FOREWORD

The field of electronic composition has been marked by rapid change since its inception. Any bibliography of electronic composition will be somewhat obsolete by the time it is published, this one no less so than others. We believe, however, that this bibliography will be of value to all who are interested in this important and emerging field.

The Federal Electronic Printing Committee gratefully acknowledges the assistance of the National Bureau of Standards, Department of Commerce, and the Environmental Health Service, Department of Health, Education, and Welfare, in its production.

Special recognition also is given to E. Raymond Lannon, formerly an active and valuable member of the Electronic Committee. He is now Chief of Administration, Pan American Health Organization. We are fortunate to have him still serving with us in the development of information for future projects.

JOHN F. HALEY,
Chairman, Federal Electronic Printing Committee.
