Chairman HAYDEN. This activity was established by act of August 3, 1961; so this is the first appropriation request under the act whose terms are applicable during the calendar year 1962.

Will you explain briefly how the program is to work?

Mr. FUMICH. Sir, this is a $4½ million program, as you have just stated, and we are asking approximately $400,000 for administration costs. And this is for the calendar year 1963. This is the lead-zinc stabilization program passed by Congress in October.

Chairman HAYDEN. Do you have a statement in regard to it?

Mr. FUMICH. Yes, sir; we have a statement.

Chairman HAYDEN. You may put that in the record.

(The statement referred to follows:)

STATEMENT OF GEORGE FUMICH, JR., DIRECTOR, OFFICE OF MINERALS EXPLORATION, ON LEAD AND ZINC STABILIZATION PROGRAM

Mr. Chairman and members of the committee, thank you for this opportunity to discuss the appropriation for the lead and zinc stabilization program authorized by Public Law 87-347.

The request for $4,900,000 is based on our estimate that 500 producers will qualify for stabilization payments during the calendar year 1963 and that payments will reach $4,500,000, the maximum authorized for that year by the act. The remaining $400,000 will be required to administer the program during that same period.

The stabilization program as authorized is based on calendar year production. Consequently, we are recommending that this appropriation be available for the calendar year 1963, rather than the fiscal year. This procedure will enable us to compute individual production allotments based on the funds available and to notify the producers in time that they may plan their production for the coming year. This plan accounts for the carryover of $2,450,000 to fiscal year 1964 which appears in the justification. A similar procedure will be proposed in the request for the fiscal year 1962 supplemental appropriation to provide funds for calendar year 1962. The program should become effective shortly after funds become available, and the peak load of processing applications should occur toward the end of calendar year 1962 and during calendar year 1963.

The staff required to administer this program is expected to reach a peak of 34 persons during fiscal year 1963 when most of the applications for eligibility are being processed and the maximum amounts are being paid.

Each application must first be examined for conformance with the statute and the regulations, then we must review the applicant's organizational structure during the base period from January 1, 1950, until the date of application analyzing any successions in interests or other reorganizations, mergers, and split offs which occurred during the period and determining eligibility of the applicant and the effect of these changes on the eligibility of other applicants who may have been affiliated with the applicant under consideration. Historical data on sales and inventory will be reviewed also for consistency and compatibility with legal limitations and to determine whether data in the application must be verified by field examination.

Since the total funds usable for the program for each calendar year are limited by law, and metal price changes may affect the amounts that can be paid to individual producers, a system of allocation (quotas) must be maintained to distribute equitably the benefits of the program as required by law. For this purpose current records will be maintained of maximum quantities certified to each participant, amounts earned to date, and unused allocations. These data will be evaluated with consideration given to such factors as anticipated additional quantities to be certified, present and anticipated levels of market prices for lead and zinc, anticipated future production of lead and zinc, and remaining funds available. The results of this evaluation in composite form will be the basis for determination of overall and individual allocation of sales quotas on which stabilization payments will be made.

One claim per month may be expected from each participant so that the volume of such claims could be approximately 6,000 per year. The factors to be considered in reviewing a claim will include a determination that the quantity of lead and zinc sold on which payment is claimed is within the participant's approved quota, and that the sale is in fact a bona fide sale. Each claim approved would be entered in the records required for control of the quota system and would then be processed for disbursement. Claims on which the propriety of payment is questioned would require review with engineers or attorneys or some other means of confirmation. Each claim would require continuing surveillance of applicant's independence of operation or integrity of corporate structure to assure continued eligibility for participation in the program.

Technical review and verification of basic data

This work will involve the delineation of mining properties and operating units for which eligibility is claimed and their composition and character of operations during the base period; analysis, review, and verification of all base period physical and metallurgical production data, as well as data on production, processing, or sales submitted with the application for payment.

It is expected that a substantial percentage of the applications for stabilization payments will involve further search of basic records, verification of production and sale, assay reports, or other factors requiring attention of the staff of mining and metallurgical engineers.

It is estimated that field engineers will spend about half of their time in travel status examining and investigating the 500 applications for participation and the 6,000 applications for payment.

Under certain conditions, it may be necessary to have Government surveillance of sampling and to have assaying done for the Government account. An estimate of 75 such cases per year at $100 per case has been included in the cost of administering the program.

Legal services

It is expected that a considerable volume and variety of legal problems will arise in the administration of this program; among these are the following:

1. Approximately 20 percent of the applications for participation under the program will involve questions of joint ownership, affiliation with other companies, partnership, common control of mining properties, succession in interest, and single operating units. In the consideration of these questions, it will be necessary to examine voluminous legal documents such as mining agreements, leases, and partnership and financial agreements.

2. Because a large number of the mining properties from which lead and zinc are produced are owned by large mining and milling companies, and leased under agreements whereby the production of the mine is delivered to the mill of the owner of the property, it will be necessary to examine agreements to determine whether the miner is an independent contractor and a small domestic producer within the meaning of the act.

3. The law provides that the maximum tonnage eligible for stabilization payments under the program shall be the maximum tonnage of lead and zinc produced by any participant during any calendar year between January 1, 1950, and December 31, 1960, but not in excess of the limits specified in the act. It is anticipated that many legal problems will arise in connection with this question and a determination will be required in the case of each applicant since many of the miners have operated more than one mine at the same time during this period and some are known to have been interested in several operations at one and the same time. It will, therefore, be necessary to determine their status, within the contemplation of the act, with respect to such production.

Program audit

Annual site audits are planned for about 15 percent of the 500 qualified producers, about 75 site audits per year. They will involve verification of most of the production and sales data supplied in applications for participation and applications for stabilization payments. Other audits of limited scope are planned in connection with the current processing of documents or changes in the regulations.

If you have any questions, I shall try to answer them.

OPERATION OF PROGRAM FROM WASHINGTON

Senator DWORSHAK. Are you going to operate this program from Washington, D.C.?

Mr. FUMICH. Sir, the program will be operated from Washington. At this time we do not know whether we will be delegated with the responsibility for operating that program, or whether it will be delegated by the Secretary of the Interior to GSA. But we have been given the responsibility for requesting funds for the administration of the program.

I am willing to answer any questions. Or if you wish, I could give you a few explanatory remarks on the program itself.

Chairman HAYDEN. Do that.

PROGRAM DESIGNED FOR SMALL PRODUCERS

Mr. FUMICH. This of course was designed primarily for small producers, and your small producer has been defined as anyone producing less than 3,000 tons, combined, of lead and zinc, in any 12-month period, between 1956 and the time that they apply for the program after 1961.

The program is also based in another way on the years 1950 to 1961, in that the person is qualified for the highest tonnage that he produces during that 10-year period.

That is what he is qualified for payments for.

Senator DWORSHAK. New mines cannot qualify under this program?

Mr. FUMICH. No, sir. There is a dual qualification. The property itself has to have been operated between 1956 and 1961.

Then the producer himself has had to operate during those particular years.

We are asking for this amount of money, because we figure that, based on some data that we acquired from the Bureau of Mines in 1956, the biggest year, there were 574 producers. We are talking about units, now; units of less than 3,000 tons per year. At that time, 1956, the lead production was 58,000 tons in round figures, and zinc production was 95,000 tons.

STABILIZATION PAYMENTS

Now, basing it on today's prices of 9½ cents for lead and 12 cents for zinc, your total stabilization payments would amount to $15,000 less than $7 million. In other words it would be $6,985,000. That would be based on your big year, in 1956.

Of course, we realize that we can only pay up to $4,500,000. But I am just trying to show you what our estimate is based on.

Senator DWORSHAK. That is assuming that all of those old mines go back into production?

Mr. FUMICH. Well, that is just one basis.

The other measurements we have are these: In 1959, we had 213 producers. This is 3 years later, and of course we are going back into that recession. We had 213 producers.

And at that time we had approximately 23,000 tons of lead produced, and around 27,000 tons of zinc.

So again, based on today's prices the amount of stabilization payments would be approximately $2,450,000. That is your low period.

Now, let us figure the last 5 years. In the last 5 years we had around 372 producers on an average, figuring between 1956 and 1960.

We had 32,000 tons, approximately, of lead produced. We had approximately 52,000 tons of zinc produced.

That figure, with stabilization payments based upon present prices, would be around $4,200,000.

That gets us to our estimate for our program.

LOCATION OF SMALL PRODUCERS

Senator DWORSHAK. Are those small producers scattered pretty much throughout the West, or are they concentrated in one or two States?

Mr. FUMICH. They are in 20 States, approximately.

Senator DWORSHAK. Most of them are in Oklahoma, are they not?

Mr. FUMICH. Well, that is your tristate area. You have another grouping in New Mexico and Arizona. Then you have your Coeur d'Alene district. You have three or four primary areas, sir.

BASIS OF ESTIMATE

Getting back again to our estimate, we believe they will get more than the average. At least we think they will. We figure there will be 500 producers.

We also figure that the 500 producers will produce 50,500 tons of lead and 83,000 tons of zinc; which will mean that they will produce for lead and zinc stabilization payment purposes, $6,070,000.

That, again, is above your $4,500,000 limitation. I am just trying to give you estimates.

So breaking that down another way, we estimate that each producer will average around 267 tons and around $10,000 in stabilization payments.

PERCENTAGE OF SMALL MINES RESUMING PRODUCTION

Senator DWORSHAK. Have you made any checks to ascertain what percentage of these small mines will go back into production?

Mr. FUMICH. We have not made any checks. We have had three or four hearings out in the field in these particular areas, and from all indications, a lot of them are not going to be able to make it, because some of the mines are watered, and everything. But we have no actual evidence at all of any of that.

Senator DWORSHAK. Your figures, then, may not be too reliable; because while you are basing them on the conditions which prevailed in 1956, 1959, and more recently, actually, you have got to determine how many of these small mine operations are profitable, because certainly the owners are not going to produce lead and zinc unless they can make some money.

Mr. FUMICH. Sir, I agree with you, there. We have no other indication, other than the statistics and figures I gave you, which were garnered by the Bureau of Mines, and there would be no way that we could check ourselves. We have no money to go out to check. The figures we give you at this time are based on figures we received from the Bureau of Mines, and those are based on production figures during the last 5 years.

MAXIMUM PRODUCTION FOR SINGLE PRODUCER

Chairman HAYDEN. What is the maximum amount any one producer could produce?

Mr. FUMICH. 3,000 tons, sir; 1,500 tons of lead and 1,500 tons of zinc. You could not produce any more than that, because you would be disqualified.

Chairman HAYDEN. And how much would he get for that?

Mr. FUMICH. Well, you would base that on current prices. Your 9½-cent lead would amount to $75 a ton for lead, and your zinc price would be $27.50 a ton for zinc. So you would multiply 1,500 by $75, and 1,500 by $27.50, and those would be your total figures.

Mr. JOHNSON. About $135,000, or something like that.

CLOSE SCRUTINY OF APPLICATIONS

Chairman HAYDEN. Is it possible for one producer to participate in the program with products from more than one property?

Mr. FUMICH. Yes. We figure, based on the information we have at hand, that almost every one of these applications is going to have to bear legal scrutiny before any payment is made. And that is because three particular areas especially will receive careful examination on legal aspects alone.

First, who is the producer? One person might have stock in a corporation. The same person might be in a partnership that is producing over 3,000 tons. He might be in a joint venture that has a mine, with another production. And it is going to be up to the solicitor to find whether that man qualifies under the act.

We are going to have many of those.

Now, in another particular area, we have a different situation that applies. We have a large company with many leases out to lessees, and they in turn sell their production back to the original lessor.

So the attorney is going to have to check in each instance whether that person is a lessee and an independent contractor and therefore eligible for the program, or whether he is an employee of the original operator or the original lessor.

The third group of claims that we are going to have is in the category of his top qualification. Say that a person has one unit, where he is producing maybe 200 or 300 tons of zinc, as an individual. He has stock in a corporation that has certain tonnages of lead and zinc. He belongs to a joint venture that has a different production capacity. It is going to be up to the solicitor to determine if he is qualified and what tonnage he is qualified for.

As you can see, it is going to take an attorney's check on every application in this program.

Chairman HAYDEN. Any further questions, Senator Dworshak?

ALLOCATION OF QUOTAS

Senator DWORSHAK. Just one.

What you have just said indicates that you will have to be very cautious in selecting allocation quotas, or whatever you might call this, so that there will be an equitable application of this program, and the possible elimination of any abuses in any particular area.

Mr. FUMICH. I agree with you there, sir.

Senator DWORSHAK. If you do not do that, this program is going to cause a lot of embarrassment for the Department and for Congress and for the mining industry.

Mr. FUMICH. Let's put it this way, sir. I agree with you entirely and I will add this: In writing the regulations, we have tried to cut the area of controversy right down to the minimum. Regardless of that, it still means this program is going to be a hornet's nest to administer. It is going to be very difficult. It is going to be very expensive; because each application is going to take a lot of work not only on the legal side, but also for the group. That is one reason we are asking for $400,000 to administer this program.

For instance each application that comes in—we are going to have to check, based on all the records that we have and that the Bureau of Mines has, to see whether that man is an eligible man. We will have to go through all the things I have already mentioned. That is just to get him in the program.

Then we have to try to assign a quota; because we are going to have to try to find out what the price of lead and zinc is at the time, and what we think it is going to be during the year, how many applications we have, how much each one is entitled to. That whole thing will be done every quarter.

And then we will have 6,000 applications for payment because we figure, based on an estimate of 500 for 12 months, we will have 6,000 applications for payment a year, and each one of the applications we will require this check. We will have to determine whether it is an eligible unit, whether the producer is an eligible producer, whether there is a bona fide sale, the validity of the assay, the metal content from the assay, and whether it fits into the quota, and whether it fits into the year.

So you can see it is going to be very, very tough.

Senator DWORSHAK. That will make a good reemployment project.

ADMINISTRATIVE COST

Senator BIBLE. Mr. Chairman, this is certainly a complicated program, and I hope we do not spend more in administering it than we end up paying out.

The figure that you use for administration was $400,000?

Mr. FUMICH. Yes, sir.

Senator BIBLE. And is this going to be a fairly constant program during the 4 or 5 years of the program? Is this a 4-year program?

Mr. FUMICH. A 4-year program, sir. It phases out.

On the other end, you will have 1,500 tons of each metal, and then it goes down to 1,200, 900, and 600.

POLICY ON INVENTORY

Senator BIBLE. Under this law—and I have just briefly and hurriedly scanned it right now—will you pick up ores on the ground? If I have a lead-zinc mine operated in 1957, if I have 300,000 tons of lead-zinc ore on my property right as of today, will you come in and buy that?

Mr. FUMICH. Sir, you are getting into the question of inventory, which is one of the very ticklish points that we have to worry about. Of course, I cannot say exactly, but based on what I think the regulations are going to say, it is going to be based on what the normal inventory for the production is at that particular unit. In other words, if you were to say 300,000 tons, if that is a normal inventory that that particular unit has been carrying on all the time historically, it might be all right.

On the other hand, if it would not be, then it would not be a normal inventory, and it would not be eligible.

Senator BIBLE. Of course, I think this is one of the main areas.

PAYMENTS BASED ON SALES

Mr. FUMICH. The ore has to be sold. There will be no payments made at all unless there is a sale. If you merely produce and stockpile, there will be no stabilization payments made at all.

Senator DWORSHAK. It has to be new production, does it not?

Mr. FUMICH. New production; yes, sir.

Senator BIBLE. Is this new production, then, in the current year, 1962?

Mr. FUMICH. Yes, sir.

Senator BIBLE. You would not pay anything for ore that was produced in 1961?

Mr. FUMICH. Well, the ore might be produced after October 1, 1961, but it would have to be sold this year.

Senator BIBLE. Yes, but do you have any honest-to-God miners in your outfit that know this lead-zinc problem, that can go out and distinguish between ore that was mined in June last year and in October? How are you going to tell the difference?

Mr. FUMICH. Yes, sir. I think we have some specialists in the Department. I will just say that in all sincerity.

Senator BIBLE. You have one sentence in here:

> Payments shall be made only with respect to ores and concentrates produced from an operating unit which was operated during the whole or some part of the period January 1, 1956, to August 1, 1961.

Mr. FUMICH. That is right.

Senator BIBLE. What does that mean?

Mr. FUMICH. That was designed for this particular purpose, sir. The Lead-Zinc Stabilization Act was designed to try to make the producers that were actually producing lead and zinc at that particular time or in recent years—let them hold on a little while longer, and then I understand phase them out.

In other words, it was not designed to bring any more people into production.

Let us say a mine was operating in 1950, but it closed down before 1956, and it did not operate during 1956–61. That mine would not be eligible.

It is the same way with a producer. It was designed not to bring new units into production. It was designed to try to help out the persons that were actually in production during the last 5 years.

SITUATION OF SMALL PRODUCER

Senator BIBLE. How about the little lead-zinc miner that lived in hope between 1956 and 1961, and actually did not produce very much?

Mr. FUMICH. He would be eligible, sir, but he would be only eligible for the amount of tonnage that he produced and sold during the base period, any 12-month period.

Senator BIBLE. Of course, he probably did not produce or sell very much, because the price was such that he could not produce and sell much. Would this be factually correct?

Mr. FUMICH. Well, factually, based on estimate, we understand that about 90 percent of the lead and zinc producers would be eligible for the program.

Senator BIBLE. Of small producers?

Mr. FUMICH. Of all the producers.

Senator BIBLE. Can a large producer take advantage of this up to 3,000 tons?

ESTABLISHING ELIGIBILITY

Mr. FUMICH. No, sir. As we understand the law, anyone that has produced over 3,000 tons during the base period is ineligible.

Senator BIBLE. Now, you are getting back to the point of my question. How many actually produced and sold? Do both of them have to produce? Do we have to produce and sell over 3,000 tons in the period between 1956 and 1961, to be eligible?

Mr. FUMICH. If you produced more than 3,000 tons; but if you sold less than 3,000 tons, I think, personally—now, I do not know about the regulations— I personally think you would be eligible.

In other words, the test is on the amount sold during any 12-month period, and not the amount produced.

ESTIMATED NUMBER ELIGIBLE

Senator BIBLE. How many lead and zinc producers sold less than 3,000 tons in the period between 1956 and 1961?

Mr. FUMICH. I will go back to the statements I gave before. In 1956 there were 574 units that produced lead and zinc totaling less than 3,000 tons, lead and zinc combined, per year.

Senator BIBLE. How about the following year? Was 1956 the peak year?

Mr. FUMICH. 1956 was the peak year. We have the figures for the following year. I can give you the low year. The low year was 213 units, in 1959; units totaling less than 3,000 tons in the 12-month period.

Senator BIBLE. Then your statement is that the peak number of lead and zinc miners who would qualify under this program, based on the years 1956 to 1961, would be 564?

Mr. FUMICH. We are saying that based upon the statistics that the Bureau of Mines has given us.

Now, with the subsidy payment the way it is right now, it is going to come pretty close to that figure. We believe it will be better than the 5-year average that I gave you before, of 372. We think it will be nearer the 574. But of course we do not believe that it will be 574. The only way we could try to figure would be to base it on those particular statistics.

SALES TO PRIVATE INDUSTRY

Senator BIBLE. Where does this lead-zinc go after the Government has purchased it?

Mr. FUMICH. The Government does not purchase it.

Senator BIBLE. It is sold to industry, and then this is a straight-out stabilization payment?

80391—62——39

Mr. FUMICH. That is right, sir, a stabilization payment, paid to the producer, based on the amount sold.

Senator BIBLE. So the U.S. Government receives nothing in the way of either lead or zinc after they have made the stabilization payment?

Mr. FUMICH. No, sir.

Senator BIBLE. The lead-zinc goes to St. Jo or American Lead and Zinc or A.S. & R. or one of the big smelters?

Mr. FUMICH. That is right, sir.

Senator BIBLE. I think I have no further questions at this time, Mr. Chairman.

Chairman HAYDEN. We thank you, then, for your statement, and we will now take up the Office of Oil and Gas.

OFFICE OF OIL AND GAS

STATEMENTS OF JEROME J. O'BRIEN, DIRECTOR; FREDERICK S. LOTT, ASSISTANT DIRECTOR; RUSSELL W. SLIGHT, ADMINISTRATIVE OFFICER; J. CORDELL MOORE, ADMINISTRATOR, OIL IMPORT PROGRAM; THOMAS C. SNEDEKER, ASSISTANT ADMINISTRATOR, OIL IMPORT PROGRAM; AND HENRY C. RUBIN, OIL IMPORT APPEALS BOARD COUNSEL FOR THE BOARD

SALARIES AND EXPENSES

Chairman HAYDEN. The Office of Oil and Gas requests $731,000 for "Salaries and expenses" during fiscal year 1963. This is $200,000 more than was appropriated in fiscal year 1962. The justifications in support of this request will be printed in the record.

(The justifications follow:)

COORDINATION OF OIL AND GAS ACTIVITIES

Program objectives

The Office of Oil and Gas is a staff organization primarily responsible for the coordination of Federal oil and gas policies and activities.

Program for past year

Provided advice and assistance to Federal and State agencies, Members of Congress, congressional committees, industry, foreign governments, and private citizens on oil and gas matters or activities.

Collaborated with the Office of Emergency Planning (formerly OCDM) and the Departments of State and Defense on petroleum problems involved in potential and actual crises in the Far East, the Middle East, and Western Europe.

Participated in meetings of the Petroleum Planning Committee of NATO and provided advice and assistance to other international organizations.

Conducted regular and special petroleum supply-demand studies both domestic and worldwide.

Cooperated with State, local, and industry emergency planning officials in the development and coordination of their petroleum and gas plans.

Continued the program for the recruitment, selection, and appointment of the petroleum and gas national defense executive reserve.

Program changes

Any changes in the normal flow of petroleum and gas results in a shift of emphasis of the activities of the Office of Oil and Gas. This may result from specific situations such as those involved in Quemoy, Iraq, Jordan, Lebanon, or Berlin; petroleum transportation system breakdowns, such as seizure of Suez, strikes or severe winter weather; breaks in pipelines whether due to natural causes or causes such as the destruction of pumping stations in Syria during the Suez crisis; and shortages or surpluses in supplies of petroleum and gas due to changes in economic conditions at home or abroad.

Programs for budget year

Most programs are expected to continue during the fiscal year 1963. The oil and gas activities must be flexible in order to meet specific situations at any given time. More emphasis is planned for the coordination of petroleum and gas mobilization readiness plans at the State, county, and local levels; also, industry facilities protection and rehabilitation planning.

ADMINISTRATION OF OIL IMPORT PROGRAM

Program objectives

The program is designed to insure a stable, healthy industry in the United States capable of exploring for and developing reserves to replace those being depleted. The basis of the program is the certified requirements of our national security which make it necessary that we preserve to the greatest extent possible a vigorous, healthy petroleum industry in the United States.

In addition to serving our own direct security interests, the program will also help prevent severe dislocations in our own country as well as in oil industries elsewhere which also have an important bearing on our own security. Petroleum, wherever it may be produced in the free world, is important to the security, not only of ourselves, but also of the free people of the world everywhere.

Program for past year

Analyzed applications from over 199 importers to determine eligibility for semiannual import allocations for crude oil, unfinished oils, and finished products.

Established semiannual allocations for imports of crude oil, unfinished oils, and finished products. Also established the amounts to be allotted to each eligible applicant by type of product.

Issued semiannual licenses to eligible importers authorizing the amounts of crude oil, unfinished oils, and finished products to be imported during each semiannual period and quarterly licenses for eligible importers of residual fuel oil. Furnished a copy of license to the appropriate collector of customs for their information and guidance.

Analyzed reports from each importer showing the amount of crude oil, unfinished oils, or finished products entering the United States under the license issued, the port of entry, and date of entry. Received and tabulated reports of exchanges of imported crude oil. Maintained and analyzed records of stock positions of residual fuel oil.

Maintained adequate records of imports for the preparation of regular and special reports to the Director, Office of Emergency Planning (formerly OCDM), the President, and the Congress.

Program changes

No significant change in the program is anticipated during the fiscal year 1963.

Program for budget year

The progam is expected to continue at about the current level during the fiscal year 1963.

Salaries and expenses

Appropriation, 1961	$512,000
Transfer from Office of Emergency Planning for financing defense functions	71,794
Total available, 1961	583,794
Appropriation, 1962	531,000
Transfer from Office of Emergency Planning for financing defense functions	115,000
Total available, 1962	646,000

Summary of increase, 1963

Increase in defense functions	85,000
Budget estimate, 1963	731,000

Analysis by activities

	Amount available, 1961	Amount available, 1962	Estimate, 1963	Increase (+) or decrease (−)
1. Coordination of oil and gas activities	$481,502	$532,500	$617,500	+$85,000
2. Administration of oil import program	79,896	99,000	99,000	
3. Oil import appeals	14,086	14,500	14,500	
Unobligated balance lapsing	8,310			
Total	583,794	646,000	731,000	+85,000

JUSTIFICATION

The estimate of $731,000 is $85,000 more than the amount available for fiscal year 1962. It provides for the following activities: Coordination of oil and gas activities including emergency planning $617,500, administration of oil import program $99,000, and administration of the Oil Import Appeals Board $14,500. The increase is for the emergency planning activities of the Office of Oil and Gas.

COORDINATION OF OIL AND GAS ACTIVITIES

Functions.—The Office of Oil and Gas, under the supervision of the Assistant Secretary for Mineral Resources:

1. Provides staff advice and assistance to the Secretary of the Interior, the Assistant Secretary for Mineral Resources and the secretariat in the development, coordination, and management of programs and functions relating to oil and gas which are assigned to the Department of the Interior by the President or the Congress.

2. Provides leadership in obtaining the coordination and unification of oil and gas policies and related administrative activities of Federal agencies and enlists their cooperation to assure adequate development, distribution, and utilization of petroleum and gas resources and facilities to meet civilian, industrial, and military requirements in time of peace or national emergency.

3. Serves as the principal channel of communication between the Federal Government and the Interstate Oil Compact Commission, State oil and gas regulatory bodies, and the petroleum and gas industries.

4. Represents the United States on NATO's Petroleum Planning Committee and, on occasion, furnishes the chairman for the working group thereof. Also, represents the United States on oil and gas matters at meetings of the International Labor Organization.

5. Represents the United States on Energy and Oil Committees of the Organization for Economic Cooperation and Development.

6. Provides advice and assistance on petroleum and gas matters and, when necessary, represents the United States at meetings of international and other organizations such as the Economic Commission for Latin America, Economic Commission for Asia and the Far East, Economic Commission for Europe, Economic and Social Commission of the United Nations, and the World Petroleum Congress.

Evaluation and forecasting.—The Office of Oil and Gas is the only Federal Government Office that consolidates military, industrial, and civilian petroleum requirements, correlates these requirements with probable availablity of petroleum and gas, makes comprehensive petroleum and gas supply-demand surveys, and prepares forecasts of the probable availability of petroleum and gas to meet the peacetime requirements of the United States and the friendly foreign nations from all sources at home and abroad. In collaboration with the military and the Office of Emergency Planning conducts petroleum and gas supply-demand surveys to coordinate probable military demands with essential civilian and industrial requirements of the United States and the friendly foreign nations to meet emergency or wartime requirements.

Data includes information on capacity and facilities to locate, produce, refine, store, and transport petroleum and gas in the free world under peacetime, emergency, or wartime conditions; also, supply-demand information for the free world under the same conditions.

Information on petroleum and gas supply and demand is available from many sources. Federal sources include the Geological Survey, the Bureau of Mines,

the Department of Commerce, the Federal Power Commission, the Interstate Commerce Commission, or any agency developing, maintaining, and publishing data which has a bearing on petroleum and gas supply. State sources include the Interstate Oil Compact Commission, Texas Railroad Commission, and other State conservation agencies of oil-producing States. Industry sources include information regularly published by oil and gas trade associations and by direct contact with the executive and technical personnel in the oil and gas industry.

Additional information is obtained by utilizing the services of industry advisory councils, boards, and committees established by the Secretary of the Interior. These include the National Petroleum Council, which provides the services of the best qualified men in the oil and gas industries on broad technical matters concerning petroleum and gas; a new subcommittee of the Foreign Petroleum Supply Committee, recently organized, composed of a special group of technical advisers to the Department of the Interior, Department of Defense, and Office of Emergency Planning on highly confidential questions involving petroleum and gas national security and defense; and the Foreign Petroleum Supply Committee which provides an advisory service pertaining to sources and methods for obtaining petroleum supply and demand information for all countries of the free world, and develops plans of action to prevent, eliminate, or alleviate shortages of petroleum supplies which threaten to affect adversely the security of the United States. These correlations of the probable petroleum and gas supplies available with probable peacetime, emergency, or wartime requirements disclose areas of potential deficiencies. The Office then devises ways to alleviate or prevent such deficiencies.

The foregoing information also provides a basis for special studies, reports, and papers pertaining to—

(1) planning by the military and interested civilian agencies for threatened or actual crises in situations such as Quemoy, Matsu, Lebanon, Jordan, Korea, Suez, and Berlin;

(2) advice and assistance on a wide range of oil and gas matters to the Congress, its committees, the Departments of State, Commerce, and Defense, Office of Emergency Planning, and to other Federal agencies concerned with petroleum and gas or the supply thereof;

(3) cooperation between the Federal Government and the oil-producing States and the State conservation bodies thereof, and the Interstate Oil Compact Commission;

(4) cooperation between the Federal Government and the petroleum and gas industries and industry councils, boards, and committees;

(5) activities of U.S. representatives at meetings of the Petroleum Planning Committee of NATO;

(6) activities of the U.S. representatives at meetings of the Energy and Oil Committees of the Organization for Economic Cooperation and Development;

(7) activities of the U.S. representatives at meetings of special petroleum industry advisory groups appointed by the Organization for Economic Cooperation and Development composed of the friendly European nations;

(8) activities of the U.S. representatives at meetings of other international organizations dealing with the economic development of areas of the free world other than the NATO countries; and

(9) petroleum planning by the Department of State in connection with its programs with the NATO countries and the friendly foreign nations elsewhere in the free world.

Committee activities.—The Office of Oil and Gas chairs or furnishes representatives to a variety of Federal, State, and industrial committees interested in or affected by petroleum and gas operations or supplies. Some of these are—

(1) cochairman of committee or subcommittees of the National Petroleum Council (industry) when so designated by the Secretary of the Interior;

(2) cochairman of the National Petroleum Council Committee on National Emergency Oil and Gas Mobilization (industry); the Committee on Proved Petroleum Reserves and Availability; and the Coordinating Subcommittee for Natural Gas and Natural Gas Liquids Reserves and Availability;

(3) Department of the Interior representative to the Interstate Oil Compact Commission (State government);

(4) Department of the Interior representative on the Petroleum Subcommittee of the Economic Intelligence Committee of Central Intelligence Agency (Federal Government);

(5) Department of the Interior alternate representative on the Operating Committee of the Advisory Committee on Export Policy of the Department of Commerce (Federal Government);

(6) chairman of the Foreign Petroleum Supply Committee (industry). The chairman or a full-time Government employee of the Office of Oil and Gas serves as chairman of subcommittees of the Foreign Petroleum Supply Committee (industry);

(7) Department of the Interior representative on the Interdepartmental Committee To Develop Programs To Retard Western Europe's Dependence on Middle East Oil; and

(8) Department of the Interior representative on the Interdepartmental NATO Petroleum Backstopping Committee.

Emergency planning.—In carrying out its normal functions, the Office of Oil and Gas develops much information having application to programs being conducted to discharge Interior's delegated responsibilities under E.O. 10997 for planning petroleum and gas mobilization readiness. However, funds heretofore have not been available to provide the Office with adequate capability to develop and coordinate all aspects of planning guidance required or to carry on mobilization activities in the field. It is in the field where practical arrangements for the emergency handling of petroleum and gas must be worked out. Here at State and local government levels and in industry are persons likely to have responsibility for implementing such readiness measures in wartime.

Importance of petroleum and gas.—Petroleum and natural gas currently constitute the source of approximately 73 percent of all energy used in the United States and conservative forecasts of future demands indicate our Nation will become more, not less, dependent upon oil and gas to meet its energy requirements.

Our very way of life is built upon the assumption of adequate supplies of petroleum and gas. Seventy-two million passenger automobiles, trucks, and buses jam our streets and highways; the railroads operate mostly on fuel or diesel oil; water movement from the small outboard to the huge ocean liner is based mostly on oil fuel; and air travel as we know it today depends entirely on high test gasoline and jet fuel. Motive power for the factory and mechanization on the farm are provided by the internal combustion or diesel engine and the electric motor. As for electricity, 25 percent of all the power produced is generated with oil and gas. Space heating, formerly provided largely from coal, and then oil, is rapidly becoming the special preserve of natural gas and this heavy dependence, too, must be taken into account in developing plans for government and industry, working together, to meet essential oil and gas requirements in a national emergency.

Adequate oil was an indispensable factor in winning World War I and World War II, and the availability of petroleum and gas to meet essential needs for civilian survival, military operations, and reconstruction would be vital in event of nuclear conflict. In both World Wars and the Korean crisis however, there was ample time to mobilize after war began. A third world conflagration, on the other hand, could start with a no-warning nuclear attack, followed up possibly by biological and chemical weapons. Hence, the imperative need to have an adequate mobilization mechanism ready, tested and in effect before the beginning of hostilities.

Emergency organization.—Current planning provides for the Office of Oil and Gas to serve as the nucleus of a standby Federal petroleum and gas agency, to be in readiness, if needed, to exercise directional control of oil and gas industry operations during a national emergency. Operating in close conjunction would be appropriate State and local government emergency units supervising allocation and distribution of oil and gas to the ultimate consumer. Backing up all levels of government would be industry endeavoring to supply products and services as needed. Personnel to staff the Federal Government's standby organization is being recruited largely from industry, although other sources of manpower are also being drawn upon such as government, the professions, universities, labor, etc.

In carrying out its assignment to plan for the emergency mobilization of oil and gas resources, the Office of Oil and Gas makes maximum use of its built-in capabilities. The advice and experience of its technical specialists are freely drawn upon and its information, materials, and studies fully utilized in preparing the Office of Oil and Gas to serve as the nucleus of an emergency petroleum and gas agency; in developing and coordinating national level mobilization planning guidance; and in providing direction and review of field mobilization programs.

Cooperation with State and local emergency planning agencies.—During fiscal year 1962, the Office of Oil and Gas has five mobilization representatives and a secre-

tarial assistant in the field with delegate agency funds, one each in areas 1, 4, 5, 6, and 7. In fiscal year 1963 funds are being requested to add three more of these field people so as to have one in each of the eight areas; and to provide them with more nearly adequate office expense and travel allowances. Working closely with representatives of government and industry our area mobilization representatives—

(*a*) advise the Office of Emergency Planning area directors as to integration of oil and gas in area plans;

(*b*) assist State and local governments to plan, test, and coordinate with Federal planning, their proposed arrangements for the emergency handling of petroleum and gas;

(*c*) provide industry with advice and assistance for setting up, and assuring the feasibility of, plans to enable continuance of operations during and after nuclear attack; and

(*d*) assist in the recruitment, training, and orientation of executive reservists expected to man a Federal emergency organization to meet essential demands for oil and gas during a national emergency.

Fieldwork in promoting oil and gas mobilization readiness has been impressive thus far during fiscal year 1962 although restrictions on travel may prevent effective followup in many instances of initial planning effort. Requests for assistance from State and municipal authorities are very much on the increase. Joint Federal-State oil storage surveys were begun in five areas. Analysis of the data developed by the National Petroleum Council on oil storage was completed and the information is being utilized in support of our mobilization plans. A project to plot precise locations of all important oil and gas facilities on large scale maps, scale 1:250,000 for each of the eight areas and the entire United States is nearing completion. Many oil and gas companies adopted survival plans and an increased number participated in Operation Alert exercises including tests at community level. Acceleration of the preparation of area plans and annexes increased the requirement for joint planning with the Office of Emergency Planning area offices.

Executive reserve.—Recruitment for the petroleum and gas unit of the national defense executive reserve must be stepped up and a useful program of training inaugurated. Fifty to sixty individuals are expected to be nominated during fiscal year 1963 for the petroleum and gas executive reserve which requires top secret clearance. Thus far, training and orientation of reservists has been confined to their receiving information materials by mail, infrequent participation in Operation Alert exercises, and occasional contact with Office of Oil and Gas field representatives. If reservists are to perform their duties effectively under conditions imposed by nuclear attack, they need to be familiar with emergency government procedures and knowledgeable regarding what to expect in carrying out their assignments in a modern no-holds-barred war. It is proposed to conduct reservists' training conferences every quarter in each of the eight Office of Emergency Planning areas and in Washington during fiscal year 1963. Funds for travel of full-time employees in connection with the conduct of these training conferences is incorporated with travel allowance being requested for field personnel. However, funds are not included for traveling expenses for executive reservists.

Industry survival.—If the oil and gas mobilization readiness program is to succeed, it must be considered realistic and feasible of implementation by those in government at Federal, State, and local levels and those in industry expected to be involved in emergency operations. Most important single element in attaining this goal is the wholehearted participation of the petroleum and gas industries. Their personnel is expected largely to staff government emergency oil and gas agencies and the companies themselves are expected to furnish enough oil and gas to meet emergency requirements.

Limited guidance dealing with industry survival preparations, based on Washington advice, is provided by our mobilization representatives, but neither we nor our field people are experts in this profession. A specialist in industry facilities protection is urgently needed in Washington, capable of preparing manuals for field use and developing specific guidance to individual petroleum and gas companies regarding their disaster planning problems. Funds are requested to provide an industrial specialist and secretarial assistant for the Washington office for these purposes.

Area offices.—Funds are requested to provide a petroleum and gas representative and a secretarial assistant for each of three Office of Emergency Planning area offices in order to complete the staffing of all eight offices. These representatives furnish technical advice to members of the Office of Emergency Planning regional staff and participate with them in the integration of petroleum and gas plans with

the overall plans for the area; work with emergency planning officials at State and local levels in the development of resource management programs; assist petroleum and gas industry officials in survival planning and the development of mutual aid programs; assist the Office of Oil and Gas in the selection and training of petroleum and gas executive reservists.

ADMINISTRATION OF OIL IMPORT PROGRAM

Authority.—Pursuant to section 2 of the act of July 1, 1954 (68 Stat. 360), as amended 69 Stat. 166 (19 U.S.C. 1352a) and 72 Stat. 678, the Director, Office of Civil and Defense Mobilization, made an appropriate investigation and determined that crude oil and crude oil derivatives and products were being imported in such quantities and under such circumstances as to threaten to impair the national security.

The President concurred in the recommendation of the Director, Office of Civil and Defense Mobilization, and issued Presidential Proclamation No. 3279, "Adjusting Imports of Petroleum and Petroleum Products Into the United States," dated March 10, 1959 (24 F.R. 1781, as amended). The Presidential proclamation authorized the Secretary of the Interior to issue regulations for the purpose of implementing the provisions thereof.

The Secretary of the Interior, pursuant to the Presidential proclamation, established on March 13, 1959, an Oil Import Administration within the Department of the Interior, issued regulations for the operation of the oil import program, and delegated, except for appeals, the authority conferred upon him by the proclamation to the Administrator, Oil Import Administration (24 F.R. 1907, as amended).

Objectives.—The program is designed to insure a stable, healthy industry in the United States capable of exploring for and developing new hemisphere reserves to replace those being depleted. The basis of the program is the certified requirements of our national security which make it necessary that we preserve to the greatest extent possible a vigorous, healthy petroleum industry in the United States.

In addition to serving our own direct security interests, the program will also help prevent severe dislocations in our own country as well as in oil industries elsewhere which also have an important bearing on our own security. Petroleum, wherever it may be produced in the free world, is important to the security, not only of ourselves, but also of the free people of the world everywhere.

Program.—Prior to the beginning of each allocation period, the Administrator shall determine in accordance with the limitations imposed by section 2 of Proclamation 3279, as amended, the quantities of imports of crude oil and unfinished oils which are available for allocation in districts I–IV and in district V, respectively, and the quantities of imports of residual fuel oil to be used as fuel and of imports of finished products other than residual fuel oil to be used as fuel which are available for allocation in such districts.

Pursuant to paragraph (e) of section 2 of Proclamation 3279, as amended, the Secretary will make a determination as to the level of imports into districts I–IV of residual fuel oil to be used as fuel in sufficient time to permit the making of allocations at least 45 calendar days in advance of each quarterly period.

Pursuant to section 2 of Proclamation 3279, as amended, it is determined (1) that the average barrels per day of imports of crude oil and unfinished oils into Puerto Rico during any particular allocation period shall not exceed the average barrels per day, as determined by the Administrator, during the month of July 1958 of imports of such commodities into Puerto Rico, (2) that the average barrels per day, as determined by the Administrator, of imports of residual fuel oil to be used as fuel and of imports of finished products other than residual fuel oil to be used as fuel into Puerto Rico during any particular allocation period shall not exceed the average barrels per day of imports of such products, respectively, into Puerto Rico during the last half of the calendar year 1958, and (3) such lower or higher levels as the Secretary may subsequently determine are required to meet increases or decreases in local demand in Puerto Rico or demand for export to foreign areas.

After each such determination, the Administrator shall as provided by these regulations make allocations and issue import licenses to eligible applicants for the appropriate allocation period.

Allocation periods.—Allocations of imports of crude oil, unfinished oils, and finished products will be made for periods of 6 months—that is, July 1 through December 31; January 1 through June 30—except that allocations of imports into districts I–IV of residual fuel to be used as fuel will be made on an annual basis beginning April 1, 1961.

Applications.—With respect to the allocation period January 1, 1960, through June 30, 1960, and each successive allocation period thereafter, an application for allocation of imports of crude oil and unfinished oils must be filed with the Administrator, in such form as he may prescribe, not later than 60 calendar days prior to the beginning of the allocation period for which the allocation is required. However, if the 60th day is a Saturday, Sunday, or holiday, the application may be filed on the next succeeding business day.

For the allocation period April 1, 1961, through March 31, 1962, an application for an allocation of imports into district I of residual fuel oil to be used as fuel must be filed with the Administrator not later than March 20, 1961. Applications which were filed pursuant to amendment 4, dated January 19, 1961, to this regulation will not meet the requirement of this subparagraph but a new application must be filed on the new forms which may now be obtained from the Administrator, Oil Import Administration, Department of the Interior, Washington 25, D.C.

For the allocation period beginning April 1, 1962, through March 31, 1963, and each successive allocation period thereafter, an application for an allocation of imports into district I of residual fuel oil to be used as fuel must be filed with the Administrator not later than 60 calendar days prior to the beginning of the allocation period for which the allocation is required. However, if the 60th day is a Saturday, Sunday, or holiday, the application may be filed on the next succeeding business day.

Each application for an allocation of imports of finished products other than residual fuel oil to be used as fuel which was granted for the allocation period July 1, 1960, through December 31, 1960, shall be considered to be a continuing application.

Each application for an allocation of imports into districts II–IV of residual fuel oil to be used as fuel granted for the allocation period April 1, 1961, through March 31, 1962, shall be considered to be a continuing application.

Once a continuing application is on file an eligible applicant need not thereafter file an application and an application for a license for each allocation period will be mailed to him by the Oil Import Administration. The failure of an eligible applicant to return an application for a license will be regarded as an abandonment by the applicant of his continuing application for an allocation and no applications for licenses will thereafter be sent to him unless he files a new application for an allocation.

An applicant who has no continuing application on file must, in order to receive an allocation of imports of residual fuel oil to be used as fuel or an allocation of imports of other finished products, file an application for an allocation with the Administrator not later than 60 calendar days prior to the beginning of the allocation period for which the allocation is required. However, if the 60th day is a Saturday, Sunday, or holiday, the application may be filed on the next succeeding business day. An application so filed by an eligible applicant will be regarded as a continuing application.

Operations.—Involves: (1) Analysis of data published by the Bureau of Mines for crude oil, unfinished oils and finished products by petroleum industry coordinating districts and Puerto Rico, and types of petroleum and petroleum products. Also, analyze data furnished in reports by over 178 importers as well as past allowances for imports. Summarize data by districts and type of products and set overall amounts to be imported during each semiannual period.

(2) Analyze applications from over 187 importers to determine eligibility for semiannual import allocations for crude oil, unfinished oils, and finished products.

(3) Establish semiannual allocations for imports of crude oil, unfinished oils, and finished products and yearly allocations for imports of residual fuel oil. Also establish the amounts to be allotted to each eligible applicant by type of products.

(4) Issue semiannual licenses to eligible importers authorizing the amounts of crude oil, unfinished oils, and finished products to be imported during each semiannual period, and quarterly licenses for eligible importers of residual fuel oil.

(5) Analyze reports from each importer showing the amount of crude oil, unfinished oils, or finished products entering the United States under the license issued, the port of entry, and date of entry. Each report must be filed with the Oil Import Administration within 15 days after the end of a particular month. Maintain adequate records of imports for the preparation of regular and special reports to the Director, Office of Emergency Planning, the President, and the

Congress. Also, to answer telephone or written inquiries as well as inquiries by personal visits regarding the regulations, import allocations, or problems resulting therefrom or affected thereby from officials of interested importing companies, trade associations, and oil companies as well as State regulatory bodies and the general public.

(6) Persons concealing material facts or making false statements in or in connection with any applications or reports filed, or in connection with any license presented to or statements made to a collector of customs, with respect to imports of crude oil, unfinished oils, or finished products, is guilty of a crime and upon conviction may be punished by fine or imprisonment or both. Analyze applications, licenses, and reports to prevent possible or actual violations of the oil import regulations. Initiate, when appropriate, action to start the necessary investigations to determine whether a crime has been committed. Initiate necessary reports to the Solicitor, Department of the Interior, for appropriate action.

(7) Analyze monthly reports of stocks of residual fuel oil on the east and gulf coast areas as a major factor in determining quarterly import levels for residual fuel oil.

(8) Analyze monthly reports furnished by collector of customs showing the amount of crude oil, unfinished oils, and finished oils imported by overland transportation from the country in which produced and exempt for the overall import program to determine whether these imports tend to threaten the accomplishment of the purpose of Proclamation 3279, as amended.

(9) Review and take appropriate action upon exemption requests for the importation of small quantities of crude oil, unfinished oils, and finished products, including samples for testing or analysis, baggage entries, and informal entries.

Summary of increases

Program activity	New positions	Personnel compensation	Personnel benefits	Other expenses	Total increase
Emergency planning (Washington)	2	$16,000	$1,000	----------	$17,000
Emergency planning (field)	6	45,000	3,000	$20,000	68,000
Total	8	61,000	4,000	20,000	85,000

A $5,000 increase for travel and transportation of persons will be needed for field personnel to meet with State, local and industry officials on defense mobilization and industrial survival problems.

Other increases urgently needed are: Printing and reproduction ($1,000) for data and information for use of the executive reservists (150) and eight area offices, communications ($4,000) for use of the staff in eight area offices for liaison with State, local, city, and industry officials and with the area executive reservists, other services ($7,000) for long-range petroleum study and security checks for executive reservists, office supplies ($2,000), equipment ($1,000), and ($4,000) for personnel benefits for the additional personnel.

The sum of $115,000 and 10 positions for 5 area offices was made available from delegate agency funds for the fiscal year 1962.

OIL IMPORT APPEALS BOARD

As outlined in detail under the previous section, on March 10, 1959, the President issued a proclamation adjusting and regulating crude oil and its principal products into the United States. Authority for the administration of the mandatory import control program was delegated to the Secretary of the Interior by the President.

Under the Presidential proclamation the Secretary, in addition to his other responsibilities, was authorized to provide for the establishment and operation of an appeals board. Accordingly Oil Import Regulation 1, issued by the Secretary March 13, 1959, established an Oil Import Appeals Board, comprised of one representative each from the Departments of Commerce, Defense, and Interior. Representatives have been designated by the three departments, and the representative of the Department of the Interior has been elected by the Board to serve as its Chairman. Although regulation 1 has been amended several times the makeup of the Board has remained the same.

The Appeals Board considers petitions by persons affected by the regulation and may, within the limits of the maximum levels of imports established in section 2 of the proclamation:

(1) Modify any allocation made to any person under the regulation on the grounds of exceptional hardship or error;

(2) Grant allocations of crude oil and unfinished oils in special circumstances to persons with importing histories who do not qualify for allocations under the regulation;

(3) Grant allocations of finished products, on the ground of exceptional hardship, to persons who do not qualify for allocations under the regulation;

(4) Review the revocation or suspension of any allocation or license.

All petitions to the Appeals Board seeking relief from a decision of the Administrator, Oil Import Administration, must be filed with the Board not later than 15 days following notice of allocation. In the case of those not receiving allocations petitions must be filed with the Board not later than 15 days after the beginning of an allocation period.

The Appeals Board has adopted and published rules of procedure necessary for the conduct of its hearings.

Mandatory restrictions on the importation of oil became effective March 11, 1959, and involve allocations and licenses for the importation of crude oils, unfinished oils, and finished products. The initial allocation period was March 11 through June 30, 1959. Allocations of crude oil and finished products other than residual fuel oil are now made and licensed on a 6-months basis. Effective April 1, 1961, residual fuel oil to be used as fuel is allocated on an annual basis and licensed on a quarterly basis.

Experience obtained since the inception of the program in March 1959, indicates that, if extensive revisions are not made in the Board's authority, the administrative functions of the Board can continue to be met by the continued employment of one clerk-stenographer, paid from funds requested in this budget. In addition, the position of Counsel to the Board, a full-time position, continues to be paid from funds appropriated to the Office of the Solicitor.

In addition to the one salary, the major expenditure is for transcripts of Appeals Board hearings; however, it is not possible to determine an exact amount since the number of petitions to be received varies widely from one allocation period to another as shown in the following table:

Allocation period:	*Number of petitions*
March to June 1959	81
July to December 1959	24
January to June 1960	55
July to December 1960	26
January to June 1961	26
July to December 1961	31
Total	243

Petitions under two separate allocation periods will be considered with the funds requested.

Itemization of estimate—Office of Oil and Gas, salaries and expenses

	Actual, 1961	Estimate, 1962	Estimate, 1963	Increase (+) decrease (−)
Program and financing:				
Total obligations	$503,690	$531,000	$731,000	+$200,000
Unobligated balance lapsing	8,310			
Appropriation	512,000	531,000	731,000	+200,000
Obligations by objects:				
11 Personnel compensation	427,558	456,000	601,000	+145,000
12 Personnel benefits	29,780	33,000	42,000	+9,000
21 Travel and transportation of persons	7,984	12,000	28,000	+16,000

PREPARED STATEMENT

Chairman HAYDEN. We will be pleased to hear from you, Mr. O'Brien.

Mr. O'BRIEN. Thank you, Mr. Chairman.

I am Jerome J. O'Brien, Director of the Office of Oil and Gas.

With your permission, I will file my prepared statement for the record, and just comment briefly upon it.

Chairman HAYDEN. That may be done.

(The statement referred to follows:)

STATEMENT BY JEROME J. O'BRIEN, DIRECTOR, OFFICE OF OIL AND GAS

The estimate of $731,000 is $85,000 more than the amount available for fiscal year 1962. It provides for the following activities: "Coordination of oil and gas activities, including emergency planning," $617,500; "Administration of oil import program," $99,000; and "Administration of the Oil Import Appeals Board," $14,500. The increase is for the emergency planning activities of the Office of Oil and Gas.

The responsibilities of the Office of Oil and Gas fall in the general categories of coordination of the Government's national oil and gas policies; liaison between the Federal Government and the Interstate Oil Compact Commission, State oil and gas regulatory bodies, and the oil and gas and allied industries; participation in meetings of Petroleum Planning Committee of NATO and the Energy and Oil Committees of the Organization for Economic Cooperation and Development; advice and assistance to other international organizations; regular and special petroleum supply-demand studies, both domestic and worldwide; coordination of petroleum and gas mobilization readiness plans with State, local, and industry emergency planning officials; and the appointment and training of a Petroleum and Gas National Defense Executive Reserve.

The Office of Oil and Gas endeavors to keep abreast of the world's petroleum situation so as to be in a position to know what this country may be able to rely upon petroleum and gaswise under peacetime, emergency, or wartime conditions in the interest of free world security.

The Office utilizes information and data available to it in Government agencies, the petroleum, gas, and allied industries, and trade sources. Beyond that, it is necessary at times to get specialized information and advice through the National Petroleum Council and the Foreign Petroleum Supply Committee.

In connection with the petroleum planning activities of the North Atlantic Treaty Organization, the Director of our Office may serve as the head of the U.S. delegation to the NATO Petroleum Planning Committee at some meetings of the Committee and, on occasion, a member of our staff serves as chairman of its working group. This requires advance preparation of comprehensive papers and reports to assist in sound petroleum planning. The meetings generally are held in Europe and require participation by U.S. officials. Collaboration of this Office particularly with the Departments of State and Defense is necessary to insure coordination on overall petroleum and gas planning.

The Office renders another important service to other agencies of the Government, to Members of Congress and congressional committees, the States, and the general public in advice and staff assistance given day by day on problems and inquiries with respect to petroleum and gas. The staff also participates in the work of interagency or intra-agency committees where petroleum and gas or their products are involved.

The defense and security programs of the United States, and of the United Nations, have accelerated essential demands for oil. Stocks of petroleum at various key points throughout the world must be maintained at satisfactory working levels. Any substantial diminution in world petroleum supplies will directly and adversely affect the interests of the United States, including the successful continuation of its mobilization program. Accordingly, the United States must be prepared to meet and handle immediately the problems inherent in any substantial loss of world petroleum supplies. The Office studies world oil conditions with the purpose of minimizing the potential risks involved.

It should be emphasized that petroleum supply is a worldwide matter and that significant shortages in one location necessarily involve adjustments in remotely distant areas. This normal interreliance is sharply pointed up in times of emergency. Loss of any substantial current sources of world petroleum supply

can jeopardize the interests of the free nations of the world. It is necessary, therefore, to conduct regular and special worldwide short-term and long-range petroleum supply-demand studies. Some of these include: (1) petroleum requirements, (2) refining capacity, (3) pipeline facilities and systems, (4) aviation gasoline and jet fuel supplies, and (5) petroleum terminal and storage facilities.

The additional funds are urgently needed to assist State and local governments to plan, test, and coordinate with Federal planning their programs for the emergency handling of petroleum and gas. Considerable progress has been made in Office of Emergency Planning areas 1, 4, 5, 6, and 7. This has been financed from delegate agency funds during the fiscal years 1961 and 1962. In 1963, it is planned to step up assistance to State and local authorities in areas 2, 3, and 8. Requests for assistance from these officials are very much on the increase. More emphasis must be placed on industry survival planning and these plans integrated into the Federal, State, and local emergency plans. Many oil and gas companies have adopted survival plans and others are seeking assistance in order to expedite their programs.

Favorable action on this request for an appropriation of $617,500 is respectfully requested for coordination of oil and gas activities.

General Statement

Mr. O'Brien. The budget request of $731,000 for the fiscal year 1963 is $85,000 more than the amount available for 1962. Three activities are involved in this request, and funds are distributed as follows: Coordination of oil and gas activities, $617,500; administration of the oil import program, $99,000; and the Oil Import Appeals Board, $14,500.

The additional $85,000 is required for the emergency planning activities of the Office of Oil and Gas. Most of this amount will be used in the field to provide advice and assistance to State and local officials in the development and coordination of their petroleum and gas mobilization readiness plans and programs.

The request contains funds for three separate organizations. I will answer questions on activities of the Office of Oil and Gas; Mr. J. Cordell Moore, for Oil Import Administration; and Mr. Henry C. Rubin for the Oil Import Appeals Board.

Chairman Hayden. Senator Dworshak?

Oil Import Situation

Senator Dworshak. I have not had much interest in oil, because we do not produce any. But I realize that there is considerable concern about import quotas. Is that your main program?

Mr. O'Brien. Mr. Moore is Administrator of the oil import program.

Senator Dworshak. Has that situation changed materially in the past year?

Mr. Moore. If I may, Mr. Chairman, I will present a statement for the Oil Import Administration when Mr. O'Brien finishes, and I will answer your question at that time.

Chairman Hayden. Then I think we will take Mr. Moore's statement.

Mr. Moore. Thank you, Mr. Chairman.

Prepared Statement

I am J. Cordell Moore, Administrator of the Oil Import Administration.

With your permission, I will file my prepared statement for insertion into the record, and, if I may, I will briefly comment upon the budget estimate.

(The statement referred to follows:)

STATEMENT BY J. CORDELL MOORE, ADMINISTRATOR, OIL IMPORT ADMINISTRATION

The budget request of $99,000 for the fiscal year 1963 is the same amount appropriated for 1962.

The Oil Import Administration was established by the Secretary of the Interior March 13, 1959 (24 F.R. 1907, as amended), pursuant to Presidential Proclamation No. 3279, dated March 10, 1959 (24 F.R. 1781, as amended).

The Presidential proclamation was based upon the following facts:

1. That within the continental United States there are two areas, one, east of the Rocky Mountains (districts I–IV), in which there is substantial oil production capacity in excess of actual production, and the other, west of the Rocky Mountains (district V), in which production is declining and in which due to the absence of any significant interarea flow of oil, limited imports are necessary to meet demand, and that, accordingly, imports into such areas must be treated differently to avoid discouragement of and decrease in domestic oil production, exploration, and development to the detriment of the national security.

2. That the Commonwealth of Puerto Rico largely depends upon imported crude oil, unfinished oils, and finished products and that any system for the adjustment of imports of such commodities should permit imports into Puerto Rico adequate for the purposes of local consumption, export to foreign areas, and limited shipment of finished products to the continental United States.

3. That adjustments must be made in the imports of crude oil, unfinished oils, and finished products, so that such imports will not so threaten to impair the national security.

The program is designed to insure a stable, healthy industry in the United States capable of exploring for and developing reserves to replace those being depleted. This program is vital to the defense mobilization activities of the United States and the nations of the free world. Import policies affect diplomatic relations with our friends in the free world, economic development and defense mobilization plans of the North American Hemisphere and other free world areas, and, last but not least, the petroleum, gas, and allied industries, and the consumers of petroleum and gas.

The basis of the program is the certified requirements of our national security which make it necessary that we preserve to the greatest extent possible a vigorous healthy petroleum industry in the United States. In addition to serving our own direct security interests, the program will also help prevent severe dislocations in our own country as well as in oil industries elsewhere which also have an important bearing on our own security.

Many changes not only in the Presidential proclamation but also the Department of the Interior import regulations have been made in the program since its inauguration in 1959. Each has resulted in more work for the limited staff of the administration. As Russia seeks to increase its share of the world oil market and as additional petroleum reserves are found in areas of the free world, the workload will continue to increase in volume and complexity.

Considerable travel will be necessary to handle import problems with groups of producers, refiners, importers, State regulatory bodies, and trade associations. Long-distance telephone calls and telegrams will be required to expedite and adjust oil import information urgently needed. Considerable funds will be needed for the reproduction of forms, regulations, press releases, and reports.

Favorable action on this request for an appropriation of $99,000 is respectively requested.

BUDGET REQUEST

Mr. MOORE. The staff of the Oil Import Administration consists of nine employees. A considerable part of the statistics and data required in our operations are obtained from the Bureau of Mines and the Office of Oil and Gas. By this means, we avoid duplication of effort.

The budget request of $99,000 for the fiscal year 1963 is the same amount appropriated for 1962.

The import program is designed to insure a stable, healthy industry in the United States capable of exploring for and developing reserves to replace those being depleted. It is vital to the defense mobilization activities of the United States, as well as the nations of the free world, in our opinion.

Import policies affect diplomatic relations with our friends in the free world, economic development and defense mobilization plans of the North American Hemisphere, the petroleum, gas, and allied industries, as well as the consumers of petroleum and gas.

As Russia seeks to increase its share of the world oil market and as additional petroleum reserves are found in areas of the free world, the problems of the Oil Import Administration will continue to increase in volume and complexity.

Although the import program cannot completely fulfill the desires of all interested groups in the United States, nor our allies in the free world, it is in the aggregate, in my judgment, an essential part of the overall defense posture of the free world.

If you have any questions, I will be very glad to answer them.

Chairman HAYDEN. Senator DWORSHAK?

IMPORT QUOTAS

Senator DWORSHAK. Can you answer the question that I propounded a few minutes ago, concerning any material changes in the import quotas during the past year?

Mr. MOORE. I will have to lay the groundwork for a reply to that question.

In the first place, the program is divided into the crude oil program and the residual fuel oil program.

Are you asking about both?

Senator DWORSHAK. Yes; both of them.

Mr. MOORE. The President on December 2 indicated that there would be a study made of petroleum requirements and supplies. A petroleum study committee was established and is now working on that study. Pending completion of the study, no changes were made in the crude oil regulations for the year.

The only changes made in the crude oil program, of course, were necessary procedural changes including the quantity involved, based on a formula which we have. The crude oil level on the east coast was increased by about 30,000 barrels a day. That was under the application of the formula.

SOURCE OF INCREASED CRUDE OIL IMPORTS

Senator DWORSHAK. What countries was that east coast increase coming from?

Mr. MOORE. About 60 percent of that comes from Venezuela or the Western Hemisphere. The balance of it comes from the Eastern Hemisphere, Saudi Arabia, Kuwait, Iran, and so on.

RESIDUAL FUEL OIL PROGRAM

Senator DWORSHAK. How about residual oil? Have there been any increases?

Mr. MOORE. We have just published a notice of proposed rulemaking in the Federal Register. We are expecting replies by the

9th of March. There are also very few changes in the residual fuel oil program, other than procedural changes. There is an increase in the level to 507,000 barrels per day. That is tentative, based on Bureau of Mines estimates of supply and demand in district 1.

Senator DWORSHAK. For how long? A year?

Mr. MOORE. That is for 1 year. There is also a slight change with respect to historical importers which we are proposing. The historicals last year were entitled to 85 percent of the ratio, which they imported in 1957. The current regulations provide for a decrease of 3 percentage points for historical importers. We found in the application of the formula that it would be inequitable to cut the historicals back to 82 percent, therefore we recommended retention of the 85 percent.

Senator DWORSHAK. Where does most of that increased residual fuel oil come from?

Mr. MOORE. You mean country of origin? About 90 percent of it comes from Venezuela. Almost 100 percent comes from the Western Hemisphere—virtually all from Venezuela and Trinidad.

Senator DWORSHAK. We are getting very little oil now from the Near East?

Mr. MOORE. With respect to residual fuel oil, we get very little.

Senator DWORSHAK. How about crude?

Mr. MOORE. Crude oil, about 40 percent, plus or minus 2 or 3 percentage points, comes from the Middle East.

Senator DWORSHAK. Of the total imports?

Mr. MOORE. Of the total licensed imports of crude oil; that is correct.

Senator DWORSHAK. But those have not been increasing much? They have been quite steady over the last few years?

Mr. MOORE. It has been fairly constant, I think, over the past several years. The pattern has not altered much.

Senator DWORSHAK. That is all the questions I have, Mr. Chairman.

WESTERN HEMISPHERE OIL PRODUCTION

Chairman HAYDEN. Aside from Venezuela, what other Western Hemisphere countries produce oil?

Mr. MOORE. We have a small amount from Colombia. We have a small amount from Mexico. We have some residual fuel oil from Trinidad, and I think some small quantities of crude comes from Peru. Venezuela, of course, accounts for the major part of it. Of course Canada and Mexico, which are exempted from import controls, should be included. We get about 215,000 barrels a day from Canada at the present time.

Chairman HAYDEN. That is by pipeline?

Mr. MOORE. Yes, sir.

COMMITTEE RECESS

Chairman HAYDEN. The committee will stand in recess until 10 a.m., tomorrow, when we take up the National Park Service.

(Whereupon, at 11:30 a.m., Monday, March 5, 1962, the committee was recessed, to reconvene at 10 a.m., Tuesday, March 6, 1962.)

DEPARTMENT OF INTERIOR AND RELATED AGENCIES APPROPRIATIONS, 1963

TUESDAY, MARCH 6, 1962

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, D.C.

The subcommittee met, pursuant to recess, at 10:30 a.m., in room 1223, New Senate Office Building, Hon. Carl Hayden, chairman, presiding.

Present: Chairman Hayden, Senators Byrd, McGee, Mundt, Young, and Dworshak.

Also present: Senators Burdick and Bennett.

DEPARTMENT OF THE INTERIOR

FOREST SERVICE AND NATIONAL PARK SERVICE PROGRAMS

STATEMENT OF HON. WALLACE F. BENNETT, A U.S. SENATOR FROM THE STATE OF UTAH

PREPARED STATEMENT

Chairman HAYDEN. The committee will be in order. Senator Bennett, we will be glad to hear from your.

Senator BENNETT. Mr. Chairman, I have a statement which would take about 12 minutes to read. I will be glad to summarize this quickly and put the statement in the record.

Chairman HAYDEN. It may be included.

(The statement referred to follows:)

Mr. Chairman, I greatly appreciate the opportunity to appear again before the Interior Appropriations Subcommittee. First of all, I should like to address myself to several items which are not included in the budget request.

FOREST SERVICE

American Fork watershed

Some time ago, Congress approved the American Fork watershed project to carry out vitally needed conservation activities as a joint endeavor by the local people and by the Forest Service and Soil Conservation Service. However, a problem has arisen because some of the land most needed is privately owned and surrounded by National Forest Service lands in the upper reaches of the watershed. There are about 30 private landowners involved. The Utah County Commission, the local participating organizations, and the Forest Service have all advised me that there cannot be a gap of untreated lands in the upper watershed area, or the entire project may be doomed to failure.

The Forest Service has developed a detailed 3-year program, which will cost $80,000. With this money, the land will be purchased from the 30 private owners,

89391—62——40

attached to the national forests, and conservation work undertaken thereon. The Forest Service advises me that it can use $20,000 during the coming fiscal year. It is suggested that this be financed from Uinta National Forest receipts. Unfortunately, there is no authority under Public Law 566, which was passed by Congress in 1954, to carry out watershed treatment work.

This is one of the most important watersheds in Utah and must be protected. A small investment now will reap untold benefits in the future.

Watershed research laboratory

In addition, I urge the committee to undertake another key project in watershed research. One of the great programs under the administration of Secretary of Agriculture Ezra Taft Benson was the program for the national forests. It was based upon careful study, and estimated the work needed and the costs involved to fully develop our forest resources. One of the key features in this program was a major Forest Service watershed, erosion, and rehabilitation research laboratory, to be built at Logan, Utah, in cooperation with the Utah State University. USU has one of the most outstanding corps of water experts in the United States.

The laboratory would cost $900,000, and unfortunately is not included in the President's budget for the coming fiscal year. The project is one of nine forest research projects included in the program so well presented by Senator Stennis in a speech given to the Senate on February 15, 1962.

The purpose of the laboratory is to study problems relating to flash floods originating on steep mountain watersheds. It is expected that the laboratory will be able to develop ways of improving water yield from the mountain watershed, and ways of rehabilitating areas which are producing excessive runoff and erosion.

Plant cover is the only effective natural means of protecting against the high-intensity rainstorms which strike high mountain areas, yet because of the rapid runoff it is very difficult to establish vegetation by usual means. It is believed that this laboratory could develop new techniques and acquire new information about mountain erosion and the effects of vegetation on floods, which could greatly cut down losses both from erosion and from flooding.

The laboratory facility will conduct research on problems covering a large area in Utah, Idaho, Montana, Nevada, and western Wyoming.

NATIONAL PARK SERVICE

Survey of Southern Utah National Parkway

As the chairman will recall, I sent him a letter on February 28 asking that he interrogate National Park Service officials to determine whether or not they could undertake a survey of the Southern Utah National Parkway which I have proposed in my bill, S. 2280. In reporting on my bill. the Department of the Interior said, concerning the undertaking of a survey, "We hope to do this when personnel and funds are available for the purpose."

I respectfully urge the committee to appropriate $80,000 for this purpose. The President's budget includes $713,000 for National Park Service planning. This is an increase of $205,000 over the present fiscal year. Of that amount, only $35,000 is specifically earmarked. Interestingly enough, this is allocated to the survey of an extension of the Blue Ridge National Parkway into Georgia. I hope the committee will earmark $80,000 of this $713,000 to survey the Southern Utah Parkway.

The parkway would link the complex of national parks and monuments in southwestern Utah and northern Arizona with the national monuments and recreation area in southeastern Utah and western Cororado. It would be a veritable national park in its own right, opening up one of the most magnificent scenic areas in the United States. Moreover, it would bring more tourists to that area of the Southwestern United States than any combination of new national parks that I can think of. My parkway proposal is endorsed by virtually every responsible organization in southern Utah, as well as State officials.

As the subcommittee knows, there is not a single national parkway west of the Mississippi River, and virtually all of the parkways are in the South. Yet, it is we in the West who are expected to give up hundreds of thousands and even millions of acres of land for national park purposes. Therefore, I think it is high time that this discrimination against the West be ended. National parkways should be scenic routes connecting national parks, and I think that we in the West are entitled to consideration.

Natural Bridges National Monument visitors center

My longstanding capaign to correct the one-half century record of neglect at Natural Bridges National Monument has finally achieved success this year. The President's budget includes $312,000 to construct an approach road and a visitors center parking area. In addition, $106,000 is included for utilities and two employee residences. Since I urged Secretary Udall to include these items, and to provide for full-time ranger service at the monument, I naturally support these recommendations. However, I am disappointed that a visitors center is not included. It is vitally needed to accommodate the visitors and particularly the new influx of tourists who will go to Natural Bridges when the road is completed. Therefore, I urge that $150,000 be added to the President's recommendation, or such additional amount as the National Park Service estimates would be necessary for a first-class visitors center.

Zion National Park

It was my privilege to sponsor a bill which added the old Zion National Monument to Zion National Park. This was done with the assurance that additional emphasis would be placed on developing the monument area which was established in 1937. However, there has been absolutely no development, and I have waged a campaign for several years to get a road built from Highway 91 through Kolob Canyon to Lee Pass. For several years I have urged the Department of Interior to include funds for this purpose, and I was pleased therefore when my recommendation was favorably acted upon by the Department of Interior this year; $460,000 is included in the budget for the Kolob Canyon road which will extend 4.6 miles to Lee Pass. In addition, campground activity and development will be carried on.

I respectfully urge that the full appropriation for Zion National Park be approved by the committee. In addition, I hope the National Park Service will plan the necessary extension of this road for next year's appropriation bill instead of waiting until the end of the Mission 66 program.

Except for these items, I fully support the budget recommendations made by the National Park Service for Arches, Bryce, Capital Reef, Cedar Breaks, Hovenweep, and Rainbow, and urge the committee to approve them.

AMERICAN FORK WATERSHED

Senator BENNETT. I appreciate this opportunity to appear again to discuss several items which I think would be very important for my State for the Forest Service and National Park Service.

The first is the American Fork watershed. At the head of this canyon there are about 30 little privately owned parcels of land surrounded by forests. The Forest Service is anxious to acquire this land in order that it can complete its control of the watershed.

On a 3-year program this will cost $80,000 and the Forest Service has asked for $20,000 for the coming year as a first step.

Chairman HAYDEN. The land has been appraised and there is general agreement about buying?

WATER LABORATORY

Senator BENNETT. Yes. These are little mining claims that were operated 50 or 60 years ago and they are just little tiny bits scattered all through the very top of this watershed.

One of the key features of Secretary Benson's program for the national forest was a laboratory to study watershed erosion and rehabilitation.

As the chairman knows, we live in a part of the country that is subject to flash floods and we need more information about how to protect ourselves against these problems.

The laboratory would cost $900,000 and is not included in the President's budget for this year. It would serve Utah, Idaho, Montana, Nevada, and western Wyoming.

I hope the committee may consider it favorably.

Southern Utah National Parkway Survey

As a third item, on February 28 I asked the chairman in a letter to interrogate the National Park Service officials to determine whether or not they could undertake a survey of the Southern Utah National Parkway which I proposed in my bill, S. 2280.

The Department said they hoped to do this when personnel and funds are available. The President's budget includes $713,000 for National Park Service planning. This is an increase of $250,000 over the present fiscal year. Of this amount only $35,000 is specifically earmarked. It will be used to survey an extension of the Blue Ridge National Parkway into Georgia.

I hope the committee will earmark $80,000 of this $713,000 to survey the proposed Southern Utah Parkway, which would be the first national parkway west of the Mississippi.

Natural Bridges Natural Monument

As a fourth item, we have had in the southeast corner of Utah, since 1904, the Natural Bridges National Monument and it has not been developed. The President's budget includes $312,000 to construct an approach road and a parking center for visitors.

In addition, $106,000 is included for utilities and two employee residences. Unfortunately, there is no visitors' center proposed, and I ask that the committee consider adding $150,000 so that there can be a first-class visitors' center at this national monument which has been sitting there for nearly 60 years.

Kolob Canyon Road

In 1937 Zion National Monument was added to Zion National Park and several years ago the Congress approved my bill to give this all national park status. Since then, however, there has been no road through which access could be had to the back part of the park. I have asked to have a road built from Highway 91 through Kolob Canyon to Lee Pass.

So, $460,000 is included in the budget for the Kolob Canyon road this year, which will extend 4.6 miles to Lee Pass. I respectfully urge that the full appropriations for Zion National Park be approved by the committee in order that this road may be begun.

In addition, I support the budget recommendation for all the National Park Service areas in Utah, including Arches, Bryce, Capitol Reef, Cedar Breaks, Dinosaur, Hovenweep, Timpanogos, and Rainbow.

I thank you, Mr. Chairman, and the members of the committee, for this opportunity.

Chairman HAYDEN. Senator Burdick.

FORT UNION, N. DAK., HISTORIC SITE

STATEMENT OF HON. QUENTIN N. BURDICK, A U.S. SENATOR FROM THE STATE OF NORTH DAKOTA

GENERAL STATEMENT

Senator BURDICK. Mr. Chairman and members of the committee, last year Fort Union, located at the confluence of the Yellowstone and Missouri Rivers in North Dakota, was designated by the Secretary of the Interior as a national historic site. The area had been evaluated by the National Survey of Historic Sites and Buildings and the Advisory Board on National Parks, Historic Sites, Buildings, and Monuments.

Further funds are needed to undertake archeological work to bring full recognition to the historic values of this site, and Senator Young and I are respectfully requesting Congress to appropriate $5,000 for the next fiscal year to do the required work.

Gov. William L. Guy, of North Dakota, who joins with us in making this request, assures us that the State of North Dakota is prepared to match these funds up to $5,000.

According to our information, the combined sum of $10,000 will be ample to complete the work as now contemplated. It is our understanding that Congress approved a similar study for Fort Atkinson in the State of Kansas, on a matching basis, 3 years ago.

IMPORTANCE OF SITE

The confluence area was known to the Governments of Spain, France, and England before the 19th century. It was a highlight in the exploration trip of Lewis and Clark and was designated by them as the place of rendezvous in 1806.

In 1822 the Rocky Mountain Fur Co. established a trading post at the confluence. First named Fort Floyd, the post was purchased in 1828 by the American Fur Co. and renamed Fort Union in 1829. Developed by Kenneth McKenzie, Fort Union became the greatest fur trading post on the North American Continent. It played a prominent role in the opening of the Pacific Northwest for more than two decades.

In about 1865 Fort Union was purchased and taken over by the United States and converted into an Army military post.

Fort Union served as a port of call for many world-famous personages. As a result of the fur-trading business, it was the major point of contact between the whites and Indians for a number of years.

In 1867, Fort Union was dismantled and the materials used in building nearby Fort Buford, which became a factor in the regulation of the fur trade with the Indians and in the subsequent Indian campaigns, culminating in the Battle of Little Big Horn, in 1876. Many Indian prisoners passed through Fort Buford and it was there that Sitting Bull surrendered. The site of the fort is at the east edge of Buford, N. Dak., on the North Dakota-Montana boundary. It is owned by the State of North Dakota and is administered by the State historical society.

Because of the national importance and significance of this confluence area and because of the neglect it has suffered, the States of

North Dakota and Montana are doing something about its preservation and restoration. But we cannot do a complete job without the help of the National Park Service. We need the technical assistance of that agency in undertaking the archaeological and historical work involved.

AMOUNT REQUESTED

The action in connection with the restoration and development of the confluence area is attuned to the Administration's desire to develop parklands as cited in the President's natural resources messages.

We earnestly solicit the favorable consideration of this $5,000 request.

Chairman HAYDEN. We thank you for your statement; and I will place in the record your letter to me regarding this matter. Senator Young joins with you in this proposal.

Senator YOUNG. Mr. Chairman, this is a project in which Senator Burdick's late father, Congressman Usher L. Burdick, was greatly interested. He was a great Indian historian and a historian of the old West. He wrote many interesting books on it.

I think this fine statement you have in itself is worth about $5,000.

Senator BURDICK. I hope so.

Senator BYRD. Mr. Chairman, I would like to say that I think that Senator Burdick has made a very fine presentation here and I join with Senator Young in saying that the statement itself is worth $5,000.

Senator BURDICK. Thank you.

(The letter referred to follows:)

LETTER FROM SENATOR BURDICK

Hon. CARL HAYDEN,
Chairman, Appropriations Committee,
New Senate Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: In behalf of myself and Senator Milton Young, I respectfully request Congress to appropriate $5,000 for the next fiscal year to undertake archaeological work at Fort Union, located at the confluence of the Yellowstone and Missouri Rivers in North Dakota.

Last year Fort Union was designated by the Secretary of Interior as a national historic site, following an evaluation by the National Survey of Historic Sites and Buildings and the Advisory Board on National Parks, Historic Sites, Buildings, and Monuments.

Further funds are needed to undertake an archaeological study to bring full recognition to the historic values of this site. Gov. William L. Guy of North Dakota assures me that the State of North Dakota is prepared to match these funds up to $5,000. According to my information, the combined sum of $10,000 will be ample to complete the work as now contemplated. It is my understanding that Congress approved a similar study, on a matching basis, for Fort Atkinson in the State of Kansas, 3 years ago.

Fort Union was the most important fur trading post in the United States and is a priceless heritage of the fur trade and western expansion. The confluence area was known to the Governments of Spain, France, and England before the 19th century and was a highlight in the exploration trip of Lewis and Clark. Fort Union afforded the Sioux, Cheyennes, Crow, Blackfoot, and other Indians their first sustained contact with the white man's civilization.

Because of the national importance and significance of this confluence area and because of the neglect it has suffered, the States of North Dakota and Montana are doing something about its preservation and restoration. But we cannot do it without the help of the National Park Service. We need the technical assistance of that agency in undertaking the archaeological and historical work involved.

The sympathetic consideration and approval of this project by the Senate Committee on Appropriations is solicited by both Senator Young and myself.

With kind regards, I am

Sincerely,

QUENTIN N. BURDICK.

NATIONAL PARK SERVICE

STATEMENTS OF CONRAD L. WIRTH, DIRECTOR; HILLORY A. TOLSON, ASSISTANT DIRECTOR; JACKSON E. PRICE, ASSISTANT DIRECTOR; CLARENCE P. MONTGOMERY, CHIEF OF BUDGET AND FINANCE; HAROLD G. SMITH, CHIEF OF PROGRAM COORDINATION; AND T. SUTTON JETT, REGIONAL DIRECTOR OF REGION SIX

SUMMARY TABLE OF APPROPRIATIONS

Chairman HAYDEN. We will now hear from the National Park Service.

Before we begin the study of the justifications for the National Park Service budget, fiscal year 1963, I will place in the record a summary table of appropriations, revenues, and visitors to National Park Service facilities for the years 1943 through 1963; a table of the general funds receipts, showing their sources for the years 1961 to 1963; and a comparative summary of the 1962 appropriations with the 1963 budget estimates.

(The table referred to follows:)

NATIONAL PARK SERVICE

Summary of appropriations, revenues, and visitors

Year	Appropriations			Revenues	Visitors
	Operating funds	Capital improvements	Total		
1943	$5,079,342	$408,023	$5,487,365	$1,061,992	6,828,420
1944	4,563,560	----------	4,563,560	807,601	8,339,775
1945	4,736,810	4,000	4,740,810	824,078	11,713,852
1946	5,457,125	30,250	5,487,375	1,592,947	21,752,315
1947	11,032,334	14,995,621	26,027,955	2,923,587	25,534,188
1948	9,660,055	968,000	10,628,055	3,303,328	29,858,828
1949	11,542,299	2,505,350	14,047,649	3,467,606	31,726,402
1950	15,150,982	14,953,868	30,104,850	3,527,607	33,252,589
1951	16,288,200	17,687,500	[1] 33,975,700	3,534,372	37,106,440
1952	16,878,564	11,370,000	28,248,564	3,568,094	42,299,836
1953	18,131,920	15,030,410	[1] 33,162,330	4,190,643	46,224,794
1954	18,437,550	15,416,300	33,853,850	4,037,551	47,833,913
1955	18,494,095	14,199,895	[2] 32,693,990	4,914,239	50,007,838
1956	20,787,000	28,079,300	48,866,300	5,065,784	54,923,443
1957	22,970,000	45,050,000	68,020,000	5,658,040	59,284,869
1958	[3] 27,581,530	48,400,000	75,981,530	5,744,920	58,676,953
1959	29,962,600	50,000,000	79,962,600	5,688,138	62,812,000
1960	32,682,000	46,735,000	79,417,000	5,685,176	[4] 72,288,000

Comparative summary of the 1962 appropriations with the 1963 budget

Appropriation and activity	Adjusted appropriation, 1962 [1]	Estimate, 1963	Increases (+) or decreases (−)
Management and protection:			
1. Management of park and other areas	$16,899,378	$20,400,000	+$3,500,622
2. Forestry and fire control	1,097,225	1,260,000	+162,775
3. Soil and moisture conservation	106,540	200,000	+93,460
4. Park and recreation programs	3,222,670	4,910,000	+1,687,330
5. Concessions management	457,530	470,000	+12,470
Subtotal	21,783,343	27,240,000	+5,456,657
Maintenance and rehabilitation of physical facilities:			
1. Roads and trails	7,298,000	8,119,000	+821,000
2. Buildings, utilities, and other facilities	10,571,000	11,881,000	+1,310,000
Subtotal	17,869,000	20,000,000	+2,131,000
Construction:			
1. Buildings, utilities, and other facilities	28,896,000	31,153,000	+2,257,000
2. Acquisition of lands and water rights	7,830,000	12,500,000	+4,670,000
5. Executive Mansion and grounds		347,000	+347,000
Subtotal	36,726,000	44,000,000	+7,274,000
Construction (liquidation of contract authorization):			
1. Parkways	14,000,000	14,000,000	
2. Roads and trails	16,000,000	16,000,000	
Subtotal	30,000,000	30,000,000	
Executive Mansion and grounds:			
1. Care, maintenance, and operation of the Executive Mansion and surrounding grounds	693,000	658,000	−35,000
General administrative expenses:			
1. Departmental expenses	1,005,830	1,295,000	+289,170
2. Regional offices expenses	575,170	805,000	+229,830
Subtotal	1,581,000	2,100,000	+519,000
Total	108,652,343	123,998,000	+15,345,657

[1] Excludes $28,157 transferred to General Services Administration.

JUSTIFICATIONS

Chairman HAYDEN. I will also enter into the record justifications for the budget estimates for management and protection of National Park Service facilities during fiscal year 1963. This amount is $27,240,000, an increase of $5,456,657 over the amount available for management and protection in fiscal year 1962.

(The information referred to follows:)

NATIONAL PARK SERVICE—MANAGEMENT AND PROTECTION

Broad purpose and long range objective of program

The programs financed under this appropriation are those concerned with the management, protection, and interpretation of the areas administered by the Service, including soil and moisture conservation, land use and water rights studies, and the management and audit of concessions operations; and those aimed at fulfilling the responsibilities placed upon the Service by provisions of the Park, Parkway, and Recreation Area Study Act, approved June 23, 1936 (49 Stat. 1894), the Colorado River Storage Project Act, approved April 11, 1956 (70 Stat. 105), the Surplus Property Act of 1944, as amended (62 Stat. 350), and the Historic Sites Act, approved August 21, 1935 (49 Stat. 666).

The broad purpose and long-range objectives of the programs concerned with park operations are as stated in the act of August 25, 1916, establishing the National Park Service, which provides that "The Service thus established shall promote and regulate the use of the Federal areas known as national parks, monuments, and reservations hereinafter specified by such means and measures as conform to the fundamental purpose of the said parks, monuments, and reservations, which purpose is to conserve the scenery and the natural and historic objects and the wildlife therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations." One objective of Mission 66 is to place the Service in a position to handle 89 million visitors in carrying out this mandate by 1966, the last year of the 10-year period.

The Park, Parkway and Recreation Area Study Act of 1936 authorizes and directs the Secretary of the Interior "to cause the National Park Service to make a comprehensive study, other than on lands under the jurisdiction of the Department of Agriculture, of the public park, parkway, and recreation-area programs of the United States, and of the several States and political subdivisions thereof, and of the lands throughout the United States which are or may be chiefly valuable as such areas." The act further provides that "For the purpose of developing coordinated and adequate public park, parkway, and recreational-area facilities for the people of the United States, the Secretary is authorized to aid the several States and political subdivisions thereof in planning such areas therein, and in cooperating with one another to accomplish these ends. Such aid shall be made available through the National Park Service acting in cooperation with such State agencies or agencies of political subdivisions of States as the Secretary deems best."

In carrying out the provisions of this statute, the Service has in progress a nationwide recreation planning program, a national park system planning program, and a program for cooperation with States and other political subdivisions in their park and recreation planning. The nationwide recreation planning program is aimed at developing a plan for a system of recreational development by each level of Government—Federal, State, and local—each bearing its proper share of the expanding recreation load. The national park system planning program is aimed at planning an adequate national park system for the United States. This includes both the current needs of existing national parks, monuments, and other areas of the system, and future requirements to meet the Nation's foreseeable needs. The program for cooperation with States and other political subdivisions in their park and recreation planning is a continuing one for such time as there is a need for such assistance.

The Colorado River Storage Project Act of 1956 provides under section 8 that "in connection with the development of the Colorado River storage project and of the participating projects, the Secretary is authorized and directed to investigate, plan, construct, operate, and maintain (1) public recreational facilities on lands withdrawn or acquired for the development of said project, or of said participating projects, to conserve the scenery, the natural, historic, and archeologic objects, and the wildlife on said lands, and to provide for public use and enjoyment of the same and of the water areas created by these projects by such means as are consistent with the primary purposes of said project; * * *." The National Park Service has been designated as the agency responsible for carrying out the obligation of the Department under this statutory provision. The Service is currently conducting archeological investigations and salvage and recreation planning programs in connection with the Colorado River storage project in fulfillment of this responsibility. It has also commenced management, protection, interpretation, and maintenance operations in the Glen Canyon area, Arizona and

Utah, and the Flaming Gorge area, Utah and Wyoming, areas that have been determined to be of national significance. Funds were provided in the Public Works Appropriation Act for 1962, for transfer from the Bureau of Reclamation, to commence the program for constructing recreational facilities in the Upper Colorado River areas as authorized by the above-cited statute, and provision for continuing the program is made in the Bureau of Reclamation's budget for 1963.

Under a provision of the Surplus Property Act of 1944, as amended, the Service is responsible for determining whether surplus Federal land is suitable and desirable for use as a public park, public recreation area, or historic monument, and to inform disposal agencies of such determinations. The Service is also responsible for determining and enforcing compliance with the provisions of any instrument transferring such properties to States, political subdivisions and instrumentalities thereof, and municipalities, for public park, public recreation area, or historic monument purposes.

The Historic Sites Act of 1935 provides that "* * * it is a national policy to preserve for public use historic sites, buildings, and objects of national significance for the inspiration and benefit of the people of the United States * * *." The act further provides that the Secretary of the Interior through the National Park Service, for the purpose of effectuating this policy, shall:

"(a) Secure, collate, and preserve drawings, plans, photographs, and other data of historic and archaeologic sites, buildings, and objects.

"(b) Make a survey of historic and archaeologic sites, buildings, and objects for the purpose of determining which possess exceptional value as commemorating or illustrating the history of the United States.

"(c) Make necessary investigations and researches in the United States relating to particular sites, buildings, or objects to obtain true and accurate historical and archaeological facts and information concerning the same."

In fulfilling the foregoing responsibilities, the Service has in progress an archaeological investigations and salvage program, a historic sites survey, and a historic American buildings survey. The archaeological investigations and salvage program is aimed at recovering irreplaceable historic and archeological resources from water control projects in the major river basins of the United States prior to flooding or other destruction. The historic American buildings survey comprises a national plan for making and preserving records of existing monuments of the builder's art in the United States and its possessions. Its first aim is the conservation of our national cultural resources in historic architecture and its secondary aim is service to the public by making available and preserving exact records of this cultural background of American history. The historic sites survey has as its objective a systematic nationwide inventory, investigation and recording of significant historic and archeological sites; the formulation of clearly defined standards for determining which historic and archeological sites possess national importance within the scope of the Historic Sites Act; the preparation of a classified list of recorded historic and archeological sites, indicating which possess national importance and which do not; definition of the nature and extent of Federal responsibilities for the preservation and use of sites of national importance; and the formulation of policies and practices to carry out those responsibilities.

Objectives and program for budget year

The objectives for the budget year are to achieve maximum progress toward the Mission 66 goal in all programs financed under this appropriation and to keep Mission 66 as nearly on schedule as possible.

The budget provides increases to raise the levels of the various programs as follows (in thousands): $1,226 for the operation of new Mission 66 facilities; $1,115 for additional staffing and general expense items to meet workload incident to increased visitor use and extension of the operating season; $128 for leasing additional communication facilities in the parks and for conversion of existing radio systems to narrow-band frequencies; $180 for commencement of operations in three newly authorized areas; $480 for 62 additional park police positions plus general expense fund requirements; $48 to strengthen the existing mobile tree crew and to establish a second crew to serve the western areas; $93 for soil and moisture conservation; $182 to intensify the training programs for uniformed employees; $195 and $80 for additional staffing and general expense items for ranger services and interpretive functions, respectively, in the Washington and regional offices; $100 for printing additional informational publications; $200 for land use and water resource studies functions which are carried on in the Washington and regional offices; $12 for concessions management and audit functions; $300 to initiate a comprehensive history and natural history investiga-

tions program; $816 for nationwide recreation planning, national park system planning, and cooperation with States and other agencies in their park and recreation planning functions; $161 for archeological investigations and salvage; $76 for the historic American buildings survey; and $55 for the historic sites survey.

Management and protection

Appropriation, 1961	$18, 575, 000
Supplemental appropriation, 1961	1, 934, 000
Total appropriation, 1961	20, 509, 000
Appropriation, 1962	21, 786, 500
Supplemental appropriation, 1962	25, 000
Total appropriation, 1962	21, 811, 500
Transferred to General Services Administration	28, 157
Total amount available 1962	21, 783, 343

SUMMARY OF INCREASES, 1963

Three new parks for which funds are not now provided	180, 000
Operation of newly constructed Mission 66 facilities	1, 225, 669
Operating costs brought about by increased visitor use and extension of the operating season	1, 114, 718
Leasing additional communication facilities and conversion of existing park radio systems to narrow-band frequencies	127, 700
To intensify and expand the training program for uniformed employees:	
To move the existing training center from Yosemite National Park, Calif., to Grand Canyon National Park, Ariz., and to expand its program	62, 800
To establish a new training center at Harpers Ferry National Monument, W. Va	119, 500
Additional staffing and general expense funds for ranger services functions in the Washington and regional offices	195, 356
Sixty-two additional U.S. Park Police and additional general expense funds for the existing force	480, 000
Production of additional park information publications	99, 590
Employees' compensation fund payments	10, 000
Establishment of a mobile tree crew to serve Western areas and one additional position and general expense funds for existing crew serving eastern areas	48, 064
To expand soil and moisture conservation program in the parks	93, 460
To accelerate the programs for nationwide recreation planning, national park system planning, and cooperation with States and other agencies in their park and recreation planning	815, 680
Additional staffing and general expense funds for interpretive functions in the Washington and regional offices	79, 720
To commence a comphrehensive history and natural history investigation program	300, 000
To finance under this appropriation certain positions concerned with land use and acquisition functions now financed wholly from land acquisition funds	96, 375
Expansion of water resources studies to keep pace with the program for development of water systems in the parks	103, 450
Acceleration of archeological investigations and salvage program to keep abreast of reservoir construction	160, 800
To meet increased requirements for following programs:	
Historic American building survey	75, 825
Historic sites survey	55, 480
Additional general expense funds for present concessions management and audit staffs	12, 470
Net change, 1963	5, 456, 657
Budget estimate, 1963	27, 240, 000

Analysis by activities

Activity	Amount available, 1961	Amount available, 1962 [1]	Estimate, 1963	Increase
1. Management of park and other areas	$15,341,211	$16,899,378	$20,400,000	$3,500,622
2. Forestry and fire control	2,211,474	1,097,225	1,260,000	162,775
3. Soil and moisture conservation	104,254	106,540	200,000	93,460
4. Park and recreation programs	2,461,255	3,222,670	4,910,000	1,687,330
5. Concessions management	379,896	457,530	470,000	12,470
Unobligated balance no longer available	10,910			
Total	20,509,000	21,783,343	27,240,000	5,456,657

[1] Adjusted to exclude $28,157 transferred to General Services Administration.

1. Management of park and other areas

Subactivity	Amount available, 1961	Amount available, 1962	Estimate, 1963	Increase
(*a*) National parks, monuments, etc	$13,335,044	$14,574,113	$17,348,000	$2,773,887
(*b*) National Capital Parks	1,731,072	1,996,855	2,614,000	617,145
(*c*) Informational publications	275,095	328,410	428,000	99,590
(*d*) Employees compensation fund payments			10,000	10,000
Total	15,341,211	16,899,378	20,400,000	3,500,622

(A) NATIONAL PARKS, MONUMENTS, ETC.

The estimate of $17,348,000 is an increase of $2,773,887. The increase requested are for the following purposes:

3 new parks for which funds are not now provided	$177,000
Operation of newly constructed Mission 66 facilities	1,156,669
Operation costs brought about by increased visitor use and extension of the operating season	967,918
Leasing additional commercial communication facilities	42,200
Conversion of park radio systems to narrow band frequencies	67,500
To expand National Park Service training program for uniformed employees:	
To move existing training center from Yosemite National Park to Grand Canyon National Park and to expand its program	62,800
To establish new training center at Harpers Ferry National Monument	119,500
Additional staffing and general expense funds for ranger services functions in Washington and regional offices	180,300
Total	2,773,887

Need for increase

Fund requirements under this subactivity continue to increase from year to year. Principal factors bringing about the increased requirements are: (1) Constantly increasing visitor use of the parks; (2) completion and placing into operation of new Mission 66 facilities requiring additional management, protection, and interpretive personnel and supporting general expense funds; (3) establishment of new park areas; and (4) increases in the cost of doing business. All of the increases requested are for going programs, except $177,000 for new parks, and $67,500 for conversion of radio systems to narrow band frequencies. Justification for the increase under each of the major categories is set forth below:

New parks for which funds are not now provided, $177,000.—The new parks and amount required for management, protection, and interpretation of each follows:

Cape Cod National Seashore, Mass	$86,900
Fort Davis National Historic Site, Tex	43,900
Fort Smith National Historic Site, Ark	46,200
Total	177,000

Cape Cod National Seashore, Mass., $86,900.—This national seashore was authorized for establishment by Public Law 87–126, approved August 7, 1961. The seashore boundaries will embrace about 26,666 acres of lands in Provincetown, Truro, Wellfleet, Eastham, Orleans, and Chatham, all on the outer arm of Cape Cod. The Secretary of the Interior is authorized to acquire by purchase, gift, exchange, or otherwise, the lands, water, and improvements thereon necessary for establishment of the seashore.

The legislation providing for establishment of the park authorizes the appropriation of such sums as may be necessary, except that no more than $16 million shall be appropriated for the acquisition of land, waters, improvements thereon, and interests therein. An initial appropriation of $2,250,000 has been provided to commence the land acquisition program in the 1962 fiscal year. It is expected that considerable acreage within the authorized boundaries will be made available without the expenditure of Federal funds.

As soon as a significant number of acquisitions have taken place, it will be necessary to provide an administrative, protective, and interpretive staff for the new park. This point will be reached prior to commencement of the 1963 fiscal year. The increase requested will provide for the following:

Superintendent, GS–14	$12,230
Chief park ranger, GS–11	7,571
Administrative assistant, GS–9	6,448
Park ranger, GS–7	5,366
Park ranger, GS–5	4,347
Clerk-stenographer, GS–5	4,347
Clerk-typist, GS–4	4,056
Temporary employment (park rangers, etc.)—2 man-years	8,233
Total salaries	52,598
General expenses, including initial equipment requirements, retirement, health benefits, employee insurance, etc	34,302
Grand total	86,900

Fort Davis National Historic Site, Tex., $43,000.—This park was authorized for establishment by Public Law 87–213, approved September 8, 1961. The act provides that the park shall not exceed 460 acres. It is expected that the full 460 acres authorized will be required and funds for acquiring them are included in the 1963 land acquisition estimates.

Such lands as are necessary to establish and administer the park are expected to be in Federal ownership early in the 1963 fiscal year, at which time the Service's responsibility for management, protection, and interpretation will commence. The increase requested for a small staff plus general expense funds will provide for the following:

Superintendent, GS–11	$7,571
Historian, GS–9	6,448
Supervisory park ranger, GS–7	5,366
Secretary, GS–5	4,347
Temporary employment, 0.7 man-years	3,047
Total salaries	26,779
General expenses, including contributions for retirement, health benefits, employee insurance, equipment, etc	17,121
Grand total	43,900

Fort Smith National Historic Site, Ark., $46,200.—This site was authorized for establishment by Public Law 87–215, approved September 13, 1961. It will comprise about 15 acres, 10 of which are being donated to the United States by the city of Fort Smith, Ark. The act authorizes an appropriation of not to exceed $319,000 for acquisition of the remaining lands, with the proviso that no property shall be purchased until the city conveys without expense to the United States its portion of the authorized site.

The city of Fort Smith has already initiated action to transfer to the Service the designated lands, and acquisition of the remaining 5 acres will permit the establishment of the park early in the 1963 fiscal year. Funds required for land acquisition are included in the 1963 fiscal year land acquisition estimate. The site previously has had some restoration, and contains a historical museum which

attracted 25,000 visitors last year. It is necessary that the Service assume its responsibilities for management, protection, and interpretation immediately upon transfer of the lands to the United States. The increase requested for the purpose will provide for the following:

Superintendent, GS–11	$7,571
Historian, GS–9	6,448
Historian, GS–7	5,366
Information-receptionist, GS–4 (2)	8,112
Secretary, GS–5	4,347
Janitor, ungraded	3,620
Total salaries	35,464
General expenses, including contributions for retirement, health benefits, employee insurance, equipment, etc	10,736
Grand total	46,200

Operation of new Mission 66 facilities, $1,156,669.—This item has been justified in estimates for previous fiscal years since the beginning of Mission 66 and additional funds have been provided each year for the purpose. The increase requested in this estimate is the additional amount required in 1963 to meet the cost of operating new Mission 66 facilities that have been and will be placed into operation before the end of that year over and above the increases provided for the purpose in prior-year appropriations.

From the commencement of Mission 66 through June 30, 1961, a 5-year period, there were completed and placed into operation, among a wide variety of other facilities, 54 new visitor centers, 7,000 new campsites in 140 new campgrounds, 33 new amphitheaters and campfire circles with a capacity of 8,100 persons, 144 miles of new roads and 653 miles of reconstructed and improved roads, and 151 miles of new parkway sections. The programs for completing and placing into operation additional units in all of these categories will continue at a reasonably high level in the 1962 and 1963 fiscal years.

The completion and placing into operation of new units in each of these categories bring requirements for additional funds under this appropriation activity. New visitor centers require additional uniformed interpretive personnel, additional janitorial personnel, and funds for heating, lighting, telephone, and other utility services. The new campgrounds and campfire circles require additional protective and interpretive personnel (rangers, naturalists, historians, etc.), plus supporting general expense funds, including uniform allowances. New miles of roads and parkways, and, in some instances, reconstructed and reconditioned roads, require additional ranger personnel for patrol functions, plus supporting general expense funds, including such expensive items as the acquisition, operation, maintenance, and replacement of motor vehicles. Along with the direct requirements for operating new facilities there are indirect ones, such as those generated by additional administrative workload incident to the expansion in operations.

The fund requirement for operating new facilities has been recognized since the beginning of Mission 66, and appropriation increases have been granted for the purpose. However helpful as they have been, the increases so provided have not kept pace with actual needs. Also, as is the case under the "Maintenance and rehabilitation of physical facilities" appropriation, full annual requirements for a new facility are seldom provided in an increase for 1 fiscal year but must be sought partially in the estimates for succeeding fiscal years. In other words, the increases in most cases have not covered full-year requirements for the various facilities involved. For example, a new visitor center with an annual operating fund requirement of $30,000 might be placed in operation on April 1 of a fiscal year, in which case only $7,500 would be required for it that year. However, unless a further increase for the visitor center is granted in the succeeding year's appropriation, it would not be possible to operate the facility adequately, or to do so, other facets of the program would have to suffer. The placing into operation of many of the new facilities completed to date has been done at the expense of foregoing or deferring other important program features, thus compounding an already serious situation as discussed under the next heading.

The total increase requested under this heading is for application to requirements of 80 parks. The increase will provide for 99 new permanent positions and 59 man-years of temporary employment.

Operating costs brought about by increased visitor use and extension of operating season, $967,918.—As explained in prior-year estimates, this item must be considered as a companion one to the foregoing. The placing into operation of new Mission 66 facilities in many instances prior to obtaining appropriation increases for the purpose has been done at the expense of foregoing or curtailing other important facets of the park management, interpretation, and protection programs. This has been done when the visitor workload has been increasing, thus generating additional needs under this heading.

As is the case with respect to requirements for operating new Mission 66 facilities this item has also been justified in previous fiscal year estimates since the beginning of Mission 66 and increases have been provided for the purpose. However, the Mission 66 objective of providing adequate staffing and supporting general expense funds for these purposes is far from being realized. Park visitation is expected to reach 81 million in 1963 as compared to 72,288,000 in 1960 and an estimated 79 million in 1962. Only through the provision of additional uniformed personnel and supporting program assistance can minimum visitor services and park features and facilities protection requirements be met, to say nothing of improving the service to the public and providing more adequate protection of park values.

Aside from the increased visitor use of the parks during previously recognized travel seasons, use patterns are changing and extending to the degree that in some heretofore seasonal parks, public use is steadily approaching a year-round basis. New public-use areas and improvements of roads tend to spread public use within the parks. Water use and back-country use are steadily increasing. The percentage ratio of the total number of park visitors who use campgrounds has increased tremendously. All of these factors bring about progressively increasing fund requirements for management, protective, interpretive staffing, and general expenses.

The total increase requested under this heading is for application to requirements of 137 parks. The increase requested will provide for 69 new permanent positions and 60 man-years of temporary employment.

Leasing additional commercial communication facilities, $42,200.—Adequate communication services within the parks are essential for the proper management, protection, maintenance, and operation of the parks, especially in those where operations extend over wide isolated areas. Since the 1957 fiscal year there has been in progress a program for obtaining such services, both radio and telephone, on a lease-rental basis. The program has provided both for replacement of Government-owned facilities with commercial ones and for obtaining on a lease-rental basis, radio and telephone service not previously available in some parks. Some of the services and facilities heretofore provided are not adequate to meet present requirements. The increase of $42,200 will provide for improvement in commercial communication services currently available in 10 parks in 1963.

Conversion of park radio systems to narrow-band frequencies, $67,500.—On January 14, 1959, the Executive Office of the President, Office of Civil Defense Mobilization, issued a directive requiring the narrow banding of all Federal radio systems. Pursuant to that directive, the Interdepartment Radio Advisory Committee issued a memorandum to the National Park Service on March 5, 1959, requiring conversion of the radio systems in the parks to narrow-band frequencies by November 1, 1963. In view of the number and diversity of radio installations throughout the Service, the various types of equipment now in use in the parks, and the various technical problems expected to be encountered, it appeared most unlikely that all of the conversions throughout the Service could be completed by the date set. Accordingly, the Service appealed for an extension of time and was given a new deadline date of November 1, 1966.

It is estimated that the total cost of the conversion to narrow-band frequencies will exceed $400,000. The amount of $67,500 requested under this item represents fund requirements for conversions proposed to be accomplished in 1963.

A significant increase in the use of the very high frequencies (VHF) for military, aeronautical, and "space" services emphasizes the need for the Government to use the available spectrum as efficiently as is practical. Use of narrow-band or "split" channels is a major factor in obtaining more efficient use and will provide increased availability of existing transmission and receiving radio channels. The National Park Service must convert its systems or the total schedule will not be met. This could cause serious interference with radio assignments to other agencies.

To move the training center from Yosemite National Park to Grand Canyon National Park and to expand its program, $62,800.—The National Park Service training center program was commenced on a trial basis in the 1958 fiscal year as a personnel development feature of Mission 66. It was established as a necessary corollary to the development of the physical plant to insure the best possible conservation of natural resources and visitor enjoyment of the parks. It was designed primarily as an inservice activity to promote rapid orientation, indoctrination, and basic skills' development of recently appointed career employees who are meeting the public in uniform.

During the period that the program has been in progress, the training has been conducted in temporary facilities consisting of the upstairs storeroom of a museum in Yosemite National Park. Due to the inadequacy of the facilities at Yosemite, only 2 sessions of 3 months' duration, each with a maximum enrollment of 25 trainees, have been conducted annually.

The program, while limited in scope, has been a highly successful one. Substantially fuller utilization of new uniformed employees has been achieved through the orientation and training they have received under the program. In order that the program may be expanded, and that the training may be improved and broadened, a new permanent training facility is being constructed at Grand Canyon National Park with funds provided for the purpose in the 1962 fiscal year appropriation. The new facility at Grand Canyon will be ready for occupancy and the expanded training program will be ready for implementation early in the 1963 fiscal year. Whereas, 50 trainees were accommodated each year in the trial program at Yosemite, 80 trainees will be accommodated in the new facility each year at Grand Canyon. The training center at Grand Canyon will be designated as the National Park Service Western Training Center.

The present training center staff consists of a supervisor, two training specialists, and a secretary. It is proposed to increase that staff by two positions, an administrative assistant and a janitor. The services of an administrative assistant will be required to handle the additional administrative workload incident to the expanded program and to perform various functions that have heretofore been performed for the training center by the Yosemite staff. During the 5 years that the program has been in operation, much of the administrative work has been performed on a makeshift basis by various Yosemite employees. This is not a satisfactory arrangement and in view of the expanded program and plant operation responsibilities to be assumed at Grand Canyon by the training center staff, provision must be made for the services of an administrative assistant in the training center organization. The services of a janitor will be essential to the proper functioning of the training center building and dormitory facilities. Janitor services during the trial period at Yosemite were provided for the limited plant by Yosemite. The same is true with respect to the provision of various utilities—heat, light, water, sanitation service, etc., and other items required in operating the training center buildings and facilities. No provision has heretofore been made in the training center budget for such expenses; they have been absorbed by Yosemite.

As the new facilities at Grand Canyon will be additional ones for which no provision of operating funds has been made in the past, and as they will be identified as training center facilities, provision should be made in the training center budget for such costs. Additional funds will also be required to meet per diem allowances of the increased numbers of trainees, and the additional costs that will result from the payment of higher per diem allowances in some cases as authorized by Public Law 87–139. The amount of the total increase requested in the budget required for each of the items discussed in the foregoing is shown in the following:

Personnel compensation:	
Administrative assistant, GS–9	$6, 448
Janitor, ungraded	4, 680
Subtotal	11, 128
Personnel benefits	872
Total personnel compensation and benefits	12, 000
Utilities and plant operating costs	20, 800
Travel	30, 000
Total	62, 800

To establish a new training center at Harpers Ferry National Monument, $119,500.—As stated in the foregoing, the training center program at Yosemite has been a highly successful experiment. That program, however, even on the expanded basis as contemplated to be conducted at Grand Canyon National Park, still will not insure the degree of training and orientation that is required to insure the fullest and most economical utilization of the Service's manpower. Accordingly, it is proposed to establish a second training center to be designated the National Park Service Eastern Training Center, and to utilize therefor the old Storer College facilities at Harpers Ferry National Monument. It is the Service's conviction, in the light of the trial program at Yosemite, that, in the long run, the cost of the overall training center program will be more than offset through better utilization of manpower, not to mention the improved service to the public and the more adequate fulfillment of the Service's responsibilities.

The acquisition of the Storer College properties at Harpers Ferry, W. Va., was authorized by Public Law 86-655 for addition to Harpers Ferry National Monument. When funds were sought for the purchase of the Storer College properties, it was stated that the Service planned to use some of the college facilities for an additional training center.

The college is admirably located to serve as a training center, because it is only a short distance from the central Service office in Washington, D.C., yet far enough away to retain a rural, park-type atmosphere. Washington contains a pool of experts in many fields within and outside the Service, useful as teachers and discussion leaders at the center. Harpers Ferry is itself a historical national monument. The existence of varied terrain, habitats, historical features, restoration, and archeological projects and a functioning visitor services program at Harpers Ferry offer to the trainee an opportunity for varied experience in many programs. Other historical parks such as Antietam, Manassas, and Gettysburg are within easy reach for training purposes. Shenandoah National Park is relatively close at hand as is the Chesapeake and Ohio Canal and several State parks.

Whereas the western training center at Grand Canyon National Park will be geared to the big western park atmosphere and operation, the eastern training center at Harpers Ferry will give opportunities for learning historical park operations, interpretation, and advanced training in many fields. Most of the historical parks of the National Park System are east of the Mississippi. Of the 192 parks in the System, 100 are classed as historical.

Interpretation is a distinct form of public service developed by the Service from a nature guiding project at Yosemite National Park in the early 1920's. It has now reached professional status and is being started or already carried on by State parks, municipal parks, the U.S. Forest Service, and private organizations such as the National Audubon Society. Although some basic training is given on the subject at the western training center, it is not enough to train the interpreter for his professional work or to keep him up with this changing field as he progresses in his career. It is proposed that this will be done at the eastern training center which is ideally located for the purpose.

It is proposed, too, that the techniques, philosophies, and practices of interpreting natural phenomena and historic events will be perfected to a greater professional degree at the center. Advanced seminars and courses in many phases of park operations will be offered at the eastern training center calling on the professional pool in Washington to assist. Except for the basic training at the western training center, there are few opportunities for progressive training during career advancement in the National Park Service.

The location of Harpers Ferry is suited to the needs of other bureaus of the Department for occasional seminars and meetings as well as outside agencies where work is related to the Service by authority of the Historic Sites Act of 1935 and the Park, Parkway, and Recreational Study Act of 1936. As concepts of training activity change and grow, the Storer College facilities can be readily adapted to meet the needs.

It is proposed to have a professional teaching staff of four persons, one of whom will be the supervisor (but will also teach), representing the fields of protection or ranger activities, history (and archeology), and natural history.

Training is a full-time activity if it is to be adequate for present-day needs and if training is considered as preparing curricula and materials, including studies to perfect same, as well as actually teaching. The professional staff must be supplemented by an administrative assistant, a secretary, and a janitor. The permanent staff will be augmented by temporary instructors who, on occasion, will require salary reimbursement.

The amount requested will provide for the following:

Personnel compensation:	
Supervisor, GS-14	$12,230
Instructor—Protection, GS-13	10,650
Instructor—History, GS-12	8,965
Instructor—Natural History, GS-12	8,965
Administrative Assistant, GS-9	6,448
Secretary, GS-5	4,347
Janitor, ungraded	3,600
Subtotal	55,205
Less lapse	−15,500
Personnel benefits	2,795
Temporary employment, instructors	2,500
Total personnel compensation	45,000
General expenses including utilities and plant operating costs	24,500
Travel	40,000
Equipment (including 2 station wagons, 1 pickup truck, typewriters, adding machines, etc.)	10,000
Total	119,500

Additional staffing and general expense funds for ranger services functions in the Washington and regional offices, $180,300.—About 500 permanent and 700 seasonal rangers provide protective services for the National Park System. These services are coincident to over 78 million visitors annually and to the preservation and use of natural, historic, and prehistoric resources under widely diverse conditions of climate, terrain, flora, and fauna. They are related not only to varying conditions within the parks, but successful operations are dependent, too, upon coordinated cooperative effort with outside individuals, groups, and agencies with interests in or adjacent to the parks. The requirements of servicewide direction for these protection activities were recognized in 1958 when funds were provided, in part, to establish the Division of Ranger Activities (now Division of Ranger Services) in the Washington office. In 1960, additional funds were appropriated to provide for a division chief in each of the regional offices except region 5.

The organization of the Division of Ranger Services as approved by the Department on March 12, 1957, includes a Branch of Park Forest and Wildlife Protection and a Branch of Visitor Protection in the Washington office with counterparts in each of the five regional offices. Funds currently available provide for minimum staffing for the Office of the Chief of the Division and the two branches in the Washington office; for a division chief and a secretary in four of the regional offices; and partially for a Branch of Park Forest and Wildlife Protection in all the regional offices. Presently available funds do not provide for a division chief and secretary for the region 5 office or for the staffing of the Branch of Visitor Protection or for any wildlife management positions in any of the regional offices.

With the increase in protection workload generated by the increase in park visitor use and in keeping pace with other facets of the Mission 66 program, the Service's protection functions can be more effectively executed with three branches in the Division of Ranger Services in the Washington office instead of two. Accordingly, a Branch of Park Protection and Branch of Wildlife Management are being established in lieu of the originally approved Branch of Park Forest and Wildlife Protection.

The Branch of Visitor Protection for which staffing is provided only in the Washington office is responsible for providing protection and assistance to park visitors and for the protection of historic, prehistoric, and scientific values. The new Branch of Park Protection is responsible for the conservation and protection of all soil and vegetation in the parks. The new Branch of Wildlife Management, for which no regional office staffing is currently provided, is responsible for wildlife management and for maintaining natural conditions representing a proper balance between the plants and animals in the parks. The increase requested under this heading plus an increase in the amount of $15,056 requested under "Activity 2, forestry and fire control," are required to provide essential staffing for the Washington and regional office organizational units.

The increased staffing proposed for the Washington office is as follows:

Office of the Chief of the Division: Training officer, GS–13; clerk-stenographer, GS–4.

Branch of Visitor Protection: Statistician, GS–12; statistical clerk, GS–5; secretary, GS–5.

Branch of Wildlife Management: Chief of Branch, GS–14; clerk-stenographer, GS–4.

Branch of Park Protection: Forester (general), GS–12.[1]

Of the total increase requested, $58,483 is for salaries of the foregoing positions plus supporting general expense funds.

The Division of Ranger Services is one of the units through which the Service accomplishes the basic objectives provided in the act of August 25, 1916, "* * * to provide for the enjoyment of the same (parks) in such manner and by such means as will leave them unimpaired for the enjoyment of future generations * * *."

Since the Division was formed in 1957, it has functioned in a skeletal form awaiting sufficient funding and staffing so it can fully participate in the mission of the Service. If these increases are deferred or are not provided, the function of the Division to provide servicewide direction for protection activities will be seriously delayed and/or limited to the point that the Service will not meet fully its basic responsibility to protect the people and the parks. Programs must be planned to keep pace with the increase in park use. It is impossible to "catch up" after irreparable damage or avoidable visitor injuries and deaths have already occurred.

Office of the Chief of the Division

Training is a primary function of the Division in all branches and at all levels. The training officer and clerk-stenographer positions will provide direction and objectivity to the whole training responsibility in ranger services at all levels. Without adequate training, personnel are not capable of optimum performance.

Branch of Visitor Protection

The statistician and statistical clerk positions are needed to assist the present activities analysis staff, consisting of two positions, in providing data and other essential services required for management and planning as the Service meets increased visitor use. From an annual figure of 37 million visits to the parks administered just over a decade ago, the flood will reach about 79 million in 1962. There is no sign of an ebb of the tide. The system for collecting and reporting public-use statistics, which was established in 1959, signaled the generation of more than 900 separate series about visitor use and activities in the parks. These series relate to such subjects as overflow camping, patronage of concessioner accommodations, patterns of party size, dispersion of visitors within parks, comparative traffic flows through different park entrances, special uses, such as boating, swimming, and skiing; and analysis and dissemination of these data. This involves designing compilation forms, data books, and summary and analytical tables together with the performing of routine analyses for officials needing them in their planning and managing work. Without an adequate technical staff much useful data must remain in raw form. This function has increased in volume as public use has increased. It has been broadened in scope since its inception to provide analytical data for many other National Park Service planning and operating functions. Dependable data must be available in usable form if planning and management decisions are to be made on a sound basis.

The secretary position will provide clerical assistance needed in the development of rules and regulations, guides, handbooks, policies, and studies which will give direct assistance to rangers in field areas.

Branch of Wildlife Management

In the Branch of Wildlife Management, a chief and secretary will provide technical direction and coordination of a mushrooming responsibility in the Service at all levels. At present, only one management biologist is available in the Division of Ranger Services for the entire function. Native wildlife populations in the parks have increased and overbrowsed the ranges into various degrees of deterioration. Appropriate control measures must be designed and executed under expert direction to assure quick adjustment between the animals and the habitat. Approximately 14 million acres have wildlife populations needing management. Fifty-seven parks have wildlife populations of great interest to visitors

[1] Increase for this position requested and justified in "Forestry and fire control" item.

and ecologists. Programs to perpetuate these populations must be initiated to prevent loss or depreciation of this resource. Appraisals of damage must be made and methods for correction must be designed and executed under surveillance by trained technicians. There are 59 parks with over 7,000 miles of streams that support important fish populations. Without an improved program for study and management this natural resource will deteriorate. In many instances, the management of wildlife populations is a mutual responsibility of the Service and the appropriate State game agency. It is important that the Service keep abreast of new methods and techniques in management and research.

The increased staffing proposed for the regional offices is as follows:

	Region 1 office	Region 2 office	Region 3 office	Region 4 office	Region 5 office
Office of Chief of the Division:					
Division Chief, GS-14					1
Secretary, GS-5					1
Branch of Wildlife Management: Wildlife biologist, GS-12	1	1	1		
Branch of Visitor Protection: Branch Chief, GS-13	1	1	1	1	1

Of the total increase requested, $121,817 is for salaries of the foregoing positions plus supporting general expense funds.

The increase will provide for a division chief and a secretary for the region 5 office, and minimum staffing for the Branch of Visitor Protection in each of the five regional offices. It will also provide minimum staffing for a Branch of Wildlife Management in the three regional offices where the need is the greatest. Through this additional staffing, continuity and consistency of the highly diversified functions will be provided. The work is accomplished under widely varying conditions of climate, terrain, flora, and fauna. Successful operations are dependent upon cooperative efforts with many other agencies.

To meet successfully the total visitor protection responsibility, coordinated action on a Service-wide basis at all organizational levels is essential. It cannot be done on an individual park basis. Additional staffing in the regional offices is essential if the required levels of performance and accomplishment are to be attained.

The management biologist positions, the incumbents of which will serve temporarily as Acting Chiefs of the Branches of Wildlife Management in the three regional offices, will provide the Washington office and the parks with assistance in establishing adequate guidelines for the preparation, review, and operation of wildlife management programs. Specific assistance is needed in the fields of fish management, wildlife population estimates, range restoration, restocking of extirpated native species, and reduction of competing exotics. Increased liaison with cooperating Federal and State agencies will add support to a program of wildlife resource management in the parks.

Plan of work

The program contemplates a continuing effort to manage, protect, and interpret the parks and facilities administered for the estimated 81 million visitors to the parks and, at the same time, preserve park values.

Of the increase requested, about 77 percent has been applied to the operation of newly constructed Mission 66 facilities and to cover additional operating costs brought about by increased visitor use and extension of the operating season; about 6 percent is for the operation of three new parks for which funds are not now provided; about 7 percent to expand the Service's program for training uniformed employees; about 6 percent to strengthen the Divisions of Ranger Services in the Washington and regional offices; and the balance, about 4 percent is for leasing additional commercial communication facilities and initiating of a program for conversion of park radio systems to narrow-band frequencies.

In carrying out this program, the various functions are performed by Service employees, except in relatively few instances where accomplishment by contract is more practical or economical.

(B) NATIONAL CAPITAL PARKS

The estimate of $2,614,000 is an increase of $617,145. The increase consists of (1) $40,000 for operation of new Mission 66 facilities; (2) $480,000 for 62 additional U.S. Park Police and to meet increased requirements of existing force; and (3) $97,145 for additional management, administrative, and interpretative staffing plus supporting general expense funds.

Need for increase

The increases are needed to: (1) Strengthen the Park Police force as a further step toward achievement of the required staffing level as discussed in previous estimates; (2) operate and protect the first unit of the new park operations building; and (3) to provide additional management, administrative, and interpretative staffing and general expense funds to meet increased workload generated by increased visitor use and the operation of additional facilities. The following statement reflects increases in the volume of individuals using National Capital Parks facilities and/or comprising vehicular and pedestrian traffic handled by the U.S. Park Police from 1937 to 1959, from 1959 to 1961, and estimated from 1961 to 1963.

	1937	1959	1961	1963
Out-of-town visitors	3,500,000	11,000,000	16,000,000	21,000,000
Active and inactive recreation participants	15,000,000	24,300,000	26,000,000	28,000,000
Business motorists and pedestrians	30,000,000	105,400,000	108,000,000	111,000,000
Total	48,500,000	140,700,000	150,000,000	160,000,000

The attendance at the Lincoln Memorial alone was just under 3 million in 1961, or about 45 percent over the 1959 attendance. This increase in visitation and in all types of park use, together with the increasing crime rate, makes it essential that the management, interpretive, and protective programs be strengthened. Justification for each major category of increase requested follows:

Operation of new Mission 66 facilities, $40,000.—The first unit of the new park operations building, for which construction funds have been provided in the "Construction" appropriation, is scheduled for completion and occupancy by November 1, 1962. To operate the building, funds will be required for guard services, heating fuel, electricity, water, janitor services, and other building operation items. Protection of the building will require the services of five additional guards. Janitor service will require two additional employees. Fund requirements for operating the building 8 months in the 1963 fiscal year total $40,000. As the space currently occupied by employees to be housed in the new building is provided by the General Services Administration, this will be a cost to the Service for which no budgetary provision has heretofore been made. The increase requested under this heading is to meet this building operation cost for 8 months in the 1963 fiscal year.

Sixty-two additional Park Police and to meet increased requirements of existing force, $480,000.—Of the total increase requested under this heading $434,000 is to employ 62 additional police officers bringing the total strength of the force to 284 officers and civilians. With this increase, the manpower of the Park Police force will still be 92 short of the recommended strength. The increase, however, will provide a realistic start toward building a force capable of providing adequate protection.

The Park Police force is the only one in the metropolitan area operating one-man cruisers. This has been necessary to give as much geographic coverage as possible with the limited manpower but it is not accepted as satisfactory policing in a metropolitan area. In case of accident, one man cannot satisfactorily care for the injured, handle traffic, and make reports. In the case of outbreaks, one man is seldom able to handle the situation alone. It also means that whenever an officer is required to leave his cruiser, radio contact is lost thereby reducing the efficiency of the force.

After excluding officers necessary for supervision; operating communications; performing records, equipment, investigation, and training functions; handling crowds for approximately 400 special events per year and furnishing numerous escorts, less than one-half of the force is available for regular patrol duty. Considering that it takes 5 men to man a patrol post, only about 20 such posts can

be manned regularly to protect life and property in approximately 39,000 acres of park land and regulate traffic over 200 miles of roads and parkways.

All new Park Police positions provided for in recent years have been for new parks only. It is urgent that steps be taken immediately to enlarge the Park Police force to the strength that has been determined by competent authority to be necessary.

The remainder of the increase ($46,000) is needed to meet additional requirements for pension payments to the District of Columbia as required by Public Law 85-157, for training new police recruits and to improve communications.

Additional management, administrative, and interpretive staffing plus supporting general expense funds, $97,145.—Superintendent's Office, $23,00: This amount is requested to provide for a new position of park planner, GS-9, and for financing under this appropriation the position of programs and plans control officer, GS-13, currently financed under the "Construction" appropriation.

An additional park planner is needed to assist the advance planning officer who is responsible for the formulation of a long-range, comprehensive program for a system of parks for the Nation's Capital and its environs. One such new position was provided for in the 1962 appropriation. This additional planner will round out the advance planning function as now constituted. It will permit the Service to plan properly for the retention of open spaces in a rapidly expanding community to provide for parks, parkways, and recreation facilities and to cooperate with many planning agencies in the Washington metropolitan area. The existing staff is inadequate to meet this responsibility.

The programs and plans control officer position is presently financed from construction funds. The position is being so financed due to the fact that when it was established in 1956, it was concerned primarily with programing for the development of physical facilities. The duties and responsibilities of the position have since been broadened to include coordination of all National Capital Parks programs. As the primary function of the position is to provide staff assistance to the Superintendent in overall program coordination, the position should be provided under the "Management and protection" appropriation.

Administrative Division, $8,700: There is a serious need in the National Capital Parks organization for a training officer. At the present time employee relations and training functions are combined in one position. The volume of work attending the two activities has reached such proportions that each is suffering, especially since the passage of the Government Employees' Training Act (72 Stat. 327). The need for the separate training officer position has been emphasized by adverse comment in a recent U.S. Civil Service Commission evaluation survey which noted the limitations imposed on these two important functions because of one employee having responsibility for both of these in an organization having 1,200 employees. The amount requested under this heading is to provide for a training officer, GS-9, in the Branch of Personnel.

Public Use and Interpretation Division, $65,445.—Public Use Branch, $14,200: This amount is requested to employ a special events assistant, GS-9, and permit clerk, GS-4, in the Public Use Branch. Special event arrangements are now being made by the Chief of the Public Use Branch. These events, ranging from band concerts to the Pagent of Peace and the Cherry Blossom Festival here increased from 200 to 400 per year in the last 10 years. The Chief of the Branch has only been able to keep pace with the increase by working many hours of uncompensated overtime. An assistant is needed to plan and arrange for the ever-increasing number of events of national and international significance which attract visitors from all parts of the world as well as to arrange for events having only local significance.

A permit clerk, GS-4, is needed in the Information Section. The workload of this section has doubled in the last 10 years and an additional employee is needed to give necessary service to the public. The employee would be assigned to assist in handling the ever-increasing number of requests for special use and picnic permits.

Interpretation Branch, $51,245: The following increases are required to continue an adequate program of interpretation and visitor services in the face of increased visitation:

(1) Two historians, GS-5, are needed to relieve shortages of personnel at the six major memorials and historic sites. Two additional historian positions were provided for in the 1962 appropriation which, combined with the two requested herein, will provide minimum services at each site. In addition to

providing the needed personnel, this continues a program inaugurated in 1957 to improve the quality of personnel engaged in public contact work.

(2) An additional park naturalist, GS-7, is needed to meet the increasing number of conducted trips and assembly talks, and to provide interpretive services at the new Great Falls Park, Va.

(3) Three seasonal naturalists and historians, GS-4, are needed to provide interpretive services for day camps at Fort Hunt, Va., increased trips on the Chesapeake & Ohio Canal barge, and at Prince William Forest Park.

(4) An increase of $6,000 is requested to meet the cost of converting tour leader positions to a proposed new official guide series. This proposed series is also designed to improve public contact services by raising the standards of employment in this field.

(5) Four tour leaders, GS-4, are needed to extend the visiting hours at the Lincoln and Thomas Jefferson Memorials to midnight. The extension of these hours for the Lincoln Memorial has been approved by the Secretary in response to public demand and it is anticipated that the extension of the hours for the Thomas Jefferson Memorial will be approved before the beginning of the budget year.

Plan of work

The program under this activity contemplates the management, interpretation, and protection of the Federal park system of the Nations' Capital and the adjacent metropolitan area in Maryland and Virginia. The system comprises approximately 39,000 acres representing capital investments of approximately $209 million, including improvements. The functions will be performed principally by employees of National Capital Parks.

The increase will provide for park police two-man cruiser operation during the night shifts, station officers in parks now only partially covered by periodic cruiser checks, and professional and clerical assistance in meeting the needs of the management and interpretation programs.

(C) INFORMATION PUBLICATIONS

The estimate of $428,000 for 1963 is an increase of $99,590 over the amount appropriated for 1962. The increase will provide for production of additional free informational publications for distribution to park visitors and to interested persons, organizations, etc., requesting them. It will also provide a small amount for the production of additional sales publications.

Need for increase

Provision is made elsewhere in these estimates for the commencement of operations in three newly authorized parks in 1963 and four new parks were provided for in the appropriation for 1962. Informational publications should be available for each new park as soon as visitor use of it commences. Only the minimum number of publications and copies are provided during the year in which the operation of a new park commences and additional publications and increased numbers of copies are provided the next year to meet the demand as use of the park increases. Visitors to the parks are expected to increase from an estimated 79 million in 1962 to more than 81 million in 1963. Experience has demonstrated that there should be a copy of a free publication for every three park visitors. The Service's goal is ultimately to be in a position to meet that demand. With the increase requested in this estimate, one copy could be provided for every 5.1 visitors. Inadequate supplies of publications bring complaints from park visitors.

Publication of new and revised natural history and history handbooks (sales publications) has not kept pace with needs because of the heavy demands for, and increased cost of, the free publications. About 2 percent of the increase requested is programed for the publication of additional history and natural history handbooks.

The constantly increasing printing cost is a significant factor in the execution of the informational publications program. During 1961, 151 free publications were printed (11,314,000 copies) at slightly over $0.012 each. In 1962 an estimated 256 publications will be printed (13,145,000 copies) at slightly more than $0.013 per copy.

The increasing recognition of the parks administered by the National Park Service as major reserves of the scenic, scientific, recreational, and historic heritage of the American people—which contribute not only to the material

well-being of the Nation but, far more significantly, give meaning and purpose to our way of life—have placed a burden upon the Service in supplying informational material to the public and to leaders of thought and action. Dealing in a commodity so abstract, yet so real and vital to the American way of life as is in the values of the national parks, provision should be made for meeting the smallest and simplest need for informational material.

Plan of work

By and through this program it is planned to continue the production of general informational publications and their important adjuncts, the historical and natural history handbooks. Service personnel in the parks, the regional offices, and the Washington office, prepare and edit the publications and the Government Printing Office does the printing.

(D) EMPLOYEES' COMPENSATION FUND PAYMENTS

The amount of $10,000 is requested for payment to the Bureau of Employees' Compensation, Department of Labor, as required by Public Law 86-767, approved September 13, 1960.

E. Forestry and fire control

Subactivity	Amount available, 1961	Amount available, 1962	Estimate, 1963	Increase
(a) Forest management	$180,097	$205,944	$221,000	$15,056
(b) Fire protection service	701,453	737,345	837,000	99,655
(c) Tree preservation	48,644	53,936	102,000	48,064
(d) Forest fire suppression	1,281,280	100,000	100,000	
Total	2,211,474	1,097,225	1,260,000	162,775

(A) FOREST MANAGEMENT

The estimate of $221,000 is an increase of $15,056. The increase requested will provide for one additional forester position with support general expenses in the Washington office.

Need for increase

The Washington office is not able to provide adequate assistance to the parks in matters concerning forest management with the staff currently provided. The expansion of public-use facilities under the Mission 66 program, such as new and enlarged campgrounds, road improvements, and new structures, has intensified vegetation protection and structural fire control functions. Man-caused fire risks increase and vegetation protection and management become more complex with expanding use requiring close attention to investigations, planning, and programing to maintain a consistently high standard of protection of the basic forest resources, visitor-use structures, and of the people themselves. Another factor that has contributed to these deficiencies relates to the development of new methods, techniques, materials, and equipment in the fields of forest fire control and insect and disease control throughout the country. The Service must keep abreast of these new developments and adopt those that are suitable and appropriate for use and will increase the effectiveness and efficiency of protection within the parks. This requires close cooperation with other agencies and the development of technical procedures and standards for application within the parks administered.

To strengthen organizational and staff functions of the Washington office, the sum of $15,056 is requested for a GS-12 forester and for general expenses of the existing staff.

Plan of work

Technical staff direction, including investigation and planning and the development of procedures and standards for vegetation protection and structural fire control, is provided under this program by the five regional offices and the Washington office.

(B) FIRE PROTECTION SERVICE

The estimate of $837,000 is an increase of $99,655 over the amount appropriated for 1962. The increase requested is needed for the following purposes:

One new park for which funds are not now provided	$3,000
Leasing commercial communication facilities	18,000
Operation of newly construtced Mission 66 facilities	29,000
Operating costs brought about by increased visitor use and extension of operating season	49,655
Total	99,655

Need for increase

The justification for the increase under each of the foregoing items follows:

One new park for which funds are not now provided, $3,000.—Fort Davis National Historic Site, Tex., $3,000.

The amount requested will be required to procure supplies, equipment, and related fire protection service items during the estimate year.

Leasing commercial communication facilities, $18,000.—A program for providing telephone and radio service in the parks on a lease-rental basis has been in progress since the 1957 fiscal year. The program has provided for replacement of Government-owned facilities with commercial ones and for obtaining, on a lease-rental basis, radio and telephone service not previously available in some of the parks. Some of the services and facilities heretofore provided for are not adequate to meet present requirements. The increase of $18,000 will provide for new facilities or conversion of existing facilities in 11 parks in 1963.

Operation of newly constructed Mission 66 facilities, $29,000.—Additional fire control facilities and services are needed as new or enlarged public use facilities are provided under the MISSION 66 program. The provision of these expanded facilities has intensified the need to strengthen fire control and related programs. Some of the largest, most damaging, and costly forest fires are of man-caused origin, and efforts must be continuously directed toward reduction of these fires. The heavy and increasing visitor use of the parks makes this control more difficult and costly. Both increased visitor use and extensions of public use areas result in changing use patterns within the parks and adjoining areas requiring revision and expansion of the protection planning, organization and related functions to meet these increased protection requirements. A typical example of a park where almost all of the foregoing conditions exist in Petrified Forest National Monument, Ariz., where approximately 37 percent of the increase requested under this heading will be applied. The relocation of a major U.S. highway through a portion of the park, the construction of substantial new developments in a different location to better serve the visiting public, coupled with the tremendous increase in visitor use, have all contributed to a changing use pattern requiring additional funds for fire control purposes. The increase of $29,000 under this heading will provide for the employment of an additional 2.6 man-years of fire control personnel in the parks and for supporting expenses, such as acquisition of small hand tools, equipment, supplies, and materials needed to carry out the protection work.

Operating Costs Brought About by Increased Visitor Use and Extension of Operating Season, $49,655.—As indicated above, the steadily increasing use of the parks has intensified the responsibility and workload of park staffs, particularly in connection with forest and structural fire control program functions. This public use is not only increasing during normal periods but use patterns are changing and extending to the degree that in some parks such use is approaching or has already reached a year-round basis. The expansion of existing facilities or development of new public use areas and improvement of roads and trails tends to spread visitor use within the parks. Back-country use and water use are also steadily increasing, creating a greater potential for man-caused fires in isolated locations. Fire prevention and presuppression activities must be broadened accordingly. By providing additional protection services and facilities, it is hoped that there will be a significant reduction in the number and size of fires as compared with the Service's experience during the past few years. The increase of $49,655 requested for strengthening of existing program resources will provide for the employment of 2 man-years of additional fire control personnel and for necessary supporting expenses, such as acquisition of firefighting equipment, small hand tools, supplies, and various materials needed to carry on the protection work.

Plan of work

The fire control program provides services and facilities within the parks to carry out prevention on the ground, train and organize Service employees to combat fires when they do occur by the most economical means and with the least possible damage to park features.

(C) TREE PRESERVATION

The estimate of $102,000 is an increase of $48,064 over the amount appropriated for 1962.

Need for increase

The Service has employed a mobile tree crew for several years to serve the parks in the eastern and southeastern parts of the United States. This crew is highly skilled in carrying out specialized tree preservation and maintenance on shade and valuable specimen trees in public use areas of the parks and in historical parks and monuments and national cemeteries. This operation has been most successful in improving conditions and prolonging the life of these important trees and in reducing hazards to park visitors. Demands for the services of the tree crew has exceeded its ability to do the work required. In order to permit greater accomplishment on a Servicewide basis, it has been determined that a second mobile tree crew should be established. The increase of $48,064 will provide $39,273 for the establishment of a four-man tree crew for special work in the western parks, and $8,791 to add an additional position and otherwise strengthen the existing crew for special tree preservation assignments in the eastern part of the country.

Plan of work

The work plan proposes to continue the tree preservation program, but on a larger scale, with two mobile tree crews—one for the eastern and one for the western parts of the country.

(D) FOREST FIRE SUPPRESSION

The estimate of $100,000 is the same as for 1962.

Plan of work

These funds are used solely to cover forest fire suppression and emergency presuppression costs when and as they accur. They are funds which may be required in addition to the regular fire protection service and on-site management activities for fire suppression and emergency presuppression actions. Suppression involves actual on-the-ground firefighting to control fires with dispatch and at least cost. Presuppression activities include stepping up protection forces during periods of critical fire danger as a preparedness measure in the event of fire emergency.

3. Soil and moisture conservation

Amount available 1961	$104,254
Appropriated 1962	106,540
Estimate 1963	200,000
Increase	93,460

The estimate of $200,000 is an increase of $93,460. The increase is for soil stabilization on recently acquired lands and for established, long-range soil and moisture programs.

Need for increase

The Service's current program is necessarily confined to remedial maintenance only, to prevent further deterioration of land. The increase of $93,460 will insure corrective measures on additional acreage with each successive year. The objective of the program is to restore and protect those areas in the parks where damaging erosion occurred from man's use of the land. The parks requiring remedial measures are generally those comprising lands formerly used for farming or grazing purposes where little or no effort had been made to practice sound soil and moisture conservation and on those lands that have become depleted of their natural protective cover by elements or other causes. A sub-

stantial increase in funds is a prerequisite to making significant progress in this all important conservation undertaking.

Plan of work

The program consists of conservation measures in 35 parks involving land-use planning, soil stabilization and improvement, and water runoff and control. Approximately 60 percent of the estimate will be directed toward brush control, fencing, construction of checks, establishing vegetation cover, weed control and other soil stabilization measures. About 25 percent of the estimate involves water management—primarily bank protection, conduits and drops, developments and diversions. The remaining work will be land-use planning, classification and surveys. The work will largely be carried on by employees of the Service, the majority of whom will be seasonal and temporary. Park conservation measures are coordinated with programs of adjacent jurisdictions.

4. Park and recreation programs

Subactivity	Amount available 1961	Amount available 1962	Estimate 1963	Increase
(*a*) Cooperative activities	$1,049,561	$1,609,320	$2,425,000	$815,680
(*b*) Visitor services	537,371	538,280	918,000	379,720
(*c*) Lands and water resource studies	143,553	207,175	407,000	199,825
(*d*) Archeological investigations and salvage	492,441	589,200	750,000	160,800
(*e*) Historic American buildings survey	132,960	134,175	210,000	75,825
(*f*) Historic sites survey	105,369	144,520	200,000	55,480
Total	2,461,255	3,222,670	4,910,000	1,687,330

(A) COOPERATIVE ACTIVITIES

The estimate of $2,425,000 is an increase of $815,680 over the amount available for 1962. The increase is for acceleration of the programs in line with the objectives set forth in the President's special message to the Congress of February 23, 1961, on natural resources, and for a survey of a proposed national parkway from the Blue Ridge Parkway into the State of Georgia as authorized by Public Law 87-135. Of the total increase requested, $305,347 is for nationwide recreation planning, $205,167 for national park system planning, and $305,166 for cooperation with States and other agencies.

Need for increase

General.—The increase of $815,680 is requested to accelerate a going program, the objective of which is to plan for (1) conserving and developing the Nation's recreation resources at the national, State, and local levels to meet the long-range needs of the public for outdoor recreation; (2) rounding out the national park system so that it will eventually contain the most representative samples of nationally significant areas that are important scenically, scientifically and historically in the Nation's heritage; and (3) providing critically needed assistance to other Federal agencies and to States and their political subdivisions in planning adequate and well-managed park and recreation area systems.

This is a major program under Mission 66 and one of utmost importance to the future vitality of the Nation. Time is of the essence because opportunities at all levels—national, regional, State, county, and city—to reserve open spaces for outdoor recreation are either vanishing before the impact of urbanization, industrial expansion and highway construction, or being priced out of reach. Ample evidence of the need is found today in the Nation's crowded parks, and this situation is rapidly growing more serious with the increases in population, leisure time and income, earlier retirements, and improved means of transportation. In view of the critical need for preserving potential park, parkway, and recreation areas now before they are lost, and because of the impact this planning would have in bolstering economically depressed areas, the program should be accelerated at the most rapid rate possible.

Nationwide recreation planning.—The increase of $305,347 requested is to strengthen this activity and make possible more rapid identification and evaluation, in cooperation with State, metropolitan and local authorities of needed potential park, parkway and recreation areas. Special emphasis would be given

to the Appalachian Mountains region and other depressed areas in the United States as an aid in bolstering their economies through planning assistance in the proper conservation, development and increased public use of their recreation resources. They may well be the region's most valuable remaining reosurces, and they are largely untapped.

National park system planning.—The increase of $205,167 requested is to facilitate surveys and studies now in progress on a limited scale. They have as their aim the orderly addition of nationally significant scenic, historic, and scientific areas until, as nearly as possible, all such parks are protected and preserved for the use and enjoyment of future generations of Americans. These surveys and studies will provide the factual data that are needed by legislatilve and administrative officials in considering new park proposals and boundary changes. Unless many of the lands are acquired for park purposes very soon, such as those along the seashores, Great Lakes and inland lakes and waterways, they will be lost forever. The survey of the proposed parkway from Blue Ridge Parkway into the State of Georgia, as directed by Public Law 87-135, approved August 10, 1961, is to be accomplished under this heading in cooperation with the Bureau of Public Roads within the increase requested.

Cooperation with States and other agencies.—The increase of $305,166 requested is to enable the Service to provide additional urgently needed assistance to other Federal land and water resource management agencies and to States and their political subdivisions in planning for the acquisition, development and management of lands for public park and recreation purposes. It has been possible for the Service to provide only limited planning assistance heretofore below the State level. It is at the county and metropolitan levels that this assistance is most urgently needed because of mushrooming cities, suburbs and industrial complexes.

Plan of work

The major portion of the work is performed by basic staffs located in the Washington office and the five regional offices. These staffs are composed of specialists in park and recreation planning. Certain specialized phases of the program are accomplished through contracts with private and public organizations, such as universities and research foundations.

(B) VISITOR SERVICES PROGRAM

The estimate of $918,000 is an increase of $379,720 over the $538,280 appropriated for 1962. The increase consists of $300,000 to commence a strong and adequate program of history and natural history investigations, and $79,720 for additional Washington and regional office staffing to handle regular interpretive program functions.

Need for increase

There has been virtually no increase in Washington and regional office staffing for this function since the first year of Mission 66. The increase in visitor use of the parks, the addition of new parks, and the provision of the many additional interpretive facilities and devices in the parks under the Mission 66 construction program and the increase in requests for information and assistance in matters within the scope of the visitor services program from members of Congress, other government agencies, various societies and organizations, and private individuals have brought substantial increases in the regular interpretive functions workload. Available data required for reaching policy, management, and program decisions in matters within the fields of history and natural history are grossly inadequate and new problems requiring research findings are constantly arising. These needs are discussed in more detail in the following:

Additional staffing and general expense funds for regular Washington and regional office interpretive program functions, $79,720.—The regular visitor services program functions performed in the Washington and regional offices are concerned with the overall guidance of the interpretive programs in all the parks administered. These functions include the formulation of policies, guidelines and standards and the improvement of techniques and procedures required for the management and interpretation of the extremely rich and diversified natural and historical resources of the parks. Staff responsibilities include the supplying of technical advice and assistance to field areas as well as to the director and regional directors relative to interpretation; coordinating and reviewing interpretive activities in the parks; cooperating in interagency and

interdepartmental programs of interest to the Service; and maintaining close liaison and working relationships with other agencies, organizations, and individuals engaged in work with which the Service is concerned.

These interpretive functions are essential to insure maximum public enjoyment and understanding of park resources through provision of naturalist and historian services and facilities for visitors; and to provide advisory services to other agencies, commissions, societies, organizations, and State agences as authorized by law.

The interpretive program requirements of the National Park Service are directly related to the number of park visitors and the number of physical facilities in the parks. Interpretive services and facilities, including campfire programs, conducted trips, informal talks, roadside markers and museum exhibits based on scientific and historic data, are being used by increasing numbers of park visitors. Visitor use of the parks increased 4.8 percent in 1960 over the previous year. However, the number of visitors using such interpretive services as conducted trips, campfire talks, audio-visual and self-guiding devices increased 8.4 percent. It is predictable that not only will visitor use continue to increase, but the demand for personal services will show an even greater rise. This is substantiated by comparing visitor use for 1956 with that for 1960. Total park travel increased 20 percent—from 54,923,000 in 1956 to 65,827,000 (old visitor count basis) in 1960. During this 4-year period, attendance at interpretive talks increased 57 percent from 5,295,118 to 8,336,605; visitors to park museums, visitor centers, and other atteendance stations increased 30 percent from 17,968,468 to 23,416,061; and the use of self-guiding devices increased 67 percent from 24,552,789 to 40,895.

The new positions provided for in the estimate are as follows:

Washington office:	
Naturalist, GS–13	2
Clerk-Stenographer, GS–5	1
Clerk-Stenographer, GS–4	1
Region Two office: Historian, GS–12	1
Region Three office: Historian, GS–13	1
Region Five office: Naturalist, GS–13	1
Total	7

The additional positions shown in the foregoing, plus general expense funds for them and additional sums for the existing staff, are essential if Servicewide interpretive manpower is to be utilized to the fullest extent, if new developments and techniques are to be implemented uniformly and efficiently in all parks, and if park visitors are to receive interpretive services commensurate with the constantly increasing level of education of the American people.

History and natural history investigations, $300,000.—The need for a comprehensive history and natural history investigations program has been increasing over the years and has now reached the critical point. It is essential that the Service initiate without delay a comprehensive, preplanned, coordinated program to provide data required in reaching policy decisions and determining management practices for the preservation and appropriate use of historical and natural parks administered by the Service. Only $32,000 is programed within the current appropriation for such work.

The scientific and historic facts to be uncovered are needed for purposes of park preservation, use, management, interpretation, and development. It involves coordinated basic studies in all the life and earth sciences, in history and archeology, and to some degree in sociological, economic, and related fields.

The national parks and monuments have long since passed the stage where the mere drawing of boundaries and providing physical protection are sufficient to insure their preservation. They are subjected increasingly to adverse influences arising out of contrasting types of land use adjacent to them. To adjust management so as to neutralize and correct for these factors requires adequate and precise knowledge about the nature of these historic and scientific properties, and of man's influence upon them. Research is the means by which this understanding is obtained.

The parks in the National Park System provide matchless opportunities for scientific investigations because their natural environments are protected. Eventually, they may become the only places of significant scope that can remain natural as our country becomes ever more thickly populated and all other avail-

able lands are intensively managed to produce material and physical necessities of life. The Service has an ever-increasing role as a basic reference and research source. Up to the present time, however, the full potential of making the scientific values in the System available to the service of man has fallen far short of achievement.

Of the total amount requested under this heading, $75,000 is for Historical investigations and $225,000 is for Natural history investigations.

The proposed program involves five main steps: (1) Immediate attack upon problems which are of urgency, such as wildlife overpopulations, a determination of the water requirements of the Everglades, and, studies of the new historical areas so that all historic landmarks may be identified, protected and explained in the interpretive programs of those areas; (2) the development in collaboration with universities, other institutions, and Federal agencies of a research master plan for each important natural area within the system, to give direction to, establish needs and objectives, and provide the framework within which yearly project programs can be economically and effectively scheduled; (3) the performance of investigations within the framework of the master plan, chiefly by contracts with universities and by reimbursement to other Federal agencies; (4) the evaluation and application of results by the National Park Service; and (5) the publication of the more significant reports for the benefit of the Service and science generally.

The natural history investigations program proposed for 1963 fiscal year consists of two main elements:

1. Contract studies, $160,000: This provides for directing a vigorous and immediate attack upon problems now known to be of critical urgency. Of these, the Everglades presents a most vivid example. This park exists because of water supplied in the right quantity and at the proper seasons, to maintain in natural balance the fresh water, brackish water and salt water life communities. Aside from park requirements the million dollar shrimp industry of southern Florida depends in part upon the maintenance of this balance to protect spawning grounds within the park. Projects outside of the park have the capacity to control or completely shut off the flow of water in the park. Research is needed immediately to determine actions required to maintain a proper balance of water in all seasons. Comparable problems exist in Yellowstone, Grand Teton, Glacier, Rocky Mountain and other parks where scientific data are required to guide the management of wildlife populations to bring them in balance with the capacity of the ranges they occupy. In Sequoia, Kings Canyon, and Yosemite, there is need for studies of the ecology of Sequoias for these trees are endangered by soil compaction from trails, roads, and the impact of the feet of park visitors. In Olympic, Glacier, Lassen Volcanic, Sequoia and Kings Canyon and other national parks, investigations are needed to determine the status of recreational fishing resources and to develop management plans that will preserve these resources and provide their best utilization. In Death Valley, Joshua Tree, and other desert national monuments, scarce water supplies are subject to severely competitive or overlapping uses. Such competition affects the survival of animal life.

2. Staff studies and program management, $65,000: To provide more purposeful and more positive direction, it is proposed to develop for each park or research unit, a comprehensive master plan within the framework of which individual projects can be efficiently planned, programed, and executed. This will bring into relationship all scientific, historic, and sociological data necessary for policy decisions, the development of environmental management practices, and provide a continuous appraisal of the conditions of life communities involved. A comprehensive attack should be activated in four yearly stages, and reach full stature by 1966. In 1963 research projects in the following parks are in highest priority: Everglades, Yellowstone, Isle Royale, Rocky Mountain, Grand Teton, Olympic, Sequoia and Kings Canyon, Grand Canyon, and Big Bend.

The proposed Historical Investigation program includes the conduct of historical studies in 5 parks in 4 States and 1 Territory. It also consists of two main elements:

1. Contract studies, $22,000: Two studies are programed to be commenced in 1963 by contract. Physical development of the areas involved is dependent on basic investigation which must be accomplished prior to the development. The studies include: (1) A study of Danish colonial culture and the old plantation buildings and sugar factories of St. John, Virgin Islands. This study

must be completed to aid development and interpretation of the new Virgin Islands National Park; and (2) A thorough study of the historic French, English, and Early American periods of occupation and use of the Grand Portage. This study is necessary to insure the accuracy of restoration of original structures associated with the historic fur trade and the Grand Portage at Grand Portage National Monument, Minn.

2. Staff studies and program management, $53,000: Studies programed to be conducted with Service personnel include: (1) At the recently authorized Wilson's Creek Battlefield National Park in Missouri, the Service will begin a comprehensive study of this battle, its background, and its consequences, (2) To complete development and interpretation of Cabrillo National Monument in California, a comprehensive study will be made of the historical background of the explorer Cabrillo and of the Spanish, Mexican, and American associations with historic Point Loma, site of the monument; (3) Preparation of an authoritative and modern military study of the Battle of Gettysburg to be used for many development and interpretive purposes will be undertaken so that the Service can complete a comprehensive study of all aspects of this renowned military event which was the turning point of the American Civil War; and (4) To provide data needed for management, interpretation, preservation, restoration or development of new facilities purposes, similar studies will be made or commenced, as indicated, with respect to the following: "Battle of Pea Ridge, Pea Ridge National Military Park, Ark.; history of the Grand French Battery, Colonial National Historical Park, Va.; study of inscriptions at El Morro, El Morro National Monument, N. Mex.; and history of Sitka National Monument, Alaska (commence).

Personal services and other components of costs provided for in the estimate are as follows:

	Historical research	Natural history research	Totals
Research Naturalist, GS-14		$12,230	$12,230
Research Biologist, GS-12		8,965	8,965
Historian, GS-12	$8,965		8,965
Historian, GS-9	6,448		6,448
Secretary, GS-5		4,347	4,347
Clerk-Stenographer, GS-4	4,056	4,056	8,112
Total salaries, permanent positions	19,469	29,598	49,067
Less lapse	1,969	2,998	4,967
Net salaries	17,500	26,600	44,100
Temporary employment	31,000	5,000	36,000
General expenses, including personnel benefits, travel, publications, printing, supplies, materials, equipment, etc	4,500	33,400	37,900
Contract studies projects	22,000	160,000	182,000
Total	75,000	225,000	300,000

As indicated above, a minimum increase in permanent staffing is contemplated for execution of the programs. The seven permanent positions requested will be required to supervise, coordinate, and facilitate the program and to perform some of the actual investigations. Plans call for the accomplishment of a good deal of the work by permanent personnel budgeted for other functions through the provision of temporary personnel to replace them while they are engaged in the special studies.

Plan of work

The visitor services program provides the technical and scientific services and guidance in the fields of history, geology, biology, wildlife, and botany, essential to the preservation, management, interpretation, and public use of the historic and natural parks of the national park system.

The investigations program contemplates utilization to the fullest extent possible of research competence of State universities and other qualified institutions, historical societies, and of other Government agencies on a reimbursable basis. A minimum permanent staff within the Service is required to administer, plan, monitor, and evaluate the program and to translate the results into terms immediately applicable in the preservation, management, interpretation, and public

use of the parks involved. A good portion of the work will be accomplished by assignment of permanent personnel budgeted for other functions to the study projects. In such cases, the permanent employees will be replaced during periods when they are so assigned by temporary ones for which the estimate makes provision.

(C) LANDS AND WATER RESOURCE STUDIES

The estimate of $407,000 is an increase of $199,825. The increase provides for financing under this appropriation item, 10 positions concerned with land use and acquisition functions now financed wholly from land acquisition funds ($96,375) and for expansion of water resources studies to keep pace with the program for development of water systems in the parks ($103,450). The program is divided into two functions as follows:

Function	Amount available, 1961	Amount available, 1962	Estimate, 1963	Increase
Land use	$83,777	$93,625	$190,000	$96,375
Water resource studies	59,776	113,550	217,000	103,450
Total	143,553	207,175	407,000	199,825

Need for increase

Land use studies.—Staffing for the land use program in three of the five regional offices was provided for in the 1957 fiscal year appropriation and in the other two in 1958. Since that time, because of increased visitation and increased appropriations for land acquisition under the Mission 66 program, the activities relating to land use have increased tremendously. This was particularly true during the 1961 fiscal year and such activities are being stepped up substantially during the fiscal years 1962 and 1963, creating an increasing workload in the Washington office as well as the regional offices.

The increase of $96,375 provides for 10 positions in the Washington office which are currently being financed from land acquisition funds. The expansion of the land acquisition program with the attendant increase in volume and complexity of land use workload makes necessary a realinement of the staffing in the Division of Lands for accomplishing the two functions. The objective is to provide staffing for the Division under the Management and Protection appropriation to meet the workload should there be no substantial land acquisition program in progress, and to provide for additional personnel required to handle whatever land acquisition program obtains from land acquisition funds.

With the expansion of the land acquisition program in the 1962 fiscal year and as envisioned for 1963 and later years, it will be necessary to have an adequate staff of land acquisition specialists available to work exclusively on acquisition, whereas in the past, and progressively so in recent years, the incumbents of the 10 positions proposed for transfer from the land acquisition estimate have been concerned with both land use and land acquisition functions.

The land use functions pick up where the acquisition of lands program leaves off. The Service now has administrative jurisdiction over approximately 25,000,000 acres of federally owned lands and interests in lands, or about 1 percent of the area of the United States. Land use matters include highway and utility rights-of-way and easements, agricultural and grazing permits, private accesses, and continued use and occupancy reserved by owners in deeds of conveyance. There is a growing number of adverse or nonconforming uses, or applications for such uses, which must be given serious consideration and attention. These involve uses such as prospecting, mining claims and trespass, grazing permits or rights, some of which were inherited from other Federal agencies. The extensive real estate holdings of the Service require an increasing amount of special attention at all levels, in annual inventorying, reporting and record keeping, and in various and numerous other related land use matters. In addition, the staff furnishes valuable assistance in the acquisition of the non-Federal lands within the boundaries of the parks. Negotiations for some of the tracts require frequent contacts or continuous communications with the owners by regional or Washington office personnel because of the delicate nature of the local situation.

Water resource studies.—Under the Mission 66 development program, the

Service is enlarging most of its more than 1,500 water systems and constructing a significant number of new ones, which in most cases require supplemental water sources. The establishment of new parks such as Cape Cod National Seashore and the enlargement of others such as Antietam National Battlefield also requires broad studies and analysis of water resources and existing water systems and appurtenant water rights, and planning for new and enlarged water supplies. Increasing scarcity and pollution of unappropriated surface water in the Western States and the highly populated Eastern States also make it necessary to find and use many more underground water sources through supplementing the general studies with many small localized studies to select favorable well sites. It is in turn necessary to provide funds for the drilling of from one to five exploratory wells in such areas, and for their pump testing and analyses to determine the quality and quantity of such waters. Additional funds are also needed for special studies to determine proper administrative action to resolve conflicts between the Service and other water users or potential users on lands adjacent to parks.

The increase of $103,450 is needed to provide: (1) $16,500 for two positions for the region 5 office, including travel and related general expense funds; and (2) $86,950 for investigations and studies in the various parks on a reimbursable basis by the Geological Survey and other qualified governmental agencies and by contractual arrangement with outside technical specialists. Funds are included for an engineer and a clerk-stenographer in the region 5 office where newly established parks require extensive study, and for which no personnel has as yet been provided. The water resource studies must be accelerated in 1963 due in part to the addition of new parks to be administered but primarily to the fact that the situation is becoming more serious each year because of the increase in population and the heavier demand on this most valuable and life-sustaining natural resource.

Plan of work

Land-use studies.—The work plan contemplates providing technical services and guidance to the park superintendents and their staffs, relating to rights-of-way, easements, agriculture, special use and grazing permits, mining claims, and the acquisition of nonfederal inholdings within the established parks and those authorized for establishment. In carrying out this program, the functions are performed by employees of the Service at the regional and Washington office levels.

Water resource studies.—This program calls for a continuing effort to locate sources of water supply necessary for operating the parks and for use of visitors, and the determination of methods for establishment or acquisition of rights to the use of such sources in compliance with the water laws of the several States. The work is performed primarily under the technical guidance and supervision of the staffs in the regional and Washington offices, with some technical assistance provided by the Geological Survey on a reimbursable basis. Where feasible and practicable, contracts with local consulting engineers, geologists, ecologists and other professional specialists are utilized in making these technical studies.

(D) ARCHEOLOGICAL INVESTIGATIONS AND SALVAGE

The estimate of $750,000 is an increase of $160,800 over the amount appropriated for 1962. The increase will provide for acceleration of the reservoir salvage program ($95,900) and the archeological programs in the parks ($39,000); for new archeologist positions in the regions one and two offices ($16,400); and for publication of archeological reports ($9,500).

Need for increase

Acceleration of the reservoir salvage program, for which an increase of $95,900 is requested, is needed to bring it into pace with the Federal reservoir construction program. Archeological salvage must be accomplished ahead of reservoir construction and flooding or the scientific data and materials are lost forever. In some large reservoir areas, now authorized or under construction (i.e., John Day, Amistad, Carlyle, Navajo and others), the program is dangerously behind schedule; unless the salvage pace is increased, the reservoirs will be flooded before a scientifically adequate sampling (about 10 percent) can be recovered. In more than 50 smaller reservoir projects, salvage work must be started well ahead of construction to provide sufficient leadtime to accomplish the salvage ahead of flooding.

80391—62——42

Acceleration of the archeological investigations in the parks, for which an increase of $39,000 is requested, is needed to keep pace with the Mission 66 development programs. Surveys and base maps are needed in most parks for planning and development; excavations in prehistoric and historic sites are needed to provide interpretative data and exhibit material; archeological salvage ahead of park development is increasingly necessary.

Additional archeologist positions in the regions one and two offices, for which an increase of $16,400 is requested, are needed to provide assistance to the regional archeologists, to carry out investigations in the parks, and to assist park staffs in intepretative planning and development.

A small increase of $9,500 is needed to publish archeological research manuscripts now on hand. Unless the results of research are published and disseminated, the research cannot be fully utilized.

Plan of work

This program deals with archeological surveys, investigations, and/or excavations in the parks, in 25 major reservoir projects, and in many smaller projects. The major portion of the work (70–80 percent) is accomplished through contracts with qualified State and local educational institutions.

STATUS OF PROGRAM

The primary purpose of the program is to protect, conserve, and salvage archeological values within the National Park System, and on all other lands when Federal construction or other developmental activities threaten such sites. Specific objectives are: (a) to excavate prehistoric or historic structures; (b) to give professional archeological assistance in the preservation and protection of collections; (c) to investigate archeological sites and areas proposed for addition to the National Park System; (d) to give supervision and guidance to the interpretive program in archeological areas and to other areas of the Service having important archeological remains; (e) to give archeological advice to other Federal agencies and State organizations; (f) to carry out liaison work between the Federal Power Commission, private power development licensees and research institutions capable of salvaging archeological values threatened by such projects; (g) to carry out liaison work with the Corps of Engineers and the Bureau of Reclamation in the archeological salvage program in river basins; (h) to salvage and process archeological material important to scientific knowledge which would otherwise be lost through flooding or other related activities; (i) to make available to State and local museums representative collections of artifacts and objects recovered through salvage; and (j) to publish the results of field work and research so that scientific data obtained are not lost to the Nation.

Of the total program carried during 1961, approximately 79 percent was accomplished by cooperative agreements and contracts with local and State institutions qualified to carry out archeological investigations. In turn, the cooperating agencies expended more than $125,000 in cash and/or equivalent services. This involved 49 agreements with 35 institutions for investigations and salvage in 20 reservoirs and 14 service areas.

During 1962, it is planned to carry out investigations in 35 reservoir areas in 22 States and small investigations in 12 Service areas. Already 19 agreements totaling about $350,000 have been written for this work, and other such agreements are planned.

During 1963, with the increase requested, survey and salvage operations are planned in some 82 reservoirs in 29 States. This expanded program is essential to augment the work already underway, particularly in large reservoirs under construction, and to initiate survey and salvage in authorized projects where no work has been done and where sufficient lead time is an important factor. The expanded program is essential to catch up on the backlog of investigations needed in 22 parks and to accelerate the survey and base map program which is so essential to planning and development. The 1963 program as provided for in this estimate is as follows:

NPS region and project

RESERVOIR AREAS

	State	Estimate
Region 1:		
Beaver	Arkansas	$13,400
Millwood	do	13,400
DeGray	do	7,500
Carter	Georgia	6,000
Lanier (West Point)	do	7,400
Fishtrap	Kentucky	7,500
Grayson	do	7,300
Laurel	do	4,500
Devils Jump	Kentucky-Tennessee	7,500
J. Percy Priest	Tennessee	4,500
Region 2:		
Trinidad	Colorado	7,200
Saylorville	Iowa	3,900
Red Rock	do	7,200
Elk City	Kansas	7,200
Marion	do	6,500
Region 3:		
Gila River Channel	Arizona	12,000
Upper Gila	Arizona-New Mexico	6,000
Navajo and Hammond [1]	New Mexico	90,000
Two Rivers	do	3,000
Oklahoma Reservoir	Oklahoma	15,000
Amistad (Diablo)	Texas	40,000
Gulf Basins	do	55,000
Sanford	do	11,500
Glen Canyon [1]	Utah	104,000
Flaming Gorge [1]	Utah-Wyoming	15,000
SCS projects	Various	5,500
Region 4:		
Vee Dam	Alaska	2,000
Los Angeles County drainage area	California	8,500
Burns Creek	Idaho	20,000
Idaho River Basin	do	16,000
John Day	Oregon	23,000
Sexton	do	1,500
Lower Monumental	Washington	21,000
Region 5:		
Surveys, 8 reservoirs	Connecticut	3,500
Carlyle	Illinois	17,000
Shelbyville	do	11,000
Sny Basin	do	5,000
Monroe	Indina	5,000
Mississinewa	do	3,000
Survey, 1 reservoir	Maine	400
Surveys, 3 reservoirs	Massachusetts	1,000
Surveys, 2 reservoirs	New Hampshire	800
Surveys, 2 reservoirs	New Jersey	1,800
Surveys, 4 reservoirs	New York	1,500
Curwensville	Pennsylvania	3,000
Shenango	do	6,000
Stillwater	do	4,000
Surveys, 5 reservoirs	do	2,500
Surveys, 3 reservoirs	Vermont	900
Survey, 1 reservoir	Wisconsin	600
Subtotal reservoir areas		627,000

PARK PROJECTS

Region 1:		
Everglades	Florida	$5,000
Other NPS	Various	4,500
Region 2:		
Badlands	South Dakota	3,500
Colorado	Colorado	3,000
Dinosaur	Utah	6,500
Grand Portage	Minnesota	7,000
Other NPS	Various	3,000
Region 3: Walnut Canyon	New Mexico	3,000
Region 4:		
Death Valley	California	2,000
Joshua Tree	do	2,000
Hawaii Volcanoes	Hawaii	6,000
Lassen Volcanic	California	3,500
Olympic	Washington	9,000
Oregon Caves	Oregon	4,000

[1] Upper Colorado, total $209,000.

NPS region and project—Continued

PARK PROJECTS—Continued

	State	Estimate
Region 4—Continued		
Lehman Caves	Nevada	$1,000
Mount Rainier	Washington	3,000
Glacier Bay	Alaska	4,000
Crater Lake	Oregon	5,000
Region 5:		
Acadia	Maine	5,000
C. & O. Canal	Maryland-West Virginia	5,000
Isle Royale	Michigan	6,000
Morristown	New Jersey	5,000
St. Croix Island	Maine	10,000
Saratoga	New York	2,000
Subtotal, park projects		108,000
Publications		15,000
Total		750,000

Future plans for the program propose to continue with archeological investigations and excavations consistent with the purposes and objectives mentioned above. The scope of the program will vary depending on the scope of Federal construction activities which may inundate or destroy archeological sites and objects.

(E) HISTORIC AMERICAN BUILDINGS SURVEY

The estimate of $210,000 is an increase of $75,825 over the $134,175 appropriated for 1962. The increase is to provide for expansion of staff, including additional seasonal assistance, and for overall invigoration of the program above the requirements of minimal operation since its reactivation in 1958.

Need for increase

This need is geared to the appalling rate at which historic buildings and structures are disappearing on every hand. The tempo of destruction, accelerated by highway construction, urban renewal, and real estate developments, in addition to what is accepted as natural elements of attrition, underscores the urgency of the task. To make permanent records of our architectural heritage is more than ever increasingly vital to counteract these factors. Working within former budget and staff limitations, the Service has been unable to keep abreast of severe and crippling losses. The job is staggering in its needs and proportions. Add to this a growing realization of the importance of buildings beyond the cutoff date (approximately 1860), the field of concern is steadily widening, so that the mandate becomes overwhelming in its implications. There is no time to lose. The crusade ahead calls for marshalling additional financial aid to implement an expanded program. The increase requested will provide for employment of 5 additional permanent and 3 man-years of additional seasonal personnel.

Since reactivation the survey has been reconstituted to serve as a supporting arm of the Service's preservation, rehabilitation, restoration and reconstruction programs. Survey work is closely integrated and coordinated to all phases of these activities and there are a practical alignment and mutual reciprocity between the two which contribute to efficient operation. The additional funds requested will permit the Service to prosecute its work with the vigor called for, including the establishment of workable arrangements to meet increasing obligations and opportunities.

Plan of work

A large portion of the work (measured drawings) is done in cooperation with the collegiate schools of architecture. Measuring teams are recruited each summer composed of three to six carefully selected architectural students under the supervision of a professor of architecture, enabling the Service to get first rate work at a fraction of its cost by professional architects. Working closely with these universities over the years, the survey is coming to be recognized as a factor in the education of future architects. Several eastern schools are placing emphasis on historic architecture and making it a portion of their curriculums. The Service has consistently worked to cooperate with local groups in making records of early buildings threatened with demolition. Several projects of this

sort have been successfully carried out each year. What the Service is unable to preserve as a physical entity, can be included by essence and spirit in the survey.

In the dual role of conservation and education, the survey also stimulates an increasing number of gifts. Donations have built up the collections far beyond what could possibly have been accomplished with the limited fund resources available. Since the survey was revitalized, in 1958, the Service has received approximately $46,000 worth of gifts in the form of measured drawings, and historical and architectural documentation of 335 buildings. (This figure was based on the following average values: Measured drawings $125 each; photographs, negative and print $10; historical and architecural documentation, per building $20.) These valuable contributions bespeak the high regard the survey holds in the field of architectural history. Through these dividends it is felt that the Service is getting more for less money than any other comparable governmental program. The Service is therefore encouraged to request funds to expand this sound professional and productive operation. The personnel in the Design and Construction offices have developed techniques and standards and are prepared to cover a larger part of the country and to fill in neglected gaps in the record with the funds requested.

(F) HISTORIC SITE SURVEY

The estimate of $200,000 is an increase of $55,480 over the $144,520 appropriated for 1962. The increase will provide $9,500 for the publication of theme studies already completed; $6,500 for additional studies of aboriginal sites and structures on which action has been deferred due to insufficient knowledge of the sites; $26,800 for additional personal services costs to meet the requirements of the acelerated publication and Registered National Historic Landmark program; $5,200 to defray cost of marker production under the Landmark program; and $7,480 to meet increased costs of supplies, materials, equipment, and other direct expenses necessary to the administration of the Landmark program.

Need for increase

Publication of theme studies which began in fiscal year 1962 is of special urgency. To continue the publication program on schedule, an additional $9,500 is needed to defray publication costs. With the acceleration of the Registered National Historic Landmark program, increased emphasis on production of markers is required. An increase of $5,200 is necessary to defray the costs of marker production. With the simultaneous urgency of the publication program and acceleration of the Registered National Historic Landmark program, work of the Survey has expanded greatly. The amount of $26,800 is needed to add two historians and one clerk-stenographer to aid in revision and preparation of theme drafts for publication, and to maintain adequately the additional workload of the Landmark program.

In the process of work on the archeological theme studies, action has been deferred on certain legislative and other proposals involving prehistoric sites. These are on sites which appear to be of exceptional value, but which, due to absence of concrete knowledge, are not now known to possess prime significance under the Survey criteria. To discharge the Survey function in furnishing sound recommendations under the Registry of National Historic Landmarks and in the National Park System Planning, an additional $6,500 is necessary to assemble information on which to evaluate this backlog of sites.

To maintain the schedule of work on the difficult thematic studies dealing with the Nation's cultural history which is now being studied, and to keep pace with the demands of the Registry of National Historic Landmarks, an additional $7,480 is necessary to defray costs of supplies, materials, equipment needs, and other expenses related in both programs.

Plan of work

The program involves surveys and studies of historic and prehistoric sites to determine which ones are of exceptional importance in commemorating and illustrating the history of the United States and are, therefore, worthy of preservation as part of the American heritage. The program also involves preparing manuscripts for publication and the operation of the Registry of National Historic Landmarks. The work is performed by technical employees of the Service assigned to the various phases of the program, and by contracts with qualified professional historians and anthropologists outside the Service.

5. Concessions management

Subactivity	Amount available, 1961	Appropriation, 1962	Estimate, 1963	Increase
(a) Management	$141,681	$194,030	$200,000	$5,970
(b) Audit	238,215	263,500	270,000	6,500
Total	379,896	457,530	470,000	12,470

(A) MANAGEMENT

The estimate of $200,000 is an increase of $5,970 over the $194,030 appropriated for 1962. The increase requested is to meet increased general expense requirements in the Washington and Regional Offices.

Need for increase

The increased activities of concessioners resulting from accelerated improvement and expansion programs and new concessions which have been, or are to be, authorized have increased concessions management activities. This will require more travel by Regional and Washington Office concessions management officials to provide adequate field guidance and to coordinate the various interests involved; to assure contract compliance and adequate and dependabel service to the public; to negotiate new contracts; and to determine the acceptability of proposed new concessioners. The increase of $5,970 is needed to augment the general expense funds of the Washington and the four Regional Offices having Concessions Management Divisions.

Plan of work

The program contemplates general and technical supervision over the establishment, operation, and maintenance of facilities and services being, and to be, furnished by concessioners to the public, and the providing of technical assistance to the Superintendents and their staffs relating to all phases of the program, including contract compliance, business procedures, corrective measures when appropriate; and contract terms and conditions. Since visitor housing costs are of major importance, the Service will accelerate its program of exploring new developments in low-cost accommodations. In addition, the program of exploring and developing new sources of concessioner financing will be continued, as well as giving assistance, when requested, to municipal authorities, other Government agencies, both domestic and foreign, for assistance and guidance in handling matters of a similar nature.

(B) AUDIT

The estimate of $270,000 is an increase of $6,500 over the $263,500 appropriated for 1962. The increase requested is to meet increased general expense requirements.

Need for increase

Additional funds are needed to permit the existing audit staff to be in an almost constant travel status. This is necessary so that the desired 3-year audit cycle covering approximately 200 concessioners and subconcessioners geographically dispersed throughout the continental United States, Alaska, and Hawaii may be accomplished as planned. During the 1962 fiscal year it will again be necessary to use a portion of the funds programed for authorized positions to finance necessary travel. This situation has been brought about in part by having to absorb a portion of the last pay increase cost ($3,550) and the payment of higher per diem allowances as authorized by recent legislation.

Plan of work

The program entails the audit, by Service personnel, of the accounts and records of concessioners who provide food, lodging, transportation, and various other services and facilities to park visitors, to insure that provisions of the concessions contracts have been and are being complied with. It also entails financial surveys, by Service personnel, of the financial ability of prospective concessioners prior to the negotiation of contracts. The plan provides for an audit of each concession operation requiring audit once every 3 years with provision for more frequent audits in particular instances when determined to be necessary.

Itemization of estimate—Management and protection

	Actual, 1961	Available, 1962	Estimate, 1963	Increase (+) or decrease (−)
Program and financing:				
Total obligations	$20,498,090	$21,783,343	$27,240,000	+$5,456,657
Unobligated balance	10,910			
Transferred to General Services Administration		28,157		−28,157

Total obligations	20,498,090	21,783,343	27,240,000	+5,456,657

PREPARED STATEMENT

Chairman HAYDEN. If you have a statement you may put it in the record and we will be glad to have you highlight it.

(The statement referred to follows:)

STATEMENT OF DIRECTOR CONRAD L. WIRTH OF THE NATIONAL PARK SERVICE

Mr. Chairman and members of the committee, it is always a pleasure for me and members of my staff to discuss with you the programs and financial requirements of the National Park Service. This is the 11th consecutive year in which it has been my privilege to appear before this committee in my present capacity and the 7th one since the announcement of our Mission 66 program. I should like to say to you, as I did to the House subcommittee, that your sympathetic consideration and understanding of our responsibilities, problems, objectives, and budgetary needs were instrumental in making possible commencement of Mission 66. Your actions on our budget requests for subsequent years have likewise been instrumental in bringing about the progress made to date in executing the program. It is with this sense of the committee's mutual interest in the programs of the National Park Service and the part they plan and will play in the general welfare of both present and future generations of Americans that we meet with you today to discuss our plans and fund requirements for the coming year.

I am pleased to report that the year just passed was one of the best in the history of the National Park Service. In reviewing some of my prior year reports to the committee, I find that I have made this statement before. Being able to repeat it is an indication that, while our responsibilities are increasing from year to year and the program deficiencies existing at the commencement of Mission 66 have not been overcome fully, our position is being steadily improved as time goes on.

At the outset, I should like to mention the continuing increase in visitor use of the parks. I must first explain, however, that, as you no doubt have noted in our justifications, we have changed our system for counting visitors with the result that our projections for the future and the actual count for 1961 are greater than would have been the case under the former system. The change was made only after careful review of the former system and a determination made that it did not produce a realistic visitor count. For comparative purposes, the visitor count for the 1960 calendar year has been converted and reflected on the new basis in our justifications.

Under the new basis of counting, visitation totaled 79,040,000 in 1961 as compared to 72,288,000 in 1960, a 9.3 percent increase. Providing recreational op-

portunities and park experiences for such a large segment of the population and at the same time preserving the wilderness, natural and historic values of the parks was our most important accomplishment in 1961. Making this possible were the various Mission 66 accomplishments, including the provision of the many new buildings, utilities, campgrounds, amphitheaters, sanitation systems, roads, trails, parkway sections, etc., in the parks; the provision of additional personnel and other program requirements for operating and maintaining the new facilities, for meeting increased visitor workload and for correcting deficiencies in staffing and other program components existing at the commencement of Mission 66; the addition of new areas to the system and the provision of operating funds for them; the implementation of an effective training program for uniformed personnel; the acquisition of strategic privately owned lands within certain park areas and the acquisition of required water rights; and improved communication systems and facilities within many of the parks.

The Service's capacity and capability for executing large-scale construction programs have reached a very high point. Accomplishments in the development of physical facilities continue to be gratifying. Some of the accomplishments under the construction programs during the 1961 fiscal year and for the first 5 years of Mission 66 are as follows:

(1) 6 new visitor centers were completed and 16 others were under construction at the close of the year, bringing the total to 51 new visitor centers put in operation under the Mission 66 program.

(2) 3,044 new campsites were completed and 882 others were rehabilitated or improved during the year, bringing the 5-year totals to 7,442 and 4,000, respectively. Also, during the 5-year period 305 new comfort stations were completed.

(3) 78 miles of new and reconstructed walks and trails were completed, bringing the 5-year totals to 288 miles.

(4) 2 new campfire circles or amphitheaters were built for a 5-year total of 33 with an overall seating capacity of 8,100 visitors.

(5) 305 miles of roads were constructed or reconstructed during the year, bringing the 5-year totals to 797 miles of new roads added and old roads reconstructed or improved.

(6) 40 water storage and distribution projects and 35 sewer system projects were completed, bringing the 5-year totals to 305 water systems and 269 new sewer systems.

(7) 4,406 new vehicle parking spaces were added making a total of 22,440 new vehicle spaces in 887 new parking areas for the 5-year period.

(8) 102 housing units for permanent and seasonal employees and their families were completed, bringing the total to 678 for the Mission 66 period.

(9) 42 miles of new parkway sections were completed, bringing the 5-year totals to 151 miles.

The lands and water rights acquisition programs are, on the whole, progressing in a very satisfactory manner. While much preliminary work had to be done before the program for acquisition of Cape Cod National Seashore Lands could be gotten underway, I am pleased to report that such preliminary work is nearing completion and we now expect to move forward rapidly with the acquisitions provided for in the 1962 supplemental appropriation. The increases provided in the 1962 regular appropriation for land acquisition are gratifying. We are hopeful, with the program level provided for in the 1963 budget, of making real progress in overcoming this most serious longstanding problem.

With the increase provided for the purpose in 1962, we have accelerated our programs for nationwide recreation planning, national park system planning, and cooperation with States and other agencies in their park and recreation planning work. I believe maximum progress is being made within the resources available. The job, however, is a monumental one and time is of the essence. The programs must be further accelerated to a very substantial degree if the objectives set forth in the President's special message to the Congress on natural resources of February 23, 1961, are to be attained.

The program for archeological investigations and salvage has also been stepped up with the 1962 appropriation increase, but here again the time element is very pertinent. Archeological salvage must be accomplished ahead of reservoir construction and flooding or the scientific data and materials are lost forever.

Steady progress is still being made in the prosecution of the historic American buildings and historic sites surveys. It has not been possible, however, as was reported last year, to maintain the schedule originally contemplated for

these important Mission 66 features and the target completion dates have had to be extended.

1963 ESTIMATES

The estimates under consideration total $123,340,000. This is an increase of $15,380,657 over the amount provided for 1962.

The budget provides a total of $49,340,000 for the Service's various operating programs, and $74 million for its capital programs. These amounts represent increases over the 1962 appropriations for those purposes of $8,106,657 and $7,274,000, respectively.

OPERATING PROGRAMS

The appropriation items which finance the operating programs, the amounts requested for 1963, and the increases provided for in the estimates are as follows:

Appropriation item	1963 request	Increase
Management and protection	$27,240,000	$5,456,657
Maintenance and rehabilitation of physical facilities	20,000,000	2,131,000
General administrative expenses	2,100,000	519,000
Total	49,340,000	8,106,657

The increases requested for "Management and protection" and "Maintenance and rehabilitation of physical facilities" may be grouped into three categories. First, amounts for the direct benefit of programs that are concerned with the management, protection, interpretation, maintenance, and operation of the parks and the various facilities in them. The increases falling into this category total $5,693,000. Second, amounts for the indirect benefit of programs concerned with the management, protection, interpretation, maintenance, and operation of the parks and the facilities in them. The increases falling into this category total $787,000. Third, amounts that are for important programs other than those concerned with park operations. The increases falling into this category total $1,108,000.

With respect to the first category, we now estimate that park visitation will reach 86 million in 1963 as compared to 79,040,000 in 1961, and an estimate of 83 million for 1962. These figures exceed those set forth in our justifications by 1 million for 1961, 4 million for 1962, and 5 million for 1963. The figure for 1961 is the actual count. The new estimates for 1962 and 1963 are up-to-date ones based on current trends. This increase in visitor use generates increases in full requirements for all facets of park operations and maintenance. Substantial increased fund requirements for park operation and maintenance purposes also accrue from year to year as new buildings, utilities, campgrounds, picnic areas, roads, trails, parkways sections, etc., completed under the Mission 66 construction program, are placed into operation. The budget recognizes these factors, as it has for the past several years, and provides a total increase of $4,054,000 for placing the Service in a better position to handle the increase in visitor workload in the parks, including extension of the visitor season in some of them, and for operating and maintaining the various new Mission 66 facilities.

Also included in the first category, are amounts for operating and maintaining the three new areas authorized for establishment in the first session of the 87th Congress. Progress to date and anticipated in the acquisition of lands for the Cape Cod National Seashore is such as to make necessary commencement of limited management, protection, interpretation, maintenance, and other operating functions in this new area prior to beginning of the 1963 fiscal year. It is also anticipated that the lands authorized for inclusion in the Fort Davis and Fort Smith National Historic Sites, Tex. and Ark., respectively, will be in Government ownership by the early part of the 1963 fiscal year at which time funds will be required for operating and maintaining those areas. Minimum requirements for these new park areas are provided for in the budget.

In the category of items for the direct benefit of park operating programs is provision for 62 additional U.S. Park Police and more adequate general expense

funds for the existing force; for leasing additional communication facilities in the parks, and for commencement of a program for converting existing radio systems to narrow-band frequencies; for expanding the soil and moisture conservation program; for wage-rate increases; for intensifying the program for training new uniformed employees; and for improving the program for tree preservation and maintenance.

Provision of the additional park police positions will be a further step toward attainment of the staffing level that has been determined by competent authority to be necessary. This item has been discussed in prior year estimates.

The provision of additional commercial communication facilities in the parks is a continuation of a program that has been in progress since the 1957 fiscal year. The program for conversion of existing radio systems in the parks to narrow-band frequencies is being undertaken to meet a requirement of a regulatory agency. The program must be completed by November 1, 1966. The total cost is estimated to exceed $400,000, of which the sum of $67,500 is requested for 1963.

The expansion of soil and moisture conservation functions, as provided for in the budget, will bring the program level more nearly in line with the Department's long-range program.

The wage-rate increases for which additional funds are needed are already in effect and can be met only through an appropriation increase or through program retrenchments.

To intensify the program for training uniformed employees, we plan to move the existing training center from Yosemite National Park to Grand Canyon National Park, new facilities for which are now being constructed at Grand Canyon with 1962 fiscal year construction funds, and to enlarge the program. We also propose to establish a second training center at Harpers Ferry National Monument, utilizing the Storer College properties which are now being acquired with 1962 fiscal year land acquisition funds. We feel that this training program will more than pay for itself in the long run by making possible a fuller utilization of the Service's uniformed employee manpower.

The tree preservation and maintenance program would be intensified through the provision of a western mobile tree crew to supplement the present crew which serves the park areas in the East.

The increases in the second category, those for the indirect benefit of the park operating programs, include $195,000 and $80,000 to provide for the more adequate execution of ranger services and interpretative functions, respectively, in the Washington and regional offices; $200,000 for land use and water resources studies functions which are carried on in the Washington and regional offices; $12,000 for concessions management and audit functions; and $300,000 to initiate a comprehensive history and natural history investigations program.

It is essential that additional staffing and general expense funds be provided for the ranger services functions in the Washington and regional offices if the ranger services organizational units are to fulfill adequately the responsibilities for which they were established. Those responsibilities are basically the direction and coordination of all functions in the parks having to do with the protection of visitors and the park features and facilities.

There has been virtually no increase in the Washington and regional office staffing for direction and coordination of park interpretative programs since the first year of Mission 66. The increase requested for that purpose is to correct staffing deficiencies that have come about with the increase in visitor use of the parks, the addition of new areas to the System and the provision of the many and varied interpretative facilities in the parks.

The increase for land use and water resources studies will provide principally for the salaries and expenses of certain positions in the Washington office which are proper for financing under this appropriation but which are now being financed from land acquisition funds and to bring the water resources studies program to a level more nearly commensurate with the programs for acquisition of water rights and the development of water systems in the parks.

The small increase for concessions management and audit is to meet the increased cost of travel and other general expense items.

The need for a comprehensive history and natural history investigations program, for the commencement of which an increase of $300,000 is requested in the budget, cannot be overemphasized. Such a program must be undertaken at the earliest possible date if the Service is to have adequate facts and information upon which to base policy, program, and management decisions. Boundary lines in themselves are no guarantee of the integrity of a national park. Scien-

tific management of resources within them and intelligent guidance of the people who use them is also required. The national parks are complex assemblages of scientific, historic, and archeologic resources, subject increasingly to adverse influences arising from contrasting land uses around their borders and from the impact of expanding recreational use. To adjust policies and management so as to neutralize and correct for these adverse factors requires adequate and precise knowledge of the nature of the scientific and historic properties and about man's activities and influence upon him. Science, in contrast to empirical opinion, provides the safer conservation base. Research findings are needed, therefore, to back up policy decisions and action programs for the preservation, planning, development, use, and interpretation of areas now in or likely to be included in the national park system. Large sums are being spent by the Federal Government, foundations, and private enterprise in research work to determine uses to which various resources, commodities, and products can be put. In contrast to this type of research, the programs proposed in our estimates are to determine measures that should be taken to conserve the park areas and at the same time to provide for the use and enjoyment of them. The nature of the research required is such that it must be performed or directed by this Service. It cannot be done for us.

The increase of $1,107,785 requested for important programs not concerned with park operations includes $815,680 for nationwide recreation planning, national park system planning, and cooperation with States and other agencies in their park and recreation planning work for which $1,609,320 is provided in the 1962 appropriation; $160,800 for archeological investigations and salvage, for which the 1962 appropriation provides $589,200; $75,825 for the historic American building survey, for which $134,175 is available in 1962; and $55,480 for the historic sites survey, for which $144,520 is available in 1962. These are all going programs which must be accelerated in the light of the President's special message to the Congress of February 23, 1961, on natural resources and if the programs are to be prosecuted at a rate reasonably commensurate with Mission 66 objectives.

The programs for nationwide recreation planning, natural park system planning, and cooperation with States and other agencies in their park and recreation planning work are major Mission 66 features and ones of utmost importance to the future vitality of the Nation. Time is of the essence because opportunities at all levels—National, regional, State, county, and city—to preserve open spaces for outdoor recreation are either vanishing before the impact of urbanization, industrial expansion, and highway construction, or being priced out of reach. Ample evidence of the need is found today in the Nation's crowded parks and this situation is rapidly growing more serious with the increases in population leisure time and income, earlier retirements and improved means in transportation. In view of the critical need for preserving potential park, parkway, and recreation areas now before they are lost, these planning programs should be accelerated at the most rapid rate possible.

Acceleration of the archeological salvage functions in areas to be flooded, as provided for in the estimate, is necessary to bring the program into pace with the Federal reservoir construction program. As stated earlier, archeological salvage must be accomplished ahead of reservoir construction and flooding.

The historic American buildings survey must be stepped up in view of the appalling rate at which historic buildings and structures are disappearing on every hand. The tempo of destruction, accelerated by highway construction, urban renewal, and real estate developments in addition to what is accepted as natural elements of attrition underscores the urgency of this task.

The increase requested for the historic sites survey is needed for the publication of theme studies already completed, for additional studies or aboriginal sites and structures on which action has been deferred due to insufficient knowledge of the sites, and to meet requirements of the accelerated registered national historic landmark program, including the cost of marker production under the landmark program.

The increase of $519,000 requested for "General administrative expenses" provides principally for the salaries and expenses of certain staffs in the Washington and regional offices which are now proper for financing under the "General administrative expenses" appropriation but which are being financed from construction funds. It also provides for six additional positions in the Washington office and four additional positions for the regional offices, plus supporting gen-

eral expense funds, that are essential for meeting increased workload. The administrative workload in the Washington and regional offices has increased constantly since the commencement of Mission 66 during which period increases in this appropriation have provided for only six additional positions for the Washington office and no staffing increases for the regional offices. The need for the additional staffing requested in the estimate is urgent.

CAPITAL PROGRAMS

Our capital program estimates include $44 million for "Construction" and $30 million for "Construction (liquidation of contract authorization)". The "Construction" estimate provides for the following:

Building, utilities, and other facilities	$31,153,000
Acquisition of lands and water rights	12,500,000
Executive Mansion and grounds	347,000
Total	44,000,000

The "Construction (liquidation of contract authorization)" estimate provides expenditure authority for liquidation of obligations incurred, and to be incurred, under the contract authorization for parkways and roads and trails construction. The contract authorization programs for parkways and roads and construction for 1963 are in the amounts of $16 million and $18 million, respectively.

New work provided for in the capital programs include the Theodore Roosevelt Memorial project in the National Capital pursuant to congressional authorization, $1,400,000; airports to serve Grand Canyon and Yellowstone National Parks in the amounts of $880,000 and $735,000, respectively; and initial developments in five new areas for which construction funds have not heretofore been provided, $916,500. The new areas include Cape Cod National Seashore and Fort Smith and Fort Davis National Historic Sites as mentioned in the foregoing; Wilson's Creek Battlefield National Park, Mo., for which operating funds are provided in the 1962 appropriations, and Buck Island Reef National Monument in the Virgin Islands, which was established as an area in the national park system by Presidential proclamation of December 28, 1961.

The capital programs provide for additional important projects in areas commemorating the historical events of the Civil War in preparation for the centennial observances, totaling $3,654,700; for continuing to completion the work on the Jefferson National Expansion Memorial, St. Louis, Mo., $510,000; for continuing work in Independence National Historical Park, Pa., $2 million; and for continuing work commenced in fiscal 1962 in the New York City areas, $1,141,800.

Projects included in the capital programs for areas other than those mentioned in the foregoing total $22,878,100 for buildings, utilities, and other facilities; $16 million for parkways and $15,036,900 for roads and trails.

Of the total estimate for acquisition of lands and water rights $1,400,000 is for Civil War area lands; $4 million for Cape Cod National Seashore, Mass., lands; $1,500,000 for Minute Man National Historical Park, Mass., lands; $937,000 for lands to be added to the National Capital park system as authorized by Public Law 87-362; $434,000 for lands for the newly authorized Fort Davis and Fort Smith National Historic Sites in Texas and Arkansas, respectively; $162,000 for acquisition of lands within extended boundaries of certain areas as authorized by legislation enacted during the first session of the 87th Congress; and $365,000 for acquisition of water rights; leaving $3,702,000 for acquisition of inholdings in other park areas throughout the Service. The estimate provides for a realistic land acquisition program looking toward overcoming long-standing problems incident to the existence of inholdings within the park areas.

DONATIONS

Since the commencement of Mission 66 I have reported to the committee annually with regard to donations of cash, lands, and other objects received by the Service. Last year I reported that cash donations totaling $3,905,759 and donations of lands and other objects valued at approximately $5,490,340 had been received during the period from July 1, 1955, the beginning of the fiscal year in which Mission 66 was announced, through December 31, 1960. I am pleased to report that during the 1961 calendar year additional cash donations totaling $354,814 and additional donations of lands and other objects, with the

exception of the White House furnishings, valued at approximately $1,014,015 were received. This brings the total of such donations for the 6½-year period to approximately $10,765,000. No estimated values have yet been established for the approximately 240 items of furnishings which were donated during the year for the White House. We will continue our efforts to stimulate financial assistance from outside sources to help carry out our programs wherever possible.

In closing, may I again express on behalf of the Department of the Interior and the National Park Service our most sincere appreciation for the sympathetic and favorable consideration given by this committee to our budget requests in prior years, and renew our pledge to obtain the maximum benefit from every dollar appropriated to carry out the programs of the Service as approved by the Congress.

GENERAL STATEMENT

Mr. WIRTH. First, I would like to say that what we have accomplished—and I think we have accomplished considerable in Mission 66 for the national parks—is due substantially to the sympathetic consideration afforded by this committee and the House committee.

I might add that this is my 11th appearance before the committee and also the 7th year of Mission 66; so we have a lucky combination of 7-come-11, which I hope works well for us.

Chairman HAYDEN. Sometimes that works.

Mr. WIRTH. I might point out that the increase in travel last year was more than we anticipated. It is up to over 79 million in 1961 as compared with 72 million in 1960, or an increase of 9.3 percent.

I have a few figures here that I would like to read, because I think they are important, and I do not think it will take more than 2 or 3 minutes. It is in my statement, but I would like to emphasize it.

Chairman HAYDEN. Go ahead.

Mr. WIRTH. It is a progress report on Mission 66 developments. Through the 1961 fiscal year and the first 5 years of Mission 66 the accomplishments are roughly as follows:

Six new visitor centers were completed and 16 others were under construction at the close of the year, bringing the total to 51 new visitors' centers put into operation under Mission 66; and, of course, there are 16 still underway in addition to those that we have included in this budget for which we ask your approval.

There have been 3,044 new campsites completed and 882 others were rehabilitated or improved during the year; bringing the 5-year totals to 7,442 and 4,000, respectively. Also, during the 5-year period, over 300 comfort stations were completed.

Seventy-eight miles of new and reconstructed walks and trails were completed, for a total of 288 for the 5 years.

There were 305 miles of roads constructed or reconstructed during the year, bringing the 5-year total to 797 miles of new roads added and old roads reconstructed or improved.

Senator BYRD. Did you intend to overlook No. 4, Mr. Wirth?

Mr. WIRTH. I did not. I am glad you called my attention to that. Two new campfire circles, or amphitheaters, were built for a 5-year total of 33, with an overall seating capacity of 8,100 visitors.

Forty water storage and distribution projects and 35 sewer system projects were completed, bringing the 5-year totals to 305 water systems and 269 new sewer systems.

Also, 4,406 new vehicle parking spaces were added, making a total of 22,440 new vehicle spaces in 887 new parking areas for the 5-year period.

One hundred and two housing units for permanent and seasonal employees and their families were completed, bringing the total to 678 for the Mission 66 period.

There were 42 miles of new parkway sections completed in the 1961 fiscal year, bringing the 5-year total to 151 miles of new parkway constructed.

INCREASE REQUESTED IN 1963

I think I will skip over a good part of the rest of my prepared statement and just bring out certain facts: Under our 1963 budget for the "Management and protection" appropriation, as you have already indicated, Senator, we ask for an increase of $5,456,657 under our "Maintenance and rehabilitation," appropriation an increase of $2,131,000; and we are asking this year for an increase of $519,000 under our "General administrative expenses" appropriation. We have not had any great increase in the administrative expenses item over the last several years and we have necessarily financed certain functions with construction funds. This increase will allow us to transfer those positions to the appropriation they really belong in.

There was no better way of financing the Mission 66 and program staffs at the time we had to meet the situation. We are asking for funds to get straightened out on the financing this year if we could, please.

There is an actual increase of about 10 additional positions in the $519,000.

LAG IN LAND ACQUISITION

I will skip over the rest of the statement in the interest of saving time. I most sincerely hope that it will be read. Our capital improvement program is covered in detail in the material already submitted. While we are well into the Civil War centennial years now, we are lagging behind in some land acquisition and in some development. We sincerely hope that you will give us what we have suggested here in order to allow us to proceed in an orderly fashion to meet the various commemorative dates.

EFFORTS TO OBTAIN DONATIONS

I do want to report on our continued efforts to obtain donations. We received during the year money and various land and other objects, with a value of about $1,369,000, for a total of about $10,765,000 since the beginning of Mission 66. We will continue to press for that source of revenue as hard as we can. Such funds have relieved us from asking for appropriations for certain projects; to acquire lands; and also to build certain facilities; as well as to acquire certain historical documents in order to tell the true story of many of our historic areas.

I think with that, Senator, I will close and file the statement and thank you on behalf of the Department of the Interior and the National Park Service for your past favors. I had a boss once who used to say when you thank a person for past favors, it is in anticipation of future favors.

MOVING NATIONAL PARK SERVICE TRAINING CENTER

Chairman HAYDEN. We will see how much favorable consideration you will get.

Last year Congress provided $301,000 to move the National Park Service Training Center from Yosemite National Park to Grand Canyon National Park. Would you please tell us the status of this move now?

Mr. WIRTH. The new buildings are expected to be under contract within a short time. We propose to hold our first session and move into the new area this fall. We have requests for certain operating funds in here to help meet the additional requirements. It should be out for bids very shortly. We fully expect to have it constructed so we can move the training center to Grand Canyon next fall. We are asking for additional operating funds for that purpose.

ACQUISITION OF STORER COLLEGE PROPERTY

Chairman HAYDEN. Also, what is the status of the acquisition of the Storer College properties at Harpers Ferry for which funds were provided in last year's bill?

Mr. WIRTH. The area has been appraised and negotiations are now underway. We received, I believe, $300,000 last year.

HISTORIC SITES SURVEY

Chairman HAYDEN. In connection with your historic sites survey, for which you asked $200,000 during the coming fiscal year, are the studies which are published available to the public? If so, where can they be secured and at what cost?

Mr. WIRTH. We have sent copies to the congressional committee. They have not been published for public distribution. We feel that the theme studies of our historic sites survey of 22 themes and several subthemes are valuable public documents. We do not have the funds to publish them for public distribution, although in this year's estimate we have requested some funds for publishing more of them for official purposes, but you know that story. We have broken down the whole history of the United States into themes, starting from prehistory, and into discovery, exploration, settlement, the Revolution, the western expansion, and the expansion of the various industries like the cattle industry, fur trade, and things like that. They are excellent reports; and we have received favorable comments about them. These studies are bulky. We cannot distribute them to the public.

AUDITING CONCESSIONAIRE ACTIVITIES

Chairman HAYDEN. I see. In the justification for the $270,000 estimate for auditing concessionaire activities, you state that a portion of the funds which were programed for 1962 for authorized audit positions were used to finance travel. How much of the funds were used, and how many authorized positions were not filled?

Mr. WIRTH. We would have to furnish it for the record. We must keep the auditors traveling because they can't stay in Washington and get the job done. They have to be out in the field where the work is in order to do the auditing. We feel our staff is sufficient if we can afford to keep them out where the work is.

Chairman HAYDEN. That may be placed in the record.

Mr. WIRTH. Yes, sir.

(The information referred to follows:)

FINANCING TRAVEL OF AUDIT STAFF

During the 1962 fiscal year, four positions in the Office of Audits have been left vacant for various periods of time in order to assure availability of funds required to keep the audit staff in a travel status. A total of about $7,000 that would otherwise have been used for salary and related expenses has thus been made available for travel.

WILDLIFE MANAGEMENT PERSONNEL

Chairman HAYDEN. I note that included within the proposed additional staffing are wildlife management personnel. To what extent does the Park Service cooperate with or call upon the Fish and Wildlife Service for help in this general field? Are you able to secure such help as you do need?

Mr. WIRTH. We have our own problem of protection of wildlife and of maintaining the wildlife in the parks. Some of the money requested in 1963 is to do further research. We use the Fish and Wildlife Service quite extensively. However, it has to be on sort of a repay basis because they get their money for certain specific purposes. We not only use them, but we also use many of the universities on a contractual basis. Our big problem, Senator, is that, with the increased travel to the areas and the elimination of the predators around and in the parks, we are getting a great increase in certain types of animals. We have to do research work and are seriously in need of additional wildlife management personnel.

We are trying to find out how to maintain the habitat and wildlife in our parks and we need additional funds. We would contract with the Fish and Wildlife Service and with universities, and do part of the work with our own people, but wherever there is outside help we want to use it.

ADDITIONAL PARK POLICE

Chairman HAYDEN. Last year you requested funds for 25 additional park police but only about one-third of the amount requested was approved. How many additional park police were you able to employ with the money made available?

Mr. JETT. We employed 10.

Mr. WIRTH. Ten out of the twenty-five for which funds were requested.

Mr. JETT. These were for the new section of the George Washington Memorial Parkway recently completed.

Mr. WIRTH. We are asking for 62 new positions this year, sir. That would still be below what the study indicates we should have. The study was made by an outside authority on police matters, not by ourselves.

Chairman HAYDEN. This year your budget asks for 62 additional police. Will you explain to the committee why the need for this number of police at one time?

Mr. WIRTH. We are running far behind, Senator. I would like to have Mr. Jett, who has charge of that phase of our work, answer that question for you, please.

Mr. JETT. Mr. Chairman, in 1957 we had a very distinguished police official from Detroit make a study of the U.S. Park Police, and he recommended over a period of years the expansion of this force. We have never been able to keep up at the rate he proposed and, even with the 62 additional requested this year, we will be short 72 officers which we feel are required to police this 35,000-acre park system.

EVENTS HELD IN DISTRICT OF COLUMBIA

We had, for example, 400 special events in the Washington park system last year. This means that we have to bring in our force on an overtime basis in order to take care of these events. These are events like the Cherry Blossom Festival, the Christmas Pageant of Peace, the President's Cup Regatta, and things of that kind, which means that we, in turn, have to give them compensatory time off, so that we have an insufficient number of police officers to adequately police the more than 700 units in the park system.

We, for example, are only able to have one-man cruisers, which means, if we have an accident, the officer has to get out, be out of the range of his communications. The single officer system is not used any more by up and coming police organizations. The District of Columbia, Maryland, and Virginia counties have two-man cruisers. We, as I said, got 10 additional positions last year. This is the first increase of any consequence we have had in a number of years, and gives us just enough men to have one officer on duty on the newly completed section of the George Washington Memorial Parkway, generally from Key Bridge to the CIA, on an around-the-clock basis. We would strongly urge that this be approved. We are already behind in what is recommended and this would bring us up to within 72 for this year of what we have been advised to have.

Mr. WIRTH. May I add, Mr. Chairman, that I don't think many people realize that the Metropolitan Police are limited to the confines of the District of Columbia and, consequently, any handling of special visitors to the Capital coming in from the airport, or Andrews Air Force Base, or the new Dulles Airport, is a responsibility placed on National Capital parks and its police force. Persons for whom protection is provided include the President as well as others.

Perhaps I shouldn't say this, but the situation we are in worries me greatly, and I know it does Mr. Jett and our police force, because we are spread too thin. We are supposed to provide protection, but we are not doing it. Let's face the facts. That is the situation we are in and we need help. We need it badly. If something real serious happens, I know that we will be criticized for it.

RELATIONSHIP OF PARK AND METROPOLITAN POLICE

Senator MCGEE. To what extent do the Park Police carry responsibilities in the regular policing of the District, trafficwise and that sort of thing? Are they integrated in that sense?

Mr. WIRTH. They are integrated on a cooperative basis. In other words, in the District the Metropolitan Police do come into the parks and we do go out and help them. For instance, when there are parades on Pennsylvania Avenue you see U.S. Park Police. In the inauguration, you saw our mounted police in the parade.

The relationships between our police and the Metropolitan Police are very, very good and between the Metropolitan Police and our police and the surrounding police forces there is very good cooperation, but except in cases of "hot pursuit," I guess, the District Police will not go outside the District.

Senator McGee. I was thinking less of any friction than what kind of load your police had to carry in addition to the National Capital parks. For example, in traffic peaks in the District do they help out?

Mr. Wirth. We have to carry the traffic load on our own roads, which includes the Mall roads and Independence Avenue, for instance, from 15th Street down to the Memorial Bridge. We have to carry the traffic load on the Virginia side. We have to carry the traffic load on 19 miles of the Washington-Baltimore Parkway. We have to carry the load on the Suitland Parkway. We have to carry the load on the George Washington Memorial Parkway down to Mount Vernon and up to the CIA buildings. It looks now that we are going to have to carry it all the way from there to the Dulles Airport.

Senator McGee. I think the record should show that your burdens are greater than you would normally associate with the Park Police, with the arrival of dignitaries at Andrews and some other special event?

Mr. Wirth. You are absolutely correct, Senator McGee. As Mr. Jett says, one man to a car, especially when they are on night duty, is not good. It is dangerous, not only from the standpoint of losing contact or communication, but also the buddy type of operation is very much better from the standpoint of protection of the officer himself as well as for carrying out his duties.

HOURS OF OVERTIME WORKED

Mr. Jett. May I add one brief statement for the record, and that is that our police worked 16,299 hours of overtime in the 1961 leave year for which they have not been given time off. They can have compensatory time if the circumstances warrant it, but we have not been able to do that.

Mr. Wirth. That is a donation on their part of their time to carry out their jobs. It is not a healthy condition, sir.

PARK AND RECREATION PROGRAM BUDGET

Chairman Hayden. In connection with your park and recreation program budget, what amount do you propose to expend to survey the proposed national parkway from the Blue Ridge Parkway into the State of Georgia, as authorized by Public Law 135 of this Congress?

Mr. Wirth. Congress authorized a study of the proposed extension of the Blue Ridge Parkway down toward Atlanta, Ga., and $35,000 is authorized by law to make that survey. The study will go forward as soon as we get the funds, sir.

Chairman Hayden. What are you doing by way of nationwide recreation planning, for which you have asked an increase of more than $305,000 during the coming fiscal year?

Mr. Wirth. Well, we are moving forward on several fronts. The planning or the study in cooperation with the States on a national

plan for park and recreation areas at all levels of government is a cooperative business. I might say that this item was put in before the Outdoor Recreation Resources Review Commission report was issued, and, of course, before the President's message concerning this particular problem. Of course, that will, I assume, require some clearance from Congress. In the meantime, these studies should go forward in accordance with the 1936 act, whether or not a new bureau is established. I would say these estimates would certainly be needed even if the funds were later transferred to another bureau. We have the responsibility now and we have to move forward at a faster rate than we have. It is essential that we get some additional help in this field.

Chairman HAYDEN. You heard Senator Bennett testify this morning with regard to the bill that he has introduced, S. 2880, which I will insert in the record.

(The bill referred to follows:)

[S. 2280, 87th Cong., 1st sess.]

A BILL To provide for an appropriation of a sum not to exceed $80,000 with which to make a survey of a proposed national parkway in Utah connecting the national parks and monuments in the southwestern part of Utah and the national monuments and recreation areas in the south-central and southeastern parts of Utah

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That a sum not exceeding $80,000 is hereby authorized to be appropriated out of the Treasury of the United States, to be used by the Department of the Interior through the National Park Service and by the Department of Commerce through the Bureau of Public Roads, with which to make a survey of the route of a proposed national parkway (including proposed scenic loop and radial roads) connecting the national parks and monuments in the southwestern part of Utah and the national monuments and recreation areas in the south-central and southeastern parts of Utah. An estimate of the cost of an appropriate national parkway, comparable with the Blue Ridge Parkway, over the route or routes surveyed, together with such other data as may be of value, shall be obtained through the said survey, hereby authorized, for the purpose of determining the feasibility and desirability of constructing the proposed national parkway, or any portions thereof. Final report of such survey, accompanied by full information and data, with recommendations, shall, at the earliest possible date, be made and submitted to the Congress of the United States for its consideration: *Provided*, That the survey of such portions of the proposed national parkway as may be located within the exterior boundaries of a national forest shall be made in cooperation with the Secretary of Agriculture, and the comments and recommendations of the Secretary of Agriculture with respect to such portions shall be set forth in the final report to be submitted to the Congress by the Secretary of the Interior: *Provided further*, That the survey shall be made in cooperation with the State Road Commission of the State of Utah and with the cooperation of the county commissions of the counties in the areas surveyed.

UTAH PARKWAY REQUEST

Mr. WIRTH. That is the parkway, yes.

Chairman HAYDEN. The proposed Southern Utah National Parkway. Does the amount which you request for the national park system plans include this survey?

Mr. WIRTH. No; it does not.

Chairman HAYDEN. How much could you economically use for this purpose?

Mr. WIRTH. I would like to check on that and make a recommendation or submit some material, Mr. Chairman.

Chairman HAYDEN. You may place it in the record.

Mr. WIRTH. All right. That is rugged country down in southern Utah, and while there is a lot of it that we could get through, I think I would like to make a little closer analysis of how much would be needed for that.

(The information referred to follows:)

AMOUNT THAT COULD BE USED ECONOMICALLY IN 1963 IN CARRYING OUT THE SURVEY CONTEMPLATED IN S. 2280

The feasibility study contemplated in S. 2280 could be completed in 1 fiscal year. Accordingly, the National Park Service could economically use the full amount of $80,000 which the survey is estimated to cost in the 1963 fiscal year. The Service feels, however, that such a study should include not only southern Utah but the general Colorado River region in adjoining States where outstanding scenic parkway possibilities exist. This would include the area covered by S. 2280 and areas in southeastern Nevada, western Colorado, northwestern New Mexico, and northern Arizona. Such an overall study would require 2 years and would cost about $160,000.

OTHER PARK STUDIES AND ADJUSTMENTS

Mr. WIRTH. The national park system planning program includes carrying out our continuing studies as to what areas should be in the national park system and the adjustment of boundary lines. That is going on at the present time extensively. We have made quite a few studies with donated funds. Some of those are running out and we need additional funds. These studies are absolutely essential if we are going to come out within the next few years with a complete picture to Congress of what the national park system should be.

MAINTENANCE AND REHABILITATION OF PHYSICAL FACILITIES

Chairman HAYDEN. I see. The budget estimate for maintenance and rehabilitation of physical facilities, in the amount of $20 million, will be placed in the record. This is $2,131,000 more than was available to you in fiscal year 1962. The greatest portion of this increase, $1,310,000, is for buildings, utilities, and other facilities. Would you please comment upon the need for these additional funds?

(The information referred to follows:)

Broad purpose and long-range objective of program

The maintenance and rehabilitation of physical facilities program is directed toward keeping, as nearly as possible, all park physical facilities—roads, trails, buildings, utilities, etc., in their original condition, as constructed or as subsequently improved, and providing sanitation, utility, grounds maintenance and other services required by the visiting public.

A primary objective of Mission 66 is to be in a position to accomplish satisfactorily the foregoing when adequate facilities of all types have been provided and the visitor use reaches an estimated 89 million in 1966, the last year of the 10-year period.

Accomplishments during the past year

One measure of accomplishment during 1961 was the maintenance and operation of facilities which were utilized by 78 million visitors with only a few complaints of a general nature. Some of the specific 1961 accomplishments were:

1. Maintenance and operation of new and reconstructed facilities completed during the first 5 years of Mission 66, representing a construction investment of about $180 million.

2. Back country cleanup at Sequoia, good progress on long-range program for resealing roads in region 3, the repair of damage caused by storms and other acts of God in several parks, and collection and disposal of debris from the shores of Lake Roosevelt at Coulee Dam.

Objectives and program for budget year

Objectives for the budget year are to keep this segment of the Mission 66 program on schedule to the fullest extent possible.

The program for 1963 contemplates a continuation of the rise in the visitor use and increased maintenance and operating requirements due to the completion of new facilities or reconstructed facilities by the beginning of the budget year.

Increases requested totaling $2,131,000 are for:

1. New areas for which funds have not been provided	$160,000
2. Wage rate increases	367,000
3. Maintenance and operation of newly constructed facilities	1,164,300
4. More adequate maintenance and operation of facilities existing at commencement of Mission 66	439,700
Total	2,131,000

Maintenance and rehabilitation of physical facilities

Appropriation 1961	$15,000,000
Supplemental appropriation 1961	800,000
Total appropriation 1961	15,800,000
Appropriation 1962	17,869,000

SUMMARY OF INCREASES, 1963

New parks for which funds are not now provided	160,000
Wage rate increases already in effect	367,000
Maintenance and operation of new and reconstructed Mission 66 facilities	1,164,300
More adequate maintenance and operation of roads, trails, buildings, utilities, and other facilities existing at commencement of Mission 66	439,700
Net change, 1963	2,131,000
Budget estimate, 1963	20,000,000

Analysis by activities

Activity	Amount available, 1961	Amount available, 1962	Estimate, 1963	Increase
1. Roads and trails	$6,694,165	$7,298,000	$8,119,000	$821,000
2. Buildings, utilities, and other facilities	9,042,720	10,571,000	11,881,000	1,310,000
Unobligated balance no longer available	63,115			
Total	15,800,000	17,869,000	20,000,000	2,131,000

1. Roads and trails

The estimate of $8,119,000 is an increase of $821,000. The increase consists of $35,000 for two new parks for which roads and trails maintenance funds are not now provided; $142,000 for wage rate increases already in effect; $464,300 for maintaining additional or reconstructed Mission 66 roads and trails; $179,700 to provide for more adequate maintenance of roads and trails existing at commencement of Mission 66, including provision for increased visitor use workload.

2. Buildings, utilities, and other facilities

The estimate of $11,881,000 is an increase of $1,310,000. The increase consists of $125,000 for three new parks for which funds are not now provided; $225,000 for wage rate increases already in effect; $700,000 for maintenance and operation

of new Mission 66 facilities; and $260,000 to provide for more adequate maintenance and operation of old facilities existing at commencement of Mission 66, including provision for increased visitor use workload.

Need for increase.—Fund requirements for maintenance and operation of physical facilities in the parks are governed principally by the size, number, and complexity of physical plants (roads, trails, buildings, utilities, campgrounds, sanitation systems, etc.), the number of visitors accommodated, and cost levels obtaining when the work is accomplished. Large-scale construction and reconstruction programs have been underway since 1957 and are planned through the budget year, resulting in the addition of many new and improved facilities. In addition, the maintenance and operation of such facilities in new parks are commenced from year to year, all of which require additional funds. The continued heavy park visitation exerts additional burden on maintenance and operating funds, and maintenance cost levels have increased steadily since and even before the start of Mission 66.

The increases requested are needed not only to meet increased requirements currently accruing but to meet annual requirements now existing that cannot be financed adequately within present resources. All of the increases requested, except the small amounts for new parks ($35,000 under "Roads and trails" and $125,000 under "Buildings, utilities, and other facilities"), are for going programs. Justification for each of the increases summarized in the foregoing follows:

New parks for which funds are not now provided

	Roads and trails	Buildings, utilities, etc.
Fort Davis National Historic Site, Texas	$14,300	$21,600
Fort Smith National Historic Site, Arkansas		15,500
Cape Cod National Seashore, Massachusetts	20,700	87,900
Total	35,000	125,000

Information concerning each of the foregoing newly authorized parks is furnished in the "Management and protection" justification. The amounts requested under this appropriation will be required to operate and maintain the physical facilities in the new parks during the estimate years.

Wage rate increases

Roads and trails	$142,000
Buildings, utilities, and other facilities	225,000

The funds requested under this item are to cover wage rate increases in effect as of September 15, 1961, and do not take into consideration such increases that may become effective during the balance of 1962 or during 1963. It is essential that the increase be granted in order that the maintenance and operating program level heretofore provided for will not have to be lowered due to the increased personal services costs. Increases included for National Capital Parks under this item are $8,715 for roads and trails, and $47,933 for buildings, utilities, and other facilities.

Maintenance and operation of new and reconstructed Mission 66 facilities

Roads and trails	$464,300
Buildings, utilities, and other facilities	700,000

This estimate covers fund requirements for the seventh year of Mission 66. During the period that the program has been in progress, tremendous strides have been made in completing and placing into operation new and reconstructed roads, trails, buildings, utilities, campgrounds, and many other types of facilities. The completion and placing into operation of these new facilities increases the maintenance and operating workload and fund requirements in the parks.

This item has been justified in the estimates for previous fiscal years since the beginning of Mission 66 and additional funds have been provided each year for the purpose. The increase requested in this estimate represents additional needs in 1963 to meet the cost of maintaining and operating new Mission 66 facilities that have been and will be placed into operation before the end of that year over and above the increases provided for the purpose in prior-year appropriations.

Experience of all agencies points up the fact that for the first 3 or 4 years after a road has been constructed or reconstructed, maintenance costs for drainage and shoulder and slope stabilization work are particularly high. Reconstructed roads are built to a higher standard with lesser grades, wider roadway, shoulders, ditches, and flatter slopes to safely handle increased visitor use. Accordingly, for reconstructed roads maintenance costs are higher than for the old roads due to need for more frequent mowing, roadside cleanup and the increased surface to be maintained on the improved road.

The maintenance and operation of new buildings, such as visitor centers, administration buildings, utility buildings, comfort stations, entrance stations, et cetera; new and improved campgrounds, new and improved utility systems; and other varied types of facilities provided in the parks under the Mission 66 construction program bring about heavy increases in annual fund requirements. While some of these new facilities replace old ones for which maintenance funds have previously been provided, most of them represent plant expansion, the maintenance and operation of which can be accomplished only through the provision of appropriation increases, or on a substandard basis through lowering the standard of maintenance of other facilities.

Many facets of the workload comprising the maintenance and operation of buildings, utilities, and other facilities are obvious and immediately recognized. However, it might not be fully understood that the placing into operation of a new campground requires, in addition to funds for maintaining guard rails, fireplaces, picnic tables, et cetera, substantial amounts for sanitation and other cleanup service, including the replacement of garbage and trash containers as they become unserviceable. Also, in placing a new comfort station in operation, in addition to requirements for painting, plumbing repairs, structural repair, et cetera, the much more costly sanitation service must be performed several times daily while the facility is receiving heavy visitor use. Many other similar operating costs, in addition to the more obvious maintenance ones which have a bearing on the Service's maintenance and operating fund requirements, could be cited.

The increases requested in this estimate must be provided if the new facilities are to be operated and maintained at standards that will protect the Government investment and adequately serve the visiting public during the estimate year. The increase requested under this heading will enable the Service to maintain the new facilities substantially at standards that will preclude costly restoration and rehabilitation requirements in later years. Increases included for National Capital Parks under this item are $88,400 for roads and trails, and $147,000 for buildings, utilities, and other facilities.

To provide for more adequate maintenance and operation of roads, trails, buildings, utilities, and other facilities existing at commencement of Mission 66

Roads and trails	$179,700
Buildings, utilities, and other facilities	260,000

Since the beginning of Mission 66, the two major purposes for which increases have been requested in the "Maintenance and rehabilitation" appropriation have been: (1) for operating new Mission 66 facilities; and (2) for more adequate maintenance of facilities existing at the commencement of Mission 66, including additional requirements incident to increase in visitor use of those faclities. The Service has had to consider the two items as companion ones in its budget requests inasmuch as, in many instances, it has been necessary to apply amounts appropriated for operating facilities existing upon commencement of Mission 66 to meet the cost of maintaining and operating new facilities, thus creating a greater need for the latter purpose. The latter requirement has been further boosted by the increased visitor use to which the various facilities have been subjected. While substantial headway has been made through appropriation increases in providing for more adequate maintenance of facilities existing when Mission 66 was commenced, the standard of maintenance as contemplated in the Mission 66 program has not as yet been attained. Also, as long as the visitor use workload continues to increase, it will be necessary to request additional funds for this purpose. The increases requested in this estimate will make possible continued progress in overcoming deficiencies in this phase of the maintenance and operation of physical facilities program.

Aside from the increased visitor use of the parks during previously recognized travel seasons, use patterns are changing and extending to the degree that in

some heretofore seasonal parks public use is steadily approaching a year-round basis. New public use areas and improvements of roads tend to spread public use within the parks. Water use and back-country use are steadily increasing. The percentage ratio of the total number of park visitors who use campgrounds has increased tremendously. All of these factors bring about progressively increasing maintenance and operation fund requirements.

Increases included for National Capital parks under this item are $16,907 for roads and trails, and $55,697 for buildings, utilities, and other facilities.

Plan of work.—The roads and trails program provides for maintenance and operation of primary and secondary roads, parkways, airport landing strips, and trails in such a manner as to prevent deterioration in the maintenance of existing mileage, and to provide adequately for new and reconstructed mileage. Maintenance plans and estimates are prepared by engineers based upon field inspections of existing conditions. The proposed increases will be allocated for the purpose mentioned above under the "Need for increase." Practically all of the functions under the roads and trails maintenance programs are performed by technical, skilled, and unskilled employees of the Service assigned to these activities.

The buildings, utilities, and other facilities program provides for the maintenance, preservation, and operation of all physical facilities in the parks other than roads and trails. These facilities include buildings, structures, utilities, campsites, campgrounds, picnic facilities, prehistoric ruins, memorials, historic structures, scientific and historical, archeological artifacts, improved grounds, et cetera. As construction projects are completed, many diverse facilities must be maintained and operated to either directly or indirectly serve the visiting public. Many of the tasks required to be performed are routine housekeeping functions, such as cleaning and picking up litter, but there are also facilities which involve highly technical work, such as the operation of water, sewer, and sanitation systems, audiovisual installations, and the preservation of priceless historic structures, paintings, and furnishings.

The major portion of the buildings, utilities, and other facilities maintenance and operating functions are carried out by employees of the Service assigned specifically to those tasks.

Itemization of estimate—Maintenance and rehabilitation of physical facilities, National Park Service

	Actual, 1961	Available, 1962	Estimate, 1963	Increase
Program and financing:				
Total obligations	$15,736,885	$17,869,000	$20,000,000	$2,131,000
Unobligated balance	63,115			
Appropriation	15,800,000	17,869,000	20,000,000	2,131,000
Obligations by objects:				
11 Personnel compensation	9,991,063	11,410,000	12,976,000	1,566,000
12 Personnel benefits	627,226	712,000	824,000	112,000
21 Travel and transportation of persons	136,104	145,000	152,000	7,000
22 Transportation of things	95,707	100,000	108,000	8,000
23 Rents, communications, and utilities	626,094	675,000	702,000	27,000
24 Printing and reproduction	8,669	10,000	11,000	1,000
25 Other services	861,898	970,000	1,015,000	45,000
26 Supplies and materials	2,064,028	2,382,000	2,612,000	230,000
31 Equipment	1,312,184	1,465,000	1,600,000	135,000
32 Lands and structures	5,133			
42 Insurance claims and indemnities	8,779			
Total obligations	15,736,885	17,869,000	20,000,000	2,131,000

AMOUNT REQUESTED

Mr. WIRTH. As new facilities are developed and put into use and, believe me, they are being used—we need the maintenance funds for these buildings and utilities. It is a wise expenditure for the protection of the buildings and to keep them serviceable. These requests are based on past experience on similar operations. With the new

facilities coming into use throughout the national park system an increase of $700,000, is needed for maintaining and operating them.

WAGE BOARD RATE INCREASES

You will also note that of that increase of $1,310,000 there is $225,000 for a wage rate increases which are already in effect.

Chairman HAYDEN. That is the wage board?

Mr. WIRTH. That is the wage board increase throughout the country.

Chairman HAYDEN. You had a supplemental on that this year?

Mr. WIRTH. There is one pending. The pending one is for 1962; this is for 1963, but these increases are in effect now.

The 1962 supplemental covers the ones that have been put in effect since the 1962 budget was prepared.

NATIONAL PARK SERVICE—CONSTRUCTION

Chairman HAYDEN. The budget estimate for construction, acquisition of lands and water rights, and maintenance and protection of the Executive Mansion and grounds will be placed in the record. For these purposes an estimate of $44 million has been submitted. This is $3,385,740 more than the amount available in 1962.

(The information referred to follows:)

Broad purpose and long-range objective of program

This program provides for the construction of buildings, utilities, and other facilities in the parks and improvements for the Executive Mansion and Grounds; the acquisition of privately owned lands within the parks; and the acquisition of water rights to serve the parks. The objective of the program is to equip adequately the areas administered with structures and facilities needed for the safety and enjoyment of park visitors and for efficient administration, maintenance, and conservation; to acquire all lands within the areas that are needed to carry out the purposes for which the areas were established; and to acquire and establish such water rights as are needed to meet visitor and park operating requirements. An objective of Mission 66 is to prosecute these programs on the basis of providing adequate structures, facilities, lands and water rights for the proper administration, maintenance, and conservation of the parks and to meet the needs of more than 89 million visitors by 1966, the last year of the 10-year period.

Accomplishments during the past year

During 1961 nearly $18,500,000 was obligated for the construction of camping and picnicking facilities, public service and administrative units, utilities, employee housing, and miscellaneous items. Among accomplishments during 1961 were the completion of 6 new visitor centers with 16 others under construction at the close of the year; the provision of 3,044 new campsites and rehabilitation or improvement of 882 existing campsites; the provision of 101 additional comfort stations; the completion of 84 utility systems; the completion of 102 housing units for permanent and seasonal employees; and the completion of 2 new campfire circles or amphitheaters.

In addition, about $2,211,000 of appropriated and $27,000 of donated funds were obligated for the acquisition of lands and water rights. Some 6,000 acres of inholdings were acquired by purchase, donation, and exchange (exclusive of boundary adjustments) for addition to 33 areas of the national park system. Water rights acquisition functions were carried on in 75 parks with major activities in 10. Accomplishments included purchase of 1 well site and related access, drilling and testing numerous wells, installation and operation of about 50

water and tidal measuring gages, and extensive surveys and analyses of water resources and water use in several parks.

Objectives and program for budget year

The 1963 budget provides for constructing facilities for park purposes and visitor use which are of the highest priority throughout the Service, including Executive Mansion and Grounds improvements; an expanded land acquisition program, including acquisitions for newly authorized areas and lands within recently authorized extended boundaries of existing areas, giving first priority to parcels that stand in the way of developments and those on which private developments are contemplated which would be adverse to public use and enjoyment of the parks; and the acquisition and establishment of water rights at a substantially higher level than in 1962.

The program for the budget year contemplates obligating $31,153,000 for the construction of 613 projects affecting 123 parks located in 34 States, plus the territories and the District of Columbia; $12,135,000 for land acquisition; $365,000 for acquisition of water rights; and $347,000 for improvements at the Executive Mansion and Grounds.

Construction

Appropriation 1962		$34,476,000
Supplemental appropriation 1962		2,250,000
Total appropriation 1962		36,726,000
Unobligated balance from prior years		3,888,260
Total available for obligation		40,614,260
Decreases:		
Buildings, utilities, and other facilities	$30,560,379	
Acquisition of lands and water rights	9,058,844	
Parkways	3,974	
Roads and trails	991,063	
		40,614,260
Subtotal		
Increases:		
Buildings, utilities, and other facilities		31,153,000
Acquisition of lands and water rights		12,500,000
Executive Mansion and grounds		347,000
Total available for obligation		44,000,000
Budget estimate, 1963		44,000,000

Analysis by activities

Activity	Amount available, 1962	Estimate, 1963	Total available, 1963 compared to total available, 1962
1. Buildings, utilities, and other facilities	$30,560,379	$31,153,000	+$592,621
2. Acquisition of lands and water rights	9,058,844	12,500,000	+3,441,156
3. Parkways	3,974		−3,974
4. Roads and trails	991,063		−991,063
5. Executive Mansion and Grounds		347,000	+347,000
Total	40,614,260	44,000,000	+3,385,740

1. Buildings, utilities, and other facilities

The estimate of $31,153,000 is an increase of $2,257,000 over the $28,896,000 appropriated for 1962 and an increase of $592,621 compared to the amount available for 1962 due to carryover balances. The increase includes $825,000 for projects in new parks and for other new work authorized by the 87th Congress and $30,328,000 for carrying out previously authorized projects.

Need for funds.—1963 will be the seventh year of the Service's 10-year Mission 66 program. Execution of the program provided for in the estimate will be another step forward in achieving the objective of completing sufficient developments to accommodate visitors to the parks as contemplated in Mission 66. The estimate again provides for important developments in areas commemorating the historic events of the Civil War in preparation for the centennial observances; for continuing to completion, work on the Jefferson National Expansion Memorial National Historic Site, St. Louis, Mo.; and for continuing work on the Independence National Historical Park, Pa.; and New York City areas. It also includes funds for initial developments at five new parks; for two airports, one at West Yellowstone, Mont., and the other at Tusayan (near Grand Canyon National Park) Ariz.; for limited improvements at one national historic site not in Federal ownership; and for the construction of a memorial to Theodore Roosevelt in the National Capital. The numbers of visitors to the parks are continuing at a very high level, with increases expected each succeeding year of the foreseeable future. Accommodations and services for these people are a prerequisite to preserving the parks for future generations. The types of facilities proposed for construction within the amount of the estimate for this activity are as follows:

Camping and picnicking facilities	$3,200,000
Public service and administrative units	15,152,000
Utilities	5,028,000
Employee housing	3,950,000
Miscellaneous	3,823,000
Total	31,153,000

By the end of 1962, the Service will have increased the number of camping spaces to 20,500 or 8,500 more than those it had at the beginning of Mission 66. The Mission 66 goal is 30,000 camping spaces, but if the campground use trend continues to increase, this goal must be increased. The amount of $3,200,000 programed for camping and picnicking facilities under this activity includes such items as site development; water, sewer, and power systems; tables; fireplaces; garbage receptacles; comfort stations; and shelters.

The $15,152,000 programed for public service and administrative units will provide facilities which give direct service to the visitor and all units essential to proper administration, such as visitor centers, museums, wayside exhibits, contact stations, comfort stations (except those located in campgrounds), administration buildings, entrance stations, fire lookouts, utility buildings, and observation stations, among other things. Construction of these facilities will increase efficiency in park operations by replacing, enlarging or modernizing facilities constructed 20 or more years ago, when visitors numbered only a quarter of what they do today, and by providing new facilities in parks in which there have been no developments.

The $5,028,000 scheduled for utilities is to serve the above-mentioned public service and administrative units, and will provide the necessary services for new concessioner developments or expansions. Utilities are programed only for those parks where commercial facilities are not available or economically feasible.

The $3,950,000 included for employee housing provides for continuance of the program for providing satisfactory living quarters for park personnel. The title "employee housing" refers to facilities for housing permanent and seasonal employees, such as detached residences, duplex residences, apartments, motel-type multiple quarters, dormitories, and bunkhouses.

The miscellaneous item of $3,823,000 includes items such as entrance motifs, fences, docks, signs, seats, memorials, and grading, seeding, and planting, for public service and administrative units. Fencing is necessary for utility areas to protect Government equipment, and boundary fencing in some of the western parks is necessary to eliminate livestock trespass and prevent overgrazing

This estimate, and the one for roads and trails under the appropriation title "Construction (liquidation of contract authorization)" include funds for newly authorized parks as follows:

	Roads and trails	Buildings, utilities, etc.	Total
1. Cape Cod National Seashore, Mass.	$70,000	$340,000	$410,000
2. Fort Davis National Historic Site, Tex.	1,500	250,000	251,500
3. Fort Smith National Historic Site, Ark.		100,000	100,000
4. Wilson's Creek Battlefield National Park, Mo.	20,000	100,000	120,000
5. Buck Island Reef National Monument, V.I.		35,000	35,000
Total	91,500	825,000	916,500

Information concerning the first three of the foregoing newly authorized parks is furnished in the "Management and protection" justification. Details of individual projects proposed for construction in each of these new parks during the 1963 fiscal year are shown in the program schedules. However, they are summarized here for convenience in review, including certain other information concerning the last two.

At Cape Cod National Seashore, it is proposed to demolish undesirable structures and restore grounds at Camp Wellfleet (a former Army base); and to construct a bathhouse, including water, sewer, and power facilities. It is estimated that $340,000 will be required for this purpose, in addition to $70,000 which will be required under the roads and trails construction activity primarily for reconstructing portions of existing roads, trails, walks, paths, and parking areas.

At Fort Davis National Historic Site it is proposed to construct facilities estimated to require $251,500, including $40,000 for rehabilitation and stabilization historic structure; $85,000 for a visitor center; and 125,000 for utilities, and three employee residences.

At Fort Smith National Historic Site, it is proposed to expend $100,000 for repairing and stabilizing existing historic structures, obliterating nonhistoric structures and site improvements, visa clearings, and ground improvements.

Wilson's Creek Battlefield National Park, Mo., was authorized for establishment by Public Law 86–434, approved April 22, 1960. The legislation provides for acquisition by gift, purchase, condemnation, or otherwise, of the lands (with improvements thereon) comprising the Wilson's Creek Battlefield Site, near Springfield, Mo., and any other lands adjacent to such site which are necessary or desirable to carry out the purposes of the authorizing act. The park boundaries have been determined and will encompass a total land area of 1,730 acres, of which approximately 37 acres comprise the memorial site being donated to the United States for park purposes. It is anticipated that the bulk of the remaining acreage will be acquired by the State of Missouri and donated to the United States for inclusion in the park. Operating funds for the area were provided in the 1962 appropriation. The amount of $100,000 is included in this estimate for constructing two employee residences, a utility building, pumphouse, utilities, signs, and markers. In addition, $20,000 is included for constructing an entrance and service roads, under another appropriate estimate.

Buck Island National Monument in Virgin Islands, lying 1½ miles off the northeast coast of St. Croix Island, and 5 miles east of Christiansted, was established by proclamation on December 28, 1961. The monument contains 850 acres of land and waters. The surrounding coral reefs and undersea formations constitute some of the outstanding marine gardens in the entire Caribbean region. The 1963 estimate of $35,000 will provide living quarters for an employee to be stationed on the island, utilities including water and sewage disposal facilities, and grounds improvements.

Other projects of special interest are discussed briefly, as follows:

New York City areas (Federal Hall National Memorial, Castle Clinton, and Statute of Liberty National Monuments): The New York City National Shrines Advisory Board appointed by the Secretary, as authorized by the act of August 11, 1955 (69 Stat. 632), as amended, reported to Congress in September 1957,

outlining a development and rehabilitation program for these historic shrines. The Secretary of the Interior may accept donations of funds for rehabilitating, preserving, and developing the historic properties, including any donations made upon condition that amounts equal to the donated funds are appropriated for such purposes. The Board, the Federal Hall Memorial Associates, Inc., and the Committee of the American Museum of Immigration are extremely interested in assisting the Service in completing the physical development for these parks in time for the New York World's Fair in 1964. The 1962 fiscal year appropriation provided $1 million to commence the program. The estimate includes $1,141,800 to continue the work in 1963.

Independence National Historical Park, Pa.: The act of August 27, 1958 (Public Law 85-764), authorized the appropriation of $7,250,000 for developing Independence National Historical Park, Philadelphia, Pa. The amounts of $871,100, $900,000, and $1,260,000 were provided for the 1960, 1961, and 1962 fiscal years, respectively, and the amount of $2 million is included in the 1963 budget estimate to finance the maximum amount of work possible for completion by June 30, 1963.

Jefferson National Expansion Memorial, Mo.: Current authorizations for the appropriation of Federal funds for developing Jefferson National Expansion Memorial, St. Louis, Mo., in accordance with plans approved by the U.S. Territorial Expansion Memorial Commission and the Department of the Interior total $17,250,000. Based on a $1 to $3 ratio provision of the authorizing legislation, non-Federal funds in the total amount of $5,750,000 must be contributed from non-Federal sources, making a total authorized program of $23 million. The non-Federal matching funds have either been contributed or are assured in the full amount of $5,750,000. Through the 1962 fiscal year $16,740,000 of Federal funds have been appropriated. The $510,000 included in the 1963 budget estimates will provide the balance of Federal funds authorized for this project.

Observation of centennial dates in Civil War areas: The program for accomplishing developments in the areas of Civil War significance is being kept on schedule, despite pressing demands for funds in other parks. Barring unforeseen contingencies, this noteworthy objective will become a reality.

Airports, Tusayan (near Grade Canyon National Park), Ariz.: and West Yellowstone, Mont.: The act of March 18, 1950 (Public Law 463, 81st Cong.) authorized the Secretary to participate in construction of airports under the Federal Airport Act of May 13, 1946 (60 Stat. 171), in, or in close proximity to the national parks, monuments, and recreation areas administered by the National Park Service. The act authorized an appropriation not to exceed $2 million for this purpose. The budget estimates include funds for two such projects, in the amounts shown:

Airport	Total estimate	Federal Aviation Authority contribution	National Park Service share
Tusayan, Ariz. (near Grand Canyon National Park)	$2,200,000	$1,320,000	$880,000
West Yellowstone, Mont	1,383,000	648,000	735,000
Total	3,583,000	1,968,000	1,615,000

(*a*) Broken down by National Park Service appropriations, as follows:

Appropriation and activity title	Tusayan, Ariz.	West Yellowstone, Mont.	Total
Construction, National Park Service: Buildings, utilities, etc.	$160,000	$165,000	$325,000
Construction (liquidation of contract authorization): Roads and trails	720,000	570,000	1,290,000
Total	880,000	735,000	1,615,000

The Arizona Aviation Authority has indicated willingness to jointly sponsor the Tusayan Airport project. Upon completion of the project, it is proposed that title to the federally owned or controlled lands, together with improvements, be vested in the Arizona Aviation Authority under section 16 of the act of May 13, 1946, as amended (60 Stat. 171), thus relieving the Federal Government of further expense of maintenance and operation of the airport. Similarly, the Montana State Aeronautics Commission has agreed to maintain and operate the proposed West Yellowstone Airport.

Dorchester Heights comprising an area of 5.43 acres in non-Federal ownership, was designated as a national historic site on April 27, 1951, and is administered by the Department of Parks, Boston, Mass., under terms of a cooperative agreement. The site memorializes the actions of the American Colonies in forcing the evacuation of Boston by the British in March 1776. The accomplishment was a major boost to the morale of the Thirteen Colonies at a most critical stage in the Revolution. The summit of Dorchester Heights is surmounted by a 115-foot tower and steeple structure which was dedicated on March 17, 1902. An excerpt from the report of the Boston National Historic Sites Commission to the Congress of the United States on June 16, 1960, follows:

"Provision of adequate corrective measures for Dorchester Heights may well call for a larger measure of active participation by the Federal Government. The assistance provided from time to time by the National Park Service has been satisfactory insofar as it has been possible under the existing cooperative agreement. Both the impressive model monument and the sloping area around it, however, remain as fundamental problems in rehabilitation that has been too long postponed."

Only in unusual situations does this Service request the appropriation of Federal funds for major improvements to historic sites in non-Federal ownership. The proposed expenditure of funds for improvement of the Dorchester Heights appears to be warranted, and would involve the planting and improvement of grounds and general rehabilitation of the monument structure. All of the work contemplated with the $50,800 included in this estimate would be conditioned entirely upon the assurances of local authorities that once the improvements had been made, the area would be maintained and protected in keeping with its historical importance.

The Theodore Roosevelt Memorial, estimated to require $1,400,000, is to be located on the Theodore Roosevelt Island in the Potomac River, immediately north of the Arlington Memorial bridge. The memorial was authorized by Public Law 86-764, approved September 13, 1960. The memorial design has been approved by the children of Theodore Roosevelt, the Commission of Fine Arts, and the National Capital Planning Commission. As of January 1, only the formal approval of the Theodore Roosevelt Association was still needed to comply with requirements of the authorizing legislation. This approval is expected momentarily.

Plan of work.—The program contemplates continuing with construction of physical facilities in the parks to meet current administrative and visitor needs and to provide for handling about 89 million visitors by 1966.

For the most part, the plans, estimates, and supervision for the construction work are carried out by professional employees of the Service, although in individual cases it is desirable and possible to procure the services by contract with outside professional firms. The major portion of the construction will be performed under contract with some minor projects being accomplished with day-labor forces employed by the Service.

Listing of projects amounting to $100,000 and over in the 1963 fiscal year buildings and utilities program

REGION 1

Appomattox Court House NHP (Viriginia): Reconstruct courthouse building, vilage area	$172,500
Cape Hatteras NSRA (North Carolina): Park general, Beach erosion control and stabilization	400,000
Fredericksburg and Spotsylvania NMP (Virginia): Chancellorsville, construct maintenance and storage buildings, including equipment and furniture	117,100
Kennesaw Mountain NBP (Georgia): Construct vistitor center, including exhibits, audiovisual installation, furniture, and furnishings	212,400
Petersburg NMP (Virginia): Battery 5 area; construct visitor center, including exhibits, audiovisual installation, furniture, and furnishings	195,100
Vicksburg NMP (Mississippi): Construct visitor center, including exhibits, audiovisual installation, furnture, and furnishings	200,000
Virgin Islands NP (Virgin Islands): Cruz Bay development, construct visitor center, including exhibits, audiovisual installation, furniture, and furnishings	208,300

REGION 2

Colorado NM (Colorado): Saddlehorn area, visitor center, including exhibits and audiovisual	214,000
Dinosaur NM (Colorado):	
Artesia headquarters:	
Construct water system	168,200
Employee residences (8)	160,000
Maintenance and storage building	200,000
Fort Laramie NHS (Wyoming): Fort area, rehabilitation of historic structures, Bldg. No. 1, Old Bedlam (complete)	100,000
Glacier NP (Montana):	
Logan Pass, information center, including exhibits	175,000
Fish Creek campground, reconstruct water and sewer	118,800
Grand Teton NP (Wyoming): Moose headquarters, employee housing (permanent), 8-unit apartment or 7 duplex units	147,600
Jefferson National Expansion Memorial NHS (Missouri): Completion, walls, arch, site work, etc	510,000
Rocky Mountain NP (Colorado):	
Fall River Pass:	
Construct water and sewer systems	117,600
Construct alpine visitor center	150,000
Grand Lake entrance: Utility system	125,300
West Yellowstone Airport, West Yellowstone (Montana): Terminal building, utilities, landscaping, etc	165,000
Yellowstone NP (Wyoming):	
Mammoth:	
Employee residences (5)	100,000
Clinic building, including equipment and heated ambulance storage	152,200
Lake: Water reservoir No. 2	240,000
Bridge Bay: Boat docks and related facilities	176,000
Norris campground (100 sites): Construct utilities	150,000

REGION 3

Canyon de Chelly NM (Arizona): Visitor center and exhibits ($30,000), interpretive and museum equipment, lobby and office furniture and furnishings, grounds improvement, and related facilities	147,600
Grand Canyon NP (Arizona):	
South Rim:	
Utility buildings	340,600
Locate and repair leaking waterlines to complete loop in zone 2	116,500

Listing of projects amounting to $100,000 and over in the 1963 fiscal year buildings and utilities program—Continued

REGION 3—continued

Mesa Verde NP (Colorado):	
Water supply rehabilitation	250,000
Archeological surveys, excavations, and ruins stabilization, Wetherill Mesa	169,000
Navajo NM (Arizona):	
Visitor center, including exhibits ($30,000), interpretive and museum equipment, lobby and office furniture and furnishings, grounds improvement, and related facilities	133,000
Utility systems, water, sewer, power, and gas	117,000
Organ Pipe Cactus NM (Arizona):	
Utility building, including walls, fences, etc	141,800
Employee residences (5)	100,000
Tusayan Airport (Near Grand Canyon NP, Arizona): Terminal building, landscaping, utilities, etc	160,000
Walnut Canyon NM (Arizona): Visitor center, including exhibits ($20,000), interpretive and museum equipment, lobby and office furniture, grounds improvement, and related facilities	115,300
Wupatki NM (Arizona): Visitor center, including exhibits and cases ($35,000), interpretive and museum equipment, lobby and office furnishings and furniture, grounds improvement, and related facilities	115,000

REGION 4

Crater Lake NP (Oregon):	
Headquarters:	
Employee residences (12 units)	240,000
Utility and shop storage	100,000
Equipment storage	100,000
Rim area: Acquisition of lodge and conversion to visitor center	129,300
Joshua Tree NM (California): Oasis headquarters, visitor center	126,200
Lassen Volcanic NP (California): Southwest development area utilities	112,400
Mount McKinley NP (Alaska): Rehabilitate hotel water system	124,000
Mount Rainier NP (Washington):	
Ohanapecosh:	
Equipment storage, shop, gasoline and oil building	115,300
Southeast information center and exhibits	153,000
Sequoia and Kings Canyon NP's (California):	
Ash Mountain:	
Administration building	349,800
Warehouse building	225,000
Grant Grove:	
Visitor center	209,900
Residences (6)	120,000
Multiple-use building	222,200
Yosemite NP (California):	
El Portal: Reconstruct water system, existing community	120,000
Crane Flat: Water, power, and sewer systems	200,000

REGION 5

Acadia NP (Maine): Hardin farm site residential area, east side employee housing (2), seasonal multiple units (8)	101,600
Cape Cod NS (Massachusetts):	
Demolition of undesirable structures, Camp Wellfleet	180,000
Bathhouse, including utilities	130,000
Edison Laboratory NM (New Jersey):	
Laboratory group: Install central heating system	224,000
Glenmont group: Structural repair, rehabilitation and exterior, and interior painting of Edison home	147,100
Federal Hall NMEM (New York): Rehabilitation of exterior; painting interior; elevator installation; museum exhibits, flagpole, etc	400,000

Listing of projects amounting to $100,000 and over in the 1963 fiscal year buildings and utilities program—Continued

REGION 5—continued

Harpers Ferry NM (West Virginia):	
Rehabilitation and restoration of historic structures	100,000
Alterations and rehabilitation of Storer College, structures and grounds (portion), including historical, archeological, and architectural research	240,000
Independence NHP (Pennsylvania):	
Rehabilitate and restore McIlvaine House	130,100
Rehabilitate Congress Hall, including furnishings ($117,300)	142,200
Rehabilitate Independence Hall (stage I, completion)	250,000
Reconstruct Hibbard-Marshall houses	213,900
Rehabilitate Yoh Building (park office)	298,000
Rehabilitate and restore Bishop White House, including furnishings ($35,000)	225,000
Rehabilitate and restore Dilworth-Todd-Moylan House, including furnishings ($44,800)	138,900
Rehabilitate Kidd houses, Bldgs. Nos. 16 and 17	250,000
Perry's Victory NM and IPM (Ohio): Rehabilitate exterior of monument shaft	125,000
Statue of Liberty NM (New York):	
American Museum of Immigration:	
Structural frame and enclosing walls	251,500
Architectural finish work	100,000

REGION 6 (NATIONAL CAPITAL PARKS)

District of Columbia:	
Park operations building	1,129,000
Improvements, small parks and reservations	427,000
Southwest renewal area C, pedestrian mall, overlook to P St. SW	265,000
Southwest renewal area C–1, park development	382,400
Theodore Roosevelt Island, construct memorial	1,400,000

STATUS OF MISSION 66 CONSTRUCTION PROGRAM

The estimate will go far in keeping the program up to the approximate level contemplated when the Mission 66 estimates were originally made. This estimate takes into account the increase of about 30 percent in general construction costs since 1955 and provides for many projects which were not in the original Mission 66 program. Since funding of the Mission 66 program was initiated beginning with the 1957 fiscal year (6 years), $302,887,600 has been appropriated for park developments. As of April 1961, approximately $315 million would be required to complete the program by the end of the 1966 fiscal year, and at the same time provide for special projects not contemplated at the time the program was initiated.

2. Acquisition of lands and water rights

Subactivity	Amount available, 1962	Estimate, 1963	Total available, 1963, compared to total available, 1962
(a) Acquisition of lands	$8,642,277	$12,135,000	+$3,492,723
(b) Acquisition of water rights	416,567	365,000	−51,567
Total	9,058,844	12,500,000	+3,441,156

(a) Acquisition of lands

The estimate of $12,135,000 is an increase of $4,535,000 over the amount of $7,600,000 appropriated for fiscal year 1962, and an increase of $3,492,723 over the amount available for that year due to carryover balances, including a supplemental appropriation of $2,250,000 for land acquisition at the Cape Cod Na-

tional Seashore, Mass. The program for 1963 provides for the acquisition of lands as follows:

Civil War areas	$1,400,000
Cape Cod National Seashore, Mass	4,000,000
Minute Man National Historical Park, Mass	1,500,000
National Capital parks	937,000
Newly authorized parks	434,000
Extension of boundaries in existing parks	162,000
Inholdings in various park areas	3,702,000
Total	12,135,000

Need for funds.—Privately owned and State-owned lands within the areas of the national park system constitute a major problem in the management, protection, maintenance, operation, and development of the individual areas in which they lie. Of the total of approximately 22,950,000 acres in the system, about 460,000 were privately owned or State owned as of October 1, 1961, including the recently authorized Cape Cod National Seashore and the Fort Davis and Fort Smith National Historic Sites. Until these privately owned lands within the park boundaries are acquired, some of the consequences which must be endured are:

1. Private development and operation of facilities within the parks and monuments over which there is no public control but which owe their profit-making capacity to park visitors.
2. Cutting of timber with consequent scars and impairment of park scenery.
3. Operation of undesirable establishments or activities.
4. Creation of real estate subdivisions.
5. Conduct of land-scarring mining operations and, after the cessation of mining, the existence of mining debris and of deteriorating structures.
6. Costly delays in needed developments or greater expense because of the necessity of "going around" private lands or establishing public developments in less desirable locations.
7. Construction of commercial and other structures on lands whose acquisition thereafter becomes more expensive.

As new areas are authorized for establishment from year to year and as boundaries of existing areas are enlarged the land acquisition fund requirement increases. The funds requested in this estimate are needed for the land acquisition program, as follows:

Civil War areas, $1,400,000.—The Civil War Centennial extends from 1961 to 1965. Many of the areas of the Service were established in commemoration of historical events of that war. Several of these Civil War parks need further development or restoration of original scenes so as to provide for sound visitor use, understanding, and enjoyment of them. Acquisition of certain lands for addition to those areas is a prerequisite to such development and restoration in many instances. The amounts of $450,000, $400,000, and $600,000 were provided for this purpose in the 1960, 1961, and 1962 appropriations, respectively. The amount of $1,400,000 included in the estimate is required to continue and accelerate the program in 1963.

Cape Cod National Seashore, Mass., $4,000,000.—The largest single item in the program is the amount for lands for Cape Cod National Seashore. The act of August 7, 1961 (75 Stat. 284), authorizes appropriations of not to exceed $16 million for land acquisition. In the supplemental appropriation for the 1962 fiscal year, $2,250,000 was provided to start the land acquistion program. The amount of $4 million included in the estimate is required to continue an orderly program in 1963.

Minute Man National Historical Park, Mass., $1,500,000.—The act of September 21, 1959 (73 Stat. 590), providing for establishment of the Minute Man National Historical Park authorized an appropriation of $5 million to acquire lands necessary for the park. The 1961 appropriation provided $500,000 to commence this land acquisition program. The 1962 appropriation provided $2,500,000 to continue the program. The amount of $1,500,000 requested in the estimate is needed to continue an orderly acquisition program for this area in 1963. This amount plus previous appropriations would provide $4,500,000 of the $5 million authorization.

National Capital parks, $937,000.—Public Law 87-362, approved October 4, 1961, authorized the preservation and protection of certain lands in Prince

Georges and Charles Counties, opposite Mount Vernon, by the acquisition of lands and scenic easements in order to preserve as nearly as possible the view from George Washington's home in the condition existing during his lifetime and to prevent intrusion on an archeologically valuable site. The expanding population of the Washington metropolitan area is continually creating threats of adverse uses to the territory surrounding and across the river from Mount Vernon, including proposals, such as the installation of a sewage disposal plant, an oil tank development, and construction of a sewer line which would dump effluent, raw and untreated, into the nearby Potomac River. These threats have been warded off so far, but pressures continue to build up. Acquisition of the land and scenic easements authorized, with the $937,000 requested for the purpose, would ward off intrusions and preserve the view from Mount Vernon.

Newly authorized parks, $434,000.—Recent legislation which authorized the establishment of two national historic sites, Fort Davis, Tex. (Public Law 87-213) and Fort Smith, Ark. (Public Law 87-215), also authorized the appropriation of $115,000 and $319,000, respectively, to acquire the necessary lands and interests in lands to provide for establishment of the areas. It is important that the Service move forward with the acquisition program at the earliest possible date so that the lands may be brought under Federal control. The amount of $434,000 is requested for this purpose.

Extension of boundaries in existing parks, $162,000.—Legislation enacted during the first session of the 87th Congress authorized the extension or revision of boundaries of four existing parks: (1) Cumberland Gap National Historical Park (Public Law 87-111); (2) Effigy Mounds National Monument (Public Law 87-44); (3) Fort Necessity National Battlefield Site (Public Law 87-134); and (4) Scotts Bluff National Monument (Public Law 87-68). As most of the additional acreage involved in the new authorizations is in need of protection or is threatened with adverse uses, it should be brought under Federal control at the earliest possible date so that the purposes for which the legislation was enacted can be achieved. It is contemplated that the Commonwealths of Kentucky and Pennsylvania will share in the cost of acquiring the lands for Cumberland Gap and Fort Necessity. It is, therefore, incumbent upon the Federal Government to provide funds for its share of the cost without delay.

Inholdings in various parks, $3,702,000.—The value of the privately owned inholdings in the parks after 1962 (not including new authorizations, such as Cape Cod National Seashore) is estimated at $45 million. The amounts appropriated for the past several years have alleviated many complex problems in connection with management and development of the parks, but the Service still has a long way to go. The rate of progress in acquiring these privately owned lands has not been as rapid as desired. With the passage of time, it is proving to be more and more expensive to the Government. The amount of $3,702,000 requested for the acquisition of inholdings in various parks would be applied to requirements of highest priority throughout the Service and will go a long way toward reaching the objective as contemplated in Mission 66.

Plan of work.—The program contemplates acquiring all of the privately owned lands within the parks administered by purchase with appropriated or donated funds, through land exchanges, and by acceptance of gifts of lands. The work is performed generally by employees of the Service supplemented by outside consultant or advisory services when more practical and economical to do so.

(b) Acquisition of water rights

The estimate of $365,000 is an increase of $135,000 over the amount of $230,000 appropriated for the 1962 fiscal year, but a decrease of $51,567 under the amount available for that year due to carryover balances. The increase is needed to permit the acceleration of this phase of the Mission 66 program to bring it more in line with the operating needs as a result of increased visitor use and expanded development programs.

Need for funds.—More than 1,500 water systems in the parks administered are being supplemented or enlarged under the Mission 66 development program to provide more water for which water rights must be acquired or established. Increasing numbers of the Eastern States are adopting regulatory or appropriative water laws which will not conflict with the basic riparian doctrines. These laws and related regulations are particularly applicable to the use of underground water and the drilling, development, and use of wells. As a result, the Service must establish increasing numbers of State permits and appropriative water rights for increasing water use from systems which have formerly been operated under the riparian water laws.

With the increased public use of the parks, more water must be obtained than is available in surface water sources. This can only be accomplished by preliminary geological investigations and subsequent exploratory test well drilling. The increasing need for such wells has been brought about by the increase in prior appropriations of the national water resources in many areas where the parks are located. Florida and Mississippi, among other States, have adopted laws which define riparian rights as those to the average 5-year minimum surface flow or ground water level during the past 20 years. These minimums now have to be estimated and revised as more data are obtained. The urgent need for wells and gages in the Everglades, of which a few have been installed, is due to the basic drainage program on adjacent tributary land, by the central and southern Florida flood control project of the Corps of Engineers. In many of the other Eastern States, it is necessary to drill and pump test several wells to define the extent of small ground water basins and determine the safe withdrawals which will not affect the yield of other wells deriving their water from the same sources.

The estimate of $365,000 is needed to finance an expanded and more realistic program to carry out surveys to obtain needed data which are not provided in plans of existing water systems; preparation of maps to support applications for the appropriation of water in compliance with State water laws; purchase of water rights; drilling and observation of necessary test wells; and for preparation and filing of applications with supporting maps for new systems being constructed under the Service's development program.

Plan of work.—A large portion of the studies, supervision and analysis of ground water, are accomplished by the U.S. Geological Survey on a reimbursable basis, particularly with respect to geological investigations and exploratory test well drilling. Most test wells are drilled under contracts with private firms. Temporary survey crews are employed by the Service in gathering data on existing water systems, and for mapping in support of applications. The acquisition phases of the program are performed by professional employees of the Service.

The 1963 program calls for continuation of surveys and analyses with the completion and filing of many applications for the appropriation of water based on past investigations; accelerated programs of drilling and testing of exploratory wells in eastern parks and along the Blue Ridge Parkway, in particular in region 5 where water supplies are urgently needed for new parks, such as Cape Cod National Seashore and Chesapeake and Ohio Canal National Monument; continued analysis of the water resources of the Everglades to provide fuller coordination with the accelerated pace of the central and southern Florida flood control project. Continued acceleration of gaging installation and operation at Everglades National Park due to abandonment of similar work around the park boundary by the Corps of Engineers and flood control district is also planned. A large test well program is planned at Virgin Islands National Park in an effort to overcome serious water supply shortages. Two water right purchases are contemplated during the budget year.

The long-range program for this activity contemplates the perfection of rights in compliance with the laws of the several States for all supplemental water supply systems being constructed under the Mission 66 program, the perfection of rights to the use of underground water where changing State laws make such rights for old uses necessary, and the elimination of conflicting claims to the same water by the United States and other water users, of which two of the present major conflicts are in Death Valley National Monument and Everglades National Park.

5. Executive Mansion and grounds, $347,000

The responsibility for maintenance and development of U.S. Reservation No. 1, commonly known as the President's Park, was never clearly defined by legislation until the enactment of Public Law 87-286, approved September 22, 1961. This act states that the White House and grounds "shall be administered pursuant to the act of August 25, 1916 (39 Stat. 535 16 U.S.C. 1-3), and acts supplementary thereto and amendatory thereof." As a result of the lack in the past of clearly defined responsibilities regarding the White House grounds, limited maintenance and development of this area over the past years has been undertaken by several Federal agencies such as General Services Administration, Department of Commerce, U.S. Army Signal Corps, Treasury Department, and the Interior Department.

Need for funds.—Now that existing legislation clearly places the responsibility for the White House and grounds on the National Park Service, steps are being taken to prepare an adequate and coordinated development program for this area. In the meantime, however, the following high priority projects must be provided for in the 1963 fiscal year at the very latest:

Reconstruct fence and foundation, Pennsylvania Ave., and grounds improvements	$176,500
Reconstruct sidewalk, Pennsylvania Ave	41,000
Replace guard booths	129,500
Total	347,000

The fence along Pennsylvania Avenue (approximately 665 feet) was installed about 1870 and has deteriorated due to rust and vandalism to the point that the Secret Service and White House Police consider it a serious security risk. The height of this section of the fence is about 18 inches lower than the newer fence installed about 1938 around the east, south, and west sides of the White House Grounds, thereby making this section more of a security risk. The foundation for the north section of fence has settled and deteriorated to the extent that it needs complete replacement, as does the sidewalk along Pennsylvania Avenue. The flagstone walks at the north and south entrances to the White House require immediate repairs in order to prevent further deterioration as a result of damage due to freezing. There is a related need to beautify and improve the general appearance and condition of the grounds with a comprehensive landscaping and planting project. The approved development plan for landscaping and planting the White House Grounds, prepared by the Olmsted brothers, noted landscape architects, has never been completed. It is the desire of those concerned to revise and modernize the plan and proceed with the landscape and planting work involved by not later than the 1963 fiscal year.

The present White House guard booths were built about 1935 and were not constructed to the standards required for proper security of the White House and Grounds. With increased emphasis on security, there is a serious need for replacing these booths, some at new locations for proper visibility, with ones made of modern bulletproof materials and designed with adequate communications, ventilation, and visibility.

Plan of work.—The program contemplates reconstruction of certain facilities necessary for safety and security purposes and further improvement to the grounds in accordance with approved development plans.

The planning, design, and supervision of construction will be carried out by professional employees of the Service. It is contemplated that the major portion of the work will be performed under contract, with the ground improvement and miscellaneous work to be performed by day-labor forces of the Service.

Itemization of estimate—Construction, National Park Service

	Actual, 1961	Estimate, 1962	Estimate, 1963	Increase (+) or decrease (−)
Program and financing:				
Total obligations	$22,542,692	$40,614,260	$44,000,000	+$3,385,740
Unobligated balance brought forward	−4,902,952	−3,888,260		+3,888,260
Unobligated balance carried forward	3,888,260			
Appropriation	21,528,000	36,726,000	44,000,000	+7,274,000
Obligations by objects:

DORCHESTER HEIGHTS, BOSTON

Chairman HAYDEN. Included within this appropriation is a request for $50,800 to improve the grounds and generally rehabilitate Dorchester Heights in Boston. Would you please furnish the committee a citation of the authority to make this appropriation?

Mr. WIRTH. Yes, sir. We will be glad to. It comes under the Historic Sites Act of 1935.

Chairman HAYDEN. All right.

Mr. WIRTH. We will be glad to write that up and submit it for the record.

(The information referred to follows:)

CITATION TO PORTIONS OF THE HISTORIC SITES ACT OF 1935 (49 STAT. 666) PERTAINING TO REHABILITATION OF DORCHESTER HEIGHTS IN BOSTON, MASS.

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That it is hereby declared that it is a national policy to preserve for public use historic sites, buildings and objects of national significance for the inspiration and benefit of the people of the United States." (16 U.S.C. 461.)

"SEC. 2. The Secretary of the Interior (hereinafter referred to as the Secretary), through the National Park Service, for the purpose of effectuating the policy expressed in section 1 hereof, shall have the following powers and perform the following duties and functions:

* * * * * * *

"(e) Contract and make cooperative agreements with States, municipal subdivisions, corporations, associations, or individuals, with proper bond where deemed advisable, to protect, preserve, maintain, or operate any historic or archeologic building, site, object, or property used in connection therewith for public use, regardless as to whether the title thereto is in the United States: Provided, That no contract or cooperative agreement shall be made or entered into which will obligate the general fund of the Treasury unless or until Congress has appropriated money for such purpose.

"(f) Restore, reconstruct, rehabilitate, preserve, and maintain historic or prehistoric sites, buildings, objects, and properties of national historical or archeological significance and where deemed desirable establish and maintain museums in connection therewith.

* * * * * * *

"SEC. 6. There is authorized to be appropriated for carrying out the purposes of the Act such sums as the Congress may from time to time determine." (16 U.S.C. 466.)

In accordance with authority contained in the above cited act, the Secretary of the Interior on March 17, 1951, entered into a cooperative agreement with the city of Boston for the purpose of designating Dorchester Heights a national historic site, which was to remain in the ownership of the city of Boston. The site was officially designated on April 27, 1951, under this cooperative agreement.

THEODORE ROOSEVELT MEMORIAL

Chairman HAYDEN. Also, $1,400,000 is requested for the Theodore Roosevelt Memorial proposed to be located on Theodore Roosevelt Island. Has the final design of the memorial been approved by the Theodore Roosevelt Association?

Mr. WIRTH. I am glad to tell you, sir, it has been approved. It has been approved by the association, by the Fine Arts Commission, by the Planning Commission, and by the Roosevelt family. Everyone is in accord, and I most sincerely hope we can go forward with it.

Here is a sketch of the new Theodore Roosevelt Island Bridge across Theodore Roosevelt Island. This is the Virginia side and this ties in Independence Avenue. The bridge is under construction now. Here

is the Theodore Roosevelt Memorial which is surrounded completely by the natural part of the island with the area in the middle as a symbol of what Theodore Roosevelt stood for. There will be plaques around here [indicating on map], I think about 10 or 15 feet high, with inscriptions regarding various accomplishments of Theodore Roosevelt. It is in a natural setting. We want to keep the island this way to emphasize the great leadership he gave in the conservation field.

Chairman HAYDEN. Apparently, there was a certain piece of ground that had to be cleared.

Mr. WIRTH. Yes, there will be a clearing right in here [indicating].

Chairman HAYDEN. A very small part of the island.

Mr. WIRTH. A very small part of the island is all that is involved. There will be a parking area and a foot bridge. The island will be a bird sanctuary and a natural area with the exception of the central glade. While this looks rather formal, there will be open water and a glade within the natural setting.

COMPLETION DATE FOR THEODORE ROOSEVELT ISLAND BRIDGE

Senator YOUNG. I was going to ask when will this bridge be completed?

Mr. WIRTH. The automobile bridge?

Senator YOUNG. Yes.

Mr. WIRTH. I think it is due for completion in late 1963.

Senator MCGEE. I wanted to mention that it is gratifying to see it come along with this conclusion. As you remember, Connie, when I was here with Senator O'Mahoney years ago, 1956, this was just a dream in the Theodore Roosevelt Association. They worked a great deal on it. The only thing that went awry was that tunnel under the river, instead of on top of the island now in the form of the bridge.

Mr. WIRTH. I wanted a tunnel. But the area is going to be nice and, as I say, we now have the full approval of Mrs. Longworth, Mrs. Derby, and Mr. Archibald Roosevelt.

Senator MCGEE. The memorial is a considerable improvement over the first one that they had, in my judgment. I belong to that school that thinks a memorial ought to look like what it represents, instead of letting the imagination run wild.

Mr. WIRTH. I am very happy with this, but I thought the other was nice, too.

LAND ACQUISITION, CIVIL WAR AREAS

Chairman HAYDEN. You are asking $1,400,000 this year for purchase of land in Civil War areas. In previous years $1,450,000 has been made available. How much, if you can estimate, will be required to complete the desired purchases?

Mr. WIRTH. We have the full estimate in here. After this year, it will take approximately $3 million to complete all land acquisitions in the Civil War areas.

Chairman HAYDEN. You can furnish for the record a table showing the purchases made with the $600,000 provided for Civil War area purchases in the fiscal year 1962 bill and the purchases contemplated with the $1,400,000 asked for this year?

Mr. WIRTH. Yes, sir.

(The material referred to above follows:)

Data concerning acquisition of lands, Civil War areas

	Appropriated 1962 fiscal year	Land purchase commitments as of Mar. 8, 1962	Acreage	Requested 1963 fiscal year	Acreage
Antietam National Battlefield Site	$100,000			$155,000	[1] 400
Fort Donelson National Military Park	125,000	$81,350	59.90		
Fredericksburg and Spotsylvania National Military Park	75,000			318,000	400
Manassas National Battlefield Park	100,000	74,500	33.45	350,000	460
Gettysburg National Military Park	200,000			573,000	205
Stones River National Battlefield				4,000	7
Total	600,000	155,850	93.35	1,480,000	1,472

[1] Plus scenic easements.

ZONING IN GETTYSBURG AREA

Chairman HAYDEN. What can you report to the committee with regard to an adequate zoning ordinance in the Gettysburg area?

Mr. WIRTH. We have not been able, sir, to get adequate zoning as far as Gettysburg is concerned. It is a thing that concerns us greatly. We have been buying land in accordance with the instructions of the committees. We are buying only those lands that are completely surrounded by Federal lands or those upon which we have scenic easements at the present time, either in fee simple or by scenic easements.

We are going ahead in accordance with the instructions of the committees and only buying those lands that are completely surrounded.

ADAMS COUNTY POOR FARM IN PENNSYLVANIA

Chairman HAYDEN. Has there been any development with regard to disposition of the Poor Farm by Adams County, Pa.?

Mr. WIRTH. No; that is still an outstanding purchase. We are trying to find some way of getting somebody else to contribute funds to buy it. We cannot touch the poor farm as it is on the edge of the area and is not completely surrounded by Federal property.

Chairman HAYDEN. Are you carrying on any negotiations with county officials in an effort to add the poor farm to the Gettysburg Park?

Mr. WIRTH. They cannot add it. They would have to buy it according to the legal situation. The money that they would get from the poor farm would go into some other State institution.

Chairman HAYDEN. Is it not a matter that could be corrected by the Pennsylvania Legislature?

Mr. WIRTH. I think it would take a State constitutional amendment.

FORT SMITH, ARK.

Chairman HAYDEN. I see. Included within the land acquisitions in newly authorized parks I note a request for $319,000 to buy 3 acres of land at the Fort Smith National Historic Site in Arkansas.

In your highlight statement you indicate that the total area of the park will be about 15 acres, 10 of which are to be donated by the city of Fort Smith as indicated in the authorizing legislation. The legislation provides for only $319,000, all of which you ask to buy 3 acres of land. Why is this land costing over $106,000 per acre; and how and when do you plan to acquire the other 2 acres?

Mr. WIRTH. This old fort is in the middle of the city and the city is now making the transfer of the 10 acres there now. The deeds have been drawn up. I think the deeds are either in, or being sent in, for checking by the Attorney General to determine whether they are clear and sufficient. We would like to go ahead and purchase the remaining land right away. The budget request of $319,000 is for acquisition of 3.8 acres which is the total amount of land to be acquired other than that being made available by the city.

I realize it is expensive, but we are really getting about 14 acres almost for the price of 3. If you divide by 10, perhaps it would not seem quite as expensive.

Chairman HAYDEN. You can furnish an appraisal of the 3 acres?

Mr. WIRTH. I would be very glad to, sir.

Chairman HAYDEN. Including the cost of the improvements that are on them?

Mr. WIRTH. Yes.

(The information is in committee files.)

LAND ACQUISITION, PISCATAWAY BAY AREA, MD.

Chairman HAYDEN. With regard to the $937,000 requested for purchase of lands in the Piscataway Bay area in Prince Georges and Charles Counties, Md., is there any doubt that the desired lands will be available and can be purchased for this amount of money?

Mr. WIRTH. That is an area on which we have a good appraisal. As you perhaps know—I will be glad to show it to you on a map—there is considerable land down there already purchased by foundations which will be transferred to us. It is right across from Mount Vernon and the purpose is to protect the view from Mount Vernon and prevent it from being cluttered up. The thing started over the fact that there was a proposed sewer disposal plant to go in across the river from Mount Vernon. The Congress did pass an authorization for the Federal Government to acquire it.

I might say Congresswoman Bolton, of Ohio, has contributed a considerable amount of her own personal funds toward acquiring the land that has already been acquired. The foundation which she is supporting is ready to transfer its lands to us. We figure $937,000 is necessary to acquire the rest, and that is the total amount authorized under the bill, as I recall.

Chairman HAYDEN. What is the status of the commercial developments which have been proposed in this area; and have any of the proposed commercial uses been initiated?

Mr. WIRTH. No; there has been no commercial interest initiated at the present time with the exception that the sanitary district around Washington is still after this spot as a possibility for a sewage disposal plant.

Chairman HAYDEN. Could they not move their spot to some other place? Have they not done that already?

Mr. WIRTH. No; they have not. They are not in exactly at the same spot, but they are proposing to go a little bit farther up the stream at the junction there. I have a map here on which I would like to show you exactly what the problem is. They were figuring on the disposal system down in this section.

They now are figuring on coming farther up in here. The question of the affluent from the disposal plant is also a problem because this is more or less a bend in the river and how much is to be washed out is a question; and Mount Vernon is right across in here. This is a historic site area.

The orange color shows land the the Foundation now has which it will donate to us, and the green is what we are proposing to buy with the money that we are asking for. This pink area here is to be scenic easement authorization.

Senator DWORSHAK. What do you propose to do with the land included in the green area?

Mr. WIRTH. To keep it as park land similar to the rest of the land we have along the Potomac River.

Senator DWORSHAK. Do you plan to develop any for highways very soon?

Mr. WIRTH. Campgrounds and picnic areas.

EVERGLADES NATIONAL PARK LAND ACQUISITION

Chairman HAYDEN. Thank you. Last year you requested $450,000 to purchase 30,000 acres in Everglades National Park. This year you indicate that 25,000 acres are to be purchased. How much of the land acquisition fund is set aside for this purchase?

Mr. WIRTH. We have programed $500,000 for acquisition of land in the Everglades. That is the same figure we requested last year.

RESTORATION OF FORD'S THEATER

Chairman HAYDEN. Last year you advised this committee that you expected plans for restoration of Ford's Theater to be completed during the latter part of the current fiscal year, and that you would be ready to solicit construction bids by the end of fiscal 1962. What is the status of this project now?

Senator YOUNG. I am glad you brought that up, Mr. Chairman.

Mr. WIRTH. We have the information on it here. I knew Senator Young would bring it up if you had not, Mr. Chairman, so we anticipated a request. Without reading this, we propose to have the plans sufficiently far along in the next 2 months so that we can come up with a firm estimate. Then we would proceed with the completion of detailed plans to get ready to let a contract. We are proposing to ask for the funds in the 1964 budget so we can let the contract shortly after July 1, 1963.

If we have all the plans completed, that is, if the funds are granted, it should be done by January 1965.

Senator YOUNG. Aren't you reading from last year's book? That is the same thing you told us last year.

Mr. WIRTH. No. This is a more current report.

Senator YOUNG. You have not made any progress at all?

Mr. WIRTH. Oh, yes. But so much additional new material was uncovered by our research that we had to go back over and reevaluate our work several times. This means, of course, we'll have a much better job when we're through, but it did delay the time when we had expected to have the plans ready. We said last year that we would have the plans done by the end of the 1962 fiscal year.

Senator YOUNG. Toward the end of the summer?

Mr. WIRTH. I read last year's hearings yesterday and noted that we said toward the end of the 1962 fiscal year the plans would be completed.

Senator YOUNG. You have had planning funds now for 2 years.

Mr. WIRTH. That is right.

Senator YOUNG. What is holding you up?

Mr. WIRTH. Senator Young, it is an old building. We have to go into it, analyze the structural strength, and determine what we are going to be able to do with it, and how much of the old we can preserve. And naturally the more historical facts and information we find, the longer it takes to finish the research. It is not like building a new building on which we could develop plans very quickly; but we will be ready by 1965, which is the 100th anniversary, April 1965, I believe.

Senator YOUNG. When will you be ready to start construction?

Mr. WIRTH. We do not have the date indicated here, but we would look forward to getting it underway by July 1, 1963. We would want the funds all in one sum so we can let one overall contract, which we think can go for $1,500,000 or $2 million.

Senator YOUNG. And you will not be ready for construction funds for another year yet?

Mr. WIRTH. We do not think we would be ready until the spring of 1963, and we figured on having our plans and specifications ready then so we would be ready to go right after July 1, 1963 if we get the money in 1964 fiscal year. The $200,000 that you gave us a couple years ago has financed all the research and is sufficient funds to go ahead with preparing of the detailed plans and specifications. That is the way we are proceeding. However, as I said, we couldn't get the estimate ready in time for the 1963 fiscal year's budget.

Senator YOUNG. Mr. Chairman, I have been working on this project for 17 years now. This is one of those years in North Dakota when the people may decide to have me undertake some different work next year. I was in hopes that this would be started while I was still here. This is a great disappointment.

CONSTRUCTION FUNDS IN 1964 BUDGET

Mr. WIRTH. I know your feelings very well. We are not dragging our feet. We are going forward in an orderly way. I do not say that we could not get it under contract in the fiscal year 1963, but it would be toward the end of fiscal 1963, and we expect to complete it in 1965. This seemed to be the orderly way to proceed. We plan to have a request in 1964 for the full amount and it is going to run into a large figure. We want to let one contract because it is not a job you do part this year and part next year. It ought to be all in one contract.

Senator YOUNG. Do you expect to be asking the Bureau of the Budget for funds in your next year's budget?

Mr. WIRTH. I certainly plan to ask for money in 1964.

Senator YOUNG. You did not ask for any this year?

Mr. WIRTH. No, sir.

Senator YOUNG. Thank you, Mr. Chairman.

TRANSFER OF FUNDS FROM BUREAU OF RECLAMATION

Chairman HAYDEN. All right. Last year in the public works appropriation bill money was made available to the Bureau of Reclamation for transfer to the National Park Service to construct recreational facilities in the upper Colorado River Basin.

RAINBOW BRIDGE NATIONAL MONUMENT

Would you outline briefly for the committee the work you have accomplished with this money? Touch specifically on the use of $240,500 which was provided for construction of a boat and landing facilities to Rainbow Bridge National Monument.

Mr. WIRTH. The last time I was out there we had not done anything on building the landing facility at Rainbow Bridge National Monument. That is on the Glen Canyon Reservoir. It is going to have to be a floating dock. We are studying how that can be handled. It is going to be quite difficult because we are not certain as to how much fluctuation there is going to be in the Glen Canyon Reservoir. If we follow one scheme of going down with the water, right down the center of the canyon, then we, perhaps, have a mile-and-a-half or 2-mile drawdown which is important. Otherwise, we would have to build it down where we are sure of water at all times and just have an up-and-down proposition with a long trail which will come right up through the quite rough canyon.

Yes, we have the 1962 funds, but we have not proceeded with construction. We are still in the study and planning stage as to just how we are going to handle it.

DATES ON DAM FILL AND LEVELS

Chairman HAYDEN. Can you get any estimates from the Reclamation Service about when they expect the dam to fill and then at what levels they expect to maintain it?

Mr. WIRTH. Yes, we have that. The flood date is March of 1963.

Chairman HAYDEN. That may come true now because there have been heavy snows. The watershed and the dam may fill very rapidly.

Mr. WIRTH. That is right. Of course, I think their estimate would be pretty close to the 1963 one because it is a big reservoir and we have an awfully heavy snow load out there this year, thank goodness. We needed it very badly all through the Rockies and Sierras and I think everybody is happy over it.

Chairman HAYDEN. That is right.

Mr. WIRTH. We will push this project so it will surely be done, Senator.

LIQUIDATION OF CONTRACT AUTHORITY

Chairman HAYDEN. The justifications for a $30 million appropriation for construction (liquidation of contract authorization) will be placed in the record. This is the same amount that you requested in the past fiscal year and is to be divided between parkways ($14 million) and roads and trails ($16 million).

(The justification follows:)

NATIONAL PARK SERVICE

Construction (liquidation of contract authorization)

Appropriation, 1962		$30,000,000
Decreases:		
Parkways	$14,000,000	
Roads and trails	16,000,000	
		30,000,000
Subtotal		
Increases:		
Parkways	14,000,000	
Roads and trails	16,000,000	
		30,000,000
Budget estimate, 1963		30,000,000

Analysis by activities

	1961 actual	1962 estimate	1963 estimate	Increase
1. Parkways	$13,833,224	$17,605,000	$21,423,000	$3,818,000
2. Roads and trails	17,219,082	15,404,000	22,477,000	7,073,000
Total expenditures	31,052,306	33,009,000	43,900,000	10,891,000
Less: Balance available from prior years	18,150,430	17,098,124	14,089,124	+3,009,000
Total expenditures from current appropriation	12,901,876	15,910,876	29,810,876	13,900,000

Contract authorization and liquidation program

	Contract authority available	Obligations	Unliquidated obligations, prior year	Total obligations	Expenditures	Unliquidated obligations carried forward
FISCAL YEAR 1961						
Parkways	$19,125,658	$13,595,018	$17,026,721	$30,621,739	$13,833,224	$16,788,515
Roads and trails	19,749,435	19,185,940	13,301,116	32,487,056	17,219,082	15,267,974

Total	35,700,000	35,700,000	37,441,624	73,141,624	43,900,000	29,241,624

[1] Available cash for liquidation is $17,098,124; balance of $14,958,365 is unfunded obligations.
[2] Available cash for liquidation is $14,089,124; balance of $23,352,500 is unfunded obligations.

Construction (liquidation of contract authorization)—Status of cash appropriation for liquidation of contract authorization

	1961	1962	1963
Appropriation	$30,000,000	$30,000,000	$30,000,000
Unexpended balance brought forward	18,150,430	17,098,124	14,089,124
Total available	48,150,430	47,098,124	44,089,124
Less expenditures	31,052,306	33,009,000	43,900,000
Unexpended balance	17,098,124	14,089,124	189,124

Need for funds.—The estimate of $30 million is for liquidating contractural obligations scheduled for the 1962 programs and for making partial payments against obligations to be incurred during 1963. Sections 2 (4) and (5) of the Federal Highway Act of 1960 provides an appropriation authorization of $16 million for parkways and $18 million for roads and trails, a total of $34 million for 1963.

1. Parkways, $14,000,000

The $14 million estimate will provide $11,500,000 for liquidating prior-year contractual obligations incurred and to be incurred during 1962; and $2,500,000 to finance plans, surveys, and project supevision functions, to make partial payments under contracts, and for day-labor projects to be undertaken during 1963.

The Federal Highway Act of 1960 authorizes a construction program of $16 million for each of the fiscal years ending June 30, 1962, and June 30, 1963. The 1963 program will permit work on 7 of the 10 authorized parkways. Of the 23 major road projects on the parkways, 11 involve amounts in excess of $500,000 each, of which 5 exceed $1 million each. The early acquisition of parkways rights-of-way and their donation to the Federal Government is being pursued by State officials so that construction work can move forward without delay.

The parkways continue to receive enormous public use and each new stretch of completed mileage calls for complementary facilities, such as campgrounds, picnic areas, utility systems, and comfort stations. Other facilities, such as utility buildings, etc., must also be provided. An amount of $1,928,200 is included in the program for these purposes.

A general description of each parkway and what is proposed for accomplishment under the major projects of the program follow:

Major projects

Blue Ridge Parkway, $6,100,600 (North Carolina, $2,531,900; Virginia, $3,568,700).—This parkway was started in 1933 under authority of the National Industrial Recovery Act of June 16, 1933. When completed, it will extend along the crest of the Blue Ridge Mountains for a distance of 477 miles from Shenandoah National Park in Virginia to Great Smoky Mountains National Park in North Carolina.

In North Carolina, a 4-mile section involving grading and two tunnels is scheduled between Flat Laurel Gap and Cutthroat Gap, which will close the last gap on the 18-mile unit between Asheville and Wagon Road Gap. A surface treatment project between Balsam Gap and Beech Gap will make usable an additional 20 miles of new parkway to the existing sections which are completed southwest of Asheville. Completion of this paving will provide a continuous parkway strip of 56 miles between Wagon Road Gap and Great Smoky Mountains National Park. A start of construction on the 11-mile gap between Oteen and the French Broad River around Asheville is proposed on 4 miles of parkway between the river and the crossing of Interstate 26. Repaving on portions of the parkway motor road above Asheville constructed many years ago will restore and preserve the original riding qualities.

In Virginia, three major projects are proposed for the construction of the last gap of parkway in the State involving the 15-mile section around Roanoke between Adney Gap and U.S. Highway No. 460. Completion of this work and final paving will provide a continuous parkway road of 376 miles from Shenandoah National Park to Asheville, except for a 5½-mile gap across Grandfather Mountain.

Colonial Parkway, $334,400 (Virginia).—The Colonial Parkway had its inception in the act of July 3, 1930, which was the basic act for establishing Colonial National Historical Park. Subsequently, the parkway was more specifically authorized by the act of June 5, 1936 (16 U.S.C. 81c). It connects Yorktown, Williamsburg, and Jamestown Island by a 22-mile scenic roadway, portions of which parallel the York and James Rivers.

The Broadway grade separation project will eliminate a dangerous and hazardous intersection in the vicinity of a rapidly developing suburban area of Williamsburg. The shore stabilization project will prevent further erosion along the James River shoreline where continuous wave action and river traffic, coupled with tide and storm action have seriously endangered the roadway.

George Washington Memorial Parkway, $550,000 (Virginia).—This parkway is authorized to extend from Mount Vernon to Great Falls on the Virginia side of the Potomac River and from Great Falls to Fort Washington on the Maryland side, a total length of about 49 miles, not including the distance through Alexandria, Va., and the District of Columbia.

In Virginia, construction of the Theodore Roosevelt Bridge and Interstate 66 connections will require major changes in the traffic pattern when these facilities are completed. The project proposed in 1963 will carry the northbound roadway of the parkway to connect with the approved plan for the Virginia approaches to the Theodore Roosevelt Bridge. Construction of this portion must proceed promptly so that the facility will be available for traffic concurrently with the completion of the Theodore Roosevelt Bridge in 1963.

Natchez Trace Parkway, $4,093,000 (Alabama, $500,000; Mississippi, $3,593,000).—A survey to determine the route of this parkway was authorized by the act of May 21, 1934, and construction was started with funds allocated from the Emergency Relief Appropriation Act of 1935. When completed, the parkway will extend for a distance of about 450 miles from Nashville, Tenn., to Natchez, Miss.

In Alabama, the grade separation for the crossing of Southern Railway and U.S. Highway No. 72 is to be located at the southern terminus of section 2–C. Funds were provided for grading this section in the 1962 fiscal year. This structure will provide the only access to this section and the Tennessee River Bridge, now under construction.

In Mississippi, the surface treatment of a section south of Jackson running southerly from the Oakley-Edwards Road to the Big Bayou Pierre will make available a usable unit of some 25 miles. The program includes funds for continuing the parkway an additional 11 miles on an adjacent section from Big Bayou Pierre to U.S. Highway No. 61, in the vicinity of Port Gibson. Two grade separations are included for a completed section north of Jackson, to eliminate grade crossings of a county road and State highway, and permit an uninterrupted flow of parkway traffic.

Rock Creek aand Potomac Parkway, $2,793,800 (District of Columbia).—The Rock Creek and Potomac Parkway was authorized by the act of March 4, 1913 (37 Stat. 885), to be under the jurisdiction of the Corps of Engineers, U.S. Army, as a part of the park system of the District of Columbia. Jurisdiction of the parkway was placed under the Director, Public Buildings and Public Parks, by the act of February 26, 1925 (43 Stat. 983), and consolidated into the National Park Service by Executive Order No. 6166 issued pursuant to the act of March 3, 1933 (47 Stat. 1517).

The zoo bypass project will continue the existing parkway as a two-lane roadway northward to connect with Beach Drive in Rock Creek Park north of the Zoological Park as authorized by the act of March 4, 1913. The work programed for the 1963 fiscal year will provide grading, drainage, vehicle tunnel, and structures required for the complete roadway, except for paving and miscellaneous work. Completion of this parkway will bring about the realization of several long-sought projects of the Smithsonian Institution and the National Park Service to provide for a continuous 24-hour scenic park road in the Rock Creek Valley, and the separation of the through north-south traffic from the secondary roads within the zoo. The zoo roadway now crosses two fords which become impassable during times of high water in Rock Creek, frequently interrupting the continuity of traffic movement. The roadway will be located primarily on the east side of Rock Creek, protected by fencing and planting from the Zoological Park. It will in no way adversely affect the operations of facilities in the Zoological Park.

Minor roads and trails, buildings, utilities, etc.—The remainder of the 1963 program totaling $2,128,200 is for approximately 50 minor projects

consisting of campground and picnic area roads, trails, campground developments, erosion control, picnic facilities, comfort stations, and other visitor facilities required to make the parkways usable recreation units.

Included in the foregoing are funds for campground expansion at Doughton Park and Julian Price Park, and new campground developments at Linville Falls and Humpback Roads, all on the Blue Ridge Parkway; comfort stations and utilities at the Colbert Ferry area of the Natchez Trace Parkway in Alabama; and campground, picnic, and other visitor facilities in various locations on the George Washington Memorial Parkway in Maryland and Virginia.

2. Roads and trails

The $16 million estimate will provide $11,852,500 for liquidating prior year contractual obligations incurred or to be incurred prior to 1963; and $4,147,500 to meet plans, surveys, and project supervision costs, day-labor project costs, and to make partial payments to contractors in carrying out the 1963 fiscal year program which totals $18 million.

The roads and trails construction program is broken down into the following broad categories:

Major roads:	
Reconstruction	$5,222,400
Paving	1,228,300
New work	3,843,200
Miscellaneous minor roads and trails projects	7,206,100
Advance planning	500,000
Total	18,000,000

Many of the existing park roads are antiquated and the standards do not come up to present-day requirements. Many of them have been in use longer than the normal life expectancy. Road bases and surfaces have deteriorated and some structures are outdated. In some instances, relocation is the only means of meeting minimum traffic requirements and of eliminating steep, narrow, and winding sections of road which are unsafe for present-day vehicular traffic. The estimate provides for continuing the program of bringing park roads up to modern standards by providing work on 144 miles of major roads, including reconstruction of 56 miles; 43 miles of paving; and construction of 45 miles of new roads. The remainder of the program provides for numerous minor roads and trails projects, parking areas, campground roads, drainage structures, etc.; for advance planning, reconnaissance surveys, topographic surveys, etc. Provision must also be made for turnouts, parking spaces, and overlooks for the safety and enjoyment of the motorist. Although the Service holds construction of new roads to a minimum, some are necessary to disperse the concentrated public use and alleviate the resulting abuse of some areas of the national park system. The Service's policy on providing roads is to make a number of sites and objects available to the visitor and to supplement the roads with trails to accommodate those people who wish a closer look at park features. The roads and trails also serve accesses for protection and management purposes.

Listing of projects amounting to $100,000 and over in the 1963 fiscal year roads and trails program

Region 1:	
Great Smoky Mountains National Park (North Carolina): Reconstruct and final surface, Route 1B, Towstring-Kephart prong	$437,500
Mammoth Cave National Park (Kentucky): Grade, base, structures, sec. 1A, 4.5 miles, Chaumont to U.S. 31W and surface secs. 1A and 1B	372,400
Petersburg National Military Park (Virginia):	
Construct attack road to battery 5, including overpass, Virginia 36, visitor center entrance road, and parking area (50 cars)	308,800
Pave Siege Rd. and Colquitts salient road, regrade Prince George Rd	126,900
Shiloh National Military Park (Tennessee):	
Construct entrance road to visitor center, 1.2 miles, including 30-car addition to parking area	127,600
Reconstruct and surface tour route, 7.20 miles, entire park	200,000
Virgin Islands National Park (Virgin Islands): Park general, construct trails, roads, and parking areas	250,000

Listing of projects amounting to $100,000 and over in the 1963 fiscal year roads and trails program—Continued

Region 2:	
Badlands National Monument (South Dakota): Cedar Pass-Pinnacles Highway, top surfacing, 22.6 miles	$525,000
Big Bend National Park (Texas): Construct Santa Elena-Castolon Rd., grade, drainage, inverted penetration surface, 8.8 miles	333,200
Glacier National Park (Montana):	
Reconstruction, Camas Creek cutoff (portion), clear right-of-way	169,000
Reconstruct roads and parking, clear, grade, and drain (2 bridges), Fish Creek Campground	120,000
Grand Teton National Park (Wyoming): Reconstruct Gros Ventre Bridge structures and approaches, Jackson Hole Highway	300,000
Rocky Mountain National Park (Colorado): Reconstruct Trail Ridge Rd., Fall River entrance to Deer Ridge including Deer Ridge intersection, Route 1–A, 3.9 miles, grade, base and bituminous stabilize	340,000
West Yellowstone Airport, West Yellowstone (Montana): Runways, taxi strips, aprons, service roads, etc	570,000
Yellowstone National Park (Wyoming):	
Reconstruction, northeast entrance road and bridge approaches, Yellowstone River Bridge through Lamar Canyon	385,000
Grand Loop, relocate road at Beryl Springs, Route 1B (portion)	230,000
Reconstruction, Red Lodge-Cooke City Rd. (portion) (Montana)	150,000
Construct entrance road and parking, Bridge Bay	166,000
Construct campground roads, base and surface, Bridge Bay	135,000
Region 3:	
Chaco Canyon National Monument (New Mexico): Construct entrance road, Route 1, 2.75 miles	151,500
Great Sand Dunes National Monument (Colorado): Access and circulatory roads, new campground	130,000
Lake Mead National Recreation Area (Nevada): Construct road from Las Vegas Wash to Callville Wash, Route 1–E, grade, base, surface, structures, 15.5 miles	538,000
Mesa Verde National Park (Colorado), Navajo Hill:	
Construct campground roads, spurs, loops and turnouts, obliterate old roads	122,400
Realinement portion of entrance road and parking area	300,000
Natural Bridges National Monument (Utah): Construct approach road and visitor center parking area	312,000
Tusayan Airport (near Grand Canyon National Park, Ariz.): Landing strips, aprons, taxi strips, service roads, etc	720,000
Zion National Park (Utah): Construct Kolob Canyon Rd. from U.S. 91 to Lee Pass, clear, grade, base, bituminous surface, drainage structures, 4.6 miles	460,000
Region 4:	
Cabrillo National Monument (California): Completion, parking area, roads, and walks	186,300
City of Refuge National Historical Park (Hawaii): Entrance road and parking areas, 1 mile	150,000
Crater Lake National Park (Oreg.):	
Reconstruction, grading, surfacing, and bituminous paving, Route 2, south boundary to Annie Springs	801,000
Reconstruction, bituminous paving Routes 3 and 4, Annie Springs to rim	129,000
Hawaii Volcanoes National Park (Hawaii): Kalapana Rd., clearing, grading, drainage, and base course	832,000
Katmai National Monument (Alaska): Construct road, Brooks River to Windy Creek, 23 miles	100,000
Lassen Volcanic National Park (Calif.): Realine Route 1, construct bridge, underpass road, access roads, walks, and parking areas (including paving), southwest development area	345,000

Listing of projects amounting to $100,000 and over in the 1963 fiscal year roads and trails program—Continued

Region 4—Continued	
Mount Rainier National Park (Wash.), park general:	
Cougar Rock campground and picnic area, roads, and parking areas	$300,000
Recondition and pave Nisqually entrance road, 6.8 miles	363,400
Sequoia-Kings Canyon National Parks (Calif.):	
Grant Grove, reconstruct campground roads, 2.5 miles	100,000
Dorst Creek, reconstruct and resurface campground roads	160,500
Yosemite National Park (Calif.):	
Clearing and grading, 5.3 miles, Big Oak Flat Rd	800,000
El Portal, reconstruct roads, existing community, 2 miles	106,200
Crane Flat, campground roads, 3.7 miles	106,200
Region 5:	
Acadia National Park (Maine): Reconstruct and pave Bubble Pond Rd., Route 4 from intersection with Routes 10 and 7, 5.3 miles	600,000
Antietam National Battlefield Site (Md.): Construct Burnside Bridge bypass road and bridge	367,500
C. & O. Canal National Monument (Md.): Surfacing towpath (32 miles)	213,200
Region 6 (National Capital parks), District of Columbia: President's Park, reconstruct E St. and State Pl	230,000

Itemization of estimate—Construction (liquidation of contract authorization)

	Actual, 1961	Estimate, 1962	Estimate, 1963	Increase (+) or decrease (−)
Program and financing:				
Total obligations	$32,780,958	$38,394,135	$35,700,000	−$2,694,135
Unobligated balance brought forward (contract authorization)	−38,875,093	−40,094,135	−35,700,000	+4,394,135
Unobligated balance carried forward (contract authorization)	40,094,135	35,700,000		−35,700,000

ZOO BYPASS PROJECT

Chairman HAYDEN. I note that included within the parkways portion of this request is $2,793,800 for the Rock Creek and Potomac Parkway, which in this case is the so-called zoo bypass project. How long in miles is the proposed construction, including the vehicular tunnel? How long is the tunnel itself?

Mr. WIRTH. Senator, we have a model of this project. Last year, you know, we had this in before the Senate and House committees.

Chairman HAYDEN. If you can just lay the model on these papers I do not think it will scratch.

Mr. WIRTH. This is the way it is at the present time. The question last year was, Would it be better to stay on this side, bridge across here, and come through here; and then come through here and bridge across at this location?

At the present time, here is Rock Creek Park and this is the Calvert Street Bridge. Now, the zoo people feel for their own protection that they have to close the gates here and here at sundown and open them at sunrise. At the present time with a ford here and a ford here, they must be closed in bad weather. We are closed a good part of the time and people coming down through Rock Creek Park on a drive are in bad shape for getting through. In fact, they cannot get through. We have been working with the Smithsonian people as to how to treat this whole thing.

We reached an agreement last year and they in the meantime have gone ahead with other studies for the zoo development. Last year the House committee and this committee asked us to make further studies on it before you would consider it.

We have made further studies. The Bureau of Public Roads people indicate it will cost us just about as much to undertake either of these two possible plans; but if we do this one [pointing at model] we still have the problem of night closing.

We also still have the problem of through traffic in the usable part of the zoo, and it would be of great help to the zoo to get this additional land without through traffic, even when it is open.

Our plan last year covered this same principle and we made a model this time because we felt it could be better explained; especially after we found out what the cost was of each of the possibilities.

BRIDGE AND TUNNEL PROPOSED

We are proposing the bridge here in place of the old ford here, and tunnel under here, and stay on this side of the creek and come up on this side and go through here. The Smithsonian is agreeable to transfer to us all the property on this side needed for this road up to here.

They have plans. I do not know whether they presented them to this committee or another committee for the development——

Senator MUNDT. Under your new plan would you leave the old road open for people who want to drive up there on Sunday afternoon and drive through the ford and have that pretty drive, or would you close that up?

PLANS OF ZOO MANAGEMENT

Mr. WIRTH. That would be turned over to the zoo people. Here is their plan for the development of the zoo with this additional land. They propose to change their road over here on this side and this would be all pedestrian. They are also figuring on, as is practically every recognized large zoo in the country, a sort of mass transportation system with little motorcars like they have at a lot of the world fairs, so that they can get around to these different things and park the cars on the edge.

You can still get through here and you tie into the parkway here, so you can come in here. While you will not be using that ford, you

will be able to get in the zoo and go on whatever roads they have available. Then they propose to take this part up here and make an animal hospital and experimental area and develop the whole zoo probably on this basis. The main thing they have to get out of the zoo is our through traffic which comes through in here and clutters it up.

ANIMAL HOSPITAL

Senator MUNDT. Are you going to have a Government animal hospital?

Mr. WIRTH. We are not.

Senator MUNDT. I do not mean you. I mean under the plan.

Mr. WIRTH. An animal hospital for the zoo.

Senator MUNDT. I see.

Mr. WIRTH. It is for their own animals, and they will most likely even have elephants they will have to send to the hospital. I never heard of an elephant going to a hospital, but I imagine they get sick like the rest of us.

Senator MUNDT. An elephant is a symbol of sturdiness.

Mr. JETT. Do you want to mention the added land?

Mr. WIRTH. Yes. By taking the road over here, we actually add 45 acres of unspoiled land from the standpoint of through traffic to the zoo.

Senator MUNDT. You are surely not going to be able to build all that for the same costs as this other, including the transportation system and all?

Mr. WIRTH. Oh, no. I am just telling you what the zoo proposes to do.

Senator MUNDT. You mean the highway would cost about the same?

COST OF PROJECT

Chairman HAYDEN. What would your cost be?

Mr. WIRTH. Our total cost is what, Mr. Smith?

Mr. SMITH. $2,793,800 for construction and $406,300 for paving later.

Senator MUNDT. A total of how much?

Mr. SMITH. $3,200,100

Senator MUNDT. And what would be the comparable cost of doing it at the lower level?

Mr. WIRTH. Approximately the same.

Senator MUNDT. Could you give us the exact figure?

Mr. WIRTH. We asked the Bureau of Public Roads to give us an estimate on it, and they said it would cost within $200,000 of what this one cost, without going into the details. We have all the detailed specifications drawn up on this proposal, including the specifications for the tunnel. This will still be, Senator, a park road and not a four-lane highway. It would be the same type of road we have through Rock Creek Park so it will be parklike in character. You can come off here and go into the parking area to get into the zoo or you can come off here, get into the zoo on any roads they might have, or come here and get into the zoo.

Senator MUNDT. How long will that tunnel be?

Mr. WIRTH. 600 feet.

Senator MUNDT. And that eliminates how many miles or feet of traffic that you would normally drive under the present route?

Mr. JETT. You mean the whole?

Senator MUNDT. You cut across here so I was just wondering.

Mr. WIRTH. About 1,200 feet just doing it this way as a rough measure, or about 2,000 feet at the most.

CLOSING OF ROAD

Senator MUNDT. This road would be closed then? You could not make that trip?

Mr. WIRTH. Well, what will happen, Senator, is as far as we are concerned this would be closed. All this land, without any through-traffic barrier, would be turned over to the zoo and the map I showed you was how they propose to use the additional land they will get without a through-road cutting them in half.

Senator MUNDT. There is a road there now?

Mr. WIRTH. There is a road on this side which crosses the ford, and then you come across this bridge with the sharp right angle and then you come up here. You can turn up here or come out on Harvard Street.

Senator MUNDT. That road, I take it, would be lost or abandoned?

Mr. WIRTH. Our park road would, yes. The zoo would have to have a road connecting up to their administration building and animal hospital.

Chairman HAYDEN. There will be no through-traffic?

Mr. WIRTH. No through traffic.

Senator MUNDT. As far as the public is concerned that part of the road is closed?

Mr. WIRTH. That is right. Until they get the development here they would need this road in here and they most likely would leave this one up in here. However, this I think is one of the really important links to straighten out a very bad condition, and I cannot urge it any more than just say that this is very high in our priorities now.

APPROVAL OF SMITHSONIAN BOARD OF REGENTS

Chairman HAYDEN. You have taken this up with the House?

Mr. WIRTH. Yes. The Smithsonian Board of Regents has approved this and has taken it up with the House in trying to get funds for going ahead with their zoo development there. What we do here will govern what they do and what they do will govern what we do.

After years of negotiations we are in complete accord and we would like very much to go ahead and get this one done.

GENERAL ADMINISTRATIVE EXPENSES

Chairman HAYDEN. For general administrative expenses you request $2,100,000 during fiscal year 1963, an increase of $519,000 over the amount available to you in fiscal year 1962. The justifications will be printed in the record.

(The justifications follow:)

NATIONAL PARK SERVICE—GENERAL ADMINISTRATIVE EXPENSES

HIGHLIGHT STATEMENT

Broad purpose and long-range objective of program

This appropriation finances certain administrative functions in the Washington office and the five regional offices incident to the fulfillment of the Service's many responsibilities. The administrative functions are general in nature and include the formulation of the Service's policies; the prescribing of procedures; information, safety, management analysis, and financial, personnel, property, and records management functions; and the overall executive direction and coordination of the various programs of the Service. The long-range objective is to have the Washington and regional offices in a position to discharge these administrative and executive direction functions in a manner that will facilitate fulfillment of the Service's multiple responsibilities to the maximum extent at the least possible cost.

Accomplishments during the past year

The accomplishments under the Service's programs during the past year, as discussed under the other appropriation headings, can be credited largely to the administrative functions financed under this appropriation. None of the programs could be carried forward without the administrative functions. In the field of financial management, a Visitor Fee Collection Handbook was completed in draft form and issued for field implementation to improve the control and handling of visitor fees collected by the parks. The Accounting Handbook was also completed and made ready for final review. The field finance office at Hawaii National Park was closed and its functions transferred to the region 4 office in San Francisco, Calif., with a net annual saving of $11,500. In the field of personnel management, recruiting circulars and brochures were improved and produced and the recruiting program for professional uniformed positions received further emphasis. A management development seminar was again conducted in the East for selected Service officials, and a 2-week training course was conducted for about 60 employees showing promise in the executive field. The transfer and promotion program was revised to serve better the objectives of both employees and management. A Wage Administration Handbook was completed and issued for the guidance of field officials in establishing ungraded employee salary rates and in administering other aspects of the program. In the field of property and records management the Motor Equipment Management Handbook was completed and distributed, supply operations for the larger parks improved, and continuation of the records disposal program resulted in the net decrease of 2,934 cubic feet of files.

Objectives and program for budget year

The objectives for the budget year, as well as the long-range objective, are to continue to discharge the administrative and executive direction functions in the most effective, efficient, and economical manner, and to facilitate the prosecution of all of the Service's diversified programs to the maximum extent possible.

The budget includes an increase of $383,000 for the salaries and expenses of certain staffs in the Washington and regional offices which are now proper for financing under this appropriation, but which are being financed from construction funds; $100,000 for new positions in the Washington and regional offices to help meet increases in the administrative workload and to strengthen the safety program; and $36,000 to cover increased administrative printing requirements and additional general expense needs of the present administrative staffs.

General administrative expenses

Appropriation 1961	$1,485,000
Supplemental appropriation 1961	96,000
Total amount available 1961	1,581,000
Appropriation 1962	1,581,000

SUMMARY OF INCREASES, 1963

Salaries and expenses of certain positions currently financed from construction funds but which are now proper for financing under this appropriation	383,000
Salaries and expenses of 6 additional positions to strengthen the safety program	54,500
Salaries and expenses of 4 additional positions to help meet increases in administrative workload	45,500
Additional general expenses funds for existing staffs	31,000
Additional funds for administrative printing	5,000
Net change, 1963	519,000
Budget estimate, 1963	2,100,000

Analysis by activities

Activity	Amount available, 1961	Amount available, 1962	Estimate, 1963	Increase
1. Departmental expenses	$1,005,021	$1,005,830	$1,295,000	$289,170
2. Regional office expenses	573,292	575,170	805,000	229,830
Unobligated balance no longer available	2,687			
Total	1,581,000	1,581,000	2,100,000	519,000

1. Departmental expenses

Subactivity	Amount available, 1961	Amount available, 1962	Estimate 1963	Increase
(a) Personnel compensation and benefits	$863,610	$865,000	$1,109,000	$244,000
(b) General expenses	112,479	115,830	156,000	40,170
(c) Administrative printing	28,932	25,000	30,000	5,000
Total	1,005,021	1,005,830	1,295,000	289,170

1. *Departmental expenses.*—The estimate of $1,295,000 is an increase of $289,170. The increase consists of (1) $203,000 for financing the Mission 66 staff, the Office of Program Coordination staff, and three positions in the Division of Information under this appropriation. They are now being financed from construction funds; (2) $65,500 for six additional positions needed to meet the increased workload, including general expense funds for the new positions; (3) $5,000 to meet increased administrative printing requirements; and (4) $15,670 to meet requirements of the present staff for general expense funds.

Need for increase.—Since the commencement of Mission 66, there has been a constant increase in the administrative workload of the Washington office. This is evidenced by the increase in the Service's new obligational authority from $52,712,000 in 1956, the last year before the beginning of Mission 66, to $111,978,343 in 1962. Provision for meeting a small amount of the increased workload was made in the 1960 appropriation through an increase for six positions and a small amount for general expenses. No other provision has been made for additional staffing since Mission 66 started. In addition to the increase in workload that has come about, changes in organizational unit responsibilities make the costs of two units and a portion of another proper for financing from

general administrative expenses funds rather than from construction funds as is now the case.

New obligational authority has increased over 112 percent during the Mission 66 period while the general administrative expenses appropriation has increased only 26 percent. During that period the general administrative expenses funds have progressively diminished in comparison with the total program as follows:

Fiscal year	New obligational authority	Appropriated for general administrative expenses	Percentage of total
1956	$52,712,000	$1,250,000	0.0237
1957	61,720,000	1,250,000	.0202
1958	76,981,530	1,390,650	.0180
1959	81,962,600	1,429,300	.0174
1960	83,417,000	1,475,000	.0176
1961	95,418,000	1,581,000	.0165
1962	111,978,343	1,581,000	.0141

The increases requested are discussed more specifically in the following:

To provide for financing under this appropriation the Mission 66 staff, the Office of Program Coordination staff, and three positions in the Division of Information currently financed from construction funds, $203,000

When first established as organizational units, the Mission 66 staff and the Office of Program Coordination were concerned principally with the formulation and execution of the Service's construction programs. Also, in the early days of Mission 66, the Division of Information had to be expanded by three positions to handle the greatly increased workload brought about by the Mission 66 construction program. As the major part of the effort of the employees involved was concerned with the construction programs, their salaries and expenses were, and are now being, financed from construction and construction (liquidation of contract authorization) funds.

As the Mission 66 program has progressed, the portion of the overall effort of the Mission 66 staff and the Office of Program Coordination benefiting the construction programs has diminished and the portion benefiting all other programs has increased to the point where the construction programs are no longer the principal beneficiaries. The same is true with respect to the three positions in the Division of Information. Accordingly, provision should be made for the salaries and expenses of the positions involved in the general administrative expenses appropriation. Aside from the question of propriety of continued financing from construction funds, such financing reduces the amounts that would otherwise be available for development of facilities in the parks. The following statement shows the number of positions and the total amount required including general expense funds for financing the functions under the general administrative expenses appropriation:

Organizational unit	Number of positions	Fund requirements
Mission 66 staff	8	$90,000
Office of Program Coordination	10	90,000
Division of Information (portion)	3	23,000
Total	21	203,000

Six additional positions needed to meet the increased administrative workload, including general expense funds, $65,500

The new positions requested under this heading and the amount required for salaries and general expenses are as follows:

Division of Safety: Assistant safety officer, GS-13; Statistical clerk GS-6	20,000
Division of Personnel: Assistant training officer, GS-12	11,000
Division of Budget and Finance: User charges officer, GS-13	12,500
Division of International Cooperation: Chief of division, GS-15; clerk-stenographer, GS-6	22,000
Total	65,500

Division of Safety.—The Service's safety staff now consists of a safety officer and a secretary in the Washington office. With this limited staff it is not possible to formulate and implement a fully effective safety program thoughout the Service.

Accidents and fires involving Service employees, Government property, visitors, and contractor and concessioner operations and personnel result in unnecessarily large annual losses, not only in money, but in efficiency, morale, and suffering, and in maintaining good public relations. For the calendar-year 1960, the direct total loss to the Service was $436,604. This figure does not include losses suffered by the concessioners, contractors, or the public. The indirect losses from accidents and fires such as the cost of accident investigation, processing of tort claims, etc., are considered to be from two to four times greater than the direct losses.

It is impossible at the present time for the chief safety officer to spend any time in the formulation and administration of an effective safety program throughout the Service. All of his time is now spent in handling current policy, technical, and miscellaneous matters relating to the numerous operations and activities. The tremendous increase in visitor use of the parks, the Mission 66 program, and other activities such as boating, camping, and winter-use, have resulted in a tremendous workload for one man even in the handling of current matters.

To provide a minimum of badly needed safety personnel, this estimate proposes the addition of an assistant safety officer and a statistical clerk to the Washington office staff and the establishment of safety staffs in two of the regional offices; one to serve the eastern park areas and one to serve the western areas. The two regional staffs would consist of two positions each—a safety officer and a secretary. This additional staffing for an effective safety program is long overdue. The two additional positions for the Washington office are requested in this item. Two regional office staffs are requested in activity 2.

Division of Personnel.—The additional training officer position requested for the Division of Personnel is vitally needed to assist the training officer, GS-13. The passage of the Government Employees Training Act of 1958 (Public Law 85-507) has generated considerable additional workload for the training officer and this increase in volume unquestionably will continue to mount. The training officer, unassisted, has not been able to set up guidelines for a formal program under the Government Employees Training Act or to do other things which would make use of the provisions of the Training Act more effective. These things include an intensive and continuing study of training needs which could be met through use of outside facilities, reports on these needs, and establishing criteria for the selection of employees to receive the benefits of training in outside facilities. The additional training officer position requested will provide more nearly adequate leadership and assistance in management development, supervisory training, instructor training, orientation, safety training, etc., which are vital for the improvement of the career service of the Bureau. It is impossible for the training office, unassisted, to plan and execute a training program for a bureau of the size and complexity of the National Park Service. The pressures on the single training officer are mounting steadily and there are many demands on his time which he simply cannot meet.

With the additional position requested, it would be possible to do the following which now cannot be done:

1. Work up formal orientation programs for the Washington office and pattern programs and guidelines for field offices.

2. Develop manuals for supervisors to use in orientation training and in developing their staff members.

3. Plan and conduct supervisory training sessions. (Considerable progress has been made on executive training and management training, but nothing at all has been done on supervisory training and this is one of the greatest needs.)

4. Make field visits to advise on and assist in and evaluate park training programs.

5. Assist the training officer in conducting management seminars. (Hitherto this has of necessity been a one-man job. Management seminars, properly conducted, involve a tremendous amount of planning and detail. It is too much to expect one man to handle, along with the other work a training officer necessarily must do.)

6. Provide coverage and continuity here in Washington when the training officer is in the field, as he should be a considerable portion of the time.

Division of Budget and Finance.—One of the items in the President's special message to the Congress of February 23, 1961, on natural resources had to do with fees and other user charges at all types of Federal natural resource projects and areas. Even before the date of the President's message on natural resources, this Service had under consideration the need for a comprehensive review of its visitor fee system in the light of the many additional services and facilities that have been provided in the parks under Mission 66, and the need to intensify its day-to-day review of the system following whatever changes that may result from a comprehensive study.

Through the years the Service has adhered to a policy of not charging visitor fees in a park until adequate services and facilities have been provided to warrant such action. Adequate services and facilities are now available, or soon will be available, in many of the existing parks where no fees are now charged. As new parks are added to the System, full consideration and study should be given to the charging of appropriate visitor fees. The fees being charged in the various parks should be constantly reviewed to insure that they are fair and equitable, are in accordance with governing policies and principles, and that the full revenue potential is being realized within the governing policies and principles.

The staff functions incident to management of the Service's fee system are now being handled in the immediate office of the Chief of Budget and Finance. No special staff has been provided for this function, the workload incident to which is expected to increase substantially as time goes on. Aside from the continuing study and review that are required to keep the fees system up-to-date, there is also a heavy workload of correspondence to be handled, as well as oral inquiries concerning the fees that are being charged. To intensify efforts to realize the full revenue potential and to insure the charging of just and equitable visitor fees the estimate requests funds for the establishment of a user charges officer position to assist the chief of budget and finance in carrying out this important function.

Division of International Cooperation.—As the accepted historical and natural leader in national parks and related economic, conservation, and scientific activities, the National Park Service has responsibilities that have come about automatically which extend throughout the world. In the past, the Washington office of the Service has divided the resultant workload among its various organizational units. This practice has had to be accepted as the best that could be done within the limitations of funds and personnel. In recent months, however, the volume has become so great that the proposal to establish an office for the purpose has been thoroughly studied following which a skeleton office has been set up on a pilot basis.

This estimate proposes the firm establishment of such an organizational unit in the Washington office to handle this important function and thus relieve the other organizational units of workload that impedes the accomplishment of the functions for which they are basically responsible. The personnel of the new office must be thoroughly informed on all matters pertaining to the philosophy, objectives, and activities of the National Park Service, including economic values, physical facilities, legislation, planning, development, operations, organization structure, and benefits and use. The personnel must be competent to conduct foreign relations work effectively and efficiently in order to best serve the world interests of the United States. The office would coordinate National Park Service operations with related operations of American as well as of foreign national and international agencies. The operations of the organizational unit would be

tailored to fit within the framework of the programs of the Department of State and the Agency for International Development. To establish the organizational unit, this estimate provides for the position of a chief (GS–15) and a secretary (GS–5). If the unit is not provided for, the workload will have to be handled, on a less than efficient and satisfactory basis, by other organizational units at the expense of depressing the progress of other programs.

Increased administrative printing requirements, $5,000

There has been no increase in the amount provided for administrative printing during the past 10 years. The increased cost of printing and the materials required therefor that have taken place during that period, coupled with increased requirements of printed material incident to the Service's expanded operations, have rendered the present printing allowance of $25,000 inadequate. Administrative printing costs under this appropriation for the 1961 fiscal year totaled $28,932 during which period it was necessary to charge some of such costs to program funds in order to satisfy requirements. The increase of $5,000 requested is essential if the administrative printing needs of the Service are to be met.

Increased general expense funds for present staff, $15,670

Periodic within-grade promotions, increases in per diem and mileage rates, the necessity of absorbing a portion of the salary-increase costs authorized by Public Law 86–568, and position reallocations brought about by increased responsibilities incident to the expanded programs have progressively reduced from year to year the amount available under this appropriation for general expenses. The situation forces the charging of some travel and other costs to program funds that properly are for financing as general administrative expenses. With the expanded operations, personnel turnover has increased substantially with the result that the number of Washington office vacancies filled by transfer of field employees has risen, thereby increasing travel and transportation costs. An example of such an item was the recent transfer of an employee from Yosemite National Park to the Washington office at a total cost of $1,712. The amount requested in this estimate, while representing an increase of approximately 13.5 percent over the amount allocated for the purpose in the 1962 fiscal year, must be provided if the Service is to discharge adequately its administrative responsibilities and if program funds are not to be used for general administrative purposes.

Plan of work.—The program contemplates provision of executive direction and the performance of certain administrative functions in the Washington office in support of all Service programs.

2. Regional office expenses

Subactivity	Amount available, 1961	Amount available, 1962	Estimate, 1963	Increase
(*a*) Region 1 office	$113,024	$113,070	$168,570	$55,500
(*b*) Region 2 office	115,042	115,480	155,980	40,500
(*c*) Region 3 office	113,842	114,450	154,950	40,500
(*d*) Region 4 office	113,208	113,650	166,480	52,830
(*e*) Region 5 office	118,176	118,520	159,020	40,500
Total	573,292	575,170	805,000	229,830

2. *Regional office expenses.*—The estimate of $805,000 is an increase of $229,830. The increase consists of (1) $180,000 for financing under this appropriation the salaries and expenses of the program coordination staffs which are now being financed from construction funds (2) $34,500 for four additional positions needed to establish safety organizational units in the regions 1 and 4 offices, including general expense funds for the new positions, and (3) $15,330 to meet requirements of present staffs for general expense funds.

Need for increase.—What was said under activity 1 concerning the increased administrative workload in the Washington office since the beginning of Mission 66 is equally true with respect to the regional offices. No additional staffing has been provided under the appropriation for the regional offices since the commencement of Mission 66. The situation explained under activity 1 with re-

spect to the Office of Program Coordination staff in the Washington office is the same in the regional offices.

The increases requested are discussed more specifically in the following:

To provide for financing under this appropriation the salaries and expenses of the offices of program coordination which are currently financed from construction funds, $180,000

The situation that has developed with respect to the financing of the program coordination staffs in the regional offices is the same as that in the Washington office as explained in activity 1 under a similar heading. It is necessary that funds for the salaries and expenses of those organizational units be provided under the general administrative expenses appropriation if the integrity of the appropriation structure and the proper budgeting thereunder is to be maintained. As stated under activity 1, the question of propriety of continued financing of these costs from construction funds notwithstanding, such financing reduces the amounts that would otherwise be available for development of facilities in the parks. The increase of $180,000 requested under this item will provide for the salaries and expenses of 19 positions in the 5 regional offices comprising the program coordination staffs.

Four additional positions needed to establish a division of safety in each of the regions 1 and 4 offices, $34,500

As indicated in the justification for the increase in the departmental expenses activity, no provision is made in the present regional office staffing for the prosecution of safety and health programs. It is proposed to establish two field safety officer positions, one with headquarters in the region 1 office in Richmond, Va., and one with headquarters in the region 4 office in San Francisco, Calif., and a clerk-stenographer position to serve each. The field safety officers would work with field officials in charge of the parks and offices to lower the number of visitor and employee accidents and reduce the cost to the Federal Government under the Tort Claims Act and the amounts paid out annually in employee injury compensation cases. The increases in the number of Service and concessioner employees and the continued increase each year in visitor use of the parks emphasize the importance of giving more serious consideration to the Service's safety and health programs.

Additional general expense funds for present staffs, $15,330

The situation obtaining in the regional offices with respect to the need for additional general expense funds is the same as that obtaining in the Washington office as explained under activity 1, "Departmental expenses." The increase will provide an average of $3,066 for each regional office.

Plan of work.—The program contemplates provision of executive direction and the performance of certain administrative functions in the regional offices in support of all Service programs.

Itemization of estimate—General administrative expenses

	Actual, 1961	Estimate, 1962	Estimate, 1963	Increases
Program and financing:				
Total obligations	$1,578,313	$1,581,000	$2,100,000	$519,000
Unobligated balance	2,687			
Appropriation	1,581,000	1,581,000	2,100,000	519,000
Obligations by objects:				
11 Personnel compensation	1,272,143	1,269,000	1,690,000	421,000
12 Personnel benefits	94,221	94,000	127,000	33,000
21 Travel and transportation of persons	82,085	84,000	110,000	26,000
22 Transportation of things	5,391	7,000	9,000	2,000
23 Rent, communications, and utilities	32,312	35,000	42,000	9,000
24 Printing and reproduction	49,868	52,000	58,000	6,000
25 Other services	21,897	24,000	35,000	11,000
26 Supplies and materials	7,942	8,000	12,000	4,000
31 Equipment	12,454	10,000	17,000	7,000
Total obligations	1,578,313	1,581,000	2,100,000	519,000

USE OF ADDITIONAL FUNDS

Chairman HAYDEN. Would you care to explain briefly the need for these additional funds?

Mr. WIRTH. Through the years in carrying out our program, due to a lack of administrative funds, we have been carrying certain functions under our construction funds in our general overall park service activities. For instance, on page 185 it will show that we have been financing our special Mission 66 staff of eight people with those funds to try to keep things in balance, as well as the office of our Program Coordinator, which is headed by Mr. Smith here and his counterparts in the regional offices, and a certain portion of our Division of Information, because we just had to keep things moving.

This budget request would provide $203,000 for those positions under the general administrative expenses funds and would accordingly relieve our construction funds; also for the same thing affecting the regional offices, $180,000. Those are all transfers of recurring costs to funds where they should properly be.

ADDITIONAL POSITIONS

It also provides for 6 additional positions in Washington and 4 in the regions, new positions; so that is a total of 10 new positions and the transfer of existing personnel over to another item.

NATIONAL PARK SERVICE—ADMINISTRATIVE PROVISIONS

Chairman HAYDEN. We will put in the record this statement entitled "Administrative Provisions," which has to do with your request for authorization to purchase 159 passenger motor vehicles, 125 for replacement and 34 additional.

(The information referred to follows:)

Authorization is requested for the purchase of 159 passenger motor vehicles of which 125 are for replacement only, including not to exceed 57 for police-type use the cost of which may exceed by $300 each the general purchase price limitation for the current fiscal year.

The vehicles to be replaced will be within the age or mileage standards for replacement as prescribed by the General Services Administration. Many of them are used for patrol purposes and law-enforcement functions by employees such as park rangers and the U.S. Park Police, and often at high speeds for the apprehension of speed and other violators. They must, therefore, be in good condition to insure safety of the operator and the public. Many of the vehicles operated by the Service are used in rugged mountainous and desert terrain and under trying weather and road conditions. The geographical location of many areas, far from railheads or other populated centers where Government business is transacted, makes it mandatory to use this type of transportation.

Vehicles to be purchased:	
Number	159
Estimated gross cost	$267,750
Old vehicles to be exchanged:	
Number	125
Estimated allowance	$42,765
Net cost	$224,985
Old vehicles still to be used	299

Expansion of the Service's activities under the Mission 66 program has brought about the need for additional passenger motor vehicles. Additional park ranger and interpretive positions are provided for in the increased funds requested for the parks for which passenger motor vehicles will be required. Additional vehicles are necessary to more nearly meet the needs of the present staffs in existing parks. Passenger motor vehicle transportation is also essential in administering new areas added to the system. The 34 additional vehicles included in the budget are all required to fill these needs. The vehicles are distributed as follows: Six for new parks, 22 for additional ranger and interpretative personnel and to supplement the needs of the present staffs in existing parks, 2 for the new Eastern Training Center, and 4 cruisers for the U.S. Park Police.

The language will permit the Service to purchase special features of equipment for vehicles used for law-enforcement or police-type activities exceeding in cost the maximum amount established for the purchase of any passenger motor vehicle. In the discharge of its responsibilities the Service will need to purchase 57 cars equipped as police cruisers in 1963. They are required for patrolling such areas as the George Washington Memorial, Baltimore-Washington, Suitland, and Blue Ridge Parkways, and roads in the larger parks. Special features of equipment for police-type vehicles include heavy-duty front seat and upholstery, heavy-duty police-type engine, safety belt, safety padded sun visor and dashboard, special safety tires and tubes, and heavy-duty chassis, springs, and shock absorbers, and heavy-duty alternators.

ARCHEOLOGICAL INVESTIGATIONS AND SALVAGE PROGRAM

Chairman HAYDEN. Have you any questions, Senator Mundt?

Senator MUNDT. Yes. In your justifications, you discuss the archeological investigations and salvage program, the historic sites survey, and the historic American buildings survey.

In connection with the archeological investigations and salvage program, have you done anything in the Missouri Basin out in South Dakota on land to be flooded by the big dams? I know there the universities, and the Smithsonian here, have done some work.

Are you cooperating in this work? Do you plan something further or do you do something independently?

Mr. WIRTH. We are doing that, Senator, with reclamation money and no doubt—I would like to look in the record—we have been employing under contract the universities and the Smithsonian. The work they are doing under the contract for us is with money that we have obtained through the Bureau of Reclamation for the Missouri Basin work.

Senator MUNDT. I was wondering. If you search the record you may find this is all under contract with you. I did not know whether it was that, or whether it was done independently, or what coordination there is.

Mr. WIRTH. I can assure you there is full coordination. Just where the money is coming from is something I would have to run down, but we do a lot of that work in the various States. As the chairman knows, we use certain facilities in Arizona, the museum and the university, the same way in New Mexico, and Utah.

We have our own salvage program staff, but we keep this as a nucleus, and do as much as we can under these contracts. We get twice as much out of it that way because the contractors contribute a little bit.

Senator MUNDT. Yes; I am not at all critical of the program. I simply mention it because whatever is going to be done and not left undone in the Missouri River Valley as far as South Dakota is con-

cerned is going to have to be done pretty fast because these dams are filling up.

Mr. WIRTH. Yes. May we submit a full statement on that?

(The information referred to follows:)

STATEMENT OF ARCHEOLOGICAL INVESTIGATIONS AND SALVAGE WORK IN SOUTH DAKOTA

For the past 15 years the National Park Service, with funds transferred to it by the Bureau of Reclamation, has been actively cooperating with the Smithsonian Institution and local universities or other cooperative agencies in the interagency archeological salvage program in the Missouri River Basin.

Field excavations are conducted in the late spring, summer, and early fall; with cleaning, cataloging, and analysis, as well as report writing on the material recovered going on in the wintertime. During last summer's field season, with funds transferred to it by the National Park Service and also with a grant from the National Science Foundation, the Smithsonian Institution had five field crews out and there were five other cooperating institutions working in the Missouri River Basin under contract with the National Park Service.

Specifically in South Dakota, Smithsonian had a field party in the Big Bend Reservoir, central South Dakota, investigating a series of 10 mound sites. A second party was in the lower portion of Big Bend Reservoir excavating a prehistoric Indian village site.

The third Smithsonian party worked in the Oahe Reservoir, just south of Mobridge, recovering a rather unusual prehistoric fortified Indian village. A fourth Smithsonian party excavated important Indian burials from the Sully site, 19 miles northwest of Pierre, S. Dak.

Of the five cooperating local institutions, two worked in South Dakota. One was the University of Nebraska spending a second season at the Leavenworth site in the Oahe Reservoir and the other a University of South Dakota crew investigating sites in the Gavins Point and Fort Randall Reservoir areas where shoreline sites were being exposed and eroded by these already filled reservoirs.

In the coming field season of calendar year 1962, the Smithsonian Institution plans to continue their investigations in the Oahe and Big Bend Reservoir areas of South Dakota. The National Park Service has programed funds for further cooperative work with the University of South Dakota in the Fort Randall area. In addition it has programed to investigate sites in six other reservoir areas in the Missouri River Basin by utilizing the services of various local institutions under contract with the National Park Service.

SURVEY FOR ADDITIONAL PARK SYSTEM UNITS

Senator MUNDT. Fine. On page 9 of the justification you state that 61 areas, including 3½ million acres were investigated in the field or were inventoried for possible consideration as units in this system. Do you mean the overall park system, or can you give us a breakdown of where these 61 areas are?

Mr. WIRTH. That reference is to the national park system.

Senator MUNDT. You are not exploring any areas outside the system?

Mr. WIRTH. These investigations are of areas that might be included in the system.

Senator MUNDT. That is what you mean?

Mr. WIRTH. Yes.

Senator MUNDT. You are then surveying possible additions?

Mr. WIRTH. That is right.

Senator MUNDT. To the system?

Mr. WIRTH. That is right.

HOME OF LINCOLN'S TEACHER

Senator MUNDT. Would that survey or any other program that you have in your justifications include a study, or investigation, or whatever you call it, in connection, for example, with the home of the teacher of Abraham Lincoln, Mentor Graham, out in Blunt, S. Dak.? I have had some correspondence about that. Do you feel that the home of the teacher of President Lincoln, whose home is still there, might have some historic national significance?

Mr. WIRTH. I doubt very much whether we have investigated anything on that, Senator. As far as I am concerned, this is the first time I have heard of it.

Senator MUNDT. Could you do so under this authority or under this money? We need your professional guidance to know whether or not this comes within the criteria.

Mr. WIRTH. It would come under the historic sites surveys. We investigate everything that has any possibility that is brought to our attention; including those that we know of ourselves. Then we grade them in accordance with our ideas as to their importance from the viewpoint of national history; and then we have the advisory board which reviews our studies and makes separate recommendations to the administration.

Senator MUNDT. Do you have people out there in some regional office that could take a look-see at this and figure out where this fits into the scheme of things?

Mr. WIRTH. Yes, we do operate out of our regional office.

Senator MUNDT. Will you so operate and take a look at this?

Mr. WIRTH. I will take this as an official request and we will certainly do so.

HISTORIC BUILDINGS IN SOUTH DAKOTA

Senator MUNDT. Thank you very much. You have mentioned in your statement the four South Dakota structures in the historic American buildings survey. Could you supply for the record where they are?

Mr. WIRTH. Yes, sir.

Senator MUNDT. Thank you. Unless you have them handy, you may supply them for the record.

Mr. WIRTH. I do not have them right here.

Senator MUNDT. Will you supply them for the record then?

Mr. WIRTH. Yes, sir.

(The information referred to follows:)

List of South Dakota structures in the historic American buildings survey

Structure	Town or vicinity, and county	References
Blacksmith shop and barracks	Pierre vicinity, Armstrong	Built 1880. Site of Fort Bennett and Oahe Reservoir.
Bon Homme Mill	Tabor, Bon Homme	Built 1875. Colony of Hutterian Brethren, a communal group with extensive farm holdings.
Oahe Congregational Mission	Pierre vicinity, Hughes	Built 1877. 1 story, clapboard, with corner tower and belfry.
St. John's Episcopal Mission	Cheyenne River Indian Reservation, Dewey.	Built 1885–86 near Fort Bennett. Relocated 1892–93. Clapboard chapel and rectory.

SOIL AND MOISTURE CONSERVATION WORK

Senator MUNDT. In connection with your justification on page 10 of the justifications, can you give a little more detail? I notice you are planning to spend $93,000 for soil and moisture conservation work, and it would seem to me that this would fall into the functions of the Soil Conservation Service, or some other branch of the Department of Agriculture, and I am just curious to know why it is being done by the Park Service.

There must be some good reason for it, but it does not occur to me.

Mr. WIRTH. It has to do with soil erosion within the park areas that has been caused by overuse. Of course, as you know, we have perhaps some of the finest, biggest erosion areas in the world in the badlands, for instance, and in Grand Canyon. Then there are other areas where we have heavy camping use, and so forth, where we are constantly fighting erosion. We also have taken over depleted lands in new areas, and there are still some in old areas that have not come back from the overuse.

Senator MUNDT. It is a job that needs to be done. My question goes to the point of whether you could not contract that out to the Soil Conservation Service. It seems that would be in the interest of economy. You would be drawing upon a service that specializes in that work, contracts for archeological work with the Smithsonian.

Mr. WIRTH. If the program was sufficiently large we could do that. We do use their technicians, and borrow their techniques like we do with the Forest Service on firefighting, and with the Public Health Service on health matters, but most of our conservation work is done with the maintenance force in the parks and $200,000 divided between close to 200 areas is a small amount.

It is not a big erosion job that the Soil Conservation Service would come in and do. They would have to organize and come in and the overhead would eat up this money before we get started.

I do not think there is any conflict of interest and they have been very cooperative in giving advice from time to time and dropping by and seeing various places.

SOUTH DAKOTA PARKS

Senator MUNDT. You list in your tabulation on page 42 the following expenditures for South Dakota parks: An increase of $9,000-plus for the Badlands; an increase of $11,000-plus for Mount Rushmore, an increase of $10,000-plus for Wind Cave, and an increase of $3,000-plus for Jewel Cave. Can you tell me generally what these increases will mean at each place? What will be done, or would you rather supply it for the record?

Mr. WIRTH. I can give you exact details of what they would be. On the Badlands, it most likely has to do with the equipment and so forth necessary for proper maintenance, because it does not show any permanent new positions; and it may also include some temporary positions which we do not show here for summer use to handle the crowds, and operating some new facilities; but I can give you the detailed breakdown on that if you wish.

Senator MUNDT. Yes, I would like to have it so I can check it with the correspondence I have had from those areas.

Mr. WIRTH. Yes, sir. I can assure you, though, that the superintendents have not gotten all that they wanted for the areas.

Senator MUNDT. I would imagine that because the increase seems modest. It looks to me like they might simply involve an additional individual or so and perhaps an increase in pay for people who are there, upgrading, and so forth.

Mr. WIRTH. Some reclassification, some salary increases; but that raises one more point. When you talk of an increase for management and protection of so many millions of dollars and when you figure how many areas you have and you start dividing it up to meet the requests, it spreads itself fairly thin.

Senator MUNDT. If there are items involved in here, including equipment, or facilities, and so forth, that is what I am interested in primarily.

Mr. WIRTH. Yes. We will give you a complete breakdown of those areas in South Dakota.

(The information referred to follows:)

BREAKDOWN OF INCREASES FOR PARKS IN SOUTH DAKOTA, MANAGEMENT OF PARK AND OTHER AREAS, "MANAGEMENT AND PROTECTION" APPROPRIATION

Principal factors for which increased funds are requested for the following parks are the operation of newly constructed Mission 66 facilities, and higher operation costs brought about by increased visitor use and extension of the operating season. The increases are summarized as follows:

	Amount
Badlands National Monument:	
Temporary employment (park ranger, clerk-typist and charwoman) 1 man-year	$4,042
General expenses, including supplies, materials, utilities, and personnel benefits	5,375
Total	9,417
Jewel Cave National Monument:	
Temporary employment (park ranger, park naturalist, and clerk-stenographer) 0.5 man-years	2,200
General expenses, including supplies, personnel benefits, and equipment	814
Total	3,014
Mount Rushmore National Memorial:	
Temporary employment (caretaker, clerk-typist, and park ranger) 1.2 man-years	5,100
General expenses, including supplies, materials, personnel benefits, utilities, etc	3,244
Pickup truck for use of protective staff	1,325
Equipment, including chairs, desks, etc., for new visitor center	2,082
Total	11,751
Wind Cave National Park:	
Temporary employment (naturalist and park ranger) 1.3 man-years	5,480
General expenses, including supplies, materials, travel, utilities, personnel benefits, etc	5,043
Total	10.523

MOUNT RUSHMORE SOUND AND LIGHT PROGRAM

Senator MUNDT. As you know, you and I have had a lot of correspondence about the sound and light program proposed for Mount Rushmore and you are still entitled to an unbudgeted lunch at my expense sometime, if we can find a happy moment when both of us can get together.

Mr. WIRTH. I can assure you I am going to collect it.

Senator MUNDT. You have indicated to me that you have plans underway now for the development of this type of portrayal in some of our national parks and if my memory is right—you correct me if it is wrong—you are far enough along so about the Fourth of July you are going to initiate a program of this kind at Independence Hall.

Can you give me a rundown of what is happening along these lines because, as you are well aware, this type of program has proved phenomenally successful at the Sphinx, and at the Acropolis, and other places; Versailles, I believe, in Europe.

PROGRAM AT ST. AUGUSTINE

Mr. WIRTH. We have two projects of this type that will come into effect within the next few months. One is the Castillo de San Marcos in Florida.

Senator MUNDT. That is the first white home in America?

Mr. WIRTH. It is the old Spanish fort we have there. We have let a contract with the concern that has the know-how from Europe on this type of thing.

Senator MUNDT. Phillips?

Mr. WIRTH. On the basis of no cost to the Government, but as an income proposition to try it out at Castillo de San Marcos.

Senator MUNDT. Much like you let a concession for a souvenir stand, or something?

Mr. WIRTH. That is right. It is a 1-year contract to see how it works out. We want to go into this sort of thing cautiously and carefully. It is new to us and we do not want to make any mistakes. Up in Philadelphia there was a grant of funds, as you know.

INDEPENDENCE HALL

With a donation of funds we have an analysis going forward on a light and sound program at Independence Hall. We fully expect to go ahead with that. I think the tentative date is a little before July 4. Do you recall, Mr. Price?

Mr. PRICE. We have a proposed contract under study now, Mr. Wirth, which would be with Illumadrama, Inc., for the installation and operation of the sound and light program at the center.

Senator MUNDT. Would that be done the same way as the one at St. Augustine; that is, you make a contract like a concession?

Mr. WIRTH. That is right. We are trying to do it without any cost to the Government. As a matter of fact, I am to go up to Philadelphia this afternoon, if we get through in time. I will also be there tomorrow at an advisory board meeting and this will be one of the things under discussion.

COST OF INSTALLATION OF SOUND AND LIGHT PROGRAM

Senator MUNDT. Either off the record or on the record—I do not want to embarrass your contract negotiations—I would like to get some idea of how expensive an installation of this type would be.

Mr. WIRTH. It is quite an expensive proposition—I do not have the figures—because we will require, certainly at Independence Hall, protection to prevent damage to the structure and will insist on the complete hiding of all the lighting equipment when it is not in use.

If we just wanted to put the things outside and show them on the building at nighttime, that is one thing; but we have thousands and thousands of people going through there every day and we cannot jeopardize the building.

I might say that I met with the committee on Saturday. They have been wanting to do one up at Gettysburg. It would be out in the open and all over the field. I was scared of it and I turned it down for the time being until we know more about it. It would have lights in the trees and along the fences and, while the wires would be underground, we would have to have a big parking area out in the battlefield we are trying to preserve.

In connection with the Gettysburg centennial, the committee from Pennsylvania has agreed to put it on the shelf for the time being and plan to have something else for the centennial up there.

The State has $100,000 available to help on the centennial.

PLANS FOR GETTYSBURG STUDY

Senator MUNDT. While you are talking about Gettysburg, I notice that you are planning the preparation of an authoritative and modern military study of the Battle of Gettysburg to be used for development and interpretative purposes. You state also that you can complete this comprehensive study of all aspects of this great military event which was the turning point of the Civil War.

That arouses my curiosity. I can remember West Pointers telling me for years how they have studied the Battle of Gettysburg as part of the textbook training that they get at West Point; and I remember one distinguished general who told me a lot about that.

Have not all those aspects been studied and analyzed by military experts long ago? Is this something which is just now being undertaken?

Mr. WIRTH. This is my personal opinion without talking to our historians, but I am inclined to believe from the standpoint of the study of a military operation the answer is "yes"; but from the human interest standpoint that is needed to bring this thing alive to the lay person who goes there, there is a lot missing. We feel the full story should be analyzed completely, and we do know a lot of it has come about by some, perhaps unintentionally, but perhaps not proper, interpretation of certain things that ought to be checked and rechecked. Sometimes they become word-of-mouth stories of events without proper basis.

We would like to make a check and recheck on the events and come out with the true story as it would affect not the military man but the layman who is coming there now.

Senator MUNDT. From that point I agree with you completely. I think there is work to be done there, but I would think that there

must be literally hundreds of books and documents written on the military aspects; and from the standpoint of the military training and from the standpoint of the value to soldiers and military leaders I do not think we could contribute much there.

However, from the standpoint of portraying the story accurately and effectively, as glamorously as possible, I would agree.

HISTORICAL ACCURACY

Mr. WIRTH. Let me point out one example of what we have in mind. Take Independence Hall, or take the place where Lincoln died down here. I think you will find anywhere from 10 to 20 paintings and pictures of what took place there, and no two of them are alike; not as far as the people are concerned, but as far as the room appearance itself goes.

They all took the artist's conception of what he thought the building looked like or what it would look like to better set off the pictures. For instance, in one picture of the room where Lincoln died I think they have about 20 to 22 people, all dignitaries of the Government at that time. I would defy anyone to get that many people in that room with Lincoln still there in bed.

In Independence Hall, I do not know how many hundreds of thousands of documents we got 10 graduate students of the university to go through to try to determine just what Independence Hall, the place where they signed the Declaration of Independence, looked like at the time of the signing. We still have not found out. We have practically given up and come to the conclusion that it is up to someone to prove we are wrong. We even scraped the paint off to try to find the true color. It is awfully important, I think, to establish accuracy of these things.

IMPROVEMENT OF EXECUTIVE MANSION AND GROUNDS

Senator MUNDT. In connection with your discussion of the improvement of the Executive Mansion and the White House campus, can you give us just some idea as to the plan that the Olmstead brothers had? I do not believe it was ever carried out, but I think it was recommended at one time, as I recall. Just what changes do you propose to make in the years to come? What are you thinking about in connection with these improvements?

Mr. WIRTH. The Olmstead plan for the White House and its grounds has been pretty well preserved, but, as you say, never fully carried out. We are proposing to gradually carry it out. Also a lot of the plantings around the White House are old. Most of the planting we did last year was in accordance with the Olmstead plan. Those bushes had become straggly and we had to replace them. We have not undertaken a systematic replacement of trees.

Many of the trees in front of the White House and around the Ellipse are going now. Some of them are going by the Dutch elm and other diseases. We have to do a refurbishing job and we are trying to do it gradually. This budget includes funds for that purpose. I think the front fence of the White House was built in 1870. The Secret Service is very much disturbed because it has deteriorated to a point where it would not take much to push part of it over.

The fence around the side and down along the Ellipse has been improved, but the front fence on Pennsylvania Avenue has not been done since 1870, and it has to be replaced. Since Congress definitely gave us the responsibility last year, we propose to get in there and gradually improve it and keep it in good shape in the future.

GEORGE WASHINGTON MEMORIAL PARKWAY

Senator MUNDT. I was glad to see that you are proposing a plan of operation the George Washington Memorial Parkway ultimately to connect, I believe, Mount Vernon and Great Falls.

Mr. WIRTH. Yes, sir.

Senator MUNDT. What about the traffic problem on this matter? It seems to me that a real problem is developing there that makes people cross the parkway traffic if they want to go up to the CIA portion of the highway. There is a lot of confusion and I do not think it is really a traffic engineer's dream that has been created there.

I wondered if this was your planning or the State of Virginia? What can be done to correct it?

PROBLEM OF THROUGH TRAFFIC

Mr. WIRTH. Well, you have put your finger on one of the most difficult problems we have in the parks. As soon as we build a road, everybody thinks it has to be through traffic or a road for commuters, and I admit that some of the parkways up in New York and other places are practically nothing more than commuter highways. We feel very strongly that the question of servicing the people in business is one thing, but from the standpoint of our great National Capital we should try to keep some of these as park drives for the use and enjoyment of the great Potomac Gorge.

ORIGINAL PLAN FOR MEMORIAL BRIDGE

I think you saw a year or so ago our design of the roads around the Lincoln Memorial and on down to the Washington Monument. We would like to restore the Memorial Bridge to the intent for which it was constructed; namely, a connecting road from the Capitol down the Mall, around Washington Monument, the Lincoln Memorial, and across to Arlington Cemetery, as a memorial drive. We feel that with the Theodore Roosevelt Bridge we can eliminate the circle from around Lincoln Memorial, this will mean that the roads would then go straight down both sides of the Reflecting Pool, around the Washington Monument, and tie in with the Mall, coming directly up to the Capitol Building of the United States.

It is true some people will use it for business transportation, but we hope the 14th Street bridges and the Theodore Roosevelt Bridge will carry most of that type of traffic and leave the park roads for the enjoyment of the memorial aspects of Washington. That is our hope and desire.

Senator MUNDT. The only difficulty, Mr. Director, is that people have a perversity for driving any place they want to drive unless you put a policeman who won't let them go.

Mr. WIRTH. We are not going to do that.

Senator MUNDT. No. I quite agree with you, it would be a wonderful thing if we could have some parkways and people could drive across leisurely and not have to worry about fast moving traffic going someplace to work; but I just do not know how you could create that kind of situation.

Mr. WIRTH. We cannot put the police there to stop that. We should not and would never get that done.

Senator MUNDT. It would create a lot of antagonism.

Mr. WIRTH. People going to the office and going home at night will go the shortest and quickest way.

Senator MUNDT. That is right.

Mr. WIRTH. They do not drive on the parkway back and forth to work for pleasure. They do it because they have to. They have to go to work and they want to get home after work. So I think the Theodore Roosevelt Bridge, when completed, and the 14th Street bridges that are now completed will siphon some of that travel off the Memorial Bridge and it will become more and more a memorial type of bridge. It is important, I think, that the central part of the motif of Washington be retained in that kind of atmosphere.

TRAFFIC ENGINEERS

Senator MUNDT. Do you have a corps of traffic engineers in your Service, or do you work with them to get them to envision and try to eliminate the traffic dangers if people go ahead and do what they want to do, instead of what you think they ought to do in their driving?

Mr. WIRTH. We do not have a corps. We have some, and we also use the Bureau of Public Roads and the District Highway Department. We are also consulting with the Virginia Highway Department and its specialists on traffic demands and the allotment of traffic to different routes based on the time element and things like that; so we have access to a great deal of professional help which we use. We also do a certain amount of checking ourselves.

Senator MUNDT. Mr. Chairman, Senator Saltonstall is tied up this morning in an important meeting of the Committee on Armed Services and he has asked that I ask a couple of questions in his behalf.

Chairman HAYDEN. Surely.

CAPE COD NATIONAL PARK

Senator MUNDT. I will just ask the questions and you will have to give the best answers you can. I am not prepared to follow through because I am not familiar with the terrain that he discusses, but the Cape Cod National Park is one of the recent projects approved by Congress.

Senator Saltonstall would like to know what progress has been made and what accomplishments are planned in fiscal year 1963?

Mr. WIRTH. We have two field parties now surveying the boundary and base lines in preparation for checking on titles and land acquisition program. We have been searching the county records to get the title data.

The last I heard, that 150 people—landowners—had come in offering to sell their properties. We are now getting ready to contract with appraisals to arrive at sound values of the property. We have the

funds which were appropriated last year for land acquisition. We are asking for $4 million more this year for additional land purchases.

We are about ready to go forward in actual land acquisition. We also have a request for funds in the budget for certain improvements. One is to clear up the military camp which we have acquired. All the buildings have to be taken off or restored.

We have had our first meeting with the Cape Cod National Seashore Advisory Commission which was authorized by Congress. We brought them down here to Washington for the first meeting. The second meeting will take place on March 9 at the cape.

We hope to have, and they should be ready now for publishing, the proposed zoning regulations required by law. They will have to rest in the Federal Register for 90 days before the Secretary reviews the comments received and makes the final decision.

So, we are moving forward. It may seem a little slow, but we have to get the locomotive running soon. When we do start, it will go quite rapidly.

PROPERTY APPRAISALS IN MASSACHUSETTS

Senator MUNDT. Senator Saltonstall reports that there has been some indication of dissatisfaction on the part of property owners regarding acquisition of improved property and appraisals in Concord, Lexington, and Lincoln, and he said he would appreciate information as to whether or not the National Park Service has received any complaints in this respect or reports along these lines from Park Service representatives, and what the general policy is on appraisals for that area.

It is understood that some people are agreeable and want to sell their homes in connection with this park, but they have been informed by the Park Service that there are insufficient funds available for this purpose.

FUNDS FOR IMPROVED PROPERTIES

What percentage of the funds already appropriated has been used to acquire improved properties within the proposed park boundaries?

Mr. WIRTH. I would suggest that I submit, and we have it here, a complete tabulation of just how much we have spent and how much we have available for additional land. That will answer the last part.

As far as the first part is concerned, we have had some misunderstanding as to our land acquisition program, more from the standpoint of people that own homes saying that we are coming in and dispossessing them. I have just finished writing a letter which substantiates what I told them 2 years ago when I met the people at the town of Lincoln, to the effect that our priority is to buy all private land and that we will not condemn residential property. We hope that when they are ready to sell they will sell to us. We are willing and would like to buy these residential properties. If they go ahead and make any major alterations, like putting in overnight accommodation motels, then we feel we have a right to step in and prevent it.

(The information referred to follows:)

Minute Man National Historical Park—Status of land acquisitions as of Mar. 1, 1962

	Number of parcels	Acres	Amounts
I. Property acquired:			
Purchase	7	27.60	$170,100
Declaration of taking	1	0.31	19,800
Transfer from Federal agencies	1	8.21	
II. Approved options	17	67.58	307,620
III. Appraisals completed	26	85.10	445,972
IV. Appraisals authorized	22	60.54	[1] 744,500
Total	74	249.34	1,687,992

[1] Estimated values.

Actual obligations plus firm commitments as of March 1, 1962, total $1,031,504.

Of the $3 million appropriated through the 1962 fiscal year for acquisition of lands, the above tabulation reveals that approximately 56 percent has been obligated or earmarked for properties for which appraisals have been authorized through March 1, 1962.

LIFE TENANCY OF FORMER OWNERS

Senator MUNDT. He asked this question which would be pertinent right there. Does the Park Service propose to permit the former owner to maintain a life tenancy?

Mr. WIRTH. We will be glad to buy them subject to the life tenancy. Of course we will not give a seller the full amount when he sells his property on that basis. We would have to take into consideration the question of the value of the life lease or staying in the place.

Senator MUNDT. Senator Saltonstall has submitted some letters he would like to have put in the record which contain some of these complaints that have been discussed and asks that the Director supply for the record what he would consider to be proper answers to these complaints.

(The letters referred to follow:)

CONCORD, MASS., *February 15, 1962.*

HON. LEVERETT SALTONSTALL,
U.S. Senator,
Senate Office Building, Washington, D.C.

DEAR SENATOR SALTONSTALL: Enclosed find article concerning Federal action in Minute Man Historical Park.

Many of the property owners residing in the park area in Concord are very much disturbed by the attitude of the National Park Service. They want to know if the promised policy of the Park Service has been changed.

While the park bill was pending in Congress, the Director of the National Park Service, Conrad Wirth, and Mark Bortman assured property owners that they could have life tenancies of their property, and could also hand their property down to their next of kin without interference from the Federal Government. It was with this promise that property owners went along with the bill.

As chairman of the Battle Road Citizens Committee, can I reassure the citizens of Concord whose property is involved that they can continue to live here in peace of mind as previously promised by the Federal Government? If there is a change in the park policy the citizens would like to be so advised.

Sincerely,

WALTER E. BEATTEAY,
Chairman, Battle Road Citizens Committee.

THEY WISH PAUL REVERE HAD TAKEN DIFFERENT ROAD—FAMOUS RIDE TO COST LINCOLN FOLKS MONEY

Some residents of historic Lincoln wish that Paul Revere had taken another road to Concord in 1775.

Revere was captured in Lincoln. The spot is marked by a tablet near the edge of Route 2A.

Now, some homeowners along the Battle Road figure they stand to lose good hard cash because of that famous ride.

Some 750 acres east and west of the historic spot are now within the newly approved Minute Man National Historical Park. This stretches from Route 128 in Lexington, through Lincoln, to Merriams Corner in Concord.

Another 100 acres will be added to the park in the near future. By 1975 the area will be cleared, its 1775 appearance restored.

Nearly 100 homeowners in Lincoln alone are expected to sell their homes to the National Park Service. They are engaged in a discouraging search for new land and houses. And some are not too happy about prices offered for their present homes. Increased real estate costs outside the park compared with Government appraisals of property in the park have forced some North Lincolnites' patriotism to the breaking point.

"Something is out of proportion," a Nelson Road resident said recently. "Even if I could build my home somewhere else for $10 a square foot, I couldn't build half of it for what the Government has offered me."

A housewife down the road heard how appraisals were going, decided to wait. "We were told that the Government won't repair or paint the houses they buy; they will rent them. But we were warned we had better sell our house now because it will depreciate when the neighborhood goes down."

She is in an understandable quandary. If the quality of the neighborhood is allowed to go down, she will get even less for her house a few years hence. On the other hand if she sells her house to the park right now, where will she go?

Living in a "ghost town" of empty or uncared-for houses is a spectre haunting those who feel they want to hang on as long as possible. But getting a reasonable price is the problem for most.

"Why does the Park Service insist that our homes have depreciated in value," one young father asked. "Realtors quote a compounded 2 percent increased real value almost everywhere else?"

Home owners have been told that appraisals are low because the houses are close to Bedford Airport.

However, independent real estate agents before the park was established in 1959 had offered several park residents up to $10,000 more than the Government is willing to pay them now.

Ronald F. Lee of the National Park Service, contacted in Philadelphia recently promised to do what he could to equalize the situation.

"We have to protect the interests of the Government, but it is certainly our obligation to pay fair market value for houses in Minute Man Park."

Lee also stated, "If we find ourselves owning houses for several years we would maintain them. A private owner can get his own appraisal to use as a guide, but there are bound to be differences of opinion as to the value of property."

Purchased houses would be taken down or removed from the park "as our master plan develops," he said.

Nevertheless curious discrepancies have set tongues wagging in the area and with reason.

One house, which the owner bought for $24,000 was purchased by the Government for $49,500. It now serves as office headquarters for the National Park Service. A few others have been appraised at prices that have left the owners in good spirits but these houses are no larger and stand on no more acreage than some that have been appraised at what one disgusted owner called "insulting" prices.

Other quotes:

"The realty officer for the park told us the Government wants to begin bringing the area back to its Revolutionary War appearance by 1968. If we don't sell by then, it will take our property by condemnation, 'Unless you care to take the case to the Federal court.' "

"We have put at least $7,000 in betterments into our house. Besides that real estate everywhere has gone up. They offered us what we had in this house 10 years ago."

"I don't know what they base their appraisals on. They take measurements to the nearest inch but where somebody gets an interior decorator and does a posh job with decor and all that, those boys are really impressed."

"All we want is for the appraisers to appraise realistically and to distribute the park money evenly," a Virginia Road housewife concluded.

LEXINGTON, MASS., *February 19, 1962.*

Hon. LEVERETT P. SALTONSTALL,
Senate Office Building,
Washington, D.C.

DEAR SENATOR SALTONSTALL: A number of the residents of North Lincoln whose homes are within the tentative boundaries of Minute Man National Historic Park have formed a committee of correspondence so that they may more effectively bring to the attention of Congress and the public the problems that have arisen in connection with the establishment of the park and the manner in which the National Park Service's policies have been applied in this particular instance.

Most recently, as you may be aware, the residents have become concerned over what seemed to be fairly serious errors of judgment in the appraisal of property within the park. As a direct result of that concern the Lincoln editor of the Fence Viewer requested Mr. Ronald Lee, regional director of region 5 of the Park Service, to explain the appraisal processes relied on by the Service.

Mr. Lee's reply to that request, published in the February 15 issue of the Fence Viewer is not wholly satisfactory, and the committee has requested me to reply to Mr. Lee and to forward to you a copy of his letter and of my answer.

We should appreciate hearing from you about this matter.

Very truly yours,

ALVIN LEVIN,
(For the Committee of Correspondence).

ON LAND ACQUISITION FOR THE MINUTE MAN PARK

To the Lincoln Editor:

During our telephone conversation the other day I promised that I would send you material pertaining to land appraisals. I will attempt in this letter to give you a brief summary of the appraisal processes.

As you well know the Constitution itself protects property owners from the taking of their property by the Government without just compensation. The key word in the constitutional provision is "just" and the appraisal of property for acquisition by the Government is to assist in the determination of what is "just compensation."

Basically the appraisal of property is to determine what is referred to as its "market value," which is another way of expressing its just value. In essence, that is the highest price which a property will bring if offered for sale in the open market by a seller who is willing but not obliged to sell and a buyer who is willing but not obliged to buy. This not only applies to Government purchases but is the general practice in real estate transactions.

The appraisal of property is not an exact science but is firmly based on appraisal policies, procedures, and techniques which are of general application, are permanent in nature and which have found general acceptance in the appraisal community. The appraiser, therefore, is a technican who, by training and experience, is qualified to pass independent and defensible judgment upon the values of the types and kinds of real property involved in an acquisition program. The techniques and procedures used by him are quite involved and complicated and I do not believe that they would be of special interest to you. I can assure you, however, that they have been developed over the years, are now included in academic courses for which degrees are offered and are recognized by all of the societies made up of members of the appraisal profession.

All of the appraisal work for Minute Man National Historical Park project is being accomplished by local qualified impartial appraisers on a contract basis. These are men of established reputation, integrity, proven ability, judgment, fairness, and honesty. The acquisition of land for Minute Man National Historical Park project has progressed quite smoothly and we are naturally concerned now if there appear to be any problems arising. As you know, the

Congress provided substantial sums to accelerate this program and we have every intention of doing so with the least disruption to the landowners.

There has been no change in our policy to acquire property with life tenancies or with use and occupancy provisions of a lesser duration. We have found not too much interest on the part of landowners to retain such an interest in their property but assure you that they may do so if they so desire.

It so happens that two members of our staff, who are closely associated with the land acquisition program at Minute Man, will be in the Boston area February 12–14. They are Mr. J. Carlisle Crouch, regional chief of operations, and Mr. Thomas D. Anderson, regional chief of lands. I have requested Mr. Crouch to contact you to make an appointment for further discussions of this subject while they are there.

Meanwhile, we appreciate your interest and will be glad to make complete information available about this very important acquisition program.

Sincerely yours,

RONALD F. LEE,
Regional Director, National Park Service.

FEBRUARY 19, 1962.

Mr. RONALD F. LEE,
Regional Director,
Region 5, National Park Service,
Philadelphia, Pa.

DEAR MR. LEE: Anyone who, like me, has read the last two issues of the Fence Viewer, knows that the residents of North Lincoln are disturbed and angry about the land acquisition program for Minute Man Park. Your letter in the February 15 issue, however, suggests that you do not fully comprehend the nature of that disturbance and anger. It may be, too, that the Park Service's apparent befuddlement about boundaries and plans, after 6½ years of study, is the kind of mental condition which makes it hard for you in the Service to realize what the people here are concerned with. Our local committee of correspondence has asked me to write to you to try to explain some of the local conditions and points of view, and to offer some suggestions about them.

The problem isn't that people here don't like the idea of a park, or that they don't like the idea of the kind of park they think you think you're going to set up. The problem is that some of the people who live here would like to stay on in their homes and are anxious about whether they will be able to. Some have to move and therefore have to sell their homes. A number of people in North Lincoln have growing families and want to enlarge their homes. All of those problems are related to the development of the park and to your land acquisition program, but for most of these people the problems have had to remain unresolved, because it seems to be impossible to find out what you are going to do next or when you are going to do it.

For a few people that doesn't matter too much; they can afford to sit tight and hope. Of course, anyone who sits tight and later discovers he has guessed wrong may find he has lost a chance to get another place that suits him, but on the whole, he is probably better off at that. If he had wanted to move, he would have been in the kind of spot some of the other citizens around here are in now. They have to sell for one reason or another. Private buyers for homes in this part of Lincoln have suddenly become scarce, with the spread of knowledge of the park problem. That leaves you as the best customer, and most people here are beginning to think that isn't very much. I don't know how many people have been told you weren't interested in buying just now, and I don't know how many people have been given offers low enough to make them angry (and I don't know how many people got offers high enough to make the other people even angrier), but I do know those things have happened, and others like them, often enough to make a lot of people very angry indeed. They said so, and the Fence Viewer said so, and the selectmen and their committee said so, and that's where your letter came in.

First you discussed what the Constitution says about taking private property for public use. Then you quoted what the judge would say to the jury about "fair market value," if the case ever got to court. That was interesting, but not much to the point, since you don't seem to take homeowners to court and there doesn't seem to be any way for a homeowner to take you there, until you're good and ready. There may be some people who can wait you out until you take their land by eminent domain, in 1968, or 1975, or 1984. If so, they will get a chance to check your letter against the judge's charge, but right now what

most people want to know is whether you apply the same standards when you're negotiating to buy a piece of property.

A lot of people believe you haven't been doing that, and they looked forward to your letter to reassure them and to explain how your program worked. The beginning of your letter reinforced that expectation: "A brief summary of the appraisal processes" was what you said you were writing. You began by talking about policies, procedures, and techniques which have found general acceptance in the appraisal community. It was interesting, too, to read that those appraisers take courses and get degrees and join societies, just like the rest of us. But right there—where a reader might think you were going to describe what the appraisers learned in those courses, and then explain how some of the surprising differences in appraised value which people have been hearing about might be justified—right there, you started to write about how honest these appraisers of yours are. Nobody thinks they're dishonest—just wrong. And it's curious that of the time they seem to be wrong in your favor. There must be something remarkable about the training of an appraiser which enables him to go into a strange town, make a brief examination of two adjoining and apparently identical houses, and to come up with figures far enough apart to start unpleasant rumors.

A charitably disposed reader might have ascribed to a lack of time on your part the omission from your letter of a description of the techniques, policies, and procedures which have been applied by your appraisers to make those independent and defensible judgments you wrote about. That same charitable reader might also think it was just your lack of time and your own polite way of putting things that made you say you thought all those policies and procedures and techniques were just too complicated for the residents of North Lincoln to understand. Really, if you have the time to explain, you will be surprised at how good the people here are at understanding complicated ideas.

One statement in your letter, though, might make even a charitable reader wonder. You said you didn't think the people here would be especially interested in how the appraiser came to his conclusions. If you meant that, you couldn't really have understood what the person from the Fence Viewer said to you when you undertook to write your letter.

Of course these people are interested. It is their homes that you may or may not be taking away from them, or may or may not be buying from them, at what may or may not be a fair price. They bought those homes, or built them, or inherited them. They have maintained them and improved them and paid taxes on them. They are raising their families in them. They have been interested for 3 years in that complete information about your acquisition program which, at the end of your letter, you offered to make available. They are interested in discovering whom they can talk to when your local man says that he can't negotiate, that all he can do is transmit the offer. They are interested in knowing whether the tone and content of your letter and the manner in which the land acquisition program has been conducted are unhappy accidents, or the symptoms of almost unbelievable incompetence or of an astonishing bureaucratic density, or whether they are the surface indications of a policy designed to buy in the property within the park at a discount by keeping the residents ignorant and treating them rough.

Some people here think the last conclusion is the right one: They point to the silly guess at the market value of the Lincoln property tentatively included in the park which appears in the 1959 report of the Historic Sites Commission. They point to the trouble you have to go to for every dollar you get out of Congress. They point to the low appraisals and the take-it-or-leave-it bargaining. They point to the impossibility of getting information out of you people, and to the number of times you have started out by offering to tell all and ended up by saying nothing. Those people are the angry ones I have mentioned before. They are the ones who might actually misunderstand your letter, and they are articulate enough, perhaps, to create some needless complications in the establishment of this park.

I said at the beginning our committee wanted to make a few suggestions. You might start out by passing out that "complete information" you mentioned in your letter. When you let the residents know where the park boundaries are going to be, you might also let them know what parts of the area you have to have at once. That way you could reassure a lot of people without much effort. If you could go further and let them know your long-range schedule for acquisition as well, and what parts of the park area you are willing to leave

in private ownership, and for how long, and on what terms, many more people would be able to plan their lives without spending a lot of time being outraged at the Park Service and going out to do something about it. If you went a little further yet and set up some real negotiating machinery for purchasing property in the park area, you would find more people settling with you at fair prices, and fewer people resolved not to deal with you at all.

Let me make a few more suggestions: Even if you think it may save you some money, I don't think it wise or practical for you to wait for the hardship cases to fall into your laps. Even if you have to send those appraisers back to take some more courses, I don't think you ought to make many more of those ridiculously high offers—people will begin to talk. Even though you are an agency of the Federal Government, I don't think you should treat your plans for Minute Man Park as if they were the plans for the Minuteman missile. And above all, even if you are convinced, as the tone and content of your letter indicate, that the people here are ignorant peasants, I don't think you should make your convictions generally known.

Sincerely yours,

_____, _____

(For the Committee of Correspondence).

LETTER TO MASSACHUSETTS TOWN COUNCIL

Mr. WIRTH. I will do this, if it is agreeable to the chairman and to you, Senator Mundt; I will send to the committee, and also to Senator Saltonstall, copies of the letter I wrote to the chairman of a town council up there a couple of days ago, which, I think, will answer 90 percent of those letters. In that way, they will have the information. If he wants the letters answered specifically, we will be very glad to do it, too.

Senator MUNDT. I think that will be satisfactory, provided that if there is something new in the nature of a complaint in the correspondence you could add that under a separate codicil to your letters, so that all these answers will be available.

(The letter referred to follows:)

Mr. CHARLES K. FITTS, MARCH 5, 1962.
Chairman, Lincoln Board of Selectmen,
Boston, Mass.

DEAR MR. FITTS: Regional Director Ronald F. Lee of our region 5 office and Superintendent Edwin W. Small of the Minute Man National Historical Park project have informed me of the recent meetings with Service officials during which concern was expressed that the National Park Service might have made a change in its policy for the acquisition of land for the Minute Man National Historical Park project. I have been advised that a reaffirmation of our original policy would be quite helpful at this time in dispelling any feeling of unrest or uneasiness that may have developed. With this suggestion I am pleased to comply.

The acquisition of land for Minute Man is accomplished under procedures that have been developed by the Service over the years. This basically involves free negotiations with the landowners for the purchase of their properties. We strive neither to inflate nor deflate the value of properties and endeavor in each case to offer the landowner the fair market price. Basic to a determination of the fair market value are one or more appraisals made by outside, disinterested, and competent appraisers. A great deal of time and effort were expended in screening appraisers for the Minute Man project and their work to date has confirmed our faith in their integrity, honesty, and objective approach to this very important assignment. They are not on our staff but are employed under contractual arrangements.

Once we feel confident that the fair market value has been established, our representatives endeavor to negotiate with the landowner. The latter has a perfect right to have his own appraisal made for guidance purposes but, with very few exceptions, we have to date been able to complete mutually acceptable negotiations and to close the purchase. This procedure will be continued.

We naturally want to move ahead with the acquisition of the land as expeditiously as possible and to advance the development and public use of the park as soon as possible. At the same time, we will give landowners every reasonable consideration consistent with the conducting of an orderly and fair land acquisition program.

Sincerely yours,

CONRAD L. WIRTH, *Director*.

P.S.—Your telephone call to me at my home about this matter came while the above letter to you was in preparation by my staff. As a result of our telephone conversation on February 23, let me add that the private property necessary for the eventual establishment of the park would be acquired under the following priorities and conditions:

(1) The National Park Service will acquire all the vacant, undeveloped land within the boundaries in first priority.

(2) We will also acquire properties with homes on them if the owners wish to sell. In acquiring such property it can be an outright purchase or subject to a given number of years of occupancy.

(3) The National Park Service will not condemn residential property with homes on it unless the owners misuse it with reference to future development of the park or if a particular piece of property is necessary for the proper development of some feature of the park. I know of no case at this time that would require such action.

(4) A person who owns a home has a right to sell his property to others; however, we would hope that he would give us the first opportunity to buy.

These conditions are, as I remember, in accord with my statements made in Lincoln 2 years ago.

C. L. W.

Mr. WIRTH. I most sincerely hope that what I wrote will satisfy everyone up there and clear up the misunderstanding.

Senator MUNDT. If you succeed in that hope we are going to get you out in the Missouri River Valley to acquire the land for the Corps of Engineers, who have been unable to satisfy anybody, it seems.

Mr. WIRTH. At times I have not been too successful. I have been in a lot of trouble once in a while.

Senator MUNDT. Acquiring land is not easy.

Mr. WIRTH. No; it is not.

Chairman HAYDEN. Senator Dworshak, any questions?

ADDITIONAL BURDENS ON PARK SERVICE

Senator DWORSHAK. Mr. Wirth, I have been checking your prepared statement. I notice on page 5 that you refer to the additional burdens which have been placed upon the Park Service of recreational planning, and so forth.

You say:

I believe maximum progress is being made within the resources available. The job, however, is a monumental one and time is of the essence. The programs must be further accelerated to a very substantial degree if the objectives set forth in the President's special message to the Congress on natural resources of February 23, 1961, are to be attained.

INCREASE IN PARK FUNDS

I am amazed by that statement when I check the data in your justification book and find on page NP-1 you show "Operating funds" and the "Capital improvements" with the total amount increasing very precipitously from 1943, when the total was $5,487,000 and in 1962 it was $108,652,000, and you are asking for about a $15 million increase; making the total for fiscal year 1963, $124 million.

EXPANSION OF MISSION 66

That record would indicate that you have been expanding very rapidly under Mission 66. Wherein do you feel that there has not been more than normal progress made? I appreciate as much as anybody the importance of our national park system, with the increased visitor demand, and all that; but are we going to face a continuing high increase in the operations and capital improvements in the Park Service for several years to come?

Mr. WIRTH. Senator Dworshak, I would say this: In my opening statement I also acknowledged with appreciation the support we received from the Congress on our Mission 66 program and I certainly do not intend to retract from that, because you have been very helpful and have supported our program very well.

My statement on page 5, I think, should be construed to mean it has to do with our planning work in connection with not only new areas for the park system, but with nationwide recreation planning and the relationship with the States, which has been dragging somewhat. It is not intended to apply to our capital improvements and the help we have received in management and protection and maintenance and rehabilitation.

INCREASE IN CONSTRUCTION COSTS

According to the Mission 66 program on those things, with the exception of new areas that have been added, we are running at about the way we had originally submitted Mission 66. There has been an increase of approximately 27 percent, I believe, in costs of construction since Mission 66 started, and there have been new areas added.

Senator MUNDT. What is that figure again? An increase of how much?

Mr. WIRTH. Well, this is the total: 30.67 percent accumulative since June 1955 to January 1962 on general construction costs as far as building and utilities are concerned; and approximately 10.5 percent in the same period on road construction type of work.

Senator MUNDT. That is an increase of about 5 percent a year. Is that continuing to go up that fast?

Mr. WIRTH. Well, I can give it to you by years. It showed 5.4 percent in 1956, 4.2 percent in 1957, 5 almost across-the-board in 1958, 4.9 percent in 1959, 3.9 percent in 1960, 2.8 percent in 1961, and a half of 1 percent in 1962. So that is 7 years for a total accumulation of 30.679 percent; and these statistics come from the various censuses and the Labor Department. Does that answer that question, Senator?

Senator DWORSHAK. Partially. I think that was in reply to Senator Mundt's question more than mine.

TOTAL PERSONNEL

What is the personnel you have in fiscal 1962 in all echelons of the Park Service? Do you have that available?

Mr. WIRTH. What is what?

Senator DWORSHAK. Your total personnel?

Mr. WIRTH. We can give you the exact figures, but I think we have about 5,000 permanent employees, and I think it goes up to 10,000, in round figures, with temporary employees who come on seasonally.

Senator DWORSHAK. How does that compare with 5 years ago and 10 years ago?

Mr. WIRTH. I would have to get that for you. In 1962 our permanent employees were 4,901.

Senator DWORSHAK. You do not have it there for, say, 1950 or 1955?

Mr. WIRTH. No. We would have to go back into the record to get that data for you. I did not bring that information with me. We would be glad to furnish it, however. There has been an increase.

Senator DWORSHAK. Well, a large increase I presume. I was merely trying to develop the total appropriations made available to the Park Service in the past 15 years. Where you have gone up, say, sixfold or eightfold certainly there has been no tendency on the part of the Congress to be parsimonious in providing funds for the Park Service.

That is correct, is it not?

Mr. WIRTH. I have no complaint.

Senator DWORSHAK. In fact you are probably moving along more rapidly than you should in years when we have deficits.

Mr. WIRTH. I would say this, Senator: I think Congress has been very good to the Park Service. We are running just about on schedule as we had planned on the budgets that we have been submitting to Congress right down through the years.

Senator DWORSHAK. Especially on Mission 66?

Mr. WIRTH. Yes, sir. I might say that before Mission 66 we were really in tough shape. This table here only goes back to 1943; but if you go back to the thirties and before the war, we had a greater appropriation, much greater, and we also had a lot of emergency funds, like the CCC, and PWA, which did not appear in our budget. During the war we went way down to a standby appropriation, purely maintenance, and afterward, we were, perhaps, the last agency that got any real attention. As a result, we developed a backlog.

OUTDOOR RECREATION RESOURCES COMMISSION

Senator DWORSHAK. All right. One more question: You are acquainted with the report which was submitted recently to the Congress by the Outdoor Recreation Resources Review Commission?

Mr. WIRTH. Yes, sir.

Senator DWORSHAK. Do you have any funds in your 1963 budget for implementation of any of the recommendations which were submitted, or is it too early yet to implement that program in any way?

Mr. WIRTH. There is nothing in our budget that would implement that program unless it is one particular part of the program which calls for setting up a separate bureau. Chances are some of the funds that we have in here would normally be allocated to it; but until that happens this is our regular park and recreation study program under the 1936 act.

RECREATION OF BUREAU OF OUTDOOR RECREATION

Senator DWORSHAK. Are you referring to the proposal to re-create the Bureau of Outdoor Recreation?

Mr. WIRTH. Yes, sir.

Senator DWORSHAK. Do you have any brief comments to make on that? Has the President submitted a proposal to Congress to create

that, and if so what are your own opinions? Will that accelerate the overall recreational program, or will it have a tendency to retard it?

Mr. WIRTH. Senator, I cannot say what the President has submitted to Congress, because I have not seen anything outside of his message; but I have no reason why I should not give you my opinion of what I think of it.

The National Park Service, ever since its beginning 'way back in Steve Mather's day, and he organized the National Conference of State Parks, felt that the Federal Government could not carry the full recreation program and that we should stimulate the States and local governments to help carry the load. So we have been working on that and in 1936, we got an act to help in that field. We have been getting appropriations to help in that field. It is awfully hard for one bureau that has a direct line of management to try to influence other bureaus, because of a certain amount of conflicts, may I say, to do certain things. There are two or three ways in which you can stimulate that. I think the way the Outdoor Recreation Resources Review Commission has reported it is one, and this would be taking certain responsibilities away from the Park Service.

This possibly is the best way to do it. We are all for it because we feel it must be done, and the States and local governments must be stimulated in order to do it. So far as the Park Service is concerned, we are supporting it, and I have written a letter to our field people informing them of our stand.

Senator DWORSHAK. Is not the objective under the new proposal more or less a matter of coordination and not taking over any of the specific programs that are already under the supervision of the Park Service?

Mr. WIRTH. That is right. The theory is that we are an operating agency and also a planning agency; and they are proposing, as I understand the Outdoor Recreation Resources Review Commission, to take the part that has to do with the coordination between other Federal bureaus and the States and put it into a separate bureau with a planning and grants-in-aid, whatever it is, and land, and that relieves us of that particular duty. I think perhaps it is the best solution.

Senator DWORSHAK. So far as the operational programs are concerned of your Service or other agencies, either in Interior or Agriculture, there will be no material change, will there?

Mr. WIRTH. No, sir.

GREATER PARTICIPATION BY STATES AND LOCALITIES

Senator DWORSHAK. You mentioned that greater emphasis is being placed upon participation by States and other local governmental units. In the Interior Committee recently we have had under consideration the establishment of the Padre National Seashore Park in southern Texas.

We ran into considerable conflict there because the State of Texas was contending that they were planning to establish a State park and were not very eager to have the Federal Government step into that situation.

What is your viewpoint very briefly on that?

PADRE ISLAND

Mr. WIRTH. I think Padre Island is an area that should be established as a national seashore area. It is one of the 10 that we recommended for the whole United States.

Senator DWORSHAK. Is it in conflict with your basic concept that the States when able and when willing to carry on should supervise and finance recreational and park development themselves and not rely on the Federal Government?

Mr. WIRTH. No, sir. It is not in conflict, because I consider Padre Island like I do Cape Cod, and like Yellowstone, and Grand Canyon, of national significance and as a national area. We made our studies of the seashore areas jointly with the States, and there are at least several hundred other seashore areas along the coastline that ought to be acquired by the States for recreational purposes.

Senator DWORSHAK. Is that on the basis that you feel that States are not qualified to do the kind of a job that the Park Service can?

Mr. WIRTH. No, I do not say that, because there are some very fine State park systems. I do say that certain areas fit into the national system and certain areas fit into the State system.

Senator DWORSHAK. Thank you, Mr. Chairman.

INTERNATIONAL PEACE GARDEN

Senator YOUNG. As you know, several years ago the authorization for the appropriation of funds for the International Peace Garden in North Dakota was increased from $200,000 to $400,000. To date $300,000 has been appropriated under this authorization. My understanding is that presently this appropriation is nearly exhausted and there is still a considerable amount of work to be done in the Peace Garden. Under your current budget for fiscal 1963 would you be able to make any of the remaining $100,000 authorized available to the North Dakota State Historical Society for work on the International Peace Garden?

Mr. WIRTH. In order to keep the work going next year, I feel we could provide, say, $30,000 by reprograming funds included in our 1963 construction programs.

Senator YOUNG. Wouldn't it be advisable to provide the full $100,000 remaining of the authorization at this time which would enable the State historical society and the International Peace Garden Corp. to better plan their development of this beautiful area?

Mr. WIRTH. Having the full $100,000 available at one time might be advantageous to the State historical society and the International Peace Garden Corp. in their planning for the project, but on the basis of prior year obligations, $30,000 would be adequate to meet 1963 fiscal year requirements. We could not provide $100,000 for the Peace Garden project in 1963 without jeopardizing other facets of our buildings and utilities construction program. Accordingly, unless the estimate is increased to provide the additional $70,000, we would be opposed to providing the full $100,000 in the 1963 fiscal year.

OFFICE OF TERRITORIES

INSTALLATION OF TELEVISION STATIONS ON SAMOA

(See p. 293)

The estimate of $2,579,000 for the installation of educational television (six channels) in American Samoa was furnished by the National Association of Educational Broadcasters, Dupont Circle Building, Washington, D.C.

USE OF THREE-CHANNEL SETUP

(See p. 292)

At first, could use a three-channel setup which would cost approximately $1,869,000; this estimate given by the National Association of Educational Broadcasters. The three channels intended here would be set up to provide for future expansion to a six-channel installation with a minimum of technical difficulty. It is estimated that a three-channel installation would reach only about one-half of the grades in the Samoan educational system.

Following estimate for three high-powered channel systems:

Television studio and production center	$225,000
Studio equipment	293,500
Microwave equipment	75,000
Transmitter building	50,000
Transmitter tower or towers	177,500
VHF antenna	120,000
3 high-powered transmitters	307,000
Transmission lines, filters, transmitter monitoring equipment	36,000
Tower lighting equipment	1,000
Repeater equipment, Manua Islands	60,000
Receiving antenna and cable local distribution system	7,500
300 tropicalized receivers for the schools	90,000
Access road to Mount Alava	100,000
Recruitment consultation and travel cost	40,500
Total installation cost	1,583,000
22 housing units for television personnel	286,000
Total	1,869,000

COMMITTEE RECESS

Chairman HAYDEN. Are there any further questions? If not, the committee will stand in recess until 10:30 Wednesday morning when we will take up the related agencies.

Thank you, Mr. Wirth.

Mr. WIRTH. Thank you.

(Whereupon, at 12:35 p.m., Tuesday, March 6, 1962, the subcommittee was recessed, to be reconvened at 10:30 a.m. of the following day, Wednesday, March 7, 1962.)

DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES APPROPRIATIONS, 1963

WEDNESDAY, MARCH 7, 1962

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, D.C.

The subcommittee met, pursuant to recess, at 10:30 a.m., in room 1223, New Senate Office Building, Hon. Carl Hayden, chairman, presiding.

Present: Chairman Hayden, Senators Byrd, Young, and Dworshak.

BUREAU OF THE BUDGET

TRANSITIONAL GRANTS TO ALASKA

STATEMENT OF HAROLD SEIDMAN, ACTING DIRECTOR FOR MANAGEMENT AND ORGANIZATION, ACCOMPANIED BY HOWARD SCHNOOR, STAFF MEMBER

STATEMENT IN SUPPORT OF REQUEST

Chairman HAYDEN. The committee will be in order.

We will first take up the transitional grants to Alaska. Under the Alaska Omnibus Act the United States has agreed to grants to the State of Alaska for a period of 5 years. This is the fourth year and the amount to be paid is $3 million. The statement submitted in support of this request for these funds will be printed in the record.

(The statement referred to follows:)

FUNDS APPROPRIATED TO THE PRESIDENT

TRANSITIONAL GRANTS TO ALASKA

Justification

This appropriation is the fourth of five annual appropriations authorized by section 44(a) of the Alaska Omnibus Act, Public Law 86-70. It is requested to enable the President to make grants to the State of Alaska to facilitate an orderly transition from territorial status to statehood and to assist the State in financing, for a 5-year transitional period, the assumption of functions hitherto performed by the Federal Government. Section 44(b) of the Alaska Omnibus Act also provides that portions of the appropriation may be allocated to Federal agencies to continue interim services in Alaska but only upon a request from the State that such services be continued. One such allocation of the appropriation for 1963 is anticipated at present in the amount of up to $593,000 to provide for the operation and maintenance of intermediate airports. The grants to Alaska are unearmarked and available as a general supplement to the State's financial resources.

Alaska presented many unique and difficult problems not previously encountered when new States were admitted into the Union. Transitional problems

were greatly complicated by the fact that the Federal Government performed functions in Alaska which normally are the responsibility of State and local governments. The Federal Government, at the time of Alaska's admission to statehood, was responsible for construction and maintenance of highways, operation of many commercial airports, administration of justice, conservation and management of fish and wildlife resources, and other services and facilities in Alaska which are elsewhere furnished by local agencies. For this reason, the President recommended in his 1960 budget message that, in the longrun interest of both the State and the Nation, "the Federal Government should not continue special programs in Alaska which, in other States, are the responsibility of State and local governments or of private enterprise."

The Alaska Omnibus Act, in section 21, authorized the transfer to Alaska of responsibility for highway construction and maintenance formerly vested in the Bureau of Public Roads, and, in section 35, authorized the transfer to Alaska of the Anchorage and Fairbanks airports operated by the Federal Aviation Agency. Those transfers have been effected. Approximately 17 intermediate and primary airports were to be transferred to the State under authority of the Surplus Property Act of 1944, as amended. The Federal Aviation Agency is continuing to work with the State to attempt to complete the transfer of some or all of those airports to the State. On January 1, 1960, the State assumed responsibility for the management of its fish and wildlife resources pursuant to section 6 of the Alaska Statehood Act. Action was taken to establish normal State judicial and law inforcement agencies and to transfer to Alaska the Federal responsibilities in the area pursuant to section 18 of the Statehood Act. The Federal grants for Alaska mental health and the special program for construction of recreation facilities in Alaska were terminated by sections 31 and 38 of the Alaska Omnibus Act, respectively. Former appropriations for the general health grants to Alaska were not continued in 1960.

Without financial assistance, Alaska would be unable to assume responsibility in a prompt and orderly manner for the Federal functions and services which have been terminated. Some time will necessarily elapse before Alaska can either increase its revenues from existing sources or benefit fully from the revenues to be derived from public land grants and other resources made available to the State by the Statehood Act. If the Federal Government did not provide assistance to Alaska through the transitional grants, it would have been faced with the undesirable alternative of continuing the Federal programs and Federal financing for an indefinite period.

The President recommended, therefore, that "the Federal Government should provide such financial assistance as is necessary to facilitate transfer to the State of such programs as highway construction and maintenance, airport operations, and public health services." Section 44(a) of the Alaska Omnibus Act authorizes transitional grants to the State in the amount of $10,500,000 for fiscal year 1960, $6 million each for fiscal years 1961 and 1962, and $3 million each for fiscal years 1963 and 1964.

The requested amount of the appropriation for 1963, $3 million, is based in part on the costs which would have been borne by the Federal Government if Alaska had remained a territory, together with certain additional funds authorized by the Congress to cover the costs of improving the airports and other facilities taken over by Alaska. The following table provides a comparison between the amount of the proposed transitional grant to Alaska for fiscal year 1963 and the amount of anticipated Federal expenditures if Alaska had remained a territory.

Federal expenditures in 1963 if Alaska remained a territory

[In thousands of dollars]

Operation and maintenance costs, Anchorage and Fairbanks airports	845
Operation and maintenance costs, intermediate and primary airports	593
Mental health grant	900
General health grant	638
Subtotal	2,976
Less airport revenues	—1,215
Total	1,761
Proposed transitional grant	3,000

Program and financing

[In thousands of dollars]

	1961 actual	1962 estimate	1963 estimate
Program by activities:			
1. Grants to Alaska	5,451	5,363	3,000
2. Operation and maintenance of intermediate airports	547	637	
Total obligations	5,998	6,000	3,000
Financing:			
Unobligated balance lapsing	2		
New obligational authority (appropriation)	6,000	6,000	3,000

GENERAL STATEMENT

CHAIRMAN HAYDEN. Who is going to testify?

Mr. SEIDMAN. Harold Seidman, Acting Chief of the Office of Management and Organization of the Bureau of the Budget, and I am accompanied by Howard Schnoor of my staff.

Mr. Chairman, we have submitted a justification for the record. The budget request for $3 million is for the fourth of five annual appropriations which were authorized by the Alaska Omnibus Act to facilitate the orderly transition of the State of Alaska from territorial status to statehood.

The amount is a reduction of $3 million from last year's appropriation of $6 million, and the final appropriations authorized for fiscal 1964 is for $3 million.

Chairman HAYDEN. And that completes the obligation of the Federal Government?

Mr. SEIDMAN. That will complete the obligation of the Federal Government.

Chairman HAYDEN. Are there any further comments?

Mr. SEIDMAN. No, sir.

Chairman HAYDEN. We thank you for your statement.

Mr. SEIDMAN. Thank you.

CIVIL WAR CENTENNIAL COMMISSION

STATEMENTS OF ALLAN NEVINS, CHAIRMAN, AND DR. JAMES I. ROBERTSON, JR., EXECUTIVE DIRECTOR

JUSTIFICATIONS

Chairman HAYDEN. The Civil War Centennial Commission.

This year the Civil War Centennial Commission estimates its requirements at $100,000, the same as the appropriation in 1962. The justifications submitted with the request will be printed in the record.

(The justifications referred to follow:)

HISTORICAL AND MEMORIAL COMMISSIONS

Civil War Centennial Commission

Appropriation, 1961	$100,000
Supplemental appropriation, 1961 (increased pay costs)	3,750
Total appropriation, 1961	103,750
Appropriation, 1962	100,000
Budget estimate, 1963	100,000

Analysis by activities

Activity	Amount available, 1961	Amount available, 1962	Estimate, 1963	Increase (+) or decrease (−)
Planning the commemoration	$103,559	$100,000	$100,000	
Unobligated balance no longer available	191			
Total	103,750	100,000	100,000	

JUSTIFICATION

Civil War Centennial Commission

The estimate of $100,000 is in the same amount as the 1962 appropriation.

The change of emphasis that the Commission recently made in its program will continue during the 1963 fiscal year. This means somewhat less emphasis on ceremonial events and a great deal more on historical undertakings.

By no means will the Commission abandon or neglect ceremonial observances, but it will select with great care those that seem to merit its sponsorship or participation. Those selected must meet the highest standards. They must commemorate events of outstanding national or international importance. In conceptions, content, and execution they must combine dignity and good taste. They must reflect the deepest sentiments of a mature and united people.

An excellent example of this type of observance is the one that will mark the 100th anniversary of the Emancipation Proclamation. The Commission plans a ceremony at the Lincoln Memorial on September 22, 1962, with the President as the central figure. The basic theme will be the worldwide significance of the proclamation and its place in mainstream of 19th century events.

The main energies of the Commission, however, will be devoted to historical projects. It will sponsor the preparation and publication of perhaps three series of volumes in the field of Civil War history.

In no sense will there be mere additions to a body of literature that is already voluminous. Instead, the series will consist of urgently needed volumes. A bibliographical series will guide the student not only to books and periodical articles but also to manuscript sources on the Civil War. Another series will guide students and laymen alike to sites and buildings associated with the war and to museum resources. A third series will consist of studies of the impact of the Civil War on the Nation's people and their lives in such fields as agriculture, business, labor science and technology, law, medicine, moral forces, literature, and the arts.

These volumes will be prepared by first-rate scholars with a demonstrated talent for writing.

While it is not expected that either these writers or the publishers will receive Commission funds, this phase of the program will command a measurable portion of the Commission's budget. This is so because the Commission and its staff will supervise as well as sponsor the work.

The Commission will continue to keep the public and the informational media informed of major centennial events. It will continue to cooperate closely with the various State centennial commissions as well as with civic and patriotic organizations. It will continue to urge individuals who have Civil War letters, diaries, maps, and photographs to deposit these in libraries and archival institutions. It also proposes to establish practical and productive relationships with historical societies and to do what it can to encourage and assist the study of the whole period of the Civil War in the Nation's high schools.

Itemization of estimate

	Actual, 1961	Available, 1962	Estimate, 1963	Increase (+) or decrease (−)
Program and financing:				
Total obligations	$103,559	$100,000	$100,000	
Unobligated balance	191			
Appropriation	103,750	100,000	100,000	
Obligations by objects:				
11 Personnel compensation	68,199	65,855	65,855	
12 Personnel benefits	2,975	2,873	2,873	
21 Travel and transportation of persons	8,198	7,916	7,916	
22 Transportation of things	121	117	117	
23 Rent, communications, and utilities	3,543	3,421	3,421	
24 Printing and reproduction	2,354	2,273	2,273	
25 Other services	16,942	16,360	16,360	
26 Supplies and materials	1,227	1,185	1,185	
Total obligations	103,559	100,000	100,000	

GENERAL STATEMENT

Chairman HAYDEN. Who will appear?

Mr. NEVINS. I shall appear. I am Mr. Allan Nevins, Chairman of the Commission.

Chairman HAYDEN. We are very glad to see you. If you will sit down and, if you have a statement, we will be glad to hear it.

Mr. NEVINS. We have submitted a formal statement. We are in charge of our undertaking to commemorate the various events of the 4 years or more of the Civil War. We are assisting a lot of bodies in commemorating battles all the way from Cape Hatteras to Picacho Pass in Arizona.

We have undertaken a large variety of publications, including in particular a series of volumes dealing with the impact of the Civil War on the civil, the economic, and the social life of the country; a

volume, for example, on the impact of the Civil War upon agriculture in the United States, another dealing with its impact upon medicine, another dealing with its impact upon the status of women, another dealing with its impact upon literature and the arts, and so on.

Chairman HAYDEN. Then there is some kind of a change in emphasis on the activities of the Commission from what they were before?

EMPHASIS ON HISTORICAL PUBLICATIONS

Mr. NEVINS. Yes. We are particularly anxious to give emphasis now to historical publications and to avoid excessive emphasis upon battles and military events. For example, we wish to commemorate as thoughtfully and carefully as possible the passage of the Homestead Act in 1862, the passage of the Pacific Railroad Act, the passage of the Land Grant Act for colleges and universities, the Morrill Act, and of course the Emancipation Proclamation. For that we are making very large preparations already.

We are getting out brochures on these various great acts of Congress which were landmarks in our history and on the President's Emancipation Proclamation, which is certainly still another great landmark in our history.

Chairman HAYDEN. You are taking the period from the outbreak of the war until some time in 1965?

Mr. NEVINS. Yes. The life of the Commission, I think, is bounded by May 1965, and we wish to continue our commemorations until that time, until the time of the grand review in Washington in 1965. We are being assisted, and we are assisting ourselves, by a great variety of State and local commissions all over the country. Most of the States, some 40 States, have State commissions for commemorating the war and a number of cities, including the District of Columbia, have city commissions.

New York City has a very active commission, for example. We act in an advisory capacity to them and we are trying to engage the services of qualified historical scholars all over the country, and have the active cooperation of course of the National Park Service, which is in charge of the principal battlegrounds.

Senator BYRD. Mr. Chairman, may I ask a question at this point?

Chairman HAYDEN. Certainly.

ONE HUNDREDTH ANNIVERSARY OF STATE OF WEST VIRGINIA

Senator BYRD. West Virginia, as you know, became a State on June 20, 1863, and in 2 years we will be celebrating our 100th anniversary as a State. What is the Commission doing in connection with our own people in West Virginia?

Mr. NEVINS. We shall cooperate with the State of West Virginia and give it any assistance that it can possibly desire. That holds true of all the States of the country. As a matter of fact, we are quite aware that the movement for the separation of West Virginia began at the beginning of the war, in fact anticipated the beginning of the war, and we shall take note of that.

Senator BYRD. What are you doing specifically?

Mr. ROBERTSON. I am James Robertson, the Executive Director of the Commission, sir. I know of your Commission very well. I am a very close friend of Boyd Stutler, in Charleston, and may I say beforehand we were distressed at the death of the chairman, Dr. Myers.

Along these lines we are cooperating already with Mr. Stutler and the West Virginia Commission to assist him in every way we can. As a general policy we do not participate actively in any local commemoration. We feel the local group should take the responsibility, so we are simply standing by to assist them and then we advise with our own plans.

Senator BYRD. Do you have anything further?

Mr. NEVINS. No. Boyd Stutler is one of my oldest friends and I am in close touch with him at all times. We recently held here in the city of Washington a joint meeting of the National Commission and the State commissions. I am glad to report that Boyd Stutler was there and we compared notes.

Senator BYRD. Thank you, Mr. Chairman.

Chairman HAYDEN. Does that complete your statement?

Mr. NEVINS. That was my statement; yes.

PREPARED STATEMENT

Chairman HAYDEN. Do you want this statement in the record?

Mr. NEVINS. Yes, we wish that in the record.

Chairman HAYDEN. I will place it in the record.

(The statement referred to follows:)

STATEMENT BY ALLAN NEVINS, CHAIRMAN, CIVIL WAR CENTENNIAL COMMISSION

I greatly appreciate this opportunity to support the request of the Civil War Centennial Commission for an appropriation of $100,000 for the fiscal year 1963.

In this connection, let me point out a major change of emphasis in the Commission's program. Hereafter we shall devote our energies mainly to undertakings that will have enduring value.

Foremost among these is our publications program. This calls for the preparation and publication of two or more series of useful and scholarly volumes. One series will comprise bibliographical guides to the study of resources of the Civil War period, both source materials and the more valuable secondary works.

Another series, the impact series, will consist of some 15 volumes dealing with the impact of the Civil War on American life and culture. These titles will examine the war's impact on such important and diverse subjects as agriculture, science and technology, business organization and leadership, immigration and population movements, labor, medicine, law, literature and the arts, and moral forces.

Each volume of the impact series will be written by an outstanding authority in his field with a demonstrated talent for fluent writing of a high order.

Let me assure you that Commission funds will not be used to pay fees to the authors or to defray the costs of publication. Alfred A. Knopf, Inc., has agreed to publish the impact series. Each author will look to that firm for his recompense.

It is a genuine pleasure to report that already we have obtained commitments for the writing of no fewer than 12 of the impact series books.

Our role in obtaining these commitments suggests the kinds of work the Commission will perform in connection with the new publications program. We will serve as initiator and sponsor. We will bring authors and publishers together. We will give guidance, supervision, and assistance to the work at all stages. These labors will doubtless claim an appreciable portion of staff time as well as some of our funds, but we shall spend the Government's money wisely, prudently, even frugally.

1962 MANHATTAN, KAN.

Another aspect of our new program emphasis calls for the Commission to commemorate great landmark events of a century ago, especially the important forward steps in the nonmilitary field. In some cases we shall do this by taking part in ceremonial exercises, but only if they meet high standards of dignity and good taste. A prime example will be the observance of the centennial of the Emancipation Proclamation. In partnership with others we are arranging for ceremonies of national, indeed international, importance at the Lincoln Memorial on September 22, with briefer exercises next January 1. In other cases, different commemorative techniques will be more appropriate or more feasible. However this may be, the Commission is eager to commemorate such legislative monuments as the Homestead Act, the Morrill Land Grant College Act, and the National Banking Acts.

The Commission members believe that, by giving high priority to those companion activities of publications and commemorations, we can render a service to the Nation that will endure long beyond the period of the centennial.

At the same time we shall continue and expand our cooperative endeavors with the State commissions. Dr. Robertson will tell you more about this part of our work and about our recent meeting in Washington with representatives of those commissions.

Our forthcoming National Assembly in Columbus, Ohio, is designed to develop very practical groups throughout the Nation. The assembly will be a series of working sessions centered around panels on schools, on music, on the mass media, and on books and sources for the study of Civil War history. These panels are expected to make concrete proposals as to how we can best serve the groups they represent and what those groups can do to assist us.

My colleagues share my strong feeling that we must do more than we have thus far done to enlist the Nation's schools in the centennial. This requires more than exhortation. We must, we will, find the means of providing the schools with useful materials about the war period and its place in the seamless web of our developing heritage.

In conclusion, I repeat a paragraph from my recent statement to the corresponding subcommittee of the House of Representatives:

"The Civil War was the greatest upheaval that the American people have ever experienced, a many-sided cataclysm that has left its imprint for both good and ill on the national life ever since. It had aspects of grandeur and of tragedy, of exaltation and of sorrow, of moral gain and spiritual loss, that thoughtful men can never forget. It is fitting that a century after the event, the country should restudy this terrible conflict with an earnest desire to understand all its lessons. In contributing what it can to this reassessment, the Civil War Centennial Commission will make its dominant theme one not of division, but of unity."

PREPARED STATEMENT

Chairman HAYDEN. Dr. Robertson, do you want to say something?

Dr. ROBERTSON. No, sir. I think our chairman has said it better than I.

Chairman HAYDEN. Your statement at least will be included in the record.

Dr. ROBERTSON. Yes, I would like my statement included in the record.

(The statement referred to above follows:)

STATEMENT BY DR. JAMES I. ROBERTSON, JR., EXECUTIVE DIRECTOR, CIVIL WAR CENTENNIAL COMMISSION

On December 4, 1961, new leadership assumed the responsibilities of the Civil War Centennial Commission with the appointment of Dr. Allan Nevins (a native of Illinois) as Chairman and Dr. James I. Robertson, Jr. (a native of Virginia) as Executive Director.

Commensurate with this change in personnel is a new emphasis on the Commissions duties as well as completely new objectives. The Commission is now embarking on a program of more commemoration and less commercialism, of more reverence and less revelry, of producing works of permanent and lasting value and less temporary and immediate import.

Foremost among our plans is the publications program, as outlined in the statement of Dr. Nevins. A second aim is to make greater strides in the field of education—to acquaint schoolchildren better as to the causes and consequences of the war. By understanding the unequivocal impact on American history made by that struggle, rising generations can gain a better understanding of and respect for their national heritage.

Also in the field of education does the Commission hope to induce institutions (and individuals, where possible) to sponsor scholarships for college and graduate study in the field of American history. The Commission feels strongly that a keen cognizance of past struggles is necessary for the preservation of our national unity.

The Commission has already taken steps to work in closer liaison with State centennial Commissions. On January 31–February 1, 1962, delegates from 31 State commissions met in Washington, D.C., and discussed programs, problems, and future aims. This was the first meeting of its kind ever held; we feel that all obtained a better understanding of our common goals. The National Commission accordingly has taken a stronger lead in advising and engineering on grassroots levels that are, in their solemnity, worthy of those men and events which we are commemorating.

To foster closer organization and cooperation, the Executive Director is planning a series of visits to various State commissions and historical groups. As the major result of the Civil War was a restrengthened Union, so should our commemoration of that era be one of concerted effort.

Our Commission headquarters (700 Jackson Place NW.) will continue to answer scores of inquiries, distribute literature, issue a monthly newsletter, and serve as a relay for State, county, and civic centennial groups. We shall likewise continue assisting the National Archives, Library of Congress, National Park Service, and other governmental agencies in matters pertaining to the Civil War and its centennial.

To recognize achievements and extraordinary contributions to these observances, the Commission will bestow awards and make public notice of these deeds so as to foster more interest in and homage for our American past.

A major proportion of our appropriation will be expended for office personnel, newsletter, and travel conferences. That amount which we can save will be applied to our new publications program. We do not expect this latter amount to be sufficient for our needs, at this time, however, we are willing to do what we can with what we have.

We shall ever strive to bury the briers of bitterness and to engender closer harmony among all sections and peoples. That obligation we inherited from American generations of the 1860's.

Chairman HAYDEN. If that is all, we thank you very much for your appearance.

Mr. NEVINS. Thank you.

Chairman HAYDEN. Mr. Schwengel, we would like to hear from you.

STATEMENT OF HON. FRED SCHWENGEL, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF IOWA

GENERAL STATEMENT

Representative SCHWENGEL. Mr. Chairman and members of the committee, first I want to apologize for being a little late, but we get important business in our offices sometimes that involves people from home, and because they are the ones that vote for us we have to give them a little attention.

Chairman HAYDEN. I have that same experience myself.

Representative SCHWENGEL. You know what I am talking about. I am here with these gentlemen as a member of the Commission and as an interested student of the history and this particular Centennial Commission activity. I want to associate myself with the remarks that have already been made by these distinguished gentlemen and to say to you and for the record that they are distinguished gentlemen.

We are indeed fortunate to have two such fine men as Dr. James Robertson and Dr. Allan Nevins to furnish us leadership and to help us with the proper commemoration of this unfortunate period in our history from which we can learn, and I think should learn.

TRIBUTE TO DR. NEVINS AND DR. ROBERTSON

I would like to point out, and I wish I had time to elaborate on this, but I do not have time and I shall not take time, that there are many great historians with American background and history and they include such names as Turner, Muzzey, Beard, Bancroft, and many others, but I say to you, Mr. Chairman, that I think there is none any greater than the one who has consented to serve the Commission and as Chairman of the Civil War Centennial Commission.

We are indeed fortunate to have Dr. Allan Nevins as our Chairman. He is one of the most productive historians that we have ever had and with that, and this is not easy when you are as productive as he has been through the years, a most respected one among all the historians; and I speak for the entire Commission, I think, when I say that we are grateful that he has consented to come on to the Commission and to act as Chairman and to take time from his busy schedule and his many interests to help us in the proper commemoration of this affair.

I could go on and speak enthusiastically about Dr. Robertson. Let me just say that he is one of the youngest and one of the most respected young historians in America and we are indeed fortunate to have him as our Director.

I should like to have permission to revise and extend these remarks in the record.

Chairman HAYDEN. You may have that, sir.

Representative SCHWENGEL. I think permission has already been granted that the remarks of Dr. Robertson and Dr. Nevins be put in the record.

Chairman HAYDEN. Yes.

Representative SCHWENGEL. I would like also to put in the record a statement that Dr. Nevins made at the time he was elected; sort of his acceptance speech when he responded to his election for the chairmanship of the Commission.

Chairman HAYDEN. We would be very glad to have that.

Representative SCHWENGEL. And also the statement he made at the opening of the recent meeting we had with the leaders of the commissions of every State that met recently.

Chairman HAYDEN. Both statements will be included in the record.

(The statements referred to follow:)

CIVIL WAR CENTENNIAL COMMISSION MEETING OF STATE AND NATIONAL COMMISSION DELEGATES, WASHINGTON, D.C., JANUARY 31, 1962

SPEECH OF WELCOME

We of the National Commission are most heartily glad to see so many faces from different parts of the country. We thank you for leaving your businesses and facing all the discomfort and cost of a midwinter journey to Washington. We know we have put you to heavy inconvenience, and we hope that the give and take of our discussions will offer you a real compensation. We have a good deal to teach each other. Mr. Robertson and I, who are so new to our positions—we took office only last December, and have barely found our way to the pencil sharpener and water cooler—assuredly have a great deal to learn. Our older Commission members, however, and our Assistant Director, Mr. Gass, are men of experience and sagacity whose advice you will find profitable.

We are not likely to reach any important goal unless we are realistic about our problems. Of course we have a proud as well as difficult task in commemorating the Civil War, and we should all feel elation in being called upon to undertake it. But let us not minimize the difficulties. We have the task of interpreting the terrible convulsion of a century ago in such a way as to deepen the patriotism of all Americans, South and North, white and black, learned and unread. How can we do this honestly, not glossing over the misunderstandings, mistrusts, and demagogies in which the war was born, the searing anger with which it was carried on, the hatreds and despairs which it left in its wake, in such fashion as to make men better patriots? Clearly, only by giving a just emphasis to what was really the most important and memorable aspect of the conflict—the fortitude, the heroism, the self-sacrifice, the generosity of spirit which it evoked on boths sides; by bringing into relief, as worthy of emulation, the devotion to high purposes, the consecration to ideals, that marked North and South alike.

To accomplish this means lifting the commemoration to a high plane. To lift it to a high plane requires plan and sustained effort, with brains behind the plan, and time behind the sustained effort.

One of our difficulties is wrapped up in the word "time." In one sense we began the commemoration of the Civil War too soon. It began 10 years ago with a stream of books on battles, campaigns, generals, and other martial aspects of the conflict; a stream which grew into so great a torrent that some people professed themselves jaded with the war before we observed the centenary of Sumter. If we confine ourselves to battles and campaigns, the sigh of relief that went up over the real Appomattox in 1865 may conceivably be nothing to the national sigh of relief that will go up over the commemorated Appomattox in 1965.

But in a truer sense we began the work of commemoration too late. Our most important tasks, especially if we do lift them to a high plane, require creative thought, detailed blueprints, and years of labor. We have but 3 years left, and for a big job—for saving a neglected battlefield, commissioning a symphony, raising a monument, or getting important books written, 3 years is none too much. The larger our conceptions the more time presses. We must make haste lest 1965 find us with all too little done.

Another difficulty lies in the variety of prevalent conceptions about the proper way to commemorate the vast array of events, forces, and personalities bound up in the conflict. Perhaps a great poet, another Walt Whitman, or even a great single poem, another "Harvard Commemoration Ode," would do more to touch the heartstrings of the country than all the labors of the national and State commissions; perhaps another novel as vivid as Stark Young's "So Red the Rose" or as panoramic as Margaret Mitchell's "Gone With the Wind" would similarly eclipse our efforts. We cannot command poets and novelists; we must use humbler instruments, and on their use men naturally differ. But possibly we can turn this apparent weakness into a strength; we can adroitly make use of different concepts, different commemorative devices, to reach the different audiences that ought to be reached.

The propriety of reenacting, even in part, some of the great battles of the war has been hotly debated. Such reenactments are all too likely to be a travesty of the real event; they may even give a tragic, blood-soaked field a carnival atmosphere, which is the last abuse of history that we should permit. For myself, I confess to a distrust of them unless taste rules, and all elements of commercialism are muted and disciplined. Remembering the third and worst Bull Run, I told a friend that the National Commission would reenact a battle only over my dead body; I would be the first casualty of the engagement. I still think that such pageantry should be left to the States, with the aid of the National Park Service; it lies in their field, not ours.

But if the States and local authorities make their arrangements with taste and restraint, and if the National Park Service supplies its expert emphasis on accuracy, such reenactments may fill a valuable role. The sight of authentic uniforms and authentic colors and the sound of authentic arms can awaken the imagination as nothing else will. Taste is not an expensive commodity; it is rare, but it is not high priced. A good example of what it can accomplish was afforded by the town of Concord, Mass., when in 1875 it commemorated the shot heard round the world. The observances were almost perfect in their vividness and dignity and were recorded in a volume well worth study today. A mock battle badly done will mock its producers; fittingly and carefully done, with all the present-day sutlers kept well to the rear, a sober reenactment will thrill the heart and exalt the spirit. We may well make room for it, and the National Commission will be glad to give encouragement and advice.

The greatest difficulty of all, some will say, lies quite beyond all this. It lies in fact that our commemoration of the upheaval of a century ago coincides with a new crisis in race relations which has aroused strong emotions. We shall need courtesy and tact in facing this difficulty; all our tact, and all the mutual forbearance of which men of differing views are capable. Slavery, as my old friend Douglas Freeman once observed to me, was an ugly institution, and some of its legacies are ugly. But to my fellow northerners I can say that in considering the complicated subject of race relationships, nothing is more repugnant or less justified than an assumption of moral superiority, a holier-than-thou attitude. Mr. Dooley put a sound point into one sentence of his famous catalog of events he had witnessed during his lifetime. "I have seen the shackles dropped from th' slave," said Mr. Dooley, "so that he cud be lynched in Ohio." In this field we have all been sinners.

And the rule for the National Commission to follow is, I think, entirely clear. I put part of it into a short statement when I took office. "Above all," I said, "our central theme will be unity, not division, for out of the brothers' war slowly emerged the basis of a firm union of hearts instead of an uncertain union of jarring political elements. So far as we can, we shall allow the just pride of no national group to be belittled or besmirched. A host of white southerners died for what they believed a just cause; a host of white northerners died for what they held a sacred duty; a host of Negroes died, many in the uniform of the United States, for the achievement of freedom and human equality. We must honor them all." The National Commission, in its own observances, will never condone an affront to the dignity of any one of these groups. But that is all. Beyond that line we have no authority, and we well realize that a proper commemoration of events a century ago might suffer irretrievable damage from entanglement with controversial issues of today.

Part of the commemoration must reach the grassroots; it must appeal to the common people. Part of it, we hope, will reach up to the mountain peaks; painter, poet, sculptor, musician, philosopher will see it against the skies and say it is good. We of the National Commission have plans for one commemoration in the not distant future in which we are striving to enlist the poet and the

composer. To reach to the plain man and woman by their fireside we should like to encourage radio and television to seize some of the wealth of neglected opportunities in the Civil War area; and we think that Mr. Minow will approve of this desire. We have set on foot a rather ambitious program of historical and bibliographical publications, which already offers every prospect of success. As it is described, or at least outlined, on a separate sheet distributed among you I shall not now deal with it further; but if you desire we can supply additional information on any part of it.

As it is described, or at least outlined, on a separate sheet distributed among you, you will be equally frank and explicit in giving us yours. We have done our best to arrange an orderly agenda, which is in your hands; but we shall depart from it or add to it as you may desire. We do not expect that any controlling decisions will come out of this meeting; that is not its purpose. But we do hope that it will give us all a great deal of practical enlightenment, and will do something even more important—will give us a sense of solidarity in our common endeavors to make this nationwide commemoration a success.

STATEMENT BY THE CHAIRMAN, DR. ALLAN NEVINS, CIVIL WAR CENTENNIAL COMMISSION, DECEMBER 4, 1961

We shall use our energies and influence to help make the national commemoration of the Civil War both instructive and constructive.

To this end we shall discourage observances that are cheap and tawdry, or that are divisive in temper, or that in any other respect fall short of expressing the magnanimity of spirit shown by Lincoln and Lee, that fall short of honoring the heroism of the 600,000 men who gave their lives. We shall encourage observances which will assist the American people to understand the mingled tragedy and exaltation of the war, and to draw from it lessons both practical and moral commensurate with its importance.

We shall promote the publication of books and the collection of sources, which will stand as a permanent memorial of this commemoration. We shall do what we can to make the principal events of the war, civil and military, more meaningful to teachers and students in the schools of the Nation. We well realize that by use of the mass media we can give observances otherwise merely local a national interest and impact. We hope to enlist in our work the poets, the essayists, the novelists, and the composers of the country.

Above all our central theme will be unity, not division, for out of the brothers' war slowly emerged the basis of a firm union of hearts instead of an uncertain union of jarring political elements. So far, as we can, we shall allow the just pride of no national group to be belittled or besmirched. A host of white southerners died for what they believed a just cause; a host of white northerners died for what they held a sacred duty; a host of Negroes died, many in the uniform of the United States, for the achievement of freedom and human equality. We must honor them all. When we finally reach the commemoration of Appomattox, we shall treat it not as victory or defeat, but as a beginning—the beginning of a century of increasing concord, mutual understanding, and fraternal affection among all the sections and social groups of the Republic.

SUPPORT FOR FUNDS FOR COMMISSION

Representative SCHWENGEL. I conclude by expressing the hope that you will grant us the appropriation we are asking for so that we can move ahead with the program and the plans that we have, and invite you to watch what we are doing and aid and abet us in any way you can in your positions as Senators of the U.S. Senate.

Chairman HAYDEN. Thank you, sir, for your statement.

Senator BYRD. Mr. Chairman, may I just take 30 seconds to compliment my former colleague on his very fine statement here this morning and also to commend him on his continuing interest in the work of the Civil War Centennial Commission.

Representative SCHWENGEL. Thank you.

Federal Coal Mine Safety Board of Review

STATEMENT OF EDWARD STEIDLE, CHAIRMAN; ACCOMPANIED BY CHARLES R. FERGUSON, MEMBER; EDWIN R. PRICE, MEMBER; TROY L. BACK, EXECUTIVE SECRETARY; AND ROBERT J. FREEHLING, GENERAL COUNSEL

Justification

Chairman Hayden. We will now hear from the Federal Coal Mine Safety Board of Review. For the fiscal year 1963 budget estimate for the Federal Coal Mine Safety Board of Review the amount is $70,000, the same as that appropriated in fiscal year 1962. The justification for this estimate will be inserted in the record.

(The justification referred to follows:)

JUSTIFICATION OF THE 1963 BUDGET ESTIMATES

Creation of the Board

The creation of the Federal Coal Mine Safety Board of Review is provided for in title II of the Federal Coal Mine Safety Act, Public Law 552, 82d Congress, which act was signed by the President and became law on July 16, 1952. This act amends the Federal Coal Mine Inspection and Investigation Act of May 7, 1941, Public Law 49, 77th Congress, by giving Federal coal-mine inspectors authority to control certain dangerous conditions and practices in coal mines that may result in major disasters, and by creating a Board to which an operator may apply for revision or annulment of, and temporary relief from an order issued by a Federal coal-mine inspector or the Director of the U.S. Bureau of Mines, pursuant to section 203 or 206 of the act.

The Federal Coal Mine Safety Act reads in part as follows:

"Sec. 205. (a) An agency is hereby created to be known as the Federal Coal Mine Safety Board of Review, which shall be composed of three members who shall be appointed by the President, by and with the advice and consent of the Senate.

"(b) The terms of office of members of the Board shall be three years, * * * . A member appointed to fill a vacancy caused by the death, resignation, or removal of a member prior to the expiration of the term for which he was appointed, shall be appointed only for the remainder of such unexpired term. The members of the Board may be removed by the President for inefficiency, neglect of duty, or malfeasance in office."

Organization of the Board

The original Board was appointed by the President on August 21, 1952. The Board opened its offices on September 24, 1952, in the Lafayette Building, 811 Vermont Avenue, NW., Washington, D.C.

General duties of the Board

It is the duty of the Board to hear and determine applications filed with it by coal-mine operators seeking annulment or revision of, and temporary relief from, orders issued by the inspector or the Director of the U.S. Bureau of Mines pursuant to the provisions of the Federal Coal Mine Safety Act.

The performance of these duties requires the holding of public hearings, either in the District of Columbia or at other locations, at the discretion of the Board; the rendering of decisions; the ultimate issuance of findings and orders; and the certification of records on appeals.

The workload

The Federal Coal Mine Safety Act gave Federal coal-mine inspectors, for the first time, authority under law to close mines or parts of mines where certain dangerous conditions or practices are found, and to classify mines as "gassy." (A mine classified as "gassy" is required to be operated under somewhat different conditions that a nongassy mine.)

Under the act, the Board does not have authority to initiate proceedings or to conduct investigations. The workload depends entirely upon the number of appeals from orders, filed with the Board by coal mine operators; therefore, an estimate of the volume of such workload in any fiscal year is somewhat of a conjecture. To illustrate its caseload potential, the Board has obtained from the Bureau of Mines data pertaining to the number of orders issued pursuant to title II of the Federal Coal Mine Safety Act. These data reveal that 1,174 orders were issued during the period July 16, 1952, through July 31, 1961 (a period of approximately 9 years). These orders were made pursuant to the various sections of the act as follows: 483 pursuant to section 203(a); 533 pursuant to section 203(c); and 158 pursuant to section 203(d). This means that 483 mines or sections of mines were closed because of the existence of imminent dangers, 533 mines or sections of mines were closed because the violations cited in the notices of findings had not been eliminated within the time specified, and 158 mines were classified as gassy. Such orders, as already mentioned, are the sources of appeals to the Board. During this period, the Board received 24 applications for annulment or revision of orders issued by Federal coal-mine inspectors or the Director of the Bureau of Mines, and hearings which required from 1 to 12 days were held on each application.

The cost of the Board's operations will be influenced greatly by the number of hearings and the locations at which they are held. One item that conceivably could run to a large expenditure is the cost of hearings held outside of Washington, D.C. It is obvious that Congress did not intend that operators be unduly burdened with costs in connection with hearings. To take care of situations where long distances would have to be traveled by operators and their witnesses, section 205(d) of the act provides that "The principal office of the Board shall be in the District of Columbia. Whenever the Board deems that the convenience of the public or of the parties may be promoted, or delay or expense may be minimized, it may hold hearings or conduct other proceedings at any other place. * * *"

It is probable that some applications will be submitted by small operators of the Far West, the hearings of which would require a number of witnesses. In such instances, it is quite obvious that the convenience of the parties and the public would be promoted and expense and delay minimized if the hearings were held at a location near the mine. Even one hearing at a location remote from Washington headquarters would increase greatly the expenses of the Board.

The Board is aware that Congress did not intend that it become a large agency; therefore, it has no intention of expanding its staff beyond the number necessary to insure orderly functioning. However, the Board is required by statute to be at all times in a position to immediately set a date for and hold a prompt hearing, and to render a prompt decision, on any application filed with it. Delay where a mine has been closed by an order under this statute could mean undue hardship or bankruptcy to the operator and unemployment to the miners involved.

PROGRAM AND PERFORMANCE

Coal-mine operators, affected by orders issued by Federal coal-mine inspectors, may appeal to the Board for annulment or revision of, and temporary relief from such orders. During fiscal year 1961, a total of 133 orders were issued. When operators appeal, hearings are held, and the Board rules upon the application. It is estimated that there will be 125 to 150 orders subject to appeal to the Board in each of fiscal years 1962 and 1963.

Requirements for 1963. This request is in the amount of $70,000 for fiscal year 1963, of which $58,747 is for personnel compensation and $11,253 is for other obligations.

JUSTIFICATIONS FOR PERSONNEL COMPENSATION

The following summary table and statement present the essential facts with respect to this item:

	1962 estimate	1963 estimate	Estimated change in 1963 from 1962
1. Number of permanent positions	5	5	0
2. Annual salary cost of permanent positions	$46,579	$47,697	+$1,118
3. Other personnel compensation	50	50	0
4. Positions other than permanent (3 Board members)	12,000	11,000	−1,000
Total personnel compensation	58,629	58,747	+118

The five permanent positions listed represent the minimum staff required to carry out the statutory duties of the Board.

JUSTIFICATION FOR OTHER OBLIGATIONS

A total of $11,253 is requested for "Other obligations" in budget year 1963. The following summary table and statements present the essential facts with respect to these items:

	1962 estimate	1963 estimate	Estimated change in 1963 from 1962
12 Personnel benefits	$3,850	$3,950	+$100
21 Travel and transportation of persons	4,500	4,400	−100
22 Transportation of things	10	10	0
23 Rent, communications, and utilities	1,150	1,150	0
24 Printing and reproduction	700	650	−50
25 Other services	200	200	0
26 Supplies and materials	624	615	−9
31 Equipment	227	278	−59
Total	11,371	11,253	−118

Detailed statement

12 Personnel benefits.—The $3,950 requested for this item will be required to defray the aggregate costs to the agency resulting from various laws enacted in the interest of Federal employees, as follows: employer's share of cost of employees' life insurance, $180; health benefits, $300; retirement, $3,140; and Federal Insurance Contributions Act taxes, $330.

21 Travel and transportation of persons.—The $4,400 requested for this item includes $3,400 for travel expenses for Board members and $1,000 for transportation and subsistence for the Executive Secretary and the General Counsel of the Board.

22 Transportation of things.—This small sum of $10 is requested to defray any costs that may arise in connection with the shipment of files, records, or other documents required in connection with hearing held outside of the District of Columbia.

23 Rent, communications, and utilities.—The $1,150 requested for this item includes $850 for local telephone costs; $200 for long-distance telephone calls; $75 for airmail, special delivery, and other postage stamps; and $25 for telegraph service.

24 Printing and reproduction.—The $650 requested for this item includes the cost of administrative forms, leterheads, envelopes, etc.; and the printing regulations and issuances of the Board.

25 Other services.—The $200 requested for this item will provide $135 for the maintenance of equipment used in day-to-day operations, and $65 for health services provided by the Public Health Service.

26 Supplies and materials.—The $615 requested for this item includes the cost of all office supplies and commodities normally required in an agency of this kind.

31 Equipment.—The $278 requested for this item will provide funds for the purchase of such equipment as may be required.

Hearing appeals (total obligations)	$55		$15	$70			$70

PREPARED STATEMENT

Chairman HAYDEN. It is the duty of this Board to hear and determine applications filed with it by coal mine operators seeking a change or abandonment of an order issued by a coal mine inspector or by the Director of the U.S. Bureau of Mines. If you have a written statement you may wish to file it for the record and summarize it orally.

Mr. STEIDLE. Mr. Chairman, I again have a short statement and a long statement.

Chairman HAYDEN. The long statement may go in the record and you may summarize it.

(The statement referred to follows:)

STATEMENT OF EDWARD STEIDLE, CHAIRMAN, FEDERAL COAL MINE SAFETY BOARD OF REVIEW

The Federal Coal Mine Safety Board of Review is presenting for your consideration a request for $70,000 for fiscal year 1963. This amount is the same as that appropriated for the current fiscal year.

The Board was created by, and is operating under, title II of the Federal Coal Mine Safety Act, Public Law 552, 82d Congress. It operates completely independent of any other Federal department or agency. Having only five permanent positions, the Board is one of the smallest independent entities in Government.

Notwithstanding its smallness, the Board is required to file various periodic and special reports with other Federal agencies and the Congress and is responsible for compliance with all laws, rules, and regulations pertaining to the operation of independent Government agencies. Meeting such requirements is somewhat of a problem in an agency such as ours, which is too small to employ experts in each phase of Government procedure. To meet this problem the Board employed persons who had extensive and diversified experience in Government and who had demonstrated their willingness and ability to carry out assignments without day-to-day supervision. Another reason for employing experienced personnel is that due to the extremely small number of employees, two of whom on occasion have been on out-of-town hearings simultaneously, any one of the remaining employees may be required to assume the responsibility of handling the immediate affairs of the Board.

The Board itself is composed of three members who are paid only when actually employed. The present members are Charles R. Ferguson, safety director, United Mine Workers of America, Washington, D.C., representing the coal mine workers; Edwin R. Price, manager, coal properties (retired), Inland Steel Co., Wheelwright, Ky., representing the coal mine operators; and I. Ed-

ward Steidle, dean emeritus, College of Mineral Industries, the Pennsylvania State University, University Park, Pa., serving as Chairman. The tripartite nature of the Board is required by section 205(c) of the act.

The duty of the Board by statute and the procedure under which it operates are in some respects unique among those given to Government agencies. The sole activity of the Board is the hearing and determination of appeals by coal mine operators from orders of Federal coal mine inspectors or the Director of the Bureau of Mines. In this connection, the Board is required by law to be in a position at all times to "immediately * * * fix the time for a prompt hearing" on any appeal filed with it. The Board has no inspection duties and dies not itself initiate action. The extent of its activity depends entirely upon the wishes of coal mine operators affected by the aforementioned orders. This situation precludes any control by the Board over its workload and makes its volume difficult to estimate to a reasonable degree of accuracy.

To illustrate the potential workload, it is the information of the Board that during the period July 16, 1952, the effective date of the act, through December 31, 1961, a total of 1,223 orders were issued by Federal inspectors. Of these orders, 526 were pursuant to section 203(a) of the act, and required the closing of mines or sections of mines where imminent dangers were found; 537 were pursuant to section 203(c), and required the closing of mines or sections of mines where the operators had failed to abate certain specific violations of the act within the time provided by the inspectors; and 160 were pursuant to section 203(d), and required the operators to comply with the provisions of the act pertaining to gassy mines. It is estimated that there will be 125 to 150 orders subject to appeal to the Board in fiscal year 1963.

As of January 15, 1962, 25 appeals had been filed with, and decided by, the Board. The Board has no knowledge of the number of orders still outstanding and therefore subject to appeal. Five determinations by the Board have been reviewed in Federal Courts of Appeal, and in each instance the Board action was unanimously sustained.

As previously stated, the sole activity of the Board is the hearing and determination of appeals made by coal mine operators. The principal purpose of permitting such review by an administrative body representing the coal mine workers, the coal mine operators, and the public is to safeguard against possible unreasonable or ill-founded interpretations and decisions by the personnel of the Bureau of Mines. As has been pointed out by one of the major coal associations, "The mere existence of the Board and the powers vested in it by Congress to annul orders issued by Federal coal mine inspectors and the Director of the Bureau of Mines has a strong tendency to keep the administration of the act on a fair and equitable basis."

The Board will make a sincere effort to carry out its duties under the statute at a cost within the amount requested. However, if the workload should prove to be greater than is presently anticipated, it, of course, would have no choice but to ask for additional funds.

In conclusion, I assure you that this Board is anxious to operate as economically as is consistent with the carrying out of its function under the Federal Coal Mine Safety Act. It has worked toward that objective in the past and will continue to do so. A considerable saving has been effected by utilizing the services and facilities of larger agencies wherever possible either on a reimbursable or gratis basis, and the Board expects to retain this practice in the future.

General Statement

Mr. Steidle. The Federal Coal Mine Safety Board of Review is presenting for your consideration a request for $70,000 for fiscal year 1963. This is the same amount as that appropriated for the current fiscal year.

The Board was created by, and is operating under, title II of the Federal Coal Mine Safety Act, Public Law 552, 82d Congress. It operates independently of any other Federal department or agency. Having only five permanent positions, the Board is one of the smallest independent entities in Government.

Members of our Board are paid only when actually employed. Currently the members are Charles R. Ferguson, Safety Director,

United Mine Workers of America, on my left; and next to Mr. Ferguson, Edwin R. Price, manager, coal properties, Inland Steel Co. (retired); and I, Edward Steidle, dean emeritus, College of Mineral Industries, the Pennsylvania State University. The tripartite nature of the Board is required by section 205(c) of the act.

BOARD FUNCTIONS

The Board hears and determines appeals by coal mine operators from orders of Federal coal mine inspectors or of the Director of the Bureau of Mines. The extent of Board activities thus depends entirely upon the wishes of coal mine operators affected by such orders. This procedure precludes any control by the Board over its workload.

The principal purpose of permitting a review by an administrative agency representing the coal mine workers, the coal mine operators, and the public is to safeguard against possible unreasonable or ill-founded interpretations and decisions by the personnel of the Bureau of Mines.

TOTAL APPEALS TO BOARD

It is the information of the Board that during the period July 16, 1952, the effective date of the act, through December 31, 1961, a total of 1,223 orders were issued by Federal inspectors. As of today, 25 of these orders have been appealed to the Board.

The Board will make a sincere effort to perform its function at a cost within the $70,000 requested. We will continue to operate as economically as is consistent with the carrying out of our duties.

Chairman HAYDEN. How many appeals are pending now?

Mr. STEIDLE. I think the slate is clear; is that right?

Mr. FERGUSON. That is right.

Mr. STEIDLE. The slate is clear at the moment.

ChairmanHAYDEN. How many appeals did you have during the past year?

Mr. STEIDLE. Only three during the past year.

Chairman HAYDEN. You are there ready to function whenever it is necessary. That is the point?

Mr. STEIDLE. Yes, sir.

Chairman HAYDEN. I think it is a very important function to perform, too. Are there any further statements by any of you?

We thank you for your appearance.

Mr. STEIDLE. Thank you, Senator, and members of your committee.

COMMISSION OF FINE ARTS

STATEMENT OF DAVID E. FINLEY, CHAIRMAN; ACCOMPANIED BY L. R. WILSON, SECRETARY; AND DALE L. ROTHROCK, FINANCE OFFICER

SALARIES AND EXPENSES ESTIMATE

Chairman HAYDEN. Mr. Finley, Chairman of the Commission of Fine Arts. The budget estimate for salaries and expenses, Commission of Fine Arts, for fiscal year 1963 will be placed in the record. Eighty thousand dollars are requested for the coming fiscal year, an increase of $10,000 over the amount asked for last year.

(The estimate referred to follows:)

COMMISSION OF FINE ARTS

Salaries and expenses

Appropriation, 1961	$69,000
Appropriation, 1962	70,000

SUMMARY OF INCREASES, 1963

Administration: Increase in staffing of the Commission and increased travel costs	+10,000
Budget estimate, 1963	80,000

Analysis by activities

Activity	Amount available, 1961	Amount available, 1962	Estimate, 1963	Increase (+) or decrease (−)
Administration	$67,671	$70,000	$80,000	+$10,000
Unobligated balance lapsing	1,329			
Total	69,000	70,000	80,000	+10,000

JUSTIFICATION

The estimate of funds needed to operate the Commission of Fine Arts in fiscal year 1963 is $80,000, or an increase of $10,000 over the sum appropriated in fiscal year 1962. The increase for 1963 would provide funds for increased travel costs of the members, promotions, and a new position in the editorial series.

1. The Commission of Fine Arts was established in 1910 to fill the need for a permanent advisory agency whose members would be qualified to make available to the Government the authority of expert opinion upon questions of art arising in the course of administration. As an independent agency, it was intended to serve a twofold purpose; first, to give advice concerning esthetic standards and matters of civic design involved in the orderly development of the city of Washington; and, second, to furnish expert advice on questions of art to the President, to the Congress and its committees, and to the heads of the various departments and agencies of the Federal and District Governments.

The seven members of the Commission are appointed by the President and serve without pay. They give freely of their time, meeting for 1 or 2 days each month as required, with compensation only for actual expenses of travel and

subsistence incurred in attending meetings. The technical and professional problems that come to the Commission fall primarily into the fields of architecture, general site planning, landscape architecture, sculpture and painting, but, in recent years, an increasing amount of time has been devoted to critical review and report of proposed legislation, whose aim is to foster production and appreciation of the fine arts.

The authorized scope of the Commission's activity covers not only Federal and District Government projects in the city of Washington and its environs, but also cetain designated private ad semipublic construction projects under authority as noted hereafter; and its scope often includes Federal projects outside the District of Columbia and abroad, such as the World War I and World War II memorials and cemeteries, the designs for which come before the Commission by authority of Public Law 534, 67th Congress (42 Stat. 1509) as amended. During the 51 years of the Commission's existence, the 64 members who have served on it, have steadwastly insisted on the maintenance of the highest esthetic standards in the design of the Federal and semipublic projects that are referred to it by law.

The current staff of the Commission comprises an executive secretary (GS–14), a staff assistant for fine arts matters (GS–13), a staff assistant for legal matters (GS–13), an administrative assistant (GS–10), and two secretaries (stenography) (GS–7). As noted above, a new position (GS–10) in the editorial series is being sought to provide for compilation and editing of reports and documents. Increase in the workload over the past few years has resulted in tardy compilation of the 16th and 17th Reports of the Commission and the Minutes of the Commission. These reports and minutes of the Commission are invaluable records of the aesthetic development of the city of Washington during the 20th century which furnish information not available from any other source.

2. Specific functions of the Commission comprise the following:

(*a*) Under the provisions of its Enabling Act, Public Law 181, 61st Congress, approved May 17, 1910, the Commission of Fine Arts advises generally upon questions of art when required to do so by the President, or by any committee or Member of either House of Congress.

It advises specifically on all plans for parks and public buildings, constructed by the executive departments or the District of Columbia, which in any essential way affects the appearance of the city of Washington and its environs. Authorization has been given or is pending for the design of many new Federal and District buildings, most of which are planned for erection in the central area of the city of Washington, as part of the expansion of the Federal or District Governments.

It also advises upon location and design of statutes, fountains and monuments in the public squares, streets, and parks in the District of Columbia and upon the selection of models for the statues, fountains, and monuments erected under the authority of the United States and upon the selection of artists for the execution of the same.

Rendering an opinion on the merit of designs for medals, insignia, coins, or other art projects created and produced by the executive department is also a phase of the Commission's duties.

(*b*) The Commission carries out the provisions of the Shipstead-Luce Act. Public Law 231, 71st Congress (46 Stat. 366) approved May 16, 1930, an act to regulate the height, exterior design, and construction of private and semipublic buildings in certain areas of the National Capital. In this function the Commission reports its findings on the above features to the Commissioners of the District of Columbia before building permits are issued at the Central Permit Bureau.

(*c*) The Commission also carries out the provisions of the Old Georgetown Act, Public Law 808, 81st Congress (64 Stat. 903, ch. 984), approved September 22, 1950, an act to regulate the height, exterior design and construction of private and semipublic buildings in the Georgetown area of the National Capital. This action also requires review and recommendations to the Commissioners of the District of Columbia on the merits of the designs submitted for building permits.

(*d*) Gifts of works of art to the Government from private individuals or foreign governments are reviewed by the Commission for artistic merit and suitability before acceptance.

(*e*) Private organizations and citizens from the entire country frequently call upon the Secretary's office for advice and suggestions that vary from the au-

thenticity of historical monuments to the procedures for establishing a municipal art commission.

(*f*) Periodic and special reports are compiled and issued as required or requested; for example, the regular reports of the Commission's activities, and the report to the President, entitled "Art and Government," issued in 1953.

ITEMIZATION OF ESTIMATE

Salaries and expenses

	Actual, 1961	Estimate, 1962	Estimate, 1963	Increase (+) or decrease (−)
Program and financing:				
Total obligations	$67,671	$70,000	$80,000	+$10,000
Unobligated balance lapsing	1,329			
Total (appropriation)	69,000	70,000	80,000	+10,000
Obligations by objects:				
11 Personnel compensation	46,680	53,000	62,000	+9,000
12 Personnel benefits	3,063	3,500	4,100	+600
21 Travel and transportation of persons	5,049	7,000	7,400	+400
23 Rents, communications and utility services	1,093	1,000	1,000	
24 Printing and reproduction	5,722	2,000	2,000	
25 Other services	2,639	2,500	2,500	
26 Supplies and materials	1,557	1,000	1,000	
31 Equipment	1,868			
Total obligations	67,671	70,000	80,000	+10,000

GENERAL STATEMENT

Chairman HAYDEN. You may either read your statement or you may place it in the record and summarize it if you wish.

Mr. FINLEY. Thank you, sir. We filed a justification for the record and I would like to read a short statement, if I may.

Chairman HAYDEN. All right.

REQUEST FOR INCREASED FUNDS

Mr. FINLEY. The Commission of Fine Arts is requesting an appropriation of $80,000, which represents an increase of $10,000 over the appropriation for fiscal year 1962. The increase is to provide for travel costs and salaries, and a new position in the editorial series.

At the present time the Commission has six regular employees; an executive secretary, a staff assistant for fine arts matters, a staff assistant for legal matters, an administrative assistant and two stenographers. The incumbent of the new position would be engaged in writing reports and conducting research essential to the work of the Commission.

TOTAL SUBMISSIONS ACTED UPON

During fiscal year 1961, the Commission acted upon 583 formal submissions, carrying an estimated cost of many millions of dollars. A tabular listing accompanies my statement showing the number of applications for 3 past fiscal years.

Over the past 10 years the number of formal submissions to the Commission has steadily increased. More than 3,000 formal applications have been considered under the administration of the Old Georgetown Act, and over 1,000 formal applications under the Shipstead-Luce Act.

These numbers do not include the many informal submissions and inquiries that consume much time and effort by the staff. Yet during this time the staff has remained relatively small. The members of the Commission believe that it needs to be further strengthened. I, therefore, hope the committee will favorably consider our request for the amount needed for the next fiscal year.

The members of the Commission are, as you know, appointed by the President and serve without compensation, receiving only actual travel expenses incurred in attending meetings.

Since the Commission was established in 1910, more than 60 distinguished architects, landscape architects, painters, sculptors, and laymen in the field of fine arts have given freely to their Government the benefit of their experience and professional skills in advising the President, the Congress, and Government agencies on matters involving the fine arts.

(The tabular listing referred to follows:)

Number of submissions presented to the Commission of Fine Arts during the past 3 fiscal years

	1959	1960	1961
Shipstead-Luce Act (approved May 16, 1930)	97	114	107
Old Georgetown Act (approved Sept. 22, 1950)	212	226	280
Commission of Fine Arts Act (approved May 17, 1910)	194	217	196

FISCAL YEAR 1959

Item	Cases received	Approved	Disapproved
Shipstead-Luce Act	97	85	12
Old Georgetown Act	212	203	9
Commission of Fine Arts Act	194		

FISCAL YEAR 1960

Shipstead-Luce Act	114	75	39
Old Georgetown Act	226	201	25
Commission of Fine Arts Act	217		

FISCAL YEAR 1961

Shipstead-Luce Act	107	82	25
Old Georgetown Act	280	250	30
Commission of Fine Arts Act	196		

ADDITIONAL POSITION

Chairman HAYDEN. We thank you for your statement. I believe the committee would like to know just what you will use the additional $10,000 for. Just one man?

Mr. FINLEY. Yes; it is for one man. We want someone who can do research and write reports. We have nobody that has the time to do that and we find it very difficult to get out annual reports, and special reports, and so on; and we are frequently asked for them.

Chairman HAYDEN. I realize that you are very frequently called upon for information which is desired quickly and to get an accurate report you have to have somebody write it up.

Mr. FINLEY. Yes; it really requires a full-time man for that work and we would like very much to have that one extra position. We have kept down the number of employees to the least possible number.

Chairman HAYDEN. Have you any questions, Senator Young?

TOTAL EMPLOYEES

Senator YOUNG. How many employees do you have now?

Mr. FINLEY. We have six paid employees.

Senator YOUNG. What do they do?

Mr. FINLEY. One is the Executive Secretary, Mr. Wilson, here; a staff assistant for fine arts matters; staff assistant for legal matters—he is a lawyer, of course—an administrative assistant, and two stenographers. That comprises the staff at present.

Senator YOUNG. That is all. Thank you.

Chairman HAYDEN. Senator Byrd?

Senator BYRD. No questions; thank you.

Chairman HAYDEN. We thank you.

Mr. FINLEY. Thank you, Senator Hayden.

National Gallery of Art

STATEMENT OF JOHN WALKER, DIRECTOR; ACCOMPANIED BY ERNEST P. FEIDLER, ADMINISTRATOR; E. ROY BERGHOLZ, ASSISTANT TREASURER; AND LLOYD D. HAYES, ASSISTANT ADMINISTRATOR

Increase in Budget Estimate

Chairman Hayden. The National Gallery of Art, Mr. Walker.

The justifications for the National Gallery of Art 1963 budget estimate for salaries and expenses will be printed in the record. This estimate amounts to $2,054,000; an increase of $122,000 over the appropriation for fiscal year 1962.

(The material referred to follows:)

The appropriation "Salaries and expenses, National Gallery of Art", is authorized by the joint resolution of Congress, approved March 24, 1937 (20 U.S.C. 71–75). Appropriated funds are used only for the operating and maintenance costs of the gallery. Works of art are acquired by gift from public-spirited collectors, or by purchase with funds donated for that specific purpose.

In 1963 we plan to undertake the largest single maintenance project which has been required since the monumental building was turned over to the Government in 1940. This budget includes funds for the major repair of one-half of the skylight—1¼ acres of glass roof. The remaining portion of equal area will be repaired in fiscal year 1964. Conversion of an elevator to passenger operation is also planned for 1963.

There will be no increase in 1963 in the full-time employment of 308 supported by funds available for the current year. Other normal operating expenses are expected to remain at the current-year level.

Salaries and expenses

Appropriation, 1961	$1,920,000
Appropriation, 1962	1,932,000

SUMMARY OF INCREASES AND DECREASES, 1963

1. To pay the net cost of within-grade promotions	+10,000
2. To pay for major repairs to skylight	+100,000
3. To pay for conversion of elevator to passenger operation	+18,000
4. To pay for maintenance and central station service for new burglar alarm system	+6,000
5. Reduction due to anticipated decrease in overtime payments to guards	−10,000
6. Reduction due to nonrecurring purchase of power scrubbing machine in 1962	−2,000
Net change, 1963	+122,000
Budget estimate, 1963	2,054,000

EXPLANATION OF INCREASES AND DECREASES

1. Within-grade promotions

The net cost of within-grade promotions in 1963 is estimated at $10,000. Turnover in gallery employees occurs principally in the lower grade positions,

and among employees who have not reached the higher steps of their grades. For this reason turnover savings have never been sufficient to cover within-grade promotion costs. However, this increase in personnel compensation is offset by the reduction in overtime payments explained in item 5.

2. Repair of skylight

The entire roof over the exhibition galleries is skylight. This glass roof consists of 15,301 pieces of glass, each 36 inches by 25⅛ inches, which are sealed in aluminum frames forming 184 roof sections joined together by expansion joints. Such a roof is considered watertight so long as the mastic sealing the glass lights to their aluminum frames prevents water from entering the joint between the glass and aluminum, or so long as the water that enters the joint is carried by a gutter system on the attic side of the glass to drains outside the building.

The gallery skylight has not been a watertight roof for at least the last 10 years. This condition began to develop within 5 years after the building was completed due to normal aging of the mastic sealant and the extremes of temperatures to which this material was exposed. The condition has continually deteriorated as many of the small gutters, designed to carry off water entering defective joints have become clogged with pieces of the hardened mastic which have broken away from the joints. The design and location of the gutters prevent their cleaning as a roof maintenance operation, and the replacement of the mastic on the underside of the glass has involved so much labor that it has been undertaken only in experiments being made to test new materials.

For more than 10 years then, we have tried to cope with this problem by covering the upper side of the glass and metal joints with convential-type (oil base) calking compounds. This is a temporary repair method which is only partially effective for 1 or 2 years. At no time have we been able to effectively repair all the leaks in the more than 2½ acres of skylight. To prevent water from entering the rooms where works of art are exhibited, more than 100 aluminum dishpans are used during a heavy rain to catch water leaking into the attic.

Over the past 15 years we have inspected many skylights of various designs and have found that all skylights leak once the mastic used in the joints of glass and metal has lost its adhesive and cohesive qualities. Since 1955 we have experimented with some of the new types of mastics. Accelerated weathering tests indicate the life expectancy of several of these new materials to be two to four times that of conventional oil-base calking compounds. These new mastics are expensive and difficult to use, but we believe their use to be essential to any satisfactory repair of the skylight.

More than a year ago a waterproofing contractor, experienced in the proper application of a polysulphide mastic, sealed 270 lights of glass in the gallery skylight. The material and method of application used in this experiment present the most practical solution we know of for effective skylight repair. This repair would be expected to provide a comparatively leak-free skylight for a minimum of 20 years.

The cost for the total skylight area is estimated at $200,000 based on the cost of the experimental work performed last year. Within the months normally suitable for exterior work of this kind not more than 50 percent of the skylight can be repaired in a single year. Therefore, only $100,000—one-half of the estimate for the complete skylight—is requested for fiscal year 1963.

3. Conversion of elevator to passenger operation

In the 1960 budget $17,000 was approved for the conversion to passenger operation of one of the two elevators at the Constitution Avenue entrance of the gallery. At the completion of this conversion in October 1960, the full-time service of an elevator operator was no longer required. While on the whole service from the passenger-operated elevator has proved satisfactory, there have been many interruptions in service due to malfunctions in the automatic controls. We have also found that the passenger-operated elevator will not, to an equal degree of efficiency, handle as much traffic as an elevator manually operated. Accordingly, there have been many occasions in the past year when it has been necessary to take a laborer or guard from other work to operate an elevator. We believe that if both elevators were passenger operated, a satisfactory elevator service could be provided gallery visitors. Also, an additional passenger-operated elevator would prevent the service and work interruptions

mentioned above. The cost of converting this second elevator to passenger operation is estimated at $18,000.

4. New burglar alarm system

In the past several years there has been a significant increase in thefts from museums. This increased activity has caused real concern to the officers and trustees of the gallery due to the many openings into the building which are unprotected by burglar-alarm devices. In order that these devices may be installed without delay, the Trustees of the National Gallery of Art have authorized the expenditure of $21,000 from private funds. Maintenance and service for the remainder of this fiscal year will be covered in the installation contract. Thereafter, the annual service and maintenance charge will become an obligation of the Government the same as the present service and maintenance of watch-station and fire-alarm devices. This annual charge for service and maintenance of the new system giving burglar-alarm protection to 18 doors, 105 movable windows, 5 fixed windows, and 82 air-vent openings is estimated at $6,000.

5. Decrease in overtime payments

Due to the special protection provided for temporary exhibitions from Nationalist China and the United Arab Republic overtime payments to guards were unusually high during the first half of the current fiscal year. There are no exhibitions planned for 1963 which will require a comparable amount of overtime services. The anticipated decrease is $10,000.

6. Nonrecurring purchase of power scrubbing machine

A power scrubbing machine costing $2,000, is being purchased this year. No similar replacement of equipment is planned for 1963.

STATUS OF PROGRAM

Changes in management requirement

A lower average employment than planned permitted the saving of $13,446 in personnel compensation during 1961. This saving was used to purchase the air-filter units included in the 1962 budget at $12,000, and to replace unserviceable items of equipment. The use of 1961 money for 1962 budget items will permit the absorption of $12,000 in wage-board pay increases (effective December 25, 1960) which were not included in the 1962 budget. By effecting additional efficiencies in building operation and maintenance one permanent position was abolished in 1961, and another permanent position is being dropped during the current year. A net of seven full-time positions have now been abolished since July 1, 1958.

Accessions

During the fiscal year 1961 there were 96 accessions, either gifts or loans, including 41 paintings, 23 sculptures, 29 objects of decorative art and 3 of graphic arts.

Obligations by object classification

	1961 actual	1962 estimate	1963 estimate
11 Personnel compensation	$1,569,454	$1,593,800	$1,593,800
12 Personnel benefits	118,058	119,500	119,500
21 Travel and transportation of persons	6,713	7,000	7,000
22 Transportation of things	722	700	700
23 Rent, communications, and utilities	125,568	131,000	131,000
24 Printing and reproductions	1,668	9,000	9,000
25 Other services	29,151	25,000	131,000
26 Supplies and materials	54,636	41,500	41,500
31 Equipment	13,925	4,500	2,500
32 Lands and structures			18,000
Total obligations	1,919,895	1,932,000	2,054,000

WORK PROPOSED UNDER INCREASED FUNDS

Chairman HAYDEN. Please outline for the committee the work proposed to be done with the additional funds requested.

Mr. WALKER. I have a statement, sir. May I read it to you?

Chairman HAYDEN. Yes.

Mr. WALKER. Thank you. The appropriation, "Salaries and expenses, National Gallery of Art," for the current year is $1,932,000. For fiscal year 1963 we are requesting a net increase of $122,000 which brings the total to $2,054,000.

RENOVATION OF GALLERY BUILDING ROOF

One hundred thousand dollars of the increase is for renovating one-half of the roof of the gallery building. The roof is constructed of 15,301 lights of glass sealed in aluminum frames with a putty or mastic. In total area there are about 2½ acres of glass.

After 22 years the mastic sealing the lights in the metal frames has lost its adhesive and resilient properties which are necessary for a watertight seal. During a heavy rain more than 100 containers must be distributed in the attic of the building to catch the water leaking through the skylights.

The conventional-type sealant used in the original construction has an expected life of 10 years. Over the past several years synthetic mastics have been developed which are expected to last at least twice as long. In August of 1960 we had an experienced waterproofing contractor repair, with a synthetic (polysulfide) sealant, a roof section of 270 lights. The material and method of application used in that test section presents the most practical solution we know of for effective skylight renovation.

To repair the total skylight by this method will cost approximately $200,000. During a single fiscal year normal conditions of weather will permit the renovation of an estimated one-half of the total skylight. For that reason we have planned the complete project over a 2-year period. The first 1¼ acres of skylight to be repaired in 1963 is estimated to cost $100,000.

DANGER TO CONTENTS OF GALLERY

Chairman HAYDEN. There is a great danger of injury to contents of the gallery when water pours through?

Mr. WALKER. It is a danger. We try to keep a good many members of our staff on rainy days placing the buckets at the right places.

Chairman HAYDEN. Concerning the repair work, I assume that you would need particularly good weather?

Mr. WALKER. That is true, and that limits the amount of time that can be devoted to it.

In October 1960, one of the two-passenger elevators at the main entrance to the building was converted to automatic operation. With the automation of one elevator we no longer needed the service of a full-time operator. However, because of normal malfunctions in automatic devices and because during peak periods of attendance two elevators are required, we must at times assign a guard or laborer to operate the remaining car.

CONVERSION OF ELEVATOR TO AUTOMATIC OPERATION

To improve the automatic service and to save the manpower expended for manual operation, we are requesting $18,000 to convert the second elevator to passenger operation. This will complete the conversion of elevators at the National Gallery of Art.

GIFT OF NEW BURGLAR ALARM SYSTEM

With the recent increase in the number of thefts from museums, the trustees and officers of the gallery have decided that better protection should be provided against possible undetected entry into the building when it is closed to the public. The trustees have provided $21,000 from private funds for the purchase and installation of a new burglar alarm system. This system, now being installed, without cost to the Government, protects the 18 doors, 110 windows, and 82 air vents which provide possible access from the outside to the interior of the building.

ANNUAL MAINTENANCE OF ALARM EQUIPMENT

The central station alarm service to be furnished by the installation contractor, and the maintenance of the equipment will be covered by an annual contract at an estimated cost of $6,000.

Chairman HAYDEN. That was a very generous gift.

Mr. WALKER. It was a very generous gift, I agree, and will greatly increase our protection. This cost will be a recurring item in the annual appropriation for the National Gallery of Art.

In summation, the net increase of $122,000 covers three items of utmost importance in the maintenance and operation of the gallery, and the protection of its irreplaceable art collections: (1) the repair and renovation of the gallery skylight, (2) the conversion of an elevator to passenger operation, and, (3) the maintenance and central station service for a new burglar alarm system. Estimates for these items are: $100,000 for the skylight, $18,000 for the elevator, and $6,000 for the burglar alarm system. Offsetting this total of $124,000 is $2,000 in this year's appropriation for the purchase of a scrubbing machine, which is a nonrecurring item.

ABSORPTION OF WAGE BOARD INCREASES

I would like to call your attention to the fact that these estimates for 1963 provide no increases for personnel compensation. Within the appropriation passed for the current year we are absorbing $12,000 in wage board pay increases which became effective December 25, 1960.

Also, an additional increase was granted wage board employees effective December 10, 1961, which will amount to $5,000 for this year. This increase will also be absorbed. In our judgment these administrative actions will not reduce the high standard of protection, maintenance, and service which we have consistently tried to maintain since the gallery was established.

80391—62——49

TOTAL ATTENDANCE

Our attendance last fiscal year reached 1,032,340—an increase of 7 percent over 1960.

We believe that the requested appropriation of $2,054,000 will enable us to maintain and operate the National Gallery of Art at the same high standard which the Congress has heretofore determined must be sustained.

Thank you.

Chairman HAYDEN. Are there any questions?

PRIVATE ENDOWMENT FUND FOR ACQUISITIONS

Senator YOUNG. What funds do you have in addition to the Government funds?

Mr. WALKER. We have a private endowment fund provided by Mr. Mellon and others.

Senator YOUNG. How much does that amount to a year?

Mr. BERGHOLZ. The income is approximately $500,000.

Mr. WALKER. This is also the only purchase funds that we have in the gallery and it was the intention of Mr. Mellon that the greater part of that fund should be used for the acquisition of works of art. We never come to Congress and ask for any appropriations for further acquisitions; so we keep as much as possible of that income for purchase.

Senator YOUNG. Do you use some of this money for other purposes?

Mr. WALKER. For other purposes?

Senator YOUNG. Yes.

Mr. WALKER. The $21,000 I spoke about which was necessary to install this burglar system came out of those funds. Then we have concerts every Sunday night which are free to the public and that also comes out of those funds.

We have lectures every Sunday. We use it for that purpose, and there are other matters of that kind for which it is used.

Senator YOUNG. Thank you.

Chairman HAYDEN. What is the estimate of the total amount which is required to complete this endowment?

Mr. WALKER. You mean the total amount of money for endowment from Mr. Mellon and the Mellon Educational and Charitable Trust Fund?

Chairman HAYDEN. Yes.

Mr. WALKER. $11 million.

Mr. BERGHOLZ. Roughly $11 million.

Mr. WALKER. Part of that, sir, was for the finishing up of certain unfinished areas in the gallery.

Chairman HAYDEN. I see. It was a very generous gift.

Mr. WALKER. Very generous, sir.

Chairman HAYDEN. Are there any further questions?

Senator BYRD. No, Mr. Chairman.

Chairman HAYDEN. We thank you for your appearance.

Mr. WALKER. Thank you, sir.

INDIAN CLAIMS COMMISSION

STATEMENT OF ARTHUR V. WATKINS, CHIEF COMMISSIONER; ACCOMPANIED BY JEAN R. HANNA, ADMINISTRATIVE OFFICER

JUSTIFICATIONS

Chairman HAYDEN. We will now hear from the Indian Claims Commission. Senator Watkins. The budget estimate for fiscal year 1963 for the Indian Claims Commission is $295,000; $15,000 more than was appropriated in fiscal year 1962. The justifications for this estimate will be printed in the record.

(The material referred to above follows:)

The Indian Claims Commission was organized on April 10, 1947, under the act approved August 13, 1946 (25 U.S.C. 70).

The duties of the Commission are to hear and determine all causes arising under section 2 of the act, up to and including August 13, 1946, on behalf of any Indian tribe, band, or other identifiable group of American Indians residing within the territorial limits of the United States. The act provides that the claims may be heard notwithstanding any statute of limitations or laches, but all other defenses shall be available to the United States.

Salaries and expenses

Appropriation, 1961	$205,800
Appropriation, 1962	280,000

SUMMARY OF INCREASES AND DECREASES, 1963

Increases and decreases are as follows:

Personal services	+18,000
Personal benefits	+1,000
Printing and reproduction	−2,000
Equipment	−2,000
Total	+15,000
Budget estimate, 1963	295,000

Analysis by activities

Activity	Amount available, 1961	Amount available, 1962	Estimate, 1963	Increase (+) or decrease (−)
Hearing and adjudication of Indian claims	$205,800	$280,000	$295,000	+$15,000

REQUIREMENTS FOR FISCAL YEAR 1963

The estimate for funds needed to operate the Indian Claims Commission in fiscal year 1963 is $295,000.

JUSTIFICATION FOR PERSONAL SERVICES

The following table and statement present the essential facts with respect to this item:

	1962 estimate	1963 estimate	Estimated change in 1963 from 1962
1. Number of positions	23	25	2
2. Annual salary cost of permanent positions	$235,000	$253,000	+$18,000
Total personal services	235,000	253,000	+18,000

The overall increase of $18,000 for personal services is for 2 clerk-stenographers, which is essential for necessary accumulated work due to our accelerated program, the full-time financing of the three Commissioners' salaries which was increased by Public Law 87-867 ($1,000 each or a total of $3,000), and other related benefits.

DETAILED STATEMENT

12 Personal benefits.—Section 4(a) of the civil service retirement amendments of 1956 (70 Stat. (747)) requires agencies to match the 6½-percent contribution of employees. This also covers employees' group life insurance and employees' group health contributions. This is a $1,000 increase due to additional authorized personnel.

21 Travel expense.—The principal provision of the Indian Claims Commission Act requiring expenditures for travel by the Commission and members of its staff are contained in 25 U.S.C. 70p, 709. The present limitation for travel is $10,000, the same as previous year.

23 Communications.—Three thousand dollars is requested to cover the cost of telephone facilities, long-distance calls and postage.

24 Printing and reproduction.—The estimate for printing and reproduction for 1962 is $1,000, and is to cover the printing of stationery and envelopes, miscellaneous forms, and binding repairs to old books in use by the Commission. This is a decrease over 1962.

25 Other services.—The amount of $2,000 is to cover the cost of maintenance of office machines, premiums on surety bond for two certifying officers, and miscellaneous services by other agencies, including the Commission's pro rata share (approximately $10 each, or $250) for emergency service in the health unit in the building in which we are located.

26 Supplies and materials.—Three thousand dollars is requested and is to cover the cost of blank paper, binders, jackets, folders, stencils, carbons, and miscellaneous office supplies.

31 Equipment.—The estimate for this year is $1,000 and is to cover the cost of additional file cases, incidental equipment as needed, and repairs to furniture. This represents a decrease over 1962 since no additional equipment or major replacements will be needed.

Object classification

	1961 actual	1962 estimate	Estimated change in 1962 from 1961	1963 estimate	Estimated change in 1963 from 1962
11 Personnel compensation: Permanent positions	$174,661	$235,000	+$60,339	$253,000	+$18,000
12 Personal benefits	12,631	21,000	+8,369	22,000	+1,000
21 Travel and transportation of persons	3,952	10,000	+6,048	10,000	
23 Rent, communications, and utilities	1,467	3,000	+1,533	3,000	
24 Printing and reproduction	597	3,000	+2,403	1,000	−2,000
25 Other services	413	2,000	+1,587	2,000	
26 Supplies and materials	1,518	3,000	+1,482	3,000	
31 Equipment	8,728	3,000	−5,728	1,000	−2,000
Total obligations	203,967	280,000		295,000	
Increase			+76,033		+15,000

GENERAL STATEMENT

Chairman HAYDEN. The increase in this estimate is for employment of two additional clerk-stenographers and for small salary increases for each of the three Commissioners. You may present to the committee such statements as you care to make regarding your budget for the coming fiscal year.

Mr. WATKINS. Thank you, Senator. I am going to read my statement because I find that I take less time when I pin myself down to a text than when I speak extemporaneously.

We greatly appreciate the opportunity to appear before you for the presentation of our budget request for fiscal 1963. It is not our purpose in making this statement to review the history of the Commission or explain how its activities are carried on. We have already done that many times in the past and we take it for granted that this committee understands how we operate and the task we have to accomplish.

However, we do believe that it would be helpful to point out some of the recent activities of the Commission and also to indicate what progress has been made in getting the overall job done.

Before I go on with that, let me state that the small increase we ask in our budget for 1963 is occasioned by the necessity of hiring two additional legal secretaries and in paying the salary increases given to the Commissioners in 1961 by the Congress.

We came to the conclusion in 1960 that the rate of disposal of Indian claims by the Commission would have to be greatly accelerated if we were to get the work done within a reasonable period of time. The Commission was reorganized soon after the resignation of Mr. Witt in 1960 and a conference of all lawyers practicing before the Commission was called to meet in Washington in September to discuss the moving of trials ahead and the disposal of cases.

A 3-year calendar was adopted setting cases for that period of time as a result of that conference. The 3-year period was adopted because it was believed that if lawyers and witnesses knew some time in advance when their cases would be tried, they would have a better opportunity to work out their schedules.

They would also be ready to try their cases when they were set, because they would have had ample notice and would have worked out their program with more certainty as to when they were to ap-

pear. The attorneys for the Department of Justice, representing the United States, and those representing the Indians were very cooperative and a rather heavy calendar for the 3-year period was adopted as a result of that cooperation.

You might be interested in learning how this program has been working. The new calendar went into effect in 1960. In 1961 we had a real opportunity to test the value of setting the cases for a long period in advance. Out of 104 cases set for that year, 86 were actually heard. This involved 112 docket numbers. These hearings consumed 186 days of trial time in which we took evidence, heard arguments, and took care of other miscellaneous matters in connection with the claims involved. All of the 104 matters set would have been heard except for continuances granted to parties for good cause shown.

NAVAJO CASE

It may be of interest to note that the Navajo consolidated docket No. 229, et cetera, consumed 79 days of actual trial time. Most of the land involved in that docket number is in Arizona, Senator. I am sure you would be interested in that.

The hearings began in 1960 and were concluded in October 1961. We were not able to go week after week without interruption in the course of that hearing because of the necessity of various tribes. There were some seven other tribes than the Navahos involved in that consolidated hearing. We had to try to make the hearings convenient to the counsel and to the witnesses who appeared in the case. It is one of the larger cases, as far as numbers are concerned, that we have had before us.

These hearings in that particular docket were on the questions of title and liability, which is only the first stage of this particular docket number.

CLAIM TO ABORIGINAL TITLE

Chairman HAYDEN. Are they claiming aboriginal title?

Mr. WATKINS. Yes, sir; it is all on aboriginal title. No treaties are involved because this land came to the United States as a result of the treaty with Mexico. This treaty was adopted in 1848 and we took over the situation as it was when the Mexicans had it. So, as I recall, we did not buy any land by treaty from any of those Indians in that Southwest Territory. We just took it, went on and used it, and now, of course, they have had their first time, really, to get in and make some claims for the territory we took under aboriginal title.

Chairman HAYDEN. There was one Navajo Reservation created by treaty. The rest have all been by Executive order.

Mr. WATKINS. I think that is true. I do not know whether the treaty was actually ratified. I do not recall at the moment whether it was ratified or not. They made some treaties which the Senate did not ratify.

POLICY CHANGE

We changed policy some years later and did not ratify any more treaties. They made some agreements occasionally which the Congress approved, but not in the way of formal treaties.

Orginally, if you will recall, we dealt with these Indian tribes as nations. We went through the process of the President negotiating the treaty through his representatives and then it would have to come to the Senate for ratification, just as if we entered into a treaty with Great Britain, France, or any other nation.

Chairman HAYDEN. When was that system of treaties abandoned?

Mr. WATKINS. I think it was between 1870 and 1880. I do not remember the exact year, but it is somewhere along that period of time.

Senator YOUNG. Is there anything involved besides title to land in this case?

Mr. WATKINS. Yes. First of all, in our process of adjudicating these claims we take up the matter of whether or not the Indians owned any land and if they had title to it, aboriginal title or recognized title that might come to them by reason of the treaty provisions.

Then if they do own any land, we determine then whether or not the United States was liable to them for the taking of it. When we pass that stage we enter what we call an interlocutory judgment or decree and then we proceed with the evaluation.

If the judgment is in favor of the Indians, then we proceed with the evaluation of that land and that involves a large number of witnesses, appraisers, and it is really a massive proceeding; especially when you have a large bit of territory that was taken rather early.

CONQUESTS OF NAVAJO TRIBE

Chairman HAYDEN. I can say to my colleagues the Navajos were a conquering tribe of Indians that apparently came down the eastern side of the Rocky Mountains and then came over into northern New Mexico and northern Arizona. Later came the Apaches, or part of them, who speak a similar language, and so it has always been a question in my mind as to whether titles they had were gained by conquest, by taking it away from other Indians.

It is a rather interesting thing. When the original Spanish explorers came up into that country there were no Navajos there at all. They appeared later, coming in from, as I say, the north and gradually spreading over the mountains.

Mr. WATKINS. During 1961 the Commission also issued 21 findings of fact, opinions, and the same number of orders to make the findings effective. These items were the joint efforts of the Commission and its legal staff.

When I mention these they may sound like just a very few findings of fact and opinions and decisions entered, but you want to remember these cases take sometimes years to prepare. They cover a vast amount of documented evidence that is brought in. In some cases we have had as high as 12,000 exhibits; and in this Navajo case I think they will probably run 25,000 to 30,000 exhibits.

The volumes of transcripts, the reporters' transcripts of the hearings up to date, and that is only a small part of it, I think must run to 45 or 50; so that indicates the scope of the work we have to do.

We have to prepare findings of fact on all of the important matters alleged in the Indian's petition and the Government's answer to it, and then when we get through making those findings of fact, some times they will take 60, 75, or 100 pages, letter-sized paper, to contain that.

Then we have to give a reason for each one of these findings and that is in the opinion. When we get through with it if they do not like it they go to the Court of Claims with appeal and then have a second opportunity to get what they think is justice. The Government sometimes appeals. The Indians appeal. But it requires a lot of activity to carry forth one of those cases.

I think we probably disposed of last year about two times more than had been done in any previous year under this accelerated program. That is why I am calling it to your attention, because I knew you would be interested in that.

LARGEST JUDGMENT

Chairman HAYDEN. Do you remember for the record what is the largest judgment that has been rendered?

Mr. WATKINS. I think possibly the largest one we have had was one that was just rendered recently and that is the Arapaho-Shoshone judgment taking in the territory from Denver to the North Platte, and south to Pueblo, and down in that area. I think that was around $23 million. There will be some offsets against that so that the net judgment would be in the neighborhood of $21 million unless the case might be reversed, in the event of appeal.

Do you remember any larger than that, Mrs. Hanna?

Mrs. HANNA. Not offhand, no.

Mr. WATKINS. We have a list of all the judgments entered to date, the acres involved, the amount claimed by the Indians, and the net final judgment. That is on the exhibit A attached to my statement.

Chairman HAYDEN. Thank you.

TOTAL CLAIMS PAID

Mr. WATKINS. And that shows all together, since the Commission has been organized, the claims that have been awarded and paid; some $70,685,832. The Indians have requested in these cases judgment sums in the total amount of $277,689,188.

There are two or three cases in which they did not set up how much they were demanding. The acres involved amounted to 99,627,727 acres. However, I would state that the proportion may not run that way in the future because in the early stages of the Commission's activities, the so-called fringe cases, the ones that were not so difficult and did not take so long to prepare, were tried and quite a number of those were cases in which there was not very much merit. Many of them were dismissed under what we call a summary judgment; they have weeded out a lot of those fringe cases, and I think now around 70 percent of the claims are being adjudicated in favor of the Indians; at least as far as the judgements in money are concerned.

The only thing we can award eventually is money for damages. They do not get the land back.

Chairman HAYDEN. Go ahead.

COMMISSION ACTIVITIES

Mr. WATKINS. After deducting the 186 days consumed in trial time and eliminating Saturdays, and Sundays, legal holidays and vacation time there would be left 136 days of the year to hold conferences with

the attorneys of the parties herein, and they come in frequently for advice because they have to come in with respect to the trial of the case and getting all the evidence, determine numerous motions and arguments on the matters of procedure, prepare budget estimates, appear before congressional committees in the interest of appropriations and the extension of the life of the Commission—all of which we had to do last year—and process the 21 cases to decision.

It is estimated that this last item, that of preparing the findings of fact, the opinions and orders in the 21 cases was accomplished by the Commission, at least its part of it, in less than 90 days. All these other matters took much time in hearings and all that sort of thing. It only left 90 days for us to get in and write these findings of fact and make these decisions.

This brief résumé covers the major items only. Numerous conferences with staff assistants took place as well as conferences limited to the Commission members for the purpose of determining what the final decisions would be. We do not always agree. We are just like the courts and we have dissents on occasion, and when we cannot agree it takes a little longer to get out the dissent because until the majority opinion is written the dissent cannot be prepared.

Work does not start on the preparation of the dissent until the majority opinion is ready. We are required to give reasons for all we do. The Federal and district courts of the United States do not have to give their reasons. They make their decisions and the attorneys usually that win are required by the judge to prepare the findings of fact sustaining the opinion.

We do not have any of that. We have to get in and do this work, and when you realize that this evidence is so voluminous and covers such a long period of time—most of the cases are over 100 years old—you can see it puts a real burden on the Commission to write those findings of fact and to give the reasons why we decide as we do.

In connection with the holding of hearings on claims, we are pleased to state that the additional space we were able to obtain in the GAO building has been a contributing factor to our last year's heavily increased activities. We now have two hearing rooms, and frequently we hold hearings in both rooms at the same time, and at times we have held three hearings at a time by using our library as the third room.

In order to hold separate hearings that way we have to divide the Commission. Each member will take charge of a hearing and take evidence as if the whole Commission were there.

Our legal staff is now housed so that they can work much more efficiently than was the case before we secured the additional space.

AWARDS TO INDIAN LITIGANTS

Another item which should be of interest to the committee is the record of money awards made by the Commission to Indian litigants. We tabulate that record.

1950 (1st award)	$3,489,843.58	1959	$5,957,194.56
1951	600,900.00	1960	16,373,539.84
1954	927,668.04	1961	33,355,731.26
1955	4,777,852.63		
1957	533,013.60	Total	70,653,862.39
1958	4,759,018.88		

NOTE.—The Commission was organized in 1947. It required a number of years to mature cases to the point where cash awards could be made.

It will be noted that the 1961 awards were almost as large as all the other years put together. This was made possible by the fact that many of the claims had advanced to the stage where they were ready for final determination. The increased tempo of Commission activities, also, was a contributing factor.

We have also supplied for the information of the committee a more detailed statement of the awards; showing the dates of the awards, the tribes to whom they were made, our docket number of each of the claims, the acreage of land involved, the amount of money claimed by each of the tribes, and the amount of the final judgment to the various tribes named.

This is all I have to offer unless you have some questions.

(The statement referred to follows:)

Final judgments

No.	Date	Tribe	Docket No.	Area (acres) allowed	Amount claimed [1]	Net final judgment
1	July 14, 1950	Choctaw	16	3,374,663.00	$7,067,024.00	$2,587,835.47
2	July 14, 1950	Chickasaw	23	1,124,888.00	2,355,674.00	902,008.11
3	Oct. 19, 1951	Loyal Creek	1	(2)	690,000.00	600,000.00
4	May 7, 1954	Quapaw	14	1,161,284.75	48,175,280.00	927,668.04

PAYMENT OF CONTINGENT FEES TO WITNESSES

Chairman HAYDEN. Do you have any questions, Senator?

Senator YOUNG. No.

Chairman HAYDEN. On February 12 the Indian Claims Commission decided in a proceeding before it that it would not approve payments to expert witnesses whose employment contracts were such that payment was to be made in the event the claims proceeding was determined in favor of the Indian tribe. Do you wish to comment on that?

Mr. WATKINS. We did issue such a decision and we have stated very frankly that we do not agree that it is proper to place witnesses before us and have them give their testimony when their fees are based on a contingency; that is, they will get their pay only if the Indians win the case. Otherwise they do not get paid. (The decision was in the *Crow* case, Docket No. 54, Indian Claims Commission, decided Feb. 12, 1962.)

Of course it is quite true in claims cases where the Indians do not have the money to pay their witnesses that there is very little prospect

that the witness, whether there is an agreement to that effect or not, will get his pay unless the Indians win. There just would not be any way to collect it.

In the first place, under this Indian Claims Commission Act, nobody can sue the Indians. This act only permits suit by the Indians against the United States. We cannot enter a judgment against an Indian for costs that are ordinarily entered by the Federal courts of the country against the losing party. We cannot do that, so it puts these witnesses in a position where we think it violates a public policy of long standing that witnesses who testify should not have their contract approved because they violate public policy, if they are testifying on a contingent basis.

We have over 400 cases yet to try, which means hundreds of witnesses will be before us, so now the Indians and the attorneys are hunting around for some way to get the money to pay their witnesses so they can appear in court, and we have suggested in that opinion, Senator, that Congress probably should take a look at this situation.

We are doing that because we are a legislative court. We think Congress should take a look at this and see if there is not some way that funds can be made available to those Indian tribes with which to pay their witnesses so the witnesses can come in on the same basis that the Government witnesses appear.

The Government witnesses are all paid whether the Government wins or loses its case, but the Indian witnesses in these cases where the Indian tribes are indigent cannot get paid unless there is some way provided that the Indian can get money to pay them. We have also suggested that if Congress should make some money available, if the Indians win, then the money advanced should be deducted from the judgment. There will be some cases the Indians will not win and the United States would be out that money.

After all is said and done, if we are going to give them an opportunity to have their day in court, it would mean a lot more to them if they had the means with which to bring the cases to the court properly. It is an expensive operation to get all these witnesses, to hire these anthropologists, ethnologists, historians, and appraisers—very expensive—at least to the Indians because they do not have any resources with which to pay.

These witnesses naturally want their pay to be assured and I think it is very unfair to these experts to ask them to come in and take a chance with the Indians, because there is always a temptation—I am not saying that they will yield to the temptation—to color their testimony or even go further than that.

That has been the reason in the Federal courts and State courts of the land why it has almost universally been held that a contract for a contingent fee for expert witnesses or any other witnesses, as a matter of fact, is void as a matter of public policy.

QUESTIONS SUBMITTED BY SENATOR MUNDT

Chairman HAYDEN. Senator Mundt expected to be here, but could not attend and he has prepared a series of questions that I will put in the record and he would like to have you answer them when you have an opportunity to look over them.

Mr. WATKINS. And we can send in the answers?

Chairman HAYDEN. Yes. You just take them one at a time, if you would, and answer them and then we will put them in the record.

Mr. WATKINS. We will be very glad to do that. Thank you.

(Senator Mundt's questions referred to by the chairman follow:)

Senator MUNDT. While I recognize that the issues before the Indian Claims Commission are often complex and involve questions and considerations somewhat unique in our American legal system, it does, nevertheless, seem to me that progress on the consideration of these claims is often delayed by the entry of what many times appear to be frivolous motions by the contesting parties. This practice seems to be especially prevalent on the part of the Justice Department. In this regard does the Commission have any established procedure or system for hastening consideration of these motions? By this I mean does the Commission require the parties to adhere to certain strict time requirements in the filing and answering of motions?

Mr. WATKINS. The answer to the question is "Yes," the Commission does have a procedure or system for the proper consideration of these motions designed to have them disposed of within a reasonable time consistent with their importance and complexity. The rule on motions is as follows:

"SEC. 22. (a) Motions. (1) With each motion there shall be filed and served a separate paper stating the specific points of law and authorities to support the motion. Such statement shall be additional to a statement on grounds in the motion itself, and shall be entered on the docket but shall not be a part of the record. A statement of opposing points and authorities shall be similarly filed, noted, and served within 10 days or such further time as the Commission may grant or the parties agree upon. If not filed within the prescribed time, the Commission may treat the motion as conceded. If so filed, the motion shall be treated as submitted unless the Commission directs or either party requests an oral hearing.

"(2) Nonappearance of parties. If at the time set for hearing there be no appearance for the moving party, the Commission may treat the motion as submitted or waived, or continue or strike it from the motion calendar. If there be no appearance for the opposing side, it may be treated as submitted or conceded."

I've only been on the Commission about 2½ years so my experience is limited in this matter, but I have made some investigation of the practice with respect to this rule during the time prior to becoming a member of the Commission. The overall answer is that ordinarily the Commission does require the parties to adhere to time requirements in the filing and answering of motions; but there are exceptions to the rule which are brought about by the pleas of the parties to these proceedings, based on reasons which they advance which bring delays in disposal of these motions.

In the early days of this Commission many motions were filed by the Justice Department, apparently for the purpose of getting rulings by the Commission on the interpretation of the law under which the Commission was acting preliminary to hearings on factual matters relating to the merits of the claims. By having the new law interpreted, wherever this could be done in advance of expensive and long-drawn-out research programs to support or defend against claims filed, would be helpful to both the Indians and the defendant, the United States. Decisions on motions of this kind did weed out some of the so-called fringe cases; they also helped establish sound matters of procedure which in the long run would cut down the time consumed in processing of claims to a final decision. This was helpful to the Indians and the United States, but in the very nature of things, the defendant had to be more active in the filing of these motions. Some of them may have been frivolous and for purposes of delay, but under the circumstances it would be difficult without hearing the motions on their merits, to know whether or not they were filed in good faith or merely for delay, and may I say that we start with the assumption that all of the motions before us are presented in good faith until the contrary is indicated by substantial evidence.

Senator MUNDT. The Commission has now been in operation for a good many years and has by now reached final awards on a considerable number of claims. With a view to expediting the remaining work I wonder if you could tell us if a pattern of valuation is beginning to develop from the awards made to date, on which the Commission could recommend settlement between the parties? Since your tribunal is a Commission and not a court, could the Commission not

bring the parties together on many of these claims and actually work with the parties in an effort to reach a settlement—thus avoiding the extended time involved with actual litigation?

Mr. WATKINS. With respect to this question let me say that a pattern of valuation in a considerable number of areas has developed to a point where it should be some help in guiding the parties in working out compromises.

I should, however, make this additional statement. There are no two of these cases exactly alike. They may differ in the type and kind of land taken; the time when they were taken—this is very important; and where they are located in the United States, which does make a considerable difference between cases. All of these items with so many differences may make it difficult to develop a definite pattern that can be followed safely.

We regret that we cannot agree with the conclusion arrived at in the preamble to the second part of the question. In the earliest days of the Commission it decided that it was a judicial tribunal with only judicial responsibility. I agree with this view and I also might add that it is a legislative court created by the Congress and the proceedings before it are adversary in nature. It is a tribunal set up to give the Indians their day in court and they, through their counsel, have taken the position that they should have full control of the investigation and presentation of their case to the Commission, and should not be dictated to in any sense of the word by the Commission or anyone else, or put under pressure to force a settlement which is not agreeable to them.

The Commission believes that it does not have the power to recommend specific settlement between the parties. We are permitted to either approve, or disapprove, compromises when they are arrived at by the parties involved. But we have no means of forcing the parties to get together on a compromise or even enter into compromise negotiations. If we attempt to force the parties to do something they do not want to do we would in effect deprive them of their day in court. We could recommend that they try to compromise their differences and that they meet for this purpose, but I think that is about as far as we could or should go. Our position on a matter of this kind is stated in an opinion of the Commission in docket No. 225–A, known as 225 Consolidated. This was a proceeding by the Omaha Tribe of Nebraska against the United States. A compromise was entered into by the parties to the litigation. It was before the Commission for approval, or disapproval, as provided for in the act creating the Commission. In discussing the matter of compromise settlements the Commission said:

"Compromise settlements of controversies have historically been favored in this country as a matter of public policy. With this policy we are in full agreement. In fact, compromises are the best hope for the early settlement of hundreds of claims still pending before the Commission after nearly 13 years of activity.

"Indian claims, many of which originated more than a century ago, are difficult to prepare for presentation to the Commission, and it is almost as difficult to prepare a defense against them. Then there are the matters of trial, preparation of briefs, consideration by the Commission, rendering of judgments, possible appeals, perhaps retrial if the Commission is reversed, or at least additional hearings, etc. All these activities are time consuming and require large expenditures of money. The most unfortunate part of all is the long delay in bringing these claims to a conclusion. Many of the original petitioners in claims filed, as well as some of the attorneys involved, have passed on to their eternal rewards before their claims were finally adjudicated. The legal maxim that, 'justice delayed is often justice denied,' seems appropriate at this point.

"With all this in mind we urge that more compromises be entered into in situations where they are possible of accomplishment."

Senator MUNDT. I understand that the Commission, under the act creating it, has very definite investigative powers, under which the Commission could carry out independent investigation and research on the extent and value of these various claims. Has this power been exercised and if so to what extent?

Mr. WATKINS. The act creating the Commission does give it very definite investigative powers. Section 13(b) provides:

"(b) The Commission shall establish an Investigation Division to investigate all claims referred to it by the Commission for the purpose of discovering the facts relating thereto. The division shall make a complete and thorough search for all evidence affecting each claim, utilizing all documents and records in the possession of the Court of Claims and the several Government departments, and shall submit such evidence to the Commission. The division shall make avail-

able to the Indians concerned and to any interested Federal agency any data in its possession relating to the rights and claims of any Indian."

When the Commisison was first organized it set up an investigative division headed by a very eminent lawyer, now a Federal judge, with two lawyers on the investigative staff. An investigation was immediately begun on cases which had been filed and were being prepared for trial at an early date. The investigators found that the Justice Department had its investigators doing research in preparation for the defense of the United States; they also found that the Indians had a staff of investigators doing research and preparing reports to aid them in the presentation of their cases. The work which the Commission investigators were doing was in every respect the same as that being done by the Justice Department and the Indians. The Commission soon learned that the provision for investigation by the Commission was completely unnecessary and unworkable. In order to cover the same areas that the defandant and the petitioning Indian tribes were investigating the Commission would have had to employ experts in the fields of anthropology, archaeology, ethnology and history for the first stage of the hearings of Indian claims. Later it would have been necessary to employ expert appraisers covering the same fields being investigated by the defendant and the Indians.

It should be pointed out in connection with this subject that personnel in the fields of anthropology, archaeology, ethnology and history was then and is now extremely limited in number. When the Indians and the Government got through selecting their expert personnel there were very few experts left for the Commission to draw from, except in the field of appraisement. But the strongest objection against the Commission doing investigative work on an extensive scale is the cost which would have been incurred and for no useful purpose, since the investigations by the parties involved were extensive and were being done by the best experts obtainable. If personnel were obtainable we would require a large number of experts to match the efforts of the Indians and the Government. The cost of such an operation for salaries, secretarial time, and other incidental expense could easily amount to $1 million per year.

A skeletonized investigative staff has been maintained since, but has not been active except in a few instances where the Commission felt special investigation was justified in order to get material which would enable them to make the proper decision on cases such as those filed by attorneys for Indian tribes who later withdrew from the case. Two cases of this kind have been investigated by a Commission investigator. But such investigation as is needed in this area where the evidence seems to be deficient is so limited that the Commission believes its legal staff can take care of these investigations, without the use of a formal investigative unit. However, we do have one attorney designated as an investigator. All the other members of the legal staff are designated as attorney assistants to the Commission.

Senator MUNDT. These next few questions relate to the matter of gratuitous offsets, and the information which I am seeking I realize you will not be able to furnish us with at this hearing, but I would like to have the information prepared for the record:

(*a*) In the claims which have been settled to date, list on a claim-by-claim basis the amount of "gratuitous offsets" which have been recommended by the Commission.

(*b*) For these same claims, what have been the amounts of "gratuitous offsets" ordered by the Court of Claims?

(*c*) For the claims considered to date, indicate on a claim-by-claim basis the time which has elapsed between the Commission's issuance of an initial award and its issuance of the final award which includes its findings on "gratuitous offsets."

(*d*) I understand that the General Accounting Office maintains a staff on Indian claims, which devotes a great portion of its time to the consideration of this matter of "offsets." Would you indicate for the record the annual expenditures of this unit since the establishment of the Commission and also for the same period the amount, on a claim-by-claim basis, of the "gratuitous offsets" which have finally been approved by the Court of Claims?

Mr. WATKINS. The (*a*), (*b*), (*c*), (*d*), subdivisions of this question will be answered in the information given in one tabulation prepared by the Commission staff. This tabulation, I believe, will give all the information we have in our possession on the subject inquired about.

I should add that in answering subdivision "d" regarding the annual expenses of the GAO unit, I obtained from Mr. Campbell a statement of their year-to-year expenses for the Indian tribal group.

(See tables attached, exhibits A and B.)

Senator MUNDT. In your opinion would the employment of additional professional personnel either by the Commission or by the Indian claims section in the Justice Department serve to expedite consideration of the pending claims?

Mr. WATKINS. We could use two additional lawyers on our legal staff in about a year, also some additional typists. We have just employed four additional lawyers who are now serving us in the processing of Indian claims. With respect to what professional personnel is needed by the Justice Department we are not in a position to know what they need or to answer that question. We know that some additional personnel have been hired recently by the Department. We do hope that the Department will hire enough lawyers so that there will be no necessity for delays in the hearing of these cases as rapidly as the Commission can get to them. We are getting excellent cooperation.

Senator MUNDT. Has the Commission ever used trial examiners on these claims cases? Do you feel this would be a useful procedure?

Mr. WATKINS. The Commission has never used trial examiners as such. We did designate two of the staff to take evidence in two of our cases but there was opposition from both the Government and the Indian tribes so we did not go any further with this program. However, we indicated to the Congress when the extension of the life of the Commission was under consideration a year ago that we would like to have hearing examiners provided. We believe that we could carry on the work much more expeditiously and effectively if we had several hearing examiners to carry part of the burden. We pointed out that the final decision, of course, would be rendered by the Commission even though hearing examiners did take care of the trial work.

In connection with this statement let me say that these answers may not be as complete as would have been liked, but the 2 days allowed for the preparation of the answers was hardly sufficient to give extensive answers on all the subject inquired into.

EXHIBIT A

Indian Claims Commission

No.	Claimant	Docket No.	Gratuitous offsets allowed by Commission	Gratuitous offsets allowed by Court of Claims	Elapsed time between initial award and determination of gratuitous offsets

[1] Gratuitous offsets stipulated by parties.
[2] No offsets involved in this case.
[3] Final award by Commission, Dec. 6, 1951. Decision affirmed as modified and remanded by Court of Claims, Apr. 6, 1954. Amended final award, May 7, 1954.
[4] Final award by Commission, Dec. 11, 1953. Findings and decision on offsets remanded for further proceedings by Court of Claims, May 3, 1955. Certiorari denied, U.S. Supreme Court, Oct. 10, 1955. Parties agreed to offsets as originally determined by Commission, Feb. 9, 1956.
[5] Offsets stipulated by parties to include all legal and gratuitous offsets. Stipulation does not indicate portion of amount which represented gratuitous offsets.
[6] Elapsed time due to motion for rehearing on initial award, death of petitioner's attorney, and defendant's requests for continuances to allow General Accounting Office to complete and supplement reports on offsets.
[7] Elapsed time due to defendant's requests for continuances pending receipt of General Accounting Office reports on offsets.
[8] Defendant claimed $2,067,166 in gratuitous offsets. Commission denied all offsets July 18, 1957. Affirmed by Court of Claims, July 16, 1958, and Oct. 8, 1958. Final award entered June 1, 1959.
[9] Elapsed time due to defendant's requests for continuances to file amended answer on offsets (6 months 15 days from date of GAO report) and fact that the hearing on offsets did not come to trial for 9 months from date of petitioner's reply to defendant's amended answer.
[10] Elapsed time due to appeal of intervenors decided by Court of Claims on July 16, 1958, and certiorari denied by U.S. Supreme Court on Feb. 24, 1959.
[11] Final judgment stipulated by parties to dispose of all legal and gratuitous offsets. Stipulation does not indicate amount attributable to offsets.
[12] No offsets claimed.
[13] Offsets applied in docket No. 175-A (No. 28 in above table).
[14] Final judgment, Sept. 14, 1951. Offsets to be applied in docket No. 173-A. Parties stipulated that $1,432,084.17 be held in Treasury to meet possible gratuitous offsets.

EXHIBIT B

Annual cost of the Indian tribal group, U.S. General Accounting Office, since establishment of the Indian Claims Commission on Aug. 13, 1946, Public Law 726 (60 Stat. 1049)

Fiscal year:	*Total*	Fiscal year—Continued	*Total*
1947	$65, 683	1957	$433, 249
1948	123, 807	1958	574, 683
1949	302, 861	1959	571, 098

SMITHSONIAN INSTITUTION

Salaries and Expenses

STATEMENT OF DR. LEONARD CARMICHAEL, SECRETARY, ACCOMPANIED BY DR. REMINGTON KELLOGG, ASSISTANT SECRETARY; AND JAMES BRADLEY, ASSISTANT SECRETARY

Justification

Chairman Hayden. Next is the Smithsonian Institution. The Smithsonian Institution budget estimate for fiscal year 1963 for salaries and expenses is $11,354,000. This is an increase over the amount appropriated in fiscal year 1962 of $2,229,000. The justification for this estimate will be placed in the record.

(The justification follows:)

The Smithsonian Institution was created by act of Congress in accordance with the terms of the will of James Smithson of England who bequeathed his property to the United States of America "to found at Washington, under the name of the Smithsonian Institution, an establishment for the increase and diffusion of knowledge among men." The social import of the Smithsonian's broad and inspiring charter has never been more obvious than it is in today's atomic age when the great modern achievements in science and technology call for the widest and most liberal basis of understanding. A great responsibility rests upon those institutions and individuals into whose hands has been placed the preservation of our cultural and scientific heritage to provide in every effectual way those sources of intellectual power so that every citizen may aspire to an understanding of this complex modern world.

The Institution is in the midst of extensive building and modernization programs which have already had their impact upon the visiting public. In 1961 there were 7,103,474 visitors to the Smithsonian buildings exclusive of the National Gallery of Art and the National Zoological Park. This is an alltime high and represents an increase of 608,844 over 1960. This amazing growth in public interest is due to the many new, vital, and effective renovated museum halls which have been opened to the public during the past few years. The Institution's renovation of exhibits program was begun in 1954 and since then 24 renovated halls have been opened to the public. Each of these revitalized exhibit areas is really a museum in itself and each has great visitor attraction potential from an educational standpoint. Aided by the modern exhibit techniques now available, the story of man and his world unfolds before the visitors as he walks from hall to hall. It is inspiring to watch these visitors passing in great streams through the doorways of our buildings. They come in order to see important exhibits which they know in sum total can be viewed nowhere else in the world. Most of them surely leave with an understanding which they could gain in no other way of the multitude of factors that have shaped the life of modern America.

The Institution embraces the world's largest museum complex with over 55 million cataloged objects, many of which are used by scientists and technologists in connection with important research programs. A great museum must be more than a laboratory or a showcase. It must be a center of interpretation and inspiration for its millions of visitors. The Smithsonian has always been thought of as a center of scientific research. One index of the productivity of this research organization is found in the more than 10,000 specialized volumes and monographs that the staff of the Institution and their collaborators have written and distributed to the learned world. The Smithsonian has become

one of the world's centers for the scientific study of geology, botany, zoology, and anthropology. In such other fields as astrophysics, physiology of living plants, and tropical biology it maintains notable research programs.

Scientific and other scholarly research, educational exhibits, publication of new advances in knowledge, facilitating the worldwide interchange of published scientific and literary information, and within the Institution's resources, the fostering and stimulating of scholarly endeavor—these are all part of the work of today's Smithsonian.

Salaries and expenses

Appropriation Act, 1962	$9,125,000
Proposed 1962 supplemental due to wage increases	+76,000
1962 rent item transferred to GSA	−40,000
1962 nonrecurring rent item	−35,000
Apparent base for 1963	9,126,000
1962 wage increases not included in 1963 estimates	−36,000
Actual base for 1963	9,090,000
Budget estimate, 1963	11,354,000
Increase, 1963	2,264,000

SUMMARY OF INCREASES AND DECREASES, 1963

(1) To provide funds to continue the preparation, moving and installation of exhibits, collections, and parts of the museum's activities into the new Museum of History and Technology Building; for partial operation of that building; and for related costs	1,076,000
(2) To provide for moving and storing museum materials, as well as moving office and laboratory equipment, in connection with the construction of additions to the Natural History Building and for building services during the partial occupancy of the east wing	122,000
(3) To provide staff to prepare exhibition plans, improve conditions of existing National Collection of Fine Arts collections, initiate action for filling gaps in existing art collections, to prepare inventory and records for transfer to the old Civil Service Commission Building, and other costs	37,000
To provide for the initial staffing and related costs of a National Portrait Gallery	55,000
(4) To provide for additional scientific research	295,000
Completion of Catlin painting renovation project	20,000
(5) To provide funds for conversion as required of combined sewerage systems to separate systems	70,000
(6) To provide for broadening the U.S. National Museum's efforts in the field of oceanography	250,000
(7) To provide for the support of the National Armed Forces Museum Advisory Board	60,000
(8) To provide for a health unit, for increases in travel rates authorized by the act of August 14, 1961, for within-grade promotions, and reclassification costs	319,000
Net increases	2,264,000

(1) An increase of $1,076,000 is required to provide funds to continue the preparation, moving and installation of exhibits, collections, and parts of the museum's activities into the new Museum of History and Technology Building; for partial operation of that building; and for related costs.

Need for increase

The Museum of History and Technology Building is scheduled to be ready for partial occupancy in October 1962 and complete occupancy in March 1963. Advance occupation by the Smithsonian Institution of certain exhibition space and maintenance and operation work areas will speed the opening of the building to the public. The preparation and installation of exhibits, begun in 1962, will be accelerated and continued during the entire year 1963. The movement of staff, equipment for laboratories and workrooms, and the transfer of reference

collections will begin upon completion of the building and continue through the year. The following increased workload will result:

(*a*) The U.S. National Museum staff will plan and participate in the design, construction and installation of exhibits for the new building; plan and prepare for the move of the staff and collections to the building; and move part of the museum's activities to the building from various locations.

(*b*) The Buildings Management Department will provide such services as protection, cleaning exhibit and installation areas, laboratories, and offices; moving, loading, unloading and placing operations; servicing and operating refrigeration, heating, temperature and humidity control systems and related machinery, accessories, and controls; assisting the exhibits staff in assembly and installation of exhibit cases, displays, special lighting, and equipment; building temporary partitions and protective enclosures for safeguarding exhibits; performing minor repairs, refinishing, and touchup painting incident to the installation of exhibits; assembling, installing, and servicing laboratory, shop and special storage equipment.

(*c*) The administrative and service units of the Smithsonian Institution will have increasing demands made upon them because of accelerated museum activities. More payroll actions and vouchers will be processed; the volume of correspondence and shipping will continue to increase, more stock items will be used; and more services will be required of the Photographic Services Division and the library. The Smithsonian Museum Service will expand its activities to share with the public the advances being made in the U.S. National Museum.

Plan of work

The increase will be used as follows:

(*a*) To employ 23 professional curators, museum aids, and clerical employees and 9 exhibit workers in the U.S. National Museum and provide for related personnel benefits	$182,000
(*b*) To annualize the cost of full-year employment of 86 positions (40 man-years in 1963) financed on a part-year basis in 1962 and to employ the full-time equivalent of 82 supervisory and operating personnel, guards, laborers and cleaners, mechanics, electricians, carpenters, and painters in the Buildings Management Department; to provide funds for personnel benefits; increased cost of electricity, including air conditioning, gas and steam; for contractual services for moving of special equipment and heavy exhibit objects to the new building; to purchase lumber, hardware, electric lamps, paint, plaster, wallboard, plumbing fittings, electric supplies, and related items	733,000
(*c*) To employ 11 clerical assistants, 2 photographers, 2 docents, and 2 messengers, provide funds for personnel benefits; additional payments to Post Office for penalty indicia; transportation costs; other contractual services; for payments to Employees Compensation Board; supplies, books, and office and library equipment	161,000
Total increase	1,076,000

(2) An increase of $122,000 is required to provide for moving and storing museum materials, as well as moving office and laboratory equipment, in connection with the construction of additions to the Natural History Building and for building services during the partial occupancy of the east wing.

Need for increase

The Congress appropriated funds in 1961 for the rehabilitation and modernization of the Natural History Building and construction of the east wing. In 1962 additional funds were appropriated for the construction of the west wing and completion of the project. Construction commenced early in January 1961 and the east wing will be completed by March 1963. The entire project is to be completed by April 1964. Large scale moving operations will have to be undertaken. In 1963 partial occupancy of the east wing will begin. Major moves of entire diversions will be underway involving relocation of large numbers of: Storage cases containing valuable and delicate specimens, many of which are irreplaceable; exhibition cases; museum objects; office furniture; equipment; and supplies. Upon completion of the required alterations in the areas vacated by activities moved into the east wing, other divisions will be transferred

to this space. The partial occupancy of the east wing will require such services as protection, cleaning laboratories and offices, servicing and operating refrigeration, heating, temperature and humidity control systems; and performing minor repairs, alterations, and touchup painting.

Plan of work

The increase will eb used for the Buildings Management Department as follows:

(*a*) To employ the full-time equivalent of 16 suprevisory and operating personnel, guards, laborers and cleaners, mechanics, electricians, carpenters, and painters	$71,000
(*b*) To provide funds for personnel benefits; for increased cost of utilities, including electricity, air conditioning, steam, and gas; to purchase lumber, hardware, electric lamps, paints, plaster, wallboard, plumbing fittings, electric supplies and related items for temporary partitions and protective enclosures during construction and for cleaning and maintaining areas after completion; and to purchase cleaning equipment, powered scrubbing machines, floor machines, shop equipment, material handling equipment, trucks, ladders, fire extinguishers, and fire hose	51,000
Total increase	122,000

(3) An increase of $92,000 is required for national art galleries in connection with the move into the old Civil Service Commission Building.

Need for increase

(*a*) National Collection of Fine Arts: For many years, due to limited space, only a small portion of the objects in the National Collection of Fine Arts have been shown to the public and those which have been exhibited have been incongruously displayed in the Museum of Natural Histroy. Many of the approximately 5,000 items in its collections are on loan and arrangements must be made for their return to the Institution when they are needed for exhibition in the new gallery. Prior to the move to the old Civil Service Commission Building, a complete inventory of items must be made and the files and records reorganized. Renovation and restoration work will be accelerated to put the paintings and other objects, many of which have been in storage, in exhibitable condition. Gaps in present collections will need to be identified and action initiated to fill them either by gift or loan, in order to provide an effective exhibit in the new gallery when it becomes available.

The larger, improved quarters will permit a better display of sculptures. Many of the 250 scultpures in the present collection need to be restored, properly described and labeled, and biographies of aritsts and designers prepared. Detailed plans must be made for placing and lighting these sculptures in the permanent National Collection of Fine Arts exhibition, including a central sculpture court, and in temporary shows. In addition, the National Collection of Fine Arts hopes to augment its collection of sculptures through gifts and loans.

The 1963 request is to initiate the work required. Final preparation and organization of exhibits will follow in 1964 so that they will be ready when the renovation of the Civil Service Commission Building has been completed.

(*b*) National Portrait Gallery: The act of March 28, 1958 (72 Stat. 68), provides for the transfer to the Smithsonian Institution of the old Civil Service Commission Building. Legislative history indicates that the intent of the Congress was to provide adequate quarters for both the National Collection of Fine Arts and a National Portrait Gallery.

Senate Report No. 1354 (85th Cong., 2d sess.), supporting the enactment of this law, stated in part:

"An art museum building is urgently needed to display national collections of fine arts, comprising paintings, sculptures, bronzes, glass, porcelain, tapestry, furniture, jewelry, and other types of art. It would also be used to display portraits of eminent American men and women, and to exhibit the works or artists deserving of recognition."

It is expected that the building will be available to the Smithsonian Institution for renovation in 1963 and for occupancy in 1964.

Public Resolution 95, 75th Congress dated May 17, 1938, (20 U.S.C. 76), sets forth the objectives of the Smithsonian Gallery of Art, predecessor of the National Collection of Fine Arts.

In the House committee report on this resolution (Rept. 1900, 75th Cong., 3d sess.), the purpose of establishing a portrait gallery is clearly spelled out, as follows:

"The committee are further impressed by the lack of a gallery where portraits of eminent national characters may be worthily displayed, to inspire emulation on the part of rising generations. In this the Government is behind the practice of other enlightened countries, where national portrait galleries are notable institutions."

The Senate committee report (Rept. 1610, 75th Cong., 3d sess.) indicated the intent of the Congress to establish a portrait gallery as follows:

"The resolution proposes to take initial steps toward establishment of an art gallery for the preservation and proper public exhibition of three classes of art: First, the art objects owned by the Government in what is termed 'The National Collection of Fine Arts,' which are at present housed in inadequate quarters in the U.S. National Museum; second, the portraits of eminent Americans of which the Government owns many; third, objects of contemporary American art."

The act of May 17, 1938, included the following authorization: "* * * to display portraits of eminent American men and women."

Space has been the limiting factor in our efforts toward developing a worthy gallery of portraiture and sculpture. The transfer of the Civil Service Commission Building to the Smithsonian will answer this problem.

In order to prepare a suitable exhibit of portraits and statuary that will be ready to move into the Civil Service Commission Building after it has been remodeled, considerable work needs to be done in 1963.

A director and assistants will be required to make plans for exhibiting portraits and other objects in the portrait gallery. This will involve considerable research; location and acquisition of portraits and sculpture; restoration and care of portraits and other art objects which are acquired; the establishment of records of materials available immediately for transfer to the gallery or which may be available for loan or later acquisition; and the preparation of a detailed script for each hall of the gallery.

Travel funds will be required by members of the proposed National Portrait Gallery Commission and the Director and curators in carrying out their investigations of available portraits and doing comparative research on exhibition techniques and other portrait layouts. Funds for transportation of things, communications, and supplies will be necessary in modest amounts. It will be necessary to contract with experts for special exhibits plans, special lighting studies, or related activities in preparation for opening the National Portrait Gallery. Equipment such as desks and office equipment will be needed for establishing new offices.

Plan of work

(*a*) National Collection of Fine Arts: To employ 1 curator, 1 museum aid, and 3 clerical assistants and to provide additional funds for personnel benefits, contractual services, supplies, and equipment	$37,000
(*b*) National Portrait Gallery: To employer a director, 2 curators, 2 clerical assistants and consultants, to provide for personnel benefits, travel, transportation, communications, other contractual services, supplies, and equipment	55,000
Total increase	92,000

(4) A net increase of $275,000 is required to provide for additional scientific research in (*a*) U.S. National Museum, (*b*) the Astrophysical Observatory, and (*c*) the Canal Zone biological area.

Need for increase

As the first organization in America to maintain a full-time staff of research workers across the broad fields of sciences, the Smithsonian has played a major role in the surge of American scientific progress during the past century. It helped to stimulate such new sciences as meteorology, aeronautics, and rocketry. Activities in which it was an originator ultimately led to the formal organization of such Federal agencies as the Weather Bureau, the Fish Commission (now part of the Department of the Interior), and the National Advisory Committee for Aeronautics (now the National Aeronautics and Space Administration).

Smithsonian staff also participated in the organization of the National Geographic Society and the American Association for the Advancement of Science.

In fulfilling its mission, the Smithsonian Institution has, since its foundation, carried on an estimated 2,000 expeditions to almost every part of the earth. Many of these expeditions were conducted in collaboration with other institutions and granting agencies. The Institution's optical satellite tracking observatories girdle the globe. Scientists and scholars in increasing numbers use its laboratories, its vast and in some respects unequaled museum study collections, and its scientific working library of approximately 500,000 titles.

Specific missions of research units in the Institution are described as follows:

(*a*) The U.S. National Museum: This museum is considered to be a biological bureau of standards by natural history investigators throughout the world. They look upon the museum collections as a valuable and irreplaceable scientific reservoir of accurately classified and documented materials which support their investigations. This determination stems from the universal acceptance of the fact that well-documented museum collections are fully interrelated to research endeavors.

This museum concentrates its research activities in four subject matter fields: anthropology, botany, geology, and zoology, to extend the boundaries of human knowledge of many aspects of the earth and of living organisms. This research on plants and animals, both living and extinct, embraces classification, nomenclature, morphology, relationships, variation, evolution, geographic and geologic distribution, life histories, functional adaptations, and structural modifications.

More than 1,500,000 different and recognizable kinds of animals and plants have already been named and described but estimates of the actual number living today extend upward to 10 million. Many of these organisms, known or currently unknown, are of great significance and their precise identification is of crucial importance in such applied fields of endeavor as preventive medicine, agriculture, and forestry, as well as in related branches of pure science such as ecology, population genetics, and animal behavior. Most branches of basic and applied biology deal with specific properties of species. Accurate identification is the key to a wealth of recorded knowledge as well as the solution of many practical problems.

Anthropological studies are concerned with the differentiation of human groups, the cultures and life histories of peoples as groups, and the material cultural achievements of prehistoric peoples of the world.

In the area of paleobotany, studies deal with the anatomy and growth series of fossils, the geographic and stratigraphic variation of fossils, and the stratigraphic distribution and paleocology of all types of invertebrate fossils and plants. Correlated fieldwork in these four major divisions of natural history increases the breadth, coverage, and scope of materials available for study.

The important basic studies underway by the biologists of the U.S. National Museum, as well as the related work of the geologists and anthropologists, will be greatly facilitated by the completion of the east and west wings of the Natural History Building, scheduled for occupancy in 1963 and 1964 respectively. Additional scientists and supporting staff are urgently required to extend scientific research in neglected areas, to reorganize some of the national scientific collections, and to prepare them for moving into the new wings.

More specifically, the museum requires specialists in the following fields: physical anthropology; plant morphology and anatomy; paleobotany, the study of fossil plants so essential to a knowledge of the evolution of modern plants; specialized insect groups among the Lepidoptera (including moths) and Coleoptera (beetles); and avian anatomy. One analytical chemist is required for the newly organized analytical laboratory. While these are not the only areas in which the museum lacks specialists, they are among the most important in the development of an adequate corps of scientists.

(*b*) The Smithsonian Astrophysical Observatory: The observatory with headquarters in Cambridge, Mass., is involved in a broad and diversified research program which includes solar radiation, solar astrophysics, the upper atmosphere, meteors, meteorites, artificial satellites, and problems of space science.

Additional scientific staff and services are required by the astrophysical observatory for its programs to design specialized equipment and conduct field testing; to detect stellar and solar radiation image registration other than photographic; direct research on an ultraviolet survey of the sky and spectroscopic studies of selected celestial objects; develop a program of electronic image conversion whereby artificial earth satellites may be tracked by photoelectric methods; conduct research on meteorites with electron probe analyses and make

mineralogical analyses; analyze meteorites for stable isotopes; assist with the meteorite program by predicting the location of falls by precision tracking methods; and study techniques for focusing X-rays.

Division of radiation and organisms: This division is a research unit of the Smithsonian Astrophysical Observatory. The research mission of this separate unit is to study the effect of solar and other types of radiation and the basic problems of radiation biology at the cellular, subcellular, and molecular levels. These studies involve both ionizing and nonionizing radiation. Specific investigation is concerned with such areas as: solar energy measuremeants concerning specific spectral regions and their influence on plant growth and development; influence of ionizing (X-rays) and visible radiant energy on pigment formation and on chromosome aberrations; studies involving the effects on the blue region of the visible spectrum on the growth movements of plants toward or away from the light source (phototopism); and biochemical studies involving the enzyme systems associated with photosynthesis. Fundamental studies are conducted in the light source (phototopism); and biochemical studies involving the enzyme of the electromagnetic spectrum and the transference and utilization of this energy by plants and animals.

Additional technicans are required to support the professional staff in operating the carbon-dating laboratory which was established with funds appropriated in 1962, and in conducting research on solar radiation and its effect on biological organisms. The addition of several specialized pieces of equipment will greatly facilitate this research. For example, a phase-contrast microscope makes visible the variations in the brightness of transparent objects which permits the observation of minute structural details of organisms; a fluorescent microscope uses an intense ultraviolet light source and permits observations of the variations in the fluorescence emitted from a specimen; and automatic, high-speed Coulter cell counter gives an accurate count of particles in suspensions; and an electrophoresis apparatus is used in the separation, isolation, and identification of large molecules obtained from biological preparations.

(*c*) The Canal Zone biological area: This laboratory on Barro Colorado Island was established to provide a tropical research station where scientists and qualified students can study plants and animals in their natural surroundings. Original studies of behavior, ecology, life history, physiology, and specialized habits of animal life are conducted. Plant ecology, plant succession, and taxonomy are included in the research program. Rainfall, humidity, and temperature are recorded daily. Scientists from Federal agencies, universities, private organizations, and foundations, and foreign professional workers carry on investigations of the fauna and flora of the area. Over 1,000 scientific articles have been written on the basis of research performed at this station.

A modest increase in personnel is required to assist in caring for various types of organisms involved in continuing research studies. The success of all such studies depends almost wholly on the maintenance of this experimental material.

(*d*) The Bureau of American Ethnology: This Bureau conducts archeological, linguistic, and ethnological research principally among the American Indians and the natives of lands under the jurisdiction or protection of the United States. Included is research on the material culture, social organization, and customs of these people. Much of the Bureau's work is conducted in cooperation with Federal agencies, and with universities, private foundations, and professional groups in these subject matter fields.

Plan of work

The requested net increase of $275,000 related to the research programs of the Smithsonian Institution will be utilized as follows:

(*a*) To employ 1 analytical chemist, 9 natural history specialists, 4 subprofessional aids, and 2 clerical assistants for the U.S. National Museum and to provide funds for personnel benefits	$118,000
(*b*) To employ 2 physicists, an astrophysicst, and an astronomer for the Astrophysical Observatory and to provide funds for personnel benefits, contractual services for electronic computer service, supplies and equipment	146,000
To employ a chemical technician, 2 laboratory technicians, and an instrumentmaker for the Division of Radiation and Organisms and to provide funds for personnel benefits, contractual services, and equipment	27,000

(c) To employ an animal keeper and a technician in the Canal Zone biological area and provide for related personnel benefits	$4,000
(d) Reduction in the base for fiscal year 1963	−20,000

While the increases listed above total $295,000, a net increase of $275,000 is being requested. The 4-year program in the U.S. National Museum to renovate the valuable Catlin paintings will be completed by the end of 1962. Completion of this program will result in a reduction of $20,000 in the 1963 base for contractual services.

Net increase	275,000

(5) An increase of $70,000 is required for the rehabilitation of buildings program to permit the conversion of combined sewerage systems to separate systems.

The following rehabilitation projects are proposed for completion in 1963:

Museum of Natural History (1911).—It will be necessary to revise the electrical wiring, lighting and controls in the auditorium of the Museum of Natural History in order to provide increased efficiency in the operation of this facility for scientific meetings and special events.

Arts and Industries Building (1881).—Window frames and window sashes must be replaced in the Arts and Industries Building and exterior woodwork repaired. The frames and sashes around the rotunda dome and the large windows of the four main halls have deteriorated over the years and present a safety hazard to the exhibits and to visitors and staff. This building is not air conditioned and the windows, which were intended to be opened for ventilation, must now be kept closed in all seasons because of their condition.

Smithsonian Building (1855).—It will be necessary to make extensive repairs to the window frames, exterior metal, wood, and stonework of the Smithsonian Building to prevent damage by weather and improve the appearance of the building. Weather has caused many mortar joints to separate, allowing moisture to come through to the inner surfaces of the walls. The soft stone of the building has become discolored and streaked and requires waterproofing and preservative treatment.

Freer Gallery of Art (1922).—The exterior surfaces of the Freer Gallery must be repaired and cleaned and the ceilings and walls of certain of the exhibition galleries and corridors refinished.

The exterior stone has not been resurfaced since the building was completed in 1922, and the accumulation of dirt, grime, streaks, and stains should be removed to improve the appearance of the building and the mortar joints must be inspected and repaired.

No major interior repairs have been made since 1955. Numerous plaster cracks have developed, wall coverings have blistered and loosened, and painted surfaces have become soiled and marred.

Related costs.—In addition to the projects listed above, the estimate provides for recurring expenses such as utilities, supplies, and the replacement of cleaning and shop equipment which is outmoded and worn.

Conversion of combined sewerage systems to separate systems.—The Smithsonian Institution was recently informed of the program of the District of Columbia to eliminate pollution from the Potomac River.

The District of Columbia is served by two systems of sewers. The older sections are sewered on the combined system. In this area all sewage, both storm runoff and domestic, is carried in a single system of pipes and, during periods of moderate to heavy rainfall, necessarily discharges into our water courses a mixture of rainwater and sanitary sewage.

Separate system areas, which drain the balance of the city, are provided with two sets of pipes, one for domestic sewage, the other for rainwater. Domestic sewage is delivered to the sewage treatment plant and rainwater is discharged into the nearest stream.

The redevelopment of Southwest Washington has advanced the conversion of existing sewer systems to separate systems. The buildings of the Smithsonian Institution on the south side of the Mall have the combined sewerage systems in accordance with practice at the time of their construction. An expenditure for this purpose is required in view of the District's antipollution program, the expressed interest of the National Capital Planning Commission in the separation of the sewers, and the active support of the U.S. Public Health Service for this antipollution program.

Plan of work

The Buildings Management Department will require $239,000 to continue the rehabilitation of buildings program at the 1962 approved level and to permit the conversion of combined sewerage systems to separate systems. The following projects are included in the 1963 program:

Museum of Natural History, $5,000.—To install effective lighting fixtures, replace an outmoded electrical distribution system, and install modern equipment to control general illumination and required special lighting.

Arts and Industries Building, $25,000.—To remove deteriorated window frames and sashes, install new window frames, sashes, hardware, and flashings, repair and recalk these areas, reputty the windows, and paint all exterior woodwork and metal of the building.

Smithsonian Building, $40,000.—To calk, putty, and paint all window sashes, exterior wood and metal work and to repoint the stonework, waterproof certain walls, and apply a preservative treatment to the stonework.

Freer Gallery of Art, $60,000.—To repoint and recalk joints and resurface exterior of building; and repair damaged or loosened plaster; recover wall surfaces; paint ceilings, trim, and walls; refinish bases and grilles in the exhibition galleries and corridors.

Related costs, $39,000.—To provide for recurring costs for utilities and supplies, and equipment.

Conversion of combined sewerage systems to separate systems, $70,000.—Preliminary studies indicate that the conversion to separate systems is feasible and is estimated to cost $70,000 for Smithsonian buildings on the south side of the Mall. Included are needed engineering services, the preparation of plans and specifications, contract work, supervision, and related expenses.

(6) An increase of $250,000 is requested to provide for needed strengthening of the U.S. National Museum's part in the field of oceanography.

Need for increase

The Smithsonian Institution already plays a significant role in the total effort of the United States in the field of biological oceanography. The members of the scientific staff of the U.S. National Museum are recognized for their specialized knowledge of diatoms, foraminiferans, sea anemones, corals, parasitic ispods, amphipods, crabs and other decapods (shrimp, lobsters), mollusks, and fishes. The Smithsonian Institution, in the extensive biological collections of its National Museum, has the most comprehensive materials for oceanographic research in this country in most areas of systematic marine biology. These scientists are also responsible for the care of the collections and for correlating the museum's work with studies by outside specialists. This small staff cannot, however, extend its special knowledge into all the fields of marine biology nor can the scientists now on the museum staff keep pace with the growth of the national collections to be anticipated in the large new oceanographic programs of the United States.

The Smithsonian Institution will cooperate with the Interagency Committee on Oceanography of the Federal Council for Science and Technology in carrying out the following objectives: (*a*) To determine the distribution, kind, and adaptation of the living populations of the sea and to understand the interrelationship of the marine organisms to the physical and chemical properties of the sea; (*b*) to determine if the oceans have been, or are being significantly modified, or how they can be exploited to benefit mankind; and (*c*) to investigate the impact of radioactivity and other pollution on the ocean including but not restricted to the distribution of pollutants, their effects on such organisms, the productive use of marine waters and the interrelationships among the various conditions.

Thorough and exact knowledge of the distribution of marine plants and animals and of the biology of those organisms as it relates to their control or utilization is dependent to a great degree on rapid and reliable means of identification. The scientific identification of an organism not only indicates its probable relationships, but it is the key to the literature on all phases of its biology and a prerequisite for the retrieval of relevant accumulated data. Of the approximately 200 orders and 150,000 different kinds of organisms that are now recognized in the marine biota alone, very few are covered by comprehensive and up-to-date monographs and revisions upon which must depend reliable and reasonable stable identifications of new specimens. In order that the biological resources of the sea may be fully explored, the nature and identity of the organisms concerned must be known with certainty.

There is no possible way of determining when some little-known forms of animal life will suddenly become important to men. For example, there was no incentive to study sponges until the greater part of the Bahamian and Gulf of Mexico sponge beds were wiped out by epidemic disease. Our country became dependent on other regions for sponges. Existing knowledge of even the commercial species was not adequate for the restocking of old sponge beds with resistant species. Until the development of sonar during the last war, the snapping shrimp which abound on tropical reefs were of interest only to the carcinologist. It could hardly be foretold that these shrimp would become a serious obstacle to the use of underwater sound apparatus in warmer seas, and that a knowledge of their distribution was vitally important in submarine warfare.

The long-range Federal oceanography program includes the establishment of training programs to promote the education of specialists in marine biological systematic research. It is hoped that through such a program enthusiastic students will be encouraged to continue their education toward a career in systematic marine biology. Definitive revisions and monographs of this research will be published so that names of marine organisms can be used in the mechanical retrieval of biological oceanographic data.

In 1963 it is proposed to add to the existing staff two marine ichthyologists, five zoological specialists in the field of marine worms, sponges, crustacea, echinoderms, and mollusks, two botonists specializing in the microscopic plant components of plankton as well as macroscopic seaweeds, and supporting subprofessional clerical staff. With these additions, the Smithsonian Institution will be able to advance and strengthen its oceanographic efforts and to offer significant support to our national determination to understand the oceans and their life.

A special assistant to the Director of the Museum of Natural History will be required to head this program, to serve as a liaison officer with other Government agencies, museums, and universities, and to aid in recruiting competent scientists. This individual must be a scientist of recognized attainment in some area of biological oceanography and one also who has administrative talent. The museum's expanding oceanographic efforts, which cut across the lines of three existing departments and five divisions, will be supervised and coordinated by him.

The special assistant will be required to travel to establish contacts and to recruit personnel. The scientists will require travel funds to visit other museums to consult historic and new collections, to collaborate with other specialists in various fields of oceanography, to participate in the collection of marine organisms, and to attend scientific meetings.

Additional transportation funds will be required to pay for shipping costs of collections of marine organisms which will be sent to the Institution for study and incorporation in the national collections.

Adequate facilities must be at hand for the systematic storage, arrangements, and immediate availability of reference collections. Proper cataloging and documenting of collections is a most important service which, if neglected, will soon result in chaotic conditions. It is hoped that facilities to become available in 1964 in the wings now being added to the U.S. National Museum will be adequate for most purposes at the outset of this program. Until they become available, however, space will have to be rented to accommodate additional staff members and their equipment and to provide room for sorting and storing incoming collections that will be submitted to the museum by the oceanography program.

It will be necessary to contract with specialists, both in this country and abroad, to undertake critical study of groups that cannot be handled by the museum staff and with experts to prepare the illustrations required for monographs, revisions, and related work that are important in descriptive biology.

Necessary supplies, materials, office an laboratory furniture and machines, and microscopes must be provided for the staff of 22 scientists and assistants.

Plan of work

The increase will be used to employ a special assistant, 9 scientists, and 12 supporting subprofessional and clerical staff, to pay related personnel benefits, and to provide necessary funds for travel, transportation, rental of space, contractual services, supplies and equipment, $250,000.

(7) Funds in the amount of $60,000 are required for the support of the National Armed Forces Museum Advisory Board.

The act of August 31, 1961 (75 Stat. 414), establishes in the Smithsonian Institution a National Armed Forces Museum Advisory Board and authorizes the appropriation of funds to carry out the purposes of the act. The functions of this Board are to provide advice and assistance to the Regents of the Smithsonian Institution on the following:

(*a*) The portrayal of the contributions which the Armed Forces of the United States have made to American society and culture.

(*b*) The investigation and survey of lands and buildings in and near the District of Columbia suitable for the display of military collections, and the preparation of recommendations to the Congress with respect to the acquisition of lands and buildings for such purposes.

The act reaffirms that the Smithsonian Institution shall (1) commemorate and display the contributions made by the military forces of the Nation toward creating, developing, and maintaining a free, peaceful, and independent society and culture in this country; (2) portray the valor and sacrificial service of the men and women of the Armed Forces as an inspiration to the present and future generations of America; (3) demonstrate the demands placed upon the full energies of the people, the hardships endured, and the sacrifices demanded in our constant search for world peace; (4) graphically describe the extensive peacetime contributions the Armed Forces have made to the advance of human knowledge in science, nuclear energy, polar and space exploration, electronics, engineering, aeronautics, and medicine; (5) interpret through dramatic display significant current problems affecting the Nation's security; and (6) provide a study center for scholarly research into the meaning of war, its effects on civilization, and the role of the Armed Forces in maintaining a just and lasting peace by providing a powerful deterrent to war.

To carry out the above objectives, the act reaffirms that "the Smithsonian Institution shall collect, preserve, and exhibit military objects of historical interest and significance."

Need for increase

During 1962, it is expected that members will be appointed by the President to the National Armed Forces Museum Advisory Board; that organization meetings wil be held; and that study assignments will be made. During 1963, the Board will furnish progress reports on the scope and character of proposed museum sites to the Smithsonian's Board of Regents. It is proposed that a member of the Smithsonian Institution staff serve as secretary to the National Armed Forces Museum Advisory Board. Since he will already have full-time responsibilities he will rely heavily on the assistants provided for in this estimate for 1963 to prepare draft proposals and assemble necessary information for the Board. The secretary of the Board and his assistants wil work closely with curators of existing military collections in the Smithsonian Institution, the Defense Establishments, and elsewhere, to obtain information relating to such collections as well as to assemble ideas on the practical matters of museum scope, organization, preservation, maintenance, and operation. Information on potential sites will also be assembled and studied. All proposed locations, exhibits, and arrangements will have to be tested against the problems of maintenance, accessibility to established visitor traffic, and fundamental value of each museum element which may be suggested.

Plan of work

To employ an administrative assistant and a stenographer to assist the secretary of the Board (proposed to be a member of the Institution staff), provide funds for personnel benefits, travel, transportation of things, printing, contractual services, supplies and materials, and equipment. Total increase, $60,000.

(8) Other increases: A total of $319,000 is required to establish a health unit, to provide for increases in travel rates authorized by the act of August 14, 1961, to provide for within-grade promotions and reclassification costs.

Need for increase

(*a*) The act of August 8, 1946 (5 U.S.C. 150), authorized the establishment of health service programs for Government employees. These programs are limited to treatment of on-the-job illness and dental conditions requiring emergency attention, preemployment and other examinations, referral of employees to private physicians and dentists, and preventive programs relating to health. The establishment of such a program in the Smithsonian Institution would offer several distinct advantages. It would provide employees with emergency treat-

ment for colds and other physical disturbances including skin irritations, minor cuts, and bruises. Other intangible benefits such as improved employee morale, greater efficiency, and productivity would be realized since less sick leave time would be utilized by employees because of physical conditions which become aggravated from lack of timely medical care at work. This program would also make it possible for the Institution to maintain its own mass immunization programs in accordance with the recommendations of the Department of Health, Education, and Welfare and provide for a modified employee health maintenance program for employees 40 years of age and over.

In addition to their concern for the health and well-being of the employees, officials of the Institution have been aware for years that more adequate emergency treatment should be available to the millions of visitors who come from all parts of the country. The proposed health unit would provide visitors with treatment in the event of accident or sudden illness.

(*b*) The act of August 14, 1961 (75 Stat. 339–341) increases per diem rates from $12 to $16 and mileage rates from 10 to 12 cents per mile.

(*c*) To provide for within-grade promotions in accordance with the Classification Act of 1949, as amended (5 U.S.C. 1161), and for prior-year authorized classification of positions in accordance with civil service standards.

In 1962 a reduction of 36 man-years of employment was necessary in order to compensate for prior-year classifications acts. These classifications were made in strict compliance with civil service standards. The so-called Whitten amendment requires agencies to audit all positions each year for the purpose of confirming or correcting grade allocations and for abolishment of positions found to be unnecessary. In 1961, the Personnel Division was able to overcome a serious backlog and to audit all positions including desk audits of 40 percent of the Institution's positions. It has been found that due to the Smithsonian's expanding programs and the consequential assumption of additional duties and responsibiilties by certain members of the staff, more than a normal number of positions audited required reclassification. A forced curtailment of employment was then necessary in order to stay within the allowance for personnel compensation.

The 1962 reduction in authorized positions was applied uniformly throughout the Institution. The proportionate shares of the Museum of Natural History, the Museum of History and Technology, and the Buildings Management Department are the most significant since these constitute the major areas of employment. Included in this reduction were such positions as exhibits workers, typists, museum aids, clerks, mechanics, and laborers, which were held unfiilled as they became vacant and then suspended in 1962. Essential services for the Institution's scientific research programs and for the preparation and renovation of exhibits were necessarily curtailed and the Institution's approved programs were delayed and impaired in direct proportion to the services lost.

In determining the number of positions which could be authorized in 1962 and 1963, full consideration was given to normal turnover, delay in filling vacancies, lag in recruitment for new positions, leave without pay, and similar factors.

Allowance of an increase of $171,000 in 1963 will provide for 36 additional man-years and will permit the Institution to regain the level of employment previously justified and approved.

Plan of work

(*a*) The establishment of a Public Health Service-operated health unit, within the limitations of Public Law 658, 79th Congress, will require an increase of $23,000. Such a unit would serve a population of 1,500 employees and would provide the services of 2 full-time nurses and the part-time services of a medical officer in charge (3 visits per week). Emergency care to an average of 10 to 15 visitors per day would also be provided by this unit. The cost of operation in the first year includes capital outlay for the acquisition of initial equipment which amounts to $3,500. The 1963 estimate represents $15.33 per employee which would be reduced to approximately $13 in succeeding years. This cost estimate and the scope of the units services were furnished by the U.S. Public Health Service $23,000

(b) The 1962 costs incident to increased travel rates authorized by the act of August 14, 1961, will be financed from estimated savings. A recent study of the per diem portion of the total travel requirements of the Smithsonian indicates that $14,100 will be required in 1963 for this purpose. However, as a matter of policy, a portion of this additional cost will be derived from savings and economies in other activities so that the amount requested for partial funding of a the total cost is	$6,000
(c) Based on a position-by-position study, the Smithsonian Institution will require additional funds to provide for the cost of within-grade promotions. Allowance was made for representative lapse factors in determining this requirement	119,000
An increase in 1963 is requested to compensate for prior-year authorized classification of positions which were made in accordance with Civil Service Commission standards. This increase will permit a total of 36 additional man-years of employment in various budget activities	171,000
Total increase	319,000

GENERAL STATEMENT

Chairman HAYDEN. Dr. Carmichael?

Dr. CARMICHAEL. Mr. Chairman and members of the committee, it is an honor to have an opportunity to appear before you to discuss the programs of the Smithsonian Institution and to present the Institution's request for funds for the fiscal year 1963.

The Smithsonian Institution is fundamentally concerned with the increase and diffusion of knowledge among men. Under the terms of its broad charter, the Institution conducts well-defined scholarly research activities. These research programs I think I can say are not duplicated elsewhere.

RESEARCH IN ASTROPHYSICS

For example, through its Astrophysical Observatory, the Smithsonian conducts very specific research in astrophysics, including the study of particular aspects of solar radiation, solar astrophysics, the nature of the upper atmosphere, meteors, meteorites, specific scientific problems related to artificial satellites, and other very specialized studies in space science.

SPACE-FLIGHT AWARD

The Director of the Institution's Astrophysical Observatory Dr. Fred L. Whipple, was the recipient this year of the American Astronautical Society's top honor, the "Space-Flight Award." Because of the expertness of our staff and the current importance of this area of study, the scientific world looks to the Institution for basic research in astrophysics.

The Institution also conducts specialized research in ethnology and related fields, in biology, geology, and related fields and in other scholarly areas.

SCHOLARLY PUBLICATIONS

One important aspect of our research function includes the issuing of scholarly publications, serving as a center for the exchange of such publications with other research centers throughout America and the world—we have been doing that for more than a century, sir—and answering requests for scientific and technical information. Last

year over 321,000 of such requests were answered, an increase of more than 24,000 over the preceding year.

In addition to these research functions, the Smithsonian maintains what is probably the world's largest museum complex. It preserves and protects for our citizens many of the irreplaceable treasures of the American people.

TOTAL VISITORS TO MUSEUM

Public interest in our museums continues to grow. In 1961 the number of visitors to our buildings on the Mall (exclusive of the National Gallery of Art) totaled 7,103,374, an increase of almost 609,000 over the previous year. We feel that this increase in the number of visitors may be attributed largely to the excellent and much-improved museum exhibits made possible by this committee in recent years.

RENOVATION OF EXHIBITS PROGRAM

Our renovation of exhibits program began in 1953 and in that year the number of visitors was 3,429,429. From this number, the visitors have increased to the over 7 million just mentioned; that is from 3,429,429 to over 7 million.

Our 1963 request in the "Salaries and Expenses" estimate for continuation of the renovation of exhibits program is at the same level as 1962, that is $455,000.

Before discussing the "Salaries and Expenses" request in more detail, I should like to report to you on the Institution's construction programs since these programs affect certain items in the "Salaries and Expenses" estimate.

CONSTRUCTION PROGRAM

The notable collections of the Smithsonian in the fields of history and technology, long largely in storage, will be displayed in the monumental building being erected on Constitution Avenue between 12th and 14th streets. The laying of the cornerstone, with appropriate ceremonies, took place on May 19, 1961. This Museum of History and Technology is now scheduled to be substantially completed in March of 1963, 6 months later than the date of September 1962, as we had previously advised the committee. Partial occupancy of some exhibition and museum areas is planned in October 1962.

I am delighted to report that excellent progress is being made on construction of the east wing of the Natural History Building. Funds were appropriated in 1961 for this construction and the completion date is now expected to be as early as January 1963. The wing will be occupied for part of that year.

Funds were appropriated in 1962 for construction of the west wing and completion of this full project is scheduled for July 1964.

REMODELING CIVIL SERVICE COMMISSION BUILDING

We estimate that $5,400,000 will be required in 1963 for remodeling the Civil Service Commission Building to make it suitable to house the National Collection of Fine Arts and the National Portrait Gallery. The transfer of this historic building, originally constructed

to house the Patent Office, with its correlated museum, to the Smithsonian Institution has been authorized by the Congress.

The availability of this building for remodeling is dependent upon the estimated completion of the office building now under construction for the Civil Service Commission. The Institution's estimates were prepared on the assumption that the new Civil Service Commission Building would be available in March 1963. However, very recently, on January 24, 1962, we were informed that the completion date had been changed to July or August 1963. The estimated remodeling cost of the old Civil Service Commission Building is based on a study authorized by the Public Buildings Service of the General Services Administration. The detailed plans and specifications for the remodeling are being developed this year with planning funds appropriated for this purpose.

CAPITAL IMPROVEMENTS AT THE ZOO

Last year, the Congress acted favorably on a request for specific legislative authority to allow capital improvements at the National Zoological Park. This program of improvements is planned to be accomplished over a period of years so that the National Zoological Park may be continued in daily operation without general disruption and inconvenience to the millions of visitors who come to the zoo from every State in the Union. It is estimated that $950,000 will be required in 1963, and that varying amounts will be required in the next 10-year period.

In discussing the Smithsonian Institution's request for funds for capital improvements at the National Zoological Park, I should also like to say at this time that the National Capital Parks of the Department of the Interior is again requesting funds for a road and tunnel that will bypass the National Zoological Park and serve as a connecting link between Rock Creek Park and the Potomac Parkway. The construction of such a road seems to be most desirable. It will allow traffic to move through Rock Creek Valley without cutting through the National Zoological Park. At present, traffic disturbs the animals in the collections and interferes with the safety, free access, and movement of the millions of visitors to the zoo.

Chairman HAYDEN. We had a very interesting hearing on that previously when the National Park Service showed an exhibit of how it would be done.

Mr. CARMICHAEL. Yes, sir. I should like to emphasize, however, that the funds for this necessary improvement are included in the request of the National Capital Parks and are not included in the estimates we have placed before you.

NEED FOR INCREASED FUNDS

Now I should like to discuss our need for increases over last year as reflected in the "Salaries and expenses" request before you. Our appropriation request of $11,354,000 for 1963 represents an increase of $2,229,000 over the amount appropriated for 1962.

Of this increase, funds totaling $1,076,000 are related to the new Museum of History and Technology. They will be used to prepare, move, and install exhibits and collections in this new museum and pro-

vide building services and related costs for partial operation of this great building.

The estimates before you also include an increase of $122,000 for moving and storing museum materials, for moving scientific and related equipment, and for building services for partial occupancy of the east wing of the Natural History Building.

NATIONAL PORTRAIT GALLERY

An increase of $92,000 is requested to provide needed staff to prepare exhibition plans for the national collection of fine arts which will be moved into the old Civil Service Commission Building and to provide for the initial staffing and related costs of the National Portrait Gallery, which will also be housed in that building.

SCIENTIFIC RESEARCH

We are also requesting a net increase of $275,000 for certain areas of scientific research. These additional funds will be used to extend scientific research in the great national scientific collections of the United States National Museum of the Smithsonian which are in many cases unique and must be used by visiting scientists from all over the country. I suppose in an ordinary working day there are possibly 200 or more visitors working on these collections. Part of this increase will also be used to advance the research programs of the astrophysical observatory to which reference has been made above. The Smithsonian has been recognized throughout the world for over 80 years as an important center of research in this field.

OCEANOGRAPHY

The request before you includes $250,000 additional to permit the broadening of the Smithsonian's scientific work in oceanography. We have been active in this area of research for a great many years. These funds will enable the Institution to employ additional scientists and specialists and to provide for other related costs so that the Smithsonian can perform necessary biological studies required in this new and very important national program. This program is dedicated to an increase in our understanding of the oceans and their potential value to man as a source of food and in other ways. The special oceanography services of the Smithsonian are well recognized around the globe, and, I think I can say with assurance, do not duplicate other research activities.

SEWERAGE SYSTEM

The requested increase includes $70,000 to provide for the required conversion of a combined sewerage system to a separate system for the Smithsonian buildings on the south side of the Mall. Conversion of this system is part of the District of Columbia's program to eliminate pollution of the Potomac.

NATIONAL ARMED FORCES MUSEUM ADVISORY BOARD

There is also included $60,000 to carry out the purposes of the act approved on August 31, 1961, which established a National Armed

Forces Museum Advisory Board in the Smithsonian Institution. These funds will be used to employ a small staff to assist the Board in its studies and to provide for related costs.

HEALTH UNIT

An additional $319,000 in the aggregate is requested to provide for an urgently needed health unit for the benefit both of our employees and of our many millions of visitors; for the increases in travel rates as authorized by the act of August 14, 1961; for mandatory within-grade promotions; and for reclassifications in accordance with required Civil Service Commission standards.

Mr. Chairman and members of the committee, may I again express my appreciation to you for allowing me to present this statement. I will try to answer any questions I can.

REDUCTION IN ESTIMATE

Chairman HAYDEN. I understand that you may be able to reduce your salaries and expenses estimate, inasmuch as personnel will not have to be employed until next fiscal year because of slippage in the construction schedule of the Museum of History and Technology. How much will that reduction be?

Dr. CARMICHAEL. Mr. Chairman, information on that delay was not available to us when these estimates were put together. It is our estimate that we may now be able to save as much as $454,000, sir.

CONSTRUCTION PROGRAM ESTIMATES

Chairman HAYDEN. There will also be included in the record the Smithsonian Institution budget estimates for its 1963 construction program.

(The budget estimates referred to above follow:)

The Smithsonian Institution is requesting funds for 1963 to remodel the existing Civil Service Commission building for art gallery purposes and to undertake a capital improvement program at the National Zoological Park in annual stages over an appropriate period of time.

In 1962, $400,000 was appropriated for preparing plans and specifications for the necessary remodeling of the existing Civil Service Commission building for art gallery purposes. It is anticipated that this building will be available for transfer to the Smithsonian Institution in 1963, when a new building to house the Civil Service Commission is to be completed. A request for $5,400,000 is included in these estimates to provide funds for remodeling at the time the building becomes available to the Smithsonian Institution.

Funds to begin a program of construction, remodeling, and equipping of buildings and other exhibit facilities at the National Zoological Park are also included in these estimates. To initiate this program, which is proposed to be accomplished over a period of years, $950,000 will be required to provide for construction of the first improvements ($790,000) and for detailed planning of improvements to be undertaken in subsequent years ($160,000).

In 1961, $13,500,000 was appropriated for the rehabilitation and modernization of the Natural History Building and the construction of an east wing. This work is progressing well and is expected to be completed by March 1963. In 1962, $4,336,000 was appropriated for construction of the west wing and completion of the entire project. It is anticipated that the entire project will be completed by April 1964.

Construction is continuing on the Museum of History and Technology on Constitution Avenue between 12th and 14th Streets NW. Partial occupancy of certain exhibit and work areas is scheduled for October 1962 or before and complete occupancy is expected by March 1963.

REMODELING OF EXISTING CIVIL SERVICE COMMISSION BUILDING

The Congress by act of March 28, 1958 (72 Stat. 68), provided for the transfer of the existing Civil Service Commission Building (formerly known as the Patent Office Building) to the Smithsonian Institution. Designed by Robert Mills during the administration of President Andrew Jackson, this building is considered an outstanding structure of that period. It is anticipated the the building will be available for transfer by the General Services Administration in fiscal year 1963. Remodeling will be necessary to make it suitable as an art gallery to house the National Collection of Fine Arts and the National Portrait Gallery of the Smithsonian Institution. These two collections will be housed in the building on an equally shared basis.

In order to obtain the information necessary to make an estimate of funds required for detailed plans and specifications for remodeling the building, the architectural firm of Faulkner, Kingsbury & Stenhouse was retained in 1960 by the General Services Administration. This firm submitted a feasibility study upon which the total cost of the renovation was estimated as well as the estimate of the cost of necessary detailed plans and specifications.

Funds in the amount of $400,000 for the preparation of detailed plans and specifications for the necessary remodeling of the building to make it suitable to house certain art galleries of the Smithsonian Institution were appropriated in the Department of the Interior and Related Agencies Appropriations Act, 1962, Public Law 87-122, approved August 3, 1961. It is expected that the building will be made available for transfer in 1963 after the Civil Service Commission moves to its new building now under construction. The General Services Administration has agreed to the transfer at that time.

The 1963 estimate of $5,400,000 will provide for remodeling the building at the time it becomes available to the Smithsonian Institution. The scope of work required to convert the building includes such items as: replacing the existing heating system which is over 40 years old; air-conditioning; installing necessary humidity controls; replacing the electric system; making necessary structural changes and renovations, such as removing partitions and walls; caulking and pointing stonework; cleaning the entire building; repainting; regrinding or replacing existing floors; plastering; and such other work as is required to provide appropriate exhibit facilities for the National Collection of Fine Arts and the National Portrait Gallery. The details of the essential remodeling will be developed in fiscal year 1962 with the planning funds now available.

PUBLIC BUILDING SERVICE

Estimate of remodeling costs (including planning)

Design and specifications	$330,000
Surveys, etc	29,000
Supervision	175,000
Office expenses, Public Buildings Service	14,000
Improvements	4,917,000
Furnishings and equipment	250,000
Smithsonian Institution	85,000
Total	5,800,000
Less planning funds appropriated fiscal year 1962	—400,000
1963 estimate	5,400,000

CONSTRUCTION AND IMPROVEMENTS, NATIONAL ZOOLOGICAL PARK

The Board of Regents of the Smithsonian Institution on May 19, 1961, directed the Secretary to undertake a capital improvement program at the National Zoological Park, in annual stages over an appropriate period of time, to be financed as part of the regular Federal budgetary program of the Institution. The Congress since 1890 has from time to time appropriated such funds for improvements at the National Zoological Park.

The action of the Board of Regents recognized the need to improve present conditions at the zoo. These conditions are described briefly in the following paragraphs:

The Police Headquarters Building (1956) is the only structure erected in the past 20 years. Its condition is satisfactory.

The Office Building (1805), Lion House (1891), Antelope House (1898), bear pits (1902–10) and Monkey House (1906) should be replaced. The buildings are old, in poor condition, and obsolete as exhibition facilities.

The outdoor cages and other exhibit facilities are in fair physical condition but similarly are obsolete by any modern standard of good zoo practice, considering effectiveness of exhibition techniques, safety of the public, and well-being of the animals.

The Bird House (1928–36), Reptile House (1931), Elephant House (1937), Small Mammal House (1937), and public restaurant (1941) are obsolescent, averaging 25 years of age, but can be rehabilitated. Generally, ventilation is poor, heating is not well controlled, lighting is inadequate, cages are small and deteriorating, and exhibition facilities are obsolete.

The electrical wiring and distribution system, the steam distribution system, and the boilers need replacement because of age and obsolescence. Sanitary and storm sewers similarly require rehabilitation and extension.

Parking facilities are grossly inadequate to handle the load on weekends during the most popular visiting season from April through October.

The existing east-west road from Connecticut Avenue to Harvard Street and the north-south road from Potomac Parkway to Rock Creek Park, both carry heavy traffic through the Zoo. This present traffic and road system creates a hazard to pedestrians, a police problem, and a major disruption of the natural habitat setting of the park.

The needs of the National Zoological Park include outdoor exhibit facilities and indoor exhibit and shelter facilities for the animals; roadways and parking facilities for visitor automobiles and buses; separation of automobile and pedestrian traffic; associated public service facilities; operational buildings; visitor transit system; and the related sewerage, heating, water and electrical distribution systems.

The program of improvements is proposed to be accomplished over a period of years in order that the National Zoological Park may be continued in daily operation without general disruption or interruption to the several millions of visitors from every State in the Union. A very important additional consideration in scheduling the improvements over a period of years lies in a recognition of national budgetary limitations.

It is estimated that $950,000 will be needed in fiscal year 1963 and that varying annual amounts in a 10-year period will be required for construction. This program will accomplish a most significant improvement in the National Zoological Park, in keeping with its statutory purpose since 1890, "for the advancement of science and the instruction and recreation of the people."

Planning funds in the amount of $85,000 are included for the National Zoological Park in the District of Columbia Appropriation Act for fiscal year 1962. These funds will permit the preparation of detailed drawings and specifications during the current year (1962) for the initial stage of construction.

In fiscal year 1963, the request for $950,000 will provide $790,000 for construction of the first improvements and $160,000 for detailed planning of improvements to be undertaken in subsequent years.

Bird House and exhibits

The first year's program includes improvements to the interior of the existing Bird House which will be remodeled to provide suitable exhibits for birds which should be displayed indoors. The remodeling of the inside of the Bird House will achieve a greater utilization of existing space in large community cages for a truly pleasing exhibit for public interest and also a pleasanter living environment for the birds. A large, indoor, free-flight area will be developed in which there will be no visual barrier between the birds and the visiting public.

The existing outdoor flight cage will be replaced in a more suitable location adjacent to the Bird House. The adjoining area will be landscaped and the required new outdoor cages and pens will be provided, giving the entire area presently devoted to bird exhibits a unity in a parklike atmosphere. Large flightless birds will be exhibited behind dry moats, without fences or bars. Outside exhibits planned for hardy birds will be arranged to achieve maximum utilization by combining ground-dwelling birds and perching birds in the same cage.

The domed flight cage will provide a large volume of enclosed flight space at relatively low cost. Visitors will be able to walk through the cage and achieve a visual association with the birds in a natural habitat setting.

This will surely become one of the most interesting and outstanding bird exhibits in the world.

Moose and elk, beavers, picnic area

Moose and elk will be shown on a terraced slope enclosed with water and dry moats and including animal shelters. One side of the beaver pond will border on a sunken corridor with windows for viewing the animals under water. The adjacent picnic area will be furnished with tables, benches, shelters, and a refreshment stand for the visitors.

Roads

It is planned to relocate the automobile entrance off Connecticult Avenue to the north. This will make better utilization of the unused northwestern corner of the park and ultimately remove the heavy automobile traffic from the heart of the zoo. Within the limitation of funds, the new road will be constructed around the periphery of the bank which falls to Rock Creek to a point near the existing Elephant House. At this point, a temporary connection with the existing East-West road will be made to provide necessary traffic circulation.

When automobile traffic has been relocated from the existing Connecticut Avenue entrance by the completion of the northern roadwork and later, the parking facilities in the northwestern area, space will be made available for the successive development of several major exhibits for hoofed stock and for the new pedestrian plaza which will become the dominant entranceway to the exhibits.

Construction cost estimates

Bird House and exhibits:	
Indoor exhibits, 19,600 square feet of floor area	$306,000
Outdoor exhibits, 174,000 square feet of ground area	288,570
Moose, elk, beavers, picnic area: Outdoor exhibits, 98,700 square feet	98,540
Roads: Connecticut Ave. vehicle entrance and portion of northern zoological park roadway	96,890
Total	790,000

REMODELING CIVIL SERVICE COMMISSION BUILDING

Chairman HAYDEN. $5,400,000, which you asked for remodeling of the Civil Service Commission building to make it suitable as an art gallery for the National Collection of Fine Arts and the National Portrait Gallery, may not be necessary because the new Civil Service Commission Building will not be ready for use, as you stated, by the Civil Service Commission until fiscal year 1964. That is correct; is it not?

Dr. CARMICHAEL. Yes.

Chairman HAYDEN. I understood your construction budget can be reduced by this amount?

Dr. CARMICHAEL. Mr. Chairman, that is as the committee wills. We believe that if the appropriation were made it would probably mean that we could get this building ready for use, which Congress has directed, at an earlier time than if the appropriation is not made.

It is true, however, that there has been, to use the phrase, a recent slippage in the time of the completion of the new Civil Service Commission building, and that I am sure is the basis of your statement.

I do want to say that I still think if the appropriation were made, because our plans will be ready, that the contracts could be let and we could get to work in July of 1963 and the building would thus probably be ready more quickly.

Chairman HAYDEN. It would require that the appropriation be made available until expended?

Dr. CARMICHAEL. Yes, sir.

Chairman HAYDEN. That would serve the purpose?

Dr. CARMICHAEL. Oh, it would, indeed.

CONSTRUCTION AT THE ZOO

Chairman HAYDEN. In addition, $950,000 is requested for construction of initial improvements and planning of additional improvements for subsequent years at the National Zoological Park. Seven hundred and ninety thousand dollars of this is for construction.

We will be glad to have your comments on the need for the construction planned. Particularly, will you indicate how much relocation can be accomplished in fiscal year 1963 of the Connecticut Avenue automobile entrance?

Dr. CARMICHAEL. Yes, Mr. Chairman. Mr. Chairman, you will remember that last year the Congress authorized the Smithsonian to request funds for a program of public works at the zoo. For many years the public works of the National Zoological Park had, like all other expenses of the Park, been handled through the District of Columbia budget, but with this new legislation we have come before you with the request for the amount of money, for the $950,000, to be used for the beginning of the relocation of the road system and other construction.

RELOCATION OF ROAD SYSTEM

This new road is not to be confused with the road system that you referred to earlier, which is the main road that runs through the valley, but for the entrance road system; so that instead of running, as it does now, right through the middle of the animal exhibits we can go up Connecticut Avenue further and cut a new road in. In this way, automobiles will not, as they do now, disrupt the animal exhibits and also the millions of people who come into the zoo.

The beginning section of that road is provided for in the request that we have made and so also are funds for the renovation of much-needed improvements of the birdhouse and the development of a facility that will provide, as all modern zoos have, an outdoor flight cage in which the birds can be properly exhibited.

It is that request that we are making, sir.

Chairman HAYDEN. You say the beginning of this road construction. About how much will be required for that and what will be the total costs?

Dr. CARMICHAEL. Mr. Bradley, Assistant Secretary of the Smithsonian, may be able to give you the exact figure.

TOTAL COST OF ROAD CONSTRUCTION

Mr. BRADLEY. Mr. Chairman, we have included in the estimate before you an amount of $96,890 which will cover about one-quarter of the stretch of road that the Secretary was referring to, from Connecticut Avenue over to Harvard Street, so we can go about 20 percent or 25 percent of the way.

We would require an additional amount of about $325,520, Mr. Chairman, in order to construct that road all the way across to Harvard Street from Connecticut Avenue.

Chairman HAYDEN. Would it not be more economical to build this road as one project rather than in sections? How much would that cost?

Dr. CARMICHAEL. Yes, sir, it would be more economical if we could build the complete road from Connecticut Avenue to Harvard Street. This would be of great advantage to the zoo since the completed road could then be used as a unit by our millions of visitors. It would effectively remove this east-west automobile traffic from the heart of the exhibition area. The estimated total cost of this road is $422,410. Since a request for $96,890 is included in the justifications before you, Mr. Chairman, an additional amount of $325,520 would be required to construct the complete road.

Chairman HAYDEN. It seems to me it is a very desirable improvement and the sooner we get at it, the better.

Mr. BRADLEY. Yes, sir.

Chairman HAYDEN. Are there any questions?

Senator BYRD. No, Mr. Chairman.

Chairman HAYDEN. Senator Dworshak?

CONSTRUCTION PROGRAM ON CONSTITUTION AVENUE

Senator DWORSHAK. Yes. Dr. Carmichael, I am very much interested in your construction program. Your statement indicates that in 1961 $13,500,000 was appropriated for the rehabilitation and modernization of the natural history building and the construction of an east wing.

In 1962 $4,336,000 was appropriated for construction of the west wing and completion of the entire project, which will be completed by April 1964. Does this complete your construction program on Constitution Avenue?

Dr. CARMICHAEL. Yes, sir.

Senator DWORSHAK. That will take care of everything. You also have in your general statement reference to the remodeling of the existing Civil Service Commission Building for art gallery purposes and you are requesting $5,400,000 to provide funds for remodeling this building?

Dr. CARMICHAEL. Yes, sir.

NATIONAL COLLECTION OF FINE ARTS

Senator DWORSHAK. Where do you get the art objects which will be displayed in this new building?

Dr. CARMICHAEL. Senator, the national collection of fine arts has a long history. When the basic law of the Smithsonian was started we were directed to maintain a gallery of art, so from the very beginning there have been art objects at the Smithsonian.

As the years have passed, bequests, gifts, have come to the Government of objects of art. This was called the National Gallery of Art until the gift of Mr. Mellon and the establishment of the National Gallery of Art.

At that time, the name was changed to the national collection of fine arts. We have a very large collection of American works of art and of other works of art. These cannot be displayed in a proper way. We are really under great criticism because so many works of art are in basement storage. They are stored in out-of-the-way places, and

yet many of them are works of art that are of very great importance to the American people. We are very happy that the Congress authorized the transfer of the historic old Patent Office Building to the Smithsonian so that it could be remodeled to make a suitable place to house this collection.

Senator DWORSHAK. These art objects are in addition to those displayed in the National Gallery?

Dr. CARMICHAEL. They are entirely distinct, sir.

Senator DWORSHAK. A separate collection?

Dr. CARMICHAEL. A separate collection.

Senator DWORSHAK. And they are not being displayed now because you lack room?

Dr. CARMICHAEL. Yes. Senator, a few of them are on display, somewhat incongruously, in the Natural History Building of the Smithsonian.

Senator DWORSHAK. What are you going to place in these new wings that are being constructed?

RESEARCH ACTIVITIES

Dr. CARMICHAEL. Those wings are primarily for the great research activities of the Smithsonian. This new space will allow us, however, to take out of the old exhibit galleries the collections and the research activities that have crept into them during the years since the building was built.

Senator DWORSHAK. I am a little inquisitive. What kind of research? I heard you refer to it briefly in your statement, but we give the Defense Department about $5 billion a year for research activity and we give the National Institutes of Health and about every agency from a peanut stand to the Defense Department money for research. What do you do with your research money, without going into too many details? I am inquisitive.

Dr. CARMICHAEL. The Smithsonian has been called the biological bureau of standards, because we have collections in biology, geology, and related fields; in many cases these are the world's greatest collections.

Senator DWORSHAK. Do you have anything to do with the human race down there?

Dr. CARMICHAEL. We have a Bureau of American Ethnology and work in anthropology. The Smithsonian was one of the first places for such research in the world.

Senator DWORSHAK. You have not done much along that line yet, have you?

Dr. CARMICHAEL. Sir, I hardly know how to answer that question.

Senator DWORSHAK. Then do not answer. It is probably classified. We do not want the Russians to find out. All right. Let us change from research. You do feel that this research will not necessarily be a lot of increased activity and expanded programs so much as it is to take it out of the crowded quarters which you have had for years in your existing buildings?

Dr. CARMICHAEL. That is true, and there is no other place in which much of this research can be done. That is why people from universities all over this country come to us and why the other Government Bureaus send their people to us; because they have to use the collec-

tions, and these collections are, in general, not duplicated elsewhere, sir.

Senator DWORSHAK. Let us move over into the National Zoological Park. I had a reporter friend from one of the local papers tell me he had not been out there more than twice in about 10 years and I was shocked and amazed because I thought people went out there almost every weekend to witness the monkeys and all the other interesting things that you have out there.

IMPROVEMENT PROGRAM AT THE ZOO

I see that you are asking for $950,000 for an improvement program at the park in the next year, and that includes $160,000 for detailed planning of improvements to be undertaken in subsequent years.

Can you give us any briefing on what your planning is, how much you will need in the next 5 years, or 10 years, or is that still undeveloped?

Mr. CARMICHAEL. Mr. Chairman, it is still not developed in detail or else we would not have had to ask for the funds for detailed planning. Nevertheless, a preliminary study has been made and it is our belief, sir, that we will have to ask for an average of about $1,700,000 each year for 10 years for capital improvements at the zoo.

However, this will be on an annual basis and the Congress can, at any time, in its wisdom, say: "No, we have gone far enough."

Senator DWORSHAK. Will it be largely buildings and structures?

Dr. CARMICHAEL. It will be the reconstruction of the road system, of the parking system, and of the animal houses, some of which have had to be closed because they are no longer safe. It will be the reorganization of the outdoor facilities for the display of animals. This is a national zoo and it has been allowed to get way behind the procession.

It was founded by the Smithsonian. One of my predecessors, Dr. Langley, a great man with great foresight, before there was a Rock Creek Park recommended the move to its present site. It was well planned for its time, but certainly when it was laid out people did not know that there was going to be such a thing as an automobile, sir.

TOTAL ANNUAL VISITORS TO THE ZOO

Senator DWORSHAK. I know it is a big attraction, and in fact how many people visit that annually?

Dr. CARMICHEAL. It is a little difficult to give the exact number, because we cannot count with clickers. At our own buildings we count them with clickers.

Mr. BRADLEY. Something over 2 million visitors from every State, Senator, each year.

Dr. CARMICHAEL. I would not be surprised if it was even more than that.

Senator DWORSHAK. My advice is to expedite your program. Our gold dollars are dwindling rapidly and we may not have funds available to complete your program if you do not move along rapidly.

INCREASE IN BUDGET

One more question: Your "salaries and expenses budget" provides for an increase of $2,193,000, which is about a 25-percent increase over the current fiscal year. You have in detail the justification of these increases for the various categories, which are about 8 or 10 in number. What is primarily responsible for this 25-percent increase?

Dr. CARMICHAEL. Senator, the new buildings.

Senator DWORSHAK. The new buildings?

Dr. CARMICHAEL. Yes, sir.

Senator DWORSHAK. You need more personnel?

Dr. CARMICHAEL. Yes, sir.

Senator DWORSHAK. Well, I guess if Congress wants you to expand your activities and implement the activities and the displays in the new buildings, you have no other alternative. It seems peculiar that we are expanding all of these activities at a time when we are facing so much difficulty with our fiscal policies, but I guess that is not your responsibility.

BOARD OF REGENTS

That is the responsibility of Congress. You have a Board that outlines your policies?

Dr. CARMICHAEL. Yes, we do, sir.

Senator DWORSHAK. How many persons are on that Board?

Dr. CARMICHAEL. On the Board of Regents there are three Members of the Senate, three Members of the House, the Vice President, the Chief Justice, and six other citizens.

Senator DWORSHAK. How often do they meet?

Dr. CARMICHAEL. They meet on special call. They meet always twice a year and there is an executive committee that meets at other times.

Senator DWORSHAK. These six citizens come from outside of Washington?

Dr. CARMICHAEL. Yes, sir. There are two from the District by law. Two are from the District.

Senator DWORSHAK. So you do have this advisory group to help you on your planning?

Dr. CARMICHAEL. Yes, sir.

Senator DWORSHAK. I think that is all, Mr. Chairman. Thank you.

Chairman HAYDEN. If there are no further questions the committee will stand adjourned until 10:30 Thursday, March 8, when we will hear Indian health activities, the National Capital Planning Commission, and the National Capital Transportation Administration.

(Whereupon, at 10 noon Wednesday, March 7, 1962, the subcommittee was recessed, to be reconvened at 10:30 a.m. of the following day, Thursday, March 8, 1962.)

DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES APPROPRIATIONS, 1963

THURSDAY, MARCH 8, 1962

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, D.C.

The subcommittee met, pursuant to recess, at 10:30 a.m., in room 1223, New Senate Office Building, Hon. Carl Hayden, chairman, presiding.

Present: Chairman Hayden, Senators Bible, Byrd, Mundt, and Dworshak.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

PUBLIC HEALTH SERVICE

INDIAN HEALTH ACTIVITIES

STATEMENTS OF DR. JAMES R. SHAW, CHIEF, DIVISION OF INDIAN HEALTH, ACCOMPANIED BY HENRY V. CHADWICK, ASSISTANT EXECUTIVE OFFICER, DIVISION OF INDIAN HEALTH; GEORGE L. READ, CHIEF, CONSTRUCTION AND MAINTENANCE BRANCH, DIVISION OF INDIAN HEALTH; ALBERT H. STEVENSON, CHIEF, ENVIRONMENTAL SANITATION BRANCH, DIVISION OF INDIAN HEALTH; DR. JAMES V. LOWRY, CHIEF, BUREAU OF MEDICAL SERVICES; DR. JOHN D. PORTERFIELD, DEPUTY SURGEON GENERAL; AND LOYAL C. FISHER, DEPUTY DEPARTMENT BUDGET OFFICER

JUSTIFICATIONS

Chairman HAYDEN. The committee will come to order.

The budget estimate for Indian health activities in fiscal year 1963 is $55,834,000. This is $2,557,000 more than the amount available in fiscal year 1962, including a supplemental appropriation of $267,000 for wage board increases. The justifications for this estimate will be placed in the record.

(The justifications referred to follow:)

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE, PUBLIC HEALTH SERVICE

Indian health activities—Amounts available for obligation

	1962	1963
Appropriation	$53,010,000	$55,834,000
Transferred to "Operating expenses, PBS, GSA"	−44,427	
Appropriation adjusted	52,965,573	55,834,000
Supplemental required for wage board increases proposed for separate transmittal	267,000	
Applied to contract authorization	−435,330	−435,330
Contract authorization	435,330	
Total obligations	53,232,573	55,398,670

Subtotal	54,069,573	56,241,670	+2,172,097
Deduct quarters and subsistence charges	837,000	843,000	6,000
Total obligations by object	[1] 53,232,573	55,398,670	+2,166,097

[1] Includes $267,000 for wage board increases proposed for later transmission. Excludes $44,427 transferred to Public Buildings Service, General Services Administration (object 23).

Summary of changes

1962 appropriation	$53, 010, 000
Liquidation of 1961 contract authorization	−435, 330
1962 contract authorization (for 1963)	435, 330
1962 supplemental	267, 000
Transfer to PBS, GSA	−44, 427
1962 available for obligation	53, 232, 573
1963 appropriation request	55, 834, 000
Liquidation of 1962 contract authorization	−435, 330
1963 available for obligation	55, 398, 670
Net change requested	+2, 166, 097

DECREASES

Savings resulting from conversion of hospital at Poplar, Mont. (31 positions)	−238, 000
Anticipated wage board increases reflected in 1962 requirements but not budgeted for in 1963	−147, 000
Elimination of contract authorization	−435, 330
Total decreases	−820, 330

INCREASES

A. "Built-in":	
Statutory salary increases (hospital health $80,000; field health $33,000; administration $5,000)	118, 000
Increases in FICA tax requirements (hospital health $6,000; field health $3,000)	9, 000
Subtotal, "Built-in"	127, 000
B. Program increases:	
1. Hospital health services:	
(*a*) Increase for upgrading quality of care; to maintain and seek accreditation of hospitals; increased workload and change of average daily patient load compositions (51 positions which includes 31 positions reprogramed from Poplar)	565, 000
(*b*) Increase for maintenance and repair program for all facilities	283, 000
(*c*) Increase to cover advance purchases for Alaska	550, 000
2. Contract patient care: Increases for contractual services with hospitals and physicians	932, 000
3. Field health services: Increases for expansion of present program	529, 427
Subtotal, program increases	2, 859, 427
Total increases	2, 986, 427
Total change requested	+2, 166, 097

* * * * * * *

Funds in the amount of $55,834,000 are requested for fiscal year 1963 to provide medical care and public health services for approximately 380,000 Indian and Alaska native beneficiaries. In 1963, services will be provided directly by the Public Health Service through a system of 50 hospitals, and through field helath installations and outpatient field stations, and at Indian schools. Where it is to the advantage of the Indians served or where the Public Health Service facilities are limited, inadequate or altogether lacking, services are provided through contractual arrangements with non-Federal hospitals, private physicians and dentists, and State and local health and welfare agencies.

To meet the increasing demand and need for curative and preventive health services, and to treat the backlog of disabilities and crippling conditions uncovered

through case finding and expanded diagnostic services, thereby helping to achieve the goal of the program—a level of Indian health comparable to that of the general population, it is requested that $55,834,000 be made available in 1963 for Indian health activities. This will provide for general program expansion of $2,166,097 over the 1962 level, and will permit liquidation of the obligations incurred in 1962 for purchase of a supply inventory necessary to support the Alaskan activities.

The 1961 experience for utilities and several other items of a mandatory nature of expense exceeded the level anticipated in the 1962 budget. These increased costs resulted in a net loss of 48 positions that were contained in the 1962 appropriation. The 1963 budget request restores these 48 positions and provides for 30 additional positions; however, the average employment in the 1963 budget reflects no increase over the level originally contained in the 1962 appropriation.

There follows a discussion by activity.

Hospital health services

	1962 estimate		1963 estimate		Increase (+) or decrease (−)	
	Positions	Net cost	Positions	Net cost	Positions	Net cost
Personnel compensation and benefits	4,273	[1] $24,796,000	4,293	[2] $24,864,000	+20	[2] +$68,000
Travel and transportation of persons		779,000		796,000		+17,000
Transportation of things		561,000		589,201		+28,201
Rent, communications, and utilities		1,213,000		1,257,000		+44,000
Printing and reproduction		21,000		21,000		
Other services		1,438,000		1,596,000		+158,000
Supplies and materials		4,142,000		4,449,277		+307,277
Equipment		550,000		595,192		+45,192
Deduct quarters and subsistence charges		−754,000		−758,000		−4,000
Total obligations		32,746,000		33,409,670		+663,670
Applied to contract authorization		+435,330		+435,330		
Contract authorization		−435,330				+435,330
Add amount transferred to PBS, GSA		+17,000				−17,000
Appropriation estimate		32,763,000		33,845,000		+1,082,000

[1] Includes $267,000 for wage board increases for which a supplemental estimate is proposed for separate transmittal. Wage board increases occurring in 1962 are estimated to total $369,000. Through the application of anticipated savings of $102,000 during the year, it will be necessary to request only $267,000 for this purpose.

[2] Excludes $147,000 required in 1963 for unbudgeted wage board increases.

The Hospital Health Services request of $33,845,000 includes $435,330 for liquidation of 1962 contract authority obligated in 1962 for the 1963 program, and an increase of $663,670 in new program over 1962, providing (1) for the operation of 50 Public Health Service Indian hospitals including outpatient clinics, (2) for the practical nurse training program, and (3) for the maintenance of the complete Indian health plant consisting of hospitals, health centers, and stations, school clinics, and staff quarters. It reflects the conversion during fiscal year 1962 of the Indian hospital at Poplar, Mont., and Shawnee, Okla., (originally scheduled for conversion by beginning of fiscal year 1962); it further provides for the opening and full operation of the new 36-bed replacement hospital at San Carlos, Ariz., scheduled for opening in 1962.

The program increase for 1963 is requested for (1) a change of workload as follows: (*a*) an increase of 25,550 patient days, (*b*) substitution of 16,425 general patient days for a like number of tuberculosis patient days, (*c*) an increase of 19,000 outpatient visits; (2) opening and operation of San Carlos hospital; (3) increased staffing requirements; (4) maintenance and repair costs for physical facilities which have been added since transfer of the program to the Public Health Service, and to reduce the backlog for other facilities; (5) equipment needs; (6) statutory promotions and increased FICA requirements; and (7) funds to be applied for 1964 advance purchases in Alaska.

The anticipated increase in admissions (estimated 5,100 in 1963 over 1962 and continuing rising demands for therapeutic and preventive services in the outpa-

tient clinics of hospitals (estimated increase of 19,000 visits in 1963) will require increases for personal services, drugs, laundry, medical and subsistence supplies.

Personnel compensation and benefits

An increase of $68,000 is proposed for this purpose in 1963. Through adjustment for closure of the Poplar hospital and with provision during 1963 for support of wage board presently unbudgeted, it will be possible to provide 20 additional positions and utilize the 22 Poplar positions in other vital program areas.

The opening and full operation of the new replacement hospital at San Carlos, Ariz., together with increased workload of inpatient days and outpatient visits at this and other DIH hospitals makes necessary the gross position increase of 51. With the closure of Poplar, Mont., hospital in 1962, 31 positions are available for utilization in other hospitals.

Fifteen of these 51 positions will be required at the new San Carlos hospital and the balance of 36 will be assigned to other hospitals on the basis of increased workload or special operating requirements. A listing of these supportive personnel follows: 20 nursing personnel, 20 dietetic assistants, 7 medical record personnel, 1 pharmacy officer, 1 medical social worker, and 2 maintenance workers.

After adjusting the total hospital health employment for the area office and outpatient activities, the request for 1963 provides for a total of 3,391 man-years for hospital inpatient activities. Based on the 1963 esimated average daily patient load of 2,320, the overall employee per patient ratio is 146 employees per 100 patients.

By comparison, the AHA Hospital Guide Issue (dated August 1, 1961) shows that voluntary short-term general hospitals, all sizes, reported an average of 232 employees per 100 patients. It should be noted that the ratio for Public Health Service Indian hospitals includes physicians while the ratio cited for voluntary general hospitals excludes physicians. Also that the majority of the Indian hospitals are of a very small bed capacity having a very acute patient load wirh a relatively large pediatric load.

Travel and transportation of persons

An increase of $17,000 is requested for (1) increase in patient and escort travel resulting from the estimated increase in hospital loads and admissions, and (2) increased staff.

Transportation of things

The increase requested of $28,201 includes (1) $10,000 to cover additional shipment of household goods, supplies and equipment resulting from requested program increase; (2) $17,000 for the increased maintenance and repair program discussed below; and (3) $1,201 for advanced procurement authority also discussed below.

Rent, communications, and utilities

The increases requested under this category include $10,000 for communications and $34,000 for utilities. This slight increase for communications is required as a result of the installation of modern communications systems at the new and modernized hospitals. Utility increases are required as a result of additional hospital floor space and additional reimbursements to Bureau of Indian Affairs for heat, light and power.

Other services

The increase of $158,000 for this object of expense includes $138,000 for the maintenance and repair program. The balance of $20,000 is requested for laundry service to cover additional requirements for the increased average daily inpatient and outpatient loads.

Supplies and materials

The increase requested ot $307,277 is comprised of (1) $102,000 for the maintenance and repair program; (2) $103,277 for advance procurement; and (3) $102,000 for the following: (*a*) drugs and medical supplies, $45,000; (*b*) subsistence, $26,000; (*c*) fuel, $10,000; and (*d*) all other supplies, $21,000. These increases are necessary to cover the additional average daily patient load and outpatient workloads.

Drugs costs are computed on the basis of $0.45 per inpatient day and $0.75 per outpatient visits. Medical supplies are computed on the basis of $0.55 per inpatient day and $0.35 per outpatient visit. Subsistence costs are computed on the basis of $0.97 per ration for U.S. hospitals and $1.06 per ration for Alaska.

80391—62——52

Equipment

The requested increase of $45,192 includes (1) $26,000 for the maintenance and repair program; (2) $10,192 for advance procurement; and (3) $9,000 for equipment for additional personnel requested in this estimate.

Quarters, subsistence, and laundry

An anticipated increase in quarters, subsistence, and laundry deductions of $4,000 will offset the above increases.

Maintenance and repair, increase of $283,000

The request for fiscal year 1963 in the amount of $1,310,000 represents an increase of $283,000 over the 1962 level.

Since the transfer of health facilities to the Public Health Service in 1955, the gross square footage of structures has increased by over 42 percent, or about 1,335,000 square feet to a total in excess of 4,460,000 square feet. However, funds authorized for the maintenance and repair program have remained practically constant since 1956. The increase includes approximately 220,000 square feet of housing consisting of World War II surplus prefabricated housing moved from Camp Pickett, and similar housing relocated by the Public Health Service as a temporary measure.

A large number of the buildings are very expensive to maintain. Of the total square footage, 26 percent is for Alaska.

Approximately 17 percent of the square footage is over 30 years old.

Approximately 60 percent of the square footage is over 20 years old.

The $1,310,000 requested is not only for the regular maintenance of structures and for roads, walks, grounds, sewer systems, water distribution systems, sewage and water treatment plants and other utilities, but is needed to help reduce the large backlog of deferred repairs.

Advance purchases, increase of $114,670

Fifty-eight Statutes, page 266, and title 42, United States Code, section 2001, provide obligating authority for advance purchases for Alaska. Thus, for example, in fiscal year 1962 obligations would be incurred against the 1963 anticipated appropriation. This procedure requires apportionment of funds prior to the actual appropriation, and complicates the format of the budget and fiscal reports.

In order to eliminate the necessity for requesting advanced authority, $550,000 is included in the 1963 estimate.

Summary of changes

	Positions	Amount
Decreases:		
Savings resulting from hospital conversion at Poplar	−31	−$238,000
Elimination of contract authorization		−435,330
Anticipated wage board increases reflected in 1962 requirements but not budgeted in 1963		−147,000
Total decreases		−820,330
Increases:		
Mandatory items:		
Statutory salary increases		80,000
Increase for FICA rate increase		6,000
Program increases:		
Maintenance and repair increases		283,000
Increase for advance purchases		550,000
Increase for hospital operations—includes reprograming of Poplar funds and positions	51	565,000
Total increases	51	1,484,000
Net increases	20	663,670

The contract patient care program is an essential element in the total medical care program for Indian and Alaska native beneficiaries. It provides the mechanism whereby under contractual arrangements community hospitals, private physicians, and dentists render hospital, medical, and dental care services not available through our direct program. This permits extension of medical care services to areas which could not practically or economically be provided through direct program. Indian beneficiaries of the program are widely scattered and frequently live in small groups near non-Indian communities having adequate health sources available. Rather than provide medical care services at high cost through a direct program, services are purchased through the contract program. Further, there is a need for specialized diagnostic and therapeutic services which cannot be provided in many of our small hospitals at a reasonable cost. Contract funds are also required to provide for emergency hospitalization and medical care in situations where a Public Health Service Indian hospital is not readily accessible. As the Indian health program of the Public Health Service does not include operation of psychiatric facilities, all psychiatric care is provided under the contract patient care program.

As a matter of policy in locations reasonably close to our Indian reservation populations, the Service attempts to utilize community medical care services when they are available and adequate in quantity and quality to meet the special needs of Indians and when such services will be accepted by our Indian beneficiaries. Use of community facilities is an important step in the acculturation process since it permits the Indian to familiarize himself with and utilize community services and at the same time give the community an opportunity to understand and adjust to the special health needs of Indians. The Public Health Service plans to further extend the use of community medical services in meeting Indian health needs.

The appropriation in 1962 for the contract patient care program provides a $500,000 increase over the President's budget. This increase was allowed for treatment of nonemergent cases. These funds are being used as indicated by the Congress.

For fiscal year 1963, it is planned to further shift the emphasis in contract patient care from purely emergency care that fund limitations have imposed on

this activity to a more comprehensive program which will provide hospital and medical care for the type of cases which have been classified as being nonemergent.

Secondly, it will also be necessary to readjust the program in consideration of the new and modernized hospitals of the direct operations. To a certain degree these new and modernized facilities will be able to adequately serve cases heretofore required to be covered by the contract patient care program. However, referrals of more complicated cases developed through these direct facilities will require more highly specialized and more costly contract services.

Thirdly, those medical areas involving specific disease problems will be expanded. The mastoid problem, crippling conditions, and sight difficulties are examples of the special projects requiring more attention in this year.

For these purposes contract funds in the amount of $10,700,000 are requested in fiscal year 1963 representing an increase of $932,000 over the fiscal year 1962 requirements.

A table reflecting the distribution of funds, patient loads, and per diem for fiscal years 1962 and 1963 follows.

Contract patient care

	1962 estimate			1963 estimate		
	Average daily census	Rate	Amount	Average daily census	Rate	Amount
Hospitalization:						
General	462	$28.14	$4,745,200	495	$30.11	$5,440,000
Tuberculosis	200	15.47	1,129,300	190	16.30	1,130,400
Neurophsychiatric	225	5.45	447,500	225	5.84	479,600
Total	887		6,322,000	910		7,050,000
Patient and escort travel			250,000			265,000
Professional field supervision			20,000			20,000
Physicians' services (inpatient fees, office visits, consultation services)			2,146,000			2,300,000
Dental services (emergency services dental laboratory, prosthesis)			355,000			380,000
Other costs (laboratory and X-ray services, pharmaceutical, proprietary drugs for inpatients and outpatients, prosthesis, and burials)			675,000			685,000
Total			9,768,000			10,700,000

There follows a discussion of each change by major item of cost reflected in the 1963 estimate:

General hospitalization, increase of $694,800

An increase of $694,800 is requested for general patients. An estimated average of 495 general medical and surgical patients will be hospitalized in 1963, representing 33 more than the estimate for 1962. It is anticipated that 15 of the 33 increase will result from the anticipated conversion of the Poplar Hospital. Because of fund limitations, current and prior-year patient loads have been restricted to lifesaving emergencies and, consequently, a backlog of casesneeding hospitalization for elective chronic and rehabilitative conditions has been built up. Unless service is furnished within a reasonable time, these elective conditions will develop into acute emergencies. The $500,000 which was added by Congress to the 1962 request will provide in part for the surgical cases which have hitherto been deferred as nonemergent. The projected need for funds to continue to care for deferred surgical cases, the need for concentration on the reconstructive rehabilitation cases, and the chronic electives noted, plus an anticipated rate increase will require the additional funds requested for 1963. The estimate for 1963 provides for an average daily patient cost of $30.11, which is an increase of 7 percent over, 1962. Current experience shows increased costs in 1961 over 1960 of approximately 7 percent, which is the basis for the 1962 and 1963 projections.

Tuberculosis hospitalization, increase of $1,100

An increase of $1,100 is requested for tuberculosis patients. It is estimated that an average of 190 tuberculosis patients will be hospitalized in 1963, which is 10 less than the estimate for 1962. The fund increase of $1,100 as related to a decreased average daily patient load is attributable to an anticipated $0.83 or

5-percent increase in the per diem rate in 1963 over 1962. The estimate for 1962 provides for a 5-percent increase in per diem rate over the 1961 experience. The 5-percent increase for both 1962 and 1963 is considered quite conservative in that the 1963 experience over 1960 was 11 percent. The rate increase in 1962 and 1961 is further justified by having a fewer number of patients. The contracts for tuberculosis patients are negotiated on a sliding scale whereby less patient volume results in higher per diem costs.

Neuropsychiatric hospitalization, increase of $32,100

An increase of $32,100 is requested for neuropsychiatric patients. It is estimated that an average of 225 neuropsychiatric patients will be hospitalized in 1963, which is at the same level as estimated for 1962. The increase in funds is attributable to an anticipated $0.39 or 7-percent increase in the per diem rate in 1963 over 1962. The estimate as presented for 1962 provides for a 7-percent increase in per diem rate as compared with the 1961 experience. The 7-percent rate increase for both 1962 and 1963 is considered conservative in that the 1961 experience over 1960 was 11 percent. Care of psychiatric patients is provided entirely through contractual arrangements as the Division of Indian Health has no facilities to care for this category of patient.

Patient-escort travel, increase of $15,000

An increase of 33 general medical and surgical patients per day in 1963 will require an estimated additional $15,000 for patient and escort travel. Careful attention to methods of transportation of the planned movement of patients as against the primarily emergency transportation heretofore required is expected to assist in containing this cost item within the amount requested.

Physicians' services, increase of $154,000

Physicians' services through contractual arrangements are funded under this activity. Funds budgeted under this item are for payment for services rendered by high cost specialists and consultants for hospitalized cases as well as for reimbursement for emergency and routine office, home, and other outpatient care. The request for additional funds of $154,000 reflects rising costs of medical care.

Dental services, increase of $25,000

In areas where it is not practical to provide dental services by direct operation and where it is possible to obtain the services of private dentists, emergency dental care for children and adults and limited preventive care for children has been provided through the contract program. Current evaluation of need indicates that increasing costs will necessitate an additional amount of $25,000 to maintain current program levels and provide adequate care on even a limited basis.

Other costs, increase of $10,000

The services funded under this item include laboratory and X-ray, drugs, antibiotics, medical supplies, prostheses and burials as well as those ancillary services such as physical therapy and rehabilitation and other treatment services not provided personally by a physician. An increase of $10,000 is requested.

Field health services

	1962 estimate		1963 estimate		Increase (+) or decrease (−)	
	Positions	Net cost	Positions	Net cost	Positions	Net cost
Personnel compensation and benefits	1,027	$6,506,000	1,085	$6,834,000	+58	+$328,000
Travel and transportation of persons	--------	543,000	--------	578,000	--------	+35,000
Transportation of things	--------	175,000	--------	187,000	--------	+12,000
Rent, communications, and utilities	--------	284,573	--------	321,000	--------	+36,427
Printing and reproduction	--------	27,000	--------	27,000	--------	--------
Other services	--------	878,000	--------	930,000	--------	+52,000
Supplies and materials	--------	685,000	--------	743,000	--------	+58,000
Equipment	--------	206,000	--------	252,000	--------	+46,000
Deduct quarters and subsistence charges	--------	−83,000	--------	−85,000	--------	−2,000
Total, field health services	--------	9,221,573	--------	9,787,000	--------	+565,427

Field health services consist of comprehensive public health services including sanitation services, dental services, public health nursing, health education, and field medical services, all based on ambulatory medical care and modern preventive health measures. These field activities are necessary if we are to raise the level of health among Indians which, because of isolation, insanitary conditions, lack of understanding of health and modern health practices and lack of medical care resources, is considerably below that in the general population.

In order to make the services available to the Indians, in their widely scattered homes or in their small isolated communities, it is necessary to locate the health centers and stations through which the services are provided in the same remote areas.

Many field facilities are staffed only part time by traveling teams of medical and allied health personnel providing diagnostic, curative, and preventive health services. Some specialists are available to provide maternal and child health services and consultation in such fields as communicable diseases, congenital and orthopedic afflictions and eye diseases.

This program provides case finding, diagnosis, and treatment in the field and followup on previously hospitalized cases. These services provide a base for encouraging the acceptance in the field and in the home of the allied preventive health services. In addition, contracts are negotiated with State and local health departments to provide public health services in those situations in which such services are available for purchase and in which it is not practical to provide them directly.

Funds and positions for the five major subactivities under "Field health services" follow:

	1962 estimate		1963 estimate		Increase (+) or decrease (−)	
	Positions	Net cost	Positions	Net cost	Positions	Net cost
Sanitation services	163	$1,438,000	163	$1,448,000		+$10,000
Dental services	186	1,527,000	196	1,629,000	+10	+102,000
Public health nursing	179	1,514,000	190	1,592,000	+11	+78,000
Health education	51	483,000	51	483,000		
Field medical services	448	4,259,573	485	4,635,000	+37	+375,427
Total	1,027	9,221,573	1,085	9,787,000	+58	+565,427

There follows a discussion by each subactivity.

Sanitation services (increase of $10,000)

Gross insanitary conditions and practices in the Indian home and community continue to be a major cause of the high incidence and death rate from preventable diseases, particularly among infants. Although increased attention to this problem has been shown by the Indian people, lack of proximate safe water supplies for domestic use; improper and often nonexistent facilities for satisfactory disposal of wastes; overcrowded and poorly constructed housing; and environmental conditions conducive to stimulation of insect and rodent problems continue to exist. These conditions are in large measure responsible for diseases such as infant diarrhea and dysentery, respiratory ailments, and infectious hepatitis which continue to be a significant patent load at the Public Health Service Indian hospitals, contract facilities, and clinics as well as the cause of sporadic epidemics on Indian reservations.

Following enactment of Public Law 86-121, the Indian Sanitation Facilities Act, a coordinated tribal-Federal attack on the correction of gross deficiencies in domestic and community water supplies, waste disposal systems, and other essential sanitation facilities has been carried out. Indian participation is obtained in project planning, in project execution, and in assumption of responsibility for operation and maintenance of completed facilities. This has resulted in a major shift in program emphasis; the staff time devoted to the activity is reflected by Indian acceptance and participation in the program which is being effectively demonstrated.

Engineering plans have been completed on almost all 46 projects budgeted in fiscal year 1961 and construction work is well underway on 39 projects. On the Navajo Reservation alone, 341 shallow well and spring communal water supply projects were completed this year at tribal expense under the technical direction of Public Health Service staff.

The sanitarian aid program now in its ninth year, in which Indians are trained in the basic elements of sanitation and then impart this knowledge to their own people has been productive. Seventy-four full-time aids are employed on Indian reservations. Under a contractual arrangement with the Alaska Department of Health and Welfare, 19 part-time Alaska natives are engaged in similar work in native villages.

Through the educational and technical efforts of this staff, in fiscal year 1961, individual Indian families and groups were motivated and assisted in obtaining improvement and installation of 1,651 domestic water sources, 774 water storage facilities, 1,439 sanitary pit privies or individual sewerage systems at Indian homes and gathering points, and 1,078 refuse disposals facilities.

Also, comprehensive surveys were made at 9,962 Indian homes. More than 1,200 health nuisances were investigated and some 652 were abated. Fly control demonstration work was carried out on 7,268 Indian premises, with emphasis on shift of responsibility for this activity to individual families and communities. About 200 insect breeding places and rat harborages were eliminated. Sanitation films were shown and demonstrations given at 1,211 public meetings and ceremonials attended by 87,702 Indians.

Tribal governing bodies have shown an increased interest in the adoption of sanitary codes applicable to conditions on Indian reservations. Professional sanitation staff has assisted in the development of these codes and in the provision of sanitary inspectional services at trading posts and other establishments serving Indian populations. Environmental health surveys are made on the adequacy of sanitary facilities and practices related to the operation of schools, hospitals, and other installations serving the Indian people. Food sanitation training courses were conducted for staff at such facilities.

The appropriation in 1962 for the sanitation activity provided an $80,000 increase over the President's budget to provide staff and related expense to implement projects made possible by the $1 million increase allowed in the construction budget for sanitation projects. This $80,000 increase is being used to finance these positions.

The increase of $10,000 requested for 1963 is primarily for mandatory increases.

Funds are included for one replacement passenger-carrying vehicle.

Dental services, increase of $102,000 and 10 positions

During fiscal year 1961, 83,515 patients received 324,563 dental treatments for an average of 3.9 per patient. Of an estimated 380,000 beneficiary population approximately 22 percent received 54.1 percent of their required dental care. This program has been carried on with a dentist to beneficiary population ratio of 1 to 4,268. The deplorable oral health conditions of these people are largely due to their lack of understanding of the measures that may be taken to prevent dental disease plus the fact that dental care is frequently not attainable except at great sacrifice. These figures, when translated into pain, suffering, and disfiguration, indicate the results of continual neglect of conditions that might be prevented.

Over the last 6 years there has been an appreciable expansion in the quantity and quality of corrective, preventive, and educational services. During fiscal year 1961, more than 12,500 children received preventive services in the form of topical fluoride applications. Dental health information was disseminated at an impressive rate considering the difficulty inherent in such a program, the size of the staff, and the lack of dental health education specialists. A marked increase in effective preventive and oral health education measures must be directed toward the preschool, school-age children and young parents. The dental hygienist with a degree in education will most effectively and economically provide such services.

The above is a clear indication of the large volume of dental care being rendered and of the tremendous amount of unmet needs. In view of these needs, an increase in funds of $102,000 over fiscal year 1962 is requested for fiscal year 1963. The proposed increase is to cover 10 additional positions for the provision of corrective, preventive, and educational services.

The 10 positions include 4 dental officers to provide dental services on an itinerant basis in remote areas, to augment the staffs of certain facilities where the present staffing is inadequate numerically, and to inaugurate and carry on a preventive and corrective orthodontic program.

Four dental assistants are included within the 10-position figure. One will be assigned to each of the four new dental officers. One position of dental hygienist is requested to coordinate and offer consultation for the preventive and oral health education program and one clerical position is also requested.

Funds are included for one replacement passenger-carrying vehicle.

Public health nursing, increase of $78,000 and 11 positions

Public health nurses with their special preparation and experiences bring competencies and technical skills which no other discipline can provide as efficiently. Moreover, they support and increase the effectiveness of all other services in the Indian health program. Public health nurses in the Indian health program are distinctive in that much of their work takes place in the homes of Indians. Working closely with family units, public health nurses develop strong relationships based on confidence and deliverance of nursing care. In this media they become highly effective in helping Indians to understand the principles of healthful living and learn how to apply them.

In addition to nursing in homes, clinics, schools, and health centers they teach and counsel individuals and groups. In all phases of their work emphasis is placed on the prevention of disease, the promotion of health, and rehabilitative measures. A major mission is to increase the competency of the individual, the family, and the community to more adequately participate in the resolution of their own health problems.

The increase requested for 1963 provides for 11 additional positions including 2 public health nurses, 3 clerks, and 6 trained Indian practical nurses. The trained Indian practical nurses bring to the program a group of workers already adjusted to various Indian cultural patterns, and aware of the health problems of their own people. These attributes can be effective forces in attacking health problems and in improving health conditions of Indian beneficiaries.

This minimum number of nursing personnel will help stregthen and realine the public health nursing program to accelerate services in connection with accident prevention, mental health, school health, maternal and child care, crippled children services, rehabilitation, trachoma and tuberculosis control, to provide followup nursing care to patients discharged from hospitals including contract facilities, and to expand nursing services into locations not now being served.

This increase is required to provide more constant and adequate nursing services on a more equitable population basis. For example, only 20 public health nurses are serving the 75,000 Navajo at a ratio of 1 public health nurse to 3,750 beneficiaries in comparison to the requirement of 1 to 1,200 beneficiaries. The supporting staff requested will relieve public health nurses of clerical and other nonnursing functions and thereby increase services in homes, schools, clinics, and health centers.

Funds are included for two new passenger-carrying vehicles.

Health education, no increase

Attention to health education is vital to achievement of improved Indian health. Since the control of disease and the improvement of health depends in a large measure on the degree of understanding and action by the beneficiaries and their leaders, it is extremely important that we provide them with knowledge of how to keep themselves healthy and to find ways for making the changes in health practices desirable and practical. This requires more than generalized information. It requires special adaptations of materials and services to the unique needs of the various Indian groups.

Health education is adapted to the numerous variations in community life, economics, language, and cultural differences which characterize the Indian people. The effectiveness of the program has been demonstrated on a number of reservations. The following steps have been taken to establish and to maintain a health education program to help the Indians contribute their share toward reversing the negative balance in Indian health:

(1) New kinds of health education services have been developed and made a part of the direct service operation at several levels; community health workers introduced in 1956 represent 34 of the 47 positions in 1962. The majority of the community health workers are of Indian descent. In Indian communities where language differences continue to be a problem, bilingual community health education aid positions were established in 1957.

(2) Educational materials directed toward diarrhea, tuberculosis, trachoma control, nutrition, and sanitation have been produced through the visual education program which was initiated on a small scale in 1958. The services have resulted in direct collaboration with tribal groups in developing specialized educational material.

Funds are included for four new passenger-carrying vehicles.

Field medical services, increase of $375,427 and 37 positions

The field medical services program provides medical care and preventive health services in facilities located as close as practicable to the widely scattered and isolated groups of Indians and Alaska natives.

The basic services consist of case finding, diagnosis, outpatient treatment, referrals for specialized care and followup on cases previously treated. In addition, some specialized clinics are held for well babies and for giving immunizations; efforts are made to provide prenatal and postnatal care to all maternity patients and infants; and special programs such as detection and outpatient treatment of diabetes are conducted.

The facilities in which these services are provided include 22 field health centers (includes Poplar), BIA boarding and day schools, and numerous health stations and locations. The health centers are staffed with full-time medical officers, nurses, nursing assistants, pharmacists, laboratory and X-ray technicians, clerical assistants, drivers-interpreters, and maintenance personnel. Medical social workers and nutritionists are among the consultants whose services are available on a part-time basis. The health centers and stations also provide office and work space as well as supporting services for other personnel such as sanitarians, public health nurses, dental officers, and community workers. The medical officer in charge of the health center coordinates the services provided by the entire staff.

Some of the BIA boarding schools have staffs and facilities for infirmary-type care but most of them have limited staff of nursing and clerical personnel only. Medical care and additional preventive health services are provided in the smaller boarding schools and many of the day schools by scheduled visits of medical officers and other health personnel from Division of Indian Health hospitals, health centers, or by contractual arrangements with medical personnel in nearby communities.

Health stations are small facilities usually with no full-time staff, in which health services are provided on schedule by itinerant teams of medical personnel. These stations are located near small groups of Indians who otherwise would be without health services or medical care except by traveling excessive distances. The schedule of services may vary from several visits a week to a health station near a busy trading post to once a year to a health station in a remote village in Alaska.

Through these facilities, the field medical services program extends preventive health services and ambulatory medical care to those beneficiaries who live beyond reasonable travel distance of hospitals or community medical resources and to more than 40,000 children in Federal (includes boarding and day schools), mission, and other nonpublic schools.

Outpatient clinic visits for therapeutic and preventive services at Indian health centers and health stations including BIA schools follow:

Actual, 1960	236,700
Actual, 1961	257,384
Estimated, 1962	[1] 241,000
Estimated, 1963	[2] 259,000

[1] Excludes Gallup and Sells which are now outpatient departments at the hospitals.
[2] Reflects conversion of Poplar to health center in 1963.

AMBULATORY MEDICAL CARE AND PREVENTIVE HEALTH SERVICES

There is an urgent need to strengthen and extend these services. Infant morbidity and mortality remain high in many areas; numerous eye and ear defects remain undiagnosed and untreated; protection against communicable and infectious diseases is far from complete; many medical emergencies occur which might be prevented by earlier detection and treatment if more field staff were available.

With the opening of new and remodeled Indian hospitals and with some increases in contract funds we now are in position to meet more of the medical needs of larger numbers of beneficiaries. Therefore, it is increasingly important that field activities be intensified; that more of the beneficiary population be medically screened; that case-finding activities be increased; that treatment be initiated before emergencies develop; that cases be referred promptly for further diagnosis or hospitalization; and that adequate followup be maintained on all cases requiring continued medical surveillance.

An increase in funds of $287,427 is requested to provide 24 additional positions including 2 medical officers, 4 nurses, 3 nurse assistants, 1 laboratory technician, 11 clerks, 2 maintenance personnel, and 1 administrative position, to provide them with supplies and means of transportation, and to equip the field facilities.

Many field facilities still lack basic items such as scales, examining tables, ophthalmoscopes, laboratory equipment, and even privacy screens. Much of the existing equipment is obsolete.

The Poplar Health Center which is planned as a field health operation in 1963 will require $88,000 and 13 positions—2 medical officers, 1 pharmacist, 1 medical social worker, 1 laboratory and X-ray technician, 2 nurses, 3 clerks, and 3 driver maintenance personnel.

NUTRITION

The possible improvement in the level of health of Indians is in direct proportion to the improvement in nutritional status which can be achieved. Poorly nourished body tissues neither resist disease nor promote health. Special emphasis needs to be directed toward correcting the existing malnutrition.

The President's program has specified the need for and importance of improving the nutritional quality of the diets of Americans, particularly those in the lower income groups. Indians and Alaska natives fall in this category. The Public Health Service Indian health program provides the only trained nutritionists available to work with Indians and Eskimos on this part of the President's program. The 1962 level of staffing is planned for 1963.

MEDICAL SOCIAL SERVICES

For many illnesses, experience has demonstrated that without a resolution of medical social problems there are both reduced effectiveness and increased costs of medical care. To assist in the reduction of critical Indian health problems such as repeated hospital admissions, to preplan hospital discharges for the aged, and to arrange for rehabilitation services, medical social services are essential. Medical social workers are also helpful in the establishment of procedures whereby Indians may be assisted to utilize the services of public and special agency resources. Where there are shifts in the way medical care is to be provided, for example, from the operation of a Public Health Service Indian facility to contractual arrangements with physicians and hospitals, the medical social worker assists in the adjustment to the transition. The 1962 level of staffing is planned for 1963.

PUBLIC HEALTH CONTRACTS

In fiscal year 1961 the Division had 18 contracts with State and local health departments for public health services in those areas where services were available for purchase and where it was not practical for Division employees to provide them. The 1962 level of public health contract services is planned for 1963.

TRACHOMA

It has been demonstrated that trachoma, a disease resulting in impaired vision and blindness, has a high prevalence in several Indian groups. It can be diagnosed by trained clinicians and brought under control by proper treatment. It is now evident that we must engage in a continuing, long-term program if this disease is to be reduced to a minimum level and prevented from again spreading among our beneficiaries. The 1962 level of funds is requested to continue the clinical training for Public Health Service Indian health physicians, and to provide the necessary screening, diagnostic treatment, and followup activities.

TRAINING

The need for training is made more acute by the special health problems of the Indians. The full-time training of medical officers in Public Health Administration, the short-term training in obstetrics and pediatrics, and the training courses for other health personnel will be continued at the 1962 level.

A summary of the increased funds and the positions requested by program under field medical services follows:

	Positions	Amount
Ambulatory medical care and preventive health services (excluding Poplar)	24	$287,427
Poplar Health Center	13	88,000
Total	37	375,427

NOTE.—Funds are included for 5 replacement passenger-carrying vehicles.

Administration

	1962 estimate		1963 estimate		Increase (+) or decrease (−)	
	Positions	Net cost	Positions	Net cost	Positions	Net cost
Personnel compensation and benefits	154	$1,276,000	154	$1,281,000		+$5,000

Transportation of things		9,000		9,000		
Rent, communications, and utilities		31,000		31,000		
Printing and reproduction		17,000		17,000		
Other services		36,000		36,000		
Supplies and materials		23,000		23,000		
Equipment		16,000		16,000		
Total		1,497,000		1,502,000		+5,000

All Headquarters Division of Indian health staff required to effectively direct a widely dispersed and extremely complex health service are funded under this title. This staff includes physicians specializing in the fields of curative and preventive health programs and supporting staff engaged in such specialized fields as nutrition, medical records, medical social work, statistics, financial management, and general services. In addition to the professional and supporting staff of the Indian health activities, the construction and engineering staff coordinate the construction program, review drawings and estimates, and act as liaison between the Division of Indian Health and the Construction Branch of the Bureau of Indian Affairs. The increase of $5,000 requested for 1963 is to cover statutory promotions.

Indian health activities—New positions requested, fiscal year 1963

	Grade	Annual salary

General Statement

Chairman Hayden. Dr. Shaw, you may proceed.

Dr. Shaw. Thank you, sir. I have two budgets and two statements which I will try and combine into one.

Chairman Hayden. They will be printed in the record.

(The information referred to appears on p. 832.)

Dr. Shaw. Public Law 568 of the 83d Congress charged the Public Health Service with the responsibility for providing to recognized Indian tribes and Alaska natives, the health and medical services required to raise their health status to a level comparable with that of the Nation as a whole. Additional authority was given under Public Law 151, 85th Congress, to provide financial assistance for the construction of community hospitals serving both Indians and non-Indians if in the opinion of the Surgeon General such construction would constitute a more effective way of providing hospital facilities for Indians.

The authority was further expanded in Public Law 121, 86th Congress, which authorized the Surgeon General to construct or otherwise provide and maintain essential sanitation facilities for Indian homes, communities, and lands.

OBJECTIVES OF INDIAN HEALTH PROGRAM

In endeavoring to carry out this responsibility the Public Health Service set the following objectives:

First, to elevate the level of health to a level comparable with the rest of the Nation.

Second, to conduct a program in such a way as to increase the Indian's own self-sufficiency and responsibility for his own well-being.

With the sympathetic support of Congress and the committees before whom we appear we are able to report further progress toward out mutual goal.

INDIAN POPULATION ON RESEVERATIONS

There are about 380,000 Indians and Alaska natives living on some 200 Federal reservations and several hundred village locations in Alaska. These population groups have unique health problems which stand out in sharp contrast to the remaining population.

HOSPITAL COMPLETIONS AND CONSTRUCTION

During the past year, three new hospitals were completed: A 200-bed regional hospital and medical center at Gallup, N. Mex.; a 50-bed general medical and surgical hospital at Kotzebue, Alaska; and a 38-bed general medical and surgical replacement hospital at Keams Canyon, Ariz.

Presently under construction is a 36-bed general hospital at San Carlos, Ariz. A contract was awarded in late February of this year (February 26, 1962) for architectural and engineering services to design the new 12-bed hospital at Barrow, Alaska.

Major modernizations of hospitals were completed last year at Pine Ridge and Rosebud, S. Dak. Major alterations are presently underway on hospitals at Cass Lake, Minn., Red Lake, Minn., and Fort

Defiance, Ariz., and planning has been completed on another at Bethel, Alaska. Twelve additional minor alteration projects have been completed and 12 more are under construction.

HEALTH STATIONS AND HOUSING

Eight new health stations are now being constructed, and site selection for the new health center at McLaughlin, S. Dak., has been made, preparatory to its acquisition.

Forty-nine units of southern zone housing for field personnel were completed in June 1961; 67 fiscal 1961 southern zone units were recently completed, 60 units are presently under construction, and the remaining 33 are either out for bids or scheduled for bidding in the near future.

COMMUNITY HOSPITALS

Funds appropriated by Congress under Public Law 85–151 are being used to construct three community hospitals serving both Indians and non-Indians. Two such hospitals have recently been completed.

SANITATION FACILITIES CONSTRUCTION

The sanitation facilities construction program began with an appropriation of $200,000 in 1960 for 37 emergency projects. A total of $2,550,000 was appropriated in 1961, and $3 million in 1962. These total funds have provided for 155 projects. Of these, 80 are essenially completed and 65 are in progress.

INDIAN CONTRIBUTION TO MAINTENANCE

Substantial assistance has been forthcoming from the Indians and Alaska natives in the way of labor, materials, services, and funds for construction and the maintenance of these projects. Such projects, by helping to correct gross environmental sanitation deficiencies, have proved a basic factor in raising the health level of our beneficiaries.

Despite the steady progress made in attaining the kind of physical plant needed to meet our medical responsibilities, the gap in essential facilities—both as to quantity and quality—remains unclosed.

CONSTRUCTION REQUESTS

To help remedy this situation, we are requesting funds in the amount of $9,220,000 for construction. This request includes $4 million for sanitation facilities, and funds for 3 hospitals (2 Indian and 1 community) and 20 units of personnel quarters.

An amount of $55,834,000 is requested to be appropriated for fiscal year 1963 for Indian health activities. This represents an increase of $2,557,000 which is a 4.8-percent increase over the 1962 appropriation, plus anticipated supplemental requirements for wage board increases. This will provide for general program expansion of approximately $1,500,000 over the 1962 level and funds of $550,000 to cover advance purchase of a supply inventory necessary to support the Alaskan activities thereby eliminating the necessity to obligate against future year's funds.

ADDITIONAL POSITIONS

The increase will provide for a net of 78 additional positions for hospital health and field health services; provision for an average of 23 additional patients to be treated in contract facilities, and 70 patients in Indian health hospitals; an increase in maintenance and repair funds; and $127,000 in mandatory items such as statutory pay increases.

CONTRACTUAL CARE

These increases are offset by $238,000 resulting from the conversion to contractual care at Poplar, Mont., and $147,000 for additional wage board increases authorized in 1962 and not reffected in 1963.

I will be happy to answer any questions the committee may have.

Chairman HAYDEN. This long statement I will put in the record.

(The statement referred to follows:)

STATEMENT BY CHIEF, DIVISION OF INDIAN HEALTH, ON "INDIAN HEALTH ACTIVITIES"

Mr. Chairman and members of the committee, under Public Law 568 (83d Cong.), the Public Health Service was charged with the responsibility for providing to all Indian tribes and Alaska natives recognized as Federal beneficiaires, the health and medical services required to raise their health status to a level comparable with that of the Nation as a whole. The act not only authorized administration of "all functions, responsibilities, authorities, and duties * * * relating to the maintenance and operation of hospital and health facilities for Indians and the conservation of Indian health," but it also provided that the Public Health Service could contract with private or non-Federal facilities for medical services if such an arrangement would better meet the health needs of the Indians.

Additional authority was given under Public Law 151 (85th Cong.) for the Public Health Service to provide financial assistance for the construction of community hospitals serving both Indians and non-Indians if, in the opinion of the Surgeon General, such construction would constitute a more effective way of providing hospital facilities for Indians.

A final piece of legislation, Public Law 121 (86th Cong.) authorized the Suregon General to "construct * * * or otherwise provide and maintain * * * essential sanitation facilities * * * for Indian homes, communities, and lands."

In endeavoring to carry out the Indian health program, the Public Health Service has set the following objectives: first, to provide health and medical services required to meet Indian needs not now met through other resources; second, to promote participation in the Indian health program by the Indians and Alaska natives, looking toward their eventual attainment of normal responsibility for effective management of their own health affairs; third, to encourage State and local governments to make available to their Indian citizens community health and medical care services of the same quality as those that are available to their non-Indian citizens.

Until these objectives are fully met, the Indian health program is the family physician, dentist, nurse, community hospital, and local health department for its beneficiaries. It is a total health responsibility for a group of beneficiaries with unique and severe health and medical care needs.

As we report on progress made in the 7 years since the program was transferred to the Public Health Service from the Bureau of Indian Affairs, Department of the Interior, we must first express our indebtedness to those who have helped us—the Congress, Indian and professional organizations, and the States and communities where the Indians live. Particularly gratifying has been the continued interest of the Congress, as evidenced by a genuine concern for the well-being of a group of disadvantaged Americans, by passage of supportive legislation subsequent to the transfer in 1955, and by the appropriation of requested funds.

In this report, we shall speak of further achievement in meeting our objectives and of improvement in both the quantity and quality of services we are providing. However, we cannot yet report we are satisfied that the Indians and Alaska natives in our charge have attained the level of health accepted as standard in the rest of

the population. Until we can so report, we must look to more and better services, more cooperative action with interested parties, and more time for further attack on the massive medical problem of this group of citizens.

THE INDIAN HEALTH PROBLEM

There are 380,000 Indians and Alaska natives who depend mainly upon the Indian health program for all types of health services. This beneficiary group is widely dispersed, living on some 200 Federal reservations and in several hundred locations in Alaska.

In these Indian and Alaska native populations, unique health problems are further compounded by the isolation, both cultural and geographic, which constitutes a major barrier in reaching these groups with effective medical treatment and preventive health services.

Surprising numbers of our beneficiaries do not speak English. Interpreters still fill an essential role in the program in transmitting and interpreting vital health information. Many of our patients have little or no accurate knowledge concerning the causes of disease and the measures which afford protection. Many of them adhere to an accustomed way of life and an economic base which is inimical to their health.

Comprehensive field surveys confirm that use of polluted water hauled from remote sources, insanitary outdoor waste disposal, inadequate and contaminated food, insect and rodent infestations, and dangerously overcrowded and inadequate housing are common throughout the beneficiary population. Socioeconomic conditions are depressed; the educational level, while improving, is still low.

The people served by the Indian health program comprise a young population. Nearly 60 percent of the 380,000 potential beneficiaries are under 20 years of age and the majority of these people are under 15. This compares with 38 percent under 20 years of age in the general population. Our problem therefore is concentrated in the children and their mothers in the Indian communities.

Contributing heavily to the larger proportion of young people among our beneficiaries is the increasing number of births. The Indian birth rate is now about 40 percent higher than for all races in the Nation, and in Alaska even higher. However, partly because of the still high infant mortality rate, the average age at death of the Indian is only 41 years, compared to 62 for the Nation as a whole. Among Alaska natives, the average age at death is 30.

Most illnesses and one-sixth of the deaths among our beneficiaries result from preventable communicable diseases. As a result of the gross disparities in health conditions, our Indian and Alaska native populations are about a generation behind the rest of the Nation in health status.

Preventable deaths affect all age groups. Infants, however, are especially susceptible to premature death from such diseases as gastroenteritis, diarrhea of the newborn, influenza, pneumonia, and other respiratory infections. Twenty-one percent of all Indian deaths in a single year occur among babies less than a year old. Indian babies fare as well as most other babies during the early weeks of life when they are in the hospital or just returned home. But in the period between 1 month of age and the baby's first birthday, the picture changes considerably. The death rate for Indian babies in this age group exceeds the mortality rate for infants of all races by over three times (the Alaska native rate is over five times greater). Nevertheless, the present postneonatal death rate is 40 percent lower than 5 years ago. Furthermore, the Indian infant mortality rate of about 46 per 1,000 live births is for the first times less than twice the rate for the general population, having dropped during the last decade from a rate of almost three times higher. These improvements reflect the high priority given to services for mothers and babies.

The same insanitary environmental factors which breed excessive infant morbidity and mortality also contribute to a needlessly high incidence of common infections and preventable gastroenteric diseases among the adult Indian and Alaska native population.

Today, the leading cause of death among the Indians in their homes and surrounding communities is accidents with their many other associated problems—mental health, alcoholism, and family medical-social problems. Their mortality rate from accidents is over three times that of the country as a whole.

As our beneficiaries are experiencing an increase in the average age at death (which rose from 38 years in 1955 to the present 41) and as their life expectancy rises, degenerative conditions and illnesses associated with older populations are emerging. Heart disease ranks second as a cause of death and malignant neoplasms fourth.

This gradually changing pattern in health conditions and needs calls for more intensive planning and development of activities and medical care services in such fields as congenital crippling conditions among the young as well as the aging, accident prevention, mental health, eye and ear conditions involving surgery to correct the backlog of disabilities, gastroenterology, diabetes, neurology, and rehabilitation.

Intensive case finding in the preventable diseases needs constant attention. It has been demonstrated that trachoma, a disease resulting in impaired vision and blindness, has a high prevalence in several of the Indian groups, particularly among school children. It can be disagnosed and brought under control rather quickly by proper treatment. However, there is always the likelihood of reinfection from dormanant or residual foci in the older age members of the household, particularly in the most isolated areas. We must therefore reduce this disease to a minimum level and prevent it from again spreading among our beneficiaries. Much the same problem and field approach applies to the problem of tuberculosis.

UNIQUE PROBLEMS IN HEALTH OPERATIONS

Transportation is a major problem both for the Indians and Alaska natives in need of health services, and for the health personnel providing these services. Many patients must travel long distances to our treatment facilities on foot, by motor vehicle, and in such animal-drawn conveyances as carts, wagons, and dog sleds. Considerable numbers of them must then be transported by airplane or ambulance over great distances to receive the treatment required for their medical condition. These unusual travel conditions over primitive roads and difficult terrain result in unusually high costs for these areas.

The problem of isolation in Alaska has necessitated the development of a program of regularly scheduled field clinic visits by medical teams from the area base hospital, and medical treatment by radio. Medical officers assigned to service hospitals at Barrow, Bethel, Kanakanak, Kotzebue, and Tanana regularly, on schedule, reach by radio the isolated villages within their respective hospital service areas to administer to the needs of eligible Alaskan natives residing in the area.

Schoolteachers, traders, missionaries, or State itinerant public health nurses can contact our stations and receive medical guidance and assistance. Daily such calls are received as one from Eleetmute to the Bethel Hospital to the effect that a "9-year-old boy has a 105-degree temperature, convulsions, vomiting, unable to sit up." Based on this report the medical officer may request additional information, and will make a tentative diagnosis. Sometimes, as a result of radio conversations, a physician or nurse will fly to the scene to take care of the patient and advise what remedial medical care is necessary. At other times, when reports indicate immediate hospitalization is necessary, the administrative processes required to secure transportation for the patient to the hospital are placed into motion via radio.

In the Bethel service area of approximately 100,000 square miles with an estimated native population of 10,000, only through radio medicine can the medical care program of the Public Health Service meet its objectives.

ACCOMPLISHMENTS

Despite the unusual difficulties of conducting the Indian health program, steady progress has been made in improving the health of our beneficiaries during the past 7 years.

A key factor in more and better health services has been additions to the Indian health staff—especially professional technical personnel and physicians who are specialists. Pediatricians have been added as consultants in child health to develop and direct area programs and others assigned to facilities—hospitals and school health centers. More are needed. Although other staff specialists, are gradually being added in the fields of ophthalmology, orthopedics, obstetrics. and ear, nose and throat, these areas of need are still great and not fully met. Physicians have more than doubled in numbers since 1955; staff in other specialized professional categories has increased—nutrition, health education, nursing, sanitation, pharmacy, medical social workers, dentists, etc. The need for additional specialists and technical personnel is present, especially at newly modernized or new facilities which will be completed this year, and for expanding clinic schedules at field clinic locations.

Contracts with State and local health and welfare agencies are being strengthened. Emphasis is given to broadening scope of services and integrating these services for Indian citizens as for all other citizens in the State.

The Public Health Service, through the Division of Indian Health, engages in cooperative planning and program development with the Bureau of Indian Affairs and other Federal agencies, at all levels, as well as with the Indian tribes.

Where local medical facilities are available or can be made available through joint planning and joint participation in hospital construction and equally good or better services can be provided, conversion of direct hospital operations to clinics and health centers has continued.

Of the health gains made, none has had the dramatic impact of the success in controlling tuberculosis. Mortality from tuberculosis has declined 40 percent in the last 5 years among Indians in the "lower 48" States; in Alaska, the decline has been 75 percent. Once the dread No. 1 killer among the Indians, the disease now ranks seventh as a cause of death. Its incidence is also leveling off. New methods of treatment and use of chemotherapeutic drugs have resulted in shorter hospital stay (now less than 6 months on the average) and treatment of more individuals as outpatients. Today the tuberculosis patient census in hospitals is less than 25 percent of the total, compared with 57 percent 5 years ago.

As the number of hospitalized tuberculosis patients declines, the beds are filled by waiting general medical and surgical patients. Thus the available bed space continues to be utilized, although at the higher cost necessitated by this type of patient.

Among the most rewarding demonstrations of progress has been the increased understanding and participation of the Indians themselves in health activities. Their growing acceptance of modern health practices is demonstrated through increased use of Public Health Service facilities and resources in hospitals, field health centers, and clinics, as well as in community facilities under contract. Hospital admissions, both to Division of Indian Health facilities and those under contract, amounted to 75,800 in 1961, an increase of 30 percent from 1956. Medical and surgical patients accounted for 97 percent of these admissions. Much of this increase is associated with childbirth. In 1961, almost 8,500 Indian babies were born in our hospitals, an increase of 21 percent since 1955, the year the Indian health program was transferred to the Public Health Service.

Outpatient medical and dental workloads at all hospitals and other field facilities and through contracts with private physicians and dentists have more than doubled. The number of special consultations has also increased. About 686,000 outpatient visits at hospitals for medical, therapeutic, and preventive services were recorded for 1961. This was an increase of 65 percent since 1956.

The gross and almost primitive environmental conditions and practices in many Indian homes and communities continue to be a major cause of the high incidence and death rate from preventable diseases, particularly among infants. These conditions are in large measure responsible for diseases such as infant diarrhea, dysentery, respiratory ailments, and infectious hepatitis which continue to produce a significant patient load at our hospitals, contract facilities, and clinics. In addition, they cause sporadic epidemics on Indian reservations. The need for a continuing and expanded sanitation program is further emphasized by the latest disease compilations which show gastroenteritis and dysentery to have a combined incidence rate for Indians which is about 11 times that of the general population.

Following enactment of Public Law 86-121 (the Indian Sanitation Facilities Act) in 1959, a coordinated Tribal-Federal attack was initiated to correct gross environmental deficiencies by construction of domestic and community water supplies, waste disposal systems, and other essential sanitation facilities. Indian participation is obtained in project planning and execution, and the Indians agree to assume the responsibility for operation and maintenance of completed facilities. Substantial financial support as well as labor, material, and service contributions have been made by the Indian people in the construction of sanitation facilities.

Construction of sanitation facilities for Indians under Public Law 86-121, was initiated in 1960 when $200,000 was appropriated to alleviate emergency situations. In 1961 just passed, greater strides were made toward reducing insanitary environmental conditions at Indian homes. A congressional appropriation of $2,550,000 enabled the undertaking of 46 cooperative construction projects and investigations to improve sanitation facilities for Indian homes located within 37 Indian reservations or communities in 16 States. It is significant to note that the estimated value of the participation received from the Indian people amounts to approximately 60 cents for each Federal dollar appropriated. In addition, the construction program is proving to be a stimulus to the Indian people by motivating them to improve their overall living standards, to accept responsibility

for their health needs, and to seek a better understanding of the preventive measures that are essential in a healthful home environment. As expected, this activity has broadened the avenues of approach to Indians by other paramedical staff working on the reservations, primarily due to the relationship of sanitary facilities to the many aspects of home and community life.

During the current fiscal year (1962) a total of 57 sanitary facility construction projects have been programed under the $3 million appropriated by the Congress. These cooperative projects will benefit Indians living within 41 reservations or communities in 18 States. They will provide a safe water supply, and sewerage and solid waste disposal facilities designed to benefit the Indian people.

The year 1961 saw the completion of several new hospitals, modernization and alteration at many other facilities, and improvement of outpatient clinics. The new 75-bed Shiprock, N.Mex., Hospital, completed in 1960, was in full operation with an expanded staff and increased services. The 200-bed referral medical center for the Navajo at Gallup was activated in the spring of 1961 and has about 150 patients. Recently the new and expanded replacement hospital of 50 beds at Kotzebue, Alaska, was dedicated and for the first time, obstetrical and other definitive hospital services will be available in a modern facility for this remote service area in Alaska. The new Keams Canyon (Hopi) Hospital, in Arizona, also completed during the summer of 1961, is being fully activated at the present time. The new 50-bed hospital at Sells, completed about a year ago, is in full operation.

Other major alterations and plans for reconstruction are underway at several of the 50 Public Health Service Indian and Alaska native hospitals (San Carlos, Ariz., Barrow, Alaska, Red Lake, Minn., and Crow Agency, Mont.). Small, inadequate, poorly equipped outpatient facilities at several of the hospitals are being altered and provided with more adequate auxiliary services (laboratories, public health staff offices for conferences with patients and families, medical examining rooms, and dental clinic facilities) to provide more complete and comprehensive health care to the ambulatory before the disease condition reaches a point which would require treatment as a hospital patient. This has resulted in an increasing demand for such services.

In seeking to hold the gains that we have made and to continue the program at its present level, we are faced with three factors which add to the difficulty of our task. The first of these is the relatively rapid rate at which the Indian population is increasing. Related to this is an even more rapid annual increase in the number of births in Indian hospitals.

Second, as the benefits of modern health services become more widely appreciated among Indians and Alaska natives, the demands upon the Indian health program are increased. Areas of unmet health needs—particularly in such fields as sanitation, public health nursing, nutrition, and health education—are becoming more acute. It is clear to us that the inadequate services of a few years ago no longer would be acceptable to the people who depend on these services. We are certain that their demands are far from excessive in view of their great needs. It is evidence of progress and understanding and will be to the benefit of the country as a whole that they are endeavoring to improve their health standards.

Finally, costs of providing medical services are continuing to rise. This is true for the country as a whole, and the general increases, of course, affect the operations of the Indian health program. The greatest single increase in the Consumer Price Index this year is for medical care.

FUNDS REQUESTED

An appropriation in the amount of $55,834,000 is requested for 1963. This amount represents an increase of $2,557,000 over the 1962 appropriation plus anticipated supplemental requirements for wage board increases.

The requested increase of 4.8 percent for Indian health activities over 1962 will be utilized as follows:

Hospital operations: The net increase of $1,082,000 in appropriated funds will provide: $550,000 for the advance purchase of supplies and equipment for Alaska so that shipments can be made before the winter season (advance purchases have previously been made from advanced authority from the future year's funds); $283,000 for additional maintenance and repair funds to maintain the expanded or modernized facilities; $548,000 for increased staff and related costs; and $86,000 for statutory promotions and increased social security rates. These increases are offset by $238,000 resulting from the conversion to contractual care at Poplar, Mont., and $147,000 for additional wage board increases authorized in 1962 and not reflected in 1963.

Contract patient care in the amount of $932,000 will permit an increase of an average of 23 patients over the 887 currently estimated for 1962 and $446,000 for anticipated increases in the per diem cost over 1962.

Field health services: $538,000 will provide for increases in program quality plus $36,000 for mandatory items such as statutory promotions.

Administrative activity reflects an increase of $5,000 for statutory promotions.

CONTRACT CASES OTHER THAN EMERGENCY

Dr. SHAW. Thank you, sir.

Chairman HAYDEN. Last year this committee made available additional funds for treatment of nonemergent cases under the contract patient care program. I note in your justifications that this year you plan to provide hospital and medical care to these cases which are not emergencies.

How much of your contract patient care program is planned for other than emergency cases?

Dr. SHAW. Sir, I am happy to report that the $500,000 additional funds you gave us last year did a great deal to assist us in adequate planning and care of our beneficiaries where we do not operate our own facilities and where we have to rely on contracts with local hospitals, physicians, and dentists. The $500,000 that you provided us with, plus some reprograming in the new facilities and modernized facilities in these general areas, permitted us to become almost current with the backlog of elective cases which had been deferred. We will be able through the year, continuing on the rest of this year and into 1963 to stay relatively current with the need in the field as we know it.

INDIAN NURSES

Chairman HAYDEN. I noted that some of the additional positions which you request are for trained Indian practical nurses. Are any of your Indian nurses registered?

Dr. SHAW. Yes, sir. I do not have the exact number of registered nurses that we have as such that are of Indian descent, but it is considerable; 51 percent of all of our employees are Indians.

Chairman HAYDEN. If you have that you can put in the record how many Indian women are registered nurses. I would like to have it in the record.

Dr. SHAW. Fine.

(The material referred to follows:)

The current employment of nursing personnel in the Division of Indian Health distributed between Indians and non-Indians follows:

	Indian	Non-Indian	Total program
Public health nurses	5	109	114
Hospital nurses (registered nurses)	45	737	782
Practical nurses	495	5	500
Nursing assistants	505	0	505

Dr. SHAW. All of our practical nurses, of which we have nearly 500, are registered practical nurses.

TUBERCULOSIS SITUATION

Chairman HAYDEN. You have indicated a marked improvement in the tuberculosis situation. Will you tell us again what you think is responsible for this?

Dr. SHAW. Yes, sir. The improvement in tuberculosis has been somewhat dramatic. If you would permit me I would like to take just a minute to run over the general situation with specific reference to tuberculosis.

Chairman HAYDEN. Very well.

Dr. SHAW. Because it all fits into a general health pattern which has its bearing on the tuberculosis problem. These charts which I will insert in the record show the general breakdown and comparison between the Indian population and the general population.

EARLY YEAR MORTALITY

You will note here that 21 percent of all of the deaths in the Indian population occur in the first year of life and only 6 percent of the deaths in the general population occur at that time.

(Chart 1 follows:)

CHANGE IT DISTRIBUTION BY CAUSE

Dr. SHAW. Since the Public Health Service has had the program, we have watched this shift from 27 to 21 percent, and the deaths after 65 go from 26 up to 31 percent; so there has been a rapid shift toward the normal.

The distribution by cause has changed markedly. I am sure you remember all too well that only a few years ago tuberculosis was our No. 1 problem and No. 1 cause of death.

Chairman HAYDEN. That is right.

Dr. SHAW. There were inadequate funds and inadequate facilities of all kinds to meet the needs. Today tuberculosis is seventh in importance and provides only 3 percent of the reported deaths.

(Chart 2 follows:)

ACCIDENT RATE

Dr. SHAW. The new roads, the automobile and truck replacing the horse, the environmental hazards in the homes, storage of gasoline, and the like, have made accidents our No. 1 cause of death at present.

INFECTION RATE AMONG INDIANS

In the general population, you can see that the main cause of death is the degenerative diseases of the upper age groups while in the Indian population the infections are the important causes. This gives you a clear view of the importance of infections with some comparison with the general population, standing out in sharp contrast with the general population, and due to conditions such as tuberculosis, trachoma, pneumonia, influenza, and the like that we know how to control.

(Chart 3 appears on p. 846.)

DECREASE IN TB RATE

With specific reference to tuberculosis, since 1954, the last year the program was in the Bureau of Indian Affairs, and with the additional support available from Congress, we have had a dramatic import on the tuberculosis problem. The rate has decreased in the general Indian population in the United States from 54 down to 30, a decrease of 44 percent in that short period of time.

(Chart 4 follows:)

DECREASE IN ALASKA

Dr. SHAW. In Alaska where the problem was even more severe, the rate has decreased from 236 down to 40, a decrease of 83 percent.

(Chart 5 follows:)

Dr. SHAW. The incidence of tuberculosis has also begun to show a dramatic effect because if you do not seed people with the organism, you do not produce disease; so that the hospital treatment of patients, isolation of active cases, and chemotheropy have started to show a marked decrease in the rate of infection in the Indian population from 571 down to 292, a decrease of 49 percent.

(Chart 6 follows:)

TB INCIDENCE ABOVE THAT OF NORMAL POPULATION

Dr. SHAW. This, however, is still more than seven times the normal population incidence. The infant death rate is really the segment of the population that we are most concerned about because nearly 60 percent of the Indians are less than 20 years of age. We have a birth rate of 40 compared to 24 in the general population, and briefly our problem is centered in the mothers and the babies and children, so that we are very much interested in the infant death rate and struggle at all times and at all places to reduce it.

This, too, has started to show a decrease of a significant nature, from 65.5 down to 46, a decrease of some 30 percent, and this is the first year that it has been less than twice the general population.

(Chart 7 follows:)

INFANT MORTALITY

Dr. SHAW. In the past, 6 years ago, it was about three times. If we take a closer look at the infant death rate, we get more closely to the point where we can pinpoint our problem. Because we have acceptance of the program, the mothers come into the hospitals for prenatal care and delivery in the hospitals so that in the first 3 weeks of life, the Indian babies do very well indeed and compare favorably with the experience in the general population; but as soon as they leave the hospital and go to their home environment, the last 11 months of the first year is where we lose the babies.

This is due to the hazards of their environment. In this segment of the problem, in 5 years we have been able to decrease that loss by 41 percent.

(Chart 8 follows:)

UNDER-1-DAY CATEGORY

Senator BYRD. In the under-1-day category, the Indian babies do better than the babies of all races. Do you have any explanation for that, Doctor?

Dr. SHAW. Well, I think we, with the support we have had by this and other committees, have been able to improve our facilities and expand our qualified staff so that in many of the locations where we operate, the Indians have really as good or better care than some of the surrounding communities. The support we are able to give them, and the quality of people we are able to put in those facilities, plus the cooperation of the Indians themselves, account for this.

DEATH RATE FROM GASTROENTERITIS

This is a chart that shows the death rate again primarily in the children, from gastroenteritis. This is the big killer of the babies, and due directly to the hazards of sanitation in their environment.

(Chart 9 follows:)

ACTIVE PROGRAM AGAINST TUBERCULOSIS

Dr. SHAW. You can see that we have a decrease from 56 down to 24, a decrease of 57 percent, and this ties directly into our educational activities, the availability of services, and, above all, the efforts that have been made in the improvement in the water supply, potability, and quantity, as well as disposal of waste.

Now to come back again to your original question, which was tuberculosis. We, as shown by charts 4 and 5, can report dramatic improvement. The responsibility still remains, however, to carry on a very active program, to get out into the back areas, to work with the families, dig out the active cases in the older generation that have not accepted modern medicine as have the younger generation, and bring them under treatment and under control.

We must keep at this for many years in the future. If we do not, the same thing will happen in tuberculosis as happened in trachoma, because, if you remember, about 1938 there was a major effort made to eliminate trachoma in the Indian population and the opinion was that they were successful and there was no continuing program. When the Public Health Service took a close look in the field, we found trachoma almost everywhere, as high as 38 percent in some locations.

SPORADIC OUTBREAKS IN SCHOOLS

We still have it in sporadic outbreaks in school populations running as high as 30 percent.

(Chart 3 follows:)

EFFECTIVE TREATMENT

Dr. SHAW. We have a very effective treatment of short duration. We try and are usually successful in following back out and finding the active case in the hogan or wickiup, usually in grandmother or grandfather, who has infected the children, and who must be treated or the process will continue. This only underlines the fact that in tuberculosis, as in trachoma, we must remain vigilant and carry on the public health preventive activity in epidemiology studies in order to keep abreast of it.

TUBERCULAR CHILDREN ADMITTED AT TUBA CITY

Chairman HAYDEN. I would like to make an inquiry about a particular hospital at Tuba City, about the number of children under 5 who are admitted there. That was 15. Was that not quite a large number?

Dr. SHAW. Yes. Tuba City is one of our most isolated locations in that section of the State. The Navajos in that area are only beginning to be acculturated. They are non-English speaking. They use their native cultural medical practices to a great extent.

We have only in recent years, the last 5 or 6 years, had adequate staff in that area to get out into the field, into the hogans, in the back

washes and canyons, and look for, find, and bring under treatment cases which were not known before, and which had gone unreported and untreated. Our casefinding activities and work of the field staff accounts for a great part of this plus the greatly improved acceptance on the part of the Navajo of modern medical practice.

RELATION OF ROAD PROGRAM TO HEALTH WORK

This is also evidence of the great value of the road program that has been going on in that area, because with the blacktop roads and the gravel roads that have been extended throughout that vast area they are able to get in to the hospital and we are able to get out to them and bring them under treatment.

DRINKING WATER SITUATION

Chairman HAYDEN. I know about the road problem. I have been over them years ago. What about the general drinking water situation, especially in the Southwest?

Dr. SHAW. We have been very active in this field. We hope to be able to continue for many years to come, because it is very serious. We had the first sanitation projects, as you remember, in the fiscal year 1960, which was $200,000 for emergency projects, most of which were in this area.

SANITATION PROJECTS

Mr. STEVENSON. We have had so far authorized a total of 155 projects; 80 of these are essentially complete and 65 are in progress at this time. There are about 10 on which we still have to work out final agreements with the Indians.

In the 1961 program, which is well along toward completion, over 4,000 Indian families, spread out over 46 projects, will have water for the first time in their homes.

Dr. SHAW. This has been one of our best programs and it is producing real lasting results in my opinion. We have full Indian participation from planning all the way through execution of the project and training for continuous sound operation on their part after it is finished. The Indians put up the equivalent of 40 cents in either labor or money, compared with 60 cents that the Federal Government contributes.

NAVAJO CONTRIBUTION TO PROGRAM

The Navajos, alone, last year put up $921,000 of their own money for 432 spring and water development projects, and this year nearly $700,000 for the same purpose, in addition to significant contributions for Public Law 86–121 projects.

I have here some newspaper clippings from the Arizona Republic on the project at Peridot on the San Carlos Reservation. This is a project that cost $49,044 of Federal money. It was met by substantial contributions of money, materials, and, above all, labor on the part of the Indians.

GENERAL EFFECTS OF PROGRAM

The project consisted of development of a community well so that there was an adequate supply of domestic water, installation of a water storage tank, and running the waterlines along the road where the houses were located. The important thing is that it not only brought water to them, but they recognized the value of it. They have participated in it. They contributed directly to the project, but they also did other things.

They got the desire for better things. They enlarged 35 of their houses. They painted their houses. They put in little gardens. People moved into the area and built new houses. Twelve new houses have gone up, and for the first time they have the feeling that they too can have better homes and they are proud of them.

Electricity has been brought in. Refrigerators are showing up and the number of babies that we are going to lose from diarrhea there in the future is going to be a lot less than it has been in the past.

Chairman HAYDEN. Have you any questions?

Senator DWORSHAK. You go ahead. I will wait.

Fiscal Year 1960

CONSTRUCTION, INDIAN HEALTH FACILITIES

Chairman HAYDEN. The 1963 budget estimate for construction of Indian health facilities is $9,220,000. This is $935,000 more than the 1962 appropriation. The justification will be placed in the record.

(The justification referred to follows:)

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE, PUBLIC HEALTH SERVICE

CONSTRUCTION OF INDIAN HEALTH FACILITIES

Summary statement—Amounts available for obligation, 1962 and 1963

	1962	1963
Appropriation	$8,285,000	$9,220,000
Unobligated balance:		
Brought forward	4,498,293	1,197,200
Carried forward	−1,197,200	−409,000
Total obligations	11,586,093	10,008,200

Obligations by activity, 1962 and 1963

Activity	1962 estimate	1963 estimate	Increase (+) or decrease (−)
Hospitals and clinics	$1,574,097	$3,859,000	+$2,284,903
Personnel quarters	3,738,184	662,200	−3,075,984
Alterations	1,862,797	1,487,000	−375,797
Community hospitals serving Indians and non-Indians	790,791	100,000	−690,791
Construction of Indian sanitation facilities	3,620,224	3,900,000	+279,776
Total obligations	11,586,093	10,008,200	−1,577,893

New obligational authority by activity

	1962	1963
Hospitals and clinics	$1,160,000	$3,508,000
Personnel quarters	2,500,000	535,000
Alterations	1,300,000	1,377,000
Community hospitals serving Indians and non-Indians	325,000	100,000
Construction of Indian sanitation facilities	3,000,000	4,000,000
Total new obligational authority	8,285,000	9,520,000
Less prior years unprogramed funds applied		−300,000
1963 appropriation request		9,220,000

Summary of changes

1962 appropriation	$8,285,000
Estimate for 1963	9,220,000
Total change	+935,000

INCREASES

A. Program increases:

1. Hospitals and clinics:

Funds for the construction of a 27-bed general hospital to replace the existing facility at Fort Yates, N. Dak. (planning funds appropriate in fiscal year 1962)	884,000
Funds for the construction of a 12-bed field hospital to replace an existing hospital at Barrow, Alaska (planning funds appropriated in fiscal year 1961)	2,097,000
Construction of three health centers to be located at Mescalero, N. Mex., Fort Hall, Idaho, and Peach Springs, Ariz., and construction of three health stations to be situated at Arapahoe, Wyo., Rocky Boy, Mont., and Gambell, Alaska	527,000
Total	3,508,000

2. Personnel quarters:

For construction of 20 permanent domiciliary units with furnishings for approximately 80 percent of the units	535,000

3. Alterations:

Gallup Hospital, Gallup, N. Mex. Medical trainee quarters are required to make maximum usage of the hospital as a training center. Funds are included for planning these quarters. It is estimated that the quarters will encompass approximately 30,470 square feet and will cost $631,000, excluding planning funds	22,000
Crow Hospital, Crow Agency, Mont. Major modernization of the hospital (planning funds included in the 1962 appropriation)	640,000
Tahlequah Hospital, Tahlequah, Okla. Construction of a new outpatient wing and remodeling (planning funds appropriated in 1960 ($7,200) and 1962 ($6,300)	167,000
Haskell Institute, Lawrence, Kans. Construction funds to remodel infirmary (planning funds included in 1962 appropriation)	60,000

Summary of changes—Continued

A. Program increases—Continued	
3. Alterations—Continued	
Talihina Hospital, Talihina, Okla. Funds are included for a feasibility study and preliminary planning for modernization of the hospital with a view toward consolidated housing of supporting activities and elimination of certain outmoded, deteriorated buildings which are costly to maintain. Plans include modernization of the outpatient department and surgical suite and remodeling of the waiting room; administrative and medical records offices and other areas of the hospital. It is estimated that the total cost, excluding planning funds will not exceed $300,000	$13,000
Cherokee, N.C. Provide heating facilities for Public Health Service buildings to replace central heating to be discontinued by Bureau of Indian Affairs	65,000
Parker Hospital, Parker, Ariz. Addition of clinic and waiting space and provision of standby electric power unit	55,000
Schurz Hospital, Schurz, Nev. Replace overhead electric power distribution system and install standby electric power unit	35,500
Mount Edgecumbe Hospital, Mount Edgecumbe, Alaska. Construction of an outdoor rehabilitation area; provide sidewalks, drainage, and repair access and service roads; share in reconstruction of Baranof Island waterworks	46,000
Anchorage Hospital, Anchorage, Alaska. Install automatic water sprinkler and fire alarm system and construct standby utility plant	54,500
Bethel Hospital, Bethel, Alaska. Construct waste disposal system and replace emergency water supply line	58,500
Alteration projects of a lesser magnitude (under $35,000) at 12 locations	160,500
Total	1,377,000
4. Community hospitals serving Indians and non-Indians:	
Participation in construction of a community hospital at Chamberlain, S. Dak., to be used jointly by Indians and non-Indians	100,000
5. Construction of Indian sanitation facilities:	
Includes funds to construct or improve, extend and maintain sanitation, drainage and sewage-and-waste-disposal facilities for Indian homes, communities, and lands at 67 projects, including $143,000 for investigations, planning, emergency works, supplies, and equipment	4,000,000
Gross increases	9,520,000
Less prior years unprogramed funds applied	−300,000
1963 appropriation request	9,220,000

DECREASES

Nonrecurring construction projects appropriated in 1962:	
Hospitals and clinics	1,160,000
Personnel quarters	2,500,000
Alterations	1,300,000
Community hospitals serving Indians and non-Indians	325,000
Sanitation facilities	3,000,000
Total	8,285,000
Net increases	+935,000

Despite continuous improvement and expansion in the physical plant, many of the present Indian health facilities servicing over 380,000 beneficiaries do not provide functionally arranged facilities and specialized equipment necessary for the practice of modern medicine. In addition to the request for construction or planning of two replacement hospitals, the proposed program for 1963 includes new or replacement field health facilities at locations where limited services are currently provided through grossly inadequate facilities or where field health services are not available to beneficiaries.

Projects are also proposed under two public laws passed since the transfer of the program to the Public Health Service. Public Law 86-121 authorizes the Public Health Service, in cooperation with the Indians, to construct, improve, extend, or otherwise provide water supply facilities, drainage facilities, sewage-and-waste-disposal facilities, and other essential sanitation facilities for Indian homes, communities, and lands. Public Law 85-151 authorizes the Public Health Service to participate in the construction of hospital facilities in a community hospital for joint use by Indians and non-Indians.

In appropriating funds for fiscal year 1962 the President's budget was increased by $1,669,000 to provide $350,000 to plan a new Phoenix medical and training center, $319,000 for a health center at McLaughlin, S. Dak., and an additional $1 million for sanitation facility projects under Public Law 86-121. A statement of requirements for the Phoenix medical and training center is now undergoing review by the Department and the Bureau of the Budget. Currently a site has been selected for the McLaughlin health center preparatory to acquisition. The additional sanitation facility funds are being used to initiate construction of additional sanitation projects totaling $1 million.

Funds are requested in 1963 as follows:

Hospitals and clinics:	
Hospitals	$2, 981, 000
Health centers and stations	527, 000
Personnel quarters	535, 000
Alterations	1, 377, 000
Community hospitals serving Indians and non-Indians	100, 000
Sanitation facilities	4, 000, 000
Total	9, 520, 000
Less prior years unprogramed funds applied	−300, 000
Fiscal year 1963 appropriation request	9, 220, 000

HOSPITALS AND CLINICS, 1963 REQUEST, $3,508,000

PHS Indian Hospital, Fort Yates, N. Dak., $884,000

Construction of a new 27-bed general hospital plus 7 bassinets to replace existing hospital at Fort Yates, N. Dak.

Cost estimate

Planning funds appropriated in 1962	$70, 000
Hospital construction funds requested	884, 000
Total estimated project cost	954, 000

A new 27-bed and 7-bassinet general hospital is planned to replace the present 46-bed frame structure built in 1912 which is not adaptable to modernization and is a fire hazard. The present facility is a nonfireproof frame structure of two floors, without an elevator, and in very poor condition.

On the basis of the utilization of the inadequate facility, and consistent with the estimate of bed requirements for the reservation, contained in "Plan for medical facilities needed for Indian health services" a 27-bed hospital and 7 bassinets is proposed.

For the estimated health service population of 3,500 in the Standing Rock health service area, the bed ratio is about 7.7 beds per 1,000 population. This project would be programed to conform to the minimum requirements of appendix A, Hill-Burton program and would also include space for an outpatient department and a field health unit.

PHS Indian Hospital, Barrow, Alaska, $2,097,000

Construction of a new 12-bed field hospital to replace existing hospital.

Cost estimate

Planning funds appropriated in 1961	$150,500
Construction funds requested in fiscal year 1963	2,097,000
Total estimated project cost	2,247,500

The existing facility, without a separate outpatient clinic, isolation facilities, and minimally adequate auxiliary services, was classed nonacceptable in 1952 at the time of the Parran survey. In the survey report of 1953, "Alaska's Health," it was recommended that "steps should be taken immediately to correct these basic conditions. Facilities are not only crowded but actually dangerous as fire hazards."

The original 1-story frame hospital at Barrow was constructed in 1930 with a reported capacity of 17 beds. Quonset huts have been added and there has been rearrangement of space in the past few years. At the present time 15 beds are reported to be available. The general condition of the building is poor, principally because of (1) sinking of the foundation piling into the permafrost, (2) inadequacy of electrical wiring, (3) deteriorated piping, (4) the lack of isolation facilities, (5) crowded facilities, and (6) generally poor, unsafe environmental and institutional sanitation facilities.

The present facility contains a total of five patient rooms, including the nursery. There are no isolation rooms; because of the common corridor, with direct entrance to the surgery and nurses' workroom adjacent, it is virtually impossible to maintain sterile conditions. The operating room also functions as a delivery room. Outpatient clinics and services are confined to one small room which is entirely inadequate for an extremely active outpatient service.

HEALTH SERVICE UNIT

The Barrow service unit covers an area of about 25,000 square miles. The major villages within the health service geographical area are Barrow, Wainwright, Barter Island, Point Lay, and Meade River. The nearest large community, Fairbanks, is 550 air-miles. Air-miles from Barrow to other Alaska communities are 350 miles to Kotzebue, 730 miles to Tanana via Fairbanks, 550 miles to Nome, 450 miles to Fort Yukon, and 850 miles to Anchorage.

Perishable foods and other supplies not transported in the Bureau of Indian Affairs vessel are delivered by airplane. The Bureau of Indian Affairs vessel, *North Star*, arrives with annual supplies in the early fall; only one trip can be made during the 2- to 3-week period when the Arctic icepack moves away from the shore.

Based on an analysis of the latest available information, it appears that the native population in the Barrow service unit is stabilized around 1,600 to 1,700. With the military construction completed and with minimal military operational activity, there is very little reason to believe that there will be any marked increase in the native population.

As a result of the infeasibility of staffing a complete general hospital in this remote area and in view of the improved air service between Barrow, Fairbanks, and Anchorage, it is planned to operate this new facility as a maternity, medical, and "holding bed" field hospital having the following bed distribution: Obstetrics, 4; pediatrics, 6; and holding beds, 2.

The facility would include a fully equipped outpatient clinic and 12 beds to provide hospitalization for uncomplicated deliveries, hospitalization of infants and children with minimal requirement for the treatment of respiratory diseases; and holding beds for patients to be transported to a hospital center. General surgery and cases requiring specialized diagnostic and treatment services would be referred to available hospitals in Fairbanks and Anchorage.

Clinics (health centers and stations), $527,000

The definition of the two types of facilities proposed follow:

1. Health center: A facility operated at least on a 40-hour workweek basis and where physicians' services are available full time as well as other types of health services such as dental, public health nursing, sanitation, health education, and medical social services.

2. Health station: A facility where, although physicians' services may be regularly scheduled, physicians are not available full time, but one or more other health services are available on a regularly scheduled basis such as dental, public health nursing, sanitation, health education, and medical social services. Staff is provided from Public Health Service Indian hospitals, health centers or by contract.

Funds of $527,000 are requested for the construction of three health stations and three health centers. At some of these locations limited health services are currently provided from space not suited for such purposes. The location and estimated cost for each of the proposed facilities follows:

HEALTH CENTERS

Mescalero, N. Mex $151,000

Including planning funds of $11,000 contained in the 1962 appropriation request, it is estimated that the total project will cost $162,000. The Mescalero service unit is located in Otero County in south central New Mexico. The beneficiary population residing within the service unit is estimated at 1,200. The Mescalero Apaches are a predominantly fullblood group (in 1950 the U.S. census reported 90 percent fullblood and 96 percent half or more Indian). Diseases of early infancy are a leading cause of death, and the common diseases of childhood are still a major problem. In this situation, with the proposed eventual replacement of direct Public Health Service Indian hospital operation at Mescalero by contractual arrangements under the provisions of Public Law 85–151, it is essential to plan for provision of a full program of ambulatory medical care and preventive health services on the reservation, through the facilities of a modern field health center.

Fort Hall, Idaho 166,000

The village of Fort Hall, the site of the Bureau of Indian Affairs Agency and Public Health Service health center, is 11 miles north of Pocatello, Idaho. There are about 2,200 Shoshone and Bannock Indians living on the reservation. Medical care and preventive health services are provided for these beneficiaries at the health center, in contract hospitals in Pocatello and through a contract with the local health department. The health status of the people, their economic level, and general acculturation are such that the provision of medical and health services by the Public Health Service is indicated for many years to come. The present health center is in the basement of a Bureau of Indian Affairs office building and is totally inadequate in space and arrangement. It does not lend itself to expansion, rearrangement, or installation of adequate equipment.

The health of these people can be improved and the need for contract hospitalization and medical care which cost nearly $170,000 in 1959 can be reduced only by the expansion of preventive health services and by the provision of better and earlier ambulatory medical care.

A new health center, with modern equipment, including X-ray and a laboratory and with office space for an increased staff of health personnel including medical and dental officers, public health and clinic nurses, sanitarians, and community workers is needed at Fort Hall for these purposes.

Peach Springs, Ariz 55,000

Peach Springs, the chief settlement on the Hualapai Reservation, is in northern Arizona just south of the Grand Canyon, about 50 miles northeast of Kingman, Ariz., and 116 miles west of Flagstaff.

It is the headquarters of the Public Health Service staff which provides health services and medical care not only to the 430 Indians on the Hualapai Reservation, but also to about 185 on the Hauasupai, in one of the side canyons of the Grand Canyon, and about 200 more on the Camp Verde, Middle Verde, and Yavapai Reservations. The latter three are south of Flagstaff near Prescott.

It is entirely impractical to attempt to provide services by itinerant personnel stationed at Public Health Service Indian health facilities since the nearest hospital in the Phoenix area is about 175 miles distant.

Personnel stationed at Peach Springs currently use completely inadequate facilities in a building owned by the tribe. A small modern health center with a laboratory, X-ray and other modern equipment is needed for the provision of acceptable ambulatory medical care to the Indians in this vicinity. It will serve also as a headquarters for personnel such as sanitarians and public health nurses who provide preventive health services to all the widely scattered reservations in this part of Arizona, and by nutritionists, medical social workers, dentists and health educators who will schedule part of their time and efforts to Indians on these reservations.

HEALTH STATIONS

Arapahoe, Wyo $37,500

Arapahoe is a small community on the Wind River Reservation about 25 miles from Fort Washakie, Wyo. It is a focal point for about 1,000 Indians living in the eastern and southeastern part of the reservation. Outpatient medical care and dental care is provided by contract physicians and dentists from towns near the reservation.

More than 5,000 outpatient visits per year have been provided at Arapahoe for the past 2 years in spite of the lack of adequate space and facilities. It is estimated that this number will increase considerably when a new health station is provided with modern examination and treatment facilities, an adequate waiting room, and space for proper handling of medical records and pharmaceuticals.

Rocky Boy, Mont 37,500

The Rocky Boy Indian Reservation is about 38 miles south of Havre, Mont., and about 70 miles from the Public Health Service Indian hospital at Fort Belknap. There are about 800 Indians residing on the reservation and about 1,400 on the tribal rolls.

Outpatient medical care is provided once a week by contract physicians from the nearest towns and by Public Health Service physicians from Fort Belknap 1 or 2 days a week. Patients requiring hospitalization are transported to the Public Health Service hospital at Fort Belknap or referred to contract hospitals in Great Falls or Havre. Dental care is provided 2 days a week. Other preventive health services in sanitation, public health nursing, and health education are provided by staff stationed either at Rocky Boy or Fort Belknap.

The present facility, in a condemned building belonging to the Bureau of Indian Affairs, is totally inadequate as a clinic or as a headquarters for health personnel.

A new health station is needed to provide adequate space and equipment for examination and treatment of patients and to provide a headquarters and facilities for sanitarians, health educators, public health nurses, medical social workers, and others who provide services on the reservation either on a full- or part-time basis.

Gambell, Alaska 80,000

Gambell, with a population of about 350, is one of the larger settlements on the St. Lawrence Island. In the past, health services were provided to Gambell and, to the extent possible, to other island villages by a public health nurse of the Alaska Department of Health (ADH), one of the nurses provided under contract to the Public Health Service by the Alaska Department of Health. The nurse was formerly stationed on the island and spent part of her time on the mainland. A structure built in 1923 for $2,500 and remodeled in 1953 to provide her with quarters and clinic space is totally inadequate. Services

now are provided on an itinerant basis by the Alaska Department of Health and Welfare nurse stationed at Nome. A Public Health Service medical officer flies from the Kotzebue Hospital once or twice a year to provide the only medical care on the island which consists of a 3- or 4-day clinic in the Bureau of Indian Affairs school.

A new health station with adequate equipment and living quarters is needed at Gambell in order that a public health nurse may be stationed on the island and to provide the visiting medical officer with better space and at least minimal equipment with which to provide more nearly adequate medical care.

Total 1963 estimate for clinics, health centers, and stations.. $527,000

Total 1963 estimate for hospitals and clinics..... 3,508,000

PERSONNEL QUARTERS

Year 1963 request, $535,000

Although considerable progress has been made in providing adequate staff housing, increased services and construction of new or expanded health facilities will result in the need for 20 additional units to meet the immediate foreseeable needs through 1963 (excluding replacement of temporary units). In the interest of economy, staff quarters are requested in this estimate for Barrow, Alaska, in conjunction with the request for construction funds for a new (replacement) hospital at this location. The extent to which the 326 temporary units acquired in 1956 must be replaced is currently under study. A listing of the 20 units at an estimated cost of $535,000 requested for 1963 follows:

Location	Size	Number of units	Estimate [1]
Browning, Mont	1-bedroom apartment building	4	$55,000
Rosebud, S. Dak	do	4	55,000
Barrow, Alaska	3 bedroom	1	425,000
	2 bedroom	2	
	1 bedroom	9	
Total		20	535,000

[1] Includes furnishings for approximately 80 percent of the units.

Alterations

1963 request..... $1,377,000

The following projects represent alteration work on existing Indian health facilities to provide for more effective use of structures to meet current program needs:

Aberdeen area:

Sioux Sanatorium, Rapid City, S. Dak..... 3,200

Planning funds for modernization of hospital kitchen. Total estimated cost including planning is $30,000.

Belcourt Hospital, Belcourt, N. Dak..... 13,000

Improve heating plant and provide standby boiler.

Rosebud Hospital, Rosebud, S. Dak..... 20,000

Resurface road and parking areas.

Total, Aberdeen area..... 36,200

Albuquerque area:

School of Practical Nursing and Health Center, Albuquerque, N. Mex..... 6,000

Provide gas water heaters and electric autoclave for summer usage when Bureau of Indian Affairs central heating plant is not in operation.

Gallup Hospital, Gallup, N. Mex..... 22,000

COST ESTIMATE

Planning funds requested in 1963 for medical trainee quarters	$22,000
Construction funds to be requested in subsequent years	631,000
Total estimated project cost	653,000

Project	Approximate square footage	Estimated cost
Quarters for interns, residents, and technicians in training	22,470	$467,000
Quarters and training facilities for student nurses	8,000	186,000
Total	30,470	653,000

In order to make maximum use of the new 200-bed hospital at Gallup, N. Mex., as a training center, medical trainee quarters are required for interns, residents, technicians, and student nurses.

QUARTERS BUILDING FOR INTERNS, RESIDENTS, AND TECHNICIANS IN TRAINING

The training programs at this hospital will include an approved intern and residency program for up to 23 full-time medical officers serving from 1- to 3-year periods. Residencies will be carried out for major medical specialties represented at this hospital. Permanent quarters providing furnished housekeeping facilities for these trainees and their families for 1-, 2-, and 3-year periods will be required in order to implement this program. Orientation and training for technicians, administrative personnel, and selected professional personnel on temporary duty at this hospital for periods of a few days to 6 months will require nonhousekeeping quarters to maintain the personnel at the hospital during training and to provide for nurse education activities as follows:

(*a*) advanced training for four to five graduate practical nurses to prepare them to function as assistants to public health nurses.

(*b*) postgraduate training and experience for trained practical and professional staff nurses in special services such as maternity and newborn, pediatrics, surgery, central supply, etc.

(*c*) inservice and career development of selected nursing personnel in nursing services administration.

(*d*) orientation and advanced experiences for other personnel—in dietetics, medical records, etc.

To meet the housing needs of the staff in training, a quarters building comprising 13 single rooms, 8 one-bedroom apartments, and 8 two-bedroom apartments is proposed.

QUARTERS BUILDING AND TRAINING FACILITIES FOR STUDENT NURSES

In order to provide supervised clinical experience for practical nurse students enrolled in the Albuquerque Practical Nursing School and detailed to this hospital, 10 single rooms with baths are required for 20 student practical nurses (2 classes per year—10 students each) and one 1-bedroom nonhousekeeping apartment for a house mother and 2 single rooms with private baths for 2 instructors. There should also be a lounge, classroom, and library. The clinical experiences (pediatrics, medical, surgical, and obstetrics) required for the 80 students per year could then be divided between the Fort Defiance and Gallup Hospitals and the tuberculosis nursing experiences continued at the Albuquerque Sanitorium. With present and continuing professional nurse staff vacancies, the services rendered by student practical nurses will help fill this void.

ALBUQUERQUE SANATORIUM

Albuquerque, N. Mex.	$24,000
1. Air-condition operating suite ($13,000).	
2. Modify high-pressure boilers to low-pressure ($5,000).	
3. Renovate wiring ($6,000).	
Total, Albuquerque area	52,000

BILLINGS AREA

Fort Washakie Health Center, Fort Washakie, Wyo.	9,700
1. Remodel and repair two existing 1-bedroom personnel quarters ($7,500).	
2. Grade and pave driveway and parking area, Fort Washakie Clinic ($2,200).	
Fort Peck Hospital, Poplar, Mont.	14,400
1. Regrade driveways around building, provide adequate drainage and pave ($4,400).	
2. Remodel nurses' home building No. 43 ($10,000).	
Remodeling nurses' home building No. 43 consists of repairs to walls and ceilings, replacement of floor coverings, refurbishing interior including floors, modernizing kitchen, major renovation of hot water heating system and regrading of waste disposal lines to improve drainage of plumbing fixtures.	
Crow Hospital, Crow Agency, Mont.	640,000

Planning funds of $39,000 for major modernization of the Public Health Service Indian Hospital at Crow Agency, Mont., are included in the 1962 appropriation.

COST ESTIMATE

Planning funds appropriated in 1962	39,000
Construction cost estimate, 1963	640,000
Total estimated project cost	679,000

Proposed project: The project involves a major modernization of the existing facility to provide 34 beds and 7 bassinets and facilities for oupatient medical and dental services.

EXISTING FACILITY

The Crow Agency Hospital was constructed as a 36-bed hospital in 1937. It resembles the hospital at Browning which has just undergone modernization. In the past few years, space rearrangements have been carried out as interim measures for a little more effective operation.

The physical arrangement, however, is extremely crowded and unsatisfactory for conducting an acceptable modern medical care program. There is poor and limited space for organized outpatient clinics and no means of utilizing the bed space efficiently without a hazard to patients and staff. There is a pronounced lack of space to adequately provide for pediatrics isolation; an adequately functioning obstetrical service; and required supporting facilities (pharmacy, laboratory, X-ray, medical records, dental, etc.), which are essential to provide a well-integrated outpatient medical care and preventive health service.

Northern Cheyenne Health Center, Lame Deer, Mont.	$4,000
Provide adequate drainage; grade and pave driveways around health center.	
Blackfeet Hospital, Browning, Mont.	14,200
Construct adequate parking area in front of old portion of hospital. Provide adequate drainage; grade and pave access driveways.	
Total, Billings area	682,300

OKLAHOMA AREA

Tahlequah Hospital, Tahlequah, Okla, $167,000

Planning funds of $7,200 appropriated in fiscal year 1960. Additional planning funds of $6,300 appropriated in 1962.

The existing hospital was constructed in 1937 containing 26,000 gross square feet of floor area with a constructed bed capacity of 69. A small combination nurses' workroom and nursery were included. Subsequent alterations and room assignment changes were made to provide for an expanding outpatient department reducing the reported bed capacity to 62 with 13 bassinets. A recent survey of this facility reveals crowding of patients and the need for general modernization.

The existing outpatient entrance, patients' visiting room, emergency and patients' parking area are very poorly located and extremely crowded. Parked vehicles block the ambulance entrance located on a narrow service road. To reach the emergency room from the existing ambulance entrance, patients pass through the waiting room.

This project provides a new outpatient wing in a location that will overcome much of the cross-traffic between inpatients and outpatients within the hospital and will alleviate inpatient overcrowding. The existing hospital will be continued in service during the alteration work.

Workloads for the existing facility follow:

	Fiscal year 1958	Fiscal year 1959	Fiscal year 1960
Inpatient average daily patient load (excluding newborn)	37	39	40
Total admissions	1,523	1,617	1,566
Total births	328	392	396
Total outpatient visits	13,364	14,784	18,628

Talihina Hospital, Talihina, Okla., $13,000

The existing functional arrangements in the main hospital building do not permit efficient and economical operation of the hospital and outpatient departments. Some of the supporting activities also are dispersed in a number of old buildings at wide separated locations. Funds of $13,000 are requested for a feasibility study to arrive at a satisfactory solution to this problem. Until this study and preliminary planning are completed, a realistic estimate of cost cannot be made, although the total cost, exclusive of the feasibility study, should not exceed $300,000.

The project will include modernization of the outpatient department; remodeling of medical records, administrative offices and waiting rooms; and modernization of the surgical suite. Some rearrangement and relocation of these spaces as well as some other elements of the hospital will be involved. A number of the old buildings will be eliminated and the activities consolidated resulting in a reduction of the buildings to be maintained.

Haskell Institute Infirmary, Lawrence, Kans	$60,000
Construction funds for remodeling of building erected in 1905. (Planning funds of $7,000 appropriated in 1962.)	
Cherokee, N.C	65,000
Provide heating facilities for Public Health Service buildings to replace central heating to be discontinued by Bureau of Indian Affairs.	
Total, Oklahoma area	305,000

PHOENIX AREA

Parker Hospital, Parker, Ariz	55,000
1. Additions and alterations to provide additional clinic and waiting space ($40,000).	
2. Provide standby electric power unit ($15,000).	
Owyhee Hospital, Owyhee, Nev	16,000
Provide standby electric power unit.	
Schurz Hospital, Schurz, Nev	35,500
1. Replace overhead electric power distribution system ($18,000).	
2. Provide standby electric power unit ($17,500).	
Total, Phoenix area	106,500

PORTLAND AREA

Chemawa School Health Center, Chemawa, Oreg. (total, Portland area)	$20,000
Alterations to health center and provision of exterior fire exit from 2d floor.	

ALASKA AREA

Mount Edgecumbe Hospital, Mount Edgecumbe, Alaska	46,000
1. Repairing of service and access roads and to provide sidewalks and drainage ($25,000).	
2. Construction of an outdoor area to provide for rehabilitation of pediatric and orthopedic patients ($10,000).	
3. Reconstruction of water works on Baranof Island (costs to be shared equally with the city of Sitka) ($11,000).	
Anchorage Hospital, Anchorage, Alaska	54,500
1. Provide automatic water sprinkler and fire alarm system for certain areas of hospital ($26,000).	
2. Construct standby utility plant ($28,500).	
Bethel Hospital, Bethel, Alaska	58,500
1. Construction of adequate waste disposal system in the hospital ($40,500).	
2. Replace emergency water supply line ($18,000).	
Tanana Hospital, Tanana, Alaska	16,000
Installation of high voltage distribution system.	
Total, Alaska area	175,000
Total 1963 request for alterations	1,377,000

COMMUNITY HOSPITALS SERVING INDIANS AND NON-INDIANS

Year 1963 request, $100,000

Under Public Law 85-151 the Surgeon General, where such an alternative appears more desirable and effective, is authorized to financially participate in the construction of needed hospital facilities in a community for joint use by Indians and non-Indians rather than to construct a separate facility for Federal operation only. To date, the Public Health Service has participated in 12 projects providing 275 beds of which 88 have been funded from this appropriation for the use of Indian beneficiaries. Funds are available for 2 anticipated projects at Flathead, Mont. and Mescalero, N. Mex., which will provide approximately, 25 additional beds. Under this authority, an amount of $100,000 is estimated for fiscal year 1963 for a potential project at Chamberlain, S. Dak.

CONSTRUCTION OF INDIAN SANITATION FACILITIES

Year 1963 request, $4,000,000

A cooperative approach to the correction of gross Indian sanitation facility deficiencies is provided in Public Law 86-121. It authorizes construction of domestic and community water supplies, waste disposal works, and other sanitation facilities for Indian homes, communities, and lands. The Public Health Service administers the program in consultation with Indian tribes, Alaska native groups, and State and local health agencies. Participation by the Indians in project execution is stressed and tribes are assisted in assuming responsibility for continued operation and maintenance of completed community facilities. Parallel education and training activities are conducted to assure utilization, protection, and maintenance of household sanitation facilities. Projects for Indian beneficiaries include one or more of the following features: Water—source development, treatment, storage facility, distribution system; waste (liquid and solid)—collection system, sewage treatment, disposal facility; household appurtenances—sanitary pit privy or flush toilet, kitchen sink, connecting plumbing; drainage—facilities for control of insects, systems to permit subsurface waste disposal.

The scarcity of water for even elemental household purposes is a general problem among Indian and Alaska native groups. Thousands of Indians on many reservations haul water in a primitive manner for distances of a mile or more. In these cases, domestic water use is usually 1 to 3 gallons per capita per day as compared to five times this amount for the poorest rural families in the United States. It is common for water purveyors to charge $1 to $3 per barrel for water delivered to the Indian homes. The source of domestic water supply for the majority of Indians is unsafe; contaminated streams, irrigation ditches, stock ponds, and unprotected wells and springs are often the only available supply.

Lack of adequate facilities for the disposal of human and other household wastes, both liquid and solid, results in (1) spread of micro-organisms responsible for diarrheas and dysenteries, (2) insect and rodent infestations both in Indian homes and communities, (3) contamination of foods and domestic water supplies, and (4) general nuisance conditions.

Since gross environmental deficiencies in large measure are responsible for the high incidence of preventable enteric diseases among Indians, it is the opinion of the Public Health Service that basic sanitary facilities for Indian homes and communities are essential in the prevention of diseases and basic elements in the improvement of health services to the Indians. Following is a list of specific examples of health problems directly related to the lack of sanitary facilities:

1. Gastritis, enteritis, etc. are first in reported incidence of notifiable diseases on Indian reservations; they are insignificant in the general population.
2. The Indian infant death rate is twice that in the general population, and the death rate for infants who have returned to their home environment (1 month through 11 months of age) is about four times that of the general population, in large part associated with the lack of sanitation facilities in the Indian home.
3. Twenty-one percent of all Indian deaths in a year occur before 1 year of age in the Indian population, compared with seven percent in the general population.
4. Between 15 and 20 percent of the patients discharged from our hospitals were treated for diseases associated with an insanitary environment.

In the conduct of this program to date, increasing awareness of the Indian people to the advantages of adequate sanitation facilities has been demonstrated. Substantial contributions of labor, money, and materials have been made by the Indians to construction projects. Indian governing bodies have shown a willingness to adopt the necessary measures such as appointment of responsible maintenance individuals, establishment of water or sewer service charges, and adoption of sanitary regulation which are required for continued operation and maintenance of completed facilities. There is a mounting backlog of requests from the Indians for assistance under this program.

The $4 million request for 1963 represents a $1 million increase above the level authorized for fiscal year 1962. Specifically, it will permit the construction of 67 projects (listed below) at a cost of $3,857,000 which are urgently needed on 31 Indian reservations, and in communities in the States of Oklahoma, California, and Alaska. It will meet needs in areas where (1) essential sanitation facilities are lacking or in need of major rehabilitation, (2) rates of preventable diseases attributable to gross environmental sanitation deficiencies are high, (3) work is feasible and most nearly ready to be undertaken from an engineering and economic standpoint, (4) ability and willingness of Indians to assume responsibility for maintenance and operation have been indicated, and (5) willingness of Indians to contribute to and participate in the work has been shown.

The estimate also includes $143,000 for investigations and planning funds for urgently needed construction projects on which additional technical information is necessary before a solution can be recommended and for correction of emergency problems related to Indian sanitation facilities such as occur from severe drought conditions, floods, failure of well casings, and pumping equipment, and other unforeseen conditions which frequently require provision of emergency facilities to permit resumption of services on a temporary or emergency basis.

Sanitation facility projects

Pine Ridge Reservation, Pine Ridge, S. Dak $295,000

Health needs: Water hauled in insanitary containers to most homes in community. Sanitary methods of waste disposal are lacking.

Project: Construct community water supply and waste disposal facilities.

White Earth Reservation, Naytahwaush, Minn 73,000

Health needs: Concentrated community lacks adequate water and sewerage facilities. Water hauled to most homes. Insanitary waste disposal at most homes.

Project: Construct community water system and individual waste disposal facilities.

Santee and Ponca Reservations, rural Nebraska 68,000

Health needs: Residents obtain water from unapproved or questionable sources. Few homes have sanitary waste disposal facilities.

Project: Rehabilitate existing and construct new water wells and construct individual waste disposal facilities.

Sisseton Reservation, Big Coulee and Old Agency, S. Dak 96,000

Health needs: Reservation population obtains water from insanitary wells, springs, creeks, or lakes. No acceptable waste disposal facilities on reservation. High enteric disease rate.

Project: Construct individual water supply and individual waste disposal facilities.

Fort Totten Reservation, St. Michaels (Mission), N. Dak 49,000

Health needs: Water supplies in rural areas do not meet accepted standards. No home has satisfactory waste disposal facilities.

Project: Construct individual water supply and individual waste disposal facilities.

Jemez Reservation, Jemez Pueblo, N. Mex 259,000

Health needs: High incidence of diseases related to substandard sanitary conditions. Present community water supply inadequate and of questionable quality. Most homes have insanitary waste disposal facilities.

Project: Develop water supply source and construct community water distribution and sewerage system.

Laguna Reservation, Paguate Village, N. Mex 51,000

Health needs: High incidence of diseases related to inadequate sanitary facilities. Present community water supply of questionable sanitary quality. Waste disposal facilities insanitary.

Project: Construct community wells and enlarge water distribution system.

Laguna Reservation, Seama Village, N. Mex 53,000

Health needs: Community water shortages occur due to insufficient source. Capacity of distribution system limited. Diseases associated with inadequate sanitation are prevalent in community.

Project: Construct additional well and storage tank. Modify and extend water distribution system.

Zia Reservation, Zia Pueblo, N. Mex 129,000

Health needs: Water system is inadequate to provide quantity required. Water shortage necessitated emergency work. Waste disposal facilities nonexistent or insanitary.

Project: Complete work on community water system initiated as an emergency project; construct community sewerage system.

Yakutat, Alaska 80,000

Health needs: Water supply is hauled from lake and unprotected wells. Sewerage facilities are lacking.

Project: Construct community water distribution system; community sewerage facilities to serve about half the town; construct individual waste disposal facilities to serve balance of town.

Sanitation facility projects—Continued

Native villages, Alaska:

Norton Sound area (3 villages) $70,000

Hooper Bay area (3 villages) 100,000

Health needs: Water supply is obtained from surface sources, often distant from villages and hauled to homes. Waste disposal facilities grossly inadequate.

Project: Construct communal water supply and storage facilities; provide for sanitary handling of water; and construct individual waste disposal facilities.

Kotzebue, Alaska 50,000

Healt hneeds: Eskimo community of 1,300. Water supply obtained from creek and hauled 5 miles to native homes. Purveyors charge 5 cents per gallon delivered.

Project: Exploration and engineering study of sources of water for community use and distribution on a practical basis.

Unalakleet, Alaska 80,000

Health needs: Water supply for community obtained from unprotected shallow wells and spring area 7 miles distant; wells contaminated from privies and other localized waste disposal.

Project: Construct community low pressure water supply system and individual waste disposal facilities.

Blackfeet Reservation, Browning, Mont 184,000

Health needs: Densely populated area. Many Indian homes are not connected to community sewerage system. Waste disposal facilities inadequate.

Project: Modify and extend community sewerage system; extend community water distribution system.

Fort Peck Reservation, Fort Kipp-Blair, Mont $49,000

Health needs: Most families haul water from Missouri River, local creek or from village of Brockton 15 miles away. Waste disposal facilities are either nonexistent or unsatisfactory.

Project: Construct individual water supply and individual waste disposal facilities.

Flathead Reservation, St. Ignatius, Mont 103,000

Health needs: Except for a few well sources of questionable construction and location, the Indians haul water from the village of St. Ignatius. Satisfactory waste disposal facilities are almost nonexistent.

Project: Construct community and individual water supply and individual waste disposal facilities.

Wind River Reservation, South Fork-Trout Creek, Wyo 82,000

Health needs: Diarrheal type illnesses are frequent. Most Indian families haul their water from rivers, ditches, etc. Waste disposal facilities insanitary.

Project: Construct community and individual water supply and individual waste disposal facilities.

Choctaw Reservation, Bogue Homo, Connehatta, Red Water, Standing Pine, Miss 95,000

Health needs: Diarrhea and dysentery among infants and children unusually high. Safe and adequate water supply and waste disposal facilities lacking.

Project: Construct individual water supply and individual waste disposal facilities in 4 communities.

Cherokee Reservation, Big Cove, Soco, and Paint-Town, N.C 94,000

Health needs: Residents obtain water from unapproved springs, wells and from streams. Waste disposal facilities unsatisfactory. Diseases associated with inadequate sanitary facilities abnormally high, particularly in children.

Project: Provide material and technical direction for construction of individual and communal facilities.

Cherokee County, Okla 60,000

Health needs: Many Indian families obtain water from unprotected sources and have unsatisfactory waste disposal facilities. Most prevalent diseases of Indians related to environmental conditions.

Sanitation facility projects—Continued

Cherokee County, Okla.—Continued

Project: Construct new and renovate existing individual water supply and individual waste disposal facilities; phase III.

McCurtain County, Okla $60,000

Health needs: Diseases most common to these rural Indians are communicable diseases associated with overcrowding, lack of sanitary facilities, use of polluted water sources, and absence of proper waste disposal facilities.

Project: Construct or rehabilitate individual water supply and individual waste disposal facilities; phase II.

Adair County, Okla 80,000

Health needs: Contaminated water sources, lack of waste disposal facilities and use of insanitary privies contribute toward high incidence of preventable diseases among these people.

Project: Construct individual water supply and individual waste disposal facilities; phase II.

Caddo County, Okla 58,000

Health needs: High incidence of diseases related to poor sanitary conditions. Most Indian families use unsafe water sources and insanitary waste disposal facilities.

Project: Construct new or renovate existing individual water supply and individual waste disposal facilities; phase II.

Yavapai-Apache Reservation, Middle Verde, Ariz 11,000

Health needs: Existing water distribution system seriously deteriorated and waste disposal facilities totally unsatisfactory.

Project: Renovate and replace as necessary existing community water system, and construct individual waste disposal facilities.

Salt River Reservation, Lehi, Ariz 50,000

Health needs: Residents in this community must haul water in cans and other inadequate containers an average distance of ½ mile. Waste disposal facilities inadequate.

Project: Construct community water distribution system and individual waste disposal facilities.

Fort Apache Reservation, East Fork and Seven Mile Districts, Ariz 99,000

Health needs: Present water source either raw water from the White River or from an irrigation canal. Waste disposal facilities nonexistent.

Project: Construct several small community water supply systems and individual water supply and waste disposal facilities.

Pima Reservation, Casa Blanca and Bapchule, Ariz 35,000

Health needs: Many residents travel 3 to 8 miles by horse and wagon to obtain water. Waste disposal facilities nonexistent.

Project: Construct new well and temporary storage to serve as watering point; construct individual waste disposal facilities.

California rancherias 50,000

Health needs: Certain Indian groups in California are facing imminent termination under Public Law 85-671 (Rancherias Act). Most of these Indian groups are in need of assistance in acquiring minimum sanitation facilities. Funds are needed to enable such assistance at the time acceptable requests are received.

Project: Construct and rehabilitate community sewerage facilities and/or individual waste disposal facilities.

Cocopah Reservation, entire reservation, Arizona 13,000

Health needs: Bacteriological samples of existing wells repeatedly show contamination. Unsatisfactory waste disposal facilities.

Project: Construct individual water supply and individual waste disposal facilities.

Fort Yuma Reservation, Winterhaven, Calif 103,000

Health needs: Present water supply obtained from unprotected and contaminated dug wells. Most waste disposal facilities inadequate.

Project: Construct community and individual water supply and individual waste disposal facilities.

Sanitation facility projects—Continued

San Carlos Apache Reservation, Bylas, Ariz.	$100,000
Health needs: Existing water system in need of extensive repair. Adequate waste disposal facilities are lacking.	
Project: Renovate and extend community water system and construct individual waste disposal facilities.	
Papago Reservation, 5 communities, Arizona	72,000
Health needs: Water supply and waste disposal facilities serving the villages are unsafe and inadequate. Incidence of sanitation related diseases high.	
Project: Construct community water supply and individual waste disposal facilities.	
Umatilla Reservation, entire reservation, Oregon	71,000
Health needs: Most water for domestic purposes obtained from unsafe wells and springs. Acceptable waste disposal facilities practically nonexistent.	
Project: Construct new and renovate existing individual water supply and waste disposal facilities.	
Muckleshoot Reservation, entire reservation, Washington	33,000
Health needs: Safe sources of domestic water and acceptable waste disposal facilities are practically nonexistent.	
Project: Construct new or rehabilitate existing individual water supply and individual waste disposal facilities.	
Coeur D'Alene Reservation, entire reservation, Idaho	48,000
Health needs: Estimated two-thirds of the homes have unapproved water supply and waste disposal facilities.	
Project: Rehabilitate existing and construct new individual water supply and individual waste disposal facilities.	
Hoh Reservation, Hoh, Wash.	10,000
Health needs: Contaminated domestic water obtained from the Hoh River and a creek. Waste disposal facilities inadequate.	
Project: Construct community water supply and individual waste disposal facilities.	
Lummi Reservation, rural, Washington	58,000
Health needs: Springs and shallow dug wells serving Indians fail during the late summer and early fall. Dysentery is a problem on the reservation, particularly in the 1 to 9 years age group.	
Project: Construct and improve individual water supply and individual waste disposal facilities.	
Quinault Reservation, Taholah, Wash.	67,000
Health needs: Community water system deteriorated beyond repair. Waste disposal facilities insanitary.	
Project: Construct community water supply and individual waste disposal facilities.	
Colville Reservation, Inchelium area (rural), Washington	81,000
Health needs: Most homes have unsafe water supply and insanitary waste disposal facilities.	
Project: Renovate existing and construct new individual water supply and individual waste disposal facilities.	
Tulalip Reservation, Tulalip area, Washington	36,000
Health needs: Residents obtain water from insanitary wells, springs, and streams. Many homes dispose of their waste in an insanitary manner.	
Project: Construct individual water supply and individual waste disposal facilities.	
Navajo Reservation, scattered locations, Arizona and New Mexico	140,000
Health needs: Homes in small rural communities do not have adequate water supply or waste disposal facilities.	
Project: Construct low pressure water distribution systems and individual waste disposal facilities to serve 10 communities.	

80391—62——55

Sanitation facility projects—Continued

Navajo Reservation, scattered locations, Arizona and New Mexico	$200,000
Health needs: Safe and convenient water sources are not available to many areas of reservation. Existing communal watering points are insufficiently developed to provide needed quantity and quality of water.	
Project: Provide material and equipment necessary to develop springs and shallow wells for watering points.	
Navajo Reservation, Kayenta, Ariz	250,000
Health needs: Tribal community development program includes relocating families to Kayenta. Planned community in need of water supply and waste disposal facilities.	
Project: Construct water distribution system and sewerage system to serve planned community of 150 houses.	
Navajo Reservation, scattered locations, Arizona and New Mexico	12,000
Health needs: Sanitary waste disposal facilities generally nonexistent at reservation homes. Liquid waste disposal facilities needed at homes with running water.	
Project: Construct septic tank disposal systems at individual homes.	
Subtotal, construction projects	3,857,000
Investigations, emergency work, supplies and equipment	143,000
Severe drought conditions, floods, failure of well casings and pumping equipment, and other unforeseen conditions frequently require provision of emergency facilities to permit resumption of critical services on a temporary or emergency basis. Engineering studies must be conducted for development of water and waste disposal systems in specific Indian communities, and geological and hydrological surveys must be undertaken to locate water sources.	
Total, 1963 request for construction of Indian sanitation facilities	4,000,000

GENERAL STATEMENT

Chairman HAYDEN. Will you please explain briefly the construction proposed?

Dr. SHAW. Do you wish it placed in the record?

Chairman HAYDEN. Yes.

Dr. SHAW. It is well described in the budget, page 51 through page 98. I can briefly tell you that $3,508,000 of it was for hospitals and clinics, consisting of $884,000 for the construction of the hospital at Fort Yates approved last year; $2,097,000 for construction of the hospital at Point Barrow; and $527,000 for three health centers and three clinics; $535,000 for personnel quarters; and alterations of various types at various locations, $1,377,000; $100,000 for participation in the community hospital at Chamberlain, S. Dak.; and $4 million for various sanitation projects; which total $9,220,000 after deduction of $300,000 for unprogramed funds from prior years.

MEDICAL CENTER AT PHOENIX

Chairman HAYDEN. Last year $350,000 was added to your budget for the purpose of planning a medical center and a training facility in Phoenix, Ariz. Would you please indicate the progress which has been made with regard to this project? When do you estimate that construction contracts can be let?

Dr. SHAW. Yes, sir. We are very anxious to get this project underway. Early in the year we submitted through channels our estimate of requirements for this project. As I understand it, the Bureau of

the Budget and the Department have mutually agreed that before action will be taken on the statement of requirements, there will be an on-site evaluation by the Department and the Bureau of the Budget in Phoenix.

Mr. Fisher might have some additional information on that.

Mr. FISHER. We have the trip scheduled now, sir, for this on-site evaluation beginning the week of March 19 by representatives from the Bureau of the Budget, the Department, and the Public Health Service, so I think the project is moving along.

Chairman HAYDEN. This is land belonging to the United States? No land acquisition is required, as I understand it.

Mr. FISHER. That is correct, sir.

INDIAN PATIENTS BROUGHT IN

Chairman HAYDEN. As I understand it, Indian patients will be brought to this place.

Dr. SHAW. Oh, yes. This is going to be the hub of our hospital activities, which will be a large 200-bed medical center with 25 beds for research in the diseases and malformations of children. It will be the referral center for serious cases from our field hospitals and will be the central laboratory for the field hospitals, and field clinics. Referral of the type of heavy serious and difficult cases from the hospitals in the isolated areas into the medical center for expert definitive medical care of all kinds. It will also supply expert professional consultants in the medical specialties for the field hospitals and carry on continuous indoctrination and in service training programs.

Chairman HAYDEN. There will be actually cases of that kind brought there?

Dr. SHAW. Hundreds of them, sir. We have hospitals, as you know, at Whiteriver and San Carlos, Keams Canyon, Pima, Papago, Yuma, Colorado River, Schurz, San Xavier and Owyhee. This is a service that cannot otherwise be met because of the isolation and rapid growth of Arizona generally and because of the low level of acculturation of Arizona Indians.

Chairman HAYDEN. You not only cover the Arizona area, but portions of Nevada and other places?

Dr. SHAW. Yes, to a lesser extent.

LETTER FROM CHIPPEWA CREE TRIBE

Chairman HAYDEN. Senator Mansfield has sent me a copy of a letter addressed to him by officials of the Chippewa Cree Tribe of the Rocky Boy's Reservation, attesting to the value of your sanitation program. I will include this correspondence in the record.

(The letter referred to follows:)

U.S. SENATE,
COMMITTEE ON RULES AND ADMINISTRATION,
February 21, 1962.

Hon. CARL HAYDEN,
Chairman, Senate Appropriations Committee,
New Senate Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: Enclosed is a letter I have received from the Chippewa Cree Tribe of the Rocky Boy Indian Reservation in Montana giving their endorsement for the work being done on the reservation under Public Law 86-121.

This Indian sanitation program apparently is being well received in this area and I thought you might like to have this letter in your file so that it could be used as evidence in support of the necessary funds which will be required in the next fiscal year under the Public Health Service program.

With best personal wishes, I am,

Sincerely yours,

MIKE MANSFIELD.

TRIBAL COUNCIL CHIPPEWA CREE TRIBE,
Rocky Boy Route, Box Elder, Mont., February 15, 1962.

Senator MIKE MANSFIELD,
Senate Office Building, Washington, D.C.

DEAR SIR: We are writing to you concerning the sanitation program being conducted on the Rocky Boy's Reservation by the U.S. Public Health Service under Public Law 86-121.

First, we wish to say that the purpose of the sanitation program, as we know it, is to educate our tribal members in sanitation and cause them to become sanitation conscious. It provides us with safe water, which is not only a convenience, but also an inportant means of combatting the many water-borne diseases so prevalent on our reservation. Before this program, we were all compelled to use contaminated surface water for our daily needs.

The sanitation program of the Public Health Service is also providing our members with sanitary, fly-tight privies and garbage pit units, so that refuse can be disposed of easily. This minimizes the danger of transmitting fly- or rodent-borne diseases.

These facilities are very much appreciated by our members, since we realize that consideration is being given to our health and welfare by Congress. The program enables us to feel that we are bettering ourselves through our own efforts, such as when we are required to contribute labor in the installation of facilities in our homes. The Public Health Service is providing employment to some of our members, and the requirement of labor contribution is providing something to do for many of our unemployed.

We have a good start now, and have projects either complete or underway on about one-third of the reservation. We are asking you to seek the highest appropriation possible for this program, in order that we may continue with these projects and extend the benefits to the whole reservation as soon as we possible can.

Sincerely yours,

THE CHIPPEWA CREE TRIBE OF THE
ROCKY BOY'S RESERVATION,
By JOE DEMONTINEY
Secretary of the Business Committee.

Attest:

THEODORE LA MERE,
Chairman of the Business Committee.

FORT HALL RESERVATION, IDAHO

Chairman HAYDEN. Senator Dworshak?

Senator DWORSHAK. Yes, Mr. Chairman. I was trying to digest these statements and check this chart. Apparently, Dr. Shaw, you feel that you are making a lot of progress with your program in increasing the amount of budget every year, and I presume that that is correct, but I should like to ask a few questions concerning the Fort Hall Reservation in southern Idaho.

I do not know whether you are acquainted with that personally?

Dr. SHAW. Yes. I was there 2 weeks ago and looked into it very carefully.

Senator DWORSHAK. Two weeks ago?

Dr. SHAW. Yes, sir.

Senator DWORSHAK. What did you find? Were you there when 1,900 Indians were in line to receive surplus food?

Dr. SHAW. No, sir.

Senator DWORSHAK. From the Government?

FLOOD IN AREA

Dr. SHAW. No, sir. I was not. I was there 1 or 2 days after the flood had receded.

Senator DWORSHAK. Did the Indians suffer much flood damage in their area on the reservation?

Dr. SHAW. We sent a sanitary engineer in there at the time of the flood to make a survey and study the needs of the Indians that came within the scope of the program. He found that 53 or 54 wells had been flooded and silted up and would require pumping out and cleaning and disinfection before they were usable.

The clinic operated throughout the flood. The children in the schools had the immunization rates as high as 90 percent and a program was immediately instituted to immunize for typhoid fever. We used the opportunity to bring up to date all types of immunizations. They were instructed and assisted in the protection and disinfection of water so that it would be safe to drink.

CHILDREN IN SCHOOL

Senator DWORSHAK. All the Indian children on the reservation attend public schools? They have no reservation schools?

Dr. SHAW. That is correct, sir.

Senator DWORSHAK. But you are talking only about the Indian children?

Dr. SHAW. No, if we went in the school in agreement with the local health department, and in cooperation with them, all of the children were treated the same way.

COOPERATION WITH OTHER HEALTH AGENCIES

Senator DWORSHAK. You were cooperating with other health agencies?

Dr. SHAW. Yes, sir, both State and local. There were a number of Indian homes—the exact number I cannot say—that were flooded.

There was some damage, but this was primarily to the floors and to personal property.

Senator DWORSHAK. Most of their huts have dirt floors, too, I think.

GENERAL HEALTH LEVEL

Dr. SHAW. The majority of them do, I believe. The clinic reported, and I saw quite a number of Indians myself, that there was never any evidence of malnutrition or starving. The general level of health was good. The attitude and cooperation between the medical staff, the local medical profession, and the local hospitals was excellent. We had had some minor misunderstanding with one of our officers in the past; but he has been transferred and Dr. Porter, the present medical officer in charge, was doing an excellent job.

FORT HALL MEDICAL PROGRAM

Senator DWORSHAK. I have here a letter written by you dated March 2 and replying to a letter that I had sent to Assistant Secre-

tary John Carver on December 29, 1961, regarding conditions on the reservation. You indicate that—

> Since the year 1961 there has not been any increase in allocation of appropriated funds for the Fort Hall Indian Reservation medical program. It is anticipated that the medical program in the Fort Hall Reservation will continue to operate at approximately the same level in fiscal year 1962 as in fiscal year 1961.

Can you tell us for the record how many personnel you have under the health program on the reservation?

PERSONNEL IN FORT HALL PROGRAM

Dr. SHAW. Yes, sir. We think we have a fairly adequate staff that are doing a very satisfactory job, and I went there particularly to be sure that this was true.

We have Dr. Porter, the medical officer in charge; Mrs. Warjack, administrative assistant; Florence Walrath, clerk-typist; a chauffeur-janitor; a staff nurse, Mrs. Curtis; a nursing assistant; a dentist, Dr. Wheelwright; a dental assistant; two public health nurses; and a clerk-typist. We have a temporary appointment to help the public health nurses, Madeline Parker. We have a sanitary aid working with the Indians in their local communities and homes on sanitation projects of all kinds.

Senator DWORSHAK. Are those all full time, except that one temporary employee?

Dr. SHAW. Yes, sir. And she is full time, too, but a temporary employee rather than having permanent status.

Senator DWORSHAK. Who was that temporary employee?

Dr. SHAW. Madeline Parker.

Senator DWORSHAK. Parker?

Dr. SHAW. Yes.

CONTRACT WITH SOUTHEAST HEALTH DISTRICT

Senator DWORSHAK. I had no particular information regarding the inadequacy of your program. I was merely trying to develop information. I was disturbed by one comment in the letter:

> We do not now have a contract with the Southeast Health District.

What does that mean? Apparently you have heretofore had a contract and you must have discontinued it.

Dr. SHAW. We are very upset that we had to accept the cancellation of this contract. I have considerable detail on it which I would be happy to discuss with you here or supply it for the record, if you wish.

Senator DWORSHAK. No; if you can send a report to me at my office I won't require you to put in too many details. You might just say in a few words why it was necessary to discontinue the contract and whether it was advisable or whether you regret that it was necessary.

INABILITY TO ACCEPT CONTRACT TERMS

Dr. SHAW. We regret that we were unable to agree on what we thought was an equitable price for a contract in accordance with the disease entities with which we were dealing, because a great deal of improvement has occurred over the last years.

Basically the contract which they insisted that we accept would have meant an expenditure of $15 per Indian just for preventive services and we could not in clear conscience justify this after a very careful detailed study of the cases and a home survey. After two extensions to permit further discussion and negotiation we finally accepted cancellation of the contract. We put the public health nurses on our own payroll and continued the program as it has been in the past.

Senator DWORSHAK. There will be no curtailment of any kind in the services which are available because you have transferred them to your own supervision?

Dr. SHAW. That is correct, sir.

LOCATION AND WORK OF SOUTHEAST HEALTH DISTRICT

Senator DWORSHAK. What does the Southeast Health District embrace? Is that Federal, or State, county, or what?

Dr. SHAW. That is a local county department. There are a number of counties. I am not well enough acquainted really to give the details.

Senator DWORSHAK. What contractual services did they bring previously? Were they extensive? How much money was involved under the contract?

Dr. SHAW. They provided public health preventive services only, some technical assistance in the general field of sanitation. Public health nursing was the main activity. Some laboratory services, and the like. The contract last year was for $10,768. The final proposal that they insisted upon was for over $30,000. We sincerely felt that this was excessive for about 2,000 Indians particularly after our careful study of the disease entities in the population.

Senator DWORSHAK. Are you equipped on the reservation through your own personnel now to replace the services previously provided by the Southeast Health District?

POPULATION OF SOUTHEAST DISTRICT

Dr. SHAW. Yes, sir. There are 4 counties in the Southeast Health District which has a 90,000 total population, about 2,000 of whom are Indians.

They have a budget of $113,000 consisting of $63,000 local funds, $1,200 State funds, $37,000 Federal grant-in-aid funds, and then they had our contract for $10,768 last year.

Senator DWORSHAK. Do you plan to use the money previously paid to the district to provide comparable services through your own facilities and personnel on the reservation?

Dr. SHAW. Yes, sir; and the same public health nursing personnel were transferred to our payroll, so there is actually no change whatever in the program.

Senator DWORSHAK. When they were under the supervision of the Southeast Health District you provided money to pay their salaries and other expenses and now that will be changed?

Dr. SHAW. Yes, sir.

WORSENING OF CONDITIONS AT FORT HALL

Senator DWORSHAK. Of course you know that Assistant Secretary Carver is from Idaho, and I have been very critical not only during the past year, but during the past 9 years when we had a Republican administration. I have been very unhappy over the fact that we continue to increase the budget for all activities of the Indian Bureau, including the health services, although I do not know how rapidly your budget hasb een increasing but; it seems to me that—and I am sure that your visit 2 weeks ago would corroborate some of the things I am saying now—conditions have been increasingly worse on the Fort Hall Indian Reservation for the past 20 years.

The Indians notwithstanding, with the facilities for reclamation and for other economic activities to increase self-sufficiency, they have been more dependent upon the Federal Government, and I do not know what can be done.

I am not particularly referring to the health situation, but the overall status is bad. They have to even carry their household water, their drinking water, from distant places in containers, and there are other conditions.

IMPROVEMENT IN HEALTH CONDITIONS

Of course you are not responsible for the mud floors or for the conditions which generally exist. Had you been on the reservation previous to 2 weeks ago?

Dr. SHAW. This was my second visit.

Senator DWORSHAK. When were you there previously?

Dr. SHAW. 1954 or 1955; about that time.

Senator DWORSHAK. You would not recall during that interim whether conditions have become better or worse?

Dr. SHAW. They have become much, much better from a health standpoint.

Senator DWORSHAK. I am inclined to agree with you if you have been carrying on the program there with the large staff you have. You should have improved their sanitary conditions.

Dr. SHAW. I can justify this statement by saying that I studied all of the deaths last year. There were two deaths in the 1 to 4 age group; one in the 25 to 29; one in the 40 to 44; two in the 45 to 49; one in the 55 to 59; and six over 60 years of age. This is about the same breakdown you would find in the general population.

SANITATION PROJECTS

With respect to water, last year we had one of our sanitation projects in Gibson District of $89,000, in which the Indians worked with us cooperatively. They participated with both money and, above all, labor. Fifty-three new wells were dug; 127 homes were supplied with water in the home and sanitary waste disposal, so that the supply of water, the control of the sanitation problems, in this major segment of the reservation particularly, has been pretty well solved.

Senator DWORSHAK. Do you have some more work along that same line?

Dr. SHAW. We have other projects being developed which will eventually cover the entire reservation.

Senator DWORSHAK. That is the same program that was authorized a couple of years ago for all of our Indians where they have subnormal water facilities?

Dr. SHAW. Yes, sir. It has been very effective.

COMPLETION DATE FOR SANITATION PROJECTS

Senator DWORSHAK. How many years will it take to complete that throughout the country?

Dr. SHAW. We have, including this budget before you, $10 million made available through 1963. The total need is in the neighborhood of about $70 million for the 400,000 Indians and Alaskan natives involved.

Senator DWORSHAK. Then, based on the observations you made recently at Fort Hall you feel that progress is being made and that sanitary conditions and the health services are functioning very satisfactorily?

Dr. SHAW. Yes, sir. Our new medical officer in charge, Dr. Porter, is working very closely with the Public Health nurses and with the tribal health committee. The patient load in the clinic is running between 50 and 75 or more a day now, most of whom are children. In this budget we have funds for the the construction of a new clinic at Fort Hall to replace the quarters that we are presently occupying in the basement of the old hospital building. The Bureau of Indian Affairs occupies the rest of the building.

NEW CLINIC AT FORT HALL

Senator DWORSHAK. How much is provided for that?

Dr. SHAW. $166,000.

Senator DWORSHAK. For a clinic?

Dr. SHAW. Yes, sir.

Senator DWORSHAK. Will you have beds in that?

Dr. SHAW. No, sir; this clinic will have all of the activities of a health department and a doctor's office, including laboratory and X-ray. The effort will be made to prevent diseases and treat them early, rather than to hospitalize.

HOSPITALIZATION UNDER CONTRACT

Senator DWORSHAK. They do have a small hospital there. I do not know whether it is still operating.

Dr. SHAW. There are two hospitals in town that we have contracts with that give us very excellent services.

Senator DWORSHAK. You do not operate a hospital on the reservation?

Dr. SHAW. No.

Senator DWORSHAK. You did have one a few years ago, as I recall it.

Dr. SHAW. The Bureau of Indian Affairs I think closed it during the war and it has never been reopened.

Senator DWORSHAK. And now all of the hospitalization is off the reservation under contract?

Dr. SHAW. Under contract. It is only a short distance of about 12 miles over modern highways.

Senator DWORSHAK. With the hospital in Blackfoot?

Dr. SHAW. Yes. And it works very well indeed.

INDIANS ON RELIEF ROLLS

Senator DWORSHAK. I do not know whether you were informed during your visit that most of the Indians there were on the relief rolls so far as surplus food is concerned. Is that a condition which is found generally on all reservations, or is that somewhat unusual so far as Fort Hall is concerned?

Dr. SHAW. This is a general condition. The Indians unfortunately —Fort Hall is an exception as to location—are in those parts of the country that are most isolated, the most arid and have the poorest economic base, so that the average Indian family income is less than a thousand dollars a year; so most of them, generally speaking, are at the indigent level. Fort Hall is no exception

FOOD DISTRIBUTION

Senator DWORSHAK. How is that distribution of food handled? Through joint efforts of the Indian Bureau and the State or county officials?

Dr. SHAW. State welfare through the regular surplus commodities procedure in cooperation with the tribe and the Bureau of Indian Affairs. We work with them from a nutritional point of view so that the Indians will know and understand how to use the surplus commodities and maintain a balanced diet, which is necessary for health.

COMPLETION DATE FOR CLINIC

Senator DWORSHAK. One more question: When will this clinic be completed according to your planning?

Dr. SHAW. Mr. Read?

Mr. READ. I would say that it would probably be completed by a year from this July.

Senator DWORSHAK. You are moving ahead with the planning now?

Mr. READ. We are beginning the initial program planning.

Senator DWORSHAK. Of course you have not received the construction funds?

Mr. READ. That is right. The planning funds and construction funds are included in this budget.

Senator DWORSHAK. Have you not done any planning yet?

Mr. READ. Other than just preliminary planning, no, sir.

Senator DWORSHAK. You have a lot more planning to do before the actual construction begins?

Mr. READ. That is right. We have built similar clinics elsewhere and with relatively little work it can be rather quickly adapted to the problem and site at Fort Hall.

Senator DWORSHAK. Thank you, Dr. Shaw. Thank you, Mr. Chairman. I might merely add that I do hope the Health Service will watch the situation on the Fort Hall Reservation. You are getting more funds and expanding these programs and it would seem that conditions there so far as I know anything about the Indian

reservations in our country are immeasurably worse than normal and it will take a lot of persistent effort to improve the conditions so that the Indians get what they are entitled to have under all of our programs.

PER CAPITA HEALTH EXPENDITURE AT FORT HALL

Dr. SHAW. I agree with you, sir. I could give you just one more statistic. We are running about $110 to $120 per Indian per year for health services. In the Indian population there is about three times as much disease as in the average general population. This compares to an expenditure in the general population of about $160 per year for health services.

Senator DWORSHAK. Your $120 is for the 380,000 Indians?

Dr. SHAW. Yes.

Senator DWORSHAK. On reservations?

Dr. SHAW. That is correct, compared with the general civilian expenditure per head of $160 per year for health services. We have a real problem and unfortunately we still have to establish priorities for service, but I think I can rightfully state with pride that field staff is doing an excellent job.

ALASKAN HEALTH SITUATION

Senator DWORSHAK. Mr. Chairman, I do not know whether you have explored the program of health in Alaska. Has there been anything on that?

Chairman HAYDEN. Yes. We took testimony on that.

Senator DWORSHAK. I was up there several years ago and I was shocked by the conditions that were prevalent among the natives.

Chairman HAYDEN. Apparently there has been a marked improvement.

Senator DWORSHAK. Thank you.

QUESTIONS SUBMITTED BY SENATOR MUNDT

Chairman HAYDEN. Senator Mundt was unable to be present this morning. He has furnished me with this list of questions. Would you please provide for the record answers to Senator Mundt's questions?

Dr. SHAW. Yes, sir.

(The questions referred to and answers follow:)

INCREASE IN CONTRACT PATIENT CARE

Senator Mundt's question No. 1: I note that on page 25 of the justifications that the general hospitalization item for the contract patient care program has been increased from $4,745,200 in fiscal year 1962 to $5,440,000 in fiscal year 1963, or by a total of $694,800.

It appears from these figures that you are giving greater emphasis to this program, for which I am pleased; but I do note that the costs for the program in 1963 will be approximately 7 percent above the costs for 1962, which would seem to indicate that approximately $330,000 of the increase for fiscal year 1963 will be required to maintain the program at the same level that it was operated at in 1962. Is this true?

This would seem to mean that only about half of the $694,000 increase for this program in fiscal year 1962 will actually go to expanding the service of the program. Is this true?

Answer. It is true that the increase of $694,800 for the hospitalization of general patients represents only approximately $330,000 to cover the expected rise in costs for the 1962 average daily patient load of the 462 patients plus approximately $365,000 to fund the additional expected 33 patients per day in 1963.

FUNDS FOR NONELECTIVE AND NONEMERGENT CASES

Senator Mundt's question No. 2: With further reference to the contract patient care program, I note that the item for physicians' service for fiscal year 1963 is $154,000 above the fiscal year 1962 level. This would seem to indicate that the Indian Health Service is following the recommendations made by this subcommittee last year that greater emphasis be placed on nonemergent or elective surgical cases.

However, I am perplexed by the comment in the justifications that "the request for additional funds in the amount of $154,000 reflects rising costs of medical care." Does this statement mean that the increased funds will actually provide no more services but will only be used to offset the rising costs of medical care?

If this is so, how large an amount of additional funds will be required to make some really meaningful progress in handling the backlog of elective or nonemergent surgical cases?

Answer. The increase of $154,000 is projected to cover only the rise in costs of physicians services in 1963 over 1962. It is estimated that an additional amount of $120,000 would be required to continue the attack on the backlog of elective and nonemergent cases.

HEALTH CENTER FOR STANDING ROCK SIOUX

Senator Mundt's question No. 3: Last year Congress appropriated funds in the amount of $319,000 for a health center and personnel quarters at McLaughlin to serve the members of the Standing Rock Sioux Tribe residing in the area.

Could you please give me a progress report on this project, and can you tell me whether the funds appropriated last year will be sufficient to do the work as planned?

Answer. A site selection committee visited McLaughlin, S. Dak., in December 1961 to select a suitable site for the new Indian Health Center and personnel quarters. The committee inspected four sites and recommended the procurement of one of these sites as being most suitable for the proposed project. The recommendation was concurred in by the Division of Indian Health and the Aberdeen area medical officer in charge was authorized, on February 26, 1962, to proceed with the necessary appraisals and to obtain a formal option for purchase of the recommended site. Apportionment of the necessary funds is being requested of the Bureau of the Budget and it is planned, as soon as funds are made available, to proceed with acquisition of the site. It is considered that the funds appropriated last year will be sufficient to do the work as planned.

HOSPITAL AT FORT YATES, N. DAK.

Senator Mundt's question No. 4: On page 59 of the justifications sheets there is an item of $884,000 for construction funds for a new Indian hospital at Fort Yates, N. Dak., to serve the Standing Rock Sioux Tribe.

When is this new facility scheduled for completion, and how large a staff do you intend to use in this facility?

Answer. The new Fort Yates Indian Hospital is scheduled for completion in the fall of 1964 and will have approximately 70 employees consisting of doctors, nurses, and other supporting staff.

SANITATION FACILITY AT PINE RIDGE, S. DAK.

Senator Mundt's question No. 5: I note on page 89 of the justifications sheets that funds in the amount of $295,000 are required for a sanitation facility project at Pine Ridge, S. Dak., and funds in the amount of $96,000 have been required for similar facilities on the Sisseton Reservation.

Could you give me some idea of the time schedule for the completion of these projects?

Answer. Preliminary plans for the Pine Ridge project are completed. It is planned to initiate construction work late this summer and to complete the project by the fall of 1963. Some of the units of the project would be placed in service prior to completion of the entire project.

At Sisseton it is planned to go out for bids for well drilling in the fall of 1962 and to complete the project in the summer of 1963.

COMMUNITY HOSPITAL AT CHAMBERLAIN, S. DAK.

Senator Mundt's question No. 6: I note on page 86 of the justifications sheets that you list an item of $100,000 for fiscal year 1963 for community hospitals serving Indians and non-Indians. In the explanation of the next item you state, "Under this authority an amount of $100,000 is estimated for fiscal year 1963 for a potential project at Chamberlain, S. Dak."

I assume that these funds would be used for an addition to the Bailey Community Hospital. Could you provide us with a fuller explanation of the project, and an explanation of the significance, if any, of the use of the term "potential project?"

Answer. The Bailey Community Hospital proposes the construction of a seven-bed addition to the existing hospital, as well as alterations to various areas in the facility. It has been determined that seven hospital beds and attendant service facilities in addition to those currently available are necessary for the care of Indians in the Lower Brule and Crow Creek service areas. On January 11, 1962, the Public Health service advised the hospital of its willingness to make an offer of financial assistance in the construction of additional facilities. The offer which it is proposed to make will be based upon the cost of the project which is attributable to Indian health needs, which will be the seven-bed addition together with a portion of the proposed alterations. The Division of Indian Health recently requested the Aberdeen area medical office in charge to clarify with the administrator some details of information submitted by the hospital upon which an offer of assistance can be based.

With reference to the term, "potential project," this term is used in the sense of "the proposed project" but it is our custom to use this description during the development period until a formal offer is made and accepted by the sponsor.

SANITATION PROJECTS

Senator Mundt's question No. 7: I notice on page 29 of your request that you have a $1 million increase for Public Law 86-121 sanitation projects over fiscal year 1962. How will this be implemented as the activity budget request shows no corresponding increase in staff to carry it out?

Answer. Under the request as submitted, we would plan to defer initiation of many projects until late in the fiscal year 1963, unless supporting staff is provided to permit an earlier start. As I indicated to the committee last year, we have felt that this cooperative Public Health Service tribal construction activity could be implemented on reasonable schedule with additional staff of 10 positions for each $1 million increase in the construction level. The support costs for such staff would require an increase of $100,000 in the activity budget.

Chairman HAYDEN. We thank you, doctor.

Dr. SHAW. Thank you, sir.

COMMUNICATIONS

Chairman HAYDEN. The following letters with regard to 1963 appropriations for the Division of Indian Health will be placed in the record.

Letter from Mr. Royal D. Marks, Phoenix, Ariz.

Letter from Mr. Harold Farley, director, State-Federal programs, Department of Education, Boise, Idaho.

(The letters referred to follow:)

LAW OFFICES,
MARKS AND MARKS,
Phoenix, Ariz., February 13, 1962.

Hon. CARL HAYDEN,
Senator From Arizona,
Senate Office Building, Washington, D.C.

DEAR SENATOR HAYDEN: It has been some time since I have had occasion to write you regarding matters pending in Congress, especially affecting Indians, but there has been brought to my attention an appropriation matter that is pending and with which I am sure you are familiar.

I am currently a member of the Board of Directors of the Governors' Interstate Indian Council and not only as a representative of said council but being vitally interested in our good Indian citizens of the State of Arizona, as well as throughout the country, I am writing to ask your support of the Division of Indian Health's 1963 fiscal year appropriations.

The Health Committee of the Governors' Interstate Indian Council has informed those of us who represent the Governors of our various States on this council that the appropriation requested for Indian health of $68,500,000 is the bare minimum which will satisfactorily carry on the Indian health program. As you know, the President has requested for Indian health activities, $57,500,000, and these funds will be used for hospital health services, community field health services, and services for Indian patients through contractural arrangements with private hospitals. With respect to construction, the request is $11 million, which funds will be used for the construction of new facilities and renovation of existing facilities, and we in Arizona are certainly proud of the new hospital on the Papago Reservation, and there is a very fine one being built at San Carlos. Out of the $11 million recommended for construction, we respectfully urge you to support $6 million for sanitation facilities projects as authorized under Public Law 86–121. These funds are urgently needed, especially on our Indian reservations in Arizona.

Since Indian health has come under the public health department we have seen some fine progress but certainly the funds as requested are badly needed to continue a fine program.

I know you are asked to support appropriations for numerous activities and projects and I also know you are making strong efforts to place a ceiling on various projects and I highly commend you for your attitude. I also know that you realize the dire need for better and enlarged health programs for our Indian citizens. Whatever you can do on behalf of our Governors' Interstate Indian Council and the Indian citizens here in Arizona in this behalf, will be sincerely appreciated.

Dad joins me in sending best regards.

Sincerely,

ROYAL D. MARKS.

STATE OF IDAHO DEPARTMENT OF EDUCATION,
Boise, March 1, 1962.

Hon. FRANK CHURCH,
Senator for Idaho,
Senate Office Building, Washington, D.C.

DEAR SENATOR CHURCH: In the summer of 1961 I was Governor Smylie's representative to the Governor's Interstate Indian Council and attended their meeting at Billings, Mont. At this meeting we had a discussion of the Indian health activities and facility construction activities of the Division of Indian Health of the Medical Services Division of the Department of Health, Education, and Welfare. An appropriation of $57,500,000 for hospital health services for Indians, services for contractural arrangements with private hospitals, and community health services was approved by the 22 members of the Governor's Interstate Indian Council. Approval was also given for an appropriation of $11 million for construction of new hospital facilities, staff housing, and renovation of existing facilities; $6 million of the $11 million was for sanitation facilities projects as authorized under Public Law 86–121. We were assured by the Division of Indian Health that they can adequately administer the aforementioned during the fiscal 1963 year.

I realize that you are asked to support many different appropriations for numerous activities and projects and that effort must be made to place ceilings on certain project activities. I feel that the above appropriations in the field of

health for Indian people should be adequate to meet the problem of Indian health. We, in the State of Idaho, seem to be unable to cope with the magnitude and the extent of the health problems of the various Indian communities through finances from municipal, county, or State resources.

Your support of the projected appropriations for Indian health activities and construction would be deeply appreciated by many of the Indian citizens of our State, as well as many other of our State's citizens.

This communication is submitted with the approval of the Governor of Idaho in accordance with the provisions of section 67–802(4), Idaho code.

Sincerely,

HAROLD FARLEY,
Director, State-Federal Programs.

National Capital Planning Commission

STATEMENTS OF MRS. JAMES H. ROWE, JR., CHAIRMAN; WALTER C. LOUCHHEIM, MEMBER; WILLIAM E. FINLEY, DIRECTOR; DANIEL H. SHEAR, GENERAL COUNSEL; ELLIS F. PRICE, CHIEF, FEDERAL PLANNING DIVISION; AND JOHN R. PRITCHARD ADMINISTRATIVE OFFICER

Justification

Chairman Hayden. We will next hear from the National Capital Planning Commission. The budget estimate for fiscal year 1963 for salaries and expenses of the National Capital Planning Commission and the National Capital Regional Planning Council is $625,000, an increase of $100,000 over the amount approved for fiscal year 1962.

The justification for this estimate will be placed in the record.

(The justification referred to follows:)

Summary of Appropriation Estimates

National Capital Planning Commission, National Capital Regional Planning Council, fiscal year 1963

Item	Fiscal year 1961	Fiscal year 1962	Fiscal year 1963
Salaries and expenses appropriation:			
National Capital Planning Commission	$355,700	$436,700	$527,300
National Capital Regional Planning Council	79,300	88,300	97,700
Total	435,000	525,000	[1] 625,000
Salaries and expenses, open space study, National Capital region			65,000
Land acquisition, National Capital park, parkway, and playground system:			
Sec. 1-a, George Washington Memorial Parkway:			
Fairfax County, Va			
Montgomery County, Md			100,000
Prince Georges County, Md	250,000	500,000	
Sec. 1-b, Maryland stream valley parks			[2] 600,000
Sec. 1-c, Virginia stream valley parks			[3] 600,000
Sec. 4, Park, parkway and playground system in the District of Columbia			
Total	250,000	500,000	1,300,000

[1] $100,000 increase is $89,000 for 1st year costs for private office space; $5,000 for expenses of moving; and $6,000 to reduce lapses in permanent positions.
[2] All Montgomery County.
[3] Fairfax County, $500,000; Arlington County, $50,000; Alexandria, $50,000.

National Capital Planning Commission

PROGRAM AND PERFORMANCE

1. *Planning development of the National Capital.*—The Commission is charged with planning the orderly development and redevelopment of the National Capital and the conservation of the important natural and historical features thereof. Its membership consists of five private citizens chosen for their experience in city

and regional planning and seven ex officio members who are officials having responsibility for development of the Nation's Capital.

2. *Coordinating metropolitan area planning.*—The National Capital Regional Planning Council coordinates planning in the counties and cities of the metropolitan area. Its membership is composed of the Chairman of the Planning Commission, the Engineer Commissioner of the District of Columbia, and four representatives each from Maryland and Virginia, who are nominated from the State planning agencies.

The Commission and Council continue to work together in the closest possible way. Although there are inherent conflicts in the relationship between the two agencies in terms of Federal and local development policies, close staff liaison has been able to avoid such conflicts. Real progress has been made during the last fiscal year in establishing a formal link with the Washington Metropolitan Regional Conference, which is the forum of elected and appointed officials from all levels of government in the National Capital region. The conference has for the first time a small staff and has been making great progress in getting political leaders to think as regional citizens in the tackling of the wide variety of problems involved around the growth and the coordination of the metropolitan area. It is assumed that in time the conference will achieve formal legal status and that the Regional Planning Council as it exists in its present form could well then become the planning arm of the conference. Therefore, these early years of informal cooperation are crucial.

National Capital Regional Planning Council

The National Capital Regional Planning Council was established by act of Congress in 1952, as part of Public Law 592. The Regional Planning Council is composed of representatives of the planning agencies which have jurisdiction in the region as defined by Public Law 592: The District of Columbia; Montgomery and Prince Georges Counties in Maryland; and in Virginia, Arlington, Fairfax, Loudoun, and Prince William Counties, and the municipalities of Alexandria and Falls Church. The National Capital region comprises more than 2,300 square miles and includes more than 2 million persons.

Services and facilities

Public Law 592 provides that the National Capital Planning Commission shall provde such technical and clerical assistance and such other services and facilities as may be necessary for the performance of the regional Council's functions. The Council may also accept such assistance as may be made available by any State or local governmental authority having jurisdiction in the region. During the first several years of its existence, the Council's resources were inadequate to meet its responsibilities, and its staff and funds were only slowly expanded. As the National Capital Planning Commission, too, remained understaffed until recently, the services it could render the Council were necessarily meager. However, the complete integration of Council and Commission staffs has now been attained to such a point that during the preparation of the year 2000 plan the Council's staff resources could have been considered to have undergone a three fold expansion. With this particular effort concluded, this extraordinary amount of staff collaboration will subside. However, the Council will continue to lean heavily upon the Commission's Technical Services Division, and of course, the regular day-to-day cooperation between the two staffs will prevail. For further expansion-of-its resources, the Council will look elsewhere.

Local planning agency staff contributions have been helpful to the Council. During the preparation of the region's first general development plan in 1956—it became the land-use basis of the transportation plan, National Capital region—the information, data, and top-level staff time contributed by the local planning agencies to the Council are conservatively estimated to have amounted to $25,000. It is through the expansion of local contributions that the Council will seek to augment its resources, and an effort will be made now to secure financial assistance as well as services from the localities. While Public Law 592 does not permit the Council to receive moneys from sources other than the Federal Government, discussions are now in progress seeking to work out program relationships with the Washington Metropolitan Regional Conference which will enable local and Federal moneys to be harnessed.

80391—62——56

Operations of the Council

Under the law, the Council's two main responsibilities are to develop and maintain a general plan for the development of the region, and to reconcile the land-use requirements of the Federal and District installations with the land-use requirements of the localities. To accomplish these ends, the Council works with and through the National Capital Planning Commission and the several local planning agencies in the National Capital region. With the formation of the Washington Metropolitan Regional Conference, however, and the proliferation of new agencies with regionwide jurisdictions and responsibilities, the environment within which the Council works has been profoundly altered. During fiscal year 1963, the Council intends to propose whatever modifications in its operating procedures or changes in its basic structure it deems necessary to meet the needs of its changing political environment.

Program, the next 5 years

There follows a 5-year planning program for the Council:

1. Adopt and maintain a series of land development policies—growing out of the communities response to the year 2000 plan.
2. Adopt, publish, modify, and maintain the general plan for 1980.
3. Complete a regional open-space plan.
4. Prepare a general sketch plan for the Baltimore-Washington region with the Baltimore Regional Planning Council.
5. Prepare an economic development plan for the region.
6. Develop a data-gathering and processing program for regional statistics, to provide current and projected population, economic, land use, and other useful data to all planning agencies, as well as to all other public and private agencies utilizing such statistics, and to assist in the establishment of a separate statistical agency in which all kinds of statistical data will be available.
7. In conjunction with the National Capital Planning Commission maintain a pool of possible sites for new or relocated Federal and District agencies in the environs.
8. In conjunction with the regional sanitary board, adopt and maintain a regional plan for the development of water supply and sewage disposal facilities.
9. Establish a closer working relationship with the Washington Metropolitan Regional Conference.
10. Develop a stronger regional staff committee program.
11. Maintain a regional planning programing system which will permit a continual evaluation of the status of the area's many Federal, State, and local planning projects and programs.

Program, fiscal year 1963

During fiscal year 1963, the Council proposes the following program:

1. Maintain and revise, as necessary, the general development plan (of 1956), accounting for new conditions suggested by further research into the year 2000 plan proposals, the Baltimore-Washington sketch plan, and the details for a transit system as they are worked out.
2. Conclude the open-space plan and conduct a continuing open-space development program.
3. Conclude a regional housing market analysis and projection.
4. Continue long-range economic forecasting and planning, this program being augmented by the retention of an economist on the staff of the Planning Commission, for the regional economic projections being prepared for the Council by the National Planning Association.
5. Establish a regional planning programing system which will permit a continual evaluation of the status of the area's many Federal, State, and local planning projects and programs.
6. Continue the Baltimore-Washington program relationship leading toward the development of a unified general plan for the combined metropolitan areas.
7. Develop a systematic statistical data-gathering process for the accumulation of planning data useful to the many planning agencies in the area.

Increases contained in this estimate are as follows:

	Commission	Council	Total
1. Reduction in lapse figure for permanent positions	$6,000		$6,000
2. Rental of 16,106 square feet of private office space, at $5.50 per square foot, releasing 10,995 square feet of Government space in the Interior Building	80,100	$8,900	89,000
3. Moving expenses in connection with "2" above	4,500	500	5,000
Total	90,600	9,400	100,000

It was necessary to budget in fiscal year 1962 an excessively high lapse figure of $17,957 for permanent positions. This makes it impossible to fill positions as soon as they are vacated. It is expected that full staffing will be possible during fiscal year 1963 and the increase requested herein is to reduce the lapse to a more practical amount.

The Commission and Council have outgrown the 10,995 square feet of Government office space provided in the Interior Building. Repeated requests for additional space in the Interior Building or elsewhere have been denied because of lack of space. It is expected that the staff will total 65 persons by the start of fiscal year 1963, including a portion of the staff financed by transfer funds from the Redevelopment Land Agency. It is desirable that all Commission personnel be housed in one building, and preferably on one floor for efficient operation. It should be noted that of the 16,106 square feet for which funds are requested, 10,995 square feet will be released in the Interior Building for other Government uses.

The General Services Administration has estimated that it will cost $5,000 to move our equipment and materials from the Interior Building to a new building in the vicinity.

General Statement

Chairman Hayden. We would be pleased to hear from you, Mrs. Rowe.

Mrs. Rowe. Mr. Chairman, I have no prepared statement. We have a rather modest budget, as you see. I would like to introduce to you Mr. Louchheim, who is also a member of the Planning Commission.

Mr. Pritchard is the administrative officer. Mr. Finley is the director.

MOVING OFFICE OF COMMISSION

You have the budget and I thought we could answer any questions. I might just explain the administrative budget. There is no increase in the number of members of the staff. The increase in the budget is for a nonrecurring item. We are moving the Planning Commission offices this year from the Department of the Interior Building, where they have been since 1937.

Chairman Hayden. Is that the additional $100,000?

Mrs. Rowe. That is $94,000 of it. $89,000 of it is for rent and $5,000 for moving. This will be a 1-year expenditure, because in the following year I understand the rent will be paid by GSA.

Chairman Hayden. Where will this new office space be located?

Mrs. Rowe. Seventeenth and Pennsylvania Avenue in a private building.

The special item aside from the administrative budget is for a study of open space.

OPEN-SPACE STUDY

Chairman HAYDEN. Yes; there is a request for $65,000 for salaries and expenses in connection with the open-space study being undertaken for the National Capital region. The narrative submitted in support of this request will be included in the record.

(The information referred to follows:)

OPEN-SPACE STUDY, NATIONAL CAPITAL REGION

The National Capital Planning Commission and the National Capital Regional Planning Council hereby request an appropriation in the amount of $65,000 for consulting services essential to the undertaking of an open-space study for the National Capital region.

The year 2000 plan for the National Capital region recommends general policy proposals for the future development of the region, intended to secure for the people of this area the most satisfying and efficient urban environment possible. Critical to the attainment of these objectives is the necessity to determine how to accomplish the open-space recommendations in the plan, because the urbanized development envisioned cannot be accomplished unless the open-space plans are carried out.

To be successful, the National Capital open-space study must investigate the complex nature of the subject matter, touching upon nearly every aspect of metropolitan development, ranging from the economic impact of various development alternatives to the identification of irreplaceable geographic features. In general, however, it is intended that the study should develop detailed estimates of open-space needs for the year 2000; it should relate these to the specific resources available; it should examine closely the legal, financial, and administrative means by which the needs can be met, emphasizing particularly how the year 2000 plan recommendations can best be implemented by Federal, State, and local agencies.

The national problem of securing adequate future open space in urban areas has recently been recognized by the 87th Congress through title VII of the Housing Act of 1961 through which substantial funds for open-space planning and acquisition will be made available to urban areas.

An adequate open-space study will cost more than $65,000. In the interest of assuring local support, the Commission and the Council have requested the financial participation of the Washington Metropolitan Regional Conference, a forum of local governments in the region. The conference has expressed its interest in the study, and it is assumed that it will provide matching funds. The Washington Center for Metropolitan Studies has similarly expressed interest, and has offered to undertake supporting research if the Planning Commission's study is approved.

AVAILABILITY OF HOUSING PROGRAM FUNDS

Chairman HAYDEN. Is title VII of the Housing Act of last year entitled "Open Space Land" available for this purpose?

Mrs. ROWE. I believe that that has been oversubscribed. Is that correct?

Mr. FINLEY. Mr. Chairman, the Commissioner of the Urban Renewal Administration of the HHFA has indicated that open space matching funds through that Agency would not be available for any program for which there is another Federal program, such as the Capper-Cramton Act for this region; so this would not be a competitive financing system.

Chairman HAYDEN. Will you advise the committee of the plans for the use of this money?

Mrs. ROWE. Yes.

Chairman HAYDEN. $65,000.

Mrs. ROWE. $65,000. We have submitted a description to you. I think it is particularly appropriate that this study comes the week after the President's message on conservation and its importance, in which he pointed out how quickly the urban areas are growing and gobbling up the countryside. He suggested that the Nation give its attention to ways for preserving the countryside.

This would be a study of legal methods, administrative methods, not only for public acquisition, but a way to preserve the natural resources that we have and which are disappearing so rapidly with the population and industrial growth.

LAND ACQUISITION, NATIONAL CAPITAL PARK, PARKWAY, AND PLAYGROUND SYSTEM

Chairman HAYDEN. $1,300,000 has been requested for land acquisition for the National Capital park, parkway, and playground system in fiscal year 1963.

The justification for this request will be included in the record.

(The justification referred to follows:)

The act approved April 30, 1926 (43 Stat. 463), creating the National Capital Park and Planning Commission, predecessor to the present Commission, authorizes and directs the Commission "to acquire such lands as in its judgment shall be necessary and desirable in the District of Columbia and adjacent areas in Maryland and Virginia, within the limits of the appropriations made for such purposes, for suitable development of the National Capital park, parkway, and playground system."

The Capper-Cramton Act of May 29, 1930 (46 Stat. 482) and amendments thereto (the act of Aug. 8, 1946, 60 Stat. 960, Public Law 592 approved July 19, 1952, and Public Law 85-707 approved Aug. 21, 1958) authorize the Commission to acquire land for a comprehensive park, parkway, and playground system for the National Capital and environs. Section 1(a) of the 1930 act, as amended, authorizes appropriations of $6,750,000 for the George Washington Memorial Parkway; section 1(b), contributions and advances totaling $5,250,000 to the Maryland-National Capital Park and Planning Commission, acting for and on behalf of the State of Maryland; section 1(c), contribution of $4,500,000 to the Virginia-National Capital Park Authority, established under the Park Authorities Act of the State of Virginia; and section 4 authorizes $16 million for the acquisition of park, parkway, and playground lands within the District of Columbia.

The $1,300,000 in this budget request is to be spent for land acquisition under the Capper-Cramton Act as follows:

(*a*) For the George Washington Memorial Parkway under sec. 1(a)	$100,000
(*b*) Extension of stream valley parkways into nearby Maryland, under sec. 1(b) of said act	600,000
(*c*) Extension of stream valley parkways into nearby Virginia, under sec. 1(c) of said act	600,000
(*d*) Park, parkway, and playground system within the District of Columbia under sec. 4 of said act	
Total	1,300,000

Under section 1(a) funds requested herein are the Goverment's one-half matching share for Maryland and contributions will be received from the local jurisdiction matching these funds. Under sections 1(b) and 1(c) funds requested are the Government's one-third contribution.

The attached tabulation shows funds appropriated through fiscal year 1962 under the Capper-Cramton Act, amounts authorized, and balances available for appropriation.

National Capital Planning Commission

Capper-Cramton Act appropriations, fiscal years 1931–62, inclusive

Fiscal year	Total appropriation	Sec. 1(a), George Washington Memorial Parkway		Stream valley			Sec. 4, District of Columbia
				Sec. 1(b) (Maryland)[1]		Sec. 1(c) (Virginia) grant	
		Virginia	Maryland	Loan	Grant		
1931 [2]	$5,000,000	$117,120.24	$120,579.76	$535,867.00	$267,933.00		$3,958,500.00
1936	800,000						800,000.00
1937	600,000	100,000.00	100,000.00	133,334.00	66,666.00		200,000.00
1938	893,700						893,700.00
1939	925,000			200,000.00	100,000.00		625,000.00
1940	1,150,000		150,000.00				1,000,000.00
1941	850,000						850,000.00
1942	1,300,000		250,000.00	133,333.00	66,667.00		850,000.00
1943	200,000	200,000.00					
1944	740,000						740,000.00
1946	393,994						393,994.00
1947	867,750						867,750.00
1948	279,000	130,576.46	69,423.54				79,000.00
1949	400,000			106,000.00	53,000.00		241,000.00
1950	695,000			332,000.00	166,000.00		197,000.00
1951 [3]	599,500			265,000.00	132,500.00		202,000.00
1952	155,000						155,000.00
1953	66,000						66,000.00
1954	100,000	100,000.00					
1955	545,000	110,000.00	25,000.00		126,000.00		284,000.00
1956	500,000	45,000.00	183,000.00		124,000.00		148,000.00

[1] 8-year interest-free loans advanced to Maryland-National Capital Parks and Planning Commission for land acquisition, the entire amount of which is due to be returned to the U.S. Treasury.

[2] National Capital Planning Commission allocated to separate sections of Capper-Cramton Act for this fiscal year only. For subsequent fiscal years Congress appropriated funds under separate sections of the act.

[3] Does not include $125,000 appropriated but returned to the U.S. Treasury as required by Public Law 253 dated Nov. 1, 1951.

[4] Authorization for sec. 1(a) reduced by $750,000 and sec. 1(b) Maryland grant increased by $750,000 in accordance with action by the Commission on Oct. 2, 1958. Public Law 85-707, approved Aug. 21, 1958, authorized the adjustments.

NOTES

The total of $1,724,653.30 for Maryland under sec. 1(a) includes funds for loans made as follows:

Oct. 1, 1941, agreement "AA," Maryland	$50,000
Nov. 18, 1943, agreement "BB," Maryland	68,000
Total	118,000

No loans have been made to Virginia under any section of the act.

George Washington Memorial Parkway—Sec. 1(a), act of May 29, 1930

Virginia	
Maryland	$100,000
Total	100,000

Of the $6,750,000 authorized by section 1(a) of the Capper-Cramton Act (46 Stat. 482) for this project, a total of $3,025,363.91 has been appropriated to date. This section of the act provides "for the George Washington Memorial Parkway, to include the shores of the Potomac and adjacent lands, from Mount Vernon to a point above the Great Falls on the Virginia side * * * and from Fort Washington to a similar point above the Great Falls on the Maryland side except within the District of Columbia, and including the protection and preservation of the natural scenery of the gorge and the Great Falls * * *."

The amount of $100,000 is being requested for the parkway on the Maryland side of the river to complete acquisition of land in Montgomery County from the District of Columbia line to Great Falls and the connecting roadway between the parkway and the Little Falls Branch Parkway.

Extension of the National Capital parks into nearby Maryland under provisions of section 1(b) of the act of May 29, 1930, as amended, $600,000

Section 1(b) of the act of May 29, 1930 (46 Stat. 482), as amended, for the acquisition of certain interior stream valleys in metropolitan Maryland in Montgomery and Prince Georges Counties, provides as follows:

"(b) For the extension of Rock Creek Park into Maryland as may be agreed upon between the National Capital Park and Planning Commission and the Maryland-National Capital Park and Planning Commission, for the preservation of the flow of water in Rock Creek, for the extension of the Anacostia Park system up the valley of the Anacostia River; Indian Creek, the Paint Branch and Little Paint Branch, the Northwest Branch, and Sligo Creek; of the Oxon Run Parkway from the District of Columbia line to Marlboro Road; and of the George Washington Memorial Parkway up the valley of Cabin John Creek, Little Falls Branch and Willet Run * * *."

This section authorizes appropriations of $5,250,000, of which $3,563,752 has been made available. The request herein is for $600,000 which constitutes the Government's grant to be matched by $1,200,000 from State or other funds.

Extension of the park and parkway system of the National Capital in the Virginia environs of Washington under provisions of Section 1(c) of the Act of May 29, 1930, as amended, $600,000

Section 1(c) of the Act of May 29, 1930 (46 Stat. 482), as amended provides as follows:

"(c) For the extension of the park and parkway system of the National Capital in the Virginia environs of Washington, as may be agreed upon between the National Capital Planning Commission and a park authority established under the Park Authorities Act of the State of Virginia (and such other public bodies as may be authorized under the laws of the State of Virginia), up the valleys of Hunting Creek, Cameron Run, Holmes Run, Tripps Run, Four Mile Run, Pimmit Run, Accotink Creek, and tributaries of such streams, and over other desirable lands, $4,500,000. * * *"

A total of $150,000 provided under this section in fiscal year 1960 was the first time funds were requested and appropriated. The request herein is for $600,000 which constitutes the Government's grant to be matched by $1,200,000 from State or other funds.

PARKS, PARKWAYS, AND PLAYGROUNDS IN THE DISTRICT OF COLUMBIA, SEC. 4, ACT OF MAY 29, 1930

Section 4 of the act of May 29, 1930 (46 Stat. 482) authorized the Commission to acquire land for a comprehensive park, parkway, and playground system for the National Capital, and authorized $16 million for the acquisition of park, parkway, and playground lands within the District of Columbia, "as required for the expeditious, economic, and efficient accomplishment of these purposes." Under this and prior authorization, the Commission has undertaken and is now actively engaged in carrying out a progressive, long-time program of land acquisition based upon a comprehensive plan. The entire $16 million authorized was appropriated through fiscal year 1960.

Through the close of fiscal year 1961 this Commission had expended $13,707,175.34 and reimbursements from the District of Columbia through Ocotber 1961 amounted to $13,444,719.94, leaving a balance due of $262,455.40.

Section 1(a) George Washington Memorial Parkway, Maryland, $100,000

An appropriation of $100,000 will be required for the acquisition of lands for the George Washington Memorial Parkway in Montgomery County, Md., pursuant to section 1(a) of the Capper-Cramton Act (46 Stat. 482). The Maryland-National Capital Park and Planning Commission at its meeting on October 13, 1961, indicated its willingness to match that amount in accordance with the Capper-Cramton Act and at such time as an appropriation is made.

This amount will be used to complete acquisition of all the lands necessary to permit construction by the National Park Service, as a part of its Mission 66 program, of a four-lane divided roadway in the parkway from the District of Columbia line to Great Falls and the connecting roadway between the George Washington Memorial Parkway and the Little Falls Branch Parkway.

Title to all lands necessary for this purpose has been acquired by the Commission by direct purchase or by declaration of taking in condemnation proceedings, except the D.C. Transit Cabin John right-of-way and certain lots in the Bon Air Heights and Brookmont subdivisions. The $200,000, together with amounts heretofore made available by agreements between the National and Maryland Commissions relating to the parkway but not yet disbursed, would be utilized to acquire such properties by direct purchase or condemnation and to meet deficiency judgments in pending condemnation proceedings in which title to the lands has passed to the United States but final awards have not been entered.

Section 1(b) Maryland stream valley parks, $600,000

	Loan	Contribution
Authorizations (adjusted)	$3,000,000	$2,250,000
Appropriations to date	1,917,534	1,646,218
Balance	1,082,466	603,782
Amounts requested herein		600,000
Balance	1,082,466	3,782

Land is acquired by the Maryland-National Capital Park and Planning Commission with the aid of one-third contribution from the National Capital Planning Commission for the extension of the District of Columbia park system into Maryland and to help in the abatement of flooding and polluting of the Potomac River.

Since the end of World War II, the suburban areas of the National Capital have been expanding at an unpredictable rate and in 1951, because of World War II and the Korean war, the Federal Government had fallen far behind in its one-third share of the Maryland stream valley program and the National Capital Planning Commission, with the approval of the President of the United States, entered into an agreement with the Maryland-National Capital Park and Planning Commission to empower it to acquire land within the authorized and approved stream valleys from park development, maintenance, or borrowed funds, which would be repaid at one-third the cost if and when appropriated by the Congress of the United States.

Maryland has strong laws for the acquisition of park land. Private land can be held in abeyance for 3 years without taxes, but then must be acquired or withdrawn from the park project. The Maryland-National Capital Park and Planning Commission has pursued this law to its fullest extent. In spite of the tremendous pressure being brought upon the Maryland commission by residents and citizen associations to establish local parks which would be of more benefit to them, that commission has never relaxed in its efforts to carry out the stream valley program. They have diverted money from other much-needed projects to acquire critical parcels of land in the stream valleys because they know that as land is commercially developed, the storm water runoff increases as much as 50 times that of undeveloped land and the protection of the Potomac River and the tributaries is most crucial. These parcels of land, although in projects authorized and approved by the National Capital Planning Commission, are becoming widely distributed and must be tied together into continuous units or their effectiveness will be lost.

The resources of the Maryland-National Capital Park and Planning Commission to acquire land in advance with funds from other sources has now been stretched to the limit and if Federal funds are further curtailed, the program for the preservation and prevention of pollution of the Potomac River will be seriously affected.

Rock Creek Park, unit No. 6, Montgomery County, $155,000

This unit of Rock Creek lies on the west side of Viers Mill Road between Gaynor Road on the south and Halpine Road on the north. This unit contains approximately 155 acres, and a portion has been acquired by the Maryland-National Capital Park and Planning Commission to prevent private development and increased land costs. The pressures exerted to use this land for various commercial ventures and their resulting higher land costs necessitated the reduction of the total proposed area of this unit from 185 acres to its present size.

There is a great demand for the major sports center which is planned in this park unit. A 6,000 seating capacity stadium, a fieldhouse, a large athletic field area, parking for some 2,000 automobiles, a park drive, and a small pond are the major proposals for this unit. In 1958, it was estimated that the development costs for this unit alone would exceed $1 million.

It is estimated that this unit will cost $465,000 for which funds are hereby requested on the basis of $155,000 as a Federal grant to be matched by the Maryland commission in the amount of $310,000.

Rock Creek Park, unit 7B, Montgomery County, $90,000

This unit is the last in Rock Creek Park within the former limits of the Maryland-Washington metropolitan district. It extends from the limits of the former Bullis tract (unit 7A) on the south to a line 300 feet north of and parallel to the Rockville-Norbeck Road on the north. This park unit contains 114 acres some of which has been acquired by the Maryland-National Capital Park and Planning Commission from park development and other funds to preserve this unit.

A trunk sewerline has been extended up this stream valley unit and the provision of public sanitary facilities is providing the impetus for residential development. In June 1960, a preliminary plan covering 308 acres and providing for 936 dwelling units was approved for an area a short distance to the east of this unit. An additional subdivision development east of this unit is likely to begin in the near future. Because of the danger of encroachment by subdivision development, the remainder of this unit should be acquired as soon as possible.

A recreation building, several athletic fields, a small lake, and a park drive are development features proposed for this unit. A large passive recreation area is also to be provided. The cost of this proposed development will exceed $175,000 according to current estimates.

It is estimated that this unit will cost $270,000 for which funds are hereby requested on the basis of $90,000 as a Federal grant to be matched by the Maryland commission in the amount of $180,000.

Northwest Branch Park, unit No. 4, Montgomery County, $210,000

Unit 4 of Northwest Branch Park lies between Colesville Road on the south and Glenmont-Colesville Road on the north. It is a part of the Anacostia River park system which extends out from the District of Columbia into Prince Georges and Montgomery Counties. The acquisition of this unit is in accord with the logical extension of the stream valley park system along the Northwest Branch. As this unit is planned, it contains approximately 392 acres, part of which has been acquired by the Maryland-National Capital Park and Planning Commission from park development and from other funds to preserve this unit. In addition to the acreage acquired, an option has been obtained on an additional 65.8-acre parcel.

A sanitary trunk sewer is proposed for the entire length of this unit and most of this system has been installed. Immediate acquisition of the remaining 197.5 acres is necessary. Subdivision projects are threatening to encroach upon the park areas, particularly the areas that are suitable for active recreation. Land values in the area are rising sharply. Unless prompt action is taken, it may be necessary to drastically reduce the park area because of economic considerations.

As it is now proposed, the southern portion of this unit, because of the natural beauty of the vegetation, massive rock outcroppings, and because of the privacy that is afforded by the rugged terrain, will be retained mostly in its natural state for passive forms of recreation. In addition, two small active recreation centers are proposed. In the northern portion of the unit, a larger community

recreation center and a park drive are proposed. In 1958, the cost of these development projects was estimated to exceed $500,000.

It is estimated that this unit will cost $630,000 for which funds are hereby requested on the basis of $210,000 as a Federal grant to be matched by the Maryland Commission in the amount of $420,000.

Cabin John Creek Park, unit 2, Montgomery County, $85,000

This unit of Cabin John Creek Park extends north to unit 1 and is bounded on the west by Seven Locks Road, on the north by River Road and on the east by the proposed right-of-way for the Cabin John connection to the Capital Beltway. There are approximately 94 acres in this unit of which 7.7 acres have been acquired by the Maryland-National Capital Park and Planning Commission from park development and other funds to preserve this unit.

This unit has been reduced from approximately 142 acres to its present size because of the proposed highway link. A proposed large-scale housing development of some 218 proposed lots to the east of the proposed highway connection will consume land that was originally intended to be part of this park unit. Subdivision activity in this area is increasing rapidly and property values are rising steadily. Part of the impetus behind these movements is the completed Cabin John trunk sewer.

This unit is one of the finest areas of natural park land within the limits of the Capper-Cramton system. There are steep, rugged hillsides with large virgin forests and picturesque valley meadows. The extraordinary variety of physical characteristics within this unit make it a highly desirable passive recreation area.

It is estimated that this unit will cost $255,000 for which funds are hereby requested on the basis of $85,000 as a Federal grant to be matched by the Maryland Commission in the amount of $170,000.

Cabin John Creek Park, unit No. 3, Montgomery County, $60,000

Unit No. 3 of Cabin John Creek Park is on the south side of River Road and on the west side of Seven Locks Road. This unit contains approximately 72 acres. None of this acreage has been acquired by the Maryland-National Capital Park and Planning Commission in advance of Federal funds. A continuous and rapid program for the acquisition of this and other units along Cabin John Creek is required because of the installation of the Cabin John trunk sewer. The availability of public sewer is causing demands for more intensive land use within the watershed. This demand is also resulting in increasing land costs in the area. The proposed commercial zoning on the north side of River Road oppositethis unit is also likely to contribute to the rising cost of land. Quarrying operations within this unit are gradually destroying some of this area's natural assets. This is another factor requiring prompt acquisition.

A water feature is proposed in the northwestern portion of this unit. A large area recreation center is proposed within this unit. This center is to include a community building, several athletic fields, tennis courts, an archery range, a large picnic area, and parking space for approximately 290 automobiles. The location of this center near the intersection of River Road and Seven Locks Road is likely to attract a considerable amount of recreational use.

It is estimated that this unit will cost $180,000 for which funds are hereby requested on the basis of $60,000 as a Federal grant to be matched by the Maryland Commission in the amount of $120,000.

Sec. 1(c), Virginia stream valley parks, $600,000

Authorization	$4, 500, 000
Appropriations to date	150, 000
Balance	4, 350, 000
Amount requested herein	600, 000
New balance	3, 750, 000

For many years Maryland has been acquiring stream valley park land under the original authorization of the act of May 29, 1930. Much pollution and flooding has been eliminated by these acquisitions, in addition to reserving almost 4,000 acres of valuable park land for public use.

The amendment of this act, in 1952, extended the same benefits to Virginia and authorized $4,500,000 for this purpose. Until recent years, Virginia had no park authority or other authorized agency and made no use of this authorization. As a result, many of the streams are polluted, eroded, and threatened with encroachment.

In order to interest its citizens in the important stream valley program, Fairfax County requested a Federal contribution of $100,000 for the fiscal year 1960, and Arlington County requested $50,000, both counties allocating the required two-thirds of the cost.

Fairfax County has hired consultants who have produced a public facilities plan including neighborhood, stream valley and regional parks.

Arlington County has again requested contribution of funds for the continued acquisition of land in the Four Mile Run Valley and the city of Alexandria for its section of the Holmes Run Valley.

This request includes $600,000 for contributions to the Virginia stream valley program.

Pimmit Run Park, Fairfax County, $35,000

The first unit of Pimmit Run Park is located southeast of Pimmit Hills. The Pimmit Hills subdivision started shortly after World War II was created mostly as a veterans' project. Although it is located at the headwaters of Pimmit Run, it created a storm water problem within itself. The Fairfax Park Authority, again hoping to abate this problem and prevent flooding and pollution, is starting at the headwaters and working downstream. There are approximately 120 acres in this project and the cost is estimated at $105,000. The U.S. share (one-third of the cost) will be $35,000.

Accotink Creek tributaries, Fairfax County, Va., $355,000

Accotink Creek flows into the Potomac River just south of Fort Belvoir. Its tributaries fan out in many directions throughout Fairfax County, some much closer to urban areas than the creek itself. The policy of the Fairfax County Park Authority is to start acquiring wooded park land near the headwaters of the stream and close to urban developments where the bulldozer is most threatening. This is a wise decision because the acquisition of these areas does much to prevent pollution and flooding as well as providing much needed park land for nearby communities. Three such areas are available and included in this program. The first is in the vicinity of Annandale and is partly on the Accotink and partly on Coon Branch, contains approximately 585 acres, and is estimated to cost $315,000. The second is on Long Branch and not far from the town of Fairfax and other populated areas and contains 400 acres, estimated to cost $400,000. The third is near Springfield and adjoins the old Fort Belvoir Reservoir, which the park authority is now leasing from the Department of the Army. This unit contains approximately 242 acres of which 110 is water. Land adjacent to the reservoir on Accotink Creek consisting of about 200 acres will be acquired at the estimated cost of $350,000.

The total estimated cost of these units is $1,065,000. The U.S. share (one-third of cost) will be $355,000.

Cameron Run Park, Fairfax County, $35,000

The Alexandria portion of this valley is almost entirely occupied by the Cameron freight yards of the Southern Railroad and will not be acquired. The Fairfax portion is low flat submarginal land which has been partly filled and is almost denuded of vegetation. Much can be done in the way of planting by the park authority to improve the flooded and polluted condition that exists today. The flatness of the land is ideal for large recreation areas so badly needed by the many low income families in this immediate neighborhood. There are approximately 128 acres within this unit which will be bordered by the Washington Circumferential Highway and it is estimated to cost $105,000. The U.S. share (one-third of the cost) will be $35,000.

Holmes Run Park, Alexandria, $50,000

Holmes Run is one of the tributaries of Cameron Run and extends approximately 2½ miles through the recently annexed portion of Alexandria and then into Fairfax County. The character of valley changes from flatland to steep wooded hillsides. In the flatter areas there are subdivisions close to the stream where the ground and trees have been leveled by the bulldozer. In some cases the city has been able to acquire long narrow slivers of land, but it is still possible to save many acres of wooded hillside and tie together some of the existing park land into a large usable and protective area. It is estimated that approximately 50 acres can be acquired for $150,000. The U.S. share (one-third of the cost) will be $50,000.

Holmes Run Park, Fairfax County, $75,000

In the last year more detailed plans and firm appraisals have been made in the Fairfax portion of the Holmes Run Valley. These indicated that only that portion beyond Lake Barcroft could be acquired with the funds allocated. The area between the Alexandria city line and Lake Barcroft, mostly steep wooded hillsides, forms a vital link in this stream valley system and is in immediate danger of encroachment by the rapidly expanding Bailey's Crossroads area where wooded park land will soon be at a premium. This unit contains 92 acres and is estimated to cost $225,000. The U.S. share (one-third of the cost) will be $75,000.

Long Branch, Four Mile Run Park system, Arlington County, $50,000

Long Branch is one of the very few, beautiful small stream valleys left in Arlington County. There are several rapids or small waterfalls in this wooded valley which has been preserved in its natural condition only because the lots in this section of the old Glen Carlyn subdivision were very large and the houses were placed on the higher land. No houses will be acquired because the laws of Arlington County prohibit their condemnation for park purposes. This unit contains approximately 15 acres and is estimated to cost $150,000, and the U.S. contribution (one-third of the cost) is $50,000.

BREAKDOWN OF LAND ACQUISITION EXPENDITURES

Chairman HAYDEN. Will you please outline for the committee the proposed expenditure of this sum, indicating the various amounts to be used for land acquisitions in the different jurisdictions?

Mrs. ROWE. The first item of $100,000 is for the completion of the purchase of the right-of-way for the George Washington Memorial Parkway. It is for land in Montgomery County to complete the holding there.

The two $600,000 items are for the acquisition of stream valley parks in Montgomery County and in northern Virginia. This is under the Capper-Cramton Act. If you would like any details on that, I am sure Mr. Finley or Mr. Price would be glad to give you those.

Senator MUNDT. On that point, Mr. Chairman, will you yield for a question?

Chairman HAYDEN. Yes.

ACREAGE OF GEORGE WASHINGTON MEMORIAL PARKWAY

Senator MUNDT. In connection with the George Washington Memorial Parkway system, how many acres do you contemplate purchasing?

Mr. PRICE. This fund is simply for the acquisition of the streetcar right-of-way, which is absolutely necessary for the construction of the road and a small amount for the connection to the Little Falls Branch Parkway. I think it is about 25 acres altogether.

Senator MUNDT. Is this the property now owned by the D.C. Transit company.

Mr. PRICE. Yes.

Senator MUNDT. How much do you propose to pay for it?

Mr. SHEAR. Mr. Chairman, if I may, we have not prepared an appraisal of that property at the present time. Our best estimates are only very preliminary in nature, so that we are not——

Senator MUNDT. You are asking for $100,000.

Mr. SHEAR. $100,000, sir, which will be matched by $100,000 from the Maryland-National Capital Park and Planning Commission, or a total amount of $200,000, which would be available for the portion of the D.C. Transit right-of-way in Montgomery County.

NEED FOR ACREAGE

Senator MUNDT. Do you have the measurements of that land? Is that 25 acres in a square, compact unit, or is it 25 acres of lineal mileage?

Mr. PRICE. There are about 10 acres of it in a little compact unit, but the streetcar line, of course, stretched out from the District of Columbia line all the way to Cabin John.

Senator MUNDT. I can see how you might need that trackage to broaden your parkway. I cannot see why you need the 10 acres, or 25 acres, or whatever it is in a block which reaches back from that; unless you are going to build a monument base, or a park, or something else, a parking lot.

Mr. PRICE. It connects with the Little Falls Branch Parkway in Maryland which extends all the way to Bethesda. It will be a connection through the lower end of the George Washington Memorial Parkway to the parkway in Maryland which will be under the jurisdiction of the Maryland National Capital Park and Planning Commission and is partly constructed now.

TYPE OF LAND INVOLVED

Senator MUNDT. Will any of that land be suitable for building lots?

Mr. PRICE. It is very, very rugged, though there are, I think, two houses in the area now which will have to be acquired; but it is pretty hard to get to them. They actually are lotted.

Senator MUNDT. The land you are buying for parkway purposes is not going to be that kind of mountainous terrain that you cannot get to, or are you going to have to build a highway through a tunnel?

Mr. PRICE. It is going to be a maximum grade to make a considerable cut and fill.

Senator MUNDT. Are you buying more land than you need for the parkway? Is it sort of an investment, or for some other purpose?

Mr. PRICE. No, what we are actually buying is what will be needed for the connection.

Senator MUNDT. For the parkway? For the highway and then what you would call a reasonable amount on each side of the highway?

Mr. PRICE. Yes, sir.

Senator MUNDT. And nothing more?

Mr. PRICE. Nothing more.

Mr. FINLEY. Sir, if I may respond to that, the areas that are not in the linear, former track area are the slopes adjacent to the parts of the parkway that are already constructed and an extension of it into the parkway itself from the upper portion of Montgomery County; and we are not buying what you describe as general park land to all. It is essential for the piecing together of the entire system.

Mr. SHEAR. Mr. Chairman, it might be helpful if Mr. Price pointed out where that connection is on the large map.

Mr. PRICE. The green along the river is the George Washington Memorial Parkway. The streetcar right-of-way extends from the District line to the vicinity of Cabin John Creek.

The green here is the Little Falls Branch Parkway in Maryland, and there will be a connection. If you can see this little dot of red, that is what we are acquiring in the Little Falls Branch area.

Mr. FINLEY. In addition to the District of Columbia right-of-way.

Mr. PRICE. Only the area in green and that little area in red connecting the two together.

Senator MUNDT. Either you or one of your associates said this was pretty rugged land.

Mr. PRICE. Yes, sir.

COST OF HIGHWAY

Senator MUNDT. Is this going to be a correspondingly costly highway to build, or are you building around the rugged areas? What are you trying to do with this? Have a scenic road, or a general utility road that you are going to try to make fast time on?

Mr. PRICE. It will be a cut and fill. We will have to cut part and fill the other. It will be more-or-less a bulldozer job in getting up the hill.

Senator MUNDT. Is the purpose of the road mostly to provide a scenic trail, or is it to move traffic in considerable volume with rapidity?

Mr. PRICE. It supposedly will be a parkway-type of road.

Mr. FINLEY. It would be used for commuting but its primary purpose is scenic.

Senator MUNDT. Its primary purpose is scenic?

Mr. FINLEY. That is right.

Senator MUNDT. That is all, Mr. Chairman.

SYCAMORE ISLAND CLUB

Chairman HAYDEN. Last year in response to my question, Mr. Finley said that you were unable to reach agreement with the Sycamore Island Club which would place title to Sycamore and Upper Sycamore Islands in the United States. The club is willing to give a scenic easement. Will this not be sufficient to assure that the island will not be used for commercial purposes? Why would fee title to the islands be necessary?

Mr. FINLEY. May I refer that to Mr. Shear, our general counsel, please, sir.

SCENIC EASEMENT

Mr. SHEAR. Mr. Chairman, we have submitted, and you may desire to incorporate in the record, a communication on this subject in which we pointed out that our client for the purposes of the parkway, the National Park Service, has indicated to us that in its view a scenic easement would not be sufficient to protect the national interest in the George Washington Memorial Parkway, and it has requested us to acquire, when we do acquire and if we do acquire any interest in the islands, fee simple title to the islands, offering to the Sycamore Island Club the same kind of arrangement which was made with the Washington Biologists Field Club in connection with Plummer's Island.

That is to say, a right in perpetuity to use the islands for the purposes of the club, reserving to the public the title to the property and prohibiting any commercialization of the islands.

The arrangement which the owners of the island have heretofore been willing to enter into, that of granting scenic easement, we are advised by the National Park Service, has not been a successful device in other parts of the country.

NO APPROPRIATION FOR INTEREST IN ISLANDS

I might point out, sir, that we do not now have funds, nor would the additional appropriation which we have requested in our budget estimates this year, he used for the purpose of acquiring any interest in the islands.

The $100,000 which we are requesting is for the connection to the Little Falls Branch Parkway and for the D.C. Transit right-of-way. It would not be used for the acquisition of any interest in the islands.

We do not have other funds available for this purpose and we do not contemplate any acquisition at the present time.

VALUE AND POSSIBLE USE OF ISLAND

Chairman HAYDEN. What is the dollar value of the islands? How much would you have to pay if you bought them?

Mr. SHEAR. I do not know, sir. I do not think we have a current appraisal on the islands and I have no figure in mind.

Chairman HAYDEN. I am a little bit confused. What is the specific use proposed for the islands if you do acquire them?

Mr. SHEAR. It would be preserved in its natural state as a conservation area as part of the total George Washington Memorial Parkway area.

Senator MUNDT. Is the island being commercialized now?

Mr. SHEAR. No, sir; not to our knowledge.

Mr. FINLEY. It is now used for a private club.

Senator MUNDT. For a private club?

Mr. FINLEY. Yes, sir. They are keeping it in very good natural condition. We have no complaints about the method of operation. We just were urged by the National Park Service not to settle for less if we were going to acquire it; which we are not in a position to do at this time.

Chairman HAYDEN. Have you any further questions?

Senator MUNDT. No.

Chairman HAYDEN. Senator Dworshak? Do you have any questions?

REASON FOR VACATING OFFICE SPACE

Senator DWORSHAK. Yes, Mr. Chairman. I wanted a little information why it is necessary to relinquish space in the Interior Department building and go outside and use private spcae?

Mrs. ROWE. The Commission offices are very crowded. The Department of the Interior would very much like to have the space to use for their own personnel and that combination made it imperative for us to find a new home.

Senator DWORSHAK. For how many years have you been using the space in the Interior Building?

Mrs. ROWE. Since 1937.

Senator DWORSHAK. 25 years.

Mr. FINLEY. I might point out, sir, that the space was designed especially for the Planning Commission in 1937 and you can well imagine that it is not terribly appropriate now.

SENATOR DWORSHAK. Was there not some additional space contiguous to your quarters there that could have been utilized?

Mr. FINLEY. We have utilized all the additional space that was originally planned for a gallery and this is inside space, very inappropriate for personnel uses; but Interior has indicated to us that there is not 1 square inch available to us.

ANNUAL RENTAL OF NEW QUARTERS

Senator DWORSHAK. What will the annual rental be of your new quarters?

Mrs. ROWE. The first year is $89,000, and it will be the same thereafter.

Mr. FINLEY. For 10 years. It is a 10-year lease.

Senator DWORSHAK. What building are you going to use?

Mrs. ROWE. It is the building at 17th and Pennsylvania. It is now under construction.

Senator DWORSHAK. You are paying $5.50 per square foot?

Mr. FINLEY. That is right.

Senator DWORSHAK. Is that in conformity with current rates? It sounds a little high, does it not?

Mrs. ROWE. It has been approved by the GSA and the Bureau of the Budget as the going rate.

Mr. FINLEY. It is the standard going rate for a new private office building. This will not be a recurring item in our budget. It will be paid for by the GSA in their total annual rental budgets in subsequent years.

Senator DWORSHAK. GSA will take care of it after this year?

Mr. FINLEY. Yes.

Senator DWORSHAK. Why is it in your budget?

Mr. FINLEY. Because the law requires that the operating agency pay the first year's rent only.

TOTAL PERSONNEL

Senator DWORSHAK. I see. How many personnel are you adding for the next year?

Mr. FINLEY. None, sir.

Senator DWORSHAK. How many do you have now?

Mrs. ROWE. Forty-five.

Senator DWORSHAK. Forty-five.

Mrs. ROWE. Yes.

NATIONAL CAPITAL DOWNTOWN COMMITTEE

Senator DWORSHAK. That is all, Mr. Chairman.

Chairman HAYDEN. There will be inserted in the record a letter from Mr. Robert C. Baker, president of Downtown Progress, together with a copy of a resolution, supporting the budget request of the National Capital Planning Commission for an open-space study.

80391—62——57

(The letter and resolution referred to follow:)

DOWNTOWN PROGRESS,
NATIONAL CAPITAL DOWNTOWN COMMITTEE, INC.,
Washington, D.C., February 26, 1962.

Hon. CARL HAYDEN,
Chairman, Subcommittee of the Department of Interior and Related Agencies, Senate Appropriations Committee, U.S. Senate, Washington, D.C.

DEAR SIR: We wish to express our strong support of the pending request for funds to permit the National Capital Planning Commission to begin taking positive steps to assure the more orderly development of the Washington metropolitan area. The specific budget item is "Salaries and expenses, open-space study, National Capital Region," $65,000, an important first step in the implementation of the policies recommended in "A Plan for the Year 2000."

A copy of our formal action with respect to this is enclosed.

Sincerely,

ROBERT C. BAKER, *President.*

POLICY STATEMENT ADOPTED BY THE EXECUTIVE COMMITTEE OF THE NATIONAL CAPITAL DOWNTOWN COMMITTEE, INC.

The action plan for downtown now being prepared by Downtown Progress will substantially conform with the policies set forth in "A Plan for the Year 2000" recently published by the National Capital Planning Commission and the National Capital Regional Planning Council.

Downtown Progress endorses especially the recommendations of the planning agencies for the completion of the Inner Loop and Center Leg Freeway system and for the early development of a "high-grade mass transportation system." Downtown Progress heartily endorses a balanced transportation system with alternative choices available to the public. The rapid completion of these major means of access to the central business area will be the key to the revitalization of downtown.

The National Capital Planning Commission and the National Capital Regional Planning Council are to be commended for their thoughtful analysis of the future and for this imaginative guide for the growth of the National Capital area. The National Capital plan for the year 2000 demonstrates that there is a method available for the community to grow in an orderly fashion rather than chaotic. Surveys of this type, unless followed by specific programing, become lost and result in no action.

Therefore, it is recommended that the National Capital Planning Commission and the National Capital Regional Planning Council be supported with sufficient budgetary requirements to continue specific detailing of the plan for the year 2000 working with appropriate governmental bodies so as to develop in addition to the plan, a specific program for adoption by the District of Columbia and the neighboring governmental bodies which will permit the plan to become a reality and to avert growth on a nonplanned basis which eventually would produce chaos.

Chairman HAYDEN. We thank you for your appearance.

Mrs. ROWE. Thank you, Mr. Chairman.

NATIONAL CAPITAL TRANSPORTATION AGENCY

STATEMENT OF C. DARWIN STOLZENBACH, ADMINISTRATOR

JUSTIFICATIONS

Chairman HAYDEN. We will next hear from the National Capital Transportation Agency.

The National Capital Transportation Agency estimates its 1963 requirements for salaries and expenses at $4,450,000. This is an increase of $3,490,000 over the amount appropriated for this purpose in fiscal year 1962.

The justification submitted in support of this request will be printed in the record.

(The justifications referred to follow:)

NATIONAL CAPITAL TRANSPORTATION AGENCY

Salaries and expenses

Appropriation 1961	$250,000
Appropriation 1962	875,000
Supplemental appropriation 1962	85,000
Total appropriation 1962	960,000

Summary of increases 1963

Personnel costs (additional staff requirements in fiscal year 1963 and to provide for positions filled during fiscal year 1962 at a full annual rate in fiscal year 1963)	514,000
Special engineering feasibility analyses and economic studies	2,840,000
Miscellaneous administrative support costs	136,000
Budget estimate 1963	4,450,000

Analysis by object of expense

		Estimate 1962	Estimate 1963	Increase (+) or decrease (−)
11	Personnel compensation	$602,000	$1,116,000	+$514,000
12	Personnel benefits	40,000	73,000	+33,000
21	Travel and transportation of persons	20,000	30,000	+10,000
22	Transportation of things	9,000	12,000	+3,000
23	Rent, communications and utilities	54,000	125,000	+71,000
24	Printing and reproduction	10,000	15,000	+5,000
25	Other services	160,000	3,000,000	+2,840,000
	Services of other agencies	32,000	49,000	+17,000
26	Supplies and materials	8,000	10,000	+2,000
31	Equipment	25,000	20,000	−5,000
	Total	960,000	4,450,000	+3,490,000

EXPLANATION OF THE ESTIMATE

The estimate for salaries and expenses fiscal year 1963 provides for the salaries of 98 full-time positions and expenses of temporary part-time or intermittent personnel including consultants and experts employed in connection with the technical programs of the Agency. In addition, the estimate includes all expenses such as contracts for special engineering and technical studies, transportation and per diem costs incident to temporary duty travel of the staff, communication services, office supplies, rental of space, equipment, and other incidental expenses.

Approximately $1,189,000 or 26.7 percent will provide for salaries and related personnel benefit costs, $3 million or approximately 67.4 percent for special contracts,[1] and the balance of $261,000 or 5.9 percent for other administrative support costs.

During the current fiscal year the Agency has organized its staff around the most pressing tasks assigned by the Congress: recommendations for organization and financial arrangements for transportation in the National Capital region, to be submitted to the President by November 1, 1962, and the transit development program which includes both currently urgent programs and long-range solutions of the region's transportation problems. In the following paragraphs, the explanation of the salaries and expenses estimate is set forth in terms of major divisions of staff.

PLANNING AND FINANCE

The Agency's fiscal year 1963 estimate provides for an increase of nine positions in the permanent staff of the Bureau of Planning and Finance together with funds for contracts and for expenses of part-time or intermittent experts and consultants.

By the close of fiscal year 1962 this office will have reached the stage where preliminary evaluations can be made as to—

1. The type of transportation system best suited to the Washington metropolitan region.
2. The location, cost and revenues of a significant portion of a rapid transit system within the District of Columbia; and
3. The desirability of providing commuter service on existing suburban rail lines.

In addition, work on finance proposals for inclusion in the Agency's November 1, 1962, report to the President will be well along. Finally, the preparation of the transit development program—including analysis of overall transportation needs—will advance significantly during fiscal year 1962.

Planning and finance work in fiscal year 1963 will have two phases. The first half of the year will be spent in completing (*a*) the finance and other portions of the Agency's November report to the President; and (*b*) the planning necessary for the Agency's prospective 1963 legislative proposal leading toward construction of initial portions of the transit system. The second phase will occur after January 1963 and will involve concentrated effort on preparation of the Agency's total transit development program for the National Capital region. The former phase will in part be an extension of work begun in fiscal year 1962. The latter phase—further advancement in the preparation of the total transit development program—needs to be compressed into this period in order that the engineering work may proceed. This will require—

1. Completion of projections of regional economic activities and land-use data, estimates of population, labor force, residential distribution, and location of public facilities.
2. Collation of survey data on present travel patterns in the National Capital region.
3. Completion of projections of overall transportation demand in the National Capital region based on the work outlined in 1 and 2 above and development and testing of alternative transit and highway systems.
4. Detailed cost-benefit analyses of alternative regional highway and transit systems with particular emphasis on suburban services.
5. Selection of a proposed total system and detailed decisions on, stations, feeder lines, and parking lots.
6. Reevaluation of the projections outlined in 1 above to take into account the impact of the proposed transit facilities on regional development.

[1] This item broken down as follows:

Engineering feasibility analyses	$2,000,000
Engineering plans	700,000
Planning and economic studies	300,000

7. Coordination of the planning of the transit development program with activities of other planning agencies both public and private.

8. Further development of plans and consultation related to financing the transit system.

The sum of $300,000 is requested for contracts designed to complement staff work on the foregoing projects. These funds will be spent for computer services, drafting and map services, land inventories, right-of-way appraisals, a study of means of increasing the utilization of existing arterial streets, a fare-structure study, additional financing plan analyses, a study of potential sources of non-operating revenue, system cost-benefit analyses, and station location studies.

ENGINEERING AND OPERATIONS

The Agency's fiscal year 1963 estimate provides for an increase of nine positions in the permanent staff of the Bureau of Engineering and Operations, together with funds for special feasibility analyses, contracts, and for expenses of part-time or intermittent experts and consultants.

The Office of Ways and Structures will develop general route plans for the ultimate rapid transit system and will make recommendations as to which routes should be constructed in the first stage of actual construction. Included in these plans will be the recommended layout for the downtown distributor, including general design of station, yard, terminal, shop, miscellaneous facilities and buildings required to permit operation of the facilities constructed under stage 1 and to meet the ultimate requirements of the completed system. Details of subway design will be influenced by the type of vehicle chosen. This Office will originate and supervise, in collaboration with the Office of Equipment, research on advanced vehicle concepts. It will also originate and supervise research on soil solidification processes in use and under development, in an effort to determine whether a high-level subway can be constructed in the Washington area by the tunnel method. This is a project of extreme importance; if such a method can be developed it will very materially affect the costs of constructing the subway, and the time schedule under which it is constructed.

The Office of Operations, to be established during fiscal year 1963, will gather data on current operations of public transportation in the region in order to plan for the best use of existing facilities in connection with the new rapid transit system to be proposed in the Agency's transit development program.

The Agency must make a decision during the forthcoming year as to whether the future mass transit system for the National Capital region shall be a product of conventional or advanced technology. There have been relatively few improvements in mass transit technology over the past 60 years. However, technological advances in related fields could well be adapted to mass transit service. The Agency requests $2 million for engineering feasibility studies to determine whether it is possible to make such adaptations and thereby significantly decrease the capital and operating cost of transit service. Among other things, the Agency proposes to study the question of whether the so-called soil solidification process now being employed in mining operations can be used for construction of subways. Preliminary engineering studies have indicated that the cost of constructing subways could be reduced if the soil solidification process were employed. Other areas in which engineering feasibility analyses will be made are vehicle design, automatic train control and fare collection, and improved power distribution.

The sum of $700,000 is requested for engineering contracts. These funds will be spent largely on preliminary engineering plans for the first stage of construction of the transit system.

LEGAL

In addition to customary house counsel work—preparing contracts, drafting and reviewing legislation, drafting and reviewing Agency correspondence involving legal matters and advising the Administrator and staff on a variety of legal problems—the Office of the General Counsel is preparing, during fiscal year 1962, recommendations on organization for inclusion in the Agency's November 1, 1962, report to the President. The Office also has concern for the legal aspects of the financial portion of this report. Other major projects include preparation of a labor relations policy for the Agency for enactment by Congress as provided in section 205(b)(2) of the National Capital Transportation Act of 1960 and implementation of a major land acquisition program recently authorized by Congress.

All of this work will continue during fiscal year 1963. Two additional permanent positions are sought. One is related to the Agency's request for additional

funds for its land acquisition program; the need for the other position is brought about by the increase in the Agency's workload contemplated for fiscal year 1963.

INFORMATION

The Agency's Office of Community Services and Information has charge of internal information facilities including the Agency's library as well as the Agency's public information program which requires close cooperation with public and private organizations in the region, preparation of press releases and answering information requests from outside the Agency. This work will be accelerated during fiscal year 1963 thus requiring three additional staff positions. The Agency will be making public during fiscal year 1963 its plans for the initial phase of construction of the transit system and portions of its plans for the ultimate transit development program. In addition, considerable effort will be devoted to the collection of a variety of materials on public transportation for inclusion in the Agency's library.

ADMINISTRATION

The administrative staff provided in the Agency's Office of Administration is presently barely adequate to provide necessary supporting services to the Agency's program.

With further acceleration of activities in fiscal year 1963, three additional positions will be required to efficiently and effectively provide for necessary administrative and management services.

EXPLANATION OF DISTRIBUTION BY OBJECTS

Personnel compensation and staffing.—$1,116,000 for 98 permanent positions as follows:

	1961	1962	1963
Total positions (permanent plus full-time equivalent of temporary positions)	19	73	118
Average employment	12	60	111

Other objects.—$3,334,000, or almost 75 percent of the total estimate, includes—

1. $73,000 for personnel benefits expenses required by law including $59,000 for retirement contributions, $5,100 for health benefits, $4,400 for group insurance, and $4,500 FICA (social security).
2. $30,000 for travel for inspection of rapid transit systems and facilities in other cities; travel of consultants and experts; and travel incident to relocation of engineers hired outside the Washington area.
3. $12,000 for transportation of things including moving household effects of newly hired engineers and for routine express and shipping charges.
4. $125,000 for rent, communications, and utilities consisting of $110,000 for rental of space and $15,000 for telephone and telegraph services and for payment of postage fees.
5. $15,000 for printing and reproduction services including preliminary analyses and studies incident to the report on financial and organizational arrangements due in November 1962.
6. $3 million for special contracts as follows: Engineering feasibility analyses, $2 million; engineering plans, $700,000; and planning and economic studies, $300,000. $49,000 for services of other agencies provides $30,000 reimbursement to General Services Administration for administrative services and the balance for electronic computer services, engineering, and other necessary services.
7. $10,000 for office and engineering supplies.
8. $20,000 for equipment including office furniture, typewriters, calculators, and drafting and engineering equipment. The Agency will rely on reconditioned furniture to the maximum extent.

Program and financing

[In thousands of dollars]

	1961 actual	1962 estimate	1963 estimate
Program by activities:			
Preparation of the transit development program (total program costs)[1]	$152	$930	$4,235
Change in selected resources [2]	55	30	215
Total, obligations	207	960	4,450
Financing: Unobligated balance lapsing	43		
New obligational authority	250	960	4,450

[1] Includes capital outlay as follows: 1961, $23,000; 1962, $21,000; 1963, $37,000.
[2] Selected resources as of June 30 are as follows: 1961, $55,000; 1962, $85,000; 1963, $300,000.

Object classification

[In thousands of dollars]

PREPARED STATEMENT

Chairman HAYDEN. We will be glad to hear from you, Mr. Stolzenbach.

Mr. STOLZENBACH. Thank you, Mr. Chairman. I have a prepared statement which has already been submitted to the committee clerk. If you consider it appropriate, this might be inserted in the record.

Chairman HAYDEN. That may be done.

(The statement referred to follows:)

STATEMENT OF C. DARWIN STOLZENBACH, ADMINISTRATOR, NATIONAL CAPITAL TRANSPORTATION AGENCY

The National Capital Transportation Agency has been directed by the Congress to plan a transportation system for the National Capital region and to build and provide for the operation of mass transportation facilities. It proposes an appropriation of $4,450,000 under "Salaries and expenses" for fiscal year 1963, and $2 million under the appropriation "Land acquisition and construction," as authorized by Public Law 87-355, 87th Congress.

During the first quarter of fiscal year 1962 an intensive effort was made to recruit topflight transportation engineers, economists, and other technical aids to speed the work which Congress had given the Agency to do. We have now largely completed our hiring for the present fiscal year and have on board a staff of urban transportation experts and specialists which cannot be matched by any other organization in the country. And we have made considerable progress in the work assigned us by the Congress.

First, we are well on the way in the preparation of the report on organization and finance which we have been directed to present on November 1, 1962, to the President for transmittal to the Congress. Detailed studies on alternative forms of organization are virtually complete. In the area of finance, considerable legal analysis has been done to select alternative financial schemes which would be possible under the Federal and State Constitutions. Parallel work is being done in the finance area.

Second, since a report on organization and finance necessarily requires knowledge of the scope of the transportation system to be recommended, we are also well on our way in the planning of the system. This involves laying out alternative transportation systems, preparing engineering feasibility studies of these systems, costing them, preparing traffic and revenue forecasts, and selecting two or three alternative transportation systems which will then be made known to the community and the Congress.

Third, an engineering study has been completed of soil conditions and likely tunneling costs with respect to subway construction in the District.

Fourth, our joint effort with the Bureau of Public Roads and the Virginia Department of Highways to provide for express transit service on the widened Shirley Highway is proceeding apace. Engineering analyses of a transit route between Southwest Washington and the Shirley have now been initiated.

Administrative budget

The request for $4,450,000 under the "Salaries and expenses" appropriation will permit us to speed the work on our November 1962 report and thereafter to continue the work on the transit development program which will be necessary in order to arrive at a final plan complete with necessary details. The proposed fiscal 1963 administrative budget is composed of the following items:

1. A total of $1,189,000 is required for personnel compensation and related costs. This will permit us a permanent staff of 98 persons compared with our present staff limit of 70 persons. The additional personnel are urgently needed to help us meet our November 1962 deadline and to carry forward our program during the remainder of fiscal year 1963.

2. The sum of $300,000 is needed for economic studies to supplement our staff efforts. These funds will be spent for computer services, drafting and map services, land inventories, right-of-way appraisals, and other studies described more fully in our budget estimate.

3. The sum of $700,000 is required for engineering contracts. By June of this year we will have defined with some precision, the location of the downtown portion of the regional rapid transit system. In January 1963 we intend to seek authorization and necessary appropriations to begin construction of this system. In order that construction may proceed as quickly as possible preliminary engineering planning must be initiated. If we were to wait until after Congress had acted on our request for such authorization, construction would be delayed by at least a year.

4. The sum of $2 million is requested for engineering feasibility studies designed to point the way to technology advances that might well significantly reduce the cost of mass transportation service. A consulting contract let by the Agency during the current fiscal year has revealed a number of areas where adaptation to mass transportation service of technological advancements made in other fields could significantly reduce the cost of mass transportation service. For example, in the field of mining engineering a new soil solidification process has been developed which has proved highly economical compared with conventional drilling or tunneling techniques. An engineering feasibility study should be made to determine whether these new techniques can be adapted to subway construction. If so—and our engineering consultants have given us some hope in this regard—the cost of new subway construction in Washington and other areas throughout the country could be significanlty reduced. Other areas requiring engineering feasibility analyses are automatic train control and fare collection, new power distribution methods designed to reduce substation costs, and new vehicle designs capable of reducing operating costs, as well as the size and cost of subway tunnels. Prior to commiting any of the requested funds, the Agency will consult with agencies in other cities so as to achieve the maximum national benefit from these funds. It is also hoped that the funds will act as seed money to spur industry to contribute to improve transit technology.

5. The balance, or $261,000, is to cover other miscellaneous administrative costs such as travel, space rental, supplies, and similar items.

Land acquisition and construction

During the 1st session of the 87th Congress, the Agency was authorized by Public Law 87–355 to engage in land acquisition and incidental construction for future mass transit facilities in connection with construction of three major new highways in the National Capital region. The authorization permitted the Agency to arrange for the acquisition of median strips wide enough to accommodate future transit service on Interstate Route 66 in Arlington and Fairfax Counties, Va., and on Interstate Route 95 in Prince Georges County, Md. Congress further authorized acquisition of land for future parking and station areas adjacent to Routes 66 and 95 and to the new George Washington Memorial Parkway in Montgomery County, Md. To permit this work to begin, Congress appropriated $1 million for acquisition of extra-wide median strips on Routes 66 and 95 and for certain incidental construction. No funds were made available for acquisition of land for parking and station areas on any of the three highways.

The highway agencies of Virginia and Maryland have begun final design work on the sections of Routes 66 and 95 where it will be necessary for the Agency to arrange for the acquisition of extra-wide median strips. It is anticipated that in the case of Route 66 actual land acquisition will begin in the next few months. Meanwhile, the Agency intends shortly to commit a small portion of its present funds for alteration of planned bridges on Route 66. These alterations are essential if the median strip on that route is to be used at some later date for express transit service. In the case of Route 95 it is anticipated that funds will have to be committed for land acquisition in the near future.

General Statement

Mr. Stolzenbach. The task given by the Congress to this agency is to prepare a comprehensive transportation plan for the National Capital region and then to implement that plan in accordance with the wishes of the Congress as determined in the future.

This is a very urgent problem for the National Capital region as it is for many others of the Nation's some 200 metropolitan areas. The budget request that you have before you is tailored to meet this urgency.

IMPROVEMENTS UNDER NATIONAL CAPITAL TRANSPORTATION ACT

We propose through the funds and staff we have now and which we are seeking in fiscal year 1963 to go ahead as rapidly as possible in order to bring about the desired improvements in public transportation which we believe are called for under the National Capital Transportation Act.

We plan to submit to the President in November of this year a report which will indicate a transportation plan for the region of a long-range character and which will set forth specifics regarding the first stage of construction of an express transit system on exclusive rights-of-way within the District of Columbia and possibly certain limited portions of the region outside the District of Columbia.

RECOMMENDATIONS ON MASS TRANSPORTATION

This report will also include, as required by the National Capital Transportation Act of 1960, our recommendations for financing and organizing mass transportation in the National Capital region.

In this connection, Mr. Chairman, I would like to inform the committee that yesterday I appointed an advisory committee on finance. We have been very fortunate in getting some of the Nation's most outstanding people to serve on this committee.

Mr. Robert Feemster, the chairman of the executive committee of the Wall Street Journal, has agreed to serve as chairman. If you would like, I have a list of the advisory committee members which I can offer for the record.

Chairman HAYDEN. We will place it in the record.

(The list referred to follows:)

ADVISORY COMMITTEE ON FINANCE TO THE NATIONAL CAPITAL TRANSPORTATION AGENCY

Robert M. Feemster, chairman, chairman of executive committee, Wall Street Journal, 44 Broad Street, New York, N.Y.
Thomas E. Sebrell, III, president, Clarendon Trust Co., 3192 Wilson Boulevard, Arlington, Va.
Luther H. Dudley, vice chairman, Alexandria National Bank, King and Royal Streets, Alexandria, Va.
John R. Steelman, consultant, Albee Building, 1426 G Street NW., Washington, D.C.
Richard T. Newman, associates, William, Blair & Co., 135 South LaSalle, Chicago, Ill.
Dr. Wilson H. Elkins, president, the University of Maryland, College Park, Md.
James Kerr, president, Avco Corp., 750 Third Avenue, New York, N.Y.
Neil Curry, president, California Cartage Co., 4366 E. 26th Street, Los Angeles, Calif.

NATIONAL IMPORTANCE OF UNDERTAKING

Mr. STOLZENBACH. We feel that the undertaking in which we are engaged is of considerable national, as well as local, importance, because what we do here in the Nation's Capital will be considered as a model for the Nation.

We are making every effort to design and develop the most modern type of urban public transportation system which present-day technology will permit. What we are asking for in this year's budget is less than five-hundredths of 1 percent of the estimated future costs of highway and transit improvements for the National Capital region.

Detailed justification for the two portions of our budget, general expenses and land acquisition, have been set forth in the presentations you already have. I shall be happy to answer such questions as you may wish to ask.

PROPOSED REPORT TO PRESIDENT

Chairman HAYDEN. In your justifications you indicate that by November 1 of this year you have to submit a report to the President embodying recommended organization and financial arrangements for a National Capital transportation system; and later you must submit a transit development program. As briefly as you can, advise what these two things will involve.

DUTIES IMPOSED BY ACT

Mr. STOLZENBACH. In the National Capital Transportation Act of 1960 the agency was directed to prepare recommendations regarding financial arrangements and organization by next November. This is a fairly complicated matter in view of the fact that we are dealing

with an activity which in practically ever other major city in the United States, and the world, for that matter, it has not been found possible to finance rapid transit by ordinary private enterprise methods.

The Congress recognized this in our act. We have the further complicating factor here that we are dealing with a jurisdictional setup which includes nine local governments, two State governments, the District of Columbia, a Federal enclave, and the Federal Government.

We believe that we can show a feasible financing plan which will, I am sure, involve a mixture of some Federal financing and some financing by the local jurisdictions. However, I would hope the major portion of the capital costs could eventually be repaid out of the fare box.

We are also engaged in trying to work out arrangements, within existing constitutional provisions, whereby the citizens of this region can participate in the management of their own mass transportation system.

The portion of the transit development program which we intend to submit at the same time and which we will justify to the Congress at this next session will contain the first stage of construction of our rapid transit system, which I expect will include a subway in the downtown portion of Washington, and in all likelihood the use of some of the existing railroad facilities in the region.

We believe if the time table to which this budget is geared can be met we will be able to have rapid transit service operating in this region by 1968.

PRELIMINARY ENGINEERING PLANS

Chairman HAYDEN. Your budget estimate contains an item of $700,000 for preliminary engineering plans for the first stage of this construction. How can you properly expend for this program before Congress authorizes the system?

Mr. STOLZENBACH. Mr. Chairman, this $700,000 for outside contracts for preliminary engineering will permit us to lay out routes in fiscal year 1963 with a good deal more precision than we could do otherwise. This will mean that we will have the opportunity to add further confirmation to the cost estimates in time for our 1963 presention to the Congress.

It will involve far less detail than will be involved at a later date when we engage in the final engineering design.

A most important additional benefit that we will gain by being able to engage in preliminary engineering in this next fiscal year is if we wait until 1964, the beginning of the construction of the subway will have to be postponed for another year.

I think this is a matter which the Congress has to decide. If we want to go ahead as fast as is physically possible, then we should get on with this preliminary engineering work during this fiscal year.

Senator MUNDT. May I inquire, Mr. Chairman?

Chairman HAYDEN. Surely.

AUTHORIZATIONS FROM LEGISLATIVE COMMITTEES

Senator MUNDT. Do you have all the necessary authorizations from the legislative committees, and if not what are you doing to get them?

Mr. STOLZENBACH. The act sets up the following machinery: That when we present a portion of our transit development program, the Congress will look at it and decide whether they want to approve it. We submitted one such part of our transit development program to the last session of Congress.

Senator MUNDT. My question is whether you are all through with the authorizing committees; whether just the Appropriations Committee looks at it, or do you have to have other authorizations for specific plans which you have to come to Congress for appropriations?

Mr. STOLZENBACH. We must have authorization by the Congress to execute any portion of our program.

Senator MUNDT. Authorization preceding appropriations?

Mr. STOLZENBACH. We have the authorization at the moment for every thing we are asking for in this budget.

Senator DWORSHAK. Including land acquisition?

Mr. STOLZENBACH. Yes, sir; that was enacted at the last session of Congress.

Senator MUNDT. Do you mean that you have all the authorization now that you need, and you can bring in a plan with the subways and the buses and everything, and you just come to the Appropriations Committee now?

Mr. STOLZENBACH. Not for the construction of subways, sir. We have the necessary authorization for the staff work that is called for in this budget. We are not asking for any money to construct the transit system in this budget.

Senator BIBLE. Mr. Chairman, might I break in at that point for a question.

Chairman HAYDEN. Certainly.

AUTHORITY FOR PRELIMINARY ENGINEERING PLANS

Senator BIBLE. I regret that I was detained at the other Subcommittee on Treasury and Post Office and could not get here for your beginning testimony, Mr. Stolzenbach. The thing that continues to bother me in this particular request that you are making at this time is this item of $700,000 for preliminary engineering plans for the first stage of the construction.

Now, where in the law can you point to the authority for asking for this money for engineering plans in advance of the submission of the plan to the President and the approval by the Congress?

Mr. STOLZENBACH. Senator, the act provides in section 204, 204(c), that the agency—

> shall prepare proposals for implementing each part of the transit development program, including preliminary engineering plans, descriptions of the character of services to be rendered—

And so forth.

There are various stages of preliminary engineering. In the proposal which we will give you next November we will outline the costs of the first stage of a subway system in the District of Columbia.

However, if we are to be in a position to proceed as fast as possible, assuming that at the next session of Congress, Congress wishes us to go ahead with our plans, we should be underway with some more detailed preliminary studies during this next fiscal year. One of the benefits of having these studies will be that at such hearings as the

Congress may hold, say, next spring, a year from now, we will have a far better and more detailed basis for supporting our case than we would otherwise.

FUNDS REQUIRED

Senator BIBLE. Is this going to take $700,000 to arrive at these figures?

Mr. STOLZENBACK. This is quite in line with the percentage of preliminary engineering which is normally attributable to large construction projects. I venture to say that the first phase of our construction program will probably be on the order of $100 or $200 million, and $700,000 is quite in line with that, as a preliminary engineering cost.

Senator BIBLE. Is it necessary to spend this amount of money to arrive at the point where you can make the report to the President as required by law in November of this year?

Mr. STOLZENBACH. No, sir. The purpose of this is so that if the Congress gives us the go-ahead next session we will be that far along so that by the end of calendar 1963, or at the latest, early 1964, we can actually begin construction.

Otherwise, it will be 1 year later.

Senator BIBLE. Assuming that the Congress might for some good reason not give you the approval to move into this mass transit system, would this mean that you had expended $700,000 needlessly?

Mr. STOLZENBACH. No more so than all of the work that the Agency would have done. It would have to be considered as an investment toward the continuing development of this program. I presume that if the Congress should turn us down next year we would revise our plans and present them to the Congress at a later session.

COST INVOLVED IN MASS TRANSPORTATION PLAN

Senator BIBLE. I think the Congress is going to have to face up to a real hard, difficult problem, one in which I have a great interest, both from my work as the chairman of the Legislative Committee and my work on the joint committee, but I think the Members of the Congress are going to have to realize the price tag involved in this mass transportation plan.

I understand you to say now that the plan for a mass transit system will be in the neighborhood of a billion dollars. Is this correct? Is that your best estimate now?

Mr. STOLZENBACH. I believe the ultimate cost—and by ultimate cost I mean looking ahead 20 or 25 years—for a complete regional system which you might envision we would have by the year 2000, would be on the order of magnitude of a billion dollars, or possibly more.

Senator DWORSHAK. Will you yield for a question?

Senator BIBLE. Yes.

PLANNING PROGRAM

Senator DWORSHAK. I am a little bit confused as to what your planning is. Will it provide for complete Federal ownership of this transit system so that it would be necessary to purchase the transit system which is now in operation, or do you plan to coordinate private and Federal ownership into a single system?

Mr. STOLZENBACH. I certainly would think that if the Federal Government is to pay a substantial or even significant portion of the cost, ownership would rest with the Federal Government.

However, the act directs us to examine the question of how such a system should be financed and how it should be organized, and I presume this problem also entails the question of both ownership and the management of the system itself.

AUTHORIZATION FOR PLANNING

Senator BIBLE. The thing that continues to worry me, Mr. Stolzenbach, and I am trying to be helpful, is the need for doing this preliminary engineering work before the Congress has given the green light.

As I understand your reason for inclusion of this item is that it will save time.

Mr. STOLZENBACH. That is correct.

Senator BIBLE. This is about what it boils down to?

Mr. STOLZENBACH. There is no other justification for it, to enable us to move ahead as soon as possible.

Senator BIBLE. In reading your letter to me, which I would like to include in the record at this point, Mr. Chairman, because it is a pretty thorough explanation of what Mr. Stolzenbach is saying, it still seems to me that it might be better to have the Congress give you the green light and then ask for the engineering money; rather than ask for the engineering money and expect the Congress to give you the green light.

They may or they may not. I do not know.

Chairman HAYDEN. The letter may be included in the record.

(The letter referred to follows:)

NATIONAL CAPITAL TRANSPORTATION AGENCY,
OFFICE OF THE ADMINISTRATOR,
Washington, March 6, 1962.

Hon. ALAN BIBLE,
U.S. Senate, Washington, D.C.

DEAR SENATOR BIBLE: I think you will agree that the problems which gave rise to your sponsorship of the passage of the National Capital Transportation Act of 1960 are more urgent than ever before. The continued rapid growth of the region and the steadily mounting traffic congestion indicate the desirability of getting this Agency's transit development program underway at the earliest possible date.

I have tailored the Agency's fiscal year 1963 budget request to this urgency. While we have made enormous strides in the last 10 months there are still many problems ahead before we can apply the first shovel to the construction of a Washington subway. As the culmination of 7 years of planning effort, beginning with the transportation plan which Congress ordered drawn in 1955, next November I will lay before the President, for transmittal to the Congress, a report which will include a balanced transportation plan for the region, a request for authority to proceed with the first phase of rapid transit construction, and recommendations on finance and organization as required by section 204(g) of our act. If the Congress is disposed to act favorably on our recommendations at its next session, it should be possible to begin construction in late 1963 and to have rapid transit in operation by 1968, some 13 years after planning for rapid transit began.

In order to meet even this modest timetable we must begin preliminary engineering work in fiscal year 1963—in advance of Congress having approved our program. Our budget request thus includes $700,000 for so much of this work as must be done by outside contracts. My General Counsel has advised me that section 204(e) of the National Capital Transportation Act clearly authorizes the

Agency to do preliminary engineering for a part of the transit development program in advance of approval of such part by the Congress. I think it should be noted that much of the product of this engineering work will become available early enough in calendar 1963 to be of considerable aid to the Congress in measuring the soundness of our estimates when it considers our program in 1963.

I am confident the Agency will have the capacity to proceed at the pace I have thus indicated. Whenever Agency personnel talk with people in the National Capital region, we are made aware of the keen anticipation with which the region is awaiting the development of the Agency's program.

We are now far enough into our examination of the financial problem to be extremely optimistic about the possibility of finding feasible financing methods. In order to provide us with the best possible advice as to the soundness of the financial proposals we will make, I have just completed the selection of an Advisory Committee on Finance. I am attaching a list of the names of those who have agreed to serve on this Committee. You will agree, I am sure, that we are fortunate to have the services of such outstanding people.

Please let me know if I can be of service to you with any further information.

Sincerely yours,

C. DARWIN STOLZENBACH, *Administrator.*

(The list of members of Advisory Committee appears on p. 908.)

PRELIMINARY PLAN

Mr. STOLZENBACH. This is preliminary engineering. It is not the final engineering drawings. It will give the Congress a better picture of what we want to do when we come to our hearings next year. It will enable us to start a year earlier.

Senator MUNDT. Will the gentleman yield?

Senator BIBLE. I yield at this point.

Senator MUNDT. The way I interpret this colloquy it seems to me that Mr. Stolzenbach is betting $700,000 of our money that Congress will accept his plan when it is presented. Is that about what it amounts to? You have confidence in your plan and you are betting our money that you are right?

Mr. STOLZENBACH. I will certainly say that I have confidence in what we are doing and I hope and expect that the Congress will find in our plan something that they will be willing to go ahead with.

Senator MUNDT. It seems to me that the Senator from Nevada makes a pretty good point in differentiating between the preliminary engineering plans, which I certainly think you ought to have so that you can come to Congress next spring with that kind of an intelligent "guesstimate," and whatever other portion of the $700,000 is devoted to construction plans which may or may not be accepted. That is speculation which you are making with the taxpayers' money without much justification; because Congress is a rather temperamental institution and you do not know whether they are going to accept it or not, and neither do any of us.

But I think you would have justification, and I would request, Mr. Chairman, that you ask Mr. Stolzenbach to break his $700,000 down into two parts, what he actually needs to make an intelligent preliminary presentation, and to prepare his report in November, and to make his pitch next spring; and how much of it would be under the preliminary construction costs, which would certainly expedite the construction and save time if Congress approves it, and which would be a waste of money if it does not. Do you see what I have in mind?

Mr. STOLZENBACH. I shall be happy to do that.

Senator MUNDT. Thank you.

Senator BIBLE. Following the trend of thinking of the Senator from South Dakota, how much of this $700,000 do you need to prepare a proper plan to present to the President in November, which is not too many months from now?

Mr. STOLZENBACH. If I may, Senator Bible, I would like to be permitted to furnish such a breakdown for the record.

Senator BIBLE. I think it could be furnished for the record.

Senator MUNDT. Just do not do it off the top of your head. Just take your time.

Senator BIBLE. What I want is how much money you need to present a plan that is understandable in November to the President of the United States, because it seems to me that is our starting point on this.

(The following letter from the Administrator, National Capital Transportation Agency, provides the information requested:)

NATIONAL CAPITAL TRANSPORTATION AGENCY,
OFFICE OF THE ADMINISTRATOR,
Washington, March 9, 1962.

Hon. CARL HAYDEN,
Chairman, Senate Appropriations Committee,
U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: The following is submitted in response to the Senate Appropriation Committee's request for a breakdown of the National Capital Transportation Agency's request for $700,000 for fiscal year 1963 engineering contracts.

During the present fiscal year our Agency is laying out alternative routes for a future transportation system for the National Capital region, including both highway and transit routes. Our engineers and economists are engaged in preparing general capital and operating cost estimates which will be presented to me prior to June 1 of this year.

These estimates will be the product of what the engineers call "preliminary engineering" or simply "preliminary studies." This means that the transit routes will be laid out in broad corridors, with generalized station locations and rough plan and profile studies. On the basis of the preliminary studies, overall cost estimates can be made but these of necessity will be on the high side. The reason for this is that at the preliminary study stage it is necessary to make calculated guesses as to how much of the system will be in subways, which are relatively expensive, and how much of it will be on the surface or on elevated structures, which are less expensive to construct. In the preliminary study stage, estimates are necessarily overly conservative; the engineers will almost inevitably tend to decide all questions in favor of the higher cost assumptions.

During the period June 1–October 1, 1962 (at which latter date we will begin the printing of our November 1, 1962 report) our staff engineers will begin the process of preliminary engineering which is considerably more detailed. It means determining precise routes and station locations, conducting field surveys and soil borings and examining public utility relocation problems. The Agency's Assistant Administrator for Engineering and Operations, who was formerly Chief Engineer of the Chicago Transit Authority and has had many years of experience in rapid transit construction, believes it would be quite desirable at this juncture to enlist the assistance of outside contractors to provide further confirmation and refinement of the preliminary engineering studies made within the Agency. This, as I understand it, is standard engineering procedure. We estimate that the sum of $75,000 will be required for such contracts during the period July 1–October 1, 1962. The product of these contracts will be to confirm or alter the estimates which will be shown in the November 1, 1962, report.

The November 1, 1962, report will contain, in addition to our recommendations on future organizational and financial arrangements for transportation in the National Capital region, a plan for the future transportation system which will look 40 years ahead to the year 2000. A separate plan will be shown for the year 1980. In addition, we will outline generally our plans for the first phases of construction of the system. After the filing of our November report, we will prepare for hearings before Congress on our request for obligational authority to construct the first phases of the system. During the period November 1, 1962–February 1,

1963 (at which later date we anticipate the hearings will begin) it would assist in our preparation for the hearings to have the benefit of further outside preliminary engineering studies. These would lead to extremely precise cost estimates of the contemplated construction; far more precise than could be obtained in time for the November 1, 1962, report. We estimate that they will cost $100,000.

During the period February 1–June 30, 1963, our engineers plan to engage in further preliminary engineering designed to permit us to let contracts for final engineering design and construction. Of the $700,000 requested in our budget for preliminary engineering, some $525,000 is for outside contracting work which would be undertaken during this period. The latter sum is exclusively to permit us to move ahead faster in the construction of the system.

Attached is a breakdown of the $700,000 figure summarizing what I have said in this letter.

Sincerely yours,

C. DARWIN STOLZENBACH, *Administrator*.

Period of obligation	Purpose	Amount
July 1–Oct. 1, 1962	Preliminary engineering contracts designed to provide further confirmation and refinement of material to be included in Nov. 1, 1962, report.	$75,000
Oct. 1, 1962–Feb. 1, 1963	Preliminary engineering contracts designed to provide further engineering details for 1st stage of construction of rapid transit system for presentation to Congress in the spring of 1963 in support of request for obligational authority.	100,000
Feb. 1–June 30, 1963	Preliminary engineering contracts designed to permit letting of contracts for final engineering design and construction after July 1, 1963.	525,000
Total		700,000

ROUTES FOR FIRST STAGE OF CONSTRUCTION

Senator BIBLE. What is your plan going to show in November of 1962 when you submit it to the President?

Mr. STOLZENBACH. It will show the routes for the first stage of construction, the locations of the stations, and the best preliminary estimates of its cost that we can prepare.

FINANCING PROGRAM

Senator BIBLE. And in addition will you have the suggested methods of financing?

Mr. STOLZENBACH. Oh, yes.

Senator BIBLE. What is your present thinking as to the financing of this overall expenditure of some billions of dollars? Is it going to be paid for out of revenues?

Mr. STOLZENBACH. We have reason to believe that substantial portions of the capital costs can eventually be recouped from revenues. Certainly in the initial stage, if you concentrate on building the downtown portion of it, which is vital to the entire system for the long-range future, you are actually incurring a very heavy portion of the total capital cost.

We hope to work out some arrangement whereby the amortization and the interest on that can be deferred to future years, when ample revenues from the whole system would be available. If we can find some arrangements whereby the local counties in the States of Maryland and Virginia can participate in the financing of their fair share of these capital costs, we have reason to be optimistic that a feasible and practical financing plan can be presented.

I cannot tell you the details now. There are many facets to it which we are examining and this job we are working very hard on at the moment.

Senator BIBLE. I think it should be apparent to you that this is probably the key issue in this entire program, the financing, because this is a question of selling a large multimillion-dollar project to the Congress of the United States and they are going to be interested in who is going to pay for it.

Mr. STOLZENBACH. They should be.

Senator BIBLE. As I recall the earlier predictions, it was estimated that it would be about 2010 before this project would pay out. Is that roughly your present thinking? Is this about a 50-year project?

Mr. STOLZENBACH. I think it is reasonable to look at it as a 50-year project.

SUBWAYS

Senator BIBLE. Maybe you have already answered this question, and if so then I can read it in your testimony. What are you planning by way of subways at the present time?

Mr. STOLZENBACH. We hope to have a series of radial trunk transit lines, some of which would probably include either the use of existing rail lines, which would come into the downtown portion of Washington and be so arranged that they would distribute the passengers close to their place of work.

We estimate that it is possible to design an arrangement of a downtown subway so that 80 percent of the people who will be coming in on these radial trunklines could be delivered to within 5 minutes walking distance of their offices.

Senator BIBLE. And this is the heavy cost of the transit?

Mr. STOLZENBACH. This is the heavy cost of the total system. It could well be a quarter or a third of the total capital cost of the fixed portion of the system.

Senator BIBLE. Now may I ask just one further question, Mr. Chairman?

Chairman HAYDEN. Yes.

STATUS OF ARCHBOLD-GLOVER PARKWAY

Senator BIBLE. The majority leader is very much interested in Archbold-Glover. What is the present status of the Archbold-Glover property? Was this held in status quo in the authorizing legislation under which you are operating?

Mr. STOLZENBACH. The proviso to section 204(b) provides:

> No freeway, or new parkway more than two lanes in width, shall be built within the District of Columbia west of 12th Street, Northwest, and north of either the north or west legs of the proposed InterLoop Freeway * * * before July 1, 1965.

And it directs the Agency not later than January 10, 1965, to submit to the President for transmittal to the Congress its recommendations as to whether any such freeway or parkway should thereafter be built.

Senator BIBLE. This in effect is a freeze on the Archbold Glover Park, is this not true?

Mr. STOLZENBACH. It has that effect, yes.

Senator BIBLE. It has the effect of being a freeze. Has the Agency of which you are the Director reached any conclusions with regard to this area as of now?

Mr. STOLZENBACH. Conclusions regarding this will emerge from the traffic studies which we are doing in connection with the overall report we are planning to present in November.

Senator BIBLE. This will be resolved in your November report?

Mr. STOLZENBACH. I certainly think it should be; yes, sir.

Senator BIBLE. Thank you, Mr. Chairman.

Chairman HAYDEN. Any further questions?

MONORAIL SYSTEM

Senator MUNDT. Have you made any conclusions with respect to the relative merits of the subway system vis-a-vis some kind of a monorail system, such as they are setting up in Seattle for the World's Fair? I presume you have, because you keep talking about subways. You have not talked about a monorail, but if so on what do you base your verdict?

Mr. STOLZENBACH. Ever since we have started considering the type of vehicle system that we will use we have been looking at the total range of technological possibilities.

Now, whether it is a subway, whether it is underground, or above ground, is a separate kind of question from whether it is monorail or conventional steel wheels on steel track. We have not reached any firm conclusions yet regarding the type of vehicle system which is most appropriate. We will certainly consider most thoroughly all the monorail proposals that we can encounter and we will take those into account in our planning.

Senator MUNDT. I take it you have reached the conclusion that the transportation system should be underground, instead of above ground. Have you reached that conclusion? You talked about a subway system a great deal this morning.

Mr. STOLZENBACH. I can see no way of moving the large numbers of people who will want to move in and out of the metropolitan core of the Nation's Capital in the future unless provision is made for those people to move on exclusive rights-of-way underground in the central portion of the city.

RIVER BRIDGES

Senator MUNDT. Does that contemplate supplementing or replacing present river bridges by the underwater tunnel that we discussed one time before this committee?

Mr. STOLZENBACH. We now have engineering studies underway to determine the relative costs and engineering feasibility of going over the Potomac River, or under the Potomac River. Until those studies are completed I cannot make any further comment on that.

Senator MUNDT. In your studies you undoubtedly have looked around all over the United States, maybe all over the world, to see what other towns our size have done?

Mr. STOLZENBACH. That is correct.

Senator MUNDT. To meet the transportation problem.

Mr. STOLZENBACH. That is correct. We have not finished that either.

TRANSPORTATION SYSTEMS OF OTHER CITIES

Senator MUNDT. On the basis of your present surveys what would you list as the one, two, three top towns of comparable size which have done the best job so far in meeting the problem?

Mr. STOLZENBACH. I am not prepared to make such a comparison.

Senator MUNDT. Maybe that is cutting it down too thin. What would you say are three or four of the best jobs which have been done in approaching a solution? I presume you have not found any who say "We have the problem licked."

Mr. STOLZENBACH. Every problem is a little different. Stockholm has a very modern system. However, their city is spread out with a lot of islands and waterways in between. Oslo, Hamburg, and even Berlin have made recent additions to their subway systems.

All of the systems in the United States which have subways are many years old. I do not think it is a proper comparison to make with what we intend to do here.

Senator MUNDT. Well, I agree that you cannot compare it very well with Sweden, and Oslo, and so forth, because the number of automobiles and moving vehicles in an American city, per capita, is tremendously larger than it is in those areas. As I take it, having read your brochure—I guess you are the ones that sent out this brochure which I went over pretty carefully, and it is very interesting and very informative—you envision a lot of moving vehicles down below in addition to what we think of as a subway train. Am I right, or am I wrong?

Mr. STOLZENBACH. I am not sure what brochure you are referring to.

Senator MUNDT. It has a kind of reddish-brown cover, about this big, a big, unwieldy thing. It talked about the future transportation solution of Washington. Maybe it was just some engineering firm. I though it came out under your blessing.

Mr. STOLZENBACH. The only thing I can think of of this character would have been the 1959 mass transportation survey report; but that was blue.

DOWNTOWN PROGRESS COMMITTEE REPORT

Senator MUNDT. This came in this year and it had pictures of buses where people got off and escalators. This is quite an elaborate presentation of the transportation problem. It was put out by the District, I believe; and it was not only transportation, but also renovation of the downtown portion of the city.

Mr. STOLZENBACH. This could be the Downtown Progress, Inc.

Senator MUNDT. That is correct.

Mr. STOLZENBACH. We are working very closely with this business organization and their staff; but that was not our report.

Senator MUNDT. All right. Back to my original question: What American cities have done a commendable job, let us say, which you think is worth emulating?

CHICAGO SYSTEM

Mr. STOLZENBACH. The most modern improvements have been made in Chicago where the Congress Street Expressway brought about the innovation of rapid transit in the median strip of a freeway; and that

line starts in downtown Chicago in a subway and then goes out into the median strip of the Congress Street Expressway, out about 12 miles.

The engineer who designed and constructed that is Mr. Stanley Forsythe, the assistant administrator of this agency, who is sitting right here.

Senator MUNDT. Very good.

CLEVELAND SYSTEM

Mr. STOLZENBACH. The city of Cleveland has developed a modern rapid transit line. This does not involve a subway. It involves the use of an existing railroad right-of-way and it is one of the most successful rapid transit systems in the country, albeit a small one.

PHILADELPHIA SYSTEM

The city of Philadelphia has had a subway system and elevated railway system for many years. However, in the past decade they have made notable improvements in the utilization of their system and in the coordination of their many railroad radial commuter lines. They even have evolved a system of subsidizing the rail commuter operations so as to make them available to more people.

TORONTO SYSTEM

The city of Toronto has the most modern rapid transit system in the North American Continent. They built the Yonge Street subway, 4½ miles long, in 1954. It has been so successful that they are now constructing a parallel line 2 blocks away and contemplate a cross-town line at right angles to it at some time in the future.

These are the most recent actual developments.

Senator MUNDT. Thank you.

Senator DWORSHAK. Mr. Chairman, I would like to question Mr. Stolzenbach.

Chairman HAYDEN. Very well.

MASS TRANSPORTATION SURVEY

Senator DWORSHAK. Mr. Stolzenbach, in detailing your experiences you say that you headed a metropolitanwide group alanysis of the Washington area mass transportation survey. What was involved in that? Has there been a previous effort made to study the transportation system here?

Mr. STOLZENBACH. Just to review the whole history of this, in 1952 when Congress enacted the National Capital Planning Act of 1952 which brought about present planning arrangements for the National Capital region, they called for a mass transportation survey. However, funds were not made available until 1954.

The Planning Commission and the Regional Planning Council, from 1955 to 1959 engaged in a half-million dollar study of the problem. It was that study which, when presented to President Eisenhower in 1959 and when later presented to the committee of which Senator Bible was chairman, the Joint Committee on Washington Metropolitan Problems, after extensive hearings, recommended to the Congress that this agency be created, and be directed to get on with doing something about the task.

As to the activity that you refer to, I was then chairman of a regional citizens group, a group that represented the civic federations of the region, which itself undertook to make an analysis of that 1959 plan.

RECOMMENDATION OF STUDY GROUP IN 1959

Senator DWORSHAK. What did you recommend in the 1959 report briefly? Just the need of a large mass transportation system?

Mr. STOLZENBACH. The group that I was with at the time, along with practically every other civic and business group in the National Capital region, strongly recommend the adoption of the recommendations in that report, the principal one of which was to create a Federal agency to do the job.

Senator DWORSHAK. You didn't study the need of it? I mean you didn't get into any detailed planning? It was just the overall recommendation that there was an essential need for this later development?

Mr. STOLZENBACH. That is right.

COOPERATION WITH DOWNTOWN PROGRESS COMMITTEE

Senator MUNDT. Do you do work in close conjunction with this group that sent me the brochure, the Downtown Progress Committee?

Mr. STOLZENBACH. Downtown Progress Committee. At that time the downtown progress group was not existing.

Senator MUNDT. I mean in your transportation system, because they talk about transportation. They talk about an underground bus line.

Mr. STOLZENBACH. Our planning staff at this very moment is working with the planning staff of Downtown Progress to see that our plan as nearly as practicable can be fitted to the plans that they have for the downtown business district.

Senator MUNDT. I don't know how far along their plans are. This may be just an architectural dream, but they have quite a book.

Mr. STOLZENBACH. They are ahead of us, unfortunately, and we are trying to catch up with them.

BACKGROUND OF ADMINISTRATOR

Senator MUNDT. As long as you are marching together is the main thing. Are you a traffic engineer or structural engineer?

Mr. STOLZENBACH. By background I am a political scientist and economist. I also studied physics at MIT for 3 years. I had 10 years of experience with the Johns Hopkins University operations research office which was under contract to the Department of the Army for doing operational studies on Army problems.

Senator MUNDT. You have a lot of problems.

TOTAL STAFF

Senator DWORSHAK. How many personnel do you have on your staff now?

Mr. STOLZENBACH. It changes from day to day. I think we have 61 full-time people at the present time.

Senator DWORSHAK. And you are asking for an increase of $514,000 for the next year?

Mr. STOLZENBACH. We are authorized to have 70 this year and we are asking for an increase in funds that will permit us to go up to 98.

Senator DWORSHAK. And the 98 are also authorized already?

Mr. STOLZENBACH. We are authorized to have such funds as are necessary to carry out the purposes of our act. This is a general appropriation authorization.

FUNDS FOR RENT

Senator DWORSHAK. And I notice under the rent budget you have $54,000 now and you are asking for $125,000, a sizable increase. What are you proposing to do? Expand your quarters for the increased personnel?

Mr. STOLZENBACH. Last year the Agency was faced with the problem that we not only did not have sufficient room in our present building, even to reach the size we have now attained, but that there was no other federally owned space available, and in our last budget the Congress authorized us to rent outside space.

This is a nonrecurring item which will be absorbed by GSA in future years. We are moving into our new quarters now. Three-fourths of the Agency has already moved into these new quarters which are located at 1634 I Street.

FEASIBILITY STUDIES

Senator DWORSHAK. You are asking for special engineering feasibility analyses and economic studies, $2,840,000. That seems to encompass a broad program. What are you contemplating there?

Mr. STOLZENBACH. These estimates are detailed in other portions of the justification. However, I think I can briefly say that as far as the $2 million of this is concerned, this relates to the feasibility studies that are necessary for us to determine what is the most modern type of vehicle system that is available with existing technology.

Senator DWORSHAK. It seems to me that you are moving ahead rapidly, which is desirable in some cases, but as Senator Bible has pointed out, you are expanding very rapidly on the basis that you are going to make a report in November and then continue your activities. You are speculating on what Congress may do with the report. The report you make in November is to the President?

Mr. STOLZENBACH. Yes; to the President.

PRESENTATION OF REPORT

Senator DWORSHAK. When do you make one to Congress, or will that same report be submitted to Congress?

Mr. STOLZENBACH. Presumably if the President accepts it and transmits it——

Senator DWORSHAK. But you are not planning to make a separate report to Congress at this time? There will be one exclusive report?

Mr. STOLZENBACH. This is the report called for in the act, next November. We are authorized under section 204(f) to—

* * * conduct research, surveys, experimentation, evaluation, design, and development, in cooperation with other Government agencies and private organizations when appropriate, on the needs of the region for transportation; on facilities, equipment, and services to meet those needs * * *.

Senator DWORSHAK. Are you planning to use your own personnel for this item of $2,840,000, or to employ outside agencies?

OUTSIDE INDUSTRIAL CONSULTANTS

Mr. STOLZENBACH. This is for outside industrial consultants. Part of this, I think, will be in the nature of seed money. There has been a neglect in the development of transit vehicle systems over the last 30 years because it has been a declining industry. I think we have reached about the bottom of the curve on this, but what is needed when we determine an appropriate type of system is some seed money, some evidence to American industry that there is going to be some Federal interest or some interest on the part of some buyer for a modern type of vehicle system; it has to start somewhere.

This item, I may add, I think has value far beyond the merely local needs, because anything we do in this connection will be of assistance to other areas in the United States.

DISAGREEMENT ON FINANCING

Senator DWORSHAK. You know through your long experience that inevitably a controversy will develop over whether the Federal Government should finance this system, or a large part of it, or whether efforts should be made, if it is practicable and feasible in its operations and in its projection, to have private financing and private supervision. You are aware of that very serious possibility?

Mr. STOLZENBACH. Yes, sir.

Senator DWORSHAK. And I think you should bear that in mind in making this report and in extending your activities beyond November because you will probably have a gap in there of several months, and are you visualizing that possibility? You build up a large staff and you are working toward the peak of submitting a report the 1st of November. What are you going to do after the 1st of November with this large staff you are building up?

Mr. STOLZENBACH. The staff will be engaged in the planning of the system.

Senator DWORSHAK. You have authorization under the existing act to continue after you submit your first report?

Mr. STOLZENBACH. We have the authorization to do the planning right now.

Senator DWORSHAK. I don't think I made myself clear. You submit your report the 1st of November. Does the present authorization which you have enable you to proceed from that point on on the current scale that you will have in operation at that time, or to expand your activity, or to what extent will you be authorized to continue your work without some subsequent action by the Congress?

Mr. STOLZENBACH. We will need no further authorization to continue the work contemplated in this budget.

CONTINUING ACTIVITIES

Senator DWORSHAK. Then you will continue beyond November 1 on the assumption that the report will be incomplete and that Congress will authorize you to expand your planning?

Mr. STOLZENBACH. We have other continuing activities.

Senator DWORSHAK. What, for instance?

Mr. STOLZENBACH. We have a land acquisition program authorized by Congress last year.

Senator DWORSHAK. What kind of land?

Mr. STOLZENBACH. This is the authorization for advance acquisition of the extrawide median strips in certain planned freeways in the region for which Congress has given us authority and some money already.

Senator DWORSHAK. Without working through the Bureau of Roads?

WORK WITH STATE HIGHWAY DEPARTMENTS

Mr. STOLZENBACH. We have to work with the State highway departments and in fact get the approval of the Governors of Maryland and Virginia.

Senator DWORSHAK. Not for roads within the District.

Mr. STOLZENBACH. These are in all cases in Maryland and Virginia.

Senator DWORSHAK. Outside of the District?

Mr. STOLZENBACH. That is right. This is looking to the far future. This land is available now, but if the Maryland and Virginia Highway Departments buy the land with only enough for a narrow median it will be too late to get in there and ever put any transit in if we don't provide this money now.

DISPERSAL OF FEDERAL ACTIVITIES

Senator DWORSHAK. I suppose it is not the responsibility of your Agency in any way, but I think that, along with many other Members of Congress, as long ago as 10 or 12 years I advocated dispersal of some of our governmental activities like our National Institutes of Health, which has grown from 1,200 to 7,000 personnel and has caused great expansion across the line in Maryland. We are building these huge governmental structures everywhere in the District. It seems that we are pointing up the concentration of Government within a small area.

Maybe that is good. Maybe it is bad. However, these problems that you are dealing with now are largely man made, and in that category I would put the executive department, the Chief Executive, not now—I mean over the years, and presumably now to some extent—and the Congress.

We know that if we become involved in a war with the use of nuclear bombs we are building up a beautiful target here. Again, that isn't your responsibility, but I am throwing out this hint, because it seems it may be too late, and it may not be, to consider the dispersal so that if a bomb hits this target that's the end of the Federal Government.

Have you though of that eventuality?

RESPONSIBILITY OF NATIONAL PLANNING COMMISSION

Mr. STOLZENBACH. I think that is, under our act, the proper responsibility of the National Capital Planning Commission. The act says that our programs—

Shall, to the extent practicable, conform to the general plan for the development of the National Capital region within the meaning * * * of the National Capital Planning Act of 1952, except as may be determined by the President.

We do not regard ourselves as being in the business of trying to decide how the development of the region should occur, but merely to provide the kind of transportation system that is suited to their plans.

Senator DWORSHAK. The National Capital Planning Commission has greater responsibility in this overall planning program, but you do cooperate with them, I take it.

Mr. STOLZENBACH. Yes, certainly.

Senator DWORSHAK. Completely, I hope.

Mr. STOLZENBACH. We certainly do.

Senator DWORSHAK. Thank you.

EXCERPT FROM AUTHORIZATION ACT

Senator BIBLE. Mr. Chairman, may I insert something in the record which I think may be very helpful and may answer some of the questions of the Senator from Idaho. I am reading from the Public Law 86-669, which is the National Capital Transportation Agency Act, Section 204(g) and it says this:

> The agency shall submit to the President for transmittal to Congress, not later than November 1, 1962, recommendations for organization and financial arrangements for transportation in the National Capital region. The Agency shall consider the following organizational alternatives, among others: a Federal corporation, an organization established by interstate compact, and continuation or modification of the organization established by this act. In preparing its recommendation the Agency shall consult with the governments of the District of Columbia, Maryland, and Virginia, the local governments of the National Capital region, and the Federal agencies having an interest in transportation in the National Capital region: *Provided*, That any recommendations submitted by the Agency shall provide as far as possible for the payment of all costs by persons using or benefiting from regional transportation facilities and services, and shall provide for the equitable sharing of any remaining costs among the Federal, State, and local governments.

So I think that this act is very largely geared to the November 1, 1962, date. Wouldn't you agree with that? Isn't this the critical date for the Agency?

Mr. STOLZENBACH. It certainly is.

Senator BIBLE. Because it is then that you are going to know in which direction you are going.

Mr. STOLZENBACH. Yes.

FEASIBILITY STUDY FUNDS FOR PRESIDENT'S REPORT

Senator BIBLE. May I ask this question. Senator Dworshak opened it up by commenting on this $2 million for engineering feasibility studies. I would simply ask you how much of that $2 million will be required on engineering feasibility studies to perfect the plan which you will present to the President not later than November 1, 1962? Will all of that $2 million be used between July 1, 1962, and November 1, 1962?

Mr. STOLZENBACH. Not all of it. We feel that this is authorized under section 204(f) as a continuing responsibility of the agency. We feel that this is necessary if we are to have and know what type of vehicle system to go to American industry with, if we are to be able to eventually buy the type of vehicles, have them developed and ordered in time to put in operation, say, in 1968.

The development of modern vehicle systems cannot be done over night.

Senator BIBLE. I certainly recognize that, Mr. Stolzenbach, but again I come back to the same line of questioning that I was using on that $700,000 item. I wonder whether you shouldn't have approval of the plan before you expend these additional amounts of money. I would hope the Congress would approve a mass transportation system for the District of Columbia.

It is a complex and a complicated problem and it obviously is going to be a costly one, but how do you justify expending several millions of dollars before the plan is finally approved by the Congress?

Mr. STOLZENBACH. I think on two bases. When we come to the Congress roughly a year from now before the legislative committee to present our plan we will have much valuable information on which the Congress can judge the plan than we will have if we do not spend this, and, secondly, I regard the act as authorizing us to go ahead and develop the transportation program without regard to this timetable, November 1, 1962, which is simply a directive to present a specified time within which we should present our recommendations on finance and organization.

CONTINUING RESPONSIBILITY OF AGENCY

There is nothing said with respect to the November 1 date with regard to our work on the transit development program. That is in section 204 set forth as the continuing responsibility of the Agency and I think we have the responsibility to continue that.

Senator BIBLE. It seems to me that the critical question is going to arise early next year when the Congress either approves or does not approve the organization and finance arrangements which you submit. Certainly if they approve them, then the project goes forward, and I would hope it would go forward, but if they do not approve them, then you are out of business; aren't you?

You are certainly not going to continue studies if you are not going to have a transportation plan for the District of Columbia. You are not going to study just for the purposes of study. Aren't we trying to arrive at an end objective and isn't the end objective the creation of a mass transportation system for the District of Columbia and the suburbs in Maryland and Virginia?

Mr. STOLZENBACH. Senator, I believe that what we are requesting in this budget is authorized by this law.

FUNDS TO COMPLY WITH CONGRESSIONAL MANDATE

Senator BIBLE. It may be authorized by this law. I don't think your answer is responsive. I am trying to determine how much money you need between now and November 1, 1962 to comply with the mandate that the Congress has placed upon you to submit a plan of organization and financial arrangements.

Mr. STOLZENBACH. If we were just to do that and then wait for 6 months until the Congress concluded, I do not believe the Congress would consider that we were responsive to the act. It seems to me that you can't just assemble a Federal staff with permanent civil service people to do a job and then just sit and wait.

I think the act clearly contemplated that there are many things that have to go on, anticipating the development of some plan.

The Congress may not like the particular plan that we present next November.

Senator BIBLE. That is possible.

Mr. STOLZENBACH. The act did not say we had to present a portion of the transit development program then. It says, "recommendations on finance and organization."

We are trying to go ahead because we believe, and the administration believes, that this is an urgent problem.

Senator BIBLE. And I concur. I think it is an urgent problem.

Mr. STOLZENBACH. And we are assembling the kind of a staff that can do the continuing job. I think it is clearly up to the Congress as to whether it wants us to go ahead with these other activities. The administration and I feel that it is an important way of moving on to this. I think the problem appears more urgent now than it did when this act was passed.

Senator BIBLE. I think there is urgency and I think there is need. My question is whether or not it is a wise way to proceed to have engineering studies and engineering feasibility reports in advance of having approval of a concrete plan by the Congress of the United States.

Mr. STOLZENBACH. We have this alternative, I believe, due to the fact that this Agency got started very late. When I was sworn in as Administrator last May there were only five professional people on the staff.

Essentially we had to start from scratch at about that time. It is a tremendous job. One of the first decisions I had to make was whether or not we could get enough knowledge about the traffic estimates, the cost estimates, the financial picture, the wishes of the region, between last summer and essentially this coming summer when we will have to put our report to bed to meet this November deadline, and not meet it just with abstract ideas on finance and organization, but with recommendations that would be backed up by a concrete plan that would be more acceptable than what had been presented with in the 1959 report.

PERIODIC REPORTS TO CONGRESS

Senator DWORSHAK. Do you plan to make a subsequent report to Congress after November 1, 1962, to enable the Congress to determine what kind of a system should be constructed?

Mr. STOLZENBACH. We shall make periodic reports to the Congress whenever we have reached a stage where we are ready to proceed with an additional phase of the program. The act I think clearly contemplates that the transit development program of the Agency, which is the main job, shall be a continuing one until the whole job is essentially underway.

Senator BIBLE. It still seems to me that the heart of your problem still revolves around the report you are to submit November 1, 1962. It just can't escape me.

Mr. STOLZENBACH. I agree with you.

CONCURRENCE OF MARYLAND AND VIRGINIA

Senator DWORSHAK. Have you ascertained to what extent there is likelihood that the States of Virginia and Maryland will concur in the recommendations which you make on November 1?

Mr. STOLZENBACH. No, because we are not yet in a position to submit those recommendations to the States of Maryland and Virginia.

Senator DWORSHAK. Are you working with any representatives of thetwo States now?

Mr. STOLZENBACH. We are working with the duly authorized representatives of the Governors of Maryland and Virginia.

ADVISORY BOARD MEMBERS

Senator DWORSHAK. How many are on your advisory council or commission?

Mr. STOLZENBACH. The Advisory Board consists of five members appointed by the President.

Senator DWORSHAK. Where do they live?

Mr. STOLZENBACH. One of them lives in Cleveland. He is the general manager of the Cleveland Transit System. The rest of them live in this region, two in the District of Columbia, one in Virginia, and one in Maryland.

Senator BIBLE. Thank you, Mr. Chairman.

LAND ACQUISITION AND CONSTRUCTION

Chairman HAYDEN. For land acquisition and construction there is a request for $2 million for use in fiscal year 1963, an increase of $1 million over the amount included for this purpose in the Supplemental Appropriation Act of 1962. The justification will be placed in the record.

(The information referred to follows:)

NATIONAL CAPITAL TRANSPORTATION AGENCY

Land acquisition and construction

Appropriation 1962 (Supplemental Appropriation Act)	$1,000,000
Budget estimate 1963	2,000,000
Increase, 1963	1,000,000

Analysis by activities

	Estimate, 1962	Estimate, 1963	Increase (+) or decrease (−)
1. Land for transit facilities:			
(a) Extra wide median strips	$835,000	$250,000	−$585,000
(b) Transit stations and parking areas:			
George Washington Memorial Parkway (Maryland)		300,000	+300,000
Route 95 (Maryland)		500,000	+500,000
Route 66 (Virginia)		800,000	+800,000
2. Incidental construction	150,000	150,000	
3. Program direction	15,000		−15,000
Total	1,000,000	2,000,000	+1,000,000

JUSTIFICATION

The Agency was authorized by Public Law 355, October 4, 1961, to carry out part I of its transit development program for the National Capital region. Part I consists of land acquisition, and incidental construction, for future express transit facilities in conjunction with the development of three major new highways in the

National Capital region: Interstate Route 66 in Fairfax and Arlington Counties, Va.; Interstate Route 95 in Prince Georges County, Md., and the George Washington Memorial Parkway in Montgomery County, Md. The Agency's estimate was that a total of $3,500,000 would be required to carry out the land acquisition program authorized by Public Law 355. The sum of $1 million was appropriated during the 1st session of the 87th Congress for this purpose. An additional $2 million will be required during fiscal year 1963. A further $500,000 will be required after fiscal year 1963 to complete part I of the transit development program.

The $1 million authorized for the current fiscal year will be used to purchase extra wide median strips and provide for incidental construction on portions of Routes 66 and 95. Of the $2 million sought for land acquisition and incidental construction for fiscal year 1963, approximately $400,000 is for the purpose of completing all but a very small portion of this median strip program and providing for incidental construction on the George Washington Memorial Parkway.

The remaining $1,600,000 is for the purchase of land for parking and station facilities immediately adjacent to Routes 66 and 95 and the George Washington Memorial Parkway.

This sum will be used to purchase, during fiscal year 1963, four station and parking areas in the vicinity of the George Washington Memorial Parkway; three station and parking areas on Route 95; and four station and parking areas on Route 66. A total of 30 acres will be acquired for parking and station areas adjacent to the George Washington Memorial Parkway at a total cost of $300,000, or $10,000 per acre. A total of 100 acres will be acquired for the three station and parking areas adjacent to Route 95 at a total cost of $500,000, or an average cost of $5,000 per acre. Four parking and station areas, totaling 175 acres, will be acquired adjacent to Route 66 at a total cost of $800,000 or $4,500 per acre.

Program and financing

[In thousands of dollars]

	1961 actual	1962 estimate	1963 estimate
Program by activities:			
1. Land for transit facilities	----------	635	1,600
2. Incidental construction	----------	50	200
3. Program direction	----------	15	----------
Total program costs	----------	700	1,800
Change in selected resources [1]	----------	300	200
Total obligations	----------	1,000	2,000
Financing: New obligational authority (appropriation)	----------	1,000	2,000

[1] Selected resources as of June 30 are as follows: 1962, $300,000; 1963, $500,000.

	1961 actual	1962 estimate	1963 estimate
11 Personnel compensation: (Permanent positions)	----------	13	----------
12 Personnel benefits	----------	1	----------
25 Other services	----------	21	50
31 Lands and structures	----------	965	1,950
Total obligations	----------	1,000	2,000

LAND ACQUISITION PROGRAM

Chairman HAYDEN. Please explain to the committee what is involved in this request?

Mr. STOLZENBACH. You may recall, Mr. Chairman, that we came before the Appropriations Committee last summer following the enactment of the legislative authorization to acquire land, to participate with the States of Maryland and Virginia in acquiring land.

This land acquisition is for essentially two purposes, extra width of median strips in two highways and the acquisition of land that will be needed for the stations along the route, the whole idea being that you can acquire this land now at essentially farm land prices; whereas, if we wait until these thoroughfares are actually under construction and development, and this is long-range advance land acquisition—there is no question about it—it will cost more.

FEDERAL PARTICIPATION WITH VIRGINIA AND MARYLAND

Chairman HAYDEN. Have you obligated this million dollars?

Mr. STOLZENBACH. We asked for $2½ million because the Virginia and Maryland Highway Departments told us that they fully expected to be acquiring land and would need our participation during this fiscal year. Congress reduced our request to $1 million.

Actually we were never heard by the House committee. I recall the Senate committee did recommend including our full amount of $2½ million, the full amount we requested. We are simply asking for restoration of the amount that was reduced in the supplemental—$1½ million—plus an additional half million which we had fully explained at that time would be necessary during the fiscal year 1963.

Chairman HAYDEN. Is any of it obligated at the present time?

Mr. STOLZENBACH. At the moment, no.

Chairman HAYDEN. Are there any further questions?

Senator BIBLE. Thank you, Mr. Chairman. No.

Chairman HAYDEN. We thank you for your appearance.

Mr. STOLZENBACH. Thank you, Mr. Chairman.

Chairman HAYDEN. We will recess until 10 a.m., Friday, March 9, when we will hear outside witnesses.

(Whereupon, at 12:45 p.m., Thursday, March 8, 1962, the subcommittee recessed to reconvene at 10 a.m., Friday, March 9, 1962.)

DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES APPROPRIATIONS, 1963

FRIDAY, MARCH 9, 1962

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, D.C.

The subcommittee met, pursuant to recess, at 10 a.m., in room 1223, New Senate Office Building, Hon. Carl Hayden (chairman) presiding.

Present: Chairman Hayden, Senators Byrd, and Young.

Also present: Senator Cooper.

DEPARTMENT OF AGRICULTURE

SUPPORT OF FOREST SERVICE BUDGET

STATEMENT OF HON. JOHN SHERMAN COOPER, A U.S. SENATOR FROM THE STATE OF KENTUCKY

GENERAL STATEMENT

Chairman HAYDEN. The committee will be in order.

We will hear from our distinguished colleague, Senator Cooper of Kentucky, who wishes to speak with regard to certain Forest Service research.

Senator COOPER. Thank you, Mr. Chairman.

Mr. Chairman and members of the committee, I appreciate very much the opportunity to appear before this committee. I know that Monday is the day you will consider Forest Service items, but I am glad that you can hear me today because I think the subject of my request is also of interest to the Department of Interior and several of its agencies.

I have come to ask that $200,000 be added to the Forest Service budget, for research on the restoration of strip-mined land in the Appalachian region.

This is a matter of great importance to my State and, while the Senators can speak for themselves, I believe this work will also prove to be of great value in Pennsylvania, West Virginia, Tennessee, and Virginia—in fact, throughout the region overlying the Appalachian coalfield. And I am sure that preservation of the beauty of the mountains, and conservation of the water, timber and wildlife of the region—of all its basic resources—is a matter of consequence to the country as a whole.

In the high forested watersheds of the Appalachians, coal operations are turning rapidly to strip and auger mining. By strip mining, several times as much coal can be produced per man, with smaller

80391—62——59

investment, and at lower cost. It does provide employment, and income, to a region historically dependent on coal. But it may destroy the natural forest resources of timber, water, wildlife and recreation, both in the areas mined and nearby, on which the future of the region depends.

As members of the committee, and I am sure Senator Byrd of West Virginia, know, this operation consists of carving great benches the length of the mountainside. In order to expose a strip of coal which can be taken out with a power shovel, bulldozers start the cut well above the seam to be worked. The vertical face, or "highwall," drops 25 to 75 or even 100 feet, to a ledge perhaps 75 feet wide. The overburden removed is dumped over the side of the mountain. After the exposed coal is scooped out, great augers, some 6 feet in diameter, drill into the mountain 500 feet or so, extracting more coal.

I am told that in a typical operation with four or five pieces of equipment—bulldozer, shovel, auger and trucks—five to eight men may recover 500 tons of coal a day, compared to 14 tons or more per man in mechanized shaft mines. The work goes fast, and a mile may be stripped in surprisingly few days. After the first cut, the next higher seam on the ridge may be worked, and so on.

The resulting problems of land reclamation and timber restoration are immense. Kentucky, as well as West Virginia and Pennsylvania, and I think three other States, have laws to encourage the restoration of coal-stripped lands. But it is hard to get results until practical recommendations, based on scientific knowledge, can be made for improved mining practices and effective conservation measures.

To give only one example of the associated problems, rains in eastern Kentucky last week started great earth slides from the surface mining spoil banks, which up-rooted trees and blocked streams. I have here an article from the Louisville Courier-Journal of March 3, which describes very graphically what can happen.

(The article referred to follows:)

[From the Louisville Courier-Journal, Mar. 3, 1962]

MUD, DEBRIS FROM MOUNTAINSIDE CHOKE OFF THE CUMBERLAND AT BLAIR

(By Fred W. Luigart, Jr.)

BLAIR, KY., March 2.—An avalanche of water, mud, boulders, and large trees has poured out of Wolfpen Creek into the Cumberland River here—apparently from the large mountainside strip-mining operation of a United States Steel Corp. subsidiary.

Three persons have already evacuated their homes. The debris is choking off the river and has caused it to rise upstream despite efforts by the United States Coal & Coke Co. to keep the channel clear.

Other creeks which fall from Black Mountain, site of the coal-stripping operation, were also filling with the debris.

MORE ACCUMULATED

An inspection of Wolfpen Creek, upstream from Blair in Harlan County, revealed a fantastic accumulation of debris which could come cascading down the mountainside with more rain.

At two points along the creek, boulders and logs more than 2 feet in diameter had formed dams approximately 6 to 10 feet high and 15 feet across. They were holding back tons of mud and water. Smaller dams could be seen farther upstream. Puddles of mud several feet deep were accumulating along the banks of the creek.

LODGED AGAINST HOUSES

The scene at Blair, where Wolfpen Creek flows into the Cumberland, was causing motorists and tourists to stop for an inspection of the damage. The community is 5 miles east of Cumberland on U.S. Route 119.

Mud and debris was lodged against the homes of Mr. and Mrs. Fred B. Jones, and their son, Haskell Jones. Workmen wading in ankle-deep mud were evacuating the Joneses from their homes.

Bottom land and fields along the creek were covered with debris that included uprooted trees and one tree that Jones said was around 50 feet tall until it was snapped in the avalanche.

Giant logs and rocks and a huge mound of mud were accumulating at the confluence of the creek and river. Mud and rocks were forming a dam across the river. Downriver, logs and other debris were lodged beneath the water against a wooden bridge.

OFFICIAL IS UNCERTAIN

Upstream and farther down the Cumberland River, the water was running smoothly. But, at Blair, it was tumbling like rapids over the accumulation in the main channel.

A coal company official who made an inspection of the damage refused to say if the debris had come from his firm's stripping operation.

"We don't know where it came from," he said. He declined to give his name.

Another official of the firm said his company was doing everything it could to keep the channel clear.

However, employees of the company who were helping the Joneses evacuate readily identified the debris as overburden from the strip mine.

So, too, did the Joneses and their neighbors.

"This never happened here before they started strip mining on Black Mountain," said Mrs. Jones. "The company said they'd find us a place to live and store our furniture."

The company has been strip mining coal near the top of Black Mountain, highest in Kentucky, for the past 3 or 4 years, her husband said. The company is recovering a high-grade metallurgical coal from seams up to 10 feet thick.

Overburden, the debris removed in a strip-mining operation from above the coal, is tossed over the mountain where it accumulates until heavy rains and gravity send it crashing downhill.

THIS IS THIRD AVALANCHE

The present avalanche is the third to roar out of Wolfpen Creek. The first occurred December 20, and the second in early January, but the debris remained in the channel both times, Mrs. Jones said.

"It choked up the river once and caused the water to back up about one-fourth mile, but the company cleaned it out," Mrs. Jones said. "You can see now it's backing up the river again."

Her husband, who is unemployed, said the steel company has been sending an inspector up Wolfpen Creek daily since the December 20 avalanche to check on the accumulation of debris.

"They warn us, if some's coming out," he added. The present avalanche started here at noon Thursday. It subsided shortly after for about an hour, and then resumed."

"YOU COULD HEAR ROCKS"

Mrs. Jones said, "You could hear logs breaking and popping, the rocks rolling, the water tumbling."

Mrs. Steve Scott, a neighbor of the Joneses, said debris from another creek leading up to the strip mine has spilled over into her bottom lands.

Another neighbor, Mrs. Frank Sparks, said water backed up by the small dam of debris was getting into her furnace room. Her home is along the bank of the river a short distance upstream.

RESTORATION OF STRIPPED MOUNTAIN LAND

Senator COOPER. These eastern Kentucky valleys had floods before surface mining began, but the raw land sheds water much faster. The severe floods last week—and the area has been declared a disaster

area—are an example of the urgent need for practical reclamation measures to hold and slow the water on these unprotected slopes, and to get them back under grass and timber.

Research has shown how to restore strip land in flat and rolling country, which has even been turned into recreation and wildlife areas. But until last year no scientific work had been done to find similar answers for stripped mountain land.

I am glad to tell the committee that the U.S. Forest Service began such work last fall, on a very small budget of $20,000, at the Berea Forest Research Center. The center is under the direction of the Central States Forest Experiment Station, which did the work on restoring strip lands in Ohio, Indiana, and Illinois. The director of the experiment station, Mr. R. D. Lane, has had years of experience finding ways to grow trees on stripped land.

The Forest Service has a mining engineer on the job at the Berea Research Center now. To carry forward this work, a soil physicist, a soil chemist, a stream biologist, a watershed management specialist, a silviculturist or tree planting expert, and other scientists are needed. They will form a team to get the facts on which sound recommendations and practical measures can be built.

At present the most fundamental knowledge is not at hand. While the gross results are all too plain to anyone who has flown over the area or been on the ground, there is a lack of basic data on the rate of erosion under various conditions, the extent of stream pollution from copperas and sulfurous acid, runoff rate and its relation to flood protection measures, stream and reservoir siltation, and other questions. So the first problem is that we do not even know in an organized way what is happening now.

Second, the scientists at the Berea Research Center must find the practical steps to reclaim, reforest, and put to use the stripped coal lands. When they determine the entineering properties of the earth and shattered rock materials removed in mining, they can then figure out how to place the material so it will not slide down the steep slopes. They can show how to locate, construct, and maintain haul roads to prevent erosion, stream contamination, and damaging storm runoff the bared areas. They can tell how to keep the tree seedlings from being washed away, and how to cover acid layers to prevent the pollution which kills fish miles downstream.

Because this urgently needed work is already underway in Kentucky, the Forest Service considers the Berea Forest Research Center the logical place to expand its efforts. I have a letter from Dr. McArdle, Chief of the Forest Service, which I will submit for the record, citing their capabilities and plans, which call for an expenditure of $200,000 per year.

This seems to me a small amount in view of the scope of the problems, the size of the region affected, and the people in the area who will ultimately benefit from research undertaken now. These same areas are depressed, because they depended in the past on coal, but the technology has changed. I think the committee will understand how much good can grow from a modest additional appropriation to permit this work to be carried forward.

While my request to the committee today is for funds to accelerate and expand Forest Service research on the restoration of stripped coal land in the Appalachian region, I make two additional suggestions:

First, I believe that a cooperative program should be formulated to bring together the research talents of the several Federal agencies interested in this subject. The Corps of Engineers, the Tennessee Valley Authority, the Soil Conservation Service, the Area Redevelopment Administration, the Fish and Wildlife Service, the Geological Survey, the Bureau of Mines, the Office of Coal Research, and other agencies, as well as the Forest Service, all have a proper interest in this subject and can contribute to solutions.

PRESIDENT'S MESSAGE

In this connection, President Kennedy, in his March 1 message to the Congress on conservation, stated:

> A special problem of land conservation calling for immediate attention is the serious erosion and river pollution created by surface mining practices. Techniques must promptly be devised to prevent or minimize this despoilment if we are not to abandon great areas of scenic beauty and create difficult silting problems in many sections of the country. I have directed the Secretary of the Interior, working with appropriate Federal agencies and with the States, to recommend a program of research and action.

I understand the resources program staff under Secretary Udall has given some thought to this matter, and I have a letter from the staff director outlining their tentative ideas. It may be that the Department will come before this committee a little later this year with recommendations. But I point out that whatever study groups are convened, and whatever recommendations are made, improvement will depend at last on the kind of research being done at the Berea Forest Research Center.

For this reason, I think my request is fully consistent with the President's proposal which, had it come earlier, might have been reflected in the budget request for the Forest Service research appropriation. The Berea work, if adequately supported, can be the quickest, surest road to the techniques which the President said "must promptly be devised." To delay this work would be to deny the scientific information needed by any group, private or public, wishing to undertake conservation measures, or which may be charged with making recommendations.

FACILITIES AT BEREA RESEARCH CENTER

My second suggestion is that the plans of the Forest Service to construct laboratory facilities and greenhouses at the Berea Research Center also be advanced, and submitted to this committee in the regular budget next year. Considering the very rapid growth of strip mining in the Appalachian coalfield, its importance in terms of jobs and income for the area, and the large problems of water, soil, timber, wildlife and scenic conservation it brings, certainly one major research center devoted to these problems should be established. And because this work has started at Berea, it would be the proper place for such a land reclamation center. Other interested agencies might wish to cooperate with and contribute to the work being done there toward improved mining practices and conservation measures.

That completes my statement. I believe the chairman has received letters on this subject from Mr. J. O. Matlick, commissioner of the Kentucky Department of Conservation, and from the Kentucky

Farm Bureau Federation. I also have a copy of the resolution adopted last month by the National Association of Soil Conservation Districts, and an editorial which describes the situation in Kentucky.

Senator Morton, who is out of the city today, has asked me to submit a statement on his behalf, and I am informed that several other Senators also wish to support this request.

I thank the chairman again for his courtesy, and the members of the committee for their attention.

Chairman HAYDEN. Thank you, Senator. The statements you have referred to will be inserted in the record at this point.

(The material referred to follows:)

DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington, D.C., March 6, 1962.

Hon. JOHN SHERMAN COOPER,
U.S. Senate, Washington, D.C.

DEAR SENATOR COOPER: We appreciate receiving your letter of February 27, 1962, concerning problems associated with strip mining of coal in eastern Kentucky and other States.

The problem of determining how to carry on surface mining of coal in the Appalachian Mountains region without destroying or doing irreparable damage to forest watersheds and the various forest resources is of considerable concern to the Forest Service.

Following several years of study, we have developed sound guides for the planting of trees on mining spoil materials. But success in planting can only be assured if the spoil material is left in a relatively stable, low-in-acid condition. There is a critical need for information as to how stripping operations can be effectively and economically carried out with a minimum of damage to the various resources from acid water and sediment during the operation, and also leave the site so it can be soon returned to a productive forest condition.

We have started research on this problem at Berea, Ky., and currently about $20,000 is going into the project. Our short-range plans for this work call for $200,000 per year.

This project will eventually require laboratory facilities not now available, but the most immediate need is for strengthening the staff so that studies in the field can be started. Due to overall financial needs and the many other high priority projects requiring attention, we have been unable to provide for any strengthening of this project in our proposed budget for fiscal year 1963. However, we certainly will keep the needs for research on surface mining prominently in mind as future budgets are developed.

We appreciate your interest in our program and will be glad to answer any additional questions you may have.

Sincerely yours,

RICHARD E. MCARDLE, *Chief.*
By EDWARD C. CROFTS.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., March 8, 1962.

Hon. JOHN SHERMAN COOPER,
U.S. Senate, Washington, D.C.

DEAR SENATOR COOPER: Because of your interest in the problems of reclamation of surface (strip) mining areas, and at the request of your staff in recent telephone conversations with my staff, the following are our proposals in this regard.

As you know, the President in his conservation message directed the Secretary of the Interior, working with appropriate Federal agencies and with the States, to recommend a program of research and action on this problem.

In the last session of Congress several similar bills (H.R. 497, 3088, 9480) proposed that the Secretary of the Interior make a study of the problem. Our comments on this proposed legislation are pending with the Bureau of the Budget.

In attacking this problem, we believe an overall study of the scope of the problem, previous work, research needs, and possible solutions with recommendations is vital. To our knowledge, no such overall look at the problem has been made.

Our tentative ideas on this study are as follows:

(1) The study group should consist of various agencies in the Department of the Interior, Forest Service and Soil Conservation Service in the Department of Agriculture, Area Redevelopment Administration in the Department of Commerce since many of the areas involved are area redevelopment areas, and the Tennessee Valley Authority since they use large amounts of strip-mined coal. Coordination would be in the Office of the Secretary of the Interior.

(2) Each individual agency would handle individual phases of the problem. For example, Forest Service might handle forest and revegetation phases; Geological Survey, the water phases; Bureau of Mines, mining phases, etc.

(3) After the major problems have been defined, sample problem areas might be examined and studied in detail by the group. For example, strip mine areas in a flat area and in a mountainous area might be studied.

(4) The group will probably want to gather and abstract all available information on the subject. State agencies, interested congressional groups, industry groups, conservation groups, should also probably be contacted for information and ideas.

(5) The group should try to develop the scope of the problem, the implications of possible reclamation programs on recreation and area redevelopment, water, soil conservation, etc. An overall report should be prepared setting forth the facts, the conclusions therefrom, recommendations for research and legislation, if needed.

We believe the study should begin and be completed in fiscal year 1963 so that Congress and the public may have the facts as soon as possible and so that any needed action can be taken on the problem. We have not yet decided whether additional funds are needed to carry out this study. If they are needed, we will consider making a request for the additional funds.

We appreciate your interest in this resource problem.

Sincerely yours,

CHARLES H. STODDARD,
Director, Resources Program Staff.

COMMONWEALTH OF KENTUCKY,
DEPARTMENT OF CONSERVATION,
Frankfort, February 28, 1962.

Hon. CARL HAYDEN,
Chairman, Senate Subcommittee on Appropriations for the Department of Interior and Related Agencies, Senate Office Building, Washington, D.C.

DEAR SIR: I am writing to recommend that you and your subcommittee increase this year the appropriations for research work done by the U.S. Forest Service.

This Federal agency, with funds from increased appropriations made by Congress last year, has started two new lines of research in Kentucky. One of these will help us find practical ways to reduce or eliminate damage done to forest resources by strip and auger mining of coal in the Appalachian coalfield. Some 18,000 acres of land have been strip and auger mined in Kentucky during the past 4 years. Mining in and adjacent to the Tennessee Valley now totals over 1,000 miles of contour cuts. Quite probably several thousand additional miles will be contour stripped in the next two decades. Research must find out exactly how this kind of mining affects our timber, water, wildlife, and recreation resources. Then we need research to find practical, economical ways to reduce, eliminate, an repair any undesirable effects without imposing undue financial burdens upon the mining industry.

Because we feel that this work is extremely important, we are contributing to it. Together with the Forest Service, we have only enough funds to employ two research men. This is a meager force to undertake so large and important research job. Therefore, we recommend that $100,000 be added to the Forest Service appropriations for next year to strengthen research now underway in strip and auger mining in Kentucky.

The second line of work just started by the Forest Service is in marketing and processing forest products. This work will help us make more complete, efficient utilization of timber resources and lend a stronger economy for Kentucky. This is especially true for eastern Kentucky where 3 out of every 4 acres are in forest and where we have a distressed economy. Furthermore, this research will pro-

vide technical knowledge needed by State agencies now conducting active programs directed to solving these problems. For example, our State division of forestry is working with forest land owners and wood-using industries to improve timber protection, production, utilization, and marketing. The university, through extension and research, is assisting in this effort. And our department of economic development and area program office are assisting wood-using industries to expand and come into Kentucky. Thus, our State is making a strong, coordinated effort to improve our economy and employment opportunities through better use and marketing of our forest resources.

Much of the work we are doing is heavily dependent upon the research started by the Forest Service. So, I hope that you will find ways to strengthen their work this year. We feel that an additional $60,000, as a minimum, is needed to expand this research.

We do appreciate very much the action you and the Congress took last year that made possible these new research programs in Kentucky. Undoubtedly, you have many worthy requests for similar research increases from other parts of the Nation. I hope and urge that you will continue to provide the funds needed to expand this fine forest research program and that in doing so you will include our needs in Kentucky.

Yours very truly,

J. O. MATLICK,
Commissioner of Conservation.

KENTUCKY FARM BUREAU FEDERATION,
Louisville, Ky., February 28, 1962.

Senator CARL HAYDEN,
Chairman, Senate Subcommittee on Appropriations for the Department of Interior and Related Agencies, Senate Office Building, Washington, D.C.

DEAR CHAIRMAN HAYDEN: We were highly pleased that the Congress increased appropriations for the U.S. Forest Service research programs during its last session. This permitted the Forest Service to start promptly two new kinds of work in Kentucky.

The Kentucky Farm Bureau Federation is very much in favor of a stronger Federal forestry research program for our State. As evidence, I have enclosed a copy of the resolution we adopted at our annual meeting last year. Thus we wish to recommend that the two new research programs started by the Forest Service be expanded next year.

One of the programs that we are strongly interested in will help us find practical ways to protect and restore natural resources during strip and auger mining of coal in forested watersheds of Kentucky and other parts of the Appalachian coal field. This is a serious problem now and promises to become even greater as more coal is removed from the high mountain watersheds of eastern United States. The work just now started by the Forest Service is being strengthened by contributions from our Kentucky Department of Conservation, but, together, these two groups have only enough funds for two research men.

The second new research program will help us find ways to improve processing and marketing of Kentucky timber. This work is being done by the Forest Service, with the University of Kentucky cooperating. It will supplement and furnish badly needed information for several State programs that are helping us use more fully and completely our timber resources. These programs are conducted by the Kentucky Departments of Conservation and Economic Development, the area program office and the Extension Service, but, as with the strip mine research work, very limited funds are available for research—in this case just enough for one man.

In our opinion, these two Forest Service research programs should be expanded immediately. We feel that a minimum of $100,000 should be added to the strip mine research work and $60,000 to the timber processing and marketing research program. The problems in both of these fields are so large that the small programs we now have cannot make the contributions needed as rapidly as we should have them.

Appropriation of the additional funds we have recommended probably will exceed those contained in President Kennedy's budget for Forest Service research. We know, too, from our discussions with other farm bureaus that a much bigger national program of forestry research is needed, but we hope your subcommittee and Congress can provide this year the funds for the Forest Service to do the

research in which we are interested for Kentucky, as well as meet other urgent needs in the Nation.

Again, we want to express our appreciation to you and your subcommittee and to the Congress for the increases made in Forest Service research work last year. We trust that you will provide the additional funds needed to advance this fine work next year.

Very truly yours,

JOHN W. KOON, *Executive Secretary.*

RESOLUTION ADOPTED BY THE VOTING DELEGATES OF THE KENTUCKY FARM BUREAU FEDERATION ON NOVEMBER 15, 1961, CONCERNING FORESTRY

We recommend an increase in research funds to support additional research in the heavily forested area of the Central States forestry region of the United States. This region includes Kentucky, Ohio, Indiana, Illinois, and Missouri. This research is needed to help landowners in these forest areas to better manage and market their timber, increase employment opportunities by establishing suitable wood-using industries and encouraging development of water, wildlife, and recreational resources.

Further, we believe such research to be basic to the fulfillment of the objectives of the rural development program now underway in many of the heavily forested counties in these States.

It is recommended that the Federal appropriation be increased to a level more in line with State appropriation so as to finance a practical and sound program in forestry.

RESOLUTION ADOPTED BY THE VOTING DELEGATES OF THE KENTUCKY FARM BUREAU FEDERATION ON NOVEMBER 15, 1961, CONCERNING STRIP MINING

"The Kentucky Farm Bureau Federation believes that a forward step was taken in the modernization of the strip mine and reclamation act by the last legislature. We urge better enforcement of this act. We especially urge local and public support of the reclamation provision of this act.

"The Kentucky Farm Bureau Federation further urges that an activity be initiated by the Strip Mine and Reclamation Commission to gather research information needed for further soil and water conservation and spoil bank stabilization, so as to permit maximum utilization of land in strip-mined areas."

THE NATIONAL ASSOCIATION OF SOIL CONSERVATION DISTRICTS,
Washington, D.C., March 7, 1962.

Miss JANET HUMPHREY,
Senator Cooper's Office,
Senate Office Building,
Washington, D.C.

DEAR MISS HUMPHREY: As I promised on the phone today, I'm sending you the policy position of the NACD on "Restoration of Mining Areas"—adopted by our association at its annual convention in Philadelphia last month (February 4–9, 1962). The position, as you will note, endorses research into the economic restoration of strip mining areas.

"RESTORATION OF MINING AREAS

"Strip mining operations are rendering hundreds of acres of land unprofitable for production of forest, grass, crops, or wildlife. Moreover, these strip mined areas contribute to flood and sediment damage to farms, cities, roads, water supplies, and stream fishing.

"Accordingly, the national association urges the continuation of research in the economic restoration of such areas by landowners, and it will continue to encourage and support every effort of landowners, mining interests, and public agencies to restore land already damaged by strip mining operations."

Cordially,

GORDON K. ZIMMERMAN,
Executive Secretary.

[Editorial from the Louisville Courier-Journal, Dec. 20, 1960]

ENFORCEMENT, JUDGMENT MIGHT EASE STRIP MINING PROBLEMS

In a careful and thorough study of hillside strip mining, published in last Sunday's Passing Show section, Fred Luigart has called attention to one of the most far-reaching problems facing eastern Kentucky and, less directly, the entire State. Economically depressed because of declining employment in mechanized mines and on disappearing farms, eastern Kentucky desperately needs the jobs and income made possible by strip mining. But the potential destruction caused by strip operations is so great that neither the area immediately affected nor the State which may ultimately pay the cost of restoring the damaged land can ignore the problems that the industry creates.

In hillside stripping, the side or top of a mountain is sliced away to uncover coal which is then scooped out. The earth removed from the top of the coal seam, called the overburden, is dumped down the hillside where it kills vegetation, washes across fertile land and eventually finds its way into streams which it clogs to cause bottom-land flooding, and where its released acids kill all life within the stream and make the water unusable for livestock.

The problem is of concern to all of Kentucky because the destruction of soil and the silting of streams in eastern Kentucky create economic distress in which the whole State shares. Historically, the coal counties of this region have consumed the lion's share of State relief, welfare, and school-aid funds contributed by all taxpayers, and the distribution of public money must inevitably become more disproportionate if conditions in eastern Kentucky do not improve. The streams that rise in eastern Kentucky flow into our great reservoirs, such as Cumberland and Barkley Lakes, where excessive silting could cause serious problems.

The whole State pays the cost of clearing, repairing and ditching highways damaged by earth and rocks sliding down from strip sites. The whole State shares the cost of parks being created in eastern Kentucky, which may be damaged by silt and acid in the streams. Certainly, eastern Kentucky needs more parks. But the State should consider seriously the advisability of creating new parks in mountain areas that may be scarred by strip operations.

At the same time, there is no escaping the fact that this region desperately needs the few jobs that strip mines provide. It was recognition of this situation that prompted the last general assembly to pass a law that permits strip operations but tries to control the damage they do. The law requires strip operators to obtain permission to strip land, and to post bond assuring that they will restore and reclaim the strip site according to plans they must submit before stripping. The law, however, is unfortunately vague in that it requires the stripper to restore the land only where and to the extent that restoration is practical. The matter of practicality, as might be supposed, is one on which strippers and conservationists have not agreed.

The problem of strip mining is further complicated by the long deed under which a handful of land and coal companies retain the right to minerals under land held by private owners who in many cases are unaware of the restriction of their ownership. Until recently, State courts and the court of appeals have insisted that the long deed gave the company the right to exploit minerals as they saw fit, even if this required stripping a man's land against his wishes and by the destruction of his farm and residential property. A recent Federal court ruling however, said that the long deed does not give the holding company the right to destroy the future productiveness of a man's land.

SOMETHING IS WRONG HERE

The tactics of long-deed holders and the ravages of strip-mine operations have, as Mr. Luigart points out, aroused considerable agitation in parts of eastern Kentucky for a strengthened strip-mine control law, or perhaps a prohibition of strip and auger mining. Business groups and chambers of commerce that opposed the relatively mild present strip law when it was proposed last spring are now demanding a stronger law. It seems certain that the law will be a hot issue in the next session of the legislature.

Before such action is attempted, however, we need to know a great deal more about the entire problem of strip mining in hillside land than we do now. Unfortunately, because most previous stripping has been carried on in flat or rolling country, relatively little is known about hillside stripping, which has only recently become widespread.

Furthermore, we need to see how the present law will work if properly enforced, before we begin looking for another law. And, in all fairness to the Department of Conservation that is supposed to enforce the law, it must be said that there is every evidence that the law has not been enforced so far. Neither is there convincing evidence that the field agents of the department are willing, trained, or sufficient in number to supervise, instruct, and compel strippers to post bond, make restoration plans, and carry out efficient reclamation projects.

Another thing that is obviously needed immediately is a curtailment of the powers given to land companies under the long deed. When a strip miner can move onto a man's land against his wishes, tear up his garden, destroy his farm, flood his home and yard with mud, and pay him $17 for the destruction of his livelihood, and possessions—then something is extremely wrong. Yet, as Mr. Luigart shows, this not only can be done but is being done in eastern Kentucky.

The fact that it is being done is evidence of an arrogance on the part of the strip miners that is extremely shortsighted. It can only arouse hostility and bring punitive action from the legislature. And before the matter erupts on the floor of the legislature, Governor Combs would do well to make sure that the present law is more capably enforced. It could save him some headaches in 1962.

U.S. SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
March 9, 1962.

Hon. CARL HAYDEN,
Chairman, Subcommittee on Appropriations, Interior Department and Related Agencies, Committee on Appropriations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: The necessity of being absent from Washington on official business prevents my joining today with my distinguished colleague from Kentucky, the Honorable John Sherman Cooper, to testify in behalf of certain appropriations for Forest Service projects being considered for inclusion in the fiscal 1963 appropriations bill for the Department of the Interior and related agencies.

I concur fully in Senator Cooper's recommendations for increasing the Forest Service's allocation by $200,000 to accelerate research toward developing methods to reclaim mountain land affected by strip and auger mining. Important preliminary work has been performed by the Central States Forest Experiment Station in Berea, Ky., and the station's programs should be expanded and accelerated. I will not go into the specifics of why this is imperative at this time because Senator Cooper developed the need in excellent fashion during his testimony.

In addition, I would also request consideration of a second Forest Service item, which several Kentucky organizations support as vital to developing Kentucky's timber products resources. I believe that the subcommittee has received communications from Mr. J. O. Matlick, Kentucky commissioner of conservation, and Mr. John W. Koon, executive secretary, Kentucky Farm Bureau Federation, concerning an increase of $60,000 to the research program dealing with the processing and marketing of timber. I support their request and urge its inclusion in the bill.

I appreciate your courtesy in accepting this communication in behalf of the items discussed, and I request that it be included in the hearing record at the conclusion of Senator Cooper's remarks.

With kindest personal regards,

Sincerely yours,

THRUSTON B. MORTON.

SUPPORT FOR FUNDS FOR RESEARCH

Senator BYRD. Mr. Chairman?

Chairman HAYDEN. Yes.

Senator BYRD. May I make this brief comment? I compliment the distinguished senior Senator from Kentucky on his foresight and vision, and great interest in this matter, which is of importance to his State and to adjoining States. I think it is commendable that he has taken this action to impress upon our committee the importance of these moneys and I would also like to join with him in expressing on behalf of my State of West Virginia a great interest and in pointing to the same imperative need that exists there for moneys for research. I think it is necessary that we find some practical way to reduce the damage that is done by the extensive strip-mining operations that have been carried on and still are being carried on in my State and the Senator from Kentucky's State and other States.

EFFECT OF STRIP-MINING OPERATIONS

These operations, of course, mar the natural beauty of our terrain. They contribute to erosion, as Senator Cooper has very capably indictated. They contribute to the destruction of our streams, to siltation in the streams and in the reservoirs as he has stated, and they result in tremendous destruction to our forests, our soil, and our water resources. I trust that the subcommittee and the full committee will give careful and favorable consideration to the statement

by Senator Cooper, and I assure the distinguished Senator that I will lend whatever support I can to the proposal. I can compliment the Senator from Kentucky, and I know that the committee is going to carefully weight his statement.

Senator COOPER. I thank the Senator. I may say that ever since Senator Byrd has been in the Senate—and I think we came at the same time—we have worked together, and with his colleague, Senator Randolph, on various measures to try to alleviate some of the difficulties we have in the Kentucky and West Virginia area. I think we have worked together on practically every such issue that has been before the Congress. Many times he has asked me to join with him, and I asked him to join with me on this.

I do thank the committee. I think this is a serious problem.

Chairman HAYDEN. All of this activity is on private property?

CUMBERLAND NATIONAL FOREST

Senator COOPER. Yes. The Cumberland National Forest runs through Kentucky, but the Forest Service takes steps now to protect the streams and soil there against stripping. As I pointed out, this great stripping of coal goes on all through the Appalachian region. Some States, including my own, have laws that require the operator to do something about restoring the soil and protecting the streams. But he doesn't know how, because there has been no research to tell him what to do.

The Berea Forest Research Center is the only place in the country that is doing any research on this subject. Forest research centers in other States are engaged in other work. This research has been undertaken in Kentucky, and one man is now working on it.

Senator BYRD. Is any stripping going on in the national forest lands in Kentucky?

Senator COOPER. I do not think so. I can remember several cases where permission was asked to strip, and it was denied as far as I know. At least permission has been denied where the siltage and debris could go down into the streams. I can't tell you right now whether permission was denied in all cases. I will find out for you.

Chairman HAYDEN. We thank you for your statement.

Senator COOPER. Thank you very much for your courtesy.

Chairman HAYDEN. There are a number of witnesses to be heard today, each with regard to some item in the appropriation bill of importance to him. Because of the number of witnesses, I hope that each can file his statement for the record, and highlight it orally.

The first to be heard is Mr. Philip A. Douglas, executive secretary, Sport Fishing Institute.

SPORT FISHING INSTITUTE

STATEMENT OF PHILIP A. DOUGLAS, EXECUTIVE SECRETARY

PREPARED STATEMENT

Mr. DOUGLAS. Good morning, Mr. Chairman. It is a pleasure to appear before you. I am a graduate of the University of Arizona, so I have a close spot in my heart for Arizona.

My name is Philip A. Douglas. I am executive secretary of the Sport Fishing Institute. In the interest of time, I will eliminate

some of the unnecessary points here that are in my written testimony which the clerk has.

Chairman HAYDEN. Your statement will be inserted in the record in full at this point.

(The statement referred to follows:)

Mr. Chairman and members of the committee, my name is Philip A. Douglas. I am executive secretary of the Sport Fishing Institute, located in Washington, D.C. Our purpose in life is a simple one. It is to improve sport fishing to the fullest extent possible through encouraging the rapid development and application of sound fish conservation practices; in short, "to help shorten the time between bites." We are a nonprofit organization, deriving our operation funds from a wide representation of manufacturers of various sorts of equipment used out fishing, industries, and concerned individuals.

The Sport Fishing Institute appreciates the opportunity to appear before your committee. At the outset, I should like to support the testimony of my colleagues in conservation here today, who are recommending additional funds to strengthen the several aspects of the Federal programs to which they have addressed themselves.

In the interest of time, I will confine my specific comment to the proposed budget items representing the fishery programs which are the responsibility of the Bureau of Sport Fisheries and Wildlife. Too, this is the area of special concern and professional competence that we represent in conservation matters.

1. *Reservoir sport fish research.*—You made possible an encouraging start this year by the initial appropriation of $195,000 for the reservoir research projects in South Dakota and Arkansas. May I remind you, gentlemen, that findings made in the Gavins Point and Beaver Reservoir studies won't necessarily be applicable to reservoirs in California or Massachusetts. As yet, no "common denominator" has been found in reservoir research that can be fed into an IBM machine to solve problems of all impounded waters. More money is needed to carry on the work already begun in other parts of the United States. The ORRRC report, recently handed to the President, predicts that increasing demand for recreational fishing will require an additional 10 million acres of reservoir water area to meet minimum needs by the year 2000. Along with the additional water, we need the basic facts by which to intelligently manage the sport fishery created. In other words, we cannot run before we learn to walk; at the present state of knowledge, we are still on our knees, so to speak. For next year we feel that at least $600,000 is needed in this program, rather than the $195,000 being requested again by the Department of the Interior. This new program needs to grow for the same reasons it required starting.

Last year all the States combined spent a total of $1,400,000 for fresh-water sport fishery reservoir studies. These funds included Dingell-Johnson funds received from the U.S. Fish and Wildlife Service and matched as required by the States, plus other fishery agency funds derived from sales of fishing licenses and other sources. It should be understood, however, that only about 10 percent of this money was directed toward basic research. Our analysis indicates that the bulk of the effort was on short-term management investigations (applied research). These include such things as creel censuses, evaluations of management methods, introductions of forage and sport fishes. They stand in sharp contrast to long-term basic research on such challenging problem areas as reservoir productivity, life histories of fishes, quantitative population estimates, etc.

We emphasize the great importance of the reservoir research program, since we now know that large reservoirs presently account for over 25 percent of all inland fishing activity ($700 million spent by reservoir anglers in 1960). An appropriation of $600,000 in fiscal year 1963 would equip and staff field research teams in the Arkansas, White and Red River Basin, Missouri River Valley, and in Western States. Reservoir construction is expected to double present surface area in 20 years. We regard the sum of $600,000 which we propose should be budgeted for this research work in fiscal year 1963 to be a "drop in the bucket" of the capital return from this fishery utilization by the American people. This can be appreciated more clearly than ever before as a consequence of the reliable estimates developed by ORRRC that show that these reservoirs must supply 38 percent of all inland fishing by 1975, and 50 percent by 2000. To meet these needs, doubling of present fish production in reservoirs will be required through management methods not yet devised. Obviously, they never can be devised unless the necessary research is undertaken. Therefore, we respectfully urge, Mr. Chairman, that your committee increase the sum for reservoir research to

the level of at least $600,000 in fiscal year 1963 to permit significant if modest progress to be made in this vital field.

2. *Salt water sport fish research.*—It appeared as though a fine beginning had been made in 1959, when an annual appropriation of $2,700,000 was authorized as a top limit for salt water sport fish research. The actual budget for fiscal year 1962, however, was but $158,000. A tangible beginning in a marine game fish research program was made this year on this same budget. The Sandy Hook, N.J., Marine Game Fish Laboratory was established and physical arrangements have been planned for a west coast counterpart facility at Tiburon, Calif., on San Francisco Bay. The salt water angler is becoming more proficient in locating and catching fish. His equipment, boats, electronic fish-finders, tackle, is continually being improved. A nationwide survey was conducted on saltwater angling in 1960, revealing a harvest of 630 million fish by 10 million people who spent over $600 million in the process, which portends the immediate needs of basic research programs in this field. It revealed a 7-percent average annual increase in fishing pressure on marine sport fishes since 1955—a rate of increase that is fourfold that of the population of our country.

For fiscal year 1963 at least $850,000 appears needed in our view to beef up the facilities, staff, and resulting research on the east coast, and to provide a corresponding and equally necessary program on the west coast. We regard the Department's current request for only $233,000 to continue the program as wholly unrealistic and hopelessly inadequate. There is a need to accelerate studies of estuarine nursery habitats, and to formalize plans (already outlined in preliminary form for a huge coordinated study of the Atlantic Shelf by all marine laboratories in 1964). Badly needed basic, long-term research, using an ecological approach, to provide the base for management of rapidly expanding marine sport fishing, must be soon forthcoming. This fishery will double in 15 years and comprise over one-third of all U.S. angling in 40 years. The ever-recurring threats of pollution, destruction of estuaries, siltation, and overharvest are already upon us. Therefore, we believe if a significant marine sport fishery research program is to be developed in implementation of the will of the Congress, expressed in Public Law 86-359 (73 Stat. 642-643), that providing $850,000 for 1963 fiscal year is absolutely essential. Otherwise, little progress seems possible and the will of the Congress and the interests of many millions of affected Americans would appear to be thwarted. As we see it, the $850,000 that we propose to be budgeted for marine game fish research would be best utilized in the following manner:

Coastal environment studies	$300,000
Estuary and tidal area ecological studies	200,000
University graduate fellowships for life history studies	150,000
Pacific Coast Tiburon Laboratory	150,000
Saltwater aquarium system, Sandy Hook, N.J	50,000
Total	850,000

Although only $150,000 is tagged as a Pacific coast item, it should be understood that part of most of the other items would be spent out of the Pacific station. We look in this regard for an appropriate balance of effort to be developed as between the two coasts in the overall program.

Mr. Chairman, permit me to state that we appreciate and express our thanks to you for the opportunity of appearing before your committee to express our views.

Reservoir Sport Fish Research

Mr. Douglas. I will deal principally with two items in the Interior Appropriations bill, and the first is the reservoir sport fish research.

You made possible an encouraging start this year by the initial appropriation of $195,000 for the reservoir research projects in South Dakota and Arkansas. May I remind you, gentlemen, that findings made in the Gavins Point and Beaver Reservoir studies won't necessarily be applicable to reservoirs in California or Massachusetts. As yet, no common denominator has been found in reservoir research that can be fed into an IBM machine to solve problems of all impounded waters.

More money is needed to carry on the work already begun in other parts of the United States. The ORRRC report, recently handed to

the President, predicts that increasing demand for recreational fishing will require an additional 10 million acres of reservoir water area to meet minimum needs by the year 2000. Along with the additional water, we need the basic facts by which to intelligently manage the sport fishery created. In other words, we cannot run before we learn to walk; at the present state of knowledge, we are still on our knees, so to speak. For next year we feel that at least $600,000 is needed in this program, rather than the $195,000 being requested again by the Department of the Interior. This new program needs to grow for the same reasons it required starting.

Last year all the States combined spent a total of $1.4 million for freshwater sport fishery reservoir studies. These funds included Dingell-Johnson funds received from the U.S. Fish and Wildlife Service and matched as required by the States, plus other fishery agency funds derived from sales of fishing licenses and other sources. It should be understood, however, that only about 10 percent of this money was directed toward basic research.

Our analysis indicates that the bulk of the effort was on short-term management investigations—applied research. These include such things as creel censuses, evaluations of management methods, introductions of forage and sport fishes. They stand in sharp contrast to long-term basic research on such challenging problem areas as reservoir productivity, life histories of fishes, quantitative population estimates, etc.

FUNDS REQUIRED

We emphasize the great importance of the reservoir research program, since we now know that large reservoirs presently account for over 25 percent of all inland fishing activity—$700 million spent by reservoir anglers in 1960. An appropriation of $600,000 in fiscal year 1963 would equip and staff field research teams in the Arkansas, White, and Red River Basin, Missouri River Valley, and in Western States.

Reservoir construction is expected to double present surface area in 20 years. We regard the sum of $600,000 which we propose should be budgeted for this research work in fiscal year 1963 to be a drop in the bucket of the capital return from this fishery utilization by the American people. This can be appreciated more clearly than ever before as a consequence of the reliable estimates developed by ORRRC that show that these reservoirs must supply 38 percent of all inland fishing by 1975, and 50 percent by 2000.

To meet these needs, doubling of present fish production in reservoirs will be required through management methods not yet devised. Obviously, they never can be devised unless the necessary research is undertaken. Therefore, we respectfully urge, Mr. Chairman, that your committee increase the sum for reservoir research to the level of at least $600,000 in fiscal year 1963 to permit significant if modest progress to be made in this vital field.

SALT WATER SPORT FISH RESEARCH

It appeared as though a fine beginning had been made in 1959, when an annual appropriation of $2.7 million was authorized as a top limit for salt water sport fish research. The actual budget for fiscal year 1962, however, was but $158,000. A tangible beginning in a

marine game fish research program was made this year on this same budget. The Sandy Hook, N.J., Marine Game Fish Laboratory was established and physical arrangements have been planned for a west coast counterpart facility at Tiburon, Calif., on San Francisco Bay. The salt water angler is becoming more proficient in locating and catching fish. His equipment, boats, electronic fish finders, tackle, is continually being improved.

A nationwide survey was conducted on salt water angling in 1960, revealing a harvest of 630 million fish by 10 million people who spent over $600 million in the process, which portends the immediate needs of basic research programs in this field. It revealed a 7 percent average annual increase in fishing pressure on marine sport fishes since 1955—a rate of increase that is fourfold that of the population of our country.

For fiscal year 1963 at least $850,000 appears needed in our view, to beef up the facilities, staff, and resulting research on the east coast, and to provide a corresponding and equally necessary program on the west coast. We regard the Department's current request for only $233,000 to continue the program as wholly unrealistic and hopelessly inadequate. There is a need to accelerate studies of estuarine nursery habitats, and to formalize plans already outlined in preliminary form for a huge coordinated study of the Atlantic Shelf by all marine laboratories in 1963.

Badly needed basic, long-term research, using an ecological approach, to provide the base for management of rapidly expanding marine sport fishing, must be soon forthcoming. This fishery will double in 15 years and comprise over one-third of all U.S. angling in 40 years. The ever-recurring threats of pollution, destruction of estuaries, siltation, and overharvest are already upon us. Therefore, we believe if a significant marine sport fishery research program is to be developed in implementation of the will of the Congress, expressed in Public Law 86–359 (73 Stat. 642–643), that providing $850,000 for 1963 fiscal year is absolutely essential. Otherwise, little progress seems possible and the will of the Congress and the interests of many millions of affected Americans would appear to be thwarted. As we see it, the $850,000 that we propose to be budgeted for marine game fish research, would be best utilized in the following manner:

Coastal environmental studies	$300,000
Estuary and tidal area ecological studies	200,000
University graduate fellowships for life history studies	150,000
Pacific coast Tiburon Laboratory	150,000
Saltwater aquarium system, Sandy Hook, N.J	50,000
Total	850,000

Although only $150,000 is tagged as a Pacific coast item, it should be understood that part of most of the other items would be spent out of the Pacific station. We look in this regard for an appropriate balance of effort to be developed as between the two coasts in the overall program.

Mr. Chairman, permit me to state that we appreciate and express our thanks to you for the opportunity of appearing before your committee to express our views.

80391—62——60

Chairman HAYDEN. Let me ask what income the Federal Government receives from any excise tax on sports fisheries equipment, such as boats and things of that kind.

Mr. DOUGLAS. The excise tax I am not certain of, but I know somebody here is, if I may call on him to back me up, please.

Chairman HAYDEN. I would just like to get the facts.

OUTDOOR WRITERS ASSOCIATION OF AMERICA

STATEMENT OF RICHARD WOLFF, DIRECTOR

EXCISE TAX ON SPORTS FISHERIES EQUIPMENT

Mr. WOLFF. Mr. Chairman, my name is Richard Wolff, Outdoor Writers Association of America.

I don't know the exact facts, and I would be reluctant to supply them.

Chairman HAYDEN. Maybe you can get them for the record.

Mr. DOUGLAS. Yes, sir, I can get them for the record.

(The information referred to follows:)

July 1, 1960–June 30, 1961—$6,253,432.22.

REVENUES FROM SALE OF LICENSES

Chairman HAYDEN. The Duck Stamp Act helps to pay the bill. There must be some excise tax on this kind of equipment, I would think.

Mr. DOUGLAS. I believe I can answer this. The combined State and Federal funds that are derived from the sale of licenses under the Dingle-Johnson program for fresh water fisheries is $1.4 million. The money that was expended for salt water fishery research work as of a year ago, under the Dingle-Johnson program was in the neighborhood of $435,000.

Chairman HAYDEN. We thank you for your statement.

Mr. DOUGLAS. Thank you, sir; you are very welcome.

PREPARED STATEMENTS

Chairman HAYDEN. Mr. William E. Welsh, secretary-manager, National Reclamation Association, and Mr. C. R. Gutermuth, vice president of the Wildlife Management Institute, who were scheduled to testify today, were unable to appear. I will place in the record the statements they were going to make.

(The statements referred to follow:)

STATEMENT BY WILLIAM E. WELSH, SECRETARY-MANAGER, NATIONAL RECLAMATION ASSOCIATION

My name is William E. Welsh. I am secretary-manager of the National Reclamation Association.

My purpose in appearing before your committee today is to support the appropriations for three Federal agencies—Forest Service, Geological Survey, and Bureau of Land Management.

FOREST SERVICE

The irrigation farmers of the West have perhaps a greater reason than any other group of individuals for being vitally interested in proper watershed protection and watershed management. The irrigation farmer must have an adequate water supply to irrigate his crops throughout the entire growing season. In fact,

his very existence depends upon that. That means that where irrigation is involved, a well-sustained streamflow runoff is of the utmost importance. Otherwise it is necessary to have storage reservoirs in order to store water from the spring runoff and hold it over for the summer months. And that, of course, is very expensive. That means that the watersheds of the West must be well protected and properly managed.

The higher mountainous areas of most of the watersheds of the West are under the direct supervision and control of the U.S. Forest Service, and we believe that the Forest Service has been doing a very satisfactory work in properly managing the watersheds. We especially endorse the multiple-use program which the Forest Service has adhered to over a period of years. We believe the multiple-use theory is proper and sound, and the correct manner in which to operate a watershed.

We strongly urge that adequate funds be made available to the Forest Service to permit it to keep up to date with its 10-year long-range program.

We also wish to support adequate appropriations to maintain the research program carried on by the intermountain range and forest experiment stations, and also the soil and water aspects of that program.

I am personally acquainted with the forest and intermountain range experiment station work that was carried on on the Boise River watershed. That program has been going now for about 33 years. To me it seems a very appropriate, logical manner in which to approach the many and various problems concerned with the proper operation and use of the watershed and its resources.

At the annual meeting of our association at Billings, Mont., last October, we were privileged to have Dr. Richard E. McArdle, Chief, Forest Service, as a speaker on our program. We were especially interested in his explanation of the difference between watershed protection and watershed management.

As explained by Dr. McArdle, "The primary objective of watershed protection is preservation of quality. The basic principle," he said, "is maintenance of a vegetative cover of trees, grass, and brush sufficient to hold soil in place, to control surface runoff, and to facilitate subsurface water storage." Watershed management, he said, involved maintenance of a vegetative cover, adequate for watershed protection. The members of our association were very much pleased with the presentation by Dr. McArdle at our Billings meetings, and we are happy indeed to endorse the program of the Forest Service with respect to the management of the watersheds and urge adequate appropriations for that program.

BUREAU OF LAND MANAGEMENT

There are approximately 177 million acres of public domain land that are under the jurisdiction of the Bureau of Land Management. This land is practically all in the Western States, and there are public lands in all of those States except Washington. The large percentage of the public domain lands are in a high altitude and an area where they contribute a great deal to the streamflows of the major river basins of the West. For that reason, the proper management and control of these areas is also vitally important to the water users or irrigation farmers of the West.

Prior to the enactment of the Taylor Grazing Act about a quarter of a century ago, these lands were practically uncontrolled. We believe that the Bureau of Land Management has done a very fine job in bringing the management and operation of these areas under control, and the lands of the public domain are in a much better condition as far as watershed protection and management are concerned than they were prior to the enactment of the Taylor Grazing Act.

For that reason, we strongly support the program of the Bureau of Land Management, and urge that adequate funds up to the amount recommended in the budget and sufficient to carry on a satisfactory program be made available to the Bureau of Land Management for its current operations.

GEOLOGICAL SURVEY

Streamflow measurements

The Geological Survey carries on a cooperative streamflow measurement program, which is in operation in practically every river basin throughout the West. The manner in which the various States or local organizations cooperate and contribute financially to the program indicates that it is very popular and that it serves a very useful purpose. Based on 24 years of experience as watermaster on the Boise River in Idaho, I know that this program is very popular among water user organizations, and that it is extremely important.

I know of no other Federal program where the local interests cooperate as wholeheartedly and as enthusiastically as they do with the Geological Survey in its streamflow measurement work. For that reason, the National Reclamation Association is very happy indeed to have the opportunity of supporting this program and urging that adequate funds be made available to carry on the work during the coming fiscal year.

Research

The objectives of the Geological Survey in its research program have been outlined as a study of the sources, amount, and quality of supplies, evaluation of the total national water resources, and research on hydrological principles and processes related to water.

This committee has no doubt been reminded many times of the emphasis and importance that was placed upon water research by the Senate Select Committee on National Water Resources in its report to the President and the Congress. We urge adequate appropriations for the Geological Survey to continue in the research work that it has been carrying on during the past several years.

STATEMENT OF C. R. GUTERMUTH, WILDLIFE MANAGEMENT INSTITUTE, WASHINGTON, D.C.

Mr. Chairman, I am C. R. Gutermuth, vice president of the Wildlife Management Institute. The program of this national conservation organization has been devoted to the improved management of natural resources in the public interest since 1911.

This statement is restricted to certain programs and activities of the Bureau of Sport Fisheries and Wildlife, the Bureau of Land Management, National Park Service, and Smithsonian Institution. The institute's interest is much broader, but we feel obliged to limit the scope and length of this statement. The National Wildlife Federation, Izaak Walton League of America, and Sport Fishing Institute are covering other matters of importance, and the institute endorses and supports the recommendations of those national conservation organizations.

BUREAU OF SPORT FISHERIES AND WILDLIFE

Conservationists are at a loss to understand why only $7 million is requested to carry out the initial phases of the 7-year, $105 million waterfowl wetlands acquisition program authorized last year. No supplemental funds are being requested and 9 months of the program authorization will have expired before any money is available. National waterfowl populations are at an alarmingly low point, Mr. Chairman. Habitat destruction contributes to this serious situation. Only fast action will save key areas from destruction.

We know that the Bureau can use more than the $7 million requested. The Nation's duck hunters—the people who have pledged to repay all of the money provided under this authorization—look to this committee to recommend $10 million or more for this activity in fiscal 1963.

The wildlife research item under "Management and investigations of resources" includes $56,000 for the mourning dove research program. That request, Mr. Chairman, falls far short of the amount actually needed to support the dove research and management program developed by the Bureau in cooperation with the State fish and game departments and the International Association of Game, Fish, and Conservation Commissioners in 1960. That program calls for Federal, State, and local cooperation. The Bureau of Sport Fisheries and Wildlife can put $252,000 to immediate and beneficial use, and the committee is urged to increase the wildlife research item by this amount so that the Federal Government can meet its responsibilities under the migratory bird treaties.

Conservationists believe an enlarged mourning dove research and management program is necessary, because more doves are taken by shooters than any other game bird. Virtually nothing is known about their basic biology, habits, and requirements. Information is needed upon which to base management recommendations that will assure perpetuation of the species. This information and the know-how can be obtained most efficiently through the cooperative program developed by the States and the Federal Government.

BUREAU OF LAND MANAGEMENT

We are pleased, Mr. Chairman, with the overall budget request for about an $8 million increase for the Bureau of Land Management. It is believed that these program increases are a direct reflection of this committee's interest. This committee in 1960 pointed to the "need to provide for more intensified management of our public lands and national forests. These lands represent a major national asset that produce over $500 million in Federal revenues annually."

BLM receipts for 1963 are estimated at $383 million, of which $59 million will be paid to the States and counties in which the public lands are located. The receipts continue to be several times the amount of annual appropriations. Few agencies of the Government can show such an enviable record.

It is hoped that the committee will give favorable consideration to all requests for such important activities as management of grazing lands, forestry, soil and moisture conservation, and fire suppression. These are the activities that assure perpetual public land benefits, the activities that renew and restore the resources from which these benefits accrue. Conservationists are sure that even more money could be used to initiate long-delayed restoration programs on many BLM lands. BLM is years behind in its scheduled program for soil and moisture conservation work. Less than one-fifth of the 151.9 million acres in grazing districts is in good-to-excellent condition. Range management experts say that 76 percent of the rangeland is in static, indefinite, or declining condition.

Actually, we are convinced that the budget request for BLM is not sufficient to meet the current recreational demands on the national land reserve. A pitiful request for $200,000 for this purpose was disallowed last year. Much to our disappointment, the Budget Bureau ruled out a larger departmental request for funds for this purpose this year. Every Member of Congress should know that not one single cent is allocated for the purpose of accommodating outdoor recreation on the millions of acres of land administered by the BLM. This covers picnic tables, fireplaces, water, sanitary facilities and service, and public access—in short, the whole range of facilities and services that the public needs and expects on the public lands.

Recreational use of BLM lands, and those administered by other agencies, is mounting at a fantastic rate. The public wants agency activities to keep abreast of new trends and developments. The recent report of the Outdoor Recreation Resources Review Commission shows that vigorous National, State, and local action is needed in order to meet existing demands for outdoor recreation and to prepare for those that are expected to come in the future. The national land reserve can make a significant contribution to meeting the Federal Government's responsibilities in this regard, Mr. Chairman. It is hoped that the committee will reject the Budget Bureau's recommendation and will provide sufficient funds for this long-neglected phase of the BLM program.

NATIONAL PARK SERVICE

Turning to the National Park Service, Mr. Chairman, the institute urges this committee to approve the $2 million asked for the construction of a connecting road in Rock Creek Park, here in the Nation's Capital, which will eliminate two fords and divert the north and southbound traffic which now passes directly through the National Zoological Park. This construction, we believe, is advisable from two standpoints: First, it will provide a usable 24-hour-a-day road, 365 days a year, in contrast to the present situation where the road is closed every night and the fords frequently become impassible because of high water in Rock Creek. Secondly, diverting a large volume of commuter traffic from the National Zoo will assist materially in creating the proper atmosphere at the zoo, alleviate a serious traffic hazard, reduce the noise, dust, and confusion which currently hampers proper administration of the area. It is surprising that more visiting children have not been injured by automobiles.

SMITHSONIAN INSTITUTION

The committee also is urged to recommend the $950,000 that is requested for planning and construction at the National Zoological Park under the administration of the Smithsonian Institution. These funds are needed to launch the 10-year program of capital improvements that was started by the District of Columbia government in 1962. The construction phases include the provision of an access road, reconstruction of the bird flight cage, and improvements to the existing bird exhibition building. This and other work is sorely needed at the

National Zoological Park. The lack of adequate facilities, and the general deterioration of the buildings, exhibition pens, and grounds is an absolute disgrace, Mr. Chairman. The Zoological Park is visited by people from all parts of the world each year, and the committee is urged to approve the funds that are requested so that this urgently needed restoration program can get going without further delay. Thanks for your patience and courtesy.

Chairman HAYDEN. Concerning a request of the Geological Survey for funds to purchase a replacement aircraft for geophysical survey work, our witnesses will be Mr. Thomas O'Malley, vice president of the Aero Service Corp., Gen. E. M. Day, division general manager, Fairchild Aerial Surveys, Inc., and Mr. John H. Wickham, executive director, Association of Professional Photogrammetrists.

Mr. O'Malley, the committee will be pleased to hear you.

AERO SERVICE CORP. OF PHILADELPHIA, INC.

STATEMENT OF THOMAS O'MALLEY, VICE PRESIDENT IN CHARGE OF OPERATIONS

AIRCRAFT FOR GEOLOGICAL SURVEY WORK

Mr. O'MALLEY. Thank you, Mr. Chairman. We appreciate the opportunity and the privilege of presenting our point of view to this committee. Since we have filed a statement and since the room is very crowded, and I presume time is short, I will do my best to be brief.

Chairman HAYDEN. Thank you, sir. Your statement will be inserted in full in the record at this point.

(The statement referred to follows:)

Mr. Chairman, my name is Thomas O'Malley, vice president in charge of operations for Aero Service Corp. of Philadelphia, a wholly owned subsidiary of Litton Industries of Beverly Hills, Calif. I have been employed in the private aerial survey business for 20 years. I thank this committee for the opportunity and privilege of testifying on the U.S. Geological Survey budget item, "Purchase of a Replacement Aircraft."

The U.S. Geological Survey wants to spend $150,000 to buy a replacement aircraft, probably a Convair. They want this aircraft to continue to perform airborne geophysical surveys for biology, mineral and petroleum exploration, and to update their airborne geophysical and navigational techniques. We do not believe this committee should grant this U.S. Geological Survey budget request. Further, we respectfully suggest that all airborne geophysical surveys for the U.S. Geological Survey should be performed by private aerial survey contractors. Our reasons are these:

(1) The U.S. Geological Survey now performs airborne geophysical surveys, paid for by Federal and matching State funds, or solely with Federal funds. This removes a legitimate market from the private aerial survey contractor and constitutes unfair Government competition with private industry.

(2) The acquisition of a replacement U.S. Geological Survey aircraft will be uneconomical for the taxpayer because the existing commercial airborne geophysical survey capacity can easily perform surveys anticipated by the U.S. Geological Survey.

(3) We believe the U.S. Geological Survey has a proper and constructive role in research for airborne geophysical survey techniques. However, aerial survey qight testing for these research programs can and should be carried out by commercial aerial survey contractors.

(4) The vitality of the commercial aerial survey industry of the United States depends on profit. Without profit there can be no research. Without research there is no technical improvement in geophysical and navigational instrumentation to achieve new and better ways to find mineral deposits and develop our Nation's resources. With few exceptions, these technical advances have been made by the commercial aerial survey industry, but they cannot continue in the face of Federal competition for survey business.

(5) Let us look beyond our own borders. We find that the existence of this commercial aerial survey capability is essential. Why? Because the rapid natural resources inventories, so necessary for intelligent planning of our foreign aid program, depend on modern aerial survey techniques. This capability which the commercial aerial survey industry provides for our own interests in the foreign aid program needs a full, free market at home to maintain employment and earn legitimate profits. This it cannot have in competition with the U.S. Geological Survey.

(6) Parallel situations are found in England and Canada. Both countries have embarked on large-scale inventory of their natural resources through airborne geophysical services. Both countries have abandoned the use of a Federal airborne geophysical capability in favor of performing these programs with private aerial survey contractors. Experience shows that the cost to the taxpayer is lower. Moreover, these countries realize the necessity of maintaining and exporting this capability for aerial resources inventory to the developing nations. As a policy, you cannot deprive industry of a substantial portion of the domestic market by Federal competition, and then look to the specialized, technical industry to prosper and grow at home and abroad.

In summary, the air survey industry has the capacity, the capability, and the private enterprise incentive to perform the U.S. Geological Survey's airborne geophysical survey program. We can supply aircraft, and flight crews and technical personnel for airborne research activities. We can perform, or provide full-time or consultant personnel for research in electronic navigational aids for airborne geophysical surveys and for research studies of the automation of the survey data compilation. In brief, we offer modern aircraft, and operational and technical personnel with a great depth of experience.

It is our view, and the view of our industry, that if there is continued competition from the U.S. Geological Survey, this free enterprise capability will be impaired. More taxpayers' money will be needed to support a Federal airborne geophysical survey capability to find and develop resources here and abroad, if the existing commercial capability cannot survive.

General Statement

Mr. O'Malley. The Geological Survey has requested an item of approximately $150,000 to acquire an aircraft which will serve as an airborne geophysical platform. This aircraft is to replace an existing aircraft that has in the past performed these surveys. We contend that acquiring this aircraft is an unnecessary expenditure in itself and that other expenditures are required in order to equip it with new equipment that is in the form of airborne magnetometers and other airborne sensing devices, and that the cost to operate this aircraft will be far in excess of the cost to operate the existing equipment.

Since the private airborne geophysical contractors in the United States have more than adequate capacity to perform this work, the expenditure, again, I say, is unnecessary. Further, the continuance of this capability in the geological survey when private capacity is available forms a type of government competition with private enterprise.

This argument is developed in the statement that we have made here, and I think for the sake of brevity and in the interest of your time, I will stop at this point.

Chairman Hayden. We are very glad indeed to have your statement because there is a real question here whether or not the work to be done by the Geological Survey is competitive and whether or not the work they seek to do could be done by private enterprise.

Mr. O'Malley. I am trying to make the statement that it can with the existing unused commercial capacity.

Chairman Hayden. That is the issue.

Mr. O'Malley. Yes, sir.

Chairman HAYDEN. We thank you for your statement.
Mr. O'MALLEY. Thank you, sir.

FAIRCHILD AERIAL SURVEYS, INC.

STATEMENT OF BRIG. GEN. E. M. DAY, DIVISION GENERAL MANAGER

GENERAL STATEMENT

Chairman HAYDEN. Gen. E. M. Day, division general manager, Fairchild Aerial Surveys, Inc.

General DAY. Mr. Chairman, Senators, thank you for the opportunity to be here. I appreciate it very much.

My statement is very brief, so I will just read it as it is along the same lines.

My name is Edwin M. Day, brigadier general, USAF, retired, general manager of the aerial surveys division of Fairchild Camera & Instrument Corp.

Fairchild has been in the aerial surveying business for over 38 years and in the airborne geophysical survey business for over 15 years. We currently own and operate 10 specially equipped survey aircraft, 9 of which are modified to perform all types of airborne geophysical surveying.

May I first express our appreciation for the opportunity of presenting our views on the U.S. Geological Survey budget item "Purchase of a replacement aircraft."

We are strongly opposed to this aircraft purchase as not being in the best interests of either Federal Government or private enterprise. It is contrary to the basic administration policy that governmental agencies not be permitted to engage in direct competition with commercial enterprise.

The established policy of the U.S. Geological Survey in the past few years has been to solicit work from various State agencies, performing not research and development projects, but production-type airborne magnetic surveys in precisely the same manner as performed by commercial enterprise. Funds paid by the States to the USGS for such surveys constitute an artificial increase in the Geological Survey appropriation.

Extensive surveys of this type have been carried on in Indiana and Pennsylvania, and are about to begin in the State of Iowa. These surveys, which commercial firms are perfectly capable of performing, are costing the taxpayer almost twice as much as would be the cost had they been performed commercially. Such surveys are priced at from $10 to $12 per lineal mile with one-half of the funds coming from the State and one-half from USGS funds. We and our competitors could perform such surveys for from $6 to $8 per lineal mile.

The airborne magnetometer, developed by Gulf Research & Development Corp. and operated under license in the United States by Aero Service Corp. and Fairchild Aerial Surveys, was adapted during the war for antisub detection work by the Armed Forces. It was from this beginning that the U.S. Geological Survey became engaged in airborne magnetic surveys. This carryover from warborne activity should, in our opinion, have ceased long ago.

We consider that the U.S. Geological Survey performs a very necessary service and heartily endorse their activity in research and development programs. We do not feel it should be their function to compete with commercial enterprise in the performance of commercial-type airborne magnetometer surveys such as they have in the past. Purchase of a replacement aircraft would simply continue this ill-advised and uneconomic program constituting unfair competition with private enterprise.

We note with amazement the size of the appropriation requested—$150,000. Commercial operators like ourselves consider that an aircraft costing $25,000, more or less, would be adequate for this type of work.

It has been clearly demonstrated many times that commercially contracted services are far more economical and efficient than having these services performed by a Federal bureau. I can speak from personal experience on this subject, having been on the Government side for over 30 years.

In summary, it is our contention that approval of this aircraft purchase will permit continuation of the invasion of a Federal agency into an activity which properly belongs to commercial enterprise. We have the capacity and the capability to carry out the airborne geophysical survey program contemplated by the U.S. Geological Survey efficiently and economically. We possess the technical skill and know-how, a wide range of versatile aircraft, backed up by many years of experience. We therefore urge that this budget item be disapproved and strongly recommend that the aircraft now in use be taken out of operation in order that future airborne geophysical programs may be performed by private enterprise.

That is my statement, Mr. Chairman. Thank you very much.

Chairman HAYDEN. Has the information given us been supplied to the House Committee on Appropriations?

General DAY. No, sir, it was not. This is the first we had wind of the appropriation for this specific purpose at the time it came up in the Senate. I think it has already passed the House or gone through the House committee as far as I know. I am not sure of that, sir. I might just add, if I may take one more moment, that we do a great deal of work overseas in the development of underdeveloped countries—Morocco, Liberia, and the rest of these places where we are interested in aid and development programs.

This is not sufficient to keep our capability going on at least a break-even or profitable basis. If the domestic market is taken away from us it is a serious blow to us.

Chairman HAYDEN. Mr. Wickham.

ASSOCIATION OF PROFESSIONAL PHOTOGRAMMETRISTS

STATEMENT OF JOHN H. WICKHAM, EXECUTIVE DIRECTOR

GENERAL STATEMENT

Mr. WICKHAM. Mr. Chairman, I thank you and the committee for the opportunity and privilege of testifying on the USGS budget item for the purchase of replacement aircraft. I am John H. Wickham. I am executive director of the Association of Professional Photogrammetrists. I have been engaged in the activities of the aero sur-

veying and mapping for 24 years with State and Federal Government agencies with two tours of active duty in the military in this same activity and with commercial firms.

The association statement is a repeat of what our fellow associates, Mr. O'Malley and General Day, have reported. The association subscribes to their statement not as a brainwash procedure, but from an experience history which clearly relates that the free enterprise capability of our industry is constantly in jeopardy by the continued encroachment in the Government agencies in the service area of surveying and mapping.

The USGS activity is just another example. Thank you, sir.

Chairman HAYDEN. What other agencies of the Government are competing with you?

Mr. WICKHAM. It is primarily the Geological Survey and the Army Mapping Service, in the surveying and mapping activity not in the geophysical survey activity. The aerial surveying firms provide a variety of services in acquiring data from an airborne platform other than magnetic surveys.

Chairman HAYDEN. We thank you.

Mr. WICKHAM. Thank you, sir.

Chairman HAYDEN. Next we will consider the National Marine Laboratory research program, Mr. Richard C. Wolff, Outdoor Writers Association of America.

NATIONAL MARINE LABORATORY RESEARCH PROGRAM

STATEMENT OF RICHARD C. WOLFF, A DIRECTOR OF THE OUTDOOR WRITERS ASSOCIATION OF AMERICA AND VICE PRESIDENT OF THE GARCIA CORP.—Resumed

GENERAL STATEMENT

Mr. WOLFF. Good morning, Mr. Chairman. My name is Richard C. Wolff. I am a director of the Outdoor Writers Association of America and vice president of the Garcia Corp., a major manufacturer of sports equipment. Let me make clear at the outset, that salt-water fishing plays a minor part in the firm's business.

Chairman HAYDEN. Senator Williams of New Jersey was out of town today. He expected to be here to introduce you, and regrets that he could not be here.

Mr. WOLFF. I knew that he was out of town. I realize that he is a busy man. I think this is important to both of us. I want to bring forth basically the same facts that were brought forth by the Sport Fishing Institute. They testified quite admirably on the same subject a few minutes ago. I have submitted a written statement which presents my message much better than I can do so, and accompanying the statement there are a series of maps or drawings in the back which might be helpful in looking at this entire picture.

In the interest of speed, I will avoid reading this whole thing since it is on the record and available.

(The statement referred to follows:)

Mr. Chairman, members of the committee, my name is Richard C. Wolff. I am a director of the Outdoor Writers Association of America and vice president of the Garcia Corp., a major manufacturer of sports equipment. Let me make clear at the outset that salt-water fishing plays a minor part in the firm's business.

As a member of the Outdoor Writers Association, I would like to present testimony on the Interior Department's Marine Laboratory research program. I am speaking with the full endorsement of the chairman and vice chairman of the association. We consider this program so important to the interests of the Nation's 30 million recreational fishermen that we intend to make it a major subject for discussion by the 1,200 members of the Outdoor Writers Association at our forthcoming national meeting in Florida, early this summer.

They will be asked to support a resolution urging that Congress provide adequate financial support for this project.

An effective marine research program is essential to the conservation and study of our Nation's recreational and commercial fishing resources. It must have sufficient funds to operate nationally in the interest of 25 million sport fishermen who today spend upward of $3 billion annually on their sport.

We wholeheartedly support the objectives of the Marine Laboratory research program, which are—

(1) To improve and expand salt-water sport-fishing facilities in the United States.

(2) To study marine biology, breeding habits, growth rates, and spawning grounds of popular offshore species.

(3) To observe the causes and effects of pollution on sport and food fish, and suggest immediate local controls.

(4) To study and recommend the development and location of new fishing grounds, the restoration of now barren areas, and the preservation of natural protective marshland.

We urge that the present $150,000 allocated to this program be increased, at the very least, to a minimum of $500,000. This still is far short of the maximum $2.7 million that could be appropriated in 1 year. The present ceiling of $150,000 thwarts the intent of Congress and the purpose for which the program was established.

The increase is mandatory to the successful operation of the present Marine Laboratory research facility at Sandy Hook, N.J. It is needed to:

(1) Restore existing underwater cable tanks readily adaptable as fish tanks for the observation and study of marine species	$150,000
(2) Continue statistical and fact gathering studies on a national scale	100,000
(3) Organize extensive biological studies of marine species to determine their identity, growth rates, mortality rates, and biological variation in survival	100,000
(4) Pursue ecological studies of the environmental influences, both natural and artificial, of temperature, pollution, and other water conditions on marine species and their breeding habits	125,000
(5) Develop plans for boats to serve as off-shore laboratories for coastal study	25,000

Additionally, we call to the committee's attention the need for the establishment of a west coast facility at Tiburon, Calif., to carry out these programs on a continuous national scale. This can be established at a minimum additional cost of $100,000.

Three-quarters of our population is located in urban areas. The attached exhibits show that many of these same areas are prime breeding grounds of our most popular sport fish. Fishing pressure is heaviest in these areas and, so, too, is pollution and encroachment on the marshlands that provide protection for young fish.

The pace of this program will directly affect the growth of salt water sport fishing in the United States. Currently, it is expanding by 7 percent annually, and will hit 10 million by 1970, 15 million by 1980, provided facilities are available.

But, today, many of our most popular species are observably diminishing in number. Weakfish, mackerel, croaker, and groupers are disappearing from the Atlantic coast. There are fewer bluefish, sheepshead, king mackerel, and drum in the gulf. Yellowtail, surf perch, ling cod, and barracuda are found in diminishing numbers off our Pacific coast.

This program cannot begin to find ways to save these popular species or to increase their numbers with funds barely adequate to support a small scientific staff.

In 1959 and again in 1960, less than 6 percent of the amount authorized by law, was appropriated. The sum was sufficient to establish one laboratory at Sandy Hook, N.J., and to recruit the nucleus of a scientific staff. By nucleus, I refer to the director of the present facility, Dr. L. Walford, his assistant director, John Clark, and 16 additional staff including clerical and maintenance personnel.

Given adequate funds today, the Marine Laboratory program can produce useful recommendations on pollution control in 1 year. But the groundwork for marine fish conservation cannot be productive overnight. The impact of this program will not be fully effective for 2 or possibly 3 years. We cannot afford to put off this basic research program. It is requisite to good conservation practices.

We believe with the demonstration of a vigorous program by Congress that private industry will respond positively. Private interests can be counted on to—

(1) Develop a national information program reporting the work and findings of the program to fishermen, and the cooperative findings of fishermen to the laboratory.

(2) Develop a national fish tagging program to facilitate the work of the laboratory's research. This will involve the use of films, booklets, and other training aids to interest and equip salt water sport fishermen to assist in the national research program.

(3) Cooperate with Federal and State authorities in protecting our salt water marine species from wanton destruction and poisonous pollution and other detrimental factors of population and industrial expansion.

Adequately financed, the Marine Laboratory research program will bring sizable future income to the 20 coastal States which make up the contiguous 11,500 mile coastline of the United States including Alabama, California, Connecticut, Delaware, Florida, Georgia, Louisiana, Maine, Maryland, Massachusetts, Mississippi, New Hampshire, New Jersey, New York, North Carolina, Oregon, Rhode Island, South Carolina, Texas, Virginia, and Washington.

It will also insure equitable distribution of our growing angling population between fresh and salt water resources. Our fresh water resources are strained to the breaking point today.

Our off-shore waters provide a livelihood for 129,000 commercial fishermen whose interests may differ but who are equally affected by the continued abundance of popular salt water species. The declining number of commercial fishermen can be attributed to the decline of food fish in commercial numbers off our coasts.

These aims are fully in the spirit of the program enacted by the 86th Congress in Public Law 86-359, September 22, 1959, which provided for, and I quote:

"* * * a comprehensive and continuing study of the migratory marine fish of interest to recreational fishermen of the United States, including species inhabiting the off-shore waters of the United States and species wihch migrate through or spend part of their lives in the in-shore waters of the United States. The study shall include, but not be limited to, research on migrations, identity of stocks, growth rates, mortality rates, variations in survival, environmental influences, both natural and artificial, and effects of fishing on the species, for the purpose of developing wise conservation policies and conservation management activities."

The Congress can demonstrate its recognition of the recreational needs of the Nation's 6 million salt-water sportsmen, and ensure the future of our marine resources for our growing population, by increasing the appropriation to $500,000 for the Marine Laboratory research program.

In conclusion, we respectfully urge that you take action to increase the appropriation for the biological and ecological research of our marine sport fish to ensure their continued abundance.

Mr. Chairman, I appreciate the opportunity of appearing before your committee. Thank you.

Marine Research Program

Mr. Wickham. I do want to present the fact that an effective marine research program is essential to the study of our resources. While this program is designated as a study group for sport fishing, and this is a very important thing for a nation, there is a definite interest in it for the commercial fishermen since there has been in recent years a decline in the number of commercial fishermen. They have quit the business simply because there are not fish available. Gradually, there has been a decline in the commercial fishing.

Since the improvement of sport fishing conditions, which includes a study of habitat, reproductive areas, pollution, all of those things involved in the life cycle and growth of fish, since this will, we hope, ultimately produce more fish, not only will it be beneficial to the sport fishermen but it will also have value to the commercial fishermen. This is a twofold purpose.

Laboratory on Sandy Hook

However, in order to do this it requires a considerable sum of money. The Congress permitted an appropriation of $2.7 million maximum and the appropriation so far has been 6 percent of that, which so far has provided for the establishment of a laboratory on Sandy Hook. They have 18 people there. Two of them are doctors in the field and they have the maintenance, and so forth. At the laboratory they have available huge, gigantic tanks. The pictures of the tanks are on the first map. The pictures are rather crude. They are just offhand snapshots that I took.

The tanks are fundamentally sound. The buildings and structures are rather dilapidated. Yet, these tanks, since they are available, would be an excellent way to adapt the tanks for the research so that different species could be studied in this tank area and, of course, these tanks are available.

An interesting note, sir, is that this morning I checked to see if the tanks were still there after the storm. However, everything was fine at Sandy Hook. The storm was severe but it didn't hurt the structures.

Increased Budget for Salt Water Fishermen

There is definitely a need for an increased budget for the salt water fishermen. About 7 percent more people are going to salt water every year to enjoy this outdoor sport. Nobody can put a price on the value of a healthy, bright-eyed youngster who has been out fishing. I think this is a very important point to consider when we talk about an increased budget. We cannot put a value on what the future of our children is going to be. This, while it is an intangible object, is a fact that here is a recreational area. We have it. It can be preserved; yet it requires study. Many of the questions we tried to ask in getting information for this hearing, the questions are almost unanswerable. When we say what is out beyond the 5-mile limit, nobody knows. All of these studies are very important not only for the food value of the fish, but the recreational value. These questions, I think, need to be answered.

In this printed form I have gone into detail on how I suggested a minimum of a $500,000 budget for the coming year which would be

used for studying, for improving those tanks so that they could be used for studying the fish and research in all the basic fields. It is all outlined here.

RESEARCH IN WEST COAST AREA

Also, in addition to the $500,000, there is need for something in the California, west coast area. Right now there is one stranger out there, one fellow working, and he has practically no facilities at all.

In my statement I suggested an arbitrary $100,000 to start something in California similar to that which has started in Sandy Hook.

Nothing in the statement discusses the gulf coast and yet, this is a mecca for fishermen, because we have to crawl before we walk. The gulf coast is still an area that is important but not explored yet.

Chairman HAYDEN. The conditions are different in the North Atlantic, Pacific, and gulf.

Mr. WOLFF. The conditions are basically different and this is controlled by water temperature. In the gulf coast we have much warmer temperatures and the conditions there are a great deal, to my knowledge, determined on the amount of shrimp which are available. Here is another case where the study of shrimp would definitely affect the commercial fisherman.

EVIDENCE OF DECLINE IN SPORT FISHING

We have evidence of a decline in sport fishing. In this one map here there is an indication, with blue markings, of the mackerel, weakfish, croaker, grouper, sheepshead, king mackerel, and black drum and the yellow tail and barracuda and surf perch, all of these fish are declining in numbers. Nobody knows why. The purpose of the study is to find out why and possibly rectify these things.

POLLUTION DUE TO CONCENTRATION OF POPULATION

We have another map that shows the concentration of population. We all know where the population is concentrated. Yet, with this concentration of population exactly overlaying that same area is a concentration of pollution.

We have another map here that is not too good. The dark, heavy lines indicate the spawning areas. These are the shallow areas where fish propogate. Yet, in many areas, for instance, New York and in the Delaware and Chesapeake Bay area, we have a concentration of people, the trend toward suburban living is moving out into the marsh lands. The pollution is going with them.

There is a heavy concentration of pollution. Yet, this is taking place right where the fish are supposed to spawn. This is a very dangerous and awkward position. In order to study these things and make reservations and to know precisely what we can talk about, I think there is a need for an increased budget for this marine laboratory.

Chairman HAYDEN. Was this matter brought to the attention of the House Appropriations Committee?

Mr. WOLFF. It was brought to the attention of the House, yes, sir.

I think that will be my statement, sir. I thank you very much for your time.

Chairman HAYDEN. Thank you.

Chairman HAYDEN. Mr. William R. Neblett, executive director of the National Shrimp Congress, Inc.

We are glad to hear from you, sir.

THE NATIONAL SHRIMP CONGRESS, INC.

STATEMENT OF WILLIAM R. NEBLETT, EXECUTIVE DIRECTOR

GENERAL STATEMENT

Mr. NEBLETT. Thank you, Mr. Chairman. I am caught a little short on data and files, being here in Washington from quite a distance and only learning of the opportunity to appear before the committee yesterday afternoon. However, I think I have a sufficient amount of data available to tell this story, sir.

I am William R. Neblett of the National Shrimp Congress. My residence is Key West. This is a trade association composed of a number of other associations, including Texas, Louisiana, and represents the gulf and South Atlantic commercial fisheries. There is a compact agreement which the Congress authorized for the Gulf States Marine Fisheries Association, and that is a body that cooperates with the Federal Government in fishery research and matters pertaining to fisheries. That body has for a number of years met cooperatively with the Federal scientists, and there is no disagreement between Federal and State scientists on the type of biological research that should be done in the gulf area and the South Atlantic area. They have evolved a program in which all agree. They have figures that they consider very basic.

The shrimp industry, as the committee may know, has been through considerable vicissitudes through the past years.

Chairman HAYDEN. The committee has been made aware of that.

Mr. NEBLETT. Therefore, the cutting back of the research at this time or the research at this time is a compounded situation for the gulf area. Incidentally, the gulf area is the richest area in the country as far as fisheries are concerned. I have some literature that I am going to simply turn in for the record in the gulf area, which shows that down there everything has doubled in the first 20 years and doubled again and produces 24 percent of all the fisheries in the country.

I know the time is short and I am going to turn this in.

Chairman HAYDEN. It may be inserted in the record.

(The information referred to follows:)

TEXAS SHRIMP ASSOCIATION, BROWNSVILLE, TEX., JANUARY 12–13, 1962

THE GULF OF MEXICO FISHERIES

(By Seton H. Thompson)

The Gulf of Mexico has assumed a major position in the U.S. fisheries only in very recent years. The gulf catch 20 years ago was one-quarter billion pounds or 6 percent of the domestic catch. By 1950 this had increased to one-half billion pounds or 12 percent of the total. By 1960 the catch had doubled again and now stands at 1¼-billion pounds or 26 percent of the U.S. total. The catch has doubled in each of the last two decades. While this fantastic development was taking place, the yield in other parts of the United States was either static or declining.

Shrimp and menhaden have been largely responsible for this rapid growth. Even so, these resources are not yet fully utilized, and our research and explora-

tion give us reason to believe that there are other fishery resources in these waters as rich or richer than shrimp and menhaden. So far they are used little or not at all.

The present menhaden fishery is supported by the young, immature age classes; mature fish are not taken. When the large adults are located and harvested, the yield of this fishery can be increased substantially.

In the last 5 years the yield of the shrimp fishery has been fairly stable at between 130 and 140 million pounds. That, of course, does not hold for the very poor year of 1961. This fishery is prosecuted primarily in waters of 30 fathoms or less. Species of shrimp not now used are present in commercial quantities in the greater depths. Probably the shrimp catch along our gulf shores can be increased by as much as 25 percent through expansion of operations to deeper waters and new species.

Of the other developed fisheries of the gulf, probably the greatest potential is to be found in the bottom fish now being harvested in a limited area off the Mississippi Delta, primarily for pet food. This is a new fishery, yet nearly 100 million pounds are now being taken annually. Operations are limited to 4,000 square miles of the gulf, in depths less than 20 fathoms; 170 species, representing 71 families, support this fishery. It is well known that the more important ones range over a far greater area than is now being fished, and the yield can be easily increased five or six times by extending the fishing grounds.

The mullet fishery offers a real opportunity for further development. The current catch of 35 million pounds probably could be tripled. Similarly, the crab resource of the gulf coast could be made to yield twice its present harvest. Oysters are growing in importance because of the blight in northern waters and the potential for expansion through adoption of modern methods is great.

While existing fisheries can be further expanded within sustained production limits, probably the greatest increase in yield can be expected to come with the utilization of species not now being harvested. Ocean shellfish, for example, constitute a potentially great resource. We have reason to believe there are large beds of both clams and scallops capable of supporting commercial fisheries. Particularly abundant in the gulf are herring-like fishes—anchovies, thread herring, round herring, gizzard shad, and Spanish sardines. Thread herring especially occur in prodigious quantities, possibly even in greater quantities than menhaden. Estimates of availability along the Florida west coast alone range from ½ to 2 billion pounds.

Development of our existing fisheries to their maximum productive capacity, and development of the latent resources I have mentioned, will require persistent biological and exploratory effort on our part. There will be need for gear improvement in which both industry and Government should take part. In some cases, acceptable products will have to be found through technological research. And in all cases, markets will have to be created.

The development of these new fisheries will offer the shrimp industry a much needed opportunity to diversify its operations. Our Bureau is working hard to bring this to realization through exploratory fishing operations, gear development and biological research. Other speakers on the program will describe by words and pictures more specifically what we are doing in these fields.

It will be through this kind of development that the problems plaguing the gulf fishing industry will be solved.

GULF STATES MARINE FISHERIES COMMISSION,
New Orleans, La., February 9, 1962.

To: Congressional delegations of the Gulf States.
From: W. D. Gunn, Director, Gulf States Marine Fisheries Commission.
Subject: Federal gulf shrimp biological research program.

A group of our commissioners, scientific advisers, and representatives of the shrimp industry will meet with Mr. Frank P. Briggs, Assistant Secretary of the Interior, and staff, on February 19 in Washington to discuss a full implementation of the subject program.

A similar visit to Washington was made last May, and while only $175,000 of an estimated necessary $500,000 was made available by the Congress, this appropriation has enabled the Bureau of Commercial Fisheries to make some important gains in the State of our knowledge regarding the shrimp resource. The attached copy of Mr. Seton H. Thompson's comments on shrimp research explains the character of work which the supplemental appropriation has made

possible and presents the current thinking of the Bureau regarding a further expansion of the research effort.

The Commission is most appreciative of the fine support that you gentlemen have provided and earnestly solicits your further cooperation in its effort to have developed basic information essential to the bringing about of a proper utilization of the shrimp fishery of the Gulf States.

Biological Research on Shrimp in the Gulf of Mexico

(By Seton H. Thompson, regional director, Bureau of Commercial Fisheries, St. Petersburg Beach, Fla., February 7, 1962)

Shrimp ranks first in dollar value of all the commercial fisheries in the United States. This fishery centers in the Gulf of Mexico where 7,000 trawlers manned by 16,000 fishermen harvest an average annual yield of more than 120 million pounds (heads off), worth about $65 million to the fishermen. It is a resource that has a very important role in the economy of the Gulf States.

In 1961, there was a general failure of all species of shrimp in the Gulf area to appear in normal quantities. The catch in the Gulf States dropped to 80 million pounds, as compared with 122 million pounds in the preceding year. It was the smallest catch recorded for the area since 1940, and the landings in Louisiana were the smallest since 1923. This decline of about 35 percent created near disaster conditions in many gulf communities.

The decline in abundance of shrimp in 1961 came without warning, and the cause for it is still unknown. One thing is certain: The short supply of shrimp on the fishing grounds was the result of natural factors having widespread occurrence. No State bordering the Gulf of Mexico escaped. It seems doubtful, based on our present knowledge, whether anything could have been done to prevent this decline in abundance of shrimp. Tremendous savings, however, could have been made by both fishermen and industry, if the conditions existing in 1961 could have been predicted. Vessels would not have made repeated trips to search the almost barren fishing grounds or travel great distances to new grounds, nor would shore plants have geared up for full production.

The long-range objective of our shrimp research is to determine the major factors responsible for fluctuations in the strength and availability of the commercial shrimp populations. Intermediate objectives include (1) the development of methods for accurately predicting shrimp abundance, and hence the potential catch; and (2) determination of the size of each species of shrimp which will provide the maximum sustained yield.

A small-scale research program on the biology of shrimp has been carried on by the Bureau in the gulf for several years. Results of this program demonstrated that research efforts had to be expanded to provide information needed for proper utilization and management of the resource. A broad research program was adopted by the Gulf States Marine Fisheries Commission in 1959, and full implementation was urged by Commission resolution in 1960. As a result of Commission action, Congress appropriated an additional $175,000 for shrimp research during the current fiscal year. This was in lieu of $500,000 sought for the total program. With these additional funds an extensive study is now in progress on the brown and white shrimp stocks in the northern Gulf of Mexico, from the Mississippi Delta to the Rio Grande. Two chartered vessels are at work in this area, and a third will be added during the months of March and April. The shrimp populations in these waters are being systematically sampled at 60 stations on the Continental Shelf. This operation provides data on the distribution, intensity, and chronology of spawning activity; size and age composition of the offshore adult population; the distribution and abundance of eggs and larvae; and measurements of the hydrographic parameters most closely associated with these phenomena. In the inshore waters of this area, work now in progress includes monitoring the seasonal occurrence of post larvae in several places; the collection of catch and effort statistics from the commercial bait fisheries; and studies of the ecology of juvenile shrimp, including measures of abundance.

Full implementation of the Commission's research program would mean extending the work now in progress in the northern and western gulf to the waters east of the Mississippi Delta. The additional cost is estimated at $325,000 and would put emphasis on a large-scale marking program throughout the area to determine growth and mortality rates and enable the development of a yield curve. Contemplated also is a study of postlarval and juvenile shrimp under controlled conditions to determine what factors guide their movements from the offshore spawning grounds to the estuarine nursery grounds. This latter infor-

mation will be particularly useful in developing techniques for the pond-culture of shrimp for commercial purposes.

The proposed total annual expenditure of about $765,000 for shrimp research in the Gulf of Mexico is equivalent to about 1¼ percent of the average annual value of this fishery to the fishermen. The importance of the gulf shrimp resource fully justifies an expenditure of this magnitude.

NEED FOR ADDITIONAL FEDERAL FUNDS FOR SHRIMP BIOLOGICAL RESEARCH IN THE GULF OF MEXICO

Shrimp ranks first in dollar value of all commercial fisheries in the United States. The shrimp fishery centers in the Gulf of Mexico with an average yield of 200 million pounds (heads-on weight), valued at about $65 million.

In 1961 a general failure of all species of shrimp occurred. This decline amounted to approximately 35 percent, resulting in the smallest catch since 1940. The Louisiana landings were the smallest since 1923.

The shrimp fishery of the gulf involves 16,000 fishermen who operate about 7,000 trawlers. The entire shrimp industry has sustained severe economic distress because of the decline. If the decline could have been predicted in advance, adjustments could have been made to alleviate some of the loss. Unnecessary trips would not have been made and shore plants would not have been geared for normal production, thus reducing excessive overhead.

The long-range objective of shrimp research by the U.S. Fish and Wildlife Service and the Gulf States is to determine the major factors responsible for fluctuations in the strength and availability of the commercial shrimp populations. Immediate objectives include (1) the development of methods for accurately predicting shrimp abundance, and hence, the potential catch; and (2) determination of the size of each species of shrimp which will provide the maximum sustained yield.

When the above objectives are obtained, information will be available for regulation of the fishery by the States, and such data will aid the industry in operating more efficiently.

Full implementation of the Federal shrimp research program, which the Gulf States Marine Fisheries Commission has recommended, would require an addition of $325,000 to the fiscal year 1963 budget of the Interior Department.

This would result in a total annual expenditure of $765,000 during the coming year. If such a budget can be maintained for a period of 4 or 5 years it is believed that the major research objectives can be attained.

It should be stated that the Gulf States are currently spending an estimated $300,000 per year in this joint Federal-State effort.

RECOMMENDATION OF FISHERIES COMMISSION

Mr. NEBLETT. The Gulf States Marine Fisheries Commission, after this large program was evolved, came up with a recommendation to the Department of the Interior Fish and Wildlife Service as to what would be considered a minimal type of program extended over a period of years with the rather crash program of essential things right now, such as exploration to find more shrimp because the crop is so short, and the long-range research that is necessary to manage the fishing and that minimum program would normally run about $500,000 a year.

As the budget comes to you, there is only $175,000 of that in it. So there is a shortage of $325,000 which we feel if it were restored—it was probably cut out by the Bureau of the Budget or someplace that we are not exactly told—at any rate, it is not in the bill that is presented now, and we feel that the restoration of this $325,000 will assure not a maximum, but a minimal type of fund that will be able to take care of some crash programs now to alleviate this industry and also to assure a continuation of basic research for a number of years.

Senator Ellender is interested in it as well as Senator Holland and all of the Gulf States and South Atlantic people know about this program. The basic research, even though done in the gulf, is also beneficial to other shrimp-producing States, such as Alaska, Washington, and Oregon.

I just came from a meeting of people who are interested in this. Shrimp being the No. 1 crop in dollar value and followed by another important industry in menhaden and the concentration of this resource in one area of the country, I think makes it particularly important that this is timely at this time.

I did not have an opportunity to appear before the House subcommittee on this particular item. I was not in town. As a matter of fact, I am going back to sunny Florida this afternoon. I do trust that the committee will give this program earnest consideration. Rather than take the time of the committee, I would like to leave here the biological research and the exploratory fishing and gear research program as compiled by these scientists and also approved by the Department of the Interior. However, it did not get in the budget at this time.

Chairman HAYDEN. They will be included in the record.

Mr. NEBLETT. It will be background material for this information. The program is very detailed for the amounts that are necessary to fulfill them and what they are for. I will make a general presentation to the committee and not take too much of its time.

Chairman HAYDEN. Thank you for your appearance.

Mr. NEBLETT. Thank you, sir.

(The information referred to follows:)

GULF AND SOUTH ATLANTIC EXPLORATORY FISHING AND GEAR RESEARCH

The total funds available for exploratory fishing and gear research in the gulf and South Atlantic region during fiscal year 1963, according to the President's budget message, will be $428,000. This is the same amount that is available this fiscal year and was available last year.

Funds for this work in the gulf and South Atlantic region are divided into three separate programs: South Atlantic fisheries exploration, Gulf of Mexico fisheries exploration, and fishing gear research and development. Funds are divided between these three programs as follows:

South Atlantic fisheries exploration	$152, 100
Gulf of Mexico fisheries exploration	173, 100
Fishing gear research and development	102, 800
Total	428, 000

This distribution has been the same for the past 2 years.

South Atlantic fisheries exploration is concerned primarily with the location of bottom fish in commercial quantities, and in exploration for deepwater clams, scallops, and shrimp. This program should be expanded for both bottom fish and shellfish, and the potential for pelagic fish should be investigated. There are positive indications of pelagic species in commercial quantities. Expanded effort should be made to delineate the potential areas and resources of bottom fish along the South Atlantic and provide information concerning efficient and economical techniques of harvest. There is need for exploratory fishing of inshore areas where indications of clam beds of substantial size have been found during past exploratory cruises. Further effort is needed to define the scallop resources which presently are undergoing development.

The additional funds for expanding the South Atlantic fisheries exploration program amount to $120,000. This expanded effort will provide for full utilization of exploratory vessel *Silver Bay* which is chartered for the present program at the nominal rate of $85 a day.

The Gulf of Mexico fisheries exploration program is concerned primarily with pelagic fish exploration although a relatively small effort also is directed toward the location of commercial populations of bottom fish. The pelagic fish, including thread herring and other herringlike fishes, are extremely abundant in the gulf at certain times of the year, and offer tremendous possibilities for future development. It is for this reason that the highest priority has been assigned to this project. Bottom fish and ocean shellfish also offer great opportunities for development in the Gulf of Mexico. About $40,000 is needed to extend our knowledge of the areas occupied by bottom fish in industrial quantities. This means exploration in the deeper water areas of the gulf. An increase of $175,000 is needed for shellfish exploration, which is now totally neglected. Deep water shrimp, clams, scallops and crabs are known to exist and the potential for their commercial utilization should be defined. This exploratory effort for clams has been urged both by the Southeastern Fisheries Association and the Gulf States Marine Fisheries Commission, but as yet has not been financed.

The fishing gear research and development program has been directed primarily to shrimp trawl efficiency studies, and to development of gear suitable for capture of pelagic species. With the current funds totalling $102,800, field operations on this program are restricted to about 7 months a year. This program should be expanded to hasten completion of the shrimp trawl efficiency studies and to develop economical methods of harvesting the pelagic species. The latter would be especially suitable for use in the manufacture of a low cost protein concentrate. Improved fishing gear and techniques to harvest benthonic fishes such as croaker and others which are used extensively in the growing pet food industry. This expanded program in gear research would require an additional $75,000, and would make possible full utilization of existing equipment. No additional personnel would be needed to carry out this enlarged program.

Summarizing, a fully developed program for gulf and South Atlantic exploratory fishing and gear research would entail a total increase of $120,000 for South Atlantic fisheries exploration; $213,000 for Gulf of Mexico fisheries exploration; and $75,000 for fishing gear research and development.

STANDING ROCK SIOUX TRIBE OF INDIANS

STATEMENT OF MARY LOUISE DEFENDER, MEMBER

EDUCATION OF INDIANS

Chairman HAYDEN. Senator Young, do you have a witness you would like to introduce?

Senator YOUNG. Yes, thank you, Mr. Chairman.

Mary Louise Defender, formerly with Senator Burdick and now with the Congress of American Indians.

Miss DEFENDER. I want to thank you for permitting me to appear before you this morning. I am here regarding one item in the Interior appropriations bill. The Interior appropriations bill calls for about $50 million for the education of Indians. It is the interest of the Standing Rock Tribe that money for education spent on this reservation should bring the optimum results. We should like to bring to the attention of the committee our view that Indian children are not receiving the education that could be bought for these Federal dollars.

The act of September 2, 1958 (72 Stat. 1762, Public Law 85–915) provides among other purposes for the rehabilitation of the Indians of the Standing Rock Sioux Tribe in North and South Dakota. In planning the rehabilitation program, the Standing Rock Indians keenly recognized the need for education and programed $2 million for an education-loan grant program to be used over a 20- to 25-year period for post high-school training for Standing Rock students. The program has been in operation over 1 year and thus far 78 students have received education loan grants under the programs. Of the 78 students, 39 or 50 percent of them have dropped out of the colleges and universities.

The Standing Rock Tribe attributes a large portion of this dropout to the fact that these students were not adequately prepared in the high schools to do college work. Most of the students are graduates of the Standing Rock High School.

We know the Bureau of Indian Affairs does not include foreign languages and creative writing in the curriculums of their schools. Furthermore, not enough emphasis is placed on subjects such as English, mathematics, physics, and chemistry. Our Indian youth should receive the benefits of an adequate high school education which will enable them to enter the fields of science, engineering, and other technical fields connected with the new space age in which we are now living.

It is our understanding that the Bureau of Indian Affairs does not teach foreign languages and creative writing in its schools because the English language is considered to be a foreign language to some Indian tribes. This is probably true in some areas of our country, but it is not the case with the Standing Rock people and we do not wish to have our promising young students denied the opportunity of adequate high schools because of the standardized education program of the Bureau of Indian Affairs and by an education program based on the mistaken outdated concept that Indians are basket weavers or hand craftsmen.

We believe that immediate steps can be taken toward improving the Bureau schools of the reservations since the Bureau of Indian Affairs apparently has the personnel and funds to create the new Institute of American Indian Arts at Santa Fe, N. Mex. We are not opposing the Institute, but we do believe that if the Bureau can develop such a school devoted to all phases of art, it can at the same time devote as much time and attention toward improving the schools on the reservation.

Thank you.

Senator YOUNG. May I ask a question or two. Mr. Chairman?

Chairman HAYDEN. Certainly, Senator Young.

DROPOUTS AMONG INDIAN COLLEGE STUDENTS

Senator YOUNG. Do you think that many of these Indian children have dropped out of college because they didn't have the proper background in education?

Miss DEFENDER. That is true.

Senator YOUNG. Were they required to make up some subjects that they ordinarily have in high school that they did not have?

Miss DEFENDER. Some of our students have had to do this. They had to take noncredit English courses and noncredit math courses when they get into colleges. This is particularly true of those who have gone out of the States of North and South Dakota.

Senator YOUNG. That hits pretty close to me. When I was in high school, I took an agriculture course and finished in 3 years. This course only had 3 years of English and not enough math. When I went to college I found out I had to make up some subjects and I got discouraged and quit. If I had the proper high school background I would have had the proper education as my brothers have. I think she made a very good point.

Chairman HAYDEN. A very good point.

Senator YOUNG. Did you have anything on the bus system?

Miss DEFENDER. I don't have all the facts, Senator, so we will supply them to the committee when we have them. I think there is a need.

Senator YOUNG. The Standing Rock Indians have taken $2 million.

Miss DEFENDER. Of their rehabilitation money.

Senator YOUNG. And devoted it to higher education?

Miss DEFENDER. Yes. It is a remarkable program.

Chairman HAYDEN. Yes, it is. We thank you for your appearance.

MOUNT VERNON LADIES' ASSOCIATION OF THE UNION

STATEMENT OF MRS. FRANCIS F. BEIRNE, REGENT

PROPOSED PURCHASE OF LAND ACROSS THE POTOMAC RIVER FROM MOUNT VERNON

Chairman HAYDEN. Mrs. Francis F. Beirne, Regent, the Mount Vernon Ladies' Association of the Union. Mrs. Beirne has written to the committee and I will place her letter in the record at this point. I will also include in the record a copy of Public Law 87–362, which authorizes appropriation of $937,000 to purchase lands which provide the principal overview from the Mount Vernon Estate and Fort Washington.

(The information referred to follows:)

MARCH 5, 1962.

Hon. CARL HAYDEN,
U.S. Senate, Washington, D.C.

MY DEAR SENATOR HAYDEN: As regent of the Mount Vernon Ladies' Association, the Nation's trustee for the home of Washington, I am writing to assure you of the association's support of the item in the President's budget which will enable the Department of the Interior to carry out the purpose of Public Law 87–362. We are aware that this appropriation is essential to the preservation of the overviews from Mount Vernon, the Memorial Highway, and old Fort Washington.

We are assured that this is a matter of national interest. The action of the Congress last summer in passing the authorizing legislation without dissenting voice in House or Senate indicates that it shares the belief that this splendid open space on the river threshold of the Nation's Capital should not be sacrificed to short-term local expediency.

We urge that the amount requested by the President be granted now; delay, or decrease in the amount allotted, would jeopardize the objective and increase the ultimate cost. We remind you that two foundations stand ready to donate half of the land which must be acquired in fee.

Sincerely yours,

ROSAMOND R. BEIRNE,
Mrs. Francis F. Beirne, *Regent.*

Public Law 87-362

87th Congress, H.J. Res. 459

October 4, 1961

JOINT RESOLUTION

To provide for the preservation and protection of certain lands in Prince Georges and Charles Counties, Maryland, and for other purposes.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That in order to preserve for the benefit of present and future generations the historic and scenic values, the unusual cultural, scientific, and recreational values, and the present open and wooded character of certain lands situated along the Potomac River in Prince Georges and Charles Counties, Maryland, and in order to preserve lands which provide the principal overview from the Mount Vernon Estate and Fort Washington, in a manner that will insure, insofar as practicable, the natural beauty of such lands as it existed at the time of the construction and active use of Mount Vernon Mansion and Fort Washington, the Secretary of the Interior is authorized to acquire and administer lands and interests therein, in the manner hereinafter provided.

SEC. 2. (a) The Secretary of the Interior is authorized to accept donations of lands or interests therein located in Prince Georges and Charles Counties, Maryland, in the vicinity of Piscataway Creek, held by the Accokeek Foundation or other foundations or organizations for public use.

(b) When the Secretary receives a commitment, subject to such conditions as shall be agreeable to the Secretary of the Interior and the potential donor or donors, in accordance with which commitment the property referred to in subsection (a) will be donated to the United States for purposes of this Act, he is authorized to acquire by such means as he finds are in the public interest other land and interests in land lying generally within the area identified as follows:

Beginning at a point on the shoreline of the Potomac River at the intersection of the northerly right-of-way line of Maryland State Route 227 in Charles County, Maryland; thence following the Maryland shoreline of said river in a northeasterly direction to the confluence of Piscataway Creek in Prince Georges County, Maryland;

thence following the shoreline from Mockley Point and proceeding in a generally easterly direction along the south shore of Piscataway Creek to a point 250 feet to the west of the point where the westerly right-of-way line of Farmington Creek Road intersects the shoreline of Piscataway Creek; thence southeasterly along said line approximately 250 feet west of Farmington Creek Road approximately 800 feet; thence westerly generally following the 50-foot contour line to the southeasterly corner of the property of the Accokeek Foundation;

thence westerly along said boundary approximately 1,600 feet; thence southerly with said boundary line approximately 1,800 feet; thence northwesterly on said line approximately 2,200 feet; thence westerly along said line approximately 800 feet; thence generally westerly with the 50-foot contour line to the north side of a private road on the Alice Ferguson Foundation property; thence in a westerly direction along north side of said road to the southeasterly corner of Moyaone Association land;

thence with the boundary line of the Moyaone Association land approximately 900 feet northwesterly; thence with that line approximately 800 feet westerly; thence with that line approximately 500 feet southeasterly to its intersection with the right-of-way of Bryan's Point Road; thence generally westerly with the northern right-of-way line of that road approximately 3,500 feet to its intersection with Cactus Hill Road;

thence northerly along the eastern right-of-way line of Bryan's Point Road approximately 300 feet to the southwesterly property line of the Bryan's Point Farm of the Accokeek Foundation; thence with the southerly boundary line of said property approximately 700 feet; thence with that line approximately 1,000 feet in a southerly direction; thence 1,700 feet in a westerly direction; thence following said boundary line along the easterly side of the area known as Johnson's Gully to a point approximately 4,500 feet from the Potomac River;

thence northerly along said line to the 50-foot contour line; thence northerly along said line to its intersection with Prince Georges-Charles County line; thence in a westerly and southerly direction along the southerly boundary of

the Accokeek Foundation lands; leaving the Accokeek Foundation land at a point approximately 2,200 feet from the Potomac River; thence approximately 300 feet in a westerly direction; thence north on a line parallel to and 300 feet from the boundary of the Accokeek Foundation land approximately 800 feet; thence approximately 2,200 feet in a northwesterly direction to the southeasterly corner of the Accokeek Foundation lands;

thence along the southerly border of said lands approximately 1,700 feet in a southwesterly direction to the southwest corner of said lands; thence approximately 1,400 feet to the intersection with the northerly right-of-way of Maryland State Route 227; thence with said right-of-way approximately 1,300 feet to the point of beginning, excluding all that land within the described area now leased and operated by the Marshall Hall Park, Inc., as more specifically described in a deed, recorded in the land records of Charles County, Maryland, in folio 126, liber 131. The property herein described is more particularly depicted on drawing numbered 1961–1, a copy of which is on file with the Secretary of the Interior.

Within the above-described area the Secretary shall not condemn improved residential property. As used herein "improved residential property" means a detached, one-family dwelling and structures accessory thereto, the construction of which was begun before May 1, 1961, which are used solely for noncommercial residential purposes, together with one acre of land on which the improvements are situated, or all of such lesser acreage as the owner may hold.

(c) To further the preservation objective of this Act the Secretary may accept donations of scenic easements in that land within the described area now leased and operated by the Marshall Hall Park, Inc., as more specifically described in a deed, recorded in the land records of Charles County, Maryland, in folio 126, liber 131, and the area lying between the south boundary line depicted in drawing numbered 1961–1, referred to in section 2(b) and a line approximately 3,000 feet south of said boundary. The Secretary may also acquire by other appropriate means scenic easements in the area referred to in this subsection when, in his judgment, such action is necessary in order to assure uniform application of scenic control. To further achieve the purpose of this Act he may cooperate and enter into agreements and covenants with property owners, groups thereof, and nonprofit organizations and may also cooperate with the State of Maryland and the political subdivisions thereof in order to promote and achieve scenic preservation through zoning and such other means as may be feasible.

SEC. 3. Land and interests therein acquired pursuant to this Act shall be administered in accordance with the Act entitled "An Act to establish a National Park Service, and for other purposes," approved August 25, 1916 (39 Stat. 535), as amended and supplemented.

SEC. 4. There are hereby authorized to be appropriated such sums, but not more than $937,600, to carry out the provisions of this Act.

Approved October 4, 1961.

GENERAL STATEMENT

Mrs. BEIRNE. Mr. Chairman, I appreciate your letting us come to make a statement today. My name is Rosamond R. Beirne. I am regent of the Mount Vernon Ladies' Association of the Union, an eleemosynary organization which was chartered by the State of Virginia in 1858. For over a century it has been our high duty as the Nation's trustees, under this charter, to preserve the home of Washington as a mecca for the American people and all those citizens of the free world who venerate the name of Washington.

AUTHORIZING LEGISLATION

I am here to assure you of the association's support of the item in the President's budget which will enable the Department of the Interior to carry out the purposes of Public Law 87–362. We are aware that the authorizing legislation and this related appropriation are essential to the preservation of Mount Vernon's scenic environment in its present unspoiled state, a setting which today is the delight of millions of visitors and a rare heritage from the past.

We believe that this is a matter of national interest and concern. The action of the Congress last summer in passing this authorizing legislation, without dissenting voice in House or Senate, indicated its concurrence in this belief and was so accepted by those public spirited individuals and groups who so unanimously and in such numbers petitioned you for this legislation.

There are those who would have us believe that your colleagues who introduced this legislation were overgenerous in defining the area to be preserved. They would have us ignore the fact that this is an area of overlapping and co-extensive overlooks from Mount Vernon, the Memorial Highway and old Fort Washington. They would have the Congress forget that the Federal Government created the Memorial Highway 30 years ago as a scenic parkway and an appropriate approach to the home of our first President, that the Congress has a very real and proper interest in this scenic panorama which they would make the setting for a sewage plant.

We speak for Mount Vernon as a place of national pilgrimage and this splendid approach is a part of the experience as the Congress intended it should be. A sewage plant in the proposed location would be a threefold encroachment.

Public anxiety about the preservation of this area has been calmed by the enactment of Public Law 87–362, as evidenced by this incidental paragraph in a letter which I received recently from the president of one of our national patriotic societies. The paragraph reads:

> Let me congratulate you on the action of the Congress in taking the first step to preserve the land across the river from the blight of a sewage plant, and, with thousands of Americans, I hope that the good work will be completed by the granting of the necessary funds to the National Park Service to acquire the land.

These congratulations will be a mockery, Mr. Chairman, if the Congress deletes this appropriation from the President's budget. A sewage plant will rise on the shore of Piscataway Creek. Once established, it will no doubt grow, an enduring landmark of convenience on the Mount Vernon horizon and a monument to our lack of vision.

Chairman HAYDEN. I assume that this budget estimate was considered by the House Committee on Appropriations?

Mrs. BEIRNE. Yes, it was.

Chairman HAYDEN. Thank you for your statement.

Mrs. BEIRNE. May I give you a picture, if you are not familiar with the shoreline, which will show you the point across from that very low-line piece of property?

Chairman HAYDEN. It is very interesting.

Mrs. BEIRNE. Thank you very much.

Senator BYRD. Thank you. You have made a very good statement.

Chairman HAYDEN. Dr. Spencer M. Smith, Jr., Citizens Committee on Natural Resources.

CITIZENS COMMITTEE ON NATURAL RESOURCES

STATEMENT OF DR. SPENCER M. SMITH, JR., REPRESENTATIVE

PREPARED STATEMENT

Mr. SMITH. I appreciate the opportunity to be here. I am Spencer M. Smith, Jr., secretary of the Citizens Committee on Natural Resources, and I am always privileged to represent this group because we feel we have on our board of directors distinguished conservationists.

We have two former chiefs of the Forest Range Service.

I would like to file my statement.

Chairman HAYDEN. That may be done in its entirety.

(The statement referred to follows:)

Mr. Chairman, I am Spencer M. Smith, Jr., secretary of the Citizens Committee on Natural Resources, a national conservation organization with offices in Washington, D.C. It is my very great pleasure to represent some of the outstanding professional men in the field of natural resources and conservation.

We strongly endorse Public Law 87-362, which was passed in the first session of the 87th Congress and authorizes the acquisition of lands in Prince Georges and Charles County, Md., along the Potomac River across from Mt. Vernon, Va. We are here today to urge that the committee favorably consider the President's budget request for $937,000 to implement this legislation.

The Maryland shores of the Potomac, opposite Mt. Vernon, have been of serious concern to the people from both States for a considerable number of years. Residents formed associations and entered into private covenants to keep this area in a wooded and overall characteristic setting as it was at the time of George Washington. They were aided and abetted in this effort by the formation of private foundations that purchased land for the purpose of maintaining these important scenic resources. Over the past 15 years there have been many efforts by local civic associations to effect zoning regulations that would carry forth this general use concept.

The one threat of impairment to these scenic resources that individuals could not obviate by their own efforts, was the proposal by the Washington Suburban Sanitary Commission to erect a sewage treatment plant at Mockley Point, directly opposite Mt. Vernon, and in the immediate overview of Fort Washington. On January 13, 1961, at a public hearing before the Washington Suburban Sanitary Commission, a large group of local property owners, civic associations, national conservation organizations and others, protested strongly to this site, or any other site in the Piscataway Bay area, for the construction of a sewage treatment plant. The Washington Suburban Sanitary Commission has broad powers of eminent domain, granted to it by the State, thus local and State bodies are unable to restrain their action. As a result, the distinguished chairman of the Senate Interior and Insular Affairs Committee, and the able chairman and ranking minority member of the House Interior and Insular Affairs Committee, Senator Anderson, Mr. Aspinall and Mr. Saylor respectively, introduced legislation that ultimately was passed and signed by the President into Public Law 87-362. The hearings before the Subcommittee on National Parks, of the House Interior and Insular Affairs Committee, ably chaired by Mr. Rutherford, carefully examined the merits of the proposed legislation and were anxious to pose questions to those urging the construction of the sewage treatment plant, but no opposition witnesses came forth.

The Citizens Committee on Natural Resources would have preferred that the boundaries of the park be extended in both directions. During the course of the subcommittee deliberations however, it became apparent that the problem of extending the park boundaries to more ideal limits, would increase seriously the cost, perhaps to a point beyond the ability of the Government, to acquire such lands. We reminded ourselves that the primary purpose for the park was to preserve the scenic area of Mount Vernon and to effect its preservation at a minimum cost to the Government. In order to achieve these objectives, we felt we were acting responsibly when we agreed to the boundaries now described in Public Law 87-362. In addition, almost half of the 1,186 acres to be acquired by the Government would be donated by private foundations. Also, many individuals are

willing to give the Federal Government scenic easements at no cost to the Government. This brought tohe tal cost of acquisition below $1 million. In the early stages of park consideration of the area, 1 to 2 million dollars was estimated as being required, in order to effect the purchase of the land.

The Senate Subcommittee on Public Lands, under the chairmanship of the distinguished senior Senator from Nevada, Mr. Bible, held hearings on the proposed legislation just prior to adjournment. During the course of these hearings opposition witnesses presented testimony recommending severe modification of the park measure, as follows: (1) They had now changed the site at which they desired to construct a sewage treatment plant to a place further distant from Mt. Vernon. (2) They would effectively camouflage the plant so that it would not be visible from Mt. Vernon. (3) There were no practical alternatives at this time and the need was immediate. (4) There were other intrusions upon the scenic environments of Mt. Vernon, and why was the erection of a sewage treatment plant properly camouflaged, any greater detriment than these. (Examples were indicated as other sewage treatment plants on the Virginia side were closer in terms of miles to Mt. Vernon than would be a sewage treatment plant at Mockley Point.)

It would appear that these arguments were successfully rebutted by the proponents of the park, in view of the action by the subcommittee, the full committee, and ultimately the Congress. In addition the repudiation of these arguments were concurred in by a very great number of individuals, organizations, associations, both private and governmental, from the local level to the national level. Mr. Chairman, I would like to have made a part of the record in order to save the time of the committee, a list of groups including local government and local civic associations that are now supporting the President's request for $937,000, and that did support the Public Law 87-362.

The argument that the site of the park as now proposed at a distance further away from Mount Vernon than Mockley Point and therefore would not destroy any scenic resources, omits the fact that the plant would be within the confines of the proposed national park and would be visible from Mount Vernon. The proof of the pudding is in the eating, and in this case the proof would be in the actual view from Mount Vernon. By standing on the Mount Vernon veranda, it is not difficult to understand why the proposed sewage treatment plant in Piscataway Bay would be visible from Mount Vernon. Mount Vernon is approximately 120 feet in elevation, and the sewage treatment plant on the new site is only 5 to 10 feet in elevation. Then, too, it is supposed that the sewage treatment plant would be of some significant size, which would indicate further that it would be quite easily seen from the veranda of the mansion. In addition, the corollary argument that the sewage treatment plant would be properly camouflaged seems equally difficult to understand. It is sometimes mentioned that a sewage treatment plant lies somewhat contiguous to the Baltimore-Washington Parkway and that many people pass it every day without any knowledge that it is there. It is questionable whether we are talking about the same thing. If the Washington Suburban Sanitary Commission would assure us that the sewage treatment plant that they propose in the Piscataway Bay area is essentially the same size or smaller than the one located along the Baltimore Parkway, or that the process of effecting sewage disposal is essentially the same type, then the arguments would have to be reviewed and reconsidered in that light.

The allegation of those supporting the construction of the sewage treatment plant that no alternatives exist appears highly questionable. It has been recommended by sanitary engineers, by the Maryland National Capital Park and Planning Commission, and by the Prince Georges County commissioners, that a site be chosen in an area already industrialized. One of the most mentioned sites is in Charles County along the Mattowoman Creek. This would be somewhat in keeping with the antipollution law recently passed by the Congress, which urges a regional concept of sewage development. This was rejected by the Washington Suburban Sanitary Commission after preliminary discussions with Charles County commissioners indicated that they were not in a financial position to undertake construction of this plant immediately, or in the immediate future. As a result, the Washington Suburban Sanitary Commission therefore concludes that the only alternatives are along Piscataway Creek. It should be pointed out, however, that whether the needs of the area for sewage disposal are creating or generating this need for sewage disposal at this location, or whether it is the needs of the developers. They are not necessarily the same thing. Some time ago, two major developers across Piscataway Creek requested and received a license on their own land for a small sewage treatment plant. These are planned

for high density development, in sharp contrast to the proposed park area. This sewage treatment site was abandoned and a marina placed on this site.

The Washington Suburban Sanitary Commission then proposed to build on Piscataway Creek. This has the effect of those in the high density area dumping the sewage away from their own property on property of low density areas. It is also true that before the planned development of these real estate areas can go forward, adequate sewage disposal must take place. In reality, what we are being asked to do is to sacrifice an area of proposed park land in order to facilitate the sale within these high development areas. Without this high density development the sewage needs of the area are not egregious at the present time. If all of the high density development area were populated, the need would be accelerated. This has a further effect of snowballing. When sewage treatment plants are constructed, their capacities are in excess of present needs. They also are expensive, and in order to pay for them it is usually necessary to encourage greater densities of development. Ultimately then, this would not only disrupt the scenic environment of Mount Vernon in the immediate sense, but it would hold a sword of Damacles over the entire area opposite Mount Vernon, the area that local people have tried for so long and so hard to protect from just this kind of commercial development.

Another challenge is that other intrusions already exist on this scenic area that we seek to preserve. The logic as to how this supports an additional intrusion somehow escapes us, especially when the additional intrusion according to the opponents of the park is not going to be an intrusion at all. The indication that other sewage treatment plants are closer in actual area than the proposed one is apparently to bring automatic approval of this proposal.

In the first place, the other sewage treatment plants to which mention is made may indeed be closer in terms of actual distance than the proposed plant, but there is a great neglect in comparing the different types of topography. Mount Vernon is rather carefully surrounded on the Virginia side by some 500 acres of densely wooded areas. No one is suggesting, nor would it be feasible, to clear cut all of this protection of Mount Vernon, and then have the government acquire all of the lands the eye could see from Mount Vernon. This was recognized at an early date to be impossible. The proper protection by landscaping, and the natural topography of the Mount Vernon area, clearly places the kinds of intrusion to which the opponents refer in a completely different category. The argument seems to fall by its own weight in any event, for if there were such intrusions, this would hardly argue for further intrusions.

Mr. Chairman, the members of our committee, in cooperation with other local organizations and with other national conservation organizations have carefully appraised the proposed area for a national park, and if anything, it would be our judgment that the area should be expanded. We, of course, do not want to jeopardize the prime purpose of our effort by being unreasonable, and we therefore hope that it will be the final judgment of this committee to support the President's request of $937,000 to properly effect Public Law 87–362. We feel this to be not only in the Nation's interest, but we feel that accurate testimony has been and will be given by other local organizations and civic associations, to show that it is also in the local interest that such appropriations be granted. We hope the committee concurs in this view.

INDIVIDUALS AND ORGANIZATIONS THAT SUPPORTED PUBLIC LAW 87–362 AND ARE NOW SUPPORTING THE PRESIDENT'S REQUEST FOR $937,000 APPROPRIATIONS

Local groups (Majority of home and property owners in area):

1. Accokeek Civic Association
2. Calvert Manor Civic Association
3. Moyaone Reserve Civic Association
4. Piscataway Hills Civic Association
5. Alice Ferguson Foundation (will donate land)
6. Accokeek Foundation (will donate land)
7. Swan Creek Citizens Association

National groups:
1. Citizens Committee on Natural Resources
2. Izaak Walton League of America
3. Mount Vernon Ladies Association
4. National Audubon Society
5. National Wildlife Federation
6. National Trust for Historic Preservation
7. Wild life Management Institute
8. Wilderness Society

Local government:
Prince Georges County Commissioners of the State of Maryland
Governor and Legislature of the State of Virginia
Maryland National Capitol Park and Planning Commission

Federal Government:
Senate of the United States passed authorization bill introduced by Senator Clinton P. Anderson, chairman of the Interior and Insular Affairs Committee, without dissent.
House of Representatives of the United States passed authorization bill introduced by Congressman Wayne N. Aspinall, chairman of the Interior and Insular Affairs Committee, and John P. Saylor, ranking Republican member on suspension of the rules by a voice vote.
President signed the measure into law and with the advice and concurrence of the National Park Service, Department of Interior, and the Bureau of the Budget, included the request for appropriations in his budget message.

General Statement

Mr. Smith. I may say this happens to coincide with one of the biggest annual meetings of North American Wildlife Conference that is being held at Denver and many of the organizations that would normally appear before this group and support this legislation are not able to be here, but they ask that the committee be informed that they wish to associate themselves with our testimony.

These groups would include the Isaac Walton College of America, National Audubon Society, National Wildlife Federation, Wildlife Management Institute and the Wilderness Society.

SUPPORT FOR FUNDS FOR LAND ACQUISITION

Very briefly, Mr. Chairman, we are here to urge favorable consideration by the committee of $937,000 which would implement Public Law 87–362. I shan't bore the committee too much with history which I suspect they already know a good bit about. Some time ago last year, there was an announcement by the Washington Sanitary Commission that they were going to erect a sewage plant in Mockley Point which was directly over the view of Fort Washington and Mount Vernon.

After public hearings, which were extremely spirited, it was indicated that this plan would be delayed or the decision, at least, would be delayed. Very seldom have I ever had this accusation happen to me, but only last evening I was called by someone whom I do not know, and was somewhat abused that the reason that this measure went through the Senate was that I and my colleagues had railroaded it and had panicked the Senate.

I won't even comment on that except to say that the Senator has just celebrated 50 years in the Senate and I will leave it to his judgment as to how many times the Senate has been panicked or how many times it has been railroaded, especially by the likes of myself.

Chairman Hayden. I can corroborate that. It doesn't happen.

Mr. SMITH. I don't think it does.

Senator BYRD. But we have been often abused.

Mr. SMITH. Yes. Basically, our purpose is the hope that what had been started by private organizations through protective covenants through foundations over the last 15 years, through loyal people trying desperately to preserve this area, we hope has been culminated with the enactment and passage of this act. There were rather extensive hearings in both the House and the Senate at the time the bill had been considered. There have been hearings before the House Committee on Interior and Insular Affairs and related agencies on the matter. I think very briefly that the charges against the appropriations are essentially fourfold; that, first, the site which the Washington Suburban Sanitary Commission suggested will be placed farther away from Mount Vernon and will not be damaged.

PLAN TO CAMOUFLAGE SEWAGE PLANT

Essentially, the plant will be camouflaged. Third, that there are no practical alternatives. Fourthly, that there are already other intrusions anyway in the area of Mount Vernon and why should this particular addition be found so significant in the light of these others?

Our response to that, I think, is very simple. The new site is still within the borders of the proposed park. Mr. Chairman, there are national groups, members of the Interior Department, local citizens who walked over this area and looked quite carefully to find out whether you could see Mount Vernon from the various aspects within the park of whether you could see it from Mount Vernon.

We are here to testify that in both instances the answer is a strong affirmative. We testified at the time of the authorization and were criticized by some of our colleagues for not talking more. But as in all of these matters, we realize what our primary purpose was, which was to try to preserve this area and we didn't want to be divided to the point of jeopardizing the passing of the bill. We were perfectly aware of the difficulty of trying to obtain money in these land acquisition problems whether it is for any phase of the Federal Government.

DONATIONS FROM PRIVATE FOUNDATIONS

This is becoming an enormous cost. We are pleased to have private foundations donate over 50 percent of the taking of the land. The bill is so constructed that we will be able to take easements as well as in-fee. So this has brought the cost down.

I think the estimates are a good distance from the original $2 or $2½ million. We have it down to $937,000 which we feel is a reasonable and somewhat accurate assessment. Much of this land, as far as individuals are concerned, I know that some, perhaps, would protest, some would expect to be paid, some are willing to grant these easements.

This would not interfere and is completely consistent with the local covenants. So, despite the fact that the site is changed and is farther away, it still has these detrimental aspects as far as scenic resources are concerned from Mount Vernon. Whether it can be effectively camouflaged or not, I know that there is great argument on both sides of this. I recall in the House testimony that there was indicated that

we had a little sewage plant by the Baltimore-Washington Parkway and people passed it every day and were not aware it was there.

I think the problem of camouflaging a plant of this size is going to be extremely difficult. I don't think the Washington-Baltimore plant, plus the way the sewage is processed, can be adequately compared to the one in consideration.

REAL ESTATE DEVELOPMENTS

Thirdly, there are no practical alternatives. This compares to a matter of things. One is timing. At the present time there are two real estate developments and these developments are planned for high-density development. If these come to complete fruition, there is no question about the fact that you would need some sewage disposal units. At one time there was a plan, as we understand it, that was licensed by the developers to put a sewage treatment plant to take care of their property on their own ground. This was abandoned and a marina replaced it and the next item was the sewage disposal plant by the Washington Suburban Sanitary Commission. So what we are suggesting is whether practical alternatives have to be so immediate. Whether this is to meet the needs of the area or the needs of the developers.

I have nothing against people developing or operating commercially. I do feel we have additional responsibility in zoning. The Prince Georges County commissioners hope it can be located elsewhere. The Maryland National Capital Planning Commission has indicated the same statement. It would seem to us that there are practical alternatives.

MATTAWOMAN CREEK AREA

On the matter of the Mattawoman Creek area, that is already an industrial area. It would call for a bigger plant. I know the Washington Sanitary Commission has discussed it with them. They say there is no immediate future need to do this. Our suggestion is that the need of this area sewagewise is not an immediate thing. We worked very hard and very long, Mr. Chairman, partically all of the national conservation organizations, for the President's antipollution bill. We supported Senator Kerr on this. One of the provisions is to provide Federal support for these areas that will cooperate with several counties and localities. This was an effort to get rid of some of these medium-sized or especially small-sized units which are probably not going to be effective in handling the increased load.

We would feel that this has been investigated carefully. While this is one site, we are told by others that there are other sites that might be available.

Fourthly, there are other intrusions on Mount Vernon and why should we become upset about this one? The logic of this argument somewhat escapes me. I think that anyone can be at Mount Vernon at the present time and find that the scenic enjoyment has not been completely debilitated. There are two Virginia treatment plants closer in existence to Mount Vernon. This is true.

I think anyone to see them would have to go into a balloon 500 feet high. The topography of the land is different. There are 500 acres surrounding it. I think someone also can indicate further that

you can see a part of one or two houses of some kind of development. My committee is very fussy about these details. They commissioned me on more than one occasion to walk over this ground and try to investigate this.

Mr. Chairman, I have been doing it to the best of my ability. I can see no intrusion that is there now that would be anywhere comparable to the indication that we have been talking about that the sewage treatment plant would be.

It is for this reason that the national organizations—with great concern about some of our national monuments and the admonition of Senator Anderson, who has told the organizations again and again, we want recreational opportunities, we want areas properly zoned, and we hope you will get some of them in the East out here, so you won't use the West for nothing but a playground for Easterners—we are trying to keep in accordance with this admonition.

Thank you very much, Mr. Chairman.

Chairman HAYDEN. Thank you.

Senator Byrd, I will ask you to take over because I have another appointment.

Senator BYRD (presiding). Thank you.

We will hear now from Mr. Robert Strauss, who appears instead of Mr. Harold Ravner, president of the Moyaone Association.

MOYAONE ASSOCIATION

STATEMENT OF ROBERT STRAUSS, ACCOKEEK, MD.

PREPARED STATEMENT

Senator BYRD. Mr. Strauss, do you have a prepared statement?

Mr. STRAUSS. With the chairman's and Senator Hayden's statement in mind, I have a brief statement. I will place several items in the record. I am a resident of Accokeek, Md., which is covered by this bill. Mr. Harold Ravner is ill today and he requested me to present his testimony to the committee, and I would like to present it to be presented in the record at this point.

Senator BYRD. It will be included in the record at this point.

(The statement referred to follows:)

Harold Ravner, president of the Moyaone Association, is ill today. He has requested me to present his testimony to the committee to be inserted at this point in the record.

I also want to present Mr. David Swick of the Moyaone organization, who has for the committee records a copy of a statement signed by the majority of resident landowners in the Moyaone Reserve who state they are willing to donate visual easements on their land.

Mr. Charles Wagner, vice president of the Accokeek Foundation, could not be present. He requested me to present his testimony that the foundation will donate its land, to be inserted in the committee records.

I would also like to present for the committee records a letter from Senator Harry F. Byrd of Virginia to Mr. Ravner supporting this appropriation.

I would also like to present for the record Senator Clinton Anderson's speech on Washington's Birthday supporting the measure to preserve this area.

Mr. Chairman, these men have stated the case for the appropriation far better than I. I rest on their words.

STATEMENT OF HAROLD RAVNER

Mr. Chairman and members of the committee: I am Harold Ravner, president of the Moyaone Association of Accokeek, Md., and I wish to make the following statement to this committee in support of the full appropriation of $937,000 to implement Public Law 87-362.

The Moyaone Association was chartered by the State of Maryland as a nonprofit organization to guide and direct the growth of contiguous areas occupied by the members of the association; to cooperate with other residents and to assist in the orderly development of communities of landholding residents in the vicinity of Accokeek, Md.; to act directly or in cooperation with other community groups and governmental agencies to further the general community interest; to formulate policies relating to community development and to make such policies known to governmental authorities.

The Moyaone Reserve is a community of approximately 160 landowners, situated across the Potomac River from, and slightly to the south of Mount Vernon. We are therefore directly and vitally interested in the proposed legislation before this committee.

The Moyaone Association is concerned, as are other civic organizations all over this Nation, with plans to better our community as regards schools, libraries, roads, and other normal functions of local government. In addition, however, we are dedicated to the concept of preserving the historic and scenic values of this area, which, because of its traditional rural aspect, has until recently received little attention from either local or national officials.

Our land holdings are of such size, approximately 5 acres per family, as to permit a reasonable acreage to be maintained in its traditional wooded and open character. The association has, by membership authorization, acquired lands within our community for the purpose of reserving part of it for recreational uses, including wildlife preserves, hiking and nature trails. At the present time it is yet possible to walk through the area and encounter a variety of wildlife, including geese, ducks, and deer. That land which is not set apart for these purposes is placed on the market for sale in 5-acre lots, with certain restrictions designed to insure continuance of sound conservation measures for this land.

Mr. Chairman, we have not achieved all of our goals as yet, although with the valuable help of our neighbor organizations we have made some notable gains. Some years ago, we prevented an "absentee landlord" development from running a sewer line 10 miles cross county to dump raw sewage directly into the Potomac River across from Mount Vernon; the acquisition of riverfront property by a foundation led by Congresswoman Frances P. Bolton, a vice regent of the Mount Vernon Ladies' Association of the Union prevented, at the last moment, construction of an unsightly oil tank farm directly across from that historic shrine; our long efforts to have park and planning extended to this area succeeded only a few months ago. So we have had some success. Last fall the Congress passed, and the President signed, Public Law 87-362 to preserve this area. However, at this very moment, this historic riverfront area—historic because of its relation to the home of our first President and because it is the site of what has been called one of the most important Indian archeological areas in the East—is still threatened with the construction of a sewage disposal plant by the Washington Suburban Sanitary Commission, despite its effect on a national shrine, and against the almost unanimous opposition of the affected communities, and regardless of independent engineering consultants who have proposed more suitable sites.

The full membership of the Moyaone Association, at their annual meeting a year ago, considered the matter at great length and voted to join with other citizens' groups in supporting Federal legislation to preserve the historic and scenic value of lands bordering the Potomac River in the area of the Moyaone Reserve for the benefit of present and future generations.

This legislation passed and became Public Law 87-362. The Moyaone Association, in a special meeting of its members, and all landowners in the area, in December 1961, passed a resolution in support of this appropriation, and directing that Members of Congress be advised of our support. I am here today to urge this Senate subcommittee to act favorably on the President's recommendation to appropriate $937,000, the full amount necessary to complete this project.

Half the lands needed will be donated by our local foundations. Thus, the Federal Government will receive a gift of a dollar's worth of land for every dollar's worth it acquires.

I hope this committee will see the wisdom of acting now, and will recommend that the Congress appropriate the full amount of funds authorized.

PREPARED STATEMENT

Mr. STRAUSS. Mr. Charles Wagner could not be present, and he requested me to present his testimony that the foundation will donate his land.

(The statement referred to follows:)

STATEMENT OF CHARLES F. WAGNER, VICE PRESIDENT OF THE ACCOKEEK FOUNDATION

For a number of years, this foundation under the generous leadership of your colleague, the Honorable Frances P. Bolton, has been working to preserve the wooded and open character of the land on the Maryland shore opposite Mount Vernon and Fort Washington.

Through the generosity of a number of individuals and conservation groups, about half of the lands along the shore were acquired by private funds and have since been used for the benefit of the public.

This quiet program has been threatened by the Washington Suburban Sanitary Commission's ill-considered desire to serve a few developers quickly by building a sewage-treatment plant in the middle of the preservation area.

The Congress, last fall, passed an act authorizing this program, begun by the foundation to be completed by the Federal Government.

By the terms of our charter, this foundation is empowered to donate its lands without cost to the Government for preservation. The trustees of the foundation have authorized negotiations with Interior leading to the donation of the lands, and negotiations are underway on the donation.

The foundation is ready to execute a contract now to convey all of its lands when the Government has secured title to the rights in the lands described in Public Law 87-362, under appropriations recommended by this subcommittee.

PREPARED STATEMENT

Mr. STRAUSS. I also want to present Mr. David Swick, who is a member of Moyaone Organization who has for the committee record a copy of the statements signed by a majority of the residents who state they are willing to donate easement of the land.

(The statement referred to follows:)

STATEMENT IN SUPPORT OF PUBLIC LAW 87-362

In order to preserve the wooded and open character of the Moyaone Reserve and to protect the area from sewage plants and other industrial use, now and after the expiration of present land-use covenants,

I am willing to donate to the Federal Government, after Public Law 87-362 is implemented by Federal appropriation and Foundation land donation, visual easements on my land which are in keeping with the five-acre homesite pattern and which restrict land use and the cutting of trees that would materially affect the wooded and open character of the area.

KENNETH C. OTIS,
(And others).

LETTER FROM SENATOR BYRD OF VIRGINIA

Mr. STRAUSS. I have two more things I would like to present to the committee. A letter to Mr. Ravner from Senator Harry F. Byrd of Virginia in support of this appropriation.

Senator BYRD. That is a good man to have on your side.

(The letter referred to follows:)

U.S. SENATE,
COMMITTEE ON FINANCE,
March 6, 1962.

Mr. HAROLD RAVNER,
President, The Moyaone Association, Inc.
Accokeek, Md.

MY DEAR MR. RAVNER: Thank you for your letter of March 6, which I have just received.

I shall certainly be very glad to vote for the appropriations to preserve the view at Mount Vernon.

It will be a pleasure to hear from you at any time.

With kindest regards, I am

Faithfully yours,

HARRY F. BYRD.

SENATOR ANDERSON'S SPEECH ON WASHINGTON'S BIRTHDAY

Mr. STRAUSS. I wish also to present for the record of this committee Senator Clinton Anderson's speech on Washington's birthday supporting the measure to preserve this area.

Senator BYRD. An equally good man to have in support. That will be included in the record.

(The speech referred to follows:)

PRESERVATION OF VIEW FROM GEORGE WASHINGTON'S HOME AT MOUNT VERNON

Mr. ANDERSON. Mr. President, I think it is appropriate to call attention, during our observance of George Washington's Birthday, to the fact that the 87th Congress has indicated its reverence of his memory, and those things for which his memory stands, by more than words.

On last September 20 the Senate passed what is now Public Law 87–362 authorizing the acquisition of lands and easements to lands across the Potomac River from Mount Vernon for the purpose of preserving the view from the Washington home. The House measure, which the Senate passed, was a companion to a Senate bill which I had the honor to introduce on June 6, 1961. The measure was signed into law on October 4, 1961. The authorized appropriation of $937,000 is a very modest but very important sum, for it will assure that the environs at Mount Vernon and the view from what Mrs. John F. Kennedy has described as "the Nation's most revered house," will not be violated by a sewage treatment plant, an oil tank farm, or other development which would alter its character.

I am always reluctant to hinder or restrain business development, or governmental agencies, such as the Suburban Sanitary Commission. The business activities are desirable and essential to the maintenance of a healthy economy. The provision of sanitary facilities is a necessity. But I am sure that there are alternative sites where a sewage-treatment plant can be erected, one capable of meeting the future needs of the area as well as the present. And there are alternative sites for industrial and commercial development.

There is no problem involved here of making impossible desirable industrial development or construction of essential public facilities. They can be located elsewhere, and it is to the credit of Congress that we have voted that such development shall not be permitted to intrude upon the majesty of this most important historical site.

Many people and organizations are to be congratulated for their part in preserving the dignity and beauty of the environs of Mount Vernon. The distinguished Senator from Nevada, Mr. Bible, who held hearings and steered the preservation bill through the Senate, is one of them.

The Mount Vernon Ladies' Association has done our Nation a great service in the restoration and preservation of Mount Vernon itself, and in stimulating the protection of the area.

On the House side, Representative Aspinall, chairman of the Committee on Interior and Insular Affairs, Representative Saylor, who sponsored the bill, Representative Rutherford and Representative Bolton deserve special thanks for their leadership.

Representative Bolton, as vice regent of the Ladies Mount Vernon Association and as a principal officer of the Accokeek Foundation, which now stands ready

to donate its lands to the Federal Government, has done the Nation an especially great service, as will all of those citizens who are helping to give the Government land and easements without cost, so as to make protection of the area possible.

Mr. President, we can all take pride in Public Law 87-362 and the assurance it gives that Mount Vernon and the Potomac River area around it will be preserved as a link between living generations and the man who led his countrymen—our forebears—in the establishment of a government of freemen.

Mr. STRAUSS. Mr. Chairman, these men have stated the case for the appropriation far better than I and that concludes my testimony.

Senator BYRD. Thank you very much for your testimony. You made a good statement.

Mr. Dyer, would you like to appear first?

SEWAGE NEEDS IN PRINCE GEORGES COUNTY, MD.

STATEMENT OF BEN DYER, PROFESSIONAL ENGINEER AND LAND PLANNER, REPRESENTING CLIENTS WITH LARGE LAND-HOLDINGS

GENERAL STATEMENT

Mr. DYER. Thank you very much for the opportunity of appearing before you, sir. My name is Ben Dyer. I am a professional engineer and land planner and have been so engaged in Prince Georges County, as well as elsewhere, for about 25 years. As a land planner I have a very deep regard for the explosive growth of the Washington area and Prince Georges County in particular.

As an engineer I realize that there is a very definite need for the proper agency to take care of the sewage needs that accompany that growth. Right now we are operating, in our area, with the plan of the National Capital Planning Commission which has designed a plan for the year 2000 Washington. Our local agency which covers both Prince Georges and Montgomery Counties has implemented that insofar as local needs are concerned, and have recently presented it to the public so far as its adaptation in the Prince Georges-Montgomery area is concerned. The area of land tributary to Piscataway Creek is some 48,000 acres. It extends up to the north and east from that point. It includes a large part of Andrews Air Force Base and Camp Springs, and to the south on Route 5.

INDIAN HEAD HIGHWAY DEVELOPMENT

About 3 years ago it came to my attention that there was a little development ahead of the creek about Indian Head Highway where a local developer had put in one of these small plants. It was most unsatisfactory from the State board of health and all concerned. There was a lot of correspondence about it. Finally, I was able to help the people to get the Washington Suburban Sanitary Commission interested in it and they have acquired it and are operating it much more satisfactorily.

However, this type of plant is not the answer to 48,000 acres. When this bill first started on its way before last year, there was no planning agency that had jurisdiction over the area from the south of Piscataway Creek. By action of the Maryland State Legislature about a year ago, all of this area was taken into the Maryland National Capital Park and Planning jurisdiction so far as planning is concerned, and they have implemented their jurisdiction by publishing, as a

part of their annual report, their new park desires and have included all of the area of this bill, together with quite a bit more within an area that they would have set up as a park. They have also brought to all of this area the zoning controls so far as minimum size lots, the proper type of planning, and I think they are fully capable of representing the people of Maryland in the best interests of the development of this area. I think the people of Moyaone and other interested parties are certainly to be complimented in the way in which they have developed their property thus far without those controls. Without proper planning they have done an excellent job. However, this bill breaks down into two things:

PROTECTION OF OVERLOOK TO MOUNT VERNON

First, as a means of protecting the overlook from Mount Vernon. From a planning standpoint I am most appreciative of that. I have been at Mount Vernon for a long time. I would like to present for the record a plat that I have prepared that I think tends to indicate the gist of this matter. This area [indicating] across from Mount Vernon from Marshall Hall up to a point where this 2-mile radial line intersects the east side of the Potomac River is certainly an area that should be considered, and I would have no argument about the Government of the United States spending money to protect that land. It so happens that from that 2-mile area sweep around to just northeast of Marshall Hall, all but one of these foundations, both the Accokeek Foundation and the Ferguson Foundation, all but one of those tracts that are to be donated lie within that area. The other one in question is one around on the south side of Piscataway Creek. The main effect of this bill, if it were limited to something like that 2-mile area, I think would be the proper thing. I can't conceivably see why there should be any interest in going up the south side of Piscataway Creek, now that it is under the proper jurisdiction of local agencies and they, through their own financing, have been acquiring park land and exercising control and other things.

Secondly, the other part of this bill seems to be to present the by county agency, the Washington Suburban Sanitary Commission, which is the proper one to put in the type of a plant that can serve the needs not of this immediate area but of this whole 48,000 acres. I have personally had the pleasure of taking one of the House subcommittee members to Mount Vernon and his testimony agrees with the fact that from Mount Vernon you cannot possibly see this proposed—which is only one but the nearest one of the sites proposed by the Washington Suburban Sanitary Commission—you cannot possibly see any plant here. In the first place, a sewage plant is 85 percent underground, or within close relation to the ground. The only structures that would rise above the ground at all would be about a two-story height which are pumping stations and architecturally there is no need where they could not be just as desirable as a house. They are smaller than a house. At that point you are some 3 miles from Mount Vernon. The tremendous area is indicated on this plat and the trees there on the Claggett property are indicated above in the line-of-vision thing, which is to scale—from that standpoint it is impossible to see anything that the sanitary commission would do. They are a responsible agency, as I say, and would adequately provide additional screening were it to be necessary.

MOCKLY POINT AREA

This thing, I think, started out a little wrong. Mockly Point was a generic term and not completely a specific one. The Maryland National Capital Park and Planning Commission has agreed that this area to the east of Mockly Point would be an acceptable one, someplace in this area, would be an acceptable one. Their engineers further testified that even with the aid of glasses you cannot see anything that would be built at this point. So I would conclude my statement with the fact that I believe that the limitation of this measure to something indicated by the intersection of this 2-mile radius line would give the greatest amount of land that would be donated, and would offer the protection to Mount Vernon.

VIEW FROM FRONT PORCH OF MOUNT VERNON

Actually, from the front porch of Mount Vernon, from the front patio, you can see just to the northeast this subdivision—Stratford on the Potomac is clearly visible. Those houses there are clearly visible. Mr. Wall, who is in charge of Mount Vernon, assisted that developer in getting some zoning changes to make the lots that are now there in that subdivision the size they are, which is about half of what was previously zoned. Something that is three times as far away and is not as large and would be completely hidden by trees, I am sure would offer no objection. There is one further thing that I would like to introduce, and this is the annual report of the Washington Suburban Sanitary Commission. The previous speaker alluded to a treatment plant that the sanitary commission built.

SANITARY COMMISSION TREATMENT PLANT

In their annual report at the top it shows the treatment plant which would be a very similar one, I believe, to what would be built here.

The white line in the background represents the Washington-Baltimore Parkway. With thousands of people traveling that road every day they are not even aware that it is there because of the same type of tremendous cover that affects here.

Thank you very much, sir, for allowing me to make the statement.

Senator BYRD. You have one site proposed by the Washington Suburban Sanitary Commission.

Mr. DYER. Yes, sir.

Senator BYRD. In the lower right-hand corner 3 miles away from Mount Vernon?

Mr. DYER. That would be the closer one, I understand. The chief engineer of the sanitary commission is here today and will give you more of the detailed plan.

Senator BYRD. Then you have midway on the map a sewage plant to be built by Fort Washington Estates.

EXPLOSIVE GROWTH OF PRINCE GEORGES COUNTY

Mr. DYER. That is another developer who independently would have another of these same type of small plants that I testified was built farther up the creek by another developer. This type of small

plant is a headache in that it is not efficient in its operation. It has no ability on the north side of Piscataway Creek to be expanded to serve any other needs. On this basis you would continue to have a group of smaller plants, if at all, built, each of which would add a great deal more to the condition of Piscataway Creek. It would deny the explosive growth of Prince Georges County in this 48,000 acres, because anywhere away from the mouth of Piscataway Creek or at the Potomac they do not have sufficient water to have plants so you would be confined to a septic tank type of development. There already exists that type of development around Route 5, and those people are in very poor straits right now because of the fact that their sewage is overflowing on the ground. The only solution to it is for the sanitary commission to extend lines up to it from such a plant as this.

Senator BYRD. What is the alternative?

Mr. DYER. To this plan, sir?

Senator BYRD. Yes.

Mr. DYER. I know of none as professional engineer. The sanitary commission has received a report, which Mr. McLeod, I believe, would testify on, from a study made by Dr. Abel Wolman of Hopkins at Baltimore and Mr. Geyer, who have made a report for the whole area of the Potomac around Washington, including Virginia, and all, and through that commission the sanitary commission has awaited that report before going ahead and making this commission.

I think Mr. McLeod could testify better on that than I could.

Senator BYRD. The proposed plant would be in the line of vision from Mount Vernon, would it not? It would only be protected by the trees. It would be impossible to see it from Mount Vernon?

Mr. DYER. It would be impossible to see it from Mount Vernon.

Senator BYRD. If the trees were removed the plant would be in full view of Mount Vernon, would it not?

Mr. DYER. Insofar as you could see an object of that size at 3 miles.

Senator BYRD. I shouldn't think it would be difficult to see an object of that size. Didn't you say it was a two-story house?

Mr. DYER. Smaller than a house.

Senator BYRD. It would not be difficult to see 3 miles away except on a foggy day?

Mr. DYER. I would disagree with that, sir, because there are houses in the same relative area that are most difficult to ascertain what they are at that distance standing right on Mount Vernon on the front portico.

Senator BYRD. They must be pretty small, 3 miles away.

Mr. DYER. They are awfully small 3 miles away. They do not have any particular form to them. You can't tell what they are.

HOUSE IN STRATFORD AREA

Senator BYRD. There are houses in this area?

Mr. DYER. There are a number of houses in that Stratford area.

Senator BYRD. How many houses?

Mr. DYER. I have never counted them but I would say there are at least a hundred, if not more. You cannot see all of the hundred but you can see quite a cluster of them.

Senator BYRD. What would be the size of the structure above the surface?

Mr. DYER. About two stories, the same that they would have there.
Senator BYRD. Two stories, and how long and how wide?
Mr. DYER. I would rather Mr. McLeod tell you the size.
Senator BYRD. All right. Thank you for your statement.
Mr. DYER. Thank you, sir.

WASHINGTON SUBURBAN SANITARY COMMISSION

STATEMENT OF ROBERT J. McLEOD, CHIEF ENGINEER

GENERAL STATEMENT

Senator BYRD. Mr. McLeod, would you come before the committee?

Mr. MCLEOD. I am Robert J. McLeod, Chief Engineer of the Washington Suburban Sanitary Commission.

I would like to apologize first that I only learned at 10 minutes after 9 this morning that the committee was meeting this morning and I would, with your leave, like to submit the statement in better form. We can put it in the mail this evening if you can put it in the record. It will be the same statement, but as you can see, this is just a copy. The sanitary commission feels that there is much merit to the preservation of the Maryland shore along the Potomac and also the Virginia shore. What we are taking exception to is the part of the legislation which would preclude the sanitary commission from constructing the sewage-treatment plant. First of all—

RESPONSIBILITY OF SANITARY COMMISSION

I believe it would be desirable to briefly describe the responsibility and authority of the sanitary commission. It is an agency created by the general assembly of the State of Maryland in 1918 for the express purpose of providing water supply and sewage disposal facilities in the metropolitan area of Maryland adjacent to the Nation's Capital. The commission is a bicounty public agency operating under the laws established by the general assembly of the State. At the present time it has jurisdiction over the construction of all water supply and sewage systems in Montgomery and Prince Georges Counties. It is immediately responsible for furnishing these services in a 475-square-mile area. There are now over 600,000 persons residing in this area who are served by commission-operated facilities.

When the Senate committee held a hearing on the hill authorizing a national park opposite Mount Vernon, I appeared before the committee. At this hearing it was clearly understood by all present that the purpose of the bill was to preclude the construction of a sewage-treatment plant anywhere in this part of Prince Georges County. It is to this aspect that I now take issue.

SEWAGE PLANT ON PISCATAWAY BAY

After thorough study of the needs for a sewage disposal system to serve the Piscataway and Broad Creek Drainage Basins in Prince Georges County and careful consideration of the alternatives for providing this important public service, the Washington Suburban

Sanitary Commission resolved to proceed with development of this regional system and to locate the necessary sewage treatment facility on the southern shore of Piscataway Bay.

I would like to submit a copy of the Commission's resolution for the record of this hearing.

(The resolution referred to appears on p. 1011.)

LAND INCLUDED IN PARK AREA

Mr. McLEOD. I might briefly describe this. This area in yellow is the area which generally would be included in the park area in both fee and scenic easement. The Mockley Point we speak of is this point jutting out of Piscataway Creek. The red dots which you see here represent existing sewage treatment plants with the exception of this one which is the proposed sewage plant to serve Fort Washington Estates and which will be constructed if the Commission does not proceed with its regional plant. We do have a plant here 2½ miles from Mount Vernon and one at Belvoir.

Senator BYRD. Can this one be seen from Mount Vernon?

PROBLEM OF ODOR

Mr. McLEOD. I don't think these can be seen. It has been mentioned that if you build a treatment plant over here you have this proposition of odors coming to Mount Vernon. I want to point out that Virginia has two plants closer to Mount Vernon and Mount Vernon from the prevailing wind from the west, actually the wind would be blowing away from Mount Vernon.

PRESENCE OF TREES

The purpose of this is to demonstrate that odor would not be a problem. The second thing is that you have this whole point of land with existing trees would preclude from seeing the site. You mentioned the possibility of trees being cut down, you then probably could see it. We would be able to screen it ourselves. We would be able to screen it on the site. Furthermore, if any of this is kept as park area, as I understand, none of the trees would be cut. They would be retained in the natural state. That would provide the buffer there.

SIZE OF STRUCTURE

Senator BYRD. What would be the size of the structure above the surface?

Mr. McLEOD. We haven't determined the type of plant we would build yet. It could be an activated sludge plant. In any event you would have a structure not more than two stories in height. Depending on the plant, depending on the plant similar to the parkway, you will have maybe a building 25 feet square of that nature. There may be two or three of them scattered around. From 3 miles it will look like a house. You see a lot of houses from Mount Vernon. As a matter of fact, you can look from Mount Vernon from the landscape and see a water pipe sticking up here which is necessary for the water system of Fort Washington Estates. These are not blights upon the landscape by any means.

Senator BYRD. They don't especially add to it.

Mr. MCLEOD. No, sir. They don't detract from it from Mount Vernon.

Senator BYRD. They are not attractive.

Mr. MCLEOD. I would say the man right next to it should be more concerned properly than somebody being concerned about Mount Vernon about 3 miles away.

Senator BYRD. Some of us might disagree with you on that point.

PARK PLANNING COMMISSION REPORT

Mr. MCLEOD. Very well, sir. I would like to say that the Commission is confining this consideration to sites over the Potomac River along Piscataway Creek area. We are thinking of sites over the Potomac River along Piscataway Creek area, and nothing in here. We also have a report from the Chairman of the Maryland National Capital Park and Planning Commission prepared by his director of planning who have jurisdiction over the area. They made a field inspection. Under their field inspection they say field glasses were used and no part of the site other than the tree tops could be seen anywhere along the Virginia shore either from Mount Vernon or any of the overlooks from Memorial Parkway. I include that.

(The information referred to appears on p. 1012.)

CONSIDERATION OF SITES

Mr. MCLEOD. In fact, the Commission is confining its consideration of sites off of the Potomac River shore and along the Piscataway Creek to the area east of Mockley Point. With the screening afforded by the existing trees none of the sites being considered are visible from Mt. Vernon.

Enclosed is a report transmitted by the Chairman of the Maryland-National Capital Park and Planning Commission prepared by his Director of Planning recommending the construction of a sewage treatment plant on the site proposed by the Commission. This area was recently added to the regional district of the Planning Commission which has jurisdiction over planning and zoning. You may note also under the "Field Inspection" that field glasses were used and no part of the site other than tree tops could be seen from anywhere along the Virginia shore either from Mount Vernon or any of the overlooks along the Memorial Parkway.

Also enclosed is a copy of a letter from Dr. Perry F. Prather, commissioner of the Maryland Department of Health, in vigorous support of the Commission's resolution and urging the construction of this plant with all possible dispatch.

(The letter referred to appears on p. 1014.)

REGIONAL SANITARY BOARD REPORT

Mr. MCLEOD. Dr. Abel Wolman, professor emeritus of sanitary engineering and Dr. John C. Gayer, chairman, the department of sanitary engineering and water resources, the Johns Hopkins University, international experts in public health, sanitary engineering, and water resources serving as consultants to the Washington Metropolitan Regional Sanitary Board, said in their recent report:

It is here recommended that the WSSC proceed with its plans to construct a treatment plant in the lower valley of Piscataway to serve the entire Piscataway, Swan, and Henson Creek watersheds.

The Commission has prepared engineering and cost data for a number of possible plant sites, and this information indicates that the most desirable location would be within the projected national park area off the Potomac River out of view of the Virginia shore. The Commission feels that such a development with suitable landscaping could take place adjacent to the park reserve with complete compatibility.

LAUREL AREA TREATMENT PLANT

As an example, I would like to call attention to this Commission's parkway sewage treatment plant, which was completed in 1959 and serves a large portion of the Patuxent River Basin in the Laurel area of Prince Georges County. This facility is so neatly landscaped and well fitted into the virgin forest left standing on the property that few, if any, of the thousands of motorists who daily use the Baltimore-Washington Parkway are aware that the plant exists immediately adjacent to this beautiful highway.

Mr. Thomas Wolfe, staff reporter for the Washington Post, reported in the January 31, 1962, issue:

No smell or unsightly functional architecture will intrude upon Mount Vernon. Secretary of the Interior Stewart Udall said yesterday, negotiations have begun to turn the entire Maryland shoreline that is visible across the Potomac from Mount Vernon into a national park.

The Sanitary Commission does not agree that this is necessary.

VIRGINIA'S TREATMENT PLANTS NEAR MOUNT VERNON

It should be of interest to the committee to note that there are two existing sewage treatment plants in Virginia considerably closer to Mount Vernon than any which would be constructed by this Commission. One of those is located on the Little Hunting Creek 1¼ miles north of Mount Vernon, and the other on Bogue Creek 2¼ miles west of Mount Vernon. Since we have not heard of any odor problems from these nearby plants, which if they existed certainly would be carried by the prevailing winds to Mount Vernon, one hardly could expect a problem with a site more than 3 miles away located downwind.

ANTICIPATED GROWTH OF BROAD CREEK AND PISCATAWAY BASINS

In view of the anticipated growth of the Broad Creek and Piscataway Basins to a total population of 300,000 by the year 2000, in accordance with projections of the National Capital Regional Planning Council, a regional sewage disposal facility to serve this area must be built without further delay. Since present concepts of waste disposal do not permit consideration of the discharge of raw sewage into the water courses of the Washington metropolitan area, regional disposal, with necessary treatment facilities, is the only answer to the present and long-range needs of this area of Prince Georges County.

Senator BYRD. The doctors are in agreement, then?

Mr. MCLEOD. Yes, sir.

Senator BYRD. They could not be in the category referred to by Pope, who says "Who shall decide when doctors disagree." So the doctors are in agreement?

Mr. McLEOD. Yes, sir.

Senator BYRD. Then we have no problem there.

Mr. McLEOD. No, sir. This area projected for the year 2000, we are talking about 300,000 people. With that in mind the present concept of waste disposal does not permit any consideration of discharge of raw sewage in the water courses of Washington metropolitan area; regional disposal, with necessary treatment facilities, is the only answer to the present and long-range needs of this area of Prince Georges County.

The question comes up, Suppose we don't build anything, what happens? For Washington Estates will build their plant which will be seen from Mount Vernon. Another developer wants to build here. I might point out that they will have to get a permit from the Washington Sanitary Commission and the State Department of Health, and as I am advised by our attorney and the State health department people we could not deny a permit if they met the health requirement.

FAILING SEPTIC TANKS

You also have developers here, and the more pressing thing is the fact that along the upper part of the watershed, there are about 20,000 people in the area, about 8,000 of which are in Andrews Field but those whose uses are being developed with septic tanks. Those septic tanks are failing. We are going to have to provide a sewage facility to take care of it. We are not concerned with developers. We are concerned with the existing houses. These people are a real problem. They come to the Sanitary Commission and say you will have to do something about it. We say that is our job and we will do so.

Fortunately with the developers we can get some money from them and make it larger and serve the whole area. So the developers are really helping to solve a problem and not creating one. The problem is there now. We have considered other possibilities. I think you raised that question. One is to put a pumping station in this area and pump to Blue Plains.

However, the regional sanitary board consultants have recommended against that both from the standpoint that it is expensive and also that it would be undesirable to add a greater sewage load on the upper part of the Potomac. The river in this location is in much greater position to absorb the affluent from the treatment plant. The other possibility is a joint project with Charles County on Mattawock Creek. Charles County officials are not in a position at this time to proceed. This project we would figure by the year 2000 on present-day costs would cost the Sanitary Commission about $6 million more in construction and maintenance and operating costs over the period of the 40 years. In other words, we are talking about an ultimate project here today at today's cost in the magnitude of $20 million, $26 million in Charles County.

RECOMMENDATION OF COMMISSION

There is no justification for spending the money. There would be no justification for spending even if Congress would say here is the $6 million. If you don't let us build the plant here, please give us the $6 million as the alternate. But there is no sound justification for

doing it. So what we are really asking is that the committee in making its recommendation limit the purchase of park lands to the area of Mockley Point south along the river and exclude any purchase of park land in Piscataway Bay to the east of Mockley Point. That would be this black-hatched area. If you will not do that that will make it possible that the Sanitary Commission could construct a treatment plant in the park area. That is not inconsistent. The question has been raised as to these treatment plants.

SEWAGE FACILITIES IN FLORIDA

For the benefit of the committee, I just got back from a trip last week making an inspection of some sewage treatment facilities in Florida. There is a plant at Clearwater with a large development around it, this happens to be a completely enclosed plant. On Treasury land is a sewage treatment facility and a restaurant backs right up to it. In Coral Gables they have a sewage treatment plant with a motel across the street and I had a friend who went down and spent 8 days and didn't realize there was a sewage treatment facility across the street. So these things can be screened. They are not the problem. Of course, it is the thing that gets you when you say a sewage treatment plant. Nobody wants it. It is something we all have to have. We are asking your committee to make it possible to construct the much needed facility.

Thank you, sir.

OPPOSITION TO PARK PROPOSAL

STATEMENT OF WILLIAM EDISON OWEN, REPRESENTING PRIVATE LANDOWNERS WHOSE LANDS WILL BE TAKEN UNDER BILL

GENERAL STATEMENT

Senator BYRD. Mr. William Edison Owen.

Mr. Owen, you represent private landowners in the area whose land will be taken?

Mr. OWEN. Yes, sir.

Mr. Chairman, my name is William Edison Owen. I represent the private landowners in this area whose lands would be taken. Most of these owners are farmers. It is made up primarily of three large farm tracts. We have prepared a little map here to assist parties interested in seeing the problems involved. We, of course, are not against George Washington or the party for which he stood. We are against the sewer plant. We are against unreasonable encroachments and governmental forceful taking of our property that have been our properties from birth and our parents' properties from birth. We are dealing with properties here to be taken by the Federal Government for a purpose. The ultimate purpose is noble and we are in favor of protecting Mount Vernon. The only question raised is how tenuous that protection should be extended before it is understood to be unreasonable.

Just exactly how far should we go to protecting the shrine of George Washington at Mount Vernon or the shrine in the District of Columbia? Apparently everything that can be visible from Mount Vernon

80391—62——63

should be eradicated or put in the same position as when George lived there. I have heard nothing that everything visible from the Washington Monument be condemned by the Government. I am sure that George Washington was not as adamant when he lived there in requiring what the property owners across from him should do with their land as those who would now stand in his shoes. The chairman can see from this blue line emanating from Mount Vernon to the north and from Mount Vernon to the south, the various tracts of land that are directly across from Mount Vernon. This is a 2¼ mile distance to this short line where that intersects, this is a 1½ mile distance.

VOLUNTARY EASEMENTS

The Chairman will notice that the blue markings are the various tracts of property. This tract is already owned by one of the foundations that wants to donate. This tract is owned by a foundation for donation purposes. In this area here, the owner will voluntarily give easements at no cost to the Federal Government. This area of hatch marks is owned by private owners who are interested in selling for a reasonable risk voluntarily to the Federal Government or to any one else. If this bill were limited to cover the area from this point on the Potomac opposite from Mount Vernon to this point, which is really across from Mount Vernon, there would be very little expenditure of Federal funds and no American citizen would be told to get out of his home. There must be some bounds to the limits that we will allow the taking of private property for the alleged protection of the view from Mount Vernon. It will be noticed by the chairman that one of the worst blights imaginable from a scenic point of view or from a moral point of view is the largest gambling casino in this part of the country. It is right across from Mount Vernon.

It is specifically exempted by the gerrymandering terms of this legislation. My clients' lands lie way back in this cove, the Piscataway Bay cove. Some 90 percent of the lands of my clients cannot even be seen from Mount Vernon and yet they are to be taken to protect its views. We would invite the distinguished Senator to a tour of our lands, and also a view from the Mount Vernon shore. It will have to be a very clear day for the Senator to even see what the citizens on this side of the river do. Usually the river is accompanied with a certain haze or mist which makes extremely difficult seeing and distinguishing with clear definition features on this side of the river. These lands back in here are the lands that are owned by the private farmers. Simply the statement of the proposition would raise some questions as to what is behind this. How does it happen that we are asked to extend to such an unreasonable degree the taking of private citizens' lands to protect Mount Vernon. We know why. We know that the Moyaone Land Development Co. is a big land developer. We know that they are a land grabber in sheeps' clothing. We know that they have been trying to get our lands for many years, 15 years, to buy them, to get us pushed out into the river by eminent domain. This same effort was attempted in 1955.

They have been trying to get rid of these nice farms that have been here for over 200 years from out of the midst of their development. They have the second best ground, the ground back away from the actual waterfront. It is, of course, a burr under their

saddle for these farmlands, if you will excuse the expression. They are manure spreading operations in their midst. The use of the farm machinery in their midst and what they consider is a very high-class development. They consider that they are a little different land development because you must be of a certain intellect to even buy in their area. They require that you pass certain tests. We feel that what has happened here is that the very noble ladies who are protecting Mount Vernon and have done such a good job for so long have simply been misled by a red flag being waved in front of them by this Moyaone Development Co. that wants this land either for their own purposes, have been trying to get it for years, or since they have given up on that, would like to see it paid for and bought by the Federal Government.

COSTS OF LAND ACQUISITION

Getting around to what this committee is more interested in—money—the figures suggested are quite in error. Our best estimate would indicate that it will be about $5 million for the acquisition costs of the land involved here, those that are to be taken in fee. Easements are to be acquired in the large land area beyond. We have signed statements from 61 of the 154 Moyaone landowners themselves that they do not care to donate and will be required to be paid the fair market value of these easements. These easement condemnations would run into many more millions. If you own a piece of property and another person has the right to tell you what looks good on it you are giving to that person the major value of that property. It will be up to a Federal court to determine the extent of the value that will be taken.

Furthermore, their own plans indicate that it will be a multimillion dollar installation that the Interior Department has planned for this park area, that is to say nothing of the continued cost of the yearly maintenance of such a project. We feel that for the expense of practically no money that Mount Vernon can be reasonably protected. We feel it is absolutely unnecessary to be all the way back up here 4¾ miles, almost 50 miles to take property that can't even be seen from Mount Vernon.

DEVELOPMENT ACROSS FROM MOUNT VERNON

The chairman will notice that there is already one development right across from Mount Vernon and a clear view of Mount Vernon within a quarter of a mile, a few hundred yards, which is one-quarter acre in each tract. You will notice that there are developments at the side gates of Mount Vernon behind there and all around there. There are sewer plants just within a few feet of Mount Vernon for these developments. This is some type of campaign that has been sponsored primarily for ulterior purposes.

Senator BYRD. Would you be a little more specific when you say "there are sewer plants within a few feet"?

Mr. OWEN. I believe the suburban sanitary commission has had the tacks put in the map. As I understand it, it was this development here.

Senator BYRD. Did he not indicate that it was something over a mile?

Mr. MCLEOD. That is right, about a mile and a quarter.

Senator BYRD. Thank you.

Mr. OWEN. Right here, sort of to the side of Mount Vernon.

Senator BYRD. When you said "within a few feet" I thought there should be another location that did not show up on the map. I thought it was something over a mile.

Mr. OWEN. I think that is my error. I thought there was one much closer. I thought it was on this side of the water. I stand corrected; it is on the opposite side. The view from Mount Vernon we are in favor of protecting, and have protected for many years. We think it is unconscionable for the Federal Government to take money that is so badly needed for other items to be used for this unnecessary purpose. If anything were to be done in the area that would be extremely objectionable there would be time to take proper action. The local zoning authority, usually the control of use of land is properly in government, a function of the zoning authorities. This land was not under any zoning authority when this move first started.

ZONING AUTHORITY

Now, however, we are happy to say that the Maryland National Park and Planning Commission under the State laws of Maryland has complete zoning authority as to who can build what in this entire area. I hesitate to anticipate that the Maryland National Capital Park and Planning Commission is going to do anything that would grossly insult this famous Mount Vernon shrine.

In closing, I would suggest that if moneys like this are to be appropriated for the memory of George Washington, that they be appropriated in condemning Mount Vernon itself, so that there will be a time when every man, woman, and child in this country can visit the home of our first President without having to pay the unreasonable price that is required to enter.

This shrine is now privately owned and those private owners charge admission charges for Americans to come to see the home of their President. Certainly this should either be subsidized by the Federal Government so that every man, woman, and child can see it whether he is rich or poor, or the shrine itself should be condemned and run by the Federal Government.

Thank you.

Senator BYRD. Mr. Owen, are you a landowner in the area?

Mr. OWEN. I have recently bought seven acres on Piscataway Creek about 2 or 3 miles back of the bay area that we are discussing here.

Senator BYRD. What are you, an attorney?

Mr. OWEN. Yes, sir.

Senator BYRD. Are you representing these landowners? Are they paying you to represent them?

Mr. OWEN. Yes, sir.

Senator BYRD. Thank you, Mr. Owen.

Mr. OWEN. I have very little experience at legislative liaison operations. I didn't even know where to file the lobbying registration, until I had investigated.

MOYAONE ASSOCIATION

STATEMENT OF MRS. SOPHIE ZADORETSKY, MEMBER

GENERAL STATEMENT

Senator BYRD. Mrs. Zadoretsky.

Mrs. ZADORETSKY. I have been preceded by engineers and lawyers. I feel rather inadequate.

Senator BYRD. I feel sure you will be very adequate.

Mrs. ZADORETSKY. I live in Accokeek. We own property in the Moyaone Reserve and I am a member of the Moyaone Association. I speak for myself and for a large number of people who belong to the Moyaone Association, and who own land in the Moyaone region not covered by the association itself.

FIVE-ACRE HOME RESTRICTIONS

We are opposed to Public Law 87–362 and to the proposition of a park in this area. I feel the lands are now adequately protected by 5-acre homesite restrictions, by other large parcels of land owned by foundations dedicated to preserving and conserving the land, by private individuals who have been farming this land for generations, and by local zoning laws which at present are rural-residential. At a hearing in Accokeek last night, called by the Moyaone Association, there were three gentlemen from the Department of the Interior, one of whom stated, I believe as far back as 1955 and even earlier, possibly 1940, plans were afoot to acquire these lands for a national park and recreational area, and, in effect, last summer when the matter of the sewage plant came up, there was the excuse they needed to push hard and fast for this bill. I believe that while the people living in this area, other associations, and even the Congress, were led to believe that we were being saved from a sewage plant, and that the lands would be held in a natural and wooded setting, the intent of the Department of the Interior to acquire this land had been there for many years, as early as 1940 and 1955. The bill's intent, we were led to believe, was to preserve and conserve, but last night we were shown perhaps from the Department of the Interior——

Senator BYRD. Would you like to show some maps?

Mrs. ZADORETSKY. I made a little copy, fast and hasty.

Senator BYRD. We would like to see it.

Mrs. ZADORETSKY. This is the printed map that the Moyaone Association had given us originally, and last night when the Department of the Interior held up its map of the feasible plans, this is what we copied down. We were shown plans from the Department of the Interior, with such conserving and preserving features as campsites, paved roadways in the proposed park lands, Indian villages, parking lots, and a visitor's center. And yes, a boat landing, possibly large enough not only to accommodate private boats but such large ones as used by the Wilson line. This boat landing is located in the open area. It is not wooded in the flatland, directly opposite from the view of the Mount Vernon veranda. Optimistic expenditure, had been hastily arrived at $937,000—this chiefly to pay for acquisition of land needed for the park which is shown there in the red area [indicating] and which would not be donated by individuals or founda-

tions. This $937,000 does not cover, I understand Department of the Interior representatives say, moneys that would be needed for scenic easement.

OPPOSITION OF LANDOWNERS

Mr. Chairman, there is a statement we have of 61 landowners, who state that they will donate no lands or any property rights to anyone, including easements, and if the Federal Government takes their land, they would be expected to be paid full value for their land. This would add an increase to the original figure.

COST OF MAINTENANCE

Thirdly, there are no funds requested at this time to cover the grandiose plans of the Department of the Interior to preserve and conserve this land via campsites, parking lots, nature trails, and paved roads. This should run into millions. I really don't know. I think it would cost a great many more dollars. It does not include the costs of yearly maintenance. If I remember from last fall's hearings, it was stated this would be about $30,000 a year. By the time you are through, you will see that $937,000 is a highly underestimated figure.

We have a report from the Moyaone Easement Committee which reads that if the Park Service budget requests should be shown to be too small, they will return to Congress, if not this year, next year, and the year after that and after that, for additional sums of money. And this can go on forever. I sincerely urge the committee to disapprove funds to implement this bill.

TRIBUTE TO WITNESS

Senator BYRD. Mrs. Zadoretsky, you have not only proved to be adequate, but you lead us to believe that you are an experienced lobbyist.

Mrs. ZADORETSKY. I am not. This was typed after breakfast and I am ashamed to submit it but I hope my remarks are on the record.

Senator BYRD. They are on the record. I would be willing to wager that the engineers and lawyers to whom you referred would be willing to take a few lessons from you.

Mrs. ZADORETSKY. Thank you.

MOYAONE ASSOCIATION

STATEMENT OF WILLIAM DEWEY HANSON

GENERAL STATEMENT

Senator BYRD. Mr. Hanson.

Mr. HANSON. My name is William Dewey Hanson. I live in the Moyaone Reserve area. I am one who lives in one of the original sections for about 15 years, not having lived there quite all that time. The first 2 years was spent in making pilgrimages down to my land and building a house. I have built a home in that area on my land, which would be in the visual easement area and not in the other portion of the land. Mount Vernon has always been a favorite spot of mine to visit. I have visited there four or five times.

From where I live, I am sure that there is no portion of my land that is visible from Mount Vernon. A large percentage, I would say the much greater percentage of this land in the visual area is not actually visible from Mount Vernon. There are some places overlooking the valley, the river valley, who do have vision from Mount Vernon. But this land is all a wooded area and rugged terrain. It is 5-acre or more tracts.

There are many, many tracts of land. It has grown and developed, and I would say that probably there are more than 75 homes in this area. My land, or most of it, slopes away from the riverfront. Therefore, I have two corrections on my land in the background. I have not seen any change, particularly in this whole area from the standpoint of what effect the scenic view of the land. It remains about the same as when I settled there in 1949, just about the same. There are some houses built in there but none of them are hardly visible from a distance of perhaps more than 200 or 300 yards, since most of the people who live down there seem to prefer to live in among the trees and just have trees around their homes. I do have a little more clearing on my land than some of the other people do.

ACCESS TO PARK

My main concern would be this: If this is opened up as a public park area, the main access to this park would have to be the Bryan's Point Road, already a county black-topped road which runs, I would say, about 4 or 4½ miles, maybe 5 miles, down to a place right on the shore of the Potomac River at Bryan's Point.

INFLUX OF TOURISTS

My concern, as I say, is what protection will the people have, who have built their homes, and have invested their savings, if we have an influx of tourists. There are roads coming in not only from the Indian Head Highway down to Bryan's Point Road, but there are other roads coming in from the old Marshall Hall Road that goes back down to Livingston Road. There are roads coming through even a part of what is called Apple Valley, where tourists could find themselves seeking access to this park area. If we have thousands of people coming down there it will present somewhat of a problem of policing the area. They say—I have made a number of pilgrimages to Mount Vernon—and I never did see very much what was on the other side of the river. I was there primarily to view Mount Vernon and not to view what was across the river.

I would say nearly 99 percent of the people who come to Mount Vernon come there to see what there is at Mount Vernon and not what there is across the river. If they want to see what is across the river, I imagine they could better see it by coming down to Bryan's Point Road and looking at it from that side. My impression was when I was there at Mount Vernon, and I looked across the river, and I saw the shoreline. It has been very well preserved.

5-ACRE TRACTS

The Moyaone Association has sold 5-acre tracts there and there are no small buildings there; there is no reason to believe there ever

will be any bunch of small houses or small lots built in there because of the fact that these lots are protected by covenant. They will not resell their lots in less than five acres. I am under that kind of provision.

I could not sell my property unless I sold it in 5-acre tracts. My property would be practically impossible to build houses on. I don't think there is much danger of there being a bunch of small housing developments in that area that is in the scenic area for the reason that it is not feasible.

My land is 150 feet above sea level. When you go down to the two creeks that run through my land, I think the elevation there is from probably 10 to 15 feet above sea level.

So land like that and most of the land in there is not feasible for building. I am most concerned about what will happen if there is an influx of thousands of people coming down into this area there, if there is not some different access made. We have our homes there. Our children are raised there. We have a recreation area there of our own, a swimming pool, and I just wonder how it will affect that and how it will affect the value of the property.

I would like to say that I am not opposed to protection of the view from Mount Vernon, but I believe it is too extensive; that they have land that is directly across from Mount Vernon. I don't think some of these farms over there could affect the visual view very much from Mount Vernon. If people had long glasses that they could look for miles with, and they sat around on the lawn at Mount Vermon and spent enough time, they could probably pick out a few objects over in that area.

As I say, I like it the way it is there. There is even a lot of wildlife in there. Right now there are several eagles that come to my land to build a nest on the back of my land. So I think the whole area down there has been well preserved. There are deer, and there are racoons and squirrels. The only time that we have ever been—I would not call it molested—but we put up "No hunting" signs, but the squirrel hunters do come in there and hunt squirrels.

If this park is opened up with a lot of attractions down there, it seems to me that there will be such an influx of people coming down these highways and roads, and that will present quite a problem, it will have to be policed there. It will make it less desirable to live in that area as a homeowner.

OPPOSITION TO EXTENSIVE PARK

I am not opposed to them having a parking area in there but I think it should not be made so extensive. I feel keenly for men like Robert Smith and the Claggetts. These men have had these farms for years, all their lives. The Claggett family has been there for several generations. To come and take their lands that they have their life wound up in, it seems to me that should be certainly scrutinized very carefully. Mr. Smith is a farmer and he is one of the best farmers in Prince George's County. His farm is a credit to that area. I don't see that his farm affects the view. He has farm buildings there, but I was born and raised on a farm. I wouldn't be out there on this 16½ acres if I didn't like the country. I do like it out there.

Senator BYRD. God created the country.

Mr. HANSON. That is true. It is beautiful out there. I wish you would have an opportunity to come out and see our area.

Senator BYRD. I am sure that I would enjoy that.

Mr. HANSON. We will be glad to have you. I certainly think that the suggestion that was made by Mrs. Zadoretsky and the attorney, that it be limited to the actual area across the river, rather than to take in all these farms and this easement area except where it might actually affect the view of Mount Vernon—well, that is something different. I don't believe it has affected it very much now.

MARSHALL HALL

This Marshall Hall down there is much more an objectionable thing. Then there is still another question in my mind and that is this: Do they have any park areas other than the strip going along the river along Mount Vernon to protect the view in the other direction away from Mount Vernon? Are there any parklands in there? I think Mount Vernon is primarily a shrine for what you can see when you go to Mount Vernon and look across the river and not see anything too objectionable, that satisfies every human need that we have, rather than to try to take in too much area. Besides, I think there are other things that perhaps may be of more importance.

AREAS OF UNEMPLOYMENT

For instance, some of the areas where there are people out of work due to economic conditions in States like West Virginia and some of the other States to the south, where people are out of employment, and I don't think it is necessary to spend so much money for things that are not absolutely necessary.

I would prefer to see these underdeveloped areas, or areas that have been hit by what is called disaster. I believe we have some of those, don't we, Senator?

Senator BYRD. Yes, we do.

Mr. HANSON. That need these funds. I think these funds can be better spent there and wait a while until we get the old war settled and have a lot of money to spend for these things. Right now, I think defense is about the most important thing we have to deal with. If taxpayers should be thought of somewhat in all these ventures. I want to thank you very much for this opportunity.

Senator BYRD. Mr. Hanson, you have made a very good statement, a very persuasive one. I won't forget your invitation to come down to your home sometime.

Mr. HANSON. I will be delighted to have you come down to see us at our home. I will be glad to give you the directions, if I have the opportunity.

Senator BYRD. Thank you.

Mr. FINNEY. I am interested in the Moyaone Reserve and I did not intend to speak this morning. I am so shocked about some of the false assertions that have been made a few minutes ago I would like to make a few statements, if I may.

Senator BYRD. I think it will be in order. What is your full name?

STATEMENT OF WILLIAM FINNEY, MOYAONE RESERVE

GENERAL STATEMENT

Mr. FINNEY. My name is William Finney. I am a resident of the Moyaone Reserve and I am one of the land grabbers in sheeps' clothing that were identified a few minutes ago in that I built a home in the reserve 2 years ago.

A year ago my fellow members elected me to the board of directors and secretary of the association. So I must take full credit for the assertion that we are nothing but a bunch of landgrabbers down there, taking land.

I am an employee of the Navy Department, a physical research physicist. The others on the board of directors are in similar situations. We are all elected annually. We will be kicked out in 3 or 4 weeks and a new board elected from the residents of the association. This is, together with Mr. Hanson, I think, a very excellent description of the type community we have there and what your purposes are, I think, sets the position that I had hoped to establish here. I do want to point out particularly, in connection with the assertion that this is a real estate development corporation, that we are residents. We serve as elected by our fellow landowners-residents of the area. This is our only situation there. Mr. McCloed referred to the MECP and Wolman reports and I believe introduced in evidence extracted sections of those supporting the sewage plant on the Piscataway Bay.

I wish to ask that the entire Maryland National Capital Planning Commission report and the entire Wolman report be accepted in evidence, also. We will send these to you. Because the National Capital Park and Planning report says, build the plant on Mattawoman Creek.

Senator BYRD. Permit me to say that the acting chairman was going to request that this material be produced, not for the record, but for the committee files.

Mr. FINNEY. The entire report?

Senator BYRD. Yes, sir.

WOLMAN REPORT

Mr. FINNEY. Thank you. The Wolman report says, build the plant in Piscataway Creek now and abandon it in 1980 and then build it on Mattawoman Creek. This is different than what Mr. Owen said here.

Senator BYRD. You know Solomon had a difficult time in determining the mother of the child, but he was a wise man. I am beginning to believe that the committee is going to need something more than the wisdom of Solomon to determine who has the best argument here.

Mr. FINNEY. I certainly see your point.

Senator BYRD. I just said that facetiously. Forgive me for interrupting you. Go ahead.

ADEQUACY OF SEWAGE FACILITIES

Mr. FINNEY. Mr. Dyer is a sanitary engineer and has a very solid basis for feeling that sewage facilities should be adequate for any area and we completely concur in this. I would point out that the

year 2000 plan to which he referred as being adequate to take care of the situation down here specifically precludes the very developments which these two developers—and I would like to give you a map of which you already have a copy—which shows—I believe you have a different one—the overlay on this one shows the developers who are pushing this plant of the property on the north side of the bay, where the plant goes where Mount Vernon is. The year 2000 plan which was also referred to earlier by Mr. Dyer specifically precludes these developments and includes this development here as a large acreage zoning which they define as 5 acres and larger. The very developments which are the basis for the urgency of a plant right now are the ones which go completely contrary to the county commissioners' plans, to the park and planning commissioners' master plan for the area.

In spite of your reference to Solomon, I think this is very apropos to what I am going to say.

Senator BYRD. Do you know the story?

Mr. FINNEY. Yes, I do, very well. I wish to counter the argument that this area is not clearly visible from Mount Vernon. The region between Mount Vernon and all of the sites talked about here has no elevation higher than 10 feet. It is flat all the way across there. The area back toward where Mr. Hanson is is very hilly, where my home is is very hilly. There is no visibility.

BLUE PLAINS PLANT

Along this area there is a visibility. A plant much smaller than Blue Plains plant would be clearly visible the entire section here. The Blue Plains plant has 20 or 30 buildings. Many are 30 feet high, many are 100 feet long.

This is a typical sewage plant. The Blue Plains plant is the District's sewage plant on the south side of the city.

Senator BYRD. Was that on the map?

Mr. FINNEY. I could not see the map. I was behind the map and I could not tell. It is 10 miles north of here. It is a plant which most of us know quite well because we pass it going back and forth to work every day.

It is a sewage plant somewhat larger, but comparable to what the long-term plan for this one, as they speak of their many hundreds of thousands of people, gets up to be. This is a monstrous plant. The buildings are far higher than anything that can be concealed by present trees; certainly, by any land left after trees are taken off.

I feel this was a misleading sort of statement. I don't know what one can do to improve things such as this. I wish to submit finally, a letter sent by the president of our association to the House of Representatives. It tries to explain why this petition which has been stated as having 61 signatures, I believe at the last moment, is a misleading representation of the entire situation. The petition says in its second sentence, the one which our people signed, "I will not donate my land to the Federal Government for a park." Most landowners anywhere would support that without much question. The petition tacks on riders, people who have signed the petition have disclaimed and have gone along with another statement which you have, saying we would be glad to give easements on our land which

is already under covenants, we will be glad to donate these to the Government to help this bill.

Senator BYRD. This is a letter from Mr. Ravner, president of the Moyaone Association.

Mr. FINNEY. I wish to incorporate that in the record.

Senator BYRD. It will be included in the record.

(The letter referred to follows:)

THE MOYAONE ASSOCIATION, INC.,
Accokeek, Md., March 8, 1962.

LETTER TO MEMBERS, HOUSE OF REPRESENTATIVES

On February 8, 1962, I wrote to you in support of the requested appropriation of $937,000 to implement Public Law 87–362 to preserve the wooded and open character of the Maryland shore opposite Mount Vernon. Since then you and other Members of the Congress have received a letter and a petition from Messrs. Ballowe, Faw, and Zadoretzky of this community. This distorts the position of the Moyaone Association and may mislead the Congress regarding the status of lands in the area covered by the bill. For over 15 years the Moyaone community has consistently joined with other citizen and conservation groups in efforts to protect this small part of our Nation's natural heritage from destruction by oil tank farms, sewage plants and other industrial installations for which there is already a suitably zone area. It has not changed its position.

My letter of February 8 accurately reflects the expressed position of the Moyaone Association. The subsequent petition and related material which were presented to the signers and to the Congress omitted or distorted many relevant facts. The material is now being used as part of a well-organized campaign by big deverlopers and the Washington Suburban Sanitary Commission to locate a major sewage plant on Piscataway Bay, across from, and in view of, Mount Vernon, Fort Washington, and the Memorial Parkway. The financial support back of this campaign, and the pressures bieng brought to bear on individuals and small organizations standing in the way of the sewage plant, is well demonstrated by the Honorable Mr. Saylor in the Congressional Record of February 22, 1962. He showed that a private developer has offered a half-million dollars to get this sewage plant built on Piscataway Bay.

The Moyaone Association is a free association of residents and small landowners whose hard work for over 15 years has demonstrated that free enterprise can work to preserve the natural beauty and heritage of our country rather than to destroy it. The members have, on a voluntary, democratic, and nonprofit basis, secured and placed under scenic and use restrictions several miles of rolling timberland along the south shore of the Potomac River and Piscataway Bay opposite Mount Vernon.

At its last membership meeting on December 4, 1961, the Moyaone Association voted the following resolutions with no opposing votes:

"*Resolved*, That appropriate Members of the Congress of the United States and other appropriate officials be informed that the Moyaone Association remains strongly opposed to any steps that would interfere with the activation of Public Law 87–362 or with appropriation measures required for its implementation."

Two-thirds of the voting membership of the association voted for this resolution, the remaining members being absent or abstaining. At the same meeting, over three-quarters of the voting membership voted the following resolution:

"*Resolved*, That the Secretary of the Interior be urged to provide easements which are in keeping with the 5-acre homesite pattern of development that has been begun in the area, allow land to continue in its present use, usually agricultural or residential, and which restricts any cutting of trees that would materially change the wooded appearance and cover of the area; and that the president of the association appoint a committee of members from all sections of the Moyaone reserve to study more detailed easement recommendations; the committee to work with other organizations and interested individuals and to work up plans for land use in the area, and that the committee report to the membership and guests at a membership hearing prior to a membership meeting to act on easement recommendations developed."

Again there were no opposing votes. The remaining members being absent or abstaining. The vote on these resolutions followed several hours of discussion and legal testimony on the bill by Mr. Reed, a lawyer who is a resident of the community and an employee of the Navy Department, and Mr. Owens, a lawyer

brought to the meeting by Mr. Ballowe, who is a resident of the community and vice president of Volpe Construction Co.

As to my other point, the skillfully worded petition sent to you stated in its second sentence: "I do not plan, and have no intention whatsoever to donate my land to the Federal Government for use as a Federal park or any other use." Most landowners anywhere would support this statement, but it is of course wholly irrelevant to the situation, and consequently misleading. The petition was sent for signature to selected landowners in the Moyaone reserve with a covering letter which began: "FELLOW MOYAONE OWNERS: There is presently a move afoot to cause all of us to donate our land or lesser interests therein, in the form of valuable easements, to the Government for a Federal park * * *" There is, of course, no "move afoot" to cause any private owners of land in the Moyaone reserve to donate their land or valuable easements to the Federal Government for any use.

In connection with a statement, put at the end of the petition, " * * * I shall expect to be paid the full fair market value that the law allows for that of which I would be deprived", what the deprivation would be should be made clear. The land in the Moyaone reserve is now divided into tracts of 5 or more acres. Current contract or covenants forbid the further subdivision of the land into tracts of less than 5 acres and, in these areas most directly in view from Mount Vernon, generally restrict clearing of woods that would materially affect its open and wooded character. An easement committee, appointed under the second resolution quoted above, has been informed by the representative of the Secretary of Interior, Mr. Raymond Freeman, that easements containing the provisions of the present Moyaone reserve land use covenants would fully meet the purposes of the bill.

This point is particularly important. Paid opponents of the preservation bill, Public Law 87-362, are now using the petition material before committees of Congress. They do this to support claims that an additional major appropriation would be required to pay for the large loss of land value caused by visual easements in the Moyaone reserve. This is an effort to reduce the area covered by the bill and thus immediately open the way for a large sewage plant on Piscataway Bay.

In addition to more than 500 acres in the 2(b) area owned by foundations who have signified their willingness to donate land for appropriate preservation under Public Law 87-362, about two-thirds of the acreage in the 2(c) area is under the voluntary use restrictions of the Moyaone reserve. These present restrictions are generally consistent with the visual easements proposed to our committee by the Department of the Interior. The Moyaone Association has approximately 44 voting member families and there are also about 97 lot owners who have not yet built. While the association has not, and cannot, state to Congress or the Department of the Interior that the private landowners in the Moyaone reserve will donate anything to the Government, many owners have individually stated that they will voluntarily donate visual easements without monetary compensation. Others have indicated they will not. Many private owners of land outside the Moyaone reserve who are affected by the bill have not placed any voluntary restrictions on the division or use of their land, and may of course require larger payment.

On behalf of the Moyaone Association, I again earnestly request your support of the appropriation of $937,000 recommended by President Kennedy to implement Public Law 87-362. This will preserve this area and preserve the view and atmosphere of Mount Vernon and Fort Washington from a large and currently unneeded sewage plant. The local county government has no veto power over the plans, operations, and the power of eminent domain of the Washington Suburban Sanitary Commission. It was clearly demonstrated during the last days of Congress before the Christmas recess that this desecration can be stopped only by the Federal Government implementing Public Law 87-362. As Senator Anderson said in his Senate speech on February 22, 1962, "I am sure there are alternative sites where a sewage treatment plant can be erected, one capable of meeting the future needs of the area as well as the present."

We and those with whom we have worked—the Mount Vernon Ladies' Association, the Calvert Manor Citizens' Association, the National Wildlife Federation, The Citizens' Committee on Natural Resources, and other groups—can go no further with this matter of important public interest by free enterprise alone. We ask that the Congress and these groups again demonstrate here, how free enterprise and our Federal Government can work together, to mutual advantage, to preserve the natural beauty and heritage of our country.

Sincerely yours,

HAROLD RAVNER, *President.*

Mr. FINNEY. Thank you very much, Mr. Chairman. I appreciate this extra time. I thought these things should be illustrated.

Senator BYRD. Thank you very much. I think everybody has made a very good statement, both the proponents and opponents.

STATEMENT OF WILLIAM C. MOORE, OF ACCOKEEK, MD.

GENERAL STATEMENT

Mr. MOORE. I am a resident of this area and I would like to make some statement.

Senator BYRD. I hope this won't go on and on.

Mr. MOORE. This will be very brief.

Senator BYRD. Mr. Moore, you may proceed.

Mr. MOORE. My name is William C. Moore. I am a resident of Accokeek, this area, not in the Moyaone reservation. There is quite a lot of land beside that. It seemed to me that in the hearing this morning there has been a great deal of emphasis placed upon the esthetic and the beauty that is involved, particularly on the prospect from Mount Vernon.

ADEQUATE SANITARY FACILITIES

Over against that, there is another consideration which I think is more important to people; namely, their health and welfare. There are a great many people's lives who are involved in this. I am referring to the people living up the watershed now, that Mr. McLeod and Mr. Dyer pointed out, are now suffering hazards and peril with possibilities of epidemics because adequate sanitary facilities are not available, and they should be made available, and an excellent and capable commission stands ready to make it available. This seems to me is the overriding consideration in thinking of this whole problem.

I might also say that I can see no reason why the esthetic conditions cannot be served and the prospect from Mount Vernon and the general area be maintained, at the same time providing for the most effective, most economic sanitary facility possible, as outlined by competent engineering to you today.

In other words, there really is no opposition between the two. I think that any public official would be very ill advised to take a position contrary to the health and welfare of the people and specifically the people in the watershed area of the Piscataway Bay. This is my thought on the subject.

Senator BYRD. Thank you, Mr. Moore. You have made a very good statement.

WASHINGTON SUBURBAN SANITARY COMMISSION

(NOTE: Subsequent to the committee hearing the following communications from the chairman and the chief engineer, Washington Suburban Sanitary Commission were received:)

WASHINGTON SURBURBAN SANITARY COMMISSION,
Hyattsville, Md., March 9, 1962.

Hon. CARL HAYDEN,
Chairman, Subcommittee on Appropriations, Department of the Interior and Related Agencies, U.S. Senate, Washington, D.C.

DEAR SENATOR HAYDEN: I very much appreciate the opportunity to present this commission's views on the appropriation for the purchase of national park lands adjacent to the shore of the Potomac River opposite Mount Vernon. The Washington Suburban Sanitary Commission feels there is much merit to the preservation of not only the Maryland shore of the Potomac River but the Virginia side as well. However, I want the record to clearly show our objection to one aspect of this legislation.

For those who are not familiar with the local government agencies in the metropolitan area of Washington, I believe it would be desirable first to describe very briefly the responsibility and authority of the Washington Suburban Sanitary Commission. It is an agency created by the General Assembly of the State of Maryland in 1918 for the express purpose of providing water supply and sewage disposal facilities in the metropolitan area of Maryland adjacent to the Nation's Capital. The commission is a bicounty public agency operating under the laws established by the general assembly of the State. At the present time it has jurisdiction over the construction of all water supply and sewerage systems in Montgomery and Prince Georges Counties. It is immediately responsible for furnishing these services in a 475 square mile area. There are now over 600,000 persons residing in this area who are served by commission-operated facilities.

When the Senate committee held a hearing on the bill authorizing a national park opposite Mount Vernon, I appeared before the committee. At this hearing it was clearly understood by all present that the purpose of the bill was to preclude the construction of a sewage treatment plant anywhere in this part of Prince Georges County. It is to this aspect that I now take issue.

After thorough study of the needs for a sewage disposal system to serve the Piscataway and Broad Creek drainage basins in Prince Georges County and careful consideration of the alternatives for providing this important public service, the Washington Suburban Sanitary Commission resolved to proceed with development of this regional system and to locate the necessary sewage treatment facility on the southern shore of Piscataway Bay.

I would like to submit a copy of the commission's resolution for the record of this hearing.

From the outset of my presentation, I would like to point out that the commission determined, as you will note from the resolution, that it will not give any further consideration to Mockley Point as a location for a Piscataway treatment plant. The resolution further assures that the Washington Suburban Sanitary Commission "will not consider, nor finally select, any site which would adversely affect or otherwise detract from the Mount Vernon vista."

In fact, the commission is confining its consideration of sites off of the Potomac River shore and along the Piscataway Creek to the area east of Mockley Point. With the screening afforded by the existing trees none of the sites being considered are visible from Mount Vernon.

Enclosed is a report transmitted by the chairman of the Maryland-National Capital Park and Planning Commission prepared by his director of planning recommending the construction of a sewage treatment plant on the site proposed by the commission. This area was recently added to the regional district of the planning commission which has jurisdiction over planning and zoning. You may note also under the "Field inspection" that fieldglasses were used and no part of the site, other than treetops, could be seen from anywhere along the Virginia shore either from Mount Vernon or any of the overlooks along the Memorial Parkway.

Also enclosed is a copy of a letter from Dr. Perry F. Prather, commissioner of the Maryland Department of Health, in vigorous support of the commission's resolution and urging the construction of this plant with all possible dispatch.

Dr. Abel Wolman, professor emeritus of sanitary engineering and Dr. John C. Geyer, chairman, the Department of Sanitary Engineering and Water Resources, the Johns Hopkins University, international experts in public health, sanitary engineering and water resources, serving as consultants to the Washington Metropolitan Regional Sanitary Board, said in their recent report: "It is here recommended that the WSSC proceed with its plans to construct a treatment plant in the lower valley of Piscataway to serve the entire Piscataway, Swan and Henson Creek watersheds."

The commission has prepared engineering and cost data for a number of possible plant sites, and this information indicates that the most desirable location would be within the projected national park area off the Potomac River out of view of the Virginia shore. The commission feels that such a development with suitable landscaping could take place adjacent to the park reserve with complete compatibility.

As an example, I would like to call your attention to this commission's parkway sewage treatment plant, which was completed in 1959 and serves a large portion of the Patuxent River Basin in the Laurel area of Prince Georges County. This facility is so neatly landscaped and well fitted into the virgin forest left standing on the property that few, if any, of the thousands of motorists who daily use the Baltimore-Washington Parkway are aware that the plant exists immediately adjacent to this beautiful highway.

Mr. Thomas Wolfe, staff reporter, for the Washington Post reported in the January 31, 1962, issue, "No smell or unsightly functional architecture will intrude upon Mount Vernon, Secretary of the Interior Stewart L. Udall said yesterday, negotiations have begun to turn the entire Maryland shoreline that is visible across the Potomac from Mount Vernon into a national park." The sanitary commission does not agree that this is necessary.

It should be of interest to the committee to note that there are two existing sewage treatment plants in Virginia considerably closer to Mount Vernon than any which would be constructed by this commission. One of these is located on the Little Hunting Creek 1¼ miles north of Mount Vernon and the other on Dogue Creek 2¼ miles west of Mount Vernon. Since we have not heard of any odor problems from these nearby plants, which if they existed certainly would be carried by the prevailing winds to Mount Vernon, one hardly could expect a problem with a site more than 3 miles away located downwind.

In view of the anticipated growth of the Broad Creek and Piscataway Basins to a total population of 300,000 by the year 2000, in accordance with projections of the National Capital Regional Planning Council, a regional sewage disposal facility to serve this area must be built without further delay. Since present concepts of waste disposal do not permit consideration of the discharge of raw sewage into the water courses of the Washington metropolitan area, regional disposal, with necessary treatment facilities, is the only answer to the present and long-range needs of this area of Prince Georges County.

This commission has no regional sewerage facilities in these drainage basins; and, if such facilities are not provided, the expected pattern of growth would require the construction of many privately owned small treatment plants, discharging effluent into Piscataway Creek, Broad Creek, and their tributaries. Since the capacity of these streams to assimilate sewage is limited, they soon would become polluted with organic residue from the treated effluent to such an extent that they would become unsightly, odorous, and a potentially serious health hazard. This would create exactly the problem which the Congress is attempting to eliminate through its national pollution control legislation.

The commission has considered a number of suggested solutions to the problem of providing regional facilities for this 100 square mile area. These have included—

(1) The pumping of sewage to the Blue Plains plant in the District of Columbia. As pointed out by Dr. Abel Wolman and Dr. John Geyer in the draft of their study for the Metropolitan Washington Area Regional Sanitary Board, this solution is expensive and there is no merit to pumping the sewage upstream to Blue Plains for discharge into an already heavily loaded river in the center of the metropolitan area.

(2) Construction of a joint project with Charles County at the mouth of Pomonkey Creek in the vicinity of Indian Head, Md. This is the much-touted Mattawoman Creek alternative. Charles County officials have informed us of their decision not to participate in a joint project at this time, or in the near future.

Estimates show that it would cost the WSSC (and, of course, ultimately the taxpayers of the bicounty Washington Suburban Sanitary District) about $6 million more to serve the anticipated population by a Charles County plant, rather than by a facility located on the southern shore of Piscataway Bay. Such an additional expense would not provide service for any additional area of Prince Georges County.

Most of the residents of Prince Georges and Montgomery Counties in Maryland are familiar with the public health hazards of widespread residential development with individual septic tank systems or small treatment facilities. Camp Springs and Clinton, which lie in the upper reaches of the Piscataway Basin cannot expect relief from serious septic tank problems until regional facilities are built. The other thousands of homeowners who live, or will live, in these drainage basins also deserve service from a reliable, permanent, regional system.

The Washington Suburban Sanitary Commission is one of the national pioneers in the field of regional sewage disposal planning and development. Through its efforts, pollution has been eliminated from such streams passing into the National Capital as Rock Creek.

The southern shore of the Piscataway Bay is a logical place—economically, operationally, and aesthetically—for the location of a sewage disposal facility. I therefore request, in recognition of the evidence presented, that this committee limit any appropriation it may recommend for the purchase of national park land across the river from Mount Vernon to exclude the purchase of any land along the south shore of the Piscataway Creek east of Mockley Point, or in the alternative specifically provide that the Commission may construct a sewage treatment facility within the proposed park area east of Mockley Point.

Respectfully submitted.

BLAIR H. SMITH, *Chairman.*

Whereas this Commission recognizes the public needs of the present population in the Broad Creek and Piscataway Creek drainage basins; and

Whereas that area is expected to grow to a population of approximately 300,000 persons by the year 2000; and

Whereas present concepts do not permit the consideration of the discharge of raw sewage into the water courses of the metropolitan area; and

Whereas after thorough study, the Commission's engineering department has supplied the Commission with engineering and cost data regarding the several alternatives which have been suggested as solutions to providing sewage disposal facilities in these basins; and

Whereas neither a joint regional sewage project with Charles County nor pumping of sewage back to the Blue Plains treatment plant is a feasible solution to providing sewage-disposal service in those drainage basins, and the Commission believes that public needs in that area can be met only by the construction and operation of regional disposal facilities, including a treatment plant; and

Whereas the Commission has decided to refrain from further consideration of a site on Mockley Point for a treatment plant; and

Whereas after full consideration the Commission believes that a treatment plant can be located on another site on the southern shore of the Piscataway Bay which will achieve the desired objective of meeting public needs while at the same time not occasioning any adverse effect on Mount Vernon: Now, therefore, be it

Resolved, That the Commission finds and determines that a sewage-disposal facility to serve the aforesaid major drainage basins must be built on the southern shore of Piscataway Bay; and be it further

Resolved, That on the basis of engineering and cost data available, the Commission's legal staff be, and it is hereby, authorized and directed to seek options for the acquisition of appropriate sites, suitable for the location of a regional sewage-disposal facility on the southern shore of Piscataway Bay: and be it further

Resolved, That the Commission's engineering department be, and it is hereby, directed to prepare additional engineering and cost data, engaging engineering consultants as may be necessary for such purpose, upon which the Commission may make a determination of plant layout and sewage system location with respect to sites: and be it further

Resolved, That the Commission will not consider nor finally select any site which would adversely affect or otherwise detract from the Mount Vernon vista.

Adopted by the Washington Suburban Sanitary Commission at its regular meeting on December 14, 1961.

80391—62——64

THE MARYLAND-NATIONAL CAPITAL PARK
AND PLANNING COMMISSION,
Riverdale, Md., August 10, 1961.

Subject: Project No. 44—1960 (Piscataway) proposed 5-year sewerage program, Washington Suburban Sanitary Commission.

Mr. BLAIR H. SMITH,
Chairman, Washington Suburban Sanitary Commission,
Hyattsville, Md.

DEAR MR. SMITH: Thank you very much for your letters of June 15 and 28, requesting this Commission's views and recommendations concerning your Commission's proposal to establish a sewage-treatment plant to serve the Piscataway Creek watershed.

This matter was given extended consideration by the members of the Commission at its regular meeting yesterday. The Commission approved the memorandum of our Director of Planning as generally stating its views respecting this proposal.

Ten copies of the memorandum, together with an identity map and a brochure, are enclosed herewith for your information.

When your Commission has made its final determination on the location of the facility, we shall appreciate the opportunity to give you our recommendation on the proposed site development plans, as required by section 67 of chapter 780, laws of Maryland, 1959.

We trust that the suggestion contained in the memorandum will be of assistance to your Commission in its deliberations.

Very truly yours,

HERBERT W. WELLS, *Chairman.*

THE MARYLAND-NATIONAL CAPITAL PARK
AND PLANNING COMMISSION,
August 2, 1961.

Memorandum to: Commission.
From: Director of Planning.
Re: Sites for sewage-treatment plants—Piscataway Bay area.

Communications under the dates of June 15 and 28, 1961, have been received from Blair Smith, Chairman of the WSSC requesting the Commission's views and recommendations upon a proposal to establish a sewage-treatment plant in the Piscataway Bay area to serve, generally, the Piscataway Creek watershed.

Description of sites

Two sites are under consideration by WSSC—Site A, otherwise known as Mockley Point, and presently owned by Mr. Claggett, and Site B which is owned in part by Robert W. Smith and in part by the Accokeek Foundation. Both sites are located on the Maryland side of the Potomac River, south side of Piscataway Bay, and contain approximately 100 acres in area. Both sites are reasonably level and have elevations varying from sea level to about 40 feet above. Each site contains some cultivated land and some woodland, although site B contains a considerably greater amount of wooded areas.

Need for sewage-disposal facilities

The Piscataway Creek watershed contains 67 square miles, and its population at present is 16,700. Most of the existing population is located in the upper reaches of the Piscataway and its tributaries, Tinkers Creek and Butler Branch. It is my impression that many of these residents are having problems with their septic tanks. It is projected that by 1980 the watershed will have a population between 40,000 and 50,000. The most intensive plan under consideration would contemplate a population of 150,000 by the year 2000. At the present time the greatest concentration of population in the lower reaches is in Fort Washington Forest, already serviced by a treatment plant. Development is underway in Fort Washington Estates, but these are subdivisions on relatively small lots. Calvert Manor and the Moyaone Reserve are residential areas in the watershed; however, these are low-density subdivisions, and of themselves would not at this time have to be served with public sewage-disposal facilities.

Alternate proposals

It is possible that at some future date a sewage-disposal plant serving this and a larger area could be located in Charles County, approximately at the mouth of the Mattawoman Creek where it discharges into the Potomac River.

We have been advised that inquiries and studies of this have been undertaken between the Sanitary Commission and Charles County officials. However, at the moment, the area lies beyond the Sanitary Commission's boundaries, and Charles County officials are not prepared to undertake even a relatively small part of the financial outlay needed to establish such an installation. It is anticipated that the study being completed now for the Regional Sanitary Board will touch on this problem. A sewage treatment plant has already been authorized to serve the Fort Washington Estates area on the north side of Piscataway Bay. Construction is being held up pending a decision by the Sanitary Commission to erect a disposal plant on either site "A" or site "B." A small sewage disposal plant already exists to serve the Fort Washington Forest area, but it is uneconomical to expand this facility at this point.

Historical aspect

A public hearing was held by the Sanitary Commission on January 13, 1961, in the Court House at Upper Marlboro on the location of a disposal plant to serve this area. The hearing, on the whole, developed considerable opposition to the Mockley Point site. Opponents pointed out that it would be extremely conspicuous, by reason of its prominent location jutting out into the Potomac River and therefore would intrude on the vista from Mount Vernon and from the many overlook points along the Mount Vernon Memorial Parkway. Both Governor Almond of Virginia and Governor Tawes of Maryland urged that careful consideration be given in exploring alternate sites to protect the view from the historical Mount Vernon area.

Nature of facilities plan

In conferences with the Sanitary Commission engineers we have been advised that the type of facility has not yet been determined other than we were assured that the activated sludge type of plant will not be used. Either a trickling filter plant not higher than two stories, or a lagoon is under study. The effluent from a plant located at either site would be taken by means of underwater pipes out to the main channel of the Potomac River, downstream of Mockley Point so that there would be greater dilution, avoiding a back current of effluent in Piscataway Bay itself.

Field inspection

Field inspections were made of both these sites by the technical staff of this Commission on Thursday, July 13, 1961. The inspection included an examination of the terrain, forest cover and environment of both sites "A" and "B" together with viewing from other vantage points. There is no doubt that a plant erected on either site would be clearly visible from the Fort Washington Estate areas which is quite high and directly across Piscataway Bay. The Mockley Point site can be clearly seen from the lawns and the veranda of Mount Vernon and from several overlook parking areas along the Memorial Parkway.

Site "B," because of the intervening woods, is completely obscured from any view from Mount Vernon or from any of the overlook points along the Memorial Parkway. Field glasses were used, together with a compass for orientation, and no part of site "B," other than treetops, could be seen from the Virginia shore of the river.

Planning controls

Nearly all of the Piscataway watershed is now within the Metropolitan Washington Regional District. However, we believe the zoning controls of the present Prince George's zoning ordinance are not adequate to maintain a rural character. Half-acre lot zoning is the lowest residential density classification, and even this may be further reduced to one-fourth acre if a public water supply is available. We do not believe that a proper zoning plan can be developed for the area unless and until an estate and a farm zone requiring 2- and 5-acre lot sizes are available.

Comments

We are convinced that a sewerage system is needed for the upper reaches an this lower area now developed or committed to development for the smaller lot size, 10,000 square feet, and we are mindful that no location could ever be selected for a disposal plant that would be considered good by the next door neighbor. We also think that the matter of providing a disposal facility should not be caught up in the whirly-gig of building a sewage disposal plant to provide relief for the existing population, and then the next day to try to justify intensification of zoning on the basis that more users are required to pay for the plant just built.

The long-range needs of the county will be better met by a plant located at Mattawoman Creek in Charles County. It is assumed that the sewerage study nearing completion for the Washington metropolitan area will confirm this belief. However, since this is not likely to come into existence soon enough to fill the immediate needs of the county, an interim solution consistent with the metrowide study should be reached. The lagoon treatment method appears to be the answer to any interim solution to the problem. Essentially, they are odor free, require no operators and little maintenance, and can be economically enlarged by stages to accommodate increasing loads. Such a facility will be more conducive to abandonment than a conventional structure once the Charles County plan is realized.

Staff recommendations

(1) That the Mockley Point site (A) be given no further consideration whatsoever as a location for sewage disposal facilities. The site is so conspicuous that it would seriously infringe on the historical and aesthetic aspects of the area. The existing trees are insufficient to form any but the poorest screen.

(2) Either of following two proposals:

(*a*) That site B is satisfactory provided that not less than 100 acres be selected and a belt of land not less than 250 feet deep surround the tract affording a screen by the existing trees supplemented by additional planting of evergreens or deciduous trees to afford maximum screening.

(*b*) That lagoons be located on Tinkers Creek near Waterloo Run and on the Piscataway near Butler Branch. This could provide sewerage service through appropriate trunk sewers in the Jenkins Corner, Clinton, and Andrews Air Base areas where the need is largest and most immediate. This would assume the continued satisfactory operation of the small plant serving Fort Washington Forest and the construction and satisfactory operation of small plants for Fort Washington Estates and Swann Creek, both to be built by private developers. Lagoons could be relocated downstream by progressive steps as the need develops. Such a procedure would provide the time necessary for the satisfactory completion of the Charles County proposal.

(3) That it would be our preference that the lagoon system be used rather than a disposal plant, with the thought that when a larger plant if ultimately located in Charles County, these sites could be abandoned as disposal plants and the lands be used for park and recreational purposes.

We would also recommend that if a lagoon is built on site B, the design be such as to avoid regular shapes such as a square or rectangle with harsh manmade straight lines and right angles, but instead the lagoon have a smoothly curved contour, irregular but not jagged in its shape so that it could more easily blend with surrounding landscapes. If this is done, in our opinion, the lagoon will appear even from the Fort Washington Estates and Fort Washington Memorial Park, merely as a small lake on the opposite shore. We have been assured by the engineers of the Sanitary Commission that neither the disposal plant nor the lagoon will give off offensive odors even in the sheltered cove of Piscataway Bay. On this matter we profess no competence ourselves.

Attachments

Attached to this report is a brochure distributed at Mount Vernon by the Citizens Committee on Natural Resources. We agree with the sentiments of the brochure insofar as they are directed toward the Mockley Point site, but do not feel they are correct if applied to site B.

Also attached is the Mount Vernon quadrangle sheet as mapped and published by the U.S. Geological Survey, on which is shown the location of the two sites and the various points which have been described in the preceding report.

STATE OF MARYLAND, DEPARTMENT OF HEALTH,
Baltimore, Md., January 5, 1962.

Mr. BLAIR H. SMITH,
Chairman, Washington Suburban Sanitary Commission,
Hyattsville, Md.

DEAR MR. SMITH: The resolution of your Commission dated December 14, 1961, having to do with meeting sewerage needs of the Broad Creek and Piscataway Creek drainage basins has been carefully reviewed. We regard it as seeking to meet, in every respect, long recognized sewerage objectives in this area

of Prince George's County. Existing as well as future needs have been discussed on many occasions by staff members of our Bureau of Environmental Hygiene and our Prince George's County Health Department with members of your own engineering staff.

Adequate and effective public sewerage services in these drainage basins is a necessity for safeguarding the health and comfort of the people, assuring proper development of residential communities, and protecting the water resources of this part of our State.

I therefore desire to assure you of our affirmation of the spirit and intent of your resolution and to urge you to proceed with all dispatch in initiating construction of the proposed sewage works. You may count upon our rigorous support in this endeavor.

Cordially yours,

PERRY F. PRATHER, M.D., *Commissioner.*

WASHINGTON SUBURBAN SANITARY COMMISSION,
Hyattsville, Md., March 9, 1962.

Hon. CARL HAYDEN,
Chairman, Subcommittee on Appropriations, Department of the Interior and Related Agencies, U.S. Senate, Washington, D.C.

DEAR SENATOR HAYDEN: I again want to thank you for giving me the opportunity to appear before your committee on March 9 to present this commission's views in opposition to the appropriation for the purchase of national park lands in Maryland adjacent to the shores of the Potomac River opposite Mount Vernon. Because of the short notice we had of the hearing we were unable to prepare our statement properly and it is my understanding that we would be permitted to submit our statement with attachments for the record.

At the hearing one of the witnesses testified that the consultants to the Washington Metropolitan Regional Sanitary Board advocated building a sewage treatment plant on Piscataway Bay as a temporary measure and then later building a permanent plant at a different site. This, of course, is not true and to clarify the matter I am enclosing a copy of a letter dated February 8, 1962, from Dr. John C. Geyer, one of the consultants, which clearly explains their recommendation as to the location of the sewage disposal facility. It would be appreciated if this could be made a part of the record relative to this matter.

Very truly yours,

ROBERT J. MCLEOD, *Chief Engineer.*

THE JOHNS HOPKINS UNIVERSITY,
DEPARTMENT OF SANITARY ENGINEERING AND WATER RESOURCES,
Baltimore, Md., February 8, 1962.

Mr. ROBERT J. MCLEOD,
Chief Engineer, Washington Suburban Sanitary Commission,
Hyattsville, Md.

DEAR MR. MCLEOD: Relative to our report on sanitary sewers and waste water disposal in the Washington metropolitan region, we understand that our recommendation regarding a sewage disposal plant which will serve the Piscataway, Swan, and Henson Creek watersheds has been interpreted as a recommendation not to build a plant in the lower valley of Piscataway Creek.

The first sentence of the last paragraph on page 91 of the draft copy of the report reads, "It is here recommended that the WSSC proceed with its plans to construct a treatment plant in the lower valley of Piscataway to serve the entire Piscataway, Swan, and Henson Creek watersheds."

This recommendation seems clear to us. It means we think a plant must be built now in the lower valley of Piscataway Creek.

The second sentence of the same paragraph is the one which seems to be unclear. It reads: "This plant should be designed for the growth expected in the next 10 or 15 years, with a view to its possible abandonment at the end of that time, if, as a result of further study and negotiation, it is then decided to extend the outfall down to a jointly owned and operated plant in Charles County."

In order to clarify our meaning the following statements are submitted:

(1) There are now no visible sources of funds which would pay the cost of extending the outfall down to Charles County.

(2) Charles County is not now interested in sharing any of such cost.

(3) The statement that the plant in the lower Piscataway Valley should be designed to serve for 10 or 15 years is intended to mean that the plant should have a design capacity adequate for the population expected to be served 10 or 15 years hence. It is our recommendation that the plant be at least this large. At the rate the Washington metropolitan region is growing, plant capacities are sometimes exceeded in much shorter periods after their construction.

(4) The balance of the sentence was intended to express our feeling that opportunities for future change in facilities should, to the extent practicable, be kept open. If, in the area, a population develops which can provide the financial basis for support of a different plan, and if the people then wish to follow some different plan, actions taken today should not be such that future changes would be unnecessarily expensive. It is not our intent to recommend either for or against future change in plans for the area. Ten or fifteen years from now the situation in the area is sure to be different than it is at present. We recommend only that the way be left open to meet the changing situation with any new or different measures that may become desirable in the future.

Very truly yours,

JOHN C. GEYER.

SUPPORT FOR LAND ACQUISION

Senators Morse, Douglas and Humphrey have addressed the committee in support of the appropriation authorized by Public Law 87–362. Their letters will be printed at this point in the record.

(The letters referred to follow:)

U.S. SENATE,
COMMITTEE ON APPROPRIATIONS,
March 9, 1962.

Hon. CARL HAYDEN,
Chairman, Senate Appropriations Committee,
New Senate Office Building,
Washington, D.C.

DEAR MR. CHAIRMAN: Last year, a sewage treatment plant was proposed directly across the river from Mount Vernon. The Congress, within 2 months, passed Senate Joint Resolution 97 and House Joint Resolution 459, which the President signed into Public Law 87–362 on October 4, 1961. This act provided for Federal acquisition of 1,186 acres for park and preservation purposes. Since 505 acres are to be donated to the Government, and many scenic easements will be given without cash, the appropriation authorized was $937,000.

The administration supported this legislation throughout, and the respective chairmen of the Interior and Insular Affairs Committees of both Houses, in addition to the ranking Republican member of the same committee in the House, introduced the legislation. The Maryland and Virginia delegations supported the authorization bill and now support the budget request. The Virginia Assembly felt so strongly in regard to this matter, they passed a resolution in support of the appropriation. Practically every national conservation organization supported the authorization and are supporting the appropriation. In addition, the Mount Vernon Ladies' Association have labored long and hard to protect this area for the country. The Federation of Women's Clubs, State and National garden clubs, and historical societies are in strong support of this appropriation.

The Prince Georges County commissioners would prefer this plant be located elsewhere, as does the Maryland National Capital Park and Planning Commission. Many sanitary engineers have suggested other alternative sites already in industrially zoned areas.

It appears to me that the request for funds by the President is certainly warranted. It is also in keeping with the general philosophy of the administration's policy of protecting open spaces and preserving monuments from commercial intrusion. I hope the committee will grant the President's request for the $937,000 to implement Public Law 87–362.

Sincerely,

HUBERT H. HUMPHREY.

U.S. SENATE,
COMMITTEE ON BANKING AND CURRENCY,
March 8, 1962.

Hon. CARL HAYDEN,
Chairman, Senate Appropriations Committee,
Senate Office Building, Washington, D.C.

DEAR SENATOR HAYDEN: I should like to strongly support the President's budget request for $937,000 to implement Public Law 87–362. This amount would insure the acquisition of land and easements of approximately 1,186 acres in Prince Georges and Charles County, along the Maryland shores of the Potomac directly opposite Mount Vernon, Va. Once acquired, these lands would be administered by the National Parks Service. You are no doubt aware that one of the prime purposes for the authorizing legislation was to preserve the scenic area within the environs of Mount Vernon.

As I recall, the legislation had strong support and passed both Houses without dissent. The measure was introduced by the distinguished chairman of the Senate Interior and Insular Affairs Committee, Mr. Anderson, by the chairman of the House Interior and Insular Affairs Committee, Mr. Aspinall, and by the ranking minority member of the House Interior and Insular Affairs Committee, Mr. Saylor. The Congress acted with such dispatch in this matter because of the announced intent of the Washington Suburban Sanitary Commission to construct a sewage treatment plant at Mockley Point, directly across the Potomac from Mount Vernon, and directly in the overview of Fort Washington. No opposition witness requested an opportunity to be heard before the House committee, and only the Washington Suburban Sanitary Commission, real estate developers, and a minority of local landowners indicated any opposition to Federal acquisition.

After the passage of Public Law 87–362, the Washington Suburban Sanitary Commission suggested a change in the location of the sewage treatment plant, but the new location would still be within the authorized boundaries of the proposed national park. Those opposing the appropriations for the park, urge that conditions in the area require immediate sewage disposals facilities. And they also say that the construction of such a plant at a site more distant from Mount Vernon could be adequately camouflaged, and in no way would impair the scenic resources of Mount Vernon.

These arguments have been evaluated and rejected by a large number of individuals and organizations. Seldom has such support for a park been as overwhelming as in this instance. The local government, represented by the Prince Georges County Commissioners, the Maryland National Capital Park and Planning Commission, the State congressional delegations of Maryland and Virginia, the local civic associations, the national conservation organizations, historical societies, Federation of Women's Clubs, State and National garden club organizations, and individuals too numerous to mention, have all strongly supported the authorization measure and are now supporting the President's request for funds to effect this authorization.

It is their contention that despite the proposed new location of the plant, it could be seen from Mount Vernon. Camouflaging cannot be effective for a plant of this size. A small sewage treatment plant might be hidden, but this would not apply to this site. They further contend that this is primarily motivated by real estate developers in the area who have two large tracts on which they propose high density development. In order to deliver a clear title to this property, adequate sewage disposal facilities must be present. At one time, these real estate groups had requested and received a license to build a sewage treatment plant on their own property. It appeared to be the better part of wisdom from their standpoint to take the sewage from their own planned high density development and dump it on a low density development, or within the proposed park.

In view of the obvious merit of the arguments in behalf of the park, the almost unanimous action of the Congress, the strong support by the administration, and the overwhelming support of local and national governments and organizations, it would appear that the President's request for $937,000 is warranted.

With best wishes.

Faithfully yours,

PAUL H. DOUGLAS.

U.S. SENATE,
COMMITTEE ON FOREIGN RELATIONS,
March 9, 1962.

Hon. CARL HAYDEN,
Chairman, Senate Appropriations Committee,
U.S. Senate, Washington, D.C.

DEAR CARL: It gives me a great deal of pleasure to advise you of my strong support of the President's request for $937,000 to implement Public Law 87-362, relating to the preservation of certain lands in Maryland across the Potomac from Mount Vernon.

Monuments and open spaces are fast disappearing, so I was encouraged to note that the conservation message of the President was explicit in supporting their preservation. As a member of the Senate District of Columbia Committee, I am aware that the problem of the Metropolitan Washington area in regard to the proper preservation of our monuments and our recreational resources is a serious one.

The controversy regarding Public Law 87-362 appears to have been prompted by the statement of the Washington Suburban Sanitary Commission, a quasi-public agency with rights of eminent domain, relative to the building of a sewage treatment plant on Mockley Point, which is in the overview of Fort Washington, and directly opposite the veranda of Mount Vernon.

I am informed that the two major developments called Tantalon and Fort Washington Estates are across the Piscataway Creek. These developments represent high density residential areas, while the development directly opposite Mount Vernon has been protected in the past by private protective covenants of low density developments. Also, private foundations have purchased other lands for the purpose of protecting the view from Mount Vernon.

A number of organizations and individuals have indicated that even though the Washington Suburban Sanitary Commission has modified its original plan by moving the proposed site of the sewage treatment plant from Mockley Point to a point more distant from Mount Vernon, the new proposal would still be within the boundaries of the park authorized by Public Law 87-362.

There has been a great deal of controversy as to whether the park contains too great an area and whether the new site of the sewage treatment plant can be seen from Mount Vernon. According to the Department of the Interior, any place within the park boundaries can be seen from Mount Vernon, and this can also be judged by standing on an part of the proposed park, wherein one can clearly see Mount Vernon. Some also contend that the new sewage plant is too far away and therefore cannot be seen. However, on the spot evidence and information emanating from the Interior Department indicate further that the boundaries of the proposed park were established in order to prevent the impairment of the scenic view from Mount Vernon, and that had they thought that a lesser area would have been able to meet this objective, they would have reduced their taking area.

The argument that the sewage treatment plant will not be seen from Mount Vernon, also implies that camouflaging, similar to the plant along the Baltimore-Washington Parkway, would accomplish this purpose. The Washington Suburban Sanitary Commission has yet to indicate the total size of the sewage treatment plant. From earlier indications it would appear that the plant proposed opposite Mount Vernon would exceed, greatly, similar plants where this camouflage has taken place. There seems to be no evidence that the Washington Suburban Sanitary Commission can place the entirety of their operations underground.

The location of the sewage treatment plant in this particular area poses several questions. These developments often snowball as to commercial activities. In a planned high density development a sewage plant is necessary to give effect to the plan, but once this gets underway the problem of paying for such a treatment plant requires further development. Such development would ultimately affect adversely the area opposite Mount Vernon.

The additional problem in this instance is that one of the developers of the estates who is pressing for the sewage treatment plant, did have a license to build a sewage treatment plant on his own land, but later determined that it was better suited for a marina, provided he was able to dump the sewage from his own land onto areas of low residential development. There is some evidence that the developers were so interested that they were willing to absorb some of the costs of building the sewage treatment plant in an area away from their own lands.

There is a considerable amount of evidence that a sewage treatment plant of large proportions and of more efficient size in keeping with the recommendations

of the Anti-Pollution Act, embracing both Charles and Prince Georges County, could perhaps better meet this need for a growing area, and would be able to accomplish this purpose in an industrially zoned area. The area at the present can very well wait a period of time in order to get a better location and a well designed plant. Apparently, the developers feel they cannot wait. They are anxious to deliver clear title with sewage provisos thereto, and are anxious to have this done immediately. The condition of the area, however, can wait. It seems dubious that we should sacrifice this scenic area for the expedient requirements of the developers.

I have been impressed by the number of individuals and groups who have supported this legislation. Private foundations are willing to donate half of the land to the Federal Government for purposes of a park. Many individuals residing in this area have indicated that they are willing to grant easements to the Federal Government. Practically all of the national conservation organizations have supported the creation of this park. The Mount Vernon Ladies Association strongly supports the park.

The Washington Suburban Sanitary Commission, some real estate developers, and a minority of some property owners, have been for the sewage treatment plant and against the park, but by overwhelming numbers, the large local and civic organizations have given the park strong support. Local governments have supported the creation of a park and have not supported the sewage treatment plant. I am informed that the Prince Georges County Commissioners in the State of Maryland, the Governor, the Legislature of the State of Virginia, the Maryland National Park and Capital Planning Commission, and both the Maryland and Virginia congressional delegations have all indicated that the location of a sewage treatment plant within park environs would not be in the best interest of the community.

The national interest in support of this area has been aroused since the distinguished chairman of the Senate Interior Committee introduced legislation that passed the Senate without dissent. A bill introduced by the able chairman of the House Interior and Insular Affairs Committee, Mr. Aspinall, practically identical to the Senate bill, passed the House without dissent. The President, in signing the bill, requested in his budget message funds to implement this important public law.

The argument that this problem should be solved by local groups appears to be without merit, since local citizens associations have attempted precisely this solution for a period of the last 15 years.

In all probability local groups would have continued their efforts to resolve the problem at the local level, but the situation changed when the Washington Suburban Sanitary Commission entered the picture. The Commission has broad powers of eminent domain, and cannot be restrained by either local or State groups. The good faith of the individuals within the area, the donations of private foundations, and the efforts of the local groups to effect zoning protection, seem to demonstrate the necessity for their concern, and to demonstrate also the need for Public Law 87–362, and its proper implementation by granting the President's budget request. Certainly the need to protect Mount Vernon is of national importance and requires national action.

With best personal regards,

Sincerely,

WAYNE MORSE.

TELEGRAM

Senator BYRD. A telegram received from Mr. Roger Faw will be inserted in the record.

(The telegram referred to follows:)

WASHINGTON, D.C., *March 9, 1962.*

SENATOR CARL HAYDEN,
Chairman, Senate Appropriations Committee,
Senate Office Building, Washington, D.C.:

Re P.L. 87–362 re your hearing today 10 a.m. on appropriations for subject law request this telegram be read into the record in opposition. I represent 61 of 100 property owners in affected area who are on record with a petition opposing easements of any nature. Interior Department only interested in enactment of

subject law for selfish interests of developing massive national park costing millions of dollars to construct plus thousands of dollars to maintain. Mere acquisition of land will also cost millions. Original legislation for this law rushed through Congress and passed in haste. Request you refuse appropriation until exhaustive studies have been made.

ROGER FAW, *Chairman.*

ORANGEBURG, S.C., FISH HATCHERY

Senator BYRD. Senator Johnston and Senator Thurmond have written to the subcommittee urging appropriation of $141,000 in the 1963 budget to complete necessary construction at the Orangeburg, S.C., fish hatchery. I will include their letters in the record.

(The letters referred to follow:)

U.S. SENATE,
COMMITTEE ON POST OFFICE AND CIVIL SERVICE,
March 5, 1962.

Senator CARL HAYDEN,
Chairman, Internal Appropriations Subcommittee,
U.S. Senate, Washington, D.C.

DEAR CARL: The Department of Interior 3 years ago stated that $341,000 would be needed in order to complete the facility operation at the Orangeburg, S.C. fish hatchery.

A total of $200,000 has been appropriated thus far but the additional amount is needed just as quickly as possible. I respectfully request that this $141,000 allocation be included in the current legislation.

With kind regards, I am

Sincerely,

OLIN D. JOHNSTON.

U.S. SENATE,
COMMITTEE ON COMMERCE,
March 5, 1962.

Hon. CARL HAYDEN,
Chairman, Senate Interior Appropriations Subcommittee,
U.S. Senate, Washington, D.C.

DEAR SENATOR HAYDEN: It has come to my attention that an appropriation of $141,000, which is urgently needed to complete work on the Orangeburg, S.C. fish hatchery, is not included in the budget estimates in this year's Interior Department appropriations bill. Appropriations for this project have been made in years past, and it is necessary that this further amount be included so that this project can be pursued to a successful conclusion.

In order to assure that the funds previously appropriated for this project shall not have been wasted, I urge your consideration of this further appropriation of $141,000.

With kindest personal regards,

Sincerely,

STROM THURMOND.

COMMITTEE RECESS

Senator BYRD. On Monday, at 10 o'clock, the Forest Service will present its statements in behalf of the budget request for that agency. So the committee will now stand in recess until 10 o'clock Monday morning. Thank you, ladies and gentlemen, for coming.

(Whereupon at 12:45 p.m., Friday, March 9, 1962, the hearing was recessed to be reconvened at 10 a.m., Monday, March 12, 1962.)

DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES APPROPRIATIONS, 1963

MONDAY, MARCH 12, 1962

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, D. C.

The subcommittee met, at 10 a.m., pursuant to recess, in room 1223, New Senate Office Building, Hon. Carl Hayden, chairman, presiding.

Present: Chairman Hayden, Senators Bible, Byrd, Young, Mundt, and Dworshak.

Also present: Senators Proxmire and Hart.

DEPARTMENT OF AGRICULTURE

FOREST SERVICE

STATEMENTS OF DR. FRANK J. WELCH, ASSISTANT SECRETARY OF AGRICULTURE; RICHARD E. McARDLE, CHIEF, FOREST SERVICE; CLARE HENDEE, ASSISTANT CHIEF; EDWARD P. CLIFF, ASSISTANT CHIEF; W. S. SWINGLER, ASSISTANT CHIEF; V. L. HARPER, ASSISTANT CHIEF; A. W. GREELEY, ASSISTANT CHIEF; G. M. JEMISON, DEPUTY ASSISTANT CHIEF; G. S. JAMES, DEPUTY ASSISTANT CHIEF; B. H. PAYNE, DEPUTY ASSISTANT CHIEF; M. W. CLUFF, ASSISTANT BUDGET OFFICER, FOREST SERVICE; AND CHARLES L. GRANT, DIRECTOR OF FINANCE AND BUDGET OFFICER, DEPARTMENT OF AGRICULTURE

TRIBUTE TO MR. MCARDLE

Chairman HAYDEN. We will first hear from the Forest Service.

Before we take testimony today, I would like to make a short statement.

Last Friday I learned of the retirement of Dr. Richard E. McArdle as Chief of the Forest Service, effective March 17, after 39 years of service. We are going to miss his leadership which for the last 10 years has been truly outstanding; but I know of no one in Government service today who can retire with a finer record of public service. Before and since Arizona reached statehood, I have known every Chief of the Forest Service; all of them fine men with fine records. But I believe the years that Chief McArdle has served as head of the Forest Service are an unequaled record of distinction.

During his 10 years as Chief of the Forest Service, outstanding progress has been made in the management of the national forests. For example, today we are going to hear requests for appropriations within the framework of the development program for the national forests, a far-reaching plan to make these public properties meet the increasing needs of the American people. Under his leadership the forestry research program in the United States has been significantly expanded. He has encouraged a high degree of cooperation with State and private forestry organizations, winning their respect and support for a greater conservation effort in this country.

He has won so many honors for himself, his agency, and his profession of forestry that I cannot list them all. But among the principal ones are his leadership as president of the Fifth World Forestry Congress held in the fall of 1960, the largest international conference of its kind ever held. He has received a number of honorary degrees from universities, in addition to the Distinguished Service Award from the Department of Agriculture and the President's Gold Medal Award for distinguished Federal service.

Chief McArdle, it has been a distinct pleasure to work with you over the years, and I am sure that I express the unanimous feeling of this committee in extending our congratulations on your retirement and our best wishes for your future.

BIOGRAPHY OF MR. CLIFF

It is deeply satisfying to know that Mr. Edward P. Cliff, formerly Assistant Chief for national forest administration, is going to take over over as the new Chief of the Forest Service. He brings with him a distinguished record of 32 years of service and is well known to all of us on this committee. His previous assignment as Assistant Chief in providing leadership in the management of the national forest resources well fits him for the work ahead. I believe that it is appropriate to place in the record here a short biography taken from the press release announcing his appointment.

My congratulations to you, Mr. Cliff.

(The biography referred to follows:)

Mr. Edward P. Cliff, new Chief of the Forest Service, is a career professional forester with 32 years of service with the organization. A native of Heber City, Utah, he graduated from the College of Forestry, Utah State University, in 1931 with a B.S. degree in forestry. Entering the Forest Service that year as range examiner on the Wenatchee National Forest in the State of Washington, he progressed through various assignments to supervisor of the Siskiyou National Forest at Grants Pass, Oreg.; the Fremont National Forest at Lakeview, Oreg.; Assistant Director of Range Management in the Washington, D.C., headquarters; and Asssitant Regional Forester in charge of Range and Wildlife Management in the intermountain region at Ogden, Utah.

In 1950 Mr. Cliff was appointed regional forester of the Rocky Mountain region of the Forest Service at Denver, Colo., where he served ably in achieving better relationships between western stockmen and the Forest Service in the use of grazing allotments on the national forests. In 1952, he returned to Washington, D.C., as Assistant Chief of the Forest Service in charge of National Forest Resource Management. As a member of the Chief Forester's staff he worked closely with research and cooperative State and private forestry programs.

With direct responsibility for management of the Nation's national forests, Mr. Cliff provided leadership in coordinating the multiple-use management of national forest resources. This included developed of camping and picnic facilities for national forest visitors to accommodate an increase from 33 million

visitors in 1952 to 115 million this year; improved watershed developments, wildlife habitat, and grazing opportunities through reseeding of rangelands and better control of livestock to reduce erosion damage, as well as doubling the cut of national-forest timber from 4½ billion to 8½ billion board-feet.

The new Chief Forester has long been affiliated with a number of professional societies in the field of natural resource conservation. He is a charter member of the American Society of Range Management and the Wildlife Society, a member of the Society of American Foresters, American Forestry Association, and the Wilderness Society.

A student of American history and geographic landmarks, for 10 years Mr. Cliff has been USDA representative on the Interdepartmental Board on Geographic Names. In 1961, Secretary of the Interior Stewart L. Udall, who has responsibility for the Board on Geographic Names, appointed Mr. Cliff as Chairman of this Board.

The new Chief Forester is married to the former Kathryn Mitchell of Logan, Utah. They have two children, and reside at 221 N. Royal Street, Alexandria, Va.

GENERAL STATEMENT

Mr. McARDLE. Mr. Chairman, may I say just a word?

Chairman HAYDEN. Certainly.

Mr. McARDLE. I very greatly appreciate your comments, and I will take them with me and cherish them, but I think I should with your permission at least partly correct the record.

The accomplishments the Forest Service has made have been made in these past years under the leadership of the distinguished chairman of this committee, and if I were giving credit for progress in conservation in this country, I would hand it to you, sir, and not take it to ourselves.

As the chairman well knows, the people of this country are no longer so well aware of their dependence on the land as our forefathers were. They do not realize that from the land we get all of our food, our clothing, our shelter, fuel to warm the shelter and to cook the food and all of the raw materials that industry uses to make life something more than just caveman existence.

The chairman has pointed these facts out. This committee recognizes them. And so far as the forestry aspects of resource conservation are concerned, frankly, Mr. Chairman, you have been pushing us.

I just want the record to be clear that it is not the Forest Service or McArdle who has been improving the conservation of our natural resources for the benefit of all of our people. It is you, sir, and this committee.

Chairman HAYDEN. If I had to do any pushing, I didn't know it. [Laughter.]

We will be glad to hear from you now, Senator Hart.

MICHIGAN PROJECTS

STATEMENT OF HON. PHILIP A. HART, A U.S. SENATOR FROM THE STATE OF MICHIGAN

PREPARED STATEMENT

Senator HART. Thank you, sir.

I appreciate your interruption of the agenda, and it gives me an opportunity to join in the expression of regard and commendation that you have already given Dr. McArdle. I know it is far more meaningful to Dr. McArdle to have it come from a very distinguished

Senator like Senator Hayden; but in the brief time I have been here, I have realized the significance to Michigan and the Great Lakes region of the forest resource, and we are grateful for what you have done. And I hope, as a State, we can respond to the opportunities that Federal assistance gives us.

Mr. Chairman, I appreciate your courtesy in allowing me to appear today, and I shall be brief. With your leave, I would like to file in full the statement.

Chairman HAYDEN. That may be done, and it will be printed in the record.

(The statement referred to follows:)

Mr. Chairman, I appreciate your courtesy in allowing me to appear here today, I will be brief. I appear in behalf of four items which are of vital importance, not only to the State of Michigan, but indeed to the whole Midwest.

1. *Jordan River National Fish Hatchery.*—The budget for 1963 shows $101,000 toward construction of this trout hatchery.

Total estimated cost of the hatchery is $892,000. This entire sum was in last year's budget. The House committee saw fit to cut this amount roughly in half, allowing $425,000. Your committee agreed with this decision. We in the State had assumed, perhaps erroneously, that the other half would be made available this year. Construction is underway.

This hatchery is to be a very important unit keyed into a closely organized production effort on restoring lake trout by the States of Minnesota, Wisconsin, Michigan, and Illinois; the Province of Ontario; and the Federal Governments of the United States and Canada. The production schedule cannot be met if construction is curtailed. Orderly use and care of available lake trout eggs will be disrupted if an additional year is required to bring Jordon River hatchery into production. Facilities available at other establishments are insufficient to accommodate the lake trout eggs which will become available in the fall of 1963. Incidentally, these eggs are being produced from brood stock now held in hatcheries at a substantial cost to the agencies involved.

The production effort is a vital segment of the attempt to rehabilitate lake trout in the Great Lakes following control of the sea lamprey. Trout have been reduced by the lamprey to the vanishing point in Lakes Michigan and Huron and to insignificance in Lake Superior. Losses in lake trout alone to the fisheries at dockside amount to about $5,500,000 annually. Losses among other fisheries are inestimable but the total annual loss may approximate $10 million. It is of utmost importance that these valuable resources be reclaimed as soon as possible.

Encouraging signs of effective sea lamprey control are being noted. They are convincing enough to make urgent the completion of Jordan River National Fish Hatchery as planned. It will take long enough under the best of circumstances to reestablish lake trout populations in the lakes adequate to maintain themselves and a profitable fishery. A remnant population in Lake Superior can be saved by prompt action. A year lost in completion of the hatchery would be very serious.

Mr. Chairman, I most respectful urge your committee to approve the full $467,000 needed to complete this hatchery in fiscal 1963. I ask your permission to file with my statement a telegram from Gov. John B. Swainson, making the same request, and a letter from my senior colleague, Senator McNamara, setting forth the need and requesting your favorable action. The Michigan Department of Conservation joins us in our sense of urgency. We understand that if given the funds, the Bureau would be able to finish construction in this coming year as planned.

2. *Forest Engineering Laboratory at Houghton, Mich.*—Last year the Forest Service established three research centers, one of which is at Houghton, Mich. The purpose of this center is to solve engineering problems associated with forest management and utilization peculiar to the hardwood forests of Northern and Eastern United States. It will provide the facilities urgently needed for research in mechanization of operations for converting deteriorated northern timber stands and deforested areas to improved species and culture, including removal of brush and large cull trees and transport of forest products to primary plants.

Even at the current rate, the harvesting of forest products in the Lake States is a materials handling job of major proportions—approximately 15 million tons per year. By the time this material is handled and rehandled by present inefficient methods the total annual tonnage is estimated to exceed 120 million tons. Vastly improved systems are needed.

The laboratory will be located adjacent to the planned expanded campus of the Michigan College of Mining and Technology, an outstanding engineering, educational, and research institution with which the Forest Service now has and expects to continue cooperative projects in forest products and engineering research. Much specialized skill and equipment necessary in a program of forest engineering research are available on a cooperative basis at the college and will not be duplicated in the proposed laboratory.

I hope the committee will see fit to allow us to move forward on this project which will mean new jobs, more abundant wood products, and flourishing wood industries.

3. *Program for the national forests.*—Appearing before your committee last year, I discussed the need to provide additional funds for the Forest Service program to develop the national forests. Your committee acted generously on that request. In the fall of 1961, the President transmitted to the Congress a new and revised development program for the national forests. It contemplates that commencing with fiscal year 1963 through 1972 in excess of $2.5 billion will be invested in national forest development of a capital investment nature and, along with this, there will be a substantial increase in funds available for operation. In describing what is to be done, the President said: "The forward-looking program outlined in this report holds great hope. Congressional interest in our national forests has always been high—an interest this administration shares."

In every activity affecting the national forests two significant facts are evident. One is that the demands for use are far greater than the ability of the Forest Service to service these demands. The second is that the demands for use are increasing at a tremendously high rate.

An encouraging note is that the budget submitted by the President provides for a $14 million increase over last year's appropriations, but even that proposed level of appropriations lags behind what is required to fulfill the goals set forth by the President and the Secretary of Agriculture last September 21.

My remarks concern Michigan but could apply to any of the States where there are national forest lands. I ask the committee to place in the record at this point a tabulation showing the national forest program requirements for Michigan:

In Michigan alone investments totaling almost $50 million are required, exclusive of forest research. The largest single investment is $21 million for reforestation and timber stand improvement. The second largest investment is almost $19 million to construct 1,250 miles of multipurpose roads. And the third largest investment is $5,640,000 to construct 390 campgrounds.

The 2.5 million acres of commercial forest land in Michigan which are in the national forest system are extremely important, particularly in the areas where they are located, because they are capable of supplying a significant amount of timber to nearby dependent communities. Many of these forests are in areas which have long suffered from economic distress. The combination of timber resource development and recreational development along with associated work in wildlife improvement provides us with the means to promote sound community rehabilitation. The forests of Michigan in the past were subjected to heavy utilization and this has produced part of the economic problem that we face.

The increases obtained in last year's appropriations are having significant effect in our Upper Peninsula forests, not only in providing additional needed campsites and forest improvement, but in providing badly needed work to many unemployed workers.

Some of the counties in our Upper Peninsula continue to experience levels of unemployment well above 20 percent. Where we can combine resource development with needed employment opportunities, such as in the forest program, I believe the Congress has a dual reason for providing sufficient appropriations.

Hopefully, this committee in its examination of the budget presented by the Forest Service will make its own independent determination as to the desirability of financing the development program for the national forests at the level contemplated for 1963. Because the proposed level is significantly below

planned and known needs, necessary increases to keep on schedule would seem to be justified.

4. *Commercial Fisheries Biological Laboratory at Ann Arbor, Mich.*—An item of $1,448,000 is in the budget to support construction of this laboratory. I merely wish to indicate my hope that it will be included in the appropriation bill as reported by your committee.

The present building occupied by the biological staff is an old frame residence located on the University of Michigan campus which has been furnished through the courtesy of the university. It does not fulfill the functions of a properly designed and constructed laboratory and office building. Currently the lack of suitable laboratory space and general crowded conditions have limited scope and effectiveness of the research program. The university has agreed to deed to the Government a suitable site for the laboratory.

May I again thank you, Mr. Chairman, for the courtesy your committee has shown Michigan, and the recognition given to the resources programs so essential to our Great Lakes and entire Midwest portion of the Nation.

LETTER FROM SENATOR MCNAMARA

Senator HART. I speak for my senior colleague, Senator McNamara, and ask leave that a letter indicating his strong support for the several items be made a part of the record.

Chairman HAYDEN. That will be included in the record.

(The letter referred to follows:)

U.S. SENATE,
COMMITTEE ON LABOR AND PUBLIC WELFARE,
March 9, 1962.

Hon. CARL HAYDEN,
Chairman, Subcommittee on Interior and Related Agencies, Senate Committee on Appropriations, Washington, D.C.

DEAR MR. CHAIRMAN: As you know, your subcommittee is presently holding hearings on budget estimates for the Department of the Interior and related agencies and my associate, Senator Phil Hart, and I are interested in four items which we feel are of primary importance not only to our State of Michigan but to all of the States of the Lake States area.

The first item concerns the Jordan River Fish Hatchery in Antrim County, Mich. The estimated cost of constructing this hatchery is approximately $892,000. Last year the House appropriated the full amount. However, the Senate cut this item to $425,000 as this was the approximate amount Fish and Wildlife could use for the project during fiscal 1962.

This year the proposed budget contains an item of $101,000 for construction of this project. However, I have been informally advised that Fish and Wildlife could use the sum of $467,000 in fiscal 1963 which would insure completion of this project in that year.

I feel that the need for this project was so clearly demonstrated by the hearings last year that a repetition here would serve no useful purpose. I merely wish to point out to you and your committee that Michigan and her sister States of the Great Lakes will greatly benefit from this project and there is no sound reason why construction should be strung out over a period of 3 or 4 years when it can be completed during the coming fiscal year. Speedy completion will simply mean that there will be no undue delay in helping to restore fish in the Great Lakes.

I most respectfully urge that your subcommittee recommend to the Senate Committee on Appropriations that the budgeted item of $101,000 for the Jordan River Fish Hatchery be raised to $467,000 so that this project will be completed during fiscal 1963.

The next item is the Forest Engineering Laboratory at Houghton, Mich., one of three established by the Forest Service last year. This Laboratory will unquestionably help to solve the many problems associated with the production of marketable timber and the reforestation of denuded timberlands to insure a continued source of timber for future generations. The Laboratory will, when completed, be located on lands now adjacent to but soon to be encompassed within a widened area of the Michigan College of Mining and Technology at Houghton, Mich., one of the finest engineering schools in the country. The need for this Laboratory is clear; in fact, Senator John Stennis, a member of our Senate Appropriations Committee, in a speech on the Senate floor on February 15, 1962, made a

strong plea for funds, not only for this Laboratory but for several others throughout the country (Congressional Record, pp. 2095, 2096, Feb. 15, 1962). Senator Stennis, at that time, strongly recommended the appropriation of $400,000 for the proposed Laboratory at Houghton and I most respectfully request that your subcommittee recommend approval of $400,000 for this fine project in fiscal 1963.

The next item concerns a program for our national forests. The need for funds for this program has already been demonstrated to this committee. It was also recognized by the President in his message to Congress last fall, and I am confident that representatives of the Forest Service, in your hearings today, will present a detailed documentation of this need. Michigan, one of the States possessing national forests, is, of course, aware of the value of this fine program.

The last item concerns a Commercial Fisheries Biological Laboratory at Ann Arbor, Mich. The budget contains a $1,448,000 item for construction of this project. This Laboratory will be owned and operated by the Fish and Wildlife Service on lands which will be donated to the Federal Government by the University of Michigan. Here, too, the great benefits to be derived from such a Laboratory have already been clearly established before your subcommittee. I simply wish to mention this item and urge that your subcommittee resist any efforts to slash funds for this project by a single penny.

Incidentally, just this morning I received a letter from our Governor, Hon. John Swainson, endorsing the Laboratory at Houghton, Mich., together with some correspondence he had had on this project. I would appreciate it very much if his letter and the accompanying correspondence could be made a part of the record of these hearings.

All good wishes.

Sincerely,

PAT MCNAMARA, *U.S. Senator.*

STATE OF MICHIGAN,
OFFICE OF THE GOVERNOR,
Lansing, March 8, 1962.

Hon. PATRICK V. MCNAMARA,
U.S. Senate, Washington, D.C.

DEAR PAT: Enclosed are copies of correspondence concerning an appropriation for the Lake States Forest Experimental Station at Houghton. Please note my support for such an appropriation in reply to Mr. Walsh.

The correspondence is forwarded for your use.

With warmest personal regards,

Sincerely,

JOHN B. SWAINSON, *Governor.*

FEBRUARY 28, 1962.

Mr. LAWRENCE P. WALSH,
Walsh & Munro,
Ontonagon, Mich.

DEAR LARRY: I received your letter of February 26, regarding the appropriation for the forest engineering building at the Michigan College of Science and Technology. I am familiar with this project and will do everything possible to aid in the gaining of such an appropriation.

With sincere best wishes,

Sincerely yours,

——— ———, *Governor.*

WALSH & MUNRO,
Ontonagon, Mich., February 26, 1962.

Re appropriation, forest engineering building,$400,000, Lake States Experimental Station, Michigan College of Science and Technology, Houghton, Mich.

GOV. JOHN B. SWAINSON,
Lansing, Mich.

DEAR GOVERNOR SWAINSON: I know that you are familiar with the action of the Lake States Forest Experimental Station in setting up a forest engineering and development project at Michigan College of Science and Technology, Houghton, Mich. The purpose of this project is to study and to develop equipment and methods for better harvesting our remaining forest crop. This project has been fully described in the Congressional Record. Senator Stennis has already spoken

on the floor of the Senate for a $400,000 appropriation in the 1963 fiscal budget to finance the cost of the proposed engineering building.

I have served for many years on the advisory committee to the forest products research project at the Michigan College of Science and Technology and I am fully familiar with the needs of the forest industry in Michigan for a more efficient method and for more efficient equipment for the harvest of forest products and I ask that you lend your help to the furthering of this project. Will you please contact both Senators Hart and McNamara and the members of the Michigan Congress and urge that they support this appropriation.

Over the next 10 years this project will require total appropriations of approximately $800,000 so the appropriation for the building is one-half of the total requests that will be made over the next 10 years.

Congressman Kerwin, of Ohio, is chairman of the Forest Service Appropriations Committee apparently. Senator Stennis bears a great deal of weight on the Appropriations Committee.

I would like to point out that this new project is aimed at a practical attack on the method of harvesting forest crops. It is novel, it has never been attempted and there is very strong feeling on the part of people in the forest industries that a thorough engineering and research study of this problem should be made without further delay.

Any help that you can give in furthering the appropriation for this engineering building will be very appreciated. I am sure that you know the contacts that will be most helpful in getting this Federal appropriation.

Yours truly,

LAWRENCE P. WALSH.

STATEMENT OF SENATOR HART ON JORDAN RIVER FISH HATCHERY

Senator HART. Mr. Chairman, one item of especial concern to us in Michigan and the Great Lakes Basin involves a fish hatchery, the Jordan River National Fish Hatchery. The budget for 1963 shows $101,000 toward the construction of this trout hatchery. The estimated cost a year ago was $892,000. In last year's budget we sought that entire sum. The House cut it in half, to $425,000. And this committee agreed with the decision.

Now we in Michigan, perhaps erroneously, assumed that the other half would be made available this year, and the construction is underway, and the full remaining $425,000 can be used this year, if authorized. However, the budget now shows $101,000.

The hatchery is important, because it is keyed into a closely organized production effort on restoring lake trout to the States of Minnesota, Illinois, Michigan, Wisconsin, and the Federal Government of our own country and the Dominion. The production schedule cannot be maintained if construction is curtailed.

Orderly use and care of available lake trout eggs will be disrupted if an additional year is required to bring Jordan River hatchery into production. Facilities available at other establishments are insufficient ot accommodate the lake trout eggs which will become available in the fall of 1963. Incidentally, these eggs are being produced from brood stock now held in hatcheries at a substantial cost to the agencies involved.

The production effort is a vital segment of the attempt to rehabilitate lake trout in the Great Lakes following control of the sea lamprey.

LOSSES IN TROUT

As you so well know, the lamprey reduced trout to the vanishing point in Lakes Michigan and Huron and to insignificance in Lake Superior. Losses in lake trout alone to the fisheries at dockside

amount to about $5,500,000 a year. Losses among other fisheries are inestimable, but the total annual loss may approximate $10 million. It is of utmost importance that these valuable resources be reclaimed as soon as possible.

Very encouraging signs that the lamprey control is in hand are being noted. They are convincing enough to make urgent the completion of Jordan River National Fish Hatchery as planned. We do hope, Mr. Chairman, that this may be possible.

TELEGRAM FROM GOVERNOR SWAINSON

I would like leave also to file at this point a telegram received from the Governor of Michigan, the Honorable John B. Swainson, strongly urging the inclusion of this.

(The telegram referred to follows:)

LANSING, MICH.

Hon. PHILIP A. HART,
U.S. Senate, Washington, D.C.:

I strongly urge the appropriation for Jordan River Hatchery be restored to $467,000. This amount is vitally necessary to the rehabilitation of lake trout following sea lamprey control.

JOHN B. SWAINSON,
Governor of Michigan.

FOREST ENGINEERING LABORATORY, HOUGHTON, MICH.

Senator HART. Also we have a strong concern, as you so well know, in a forest engineering laboratory at Houghton, Mich. This is in conjunction with the Michigan College of Mining and Technology. On February 15, the distinguished Senator from Mississippi, Senator Stennis, included this as one of the proposed additional desirable construction items which he urged in a Senate speech be undertaken. Our support and explanation for it is contained in the statement. The sum we urge is $400,000.

Dr. McArdle, I am sure, will express eloquently the needs of the Forest Service, and we include here an item of hope with respect to national forest land in Michigan. I ask leave that a tabulation be included in the record in support thereof.

Chairman HAYDEN. That may be done.

(The tabulation referred to follows:)

Michigan

[Dollars in thousands]

Item	Recurrent work, annual level 10th year	Nonrecurrent project work, 10-year total	Work needed
Timber resource management.	$798		Complete and keep current inventories and plans for 225,000 acres. Cut 183 million board feet annually by 1972.
		$20,713	Culturally treat 649,000 acres. Plant 231,000 acres.
Recreation, public use	678		Complete management and development plans. Maintain facilities and provide sanitation.
		5,640	Construct 390 campgrounds and picnic sites and related facilities. Provide information services at these and other visitor concentrations.
Wildlife habitat management.	89		Administer, supervise, and coordinate wildlife activities and cooperate with States.
		417	Improve and develop small- and big-game range on 33,000 acres, improve 120 miles of stream and 460 acres of lakes. Develop 20 wildlife watering facilities; 80,000 acres of rodent control.
Soil and water management.	6		Manage and administer soil and water resource. Coordinate with other resources.
		174	Conduct soil surveys on 610,000 acres. Initiate water yield inventories.
Land adjustments, classification, and uses.	156		Examine mining claims. Administer mineral leases and special uses. Exchange 50,000 acres of land. Prepare up-to-date land status records. Conduct land classification work.
Land surveys and mapping.		906	Survey and mark 9,862 miles of property lines. Topographic mapping of 1,500 square miles.
Forest fire protection	451		Intensify protection, including increased manpower, equipment, and aerial operations, to approximately twice present level.
		2,277	Reduce hazardous fuels on 12,000 acres. Construct 1,000 miles of firebreaks.
Insect and disease control.	[1] 175		Intensify and accelerate detection, prevention, and control of forest insects and diseases to reduce current timber losses.
Structural improvements for fire and general purpose.	144		Maintain existing structural and communication improvements.
		920	Construct 28 housing and related improvements, 27 service buildings, lookouts, and special structures; improve existing structures, provide 37 radio installations; replace 18 miles of telephone line; and construct 5 heliports and helispots.
Forest roads and trails	[2] 534		Maintain existing transportation system.
		[3] 18,765	Construct 1,250 miles of multiple-use-purpose roads. Provide supplemental work on roads constructed by timber purchasers.
Total, Michigan	3,031	49,812	

[1] Includes national forest control only.
[2] Timber purchasers will maintain existing purchaser-constructed roads at an estimated additional annual cost of $9,620.
[3] Timber purchasers will construct an estimated 170 miles of the roads shown costing approximately an additional $645,000.

COMMERCIAL FISHERIES BIOLOGICAL LABORATORY

Senator HART. The last two items, Mr. Chairman: There is an item of almost a million and a half dollars in the budget to support the construction of the commercial fisheries biological laboratory at Ann Arbor. I do hope that this will be included in the bill as reported by the committee.

Lastly, Mr. Chairman, I would hope that the committee would satisfy itself that in the research portion of the Bureau of Mines budget, there is adequate provision to enable research on the beneficiation of low-grade iron ores. This is of critical importance to the whole basin.

Mr. Chairman, thank you very much for letting me place this in the record.

Chairman HAYDEN. Thank you.

Senator Proxmire, come over and sit down by me.

FOREST PRODUCTS LABORATORY, MADISON, WIS.

STATEMENT OF HON. WILLIAM PROXMIRE, A U.S. SENATOR FROM THE STATE OF WISCONSIN

GENERAL STATEMENT

Senator PROXMIRE. Thank you, Mr. Chairman, for this opportunity to testify in support of the appropriations this year for the proposed addition to the Forest Products Laboratory at Madison, Wis. There is an urgent need to expand the physical plant of this important Forest Service facility. New laboratory space is required, and the present facilities must be modernized, to permit ongoing research to continue without restriction, and to house new research projects.

This eminently justified project of constructing new facilities and modernizing the present 30-year-old plant is long overdue. It was part of the President's budget last year, and funds for it were approved in the Senate. Unfortunately, it was deleted in conference. It is my understanding that this was the only Forest Service research project in last year's budget that was not approved. I strongly hope that funds to begin construction will be approved this year.

The total cost of the project will be $10 million. Construction of the first stage of this project will require $4 million. This is the sum indicated in the statement on the floor by the Senator from Mississippi, Mr. Stennis, listing the construction needs in forestry research.

FACILITIES ESSENTIAL

My informal conversations with representatives of the timber and wood products industry, as well as with scientists and administrators familiar with the research requirements of this industry, convince me that the proposed new laboratory facilities are absolutely essential. A research bottleneck is imminent in wood products research unless the Forest Products Laboratory's expansion needs are met soon.

I wish to draw special attention to the importance of our wood resources to our Nation's economy.

The industrial complex of forest products industry—lumber, plywood, millwork, laminating, factory built homes, and pulp and paper—ranks fourth among American industries in its contribution to the gross national product and fifth in total employment. In 1960, this was nearly $10 billion. Only metals and metal products, machinery, and food industries rank higher—the last mentioned by only $36 million.

EMPLOYMENT IN FOREST INDUSTRY

The forest products industries provide jobs for 1,136,000 men and women. Only machinery, food, transportation, equipment, and apparel industries have larger employment.

For this industry to remain in this high position, research in forest products must be rapidly expanded. The industry by its very nature

is not in a position to do the basic research without help from the Federal Government.

RETURNS FROM INVESTMENT

In view of the vast importance of this great industry, it is not surprising that it has been estimated that for every dollar invested in forest products research the Government gets back over $70 in taxes—and those are only the direct returns.

And, Mr. Chairman, I want to point out that this $70 in taxes has been very carefully calculated, and they are Federal taxes, and these are the taxes on products that have been developed at the Forest Products Laboratory.

The benefits to the Nation's economy in terms of new products, new jobs, and new industry are high multiples of this figure.

AREAS OF RESEARCH

Every area of research at the Forest Products Laboratory urgently needs additional specialized facilities to permit essential research to be done. For example, fundamental research on the performance of wood in fire is underway on a pilot basis. But expanded facilities where large laminated beams may be loaded and their strength evaluated to obtain engineering data are needed to determine the key strength and safety factors. We know that large wooden beams are resistant to fire because of the formation of a built-in insulator, charcoal. They do not melt and collapse. But we do not have the necessary engineering information for architects. Expanded facilities are necessary to extend the small-scale fundamental research now in progress.

LABORATORY CONDITIONS

The pulp and paper research space at the Laboratory is badly crowded. Yet, more requests by industry point up the need for a new paper machine which can be used as a pilot plant for the study of paper formation at speeds above those now used in industrial plants—2,400 feet per minute. This area of research can also lead to greater utilization of our low grade hardwoods, little used species, and plant and forest residues. Forest Products Laboratory research has formed the basis for the use of the hardwoods to produce pulp and paper products. The consumption of hardwood pulps in 1960 was 12 times that of 1920.

HOUSING DEVELOPMENTS

The housing industry is on the verge of major developments, especially in the area of low cost housing. The factory-built home industry has been developed largely upon principles developed by the Forest Products Laboratory. In 1960, nearly 200,000 homes were built by this relatively new industry with a value of about $800 million. The Forest Products Laboratory now needs a new structural laboratory to study the new uses of components and roof trusses in order to assist in simplifying house construction.

CHEMICAL INDUSTRY POSSIBILITIES

The chemical industry has moved to high pressure processing. Wood substance is an ideal raw material for chemicals, since the residues are lower in cost per pound than even petroleum, and yet are a truly renewable resource. The utilization of the residues necessarily developed by the forest products industries in their normal processing would maintain solid wood products such as lumber and plywood in an excellent competitive position. The development of a chemical industry could also provide an economic use for our low grade timber and species now having no market outlet. The Forest Products Laboratory should have facilities for high pressure research.

LABORATORIES FOR ALL STATES

These are but a few examples of the kind of research which necessitates expansion of the Forest Products Laboratory. I am most pleased that in his statement, Senator Stennis recognizes this need and proposes that the Forest Service proceed now with construction of the addition to this central laboratory serving all 50 States—and many foreign countries as well.

It is plain that the more complex type of forest products research can be most effectively carried out in one central location. There are many reasons. A more efficient operation without duplication of the expensive equipment can be operated at lower cost. Personnel and equipment from all the necessary scientific disciplines are available to work on many different kinds of problems. The industry which will use this information can get it all at one place. Last but yet very important, competent scientific personnel are attracted to such an atmosphere on a major university campus.

I am aware of the need for regional research to complement the work of the Forest Products Laboratory. However, this regional research will proceed more rapidly and effectively if the research of the central laboratory is made more productive. These regional groups must build on the accomplishments of centralized research.

COOPERATION OF LABORATORY AND UNIVERSITY

In conclusion, I would like to draw attention to the fine history of cooperation between the Forest Products Laboratory and the University of Wisconsin. For over 50 years, the successful functioning of this Federal research Laboratory located at our State university has been an outstanding example of Federal-State cooperation. Our State government, as well as university officials, look forward to the continued growth and activity of the Laboratory.

To this end, the Wisconsin State Legislature and the university board of regents recently approved the transfer of the 12-acre site for the proposed addition. It should be recognized that this land is a most valuable resource of the university. The willingness to make it available to the Forest Service at a price well below market value is evidence of the cordial relations existing between the university and the Laboratory.

Since the land transfer was approved on the understanding that construction of the new Laboratory facilities would begin soon, I

strongly hope that funds for this purpose, in the amount of $4 million, will be approved this year.

LETTER FROM GOVERNOR NELSON OF WISCONSIN

And, Mr. Chairman, I ask unanimous consent that a letter, a relatively brief letter, from the Governor of Wisconsin, Gov. Gaylord Nelson, to Secretary Freeman, be printed in the record at this point.

Chairman HAYDEN. That will be done.

(The letter referred to follows:)

THE STATE OF WISCONSIN,
Madison, January 29, 1962.

Hon. ORVILLE FREEMAN,
Secretary of Agriculture,
Department of Agriculture,
Washington, D.C.

DEAR SECRETARY FREEMAN: I want to request your support for restoration of the $10 million expansion and remodeling project at the U.S. Forest Products Laboratory in Madison in the budget for fiscal 1963.

Wisconsin has long recognized the importance of this Laboratory. The significance to Wisconsin is obvious: In our State the estimated annual gross product value of the forest products industry is $1.3 billion, nearly 2½ times that of the dairy industry which gives Wisconsin the title of Dairy State.

Recognizing this significance, the University of Wisconsin 52 years ago generously made possible establishment of the first Forest Products Laboratory on the campus when sufficient Federal funds were not available. The support of the Department of Agriculture and Forest Service have enabled the Laboratory to develop into a center for forest products research unequaled anywhere else in the world.

When once again Federal funds were not available, the legislature passed and I signed last May a bill enabling the university to make 12 acres of campus land available for expansion of the Laboratory. Though the land had other possible university uses, the fact was recognized that the Laboratory's needs were more acute.

The Laboratory here has an international reputation. It is the central research establishment serving the forest products industry, the fifth largest industry in the United States. The need for forest products research has never been greater. The U.S. Forest Service, the other owners of the 600 million acres of forest land in this country, the industry itself, and the many people and activities that depend on it have a tremendous interest in having this research carried on. There is only one location where it can be conducted efficiently and economically, and that is the Forest Products Laboratory in Madison, where it has been carried on since 1910.

Yet the Madison Laboratory must operate in a building 30 years old which has had only one major improvement—a new powerplant—since it was built. Its appropriation is only $3.25 million a year, despite the fact it has returned to Government an estimated $70 for every dollar appropriated to it since its inception. The severe limitations on the facilities and budget of the Laboratory mean that many of the needs of the industry for basic technical information cannot be met.

Last year Congress eliminated $300,000 from the budget for land acquisition and planning for the $10 million expansion program of the Madison Laboratory. At the same time it approved 16 forest research construction projects in 15 other States. I appreciate the desires of other States to have forest research facilities; Wisconsin is not the only State interested in this field. But it cannot serve the broadest interest of the industry, here or in other States, to duplicate facilities and activities carried on successfully here for more than half a century.

The concentration of research effort and facilities is what is required to meet the industry's needs. The primary reason for the Madison Laboratory's past success has been the concentration of specialized technical discipline which made possible an interchange of information seldom found in a single public establishment. Here, for $8 million in new construction and $2 million for remodeling and equipment, the further facilities needed can be established. To attempt

to meet these needs elsewhere will require construction of duplicate facilities at many times the $10 million cost.

I earnestly solicit your support for this project, which is so necessary to the economy of Wisconsin and so many other States. I would also appreciate your advice on how I may be most helpful in furthering this effort.

Sincerely yours,

GAYLORD A. NELSON, *Governor.*

FEDERAL PUBLIC WORKS PROGRAM

Senator PROXMIRE. And I would also like to just add one other point which I have not put in my formal statement, that we in Wisconsin are very much aware of the fact that we benefit very little from the Federal public works program. Most of its benefits have not gone to our State for many years. There is much work to be done out in the Far West, of course. We recognize this.

But we are deeply concerned with the fact that we are the last, the 50th, in the relationship between our population and Federal employment in our State. We are at the bottom of the barrel. In terms of taxes paid, population, area, and need, our State deserves far more consideration than we have received.

Having made this fact of life clear, however, I want to make my statement on the basis of the merits of the Forest Products Laboratory case. I think the merits are extremely strong.

Chairman HAYDEN. Thank you for your statement.

FOREST SERVICE

STATEMENTS OF DR. FRANK J. WELCH, RICHARD E. McARDLE, CLARE HENDEE, EDWARD P. CLIFF, W. S. SWINGLER, V. L. HARPER, A. W. GREELEY, G. M. JEMISON, G. S. JAMES, B. H. PAYNE, M. W. CLUFF, AND CHARLES L. GRANT—Resumed

BUDGET REQUEST

Chairman HAYDEN. There will be placed in the record a summary of appropriations, fiscal year 1962, and estimates, fiscal year 1963, for the U.S. Forest Service. This shows a requested increase of $14,131,000 over the funds available to the Forest Service, $208,769,000 in fiscal year 1962.

(The summary referred to follows:)

SUMMARY OF APPROPRIATIONS, 1962, AND ESTIMATES, 1963

Appropriation item	Estimated available, 1962	Budget estimates, 1963	Increase (+) or decrease (−)
Forest protection and utilization:			
Forest land management	$127,641,000	$140,740,000	+$13,099,000
Forest research	26,368,000	23,150,000	−3,218,000
State and private forestry cooperation	15,800,000	15,800,000	
Total, forest protection and utilization	169,809,000	179,690,000	+9,881,000
Forest roads and trails	35,000,000	37,500,000	+2,500,000
Access roads	[1] 2,000,000	2,000,000	
Acquisition of lands for Superior National Forest	[2] 250,000	2,000,000	+1,750,000
Acquisition of lands for national forests, special acts	10,000	10,000	
Cooperative range improvements	700,000	700,000	
Assistance to States for tree planting	1,000,000	1,000,000	
Expenses, brush disposal (permanent)	9,000,000	9,000,000	
Roads and trails for States (permanent)	10,020,000	11,600,000	+1,580,000
Forest fire prevention (permanent)	[3] 20,000	20,000	
Restoration of forest lands and improvements (permanent)	[4] 196,000	196,000	
Payment to Minnesota (permanent)	123,300	123,300	
Payments to counties, national grasslands (permanent)	425,000	425,000	
Payments to school funds, Arizona and New Mexico (permanent)	99,200	115,000	+15,800
Payments to States, national forests fund (permanent)	25,045,000	29,000,000	+3,955,000
Total	253,697,500	273,379,300	+19,681,800
Deduct permanent appropriations (shown in detail above)	44,928,500	50,479,300	−5,550,800
Total (excluding permanent appropriations)	[5] 208,769,000	222,900,000	+14,131,000

[1] In addition, $151,218 available from prior year balances.
[2] In addition, $628,496 available from prior year balances.
[3] In addition, $7,160 available from prior year balances.
[4] In addition, $4,270 available from prior year balances.
[5] In addition, prior year balance of $112,520 available under the item "Acquisition of lands for Cache National Forest."

RECEIPTS OF FOREST SERVICE BY SOURCES

Chairman HAYDEN. Would you please submit for the record a table showing receipts by sources from various Forest Service activities? Also, please include in that table a showing of the payments made to the various States from thees receipts.

Mr. MCARDLE. That will be done, Mr. Chairman.

(The information referred to follows:)

Actual receipts, fiscal year 1961

Class of receipts:	
Timber sales	$98,425,492
Grazing	3,268,037
Land uses	2,728,318
National grasslands	1,677,936
Total receipts	[1] 106,099,783

[1] Includes $4,069,428 under account established for Oregon and California railroad grant lands, for which receipts are transferred to the Department of the Interior for distribution under the acts of Aug. 28, 1937, June 24, 1954, and Aug. 3, 1961 (43 U.S.C. 1181f–g).

Distribution to States in fiscal year 1962 of above receipts

Alabama	$181,610	New Hampshire	$43,120
Alaska	212,431	New Mexico	158,183
Arizona	501,100	New York	559
Arkansas	870,485	North Carolina	132,651
California	2,693,550	North Dakota	195,050
Colorado	320,490	Ohio	8,814
Florida	216,487	Oklahoma	128,038
Georgia	197,619	Oregon	10,228,618
Idaho	1,123,626	Pennsylvania	128,250
Illinois	5,077	Puerto Rico	2,608
Indiana	10,633	South Carolina	494,076
Iowa	304	South Dakota	140,238
Kansas	10,504	Tennessee	83,009
Kentucky	68,770	Texas	488,525
Louisiana	370,834	Utah	141,592
Maine	3,116	Vermont	45,714
Maryland	3,106	Virginia	57,391
Michigan	190,394	Washington	4,309,990
Minnesota	260,313	West Virginia	97,609
Mississippi	684,316	Wisconsin	78,209
Missouri	46,860	Wyoming	200,626
Montana	511,427		
Nebraska	16,854	Total	[1] 25,703,847
Nevada	41,071		

[1] Includes payments to States under the permanent appropriations: "Payments to counties, national grasslands," "Payment to Minnesota," and "Payments to school funds, Arizona and New Mexico."

FOREST PROTECTION AND UTILIZATION

Chairman HAYDEN. There also will be placed in the record your justifications for your budget estimate of $179,690,000 for forest protection and utilization. This is $9,881,000 more than was available to you in the past fiscal year. Included in this justification are three exhibits pertaining to the development program for the national forests and to the national forestry research program.

I will insert this in the record.

(The justifications referred to follow:)

FOREST PROTECTION AND UTILIZATION

	Forest land management	Forest research	State and private forestry cooperation	Total
Appropriation Act, 1962	[1] $128,000,000	$26,368,000	$15,800,000	[1] $170,168,000
Transferred to "Operating expenses, Public Buildings Service," General Services Administration for space rental	359,000			359,000
Base for 1963	[1] 127,641,000	26,368,000	15,800,000	[1] 169,809,000
Budget estimate, 1963	[1] 140,740,000	23,150,000	15,800,000	[1] 179,690,000
Increase or decrease	+13,099,000	−3,218,000		+9,881,000

[1] In addition, $700,000 available by transfer from "Cooperative range improvements."

Summary of increases and decreases, 1963

For the development program for the national forests and the national forestry research program:	
(a) National forest protection and management	+11,499,000
(b) Insect and disease control	+1,400,000
(c) Acquisition of lands (Weeks Act)	+200,000
(d) Forest research	−3,218,000
Total increase	+9,881,000

Project statement

Project	1961	1962 estimated	Increase or decrease	1963 estimated
1. Forest land management:				
(a) National forest protection and management:				
(1) Timber resource management:				
(a) Sales administration and management	$21,241,987	$22,780,000	+$400,000	$23,180,000
(b) Reforestation and stand improvement	4,362,509	12,750,000	+2,500,000	15,250,000
(2) Recreation-public use	15,023,584	20,500,000	+5,620,000	26,120,000
(3) Wildlife habitat management	1,306,117	3,220,000	+200,000	3,420,000
(4) Range resource management:				
(a) Management	4,135,395	4,610,000	+100,000	4,710,000
(b) Revegetation	1,732,851	2,540,000	+120,000	2,660,000
(c) Improvements	2,094,591	3,180,000		3,180,000
(5) Soil and water management	1,958,553	4,090,000	+400,000	4,490,000
(6) Mineral claims, leases and other land uses	5,406,756	6,800,000	+400,000	7,200,000
(7) Forest fire protection	15,577,095	20,390,000	+1,400,000	21,790,000
(8) Structural improvements for fire and general purposes (construction and maintenance)	10,839,278	11,781,000	+359,000	12,140,000
(9) Rehabilitation of burns	1,242,596	1,050,000		1,050,000
Subtotal	84,921,312	113,691,000	+11,499,000	125,190,000
Deduct amount advanced from "Cooperative range improvements"	−700,000	−700,000		−700,000
Subtotal, national forest protection and management	84,221,312	112,991,000	+11,499,000	124,490,000
(b) Fighting forest fires	39,530,024	5,000,000		5,000,000
(c) Insect and disease control:				
(1) White pine blister rust control	3,244,970	[1] 3,365,000	+100,000	[1] 3,465,000
(2) Other pest control	4,115,463	[2] 5,985,000	+1,300,000	[2] 7,285,000
Subtotal, insect and disease control	7,360,433	9,350,000	+1,400,000	10,750,000
(d) Acquisition of lands (Weeks Act)	99,508	300,000	+200,000	500,000
Subtotal	131,211,277	127,641,000	+13,099,000	140,740,000
Deduct amount advanced from "Expenses, brush disposal" for fighting forest fires	−2,838,024			
Total, forest land management	128,373,253	127,641,000	+13,099,000	140,740,000
2. Forest research:				
(a) Forest and range management research	8,683,625	9,737,000	+477,000	10,214,000
(b) Forest protection research:				
(1) Forest fire research	1,018,020	1,349,000	+130,000	1,479,000
(2) Forest insect research	1,135,088	1,590,000	+135,000	1,725,000
(3) Forest disease research	1,007,753	1,405,000	+120,000	1,525,000
Subtotal, forest protection research	3,160,861	4,344,000	+385,000	4,729,000
(c) Forest products and engineering research	3,420,408	4,477,000	+240,000	4,717,000

See footnote at end of table.

Project statement—Continued

Project	1961	1962 estimated	Increase or decrease	1963 estimated
2. Forest research—Continued				
(*d*) Forest resources research:				
(1) Forest survey	$1,519,259	$1,583,000		$1,583,000
(2) Economics research	644,152	1,032,000	+$125,000	1,157,000
Subtotal, forest resources research	2,163,411	2,615,000	+125,000	2,740,000
(*e*) Forest research construction	1,238,386	5,195,000	−4,445,000	750,000
Total, forest research	18,666,691	26,368,000	−3,218,000	23,150,000
3. State and private forestry cooperation:				
(*a*) Cooperation in forest fire control	10,134,523	12,465,500		12,465,500
(*b*) Cooperation in forest tree planting	293,863	296,000		296,000
(*c*) Cooperation in forest management and processing	1,548,500	2,500,000		2,500,000
(*d*) General forestry assistance	406,769	538,500		538,500
Total, State, and private forestry cooperation	12,383,655	15,800,000		15,800,000
Total, forest protection and utilization [3]	159,423,599	169,809,000	+9,881,000	179,690,000
Unobligated balance lapsing	252,901			
Total available or estimate	159,676,500	169,809,000	+9,881,000	179,690,000
Transferred to "Operating expenses, Public Buildings Service," General Services Administration		359,000		
Total appropriation or estimate	159,676,500	170,168,000		

[1] Includes allocations to the Department of the Interior: 1962, $368,700; 1963, $353,000.
[2] Includes allocations to the Department of the Interior: 1962, $347,500; 1963, $400,000.
[3] Represents obligations. Applied costs for 1961 are $156,979,513. The difference of $2,444,086 reflects, primarily, contracts made and orders placed in 1961 over contractual services and equipment used in that year.

INCREASES AND DECREASES

The net increase of $9,881,000 in the forest protection and utilization appropriation is distributed as follows:

Development program for the national forests	+$13,099,000
National forestry research program	−3,218,000
Total	9,881,000

This net increase, together with the increase of $2,500,000 shown in the appropriation "Forest roads and trails," and the increase of $1,750,000 in the appropriation "Acquisition of lands for Superior National Forest" is needed for the orderly fulfillment of the development program for the national forests and the national forestry research program. The original program for the national forests, as submitted to the Congress in March 1959, has been revised so as to provide for major needs where these were not previously recognized in full and where subsequent surveys and trends have indicated a higher level of need. Cost estimates based upon 1958 dollars have been adjusted to 1961 operating and development costs. The need for this revision was made clear in President Kennedy's special message on "Natural Resources" of February 23, 1961, and the President's March 16, 1961 agriculture message to Congress. The revised program for development of the national forests was submitted to the Congress by the President on September 21, 1961.

In order to more clearly and adequately present this program, the revision has been developed in two parts:

1. The development program for the national forests

The development program includes all the renewable resources of the national forest system—water, timber, recreation, forage, and wildlife habitat. The program provides for the continued orderly use and development of the renewable resources of the national forests and national grasslands in accordance with the basic conservation principles under the Multiple Use-Sustained Yield Act of June 12, 1960 (Public Law 86-517). The accomplishments under this program over the next 10 years will largely determine whether those vastly important public lands will contribute by the year 2000 their fair share to a greatly expanded national economy and public need.

2. A national forestry research program

This program includes the research needed to adequately support forestry activities, whether on national forests and other public lands or on private lands, including especially the farms and other small private woodlands. This program covers all the research for which the Forest Service has responsibility. It embraces most aspects of all major problems of forests and associated rangelands. It does not include the related research that is the assigned responsibility of other Federal agencies.

Fiscal year 1962 appropriations recognized the urgent need for this accelerated program by providing obligational authority to a level of 97.1 percent of that planned for the year. However, cumulative through 1962, total implementation has been approximately $2.74 million behind schedule. This is primarily due to the fact that the Federal Highway Act authorization of $35 million for fiscal year 1962 and $40 million for fiscal year 1963 did not permit acceleration of the forest roads and trails financing to the level needed to meet the needs as recognized in the program for the national forests. The fiscal year 1963 authorization would have to be amended from $40 million to $50 million to bring this activity reasonably near the level of financing necessary to keep pace with the needs of the program.

The following exhibits reflect (1) the status of the program through 1962, (2) a comparison of the 1962 planned and financed levels, and (3) a comparative table showing the distribution by program activities of—

(*a*) Maximum annual level of $320.6 million as reflected in the original plan. This level was planned to be reached in 5 years (fiscal year 1965);

(*b*) Maximum annual level of $561.1 million as reflected in the revised plans. This level of financing is planned to be reached in 10 years (1972);

(*c*) Level of financing proposed for fiscal year 1963; and

(*d*) Amount remaining to be implemented in subsequent years.

EXHIBIT 1

Status of implementation of national forest program, 1962

	Forest land management				Forest Research	Road program			Special acquisition	Total National forest program
	National forest protection and management	Insect and disease control	Weeks Act acquisition	Total		Roads and trails	Access roads	Total		
1960:										
National forest plan base	$67,534,000	$4,000,000	$100,000	$71,634,000	$7,013,200	$35,400,000		$35,400,000	$60,000	$114,107,200
Level of financing	70,534,000	5,000,000	100,000	75,634,000	7,513,200	39,860,000	$1,000,000	40,860,000	60,000	124,067,200
Advance implementation	3,000,000	1,000,000		4,000,000	500,000	4,460,000	1,000,000	5,460,000		9,960,000
1961:										
Proposed level, 1st year	88,284,000	5,500,000	100,000	93,884,000	13,513,200	47,000,000		47,000,000	1,010,000	155,407,200
Level of financing	85,337,900	5,370,000	100,000	90,807,900	11,745,800	44,170,000	1,000,000	45,170,000	760,000	148,483,700
Difference	−2,946,100	−130,000		−3,076,100	−1,767,400	−2,830,000	+1,000,000	−1,830,000	−250,000	−6,923,500
1962:										
Proposed level, 2d year	114,597,200	6,000,000	100,000	120,697,200	18,800,000	56,700,000		56,700,000	510,000	196,707,200
Level of financing	[1] 114,050,000	7,468,200	300,000	121,818,200	19,335,800	[2] 47,520,000	2,000,000	[2] 49,520,000	260,000	190,934,000
Difference	−547,200	+1,468,200	+200,000	+1,121,000	+535,800	−9,180,000	+2,000,000	−7,180,000	−250,000	−5,773,200
Cumulative status 1960–62	−493,300	+2,338,200	+200,000	+2,044,900	−731,600	−7,550,000	−4,000,000	−3,550,000	−500,000	−2,736,700

[1] Includes $359,000 transferred to General Services Administration for space rental.

[2] Includes:

Forest roads and trails appropriation	$35,000,000
Advance of fiscal year 1963 Federal Highway Act contract authorization	[a] 2,500,000
Roads and trails for States (10 percent)	10,020,000
Total	47,520,000

[a] Unfunded.

EXHIBIT 2

Financing of national forest program, fiscal year 1962

	Planned level	Financed level	Difference	Percent financed
Forest land management:				
National forest protection and management:				
Timber resource management:				
(a) Sales administration and management	$21,541,000	$22,780,000	$1,239,000	105.8
(b) Reforestation and stand improvement	13,945,200	12,750,000	−1,195,200	91.4
Subtotal, timber resource management	35,486,200	35,530,000	43,800	100.1
Recreation-public use	20,647,000	20,500,000	−147,000	99.3
Wildlife habitat management	3,632,000	3,220,000	−412,000	88.7
Range resource management:				
(a) Management	4,671,000	4,610,000	−61,000	98.7
(b) Revegetation	2,453,000	2,540,000	87,000	103.6
(c) Improvements	3,403,000	3,180,000	−223,000	93.4
Subtotal, range resource management	10,527,000	10,330,000	−197,000	98.1
Soil and water management	4,584,000	4,090,000	−494,000	89.2
Mineral claims, leases, and other land uses	7,031,000	6,800,000	−231,000	96.7
Forest fire protection	19,343,000	20,390,000	1,047,000	105.4
Structural improvements for fire and general purposes	13,347,000	12,140,000	−1,207,000	91.0
Rehabilitation of burns		1,050,000	1,050,000	
Total, national forest protection and management	114,597,200	114,050,000	−547,200	99.5
Insect and disease control:				
White pine blister rust control	3,253,700	3,365,000		
Less private land excluded in plan base	−1,153,700	−1,153,700		
Subtotal	2,100,000	2,211,300	111,300	105.3
Other pest control	4,628,100	5,985,000		
Less private land excluded in plan-base	−728,100	−728,100		
Subtotal	3,900,000	5,256,900	1,356,900	134.8
Total, insect and disease control	6,000,000	7,468,200	1,468,200	124.5
Acquisition of lands, Weeks Act	100,000	300,000	200,000	300.0
Total, forest land management	120,697,200	121,818,200	1,121,000	100.9
Forest research:				
Forest and range management research	10,495,600	9,737,000		
Less amounts not included in national forest plan	−3,440,000	−3,440,000		
Subtotal	7,055,600	6,297,000	−758,600	89.2
Forest protection research:				
Forest fire research	1,459,400	1,349,000		
Less amounts not included in national forest plan	−271,500	−271,500		
Subtotal	1,187,900	1,077,500	−110,400	90.7
Forest insect research	1,558,400	1,590,000		
Less amounts not included in national forest plan	−316,500	−316,500		
Subtotal	1,241,900	1,273,500	31,600	102.5
Forest disease research	1,122,200	1,405,000		
Less amounts not included in national forest plan	−256,000	−256,000		
Subtotal	866,200	1,149,000	282,800	132.6
Subtotal, forest protection research	3,296,000	3,500,000	204,000	106.2
Forest products utilization research	4,879,700	4,477,000		
Less amounts not included in national forest plan	−1,416,200	−1,416,200		
Subtotal	3,463,500	3,060,800	−402,700	88.4

Financing of national forest program, fiscal year 1962—Continued

	Planned level	Financed level	Difference	Percent financed
Forest research—Continued				
Forest resources research:				
Forest survey	$1,519,000	$1,583,000		
Less amounts not included in national forest plan	−1,050,000	−1,050,000		
Subtotal	469,000	533,000	$64,000	113.6
Economics research	997,900	1,032,000		
Less amounts not included in national forest plan	−282,000	−282,000		
Subtotal	715,900	750,000	34,100	104.8
Subtotal, Forest resources research	1,184,900	1,283,000	98,100	108.3
Forest research construction	3,800,000	5,195,000	1,395,000	136.7
Total, forest research	18,800,000	19,335,800	535,800	102.8
Roads and trails	56,700,000	[1] 47,520,000	−9,180,000	
Access roads		2,000,000	2,000,000	
Total, road and trail program	56,700,000	[1] 49,520,000	−7,180,000	87.3
Acquisition of lands, special acts	10,000	10,000		100.0
Acquisition of lands, Superior National Forest	500,000	250,000	−250,000	50.0
Total, special acquisition	510,000	260,000	−250,000	51.0
Total, national forest program, fiscal year 1962	196,707,200	190,934,000	−5,773,200	97.1

[1] Includes $2,500,000 advance of the fiscal year 1963 contract authorization (unfunded) as provided in the Federal Highway Act of 1960.

80391—62——66

EXHIBIT 3

Development program for the national forests and the national forestry research program

[The following table shows the relationship between the maximum annual level of financing proposed in the program for the national forests and the maximum annual level of financing proposed in the revised programs. It also reflects the relationship of the amounts proposed for 1963 and the amount remaining to be implemented in subsequent years. In developing the program for the national forests, research work relating to non-national forest lands was excluded from the plan. The revised plan combines forestry research for both national forest and non-national forest lands to more adequately present the entire forestry research need. The adjustment shown in col. 2 below adds back the portion of the financing considered as being applicable to non-national forest lands in the original program to provide a common comparative cost base between the original program—col. 3—and the programs as revised—col. 4.]

Appropriation item	Maximum annual level proposed in original national forest program (5 years) (1)	Adjust for non-national forest land research not included in national forest program (2)	Maximum annual level adjusted comparable to proposed levels of revised programs (3)	Maximum annual level proposed for revised programs (1972) (4)	Proposed level of financing 1963 (5)	Amount remaining to be implemented in subsequent years col. (4) minus col. (5) (6)
Forest protection and utilization:						
Forest land management:						
National forest protection and management:						
Timber resource management:						
(a) Sales administration and management	$26,919,000		$26,919,000	$41,229,000	$23,180,000	$18,049,000
(b) Reforestation and stand improvement	41,119,000		41,119,000	49,307,000	15,250,000	34,057,000
Recreation, public use	31,065,000		31,065,000	96,380,000	26,120,000	70,260,000

Forest roads and trails, including "Roads and Trails for States" (10 percent)	85,000,000		85,000,000	164,370,000	[3] 49,100,000	115,270,000
Access roads					2,000,000	−2,000,000
Total road program	85,000,000		85,000,000	164,370,000	[3] 51,100,000	113,270,000
Acquisition of lands for national forests, special acts	10,000		10,000	10,000	10,000	
Acquisition of lands for Superior National Forest					2,000,000	−2,000,000
Total included in programs	320,600,000	7,013,200	327,613,200	561,060,000	210,500,000	350,560,000
Reconciliation to the 1963 budget estimates:						
Insect and disease control on lands not administered by the Forest Service					+2,200,000	
States and private forestry cooperation					+15,800,000	
Assistance to States for tree planting					+1,000,000	
Amount for fighting forest fires not included in the program because of the emergency nature of this fund					+5,000,000	
Less 10 percent of national forest receipts included in program but not in regularly appropriated funds					−11,600,000	
Total budget estimate (appropriated funds)					222,900,000	

[1] Includes $700,000 transferred from "Cooperative range improvements."
[2] Excludes $2,200,000 as explained in reconciliation at bottom of table.
[3] Does not include proposed amendment to increase the 1963 Federal Highway Act authorization by $10,000,000 of which $6,500,000 would be funded.

FOREST LAND MANAGEMENT

(1) An increase of $400,000 in timber sale administration and management would be used to increase the timber cut by 200 million board feet to a total of 9.7 billion board feet. This increased cut would be in special small and salvage sales. Further expansion of these sales to utilize material which otherwise will be lost by decay and to provide economic opportunities for small operators, particularly in rural redevelopment areas, is clearly advisable.

Following is a summary of the total program proposed for fiscal year 1963:

Regular sales:	
Sale preparation, 11.1 billion board feet at $0.51 per thousand	$5,661,000
Sale administration, 9 billion board feet at $1.49 per thousand	13,437,000
Advance sale preparation, 3 billion board feet at $0.23 per thousand	690,000
Special small and salvage sales:	
Sell and cut 700 million board feet	1,572,000
Timber inventories and management plans	1,820,000
Total	23,180,000

(2) An increase of $2,500,000 for reforestation and stand improvement would be used to implement the development program for the national forests by increasing rate of reforesting nonstocked and poorly stocked land and expanding badly needed cultural operations such as weeding, thinning, and release of young timber stands. Some of the increase is needed to develop nurseries to produce trees that must be available for the larger tree planting program.

The planned use of the proposed increase is:

Plant and seed to reforest an estimated 20,000 acres, including cost of trees and seed	$1,000,000
Release suppressed natural reproduction and planted stands from brush and worthless trees to increase growth on an estimated 43,000 acres	650,000
Thin young natural stands to increase growth on an estimated 28,500 acres	850,000

(3) An increase of $5,620,000 for recreation-public use would be used to accelerate the rehabilitation of wornout campground and picnic facilities; to provide for sanitation, cleanup, and maintenance of newly constructed areas and facilities; and to develop new sites to alleviate overcrowding and to properly meet expanding use (1960 use was 13 percent over 1959; additional increased use of 10 percent or more is indicated for 1961).

The rehabilitation program would be stepped up to accomplish the rehabilitation of 140 swimming, winter-sports, organization and other sites; and to perform major repair work on 24 recreation dams and reservoirs. Approximately $2,500,000 of the increase would be used for this rehabilitation program.

The expansion of existing recreation sites and development of new ones would provide 1,500 additional family camp and picnic units, accommodating 7,700 persons at one time, and about 1.3 million visits per season. Approximately $1,600,000 of the increase would be used for this purpose.

Due to increasing demands, additional emphasis is being placed on the development and administration of outstanding recreation sites such as Flaming Gorge, Madison River Earthquake Site, Mendenhall and Portage Glaciers, Shasta and Trinity Reservoirs, Current and Eleven Point Rivers, and Cumberland Reservoirs. Ten additional special areas and other important areas will be developed. At such sites there is need for more public services which are not measurable in terms of family units, such as an interpretive program, boat landings, bathhouses, overlooks, visitor centers, and so forth.

Increased recreation use and facilities accentuate the need for the preparation of management plans to coordinate overall multiple-use planning and development of the national forests. Forty national forest recreation management plans and 2,000 campground, picnic and other site plans needed in advance of the development program will be prepared in 1963.

Visitor Information Service would be expanded to include developments at some 50 sites where there is a concentrated demand for special facilities and services to enable the public to enjoy and understand the resources of the national forests. Museums, exhibits, nature trails, and information signs would

be developed to help the public understand the local history and the management of national forest resources.

(4) An increase of $200,000 for wildlife habitat mangement would be used to maintain and improve wildlife conditions on the national forests and national grasslands through direct habitat improvement projects.

Projects toward which these funds would be applied include permanent wildlife openings, 250 acres; prescribed burns, 20,000 acres; revegetation of key wildlife areas, 2,500 acres; aquatic plant control, 250 acres; small water developments, 100 units; fencing key game areas and stream bottoms, 3,000 acres; stream improvement, 30 miles.

(5) An increase of $100,000 in range resource management would be used to meet the increasing demands for more intensive management on the more than 11,000 national forest, national grassland, and other grazing allotments administered by the Forest Service. This would advance the rate of completion of range allotment analysis, reanalysis, and maintenance of management plans. Intensification of management of the range resource in coordination with other resources demands frequent reassessment of changing range resource conditions, incorporation of new findings into management plans, and implementation of these plans if the Forest Service is to adequately carry out its range management responsibilities.

(6) An increase of $120,000 for range revegetation would be used for revegetation of an estimated 12,000 acres of depleted national forest rangelands, either by reseeding of desirable grasses, eliminating undesirable brush, or a combination of both. This increase would accelerate the restoration of rangelands for good forage production and improved watershed conditions.

(7) An increase of $400,000 for soil and water management would be used to improve technical standards and criteria for protecting, restoring, and enhancing watershed conditions and applying them in watersheds on which activities such as road construction, timber harvesting, mining, recreation area development, and others are taking place to insure appropriate consideration of resource management and protection measures in multipurpose water development programs; for installation of water yield inventory facilities needed for administrative purposes on selected key watersheds; and to develop soil management interpretations essential to maximum use of soil survey data in ranger district multiple use management.

(8) An increase of $400,000 for mineral claims, leases, and other land uses. This item covers three major land administration activities, each of which is handled as an identifiable program, and each of which is an essential part of a balanced program. The three activities are (*a*) mineral claims, leases, and special uses; (*b*) land classification and ownership adjustments; and (*c*) land surveys and mapping. The increase would be used as follows:

(*a*) $200,000 to accelerate action on mineral claims, leases, and special uses. Additional personnel would be assigned to conduct the necessary supervision and fieldwork required to insure adequate protection of Government-owned land and resources. Specifically involved are—

Supervision of the issurance and operation of mineral leases on acquired and public-domain lands administred by the Forest Service. Such leases now cover over 10 million acres and receipts credited to the national forest system were over $1 million in fiscal year 1961. In addition, an estimated $8 million is collected by the Bureau of Land Management for leases on public lands administered by the Forest Service. It is essential that careful thought be given to multiple-use land management before mineral leases are issued, to the protection of surface resources during the mining operation and to the rehabilitation of lands after completion of mining. The Forest Service issues and administers leases for common varieties of mineral materials on all lands under its jurisdiction. It acts as adviser and gives consent to leases for minerals, oil, and gas on acquired lands, and advises the Bureau of Land Management as to stipulations in leases on public-domain lands administered by the Forest Service. This work usually requires extensive field investigation and negotiations with applicants regarding stipulations necessary to protect Government-owned land and resources.

Status records showing the mineral ownership of some 20 million acres of acquired lands. Some of these minerals are very valuable and it is necessary to have accurate ownership records so that the property of the United States and the minerals owned by the United States may be fully protected. This work requires careful and time-consuming search of title records. It

may also involve litigation. A record system to serve these purposes has been devised and is being tested. This system would be implemented in 1963.

Supervision of operations of privately owned mineral rights on lands where the United States owns the surface. Millions of acres of acquired lands are involved and it is frequently necessary that the surface rights of the United States be protected from mineral operations of the owner of the minerals. This involves unauthorized activities and unauthorized damage to land and resources.

(*b*) $90,000 for land classification and ownership adjustments as follows:

A sum of $42,000 for expanding and accelerating the program of land exchange and landownership adjustments to consolidate and adjust the national forest ownership pattern for more efficient and economical administration. The expanding population growth and changing economic conditions have intensified the need for adjustments in national forest ownership. Much of the needed change can be accomplished through land exchanges which are mutually beneficial to the United States and the exchange proponents. The number of exchange proposals increases each year with the present annual level approximating 300 actionable cases. The 10-year objective in the national forest development program is to convey 1,500,000 acres of Federal lands in national forests and national grasslands in exchange for suitable lands now in private or other ownership to consolidate and improve the pattern of Government ownership. Current exchange accomplishments must be stepped-up to meet the objective.

For land classification, $26,000.—Land uses change as do economic conditions and numbers of people in related areas. These factors require that the Forest Service give close and continuing study to the problems relating to defining areas that might better serve the needs of the Nation if excluded from or included in the national forest and national grasslands systems. A small staff of specialists has been set up at regional office and forest levels to begin to meet this problem. The increase in this activity would provide for needed additional staffing at field locations where local adjustment problems are particularly acute and complex, and where policy decisions must be made in the very near future.

For land status records, $22,000.—Existing landownership and status records are inadequate to meet the needs of Forest Service land managers in planning for expanding resource development and use in protecting the interests of the United States in the land it owns and administers. A revised records system adequate to meet the need for readily available, complete, and accurate information has been developed and field tested. This system will now be applied servicewide. The increased funds in this activity would hasten the time when this badly needed system will be fully effective.

(*c*) $110,000 for land surveys and mapping as follows:

The land line location program of the Forest Service would be accelerated. The stepped-up program of land line location initiated in fiscal year 1958 has as its basic purposes the search for, proper identification and permanent marking of property and other land line courses. Increased land values, intensified land use, pressures for land and other ownership factors make it imperative that this work be speeded up. The 10-year objective is to establish and mark property corners and survey and post some 200,000 miles of property lines between national forest and other lands which are now inadequately located and marked. The increase in this activity is necessary to continue orderly progress toward the level of accomplishment that is needed to meet this objective.

The program to procure large-scale topographic maps of national forest and national grassland areas would be expanded and accelerated. Multiple-use plans are essential management requirements in the intensified use of resources of lands under the administration of the Forest Service. Topographic maps are required as a base for the preparation of these plans, and to provide elevational data essential to design of engineering projects and execution of management plans. Adequate maps are presently available for only approximately 35 percent of the areas under the administration of the Forest Service. The 10-year objective in the national forest development program is to obtain large-scale topographic maps for an area of approximately 355,600 square miles for which coverage is either nonexistent or unreliable. The present rate of topographic mapping on national forests and national grasslands will not meet this objective.

(9) An increase of $1,400,000 for forest fire protection would be used to further strengthen the fire control force to better meet critical fire situations, partic-

ularly in Western States. An amount of $28,728 is included in this item for reimbursing the employees' compensation fund, Department of Labor, for benefit payments made from that fund to employees of the Forest Service who were injured while in the performance of duty subsequent to December 1, 1960. Such reimbursement is required pursuant to provisions of Public Law 86-767, enacted September 13, 1960.

Severe drought conditions and the occurrence of a larger number of fires during the past 3 years have caused high firefighting costs and large losses of valuable resources. Emphasis will be on increasing the striking power of crews to stop fires while small and on building up the fire prevention effort to reduce the number of man-caused fires. More small crews, including some with helicopter transportation, will be provided in an effort to assure initial fast coverage of fires. There will also be provided more large, well-equipped, and trained crews at central locations to back up initial attack when the first crews are unable to stop fires. New equipment will be provided and work will be carried on to improve and modify equipment design. The current small-scale fuel cleanup and treatment program will be expanded to new areas to test and demonstrate possibilities of making extensive changes in fuel conditions as a means of stopping conflagration fires.

Following is a distribution of this proposed increase:

Initial attack	$650,000
Reinforcement crews	250,000
Prevention	350,000
Fuel treatment	150,000
Total	1,400,000

(*a*) *Initial attack, $650,000.*—The experiences of three severe forest fire seasons in Western States have demonstrated the need for further increased striking force of capable fire crews to attack fires while small. Well-trained crews strategically located have been effective in keeping most fires to small size with consequent low loss of resource. Increases planned for fiscal year 1963 provide more small crews in areas where likelihood of fires is greatest and fuel and weather conditions cause fires to spread rapidly. Many of these will have helicopter transportation to enable them to reach a larger area more quickly. One to three men will be added to many existing crews where strength is insufficient to meet needed attack strength. Seasons will be lengthened for some crews and for individual positions to better meet fire season requirements.

(*b*) *Reinforcement crews, $250,000.*—Large reinforcement crews specially prepared for the most difficult firefighting jobs were used in the emergency fire program of 1960 and again in 1961. As backup crews for initial attack units which could not control their fires on initial attack, these crews proved their value many times. The 1961 crews were on fire duty nearly continuously in July and August and handled the most difficult parts of fires under severe burning and working conditions. Five more such crews are planned for Utah, California, Idaho, Oregon, and Colorado. They will be centrally located for use over a wide area. The high standards of selecting, equipping, and training the men will be continued.

(*c*) *Fire prevention, $350,000.*—An average of 4,454 man-caused fires have occurred on Forest Service protected lands during the past 5 years. Many of these fires could have been prevented by an expanded prevention effort. Needed to provide an expanded prevention effort are:

1. *Extend the period of employment for prevention specialists.*—Some seasonal employees would be used year long and the employment period of others would be extended so as to provide more effective contact with residents and forest visitors and to work on particularly difficult fire occurrence situations.

2. *Intensify prevention training.*—Better techniques will make each prevention employee more effective. This training is to include thorough knowledge of fire laws and training in law enforcement approaches in dealing with the public.

3. *Employ additional prevention personnel to intensify the effort on specific problems.*—Some problems require special attention which they are not now receiving. For example, the incendiary fire problem in some Southern States; debris burning, especially by rural residents; and fires in connection with logging and lumbering operations where better inspection service should help reduce fires caused by defective equipment.

To cope with the expanded prevention effort needed, it is proposed to add to the personnel assigned to fire prevention.

(*d*) *Fuel treatment, $150,000.*—Experience has shown that the spread of a number of large, costly, and damaging fires can be directly attributed to large concentrations of fuels such as snags, brush, slash, or other debris. A program of cleanup is needed in some areas to fireproof roadside strips and other areas to prevent fires from starting and to make it possible to control more fires at small size.

This is a costly undertaking. More work is needed to determine costs and to provide areas which have been treated for this purpose as a basis of assessing effectiveness of treatment under operating conditions. A fuel treatment program is underway in California. This should be expanded to additional areas and other fuel types where fire potential is high. Treatment will consist of fuel reduction, fire barriers, water facilities, and helicopter spots on these trial areas.

(10) An increase of $359,000 in structural improvements for fire and general purposes would be used for construction of improvements to maintain balance with the increased national forest activities. Approximately $179,000 of this increase will be needed to reimburse the General Services Administration for leasing new office space for expanding Forest Service program activities at locations where the General Services Administration does not have available space facilities and would have to contract for the additional space. Construction funds would be used to construct housing units plus urgently needed service buildings, related improvements, communication systems, new buildings to house the Arcadia Equipment Development Center, a smokejumper base at Redmond, Oreg., and construction of airports and heliports which are highly essential to the fire control program and multiple-use management of the national forests.

An increase of $1,400,000 for insect and disease control would be used to strengthen two phases of the forest pest control program as follows:

White pine blister rust control	$100,000
Other pest control	1,300,000
Total	1,400,000

(11) White pine blister rust control: The recently developed use of antibiotic fungicides for control of blister rust on western white pine makes possible an increase in the scope of the control program with favorable cost benefit ratios in northern Idaho, western Montana, and eastern Washington. With ribes eradication as the only control measure, protection activities were limited to about 1 million acres of young stands in these States. Use of antibiotic fungicides now makes possible the rehabilitation of heavily infected stands over 20 years of age on an additional 1,500,000 acres without any ribes eradication treatment. The increase of $100,000 would be used to start rehabilitation work in western white pine stands now being destroyed by blister rust.

(12) Other pest control: Surveys completed in the fall of 1961 reveal serious uptrends in forest insect populations, particularly bark beetles, that are causing widespread damage to forest resources. In the West, mountain pine beetle, Engelmann spruce beetle, western pine beetle, and Ips outbreaks have "exploded" on national forests, Department of the Interior lands, and non-Federal lands in California, Colorado, Montana, New Mexico, Utah, and Wyoming. In the South, outbreaks of the southern pine beetle are severe on Federal and non-Federal lands in Alabama, Mississippi, North Carolina, South Caroline, and Texas. These outbreaks have been favored by prolonged drought periods, large forest fires, unusually mild winters, blowdowns, storms, and variations in the effectiveness of natural checks of parasites, predators, and diseases.

Projects to control many of these outbreaks are underway. Due to the limited availability of funds, it has been necessary to defer a great amount of control treatment from 1962 to 1963. However, if such control is not accomplished in 1963, ultimate control costs will be greater and timber resource losses will be extremely severe with corresponding detrimental effects on other important forest resources such as recreation values. The resulting areas of dead timber would materially increase the fire hazard with corresponding inceased fire suppression cost potential in these areas. Increased efforts on going projects, previously deferred projects, and newly discovered outbreaks will be necessary if severe losses are to be averted.

This increase of $1,300,000 would be used primarily on bark beetle control projects in Western and Southern States and for budworm control that could not be accomplished in 1962.

(13) An increase of $200,000 would be used to accelerate the program for acquisition of lands under the provisions of the Weeks law (16 U.S.C. 513–519, 521). Further consolidation of landownership within the national forest, and transfer of certain critical areas to public ownership, are urgently needed to permit the most effective use of areas now in public ownership, to permit productive use of lands now largely unmanaged and to permit more efficient administration of existing national forest lands. This program must be accelerated in order to facilitate national forest management and development, and to restore the lands to be acquired to full forest productivity as soon as possible.

FOREST RESEARCH

(14) An increase of $477,000 in forest and range management research made up as follows:

(*a*) An increase of $137,000 for forest management research would be used to attack some of the most urgent timber-growing problems that are in need of further research effort to guide expanding timber growing practices on the national forests and other forest lands. Included would be additional study of animal damage to forest trees in the Pacific Northwest and further development of methods to eliminate or reduce the damage; improvement of timber growing methods suitable for Alaska; better methods for establishment and management of tree plantations in Hawaii, Southwest, and Northeast; improved cultural methods for managing lodgepole and ponderosa pine in the Northwest; and strengthened genetics research aimed at improving pines and the development of superior races through controlled breeding.

(*b*) An increase of $135,000 for strengthening research on pressing watershed management problems including improvement of water yield and reduction of flood runoff in the Ozark-Ouachita uplands and southern Appalachians; management of highly productive timbered watersheds of the west slope of the Sierra Nevada in California; development of better techniques for restoring depleted and severely eroded forest and related rangeland and watersheds to good hydrologic condition in the intermountain area of the West; and improvement of methods for reducing erosion and sedimentation in the coniferous forests of the Cascade Mountains.

(*c*) An increase of $75,000 in range management research would provide for additional study aimed at better management of pinyon-juniper and chaparral-covered ranges of the Southwest which have been converted to forage for improved water yield; for a more intensive attack on high priority problems of managing alpine sheep and cattle ranges in Wyoming and Montana, and perennial bunch grass ranges of the eastern Sierras; and for improving methods of managing piney woods grazing in Florida.

(*d*) An increase of $50,000 in wildlife habitat management research would be used to find better methods for managing and improving deer and elk habitat in California and Oregon especially on forest ranges also used by domestic livestock; and to strengthen studies directed toward better deer habitat management in Texas and other parts of the South.

(*e*) An increase of $80,000 to intensify research on the most urgent problems of forest recreation including determination of ways to protect campgrounds from damage caused by heavy and concentrated use especially in the Northeast, Central States, and Lake States; to devise inexpensive and dependable ways to measure recreational use and the types of recreational facilities needed to handle large numbers of recreationists in the Western United States; and to devise methods for assessing the recreational capacity of various types of forest environments such as lakes, streams, wilderness areas, and other special areas of high recreation potential in the West, prior to their development.

(15) An increase of $130,000 for forest fire research would be used to improve methods of preventing and controlling runaway fires that cause excessive losses and require large expenditures for control. Research would be intensified on finding what factors are involved in the evolution of lightning storms and how these storms might be modified to reduce lightning fires that are a serious problem in the West. Additional research would be done on preventing man-caused fires in California and in improving fire retardant chemicals and methods of aerial fire control, especially for western situations. Better techniques would be sought to guide the use of controlled fire to reduce critical fuel accumulations in the Northwest and southern Rocky Mountains.

(16) An increase of $135,000 for forest insect research would be used to further intensify research on the most troublesome forest insect pests including the de-

velopment of methods of biological control in the Northwest through the use of predators, parasites, or diseases of the insects themselves; development of superior chemical formulations for direct control of pests that attack southern hardwoods and that destroy wood products; determination of the manner by which systemic chemicals (substances injected into or assimilated by trees) might be used as a cheaper and more effective insect control in the Central States and adjacent regions; and for exploration into methods for increasing effectiveness of control of forest insects by irradiation and chemosterilant tecnhiques.

(17) An increase of $120,000 for forest disease research would give additional impetus to studies to reduce losses to commercial forests from root rots. Particular emphasis would be placed upon annosus root rot in the Southeast and on various soil-borne diseases in the Northwest. Efforts would be intensified to prevent or control diseases such as oak wilt and various cankers and blights that kill or seriously degrade valuable hardwoods in the East and South. Study of destructive rusts that attack western conifers would also be stepped up.

(18) An increase of $240,000 for forest products and engineering research would be used as follows:

(*a*) An increase of $200,000 for forest products utilization research would provide a more adequate basis for conducting the national program for the development of log and tree grades which will be used in establishing highest quality use for timber products. Critical field problems that prevent progress toward more complete utilization of wood in the Lake States and Northeast would receive more intensive study. Special attention would be given to development of knowledge and techniques leading to improved seasoning, conversion, and processing of southern pine into a greater variety of more usable products. The proposed increase would also accelerate study of the specific gravity and other strength properties of important western conifers so that regional variations in strength characteristics can be identified. This information will guide the development of sound specifications for use of wood in structures and aid the marketing of lumber from timber, much of which is drawn from national forests. This is a cooperative program with the forest products industry handling much of the fieldwork and the Forest Products Laboratory doing the laboratory phases of the study.

(*b*) An increase of $40,000 for forest engineering research would permit study of road design and ways to improve timber harvesting methods in steep terrain of the Rocky Mountains to preserve the soil and water resource. Study would be intensified in the use of helicopters as a possible method of log transport in inaccessible areas of the West or as a means to avoid watershed damage on unstable soils.

(19) An increase of $125,000 in forest resources research would be used as follows:

(*a*) An increase of $15,000 for forest economics research would strengthen the study of evaluation of multiple forest uses on critical watersheds in the Southwest, working toward methods to guide optimum resource management practices.

(*b*) An increase of $110,000 for marketing research would make possible expanded research in areas of severe underemployment and underdevelopment in the Appalachian Highland region and Lake States. Specific studies would include analysis of timber resources and markets to appraise potentials for industry expansion, design and testing of new and better ways of organizing timber harvesting and transportation operations from stump to market, and the development of new markets for little used elements of the timber resource.

(20) A decrease of $4,445,000 for forest research construction. This program for fiscal year 1963 would be $750,000, to be used for providing auxiliary facilities and scientific equipment at the locations shown.

Location and facility	1962 estimate	Increase or decrease	1963 estimate
(a) Athens, Ga.: Equipment and auxiliary facilities for laboratory			$250,000
(b) Bluefield-Princeton, W. Va.: Timber products concentration yard, auxiliary facilities and equipment			150,000
(c) Corvallis, Oreg.: Scientific equipment and auxiliary facilities			80,000
(d) Delaware, Ohio: Headhouse and greenhouses			64,000
(e) Olustee, Fla.: Greenhouse, insectary, and scientific equipment			35,000
(f) Research triangle, North Carolina: Scientific equipment and auxiliary facilities			126,000
(g) Stoneville, Miss.: Scientific equipment			45,000
Total	$5,195,000	−4,445,000	750,000

(a) *Athens, Ga., scientific equipment for laboratory and auxiliary facilities, $250,000.*—The research equipment and auxiliary facilities, including greenhouse, insectary, storage for inflammables, and other service buildings would make this laboratory, now under construction, fully effective. The program here includes studies of the silviculture of southern Piedmont hardwoods, including regeneration; control of insects such as hardwood borers and insects affecting nurseries and plantations; control of southern pine tree diseases such as annosus root rot, littleleaf, rusts of seeds, cones, nursery stock, and advance tree growth; studies of timber growth and quality relationships, and seasoning and other wood moisture problems. The auxiliary structures would be on federally owned land on the campus of the University of Georgia.

(b) *Bluefield-Princeton, W. Va., timber products concentration yard, auxiliary facilities and equipment, $150,000.*—The development of timber products concentration yard, with the necessary equipment and facilities, would complete the marketing research facility under construction in fiscal year 1962. The research program here includes pilot plant studies of timber market development, beginning with research on timber harvesting methods, transportation, log handling, upgrading of low quality material by sorting and processing, and studies of improving marketing practices. Related research includes feasibility studies of new and expanded wood-using industries in areas of underemployment in the Appalachian region. The facility and research equipment proposed would be on Federal land.

(c) *Corvallis, Oreg., scientific equipment and greenhouse, $80,000.*—Modern scientific instruments and equipment and a headhouse-greenhouse are needed to round out the laboratory now nearing completion. They are especially important in the research on development of biological control methods of forest pests, particularly the western bark beetles which kill billions of board feet of timber each year in the West. Root rots and heart rots and their control are being studied in the disease research program. The equipment and facilities would make the present laboratory fully effective. The headhouse-greenhouse would be placed on land under long-term lease.

(d) *Delaware, Ohio, headhouse and greenhouses, $64,000.*—These facilities are needed to fully implement the programs now underway at this laboratory. Research would benefit from these greenhouses which are necessary to controlled experiments involving the use of plant materials year round. The research program here is aimed at control of insects and diseases that kill trees, degrade timber crops, and retard growth of the Central States forests. Emphasis is given to pest control in coniferous plantations through the use of biological control methods. Research on Dutch elm disease and oak wilt is centered here. These supplementary research facilities would be adjacent to the laboratory which is on federally owned land.

(e) *Olustee, Fla., greenhouse, insectary, scientific equipment, $35,000.*—The greenhouse, insectary, and scientific equipment would provide specialized facilities needed to make the program fully effective. This includes study of genetic improvement of southern pine for oleoresin production, production and protection of cones and seeds of pines from insect and disease pests, especially in seed orchards, and factors responsible for the survival and rapid growth of planted

pine seedlings. The facilities would be an integral part of the present laboratory at Olustee, on federally owned land.

(*f*) *Research triangle* (*Durham-Raleigh*) *North Carolina, scientific equipment and auxiliary facilities, $126,000.*—Scientific equipment, insectary, and head-house-greenhouse combination are the specialized facilities needed to make the program at this laboratory fully effective. The laboratory is nearing completion. Research here emphasizes the study of forest insect and disease problems, and factors affecting forest growth in the Southern and Eastern States. The laboratory building is on federally owned land.

(*g*) *Stoneville, Miss., scientific equipment, $45,000.*—The scientific equipment would make the present laboratory constructed with fiscal year 1961 funds fully effective. The program at Stoneville includes studies of management, protection, and improvement of bottom land hardwoods, correlation of soil characteristics with growth of timber species to furnish guides for cultural practices, and on improving the utilization of important bottom land species. The equipment would be installed in the present laboratory building which is on federally owned land.

Obligations, insect and disease control funds (exclusive of white pine blister rust control) fiscal year 1961 and estimates for fiscal years 1962 and 1963

Project	1961	1962 estimated [1]	1963 estimated [1]
Forest insects feeding on or under the bark: [2]			
Northern Rocky Mountain States	$61,323	$55,000	$50,000
Rocky Mountain States	142,172	140,000	230,000
Southwestern States	56,168	195,000	63,000
Intermountain States	1,174,407	1,713,500	1,950,000
California	396,865	291,000	300,000
Pacific Northwest States	22,792	20,000	25,000
Eastern States	1,551	3,000	14,000
Southern States	238,798	280,000	300,000
Forest insects feeding on cones, seeds, buds, foliage or shoots: [3]			
Northern Rocky Mountain States	14,269	479,000	517,000
Rocky Mountain States	4,595	63,000	400,000
Southwestern States	6,526	440,000	300,000
Intermountain States	3,300		500,000
California	972		10,000
Pacific Northwest States	78,697	121,000	46,000
Eastern States	32,924	30,000	27,000
Southern States	14,656	35,000	73,000
North Central States	30,315	235,000	200,000
Alaska	9,601	5,000	30,000
Forest tree diseases: [4]			
Northern Rocky Mountain States			15,000
Rocky Mountain States	513		15,000
Intermountain States	995	4,000	5,000
Pacific Northwest States	43,164	44,000	50,000
California	15,000	10,000	15,000
Eastern States	86,204	86,000	90,000
Southern States	13,956	13,000	20,000
Administration, surveys, and pre-control work [5]	1,381,010	1,375,000	1,640,000
Department of Interior insect and disease projects	284,690	347,500	400,000
Total available or estimated	4,115,463	5,985,000	7,285,000

[1] Estimates of project needs are forecast a year or more in advance of anticipated needs and are always subject to fluctuations. Adjustments are made between projects as necessary depending on discovery of new outbreaks and expanded needs on approved projects. In addition to these amounts, a supplemental appropriation of $1,000,000 will be proposed for fiscal year 1962 to meet emergency control needs.

[2] Includes mountain pine, western pine, Engelmann spruce, southern pine, black turpentine, and other beetles, Ips, flatheaded borers, balsam woolly aphid, and scale insects.

[3] Includes spruce budworm, jackpine budworm, Douglas-fir tussock moth, elm spanworm, sawflies, Saratoga spittlebug, European pine shoot moth, white pine weevil, reproduction weevil, and seed and cone insects.

[4] Includes oakwilt, dwarfmistletoe, and *Fomes annosus*.

[5] This item provides for administration of the Forest Pest Control Act, for continuous precontrol activities, for quick action on many projects nationwide to stop outbreaks while they are small, and for detection and evaluation surveys.

EFFECTIVE USE OF 1962 INCREASES

Chairman HAYDEN. Have you any comment on that?

Mr. MCARDLE. No, sir. I think we are prepared to proceed immediately to questioning, if that is your wish.

Chairman HAYDEN. Very well.

Has the Forest Service been able to make effective and efficient use of the fiscal year 1962 increases supported by this committee?

Mr. MCARDLE. Emphatically yes, Mr. Chairman. I would be glad to submit a statement, if you like, but just from memory, I could give you a few items. For example, on tree planting and reforestation we have made more progress in the past year than we have ever done in any year before, an increase over the previous year of something like 50 percent. In timber stand improvement, which includes thinning and other work aimed at putting forests in condition to produce good crops of good trees, an operation which will bring back millions and millions of dollars in the years ahead, we made a 256-percent increase over the previous year. And I think that the reports coming in now will raise that percentage still higher.

In revegetation of rangelands, we made a 64-percent increase over the previous year. We did a complete job of cleanup and maintenance of something like 6,000 campgrounds. We rehabilitated and built more than 13,000 new family camping and picnicking units.

We did a great deal of improvement in fire control work.

There was tremendous encouragement of planting of trees on privately owned lands through a special appropriation that this committee made last year.

Research went forward in fine fashion last year. We are building new facilities now at, as I recall, 16 different locations, and all of our research programs were intensified.

I could stretch this out at great length, Mr. Chairman, but I simply say again, as I said at the beginning: emphatically yes, the increases provided by this committee have resulted in tremendous improvements right out on the ground.

MAJOR CHANGES IN FINANCING

Chairman HAYDEN. From the information shown in exhibit 2 of the explanatory notes, financing of the national forest program was about on schedule in the fiscal year 1962. Last fall Congress received a revision of the national forest program. What were the major changes?

Mr. MCARDLE. The main changes, Mr. Chairman, are listed in the President's letter, and also in the preface to this program in detail. But briefly, the major changes are to substantially broaden and increase the emphasis on recreation resource management, to increase the road and trail program, and to provide for land acquisition inside the national forests to block out the public land holdings.

Research also was eliminated from this particular program, with the thought that a separate program for research comparable to the national forest program would be sent by the President to the Congress.

Chairman HAYDEN. How does the financing proposed in the 1963 budget report compare with the 1963 level of financing that would be needed to keep the national forest program on schedule within this revised plan?

Mr. McARDLE. Mr. Chairman, it is a little difficult to compare these directly, because we have taken research out of the present national forest development program, with the idea of having a separate research program, and in the previous one, about two-thirds of our total research program was included.

But in essence, I think the comparison might be expressed this way: In fiscal year 1962, the current fiscal year, we are 97 percent on schedule, due largely, if I may be permitted this comment in my last time before this committee—due largely to the insistence of this committee that the program be as near on schedule as possible.

This coming fiscal year, 1963, the budget proposals would have us about 89 percent on schedule so far as only the national forest portions are concerned. That 89 percent includes a proposed $10 million Highway Act increase. I have included that. If that increase in roads were left out, the percentage of being on schedule would drop to about 84 percent.

Research under the proposed 1963 budget will be about two-thirds on schedule. I can give you more details, Mr. Chairman, but I thought maybe you just wanted the overall picture.

Chairman HAYDEN. I did.

Mr. McARDLE. This year 97 percent, 89 percent next year, and research about two-thirds on schedule.

STATUS OF RESEARCH PROGRAM

Chairman HAYDEN. In the preface of the revised development program for national forests, it is stated that research is not included, since a complete research program is to be submitted at an early date. What is the status of the proposed program?

Mr. McARDLE. The proposed program, Mr. Chairman, was sent by Secretary Freeman to the White House last fall, and it is now being reviewed by some of the President's Science Committees. I do not know the exact status at the moment. We had hoped to get it to the committee before these hearings, but that was not possible.

Dr. WELCH. Mr. Chairman, I might say the research program for forestry is being examined and reappraised along with the program for the Department of Agriculture, and we expect and hope to have a report on this at an early date.

EXISTING AND PLANNED NURSERIES

Chairman HAYDEN. Part of the funds asked for reforestation and stand improvement will be used to develop nurseries to produce trees to meet the demands of a larger tree-planting program. Please include for the record a list of the nurseries proposed, and the cost of each of them. It would be well to place in the record a list of existing as well as planned nurseries.

Mr. McARDLE. We will do that sir.

(The list referred to follows:)

Statement on Forest Service tree nurseries

Nurseries to be constructed or under construction	Construction costs, fiscal year 1962 (estimated)	Proposed construction costs, fiscal year 1963
Coeur d'Alene (Idaho) north	$460,000	$300,000
Lucky Peak (Idaho) south	230,000	110,000
Basalt (Colorado) west side	460,000	270,000
Humboldt (California) north [1]	55,000	
Total	1,205,000	680,000

[1] To be operated on leased land until permanent nursery site can be acquired.

NOTE.—Completion of these 4 nursery construction projects in fiscal year 1963 as planned, will increase total annual production at Forest Service nurseries by an estimated 83,000,000 trees to a total of 233,000,000 trees.

OPERATING NURSERIES

1. Savenac (Montana)
2. Bessey (Nebraska)
3. Monument (Colorado) Eastside
4. Mount Shasta (California)
5. Placerville (California)
6. Bend (Oregon)
7. Wind River (Washington)
8. Ashe (Mississippi)
9. Stuart (Louisiana)
10. Eveleth (Minnesota)
11. Chittenden (Michigan)
12. Toumey (Michigan)
13. Vallonia (Indiana)

TOPOGRAPHIC MAPPING

Chairman HAYDEN. I note that you requested additional funds for topographic mapping. To what extent do you work with the Geological Survey in preparing topographic maps?

Mr. MCARDLE. Very closely, Mr. Chairman. But I will ask Mr. Greeley to give your more details on that.

Mr. GREELEY. Senator Hayden, our work in topographic mapping is closely integrated with the work of the U.S. Geological Survey. We work to their standards. We turn over our completed work to them to use, and the work that we do is inconsistent with their scheduling.

FOREST FIRE PROTECTION

Chairman HAYDEN. The committee is aware that the past year has been another serious forest fire year. In your 1963 budget there is proposed an increase of $1,400,000 for forest fire protection. Is it your feeling that expenditure of these funds will result in savings of forests and dollars through the prevention or suppression of fires? To what extent do you estimate there will be savings in these particular categories?

Mr. GREELEY. Mr. Chairman, it is always risky to estimate that the expenditure of additional fire control funds will result in saving moneys in particular categories.

Over a period of about 5 years, ending a year ago, we had an experimental program that was designed to increase fire control manning on eight national forests where a check experiment was run to compare the results in fire control costs and in resource savings from increasing the number of men engaged in fire protection to the full level that our plans indicated would be required. And while on those eight national forests the results were not all consistent, there was

one consistent result. That was that the increase in the number of men cut down by 50 percent the acreage burned, with the consequent saving of resource, compared with the 5 years prior to this experiment on these eight forests.

RESPONSE OF TRAINED FORESTRY PERSONNEL

Chairman HAYDEN. It appears to me that there are a lot of men in the United States obtaining an education with respect to fighting forest fires, and who upon call quickly respond. Is that true?

Mr. GREELEY. Yes, sir; this is correct. Our problem involves having a large enough planned-in-advance force so that the men can be recruited and trained; and particularly, in many parts of the country, so that we can have men on a year-long basis, so that we can have their skills available to us year after year after year, rather than having to hire and break in and train new men in successive years.

Chairman HAYDEN. Since it is never known where a fire will break out, is this a precaution that is helpful?

Mr. GREELEY. Yes, sir.

STATEMENT OF SENATOR ENGLE

Chairman HAYDEN. Senator Engle expected to be here, but was unable to do so. I will place his statement in the record.

(The statement referred to follows:)

FORESTRY PROGRAM

Mr. Chairman, I appreciate this opportunity to testify on the fiscal 1963 budget proposals for the Forest Service.

First, I would like to endorse the budget as submitted, but I also would like to point out that it does contain some shortcomings. Last year President Kennedy submitted to the Congress a revised program for the national forests. It called for a rapid acceleration of all program levels. The current budget, however, falls short of the mark. Over the last several years this committee has exhibited a warm interest in advancing the work of the Forest Service. It is my hope that again this year you will chart the same course and move ahead many of the vital programs that are not up to the levels of our national needs.

FOREST FIRES

While commendable progress has been made in fores fire control, we still are a long way from doing the sort of job that is required. A rapid expansion of population and a substantial increase in use has drastically increased hazards, particularly in southern California. This situation, coupled with extremely dry weather at the critical point in the fire season, has continued the threat of disaster from fire.

As I said recently on the floor of the Senate, these fires have a double-barreled effect. They burn down trees and watershed cover of immense value and thereby leave the land subject to erosion. Then the heavy rains come, washing the topsoil and hillsides down into the gullies. What is worse, the water runoff is unrestrained and it hits the valleys and lowlands in the form of flash floods that sweep into cities and across farmlands. These often cause more property damage than the forest fires which made them possible.

I believe strongly that more research is needed in the field of fire prevention and control by use of fire-resistant materials. Through this committee's efforts we now have a new Fire Research Laboratory at Riverside, Calif. I urge that we make full use of this facility and that the committee seriously consider the appropriation of an additional $500,000 for fire research in fiscal 1963, largely at Riverside, on the three items of fuel-hazard reduction, prevention of man-caused fires, and improvement of chemical firefighting.

TIMBER MANAGEMENT AND UTILIZATION

Senator Stennis, a distinguished member of this committee, made an extensive presentation to the Senate on February 15 of an accelerated program of forest research. Included in this is a proposal for a new Laboratory at Redding, Calif., to specialize in timber management and utilization. I urge that the committee favorably consider the entire program submitted by Senator Stennis.

California's national forests are growing in their capacity to produce timber. Last year the rated annual allowable cut was close to 1½ billion board feet, and the amount of timber actually sold was approximately 1 billion board feet. There have been difficult market problems faced by our timber industry. One of our major difficulties is securing the best utilization of white fir. Additional research would be of great value because this is a big item in the allowable cut of the national forests in California.

There also is a need for economic research. Last year, according to Forest Service data, for the approximately 1 million board feet of timber sold, the bid price ranged from an average increase on the Shasta-Trinity National Forest of 10 percent to an average increase of 118 percent on the Six Rivers National Forest. In the entire State the average increase was 47 percent. It would be extremely useful to develop further information on the economic factors which influence timber sales.

In January the Chief of the Forest Service pointed out to me that in the Six Rivers National Forest difficult and costly road problems have held timber sales substantially below allowable cut levels and existing demand. In other forests there are situations where the Forest Service lacks access to existing private roads.

Some years ago this committee acted on Senator Magnuson's suggestion and included in the budget a special program which in this year's budget proposes $2 million for the purchase of existing roads. It is my understanding that this request could well be increased to $6 million for 1963 and that this would be of measurable benefit in opening up substantial volumes of national forest timber. I support this increase.

RECREATION

The Outdoor Recreation Commission, on which several members of the Senate serve, has completed its study of our outdoor recreational needs. The President's resources message dwelt on this subject in some detail. One of the major uses of the national forests in California is recreation. The President's program for the national forests submitted last year provides a detailed analysis of the needs that must be fulfilled. This year's budget contains an increase over last year of $5½ million for recreation. The test that I hope the committee will apply to the total amount sought for recreation is whether it meets the level needed for our forests for 1963, as measured in the approved national plan.

SUMMARY

Not only in California but in all the States where there are national forests, all forms of use are on the increase. We need therefore to move ahead both in programs that affect the level of operation as well as in research which brings us new knowledge needed to solve the many problems which confront us. We cannot stand still awaiting the findings of research because many of the critical situations demand action now based upon the knowledge we have. We need to pursue this dual approach—giving proper attention to research while we move ahead with available knowledge.

I therefore urge this committee to place the 1963 program for the national forests, as amplified by Senator Stennis, at the levels called for in President Kennedy's approved national plan published in 1961.

CRITICAL FIRE PROBLEMS

Chairman HAYDEN. At his request, I ask these questions:

The forest fire problem continues to be serious and the past year saw severe fires occur in California. Will you tell us what you are doing in research that may help solve this serious fire problem?

Mr. HARPER. Mr. Chairman, we are very much aware of the critical fire problems in California, and there are a number of things that we are doing, if I could just run over, briefly, several of them.

RETARDANT CHEMICALS

The research in fire-retardant chemicals is one good example. In the last few years there has been steady improvement made in the kind of chemicals used and in their application. Right now, our research people are screening new chemicals and are putting the latest information in a set of guides to be used this summer by fire control forces.

LIGHTNING FIRES

We are continuing our efforts to find a solution to the lightning fire problem and are encouraged by early yet incomplete results that suggest we may be able to modify lightning storms to reduce their potency.

We are getting a good start, although admittedly a small one, one on finding out better methods to influence people who unknowingly or unwittingly start fires. Somehow, we must find methods to reach these people in ways that are more effective and sure. We need approaches that will change the habit patterns of people. We are doing some work on devising ways to break up large expanses of forest fuels, such as brush fields in California, to reduce the chances of these sweeping conflagrations.

These are just very briefly some of the things that we are doing at the present time.

FURTHER RESEARCH EFFORTS

Chairman HAYDEN. What things should you be doing in research on forest fires, in addition to what is now underway, that would contribute to better fire prevention and control in California and other parts of the West?

Mr. HARPER. I think the best way I could answer that would be to enumerate some of the things which our research group in California has developed. They outlined the serious fire problems they faced and the things they would like to do if they had an opportunity to expand the programs. They based their recommendations on a survey made last fall following the very serious fires in southern California.

No. 1, we still need more research in fire chemicals

Actually, we have yet to learn how some chemicals operate to extinguish or retard fires. We suspect that some chemicals may retard fire under some conditions, but may even accelerate it under others.

A good deal of "cut and try" work can be eliminated from the search for better fire chemicals if we learn more of the basic requirements and the mode of operation of the best retardants. In other words, there is a plea here for more basic research in this field.

No. 2, we must intensify our research on finding ways to identify immediately after a fire starts, or even before it starts, whether or not it has conflagration potential. Only with such knowledge can we hope to mobilize the great forces necessary to prevent the blowup of occasional fires that cost excessive sums to control later.

No. 3, we need a much broader and more thoroughgoing research attack on fire prevention, both the prevention of man-caused fires and of lightning-caused fires.

No. 4, we need to find ways to improve use of aerial firefighting methods. While aerial fire control methods have brought significant advances to fire control operations, they are still limited by darkness, reduced visibility, overcrowding of airspace over large fires, and other factors. Research is needed to develop organization of aerial methods to make them more efficient, and entirely new concepts of aerial fire control need to be explored. This should not be limited to conventional aircraft, but must involve other delivery systems, such as projectiles and missiles. All aspects of aerial techniques, including chemicals, gas, cooling agents, and mechanical measures, must be studied.

And No. 5, much more intensive research is needed to find effective ways to reduce fuel concentrations, to break up large fuel masses, either by reducing them in volume or flammability by some treatment, or by replacing them with less flammable vegetation. And this, they add, is a research activity that needs a great deal of emphasis.

IMMEDIATE USE FOR INCREASE

Chairman HAYDEN. The Senator asks: Could an increase of $500,000 for forest fire research be effectively used on problems of immediate concern?

Mr. HARPER. Well, in that same statement, part of which I just briefed, that came from the research group in California which had made this recent review of the problems, an estimate is given that exceeds the $500,000. It could be effectively used immediately. I tell you this in answer to your question. Our budget request includes $50,000 for increasing fire research in California.

RESEARCH LABORATORY AT REDDING, CALIF.

Chairman HAYDEN. Then, finally, please explain the need for a forest research laboratory at Redding, Calif.

Mr. HARPER. At Redding, Calif., we have a research program that is concerned with silviculture, concerned with restoration of a large brush-covered area to timber trees through planting, and it is also concerned with forest utilization problems.

At the present time, we have very inadequate quarters at Redding, and it has been our plan, looking ahead, to provide a laboratory at Redding when that was possible to do so.

Chairman HAYDEN. Senator Kuchel has also written to the committee urging increased funds for fire prevention activities. His letter will be placed in the record at this point.

(The letter referred to follows:)

MARCH 9, 1962.

Hon. CARL HAYDEN,
Chairman, Interior-Forest Service Appropriations Subcommittee,
Senate Office Building, Washington, D.C.

DEAR SENATOR: Because of the vast extent of Federal landholdings, sensational population growth, the large number of tourists and vacationers, and the importance of natural resources to our economy and existence, I long have been gravely concerned, as you will recall, with the vital importance of adequate forest fire prevention in my State of California.

I regret that out-of-town commitments prevent my attending the hearings of our subcommittee when officials of the Forest Service appear to justify the 1963 budget items. However, I have been in direct touch with them about certain aspects of the estimates for forest protection and utilization, with particular regard to the fire prevention problems which are far reaching and, in many regards, unique in my State.

I trust that in reviewing the amounts allowed by the House of Representatives, as well as the President's budget requests, the subcommittee will give further consideration to the urgency of carrying forward diligently fire prevention features of the program for the national forests. I know of your personal concern about all aspects of this forward-looking plan for multiple use of these resources and I am grateful for your special attention in the past to the California situations of great importance.

In prior years I have urged more funds be provided for fire prevention generally and I also have sought recognition for the particular needs of the four southern California forests. In view of experiences in several areas of California in the past year, which was another in a prolonged dry cycle, I have this dual viewpoint once more.

The subcommittee is aware, I am sure, that a number of dramatic blazes occurred in heavily forested sections of California during 1961. Fortunately, damages were materially less than in the preceding year, but the number of fires is mute testimony to the continued need for strengthening the organization, improving the methods, and providing additional tools for fire prevention.

I believe that the incalculable worth of our forest resources warrants careful study of the desirability of additional funds to permit greater use of tanker aircraft and helicopters, employment of more personnel on a year-long basis and extension of the manning season in certain sections, improved communications, and construction of a substantial amount of firebreaks and trails.

The revised program for the national forests showed that nationally some $32,500,000 annually should be provided for recurrent items and a total of $72 million over a 10-year period for nonrecurrent items for fire prevention. The national forests in California were estimated to require recurrent appropriations of $11,400,000 and nonrecurrent appropriations of $18,200,000. In addition, it was indicated there are assorted needs under the heading of general facilities and equipment. The aggregate for my State this year was but slightly more than $47 million.

One item alone emphasizes the importance of increased amounts for fire prevention in California. I note the Forest Service estimate 4,300 miles of additional firebreaks are essential to effective protection of its extensive holdings there.

The subcommittee has recognized the extraordinary conditions confronting the forest service in the Angeles, Cleveland, Los Padres, and San Bernardino National Forests of southern California. Residents of the area from Monterey to the Mexican border, where these are situated, appreciate the creation by this subcommittee of the so-called special fund to carry out the 10-year program of greater protection in these reserves which are of inestimable value as watersheds and exceedingly popular as recreational attractions.

The aggregate appropriations to implement this plan have fallen far short of the original goal. Concurrently, the need for these measures has mounted, while costs also undoubtedly have risen, as population and use of the forests have increased. Despite the several increases in the size of the annual appropriation, the level of funding still is approximately $500,000 below the amount regarded as a minimum back in 1954 when the program was formulated.

While substantial progress has been recorded since this program was undertaken, none of the goals has been achieved. There still is a desperate requirement for more personnel, both seasonal and year long, firefighting and communications equipment, helispots, standby aircraft, and other items.

I believe that experience in the Los Angeles vicinity during the past few months demonstrates graphically the reason why special measures in these forests are warranted. It will be recalled, I am sure, that a tremendous amount of property was destroyed last fall by a spectacular blaze which ravaged the Bel Air section of the metropolitan area. More recently, unprecedented rains striking southern California caused the inevitable devastating runoff from the denuded hills.

Although the fires did not occur on Federal land, the Nation had a graphic example of the urgent need for providing maximum protection against fire and the costly consequences of blazes in areas which are thickly settled and where

unusual topography presents an ever-continuous threat. With the expansion of residential developments closer and closer to the national forests, the danger of repetition of such events is cause for grave apprehension.

The particular reason for giving special attention to the southern California forests is the fact that some 7 million people reside in the section where they are located. Peculiar conditions of weather present a greater-than-usual threat, as was acknowledged last year before the subcommittee by Forest Service officials.

Details of the purposes for which additional funds are required in these four forests will be provided to the subcommittee. I should like to point out, however, that last year the subcommittee was told by a Forest Service witness at least 600 to 700 miles of roads are imperative in these reservations for efficient fire prevention and to call to the subcommittee's attention recent statements by supervisors of the four forests that the bulk of the existing firebreaks, trails, and roads date back to the days of Civilian Conservation Corps activity—almost three decades ago.

There are other acute needs in the way of additional funds for Forest Service purposes in California. Increased sums would be warranted for access road construction to permit more effective lumbering operations. A forest products utilization laboratory such as has been programed by the Forest Service is highly desirable.

The most acute situation, deserving sympathetic attention from the Congress remains, however, that revolving around the horrifying threat of fire.

With warm regards,

Sincerely,

THOMAS H. KUCHEL,
U.S. Senator.

WEEKS ACT PURCHASES

Chairman HAYDEN. In your 1962 estimates you asked for $100,000 for acquisition of lands under the Weeks Act. Congress gave you $300,000. I note that for fiscal year 1963 you are requesting $500,000. Would you please comment on that and would you place in the record information as to the disposition of the funds provided last year?

Mr. GREELEY. Senator, we will place a statement in the record.

(The statement referred to follows:)

During fiscal year 1961, the National Forest Reservation Commission approved 83 purchase proposals, involving 8,598 acres of land for a total purchase value of $109,962.15. These tracts are located in 14 States and in 23 national forests, all in the East.

ACCOMPLISHMENTS UNDER FUNDS APPROPRIATED

Mr. GREELEY. The accomplishments with the funds appropriated for fiscal 1962, of course, are still going on, and I do not have an accounting of what has been accomplished with the $300,000 to date during fiscal 1962, because this has been partly obligated, but only partly obligated.

During fiscal year 1961, under this authority, the National Forest Reservation Commission approved the purchase of 83 tracts, totaling 8,598 acres, all in the eastern part of the United States.

PROPOSED ACQUISITIONS

It is anticipated that with the funds requested for fiscal 1963, priority attention for acquisition would be given to key tracks which are important for access, which are important for recreation use, or which are important because the lands constitute a source of damage of some sort to existing national forest lands. And there will also be acquired tracts which are either marginal farm properties or which constitute deteriorating and rundown forest properties, for which

there is in sight no other means of securing a good forestry program to improve and manage the lands.

All of these properties, sir, would be in the category of inholdings within existing national forests.

Chairman HAYDEN. Senator Moss has some questions he would like to have answered.

AMERICAN FORK CANYON

Concerning the American Fork, Utah, watershed project:

Should the Congress decide to activate a Federal land purchase program in the American Fork drainage? Would the Forest Service be able to get a program started this year?

Mr. GREELEY. Mr. Chairman, we are familiar with the problem and the situation in the American Fork Canyon in Senator Moss' State, and we are familiar with the type of program that he has in mind.

We do have the personnel, and we do have the know-how, to get a modest program started, should the Congress decide to appropriate funds under an authorization which already exists through legislation that was passed in 1935 and amended in 1944. This is legislation which authorizes purchase of lands by the use of receipts from the Uinta and Wasatch National Forests out in Utah.

Chairman HAYDEN. You can indicate the amount for the record that you think would be appropriate.

Mr. GREELEY. Yes, we will indicate that for the record, sir.

(The information referred to follows:)

AMERICAN FORK CANYON

Based on field reports, we understand there are about 4,000 acres of privately owned land within the Uinta National Forest located in the headwaters of the American Fork Canyon. The total cost of purchase is estimated at $80,000. Field reports indicate that this entire acreage is in need of treatment to make the land serve more effectively as watershed land.

PURCHASE OF PRIVATE LANDS

Chairman HAYDEN. All right. Would the purchase of private lands in the American Fork drainage be consistent with long-range management programs of the Forest Service?

Mr. GREELEY. Yes, Senator Hayden, it would. And I would like to point out that using this same legislation which authorizes the use of receipts from those two national forests, there previously was a program of purchase of lands that extended from 1937 through 1953. During the course of this program in excess of half a million dollars was appropriated by the Congress from these successive receipts of these two national forests, and some 84,000 acres were purchased.

So although none of this purchase activity happened to take place in the American Fork Canyon, the program about which Senator Moss asks as a possibility for the American Fork Canyon would be not only consistent with the national forest program, but would be consistent with the general type of program that was previously carried on there.

LAND ACQUISITION IN UINTA NATIONAL FOREST

Chairman HAYDEN. The Senator also asks: Has the Department previously made use of this 1935 act to purchase lands of this sort in the Uinta National Forest?

Mr. GREELEY. The answer is "Yes, sir. We have."

Chairman HAYDEN. Should the Congress decide to activate such a land purchase program in the American Fork drainage area, what, in your opinion, would be a reasonable period of time in which to complete the purchases needed for the management of this watershed?

Mr. GREELEY. On the basis of information that has been provided to us by our field people, I would estimate that at 3 to 4 years, sir.

Chairman HAYDEN. Senator Mundt, do you have any questions?

Senator MUNDT. Thank you, Mr. Chairman.

RETIREMENT OF FORESTRY CHIEF

Before beginning, I would like to associate myself with the well-chosen words that you made concerning the retirement of Mr. McArdle and the succession of Mr. Cliff. I think Mack leaves with a great record of public service, which will long pay tribute to his memory, and he leaves with the assurance that his responsibilities fall into capable hands, because the McArdle-Cliff team has worked shoulder to shoulder and cheek to jowl and pipe by pipe for a long time in a Gallagher and Shean performance in behalf of the Forest Service, and I know they will continue to consult together, and it is well to have a happy transition at this time, and I congratulate them both.

PROTESTS ON FOREST SERVICE SEED EXTRACTORIES

Senator MUNDT. I have a telegram, which I know nothing about except that it is addressed to me from people I do not know out on the west coast, the Forest Tree Seed Dealers Association. But since they sent me a wire on this matter, and apparently the rest of the committee did not get it, I would like to read the wire and have somebody comment about it.

TACOMA, WASH.

Re Forest Service appropriation.

Hon. KARL E. MUNDT,
Senate Office Building, Washington, D.C.:

Urge elimination of budget allocation for reconstruction and expansion Forest Service seed extractories, regions 5, 6, and 10, as unjustified. Present private seed extractories with capital investment exceeding $600,000 meeting all demand and able to furnish quality seed at lower cost than Forest Service. Present production capacity 500/0 in excess of Government and private requirements. State and Federal Government orders comprise 300/0 of industry sales and are essential for economic well-being of industry. Rigid industry control insure continued guaranteed high quality seeds, higher than U.S. basic requirements, from private extractories. Wasteful and unnecessary to use Forest Service personnel for seed collection and extraction with private extractories willing and able to meet all present and projected Government and private needs with superior, more economical product.

WEST COAST FOREST TREE SEED DEALERS ASSOCIATION.

COMMENT FROM DEPARTMENT

Mr. CLIFF. I would be glad to comment on that, Senator Mundt.

Of course, we want to do this reforestation job in the most economical and in the best way that we can, and if we can do that by utilizing the facilities that are available and still give us the kind of seed needed and control of its source, we want to consider that very carefully.

I was not aware of the objections to our plans to build extractories and upgrade our nurseries in the Northwest, until you read this telegram. I was aware that there was a comparable objection raised down in Louisiana just recently, and we are looking into that one very carefully to determine what is the best method of handling this.

SIZE OF REFORESTING JOB

Now ahead of us is an enormous reforestation program, much bigger than anything we have ever been in before. We have over 4 million acres of land in the national forests that need to be either seeded or planted. That means that we will have to step up our rate of accomplishment by about 10 times.

We are going more and more into direct seeding. In doing research, we have found effective methods of doing direct seeding rather than planting, although we will continue to do considerable planting on the more difficult sites.

TIME LAPSE BETWEEN SEEDING AND GROWTH

Senator MUNDT. How long does it take from a direct seeding operation to arrive at the degree of growth that you have when you have a planting?

Mr. CLIFF. Well, when we use planting, we start the seedlings in the nursery, and then we plant them out in the field by hand or by machine when they are a year or 2 years old, and in the direct seeding operation, we plant the seed directly on the ground, usually after some site preparation, and the seedling takes off and grows on its own.

Senator MUNDT. It grows as fast out there in the forest in a year as it does in your greenhouse or nursery?

Mr. CLIFF. Yes, I would think so. In the nursery, of course, we fertilize and baby these seedlings, but they do get some setback when you put them out in the woods. The direct seeding has the advantage of being cheaper. But it takes a great deal more seed. So we are looking forward to having a very greatly expanded need for seed.

SEARCH FOR BETTER SEED

Now along with this, we are trying to get better seed, that is, seed from better trees, and we are selecting and establishing seed production areas, where we can collect our own cones and handle our own seed from known sources, from parent sources that are the best that we can find.

We have to keep track of each of those batches of seeds. We are investing a lot of money in this, and we want to keep track of each of these batches of seeds and know where they come from and where they are best suited for planting, and we need to do this on a bigger scale.

That means that we will have to get away from just the open market purchase of seed that is collected from any place. In the past we have had to resort to purchasing seed on the open market without knowing the source of the seed. We might know the general zone or the general locality, but not the kind of parent trees that this seed was coming from.

Well, as we get into this program—and we are getting into it—we have felt that we needed our own facilities to handle this seed properly, to store it properly, to keep track of it properly, and to make sure that it goes where it should be going.

WORK WITH PRIVATE CONCERNS

There are private concerns that are in this business, and we have been utilizing their services. We have been buying seed from them. But our program is changing. And we want to be sure that we are getting the kind of seed and taking care of it and doing the things we should do to get the most effective use of the money we are putting into this program.

I will say, in response to their protest, that we will be glad to examine what they have to offer, and if we can do it better by utilizing their services at least in part, we want to do it. We want to do it the best way we can.

Senator MUNDT. Thank you. I am sure that your examination will disclose whether or not they have any merit to this. I know nothing about it, but I am sure the Forest Service and this committee both are interested in keeping private entrepreneurs in business. I am a kind of a private enterprise guy myself, and I think this is a kind of a private enterprise committee. And if you can work in harmony with them and utilize their services, so much the better.

I do not know much about forest seeds. I know in the seed-corn business you can get a pretty clear identification as to where it came from and what its performance is going to be. It ought to stimulate some kind of better identification of the seeds that you use in the forests, if you get them from private enterprise.

I do not know whether that can be done or not.

Mr. CLIFF. Well, as I say, we will surely want to examine that, and I have an idea we will continue to use their services to the extent that they can contribute.

GENETIC PRODUCTION OF SEED

Another thing that we are doing: We are getting into genetic production of seed in the seed orchards, where we are looking forward to producing genetically superior seed, and we do need some facilities of our own in handling those kinds of operations. We are advancing the information and knowledge we get from research through practical application. I do not know of any private seed-producing firm that is doing very much of that yet.

LABORATORY AT RAPID CITY, S. DAK.

Senator MUNDT. Some time back we established a forest research laboratory on the campus at the School of Mines at Rapid City, and

I wish that someone who is competent to know intimately what is going on would tell us about the status of this laboratory now, and whether any work is being done on the better utilization of ponderosa pine.

Mr. HARPER. The laboratory at Rapid City has been completed, and the program is installed in the laboratory. The program is centered on problems of silviculture of ponderosa pine in the Black Hills, on wildlife habitat problems, and importantly on utilization problems of ponderosa pine.

There have been increases in utilization of ponderosa pine, as a result of research, particularly in the use of lumber and poles. I think there have been one or two new industries introduced into that area, and some have expanded their operations. A new wood-preserving plant has provided a market for ponderosa pine thinnings in the form of poles. A wood lamination plant is in operation.

We were not able to attract a pulpmill into the area, for various reasons. However, I understand the pulpwood shipments from the area have increased since we began our investigations, some 3 or 4 years ago. A new chipping plant producing chips from sawmill slabs also has become established in the Black Hills.

Senator MUNDT. Thank you.

MULTIPLE USES OF FORESTS

Some of the timber operators out in western South Dakota have contacted me every time I have been in the hills concerning what they allege to be the need for the Forest Service to do more work in informing the public of the advantages of multiple uses of national forests. They contend that the Forest Service was not doing the job as well as they would like to see it done of explaining to the general public the advantages of controlling the harvesting of timber, and consequently they are faced with those who say that timber operations do not fit in with other uses.

Have you been doing anything along these lines, and is there work to be done?

Mr. CLIFF. Well, yes, we are, and we are very much aware of this problem, Senator Mundt, and I am sure that we need to do more than we have done, because the pressure on these resources is growing every year, and it is going to get more competitive than less. We have embarked on a materially stepped up program to inform the public of the multiple-use program and the advantages of multiple use.

DIFFICULTY OF TIMBER-HARVESTING PROGRAM

One of the real difficult parts of this, is to keep the proper perspective on the matter of timber harvesting. It is one of the most controversial phases of our program. It is not so difficult in your country, where we do selective-type cutting, or cutting which leaves the forest in a pleasant looking condition. I think the cultural work we have done in the Black Hills has improved the scenic values. But in areas where we do clear cutting, because it is the only way to reproduce the trees—particularly on the west coast and in the lodgepole pine forests of the Rockies—we are getting strong objections from large numbers

of people about the way it leaves the appearance of the country. There are strong pressures building up to restrict timber harvesting, because it interferes with what some people believe the forests should be used for. We are beset with conflicting pressures, on one side for more timber harvesting, to keep the communities prosperous, and industry moving, and on the other side we are getting pressures from those who want to see more of the land preserved just the way it is.

It is a difficult problem, we recognize it, and we are working on it. I agree we need to do more, and I think industry needs to do more in this respect, too.

"PRUDENT OPERATOR" STANDARDS

Senator MUNDT. I think that is right. I understand that you have some sort of study underway of your "prudent operator" standards and ultimate user need requirements, and some of our people out in the timber area of South Dakota feel that they have had to do more roadbuilding than necessary simply to remove timber. They would like to get reimbursed for these extra roads.

Have you any suggestions to make in that connection?

Mr. CLIFF. Well, we work on the principle of the so-called prudent operator theory of road construction. When we sell timber, we cannot require an operator to build a road that is better than a prudent operator would build to remove that timber. That is the principle we are working on.

Some of the operators feel that we are requiring a little more than that.

ROAD PROGRAM

We do require, and I think we need to require, that these timber sale roads be built so that they do not create erosion hazards or create unsightly messes. We are requiring cleanup and erosion control on these roads; that is part of the work they feel is unnecessary. We feel it is necessary.

If we want a road that is better than a prudent operator would build, then we use appropriated funds to supplement the construction.

Senator MUNDT. You can use both on the same road. The prudent operator standard is paid for by the operator?

Mr. CLIFF. By the operator. And he has an allowance in the timber appraisal for that.

Senator MUNDT. Do you have to agree on that before the fact, or can you look at it after the road is built and say, "You have done a pretty good job. We will give you some extra money?"

Mr. CLIFF. No; we are not in a position to reimburse him. We spell out in advance the standards to which the road is to be built, so that he should know what is expected of him under the contract.

For example, let us say under the prudent operator theory a single-lane road is good enough, and we want a double-lane road to accommodate recreation traffic and other traffic. Then we would expect the purchaser to contribute what is necessary to build the single lane for the timber removal, and we would expect to contribute from public funds the extra cost that is necessary to accommodate the other uses.

STATE AND PRIVATE PROGRAMS

Senator MUNDT. On page 2 you were discussing the justification of your cooperative program with State and private forest landowners. I would like to relate this program to the situation out in South Dakota. Does this program fit in with the South Dakota State conifer nursery at Watertown, S. Dak.? This nursery is operated by the State, using Federal aid under the Clark-McNary section.

Mr. SWINGLER. Yes, sir. We cooperate with South Dakota in our cooperative nursery program under authority of section 4 of the Clark-McNary Act.

Because of the soil bank, which built up during the past 4 or 5 years, the amount of Federal money in this particular fund has been steadily reduced, until it is now a little less than $300,000 for all of the States.

What we had been doing was distributing that money to 48 States right across the board, which did not give any one of them very much. But just within the past month, we have pretty much reached an agreement with the State foresters that we should change our distribution pattern and give more money to the States like South Dakota who are in need of this money, and less money to these big States that are putting out a hundred million trees, or more.

So I think that we are going to be able to take care of the Plains States next year, starting in July, much better than we have in the past.

WATERTOWN NURSERY EMPLOYEES

Senator MUNDT. I would hope so. I do not know whether this came to your attention or not, but when I was back home in December, four fellows come to see me from this Watertown nursery. They had been let out of their jobs, and told: "Don't worry. They will hire you again in the spring." But that did not make them feel very well. They were not getting very much pay. They were laborers who worked in the field. They have their families there. There is no way they could get unemployment compensation or social security, and they were pretty desperate.

I sent them out to Pierre to the headquarters to talk to the forester there under the game fish and parks department. Do you have anything to do with it? It probably was a lack of funds to cover a year-round operation.

It does not seem to me any employer can expect to hire people in the summer and not in the winter, and expect them to remain there and remain proficient.

Mr. SWINGLER. Of course, that is a problem we have in national forests and in State employment, that a lot of our work is seasonal. Firefighting, for instance. We hire firefighters just during the fire season. And although the State foresters attempt to keep a cadre of people year round, people they can depend on, people they can train——

Senator MUNDT. All of these people had been there for anywhere from 3 to 5 years. This was the first time that they had this suicide clause and were out of work in the winter. So these were not the temporary people that you bring in seasonally—which, of course, you have to do—but these are people that you could assume had permanent jobs. They had been hired on an annual basis.

RESULT OF SOIL BANK LIQUIDATION

Mr. SWINGLER. What was happening there—South Dakota was hit harder than any State in the United States—and what was happening elsewhere was that the soil bank was passing out of the picture. With soil bank funds, the State was able to build that nursery, where the Federal Government put up most of the money. The operating funds came from the soil bank.

Now, the soil bank has passed out of the picture, and that was why the State had to cut back, because there were not enough State funds or other funds under Clark-McNary to replace the soil bank funds which are no longer available.

Senator MUNDT. And you say that you think you have a new program worked out now?

Mr. SWINGLER. We have a new distribution that is going to give them more money than they had last year. Yes, sir.

Senator MUNDT. Thank you.

TIMBER SALE ADMINISTRATION

Timber sale administration and mangement is discussed on page 9, and the total request is $23 million. What is the difference between sale preparation and advance-sale preparation? I am not sure I understand that.

Mr. CLIFF. Well, Senator Mundt, that is kind of an artificial division, really. The advance-sale preparation would be cruising the timber, selecting the areas, scouting them out, and collecting the other basic data that is needed in making the appraisals and preparing the timber sale contracts. It is the field work that has to precede the actual placing of the sales on the market.

Sale preparation would be the analysis of this data, making the final selection of the areas for sale, making the appraisals, making engineering layout of the roads, preparing the contracts, and advertising the timber for sale.

The advance preparation has to precede the actual processing of the sale.

COMPARISON OF FEDERAL AND PRIVATE COSTS

Senator MUNDT. According to the figures as I have analyzed them in your justifications, in fiscal 1963, you will be spending a little over $23 million to get an annual return of around $121 million. Have you ever made any studies to compare those costs of management and of handling and of selling, compared with any of the big privately owned timber corporations, like Weyerhaeuser or Simpson, or any others?

Mr. CLIFF. Yes. Our problems are some different, however, because they are just doing this work for themselves, and they are dealing only with themselves when they manage their own lands, and we are dealing with lots of people, and we have a great deal more work in discussing the sales programs with the possible purchasers, the preparation of contracts, and that sort of thing.

We have made some comparisons, and some of these companies are spending more on forestry work in handling their forest lands than we are. They have more foresters per thousand acres of forest land

doing this management work, such as management planning, tree planting and timber cultural work, than the U.S. Government is doing on its land.

We estimate that some of these more progressive companies have been spending more money on timber management activities than we have.

Senator MUNDT. How about on the selling aspects?

Mr. CLIFF. On the selling aspects I do not know, because they are dealing with a different kind of a problem.

As I pointed out, they do not have to make a contract for themselves or advertise the timber for themselves. They do make appraisals, and they make logging layouts and that sort of thing. But there are a lot of things we have to do in handling a timber harvesting program, where we are selling under competitive bid, that the private operator does not need to do when he is just handling his own lands.

DEVELOPMENT OF RECREATIONAL AREAS

Senator MUNDT. I would like to have on the record a little clarification of where the lines of demarcation come between the National Park Service and the National Forest Service in this business of developing recreational areas and sites.

Connie Wirth was in here the other day asking for some money for some recreational areas, visiting centers, and campsites. You have a request in for campsites and visiting areas.

How do you decide whose job it is, or that there is not a duplication? I would just like to fortify myself against some anticipated criticism that we are appropriating for two different services for the same kind of function.

Mr. CLIFF. I am glad to clarify this matter for the record.

The first consideration is on what land it is going to be applied. The Forest Service is responsible for handling the national forests and national grasslands under multiple use, and recreation is one of the multiple uses. The demand for recreation is growing very markedly.

There is not competition between the Park Service and the Forest Service in furnishing recreational opportunities. They are faced with a big demand, and so are we. It is going to get bigger.

Senator MUNDT. Do you both ever work in the same area, or do you earmark it off? You are going to build one here, and they are going to build one there? Or are you both going in the same piece of woodland?

Mr. CLIFF. No, they work on the national parks and monuments, and we work on the national forests. We are not even beginning to fill the need for this kind of development on either category of land yet.

We do some things and permit some kinds of recreation that they do not. Our program includes winter sports developments which are not encouraged on the national parks. We permit construction of ski lifts, and that sort of thing. That has not been encouraged on the national parks. We also permit youth camps, organization camps of various kinds, which are minimized or not particularly encouraged on national parks. There is hunting on the national forests, and

this is not permitted on the national parks; and our programs are quite different in many respects.

As to the camping and picnicking, both agencies provide these. We are getting into a visitor information service, too, to help the public better understand our program and better appreciate what they are seeing and doing. We are just getting that started. We think it is good, and we need to do more of it, and it ties right in with this question you asked before, as to how you educate the public to accept timber cutting as part of the multiple-use program. We hope to get that across to many of these visitors that come to see our recreation areas.

Senator MUNDT. One last question, Mr. Chairman.

ACTION ON MINING CLAIMS AND LEASES

You requested $200,000, I believe, to accelerate action on mining claims and leases and special uses, and pointed out that over 10 million acres are covered by your leases or leases that are administered by you.

Mr. CLIFF. Yes, sir.

Senator MUNDT. And that $9 million was collected in fiscal 1961.

I was just wondering if you had ever studied the possibility of passing on these increased costs, which are understandable, to those who get the claims and leases. It would seem you have 10 million acres leased. There must be some competition for the leases. And you might be able to charge off a little bit of these extra funds that are being requested.

Mr. CLIFF. This 10 million acres is a mistake in the writeup. It is 18¼ million acres that are under mineral lease on the national forests. That is for oil, gas, coal, phosphorus, and all the other leasable minerals.

Senator MUNDT. Just about a penny an acre increase, then, if it is 18 million I figured about 2 cents an acre; but on the corrected figures, 18 million, with just over a penny an acre more you would not have to come to Uncle Sam for the $200,000.

Mr. CLIFF. Those leases, Senator, are issued by the Interior Department under rules and regulations governing the administration of the mineral leasing acts. When they are issued on national forest lands, they are referred to the Forest Service, and we have to examine the proposed leases and stipulate or recommend the land management measures that must be taken to protect the surface resources.

Generally, or I would say invariably, they have accepted our recommendations and incorporated these protective measures in the leases.

We have a job of supervising the use to make sure that these mineral activities are not doing undue damage, or doing preventable damage, to the land.

This job is growing. We are getting more leases each year. This 18 million acres has increased about 10 percent a year.

LARGER COLLECTIONS FROM LESSEES

Senator MUNDT. I am not questioning the $200,000. I am just suggesting the possibility that perhaps the people who get the leases would be willing to pay a little bit more so that the extra $200,000 you are requesting would not have to come out of general appropriations.

Mr. CLIFF. I understand. We do not have authority now to take the receipts to apply to the administration of the land. So we would still have to get the needed money out of appropriations.

But I understand what you are suggesting. The President has asked the Budget Bureau and the agencies involved to review the whole field of user charges, including oil and gas leases. That review is underway now in the Budget Bureau, and we have made our comments and recommendations to them. So this matter of user charges not only for oil and gas but all other uses is under active consideration by the administration right now.

Senator MUNDT. I have argued for many years that in this field where the Federal Government is granting licenses or leases or commercial concessions to private citizens with which to make a profit—I cannot see any justification for spreading those charges over on the general public, instead of making those charges to the fellow who is going to make the profit.

Take the granting of a television license, which is worth millions of dollars. I can see no reason in the world why a fellow applying for such a license should not be required to pay a fee, a fee that is somewhat commensurate with the cost involved, because it is a tremendously expensive job to scrutinize all the various bidders or applicants for a television license or a radio license in order to determine the relative merit of their applications.

I am not just mentioning this for the Forest Service, but you have to start somewhere. You have the Forest Service here now—getting these fees so they would be somewhat commensurate with the commercial benefits, or if not, at least with the costs that the Government has to undertake in order to do an intelligent and effective and honest job of granting these commercial concessions or leases or licenses, could make a real saving to the Federal Government in its present hard-pressed financial condition.

Mr. CLIFF. I agree with you, Senator, and of course they do pay a fee, and the question that you are raising is whether it is adequate. In the case of minerals, it is. It more than pays the cost of administration—many times over. For example, last fiscal year returns under the 1920 Leasing Act from public domain and national forest lands amounted to about $106 million. For the prior year they amounted to about $91 million. This money goes into the Treasury, and then the agencies ask for funds to administer the program.

Senator MUNDT. We can look at the figures to see whether they tend to equalize. I do not see why the Federal Government should take a financial loss in determining to whom profit-producing licenses, claims, or commercial concessions should be given.

Thank you, Mr. Chairman.

RESEARCH AT PARSONS, W. VA.

Chairman HAYDEN. The Senator from West Virginia?

Senator BYRD. Mr. McArdle, last year we had testimony on the need for and the cost of increased funds for the research work at Parsons, W. Va. Has the situation changed since last year with respect to the need for this additional forest watershed management laboratory?

Mr. MCARDLE. Dr. Harper?

Mr. HARPER. Senator Byrd, the situation has not changed. We still have the need for it that we had last year, perhaps accentuated. As you know, I am sure, we were not able to include the laboratory at Parsons in our 1963 request.

Senator BYRD. I believe last year I attempted to get an additional $200,000 for this purpose. What is the amount of money that you need at Parsons to carry out this work?

Mr. HARPER. We made a rather careful study of the requirements at Parsons last year, and by modifications that we can make in existing buildings we feel that $150,000 would satisfy our requirements at Parsons, rather than $200,000, which I believe is the figure that we mentioned to you last year.

Senator BYRD. You think $150,000?

Mr. HARPER. Yes, I would say $150,000 is a reasonable estimate.

RESULTS FROM RESEARCH AT FERNOW FOREST

Senator BYRD. Would you please describe the results which you have already obtained from the studies that are being carried on at the Fernow Forest?

Mr. HARPER. I would say that the outstanding results that we have obtained at the Fernow experimental forest have been the development of a new system of skidroads and harvesting of timber methods for steep mountain slopes.

This system has been rather reasonable in cost to install. It is not costly to maintain. And most important of all, it does protect the watershed values. It protects the watershed against erosion, and it does not channel the water into fast runoff.

This system of road development I should say has attracted a good deal of attention throughout the East, and the system has been applied in many situations where they have steep mountain country to log.

The overall problem, of course, that we are studying at Parsons is one of how best to grow and harvest timber for high sustained yields of wood, while at the same time safeguarding the watersheds against damage by timber harvesting operations.

We still have much to learn about the effect of these harvesting methods on water yield and also about the silvicultural aspects of growing timber crops. Some of our difficult watershed problems are still ahead of us.

LABORATORY FACILITIES AT PARSONS

Senator BYRD. How would the additional laboratory facilities at Parsons assist you in your watershed research?

Mr. HARPER. I think the most important influence it would have is that it would speed up the research. The laboratory is needed to make analyses and studies under controlled conditions, to better understand some of the relationships and processes which we observe in the field studies. It is through this understanding that we are able to interpret what we measure on the experimental forest in terms of situations that we would encounter elsewhere, and thus be able to extrapolate our findings.

So in addition to speeding up the research, it would increase the applicability of the findings from the experimental forest.

80391—62——68

Senator BYRD. Just how urgent, Dr. Harper, is the need for the laboratory construction at Parsons?

Mr. HARPER. We would consider this laboratory among our highest priorities. The program at Parsons has reached the stage where we ought to be doing the basic research that we cannot now do without better laboratory facilities.

We remodeled an old woodshed for soil studies that permitted us to do certain things, but the more complicated analyses and studies cannot be undertaken without better facilities.

I would say that we put this in the highest category of our priorities and would hope to have it as soon as it is possible to do so within the budgetary process.

MARKET PRODUCTS CENTER, PRINCETON, W. VA.

Senator BYRD. Now, Dr. Harper, with reference to the Princeton, W. Va., Market Products Center, how much money is in the budget for research construction and for the research program there?

Mr. HARPER. For the research construction, there is $150,000 in the 1963 budget request, and for the research program there is $100,000.

Senator BYRD. Is $100,000 considerably less than the amount that was outlined for fiscal year 1963?

Mr. HARPER. Yes, that is true. This $100,000 is the annual recurrent amount; and as I recall in the plan that we sent you, or the Department sent you last year, there was a certain amount for research construction for this project, and then a certain amount for annual recurrent operating and staffing of the program.

The amount in that plan designated for recurrent work in fiscal year 1963 was $300,000, instead of $100,000. So therefore we will be $200,000 short this coming year of doing what we contemplated at one time.

It was not possible to go as far as we had originally contemplated in our budget requests for 1963.

Senator BYRD. Do you think that $150,000 is sufficient for the research construction this year?

Mr. HARPER. Yes, that fills out the construction that we contemplated in the plan that was sent you at your request last year.

As you may recall, there was an item of $450,000 for last year, with $150,000 in the succeeding year—that would be 1963—to complete the major installations.

Now, there will be some items like purchase of materials and some equipment which we contemplate obtaining out of our operating funds, our annual operating funds.

So there are some items, as I say, that still need to be completed, but we contemplate doing it out of operating funds rather than out of construction funds.

ADDITIONAL FUNDS FOR RESEARCH PROGRAM

Senator BYRD. Do you consider it urgent that an additional $200,000 be appropriated for the research program?

Mr. HARPER. Well, we would not be able to put this project into full operation without the $300,000. I think our estimate on that was

sound. At least it appears to be so after the year of experience that we have had. As a matter of fact, it may be a little tight.

Senator BYRD. How will your progress be impeded in the event you do not get an additional $200,000 over and above the $100,000 for research?

Mr. HARPER. Mainly we would get a slower start on the project. We would, under the $100,000 which we have included in the estimate, be able to do some of the things that we had contemplated.

We would get a start on a small scale, on some of the studies. Some work, such as operating a pilot lumber concentration yard would be delayed. Processing lumber, to see if we can upgrade the lumber and make it more suitable for the market offers hope that we can attract processing and manufacturing industry to that area for the sake of the increased employment it would offer.

Senator BYRD. Dr. Harper, as you are well aware, we saw in this project something which would help to attract forest products industries into the area, and we feel that it is imperative that the project go forward as rapidly as possible.

It is my understanding, then, that it is important, in order to reach this objective that we have in mind, of attracting new forest industries into the area, and thereby to help the economy and to provide employment—is it my understanding, then, that an additional $200,000 could be very well used for this purpose, and is urgently needed?

Mr. HARPER. I would say it could be effectively used, yes. And of course we would like to get ahead on this project as rapidly as we could.

Our research people who have worked on this project during the last year are enthusiastic about it. They see even a better opportunity to do worthwhile things now than they did at the time we developed the plan for the project.

BENEFITS OF PROJECT

Senator BYRD. Will this project not be beneficial not only to southern West Virginia but to the entire eastern region of the United States?

Mr. HARPER. Yes. Of course, we consider this our primary center for research on marketing for the entire Appalachian area. This will be where most of the marketing research will be done.

Now, there will be some additional research and local applications which will be made in various other parts of the Appalachians, and in the Lake States and the Central States. But I would say not only West Virginia but at least half a dozen other States would directly benefit, and in general many of the States in the East would benefit, from the developments that come out of the research work at Princeton.

EXTENSION OF MONONGAHELA PROJECT

Senator BYRD. Dr. McArdle, I have one more brief question.

Over a year ago, I requested that I be given a report as to the advisability of extending the Monongahela National Forest westward, to include some 500,000 additional acres of land in West Virginia.

Recently I received such a report, and the Forest Service has recommended such an addition to the Monongahela National Forest. It is my understanding that a minimum of $250,000 would be necessary

as an addition to the Forest Service item, "Acquisition of lands," under the Weeks Act.

Would someone like to comment on the need for this additional money and the advisability of extending the forest, as I have mentioned?

Mr. McARDLE. Mr. Greeley will perhaps want to add some detail, Senator Byrd, but we consider this desirable. However, we thought we should be completely honest with you and tell you that it could not be done with present financing.

That is an answer I dislike very much giving, because I know many Government agencies say, "Yes, we will do something, provided you provide the money." We have been able to do some things without asking for additional funds, by making adjustments. But this project is of some considerable size, and we cannot handle it with our present funds.

Mr. GREELEY. Senator Byrd, yes, we looked into this area as you requested, and we concluded that it would be feasible to extend to an area to the west of the present Monongahela the same type of management that exists in the present Monongahela National Forest, and to anticipate that there would come from that effort the same sort of benefits to the locality that are coming in the vicinity of the Monogahela National Forest now.

TIME REQUIRED

As to the rate at which an acquisition program might be set up, I think our field people who have looked into this have considered that a figure somewhat along the lines that you mention would be probably a feasible rate.

The total job to be done over an extended period of time is rather substantial. It seemed to us that in the total area of around a million acres, which has around 800,000 acres that is forested, there is something on the order of half a million acres that probably eventually ought to be acquired if such a unit were to be established west of the present Monongahela National Forest.

So a figure of $200,000 or $250,000, such as you mention, would be probably a rather modest start.

COST OF ENTIRE ACQUISITION

Senator BYRD. What do you anticipate the cost will be for the entire acquisition over a period of several years?

Mr. GREELEY. Well, on very much of a rough estimate basis, our people projected cost estimates in terms of around $12 million.

Senator BYRD. What are you thinking of in terms of number years that would be involved in completing this addition?

Mr. GREELEY. Well, it could run into a rather long period of time. We have been working on the Monongahela since before 1920, and that job really is not finished yet. So we are really talking about a rather long period of time.

Senator BYRD. Do you think that $250,000 would be a minimum with which you could initiate?

Mr. GREELEY. I would think probably something like that.

PUBLIC RANGELAND APPRAISAL

Senator BIBLE. Mr. Chairman, I think I have just a couple of questions I would like to ask Dr. McArdle. It is with reference to the problem of range resource management.

Last year, as you well know, in Senate Report No. 294, the Forest Service was directed to work with the Bureau of Land Management in making a public land-range appraisal. What is the present status of that appraisal, Dr. McArdle?

Mr. CLIFF. I will be glad to comment on that, Senator Bible.

The charter from this committee was to make a trial study on public lands in cooperation with the Bureau of Land Management. That has been done.

Senator BIBLE. These were in selected areas, as I understand it.

Mr. CLIFF. Selected areas.

Senator BIBLE. Montana, Colorado, and Oregon?

Mr. CLIFF. Yes, sir. The fieldwork has been completed, and we are working on the analysis of the data and preparation of the report, now. We anticipate that this will be ready to submit to this committee within the next couple of months.

Senator BIBLE. Is there any indication now of what the results will be? Or do you prefer to let the final report speak for itself?

METHOD OF STUDY

Mr. CLIFF. I would prefer to let the final report speak for itself.

What we did was to select three areas, one in each of the States you named, which encompassed both Bureau of Land Management land and national forest land. All available resource inventory data information that bears on use of rangelands in those areas was used. Then we did the necessary additional fieldwork to get a complete picture.

We are developing from that a program or an analysis of what would be needed to put these resources in first-class condition and place them under proper management, and obtain an estimate of the cost.

VALUE OF STUDY

We are trying to get out of this study some experience so that we can recommend, if called upon, what would be involved and how we would go about making a broader study that would have broader application.

We are making some projections as to what the demands on these public ranges will be in the future for livestock production and production of game.

Senator BIBLE. Is this appraisal being made on a 50–50 basis? Does BLM share half the cost and Forest Service the other half?

Mr. CLIFF. Each agency financed the work on its own lands, and the lands did not divide quite 50–50. Our cost for making this study, which we did under your instructions, without asking for additional financing, amounted to $54,900.

Senator BIBLE. This is the Forest Service cost for the complete study?

Mr. CLIFF. Yes. And that, of course, did not include what we had already spent for information that was already available. But this

is what we have spent on this study. I think the Bureau of Land Management has spent about the same amount.

Senator BIBLE. Yes.

Thank you very much, Mr. Chairman.

I think this is a study that can prove of great help, particularly on this question of range allotments and fees that are charged both on BLM and Forest Service lands. They are areas of constant problems, and it is a very vexatious subject. So I am hopeful when this report comes out, you say within the next 2 months—2 months from now——

Mr. CLIFF. We are going to try to get it by that time.

Senator BIBLE. You are hopeful it will be out in 2 months?

Mr. CLIFF. That is right.

Senator BIBLE. Not longer than 3 months?

Mr. CLIFF. I hope so; yes.

Senator BIBLE. You are still hopeful. It is a hopeful expectation, then?

Mr. CLIFF. We have set the target for 2 months.

Senator BIBLE. The target date is 2 months, and you hope it is out in 2 months, and you feel positive it will be out within 3 months.

Mr. CLIFF. We will do our very, very best.

Senator BIBLE. Thank you very much, Mr. Chairman.

SCHOOL OF FORESTRY, BOTTINEAU, N. DAK.

Senator YOUNG. I would like to ask Mr. Harper: How much money is in the budget for the research laboratory at the School of Forestry at Bottineau, N. Dak.?

Mr. HARPER. I think, Senator Young, it is $53,000; but I do not have the information here. I will check. But it is very close to that amount.

Senator YOUNG. To complete the laboratory?

Mr. HARPER. Excuse me. That is for the program of research. The amount is $130,000, for the construction of the laboratory.

Senator YOUNG. You mean that has been appropriated to date? Or in the budget?

Mr. HARPER. That has been appropriated to date for the construction. The laboratory engineering and architectural work is being done now. It will be completed very shortly. The specifications will be drawn and the contract let for construction prior to the end of this fiscal year. And the construction should be completed sometime during the next fiscal year. In short, the money has already been appropriated for the laboratory, and the project is underway.

SHELTER-BELT RESEARCH

Senator YOUNG. And there is $53,000 for the research program. What kind of research?

Mr. HARPER. It is on shelter belt problems, establishment of shelter belts, maintenance of shelter belts, cultural operations, protection from insects and disease, et cetera.

Senator YOUNG. That is a wonderful program.

RETIREMENT OF CHIEF OF FOREST SERVICE

Dr. McArdle, what is this I hear about you retiring?

Mr. McARDLE. That is correct, sir; next Saturday.

Senator YOUNG. Today is the anniversary of my 17th year in the Senate. My appointment to the Senate was 17 years ago today. How long were you in the Federal service?

Mr. McARDLE. Thirty-nine years of Federal service, Senator.

Senator YOUNG. How long in the Forest Service?

Mr. McARDLE. Approximately that same amount. My service includes a short time in World War I.

Senator YOUNG. What kind of work did you start at?

Mr. McARDLE. I started in research in Portland, Oreg. Then I moved across the country in research, moved again to a different type of work, the work that Assistant Chief Swingler is now handling, cooperation with the States and private landowners. About 10 years ago, I moved into my present position.

Senator YOUNG. I think everyone will agree that the Forest Service is an important and necessary service for the Government. I have always felt it is one of the few Government services that has been operated as efficiently and effectively as a private business. And I think it is due entirely to people like you, who have dedicated your lives to the service.

I have known many people in the Forest Service, from the ground on up, and all the way through you find this fine, devoted, dedicated spirit to this work.

Yours has been a long and honorable service, Dr. McArdle. I hate to see you retiring, although we do have good men to take your place.

Mr. McARDLE. Thank you, Senator Young.

Senator DWORSHAK. Mr. McArdle, I also share the sentiments expressed by my colleagues on this subcommittee in giving recognition to your decade of leadership as Chief of the U.S. Forest Service. I am sure that after all these years, in fact 39 that you have just indicated, of service, you were somewhat reluctant to leave, but I am also sure you look back over your extensive service with the satisfaction that you have upheld the professional ideals of your work.

I suppose as you look back in the past decade when you were the Chief, you have observed that your budgets have increased quite rapidly, commensurate with the expansion of the Forest Service program. You have witnessed the initiation of Operation Outdoors. And more important, I think, than any of your other accomplishments, at least so far as I am concerned, is the fact that you have made a sincere and quite successful effort to uphold the traditions of multiple use of our natural resources.

ACREAGE UNDER MULTIPLE USE

And I note that on page 1 of your justifications, in referring to the management, protection, and development of the national forests and the national grasslands, you call attention to 186 million acres of national forests and grasslands being managed under the multiple use, and for sustained yield.

And under these principles, natural resources of outdoor recreation, range, timber, watershed, and wildlife are utilized in a fine combina-

tion that will best meet the needs of the Nation without impairing productivity of the land.

I know you have been dedicated to that principle; and the progress which has been made, especially during the past 10 years of your leadership, reflects a very fine degree of success.

Without wanting to embarrass you in any way, I wonder if you cannot look back and tell us whether you feel that problems have increased or decreased in this very material expansion of the Forest Service program.

INCREASE IN LAND PROBLEMS

Mr. McARDLE. Thank you, Senator Dworshak, for giving me credit, which I personally feel I do not deserve, but I am human, and I am glad to hear it.

To answer your question, I think I would have to say that our problems have increased tremendously during this period, and we welcome this, because it means the American people are using the lands that they own, and that they are being made available to them. These public lands are being made available to more people for more different kinds of uses than heretofore.

We think that is exactly the way it should be. Our ambition is to make these lands even more available. But with use by people come problems of land use and in the future we shall have many more problems.

Senator DWORSHAK. I presume that you realize the assaults being made upon our public lands for single-purpose use, and you do feel that there is the need of maintaining the full utilization for forest lands. For instance, reference was made a few minutes ago by Senator Mundt to the development of recreational facilities in national parks. Is it not true that you have more visitors to use your facilities within the national forests for recreation purposes than the Park Service does?

Mr. McARDLE. I think that is correct, Senator, but I think we also have to remember, in fairness to our sister agency, that the national forests encompass a great deal more acres than the national parks.

DIFFICULTIES OF FAIR ASSIGNMENT OF USE

It is I think quite proper that certain of our public lands that contain outstanding scenic resources be restricted in their public use, but the national forests, although they contain many outstanding scenic resources, also have large areas which, as you know, can serve a variety of purposes, and we are trying to do that.

I have many requests, Senator, from individual user groups who want to bolt down one particular use over large areas of the national forests, priority over all other uses. I once added up all of these requests, and they totaled more than the 186 million acres of the national forest system.

So it seems to us that as time goes on, that because we have only just so much land in this country from which we get all of our food and clothing, and so on, as I mentioned earlier, we will have increasing need to make full use of all land. If you look at a map of the United States, and remembering that, since we are not an aggressor Nation, this is all the land we are ever going to have—what we have

now—much of the most productive land is going into superhighways, into other uses that of necessity have to be single uses.

And so we have thought that as we are going to have twice as many people by the end of this century, needing more and more and more of everything, from just so much land, we will have to get as much use out of that land as possible. That, I think, may be what you had in mind in emphasizing this principle of multiple-use management. We can utilize that principle on the national forests but it may not be possible to apply the principle everywhere. I mentioned road construction as one example.

Senator DWORSHAK. I am in accord with your comments stressing the multiple uses, because, as you know, in Idaho, we have about 20 million acres of U.S. forest land, or more than 10 percent of the total, and the effective and efficient and full utilization of those forests mean a great deal to the economy of our State.

MEETING OF FOREST INDUSTRY GROUP

Now leading up to what I want to ask now, I must refer to a conference which was held in the office of the Secretary of Agriculture last month, when representatives of the forest industy came to the Capitol to discuss some of the problems of that industry.

I made a check to see whether the Forest Service had any representative present, and I believe that you did not have anybody present at that conference in Secretary Freeman's office.

Mr. MCARDLE. No, sir. But the executive committee, as you might say, of that group, had met with us a few days previously on precisely the same subject, and using the same material.

Senator DWORSHAK. Well, that gave you a comprehensive understanding of some of those problems, then, of the lumber industry. And I want to ask primarily for the record three or four questions dealing with some of those problems and programs.

ALLOWARLE TIMBER CUT IN IDAHO

First, will you furnish for this record the amount in board feet of the allowable cut of timber in each U.S. forest in Idaho for the last year, and the amount actually put up for sale and the amount sold?

Of course, you realize that when the industry is depressed, so far as prices and demand are concerned, it would not be economically sound to expand the marketing of timber. But at the same time, with trees growing older just like we grow older, you have to have a program providing for the taking care of stumpage that may become overripe. That is true, is it not?

Mr. MCARDLE. That is correct; yes, sir.

Senator DWORSHAK. And you are well aware of the importance of meeting your allowable cut requirements so far as possible? What are they today?

Mr. MCARDLE. We will be glad to insert that information, Senator, but I hope you will bear in mind that our estimates of allowable cut, which is the amount that could be cut each year, without destroying the productivity of the forest for an even, sustained yield level—in figuring those allowable cuts, we include everything, including species and sizes of trees which today are not salable and including also

timber which today is not accessible. So to some extent an allowable cut estimate is not as realistic as we would like to have it. It does indicate the goal toward which we are working.

(The information referred to follows:)

National forest timber sales, fiscal year 1961, State of Idaho

[In thousand board-feet]

Forest	Annual allowable cut [1]		Offered under formal advertisement volume	Volume sold [3]	
	Sawtimber	Products [2]		Sawtimber	Products
Boise	129,900		138,699	140,944	866
Caribou	8,000			1,128	358
Challis	10,000		10,350	10,866	406
Clearwater	158,000	11,200	107,619	107,250	4,874
Coeur d'Alene	127,000	21,400	90,712	98,246	5,019
Kaniksu	132,000	31,500	60,922	63,814	3,699
Nez Percé	98,000	52,000	123,096	120,637	322
Payette	91,500		52,654	53,428	186
Salmon	20,000	10,000	20,080	20,863	464
Sawtooth	21,000			933	1,937
St. Joe	52,000	21,400	87,472	90,901	2,685
Targhee	40,000	10,000	318,000	319,434	2,718
Total	887,400	157,500	1,009,604	1,028,444	23,534

[1] As of midpoint of fiscal year, Jan. 1, 1961.

ACCESS ROADS AND TRAILS

Senator DWORSHAK. You are constantly trying to get access roads and trails that will make more accessible some of the more isolated stands of timber, which are possibly overripe?

Mr. MCARDLE. Yes. And, Senator, I think this may be in part what you have in mind. Let me express, since I will not be meeting with you again, a very strong personal feeling, which I know is shared by my successor:

These lands are for use. Timber use is one of the important uses. Our future, in making management of these lands successful, hinges to a considerable extent on having a strong and prosperous forest industry. We cannot have a strong and complete program of forest conservation in this country without a strong and prosperous forest industry. And likewise we cannot have a strong and prosperous forest industry without a strong program of forest conservation.

So when the timber industry in this country suffers—and this is particularly true in the five western States, where three-fourths of national forest timber cut is harvested today—when they suffer, we suffer, and when they prosper, we come before this committee with considerable pride and tell you that our receipts are up. When the timber market is down, we have to come before you and say that we are not taking in as much money for the Treasury this year as we had hoped.

Senator DWORSHAK. You of course are subject to the fluctuations which take place in the overall lumber industry.

Mr. MCARDLE. That is correct. But I want to add one other thing. More than the amount of receipts coming to the Treasury, 25 percent of which go back to the States and counties, more than that, our

concern is with jobs for the people. And in many places in the West, the cutting of timber from private lands and State lands and national forest lands is a major source of local employment. When the lumber industry goes into a slump, as it has now, then jobs go down, and the local economy suffers.

LUMBER SITUATION IN NORTHWEST

Senator DWORSHAK. Along that same line, I want to put the spotlight on the lumber situation in the three northwestern States of Oregon, Washington, and Idaho, and call your attention to the fact that there is widespread distress, at least in northern Idaho, in the lumber areas. And during the past year, I have been trying to ascertain what is primarily responsible, and I am inclined to think that the increased exports of lumber from Canada are largely responsible.

For instance, in 1960, Canada exported 59 percent, or 563 million board-feet, of the total production, while in the United States during 1960 we exported only 2.5 percent of our total production. So your comparison is between exports of 59 percent, by Canada, to 2½ percent of exports by the United States.

Now, you are aware of that situation, in that regard, and probably have tried to do something about it. Can you give us a brief comment on that competition?

Mr. MCARDLE. It may be that Mr. Cliff will also want to comment on this but there is much to what has just been said.

LUMBER SHIPMENT PROBLEMS

The shipment of lumber from Canada, British Columbia, to the east coast, has increased quite substantially, and American shippers, those who ship by boat, are at a disadvantage, because they are required to ship in American bottoms. The Canadian shipper may shop around and get a cheaper rate. There are other costs which are higher, also.

In inland areas, such as northern Idaho, the Canadian shippers are also at an advantage, because they have a special allowance of free time, amounting to about 2 weeks, I believe, on the railroads, which, as I understand it, owing to a Supreme Court ruling, cannot be given to U.S. shippers. These and other factors have put our U.S. timber mills at a disadvantage.

There have been meetings held on this problem. I think for one thing it would probably require revision in existing legislation, in order to take care of the major reasons—at least major in my opinion—for these differences in advantage enjoyed by Canadian and United States shippers. There is no question, Senator, but what this is a very serious situation.

APPRAISAL POLICIES

Senator DWORSHAK. Along that same line, do you not think these problems of timber processors to meet this competiton make it imperative that appraisal policies encourage sound forest conservation programs and economic incentive to develop and maintain a sound timber economy? Do you not think that is very vital to help our lumber operators to overcome this terrifically difficult competition?

Mr. McArdle. We have no question about that, Senator. It is, however, a very big question, and one which I cannot dispose of in just a few words.

OVERINSTALLATION OF MILL CAPACITY

One of the things which concerns us on this is that in many places there is overinstalled mill capacity in comparison with the amount of timber available, which results in a considerable competition for the available timber.

In the five States where, as I have said, three-fourths of the national forest timber is sold, bid prices now average 35 percent above our appraised prices. If we reduced appraised prices just arbitrarily to say, one-half of what they are now, the bid prices would still be higher. I suppose that to sell the timber at appraised prices, whatever they may be, would force someone to, in effect, play God and decide which mills are going to live and which ones are going to die.

We are not in any sense ignoring this situation, nor are we ignoring the meeting which was held with us and the meeting which was held with the Secretary. We are exploring it fully, without losing any time. Last week we had a meeting of all of our regional foresters and spent a considerable amount of time exploring this whole subject. I am sorry that I am not going to be able to stay and see this particular project through to completion, but I know that Mr. Cliff is much concerned about it and will keep right at it. He may want to comment in addition, but I have told you how I feel about it.

Senator Dworshak. Thank you very much.

Mr. Cliff?

MODIFICATION OF APPRAISALS

Mr. Cliff. Yes: I would like to add just a little to what Mr. McArdle has said.

One of the suggestions that has been made by the timber industry to help meet this problem of increased competition from Canada is the modification of our appraisals.

We are looking into that very carefully. We have had a man in British Columbia looking into just what they are selling timber for and how they go about making their appraisals. We want to find out whether these statements that our timber is selling for a lot more than their timber are based on fact. Preliminary results indicate there is not so much difference as has been represented in appraised prices.

As we understand our legal responsibilities, we are supposed to sell timber by competitive procedures at an appraised price. The legal interpretation that has been put on that by our advisers in the Department is that appraised price means fair market price.

SALES BELOW MARKET PRICE

Suggestions have been made that we sell at less than fair market price in order to help the industry over some of these difficulties. We seriously doubt that we have that authority. If the Congress of the United States wants the national forest timber to be used or to be sold for less than fair market price, it may require additional legislation. As we interpret our authority, we must sell at not less than fair market

price. Our appraisals must be at fair market price. We do not have authority to reduce them below that.

Senator DWORSHAK. That is determined to a large extent by the competitive bidding on your stumpage sales?

Mr. CLIFF. Well, of course, we look at the history of the competitive bidding, and we consider that in our determination of fair market price, but we do not rely on it completely, nor do we use only the high bids in making our comparisons. We try to use considerable judgement in the way we analyze what is the fair market price.

SIMPLIFICATION OF CONTRACTS

Senator DWORSHAK. Well, I hope the Forest Service will, in addition to the other facts of this survey, consider the possibility of timber sale contracts being simplified. I think you have had a lot of complaints from particularly the smaller operators, who believe that it is quite difficult to interpret realistically some of the contracts which you use.

Mr. CLIFF. Yes; this is a problem. And, of course, we are willing to sit down with our purchasers and go over this timber sale contract matter. We did that about 7 years ago, and the contract that we are using now is a result of very detailed collaboration with the industry.

There have been some changes, not very many, since that time, but we are very willing to sit down with responsible representatives of the industry and to review again the timber contract provisions.

Senator DWORSHAK. Thank you for that assurance.

I want to explore very briefly another aspect of some of the problems, so far as the revenue is concerned, for the States and the taxing areas, which embrace some of the U.S. forest lands.

INCREASED PERCENTAGE OF RECEIPTS OF STUMPAGE SALES TO STATES

You know, of course, that reductions are made in stumpage prices for building access roads by the contractor, and in taking care of the slash and other developments, or other activities I should say, which are required by law.

I want to call your attention to the bill I introduced last year, which would have required that 25 percent of the gross sales of stumpage be turned over to the States, rather than 25 percent of the net. As you realize, the net gets down to a very low figure.

Are you also giving consideration to that situation?

ROAD COST FACTOR IN STUMPAGE RETURNS

Mr. CLIFF. One of the big factors in this problem you have pointed out is the matter of roads. That is one of the things that costs the most. Whenever we have to rely on the timber operator to construct the roads, we do make an allowance, in the appraisal, for the cost of that road. The net result is that the stumpage is appraised at a lower value, the receipts are less, and proportionately, the county's share is less.

If we had enough money to build the main line roads that we should be building, the result would be that it would reduce the operator's requirement for working capital, it would increase the county's returns, and I think it would improve competitive bidding.

FOREST CROP COSTS

On some of the other items, we believe that such things as slash disposal, erosion control, and putting the ground in shape to produce another forest crop, is a legitimate cost, an operating cost, in harvesting timber. It is just one of the things that needs to be done; like the farmer has to spend some money in plowing his fields and getting them ready for the next crop. It is a part of the cost of producing timber; and our position is that the counties are not really entitled to 25 percent of such costs.

I would say, though, that this is the kind of work which requires local labor, and the money which is being used for these activities, the great bulk of it, is going into payrolls, which do help the local economy. It is very important in some places. It provides labor for more people.

If we did not do these things, we would have to reduce the amount of timber we could cut. The allowable cuts would be less, if we do not get these lands promptly back into production. So in the long pull, this is a good investment, not only for the Federal Government, but it is a good investment for local governments.

I know that does not help pay the teachers' salaries this next month, but it is still a good investment for the local people.

NO TAX BASE FOR U.S. PROPERTY

Senator DWORSHAK. I think you have presented some logical observations on that particular problem, and I assure you that the main difficulty, as pointed out by our county and other tax units, is that there is no tax base for U.S. property. And, of course, that is a serious handicap, as you well know.

I wanted to point out that in your budget for 1963, you are asking for $37½ million for forest roads and trails, an increase of $2½ million over 1962, and considerably more than the average of about $30 million which you received for this program in past years. That will help materially, along with the $2 million which you are asking for the access road program?

INCREASE FOR ROADS AND TRAILS

Mr. CLIFF. Actually, our budget is for more than that, and I think Mr. Greeley should comment on that. He is handling that program now. We are asking for more than the $37½ million.

Mr. GREELEY. Senator, the budget request is for $37½ million, which is all that remains of the authorizations which have previously been made for fiscal year 1963. But there was included as part of the submission in connection with the budget a proposal or a statement that there would be a request to increase the fiscal year 1963 authorization from $40 to $50 million, and that if that increase in authorization is granted, then it would be followed by a further request for money to implement the action program that could result.

ACCESS ROADS TO RECREATIONAL SITES

Senator DWORSHAK. I wanted to ask also about a situation that is quite bothersome in Idaho. I think it comes under your supervision, Mr. Greeley.

In Idaho, we have some very valuable recreation sites in national forests which do not have very much merchantable timber. Our roads are needed for watershed management, grazing programs, and fire protection, as well as for recreational use, such as picnicking, fishing, and hunting.

Now, is there any thinking along the line that these recreational needs can be met in U.S. forest areas by helping to build access roads?

Mr. GREELEY. Senator, our problem in meeting that need has been a part of the overall problem of meeting needs for roads. There is such a tremendous backlog of needs for road mileage, both for the uses that you have cited and for extensive needs for fire protection, as well as for the harvest of our timber crop.

The kind of thinking that we have been giving to this, sir, is in the direction of the total dollar values, for instance, that are included in the development program for the national forests, in which we undertook to forecast the funding levels which would be necessary to have a program which is adequately going forward to meet these needs for roads and other things on a broad front.

Senator DWORSHAK. There is considerable validity in the point that areas that do not have merchantable timber but have other great potential uses are deserving of consideration when it comes to building these roads?

Mr. GREELEY. Very much so; yes.

RECREATIONAL DEVELOPMENT, PALISADES RESERVOIR

Senator DWORSHAK. Can someone very briefly give me a report on the recreational development adjacent to the Palisades Reservoir in the South Fork of the Snake River?

Mr. CLIFF. I would be glad to do that.

Senator DWORSHAK. Just very briefly. Are you making good progress?

Mr. CLIFF. Yes; we are. We are making good progress, and we are quite proud of what we are doing there.

As you know, this was a reclamation project, and the private lands adjacent to that reservoir were purchased by the Reclamation Service and have been incorporated in the two adjoining national forests.

This is one of the few exceptions where we did get some funds through the Reclamation Service for planning and for some additional development, and we are moving ahead with campground construction and some summer home installations and making very sound progress on that project. I think it is going to be one that we can be proud of and that your State can be proud of.

Senator DWORSHAK. You have funds in this budget to continue the development of that recreational area?

Mr. CLIFF. Yes, sir.

PEST CONTROL

Senator DWORSHAK. Mr. Chairman, I would like to take just a few more minutes, and I appreciate your patience, to get something in the record on the outlook for pest control.

I know in Idaho within the past couple of years we have had an outbreak of beetles and moths, and I know that in various other areas you have budworms and some of the other pests which destroy the timber to such an extent that it becomes more subject to the inroads of fire, particularly, and fire hazards have been increased greatly in the past few years.

What is the situation currently on pest control?

Mr. SWINGLER. Senator, I will answer that.

We are faced today with probably the largest number and most destructive epidemics of pests that we ever have had before in our history. We think it is on account of the drought that has hit the West over the past few years. We have asked for an increase of $1,300,000 in this budget; and, Mr. Chairman, we also have before the Congress a request for a million-dollar deficiency for this year.

We think possibly we got a break this year in the weather. The drought was broken in a great many areas in the West, and we got a lot of cold weather out there. So possibly the bugs above the snow line have been reduced. We are hoping. But we will not know until next spring.

On the basis of our surveys, we believe that the million-dollar deficiency which is now before the Congress, with the $1.3 million increase in this budget, by the end of next fiscal year we will be abreast of the pest situation in the United States.

Senator DWORSHAK. Have you had any new outbreaks recently?

Mr. SWINGLER. Not since last fall. We have both the bark beetle and the spruce budworm, from Montana clear down into New Mexico.

Senator DWORSHAK. You are doing more effective work now, are you not, by using airplanes in the application of chemicals?

Mr. SWINGLER. We have always used airplanes, of course, on the spruce budworm, but we are doing much more effective work on the white pine blister rust through the use of airplanes and the use of actidione. We are pretty well along with our work, and pretty well abreast of our work on white pine, especially in Idaho. We have not had nearly as much success with our actidione and other antibiotics in the East and other areas. We are working on that.

BLISTER RUST SITUATION

Just one thing about northern Idaho: About 10 years ago we abandoned to the blister rust about a million acres of white pine, because we just did not have the knowledge to take care of it. We did not know how to stop the rust after it once got into the tree. All we could do was keep it from spreading from one tree to the other by the elimination of Ribes. Now by these new antibiotics, we can stop the rust after it hits the tree. And we have asked for a $100,000 increase in next year's budget to start working, to reclaim the best of that acreage, even though it has been attacked by the blister rust.

That is more or less of an experiment, and it is a pretty small amount, but we are going to try now to get back into some of that

million acres and reclaim it because of our added knowledge on how to control the white pine blister rust.

ROAD IN AREA

Senator DWORSHAK. Do you have roads into that area?

Mr. SWINGLER. Well, in a great many areas we do. But what we are attempting now with our new phytoactin is to spread it by either fixed-wing airplane or by helicopter. So we will not need the roads.

Senator DWORSHAK. Is any of that million acres embraced within the primitive areas in Idaho?

Mr. SWINGLER. I think, some of it was.

Senator DWORSHAK. How many acres?

Mr. SWINGLER. I do not have that figure, Senator.

Senator DWORSHAK. When we get the wilderness preservation system established, of course you cannot build roads. You will have to send Mr. Cliff and some of his assistants by plane in there to cope with some of these problems.

Mr. SWINGLER. Frankly, we are hopeful that eventually we will have it worked out to the point where we will be taking care of practically all of our blister rust by airplanes and helicopters.

Senator DWORSHAK. I appreciate the fine response to my questions, which are basic to the success of the utilizing of our U.S. forests, particularly in Idaho, as well as in the other Western States.

And I want to thank you for your patience, too, Mr. Chairman.

Chairman HAYDEN. The committee will stand in recess until 3 p.m.

(Whereupon, at 12:05 p.m., the subcommittee was recessed, to reconvene at 3 p.m., the same day.)

(AFTERNOON SESSION—MONDAY, MARCH 12, 1962)

FOREST PEST CONTROL

Chairman HAYDEN. The committee will be in order.

We will resume with the Forest Service where we left off this morning.

What is the overall situation with respect to forest pest control, and how is it reflected in the supplemental appropriations for the fiscal year 1962, and fiscal year 1963 budget estimates?

Mr. MCARDLE. I will ask Mr. Swingler to answer that.

Mr. SWINGLER. Mr. Chairman, as I mentioned this morning, we are faced with one of the toughest pest-control problems in our country, from Montana south to New Mexico. We have two types of pests. One is the bark beetle which we get to right at the tree. That is why we need roads in our pest-control work. Also a great deal of our pest-control work for that type of insect, the bark beetle, is taken care of not through chemical control but through logging. Where we have roads and can log that material out and do not have to go in and spray individual trees.

We have also the second type, spruce budworm, which we attack from the air through airplanes. As I pointed out this morning to Senator Dworshak, in our other work we now have the new antibiotics by which we can arrest white pine disease rather than merely prevent its spread.

I am glad you gave me this opportunity to talk once more because I made a statement to Senator Dworshak this morning and when I checked the records I find it is wrong. He asked me if we had any blister rust work in these wilderness areas. I answered, "I think so." When I checked my records at noon we had none, so that is not a problem.

SUPPLEMENTAL REQUEST

As far as the supplemental is concerned, we have asked for a million dollars and there is a request in this appropriation bill for one million three increase. We are hopeful that with those two funds that by the end of next fiscal year there will be enough money in the budget to take care of certainly the worst of this pest situation.

Chairman HAYDEN. Being a wilderness area, would this not be a source of fees?

Mr. SWINGLER. What I am getting at, as far as blister rust is concerned, we have no work in the wilderness areas.

Not on white pine blister rust because there is none that high up in the wilderness area.

On pest control we are doing some work where it is necessary on the wilderness area; that is insect control rather than diseases control.

Chairman HAYDEN. You would not want to leave a source of infestation that would spread.

Mr. SWINGLER. No, sir; we are controlling that. But we have no white pine blister rust work on wilderness area and none is contemplated.

POLICY RELATIVE TO WILDERNESS AREAS

Mr. MCARDLE. So there may be no misunderstanding, our policy is to enter wilderness areas if necessary to prevent a large-scale spread of insects or diseases. In that respect wilderness is treated exactly as other areas. If this is not done, then epidemics may develop which would destroy tens of thousands of acres.

STATE COOPERATIVE FORESTRY PROGRAMS

Chairman HAYDEN. I note that your level of State cooperative forestry programs is the same as in 1962. Briefly, what is the status of these programs and what are the Federal and State contributions for these programs?

Mr. SWINGLER. Senator Hayden, we have four principal programs in which we cooperate with the State foresters. First is the prevention and suppression of forest fires, which is under the authority of section 2 of the Clarke-McNary law of 1924. This year the Federal appropriation is $12,465,500. The estimated State expenditures, and we can estimate at this time only, because we don't have the final reports in, is about $52 million. The second program has to do with the one we spoke of briefly this morning, the cooperative tree production program. The Federal appropriation is $296,000. That has been coming down as the soil bank program expanded. The States contribute $2,695,000 and the receipts from the private landowners which most States use to raise the trees is $4,244,000. We are attempting to change our form of distribution so that the poorly financed States will get more of the $296,000. I am sure that the States realize and

recognize as we do that we do divide $296,000 among 48 States. No matter how you divide it, no one State is going to get a great deal of money.

Under the Cooperative Forest Management Act, the State forester helps the farm woodland owner with his problem: how to grow trees, how to market them, and so forth. The Federal Government puts up $2,500,000, which is the legal limit. That is the authorization. Incidentally, legislation has been introduced this year to raise that to $5 million. The State puts up $3 million. That is another approximation. So we have somewhere in the neighborhood of 700 farm foresters on the job right now.

The last program is title IV of the Agricultural Act of 1956, which is, I believe, the only part of that act which has not elapsed. This is a cooperative program for the States to actually plant trees. The Federal appropriation is $1 million and the State appropriation is $1,700,000.

We are cooperating with 48 or 49 States in most of those programs.

LACK OF ORGANIZED FOREST PROTECTION IN ARIZONA

Chairman HAYDEN. I notice Arizona is the only one of the 50 States that provides no organized protection for State and private forest lands. What is the reason for this?

Mr. SWINGLER. You have no State forester there and no State forest organizations. It is the only State left where there is no State forestry organization. The State land out there—I believe I am correct, Mr. Cliff can correct me if I am not—the State land is protected through the Forest Service, the national forest. Privately owned land is pretty much on its own. They just have no program in Arizona.

STATE-OWNED FOREST LAND

Chairman HAYDEN. How much forest land in State ownership is there?

Mr. CLIFF. There is some, Senator, in northern Arizona, and we manage that for the State under cooperative agreement.

Chairman HAYDEN. I believe with the University of Arizona?

Mr. CLIFF. That is not quite correct.

(The following was later submitted:)

By far the largest concentration of State-owned land in Arizona is in the vicinity of Flagstaff where most of the ownership is alternate sections. These lands are on or adjacent to the Coconino and Kaibab National Forests, 36,800 acres are involved. This property is covered by a cooperative agreement with the Forest Service for protection and management. There are no cooperative agreements for management or protection of State college or university lands in Arizona. Arizona State College of Forestry at Flagstaff conducts field studies on adjacent State lands. The University of Arizona at Tucson has approached the Forest Service for an exchange to consolidate school lands for management. At the present time this proposal is dormant. The acreage of land involved is not readily available.

SURVEY ON FIRE PROGRAM NEEDS

Mr. SWINGLER. I might say, Senator, 2 years ago the Governor of Arizona asked us to make a survey of Arizona to determine whether or not they had need for a fire program in the State. We made such a study and recommended to the State that they could well use one and we would be happy to cooperate with them. That is where it stands now.

INCREASED APPROPRIATION FOR KENTUCKY STUDY

Chairman HAYDEN. The Forest Service now has a research program aimed at discovering ways to protect and restore natural resources displaced by strip and augur mining of coal for which $20,000 is proposed in fiscal year 1963. I understand $25,000 is requested in 1963 to study means of improving the processing and marketing of timber in Kentucky.

The Kentucky Farm Bureau Federation proposes that the estimates for these two programs be increased $100,000 and $60,000, respectively. Is this a desirable increase, and could you use it economically? If so, if you will place in the record an outline of the way it might be used.

Mr. MCARDLE. You want us to file a statement for the record, Mr. Chairman?

Chairmay HAYDEN. Yes.

Mr. MCARDLE. All right; we will do that.

(The information referred to follows:)

First, with respect to problems created by surface mining of coal, the increase of $100,000 suggested for research would be desirable and it could be used economically. In fact $100,000 is less than the amount contemplated as required for an adequate attack on the problem.

Research aimed at solving the problems created by surface mining of coal in Kentucky and nearby States is of very high priority. Surface mining for coal in the Appalachian coalfields of Pennsylvania, West Virginia, Kentucky, Virginia, North Carolina, and Tennessee, has severely polluted many important streams with acid mine waters and sediment. This activity is increasing rapidly with the growing need for inexpensive fuel for thermal electric powerplants. The water, timber, wildlife habitat, and recreation resources of these forest lands are being severely impaired by current methods of strip, auger, and pit mining.

A comprehensive research program is needed to determine how to plan and carry out mining operations on forest lands so as to minimize damage to other resources during the mining activity and to leave disturbed materials in a stable, acid-free condition so that immediate rehabilitation of the site is possible. Such a research program should include studies of coal haul road location, construction and stabilization, earth movement and placement on steep slopes, mechanical and chemical characteristics of overburden materials, and effects of mining operations on water quality and flow.

As to the study of timber processing and marketing problems in Kentucky, an increase of $60,000 could be used economically. However, it is felt that the surface mining problem is of higher priority at this time when considered with the fact that some increase for timber marketing research has been provided for in the fiscal year 1963 budget.

STATUS OF CONSTRUCTION PROJECTS

Chairman HAYDEN. What is the status of the construction projects that were provided for in the 1962 appropriation?

Mr. MCARDLE. For forest research, Mr. Chairman, or for everything?

Chairman HAYDEN. The whole thing.

Mr. HENDEE. We will submit for the record the accomplishments that we have for fire and general purpose construction for fiscal year 1962.

(The information referred to follows:)

FISCAL YEAR 1962

Dwellings, barracks, and cabins, constructed or planned	104
Fire lookouts, constructed or planned	42
Service and storage buildings, constructed or planned	121

PROGRESS ON RESEARCH IMPROVEMENTS

Mr. HENDEE. Now, did you want the progress on research improvements?

Chairman HAYDEN. I would like to know about that, too.

Mr. HENDEE. Would you do that, Mr. Harper?

Mr. HARPER. There are 16 projects that were appropriated for in 1962. The architectural and engineering work is now going on and should be completed very shortly for all 16 projects. The specifications will be drawn and the construction contracts let for all of them by the end of this fiscal year. We just checked very recently and find that all projects are either right on schedule or not more than a week or two off one way or the other. Each year when we start these projects an ideal schedule is prepared and we try to keep track of any problems we run into. So far we have not run into any major problems this year.

Chairman HAYDEN. Last year we had testimony on need for funds to do preplanning for additional construction for the Forest Products Laboratory at Madison, Wis. The 1963 estimate does not include funds for planning or for construction at the Forest Products Laboratory site.

SPACE NEED OF FOREST PRODUCTS LABORATORY

Please tell us briefly the status of your plans for the additional laboratory space you need for the Forest Products Laboratory.

Mr. HARPER. Senator Hayden, we were not able to include any construction items in our 1963 budget; that is, for original construction. All we could do in our 1963 estimates was to provide for completing some of the buildings that we had under construction with respect to the scientific equipment and auxiliary structures which we normally leave as a finishing item to the project.

We still have in our plans an addition of laboratory space at Madison, Wis. We would hope to get to it as soon as the financial situation would permit and it is possible to budget for this laboratory construction.

Now, I should tell you that last summer we did make a special study of the feasibility of breaking this $10 million overall project down into stages. Our engineers at the laboratory put together the various requirements and priorities. They concluded that the construction could be broken down into three stages; namely, a $4 million principal structure for a chemical and pulp and paper laboratory to be followed by a $4 million structure for our solid wood products research, and then a $2 million final stage which would provide for modernization of our existing 30-year-old building. In the final stage we would also provide for some new scientific equipment required in the new laboratory.

PRIORITY OF PROJECTS

Chairman HAYDEN. What order of those three things is the most important?

Mr. HARPER. A laboratory to provide for the pulp and paper and chemical research work would be the first priority. Then the second priority would be the solid wood products laboratory and the third would be the modernization of the existing buildings.

Chairman HAYDEN. I note in exhibit 3 that the revised 10-year forestry research program proposes an $80 million level for the fiscal year 1972. Please give us for the record the projection of this program by years, starting with 1963 as the first year, as was done for the national forest program. You can do that for the record.

Mr. MCARDLE. Very well sir.

(The information referred to appears on p. 1097.)

PROGRAM OF RESEARCH LABORATORY CONSTRUCTION

Chairman HAYDEN. From the information in exhibit 3 I assume the construction of all laboratory facilities is contemplated within the 10-year period. Will you supply for the record the proposed research laboratory construction and show the number of projects and estimated total cost by years, and a brief summary of the planned construction program.

Mr. MCARDLE. May we do that for the record, Mr. Chairman?

Chairman HAYDEN. Yes.

Mr. MCARDLE. I don't believe we have that information here today.

(The information referred to follows:)

Proposed forestry research laboratory construction program

Fiscal year	Estimated cost	Number of projects	Fiscal year	Estimated cost	Number of projects
1963	$7,000,000	6	1968	5,100,000	11
1964	11,100,000	12	1969	2,500,000	(1)
1965	13,100,000	20			
1966	13,100,000	19	Total, 1963-69	60,000,000	78
1967	8,100,000	10			

[1] The dollar estimates for construction include funds for auxiliary facilities such as greenhouses, insectaries, service buildings, or other minor structures and for scientific equipment to be provided at laboratories already built or building. These miscellaneous smaller structures are not counted as "projects" in the summary of number of construction projects. The $2,500,000 proposed for fiscal year 1969 would provide for auxiliary facilities and equipment needed at about 30 locations to complete laboratories built in the final 3 years of the construction program.

The forestry research construction program has as its objective the development of facilities at the locations where we do research that will provide for efficient high-quality work. Facilities that are planned will provide equipped laboratory rooms, offices for scientists and servicing personnel, and auxiliary buildings such as greenhouses and insectaries for the research work. There are 88 locations in the 50 States and Puerto Rico where we do research. At 21 of these locations we already have adequate facilities or they are to be provided for us. There are 78 projects proposed in the 10-year forestry research program to be constructed at the 67 remaining locations. Of the 78 construction projects, 60 units will be built at as many locations and 18 units will be built at 7 additional locations. These 18 projects represent staged construction with 2 or 3 stages planned for each of the 7 locations. Of the 67 locations for construction, 47, or 70 percent, will be on or near college or university campuses.

Forty-one of the seventy-eight projects are expected to be in the $100,000- to $500,000-size class. Only 11 projects would cost as much as $1 million.

(See p. 1096)

Proposed implementation of national forestry research program related to 1962 appropriation

Appropriation, "Forest protection and utilization"	1962 appropriation	Maximum annual level, fiscal year 1972	Amount needed for full implementation (col. 2 minus col. 1)	Fiscal year 1963		Fiscal year 1964		Fiscal year 1965		Fiscal year 1966

BEAVER CREEK PROJECT IN ARIZONA

Chairman HAYDEN. I would like to ask what is the status of the research and development work on the Beaver Creek project in Arizona?

Mr. MCARDLE. There are three or four of us that could talk on that but I will ask Doctor Harper.

Mr. HARPER. I would be very glad to talk about the Beaver Creek project because it is one of our important projects. We are now in the fifth year of that project and next year we will start the second 5 years with the calibrated watersheds. We will install treatments on these calibrated watersheds and we will learn then what effect these treatments have on the water yield.

Now, during this first 5 years the experimental watersheds were calibrated, and by that I mean they were instrumented and we kept track of the rainfall and of the streamflow, building up a history of the relationships so that in the second 5 years we can compare what happens with the previous 5 years. Presumably if the treatments have any effect they will change the pattern of water yield and stream behavior.

RAINFALL RESEARCH

While we were doing the calibrating we collected considerable information on what happens to the rainfall between the time it reaches the treetops and when it appears as useful water down in a live flowing stream below. We are finding some important relationships which will help us explain what we find out in this next 5 years.

We have also been collecting information on how to treat watersheds. For example, we are determining how to convert scrub covered range to improved pasture by various means. We keep costs on each method so that when we are ready to introduce these on a large scale we will know what are the cheapest ways to treat the land and what types of machinery are most useful, and so on. So the first 5 years has been very productive. We have gained much information and I should say that some of that information is already being applied on areas outside of Beaver Creek itself.

OVERALL OBJECTIVES OF PROJECT

Now, if I may just recall what the overall objective of the Beaver Creek project is, I would say: We wanted to find out in the practice of multiple use what the best practices might be considering all of the forest resources while giving streamflow and good quality water production highest preference. The full answer to that, of course, won't come until we can make an economic evaluation of the treatments with respect to costs and returns and also having in mind some intangible values. That time is still ahead of us. That is why I say this second 5 years is going to be a very significant period even though we have accomplished much during the past 5 years.

UTILIZATION RESEARCH LABORATORY, ALEXANDRIA, LA.

Chairman HAYDEN. Senator Ellender asked me to ask you these questions. Is there anything in the budget for construction of a utilization research laboratory at Alexandria, La.?

Mr. HARPER. No, there is not.

Chairman HAYDEN. How much would be necessary for initiation of this project?

Mr. HARPER. Well, Senator Hayden, in answer to your request I would have to refer to the plan that we have for research construction. I do recall the project at Louisiana because we have had much correspondence with the people in Louisiana about this project. It would cost $900,000 to provide the laboratories, the office space and the modernization of an existing building which we have acquired recently and is on the site of which we will build. One reason there has been so much interest in construction of a laboratory at Alexandria, La., is that 2 or 3 years ago the office and laboratory that we had there burned to the ground and at the present time our personnel in research, the personnel in the national forest are in several different locations in rented quarters. It has been our goal for some time when we could manage it to bring them all together at a central location. According to our most recent plans, as I say, we think we should build on the site that we have recently acquired.

RELATION TO WORK AT MADISON, WIS.

Chairman HAYDEN. It is Senator Ellender's understanding that this would not be in competition with the work being done at Madison, Wis., but instead would complement that work and would use the basic research done at Madison in the field. Do you believe this would be a worthwhile project?

Mr. HARPER. Very definitely I would say it would be a worthwhile project. I also would say I would agree with him it is not in competition with the Madison laboratory program and it would indeed supplement that program. We visualize at Alexandria an excellent place to interpret and extend the results that we are getting at Madison to the special problems of Southern Pine. One product that we have recently developed at Madison illustrates this special type of application. It is called "slicewood." Slicewood is made on an experimental model of a machine that breaks a log down by slicing it with a knife rather than sawing it. You can make thin lumber by this method. This is part of our research on the overall problem of how to break a log down into lumber without creating sawdust. Sawdust is a nuisance; it is a waste. We could cut the cost of producing lumber considerably if we could get rid of the sawdust. Slicing the log is one method. We have developed that process to the point where we are working with the commercial adaptation of the process. A prototype has been designed and will be manufactured. It will be taken to our laboratory at Madison and studied to make sure it is actually making the product that we want. Then we would like to send it to Alexandria where the research worker would be available to develop cost data and to help produce the product in sufficient quantities that could be tested and evaluated on a pilot basis to see how slicewood stands up in use. That is the relationship we see between the Alexandria laboratory and our Forest Products Laboratory at Madison.

COST TO INITIATE ALEXANDRIA PROJECT

Chairman HAYDEN. How much would it cost to initiate the Alexandria project?

Mr. HARPER. The research work or the building?

Chairman HAYDEN. The construction.

Mr. HARPER. It would take $900,000, as I say, to construct the building, which would not only house the utilization research but it would also house our fire research and all programs which are carried on at Alexandria.

WATERSHED MANAGEMENT LABORATORY, LOGAN, UTAH

Chairman HAYDEN. Senator Moss asked that these questions be propounded.

Concerning the proposed Forest Watershed Management Laboratory at Logan, Utah, why is a laboratory needed? Cannot research best be done out on the watershed?

Mr. HARPER. Well, of course, we think that both the Laboratory and the experimental watersheds are needed; one complements the other. In the Laboratory you can do things under controlled conditions. You can get at the "why 's" of relationships much faster than you can out under natural conditions. It would take a long time at great expense if you had to do all this under the vagaries of weather and changing environmental conditions. So the Laboratory greatly speeds the research program. It does not replace, however, the experimental watershed because you must take these ideas developed in the Laboratory out to the field and actually test them out to make sure that they do work and that adequate quantitative data are obtained as a basis for evaluaion.

ADVANTAGES OF LOGAN LOCATION

Chairman HAYDEN. What are the advantages of locating such facilities at Logan, Utah?

Mr. HARPER. Logan, Utah, is right in the center of the major problem region. It is in the Great Basin in Utah and represents much of the upper Missouri. Logan is pretty close to the central part of that problem area. Now, we have three criteria that we normally use in locating work or relocating work. First of all, it must be near the problem; it must have close access to the problem on which we work.

Secondly, the cooperative arrangements must be satisfactory; and they are very good at Logan because there the agricultural experiment station is working on watershed and irrigation problems of farmlands. We will be working on forest land problems.

The third criterion that we use is that a location must be a good place to live as well as to work, with a scientific environment such as you find at this university. So in all those respects I would say Logan is ideal.

QUESTION OF DUPLICATION OF FACILITIES

Chairman HAYDEN. The Senator wants to know, would the proposed watershed laboratory and research projects at Logan, Utah, duplicate any of the facilities or research activities of the Utah State University?

Mr. HARPER. No; I would say not, because the university, that is, the agricultural experiment station, is working on cropland problems. They do have quite a strong program on irrigation and on the cropland problems, whereas ours would be on forest and rangeland in the higher elevations. There would be areas where we could coordinate our research program to mutual advantage, I am sure, but there would be no duplication.

FOREST SERVICE TIMBER SALES IN NORTHWEST

Chairman HAYDEN. Late Friday I received from Senators Magnuson and Jackson a letter requesting that the Committee on Appropriations inquire into timber sale activities of the Forest Service, especially as they affect lumber producers in the Pacific Northwest. The complexities of such an investigation are too great to have accomplished the inquiry in the short time available. However, I shall enter into the record the pertinent portion of their letter, and ask that you supply as promptly as consistent with thoroughness information which will be of assistance in developing the facts desired.

Mr. MCARDLE. We will do that, Mr. Chairman.

Senator Dworshak mentioned this same subject this morning.

(The part of the letter and information referred to follow:)

As you know there has been concern expressed to Secretary Freeman by a number of people in the timber industry about the Forest Service timber sale program.

We believe it would be desirable for the Committee on Appropriations to give some consideration to certain of these contentions. If the sampling is limited to Washington, Oregon, California, Idaho, and Montana, it should be possible to get a representative set of facts.

The first purpose of the inquiry should be to develop whether the Forest Service performance on making timber sales in fiscal year 1961 resulted in a record consistent with the basis upon which funds were appropriated. It should be possible to make a spot check on this and limit detailed inquiry to a few situations. If it develops that there is room for substantial improvement, we would want to ascertain whether the budget requests have been on a realistic basis or whether the situation results from operating deficiencies.

The second purpose should be to ascertain whether the computation of allowable cuts is reasonably current and, especially in those areas where there is a heavy demand for timber, the cut is set at optimum sustained yield levels.

The current situation facing Northwest lumber producers is quite critical, especially in the light of increased imports of Canadian lumber. We want to work constructively with Secretary Freeman on this matter and we know that our colleagues feel the same way.

* * * * * * *

Before getting too involved in these questions in the hearing of the Forest Service budget we are sure that some of us would want to talk with you further on the basis of having the facts before us.

It may be that we will want to consider some revisions in the budget as presented, additional funds, or possibly some guidance in the form of language in the committee report, depending upon our judgment on which course will produce the best results in the most constructive manner.

National forest timber sales in fiscal year 1961

[In thousands board feet]

	Financed quota	Volume sold	Percent of financed quota sold
Region 1	1,495	1,187	79.0
Region 2	640	279	44.0
Region 3	365	465	127.0
Region 4	625	614	103.0
Region 5	1,735	1,072	62.0
Region 6	4,635	3,812	82.0
Region 7	200	136	68.0
Region 8	950	843	89.0
Region 9	520	331	64.0
Region 10	375	117	31.0
Total	11,540	8,856	76.9

We are not satisfied with this record and intend to obtain much closer adherence to planned sale schedules. However, a number of factors make it difficult to keep sales up to previously estimated levels during periods when lumber market levels and industrial activity are declining, as was the case in fiscal year 1961. During favorable market conditions in fiscal years, 1959 and 1960, sales were 109 percent and 117 percent of planned schedules as compared to 77 percent in fiscal year 1961.

Basis for approved allowable annual cuts on the national forests, as of Jan. 1, 1962

[Thousands of acres of commercial forest land]

	Cut based on current inventory (plan revised or reinventory made in past 10 years)	Cut based on plan or inventory more than 10 years old or on incomplete inventory data	Total
Region 1	15,644	794	16,438
Region 4	7,552	2,635	10,187
Region 5	7,206	1,512	8,718
Region 6	13,724	4,292	18,016
Subtotal	44,126	9,233	53,359
Percent	82.7	17.3	100.0
Region 2	3,718	5,356	9,074
Region 3	3,149	2,259	5,408
Region 7	2,096	1,567	3,663
Region 8	5,997	3,321	9,318
Region 9	6,630	990	7,620
Region 10	4,526	----------	4,526
U.S. total	70,242	22,726	92,968
Percent	75.6	24.4	100.0

The foregoing table shows that for the national forest system as a whole 75 percent of the commercial forest land is now covered by up-to-date timber inventories. For the Northwestern and Pacific Coast States where the demand for national forest stumpage is most intense, 83 percent of the commercial forest land is covered by up-to-date inventories. Work underway in Oregon, Washington, and California will provide up-to-date inventories on virtually all commercial forest land within 18 months. The situation for each of these five States is summarized below.

For all national forests in Washington and Oregon, allowable cuts are based on inventories which have been either made or adjusted since 1955. Allowable cut has been increased more than 1 billion board feet since 1955. Reinventories are well underway where present allowable cuts are based on adjusted older inventories.

Forests on which new allowable cuts have been established within the last year are the Okanogan, Siuslaw, Umpqua, Umatilla, Wallowa-Whitman, and Winema. Forests where new allowable cuts are scheduled for establishment in calendar year 1962 are the Deschutes, Gifford Pinchot, Mount Baker, Mount Hood, Rogue River, Siskiyou, Snoqualmie, and Wenatchee.

Replacement of old or incomplete inventories by acceptable current inventories is proceeding rapidly in California. New allowable cuts based on new inventories were established for 14 working circles in 1961 and are scheduled to be established for 13 additional working circles in 1962. This will leave only two or three minor working circles for recalculation after 1962.

In Montana and North Idaho (north of the Salmon River), all commercial national forest land is managed under current and approved plans. All of these plans are based on recent inventories except that for the Kaniksu National Forest. Here an older inventory was updated. A new inventory and plan revision is scheduled for fiscal year 1963.

In south Idaho about 43 percent of the commercial national forest land and 67 percent of the allowable cut is in the Boise and Payette National Forests. These have approved plans based on modern inventories. Lack of markets rather than intensive demand for stumpage is characteristic for most of the other national forests of south Idaho. Inventories are underway to provide a basis for revision of allowable cut estimates for the Caribou, Salmon, Sawtooth, and Targhee National Forests.

Forest Roads and Trails

Chairman Hayden. There will be placed in the record the Forest Service request for $37,500,000 for forest roads and trails during fiscal year 1963. This is $2,500,000 more than the appropriation in 1962.

(The information referred to follows:)

Appropriation Act, 1962 and base for 1963	$35,000,000
Budget estimate, 1963	37,500,000
Increase	2,500,000

This appropriation provides for the liquidation of obligations incurred for the construction and maintenance of forest roads and trails pursuant to the authorization contained in the Federal Highway Acts of 1958 and 1960. Roads and trails are essential to protection and management of national forests, and utilization of their resources. An appropriation of $37,500,000 for 1963 will provide sufficient cash to liquidate prior year obligations, and obligations planned for fiscal year 1963 which must be paid by June 30, 1963.

Analysis of cash requirements by activities [1]

	Actual, 1961	Estimated, 1962	Estimated, 1963	Increase (+) or decrease (−)
Construction of roads and trails	$23,308,925	$27,240,715	$28,870,000	+$1,629,285
Maintenance of roads and trails	7,786,590	8,732,645	8,630,000	−102,645
Total	31,095,515	35,973,360	37,500,000	+1,526,640

[1] The annual appropriation language and the Department presentation combine the appropriation for "Forest roads and trails" made pursuant to 23 U.S.C. 205 and the appropriation of 10 percent of forest receipts for construction and maintenance of roads and trails pursuant to 16 U.S.C. 501. This merger of funds is made in order to simplify the programing, allotment, and accounting of funds at the field level. Since the accounts for these 2 funds are merged it is not practicable to distribute obligations and expenditures between the 2 appropriations on a precise basis. The amounts shown for the "Forest roads and trails" appropriation are a proration based on the percentage that contract authorization used under the appropriated funds is of total available funds. Expenditure amounts for maintenance are based on all such obligations requiring cash payment during the fiscal year in which obligations are incurred.

Authorizations for appropriations [1]

Fiscal year	Construction	Maintenance	Total	Funded	Unfunded
1961	$22,000,000	$8,000,000	$30,000,000	$30,000,000	
1962	29,500,000	8,000,000	[2] 37,500,000	[3] 24,336,000	$13,164,000
1963	29,300,000	8,200,000	[4] 37,500,000	37,500,000	
Total	80,800,000	24,200,000	105,000,000	91,836,000	13,164,000

[1] The annual appropriation language and the Department presentation combine the appropriation for "Forest roads and trails" made pursuant to 23 U.S.C. 205 and the appropriation of 10 percent of forest receipts for construction and maintenance of roads and trails pursuant to 16 U.S.C. 501. This merger of funds is made in order to simplify the programing, allotment, and accounting of funds at the field level. Since the accounts for these 2 funds are merged it is not practicable to distribute obligations and expenditures between the 2 appropriations on a precise basis. The amounts shown for the "Forest roads and trails" appropriation are a proration based on the percentage that contract authorization used under the appropriated funds is of total available funds. Expenditure amounts for maintenance are based on all such obligations requiring cash payment during the fiscal year in which obligations are incurred.

[2] Consists of $35,000,000 authorization for 1962 plus $2,500,000 of the $40,000,000 authorization for 1963 made available for obligation in 1962.

[3] The 1962 appropriation of $35,000,000 less prior year unfunded authorization of $10,664,000 provides $24,336,000 for funding of the $37,500,000 authorization for 1962.

[4] Consists of $40,000,000 authorization for 1963 less $2,500,000 made available for obligation in 1962.

Status of unfunded authorizations

Unfunded contract authorizations beginning of 1962	$45,664,000
Appropriation, 1962	−35,000,000
New contract authorization, 1962 (1963 authorization available in 1962—Federal Highway Act of 1960, approved July 14, 1960)	+40,000,000
Total unfunded beginning of 1963	50,664,000
1963 budget estimate (cash requirements)	−37,500,000
Balance to remain unfunded as of June 30, 1963	13,164,000

Unfunded balance consists of obligations for which cash will not be required in 1963.

Analysis of cash requirements

1. Unliquidated obligations June 30, 1961	$10,888,214
2. Estimated cash requirements to finance 1962 program	[1] 25,085,146
3. Total cash requirement by June 30, 1962	35,973,360
4. Less cash on hand 1962	36,316,745
5. Cash balance from 1962 available for use in 1963	−343,385
6. Obligations in 1962 for which cash was not provided in line 2	13,507,386
7. Estimated cash required to finance 1963 program	[2] 24,335,999
8. Total cash required for 1963	37,500,000

[1] Based on 65 percent of new obligations (totaling $38,592,532) requiring cash payments during the fiscal year. This percentage is approximately in line with rate of cash payments in past years.

[2] Based on 65 percent of $37,500,000 of new obligations, or $24,375,000, but decreased by $39,001 to provide rounded appropriation.

The following tabulation reflects the total program for the construction and maintenance of roads and trails on the national forests by combining the funds available under the appropriation "Forest roads and trails" with the permanent appropriation of 10 percent of national forest receipts. This permanent appropriation for "Roads and trails for States" (10 percent fund) is estimated at $11,600,000 for 1963 compared with $10,020,000 for 1962, an increase of $1,580,000.

Project statement

Project	1961	1962 estimated	Increase (+) or decrease (−)	1963 estimated
1. Construction of roads and trails	$32,638,424	$37,612,532	+$187,468	$37,800,000
2. Maintenance of roads and trails	10,827,475	11,000,000	+300,000	11,300,000
Total obligations	43,465,899	48,612,532	+487,468	49,100,000
Transfer from "Roads and trails for States"	−14,165,522	−10,020,000	−1,580,000	−11,600,000
Program under "Forest roads and trails" contract authorization	29,300,377	38,592,532	−1,092,532	37,500,000
Obligations incurred under unfunded contract authorization	+699,623	−3,592,532	+3,592,532	
Total appropriation or estimate	30,000,000	35,000,000	+2,500,000	37,500,000

INCREASE

(1) *An increase of $2.5 million to meet cash requiremnts for liquidation of contract authorization.*—This additional cash is required to—

(*a*) Pay for obligations of the prior year which will be due for payment in fiscal year 1963, and

(*b*) Pay the portion of 1963 obligations of $37.5 million contract authorization which will require cash payment in that year.

The net increase of $487,468 in total obligations provides no change in obligations of new contract authorization in 1963. It is comprised of an increase of $1,580,000 in funds avaliable from the permanent appropriation, "Roads and trails for States" (10-percent fund), offset by $1,092,532, of the available contract authorization which was not obligated in 1961, but is planned for obligation in 1962.

Although the appropriation would be increased, the program resulting from this increase would remain at the 1962 level, since the 1962 obligation authority was also $37,500,000. The Federal Highway Act of 1960 provided contract authorization of $35 million for fiscal year 1962 and $40 million for fiscal year 1963; $2,500,000 of the 1963 authorization was approved for obligation in 1962. Therefore, only $37,500,000 contract authorization remains available for use in 1963.

The rate of accomplishment proposed in the development program for the national forests exceeds the existing authorization level. To permit the forest road and trail program to come closer to the level of the development program, additional 1963 contract authorization of $10 million is needed. Legislation is being proposed to increase the 1963 Federal Highway Act authorization to $50 million. If enacted, a supplemental appropriation would be necessary.

An increase of $10 million in contract authority could be programed for essential road work in connection with the development program for the national forests as follows:

Primarily timber access roads	$5,000,000
Primarily other purposes, such as fire and recreation roads and for bridge replacement	5,000,000
Total	10,000,000

An appropriation of $6,500,000 would be needed to provide sufficient cash to liquidate obligations that would be incurred by June 30, 1963.

GENERAL STATEMENT

Chairman HAYDEN. Would you please discuss this program, indicating your primary needs and also, if you have it available, the dollar values which will be created because of accessibility of timber and ability to protect against and suppress fires?

Mr. MCARDLE. Some of that we may have to supply for the record, but perhaps Mr. Greeley can answer most of the question right now.

AMOUNT REQUESTED

Mr. GREELEY. Senator, to speak to the question of amounts requested now and our greatest needs, we are asking in this budget for $37½ million, which is the amount of the authorization remaining for fiscal year 1963. There is also included in the budget request an increase of $2½ million cash because we had a cash appropriation last year of $35 million; but in addition we had authority to obligate $37½ million by drawing on advance contract authorizations. So we need now the cash to pay for the additional $2½ million.

Chairman HAYDEN. I remember that.

Mr. GREELEY. This means in effect we are maintaining the same level of road program for fiscal year 1963 as we were operating on this year.

LAG IN ROAD CONSTRUCTION

Now actually the road part of the development program for the national forests is falling behind the rest of the development program. This comes about through several reasons but one of the main reasons is that the authorizations that we are operating under now were enacted in legislation of 2 years ago which was prior to the time the figures for the present program were developed. Under the revised development program for the national forests the present 1963 budget including the $37½ million for roads, provides for financing for about 84 percent of the projected 1963 needs. That is the figure for the full program.

For the road part the figure is only 68 percent and that is one of the reasons why the budget commits us to request a $10 million increase in authorization for fiscal year 1963, and, if that request is granted, also commits us to request appropriations under the amended authorization. If this increase comes about the road financing figure would be at 81 percent of the projected road financing for fiscal 1963.

LEGISLATION PROPOSED

Chairman HAYDEN. Has this legislation been introduced and if so, what is its present status?

Mr. GREELEY. It has not been introduced, sir. It is contemplated that the portion dealing with authorizations will be sent up as part of the administration measure for the biennial highway bill. This has not been sent up yet, sir.

ACCESS ROADS

Chairman HAYDEN. There will be included in the record the request for $2 million for access roads. These funds are used to purchase, or to condemn if purchase negotiations fail, existing roads or right-of-way needed for access to the national forests. This is the same amount available last year but it is twice as much as you requested last year, since the Congress added a million dollars to the request for like amount.

(The information referred to follows:)

ACCESS ROADS

Appropriation Act, 1962 and base for 1963	$2,000,000
Budget estimate, 1963	2,000,000

Project statement

Project	1961	1962 estimated	1963 estimated
Access roads [1]	$1,848,782	$2,151,218	$2,000,000
Unobligated balance brought forward	−1,000,000	−151,218	
Unobligated balance carried forward	151,218		
Appropriation or estimate	1,000,000	2,000,000	2,000,000

[1] Represents obligations. Applied costs for 1961 are $1,818,782. The difference of $30,000 represents an excess of orders placed over orders received in that year.

As to dollar values that will be created because of accessibility of timber and ability to protect it, the problem is one of maintaining the ability of the Forest Service to carry on its timber business at or above the present annual rate. Roads that open up timbered areas increase the value of the timber that is thus made available. So, a substantial percentage of the cost of these roads will be self-liquidating over a period of years as the timber is sold and the Government receives in stumpage returns the larger value of the timber resulting from construction of forest development roads.

The road system to be installed as part of the development program for the national forests is planned to correspond with an increase in annual timber cut of about 3 billion board feet. Continuing and expanding the road system is an essential part of maintaining the rate of harvest of national forest timber. So, the recapture of annual amounts of $114 million or more, which is the 1962 estimate of receipts from sales of national forest timber depends in large part on continuing to make investments in the road system.

PLANNED USE OF FUNDS

Chairman HAYDEN. What is the planned use of this money?

Mr. GREELEY. We have plans, Mr. Chairman, to buy roads or buy rights in roads for some 420 miles of road now privately owned in 64 projects or road systems that would serve 6½ billion board feet of timber. This volume of timber has an estimated allowable cut of somewhere around 80 million board feet which would be valued for stumpage purposes at between $1¼ and $1½ million.

This figure relates to the access procurement we would contemplate doing with the $2 million for 1963, sir.

COMPTROLLER GENERAL'S DECISIONS

Chairman HAYDEN. I understand there have been some Comptroller General decisions with regard to the use of access road money. Can you advise the committee about this?

Mr. GREELEY. Yes, sir. We have submitted a series of questions to the Comptroller General over the last year and a half, the most recent of which was sent to the Comptroller General in February of this year. They deal with the question of how to interpret a provision in the Federal Highway Act which prohibits the collection of tolls. This series of questions describes several operating problems we have had and asks whether or not under those conditions the collection of fees constitutes the charging of tolls.

Chairman HAYDEN. I think it would be well to put all that correspondence in the record.

Mr. GREELEY. Yes, sir; we will be glad to do that.

80391—62——70

(The material referred to follows:)

COMPTROLLER GENERAL OF THE UNITED STATES,
Washington, March 2, 1962.

The Honorable the SECRETARY OF AGRICULTURE.

DEAR MR. SECRETARY: Reference is made to letter of February 2, 1962, from Assistant Secretary of Agriculture Frank J. Welch, calling attention to decisions of this Office, B-65972, of December 19, 1960, and July 3, 1961 (40 Comp. Gen. 372, and 41 Comp. Gen. 1), respectively. These decisions concerned the problems of the Forest Service as to the sharing of costs with private landowners in the development of timber access roads systems in the national forest areas of mixed or "checkerboard" ownership of land.

The Assistant Secretary's letter points out that the Forest Service has several mixed landownership situations where access roads are needed to serve national forests purposes, and the landowners are not willing, or not prepared at the time the Government is ready to proceed, to cooperate in the construction of the road.

In those timber areas within the national forest where there is a large percentage by privately owned timber, only a part of the road system can be financed by purchasers of the initial harvest of national forest timber because the harvest will not support the entire burden of the development cost of the access roads. It is pointed out that, if private timber owners are not willing or able to accomplish a share of the construction concurrently with the Government program, harvest will be commercially feasible only if a portion of the road construction cost is met from funds subject to 23 U.S.C. 301. These provisions prohibit the charging of tolls for the use of highways constructed with funds authorized thereunder.

It is further pointed out that in other areas it will be necessary for the Forest Service to initially construct the main roads into heavily mixed landownership areas entirely from funds appropriated under the provisions in title 23, United States Code. In some cases it will be necessary to purchase from these funds the necessary interests needed in private roads which together with Forest Service construction will provide the main access to privately owned tracts as well as the national forest resources.

The Forest Service proposes to recover the proportionate share of cost of the roads of the two types cited from the benefiting landowners at the time they use the roads. The cost-sharing principles for such roads generally would be the same as those followed in the earlier decisions referred to above (40 Comp. Gen. 372 and 41 Comp. Gen. 1). The concurrence of this Office is requested as to the general application of the principles announced in these published decisions to the plan set forth in the instant letter where the development of an access road system will be entirely from funds provided under title 23, United States Code.

In 40 Comp. Gen. 372 and 41 Comp. Gen. 1, there was recognized the cooperative arrangements in kind, or monetary contribution, insofar as the provision, by construction, or purchase, of a road system for hauling timber from tracts of mixed Government and private ownership within the national forest. Where voluntary cooperation was not obtainable and the United States provided the road or an improvement thereof, the collection of costs from timber haulers using the road was not regarded as a toll collection barred under 23 U.S.C. 301. The instant case involves the application of the same principles.

Accordingly, in those instances where the Government has provided the road system by construction and purchase of interests in private roads as a necessary incident to such construction from funds provided under title 23, United States Code, the recovery of costs from the benefiting landowners proportionate to their share upon use of the road is not to be regarded as an exaction of a toll barred under the provisions of 23 U.S.C. 301 but rather as a deferred payment of the cost-sharing charges for the construction of the road system.

The questions set forth in the letter of February 2, 1962, are answered accordingly.

Sincerely yours,

JOSEPH CAMPBELL,
Comptroller General of the United States.

DEPARTMENT OF AGRICULTURE,
Washington, D.C., February 2, 1962.

HON. JOSEPH CAMPBELL,
Comptroller General of the United States,
General Accounting Office

DEAR MR. CAMPBELL: Reference is made to your decisions B-65972 of December 19, 1960, and July 3, 1961. The latter has been most helpful in solving what could have been frustrating problems involving the improvement of the Lewis River Road. We now have a further question as to the applicability to other situations of the principles set forth in the last two paragraphs of your July 3 decision.

The Forest Service has several typical mixed landownership situations where access roads are needed to serve national forest purposes either before the private landowners are ready to cooperate in the construction or where, for one reason or another, cooperation cannot be obtained.

In a number of the timbered areas within the national forests there is a large percentage of privately owned timber. Only a part of the road system can be financed by purchasers of the initial harvest of national forest timber because it will not support the entire burden of this development cost. Harvest will be commercially feasible only if a portion of the road construction cost is met from funds subject to 23 U.S.C. 301, when the private timber owners are not willing or able to do an appropriate share of construction concurrently with the Government's program.

In a smaller yet substantial number of areas the only feasible plan is for the Forest Service to initially construct the main roads into areas of checkerboard or heavily mixed ownership entirely from funds appropriated under 23 U.S.C. Some of these cases will require the purchase from the same funds of interest needed in private roads which together with Forest Service construction will provide the main access to the privately owned tracts as well as the national forest resources.

Under both types of cases the share of costs for each owner is readily determinable, or can be agreed upon, based on engineers' estimates of the total costs. The past cooperative arrangements for joint construction and use have been based upon the principle that the tributary landowners will share in the cost of construction in proportion to the prospective benefits. If we have correctly interpreted the above referred to decisions, the Forest Service could recover from the benefiting landowners, when they use the roads, an appropriate share of the cost of roads of the two types cited above.

This is an equitable basis for distributing the cost of the roads to the benefiting parties and protecting the interests of the United States. The cost-sharing principles for such roads would be generally the same as those followed in the referred to decisions. Before providing for general application of this principle, I would like to have assurance that the decisions may be applied generally to situations such as the two types of cases outlined above. The only basic difference between the Lewis River Road and other roads described here is that the other roads would have been developed with 23 U.S.C. funds and without use of the special access road appropriation which became available in fiscal year 1960.

Sincerely yours,

(S) FRANK J. WELCH, *Assistant Secretary.*

COMPTROLLER GENERAL OF THE UNITED STATES,
Washington, D.C., July 3, 1961.

The Honorable the SECRETARY OF AGRICULTURE.

DEAR MR. SECRETARY: Reference is made to letter of May 8, 1961, from Assistant Secretary of Agriculture Frank J. Welch, concerning a problem arising in connection with the acquisition of actual ownership or an interest in existing private roads which could serve national forest timber purchasers.

It is stated, and correctly so, that the Forest Service has been operating on the assumption that the purchase of such roads with funds authorized by title 23, United States Code, makes the roads subject to the provisions of 23 U.S.C. 301, which prohibits the charging of tolls for the use of highways constructed under the Federal Highway Act, as amended. However, doubt is expressed whether charges made by the Forest Service on a basis intended to recover only costs of acquisition or improvement of such roads is required to be considered a toll the payment of which is prohibited by section 301 as a condition of the use thereof.

It is explained that, under the present practice of developing road systems, owners of privately owned land or timber in the checkerboard landownership area who cooperate with the Forest Service pay a share of the cost of joint road systems, whereas the owner of an existing road may delay or refuse to cooperate in the joint use of the road. In the latter circumstances acquisition of the road by the Service through purchase or condemnation is the only reasonable action when the need therefor is critical. Thus, when an owner is compensated for a road so acquired he can use the road, if it is open to other than Government use, without charge unless the toll prohibition of section 301 is inapplicable. This situation, it is suggested, may be a deterrent to cooperative sharing of the cost of developing a joint road system because the cooperator bears a part of such cost whereas an owner may recover all of his cost through sale of the road and then have the use of it without charge.

The specific situation in question concerns the purchase of the Lewis River Road leading into the Gifford Pinchot National Forest in the State of Washington. The funds used therefor were made available to the Forest Service by the Supplemental Appropriation Act, 1960, and the Department of the Interior and Related Agencies Appropriation Act, 1961, Public Laws 86-213 and 86-455, 73 Stat. 440 and 74 Stat. 115, respectively, under the heading "Access Roads." which funds, as stated in the letter, are not subject to the provisions of the cited section 301. The circumstances attending the purchase and use of the road are stated as follows:

"* * * The reservations of the parties who owned the road or had interests in it permit some free hauling, but two of the owners of reserved rights agreed in their easements conveying rights-of-way to the private road constructor to exercise hauling rights subject to reasonable use charges. One of the reservations limits the amount to be paid by haulers from its lands to a proportionate share of the cost of the road paid by the United States to the grantors. A few other private owners who are expected to haul timber over the road at some future time have not been involved in the negotiations. All users who have not reserved free hauling rights are charged at rates designed to recover the proportionate share of the cost to the United States for the purchase of the road, based on the proportion of private and U.S. timber tributary to the road. In addition, a large share of the capacity is to be used by purchasers of national forest timber who do not pay a use charge, as such, but the price for the timber purchased from the United States is higher because of the availability of the road."

It is further stated that about 10½ miles of the Lewis River Road are now being used by timber haulers and that this section of the road is surfaced with native volcanic rock. Under heavy traffic the surface material grinds into a fine dust which creates an unsafe condition, causes excessive wear on motorized equipment and results in hauling costs that are higher than would be experienced on a better road. To alleviate this condition the Forest Service plans to provide a bituminous surface for the road which may cost over $200,000 using forest road development funds and cooperative contributions from users.

The questions presented for our decision are (1) whether the use of forest road development funds to so improve the Lewis River Road, which funds are subject to the toll-free requirements of 23 U.S.C. 301, would require discontinuance of the collection of otherwise proper use charges, designed to recover the proportionate share of the cost to the United States for purchase of the road, from haulers of non-Federal timber in the area tributary to the road, and (2) whether it is proper to recover a proportionate share of the cost of such improvement from users who do not make advance contributions therefor and deposit such recoveries into the Treasury as miscellaneous receipts.

Under the terms of 23 U.S.C. 301, all highways, including forest development roads, constructed under the Federal Highway Act of 1921, as amended, are required to be free from tolls of all kinds. See 23 U.S.C. 201. In our decision 40 Comp. Gen. 372, 375, rendered to you, the word "tolls" as used in this statute was held to mean the exaction of money from highway travelers who are prohibited from using the highways unless they pay a toll to the parties entitled thereto.

The funds appropriated to the Forest Service used for the purchase of the Lewis River Road were made available for the acquisition of privately owned roads that are required to provide access to national forest timber. The collection of charges from haulers of privately owned timber in the area who otherwise would be without available access—as distinguished from the general public who are permitted to use the road free of charge—at rates designed to recover

the proportionate share of the cost to the United States for the purchase of the road, based upon the proportion of private and Federal timber tributary to the road, is a method of sharing the cost of road acquisition by the parties deriving economic benefits therefrom.

We do not believe that the collection of charges for the transportation of privately owned timber over the Lewis River Road operates to classify the road as a toll road or requires the use charges to be regarded as the payment of a toll. Since effective use of the road contemplates maintenance and improvement, we are of the opinion that the proposed expenditure of forest road development funds to provide a bituminous surface thereon, and the recovery of a proportionate share of the cost from the timber haulers who do not make advance contributions need not be considered as altering or changing the nature of the road and the use charges, or otherwise conflict with the toll free requirements of roads constructed with forest road development funds.

The questions presented are answered accordingly.

Sincerely yours,

JOSEPH CAMPBELL,
Comptroller General of the United States.

Hon. JOSEPH CAMPBELL,
The Comptroller General of the United States.

DEAR MR. CAMPBELL: Some of the problems facing the Department of Agriculture in developing access to national forest timber resources were described in our letter to you dated October 11, 1960. Your reply of December 19, 1960 (B-65972) provided a helpful solution.

Another problem related to the "tolls prohibition" in 23 U.S.C. 301 has been the need to acquire outright, by purchase or condemnation, actual ownership or an interest in existing private roads which could serve national forest timber purchasers. The Forest Service has been operating on the assumption that the purchase of such roads from funds authorized by title 23 U.S.C. makes such roads subject to 23 U.S.C. 301, prohibiting the charging of tolls. There is some doubt whether charges made by the United States on a basis intended to recover only costs of acquisition or improvement of roads is required to be considered a "toll" prohibited by 23 U.S.C. 301. The Forest Service has proceeded on the assumption that such charges were prohibited. The situation now is that owners who cooperate with the United States in developing road systems pay a share of the cost of joint road systems. However, the owner of an existing road may delay or refuse to cooperate in joint use of a road. The only reasonable action for the United States is to purchase or condemn the road where the need is critical. When this happens, the owner is compensated, but he can then use the road (if it is open to other than Government use) without charge unless the tolls prohibition does not apply. In effect, he is paid for his road, but he has the use of it subject only to sharing its capacity with other haulers. This situation may be a deterrent to cooperative sharing of the cost of developing a joint road system because the cooperator bears a part of such cost whereas an owner may recover all of his cost through sale of the road to the United States.

These situations were reviewed with the Congress. The result was a special appropriation to purchase roads, which was not subject to the provisions of 23 U.S.C. 301. Amounts of $1 million were appropriated for fiscal years 1960 and 1961 (Public Law 86-213, September 1, 1959; and Public Law 86-455, May 13, 1960).

Part of this appropriation has been used to purchase the Lewis River Road leading into the Gifford Pinchot National Forest in the State of Washington. The reservations of the parties who owned the road or had interests in it permit some free hauling, but two of the owners of reserved rights agreed in their easements conveying rights-of-way to the private road constructor to exercise hauling rights subject to reasonable use charges. One of the reservations limits the amount to be paid by haulers from its lands to a proportionate share of the cost of the road paid by the United States to the grantors. A few other private owners who are expected to haul timber over the road at some future time have not been involved in the negotiations. All users who have not reserved free hauling rights are charged at rates designed to recover the proportionate share of the cost to the United States for the purchase of the road, based on the proportion of private and U.S. timber tributary to the road. In addition, a large share of the capacity is to be used by purchasers of national forest timber who do not pay a use charge, as such, but the price for the timber purchased from the United States is higher because of the availability of the road.

About 10½ miles of the Lewis River Road is now being used by haulers described above. This section of the road is surfaced with native volcanic rock. Under heavy traffic the surface material grinds into a fine dust which hangs in heavy clouds over the road. It creates an unsafe condition due to reduced visibility, slows the traffic, and causes excessive wear on motorized equipment, resulting in hauling costs that are higher than would be experienced on a better road.

The Forest Service is planning to provide a bituminous surface for this road which may cost over $200,000 using forest road development funds (23 U.S.C. 205) and cooperative contributions from users. Contributions from the latter are expected to be related to their calculated savings in hauling costs. However, there is question whether the use of such appropriated funds to improve the road would make it necessary to discontinue collections designed to recover a part of the cost incurred by the United States for the purchase of the existing road. These charges are not "tolls" in the sense that all users will pay for use. The charges are presently made only against haulers of timber and the part of the cost to be recovered is based on the amount of non-Federal timber in the area tributary to the road, excluding that for which the owners have free hauling rights. The amount to be recovered from the major timber owners who have reserved hauling rights subject to use charges is based on the amount of timber they own tributary to the road. All other users, including recreationists, are permitted to use the road without charge.

Under these circumstances, if funds appropriated for forest development roads are used in combination with cooperative contributions to provide bituminous surface on this road, is it necessary to discontinue use charges described above? Would it be possible also for the United States to recover a proportionate share of the cost of surfacing on the same basis from users who do not make advance contributions if funds for forest development roads are used to pay the surfacing cost?

Sincerely yours,

FRANK J. WELCH, *Assistant Secretary.*

COMPTROLLER GENERAL OF THE UNITED STATES,
Washington, December 19, 1960.

The Honorable the SECRETARY OF AGRICULTURE.

DEAR MR. SECRETARY: Reference is made to letter of October 11, 1960, from Assistant Secretary of Agriculture C. M. Ferguson, requesting a decision whether section 301 of the act of August 27, 1958 (72 Stat. 912, 23 U.S.C. 301), providing that all highways constructed under the Federal Highway Act be toll free prohibits the use of funds appropriated to your Department for construction of forest development roads and trails pursuant to section 205 of the act (23 U.S.C. 205), when such roads are constructed through cooperative agreements between the Forest Service and private landowners under an arrangement described hereinafter.

Section 301 of the cited act of August 27, 1958, provides, in pertinent part, as follows:

"* * * all highways constructed under the provisions of this title shall be free from tolls of all kinds."

The Assistant Secretary explains in his letter that there is an intermingling of Federal and non-Federal land in many of the national forests in the Western United States, and that where this "checkerboard" pattern of landownership exists the construction of access roads in these areas to serve national forest lands or private lands, or both, involves crossing lands in the ownership of both the United States and private parties. He states that generally a single road will serve all parties at less cost to each than separate roads; and that frequently, particularly in difficult terrain, there is only one practical and economical route for such a road.

For these reasons, he says, the Forest Service has in a number of instances entered into cooperative road construction and use agreements with private owners hereinafter referred to as cooperators. The agreements provide for a sharing of road construction costs on an equitable basis, mutual use privileges, grant of an easement across private lands to the United States, stipulations of the cooperator's statutory right of ingress and egress across national forest lands, specifications of the standards for roads and bridges, provisions governing

construction, use by others, etc. The Assistant Secretary outlines in his letter various methods of sharing road construction costs under these agreements.

The specific situation giving rise to the question presented for decision relates to cooperative agreements which authorize the cooperator to construct, at his own expense, a forest development road to serve his needs and, in addition, those of the Government and its timber purchasers. To reimburse the cooperator for the construction costs incurred over and above his agreed to share thereof, the agreements provide that the Forest Service will permit use of the road by others for timber hauling on the condition that they will contribute to the cooperator their proportionate share of construction costs up to the point at which the cooperator recovers his share of the costs. The rates and the total amount charged by the cooperator are controlled by the Forest Service, and collections by the cooperator are not permitted to exceed in the aggregate the portion of the total estimated cost in excess of his share of these costs plus reasonable carrying charges.

In this connection, during an informal discussion of this matter between representatives of the Forest Service and our Office, it was brought out and understood that where a purchaser of national forest timber is also a cooperator who has agreed to construct a better or more extensive road than needed for the particular sale of timber, the road cost considered in the timber appraisal is that appropriate for the needs of the particular sale; the balance or excess costs incurred by the cooperator because of actual construction of a higher grade road is used to compute the sharing of costs between appropriated funds, those to be borne by the cooperator, and those to be collected by the cooperator from other users of the road.

The question for determination here would appear to be whether the payments thus required to be made to the cooperator by road users, who are not parties to the cooperative agreement, constitute the payment of tolls for use of the road intended by the Congress to be prohibited as a condition of the use of Federal funds authorized by the Federal Highway Act of 1921, as amended, for construction of forest development roads.

The Assistant Secretary points out that the intent of this method of sharing road costs between private users is to secure a single road system suitable for heavy hauling; and that the need therefor arises in situations in which there is room for only one road system, or in which a single road system provides the most economical means of transportation. The view is expressed that payments thus made to the cooperator who constructs a road, by users who are haulers of timber, are not in the nature of tolls for use of the road but represent a sharing of the cost of a single road system which is a preferred alternative to the more costly possibility of constructing two road systems.

The term "toll" in relation to highways generally applies to any highway constructed by individuals or by a corporation pursuant to legislative grant which highways are maintained by tolls payable by passengers, the payment thereof being enforced by the use of gates or bars, and the general public being entitled to use of the highways subject only to the payment of toll. See 90 C.J.S. Turnpikes and Toll Roads, sections 1 and 4. The word "toll" as used in title 23 of the United States Code, section 301, requiring all highways constructed under the provisions of the title to be free from tolls of all kinds, undoubtedly means the exaction of money from highway travelers who are prohibited from using the highways unless they pay the toll to the parties entitled thereto.

In the light of this definition of the word "toll" we agree with the conclusion of the Assistant Secretary that charges agreed upon between the cooperator and the Forest Service as a basis for the sharing of cooperative road construction costs by private users are not tolls prohibited by the Federal highway law. See *Bogart* v. *Westchester County* (57 N.Y.S. 2d 506, 512–513), appeal dismissed (70 N.E. 2d 531). Therefore, and in answer to the question presented in the letter, you are advised that the terms of 23 U.S.C. 301, prohibiting the payment of tolls for the use of highways constructed under the Federal highway law, have no application to the cooperative arrangements for national forest road construction under the terms and conditions outlined above.

Sincerely Yours,

JOSEPH CAMPBELL,
Comptroller General of the United States.

DEPARTMENT OF AGRICULTURE
Washington, D.C., Oct. 11, 1960.

Hon. JOSEPH CAMPBELL,
Comptroller General of the United States,
General Accounting Office, Washington, D.C.

DEAR MR. CAMPBELL: The problems of developing access road systems in the national forests for the utilization of public resources have been discussed with representatives of your Office on several occasions. Some of the more pressing of these problems you have reported to the Congress.[1]

Your Office is aware of the "checkerboard" ownership pattern existing in many of the national forests of the Western United States. These patterns were created by the patenting of alternate sections of public land to rail or wagon road builders and by grants of certain sections to the States mainly for common school purposes. Where these checkerboards exist the construction of access roads to serve national forest lands or private lands, or both, involves crossing lands in the ownership of both the United States and private parties. Most private landowners within the national forests need access roads to harvest timber and to develop other resources on their lands. Construction of these roads in most of such areas is costly because of difficult mountainous terrain. In numerous instances, however, private owners have constructed their own private road systems to provide the access they need.

The United States too needs access to its lands. Generally a single road will serve all parties at less cost to each than separate roads. Frequently too, particularly in difficult terrain, there is only one practical route for such a road. For these reasons the Forest Service has, in a number of instances, entered into cooperative road construction and use agreements with private owners, hereinafter referred to as cooperators. These agreements provide for a sharing of road construction costs on an equitable basis, mutual use privileges, grant of an easement across private lands to the United States, stipulations of the cooperator's statutory right of ingress and egress across national forest lands (16 U.S.C. 478), specifications of the standards for roads and bridges, provisions governing construction, use by others, etc.

The method of sharing the construction costs may vary. In some cases, the entire road will be built by the United States using cooperative advance deposits from the cooperator, as authorized by the act of June 30, 1914 (16 U.S.C. 498) or the act of March 3, 1925 (16 U.S.C. 572), as amended, plus funds appropriated under the authorization in the biennial Federal highway acts for forest development roads and trails, as defined in 23 U.S.C. 101(a), or funds provided from national forest receipts as authorized in the act of March 4, 1913 (16 U.S.C. 501). In other cases, the cooperator will construct part of the road, with the United States performing work on certain other segments, using appropriated funds, and with purchasers of national forest timber, who need a road to harvest timber they have purchased from the United States, performing the remainder of the work. In still other cases when the United States or purchasers of national forest timber, or both, are not ready to provide a full share of the cost immediately, the cooperator will proceed with the construction using his own resources plus whatever materials and assistance the United States or its timber purchasers are in an immediate position to furnish. The road is constructed to the agreed upon specifications however, and these provide for a standard of road construction (often for heavy duty hauling) that will serve the needs of the United States and its timber purchasers as well as those of the cooperator. In some of these cases, the Forest Service builds the permanent bridges since it has an engineering staff qualified to design and supervise this type of work whereas the cooperator may be equipped to provide only timber bridges built of native materials. The Forest Service also prefers to do the preliminary and construction engineering to assure compliance with specifications. In some cases, the U.S. share of the cost may be paid to the cooperator on the same basis as it would pay a timber sale purchaser to construct a higher quality road than he would need for the sale. A description of this situation and your comments on the practice are to be found in your decision B-65972 of May 19, 1947.

---

[1] Report of September 1959 on activities in regions 1, 2, and 5 recommended greater use of appropriated funds for road construction (pp. 33–37). Report of March 1960 on selected activities in region 6 recommended more aggressive action in obtaining rights-of-way in Snoqualmie National Forest (pp. 4–8). Report of June 1957 on activities in region 6 (pp. 42–51).

Cooperative agreements usually provide that the cooperator who constructs a road will bear a share of the total estimated cost equal to the proportion of timber he will haul, as it relates to total timber that may be hauled over the road. However, he may expend more than this amount in order to get the road built promptly and in advance of contributions or assistance from other private owners and purchasers of national forest timber, or when it is not possible immediately to arrange for direct expenditures by each party exactly equal to its proper share. In such instances the purchasers of national forest timber and other private owners who have not made their proportionate contribution have been allowed to use the road for heavy hauling only upon sharing the construction costs through payments to the constructor as they use the road. These payments are usually set at a rate per unit of timber hauled, but the contribution may be made in a lump sum if desired. The rates and total amount are subject to control by the United States and collections by the constructor are not allowed to exceed in the aggregate the cost he has incurred in excess of his proper share, plus reasonable carrying charges.

Funds appropriated for forest development roads as authorized in the biennial Federal Highway Act are subject to the provision in 23 U.S.C. 301 which requires that "highways constructed under the provisions of this title shall be free from tolls of all kinds." While funds made available under the act of March 4, 1913 (16 U.S.C. 501), are not subject to this provision, it is not always practicable to arrange the financing of the cooperative road projects from these funds.

The term "tolls" is defined in Webster's New International Dictionary as a "tax or due paid for some liberty or privilege of passing over a highway, as a road or bridge, for that of keeping a booth, vending goods, etc., in a fair, market, or other limited place, as a manor, for importing or exporting goods, etc." In the light of the definition it was apparently the intent of the authors of the present section 301, title 23, United States Code, that public funds auhorized by title 23, United States Code, would not be invested in any road that would be subject to a tax or a continuance charge for use, with the exception of certain bridges and tunnels.

The same act which includes this prohibition expressly authorizes cooperation with States, counties, or civil subdivisions thereof (23 U.S.C. 205b), in the construction or maintenance of roads. Cooperation with local users has been a cornerstone of Department policy in the administration of the national forests and several laws have been enacted by the Congress to recognize this by providing means for accomplishing work on a cooperative basis. The 1914 and 1925 laws mentioned above are but two of these. Both provide broad authority for cooperative improvement work in the national forests. In view of this background of cooperation it is reasonable to conclude that the Congress did not intend, by prohibiting "tolls," to preclude sharing of road costs among private users. Then this view is accepted, it does not seem material whether the cooperative contributions are made in advance in the exact sums to be paid by each user or whether these amounts are subsequently paid to the party who initially paid the expense.

The intent of the sort of arrangements discussed above is to secure a single road system suitable for heavy hauling and which the Government has a right to use and which in most cases the public may use under conditions peculiar to each case. The end aim is not a toll road, but just the opposite, that is, a single road system to serve one particular national forest area in which system there is an interest owned by the Government which the Government has a right to use. These are typically in situations in which there is room for only one road system, or in which one road system is the most economical transportation means. Thus payments made to the cooperator who constructs a road by users who are haulers of timber, up to the point at which the cooperator recovers his agreed-on share of the construction costs, plus carrying charges, are not in the nature of tolls for the use of the road but represent a sharing of the cost of a single road system, and represent a preferred alternative to the more costly possibility of constructing two road systems.

Although we believe that the purpose of the prohibition against tolls was to avoid setting up a road system financed from highway funds on which there would be a continuing practice of making charges for the use of the roads involved, the wording of the prohibitory section raises some question in this Department as to its effect on the type of arrangements described above when appropriations authorized by title 23, United States Code, are proposed for payment of part of the expenses such as preliminary and construction engineering or a part of the construction cost.

Where, subject to the limitations described above, the United States enters into a cooperative agreement under the provisions of which a cooperator will construct a forest development road and use thereof by others will be permitted by the United States on condition they contribute to the cooperator their proportionate shares of the construction costs, we desire your decision as to the correctness of the view that payments thus required to the cooperator by users who are not parties to the cooperative agreement do not prohibit the use on the road of funds, which are subject to 23 U.S.C. 301, for purposes defined as construction in section 101(a).

Sincerely yours,

C. M. FERGUSON, *Assistant Secretary.*

PROPOSED INCREASE FOR ACCESS ROAD FUND

Chairman HAYDEN. Senators Magnuson, Jackson, and Church proposed that 1963 funds for the access roads item be increased $4 million over the budget estimates of $2 million. Their letters and enclosures will be included in the record.

(The information referred to follows:)

U.S. SENATE,
COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,
March 8, 1962.

Senator CARL HAYDEN,
Chairman, Senate Appropriations Committee,
Washington, D.C.

DEAR MR. CHAIRMAN: I am sending on to you a letter dated March 7 from the Forest Service regarding their ability to effectively utilize an additional $4 million for the budget item "access roads."

The letter points out that an additional $5 million worth of timber totaling over 300 million board feet could be marketed through the acquisition of the roads permitted under this appropriation item.

My colleagues in the Northwest advise me that they have indicated a similar interest to you and I hope that this request will meet with the approval of your committee.

Sincerely,

FRANK CHURCH.

U.S. DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington, D.C., March 7, 1962.

Hon. FRANK CHURCH,
U.S. Senate, Washington, D.C.

DEAR SENATOR CHURCH: This responds to the letter of February 26 signed jointly by you, Senators Neuberger, Jackson, Magnuson, Mansfield, Metcalf, and Morse concerning the item for "Access roads" in the Forest Service budget for fiscal year 1963.

A year ago we testified before the Senate Appropriations Committee that we were working on a long list of road-access projects totaling in excess of $5 million as the value for what we believed to be the Government's share. During fiscal year 1962 we now expect to complete acquisition or obligate funds for purchase of roads totaling just under $2 million. However, further study carried on in the meantime by the field organizations has added to the list of last year. Consequently, we are still working on a long list of road projects that totals about $6 million for the portion we believe is the Government's fair share. This total, of course, exceeds by $4 million the $2 million for this item in the fiscal year 1963 budget.

For the road projects that total $6 million, the volume of timber served by such roads would total 19.5 billion board feet. The annual estimated allowable cut of this colume is 248 million board feet, valued at $4 million. The stands involved are averaging some annual timber loss, estimated at over 60 million board feet, valued at $1 million. The total road mileage of the projects involved would be 1,054 miles. States involved are California, Idaho, Montana, Oregon, and Washington.

Our plans prepared prior to submission of the fiscal year 1963 budget did not contemplate obtaining access over all of these road projects during fiscal year 1963.

Sincerely yours,

RICHARD E. MCARDLE, *Chief*.
By EDWARD C. CRAFT.

U.S. SENATE,
Washington, D.C., March 8, 1962.

Hon. CARL HAYDEN,
Chairman, Senate Appropriations Committee,
New Senate Office Building, Washington, D.C.

DEAR CARL: Enclosed is the letter from the Department of Agriculture dated March 7, 1962, regarding additional funds for the item access roads in the Forest Service budget.

The projects are in five States and the addition of $4 million to the budget would not only develop an additional $4 million in revenue, but also help abate annual timber losses of $1 million.

We would, therefore, request that this increase be given favorable consideration by the committee when it acts upon the Forest Service budget.

Sincerely yours,

WARREN G. MAGNUSON,
HENRY M. JACKSON,
U.S. Senators.

U.S. DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington, D.C., March 7, 1962.

Hon. HENRY M. JACKSON,
U.S. Senate, Washington, D.C.

DEAR SENATOR JACKSON: This responds to the letter of February 26 signed jointly by you, Senators Church, Neuberger, Magnuson, Mansfield, Metcalf, and Morse concerning the item for "Access roads" in the Forest Service budget for fiscal year 1963.

A year ago we testified before the Senate Appropriations Committee that we were working on a long list of road-access projects totaling in excess of $5 million as the value for what we believed to be the Government's share. During fiscal year 1962 we now expect to complete acquisition or obligate funds for purchase of roads totaling just under $2 million. However, further study carried on in the meantime by the field organizations has added to the list of last year. Consequently, we are still working on a long list of road projects that totals about $6 million for the portion we believe is the Government's fair share. This total, of course, exceeds by $4 million the $2 million for this item in the fiscal year 1963 budget.

For the road projects that total $6 million, the volume of timber served by such roads would total 19.5 billion board feet. The annual estimated allowable cut of this volume is 248 million board feet, valued at $4 million. The stands involved are averaging some annual timber loss, estimated at over 60 million board feet, valued at $1 million. The total road mileage of the projects involved would be 1,054 miles. States involved are California, Idaho, Montana, Oregon, and Washington.

Our plans prepared prior to submission of the fiscal year 1963 budget did not contemplate obtaining access over all of these road projects during fiscal year 1963.

Sincerely yours,

RICHARD E. MCARDLE, *Chief*,
By EDWARD C. CRAFTS.

ACQUISITION OF LANDS, SUPERIOR NATIONAL FOREST

Chairman HAYDEN. For fiscal year 1963 there is a request for $2 million, which will be placed in the record, for acquisition of lands for the Superior National Forest. This is an increase of $1,750,000 over the appropriation for fiscal year 1962. Will this amount of money

complete the authorization for purchase of these lands, and will it be sufficient to accomplish the purchases desired in this area?

(The information referred to follows:)

ACQUISITION OF LANDS FOR SUPERIOR NATIONAL FOREST

Appropriation Act, 1962, and base for 1963	$250,000
Budget estimate, 1963	2,000,000
Increase	+1,750,000

Project statement

Project	1961	1962 (estimated)	Increase	1963 (estimated)
Acquisition of lands for Superior National Forest [1]	$122,303	$878,496	+$1,121,504	$2,000,000
Unobligated balance brought forward	−799	−628,496	+628,496	
Unobligated balance carried forward	628,496			
Appropriation or estimate	750,000	250,000	+1,750,000	2,000,000

[1] Represents obligations. Applied costs for 1961 are $48,194. The difference of $74,109 represents obligations for purchase of land on which title has not been finally cleared.

INCREASE

The authorization of $2.5 million contained in the act of June 22, 1948 (62 Stat. 568), as amended by the act of June 22, 1956 (70 Stat. 326), has been fully appropriated. The act of October 4, 1961 (75 Stat. 772), further amends these acts to increase the authorization by $2 million to a total of $4.5 million for the purchase and condemnation of these lands.

The increase of $1,750,000 would be used to complete the wilderness canoe area purchases in the Superior National Forest. In addition to the approved properties now in the process of being purchased, there remains to be acquired some 14,700 acres of privately owned land including 4 resorts, 45 cabin areas, and 54 unimproved properties. There are also some county-owned and State-owned unimproved properties that should go into Federal ownership.

It is imperative that the remaining acquisition be accomplished at the earliest possible date. Values of the remaining properties are increasing rapidly and monopoly value is developing on these remaining properties. The longer the acquisition is delayed, the greater will be their value, which will result in a correspondingly greater ultimate cost to the Government. Further, the good faith of the Government is involved as owners who have already sold now complain that they would not have done so if they had thought the program would not be completed in an aggressive and timely manner. Commercial resort owners who have not sold are able to benefit through the valuable competitive advantage that now exists. In view of these factors it is in the interest of the public, in the interest of the economy, and in the interest of equity to former owners who sold in good faith, to complete this program during the fiscal year 1963.

COMPLETION OF LAND PURCHASE PROGRAM

Mr. GREELEY. Mr. Chairman, the money that is requested for purchase of lands in the Superior National Forest would complete the amount that was authorized by the amendment of 1948 which was passed by the Congress late in the last session. We feel that this amount will be sufficient to complete the land purchase program.

COOPERATIVE RANGE IMPROVEMENTS

Chairman HAYDEN. The statement in support of the request for $700,000 for cooperative range improvements, the same amount as was available in fiscal year 1962, will be printed in the record.

(The material referred to follows:)

Cooperative range improvements

Appropriation act, 1962, and base for 1963	$700,000
Budget estimate, 1963	700,000

STATUS OF PROGRAM

Part of the grazing fees from the national forests, when appropriated, are used to protect or improve the productivity of the range, mainly by construction and maintenance of fences, stock-watering facilities, bridges, corrals, and driveways. These funds are advanced to and merged with the appropriation "Forest protection and utilization," subappropriation "Forest land management."

FORMULA FOR APPROPRIATION

Section 12 of the act of April 24, 1950 (Granger-Thye Act), provides that of the moneys received from grazing fees by the Treasury from each national forest during each fiscal year there shall be available at the end thereof when appropriated by Congress an amount equivalent to 2 cents per animal-month for sheep and goats and 10 cents per animal-month for other kinds of livestock under permit on such national forest during the calendar year in which the fiscal year begins.

The appropriation for this item since fiscal year 1951 has been $700,000, except for fiscal years 1954 and 1955 when $531,000 and and $400,000 were appropriated. Since the actual use figures are not available until after more than one-half of the fiscal year for which funds are appropriated has elapsed, the 1963 appropriation request of $700,000 necessarily represents the best current approximation of the amount which will become available in the calendar year 1962 under the animal-months of use formula.

For calendar year 1960, the latest available figures, use amounted to 5,585,871 animal-months for cattle and horses; 6,902,173 animal-months for sheep and goats; and 3,960 for swine. This use under the 2- and 10-cents formula calculates to $697,026.

FUND ACQUISITION, CACHE NATIONAL FOREST

Chairman HAYDEN. There will be placed in the record your statement in support of a request of $10,000 for acquisition of lands in the Cache National Forest.

(The statement referred to follows:)

ACQUISITION OF LANDS FOR NATIONAL FORESTS, SPECIAL ACTS
(CACHE NATIONAL FOREST)

Appropriation act, 1962, and base for 1963	$10,000
Budget estimate, 1963	10,000

Project statement

[On basis of available funds]

Project	1961	1962 (estimated)	Increase or decrease	1963 (estimated)
Acquisition of lands for Cache National Forest [1]	$19,882	$122,520	−$112,520	$10,000
Unobligated balance brought forward	−122,401	−112,520	+112,520	
Unobligated balance carried forward	112,520			
Appropriation or estimate	10,000	10,000		10,000

[1] Represents obligations. Applied costs for 1961 are $20,451. The difference of $569 represents prior year obligations for purchase of land on which title was cleared in 1961.

STATUS OF PROGRAM

Two appropriations are available for acquisition of lands in the Cache National Forest. A $10,000 appropriation is available from national forest receipts under the act of May 11, 1938, when appropriated by Congress. The act of July 24, 1956 (70 Stat. 632) authorized additional appropriations not exceeding $200,000 for the same purpose. The sum authorized by the 1956 act has been appropriated. Under the 1956 act, funds appropriated must be matched by the contribution of funds or land by local agencies or persons.

Funds appropriated under each of these acts are being used to acquire lands within the Cache National Forest, Utah, which are critical from a watershed and erosion control standpoint to enable control and minimization of soil erosion and flood damage. These are private lands situated on the slopes of the Wasatch Mountains northeast of Ogden, Utah, where vegetative cover and watershed capabilities have been and still are being impaired through overgrazing and fire. Water from the mountain watersheds is vital to the cities, towns, and agriculture in the valleys. Heavy rains on these mountain areas have in the past resulted in serious floods accompanied by mudrock flows and excessive erosion of the damaged land. Public ownership of these critical lands has proven to be a necessary prerequisite to land restoration, and Federal and local governmental agencies are cooperating to this end.

In the fiscal year ending June 30, 1961, 1,227 acres were approved for purchase under these two acts. This brings the total acreage of lands purchased or approved for purchase under this program to 34,963 acres.

In excess of 10,000 acres of the most critical type of watershed lands remain to be purchased. In addition there are some 85,000 acres of land in less critical condition but still in urgent need of acquisition, rehabilitation, and protection.

ASSISTANCE TO STATES FOR TREE PLANTING

Chairman HAYDEN. I will place in the record your estimate for assistance to States for tree planting. This is $1 million, the same as was provided last year.

(The estimate referred to follows:)

ASSISTANCE TO STATES FOR TREE PLANTING

Appropriation act, 1962 and base for 1963	$1,000,000
Budget estimate, 1963	1,000,000

Project statement

Project	1961	1962 (estimated)	1963 (estimated)
Tree planting assistance (appropriation or estimate)		$1,000,000	$1,000,000

STATUS OF PROGRAM

Planning and other work is progressing on this activity authorized by title IV of the Agricultural Act of 1956. Work was first undertaken in 1958 with an appropriation of $500,000. No funds were appropriated in 1959, 1960, or 1961. The program was reactivated by an appropriation of $1 million for fiscal year 1962.

A total of 31 forestation plans presented by 25 State foresters were approved as of December 31, 1961. These plans contemplate the forestation of 1,081,274 acres of land through planting, seeding, or site preparation and natural seeding at a total cost of $29,799,353. The Federal share is estimated to be $14,770,798 over a period of approximately 10 years. Twenty-three of these in 19 States with a planned forestation of 864,000 acres were originally approved in fiscal year 1958 when a $500,000 appropriation was available.

The States in which the 30 plans had been approved as of December 31, 1961 were:

State	Acres	Total cost	Total Federal share	Estimated payments in 1962
Arkansas	1,100	$16,698	$8,349	
Connecticut	23,400	444,600	222,300	$1,500
Florida	80,370	2,419,981	1,209,990	80,000
Georgia	16,405	379,591	189,795	8,981
Hawaii	9,000	1,151,000	575,500	20,000
Idaho	2,200	103,250	51,625	10,000
Kentucky	4,800	260,158	130,079	8,000
Maine	11,350	328,755	131,502	15,000
Maryland	2,572	74,710	37,355	5,000
Massachusetts	20,000	638,000	223,000	5,000
Michigan	233,821	5,147,003	2,573,501	140,000
Minnesota	88,800	5,073,520	2,536,760	150,000
Mississippi	151,000	2,743,530	1,371,765	17,226
Montana	5,500	185,000	92,500	16,000
New Hampshire	7,515	255,345	127,672	3,500
New Jersey	60,000	54,000	27,000	5,400
Ohio	7,500	267,000	133,500	25,000
Oregon	166,067	4,354,760	2,177,380	125,000
Pennsylvania	5,559	248,797	124,398	35,100
Rhode Island	30,000	1,500,000	750,000	3,000
South Carolina	35,000	818,860	409,430	74,879
Tennessee	9,100	264,170	132,085	20,320
Vermont	715	51,625	25,812	1,000
Washington	100,000	2,595,000	1,297,500	125,000
Wisconsin	9,500	424,000	212,000	35,000
Total	1,081,274	29,799,353	14,770,798	929,906

State Contribution

Chairman Hayden. Do you have any particular comments with regard to this item?

Mr. Swingler. Senator, that is one of the cooperative programs that I mentioned before. We cooperate with the State foresters in producing and planting trees on State and privately owned land. At the present we have 31 plans in 25 States for this particular program. The States are now putting up $1.7 million. The Federal appropriation is $1 million.

Passenger Motor Vehicles and Aircraft

Chairman Hayden. You have requested authority to purchase 137 passenger cars, to replace vehicles which are no longer useful. In addition, you have indicated your need for 42 more cars. Also, you are asking to replace five aircraft and acquire two additional aircraft, either by purchase or transfer. The justification for these requests will be included in the record.

(The justification follows:)

Purchase of passenger motor vehicles

During fiscal year 1963 it is proposed to replace 137 passenger cars, 18 of which are station wagons, all of which will meet replacement standards. It is also proposed to purchase 42 additional passenger cars. In a few instances due to actual program needs, it may be necessary to substitute a sedan for a station wagon or vice versa at the time orders are placed which could make a minor change in the relative number of sedans and station wagons shown, but this would not change the total number of passenger motor vehicles scheduled for replacement and addition.

Based on the planned schedule of replacements and purchase of additions, the Forest Service will have a total of 670 passenger vehicles, including 3 buses, in

fiscal 1963. On analysis of vehicle use and age pattern, the fleet is expected to include 232 units which will meet or exceed replacement standards before replacements are received.

Replacement and addition of aircraft

The 1963 estimates propose replacement of one aircraft by purchase, four by transfer from other agencies as available, and addition of two aircraft by purchase or transfer. The Forest Service currently has 58 aircraft:

Light reconnaissance airplanes	12
Medium and heavy cargo and transport airplanes (10 medium, 6 heavy)	16
T-34B lead airplanes (2-place scout)	23
Bomber-type airplanes (chemical tankers)	4
Helicopter	1
Forest spray airplanes (Stearman and TBM)	2

The reconnaissance and transport aircraft are used primarily to transport firefighters, smokejumpers, administrative personnel, equipment, and supplies to remote and inaccessible areas where commercial service is inadequate, or not available for detection and suppression of forest fires. They are also used to locate and survey timber stand and vegetation conditions such as insect infestations, blowdown, diseased areas, and undesirable species, and to appraise resources and damage and evaluate effectiveness of control.

The T-34B lead aircraft are used primarily by air attack bosses to direct and control the dropping of fire retardants on forest fires by more than 150 tanker aircraft (mostly contracted from private owners).

The bomber-type aircraft are used as air tankers for bulk dropping of retardants on forest fires, training Forest Service personnel as lead plane pilots and developing and testing new and improved methods of dropping fire retardants.

The helicopter is used for training forest personnel in tactical use of helicopters and experimental development of techniques and equipment for direct tactical suppression of forest fires.

The two additional aircraft requested will be one medium and one large cargo and personnel transport airplanes. The need for the additional large aircraft results from the rapid increase in use of aircraft pimarily for fire suppression and the lack of suitable aircraft available from commerical sources. During the past 2 years well-trained, highly mobile, self-sufficient 25-men firefighting crews were established at strategically located bases in the Western States. These crews are transported by aircraft to bolster suppression forces when initial attack fails or critical conditions develop anywhere in the West. Commercial sources are frequently unable to provide timely and suitable aircraft services required for the mobile crews and transportation of overhead firefighters as needed. The additional medium-size aircraft will be used primarily for dropping smokejumpers and paracargo. Increased use of jumpers and rapid retrieving of them by helicopters for additional jumps requires additional aircraft.

It will be necessary to purchase a replacement of one reconnaissance aircraft which has reached an age and total number of flying hours on the airframe where it is uneconomical to overhaul or modernize it to meet Civil Air Regulation airworthiness requirements. Forest Service aircraft are operated to a large extent over a rough mountainous terrain where landing fields are poor and few. It is especially important that these aircraft be maintained for maximum performance and dependability to provide an adequate standard of safety. The replacement will be a new light twin-engine aircraft which will provide greater efficiency and increased safety in case of engine failure than the present single engine aircraft now affords.

Other aircraft currently in use may be replaced as newer and more suitable models and types become available from military services as excess property. They would be obtained on transfer without reimbursement and would not increase the fleet beyond 60 aircraft. The majority of current Forest Service aircraft were manufactured during World War II and obtained from military surplus. Most of these planes have nearly reached their limit of useful age. The military services now have aircraft which have more potential suitability for Forest Service work that may become surplus in the near future. At present one reconnaissance and survey aircraft and a large cargo and personnel transport have reached the limit of economical usefulness.

1963 Planned Program Level and Budget Request

Chairman Hayden. Senator McGee has asked me to propound these questions and you can put your answers in the record.

Show the relation between the planned level for the program for the national forests for fiscal year 1963 and the budget request for fiscal year 1963.

Explain each element of the program which is not up to 100 percent of the planned 1963 level.

For each program below 100 percent of planned levels, would you state for the committee the effect on program performance?

Mr. McArdle. Very well, sir.

80391—62——71

(The information referred to follows:)

Financing of development progran for the national forests, fiscal year 1963

	1963 planned level	1963 budget financing	Difference	Percent financed
Forest land management:				
National forest protection and management:				
Timber resource management:				
(a) Sales administration and management	$24, 188, 000	$23, 180, 000	−$1, 008, 000	95. 8
(b) Reforestation and stand improvement	17, 626, 000	15, 250, 000	−2, 376, 000	86. 5

Other pest control	5, 239, 000	6, 112, 000	873, 000	116. 7
Total, insect and disease control	[2] 7, 803, 000	[2] 8, 550, 000	747, 000	109. 6
Purchase of lands	[3] 1, 925, 000	[3] 500, 000	−1, 425, 000	26. 0
Total, forest land management	145, 272, 000	134, 240, 000	−11, 032, 000	92. 4
Forest roads and trails, including "Roads and trails for States" (10 percent fund) (existing authority)		49, 100, 000		
Forest roads and trails (proposed additional authority)		10, 000, 000		
Access roads		2, 000, 000		
Total road program	75, 170, 000	61, 100, 000	−14, 070, 000	81. 3
Acquisition of lands, special acts	10, 000	10, 000		100. 0
Acquisition of lands, Superior National Forest	2, 000, 000	2, 000, 000		100. 0
Total, special acquisition	2, 010, 000	2, 010, 000		100. 0
Total, development program for the national forests, 1963	222, 452, 000	197, 350, 000	−25, 102, 000	88. 7

[1] Amounts reduced by $1,050,000 for line item "Rehabilitation of burns."
[2] Excludes $2,200,000 for lands not administered by the Forest Service.
[3] Amounts reduced by $2,010,000 for special acquisition.

Timber resource management

(*a*) Sales administration and management: The proposed budget financing for this item is adequate to meet national forest allowable cut objectives to the extent indicated by the current and foreseeable market demand for lumber and other forest products.

(*b*) Reforestation and stand improvement: The proposed budget financing for this item is not adequate to meet the planned reforestation and stand improvement acreage objectives in the development program for the national forests. It will fall short of achieving program objectives by an estimated 160,000 acres

of needed thinning and release work in young overdense, suppressed, timber stands.

Recreation-public use

The rehabilitation of about 3,000 family units and a few swimming, organization, and winter sports sites will have to be deferred another year and the public will be required to continue to use these substandard sites.

Of 7,000 new family units and other sites planned for development, about 1,300 new family units will need to be deferred. Overuse of recreation areas will not be remedied at the rate planned.

Several planned new visitor information centers and other facilities needed for public instruction will be deferred.

Wildlife habitat management

The following work will need to be postponed: Approximately 300 acres of permanent wildlife openings, approximately 25,000 acres of prescribed burns needed to improve game forage, revegetation of approximately 3,000 acres of key wildlife areas, approximately 300 acres of aquatic plant control, fencing of approximately 3,800 acres of key game areas and stream bottoms, improvement of some 35 miles of stream and 125 small water developments.

Range resource management

(*b*) Revegetation: This means postponement or revegetation of 500 acres of national forest rangeland needed to support existing range stocking.

(*c*) Improvements: The effect will be postponement of approximately 150 miles of new fences required for betterment of grazing management.

Soil and water management

There will need to be deferred the rehabilitation of an additional 7,500 acres of seriously deteriorated areas within key watersheds. This treatment would result in upgrading water yields from an estimated 100,000 acres of important national forest watershed lands.

Mineral claims, leases, and other land uses

Delays will develop in the handling of applications for mineral patents, trespass action will not be as effective as it should be, and the seriousness of the problem will increase. Leasing of disposal minerals and the handling and issuing of special use permits may decrease. Some 15,000 acres of forest land originally scheduled will not be examined for proposed exchanges. The status record program will be initiated on one less national forest and studies of boundary changes originally planned on three national forests will be postponed. Fewer land line corners will be searched out and monumented.

Forest fire protection

There is only a small gap in this item. This is the result of placing greater emphasis in fire control in a shorter span of years than originally planned. Fire protection is such a critically important activity that it was not relegated to the more evenly spread buildup for resource services and products. Forest and watershed values at stake are tremendous. The buildup of fire forces is somewhat less than the rate scheduled in the program.

Structural improvements for fire and general purposes

Without this additional amount, many residences needed for employees at locations without rental opportunities will not be built; storage sheds and offices needed for expanded programs will have to be deferred; improvements such as rebuilding of telephone lines and other communications for fire control and general purposes will be at a slower rate than scheduled in the national forest development program.

Insect and disease control

White pine blister rust control: Financing blister rust control in fiscal year 1963, 4.9 percent below the planned level, will have little overall effect on program performance on areas presently selected for protection. Net effect will be the deferment of treatment of 8,000 to 9,000 acres of western white pine growing land.

Purchase of lands

The larger part of the land acquisition program planned to acquire key tracts within presently established national forests will need to be deferred. This would be approximately 70,000 to 100,000 acres of needed forest and watershed lands which are best suited for management as part of the national forest system.

Forest roads and trails

The rate of progress in implementing the development program—including the critical fields of timber management, recreation-public use and protection from fire and pests—will be a direct reflection of the rate of new road activity. A less-than-100-percent performance of the planned road activity will defer opportunities to market the full allowable timber harvest, to provide access to new public use areas, and to augment needed forest and watershed protection.

STATEMENT BY SENATOR KEFAUVER

Chairman HAYDEN. There will be placed in the record a statement by Senator Estes Kefauver, who urges increased appropriations for forestry research.

(The statement referred to follows:)

I think all Americans who have an interest in the conservation and development of our Nation's forest resources should be grateful for the words of my good colleague from Mississippi, Senator John Stennis, spoken on the Senate floor on February 15, 1962, regarding increased appropriations for forestry research in the coming year.

Senator Stennis outlined the financial needs for a long-term comprehensive forestry program, including laboratory construction, facility improvement, disease prevention and insect control. He also pointed out the discrepancy between the financial requirements of such a program and the inadequate sums appropriated by the Congress in recent years, and stated that in the budget proposed for the Department of Agriculture Forest Service in the coming fiscal year sums for forest research have been slashed even greater. The effect of these financial cuts on the Forest Service's long-term, comprehensive program is easy to imagine.

I share the Senator from Mississippi's distress in finding that, rather than a budget increase for forest research in the coming fiscal year, the budget request has been cut from last year's $26 million to $23 million, which has eliminated from the program almost all new construction of vitally needed laboratory buildings and other research structures. Improvements in facilities in the coming year are largely confined to equipment and supply improvement, rather than the larger and more expensive buildings, laboratories, and structures.

Senator Stennis has proposed increasing the budget for the Forest Service approximately $10½ million over the 1962 fiscal year level, to a total amount of $37 million. This increase would be to finance about $6 million of forestry research and about $4½ million of research facilities construction. I favor this increase as a needed step in implementing a truly long-term, comprehensive program of forestry research.

One of the forestry research projects which would be financed from the proposed $10½ million appropriation increase is of special interest to me, since it involves construction of a new $200,000 forestry research laboratory at the University of the South at Sewanee, Tenn. In his speech, Senator Stennis included this specific project among a dozen which he termed "high priority." I share this view of the great need for a new forestry research laboratory at Sewanee in order to facilitate the planning and carrying out of constructive programs of forest management, timber improvement, soil research, forest fire control, and insect and disease eradication. I know that great progress has been made in the past at Sewanee through the constant efforts of dedicated scientists to protect and improve the forests of Tennessee and its neighboring States. These scientists deserve, and their important projects demand, adequate work and study areas, efficient facilities, and up-to-date equipment in order to continue this fine record of constantly improving forestry programs. I am hopeful that the successes of the past may be exceeded by even greater progress in the uplands of the Cumberland Plateau and the Highland Rim, in studies to determine the best type soil for each of our splendid Tennessee hardwoods and pines, and in the development of new trees.

All of these desirable programs of forestry research, and the laboratory facilities in which to bring them to fruition, will cost money. But I am confident that even a modest investment in this program today will be richly rewarded in future years by handsome stands of healthy forest timber. I know of no more worthy investment in our Nation's future and, accordingly, I take great pleasure in alining myself with my colleague from Mississippi in urging the prompt approval of this meritorious appropriation.

LETTER FROM F. H. LANG, ARKANSAS FORESTRY COMMISSION

Chairman HAYDEN. There will be placed in the record a letter from F. H. Lang of State Forestry Commission of the State of Arkansas concerning the Stoneville, Miss., Hardwood Research Experiment Station.

(The letter referred to follows:)

ARKANSAS STATE FORESTRY COMMISSION,
Little Rock, Ark., March 9, 1962.

Hon. CARL HAYDEN,
Senator from Arizona,
Senate Building, Washington, D.C.

DEAR SENATOR HAYDEN: In 1958 I had the opportunity of appearing before your Subcommittee on Interior and Related Affairs in support of an expanded research program in the South.

It is my recollection that at that time you asked us to file our prepared statement with the secretary of the committee and I recall that you and I had a very delightful conversation regarding the possibilities and needs for good research. At that time I was most delighted and surprised to know of your interest, and that of your group, in our southern woodlands and the problems we were facing, not only in research but in the development of all phases of hardwood forestry.

During the past 2 months I have had occasion to visit the Stoneville, Miss., Hardwood Research Experiment Station and have discussed the problems with various members of its staff. The organization is now housed in a beautiful new building which is, in addition to its pleasing appearance, highly functional and I think the thanks for such a development rests with the sympathy of your committee.

The housing situation having been adequately solved and with a staff of very capable and well grounded men, it should go far in effecting results in hardwood research. However, hardwood types occupy 111.7 million acres in the South and there is so much to do, it occurs to me that your committee should consider favorably the authorization of necessary funds in the amount of $50,000 so that the Station could expand its personnel. In addition to the vast area of hardwood types we must deal with over 50 different species having commercial value, each having its own idiosyncrasies of growth and regeneration.

The quality of the work done at Stoneville, Miss., is the highest and it deserves your favorable consideration.

Very truly yours,

FRED H. LANG, *State Forester.*

COMMUNICATIONS

Chairman HAYDEN. I will place in the record letters addressed to me by Senator Robertson proposing that the Senate add $185,000 to the construction budget of the Bureau of Sport Fisheries and Wildlife to continue work on the hatchery at Wytheville, Va.; by Senator Allott urging appropriation of $65,000 to complete expansion work on the National Fish Hatchery at Leadville, Colo., and the establishment of a Cooperative Fish Research Unit at Colorado State University, Fort Collins, Colo.; and by Representative Cooley proposing establishment of a Cooperative Fishery Unit at North Carolina State College, Raleigh, N.C.

(The letters referred to follow:)

U.S. SENATE,
COMMITTEE ON BANKING AND CURRENCY,
March 5, 1962.

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations,
U.S. Senate, Washington, D.C.

DEAR SENATOR HAYDEN: You may recall that the Fish Hatchery at Wytheville, Va., was the first ever built in the United States. Needless to say, it became obsolete years ago and year before last the Congress authorized the Fish

and Wildlife Service to acquire some nearby property where an excellent water supply is available and where a modern and efficient fish hatchery could be built.

In the Interior Department budget for fiscal 1962 there was included $654,000 for the construction of six different fish hatcheries but nothing for the one at Wytheville. It is my understanding that the U.S. Fish and Wildlife Service urgently needs at least $185,000 of construction money to continue work on the next phase of the Wytheville Hatchery.

I will greatly appreciate it if you will request the Fish and Wildlife Service for the information of your subcommittee to furnish a report on the need of construction funds for the Wytheville Hatchery with an indication of the amount that can now be economically used.

Sincerely yours,

A WILLIS ROBERTSON.

U.S. SENATE,
COMMITTEE ON APPROPRIATIONS,
March 6, 1962.

Hon. CARL HAYDEN,
Senate Committee on Appropriations,
New Senate Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: Last year the Fish and Wildlife Service estimated it would take a total of $223,000 to expand the facilities at the Leadville, Colo. national fish hatchery. They further advised our committee that $158,000 was the maximum they could use to initiate such expansion in fiscal year 1962.

I have noted that the budget does not provide for the additional $65,000 to finish the work in fiscal year 1963. Knowing of the need for the hatchery facilities at Leadville and in order to finish properly the work begun by our appropriation of last year, I would appreciate it greatly if you could do all in your power to see that the remaining $65,000, to complete the expansion, may be included in the Department's appropriation for the coming fiscal year.

Warmest regards.

Sincerely yours,

GORDON ALLOTT, *U.S. Senator.*

U.S. SENATE,
COMMITTEE ON APPROPRIATIONS,
March 7, 1962.

Hon. CARL HAYDEN,
Chairman, Senate Committee on Appropriations,
New Senate Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: It is my understanding that under the fisheries research program authorized by Public Law 86-686, the Interior Department intends to establish 10 or 12 cooperative fishery units at appropriate university locations.

It has been brought to my attention that the Bureau of Sport Fisheries and Wildlife budget for fiscal year 1963 includes no funds for any cooperative fishery unit. However, I should like to commend to you, for our committee's serious consideration, the location during fiscal year 1963 of one of the proposed fishery research units at Colorado State University, Fort Collins, Colo.

I have been advised by the Department of the Interior that the planned level of work calls for an annual expenditure of $30,000 per unit to cover cost of salaries, travel related to the program, equipment, supplies, and limited funds for student assistance in graduate projects.

The recommendation for one of the proposed units to be located at Colorado State University has been made in a letter from the entire Colorado delegation from the House and Senate to the Department of Interior.

I believe very strongly that our committee and the Department of the Interior could make no better or more logical choice of a university location. Colorado State University is one of the few institutions of higher learning offering a degree in fishery science. I understand that the primary objective of the proposed research units will be to offer improved and expanded training for graduate students in order to provide more and better trained personnel for the management of the Nation's recreational and commercial fisheries resources.

There has been a fisheries research unit in existence at Colorado State University since 1949, at which time it was considered to be the only fishery research unit in existence. In the early years, it was supported by the university and

the Colorado Game and Fish Department in cooperation with the U.S. Fish and Wildlife Service. Federal participation in this ended in 1953, but the unit has been maintained through support from the university and the Colorado Game and Fish Department.

The objectives and functions of this unit at Colorado State University are essentially the same as those announced by the Department of Interior with regard to the program to be pursued under Public Law 86-686.

In view of its outstanding record of achievement in this field, and in view of the existing program and facilities in this research, I urge strongly that serious consideration be given by our committee to designate Colorado State University to be established as a fisheries research unit under the program authorized by the 86th Congress and that funds be appropriated for this purpose in fiscal year 1963.

Best regards.

Sincerely yours,

GORDON ALLOTT, *U.S. Senator.*

U.S. HOUSE OF REPRESENTATIVES,
COMMITTEE ON AGRICULTURE,
Washington, D.C., March 12, 1962.

HON. CARL HAYDEN,
Chairman, Senate Committee on Appropriations,
U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: It is my understanding that your committee is presently holding hearings on appropriations for the Department of the Interior and related agencies. North Carolina State College, which is located in the congressional district which I have represented for many years, is very much interested in establishing a cooperative fishery unit at the college, as authorized under Public Law 86-686.

As you may know, last year the U.S. Fish and Wildlife Service, Department of the Interior, requested $90,000 to establish three units under Public Law 86-686, one of which was the unit at State College. All of the requested units, however, were eliminated prior to the submission of the President's budget early this year. I am, of course, extremely anxious to have the $30,000 earmarked for State College reinstated in the appropriations bill you are now considering.

The unit will provide training of fishery workers at the graduate level, give opportunity for supervised employment to students, conducts surveys of waters on large Federal lands such as national parks, Indian reservations, and in the watershed development programs. The unit leader will carry on studies which are related to the Bureau of Sport Fisheries and Wildlife research projects and which are of general or regional interest. The fishery unit will serve in other fields as well as in research, and will be supervised through the Bureau's regional offices. The program will meet a long-felt need in the sport fishery field and will contribute materially to the quality and supply of fishery workers available for employment.

North Carolina State College, which is located in Raleigh, N.C., was selected to participate in the program because of the interest shown by the institution and by the State fish and game department, and because of its favorable location to serve the interests of the program. The college has had an active and continuous wildlife training and research program since 1937 both at the undergraduate and graduate levels and offers a Ph.D degree in the areas of wildlife biology (fish and game) and animal ecology.

For the record I am enclosing herewith a statement prepared by the Bureau of Sport Fisheries and Wildlife concerning the establishing of a cooperative fishery unit at North Carolina State College. As you will note, the statement sets forth the proposed activities of the unit as well as outlines the purposes for which the requested funds will be used.

Assuring you that I shall greatly appreciate all considerations which may be accorded this important and worthwhile project, I am, with cordial good wishes and kind regards,

Sincerely yours,

HAROLD D. COOLEY, *Chairman.*

STATEMENT CONCERNING A COOPERATIVE FISHERY UNIT AT NORTH CAROLINA STATE COLLEGE—FUNDS REQUESTED $30,000

The establishment of a cooperative fishery unit at North Caroline State College, as authorized under Public Law 86-686, would give needed support to a program of training, research, and sport fishery extension. Facilities at the college are admirably suited for this purpose, and the proposal has the support of the North Carolina Wildlife Resources Commission. North Carolina State College is one of the universities recommended by the Bureau for participation in this program.

The fishery unit would provide training to students in preparation for careers in fishery science and management. It would give supervision to graduate students in fishery research projects, including some financial support. Seasonal employment would be provided students interested in obtaining experience in this field. The unit leader and assistant leader, in addition to their supervisory duties, would conduct research in subjects of broad interest to fishery management and would participate in extension-type programs of State and regional interest. Subjects recommended for attention are: Investigations in the means of improving fish populations in reservoirs, better fishing from farm ponds, means of alleviating pollution, and development of coastal sport fishery resources.

The funds indicated, $30,000, will pay the salaries of two trained Federal employees, their transportation and necessary project expenses. Equipment for field and laboratory work would be purchased. The unit would operate under a cooperative agreement entered into by the college and the Bureau of Sport Fisheries and Wildlife. Unit activities would be closely coordinated with the work of the national fish hatcheries, the Bureau's fishery research and management programs.

COMMUNICATIONS

Chairman HAYDEN. I also will include in the record a telegram addressed to me from Mr. Kel M. Fox, secretary, Arizona Water Resources Committe, and a letter from Dr. G. Homer Durham, president, Arizona State University, asking that a Forest Service research laboratory be established at the Arizona State University.

(The material referred to follows:)

PHOENIX, ARIZ., *March 9, 1962.*

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations,
U.S. Senate, Washington, D.C.:

Meeting yesterday we check into need for forest service research laboratory facility on Arizona State University campus. We strongly urge construction of building similar to that approved last year for Flagstaff. Tempe facility would headquarter vital research on conversion of chaparral brush to grass, a promising field for increasing water yield. Also would be headquarters for other important research including salt cedar control. If further information needed call me Sedona at 23335. Regards.

KEL M. FOX
Secretary, Arizona Water Resources Committee.

ARIZONA STATE UNIVERSITY,
Tempe, Ariz., March 5, 1962.

Senator CARL HAYDEN,
Senate Office Building, Washington, D.C.

DEAR SENATOR HAYDEN: Arizona State University has been actively cooperating with the U.S. Forest Service research organization for the past several years. As you know, this agency has major watershed research projects headquartered here, as well as related research in range management and wildlife habitat management. This research means much to Arizona and to the Western States having similar problems.

Most of our part in this cooperative research has been to furnish what office space we have had available. We now find it impossible to furnish the additional office space needed, and we have little or no laboratory space available.

We regret this situation which is the result of increased enrollment and attendant needs.

However, we want to see this research continued because it is so important. We are very willing, therefore, to make land on our campus available to the Forest Service to build the needed office and laboratory buildings, if funds can be made available to them. My judgment is that it would take approximately $900,000 for the buildings, facilities, and laboratory equipment.

We appreciate your continued interest and support in our activities and hope that you will do what you can to consider funds requested by the Forest Service for the needed research facilities. It is my feeling that the possibilities for fruitful collaboration and research between the Forest Service and ASU can be greatly enhanced by such a development.

Sincerely yours,

G. HOMER DURHAM, *President*.

FIRE ASPECTS OF CIVIL DEFENSE

Chairman HAYDEN. Senator Mundt.

Senator MUNDT. Thank you, Mr. Chairman. I was called away this morning before I asked a couple questions I would like to ask. The first question has to do here with the testimony on page 36 of your justification sheets, dealing with the fire aspects of civil defense, especially of course, in rural areas. I have had a lot of correspondence with my constituents asking me to tell them what this means insofar as a rural State like South Dakota is concerned.

I am a little bit at a loss myself to know what to tell them. I wondered if you could explain what has been done at a national level beside the meeting which was held up at Battle Creek and how much we spend on civil defense activities through the Forest Service each year and how much you intend to spend this coming fiscal year.

Mr. HENDEE. Senator Mundt, there has been quite a bit of activity in this general field in recent months. The Executive order of February 16 assigned to the Secretary of Agriculture, among other things, the defense responsibilities that the Forest Service will have. This includes the prevention and control of fires in rural areas. It includes the emergency protection and management of forest timber, water, and related resources.

COOPERATION WITH COMMERCE DEPARTMENT

The third item has to do with emergency production and use of timber products in cooperation with the Department of Commerce. There are a couple of other miscellaneous items having to do with information and advice concerning equipment, manpower, and other requisites for carrying out the assigned activities and monitoring for fallout at fixed stations in the event that we need that. Then another important aspect we think is the research in support of this defense planning and emergency operations relating to management and utilization of forest resources and defense against rural land fires.

Now to answer your question on funds, Senator Mundt, actually there is no definite item in the President's budget for civilian defense in this budget that we are now hearing. We are, however, carrying on these activities as best we can as part of our regular program. For instance, in the current fiscal year our estimate of the amount of civilian defense work is $202,000. That is in the current year. It is our estimate of what we will do as part of our regular job.

ALLOCATION OF CIVIL DEFENSE FUNDS

Senator MUNDT. Will you get that allocated to you as part of the $350 million that the Department of Defense is requesting for civil defense? Will they contract it out to you or allocate it to you or does this come out of your budget?

Mr. HENDEE. This point that I am talking about now is included in our regular budget. We have as part of our regular responsibilities the civilian defense portion we estimate for the current fiscal year which is $202,000. There have been hearings in connection with civilian defense. There are some items that are ahead in connection with civilian defense planning. There will be additional information within the next few weeks as we understand it in connection with hearings on this item you are talking about. I am sorry I don't have more specific information.

REQUEST FOR TABULATION ON CIVIL DEFENSE FUNDS

Senator MUNDT. It seems to me, Mr. Chairman, that it is very hard for us to locate where civil defense is being financed and what is being done. I am wondering if it would be a good idea for our committee to write the Bureau of the Budget and ask them for a tabulation and find out how much each agency is asking for and receiving in this area, so we get a picture of the whole civil defense bill.

Chairman HAYDEN. That might be a very good idea.

Senator MUNDT. Thank you very much.

PAYMENTS TO STATES FOR NATIONAL FOREST FUNDS

One other question. On page 98 you are discussing the payments to States for the national forest funds. Exactly how does this program operate?

Mr. CLIFF. I am sorry, I didn't catch that question. Somebody else was asking me a question.

Mr. HENDEE. The question if I heard it right, Senator Mundt, was, How does this payment to States operate?

Senator MUNDT. Does it go to States or does it go to a specific county or how is it distributed?

Mr. HENDEE. It is distributed to the proper official in each State who in turn distributes it to the counties.

Senator MUNDT. Do you have a record of where the money finally eventuates? Could you put in the record, for example, a breakdown showing what South Dakota counties have participated and to what extent?

Mr. HENDEE. Yes, sir, I think we have that for the record. As we send it to the States. we show a total amount and where, according to our records, if they used the pro rata basis for distribution what each county would get. Distribution is made in accordance with the acreage of counties within a particular national forest.

Senator MUNDT. Would you supply that for South Dakota at this point.

Mr. HENDEE. We would be glad to.

Senator MUNDT. That is all.

(The information referred to follows:)

Amounts paid to State of South Dakota—25 percent of Forest Service receipts during fiscal year 1961

County:	County allocation on basis of national forest land in county
Custer	$18,375.23
Fall River	2,537.46
Harding	1,766.67
Lawrence	15,797.60
Meade	2,073.75
Pennington	22,976.28
Total	63,526.99

FOREST RECEIPTS PAID TO STATES

Chairman HAYDEN. Would it be too much trouble to do that by States for all the States?

Mr. HENDEE. I don't believe so, Senator Hayden. We have that by States, I know it is very simple. I am pretty sure we could do that for the committee.

(The information referred to appears on p. 1037.)

Senator MUNDT. That is all; thank you.

Chairman HAYDEN. Senator Dworshak.

FUNDS FOR VARIOUS LAND USES

Senator DWORSHAK. I wanted one question directed to item 6 on page 5, "Forest and utilization." Under the budget heading, "Mineral claims, leases, and other land uses," he had $6,800,000 this year and you are asking for an increase of $400,000 to $7,200,000 for the next fiscal year. Does this program deal largely with the Multiple Use Mining Act of 1955 and the responsibilities of the Forest Service to administer it?

Mr. CLIFF. It deals with that act, Senator Dworshak, but that is not the only function that we use those funds for. One-half of this increase is for land adjustment, acquisition, and status. Part of the money is being used in the administration of the act of 1955, but also we are responsible for looking after the work that is being done under the mineral leasing acts on the national forest, the land management phases of that and special land uses. This morning we discussed the fact that about eighteen and a quarter million acres are under lease on the national forest and national grasslands.

Senator DWORSHAK. That is almost entirely for mineral use.

Mr. CLIFF. Oil, gas, coal, phosphate, potash, and the other leasing minerals.

Also we have responsibility for examining claims for which patent is applied to determine if the mining laws have been adhered to, and we would have to make those examinations as patent applied for. We have responsibility for administering, for managing and disposing of common varieties of minerals. That is a growing job. That is sand, gravel, clay, and things of that kind that are now disposed of by sale rather than through the mineral claims provisions.

Senator DWORSHAK. Do you work with the land management on this?

Mr. CLIFF. Yes, sir; we do. We work very closely with them on mineral leasing but disposition of common varieties on national forest lands is the sole responsibility of the Forest Service.

PATENT APPLICATIONS

Senator DWORSHAK. How about the application, for patent? Do you make that work and then make a report to the BLM?

Mr. CLIFF. We do most of it. Sometimes we collaborate on it but generally we do the examination work. If the claim is valid and the law has been complied with we will certify as to the validity and recommend patenting. If we have any questions about the validity of the claim we will ask for a hearing. The BLM conducts the hearing and makes the final determination as to whether the land should go to patent or not.

FRAUDULENT MINING CLAIM APPLICATIONS

Senator DWORSHAK. I recall several years ago there were claims applications filed for alleged purposes other than development of mineral deposits. What is the current status? Have you cleaned that up under the authority you got under the act in 1955?

Mr. CLIFF. I would still say we have a problem in this regard, more of a problem than we formerly realized. As we have proceeded with this surface rights determination work we have found quite a large number of claims where it is very questionable whether or not they are being occupied for legitimate mining purposes. It appears that many are being occupied for purposes other than mining.

Senator DWORSHAK. That is where patents have been issued?

Mr. CLIFF. No.

Senator DWORSHAK. You would have no control over patented claims.

Mr. CLIFF. No; no control whatever. We have a problem facing us in examining these claims where questionable uses appear and to try to clear up the situation. We process these cases through the Bureau of Land Management the same as we do on the questions of patent.

Senator DWORSHAK. How many years do you think it will take to clean up this situation?

Mr. CLIFF. Well, on the surface right determination we are ahead of our schedule. We have completed the examination of about 120 million acres out of 140 million we planned on examining. We have completed the advertising to clear up the surface rights question on over 100 million acres and we have completed action on 53 million acres and the program is moving right along.

Now we are putting major emphasis on the surface rights determination. As soon as that is completed, which should be within the next 2 or 3 years, or about 1965, then we will direct more of our efforts to the examination of these questionable claims that are being disclosed.

ACREAGE IN QUESTIONABLE CLAIMS

Senator DWORSHAK. Have you found acreage disclosed in these questionable claims that you are currently checking?

Mr. CLIFF. It is variously estimated that we have, oh, maybe as many as 5,000 of those that will have to be examined. In some cases,

of course, there are some real hardships involved, old folks that have lived on these claims for years without doing any mining. You know the situation down on the Salmon River in your State and a few other places.

Senator DWORSHAK. I am not too well acquainted with that. I recall the adverse publicity that was turned on them.

Mr. CLIFF. This is a real difficult area we are getting into. We are clearing up some of these as we go along, the more flagrant cases and the ones that need to be cleared up where we have other uses for the land. We know we have a problem ahead to complete this program.

PERCENTAGE OF CLAIMS EXAMINED NOT COMPLYING

Senator DWORSHAK. I wanted to clarify just one aspect of that and I didn't make my question clear enough apparently. That is what percentage of the questionable claims which you have examined have been placed in the category where you are reasonably sure that didn't comply with the mining regulations and laws?

Mr. CLIFF. I don't have that percentage in mind, Senator. I would be glad to get that.

Senator DWORSHAK. Was it about what you expected or was it less than you anticipated in the Forest Service?

Mr. CLIFF. Our experience is we are finding more of these than we anticipated and in most of the cases we have brought to contest the Bureau of Land Management has decided in favor of the Government.

Senator DWORSHAK. Thank you, Mr. Chairman.

DEFINITION OF QUESTIONABLE USE OF MINING CLAIM

Chairman HAYDEN. I would like to ask you a question that was raised at home. What is a questionable use of an unpatented mining claim?

Mr. CLIFF. Well, the law states that the claim can be held for mining purposes only and the act of 1955 reemphasized it, if you will remember.

Well, the use of a mining claim for a summer home without any legitimate mining activity would be a questionable use of it. We have had situations where some of these claims have been used for construction and operation of service stations and we have moved in vigorously to clear those up. Those are questionable uses of mining claims, sir.

EXCEPTIONAL INSTANCES ARRANGED FOR

Chairman HAYDEN. What I had in mind was a case like this. Some oldtimer has gone out on to the forest hoping to develop a mining claim and patent but never could do it. He never got the funds or the oil was not there, but he has a home and it is the only home he has. He does not like to have to move. Is there any way you can arrange it so that in such a case where no harm of any kind is done the man can continue to live there?

Mr. CLIFF. Yes, sir; we have made some of those arrangements. We are very sympathetic to that kind of a situation and we have made arrangement for people of that kind to continue to occupy their cabins. We have issued special use permits with the understanding

that they could use the land and the cabin for occupancy until such time as the Government might need it or until the remainder of their life. In some instances they are occupying land that is needed for public purposes, some of it more usable and desirable land.

Chairman HAYDEN. That is a different question.

Mr. CLIFF. We have had to ask some of them to move. We do have these kinds of problems that you mentioned and they are difficult. They are real human relations problems that are difficult to solve. One of the real difficulties is where to draw the line as between the deserving and those that are less deserving and those that are not deserving at all.

Chairman HAYDEN. I know of several instances of that kind. I am glad to have your explanation.

ADJUDICATION OF GRAZING AREA REDUCTION

Senator DWORSHAK. Just one more question. I didn't hear all of your testimony, Mr. Cliff, but I am wondering whether you are making satisfactory progress in adjudicating some of the problems concerning the constant cutting down of grazing areas in Idaho and some of the other Western States. A few years ago we had a lot of alleged injustice involved in reductions in the number of stock that could be grazed in certain areas. What is the word to use? Have you reached a satisfactory conclusion in many of those claims? I am thinking for instance of the one which involved David Little in Emmett, Idaho.

Mr. CLIFF. That particular case has been settled without appeal. Mr. Little withdrew his appeal and we reached a settlement which was agreeable to the Forest Service and I presume agreeable to Mr. Little. We are successful in working out management programs with a large number of our permittees. We are making good progress, very satisfying progress. In a number of cases, however, we are having difficulty and you no doubt are hearing about some of those.

This is another very difficult area to work in where people's livelihoods are involved and we are attempting to solve these problems where we have them, not only by reducing livestock but by building up the range. We are spending considerable money in trying to build up the range and we are asking their cooperation and I would say that in the great majority of cases we are getting it.

INSTANCES OF OVERGRAZING

Senator DWORSHAK. You have not had very many instances of serious overgrazing that have been detrimental to the range, have you?

Mr. CLIFF. Yes, we have.

Senator DWORSHAK. In many areas, in many States?

Mr. CLIFF. I am sorry to say we have. We have had some quite extensive overgrazing in the past that dates way back to the time before the forest was created. It also was accelerated during World War I when the Government deliberately overstocked these ranges. We have had and still have places where damage is occurring. Now we are making progress in solving these problems. We still have

some distance to go yet. As I said we are trying to work those things out with the permittees themselves right out on the ground.

Senator DWORSHAK. In most cases the cooperation is forthcoming.

Mr. CLIFF. Yes, but in some cases they will appeal the decisions clear through to the Secretary.

Senator DWORSHAK. Thank you.

Chairman HAYDEN. I would like to tell a story about something that happened a long time ago. There was during the First World War the same difficulty they had in the Second World War about handling the range management. A number of fences were built and a very overambitious U.S. district attorney told the cattlemen they had to get those fences down immediately or they would be indicted.

I talked to the then Chief Forester and he could not do anything. I talked to the Secretary of the Interior and he said he could not do anything. So then I talked to Calvin Coolidge and explained these were cedar posts and barbed wire fences and they could not be taken down immediately, and besides it was not the time of year to do it; a little later would be all right. I explained these were not stone fences with which he was familiar in New England. After he listened carefully to my story he said, "Tell them not to worry." And that settled the case.

We thank you, Dr. McArdle, for your appearance here. I am sorry we won't be listening to you any more but any time you get in the mood and want to come back we will be glad to hear from you.

Mr. MCARDLE. Thank you, Mr. Chairman.

Chairman HAYDEN. I will adjourn this meeting until 10 o'clock tomorrow morning.

(Whereupon, at 4:10 p.m., Monday, March 12, 1962, the committee adjourned, to reconvene at 10 a.m., Tuesday, March 13, 1962.)

DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES APPROPRIATIONS, 1963

TUESDAY, MARCH 13, 1962

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, D.C.

The subcommittee met at 10 a.m. pursuant to recess, in room 1223, New Senate Office Building, Hon. Robert C. Byrd, presiding.

Present: Senators Byrd and Smith.

Also present: Senators Morse, Gruening, Williams of New Jersey, Aiken, and Scott.

DEPARTMENT OF AGRICULTURE

FOREST SERVICE

STATEMENT BY THE CHAIRMAN

Senator BYRD. The committee will be in order.

Good morning, ladies and gentlemen. This morning the committee will hear Senators and nongovernmental witnesses primarily with regard to Forest Service matters. There are quite a number of persons to be heard and I hope that those testifying will file their written statements and highlight them.

The schedule is such that no one can be heard today unless prior arrangements have been made. Should there be any who have not made advance arrangements, a statement can be printed in the record if received today or tomorrow.

We will hear Senators first if they are present, and then we will proceed with other witnesses. At the moment Senator Smith is present, but she is awaiting the arrival of Senator Aiken and until such time as he arrives we will hear Mr. W. A. Williams, Jr., of Santa Fe, N. Mex., representing the National Association of Soil Conservation Districts regarding soil and moisture activities in the Department of the Interior.

Mr. Williams.

NATIONAL ASSOCIATION OF SOIL AND WATER CONSERVATION DISTRICTS

STATEMENT OF W. A. WILLIAMS, JR., SANTA FE, N. MEX., CHAIRMAN, PUBLIC LANDS COMMITTEE

PREPARED STATEMENT

Senator BYRD. Good morning, Mr. Williams.

Mr. WILLIAMS. Good morning, Mr. Chairman and Senator.

80391—62——72

Senator BYRD. Do you have a prepared statement, Mr. Williams?

Mr. WILLIAMS. Yes, I do. I have copies right here.

Senator BYRD. Thank you.

Do you wish to include the prepared statement in the record and just hit the highlights extemporaneously?

Mr. WILLIAMS. I will, sir. Thank you very much.

(The statement referred to follows:)

The 2,900 soil and water conservation districts in the Nation have an active and continuing concern about the protection and improvement of public lands being managed by the Federal Government. This concern is especially evident among the districts of the West because it is in the West that the programs of districts and those of the public land agencies are most directly related.

My specific purpose today is to testify in support of the soil and moisture conservation programs of the several agencies in the Department of the Interior, and also the national forest program of the Department of Agriculture.

As you know, soil and water conservation districts are local units of government organized under State laws. The program of each district is managed by a governing body of local people, elected by the land owners and operators within the district. These district supervisors serve without pay. They are charged with the responsibility of developing annual and long-range programs of conservation and resource development for all the lands within the districts.

An additional part of their responsibility is to move forward with these programs in cooperation with individual land owners and operators—and with the government agencies administering the adjacent and intermingled public lands.

For a number of years the association I represent has recognized the need for an acceleration of the public land programs designed to protect and improve the soil, moisture, range, and forest resources of the West. Individual districts and their State associations, particularly in the 11 Western States, have been moving toward a steadily greater degree of cooperation with Interior agencies—and with the Forest Service. We recognize our own responsibilities in helping to develop mutually beneficial programs.

INFORMATION REQUIRED

It is basic, of course, that good information on the resources themselves must be obtained before we can develop intelligent, constructive programs. We have supported the collection of such information by Government agencies working with resources. The districts themselves undertake to collect better data each year on the condition and needs of the areas they are working in.

Because of the recently completed national conservation needs survey by the Department of Agriculture, there is now excellent information available as to the needs and timing of conservation work on privately owned agricultural lands. We do not yet have equally good data on Government-owned lands.

The study of range conditions being made by the Interior Department will clarify the picture to some degree. In addition, I am pleased to report that our association is initiating a district-by-district survey, to be made in cooperation with Government agencies, to ascertain the extent and urgency of conservation needs and resource development work on public and Indian lands associated with districts. We are going to emphasize this project during 1962 and I am hopeful that by the end of the year we will have a much clearer understanding of the dimension of the job ahead.

It is not necessary to wait for the completion of these surveys, however, to recognize that a major task faces the Interior Department on the lands under its administration. On the basis of the best preliminary estimates available, for example, nearly 33 million acres are in need of brush control, 32 million acres need weed control, and more than 26 million acres need pest control.

The estimates indicate the public lands should have the protection of more than 10,000 miles of terraces, close to 4,000 miles of waterways, and over 205,000 miles of gully control work.

The preliminary figures also indicate a need for seeding on nearly 19 million acres, water spreading on 924,000 acres, and rough tillage on nearly 4,700,000 acres.

We mention these estimates mainly to give a rough picture of the size of the job. They are important in their relation the progressive deterioration of large

areas of the public lands. It has been estimated, for example, that approximately 52 percent of the public lands administered by the Bureau of Land Management is suffering from critical to severe soil erosion.

Soil conservation district supervisors report that erosion has been greatly accelerated on public lands in many parts of the West by the disturbance and destruction of vegetative cover on the land. Fire, drought, rodents, overstocking, unseasonal grazing use, and other factors are serving to damage the protective vegetation.

The severe loss of soil by wind and water in many localities is largely the result of depleted plant cover. This not only represents the loss of an extremely valuable upland resource, but causes damage to downstream values—including recreation, fish and game, storage facilities for irrigation water, flood control structures, and power developments.

Soil conservation districts have a double concern for this damage to public lands—and the resulting costly deposits of silt in downstream valleys and structures.

First, we are constantly aware that millions of acres of publicly owned lands are so intimately associated with the operations of privately owned lands—either through lease or permit arrangements—that the success of private operations depends on the quality of the public lands. This means good vegetative cover and the application of essential soil and moisture conservation practices where needed—all on the basis of a carefully developed priority schedule.

I also want to emphasize that districts are keenly interested in all aspects of water management on the public lands. Water becomes increasingly more important in most every part of the West, as this committee knows so well. There is an urgent need to eliminate water waste wherever possible—and to improve the use of availability of water as rapidly as this can be done. Both of these aspects of management, as they apply to the public lands, are of critical importance to districts, and to their cooperating farmers, ranchers, and other landowners.

Our second major reason for concern arises from our feeling of responsibility, not only to our own communities, but to all the people of the country. The benefits of conservation and orderly development are not limited to farmers and ranchers. They extend to city dwellers, sportsmen, industries, municipalities, and other nonfarm interests.

As a nation we need to devote at least as much care and conservation to our public lands as we do to our private lands. As of today, it would be hard to say that the Government is setting a good conservation example for the citizens. We wish the Government would do as well on public lands as district cooperators are doing on private lands.

As the pressures increase on our land and water—and on our forests, wildlife, grass, and recreational areas—we believe it is a responsibility of leadership in the Congress and in the executive branch of Government, to anticipate oncoming requirements of the Nation and prepare to meet them in an orderly, effective way. It is an important characteristic of conservation and resource development that little can be accomplished swiftly. This is work requiring time. And it may be noted that the longer this work is postponed, the costlier it becomes. It is less expensive to conserve than to repair and rebuild. It costs less to maintain grass than to pay flood damages.

Accordingly, we believe it represents good fiscal management as well as good resource management to provide adequately for the conservation operations of the Interior agencies—and the Forest Service.

The extent of land and vegetative damage, the increasing yield of silt, the increasing rate of erosion, and the unnecessary waste of moisture, all emphasize the severe lag in conservation operations on the public lands.

We are pleased to see that the budget estimates for fiscal year 1963 recognize, at least modestly, the pressing needs. We support the budget figures for soil and moisture conservation work by the Bureau of Reclamation and the National Park Service during the coming fiscal year. The budget proposal of $705,000 for the Bureau of Sport Fisheries and Wildlife also represents a needed increase, and we hope the committee will recommend this amount for soil and moisture work by this Bureau.

The major shortcoming in the budget estimates for soil and moisture operations, in our judgment, lies in the proposal for the Bureau of Land Management. Conservation work on the reserved lands has fallen so far behind, and the needs are now so urgent, that we believe a major recovery effort must be

made over a period of years. We urge that this effort be inaugurated in the next fiscal year. Some acceleration of this work is provided in the budget estimates. While the figure of $8,525,000 represents a most welcome and needed increase, we believe that $10,150,000 could be used advantageously and should be provided.

Similarly, we recommend that soil and moisture funds for the Bureau of Indian Affairs be increased for the coming fiscal year to a $6 million level. The Indian lands, like the reserved lands, are in sore need of conservation treatment. We would like to emphasize that the treatment of both reserved and Indian lands will provide benefits well beyond the boundaries of the public lands.

In addition to our interest in the soil and moisture conservation items already mentioned, we would like to record our support for the budget estimates of $5,600,000 to BLM for grazing land management, $909,000 for weed control, and $400,000 for fire suppression.

The budget estimate of $4,300,000 for forest and range land management on Indian lands represents a desirable increase in funds for the Bureau of Indian Affairs. We endorse, also, the increase in the forestry and fire control item for the National Park Service.

Our concern for an accelerated program of conservation and development on the reserved and Indian lands also applies to the lands within the national forests—including the grazing lands within the forests. For the reasons already cited, we urge this committee to recommend the full amount of the budget estimate of $140,740,000 for forest land management during the coming year.

We also support those budget estimates pertaining to Forest Service operations in the fields of research, State and private forestry cooperation, cooperative range improvements, and assistance to States for tree planting.

One aspect of forest research warrants special mention. This concerns the damaging aftereffects of strip-mining operations in several sections of the country. These operations are rendering hundreds of acres unprofitable for further production of forest, grass, crops, or wildlife. Moreover, these strip-mined areas contribute to flood and sediment damage to farms, cities, roads, water supplies, and stream fishing.

There is a genuine need for research into the economic restoration of such areas and we support an appropriation of $200,000 to the Central States Forest Experiment Station for this purpose.

We endorse the views of President Kennedy in his conservation message to Congress earlier this month that more intensive management of the public domain and national forests is needed and would be in the public interest.

In his message the President called for the establishment of an Institute of Water Research. We concur with the urgency for strengthening research in this critical field, but prior to the creation of such an Institute we believe there should be time and funds for a more detailed analysis of existing research authorizations and operations by the several Federal departments concerned.

We have been impressed by the thoroughness and judgment which marked the report of the Senate Select Committee on National Water Resources. Our belief is that any new proposals should be weighed in relation to those of the select committee's recommendations. Most particularly, we would oppose any effort to centralize and concentrate the administration of all Federal water research in one agency. There are aspects of water research which, in our opinion, can be carried forward most effectively in the Department of Agriculture; in the Department of Health, Education, and Welfare; and in the Department of the Interior.

Within individual departments, however, we believe a strong case can be made for more coordination.

Within the Department of the Interior, for example, we would advocate the establishment of a new Bureau of Water Research, coordinating and carrying forward the many aspects of water research now dispersed among several of the Department's agencies.

We sincerely urge favorable consideration by this committee of the appropriations so essential to better stewardship by our Government of the great treasure of public lands, water, timber, wildlife, and recreational resources under its management.

We are confident that improved management of the public lands will be reflected in more effective resource work on the adjoining private lands—especially in districts. It is our hope that we can do a better job on both sides of the fence—together.

GENERAL STATEMENT

Mr. WILLIAMS. I am a resident of New Mexico. I have lived all my life in northern New Mexico, and I have seen firsthand some of the things which have happened to the public lands because of abuse and misuse of these lands.

I have seen springs, Mr. Chairman, that were once large springs falling second foot and more and we have to dig 15 to 20 feet for the first water now. This is because the water table has gone down because of the disappearance of the vegetative cover above.

In highlighting this testimony I would like to read a few excerpts from it.

It may be noted that the longer this work is postponed—this is the work of redevelopment—the costlier it becomes. It is less expensive to conserve than to repair and rebuild. It costs less to maintain grass than to pay flood damages.

SUPPORT FOR CONSERVATION OPERATION

Accordingly, we believe it represents greater fiscal management, as well as good resource management, to provide adequately for the conservation operations of the interior agencies and the Forest Service.

We are pleased to see that the budget estimates for fiscal year 1963 recognize, at least modestly, the pressing needs. We support the budget figures for soil and moisture conservation work by the Bureau of Reclamation and the National Park Service during the coming fiscal year. The budget proposal of $705,000 for the Bureau of Sport Fisheries and Wildlife also represents a needed increase, and we hope the committee will recommend this amount for soil and moisture work by this Bureau.

The major shortcoming in the budget estimates for soil and moisture operations, in our judgment, lies in the proposal for the Bureau of Land Management. Conservation work on the reserved lands has fallen so far behind, and the needs are now so urgent, that we believe a major recovery effort must be made over a period of years. We urge that this effort be inaugurated in the next fiscal year. Some acceleration of this work is provided in the budget estimates. While the figure of $8,525,000 represents a most welcome and needed increase, we believe that $10,150,000 could be used advantageously and should be provided.

Similarly, we recommend that soil and moisture funds for the Bureau of Indian Affairs be increased for the coming fiscal year to a $6 million level. The Indian lands, like the reserved lands, are in sore need of conservation treatment. We would like to emphasize that the treatment of both reserved and Indian lands will provide benefits well beyond the boundaries of the public lands.

In addition to our interest in the soil and moisture conservation items already mentioned, we would like to record our support for the budget estimates of $5,600,000 to BLM for grazing land management, of $909,000 for weed control, and $400,000 for fire suppression.

The budget estimate of $4,300,000 for forest and range land management on Indian lands represents a desirable increase in funds for the Bureau of Indian Affairs. We endorse, also, the increase in the forestry and fire control item for the National Park Service.

Our concern for an accelerated program of conservation and development on the reserved and Indian lands also applies to the lands within the national forest—including the grazing lands within the forests. For the reasons already cited, we urge this committee to recommend the full amount of the budget estimate of $140,740,000 for forest land management during the coming year.

We also support those budget estimates pertaining to Forest Service operations in the fields of research, State and private forestry cooperation, cooperative range improvements, and assistance to States for tree planting.

DAMAGES RESULTING FROM STRIP MINING OPERATIONS

One aspect of forest research warrants special mention. This concerns the damaging aftereffects of strip-mining operations in several sections of the country. These operations are rendering hundreds of acres unprofitable for further production of forest, grass, crops, or wildlife. Moreover, these strip-mined areas contribute to flood and sediment damage to farms, cities, roads, water supplies, and stream fishing.

There is a genuine need for research into the economic restoration of such areas and we support an appropriation of $200,000 to the Central States Forest Experiment Station for this purpose.

We endorse the views of President Kennedy in his conservation message to Congress earlier this month that more intensive management of the public domain and national forests is needed and would be in the public interest.

In his message the President called for the establishment of an Institute of Water Research. We concur with the urgency for strengthening research in this critical field, but prior to the creation of such an Institute we believe there should be time and funds for a more detailed analysis of existing research authorization and operations by the several Federal departments concerned.

We have been impressed by the thoroughness and judgment which marked the report of the Senate Select Committee on National Water Resources. Our belief is that any new proposals should be weighed in relation to those of the select committee's recommendations.

Most particularly, we would oppose any effort to centralize and concentrate the administration of all Federal water research in one agency. There are aspects of water research which, in our opinion, can be carried forward most effectively in the Department of Agriculture; in the Department of Health, Education, and Welfare, and in the Department of the Interior.

Within individual Departments, however, we believe a strong case can be made for more coordination.

Within the Department of the Interior, for example, we would advocate the establishment of a new Bureau of Water Research, coordinating and carrying forward the many aspects of water research now dispersed among several of the Department's agencies.

We sincerely urge favorable consideration by this committee of the appropriations so essential to better stewardship by our Government of the great treasure of public lands, water, timber, wildlife, and recreational resources under its management.

We are confident that improved management of the public lands will be reflected in more effective resource work on the adjoining private lands—especially in districts. It is our hope that we can do a better job on both sides of the fence—together.

Senator BYRD. Does that complete your statement, Mr. Williams?

Mr. WILLIAMS. Yes, sir.

Senator BYRD. Thank you very much for a good statement.

Mr. WILLIAMS. Thank you, sir.

Senator BYRD. Mr. Kenneth B. Pomeroy representing the American Forestry Association.

Mr. Pomeroy, we are very glad to welcome you before this committee this morning.

AMERICAN FORESTRY ASSOCIATION

STATEMENT OF KENNETH B. POMEROY, REPRESENTATIVE

PREPARED STATEMENT

Senator BYRD. Mr. Pomeroy, do you have a statement that is prepared for the record?

Mr. POMEROY. Yes, I do.

Senator BYRD. Would you like to have it included?

Mr. POMEROY. Please.

Senator BYRD. All right, it will be included.

(The statement referred to follows:)

Mr. Chairman, I am Kenneth B. Pomeroy, representing the American Forestry Association.

This organization endorsed the program for development of the national forests when it was presented to Congress 3 years ago. We are pleased to note that you are making it possible for the Forest Service to implement this program on schedule. We hope you will continue to do so. Whenever there is an opportunity to expand the program, we recommend that special attention be given to forest research, particularly the phases dealing with utilization, watershed management, and protection of our forests from fire, insects and disease.

This year I would like to direct your attention to a different aspect of resource management, one that has been neglected far too long. I am referring to rehabilitation of the native range on lands under the jurisdiction of the Bureau of Land Management. This segment of Federal real estate contains about 175 million acres in 11 Western States.

A decade ago Oscar L. Chapman, then Secretary of the Interior, analyzed the condition of the Federal range. He said:

"Despite the substantial improvement that has taken place since enactment of the Taylor Grazing Act of 1934, the Federal rangelands are not making their maximum contribution to the national economy. Their productive capacity is lower than it should be. In many instances, erosion of rangelands is causing substantial damage to other lands and improvements at lower elevations. In particular, reservoirs on our larger streams and their tributaries are being filled with sediment at an alarming rate."

"According to the best estimates available," Mr. Chapman continued, "about 50 percent of Federal rangelands are in a state of severe to critical erosion, 32 percent are eroding moderately, and only 18 percent are in a condition of slight to no erosion."

Mr. Chapman estimated the annual loss of soil erosion to be 500 million tons, a volume that would require 244,846 freight trains of 50 cars each to transport. This is a staggering waste of a national resource. We must correct this appalling situation.

The most impotant step in rebuilding rundown rangeland is adequate management. Range fires must be eliminated. Grazing use must be reduced to the carry-capacity of the land. Weed species must be eliminated and the range reseeded to hardy forage plants. These steps will increase the value of the range from 3 to 10 times.

Mr. Chapman concluded his report by stating that the rehabilitation job could be completed in 20 years if adequate funds were available. He estimated the cost at between $400 and $500 million.

In 1961 about 400 members of the American Forestry Association went to Santa Fe, N. Mex. to take a first-hand look at "Stewardship of the Public Lands." Some of these people visited the Rio Puerco, a 4 million-acre range near the Jemez Mountains. At one time forage plants in this southwestern valley provided the basic support of 16 thriving communities. Today only five villages exist there. One village contains only one family. The reason is clearly visible—deterioration of the native range during 70 years of misuse by man.

Shocked by this situation the American Forestry Association inquired further into the use of public lands. We found that at the current rate of progress, it will take the Bureau of Land Management more than a century to cover the 144,242,000 acres now in need of treatment. Rehabilitation will cost upward of $700 million.

Is this expenditure justified?

We think it is. At present it often requires 30 to 40 acres of rundown range to support one cow for 1 month. When such ranges are reseeded, 10 head of cattle can be supported on the same area. Removal of worthless brush alone often increases the carrying capacity 300 to 400 percent. In time such improvements will return to the Public Treasury fees equal to the cost of rehabilitation. In addition, the economy of the region and the Nation will be strengthened.

Respectfully submitted.

KENNETH B. POMEROY, *Chief Forester.*

GENERAL STATEMENT

Senator BYRD. Would you like to read your statement or would you like to speak extemporaneously?

Mr. POMEROY. I will brief it, please.

Senator BYRD. All right, you may proceed.

Mr. POMEROY. Mr. Chairman, I am Kenneth B. Pomeroy, representing the American Forestry Association.

This organization endorsed the program for development of the national forests when it was presented to Congress 3 years ago. We are pleased to note that you are making good progress with this program and we hope that it can be continued along the same lines.

If there are opportunities to advance the program, we think special emphasis should be given to forest research.

Now just this morning some of our Southern members pointed out that the Forest Survey needs to be expanded. Now we realize that there is a legislative ceiling with respect to the Forest Survey and that will have to be adjusted before you can do anything further with it.

However, I would like to leave this statement for the record which pertains to that particular thing.

Senator BYRD. It will be included in the record.

(The statement referred to follows:)

FOREST SURVEY

The output of forest-based industries in the South reached a new high of more than $8 billion in 1960. Southern forests and their dependent industries are highly dynamic. The balance of southern pine production, as one example, recently shifted from lumber to pulpwood in response to rising paper demand. Again, the supply of timber suitable for industry varies from year to year as a result of constantly changing rates at which it is being increased through growth and diminished through use, and by fire, insects, disease, and other destructive agencies.

In the face of rapidly changing resource and industrial conditions, southern wood-using firms rely more and more upon the forest survey to furnish the

information needed to determine the most economic location of proposed plants and the feasibility of expanding existing facilities. Moreover, industrial commissions, conservation departments, and other State agencies increasingly look to the forest survey for information essential to planning the orderly development of timber resources.

To accelerate and intensify the inventory of the South's timber resources, to broaden coverage of current timber production trends, and to provide for more comprehensive analyses of industrial development opportunities, the forest survey should be substantially strengthened.

The forest survey is authorized by the McSweeney-McNary Forest Research Act of 1928 (45 Stat. 699). As amended in 1949, there is authorized to be appropriated not to exceed $1,500,000 annually to keep the survey current (16 U.S.C. 581k) (sec. 9).

Authorized expenditure applies to almost 500 million acres of commercial forest in the United States—an annual rate of about 0.3 cent per acre. Since 1949, costs have risen more than 50 percent and the limintation is no longer sufficient to carry out the forest survey as the Congress originally contemplated. Introduction of legislation would be required to remove the limitation on appropriations for the forest survey.

REHABILITATION OF PUBLIC RANGE

Mr. POMEROY. Now the portion of my talk that I would like to give special emphasis to pertains to rehabilitation of the public range. This is something we feel needs a great deal more attention. Last year our association met in Santa Fe and some 400 people gathered there to consider stewardship of the public lands. We spent 4 days making tours to national forests, the Bureau of Land Management, the national parks, and to Indian reservations.

We were particularly concerned with some of the rangelands. We made a report in our magazine regarding the deserted village. I do not have an extra copy of it, but I do have photographs here of similar areas and I would like to leave these photographs with you.

That one happens to be New Mexico, showing an area of serious wash. Here is a similar one in Arizona showing the way that soil is being eaten away.

Here is another one in Wyoming.

All of these things were covered some 10 years ago by Secretary Chapman, Secretary of the Interior. At that time he said:

Despite the substantial improvement that has taken place since enactment of the Taylor Grazing Act in 1934, the Federal rangelands are not making the maximum contribution to the national economy. Their productive capacity is lower than it should be. In many instances, erosion of rangelands is causing substantial damage to other lands and improvements at lower elevations.

In particular, reservoirs on our larger streams and their tributaries are being filled with sediment at an alarming rate.

We have made some investigations to see what has been done since then and what is being done now. It is our understanding that at the present rate of progress it will take 109 years to bring these lands up to full productivity.

Now we are not making any recommendation to you as to how much money should be allocated to this work at present. We merely urge that you use your good judgment to give these things such emphasis as you can.

Thank you very much.

Senator BYRD. Does that complete your statement, Mr. Pomeroy?

Mr. POMEROY. Yes.

Senator BYRD. The photographs you have shown me will be included in the files of the committee.

(The photographs referred to will be found in the files of the committee.)

Senator BYRD. We thank you for your statement. It is a good statement.

Good morning, Senator Gruening.

Senator Gruening, we are very pleased to have you here before the committee this morning. You may present a written statement or you may speak extemporaneously, whatever way you wish.

STATEMENT OF HON. ERNEST GRUENING, A U.S. SENATOR FROM THE STATE OF ALASKA

GENERAL STATEMENT

Senator GRUENING. Mr. Chairman, I have a very extended statement here and I think it will be wise, in the interest of saving the committee's time, for me not to read it all. I thought I might make a preliminary statement and then comment on some of the projects that we feel are desirable, and then, if it is agreeable with the committee, have the statement introduced as a whole.

Senator BYRD. We will be very glad to include it in the record in its entirety, Senator Gruening.

Senator GRUENING. Thank you.

(The statement referred to follows:)

Mr. Chairman, the principal portion of my testimony before the Subcommittee on Interior and Related Agencies Appropriations will concern matters directly or indirectly affecting Alaska, its great and sometimes obvious needs, and the use to which many millions of dollars will be put if this committee approves the budget items before it.

However, before I discuss these areas I wish to thank the committee for its consideration of Alaska's needs during this fiscal year.

Although Alaska has many needs, Alaska's delegation last year did not want funds totaling $387,350 which had been earmarked for two wildlife ranges. It felt, as did the State officials, that the money could better be spent for a Forestry Research Laboratory at Fairbanks or for cadastral work of the Bureau of Land Management, for fishery rehabilitation, for schools and much else. And subsequently, the funds for the two proposed wildlife ranges were removed from the budget and used for projects urgently needed in Alaska.

This committee's action is appreciated in Alaska, for those projects, I believe, should be the State's responsibility.

Less than 4 years have elapsed since Congress approved formation of the 49th State. Progress has been made, but 98 percent of Alaska still is federally owned. As a result the State, of necessity, looks carefully at the actions, proposed and actual, of the administration and its agencies.

Let me take them up one by one.

We trust that no appropriation will be made for either the Arctic Wildlife Range or the Izembek National Wildlife Range in this or future budgets.

As a matter of fact Gov. William Egan has requested that the area comprised by the nearly 9 million acres of the so-called Arctic Wildlife Range be included in the withdrawals to which the State of Alaska is entitled. Governor Egan has done that so that if, after appropriate study it is determined that the land would serve the Nation best as a wildlife range, this could be done by the State.

This is in line with the policy announced by Secretary Udall in his speech on March 6, 1961, before the American Wildlife and Natural Resources Conference. He said:

"We have been charged by the President to formulate plans for new starts. Obviously, a national program of this kind does not mean the acquisition of new Federal parks and recreational area only. Inevitably, and most importantly, such a program must include devices for encouraging the States to develop land acquisition programs of their own.

"This will be a real challenge to our States—and one that they must meet for the benefit of their citizens."

The State of Alaska is doing this.

Although the request was made to former Secretary Seaton by Governor Egan before he made the withdrawal that he not withdraw these lands, and although

the Congress had refused to act after extensive hearings on the matter were conducted by my distinguished colleague, the Honorable E. L. (Bob) Bartlett, the withdrawal was made.

I hope, therefore, that language can be written into this bill or the report that no funds appropriated by this bill shall be used for either of these withdrawals.

BUREAU OF LAND MANAGEMENT

Our Statehood Act contains a grant to the State of Alaska of approximately 103 million acres of land now owned by the Federal Government. The State is to select this land over a 25-year period. Section 6(g) of the Statehood Act specified:

"Where any lands desired by the State are unsurveyed at the time of their selection, the Secretary of the Interior shall survey the exterior boundaries of the area requested without any interior subdivision thereof, and shall issue a patent for such selected area in terms of the exterior boundary."

As this committee knows, only an infinitesimal portion of Alaska has been surveyed. If Alaska is to make its selections these surveys must be speeded up. In his testimony before the subcommittee last year, the Director of the Bureau of Land Management, Mr. Karl Landstrom, observed:

"The selection of Federal lands by the State of Alaska is resulting in a growing workload for adjudication, field examination, and cadastral surveys."

It is, therefore, gratifying to note that the budget for the Bureau of Land Management for fiscal year 1963 is substantially increased over that of the current year. This increase includes funds for an expanding workload in the land offices in Alaska and for cadastral surveys in the State which are, as Director Landstrom said this year, "necessary before the State (Alaska) can receive title to selected lands."

The amount budgeted for cadastral surveys for fiscal year 1963 is $4,490,000. While this is substantially more than the fiscal year 1962 figure of $3,732,000, it is nevertheless considerably less than the Bureau of Land Management's request to the Bureau of the Budget which was $5.8 million.

However, let me say that I am certain the request for $5.8 million would not have ever gone to the Bureau of the Budget unless it could be used.

Therefore, I request that the subcommittee restore the funds denied by the Bureau of the Budget.

Restoration of these funds, $1,310,000, will provide the means by which the orderly land transferral in Alaska can be more rapidly accomplished.

We cannot expect the BLM to keep up with the State as land selections are made, at this time, but we can help the Bureau accomplish the necessary surveys more rapidly if we provide the funds necessary.

Alaska's development as a State is seriously impeded by the delay in land transfer.

Here again, we confront a situation and an overdue need resulting directly from longstanding discrimination against Alaska. While Alaska was a territory, land surveying proceeded at a snail's pace in contrast with what was being done elsewhere under the flag.

At the first statehood hearing held in April of 1950 in the 81st Congress before the Senate Committee on Interior and Insular Affairs, Senator Clinton P. Anderson, who was presiding and, incidentally, is the only member of that committee still in the Senate, after listening to the testimony on what had been done, or rather not done in the matter of land surveying in Alaska summed up the situation by pointing out that at the rate the Federal Government had been proceeding it would require 17,000 years to complete Alaska's land survey. (Hearings on H.R. 331, and S. 2036, p. 318.) Think of it, 17,000 years. There has been a slight increase in the rate of surveys, but the huge backlog of unsurveyed Alaska lands is still with us. The Bureau of Land Management has testified this year that approximately 375 million acres of public domain remains to be surveyed—which is roughly the total land area of Alaska (p. 81, House hearings 1962). Now the requirement of getting the 27 percent of the Federal land in Alaska granted Alaska by the Statehood Act makes a drastically increased rate of survey imperative. Here, too, this is an investment rather than a mere expenditure, for the land cannot be taken over and made productive and revenue-producing until it is surveyed. So I strongly urge the committee to grant the BLM's request for that $5.8 million.

There are other BLM items which will be of help in the State. Among them, funds for the management of grazing lands, funds for prefire suppression work and money for fire protection which I hope this subcommittee will approve.

The need is demonstrably greater in Alaska. The average forest area burned annually in Alaska over a 10-year period is 873,075 acres which is more than half the total area burned in the 50 States, which is 1,572,734.

I should like to quote the following from a BLM report:

"The range management program in Alaska will be expanded to assure the application of sound range management practices to approximately 2 million acres of public lands presently held under livestock grazing lease, and to systematically classify and establish good conservation practices on the remaining 8 million acres believed suitable for livestock production as the industry expands."

Mr. Chairman, the livestock industry is one of Alaska's great potentials. In the face of some very special handicaps it is progressing. We have some excellent dairy herds. I've seen it developing for beef cattle on Kodiak Island. We of Alaska want that industry to expand as quickly as it can, and we are appreciative of the interest which is clearly indicated by the Bureau of Land Management.

BUREAU OF INDIAN AFFAIRS

The Bureau of Indian Affairs requests $197.4 million for fiscal year 1963. This is an increase of $33.1 million over the current budget and I am reliably informed the sum could be enlarged by $17 million, based on requests originally made to the Bureau of the Budget. So I suggest that unfinished BIA work could be started immediately.

In Alaska there are 43,000 natives—Eskimos, Indians, and Aleuts. The program of the BIA directly affects these citizens, specifically, and the State generally.

Three program goals have been announced by the BIA. They are—

1. Maximum Indian, Eskimo, and Aleut economic self-sufficiency;
2. Full participation of Indians, Eskimos, and Aleuts in American life;
3. Equal citizenship privileges and responsibilities for Indians, Eskimos, and Aleuts.

I endorse each of them vigorously. I would think that they could best be accomplished through broad programs which would implement education, economic opportunity, health measures, and living accommodations.

The Bureau of Indian Affairs proposes to spend $82.8 million for education and welfare services in the Nation. Alaska's suggested share would be $9,277,113, an increase of $1,731,870. School expenses in Alaska are high. This is due to the isolation of a very large number of boarding schools which BIA operates and in which the children live on a 24-hour basis. So there is need for teachers and counselors in these resident schools.

NEW SCHOOL FUNDS

In Alaska today there are public school districts, some schools operated by the State without having public school districts, and schools operated by the Bureau of Indian Affairs. The State is willing to take over Bureau-operated institutions with Federal financial support, but it does not desire schools which are no longer operable.

For this reason, the Bureau of Indian Affairs has requested $4,388,000 to be used for the construction of 16 grade schools, for advance planning for a resident high school in Fairbanks, and for utilities at Barrow which will serve a school and a hospital.

Bureau of Indian Affairs—Proposed buildings and utilities construction program, fiscal year 1963, for Alaska

Summary of projects (States other than Navajo-Hopi)	Additional spaces	Replacement spaces	Estimated cost	Summary of projects (States other than Navajo-Hopi)	Additional spaces	Replacement spaces	Estimated cost
A. ALASKA				A. ALASKA—Con.			
Alitak School	0	30	$141,000	Nondalton School	0	60	$219,000
Barrow utilities	0	0	540,000	Old Harbor School	0	60	194,000
Eagle School	0	30	159,000	Oscarville School	30	0	158,000
Fairbanks School (advance planning)	0	0	350,000	Scammon Bay School	30	30	196,000
Hooper Bay School	90	120	519,000	Stebbins School	0	60	192,000
Kiana School	60	60	387,000	Tanunak School	0	60	188,000
Kwethluk School	60	30	230,000	Tatitlek School	30	30	186,000
Newktok School	60	0	191,000	Tetlin School	0	30	160,000
Noatak School	60	60	378,000	Total, Alaska	420	660	4,388,000

An educated citizenry is our strongest weapon against any form of subversion of tyranny. I hope this subcommittee will approve the following budget requests for better school facilities in Alaska.

1. The expenditure of $141,000 proposed for Alitak School on Kodiak Island will pay for construction of a one-classroom school with living quarters, a storage and generator building, and provide for utilities. The new school located some 80 miles southwest of the town of Kodiak, would replace existing buildings built in 1908 which have deteriorated. It would accommodate a minimum of 18 students.

2. The expenditure of $540,000 at Barrow would make possible construction of the Bureau of Indian Affairs share of a joint project with the Public Health Service. This will provide utilities for the BIA's new eight-classroom school and quarters and the PHS proposed hospital and quarters. The utilities include a water distillation plant, building and water lines; a sewage collection system and treatment plant; electric generation and distribution system; a natural gas supply distribution system; and utilidors for the utility system.

3. The Bureau seeks $159,000 to use for construction of one 500-square-foot classroom at Eagle on the Yukon River. The building would replace one constructed in 1906 now, 56 years later, in extremely hazardous condition. More than 20 children attend the eighth grade school.

4. Money for advance planning on Fairbanks High School, in the amount of $350,000 has been requested by the Bureau. There are at present no high school facilities in the vast northern part of Alaska. Most Indian, Eskimo and Aleut children have no opportunity to work toward a high school diploma.

I hope to appear before this subcommittee next year to urge the appropriation of funds for the proposed Fairbanks High School. The cost estimate today is $8,700,000 but this is a matter for future congressional action.

5. Hooper Bay is located 200 miles south of Nome. The village is growing rapidly and there is need for additional classroom space for children not now in school. There is need, also, to put an end to existing overcrowded conditions. The Bureau asks $519,000 to construct a seven-classroom school with a kitchen-dining room; utilities space; storage room; and employees' quarters. Nearly 150 students attend this school.

6. Increased school facilities are required in the village of Kiana on the Kobuk River, 100 miles east of Kotzebue in northwestern Alaska. There is need for classroom seats to permit more children to attend school. The expenditure of $387,000 covers the cost of a new four-classroom school, a two-bedroom duplex employees' quarters; and conversion of the present school to a living quarters.

7. The Bureau has requested $230,000 for additional classroom space and other improvements to the Kwethluk School in the Kwethluk community located 18 miles northeast of Bethel. The population increase in the community has been steady for two decades and continuing enrollment increase in the school is anticipated. Nearly 100 pupils use the facilities.

8. The sum of $190,000 would provide a two-classroom school, employees' quarters and a storage-generator building and utilities in the Eskimo village of Newtok where no school building presently exists. Pupils attend classes in a rented church building.

9. The Bureau requests funds of $378,000 for a four-classroom school at Noatak community which is 50 air-miles north of Kotzebue. Existing buildings are termed "unsuitable" and the requested amount would cover cost of a four-classroom school; a duplex quarters; a two-bedroom house for employees; and a storage-generator building and utilities.

10. The sum of $219,000 has bee nrequested to build a new two-classroom school in Nondalton, a community located on Lake Clark about 50 miles west of Cook Inlet. Present facilities include an unsafe log building a rented room. The requested amount covers cost of one employees' quarters and a storage-generator building and utilities.

11. School facilities of the Old Harbor School on Kodiak Island are inadequate and unsafe. The Bureau has requested $194,000 for construction of a two-classroom school and one employee's quarters; and a storage-generator building and utilities. Nearly 60 children comprise grades one through eight.

12. The Bureau proposes to spend $158,000 to build a new one-classroom school at Oscarville, a permanent village located on the Kuskokwim River. Oscarville has no school but it has 25 school-age children. The need is urgent. The funds requested would pay for a one-classroom school and the one employee's quarters and storage and generator building, including utilities.

13. School facilities in the Eskimo village of Scammon Bay on the coast of the Bering Sea are inadequate and overcrowded. Pupils in the far northern school require improved conditions. The Bureau of Indian Affairs has requested $196,000 with which to construct a two-classroom school; convert the existing classroom into an additional employees' quarters; and build a storage and generator building with utilities. Some 40 children will use the new quarters.

14. The Stebbins School, 50 miles southwest of Unalakleet, was built 40 years ago. It has deteriorated. The Bureau has requested $192,000 for a two-classroom school and one employee's quarters; and a storage-generator building with utilities.

15. The BIA has described the two-classroom school in Tanunak, an established village on Nelson Island as in deplorable condition. The lower wood wall and floor have rotted away. The situation is obviously hazardous. The Bureau requests funds of $188,000 to construct a two-classroom school and one employee's quarters; a storage-generator building with utilities. Fifty children attend class in the existing inadequate, unsafe facility.

16. The Tatitlek School population on Prince William Sound is growing. The existing school is too small and the employees' quarters are in poor condition, having been built in 1908—54 years ago. The Bureau proposes to build a new two-classroom school and one employee's quarters; and a storage-generator building with utilities. More than 25 children would use the new school.

17. The Tetlin community school today is one room. Built in 1935 from logs it has been found unsafe because the walls are poorly constructed. The Bureau seeks $160,000 with which to build a one-classroom school with one employee's quarters and a storage-generator building with utilities. The school serves more than 30 children.

The schools which would be improved, built or planned with the requested $4.4 million eventually will serve 1,288 puplis, according to current estimates of the Bureau of Indian Affairs.

Most of these students live in isolated communities whose residents have too few personal contacts with other parts of their State or other States. Part of the responsibility of our Federal Government is to give to each citizen the opportunity to partake of our public education system. Naturally, the isolation of the schools I have described increases the cost of construction.

This initial cost will be repaid many times. The opportunity to attend school is sought by all Alaskans. The lack of connecting roads, the lack of network television and radio programs, and the paucity of news in these areas magnify the need for educational facilities and opportunities. I strongly urge the appropriation of these funds.

We should note for the record that there are in Alaska 800 children of high school age living in areas in which there are no high school facilities. The Bureau desires to initiate a long-overdue high school construction program. It is an essential program. The number of grade school children who have no grade school facilities close by is quite small, according to the Bureau. However, none should be without grade school privileges today.

Mr. Chairman and members of the committee, the reasons for these seemingly numerous items for additional school facilities which we ask for now is because in the matter of education, and other essential needs for the Indians and Eskimos of Alaska, throughout Alaska's history as a territory, there has been discrimination in appropriations and legislation. This applies to other fields as well as to our native population. This statement can be fully documented.

Appearing for the first time before the House Interior Department Appropriation Subcommittee on December 29, 1933, Delegate Anthony J. Diamond, whom I know the chairman will remember, pointed this out. He had been elected in 1932. He was a great delegate. Speaking for the provisions in the Interior bill for 1935 on which he was testifying, he said:

"Now, to make a comparison, I tried to figure out how the Indians of Alaska, who are considered generally in a ward status, are treated as compared with the Indians of the United States, and I find they have not in the past obtained in Federal aid of any kind more than one-third as much. I do not know why this discrimination occurred unless it was because they did not make war on the whites and kill off the settlers" (pp. 706–707, Cong., 2d sess.)

Mr. Chairman, that condition, that difference in treatment to Alaskans' disadvantage, had long existed when Tony Dimond so testified in 1933. It

continued to exist throughout our years as a territory. It was one of the examples of what can properly be described as colonialism. So our task, now that Alaska has become a State, is to try to catch up. It is pathetic to contemplate some of the fine young men in our native communities, with latent talents and abilities, who if only they had had, and were now afforded, educational opportunities to which all Americans should be entitled, could develop these talents and make them available to State and Nation.

The successful functioning of our democracy is based on an educated, enlightened, trained electorate. Indeed, I have stated on more than one occasion my deep conviction that democracy and education are one and inseparable. The territorial authorities and for 3 years the State authorities have, I know, performed most creditably in support of primary and secondary education. A larger portion of the budget in Alaska than in most other political entities has gone to elementary education. But the Indians and Eskimos in their federally conducted schools have through lack of adequate provision lagged behind. Therefore our task now is, belatedly, to enable them to catch up and to give this generation of schoolchildren what their parents and even their older brothers and sisters, lacked. So I urge, I plead, with the committee to let every one of these school items stand.

DEVELOPING ECONOMIC INDEPENDENCE

An education is important, so is the need to make it possible for all Americans to be economically independent and self-sufficient.

Alaskan's natives demand no doles. They do deserve and they will utilize opportunities making possible full utilization of their skills and resources.

I am happy to support the Bureau's request for funds totaling $2,080,345 to be administered through the proposed Division of Economic Development. Alaska's share in this new program would be $426,042.

The Commissioner has explained the scope of the program in his testimony. I am hopeful that the Bureau's intention to help develop Indian resources in a variety of ways, can be accomplished.

I should like to mention in passing that the Radio Corp. of America is well aware of the talents of Alaskan natives. Ten of these young men are attending an RCA school in New York City where they are trained as electronic technicians, to be then employed by RCA to man company posts on the White Alice communications system and on the ballistic missiles early warning system in Alaska. They will be graduated in August. A second group of 10 has begun to receive instruction in the RCA school in Los Angeles.

These young men have shown zeal and ability for their work—their marks have been highly creditable—and RCA officials believe the program can be expanded substantially and that jobs would therefore become available for several hundred young Alaskans whose services are not now being utilized and whose earning capacity due to lack of training is insufficient.

Such a development of human resources can be accomplished through joint efforts of private business and the Federal Government.

On February 21, 1962, I wrote the Secretary of the Interior, outlining the potential savings of the program in the terms of human and financial resources.

This expanded long range human improvement program could begin with July 1, 1962, classes in Los Angeles. An additional amount of $400,000 for fiscal year 1963 would make it possible to train 90 Alaskan natives and pay their transportation to the RCA school in California. Thereafter, yearly appropriations would, of course, be required to keep the program moving. However, this is a sound investment since savings in the long run would more than offset training costs.

I therefore request that this subcommittee consider favorably the appropriation of an additional $400,000 to start the program July 1 of this year.

Today the attrition rate of non-Alaskans working for RCA on its farflung Arctic and sub-Arctic stations in Alaska is quite high. Men far away from home, untrained to cope with the solitude and unaccustomed to the climate in which they work will normally want to leave their employment as soon as possible. Alaskan natives would not have this problem. RCA estimates that the use of Alaskans would reduce monthly personnel attrition from 4 percent to one-fourth of 1 percent. By 1971, the attrition cost would have dropped by half a million dollars yearly if Alaskan natives were used as technicians.

It is noteworthy to point out that substantial savings would accrue to the

Bureau of Indian Affairs and the Bureau of Public Health per year if the Department of the Interior found it no longer necessary to pay the estimated monthly relief benefits of $55 to each Eskimo and Indian.

I am certain that Radio Corp. of America representatives would appreciate the opportunity to appear before this subcommittee to outline in detail what they feel could be done in this area of utilizing human resources. Secretary Udall has been told of its possibilities and I am awaiting his comments.

A similar project to train airplane mechanics in demand by our expanding aviation industry is under discussion.

NATIONAL PARK SERVICE

The National Park Service has budgeted not quite $400,000 toward improvement and management in Mount McKinley National Park. Specifically these funds would be spent as follows:

Management and protection	$156,572
Roads and trails	107,672
Building, utilities, etc. (rehabilitation of hotel water system)	123,698
Total	387,942

This is little more than repair and maintenance. There are still no accommodations within the 1,939,000-acre park from which the glory of 20,350-foot Mount McKinley, loftiest peak in North America, and the reason for the park's existence, can be seen.

The hotel, situated at the park entrance on the Alaska Railroad built 25 years ago, is 60 miles from where satisfactory views of the mountain can be obtained. There will be no accommodations for the influx of tourists who, with the full-time operation of the ferry system from Prince Rupert to Haines, may be expected in the summer of 1963, unless the Park Service makes an effort to get funds for a lodge at the end of the 90-mile highway into the park, which was originally intended to be a complementary unit to the hotel at the entrance.

Roughly, one-third of the funds sought will be for rehabilitating that hotel's water system. The $107,672 item is essentially for improving the highway which has not been too safe. It was not designed as a park road in the first instance but was a trail in existence before the park's establishment in 1917 to the Katishna mining district which lies just north of the central portion of the park's 150-mile northern boundary. The Park Service's only expenditures have been to improve that highway, which skirting the park's northern boundary misses some of the area's most scenic aspects.

For Katmai National Monument, I am glad to note the proposed expenditure of $100,000 as part of a roads and trails program for constructing a 25-mile low-grade road from Brooks River to Windy Creek.

For it is pertinent that although this monument of 2,697,000 acres, the largest unit in the entire Park Service was established 35 years ago, the Federal Government has not built one foot of road or trail within it. As a result the unique natural phenomena which caused the monument to be established are virtually inaccessible to the visiting public. Accommodations to the extent of five camps have been admirably supplied by private enterprise. But though an Alaska air carrier, Northern Consolidated Airlines, transports visitors by plane from Anchorage and furnishes them comfortable lodging, good food, and access to the excellent fishing of the regions, lakes, and streams, they cannot visit the famous Valley of Ten Thousand Smokes, or the other sensational phenomena caused by the great volcanic upheaval of 1912, either by vehicle or afoot, unless they are prepared to hike for days carrying food and sleeping bags on their backpacks. Hitherto and now they can only glimpse these sensational areas from the air. I am hopeful and confident that the National Park Service's request for this $100,000 makes the start of a proper and previously totally lacking minimal development program and trust that it will be only a beginning. There is little point in setting aside these splendid and vast park areas without making their enjoyment possible.

Gradually, I believe, the National Park Service will do what it can to provide park facilities within its parks and monuments in Alaska. But "gradually" is no longer the answer. The needs are more pressing. I have discussed the problem with Director Wirth and have found him interested, sympathetic, and eager to act.

80391 O—62——73

I am, therefore, requesting the addition of $150,000 in the National Park Service appropriation for fiscal year 1963 which will be used for the construction of visitor facilities in the 2,697,200-acre Glacier Bay National Monument, a superlative scenic area northwest of Juneau. The National Park Service informs me that private capital is unavailable to provide such facilities.

The money I request would pay for construction of a dining room, a store, and overnight accommodations for 10 guest cabins to house 40 persons. These facilities could later be expanded. The fiscal year 1963 budget at present includes a request for $34,200 for the purchase of two new electric generators to replace existing equipment which can't handle the existing load. The new generators, I am informed, would adequately handle the power requirements of the visitor facilities.

Glacier Bay has been a neglected jewel. Its splendor is little known to the outside world. From tidewater Mount Fairweather rises 15,300 feet. Beginning late this coming fall and in full swing by the summer of 1963, 1 of 3 ferries carrying over 100 cars each will be operating daily out of Prince Rupert up the inside passage and stopping at its ports, including Juneau. The visitors will want to stop off there to see Glacier Bay National Monument.

In response to a letter of mine, Assistant Secretary of the Interior John A. Carver, Jr., wrote me on March 5, 1962, as follows:

"The need for overnight accommodations for visitors in the monument is recognized. * * * a reasonable program which will provide these facilities with Federal funds is justified. Please be assured that this Department will support proposals to place such developments in high priority."

I should like at this time to place in the record my letter to the Secretary, dated February 7, 1962; his reply of March 5, 1962, from which I have quoted; and my response of March 6, 1962, to Secretary Carver:

FEBRUARY 7, 1962.

Hon. STEWART L. UDALL,
Secretary of the Interior,
Washington, D.C.

DEAR MR. SECRETARY: Mission 66—a wonderful and far-visioned plan—has scarcely come to Alaska where we have three wonderful units of the Park Service in Mount McKinley National Park, Glacier Bay National Monument, and Katmai National Monument. In only one of these, Katmai, are there accommondations. These were wholly furnished by Northern Consolidated Airlines which transports its people to its five separate camps, two within the boundaries of the monument and three outside.

Glacier Bay National Monument which Assistant Director of the Park Service Scoyen, who recently retired, considered the finest area in the entire Park Service, needs accommodations for the public. At present, the only facilities that exist there are for the Park Service personnel. To all intents and purposes this wonderful area is inaccessible except to a very few wealthy people who might come up there in their yachts. It is my hope that you will recommend for the 1964 budget a proper beginning of the development of this wonderful area. It is particularly desirable that this be done promptly as beginning toward the end of the coming summer a great influx of tourists to Alaska may be anticipated in consequence of the starting of the ferry system which is expected to bring several hundred tourists every day up the inside passage. Many of these would want to visit Glacier Bay but without facilities for overnight stay would be unable to do so.

I have discussed this at length with Superintendent Mitchell and with Director Conrad Wirth and believe that they strongly favor a beginning of proper development of Glacier Bay. This is one situation where accommodations will have to be constructed by the Federal Government and then leased to a concessionaire. The season is so short that it is practically impossible to expect a private concessionaire to build these facilities. The situation is entirely different in Katmai for reasons which I need not detail at this time.

The immediate need is for tourist accommodations. They need not, to begin with, be too extensive. Accommodations for 250 persons would, I think, take care of the situation for a start. An additional need, and second to the former, is for a road from Bartlett Cove, where the first tourist facilities should be established, to Sandy Cove. This would probably be the only road construction needed in this area.

I hope you will look into this matter promptly and recommend inclusion of this project in the 1964 budget.

With best wishes, I am,

Cordially yours,

ERNEST GRUENING,
U.S. Senator.

P.S.—If further evidence were needed that it is the Federal Government that must build these facilities, it is furnished by the experience of the Forest Service in advertising for a concessionaire to build the hotel right by Mendenhall Glacier. This is a magnificent scenic spot accessible by road from Juneau and was publicized widely by an excellent and attractive circular. Yet to date, the Forest Service has not received a single inquiry or nibble.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., March 5, 1962.

Hon. ERNEST GRUENING,
U.S. Senate, Washington, D.C.

DEAR SENATOR GRUENING: Thank you for your letter of February 7 containing suggestions for the development of visitor use facilities in Glacier Bay National Monument. This will also acknowledge receipt of a copy of your letter to Director Wirth of the National Park Service.

The need for overnight accommodations for visitors in the monument is recognized. As you have been informed in previous correspondence with Director Wirth the National Park Service issued a prospectus on February 11, 1960, inviting qualified applicants to submit proposals to construct, operate, and maintain overnight facilities at Bartlett Cove. Although this invitation has been open for over 2 years no applications have been received. Because of the negative response to the prospectus and the need to provide accommodations for visitors, a reasonable program which will provide these facilities with Federal funds is justifiable. While we cannot state with assurance at this time that these facilities will be programed in the 1964 fiscal year budget of the National Park Service please be assured that this Department will support proposals to place such developments in high priority. However, it may be desirable that the initial development be less than accommodations for 250 persons as proposed in your letter.

Actual experience in conducting visitors on boat tours into Glacier Bay from Bartlett Cove should help to determine the type and extent of further developments in the monument. It may well be that additional overnight facilities will be needed eventually at Sandy Cove as a secondary stopover. Whether access to it should be via a water or a land route can be determined more realistically at a later date.

We appreciate your continued interest in the development of Glacier Bay National Monument.

Sincerely yours,

JOHN A. CARVER, JR.
Assistant Secretary of the Interior.

MARCH 6, 1962.

Hon. JOHN A. CARVER, Jr.,
Assistant Secretary of the Interior,
Department of the Interior, Washington, D.C.

DEAR SECRETARY CARVER: I acknowledge your letter of March 5 replying to mine of February 7 in which I urged the development of visitor use facilities in Glacier Bay National Monument in which I enclosed similar letter making a like request of Director Conrad Wirth of the Park Service—namely, that the 1964 budget contain, at the very least, planning funds for such development, but better actual construction funds. In your reply you say that the need for overnight accommodations for visitors in the monument is recognized and in subsequent sentences you make clear that it has not been possible to get private concessionaires to bid and therefore the obligation falls upon the Federal Government to plan and construct these facilities.

What I find disappointing in your letter is your sentence "While we cannot state with assurance at this time that these facilities will be programed in the 1964 fiscal year budget of the National Park Service please be assured that this Department will support proposals to place such developments in high priority."

Unless we want to be justly charged with not matching our fine words with corresponding action, anything less than a firm determination to place this relatively important, but modest, item in the 1964 budget runs completely contrary to the ringing message issued only last week by President Kennedy on conservation in which the first section is devoted to outdoor recreation resources. Here is a clarion call for action and yet from the Assistant Secretary of the Department primarily concerned with this we have a doubt as to whether action will follow.

Please note in this connection that the year 1963, which is probably the earliest date these facilities could be completed, if included in the 1964 budget, will witness a tremendous influx of tourists to Alaska. The reason for that is beginning late this fall (1962), but in full swing by the summer of 1963, three ferries carrying over 100 cars each and operating daily out of Prince Rupert up the Inside Passage will bring a flood of tourists who will want to stop in Glacier Bay National Monument. The need is therefore urgent and in consequence I would like to urge very strongly that the position of the Department be that facilities in Glacier Bay be given not merely "high priority" but that they definitely be included in the 1964 budget presentation which will shortly be underway. Indeed, it would be extremely helpful and I urge that these planning funds be included in a supplemental appropriation in this session of the Congress.

While obviously there are many demands all over the country, in no place has there been such a total neglect of recreational facilities by the Federal Government as in our Alaska parks and monuments.

In Mount McKinley all we are doing is to improve a long existing road—nothing in the way of accommodations. In Katmai for the first time the Federal Government is planning to spend a few dollars building trails and a road to permit visitors to visit the Valley of Ten Thousand Smokes, for which, and other volcanic phenomena, the monument was created decades ago. Finally to return to Glacier Bay, accommodations have been provided for the Park Service personnel but nothing for the public.

Please let's make this a must including an effort to get planning funds in a supplemental bill in this session.

Cordially yours,

ERNEST GRUENING,
U.S. Senator.

The fact is that Mission 66—a great, needed, and in every way a highly desirable program, which aims to prepare our national parks wonderland for the increased population that will seek inspiration and recreation there by the middle of this decade, has not come to Alaska, certainly not in appreciable degree. I dislike to point out, but I must, that this is just another example of how Alaska during its territorial days was bypassed in this field as in nearly all other aspects of Federal responsibility. We are trying, Mr. Chairman, to keep some of our American tourists dollars at home. But our superb Alaska parks and monuments will be unattainable unless they begin to receive equal or equivalent treatment with our parks and monuments in the other 49 States.

President Kennedy has issued an inspiring call to develop our natural resources and expand our outdoor recreational facilities. I cannot, therefore, too strongly urge the inclusion of these modest amounts for overnight visitor accommodations in Glacier Bay National Monument, so that some accommodations may be ready by the summer of 1963.

FISHERIES

Alaska's coastline is longer than the combined Atlantic, Pacific, and gulf coastlines of the 48 older States. It is the only American State's coastline fronting on two oceans—the Pacific and the Arctic, with the Bering Sea coastline for good measure in between. The abundance of these waters and of Alaska's rivers and lakes produces a substantial share of the livelihood of the State's residents—as well as of many out-of-Staters—and contributes substantially to the national income. Alaska has had—although now seriously depleted and further threatened by foreign encroachment—the Nation's greatest fishery resource, above all the Pacific salmon, and also halibut, king crab, and other species.

The work of the Bureau of Commercial Fisheries, the Federal agency concerned with this resource, is therefore important to the State.

I do not at this time intend to cite each budget item but do wish to mention some of particular interest.

For research on fish protein concentrate $120,000 is requested. Because of the increasing interest in the great value and relatively low cost of the concentrate as a weapon for democracy against hunger and communism, I would like to see this sum substantially increased. I am informed that inadequate research moneys have curtailed exploration into diversified uses for fish protein concentrate. In a time in history when much of the world's population suffers from a lack of protein in its diet, this country should be moving ahead in the vital area of research. This work is in the Nation's interest and merits support. We have to date failed to use properly the available harvest of the sea. In the words of our President—"Let us begin."

It seems appropriate to note at this point in the record that the research funds request to the Bureau of the Budget was $10 million and that this figure was reduced to the present $7,555,000.

The vast potential of the North Pacific fishery resources is barely tapped. Included in the Bureau's request is a new fishery research vessel for use in the North Pacific and Bering Sea. The Bureau of Commercial Fisheries has requested $150,000 to fund the design of the proposed $3 million vessel. The United States now has no adequate vessel for this purpose. It is hoped construction of the floating laboratory may start in fiscal year 1963. It should.

Already we know that other nations, particularly Japan and Russia, are expanding their fishing operations in the North Pacific and moving ever closer to our shores. It is more than a serious threat. It is a shocking reality. We are in no position to compete for markets or to make responsible treaties if we are handicapped through lack of knowledge which will become available if we seek it. Indeed it is depressing to note that in 1961, the United States, for decades among the top three nations in the total catch of fish, has now for the first time dropped to fifth place behind Russia, Red China, Japan, and Peru.

FISHERIES STUDIES FUND AT AUKE BAY BIOLOGICAL LABORATORY

While I am discussing budget items concerning the Bureau of Commercial Fisheries of the Fish and Wildlife Service, I want to report, Mr. Chairman, that I recently visited the Auke Bay Biological Laboratory which is located not far from Juneau. I found the staff of the laboratory knowledgeable and hard at work.

It needs additional laboratory space and warehouse facilities and it is my understanding that these items will be requested in the 1964 budget.

More pressing at this time is the immediate need for additional funds to complete the fisheries and wildlife studies on the Yukon River in connection with the great Rampart Dam project. This—which has the greatest potential of any one hydro project under the American flag will generate 2½ times the power of Grand Coulee, and have useful concomitants in flood control and river navigation. Though larger than any other American project, it is no greater than several dams nearing completion and under construction in Soviet Siberia. It would begin in a substantial way the development of Alaska's tremendous but almost totally unused hydroelectric potential, less than one-fourth of 1 percent of Alaska's great river and lake resources have been utilized. Indeed, the only Federal hydro project in Alaska is the Eklutna power project, of only 30,000 kilowatts which supplies power to Anchorage and two adjacent REA cooperatives all of which will shortly need more power. Just as in the other fields, Alaska as a territory was neglected by the distant Federal authorities while in the lower 48 States, Boulder Dam, Grand Coulee, Bonneville, Hungry Horse, and scores of other hydro projects have long since been completed—essential concomitants of a modern society.

But whenever a big dam is to be built, studies to record the impact on the fish and wildlife resources of the region are both essential and mandatory, and additional funds will be needed to complete these.

Particularly pertinent is the increased appropriation $1,075,000, of which $252,732 will come from Kennedy-Saltonstall funds, thus making a net increase of $822,268 for—so the item reads—Research on fish migration over dams: To provide for expansion of effort with regard to emergency problems involving fish passage at high dams.

It is my hope that whatever portion of this item may be needed will be applied to the Yukon River fishery.

In his testimony before the House subcommittee Donald L. McKernan, the able Director of the Bureau of Commercial Fisheries of the Fish and Wildlife Service pointed out that:

1. Scientists have made solid progress in the fields of electrical guiding and the development of more efficient and economical fishways. This may be the answer to guiding the salmon fingerlings downstream to avoid injury or destruction in the dam's turbines.

2. Studies have also shown that a reduction in the flow of "transport" water, a flow released to attract fish into a fishway. The 2-feet-per-second velocity, formerly regarded as minimal, has successfully been reduced to 0.7 foot per second, without loss in attraction sufficiency.

3. Finally as Mr. McKernan points out—the problem of passing fish over high dams has not been solved, and I quote his words: "We need a tremendous surge of efforts to find ways of getting large populations of fish over these high structures," and he adds the gratifying item that his agency has "launched a vigorous program in the area aimed at finding significant answers by the end of 1964."

Mr. Chairman, when we have succeeded in launching a man in space and orbiting him safely three times around the earth, I am confident that our scientists can also find the way of getting salmon over a 500-foot dam on the Yukon and on other American rivers. But funds should be made amply and promptly available to achieve this breakthrough.

Mr. Chairman, there has also been concern as to where ducks will nest when Rampart Dam is completed and a lake somewhat larger than Lake Erie will be created behind the dam. I am confident that as the Rampart Reservoir expands and slowly fills over an 18-year period that the ducks will find ample places in which to nest. In any event there is now a move afoot in various States to reclaim swampy areas which can be used for nesting ducks. If necessary that can be done in Alaska.

Before proceeding to requests of other departments I did want to endorse the requested increase of the Bureau of Commercial Fisheries for $1,157,000 for North Pacific high seas and inshore research.

The sum of $510,000 will be used for biological research on salmon and related species in Alaska and the Pacific Northwest. I have mentioned to members of the subcommittee the need for wider research, including investigations to determine growth and mortality rates of fish families, their movements, and the effects of fishing.

A second amount of $197,000 would be used for biological investigations in areas off Alaska and the Pacific Northwest that are or may be fished by foreign trawl fleets. We do not at this time know what stocks of fish live in these coastal areas.

The remainder of this request for $1.157 million, the sum of $450,000, would be used for research on salmon and related species on the high seas of the North Pacific Ocean and Bering Sea.

We are only now beginning to comprehend the value of our sea wealth. We need substantial additional research to fill in what has been far too sketchy a knowledge of our seas' resources.

Finally, let it be noted that we have expended $13,787,064 on creating, or developing, or rehabilitating the fisheries of 21 foreign nations, some of whose fishery activities are actually competing with ours.

These countries are: Republic of China, Indonesia, Philippines, Thailand, Vietnam, Ethiopia, India, Liberia, Pakistan, Turkey, Spain, Peru, Korea, Laos, Iceland, Yugoslavia, El Salvador, Tunisia, Somali, Cambodia, and British Guiana.

I for one cannot subscribe to the idea that we should do less for our fishery resources. In this connection I would like to insert at the end of comments on our Nation's fishery needs and requests, a summary of our generosity in this field to other countries:

Agriculture and natural resources

FISCAL YEAR 1955 AMOUNT

Fisheries:	
Far East:	
China: Ocean fisheries improvement	$204,000
Indonesia:	
Expansion and modernization of marine fisheries	224,700
Expansion of inland fisheries	51,000
Philippines: Fisheries development	82,000
Thailand: Fisheries	59,000
Vietnam:	
Development of inland fisheries	3,000
Development of marine fisheries	95,000
Near East, Africa and south Asia:	
Ethiopia: Fisheries survey	10,200
India: Project for modernization and expansion of marine and inland fisheries and exploratory fishing program	278,100
Liberia: Marine and fresh water fisheries	22,000
Pakistan: Karachi fish harbor	364,000
Turkey: Purse seine fishing specialists	6,500
Peru: SCIPA project fisheries	32,061
Total	1,431,561

FISCAL YEAR 1956 AMOUNT

Fisheries:	
Far East:	
China (Taiwan):	
Fishing fleet rehabilitation	5,000
Fish propagation (RETSER)	8,000
Indonesian Republic: Expansion and modernization of marine and inland fisheries	150,498
Korea: Fishing boat construction	1,000,000
Laos: Inland fish culture	13,450
Thailand: Fisheries	71,000
Vietnam:	
Development of inland fisheries	13,500
Development of marine fisheries	46,000
Near East and south Asia:	
India: Expansion and modernization of marine and inland fisheries	437,520
Pakistan:	
Fisheries development: West Pakistan	371,375
Fisheries development: East Pakistan	129,295
Turkey: Purse seine fishing specialists	10,000
Africa:	
Ethiopia: Fisheries survey	7,000
Liberia: Marine and fresh water fisheries	25,280
Europe:	
Iceland: Canning industry team for the fish industry—3d country training	4,600
Yugoslavia: Fisheries	14,020
Latin America:	
El Salvador: Fisheries	15,055
Peru: Fisheries development program (SCIPA project fisheries)	33,910

Agriculture and natural resources—Continued

FISCAL YEAR 1957 AMOUNT

Fisheries:	
Far East:	
China:	
Fishing fleet rehabilitation program	$17,000
Fisheries	13,000

PUBLIC HEALTH SERVICE

After three quarters of a century of flagrant neglect of the health of Alaska's Indians and Eskimos, the responsibility for their medical care was transferred from the Bureau of Indian Affairs to the Public Health Service. Concomitantly the territory of Alaska made substantial appropriations to combat tuberculosis, whose incidence in Alaska among its natives was nine times that of people in the 48 older States. A tremendous improvement in the war against "the white plague" has been registered in Alaska but there is less progress in the fight against other diseases.

The long heritage of Federal neglect in Alaska is graphically revealed by the life expectancy of Alaska's Indians and Eskimos. It is 30 years, as contrasted with 41 years for the Indian in the 48 States and 62 years for the national average of all people.

The work of the Public Health Service in Alaska has in part been handicapped through lack of facilities.

The budget for the Service this year includes two items of particular importance and benefit to Alaska.

1. Funds have been requested with which to purchase $550,000 in supplies and equipment for Alaska in advance of demand. This is extremely wise.

Such purchases might then be brought in before the winter season. It would be more convenient and it would insure the Service's having such supplies on hand when they were needed.

2. The Public Health Service requests $2,097,000 to construct a new 12-bed field hospital at Barrow, Alaska. I might add that the existing inadequate structure has been termed "nonacceptable" for the last 10 years.

The Public Health Service has, I am certain, told you of the existing facilities which seem incredible in this modern day and age. Barrow is one of the largest native villages in the State. Its 1,600 inhabitants live about 8 miles southwest of Point Barrow, the northernmost point in the United States.

The new field hospital would serve as a maternity, medical, and holding-bed field hospital. Patients requiring surgery and specialized treatment would be flown to hospitals in Fairbanks and Anchorage.

I consider this expensive care and I am hopeful that as our scientific knowledge improves we will find it more feasible to expand the new hospital and eliminate the air transportation to cities further south. However, today there are no roads which connect Barrow to any other city. This, incidentally, is the plight of the majority of Alaska's communities. It is painful heritage of a total 40-year exclusion of Alaska—from 1916 to 1956—from the benefits of Federal-aid highway legislation.

FOREST SERVICE

Alaska has more acreage set aside in national forests than any other State in the Union—20,742,224 acres. And yet, less funds by far are expended per acre on the protection and utilization of the national forests in Alaska than in any other State. This is of grave concern to me. Although I support the increase in funds requested for the Forest Service, I hope that it will carefully reexamine the formula under which these funds are allocated for use in the various States to make certain that sufficient funds are devoted to the multiple-use development of the national forests in Alaska. I ask that tables showing the distribution of the funds appropriated to the Forest Service be printed at the conclusion of my remarks.

I am concerned also with the lack of forest highways and forest development roads in the national forests in Alaska. In the over 20 million acres of national forests in Alaska there are only 221 miles of forest highway.

This underdevelopment of the great national forests in Alaska has not come through happenchance. It has come about, I regret to say, because through the years as a Territory, the amount of funds which would have been spent on the development, protection, and utilization of these forest acres had Alaska been a State were taken from Alaska and used to develop and manage the national forests in other States.

One example will suffice.

In 1938, the appropriation of $9,333,333 of forest highway funds, apportioned to Alaska on the same basis as to the States, would have given Alaska $867,726. Instead, over the vigorous protests of Alaska's voteless Delegate, Anthony J. Dimond, Alaska was arbitrarily limited by the Congress to the flat sum of $350,000. This was not an economy measure. The money thus taken from Alaska did not revert to the U.S. Treasury. The $517,726 of which Alaska was deprived was distributed among the States. Thus has it been through the years.

It is no wonder therefore that the great forest resources of the national forests in Alaska remain relatively undeveloped and inaccessible.

It is my intention to support and work for the early enactment of increases in the appropriations authorized to carry out the President's program for the development of our national forests. There is need to increase the authorized annual appropriations far beyond the amount indicated in the budget. The President's program calls for the expenditure of a total sum of $1,263,484,000 to be spent in the 10 years during fiscal years 1963 through 1972. There is great need for the authorization of $40 million for fiscal year 1963 to be increased drastically—far beyond the $10 million increase which it is anticipated will be recommended.

I request that two letters addressed to me by the Forest Service relating to highways and development of roads in Alaska be printed at the conclusion of my remarks.

I appreciate this opportunity to testify before the subcommittee on behalf of my State, Mr. Chairman. If there should be any information required which I can provide I will be most happy to make it available to you.

Detailed statements of obligations by geographic location for Forest Service

Location, appropriation, and financial project	Obligated, 1961	Estimated, 1962	Estimated, 1963
Alabama:			
Forest protection and utilization:			
Forest land management:			
National forest protection and management (includes advance from "Cooperative range improvements")	$598,322	$896,900	$1,007,600
Fighting forest fires	28,742	(1)	(1)
Insect and disease control	25,241	35,500	39,000
Forest research	315,659	443,500	443,500
State and private forestry cooperation	378,541	465,200	465,200

[1] See "Undistributed."

[2] Represents repayment to "Expenses, brush disposal," of funds advanced for financing 1960 obligations for fighting forest fires. These obligations were included in the fighting forest fires distribution by States for 1960.

[3] The amounts for 1962 and 1963 have not been distributed by States. Locations for expenditures of emergency firefighting funds cannot be forecast with any degree of accuracy. Both the amounts and locations will vary from year to year which distorts comparison of fund availability. Also amounts in the regular appropriation may be supplemented depending upon the seriousness of the fire situation.

[4] Represents recovery of prior-year obligations.

DEPARTMENT OF AGRICULTURE, FOREST SERVICE,
Washington, D.C., February 26, 1962.

Hon. ERNEST GRUENING,
U.S. Senate, Washington, D.C.

Dear SENATOR GRUENING: We believe the following information sets forth the needs for road and highway improvements in Alaska concerning which you wrote on February 13, 1962.

The report of the Secretary of Commerce on the forest highway study required by section 3(b) of the Federal Highway Act of 1958[1] gave needs on roads of (1) primary importance to the State, counties, or communities within, adjoining, or adjacent to the national forests which have not been designated as forest highways, and (2) roads which are now designated forest highways. For Alaska, the figures are as follows:

	Miles	Needs (thousands)	
		Fiscal years 1959–71	After fiscal year 1971
(1) Roads not designated as forest highways	396.9	$61,340	$28,384
(2) Roads designated as forest highways	254.5	63,893	40,879
Total	[1] 651.4	125,233	69,263

[1] Of this total, about 430 miles are not now in existence.

Of the above total mileage, all but 34 miles are in the Alaska Federal-aid system. In addition to their importance to the State, these highways are of great importance for forest protection and administration. They receive heavy use by the general public for local and intercommunity travel and by people visiting the forests for recreation and other purposes. The need for improvement of these highways to adequate standards, and construction of the mileage that is now not in existence, is a matter of great concern to the Forest Service. The development of the timber and other resources of the national forests in southeastern Alaska is to a great extent dependent on the improvement and extension of the forest highway system. As you know, it has been necessary to arrange for substantial highway improvements adjacent to communities as part of the effort to attract pulpmill installations into Alaska.

Appropriations for forest highways are made to the Department of Commerce and are administered by the Bureau of Public Roads. Due to the importance of these highways to the national forests the regulations for administering forest highways provide for participation by the Forest Service jointly with the State and Bureau of Public Roads in designating roads as forest highways and programing funds.

Under the current authorization, the annual apportionment to the State of Alaska is about $2,876,474.

You will recall that there is another system of roads called forest development roads. These roads typically branch out from the forest highway system and provide access for the protection, development, and multiple-use management of the national forests. The development program for the national forests submitted to the Congress by President Kennedy September 21, 1961, provides for the construction in Alaska of 371 miles of these forest development roads at a cost of about $26 million in fiscal years 1963–72. These roads are for access to timber (220 miles), recreational development (76 miles), and other national forest purposes (75 miles). Their construction is essential for the orderly development of the wood, water, forage, wildlife, and recreation resources of the national forests at the rate foreseen as necessary to meet demands for the use of these resources on a continuing basis during the next 10 years and at the year 2000.

The special problems of Alaska must be considered in their true light so that adequate provision may be made for the improvement of the public highway network essential for the development and social and economic welfare of the State.

Sincerely yours,

RICHARD E. MCARDLE, *Chief.*

[1] Committee Print No. 16, Committee on Public Works, House of Representatives, 86th Cong., 2d sess.

DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington, D.C., March 2, 1962.

Hon. ERNEST GRUENING,
U.S. Senate.

DEAR SENATOR GRUENING: This responds to the telephoned request of March 1 from your staff for information concerning forest development road authorizations, the status of appropriations, and the bill numbers of pertinent bills that have been introduced that bear on this subject.

You know, we are sure, that forest highways are in a category of their own. The present forest highway authorization is $33 million annually. This amount is appropriated to the Department of Commerce and is allocated to the States on a formula basis which is established by law. The allocation to the State of Alaska now is $2,876,474.

Authorizations for forest development roads are contained in the same biennial highway authorization bill. These funds are appropriated to the Department of Agriculture. The most recent such bill, enacted 2 years ago, provides authorizations for forest development roads of $35 million for fiscal year 1962 and $40 million for fiscal year 1963. The full amount of the authorization has been included in the appropriations for fiscal year 1962 and the budget for fiscal year 1963, now under consideration by the Congress.

In the budget for fiscal year 1963 there is a commitment by the administration to propose legislation to increase the fiscal year 1963 authorization from $40 million to $50 million; and a further commitment that if this new obligational authority is granted, a supplemental appropriation for fiscal year 1963 of $6,500,000 is anticipated to liquidate obligations incurred under this additional authorization. Based on Forest Service experience, this amount of cash would permit obligating the full amount of the possible additional authorization.

A bill dealing with all of the authorizations that are usually contained in the biennial highway authorization, for fiscal year 1964 and fiscal year 1965, has been introduced. It is H.R. 9725 by Congressman Fallon. It has been referred to the Committee on Public Works. It continues the figure of $40 million as the amount to be authorized for forest development roads for both fiscal year 1964 and fiscal year 1965.

No decision has yet been made as to the authorization amounts the administration will recommend for this item for fiscal year 1964 and fiscal year 1965.

You asked to be provided with available figures on road needs within the national forests. The development program for the national forests, which was sent to the Congress by President Kennedy on September 21, 1961, calls for the construction during the period fiscal year 1963 through fiscal year 1972 of about 79,400 miles of multiple-purpose roads, and 8,000 miles of trails. It also calls for necessary maintenance, and for partial construction of some of this mileage by timber purchasers. The published report lists a total dollar figure as the estimated required Federal expenditures for these roads of $1,212,484,000 for construction and reconstruction, and in addition the equivalent of $24 million per year for annual recurrent work, largely road maintenance. The 10-year total of these two items is $1,452,848,000, or an average annual figure of $145,284,800. Of the 10-year amount it is estimated that R. & T. 10-percent funds will provide about $189 million, leaving an average annual amount to come from appropriations of about $126 million.

To recapitulate, these figures are:

Total nonrecurrent for 10 years	$1,212,484,000
Total recurrent for 10 years	240,000,000
Total estimated needs	1,452,484,000
Available from R. & T., 10 percent	189,000,000
Difference	1,263,484,000
Annual equivalent	126,348,400

In the early years of the 10-year period the amount would be less than this annual equivalent. Consequently the annual amount by the middle of the 10-year period would probably need to be higher than this annual equivalent.

This 10-year program constitutes only about 17 percent of the long-range road requirements. Ultimate requirements, now projected to be completed in about 40 years, contemplate construction of about 379,900 miles of new roads, reconstruction of about 105,000 miles of roads, plus work on trails and bridges.

80391—62——75

Enclosed are two publications outlining the development program for the national forests. Publication No. 896, the one with the glossy cover, contains a discussion of the road and trail activities on page 18. The other publication contains, page 3, a listing of all the categories of work proposed for the national forests in Alaska under this program. You will notice that the 10-year road needs for Alaska are listed as:

Nonrecurrent	$26,228,000
Recurrent	400,000
Total	26,628,000

If you have further questions, please advise.

Sincerely yours,

RICHARD E. MCARDLE, *Chief*.

GENERAL STATEMENT

Senator GRUENING. One of the notes that keeps cropping out in this testimony of mine, in which I am urging support of the budgets of the Bureau of Land Management, the Bureau of Indian Affairs, the Fish and Wildlife Service, the Public Health Service, and the national forests, is the recurring fact that during the 92 years that Alaska was a Territory it suffered repeated discrimination and exclusions from Federal projects, handicaps which persist to this day and which make it necessary for us to catch up for the many years when we were in effect a colony of the United States and suffered the discriminations and omissions of colonialism.

Therefore, while we seem to be asking for a good deal, we feel we are merely asking for what is just because of the long time when we were not a State and other States moved forward, they were included in Federal-aid programs of various kinds and we were not. And I think that is important to bear in mind.

FUNDS FOR WILDLIFE RANGES

We start, however, with an unusual request, to omit certain funds which were asked for last year. Last year the delegation did not want funds totaling $387,350 which had been earmarked for two wildlife ranges. We felt that these actions taken by the former administration on the eve of its retirement, in contravention of the desire of the State to operate these ranges, were improper.

We feel very properly, as the present Secretary of the Interior points out, that the State should assume certain responsibilties. And, the well-known Arctic wildlife range of some 8,900,000 acres, the setting aside of which has been rejected by the Congress. And it held many hearings on it, and was achieved by an action of former Secretary Seaton after he had known that he would no longer be Secretary and after our Governor, Governor Egan, had requested specifically that this withdrawal be made by the State. So the Appropriations Committee acceeded to our request to withhold those funds, and we trust that no funds from any other part of the Fish and Wildlife Service of the Interior Department will be used for these two wildlife withdrawals which we believe the State can manage and should manage, especially in view of the fact that we now have more withdrawals in Alaska for fish and wildlife purposes than practically all the rest of the States of the Union.

We are glad that we have the great national parks that we have. We have in Alaska two-fifths of the total area of national parks. They are national parks, but we feel the functions from now on of withdrawals should be done by the State.

CADASTRAL SURVEYS

Our statehood act contains a grant to the State of Alaska of approximately 103 million acres of land now owned by the Federal Government. The State is to select this land over a 25-year period.

As this committee knows, only an infinitesimal portion of Alaska has been surveyed. If Alaska is to make its selections these surveys must be speeded up.

It is gratifying to note that the budget for the Bureau of Land Management for fiscal 1963 is substantially increased over that of the current year.

The amount budgeted for cadastral surveys for fiscal year 1963 is $4,490,000. While this is substantially more than the fiscal year 1962 figure of $3,732,000, it is nevertheless considerably less than the Bureau of Land Management's reqeust to the Bureau of the Budget, which was $5.8 million.

I feel certain that that request for $5.8 million would not have ever gone to the Bureau of the Budget unless it could be used.

Therefore, I urge that the subcommittee restore the funds denied by the Bureau of the Budget.

Restoration of these funds will provide the means by which the orderly land transferral in Alaska can be more rapidly accomplished.

Alaska's development as a State is seriously impeded by the delay in land transfer.

Here again we confront a situation and an overdue need resulting directly from long-standing discrimination against Alaska. While Alaska was a Territory, land surveying proceeded at a snail's pace in contrast with what was being done elsewhere under the flag.

At the first statehood hearing held in April of 1950 in the 81st Congress before the Senate Committee on Interior and Insular Affairs, Senator Clinton P. Anderson, who was presiding, and incidentally, is the only member of that committee still in the Senate, after listening to the testimony on what had been done, or rather had not been done, in the matter of land surveying in Alaska, summed up the situation by pointing out that at the rate the Federal Government had been proceeding it would require 17,000 years to complete Alaska's land survey. Think of it, 17,000 years. There has been slight increase in the rate of surveys, but the huge backlog of unsurveyed Alaskan lands is still with us. The Bureau of Land Management has testified this year that approximately 375 million acres of public domain remains to be surveyed, which is roughly the total land area of Alaska.

Now the requirement of getting the 27 percent of the Federal land in Alaska granted Alaska by the Statehood Act makes drastically increased rate of survey imperative. Here too, this is an investment rather than a mere expenditure, for the land cannot be taken over and made productive and revenue producing until it is surveyed. So I strongly urge the committee to grant the BLM's request for that $5.8 million.

BUREAU OF INDIAN AFFAIRS PROGRAMS

The Bureau of Indian Affairs requests $197.4 million for fiscal year 1963. This is an increase of $33.1 million over the current budget, and I am reliably informed the sum could be enlarged by $17 million, based on requests originally made to the Bureau of the Budget. So I suggest that unfinished BIA work could be started immediately.

In Alaska there are 43,000 natives—Eskimos, Indians, and Aleuts. The program of the BIA directly affects the citizens, specifically, and the State, generally.

Three program goals have been announced by the BIA. They are—

(1) Maximum Indian, Eskimos, and Aleut economic self-sufficiency;

(2) Federal participation of Indians, Eskimos, and Aleuts in American life;

(3) Equal citizenship privileges and responsibilities for Indians, Eskimos, and Aleuts.

I endorse each of them vigorously. I would think that they could best be accomplished through broad programs which would implement education, economic opportunity, health measures, and living accommodations.

Alaska's suggested share of education and welfare would be $9,277,000. School expenses in Alaska are high. This is due to the isolation of a very large number of boarding schools which BIA operates and in which the children live on a 24-hour basis. So there is need for teachers and counselors in the resident schools.

SCHOOL FACILITIES

I have a list here of the various schools that are asked for. They all exist in places where there either is no school, or the school population has far outgrown the present capacity, or the school was built a generation or two ago and is falling apart. I will not detail each of these. They will be found in the written record. They total 16.

Now I come back to my recurrent theme. The reason for these seemingly numerous items for additional school facilities which we ask for now is because in the matter of education and other essential needs for the Indians and Eskimos of Alaska, throughout Alaska's history as a Territory, there has been discrimination in appropriations and legislation. This applies to other fields as well as to our native population. And this statement can be fully documented. Appearing for the first time before the House Interior Department Appropriations Subcommittee on December 29, 1933, delegate Anthony J. Dimond, whom I know the chairman of this entire committee will remember, pointed this out. He had just been elected in 1932 and was a great delegate. In testifying he said:

> Now to make a comparison, I tried to figure out how the Indians of Alaska, who are considered generally in a ward status are treated as compared with the Indians of the United States, and I find they have not in the past obtained in Federal aid of any kind more than one-third as much. I do not know why this discrimination occurred unless it was because they did not make war on the whites and kill off the settlers.

Mr. Chairman, that condition, that difference in treatment to Alaskans' disadvantage, has long existed when Tony Dimond so testified in 1933. It continued to exist throughout all the years as a Territory. It was one of the examples of what can properly be described as colonialism. So our task, now that Alaska has become a State, as I pointed out, is to try to catch up. It is pathetic to contemplate some of the fine young men in our native communities, with latent talents and abilities, who if only they had had, and were now afforded, educational opportunities to which all Americans should be entitled, could develop these talents and make them available to State and Nation.

The successful functioning of our democracy is based on an educated, enlightened, trained electorate. Indeed, I have stated on more than one occasion my deep conviction that democracy and education are one and inseparable. The territorial authorities, and for 3 years the State authorities have, I know, performed most creditably in support of primary and secondary education. A larger portion of the budget in Alaska than in most other political entities has gone to elementary education. But the Indians and Eskimos in their federally conducted schools have, through lack of adequate provision, lagged behind. Therefore our task now is, belatedly, to enable them to catch up and to give this generation of schoolchildren what their parents and even their older brothers and sisters lacked. So I urge, I plead, with the committee, to let every one of these school items stand.

As education is important, so is the need to make it possible for all Americans to be economically independent and self-sufficient.

Alaska's natives demand no doles. They do deserve and they will utilize opportunities making possible for utilization of their skills and resources.

I am happy to support the Bureau's request for funds totaling $2,080,000 to be administered through the proposed Division of Economic Development. Alaska's share in this new program would be $426,042.

ALASKAN STUDENTS AT RCA SCHOOL IN NEW YORK CITY

I would like to mention in passing that the Radio Corp. of America is well aware of the talents of Alaskan natives. Ten of these young men are attending an RCA school in New York City where they are trained as electronic technicians, to be then employed by RCA to man company posts on the White Allice communications system and on the ballistic missiles early warning system in Alaska. They will be graduated in August.

A second group of 10 has begun to receive instruction in the RCA school in Los Angeles.

These young men have shown zeal and ability for their work, their marks have been highly creditable, and RCA officials believe the program can be extended substantially and jobs will therefore become available for several hundred young Alaskans whose services are not now being utilized and whose earning capacity, due to lack of training, is insufficient.

Such a development of human resources can be accomplished through joint efforts of private business and the Federal Government.

On February 21, 1962, I wrote the Secretary of the Interior, out-

lining the potential savings of the program in the terms of human and financial resources.

Mr. Chairman, this expanded long range human improvement could begin with July 1, 1962 classes in Los Angeles. An additional amount of $400,000 for fiscal year 1963 would make it possible to train 90 Alaskan natives and pay their transportation to the RCA school in California.

Thereafter, yearly appropriations would, of course, be required to keep the program moving. However, this is a sound investment since savings in the long run would more than offset training costs.

I therefore request that the subcommittee consider favorably the appropriation of an additional $400,000 to start the program July 1 of this year.

USE OF ALASKAN NATIVES IN ARCTIC STATIONS

Today the attrition rate of non-Alaskans working for RCA on its far-flung Arctic and sub-Arctic stations in Alaska is quite high. Men far away from home, untrained to cope with the solitude and unaccustomed to the climate in which they work, will normally want to leave their employment as soon as possible. Alaskan natives would not have this problem. RCA estimates that the use of Alaskans would reduce monthly personnel attrition from 4 percent to one-fourth of 1 percent.

By 1971, the attrition cost would have dropped by half a million dollars yearly if Alaskan natives were used as technicians. It is noteworthy to point out there would be added substantial savings to the Bureau of Indian Affairs and the Bureau of Public Health per year if the Department of the Interior found it no longer necessary to pay the estimated monthly relief benefits of $55 to each Eskimo and Indian.

I am certain that Radio Corp. of America representatives would appreciate the opportunity to appear before this subcommittee to outline in detail what they feel could be done in this area of utilizing human resources.

Secretary Udall has been told its possibility, and I am awaiting his comments.

A similar project to train airplane mechanics in demand by our expanding aviation industry is under discussion.

MOUNT MCKINLEY NATIONAL PARK

The National Park Service has budgeted not quite $400,000 toward improvement and management in Mount McKinley National Park. Specifically these funds would be spent as follows: Management and protection, $156,000; roads and trails, $107,000; building, utilities, etc., and rehabilitation of hotel water system, $123,000.

This is little more than repair and maintenance. There are still no accommodations within the 1,939,000-acre park from which the glory of 20,350-foot Mount McKinley, loftiest peak in North America, and the reason for the park's existence, can be seen.

The hotel, situated at the park entrance on the Alaska Railroad built 25 years ago, is 60 miles from where satisfactory views of the mountain can be obtained. There will be no accommodations for the influx of tourists who, with the fulltime operation of the ferry system from Prince Rupert to Haines, may be expected in the summer of

1963, unless the Park Service makes an effort to get funds for a lodge at the end of the 90-mile highway into the park, which was originally intended to be a complementary unit to the hotel at the entrance.

Roughly, one-third of the funds sought will be for rehabilitating that hotel's water system. The $107,672 item is essentially for improving the highway which has not been too safe. It was not designed as a park road in the first instance, but was a trail in existence before the park's establishment in 1917 to the Katishna mining district which lies just north of the central portion of the park's 150-mile northern boundary.

The Park Service's only expenditures have been to improve that highway, which skirting the park's northern boundary, misses some of the area's most scenic aspects.

Katmai National Monument

For Katmai National Monument, I am glad to note the proposed expenditure of $100,000 as part of a roads and trails program for constructing a 23-mile low-grade road from Brooks River to Windy Creek, for it is pertinent that although this monument of 2,697,000 acres, the largest unit in the entire Park Service was established 35 years ago, the Federal Government has not built one foot of road or trail within it.

As a result the unique natural phenomena which caused the monument to be established are virtually inaccessible to the visiting public. Accommodations to the extent of five camps have been admirably supplied by private enterprise. But though an Alaska air carrier, Northern Consolidated Airlines, transports visitors by plane from Anchorage and furnishes them comfortable lodging, good food, and to the excellent fishing of the region's lakes and streams, they cannot visit the famous Valley of Ten Thousand Smokes, or the other sensational phenomena caused by the great volcanic upheaval of 1912, either by vehicle or foot, unless they are prepared to hike for days carrying food and sleeping bags on their backpacks. Hitherto and now they can only glimpse these sensational areas from the air.

I am hopeful and confident that the National Park Service's request for this $100,000 makes the start of a proper and previously total development program and trust that it will be only a beginning.

There is little point in setting aside the splendid and vast park areas without making their enjoyment possible.

Gradually, I believe, the National Park Service will do what it can to provide park facilities within its parks and monuments in Alaska. But "gradually" is no longer the answer. The needs are more pressing.

I have discussed the problem with Director Wirth and have found him interested, sympathetic, and eager to act.

Visitors Facilities at Glacier Bay National Monument

I am therefore requesting the addition of $150,000 in the National Park Service's appropriation for fiscal year 1963 which will be used for the construction of visitor facilities in the 2,697,200-acre Glacier Bay National Monument, a superlative scenic area northwest of Juneau.

The National Park Service informs me that private capital is unavailable to provide such facilities.

The money I request would pay for construction of dining room, a store, and overnight accommodations for 10 guestrooms to house 40 persons. These facilities could be expanded. The fiscal year 1963 presently includes a request for $34,200 for the purchase of two new electric generators to replace existing equipment which cannot handle the existing load. The new generators, I am informed, would adequately handle the power requirements of the visitor facilities.

Glacier Bay has been a neglected jewel. Its splendor is little known to the outside world. From tidewater Mount Fairweather rises 15,300 feet. Beginning late this coming fall and in full swing by the summer of 1963, 1 of 3 ferries carrying over 100 cars each will be operating daily out of Prince Rupert up the Inside Passage and stopping at its ports, including Juneau. The visitors will want to see Glacier Bay National Monument.

In response to a letter of mine, Assistant Secretary of the Interior John A. Carver, Jr., wrote me on March 5, 1962, as follows:

> The need for overnight accommodations for visitors in the monument is reccognized * * * a reasonable program which will provide these facilities with Federal funds is justified * * * please be assured that this Department will support proposals to place such developments in high priority.

I should like at this time to place in the record my letter to the Secretary, dated February 7, 1962; his reply of March 5, 1962, from which I have quoted; and my response of March 6, 1962, to Secretary Carver.

Senator BYRD. The Senator's request will be granted.

(The letters referred to appear on pp. 1156–1158.)

MISSION 66

Senator GRUENING. The fact is that Mission 66—a great, needed, and in every way a highly desirable program, which aims to prepare our national parks wonderland for the increased population that will seek inspiration and recreation there by the middle of this decade, has not come to Alaska, certainly not in appreciable degree. I dislike to point out, but I must, that this is just another example of how Alaska during its Territorial days was bypassed in this field as in nearly all other aspects of Federal responsibility. We are trying, Mr. Chairman, to keep some of our American tourists dollars at home. But our superb Alaska parks and monuments will be unattainable unless they begin to receive equal or equivalent treatment with our parks and monuments in the other 49 States.

President Kennedy has issued an inspiring call to develop our natural resources and expand our outdoor recreational facilities. I cannot, therefore, too strongly urge the inclusion of these modest amounts for overnight visitors accommodations in Glacier Bay National Monument, so that some accommodations may be ready by the summer of 1963.

FISHERIES

Alaska's coastline is longer than the combined Atlantic, Pacific, and gulf coastlines of the 48 older States. It is the only American State's coastline fronting on two oceans—the Pacific and the Arctic, with the Bering Sea coastline for good measure in between. The abundance of these waters and of Alaska's rivers and lakes produces a substantial share of the livelihood of the State's residents—as well as of many out-of-Staters—and contributes substantially to the national income. Alaska has had—although now seriously depleted and further threatened by foreign encroachment—the Nation's greatest fishery resource, above all the Pacific salmon, and also halibut, king crab, and other species.

The work of the Bureau of Commercial Fisheries, the Federal agency concerned with this resource, is therefore important to the State.

I do not at this time intend to cite each budget item but do wish to mention some of particular interest.

RESEARCH ON FISH PROTEIN CONCENTRATE

For research on fish protein concentrate $120,000 is requested. Because of the increasing interest in the great value and relatively low cost of the concentrate as a weapon for democracy against hunger and communism, I would like to see this sum substantially increased. I am informed that inadequate research moneys have curtailed exploration into diversified uses for fish protein concentrate. In a time in history when much of the world's population suffers from a lack of protein in its diet, this country should be moving ahead in the vital area of research. This work is in the Nation's interest and merits support. We have to date failed to use properly the available harvest of the sea. In the words of our President—"Let us begin."

It seems appropriate to note at this point in the record that the research funds request to the Bureau of the Budget was $10 million and that this figure was reduced to the present $7,555,000.

NEW FISHERY RESEARCH VESSEL

The vast potential of the North Pacific fishery resources is barely tapped. Included in the Bureau's request is a new fishery research vessel for use in the North Pacific and Bering Sea. The Bureau of Commercial Fisheries has requested $15,000 to fund the design of the proposed $3 million vessel. The United States now has no adequate vessel for this purpose. It is hoped construction of the floating laboratory may start in fiscal year 1963. It should.

Already we know that other nations, particularly Japan and Russia, are expanding their fishing operations in the North Pacific and moving ever closer to our shores. It is more than a serious threat. It is a shocking reality. We are in no position to compete for markets or to make responsible treaties if we are handicapped through lack of knowledge which will become available if we seek it. Indeed, it is depressing to note that in 1961, the United States, for decades among the top three nations in the total catch of fish, has now for the first time dropped to fifth place behind Russia, Red China, Japan, and Peru.

AUKE BAY BIOLOGICAL LABORATORY

While I am discussing budget items concerning the Bureau of Commercial Fisheries of the Fish and Wildlife Service, I want to report, Mr. Chairman, that I recently visited the Auke Bay Biological Laboratory which is located not far from Juneau. I found the staff of the Laboratory knowledgeable and hard at work.

It needs additional laboratory space and warehouse facilities and it is my understanding that these items will be requested in the 1964 budget.

STUDIES ON YUKON RIVER

More pressing at this time is the immediate need for additional funds to complete the fisheries and wildlife studies on the Yukon River in connection with the great Rampart Dam project. This—which has the greatest potential of any one hydroproject under the American flag will generate 2½ times the power of Grand Coulee, and have useful concomitants in flood control and river navigation. Though larger than any other American project, it is no greater than several dams nearing completion and under construction in Soviet Siberia. It would begin in a substantial way the development of Alaska's tremendous but almost totally unused hydroelectric potential, less than one-fourth of 1 percent of Alaska's great river and lake resources have been utilized. Indeed, the only Federal hydroproject in Alaska is the Eklutna power project, of only 30,000 kilowatts which supplies power to Anchorage and two adjacent REA cooperatives all of which will shortly need more power. Just as in the other fields, Alaska as a territory was neglected by the distant Federal authorities while in the lower 48 States, Boulder Dam, Grand Coulee, Bonneville, Hungry Horse, and scores of other hydroprojects have long since been completed—essential concomitants of a modern society.

But whenever a big dam is to be built studies to record the impact on the fish and wildlife resources of the region are both essential and mandatory, and additional funds will be needed to complete these.

Particularly pertinent is the increased appropriation $1,075,000 of which $252,732 will come from Kennedy-Saltonstall funds, thus making a net increase of $822,268 for—so the item reads:

Research on fish migration over dams: To provide for expansion of effort with regard to emergency problems involving fish passage at high dams.

It is my hope that whatever portion of this item may be needed will be applied to the Yukon River fishery.

In his testimony before the House subcommittee, Donald L. McKernan, the able director of the Bureau of Commercial Fisheries of the Fish and Wildlife Service, pointed out that—

(1) Scientists have made solid progress in the fields of electrical guiding and the development of more efficient and economical fishways. This may be the answer to guiding the salmon fingerlings downstream to avoid injury or destruction in the dam's turbines.

(2) Studies have also shown that a reduction in the flow of "transport" water, a flow released to attract fish into a fishway. The 2 feet per second velocity, formerly regarded as minimal, has successfully been reduced to 0.7 foot per second, without loss in attraction sufficiency.

PROBLEM OF PASSING FISH OVER DAMS

(3) Finally as Mr. McKernan points out—the problem of passing fish over high dams has not been solved, and I quote his words:

> We need a tremendous surge of efforts to find ways of getting large populations of fish over these high structures—

and he adds the gratifying item that his agency has—

> launched a vigorous program in the area aimed at finding significant answers by the end of 1964.

Mr. Chairman, when we have succeeded in launching a man in space and orbiting him safely three times around the earth, I am confident that our scientists can also find the way of getting salmon over a 500-foot dam on the Yukon and on other American rivers. But funds should be made amply and promptly available to achieve this breakthrough.

Mr. Chairman, there has also been concern as to where ducks will nest when Rampart Dam is completed and a lake somewhat larger than Lake Erie will be created behind the dam. I am confident that as the Rampart Reservoir expands and slowly fills over an 18-year period that the ducks will find ample places in which to nest. In any event there is now a move afoot in various States to reclaim swampy areas which can be used for nesting ducks. If necessary that can be done, also, in Alaska.

NORTH PACIFIC HIGH SEAS AND INSHORE RESEARCH

Before proceeding to requests of other departments I did want to endorse the requested increase of the Bureau of Commercial Fisheries for $1,157,000 for North Pacific high seas and inshore research.

The sum of $510,000 will be used for biological research on salmon and related species in Alaska and the Pacific Northwest. I have mentioned to members of the subcommittee the need for wider research, including investigations to determine growth and mortality rates of fish families, their movements, and the effects of fishing.

Then there are various other fish items.

EXPENDITURES ON FISHERIES OF FOREIGN NATIONS

Finally, let it be noted that we have expended $13,787,064 on creating, or developing, or rehabilitating the fisheries of 21 foreign nations, some of whose fishery activities are actually competing with ours.

These countries are—

Republic of China
Indonesia
Philippines
Thailand
Vietnam
Ethiopia
India
Liberia
Pakistan
Turkey
Spain
Peru
Korea
Laos
Iceland
Yugoslavia
El Salvador
Tunisia
Somali
Cambodia
British Guiana

I for one cannot subscribe to the idea that we should do less for our own fishery resources. In this connection I would like to insert at the end of comments on our Nation's fishery needs and requests, a summary of our generosity in this field to other countries.

Senator BYRD. The Senator's request will be granted.

(The information referred to appears on p. 1161.)

PUBLIC HEALTH SERVICE

Senator GRUENING. After three quarters of a century of flagrant neglect of the health of Alaska's Indians and Eskimos, the responsibility for their medical care was transferred from the Bureau of Indian Affairs to the Public Health Service. Concomitantly the Territory of Alaska made substantial appropriations to combat tuberculosis, whose incidence in Alaska among its natives was nine times that of people in the 48 older States. A tremendous improvement in the war against "the white plague" has been registered in Alaska but there is less progress in the fight against other diseases.

The long heritage of Federal neglect in Alaska is graphically revealed by the life expectancy of Alaska's Indians and Eskimos. It is 30 years, as contrasted with 41 years for the Indian in the 48 States and 62 years for the national average of all people.

The work of the Public Health Service in Alaska has in part been handicapped through lack of facilities.

The budget for the Service this year includes two items of particular importance and benefit to Alaska.

1. Funds have been requested with which to purchase $550,000 in supplies and equipment for Alaska in advance of demand. This is extremely wise.

Such purchases might then be brought in before the winter season. It would be more convenient and it would insure the Service's having such supplies on hand when they are needed.

HOSPITAL AT BARROW, ALASKA

2. The Public Health Service requests $2,097,000 to construct a new 12-bed field hospital at Barrow, Alaska. I might add that the existing inadequate structure has been termed "nonacceptable" for the last 10 years.

The Public Health Service has, I am certain, told you of the existing facilities which seem incredible in this modern day and age. Barrow is one of the largest native villages in the State. Its 1,600 inhabitants live about 8 miles southwest of Point Barrow, the northernmost point in the United States.

The new field hospital would serve as a maternity, medical, and "holding bed" field hospital. Patients requiring surgery and specialized treatment would be flown to hospitals in Fairbanks and Anchorage.

LACK OF ROADS

I consider this expensive care and I am hopeful that as our scientific knowledge improves we will find it more feasible to expand the new hospital and eliminate the air transportation to cities further south. However, today there are no roads which connect Barrow to any other city. This, incidentally, is the plight of the majority of

Alaska's communities. It is painful heritage of a total 40-year exclusion of Alaska—from 1916 to 1956—from the benefits of Federal-aid highway legislation.

FOREST SERVICE

Alaska has more acreage set aside in national forests than any other State in the Union—20,742,224 acres. And yet, less funds by far are expended per acre on the protection and utilization of the national forests in Alaska than in any other State. This is of grave concern to me. Although I support the increase in funds requested for the Forest Service, I hope that it will carefully reexamine the formula under which these funds are allocated for use in the various States to make certain that sufficient funds are devoted to the multiple-use development of the national forests in Alaska. I ask that tables showing the distribution of the funds appropriated to the Forest Service be printed.

Senator BYRD. It will be done.

(The tables referred to appear on pp. 1166–1185.)

FOREST HIGHWAYS

Senator GRUENING. I am concerned also with the lack of forest highways and forest development roads in the national forests in Alaska. In the over 20 million acres of national forests in Alaska there are only 221 miles of forest highway.

This underdevelopment of the great national forests in Alaska has not come through happenchance. It has come about, I regret to say, because through the years as a Territory, the amount of funds which would have been spent on the development, protection, and utilization of these forest acres had Alaska been a State were taken from Alaska and used to develop and manage the national forests in other States.

One example will suffice.

In 1938, the appropriation of $9,333,333 of forest highway funds, apportioned to Alaska on the same basis as to the States, would have given Alaska $867,726. Instead, over the vigorous protests of Alaska's voteless Delegate, Anthony J. Dimond, Alaska was arbitrarily limited by the Congress to the flat sum of $350,000. This was not an economy measure. The money thus taken from Alaska did not revert to the U.S. Treasury. The $517,726 of which Alaska was deprived was distributed among the States. Thus has it been through the years. And a total of $8 million was thus taken over the last decade and has never been returned.

It is no wonder therefore that the great forest resources of the national forests in Alaska remain relatively undeveloped and inaccessible.

It is my intention to support and work for the early enactment of increases in the appropriations authorized to carry out the President's program for the development of our national forests. There is need to increase the authorized annual appropriations far beyond the amount indicated in the budget. The President's program calls for the expenditure of a total sum of $1,263,484,000 to be spent in the 10 years during fiscal years 1963 through 1972. There is great need for the authorization of $40 million for fiscal year 1963 to be increased

drastically—far beyond the $10 million increase which it is anticipated will be recommended.

I request that two letters addressed to me by the Forest Service relating to highways and development of roads in Alaska be printed in the record.

Senator BYRD. The Senator's request will be granted.

(The letters referred to appear on pp. 1186–1188.)

Senator GRUENING. I greatly appreciate this opportunity to testify before the subcommittee, and if any more information is needed, I will be happy to supply it.

Senator BYRD. Thank you, Senator Gruening, for a very good statement. The committee will carefully consider your requests.

Senator Williams of New Jersey, accompanied by Dr. Walford, Director of the Atlantic Marine Game Fish Research Center at Sandy Hook, N.J.

ATLANTIC MARINE GAME FISH RESEARCH CENTER

STATEMENT OF HON. HARRISON A. WILLIAMS, A U.S. SENATOR FROM NEW JERSEY

GENERAL STATEMENT

Senator BYRD. Senator Williams, you may proceed. You have a statement?

Senator WILLIAMS. I have a brief statement before I introduce Dr. Walford, Mr. Chairman.

Mr. Chairman, you and the subcommittee have been kind enough to give me this time to introduce the next witness, Mr. Lionel Walford, Director of the Atlantic Marine Game Fish Research Center which is located at Sandy Hook, N.J.

I appreciate this opportunity, because both Dr. Walford and the center are very welcome additions to the Garden State, and I have had the pleasure of observing both the center and Dr. Walford at work. In September of last year, when the center was dedicated, Dr. Walford and his staff gave me a thorough tour of the facilities there.

I was impressed, but I was even more impressed with Dr. Walford's speech during that same pleasant afternoon. He made it clear that even the rich resources of the ocean can be exhausted or reduced to the point of pathetic scarcity if we do not plan ahead and use the knowledge that research can give us. He gave one example after another of the disappearance of species once common, and he also said:

> We chronicle great events, politics and wars which often decide the fate of nations. But even greater factors are the changes in environment, soil, sea resources, and climate.

To make certain that we do understand what is happening to the resources of the sea, the center is observing changes that have gone unrecorded for too long. It seems to me that its work is a vital investment in the future of our Nation and our people.

Once we took from the soil and did not replenish it, and we nearly learned our mistake too late. We should apply this lesson in other areas, too.

The research center can help us understand what is happening to the game fish in our oceans, and the steps we must take to prepare for the even greater demands of the future. As Secretary Udall pointed out at the dedication in September last year outdoor fishing has become one of the large industries of our Nation and will continue to outstrip our population growth.

Clearly, we must accelerate the work of the center, and it seems to me that Congress had this in mind when it authorized $2.7 million for the research program in 1959. At that time, we had clear recognition of the enormity of the task. But, it is now proposed that expenditures for the next fiscal year be raised only $14,000 above the $160,000 granted for the first fiscal year of work there.

This, it seems to me, is putting a brake on progress. I believe that an appropriation of approximately $800,000 would far better meet the needs of the center and the Nation, and I earnestly hope that the subcommittee will give careful study to these needs.

And now, to give you a far more expert description of the work of the center, I'd like to introduce Dr. Walford. His qualifications are imposing. He has been an author, a consultant on nutrition to the World Health Organization, one of the great living authorities on the resources of the sea, and an editor of the Encyclopedia Britannica. He was head of the Washington Laboratory of the Bureau of Commercial Fisheries of the Fish and Wildlife Service, Department of the Interior, before taking his present assignment.

Incidentally, may I express my deep gratitude to the Department of Interior and to its Bureau of Sports Fisheries and Wildlife, for allowing Dr. Walford to appear before the committee today.

Dr. Walford.

Senator BYRD. Thank you, Senator Williams.

Dr. Walford, the committee will be glad to have your testimony.

ATLANTIC MARINE GAME FISH RESEARCH CENTER, SANDY HOOK, N.J.

STATEMENT OF DR. LIONEL WALFORD, DIRECTOR

GENERAL STATEMENT

Dr. WALFORD. I am going to tell you something about the dimensions of our problem. People from all over the United States fish for recreation and subsistence along the seacoast of every maritime State from Maine to Texas, from Alaska to California and Hawaii. They catch every kind of fish that will take a hook and line, and the number of species which they take is somewhere between 200 and 300.

At the close of 1960 they took nearly 1½ billion pounds of fish. Incidentally, they use many other kinds of fishes which are not game species which they need for bait—fish and invertebrates.

More than 95 percent of the fishes which are taken by recreational fishermen live on our Atlantic shelf. They spend their entire lives on the shelf. They migrate seasonally from far out on the edge of the shelf to very close along the shore into the estuary zone, which we call the inner zone of environment.

Now the number of fishermen and the intensity of fishing is increasing at a fantastic rate. That is to say, about 400,000 fishermen are joining the ranks of recreational fishermen every year. On top of

this, the growth of population and the spread of cities along our seacoast results in changes in the coastal environment and wreaks quite serious damage to the necessary inner zone of environment on which all kinds of coastal fishes depend for their existence.

This process is happening so fast, the processes of destruction by human activities, destruction by pollution, by filling in swamp area, by various modifications of the shore, that we have no records of the changes. Thus we are dealing with a conservation problem of vast proportions and which is changing in nature very rapidly. And we are looking ahead for generations.

Now in taking this long-range view, we may not be benefiting our own generation, but if people two or three generations back had started this sort of work we would be far ahead now.

Our question is how to sustain the productiveness of the coastal resources. The classical way of doing this is to design fishing regulations. For that we must have very exact knowledge about the life histories of the various kinds of coastal fishes. We have to have a continuous measure of the quantities and species caught.

Now commercial statistics are very good, but they tell us about only a fraction of the total take. On the average this fraction amounts to about half, but it varies greatly from species to species.

For many species the commercial statistics tell us about only a very small fraction of the total take. So we have to have a staff of field biologists along the coast to collect statistics on the catch, to gather biological information, to keep a constant record of the take of fish and of changes in environment.

There is certain basic knowledge which we must have on the life history of the species which we now do not have. We must know exactly the patterns of their distribution. I do not mean their total ranges, we must know precisely where the fish live, their rates of growth, the courses of their migrations, their responses to oceanographic conditions.

We have such information for a very small proportion of the total number of coastal species. But we must find ways of restoring the productiveness of the damaged inner zone, that is the coastal zone.

To begin with, we have to find out what damage has been done. This requires a survey of the present conditions and taking inventory of the animals and plants, the condition of the water. This must be done all around the periphery of the country. The area of the coastal wet lands which are essential to fertilizing the waters which the fish need for their nursery grounds must be measured.

And all of these records must be compared with historical records that we can dig up and find. And these are very skimpy, indeed.

Our question is what can be done to replace the productiveness resulting from the damage that we find. However, we will get our answer, I believe, by experimental work in the laboratory and in ponds where we can control conditions of water temperature and food. And thus we will carry on laboratory work for the experimental culture of microscopic plants which are the basic food on which all life in the sea depends, and for the culture of larger plaintain on which fishes depend and for the culture of larval fishes. We look ahead to these practical applications (1) pond culture of those fishes for whom the inner zone is a nursery ground and which are endangered by the dam-

age that is being done to the inner zone; (2) improvement of strains of fishes by selected breeding for rapid growth, disease resistance and other desirable qualities; (3) carefully controlled introductions of species into areas that are poor in sea life. There are several such along our coast; (4) improvement of shore wet lands to enlarge their nursery capacities. And finally, the development of planned programs for the regulation of fishing.

We do not have jurisdiction over fishery resources, but we would make recommendations to States through such organizations as the Atlantic States Marine Fishery Commission, Gulf States Marine Fisheries, Pacific Marine Fisheries Commission.

Senator BYRD. Does that complete your statement, Dr. Walford?

Dr. WALFORD. Yes.

Senator BYRD. Thank you very much for your statement.

Do you have anything else to say, Senator Williams?

Senator WILLIAMS. No, thank you, Mr. Chairman.

Senator BYRD. Senator Morse.

FOREST SERVICE AND BUREAU OF LAND MANAGEMENT

STATEMENT OF HON. WAYNE MORSE, A U.S. SENATOR FROM THE STATE OF OREGON

PREPARED STATEMENT

Senator MORSE. Senator Byrd, if it meets with your pleasure, I would like to put my statement in the record, along with certain inserts, letters, and exhibits, and just give you a very biref summary. Because it is a detailed statement and I know how carefully your committee goes over material that is submitted, and I think I owe it to you to put the statement in the record for your study rather than to take your time when you have all of these other witnesses, many of whom have come long distances, than present this in detail with you this morning, if this meets with your pleasure?

Senator BYRD. The Senator's wish will be granted.

(The statement referred to follows:)

Mr. Chairman and members of the subcommittee, it is a pleasure to appear before this subcommittee, as I have in previous years, to testify on the importance of appropriations to advance the conservation of our natural resources. Again and again this committee has demonstrated its understanding of our conservation responsibility in a most helpful way. It has consistently provided a level of appropriations designed to move ahead with vigor.

FOREST SERVICE BUDGET

The budget before you for the Forest Service represents a $14 million increase over last year. Within this overall increase there are many instances where substantial gains are planned but there are also several instances where the recommended level of appropriations will not fulfill the planned level for the program for the national forests.

When President Kennedy submitted the revised program for the national forests last September he made certain obesrvations; one was that the 1959 schedule was being broadened and intensified as it related to four important programs. These were recreation, timber management, roads, and the acquisition of tracts within existing national forests. He concluded his letter to the Congress with this observation:

"I am confident that this program will be carefully reviewed by the appropriate congressional committee and that significant progress can be made in this important field."

My testimony today is directed toward asking this committee to review whether the budget submitted conforms to the program estimates and in that review to make the necessary adjustments to bring the budget into conformance with that plan.

In the President's presentation a number of significant factors were set forth which in his judgment and the judgment of the Secretary of Agriculture and the Forest Service called for acceleration of the work of the Forest Service. I am sure that this committee has reviewed all of the recommendations and I need not reiterate these facts. On March 3, 11 western Senators set forth for the consideration of Secretary Freeman, several aspects of timber policies which are of concern to the forest products industry. On the question of the allowable cut in the national forest, I would like to include at this point in my statement the text of our letter on this point:

"There is an urgent need for immediate policy review to determine whether the allowable cuts accurately reflect the full potential for harvesting national forest timber. Certainly special attention should be given to those working circles located in areas where there is today a substantial demand for national forest timber and heavy mill capacity. It should be possible to set forth the ultimate or optimum allowable cut and to show clearly the extent to which lack of access, species, or tree utilization and unfilled reforestation and stand improvement needs hinder placing on the market the optimum amount of timber consistent with sustained yield. There should also be a clear understanding of the reason for selecting various rotation ages and other scientific factors which go into the computation of the allowable cut. There are many suggestions to increase allowable cuts, some of which may overlook basic conservation responsibilities. The policy announcements on allowable cuts should also reveal why alternative suggestions may not be feasible.

"We desire that this matter be given a top priority and request that you submit appropriate information to the Senate Committee on Appropriations, including a statement as to whether or not the proposed budget for 1963 will permit timely action."

In view of this request I trust that the Forest Service has advised this committee as to whether the budget before you permits adequate progress on this important matter. The basic problem which confronts us is the continuing and growing demand for national forest timber and the compelling necessity to proceed vigorously to assure that the allowable cuts on commercial forest lands in the national forests are quickly brought to their optimum level. This involves new inventory techniques, accelerated efforts in reforestation, stand improvement, better access, and improvement of utilization. We should insist that there be firm adherence to the principles of sustained yield but we should recognize that within this framework there is room for expansion of the allowable cuts.

This is of particular importance on those national forests which are near communities and which have a substantial capacity to convert standing timber to finished products.

In past years I have called to the attention of this committee the spirited bidding which generally exists for national forest timber. It is an essential part of the free enterprise system that there be an opportunity to compete and that there be, in fact, competition. However what we have been experiencing in the strong competition for national forest timber is a particularly unhealthy situation. In my State of Oregon the average increase over appraised price for national forest timber has been 27 percent and on one forest it reached as high as 84 percent. This is in the face of a long period when lumber prices have been declining. These are averages and thus it is obvious that within these averages there are even higher percentages. These facts indicate in many cases a desperate effort by individual firms to secure enough logs to stay in business. The situation is the direct result of the fact that the supply of raw material is less than the demand. The steps that we have urged will not only help to close this gap to the extent it can be closed, but also will provide better public information on the capability of the national forests in relation to the other timber sources in a given area.

Oregon has more than enough sawmills to effectively utilize the timber that could be offered for sale. Most of our mills are modern and we have a highly skilled labor force in the forest products industry.

There is no doubt that in the years immediately ahead our Nation's population is going to grow significantly. Thus even if per capita consumption of lumber remains the same the use of wood is going to rise.

There is also no doubt that our forests can produce more wood and this can be done under the concept of sustained yield if the level of management is raised. With the plants and workers in place it is economic folly to fail to provide the optimum amount of timber under sustained yield practices. When business fails because we have not closed the gap between supply and demand to the best of our ability, we destroy capital invested both by management and labor in plants, homes, and communities. But above all, we should not forget that the burden always falls harder on the workingman than on anyone else.

For the foregoing reasons I ask that should the Forest Service need additional funds to move ahead more vigorously on timber management, you give sympathetic consideration to its request.

Access roads

On February 26 of this year several of us from the Northwest asked the Chief of the Forest Service whether additional funds could be utilized for the program entitled, "Access Roads." You will recall that this road acquisition program was initiated by a number of us led by your colleague on this committee, the senior Senator from Washington, Mr. Magnuson. Earlier Senator Neuberger transmitted to you the identical response we all received from Dr. McArdle. He pointed out that an additional $4 million could be expended wisely and that this would result in the marketing of 300 million board feet of forest timber and the realization in 1 year alone of $5 million in revenues. When it is recognized that this income will continue in perpetuity, the appropriation of this additional $4 million becomes an expenditure we cannot afford to overlook. With regard to this program I would like to emphasize that it really has just one purpose—to assure the orderly harvest of national forest timber by making timely arrangements to utilize roads already constructed through the national forest by private companies.

In the Douglas fir region of Oregon and Washington there are almost 14 million acres of commercial forest land of which 7.8 million acres or 56 percent is in public ownership. There are 8 million acres of old growth timber and 65 percent of this timber is in public ownership. One Forest Service study shows that 3 billion board feet are lost annually in the region due to mortality in these old-growth stands. This loss equals 25 percent of the annual timber harvest in the region. It occurs because of a lack of an adequate road network. In an extension of this study the Forest Service found that it is both practical and profitable to construct needed roads well in advance of the final harvest of the timber. Interest, maintenance charges, and depreciation on capital investment can be met by returns obtained from timber salvage.

The situation which faces the Forest Service is a practical one. In many areas the demand for timber is great. In some areas there are private roads already serving the national forest timber. These should be made available. In some cases this will make it possible to increase the allowable cut. In other situations the allowable cut is already being obtained from another part of the working circle. Here the benefit will be to capture large losses due to mortality or to assure a better balance between summer and winter logging. Wise use of the forest resources requires that we place in the hands of the forest managers the flexibility to wisely crop the forest. This is what we seek.

Members of this committee may be aware that the Secretary of Agriculture on the advice of the Attorney General and at the direction of President Kennedy is in the process of making a careful and thorough review of Forest Service policies relating to access to the national forests. It is therefore essential during the pendency of this review that we continue to provide the Forest Service with the tested and proven means of offering some improvement in an extremely difficult situation. The $4 million we have requested will do this.

Recreation

I am pleased to note that the Forest Service budget for this year contains a substantial increase for recreation. It is my hope that the committee will also look at the extent to which the planned budget fulfills the requirements for the national forest program. Recreation is one of the fastest growing uses for the national forest. When Secretary Benson presented the program for the national forests to the Congress in 1959, he estimated that recreation visits would reach the level of 130 million annually by 1970. Since that time much new information has been developed, including that prompted by the Outdoor Recreation Commission. This enabled President Kennedy and Secretary Freeman to point

out to us last year that recreation visits by 1972 would reach almost 200 million annually. Recreational uses on the national forests in 1961 exceeded 100 million visits. This is a 273 percent increase over 1950.

Recreation is an important industry in Oregon and our national forests are a key element in its growth but national forest recreational use in Oregon is not as great as in some other States. All I will say to this committee is that if the situation is as critical in other States as I know it to be in my own, we are going to find it necessary to revise our estimates of what needs to be done and to raise our sights considerably. At this point, I would like to include in the record the opening statement from the annual report of the supervisor of the Willamette National Forest, Mr. David Gibney:

"Everyone has an interest in the national forests.

"You may not earn your living in the forest, and you may not play there.

"You may never visit a national forest * * * but your interest in this land is as strong as anyone's, for the national forests belong to you and its multiple benefits are yours as surely as if you worked or played there.

"From the national forests comes lumber for many products—water for power, industry and human consumption—forage for raising cattle and sheep, for food and clothing. On the national forests, in some of the most beautiful country in the United Sttaes, millions of people each year hunt, fish, camp, hike, and enjoy themselves in the outdoors.

"The forest has many uses and each of these is vital to the welfare of the Nation."

It so happens that this forest is one of the most active in the entire United States. Last year the Willamette National Forest deposited over $12 million into the Treasury of the United States. Its 1,600,000 acres were operated at a cost of less than $3 million. This national forest is a great national asset.

I know that this committee is busy and also that it is aware of many intimate aspects of national forest administration. Therefore, I will not place before you the entire report by the forest supervisor. However, I should point out that on this forest in addition to a vast timber business, there are now close to 860,000 recreational visits—triple the amount in 1956. This forest is the third ranking forest in Oregon in recreational use. The Deschutes and Mount Hood have even heavier use.

One of the most pressing needs that exists on the Willamette Forest is the making of an adequate provision for the development of the great recreational potential in the Waldo Lake area, high in the crest of the Cascade Mountains. This area has been the subject of a great deal of careful deliberation by many people of my State with a genuine interest in sound multiple-use forest management. My estimate of the sentiment of the people in my State is that they want a rational development which places heavy emphasis on promoting the highest degree of well-rounded recreational opportunity. I am convinced that the necessary investments in roads, camp grounds, boating, and similar facilities in a situation which permits ready access in part of the area and trail access in the balance will produce what we all desire. I might point out that there are a number of unique scenic and scientific spots within the high mountain areas which demand most careful land-use planning for their protection.

The entire question of how to proceed is being actively studied by the Secretary of Agriculture, and he has placed this responsibility in the hands of his capable assistant, Dr. George Selke. I hope that the budget will permit moving ahead early next year following the completion of the analyses now underway.

The Willamette National Forest is an excellent example of a forest which offers a major challenge to the successful application of the principles of multiple use. It is one of the most ideally suited for recreation and it is one of the highest priority forests for the application of the most modern techniques in timber management.

The waters which are stored in this national forest are of an inestimable value to all of Oregon and it is the site of a number of major water utilization projects.

I am advised that to place the national forest program on schedule for recreation development in Oregon alone would require the appropriation of an additional $361,000. The national total would be somewhat higher. There are additional funds needed for recreation roads in the amount of $250,000. One of the major needs in recreation right now is to provide the full scheduled amount for the 1963 level of the national forest program for recreation, and I hope that the committee will see fit to do this.

Winema National Forest

As a result of action by the Congress a substantial part of the Klamath Indian Reservation forms the heart of a new national forest in Oregon, the Winema National Forest. I would like to call to the attention of the committee the efficient transformation of this property to national forest management without the development of any major problems. This action deserves the highest commendation. The Bureau of Indian Affairs, the Forest Service, and the local people who were intimately concerned with the use and management of these lands share in the credit.

National forest research

On February 15 the Senator from Mississippi, Mr. Stennis, called for an extensive and enlarged forest research program for the consideration of the Senate and this committee. I am gratified that the budget contains an item of $80,000 for an addition to the Laboratory at Corvallis, Oreg. This will greatly facilitate the growing of experimental trees for the national forests. One of the disappointing aspects of the budget before us is the proposed reduction in research construction funds and the very modest increase programed for forest research. Due to favorable action by this committee two new Laboratories are coming into operation in Oregon, one in Corvallis and the other in Bend. These Laboratories will make valuable contributions in the years ahead but only if they are adequately staffed and equipped to do the job for which they are intended.

One item which is greatly needed is the sum of at least $300,000 for commencement of work on a $500,000 Range and Wildlife Habitat Laboratory at La Grande, Oreg. On March 12, 1962, the Oregon State Board of Higher Education considered a long-term lease on a 4-acre site on the Eastern Oregon College campus for construction of a laboratory, greenhouse, and other facilities for range and wildlife habitat research. I have every reason to believe this lease will be approved.

The construction of this Laboratory would greatly benefit the forest and range research program in the Northwest where a critical need is for methods to maintain or increase productivity of grazing lands and to devise management practices whereby livestock and game production, timber growing, watershed management, and outdoor recreation can be compatible. We urgently need better information to enable us to best balance these interrelated land uses.

The proposed research involves construction of a modern laboratory, approximately 15,000 feet in area, with greenhouses and storage facilities. In the 10-year period ahead these facilities would house 18 scientists and supporting personnel. These scientists would deal with two important lines of research—range management research and wildlife habitat research.

The State of Oregon has more than 25 million acres of forest and range land now being grazed either by livestock or by big-game animals. I am personally acquainted with the pressing need for studies to determine ways to increase the carrying capacity for grazing animals on public and private lands in this area and to more quickly restore them to their full fertility and water-holding capacity. For example, on summer ranges, 30 percent of gross forage production is taken by big game on ranges used simultaneously by cattle and sheep. Later in my discussion of the Bureau of Land Management budget, I would like to make some further observations in the value of research.

A greatly expanded research program is needed to determine proper degrees of forage utilization, more uniform forage use, and best systems of grazing on mountain meadows, forested ranges, and winter desert ranges. Also urgently needed are studies of the impact of grazing on forest regeneration, extent of competition between game and livestock, and methods of growing browse on big-game ranges both in the mountains and on winter ranges throughout eastern Oregon. Basic knowledge of the reactions of forage plants to grazing and other land uses is fundamental to all recommendations for resource improvement. A well-equipped laboratory is essential in these investigations which should include studies of food reserve mechanisms, nutritional requirements and growth responses of forage plants, and the responses of plants to different soil types and soil fertility levels.

We made a good start here, but we have only three scientists on the job and working with inadequate facilities.

Last year a number of us also were successful in getting the Secretary of Agriculture and the Secretary of the Interior to initiate a range appraisal study in the West. This study is now underway and an increased research program

is needed to permit a more complete and timely job in solving the knotty problems in management of the range resource. The proposed Range Management and Wildlife Habitat Research Laboratory at La Grande would not only assist the present research staff but also would provide modern facilities for an expanded research organization to work on the most pressing current problems. Their work would bring to the Northwest the much needed technical applications of the latest developments in range and wildlife habitat research.

We have good work going on at Squaw Butte under the Agricultural Research Service, and I point out that the ARS program complements the work of the Forest Service and is fully coordinated. The expansion of ARS work is, of course, before your agriculture subcommittee. I believe there is a sense of urgency that must be met, and I hope you will act with favor on this request.

Oregon communities recognize the importance of their natural resources and are extremely desirous of cooperation in furthering forest research. La Grande is offering to cooperate in a material way in the early development of a necessary laboratory facility in that community. As evidence of the strong support of local interest, I am pleased to enclose a letter in support of the La Grande Forest Research Laboratory addressed to me by Mr. David Baum of the La Grande Chamber of Commerce. Also enclosed for inclusion in the record is a wire addressed to me by several leading Oregon ranchers: Messrs. Bill Cooper, W. H. Woodruff, Charley Hibbert, and Gilbert Courtright, of La Grande, and Messrs. Odin Miller, Arnold Edvalson, and August Zaugg, of Union, Oreg.

In addition, I should indicate to the committee that I have had conferences with a number of community leaders of the Roseburg, Oreg., area. They have informed me of the strong local interest in establishment of a forest research laboratory in Roseburg, Oreg. Although this laboratory is not scheduled for construction this year, I believe that it should be established at the earliest possible date. The committee can be sure of complete cooperation from the people of Roseburg on this meritorious project. I would like to request that the committee include in its recommendations substantial funds to make a commitment of $50,000 toward early construction of the Roseburg laboratory.

Finally, on the subject of research, I would hope that this committee would look with favor on the proposals submitted by Senator Stennis for a substantial increase in forest research. For example, one improvement that can be effected with additional funds is the undertaking of vital watershed management research on the Andrews Experimental Forest outside of Eugene and the increasing of the level of research at the new Corvallis station.

Helicopter logging

I have had extensive discussions with public-spirited citizens of my State on the opportunity that exists to use helicopters to log timber. If a decade ago I had come before this committee and suggested that we invest money in a practical demonstration of helicopter logging, I suspect that there would have been scant enthusiasm. Today, however, helicopters which can lift about 10 tons are coming into full operation. We have already seen what helicopters can do in firefighting and in many other important jobs; for example, small helicopters are "planting" telephone poles and powerline poles right now in the rugged inaccessible Rogue River, Oreg., country.

The members of this committee know well the strong support I have consistently given the timber access roads. I intend to continue to give this support because we must expand and improve the forest road network. However, we do have within sight the opportunity to revolutionize—and I use this term in its constructive sense—the logging industry through the use of the helicopter. We can eliminate thousands of miles of spur roads. We can also eliminate the effects of erosion which come from both high lead and tractor logging. We can reduce the areas lost to productivity through spur road construction and the erosion and siltation that these roads often produce. In short, helicopter logging can bring benefits of immense proportions.

What we need to do at this time is to press ahead vigorously with forest experiments so that we can find out as rapidly as possible how the helicopter can be adapted to logging. At this juncture through cooperation with helicopter manufacturers and the Department of Defense it may be possible during the coming fiscal year to get actual feasibility tests underway. To this end, I would appreciate it very much if the chairman would have the Forest Service submit at the earliest opportunity its estimate of the cost of employing a helicopter firm on a contract basis to conduct tests which the Forest Service might

find feasible. Thus the committee would, I think, want to include a directive to the Forest Service which would affect the conditions under which these funds might be expended. I am exceedingly anxious that we move vigorously, but I am also anxious that we move wisely.

These immense helicopters are extremely costly, even on a contract basis, and the operational problems associated with applying them to logging are not solved. What I seek is to have this committee put the Forest Service in a position to move as soon as the facts and circumstances indicate that there can be a soundly conducted feasibility test on the application of the helicopter to logging.

BUREAU OF LAND MANAGEMENT

The budget presented by the Bureau of Land Management included an increase of approximately $8 million over last year. In my judgment, this is a minimum increase. I can report to this committee, however, that the forest program on the Oregon and California revested lands is proceeding with a high degree of efficiency. The increase provided will assure this forward momentum and I strongly urge the allowance of the funds requested. It is estimated that during the coming year revenues in access of $32 million will be realized from the sale of 1 billion board feet of timber from these lands. When this tremendous income is measured against the $4.1 million budget it is evident that even after taking into account payments made to the counties, the Federal Government is receiving a handsome return both on past investments and operating expenses.

Grazing

In 1959, when I appeared before this committee, I pointed out that the lack of adequate appropriations was developing an extremely harmful situation in the administration of grazing lands by the Bureau of Land Management in eastern Oregon. A comparison of the vast grazing holdings of the BLM with its forest holdings and the budgets for each provide conclusive evidence that the funds for administration and management on grazing lands have long been substantially below minimum standards.

The Bureau has continued to make its range surveys and these often have resulted in proposals to substantially reduce permit grazing. Decisions such as these are working extreme hardship on range permittees, a number of whom are scheduled for cuts in use of 50, 60, and even 70 percent in their permits. The matter has received my personal attention and that of my colleague in the House, Congressman Al Ullman. We have met on the ground with the cattlemen, with conservationists, and with Government employees, including research specialists. Our eastern Oregon range has been largely converted to a cheatgrass range and this grass does not provide the type of dependable forage which both livestock and game require.

I have a request before the Agricultural Appropriations Subcommittee for a modest increase in research funds for the Agricultural Research Service. However, the extent of our knowledge today is such that it is not necessary to await the results of research before pushing ahead vigorously with improved management techniques. I recognize that the President's budget for this year provides for increase in range administration and soil and moisture conservation. The cooperation that I have received from this committee, and particularly Chairman Hayden, in my effort to bring about immediate rehabilitation of burned over rangeland has resulted in the inclusion in the budget of provisions that will assure funds to meet these emergencies.

I propose that we now take another forward step and it is in line with recommendations which I have made earlier and which have been adopted in part through the actions of this committee. The Bureau of Land Management desperately needs a more adequate appropriation for soil and moisture work and range administration.

The Bureau should be in a position where it can place into effect range rehabilitation programs and in the process hold to a minimum the reduction of permitted grazing use. To put it another way, the budget for the Bureau of Land Management in this activity should be geared toward realizing in the next 10 years the capability of these lands to carry double the present quantity of livestock and to meet fully our requirements for game management. Therefore, I request that an additional appropriation of $2 million be made to be expended in areas where range surveys indicate a need to reduce permitted grazing use or where wildlife demands cannot be met at the existing level of range condi-

tion. These funds would be used for reseeding, the conversion of cheat grass range to crested grass, the elimination of sage, fencing, and water development and more adequate cooperative management to assure proper utilization of the range. One example of the type of situation needing attention is the conflict between the use of bitterbrush by livestock and deer on deer winter ranges. For example, one study has shown that deer have overused certain areas. Research shows that the application of sound game and livestock management practices coupled with real improvements in the condition of the land can bring about a resolution of these problems.

I have had further conversations with Secretary Udall and Assistant Secretary Carver on ways and means to improve not only land management but cooperation between various groups.

As the members of this committee know, range conditions are not the same in every part of the Nation. One study showed that removing cows from a range in the Southeastern United States measurably increased the capacity of the land to grow beneficial grasses. Another study in Utah and the studies at Squaw Butte in Oregon show that removing the cows does not result in the range coming back. In still another study it has been shown that on certain western ranges the presence of rabbitbrush actually increases the production of crested wheat grass. This is contrary to one of the long-held views that brush reduces grass production. Rabbitbrush has a tap root that can drive down for water but it has poorly developed lateral roots. The crested wheat thus has no competition from rabbitbrush and thrives under and adjacent to rabbitbrush. On the other hand, big sagebrush measurably reduces the effectiveness of crested wheat grass and drives it out. In still another study it has been shown that rodents can be a primary cause of plant cover deterioration. Where livestock only had been excluded there were no marked changes in vegetative cover after 20 years but where rodents had been excluded there were marked changes in plant cover.

Therefore when I contend that cuts in range use will not always improve the range I am following the judgment of dedicated and trained researchers. The range manager must recognize the total biotic relationship. No range manager would expect to keep deer off the range with a 2-foot fence. Why should he try to restore the range for livestock and game by taking a step that just doesn't bring about the restoration?

I would like to have included with my remarks a copy of a letter I just received from an Oregon rancher, Mr. Merle Cummings. I think this letter is typical of the constructive approach that the majority of the ranchers in my State have exhibited. As Mr. Cummings points out, many of the ranchers accept the cuts simply because they believed there was no use in appealing the decisions. Mr. Cummings goes on to say, "To me this is a dangerous attitude and if permitted to continue could threaten the very democratic foundations of our free system of government.

Whenever I find that a citizen has reached the point where he thinks that it is no use to appeal a decision even though he thinks he is right, then I feel it is time for the Congress to take notice. We are protecting the basic foundation of our system of government when we show a citizen that he can get a full and fair hearing. My goals in the review I have made of the problems of our ranchers have included attention to this very vital consideration.

Mr. Chairman, I ask each of you to read this letter from Mr. Cummings. I am sure that you will then agree with the case I have made for additional range funds.

The provision of additional funds will be helpful and I have the assurance that the Secretary of the Interior intends to proceed vigorously to achieve better cooperation and constructive improvement. I ask this committee to help on this matter as it has so capably in the past.

WESTFALL, OREG., *March 5, 1962.*

Hon. WAYNE L. MORSE,
Senate Office Building, Washington, D.C.

DEAR SENATOR MORSE: I am writing to thank you for the copy of that part of the Congressional Record containing your statement presented on the floor of the Senate in regards to your policy in the controversy between the users of public lands for grazing purposes and the BLM and the Izaak Walton League.

It is very heartening to the ranchers to get the support of their Senator and realize after many years of abuse both publicly and privately by the BLM and

certain uniformed and misinformed private sporting groups to say nothing of the general public, to finally get some unbiased support from someone genuinely interested in our problems.

When we were informed by the BLM of these large cuts in the early spring of 1961 it was as if someone had cut the very ground out from under us as far as our livelihood was concerned with very little if any chance to get an unbiased hearing on our case. In the minds of many segments of the general public we were already judged as guilty in the destruction of the public ranges and prior hearings on appeals of range adjudications had been unsatisfactory as well as expensive to the permitees.

A number of permitees had accepted the terms of the BLM, not because they believed that they were right, but simply because they believed that there was no use appealing the decisions. To me this is a dangerous attitude and if permitted to continue could threaten the very demoncratic foundations of our free system of government.

I believe you have done a great service to our citizens in getting this matter out before the general public where the facts can be appraised for their true values rather than through misleading propaganda. After talking to some of my neighbors I am convinced that their faith in our Government has been renewed.

Certainly I do not write this to imply that there has not been abuses in some cases or that there is not room for improvement on our public range lands. I believe in conservation and the majority of the livestock industry believe in conservation and restoration where possible and by all methods consistent with good range management.

In closing I would like to convey to you our heartfelt thanks for the opportunity to get our case out before the public in an honest and dignified manner. We believe in the future of our industry and that in most and perhaps all instances the future of the public ranges can be maintained and improved where improvement is possible without crippling reductions in carrying capacity.

Sincerely,

J. MERLE CUMMINGS,
President, Westfall Range Users Association.

SUMMARY

This subcommittee and its comparable subcommittee in the House have done an outstanding job of providing the funds needed to meet the growing challenges for public land use and development. In my travels through Oregon I have seen numerous positive examples which clearly demonstrate the wisdom you have shown over the last several years. The growth of our population and the demand upon our natural resources, however, have exceeded past estimates and thus the substantial increases that we have made are not readily apparent to one who is not familiar with the action taken by the Congress. If the Congress had not consistently provided for the Forest Service and the Bureau of Land Management funds in excess of the budget estimate, the gap today between needs and requirements would be extremely wide. It is the rapid increase in use beyond our expectations which must guide the action we take. Unless we make the needed investments in conservation now, we will not reap any dividends in the future. I know that this committee, as it has in the past, will demonstrate its understanding of the needs which the future will place upon us.

LA GRANDE, OREG., *March 13, 1962.*

Senator WAYNE MORSE,
Senate Office Building, Washington, D.C.:

Some people are interested in big-game animals. Some are interested in domestic animals, all are interested in feed for these animals. Some come from the local area to hunt, also from neighboring States and from afar. There are those who shoot to kill while others are interested in taking pictures of these animals, some people wish merely to observe them in their natural habitat. These animals must eat. There must be maximum improvement of soil and vegetative growth before there can be maximum use.

Every day the supply of food on our ranges becomes more inadequate for the desirable increase in big-game numbers, if we are to continue to supply this Nation with big-game-hunting participants in this sport.

Nearly 50 percent of the State of Oregon is controlled by the Federal Government at this time. There are no new frontiers of virgin land on which to place these animals. Basic research is a possible answer.

We sincerely hope you can convince Congress of our need for a laboratory at La Grande. We wish you every success, and thank you for your appreciation of the importance of our problem.

W. H. COOPER.
ODIN MILLER.
ARNOLD EDVALSON.

LA GRANGE, OREG., *March 13, 1962.*

Senator WAYNE MORSE,
Senate Office Building, Washington, D.C.:

The people in this area need a research laboratory. We are in trouble and unless we have adequate facilities for further research both game and domestic animals must continue to be removed from the ranch lands in ever-increasing numbers primarily because of accelerating soil losses due to long continual overgrazing. For instance, of the Minam and Eagle Cap Wilderness Area the Oregon Water Resources Board reports "the soil is seriously eroding." We think this is an understatement. More appropriately it might be called a blighted area, possibly one of the worst in the State.

A completely new vegetative cover needs to be established. A new research laboratory should help.

We wish you success in presenting this before our friends in Congress. Thank you for being interested.

CHARLIE HIBBERT,
AUGUST ZAUGG,
GILBERT COURTRIGHT,
W. H. WOODRUFF,
Union Soil Conservation District.

BAUM INSURANCE AGENCY,
La Grande, Oreg., February 22, 1962.

Hon. WAYNE MORSE,
U.S. Senate, Washington, D.C.

DEAR SENATOR MORSE: The La Grande Chamber of Commerce and our industrial development corporation have been working for some time with the U.S. Forestry Service and Department of Agriculture for the establishment of a forest and range research laboratory in La Grande. On March 12 and 13 the State Board of Higher Education is meeting and one of the items they are going to consider is the granting of a lease to the U.S. Government for the construction of these facilities on the Eastern Oregon College campus. It is estimated that the original wing may cost approximately $200,000 but ultimately there will be an investment of $400,000 in the building. This will mean the employment of 8 to 12 professional people plus additional clerks and stenographers

As you can gather, we are extremely interested in securing this facility for our community. On March 3 to 13 Robert W. Cowlin, Director of Pacific Northwest Forest and Range Experiment Station, will be in the U.S. Forest Office in Washington, D.C., for a series of conferences. He would be most happy to discuss this matter with you at your convenience if you would so advise. He can be reached through the Forestry Office.

May I say that the La Grande Chamber of Commerce would appreciate anything you could do to expedite this matter once the lease is approved between the Forestry Department and the State Board of Higher Education. May we please hear from you on this matter.

Sincerely yours,

DAVID C. BAUM,
President of La Grande Chamber of Commerce.

ACCESS ROADS

Senator MORSE. I only want to comment on one or two points very briefly.

I have covered the program for the Forest Service and the Bureau of Land Management as that program affects the interests of my State from a good many angles, as you will see when you go through my statement. But I want to make this comment on the problem of access roads.

I have, Mr. Chairman, since I have come to the Senate, now going on 18 years, made access roads one of my major efforts. I have offered a good many amendments to the appropriation bills and legislation providing for increases in funds for access roads because I know when I do that I am saving the American taxpayer's money.

It is a very simple thing, as you know, coming from West Virginia. We look upon our timber as a crop, scientifically harvested. When you permit a body of Federal timber to override, to become diseased or wind blown, and do not get it out, you are wasting the taxpayer's money. So I have been heard to say, almost ad nauseam here for years, I am proposing a sound economic program when I am asking for increases in access road money. Each year I ask the Forest Service to tell me what they could efficiently and effectively spend if the money could be made available.

That is the money I always ask for. Of course, as the Senator from West Virginia knows, they have two bosses, the White House and the Congress. In response to the White House boss they have to cut their cloth in accordance with the budget figures given them. With respect to the Congress, they have the duty to give us the truthful answers as to what they could efficiently and effectively spend.

You will find in my statement that Dr. McArdle has said in answer to our question this year: "We could spend wisely $4 million more than you will find in the budget request." That is what I am asking for.

I discuss in the statement as to what this would mean in taxpayers' savings in this country. We are just wasting millions and millions of dollars, which leads me into a very brief comment on the so-called allowable cut.

Mr. Chairman, we are not cutting up to the allowable cut. I want to say that the allowable cut figure, and I speak respectfully, has become somewhat meaningless in our forest program in this country today. It is one thing to say this is the allowable cut, but the important question is: How near do we come to it? And we fall far short of it in forest after forest. One of the reasons we fall far short of it is we do not have the access road to get into some of it, and the other is we do not have the personnel, so the Forest Service says, to get into it. Although again, most respectfully, I say sometimes we have to ask for more personnel than the Forest Service has in its budget.

I am for giving them all the personnel that they can efficiently use in the economic interest of the taxpayers, and I think that ought to be enlarged, as you will see in the statement that I propose.

Now, the access roads problem is a very serious one, in that I am a strong supporter of the idea that access roads by and large should be built by the Federal Government and not by the timber companies.

There are exceptions. You have to have a dual program here. I am not saying that all access roads should be built by the Government, but I am saying most of them should for two main reasons, Mr. Chairman.

When you sell Federal timber, put Federal timber up to bid, with the understanding that the bid is going to have to include responsibility on the part of the purchaser to build an access road, you just squeeze the little fellow out many, many times. He cannot go into a roadbuilding program. And wherever you find that it is going to result in an undue advantage for the big operator, and to the detriment of the smaller mill owner, the Federal Government ought to go in and build the road.

My second point as to why I think the Federal Government should build most of these roads is because they should be roads that do more than just get logs out. If marketable use is going to be the objective of our public land program, and it should be, then these roads have to be built to standards where they can be used as recreational roads, as ancillary roads to regular highways, as long-term fire-control roads. And you cannot, I do not think, justifiably ask the timber company to build the road as part of the purchase arrangement and build it to standards that are going to serve purposes far beyond what they need in order to get logs out.

So when you are in those areas, where that kind of an access road ought to be built, I think clearly the Federal Government ought to build the road. And you will notice I discussed that in my statement and make certain recommendations in regard to it.

Now I want to point out, I make certain suggestions for increases in recreational facilities. Mr. Chairman, recreation as a source of income and taxes for the Federal Government in the great public land areas of this country, where the land is owned by the Federal Government, is soon going to become a greater source of income than the income from the timber itself. Most of the writings which I have read on the subject from the experts indicate that is the trend. So it is only going to be a matter of a few years before this great increase in population, the automation program with a great deal of leisure time on the part of millions of people, is going to result in a great surge of recreationists into the great natural resources of this country.

RECREATIONAL EXPENDITURES

There is a need for speedup in recreational expenditures. I am delighted that the recommendations before you from the departments, particularly the Bureau of Land Management, show some increase in the recreational funds—I do not think enough in order to meet these needs.

I want to say here again, it is an old argument, and you have to watch out that people do not say, "Well, it is almost a platitude in this argument." It is a sound, economic argument, Mr. Chairman and Senator Aiken, that the money which you spend for these recreational facilities will be a wise expenditure in that it will result in return, it will pay back into the Treasury many times the cost of the expenditure. And with me that is the test: Is this an economic expenditure that we are asking for in the first place?

And secondly, is it an expenditure that will serve a needed public purpose.

I respectfully submit to you gentlemen that my recommendations in my long statement here on recreational needs can be substantiated by the facts.

WILDLIFE HABITAT LABORATORY AT LA GRANDE, OREG.

I take you now to page 10 of the statement, on which I just comment on national forest research. I want to pay my respects to the Senator from Mississippi, Mr. Stennis, for his leadership in this matter of forest research. He is doing a magnificent job in the Senate. I have stood with him shoulder to shoulder. Because here again is another wise expenditure.

At the bottom of page 10 I say:

One item which is greatly needed is the sum of at least $300,000 for commencement of work on a $500,000 range and wildlife habitat laboratory at La Grande, Oreg. On March 12, 1962, the Oregon State Board of Higher Education considered a long-term lease on a 4-acre site on the Eastern Oregon College campus for construction of a laboratory, greenhouse and other facilities for range and wildlife habitat research.

I discuss it in greater detail.

I am filing with the committee, Mr. Chairman, a statement of Prof. Charles W. Quaintance of Eastern Oregon College in support of this La Grande laboratory, and I would appreciate it very much if this statement can be read into the record.

Senator BYRD. You may proceed, Senator Morse, to read the statement into the record.

Senator MORSE. I also have statements, Mr. Chairman, and I will not take time to read them into the record, from Odin Miller, Arnold Edvalson and Mr. Woodruff, and others.

(The statements referred to appear on p. 1211.)

STATEMENT OF PROF. CHARLES W. QUAINTANCE

Senator MORSE. Professor Quaintance' statement is as follows:

I urge you to support the proposal to establish a range and wildlife habitat laboratory at La Grande, Oreg. I am certain that from your interest in and association with the Oregon livestock producers you are aware of the laboratory's value in helping to solve the range management problems in the Pacific Northwest. And I, as a professor of wildlife science, would like to assure you of the laboratory's importance to research on the big game forage problem in Oregon and the Pacific Northwest. Both domestic and wild grazing animals are important western resources and we urgently need research information on the forage plants and the extent of competition or of compatibility between big game and livestock which use the same lands whether they be mountain watersheds or desert ranges.

Much fundamental botanical and range work is needed to strengthen the modest research program at La Grande. A modern laboratory is essential to scientists of various disciplines in their studies of how best to produce, manage, and replenish the herbaceous forage and valuable browse plants on the various northwestern range soils and under various types of grazing use. I trust construction of this laboratory can be started soon on the campus of Eastern Oregon College.

Mr. Chairman, I would like to take a half second to ask Professor Quaintance to simply rise so that the committee will have a chance to see him. Because he is one of our experts on this whole matter of

wild life in the West. He is a very reliable scientist, and his support of this laboratory is all the senior Senator from Oregon needs to know because of my long acquaintance with his scholarship.

Thank you, Professor Quaintance.

I close this comment on this laboratory by saying this is a sound one, and I strongly urge that the committee give it its favorable consideration.

FOREST LABORATORY AT ROSEBURG, OREG.

You will also note that I urge here in this statement a forest laboratory for Roseburg, Oreg. That speaks for itself on page 13. The committee can be sure of complete cooperation from the people of Roseburg on this meritorious project.

I would like to request the committee include in its recommendations substantial funds, make a commitment of $50,000 toward early construction of the Roseburg laboratory.

I shall not take time to cover the rest of my statement as it speaks for itself, other than to stress this, Mr. Chairman and members of the committee, that we have a problem with the Bureau of Land Management. The Bureau of Land Management has a great program of work to do in the public domain of the West. It needs all the hope and all the help that we can give it. Here again it is a sound expenditure of Federal money.

There is great controversy over the Bureau of Land Management in the West at the present time in respect to range rehabilitation. I want this record to show that I am seeking, along with my colleagues on the delegation and members of other western delegations, to find a solution to controversies that have arisen between the stockman and the Bureau of Land Management.

DEVELOPMENT OF WATER FACILITIES

We have a large delegation in Washington meeting today. I am sure we are going to work out a satisfactory program. But essential to it is providing the Bureau of Land Management with the necessary personnel, providing them with the necessary amount of funds for the development of water facilities. Because this is one of the greatest needs in the public range of the West. You cannot rehabilitate the range unless you can provide the adequate water resources for the stock and the wildlife.

And let us not overlook what the wildlife does. There is always great comment about what grazing cattle may do to the land by way of overgrazing. Although, may I respectfully say, the proof as to overgrazing by the cattle has not been very convincing to date to those of us who have been going into this problem, and we are going to have some public hearings on this problem in the Senate under the leadership of Senator Bible, of Nevada, later. But I want to stress that you give careful consideration to the budget needs of the Bureau of Land Management because they are the conservators of a great wealth of the American people known as the public domain. And unless the Bureau of Land Management can get the funds necessary to eliminate the sagebrush, to protect the range from fire, to do the reseeding, to do the fencing, to supply the waterholes that are necessary, we are going to see that public range deteriorate.

And let me, as I close, stress this before the committee: Please do not accept the assumption that if you just do not graze the range it will rehabilitate itself. There is nothing you can do worse for the range than just neglect it.

Careful scientific grazing of the range is essential to its development.

I can take you, for example, out to the Squaw Butte Experiment Station and I can show you land on which there has not been a mouth or set of teeth since 1936, and across the fence I can show you a range which has been carefully grazed, and it is the range which has been grazed that is good. The range that has deteriorated is the range on which there has not been any grazing.

And, fiction writers to the contrary notwithstanding, you are not going to have the grass as high as the stalks if you just do not graze it. You are going to have a destroyed range if you follow that course of action.

It is part of the controversy we are involved in, in how to rehabilitate the range. My plea to this committee is, I am only asking for an economical expenditure of money. I am simply saying that if you do not give the Bureau of Land Management such sums as we are recommending, you are going to, in my judgment, cheat the American taxpayer in the long run.

The statement will have to speak for itself. I ask to have the various insertions attached to it included in the record.

Senator BYRD. It will be included in the record.

Senator MORSE. Including a letter from J. Merle Cummings, president of the Westfall Range Users' Association, which goes into some of these range problems that I have discussed.

Senator BYRD. The letter will be included in the record.

(The letter referred to appears on p. 1210.)

PROBLEM OF CONTROL OF STARLINGS

Senator MORSE. And lastly, if you will give me another minute, I now turn to a further subject which has occasioned concern among Oregon holly growers, the State department of agriculture, and certain feedlot operators.

Basically, these individuals and agencies are urging that the Senate Appropriations Committee supply an additional appropriation of $200,000 for the control of, principally, the starling.

I was not aware of what the starling is doing in regard to this part of our economy until I got into it.

Mrs. Arnold H. Leader, president of the Oregon Holly Growers Association, Inc., has provided me with a set of color photographs which give pictorial evidence for the need of this appropriation.

I ask unanimous consent that as part of my statement there be included copies of correspondence on this point which document the need for this appropriation.

Senator BYRD. The correspondence will be included.

(The correspondence referred to follows:)

STATE OF OREGON, DEPARTMENT OF AGRICULTURE,
Salem, February 9, 1962.

Hon. WAYNE MORSE.

DEAR MEMBERS OF OREGON CONGRESSIONAL DELEGATION: As you know, starlings have caused increasing damage and losses in recent years to crop and livestock production in Oregon and other Western States. In Oregon, the heaviest losses

have been to holly production through damage to the foliage, and to livestock production through robbing and contamination of feed in feedlot operations.

In spite of a joint Federal-State program of control measures here in Oregon during the past 3 years, our population of starlings and damages caused by them have mushroomed each year. A principal limitation to control has been the lack of adequate research to develop safe and effective control materials and methods.

The Denver Wildlife Research Center has been doing as much as possible with the limited funds available, in screening chemicals for safe usage in starling control work. However, a greatly stepped up program is needed if they are to be enabled to get on top of this problem before enormous increased damages occur.

We understand ricegrowers and others from Southern States recently have presented the House Appropriations Subcommittee with their needs for blackbird control, and have requested a $200,000 increase in Federal appropriation over the normal budgeted figure for bird research during the coming year.

Due to the greatly increased losses from starling damages to western crop and livestock production, I wish to join with California Director of Agriculture Charles A. Paul and others in urging a further increase of $200,000, for a total increase of $400,000 in Federal funds for research during the coming year on starling control and eradication in the Western States.

Your efforts in this matter will be greatly appreciated in behalf of Oregon and western agriculture.

Sincerely,

J. F. SHORT,
Director, State Department of Agriculture,

OREGON HOLLY GROWERS ASSOCIATION, INC.,
February 12, 1962.

Senator WAYNE MORSE,
U.S. Senate, Washington, D.C.

DEAR SENATOR MORSE: It has just come to my attention there is recent activity relative to appropriations for starling research and control.

In my past correspondence with you, we have stressed the need for action and immediate help in this regard. The loss becomes greater each year, the population of starlings is from three to five times greater due to their nesting habits each year, and without some kind of immediate help some holly orchards are being destroyed to a point where the owner has to bulldoze them out.

Scare devices are fine for the moment, they are very expensive and will do the job partially for a few days and nights, then the reaction of the starling is the same as the robin; they become accustomed to the lights, noise, or disturbance—will wing up in a circle and come down immediately to the same spot from which they were disturbed. Scare devices can only be used in the country, so the metropolitan area does not even have that as a means of help. This kind of control is a losing battle and the expense so great it cannot be handled by the average orchardist.

It is the small farmer with his urge to contribute through effort, pride, pleasure of attainment, taxes, and side benefits of revenue to his State, that makes this country great. We enjoy the hard work to try and raise our standard of living, the added employment of our neighbors, but how can we continue when one of nature's wonders is out of control and destroying our livelihood and efforts?

Fast and immediate research seems to us to be the answer. The House Appropriations Subcommittee is being asked for $200,000 for blackbird control in the ricegrowing States; we heartily join with California Director of Agriculture Charles A. Paul, in requesting a further increase of $200,000 for research for the coming year on starling control and depopulation in the Western States.

We have a hard struggle to secure $20,000 from our State legislature for the biennium for this work and we are amazed and highly pleased with the results, even with these limited funds, of the Department of Agriculture and Federal Fish and Wildlife Service, predator and rodent control. They are dedicated men who are viewing the destruction, they are human and sympathetic and are doing all possible to save the holly industry, and as you know, this is the commercial holly belt of the world. We don't want to let this industry fall lower in acreage, we want to increase it but with the problem as it stands, this is not likely to come about until some control is attained.

We are highly indignant when we read of the astronomical amounts being spent to research if and why a baby monkey loves its mother; or to explore the nervous system of the grasshopper. These were among the items listed in the newspaper article which was sent to Senator Harry F. Byrd, whom we understand is investigating this incident.

We ask your full cooperation and understanding of the need for action to obtain adequate appropriation for the control and depopulation of this destructive bird. We not only ask for the holly industry, but for the feeder lots, grain growers, turkey lots, fruit orchardists and others in this same situation.

Was sorry I could not contact you while you were in Oregon a few weeks ago, as I wanted to take you around so you could see for yourself just what is happening.

Thank you kindly.

Sincerely,

ESTHER W. LEADER
Mrs. Arnold H. Leader,
President.

PORTLAND, OREG.

OREGON HOLLY GROWERS ASSOCIATION, INC.,
March 2, 1962.

Senator WAYNE MORSE,
U.S. Senate, Washington, D.C.

DEAR SENATOR MORSE: Am enclosing a set of pictures which will show more graphically the concentration and destruction of the starling in this area.

We sincerely hope your understanding and interest in helping to obtain adequate appropriations through the House Appropriations Committee will insure passage of our request for $200,000.

If we can be of any further assistance, would you please so advise.

Our sincere appreciation.

Sincerely,

ESTHER W. LEADER
Mrs. Arnold H. Leader,
President.

EXPERIENCE WITH STARLINGS IN WASHINGTON

Senator MORSE. I might ask the $64 question, Senator: If the money is appropriated will it do any good? Because we have had some experience with starlings in Washington, D.C. All I can say is that out in the wide-open spaces these agricultural experts say that they have the means of controlling the starling and that this appropriation will be very helpful.

Thank you very much for your courtesy.

Senator BYRD. Senator Morse, you have made a very interesting statement. I have listened to your statements before on these subjects and I have never ceased to listen in great wonderment and amazement at your tremendous knowledge of the subjects. You always speak with great knowledge of your subjects.

The committee will find your statement to be very helpful, Senator Morse, and we are exceedingly pleased today that you could have with you Professor Quaintance.

Professor Quaintance, we are glad you could visit our committee this morning.

Senator MORSE. You are very gracious and kind, and I appreciate it very much.

Senator BYRD. Thank you, Senator Morse.

The committee will now hear Senator Smith, the distinguished senior Senator from Maine, who is a member of the Appropriations

Committee. She will present Mr. Austin H. Wilkins, forest commissioner of Maine.

And also the committee will hear Senator Aiken, the distinguished and illustrious Senator from Vermont, who will introduce Mr. Perry Merrill, commissioner of forests and parks for Vermont.

Senator Smith and Senator Aiken, the committee welcomes your presence this morning and we will be glad to hear anything that you might have to say.

The committee knows of your long interest in these subjects; and we will also be delighted to have the testimony of these people whom you wish to present.

You may proceed in any way you desire, Senator.

Senator SMITH. Mr. Chairman, I would prefer to defer to my senior, Senator Aiken, from Vermont.

Senator BYRD. Senator Aiken.

STATEMENT OF HON. GEORGE D. AIKEN, A U.S. SENATOR FROM THE STATE OF VERMONT

GENERAL STATEMENT

Senator AIKEN. Well, Mr. Chairman, I do not think Senator Smith should defer to anyone.

Senator BYRD. I agree, Senator Aiken.

Senator AIKEN. But it is a pleasure to be here with her, and with Mr. Wilkins and Mr. Merrill who are old standbys in this field.

It hardly seems necessary to ask your committee to support such matters as the Forest Service and the cooperative work between the States and the Federal Government in this field. It is an example which all agencies of the Federal Government and the States might follow.

It is my pleasure to introduce Mr. Merrill, although I think Mr. Wilkins is to speak first. Mr. Merrill has been appearing before this committee, I think, for at least 20 years on behalf of the Association of State Foresters. He is at present commissioner of parks and forests in Vermont. And for many years was president of the Association of State Forests. And, as I say, for the last 20 years or so he has appeared before this committee on behalf of the Association of State Foresters.

I do not know just what he is going to say this morning, but whatever he says, and whatever he asks for, I endorse. And that is the confidence we have in men like Mr. Merrill and Mr. Wilkins.

You may consider that my introduction of Mr. Merrill.

Senator SMITH. Mr. Chairman, it is my privilege to present and be associated with our forest commissioner, Austin H. Wilkins, of Maine. And I would like to associate myself also with the remarks made by the distinguished Senator from Vermont. I feel that what is good for Maine, is good for Vermont, and vice versa.

It does give me a great deal of pleasure, Mr. Chairman, to present Mr. Wilkins. Mr. Wilkins can tell the story about the forestry needs of Maine much better than I can. All that I would add is that I sincerely hope your subcommittee and the full committee will give full and favorable consideration to the amounts and questions which he raises.

Senator BYRD. Thank you, Senator Smith, and thank you, Senator Aiken.

Mr. Wilkins, and Mr. Merrill, you may proceed in whatever order you desire.

We are very glad to have you before the committee this morning and welcome your testimony.

FORESTRY NEEDS OF MAINE

STATEMENT OF AUSTIN H. WILKINS, FOREST COMMISSIONER OF THE STATE OF MAINE

PREPARED STATEMENT

Mr. WILKINS. Thank you, Mr. Chairman and Senator Smith and Senator Aiken.

My name is Austin H. Wilkins, forest commissioner of the State of Maine, and a member of the Association of State Foresters. I am here in the official capacity as chairman of the legislative committee of this association.

Mindful of your very busy schedule, Mr. Chairman, I would like to submit the prepared statement for the record and then orally highlight from it.

Senator BYRD. All right.

(The statement referred to follows:)

Gentlemen, my name is Austin H. Wilkins, forest commissioner of the State of Maine and a member of the Association of State Foresters. I am here in the official capacity as chairman of the legislative committee of this association. My colleague, Mr. Perry Merrill, director of the Department of Forests and Parks of Vermont, is also here representing this same association and will appear as a witness.

I appreciate the opportunity to appear as a witness before this committee today. Mindful of the busy schedule of the committee, I should like to submit this prepared statement for the record and then orally highlight pertinent points from it. This will save time and yet serve, I trust, as a helpful reference during your deliberations on the Federal-State cooperative forestry programs I am about to explain.

My main purpose is to ask for your careful consideration of our association's recommended increases to the requested funds of the U.S. Department of Agriculture, Forest Service, as they appear in the 1963 Budget Bureau report. This is in particular reference to the Federal-State cooperative forestry programs of forest fire control, forest nursery production and distribution, cooperation in forest management, and assistance to States for tree planting.

When the 1963 Budget Bureau report first became publicly known, we were surprised to learn that there were no increases for these cooperative programs. The printed schedule shows the amounts to be the same as a year ago. We feel that possibly these were overlooked somewhere between budget preparation, review, and final printing of the Budget Bureau report.

On February 6, 1962, I appeared before the House Appropriations Committee, Subcommittee on the Interior and Related Agencies and presented the same report I am reviewing with you today. My colleague, Mr. Perry Merrill, of Vermont, was also a witness on that date. It is my understanding that the Forest Service has recently held their budget hearing before the Senate committee.

At this point I submit the following prepared budget schedule covering Federal-State cooperative forestry programs and call your special attention to column 3 which indicates our association's recommended increases from the Budget Bureau report, 1963 base.

Schedule of Federal-State cooperative forestry programs

1 Program	2 1963 base, Budget Bureau report	3 1963 Association of State Foresters budget request	4 Increase from Budget Bureau report, 1963 base
CM-2, forest fire control	$12,465,500	$14,465,500	$2,000,000
CM-4, nursery production and distribution	296,000	400,000	104,000
CFM, cooperative forest management	[1] 2,500,000	[2] 5,000,000	
Title IV, assistance for tree planting	1,000,000	2,500,000	1,500,000
General forestry assistance	538,500	538,500	

[1] Represents full authorization of the 1950 Cooperative Forest Management Act.
[2] H.R. 9728 introduced by Congressman Grant, of Alabama, Jan. 18, 1962, provides for increasing the authorization of this act to $5,000,000, or an increase of $2,500,000.

Before going into a detailed explanation of the recommended increases, it should be stated here that the Association of State Foresters has no quarrel with the recommended $14 million increase for forest management of the 181 million acres of national forests. We do feel, however, that recognition should be given to increases for the Federal-State cooperative forestry programs. It is believed this is as fully a major function of the Forest Service as National Forest Management and Forest Research. I should quickly add that the Association of State Foresters has enjoyed and hopes to continue its pleasant working relationship with the U.S. Forest Service which has been founded on mutual faith and trust.

Now for a few statements of our justification for requesting increased funds for these Federal-State cooperative forestry programs. One hears and reads more and more of the ever-growing demand for better protection, management, production, and utilization of approximately 435 million acres of State-private forest lands in the country. This vast, renewable resource contains a tremendous forest wealth which is important to our national forest economy. One has only to review statistics and narratives from carefully prepared reports to bring this into sharp focus. Add to this picture projections of the Nation's future wood requirements and the increasing demands of the other resource values of water, recreation, and wildlife. This is sufficient cause for all of us to ponder this situation and take necessary action.

While we are appreciative of past Federal assistance, there is a stronger need today, in the face of current national affairs of rapid changes and developments, to sustain and gradually accelerate support of these cooperative forestry programs under the present Federal-State participation plan. The States, individually and collectively, make a valuable contribution but cannot do an adequate job without Federal assistance. In 1960, for all forestry programs, the States with other sources of income expended nearly $111 million. In my own State of Maine the growing and harvesting of our 17 million acres of forests is the No. 1 economy. Under multiple land use management this forest wealth will be tremendously increased. Forest economy is equally important in other States.

In the appendix of this prepared statement there are Federal and State expenditure tabulations for each of the cooperative programs since congressional enactment and authorization.

CM-2. Clarke-McNary—Forest fire control

The Clarke-McNary Act of 1924 provides a basic authority for Federal-State cooperation in forestry. Section II of this act provides Federal funds to States for forest fire control. This has undoubtedly been one of the most helpful grant-in-aid programs to States dealing with forest fire problems. All States have benefited in varying degrees. It is my understanding from a review of the records that the original intent of this act was appropriation of Federal matching funds on a 50-50 percent basis with those expended by the States. The present authorization under this act is $20 million, but the full amount has never been appropriated. It is of interest to point out here that the States have more than carried their share. Although the Association of State Foresters is appreciative of the $12,465,500 appropriated by the 1st session of the 87th Congress for 1962,

the States expended approximately $60 million, or a ratio 5 to 1. This same unbalanced ratio has existed for the last 5 years.

The Battelle report a few years ago completed a nationwide study that the Federal share of forest fire protection funds should be increased to meet the estimated needs for adequate protection of the Nation's 435 million acres of State-private forest lands. The last area-cost study a few years ago, prepared periodically between the Forest Service and the individual States and endorsed by the association, shows an estmiated $83½ million needed to do an adequate job of protection.

Table A in the appendix shows a complete record of Federal-State forest fire control expenditures since the 1924 Clarke-McNary Act. In the light of these figures, the original intent of the act, and the increasing problems of providing better forest fire protection, we urge your careful consideration of our request for an increase of $2 million from the Budget Bureau Report, 1963, base for a total Federal appropriation of $14,465,500. With this increase the States can bring additional nonprotected forest lands under some form of organized protection and provide the means for intensifying existing forest fire protection programs.

CM–4: Clarke-McNary nursery production and distribution

Another important section of the Clarke-McNary Act of 1924 is section 4 which provides Federal matching funds with expenditures by the States for the production and distribution of forest nursery stock at low cost to landowners. Appropriations under this section have been reduced during the period of the soil bank program. Now that the soil bank program terminates June 30, 1962, there is a greater need to grow forest seedlings for planting burned lands, poorly stocked and unstocked areas. Stepped-up reforestation work under title IV, agricultural conservation programs and other incentive cost-share programs, will require large quantities of forest nursery stock. Of tremendous benefit for this program will be the continued use by the States of soil bank capital improvements and equipment without payment of the residual value to the trust fund. This is proposed in Senate bill 2638 (1st sess. 87th Cong.).

The total figure of this residual value for all States participating in the soil bank program is $4,413,459. Use of these facilities will undoubtedly be most helpful to the poorer States just getting underway in tree production. Maine is an example where from a small nursery, 1913 to 1955, it is now possible to raise forest seedlings on a much larger production basis.

Table B in the appendix shows a complete record of Federal-State expenditures under section 4 of the 1924 Clarke-McNary Act. We ask your consideration of our request for an increase of $104,000 from the Budget Bureau Report, 1963, base for a total Federal appropriation of $400,000.

CFM: Cooperative forest management

The Cooperative Forest Management Act of 1950 provides Federal matching funds with State expenditures for technical assistance to small woodland owners and processors of forest products. This is an important program. Three-fourths of the Nation's 435 million acres of State and private forest lands is held by nearly 4½ million small woodland owners. Of these owners 3½ million are farmers. It is in these small holdings where technical assistance is needed to help make these poorly managed areas more productive to meet projected timber needs by 1975 and the year 2000. In the minds of many, this is where the future "wood pile" is to be found. Add to this the serious problem of forest land shrinkage through encroachment of urban expansion, road, highway and airport construction, new reservoirs, power and pipeline construction, et cetera.

Throughout the country much has been accomplished by the States through this cooperative program in technical assistance, acres planted, timber stand improvement, forest products harvested, and stumpage and gross returns. But much more needs to be done if predicted goals are to be achieved. National figures show one-half of all privately owned commercial forest land is in farm ownership. The average farm ownership is 49 acres. Again referring to my own State of Maine, we have a pattern of thousands of small private forest land ownerships with products from these areas contributing heavily to the forest economy. Requests for assistance have increased four times within the last 10 years. This same picture is true with many other States in the country.

At the 1st session of the 87th Congress the full authorization of $2,500,000 was appropriated under the act of 1950. This is significant in forestry progress. In spite of this the Federal share is not sufficient to fulfill the 50–50 percent

matching provision of this act. The association is pleased that the full authorization of $2,500,000 appears in the 1963 Budget Bureau Report. However, to meet the heavy demands for more assistance and to meet future timber needs, an amendment in this act has been requested and introduced to increase the authorization of $2,500,000 to $5 million. This appears as H.R. 9728 introduced by Congressman Grant, of Alabama, January 18, 1962. Other similar sponsored bills have been introduced in the House and Senate. The association urges your support of the amendment.

For useful reference there is shown on table C in the appendix of this statement a complete record of Federal-State expenditures under the 1950 Cooperative Forest Management Act.

My colleague, Mr. Perry Merrill, of Vermont, is also submitting a brief statement on this particular program.

Title IV: Assistance for tree planting

An additional important Federal-State cooperative forestry program is title IV of the soil bank program. The Congress since 1958 has in different years appropriated funds for tree planting. The planting of burned lands, poorly stocked and unstocked areas of the country is important to provide another source of timber supply. Maine is one of the few States that continued this program after Federal funds were not available in 1960-61. Although the Maine accomplishment figures are small, we feel that 6,000 acres sprayed for release of valuable softwoods and 1,400 acres planted is significant with the funds available.

The 87th Congress (1st session) resumed this program with an appropriation of $1 million for fiscal year 1962. This made possible a "pickup" in the reforestation program among many of the States. Table D in the appendix shows the record of Federal-State expenditures under this program.

We urge your consideration of our recommended increase of $1,500,000 from the Budget Bureau Report, 1963, base for a total Federal appropriation of $2,500,000.

CONCLUSION

This concludes my presentation to you as chairman of the legislative committee of the Association of State Foresters, recommending certain increases in the Federal-State cooperative forestry programs of the U.S. Department of Agriculture, Forest Service. These increases are additions to the Budget Bureau Report, 1963, base.

In making these requests for increased funds we are mindful of the heavy demands to strengthen our national security and other programs presented to the Congress by the present administration. However, we feel that wood, forest lands, and people are also closely allied with the proposed allied programs.

We are pleased with the significant increases in Federal funds granted last year by the 1st session of the 87th Congress for these cooperative programs. Funds are still short of providing adequate means of administering these programs so important to the national forest economy of this country. We realize goals cannot be accomplished in one yearly appropriation, but do call for sustained and gradual accelerated increases. On behalf of the Association of State Foresters I urge your consideration of our recommended increases.

Association of State Foresters recommended budget

Item	Amount	Remarks
CM-2: Fire control	$14,465,500	Increase of $2,000,000 over 1962 appropriation.
CM-4: Nursery production and distribution.	400,000	Increase of $104,000 over 1962 appropriation.
CFM: Cooperative forest management.	(5,000,000)	Increase of $2,500,000, support of new authorization, H.R. 9728.
Title IV: Assistance for tree planting.	2,500,000	Increase of $1,500,000 over 1962 appropriation.

Thank you for the opportunity to appear before you and speak in favor of these Federal-State cooperative forestry programs.

TABLE A.—*Federal and State expenditures, forest fire protection, sec. 2, Clarke-McNary Act, 1924*

Fiscal year	Federal allocation to States [1]	State and private	Total	State and private expenditures of multiple of Federal funds
1962	$11,650,000	$60,000,000	$71,660,000	5.1
1961	10,120,000	50,429,000	60,549,000	5.0
1960	10,085,000	47,240,000	57,325,000	4.7
1959	9,401,000	44,984,000	54,385,000	4.8
1958	9,410,000	42,827,000	52,237,000	4.5
1957	9,385,000	35,950,000	45,335,000	3.8
1956	9,484,000	32,908,000	42,392,000	3.5
1955	9,945,000	30,271,000	40,216,000	3.0
1954	8,934,000	30,500,000	39,434,000	3.4
1953	8,946,000	28,770,000	37,716,000	3.2
1952	8,960,000	26,637,000	35,597,000	3.0
1951	8,996,000	24,163,000	33,159,000	2.7
1950	9,129,000	21,140,000	30,269,000	2.3
1949	8,572,000	19,302,000	27,874,000	2.3
1948	9,472,000	17,046,000	26,518,000	1.5
1947	8,835,000	13,317,000	22,152,000	1.5
1946	7,098,000	11,801,000	18,899,000	1.7
1945	4,900,000	9,600,000	14,500,000	2.0
1941	2,076,000	6,951,000	9,027,000	3.3
1935	1,533,000	4,131,000	5,664,000	2.7
1930	1,303,000	4,199,000	5,502,000	3.2
1926	638,000	1,875,000	2,513,000	2.9

[1] These allocations do not reflect the total Federal appropriation. Funds are withheld for administrative purposes.

TABLE B.—*Financing of production and distribution of tree planting stock under sec. 4 of the Clarke-McNary Act*

Fiscal year	Federal allocation to States [1]	State and private	Total	State and private expenditures of multiple of Federal funds
1962	$199,000	$6,710,000	$6,909,000	33.7
1961	194,488	6,709,862	6,904,350	34.5
1960	185,988	6,386,592	6,752,580	34.3
1959	658,415	6,290,541	6,948,956	9.5
1958	1,131,180	6,234,194	7,365,374	5.5
1957	819,713	4,949,062	5,768,775	6.0
1956	428,535	4,341,107	4,769,642	10.1

1958				

[1] Estimate.

MAJOR FUNCTIONS OF FOREST SERVICE

Mr. WILKINS. I will be very brief in my remarks.

Senator BYRD. Very well.

Mr. WILKINS. I wish primarily to call to your attention our association's recommendations for increases to the budget request already made in the Budget Bureau report as a base for 1963. We are going to discuss very briefly what we consider one of the major functions of the U.S. Forest Service, and that is forest-fire control, nursery growing of stock for distribution and aid to small woodland managers, and of course, the planting of these trees.

We are dealing today primarily with the so-called State-Federal cooperative forestry programs.

I would like to say that we have prepared a schedule which appears, Mr. Chairman, on page 2, on which we show what the Budget Bureau base for 1963 appears as, and then what we are recommending, Mr. Chairman, as appearing in column 3.

I would like to say that we have no quarrel whatsoever with the $14 million increase recommended for national forest work on the 181 million acres of national forest, but we do feel recognition should be given to increases for the Federal-State forestry cooperative programs.

We think this is just as much a major function of the Forest Service as the others.

I would like to particularly emphasize, Mr. Chairman, that the Association of State Foresters has enjoyed, and continues to enjoy, a very pleasant working relationship with the Forest Service, which has been founded on mutual faith and trust for a good many years.

We hear more and more of the ever-growing demand for better protection, management, production, and utilization of approximately 435 million acres of State and private forest lands. And with your State forester, Mr. Chairman, we are very closely concerned about this matter of small woodlands management and protection—of which your State is one.

And this vast renewable resource contains a tremendous forest wealth that we feel is very vital to the national forest economy of our country. We are very appreciative of the appropriations granted to us in the past, but we do feel there is a stronger need than ever to at least sustain, and we hope to gradually accelerate, support of these programs.

In my own State of Maine, Senator Smith referred to, the growing and harvesting of timber is the No. 1 economy. So we are vitally concerned.

And to aid you, Mr. Chairman, in your deliberations, at the back of this statement I have submitted full tabulations which show all the appropriations under these programs since the very start and that matched and contributed by these States. And I think this will be very helpful to you.

FOREST FIRE CONTROL

I would like to briefly touch on the Clarke-McNary Act.

Section II of this act—forest fire control—probably is one of the most helpful programs in fire control that the States have ever been permitted to participate in. In our State it is very vital—17 million acres with protection against fire. And I am sure that all these States have benefited.

The thing that I would like to call to your attention particularly, Mr. Chairman, is the fact that it is my understanding that the intent of the 1924 Clarke-McNary Act was that the Federal Government would participate with the States in expenditures on a 50–50 basis.

The present authorization under this act is $20 million. But the full amount has never been appropriated. I think it is important to bring out here that the States have been expending roughly $60 million annually, and that present appropriation, of last year, was $12,465,500.

That is a ratio of about 5 to 1. We urge, therefore, your careful consideration of the increase we are recommending of $2 million to the present base of fiscal year 1963 of $12,465,500. This appears as a schedule later on.

PLANTING PROGRAM

Clarke-McNary Act, section 4 is the planting program. Now with the discontinuation of soil banks, we feel there is going to be a very strong need, more than ever, to continue to grow nursery stock for planting. We are rehabilitating the destruction of that terrific forest fire disaster of 1947.

So we feel that under title IV and the agricultural conservation program there will be a need for growing more forest nursery stock.

I would like to call to your attention that one of the greatest benefits, I would say, is a bill now before the Congress that will permit the States' continued use of capital improvement and facilities to continue growing trees even though the soil bank will discontinue June 30 of this year.

There is now a Senate bill, Senate bill S. 2635, that has been introduced, and I believe there are 19 cosponsors—Senators. So we ask your consideration of an increase of $104,000, making a total of $400,000 we are asking under Clarke-McNary, section IV.

Cooperative forest management, Mr. Chairman, is going to be covered by my colleague, Mr. Merrill. I would like to merely preface by saying this: Of the 435 million acres of private and State forest land, there are 4½ million people on these 435 million acres, and we have something like 3½ million farmers who own these woodlands.

We are told that the future woodpile of tomorrow is going to be better management of the small woodlands, and that is our major concern.

And whether Mr. Merrill touches on it or not, I would like to say that we are most appreciative of what the Congress did last year in meeting for the first time the full authorization of $2½ million. We are now suggesting, and I believe it is in a bill on the House side, an increase in this authorization from $2½ million to $5 million.

This appears as House Report 9728, introduced by Congressman Grant, of Alabama. And I believe there is a companion bill on the Senate side—if that is the correct way of speaking.

One more, and this is the last. That is, under title IV, assistance for tree planting, this is not as old a program as the others. Since 1958 Congress has been appropriating money for tree planting. My own State, Maine, was one of the few that carried this program forward, even though there were no Federal funds available in 1960 and 1961. So we urge your consideration of an increase that we are recommending of $1,500,000 to the present $1 million on the 1963 base.

Mr. Chairman, this concludes my persentation. We feel that in making these requests we are mindful of the heavy demand made for national security and other programs.

May I repeat again we are appreciative of the appropriations we have received in the past, but we do feel it is necessary to at least sustain, and where possible accelerate, these programs.

And on the last page, 8, I have repeated again our recommendations of these increases.

Thank you very much for the opportunity to appear before you. I enjoy the experience very much.

Senator BYRD. Thank you very much, Mr. Wilkins. We have enjoyed your testimony and will find it useful I am sure.

Mr. Merrill.

COOPERATIVE FOREST MANAGEMENT PROGRAM

STATEMENT OF PERRY H. MERRILL, COMMISSIONER OF FORESTS AND PARKS OF VERMONT

GENERAL STATEMENT

Mr. MERRILL. My name is Perry H. Merrill and I am commissioner for forests and parks for Vermont, and a member of the National Association of State Foresters legislative committee.

I am appearing here principally in support of the appropriation under the Cooperative Forest Management Act. At the last session, the Congress very wisely, in our opinion, appropriated the full authorized amount of $2½ million and, as my colleague has stated, we are very desirous that this authorization, as introduced by a bill by Congressman Grant, will raise this to $5 million, so next year I can come back, if they so decide, to speak on behalf of that amount.

To date, of course, the Federal Government is putting up the $2½ million, and the States are putting up about $3,600,000 to work with all of these landowners that desire to cooperate. At the present time there are so many of them that are desirous of this cooperation that we are unable to fulfill all of the demands.

One of the great demands for this work is with the agricultural conservation program where the landowners pay for certain forest practices that they carry out. So a large part of this work of the Service, Forest Service, is serving the demand under the agricultural conservation program, and also with the cooperative work that is requested through the soil conservation districts in most of our States.

This technical work, and the management of the private forests is carried on through the office of the State forest service.

We feel this small sum that we are requesting here will prove great dividends to the Nation by enhancing the quality and quantity of forest growth per acre. From our forest surveys throughout the country we know that many of our acres are not growing over a third or even a quarter of its productive capacity due to the way that these areas have been handled in the past.

Now this growing Nation of ours is going to need this wood fiber in the future, and it can be increased only by good management and protection. Our pure water supply and natural life habitat are also improved as we improve the quality and quantity of this forest growth.

STATE EXPENDITURES IN VERMONT

May I be pardoned in using my own State of Vermont as an example, because I am more familiar with that than I am perhaps, with West Virginia or Tennessee or California. This year we are expending in the little State of Vermont, which has a population smaller than Rochester, N.Y., the sum of $172,000 under this cooperative program, and of that amount about $53,700 is being allocated to us from this appropriation of which we are speaking today.

Now forest management not only means an ample supply of quality timber in the future, but it has a great influence both on the water-holding capacity of our forested areas and the habitats for game. And as brought forth by everyone that I have heard testifying here, the water situation in our country is becoming critical.

And it is from the soil that all of our wealth initially springs. Some of it we mine, some of it is renewable. And our forests are in that class. And this can be increased, as I stated, by proper forest management. So let us, the States and the Federal Government, work together cooperatively to furnish the needed funds to enhance and improve our forest growth.

We are pleased to have had this privilege of meeting with you today. We hope that we may have the same privilege and be treated as courteously as we have been in the past.

I thank you.

Senator BYRD. Senator Smith, do you have any questions?

Senator SMITH. No, except I think these items that Mr. Wilkins and Mr. Merrill have referred to are national in scope, and I would hope the committee would look at them in that way rather than by State. I was talking about the State of Maine when we opened because we feel their need and know the value of the effort that has been made.

Thank you very much. And I would like to thank the staff member, Paul Eaton, for making arrangements for these gentlemen to come in each year. He is most cooperative.

Senator BYRD. He is.

Senator Aiken.

Senator AIKEN. Mr. Chairman, I won't attempt to improve on the testimony of two such capable witnesses as you have just heard today. They know their business very well. They enjoy the confidence of the State Forestry Association, State foresters all over the United States, as evidenced by the fact that Mr. Merrill, at least, as I indicated, has been representing them before congressional committees for the last 20 years or more. So I just want to join Senator Smith in thanking you for permitting us to make these introductions.

Senator BYRD. Thank you, Senator Smith and Senator Aiken and Mr. Merrill and Mr. Wilkins. It is testimony such as yours that the committee finds very useful, and we are glad that you could appear before the committee today. We realize it is an imposition upon you to take the trouble, as you have, to come to Washington, but our committee welcomes this kind of testimony.

We have been very fortunate in that you have been accompanied, as I am sure you have been in the past, by your two fine Senators. And Senator Smith, and Senator Aiken, we can understand how you can be so proud of people like Mr. Merrill and Mr. Wilkins.

Senator AIKEN. If you keep on, you will get us started on bragging about our States. [Laughter.]

Senator BYRD. Senator Scott. And with Senator Scott, we will have Mr. Plummer Collins, Mr. Blain Mead, and Mr. Henry C. Kerlin.

Senator Scott, the committee is very happy to have you testify this morning. We will be glad to hear any statement that you wish to make, and of course we will be very happy to have you present your constituents.

RESEARCH LABORATORY AT WARREN, PA.

STATEMENT OF HON. HUGH SCOTT, A U.S. SENATOR FROM THE STATE OF PENNSYLVANIA

GENERAL STATEMENT

Senator SCOTT. Mr. Chairman, I appreciate the courtesy of the committee in fixing this hearing, and of the staff in arranging for it.

You have already noted the presence of the three witnesses, the first of whom, after a short preliminary statement by me, will be Mr. Blain Mead, who is chairman of the Warren County commissioners, followed by the other two witnesses, all of whom have brief statements in deference of the fact that the committee, of course, has a great deal to consider today in this hearing.

Last year on the floor of the Senate, in January 1961, when our colleague Senator Stennis was discussing forest industry matters on behalf of an appropriation bill, I made certain remarks at that time recommending the establishment of a research laboratory at Warren, Pa. Senator Stennis indicated both knowledge and interest in the proposal and there was a very friendly reaction to it. The proposed laboratory of Warren, Pa., will cost $450,000 and will provide much needed facilities for research in several important and closely related fields.

In this vicinity there are extensive areas of hardwood forests made up of highly valuable black cherry and other species that grow in association with it. These same forests provide shelter and food for many kinds of wildlife which in turn are a source of enjoyment for hunters.

There are significant problems involved in it. Sometimes natural reproduction of the forest is retarded, deformed, or even completely destroyed by deer herds that exceed the safe capacity of the area. The solution of problems of managing timber and deer and the combination is one of the objectives of research that will be facilitated by this laboratory.

Other important aspects for which such a research laboratory will be useful include the development and creation, setting aside of areas for outdoor recreation. And in this area there is considerable interest in this phase of our public lands and guide lines will be needed to assure planting and development for the fullest and continuing recreation enjoyment and for research connected with it. And the facilities for research on how to grow timber economically and still provide for deer and small game, and study for recreation activities can also be provided in this laboratory.

DONATION OF SITE

A 600-acre tract has recently been donated to the Forest Service which will serve as a site for the building. I believe the program is sound and I hope the Congress will, in this session, approve the $450,000 necessary to provide these much needed facilities.

While what I have had to say may in some degree be duplicated by the witnesses, I am sure that each of them will take up a different phase of this matter and present it to you for your consideration.

I would like to ask that the committee first hear Mr. Blain Mead.

Senator BYRD. Thank you, Senator Scott, for a very good statement. Mr. Mead, you may proceed.

STATEMENT OF BLAIN M. MEAD, CHAIRMAN, WARREN COUNTY COMMISSIONERS

GENERAL STATEMENT

Mr. MEAD. The following is a summary of the Warren Research Center's present work, the research that should be done, and what is required to do that research. The summary includes forest recreation, forest wildlife habitat, and timber management research, the three lines of work assigned to them.

Their primary mission in Warren is research in forest recreation and wildlife habitat for the 12 Northeastern States—New York, western Pennsylvania, West Virginia, and the States to the northeast. In addition, they are responsible for research in timber management on the Allegheny Plateau, which includes most of western New York and northern Pennsylvania.

At Warren, seven forest scientists and one clerk have begun this research program in a renovated five-room cottage on the former Biddle estate now called the Irvine Demonstration Forest.

FOREST RECREATION RESEARCH

In forest recreation research they have one man full time and two men part time.

In the 18 months since the Warren Center has been established they have completed some preliminary forest recreation studies and have started others. The small staff now working on this research is best equipped to deal with the plant and soil aspects of this field, but the nature of the recreation problem has required them to make some investigation in other fields, too.

To insure their research programs included studies of practical use to recreation administrators, they recently visited nine heavily used recreation areas including five State parks in Pennsylvania, three in New York, and one Forest Service area in New Hampshire. During these visits they interviewed planning personnel and park managers, examined park and recreation areas, and reviewed pertinent records. Problems mentioned during these interviews included the need for better methods of measuring forest recreation, use, evaluation of the economic impact of recreation on communities and regions, litter problems, vandalism, soil compaction, tree root exposure, erosion of beaches, the problem of odor from pit toilets, and the need for any information that will assist in stretching the funds allocated for recreation.

OVERCROWDING IN FOREST RECREATION AREAS

One of the reasons that knowledge of user preference is needed is because people seriously overcrowd some facilities while leaving others unused. The unused facilities represent money wasted, and overcrowding tends to destroy soil and vegetation and multiplies problems of health and sanitation. If user preference can be accurately ascertained, better plans can be made to obtain more uniform utilization.

Two studies of user preference were made last summer. The first employed standard questionnaire techniques and was applied to national forest recreation areas in Pennsylvania and West Virginia. The second study used a mapping technique to obtain a measure of user preference without direct questioning. This study was made at Chapman Dam State Park in Warren County and in New Hampshire. The results of both studies are now being analyzed.

Their task in recreation research is to conduct studies which will solve some of the many problems which have accompanied the recent boom in outdoor recreation. An analysis of their studies so far has served to emphasize that these problems require the specialized techniques of several sciences.

Economics research is needed to develop methods for estimating the impact of recreation on communities and regions. The new forest recreation land being purchased and developed in New York will certainly have an effect upon local economies. But, there is now no good method for estimating the income to a community that may be expected or the type of development that should be made to draw the most people. Economic studies could provide guides for investment to keep pace with recreation demand, without overdevelopment and the resulting loss of private or public funds.

ECONOMIC STUDIES

Another example of the need for economic study was found in the Catskills in New York where a new superhighway has drained off a large part of the tourist trade with resulting loss of income to the hotels, motels, sporting-goods stores, and food markets there. Economic studies are also needed in the Pocono Mountains of Pennsylvania and in West Virginia where recreation could provide a permanent economic base that would partially replace the declining coal industry.

Information on these economic problems would provide communities with a better basis for evaluating proposed developments. A well-qualified economist is needed on these studies. He could not conduct all of the necessary studies, but by working closely with universities and research foundations he could make a good start.

Because the whole purpose of recreation is to provide for human enjoyment and well being, research is needed to measure public opinion, predict needs, and understand human motivation. The influence of Smokey Bear in the education of the public on forest fire prevention illustrates the effectiveness of applied psychology in obtaining the cooperation of the public. They do not expect to discover more Smokey Bears but studies of the needs and preferences of recreationists may assist managers in solving some of their knotty problems, such as the controversy between fishermen and waterskiers and the all too prevalent problem of litter.

A social scientist trained in the techniques of survey research with ability to analyze human motivation and behavior is needed to conduct these studies. Like the economist he would not be able to work on all of the problems but he would have the hearty cooperation of the men and agencies who are constantly faced with these troublesome situations.

ENGINEERING PROBLEMS

Research in the engineering aspects of forest recreation is needed to test a variety of existing facilities and to make improvements to meet special requirements. For example, engineering problems include the development of sewage disposal systems that will meet health standards and still remain within limited budgets. Artificially established beaches erode and result in high maintenance costs. Roads in recreation areas are usually designed for automobile traffic, and they are often inadequate and unsafe for pedestrains and bicycles. Almost everyone in recreation work has designed a gate, a fireplace, a toilet, or a picnic table. This in itself indicates that tests and standardization of such items are needed.

HABITAT MANAGEMENT

Wildlife research in the past has been concerned primarily with individual game animals and birds and their specific requirements rather than with the forest habitat and its management for game. This broader approach to habitat management is needed if we are to produce a sustained yield of game.

Most of our forest land has a potential use by as many as five different kinds of game. Each of these kinds of game must be managed in relation to the other, and in relation to the land, and all of them in relation to the other uses of the forest.

RESEARCH IN STAND IMPROVEMENT METHODS

Western New York and northern Pennsylvania have the Nation's largest concentration of high quality black cherry—one of America's most beautiful furniture woods. In addition, this region has fine stands of sugar and red maple and ash as well as many other species. A limited research program on the management of these forests has been under way in the Poconos at Kingston for 15 years and at the Kane Experimental Forest for about 30 years. Much of the improved management on the Allegheny Plateau forests has been based on this research.

In recent years thousands of cutover stands have grown into merchantable size, while other thousands of acres have failed to regenerate to desirable forest tree species. Meanwhile the price of timber has risen greatly and it is now essential that we take another look at this resource, its possibilities, and the need for improvement. Within the forest that grew following the widespread cutting preceding 1920, are many valuable trees but these form a very small proportion of the stand. It is necessary that research be continued in stand improvement methods. Here are some examples to give you an idea of the timber values involved; these are based on 1960 prices for the Allegheny National Forest timber sales. Cherry sold for an average price of $140 per thousand board feet on the stump, sugar maple $52, white ash $42, red maple $27, white pine $21, and beech sold for $5 per thousand. You can see that experiments in changing the composition of beech, aspen, and hemlock stands into cherry, maple and ash stands, could provide guides for increasing the value of the present forest by several times.

There will always be a certain proportion of lower grade logs even in the best trees, because grade depends on the diameter of the log and the amount of clear lumber. The upper logs in a tree are always smaller and have more knots. Disease, insects, scars from fire, careless logging, and many other things may also affect grade. While No. 1 or veneer logs are not rare they are far from plentiful, and much more study will be required in the management of stands before they can produce the maximum in high-grade logs.

There are about 4 million acres in western New York and northern Pennsylvania that did not become reforested or that reforested with trees of little or no commercial value. About 15 percent of this area is open or is poorly stocked with trees. Another 26 percent has only medium stocking and many stands although fully stocked consist mostly of low-value trees. Seeding or planting is needed to establish new forests on open areas and to improve the composition of the low-value stands.

PLANTING COSTS

Planting with conifers costs about $50 per acre, a cost which makes any large-scale effort prohibitive. Planting with hardwoods such as cherry, ash, and maple is even more expensive. In the South the Southern Forest Experiment Station has learned to reforest pines by seeding at a cost of as little as $5 per acre. Our center does not know that they could duplicate this success but with 4 million acres in need of reforesting it is certainly a worthy research goal.

PRELIMINARY PLANS FOR LABORATORY

Preliminary plans have been drawn for the office and laboratory needed by the center. Space for 22 scientists, their laboratory aids, and computing and clerical help is needed.

One small laboratory should be equipped for seed and seedling studies. This should include greenhouse facilities, part of which should be equipped for the biological work being done in wildlife habitat studies. A larger, general laboratory is needed for soils and another workshop for engineering tests. Added to this would be the general requirements for servicing such a building.

The technical problems in the management of the forests and the impact of these problems upon the economy of an area are many and complex. When oil, gas, and coal resources are depleted, the forest will remain as the greatest single natural resource of this area. Research in the development, maintenance, and wise use of this resource is an investment that deserves the gravest consideration.

FUNDS RECOMMENDED

It is estimated that $450,000 will be required as an appropriation to carry on the necessary development work at the Warren Research Center. We hope that this matter will be given your most careful consideration.

Senator BYRD. Thank you, Mr. Mead.

Our next witness will be Plummer Collins.

80391—62——78

WARREN COUNTY DEVELOPMENT ASSOCIATION

STATEMENT OF PLUMMER F. COLLINS, REPRESENTATIVE

GENERAL STATEMENT

Mr. COLLINS. Senator, as an example of present facilities, I would like to submit this article from the paper.

Senator BYRD. All right. The committee will have this placed in its files.

(The article referred to will be found in the committee files.)

Mr. COLLINS. Thank you.

Better recreation and wildlife habitat, like modern living facilities and medicine, can be achieved only through research.

The Warren Research Center, the first of its kind in the Nation, was established in September, 1959. Lack of facilities and equipment already has resulted in the failure of several projects.

Forest research is saddled with the responsibility of providing adequate facilities for a rapidly increasing number of people seeking relief from the hustle of the present-day world. Research in recreation today can be compared with the pony express in operation in this modern day.

In addition to examining physical resources, research is needed to evaluate the desires of people, and develop designs in recreation facilities that will fulfill the needs and wishes of visitors, yet at the same time protect the resources.

The research center would be located in the midst of virtually a sportsmen's paradise. The area offers unexcelled hunting and fishing, and an ideal location from which to conduct research.

BIG GAME POPULATION

It is estimated that over 300 black bear and over 20,000 whitetail deer make up the big game population of the area, in addition to thousands of small game animals which includes an abundant supply of wild turkey.

There are more than 500 miles of unposted fishing streams, mostly trout, which provide a mecca for fishermen each year.

Chapman Dam State Park is located in Warren County, where already research in recreation has been conducted by the research center.

Forest recreation research is not a single discipline, but draws upon sociology, economics, ecology, psychology, engineering, and other fields of science as well as upon the accumulated experience of management to devise principles and tools for use by administrators and public and private forest recreation throughout the Nation.

If a sustained yield of game and timber is to be provided, research is needed to determine the relationships between stages of forest succession patterns, and intensities of timber cuts, and the response of timber game.

Forest research in the Allegheny Plateau in tree seed selection alone has been estimated as being 30,000 years behind agriculture. The Allegheny Plateau, nearly a half century ago was dubbed the "Great Allegheny Briar Patch." Today, through management of the U.S. Forest Service, it has become one of the leading producers of timber in the northeast.

Through research the value of timberland is expected to be increased eight times.

USE OF ALLEGHENY NATIONAL FOREST RESOURCES

During 1961 the Allegheny National Forest resources were used by an estimated 1,176,000 people. This was an increase of approximately 8 percent over 1960. Nationwide, the increase in outdoor visits is approximately 16 percent annually.

Picnicking and fishing visits increased more than 20 percent.

Recreation research is being carried on in an attempt to produce the best equipment and facilities, and the best methods of maintaining them at the lowest possible cost.

It had been the general opinion that the soil of the Allegheny Plateau varied little, this has been proven to be a fallacy by the research center. Through research the best soil will be sought for the best selection of seed planting, care of wildlife habitat and location for future recreation areas.

LABOR SURPLUS AREA

Warren County was first classified as a smaller area of substantial labor surplus in April 1961 when approximately 9 percent of the labor force was idle.

This month, marking the third consecutive 6-month period, the county remains in the same classification.

During the past year it was estimated that as many as 1,500 of the county's estimated labor force of 16,600 have been idle. At present the idle labor force is listed at 1,000, or about 6.5 percent.

Warren County's jobless workers continued to increase in recent months while a slight gain has been noted statewide. Approximately 40 percent of the idle force are women.

The recommended $450,000 appropriation not only would benefit Warren County's economy, but eventually that of the 12 State northeast region of the U.S. Forest Service.

I thank you.

Senator BYRD. Thank you, Mr. Collins.

Col. Henry C. Kerlin.

WARREN AREA CHAMBER OF COMMERCE

STATEMENT OF HENRY C. KERLIN, REPRESENTATIVE

PREPARED STATEMENT

Mr. KERLIN. Senator, in view of the fact that Mr. Mead and Mr. Collins have covered a large part of what I have in my statement, I ask you permission to skip over it and strike only these things that have to do with the economic point of view, which is what I want to present today.

Senator BYRD. All right. Then the entire statement will be included in the record, and you may highlight it as you desire.

Mr. KERLIN. Yes, sir, that is my request.

Senator BYRD. Fine.

(The statement referred to follows:)

EXPANDED AND ADEQUATE FACILITIES FOR THE U.S. FOREST SERVICE, NORTHEASTERN FOREST EXPERIMENT STATION, WARREN, PA.

The purpose of this statement is to present, from an economic point of view, the reasons why it is necessary to expand the facilities of the Northeastern Forest Experiment Station.

The primary missions of this station are research in forest recreation and wildlife habitat for the 12 northeastern States (New York, Pennsylvania, West Virginia, and the States to the east), as well as research in timber management on the Allegheny plateau, which includes most of western New York and northern Pennsylvania.

The economic impact of all three of these areas of research upon the land areas which they effect is tremendous. Further, the information derived from such research would be made available to persons who are responsible for forest management from West Virginia to Maine, inclusive. These persons could be employees of the U.S. Forest Service, various State forest services, or be the owners of private timberlands.

FOREST RECREATION RESEARCH

The purpose of forest recreation research is to initiate and conduct studies which will solve as many as possible of the problems which have accompanied the recent boom in outdoor recreation. An analysis of our studies so far has served to emphasize that these problems require the specialized techniques of several sciences.

One of the objectives of these intensive studies is to insure that the heavy usage by recreation-seeking people does not do permanent damage to trees, plants, soils, and even beaches around lakes and perhaps along the streams. In order to insure that such research included studies of practical use to recreation administrators, scientists of this station recently visited nine heavily used recreation areas including five State parks in Pennsylvania, three in New York, and one U.S. Forest Service area in New Hampshire. During these visits the scientists interviewed planning personnel and park managers, examined park and recreation areas and reviewed pertinent records. Problems discussed during these interviews included the need for better methods of measuring forest recreation use, evaluation of the economic impact of recreation on communities, litter problems, vandalism, soil compaction, tree root exposure, erosion of beaches, and the need for any information that will assist in stretching the funds allocated for recreation. A knowledge of user preference is most important. This knowledge is needed because people seriously overcrowd some facilities while leaving others unused. The unused facilities represent money wasted and overcrowding tends to destroy soil and vegetation and multiplies problems of health and sanitation. If user preference can be accurately ascertained, better plans can be made to obtain more uniform utilization.

Economics research directly related to user preference is needed to develop methods of estimating the impact of recreation on communities and regions. An example of the need for economic study was found in the Catskills in New York where a new superhighway has drained off a large part of the tourist trade with resulting loss of income to the hotels, motels, sporting goods stores and food markets there. Economic studies are also needed in the Pocono Mountains of Pennsylvania and in West Virginia where recreation could provide a permanent economic base that would partially replace the declining coal industry. Recently a comprehensive study of forest recreation was made for a county in Maine, where recreation is being considered as a means of supporting a depleted economy. Therefore, it is most important that the forest areas in all of the 12 States concerned are maintained in as nearly an untouched and natural state as is possible and to keep the forest recreation areas and facilities which have been constructed by governmental, and in some instances private agencies, in first-class condition. The importance of this maintenance is twofold.

First it is highly important to prevent or minimize permanent damage to trees and plants and to keep the forest in as nearly a natural state as possible.

Second it is highly important to keep the forest recreational areas and facilities in as attractive a condition as possible because the greatly increased tourism, which is promoted by attractive forest recreation areas and facilities, has a most beneficial economic effect on the localities in which the forests are located.

WILDLIFE HABITAT RESEARCH

The purpose of wildlife research is to determine the methods of operating a forest by cutting, planting, and other cultural practices to produce the greatest variety and abundance of game possible, consistent with water and timber conservation and with the construction and maintenance of needed recreational facilities. We believe that research can produce management methods that will yield permanently higher populations of all types of game than at present. At the same time, it will be necessary to produce natural food for our game resources in such quantity and of such type that they will not destroy valuable young trees or other plants which we wish to preserve and nurture.

As an example of the need for wildlife habitat research and balancing the population of various types of game against the food resources available, deer have destroyed or severely damaged the best of the young trees in many areas throughout the northeast part of the country which this research station serves. All evidence now points to the need for temporary reduction in the size of these herds in order to allow the rebuilding of the impoverished habitat to a level that will allow sustained-yield management of our game resources; specifically here.

It can be seen immediately that wildlife habitat research is related to forest recreation research as well as to forest timber management research. It is related to forest recreation research in that one of the types of recreation in a forest area is hunting. On the other hand, it is also related to timber management in that if there is an imbalance between the numbers of game animals in the forest and the amount of food, the young trees will suffer and be lost and perhaps damage that cannot be repaired for years will result.

This brings us to the economic side of wildlife habitat research. The thousands of hunters who go forth each year to hunt in our forest improve the economic position of the areas to a very great degree. At the same time, if our research has been effective, our timber will grow without damage and expensive and valuable trees such as black cherry, which sells on the stump at $140 per thousand board feet, will grow faster and better and in a balanced manner. For these reasons it is economically sound to engage in the best wildlife habitat research.

TIMBER MANAGEMENT RESEARCH

The purpose of timber management research is to evolve methods of timber management which will permit us to raise the maximum number of commercially useful trees which will produce the highest grade logs in the shortest period of time on our forest lands.

Western New York and northern Pennsylvania have the Nation's only large concentration of high quality black cherry timber; one of America's most beautiful and most desired furniture woods. In addition, this region has fine stands of sugar and red maple and ash as well as many other commercially useful species. While thousands of acres of this timber, which is second growth, has grown into merchantable size, other thousands of acres have failed to regenerate to desirable forest tree species. Meanwhile the price of timber has risen greatly and it is now essential that we take another look at this resource, its possibilities and the need for improvement in timber management in order to correct these deficiencies. As an illustration of the need for such research, there are about 4 million acres in the Allegheny Plateau that did not become reforested or reforested with trees of little or no commercial value after the virgin timber was cut. About 15 percent of this area is open or is poorly stocked with trees. Another 26 percent has only medium stocking and many stands although fully stocked, consist mostly of low value trees. Seeding or planting is needed to establish new forests on open areas and to improve the composition of the low value stands. Forest Service research has developed a system for reforesting pines at a cost of as little as $5 per acre. On the other hand, no method has been developed for planting hardwoods such as cherry or ash, which is economically possible. The development of an economically feasible method of planting hardwoods on a large scale is absolutely essential.

Economically, the species of trees that we have in our forests is only a part of the answer. It is true that our forests must be made up of trees which are commercially useful and desirable but it is equally true that the logs produced by the trees of such species must be first grade to as great an extent as possible. For example, a No. 1 leg of black cherry may produce the veneer stock which

would list for about $280 per thousand board feet in contrast to No. 1 lumber at $185 per thousand feet or No. 2 Common at $75 or No. 3 Common at only $25 per thousand.

Therefore, from a dollars-and-cents point of view, timber management research is a very sound investment in what will be the only remaining natural resource of this area when our declining oil, gas and coal are gone.

EXISTING FACILITIES

The present organization of the Northeastern Forest Experiment Station at Warren, Pa., consists of six forest scientists and one clerk. These people work in a renovated five-room cottage on what is known as the former Biddle Estate and which has been renamed the Irvine Demonstation Forest. The latter has not yet been developed. Of the personnel mentioned above, three scientists are engaged in forest recreation research, one is engaged in wildlife habitat research and two scientists are engaged in timber management research. The clerk, of course, serves all six.

I believe that it is quite clear that the mission of the Northeastern Forest Experiment Station cannot be properly executed with the relatively few people assigned to it and with these people operating from a renovated very poorly equipped five-room cottage.

SUMMARY

In summary, let me say that the scope of the mission of the Northeastern Forest Experiment Station is such that it cannot be executed by a staff of six scientists and one clerk nor can any staff properly execute this mission from a five-room cottage where space does not exist for proper equipment and facilities. Further, I believe that it is amply clear from the foregoing that the mission of this experiment station is economically sound in all three of its facets and will return many times over to the Government and to the citizens who occupy the forest areas, the money which we hope will be expended to establish and operate it on a proper basis.

EXPANSION OF NORTHEASTERN FOREST EXPERIMENT STATION

Mr. KERLIN. The purpose of the statement is to present from an economic point of view the reasons why it is necessary to expand the facilities of the Northeastern Forest Experiment Station.

Based upon the statements that these other gentlemen have made, I believe it is fairly clear that the economic impact of all three of the areas of research in which the experiment station will be involved will have a tremendous effect on the land areas in which they will be used. And in this respect, economics research is directly related to user preference needed to develop methods of estimating the impact of recreation on communities and regions. This is evident from the fact that we are now, several of our services, including the Corps of Engineers, working out plans for recreation areas in the reservoir area which is located not very far from our city, and in the locality generally. And this in itself is expected to have a tremendous impact economically on the community. But the economic impact is not solely that which benefits the people who live there in that area and who will derive benefits immediately from it, but also from the growth of our forests, from the improved stands of timber, and the expanded stands of timber.

EXPERIMENT STATION STAFF

I will move now to a description of existing facilities at the experimental station. The present organization of the Northeastern Forest Experiment Station at Warren, Pa., consists of six forest scientists and one clerk. These people work in a renovated five-room cottage

on what is known as the former Biddle estate and which has been renamed the Irvine Demonstration Forest. The latter has not yet been developed. Of the personnel mentioned above, three scientists are engaged in forest recreation research, one is engaged in wildlife habitat research, and two scientists are engaged in timber management research. The clerk, of course, serves all six. The latter two scientists I mentioned are engaged in research that has to do with reforestation of about 4 million acres all told, reforestation which includes the planting and development of timber that is of economic value, commercial value, to users not only there in that part of the country, but all over the East. And also the preservation of the only commercial stand of black cherry in this country, which is on that Allegheny Plateau. That is the only one. The preservation of it and the expansion of it. It is a highly desirable type of timber for furniture manufacturing, and there is not very much of it left. But by this research we can expand it and give people the benefit of that.

I believe that it is quite clear that the mission of the Northeastern Forest Experiment Station cannot be properly executed with the relatively few people assigned to it and with these people operating from a renovated, very poorly equipped five-room cottage.

In summary, let me say that the scope of the mission of the Northeastern Forest Experiment Station is such that it cannot be executed by a staff of six scientists and one clerk nor can any staff properly execute this mission from a five-room cottage where space does not exist for proper equipment and facilities. Further, I believe that it is amply clear from the foregoing that the mission of this experiment station is economically sound in all three of its facets and will return many times over to the Government and to the citizen who occupy the forest areas, the money which we hope will be expended to establish and operate it on a proper basis.

Senator Byrd, thank you very much indeed for permitting us to appear before you.

Senator BYRD. Thank you Colonel Kerlin. We appreciate your presence. Thank you, gentlemen.

Congressman Charles M. Teague, a Member of the Congress from the 13th District of California, who will be accompanied by Robert T. Radford, Southern California Watershed Council, Monrovia, Calif.

Congressman Teague.

FIRE PROTECTION IN CALIFORNIA

STATEMENT OF HON. CHARLES M. TEAGUE, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF CALIFORNIA

GENERAL STATEMENT

Mr. TEAGUE. Mr. Chairman, thank you. It is good to see you.

I would like also to ask Mr. W. B. Carter, who is chairman of the California State Board of Forestry, to come to the table, if he may. He has no statement, but he is here with moral support.

Senator BYRD. We would be delighted to have him sit at the table.

Mr. TEAGUE. Mr. Chairman, I will be very brief.

For the record, I am Congressman Charles M. Teague of the 13th Congressional District of California. I do have with me Mr. Radford

and Mr. Carter, both of whom have had long experience in our very important problems of fire protection in California. I know what Mr. Radford is going to say and I fully endorse his statement and the request that he will make.

PREPARED STATEMENT

Mr. Chairman, I do ask permission to also insert a short statement for the record, which was sent to me by Mr. Frank Jewett, who is chairman of the Citizens Committee of the Los Padres National Forest.

Senator BYRD. Congressman, the statement will be included in the record at your request.

Mr. TEAGUE. Thank you.

(The statement referred to follows:)

LOS PADRES NATIONAL FOREST FIRE PROTECTION NEEDS

The Citizens Committee of the Los Padres National Forest, affiliated with the Watershed Fire Council of Southern California, again requests favorable consideration by your committee for increased appropriations to the special fire protection fund for the Los Padres National Forest.

We are grateful for the increased appropriations of the past years; however, the plan developed in 1954 for a desirable fire protection program for the four national forests of southern California requiring $2,375,000 each year for 10 years, has never been attained. Rising costs have further limited the accomplishment of the necessary program, with those funds that were made available.

The added equipment, yearlong employment of experienced men, and preattack planning have contributed to the exceptional record acres burned in the Los Padres Forest. Good fortune also played a part in the location of the fire starts and their accessibility. There are still hundreds of thousands of acres that are inaccessible and in extreme fire danger periods are closed to public use because they are so difficult to protect. Fire starts there could become wildfires and do untold damage to the valuable watersheds.

February brought above average rain to southern California. The streams that have their beginning in the national forest are bringing our most precious commodity to our reservoir and valleys. Unfortunately flood damage also occurred and the extreme flooding in the fire denuded hills gives mute testimony to the need to protect the land cover from fire. The lush growth that will result from our welcome rain will create more fuel and during the late summer, fall, and early winter add to the fire danger in our wild lands.

Experience indicates the best insurance policy for the national forests is to provide for an adequate fire protection program.

Your favorable consideration and congressional approval, and appropriation is requested for—

1. $625,000 for the special fire protection funds for the 1962–63 fiscal year for the national forests of southern California;
2. The necessary funds to continue the program for the national forests; and
3. Funds for the improvement of the fire protection facilities and fire personnel quarters in the national forests.

GENERAL STATEMENT

Mr. TEAGUE. I also want to express our appreciation to your very fine staff member, Mr. Eaton, who has been so courteous and cooperative to us in arranging for this appearance.

Senator BYRD. Congressman, we are always glad to have these expressions of gratitude concerning our staff member. And we on the committee, of course, are very much indebted to him also.

Mr. TEAGUE. Very, very briefly, Mr. Chairman, I might just say that for more than 50 years, I have lived right on the edge of Los Padres National Forest. I have had many firsthand experiences with fires, including one in which I lost my pumphouse and stable and front porch furniture.

I do particularly like what Mr. Jewett has said in the statement I have just filed to the effect that there is no better insurance for our national forests than an adequate fire protection program and policy.

I could go on at some length, but I know you, Mr. Chairman, are familiar with it. I also know that the consideration this committee gives to the various requests is not dependent upon the length of the statements which are made. So if you will excuse me, I will run along. I have a luncheon engagement. However, I do heartily endorse the statement Mr. Radford will make, and the one that Mr. Jewett has made and that has been filed with you.

Senator BYRD. Congressman Teague, we appreciate your presence before the committee. We are sorry you were inconvenienced by being delayed.

Mr. TEAGUE. Not at all.

Senator BYRD. We know how busy you are and we know you must go. We appreciate your coming this morning.

Mr. TEAGUE. Thank you.

Senator BYRD. Mr. Radford.

SOUTHERN CALIFORNIA WATERSHED COUNCIL

STATEMENT OF ROBERT T. RADFORD, REPRESENTATIVE

PREPARED STATEMENTS

Mr. RADFORD. Senator Byrd, I have filed with Mr. Eaton copies of the statement from the watershed fire council and from the watershed commission, and he has a copy of the statement from the San Diego group.

Senator BYRD. Are you proceeding to read a statement?

Mr. RADFORD. No, thank you. I have heard all the written statements I think I can stand.

Senator BYRD. You have three statements. Do you want one or all included?

Mr. RADFORD. I want them all included.

Senator BYRD. All right.

(The statements referred to follow:)

FIRE PROTECTION NEEDS OF ANGELES NATIONAL FOREST, LOS ANGELES, CALIF.

Each year since 1954 the Los Angeles County Watershed Commission has presented a program to the Congress explaining the need for increased funds for fire protection in the Angeles National Forest.

Our requests are based on a 10-year program formulated for the Los Padres, San Bernardino, Cleveland, and Angeles National Forests by the U.S. Forest Service in cooperation with the Watershed Fire Council of Southern California. This program calls for an annual appropriation of $2,375,000 special protection and maintenance funds to be used in the vital task of saving these forests.

However, funds appropriated by Congress since 1954 have fallen far short of the amounts needed to provide adequate protection for our watersheds. For instance, funds to be allocated to the Angeles National Forest during the fiscal year 1962 will total only 75 percent of the amount originally estimated to be required annually over a 10-year period beginning with fiscal year 1955.

With funds which have been allowed, however, firefighting facilities in the Angeles National Forest have been improved to the extent shown in the following table:

	1954 estimated minimum need	Budget accomplishments through fiscal year 1962	Still needed	
			Number	Percent
Yearlong firemen	100 men	77	23	23
Seasonal firemen	167 men	8	159	95
Firefighting equipment	30 units	11	19	63
Radios	55	35	20	36
Prefire planning	500,000 acres	300,000	200,000	40
Water developments	57 units	1	56	98

The Angeles National Forest is a prime watershed area for Los Angeles County, with its 6½ million population. From 50 to 100 percent of the water needs of the many communities in Los Angeles County are met by the watersheds of this forest. Recent years have also brought a great increase in use of the area for recreation.

Fire is a constant threat because of the extremes of high temperatures and dryness in this region throughout most of the year.

That a serious yearlong fire problem exists was never better illustrated than by the not unusual hot, desert wind conditions during January of 1962 which returned the southern California forests to a midseason fire condition within a few days following periods of substantial rainfall and snow in December.

Fires in this area are costly in many ways. They destroy water-retaining vegetation, clearing the way for devastating mud and debris flows. Landslides scar the hills, uncovering bare rock underneath the thin skin of soil. Recreation areas are ruined. Lives, homes, and valuable water are lost.

In the Angeles National Forest, these conditions are complicated by an ever-expanding population rise and the extension of residential areas right up into the woodlands and mountain watersheds adjacent to the forest boundaries.

But the people of Los Angeles County have not been without providing for their own protection and prevention of fire dangers resulting from their proximity to the Angeles National Forest.

In the 10 years from 1951 to 1961 the county of Los Angeles through its various agencies directly and indirectly spent $13,887,298 of local tax funds for fire prevention and forest rehabilitation within the Angeles Forest. This is $1,246,518 more than was spent by the Federal Government for similar purposes during the same period.

We believe such continuing measures are unmatched by any local or State government in providing assistance to and cooperation with the Federal Government to insure the safety and welfare of local citizens whose lives and properties are so vitally affected by a federally administrated responsibility within their own community.

Therefore, we urge the Federal Government to meet these responsibilities under the plan outlined by the Watershed Fire Council of Southern California which this commission fully supports and endorses. We urge the Congress to—

1. Increase the appropriation of special funds in the 1962–63 fiscal year budget for fire protection in the national forests of southern California by the amount of $625,000 to attain the level of $2,375,000 required annually according to the original estimated needs established in 1964;

2. appropriate the necessary funds to continue the "program for the national forests"; and

3. appropriate the necessary funds to implement a program of structural improvements within the national forests of the United States, including fire protection facilities and fire personnel quarters.

FIRE PROTECTION NEEDS OF NATIONAL FORESTS OF SOUTHERN CALIFORNIA

The Watershed Fire Council of Southern California is a group of appointed and elected citizens representing the 9½ million residents of the eight counties of southern California which contain within their boundaries, the Los Padres, Angeles, San Bernardino, and Cleveland National Forests. This organization is dedicated to the work of assisting local, State, and Federal agencies in providing adequate fire protection and administering proper land-use management to the forest preserves and wildland areas of southern California.

In this direction, in 1954, we sought and received from the U.S. Forest Service a dollar formula which, in their opinion, would provide a level of fire protection of minimum acceptable standards and which, if projected over a period of 10 years, would also provide certain essential capital improvements within these four national forests. The amount needed in addition to the amount then being provided for regular protection and maintenance in 1954 was calculated to be $2,375,000 annually.

In response to our requests, Congress has allowed additional supplemental funds in the years since 1954, but the full amount to provide that minimum protection designated (at 1954 prices and wages) for a year's period has never been appropriated in any one year, and therefore our program has fallen further behind.

Little time need be spent in justifying the critical need for increased national forest fire protection in southern California. Acute combinations of long, dry summers and hot desert winds of fall and winter create a yearlong fire season and the extremely steep and rugged slopes make fire control in this area very difficult and costly.

Outdoor recreation is heavier in the national forests of southern California than in any other national forest or recreation area and increasing use by still rapidly developing population means increasing chance of man-caused fires.

In fact, a special subcommittee of the House of Representatives Interior and Insular Affairs Committee in 1957 found that "forest fire problems in southern California are more acute than in any other part of the country and require special consideration."

For example, the deplorable situation is that the four national forests of southern California suffered 44.5 percent of all of the dollar damage by fire to all of the national forests of the United States during the 16-year period from 1941 through 1957. In 1958, fires in these four forests accounted for 52 percent of all acreage destroyed in the national forests.

In spite of these severe losses, and the insufficiency of funds allowed by Congress, the fire-control posture of southern California has nevertheless improved in recent years. We have long advocated that adequate appropriations of funds for protection can reduce acre damage from fires which do occur and the enormous amounts of emergency funds spent for their suppression.

No better example has presented itself than during the past calendar year when measured fire indexes showed that a potentially explosive situation existed for most of the 12 months. Despite the fact that our four forests experienced more fire incidents from all causes than in 1960, a significant decrease was shown in the number of acres burned.

There were 84 more fire occurrences in 1961 than in 1960, but acreage destroyed was reduced by 71,836 acres. Emergency fire suppression costs were also less by $1,833,051.

While a great deal remains to be accomplished, and a large accumulated deficit of planned funds over the years needs to be dealt with, increased benefits thus far provided such as better equipment, increased manning, yearlong employment of key fire people, increased capability of strong initial attack coupled with continued expansion of aerial firefighting methods and other new developments are beginning to pay dividends.

An illustration of what has been accomplished to date and what remains to be done is shown in the table attached hereto.

The watershed fire council believes that with the appropriation in fiscal year 1962–63 of the remaining $625,000 supplemental funds necessary for 1 full year of protection, and a continuation of this program until its fulfillment that disastrous fire losses to valuable watershed land in southern California can be further reduced and held within acceptable limits.

After we are successful in establishing this program on a fully funded yearly basis, we will examine, in view of the special needs of our area, the new protection plan now being developed for all of the national forests of the United States,

and we are hopeful that this new program will adequately insure a level of protection and management which we can support for the years to come.

In closing, we urgently petition this committee and the Congress to—

1. Increase the appropriation of special funds in the 1962–63 fiscal year budget for fire protection in the national forests of southern California by the amount of $625,000 to attain the level of $2,375,000 required annually according to the original estimated needs established in 1954.

2. Appropriate the necessary funds to continue the program for the national forests.

3. Appropriate the necessary funds to implement a program of structural improvements within the national forests of the United States, including fire protection facilities and fire personnel quarters.

Accomplishments and needs, national forests of southern California

	1954 need estimates	Accomplishments through fiscal year 1962	Still needed after 7 years	
			Amount	Percent
Additional firemen (seasonal and yearlong) positions	756	334	422	55
Pumpers	93	29	64	69
Tractors	11	4	8	72

Fire roads ... miles	389	25.5	363.5	93

[1] Revised upward by U.S. Forest Service estimated needs from original 2,671,000 acres.

Citizens Forestry Study Group of San Diego County

Gentlemen, the Citizens Forestry Study Group of San Diego County herein presents its eighth annual request to Congress to appropriate funds to permit full implementation of the fire protection plans presented in 1954 by the four national forests of southern California. This request has been reendorsed each year by the Watershed Fire Council of Southern California. In October 1957, a special subcommittee of the Committee on Interior and Insular Affairs recommended appropriation of these funds.

The Citizens Forestry Study Group of San Diego County came into being in 1951 following several disastrous forest fires in our county. The group has obtained an annual appropriation of $15,000 from the San Diego County Board of Supervisors. In fiscal year 1962, the group obtained 47,500 man-days of County Honor Camp and State Conservation Camps inmate labor for fire prevention work in our forested areas. This local contribution to our fire protection program is conservatively valued at $380,000. In addition, local communities have also contributed funds to increase the level of fire protection they receive.

The Cleveland National Forest covers approximately one-tenth of San Diego County. Its watershed, grazing, recreational, and scenic values are beyond estimation. The Cleveland National Forest provides a large portion of the water supply needed by the industries and the rapidly increasing population of San Diego County.

The Citizens Forestry Study Group of San Diego County continues its request that Congress appropriate the full $2,375,000 to permit full implementation of the 1954 fire protection plan for the four southern California national forests.

In confirmation of the urgent need for this appropriation a special subcommittee of the Committee on Interior and Insular Affairs, headed by then Congressman Clair Engle, meeting in Los Angeles on October 8 and 9, 1957, recommended "the administration consider the advantages of a plan to earmark approximately $2,375,000 to the four national forests in southern California in addition to the annual appropriation for national forest fire prevention and suppression. This amount, to be appropriated annually for 10 years has been recommended by the Southern California Watershed Fire Council" (p. 3, Committee Print No. 18).

Only by personal appearances in Washington of Watershed Fire Council and constituent group representatives, annual supplementary appropriations have been made. These appropriations, which have been in addition to the regular budget, for the four national forests in southern California have been:

Fiscal year:	*Appropriated*
1955	$250,000
1956	675,000
1957	900,000
1958	900,000
1959	1,150,000
1960	1,150,000
1961	1,450,000
1962	1,750,000
Total	8,225,000

The above amount is most inadequate in view of the $19 million which has been requested during the past 7 years. Not only are current needs not being met, but the forest management must also make up for past tasks that remain unaccomplished.

The additional funds appropriated have enabled the Cleveland National Forest to provide much better and additional fire prevention and protection. The most significant improvement is the increase in yearlong personnel from 7 in 1954 to 34 in 1962. These yearlong personnel provide increased and better fire prevention and protection.

In 1961 southern California experienced another extremely dry year. San Diego had the driest year in 110 years of weather history with only 3.46 inches of rain. In spite of the drought and the explosive condition of forest fuels, in 1961 the Cleveland National Forest had only one fire that exceeded 30 acres in size. This fine record was made possible mainly by the improved protection which has been provided by the suppleemntal funds the Cleveland National Forest receives.

Citizens Forestry Study Group of San Diego County respectfully urges your committee to report favorably on the full additional $2,375,000 recommended by both citizens and legislators. We also support implementation of the development program for the national forests which was transmitted to Congress by President Kennedy on September 21, 1961.

Only by a balanced program of adequate forest protection, administration, management, and progress through research can pressing public needs for water, forage, recreation, and wildlife be met now and in the future.

GENERAL STATEMENT

Mr. RADFORD. In order to get the record straight, my name is Robert T. Radford, and I am president of the Watershed Fire Council of Southern California, which includes eight counties and four national forests.

I am also chairman of the Los Angeles County Watershed Commission which was set up by the county government of Los Angeles.

All the things that are in the statement here I will not go over. I am just going to hit a few of the highlights.

LOS ANGELES COUNTY NATIONAL FOREST

First I will take the question of the county of Los Angeles and Angeles National Forest which is entirely within the county of Los Angeles. We have had a problem there that has been amplified and brought to the attention of everyone because of the increased population there.

This is my eighth time back here. To preface this, we have had a study made by the Forest Service, in 1954, of what would be the needs of the four forests within southern California to bring their level of protection up to what it should be. And the study resulted in the

fact that it would take $2,375,000 a year in supplemental protection funds for a period of 10 years to do that.

Now that is the program we started on and you can remember a couple or 3 years ago when I was here before you.

Now that is what all of these agencies are interested in and are attempting to get consummated. Up to the present time we have received in supplemental funds from the Congress $1,750,000. We are asking this year to get the balance of that, of $625,000, which would bring us up to 1 full year's allotment as figured for us in 1954.

It is needless to say, of course, we cannot buy the same thing today that we could in 1954 with the same number of dollars.

EXPENDITURE OF LOCAL FUNDS

Now I want to bring to your attention this one fact about Los Angeles County. During the years, 10 years, 1951 to 1961, the county of Los Angeles, through its various agencies, directly and indirectly, spent $13,887,298 of local tax funds for fire prevention and forest rehabilitation within the Angeles National Forest. This is $1,246,518 more than was spent by the Federal Government for similar purposes during the same period.

I want to bring that out because I want the committee to appreciate the fact that there the local people have more than carried their share. In other words, no other county in the United States has done as much for a forest as the county of Los Angeles. I mean, the taxpayers of the county.

Now as far as the whole picture is concerned——

Senator BYRD. Mr. Radford, the bell that you are hearing indicates that we are having a rollcall on the Senate floor.

Mr. RADFORD. All right, I am through.

Senator BYRD. So I must go. But I see that Mr. George Miller of Senator Kefauver's staff wants to introduce Mr. Michael and his party in the absence of Senator Kefauver, who had to go to Tennessee because of a death. Then, I believe, Congressman Taylor of North Carolina wanted to make some comments thereafter.

Gentlemen, I must go and answer this rollcall. I certainly want to accommodate you. If you would like to wait until I can come back, I will be glad to continue long enough to permit each of you to make your statements.

Mr. RADFORD. I would be very happy to do that, Senator.

Senator BYRD. Fine. I think we better do that because I do not want to inconvenience Congressman Taylor and others who have waited so patiently.

We will take a short recess.

(A brief recess was taken.)

Senator BYRD. Thank you, gentlemen. We will now resume.

Mr. RADFORD. I want to make a couple more points here and that will be it.

FIRE DAMAGE, CALIFORNIA AREA

That is to bring to the committee's attention again, which is in the statement here, the fact that these four forests of southern California are somewhat different from any other forests because during the 16-year period from 1941 to 1957, inclusive, 44.5 percent of all

the dollar damage done in all the national forests was done in these forests. Unfortunately, in 1958, 52 percent of all the acreage burned in all national forests were burned in these four national forests. So we have that problem of full year fire weather. Therefore, what we are after is more al! year around employment of key men so that you are at the point of having competent firefighters any time.

I would like to simply add this to the statement, that on January 8, 1962, the humidity in these forests was down to 8. Now, one of the greatest forest fires we have had occurred between Christmas and New Year's what was known as the Monrovian Peak fire.

WORK DONE UNDER APPROPRIATED FUNDS

I want to emphasize one point here, and that is to show what we have done and what we have accomplished because of the increased appropriations. We had 80 more fires in 1961 than we did in 1960, but the acreage was reduced by 71,836 acres. And as a result of that, the Federal Government spent $1,833,051 less on emergency fire suppression in 1961 than they did in 1960.

The thing that we are striving to get accomplished is that we have enough money for protection and management. Because we are absolutely certain that we can be benefited in the overall cost of operation of these forests by that. So this year we are asking the committee to appropriate $625,000 to get up to the $2,375,000.

If you will remember, Senator, last year the Appropriation Committee appropriated $950,000, the Senate committee, and the House cut it down to $300,000.

REQUEST FOR CONTINUATION OF FUNDS

The other thing I would like to point out is that we hope the committee will continue to appropriate the necessary funds to continue the development of the program for national forests. And again we want to emphasize the fact that we hope that there is enough money in the program to implement structural improvements of the national forests. Because we need fire protection facilities.

Now I want to make one more comment and then I am through. That is, I brought this picture here which shows in Los Angeles County the number of fires that we have had in the last 9 years. And that is a graphic picture which I think you will appreciate. Because I think you appreciated the fire picture I brought you a couple of years ago.

Senator BYRD. Yes; I remember.

DEBRIS DISPOSAL

Mr. RADFORD. Now one of the points I want to stress, and this was just given to me the other day, is what happens when this thing is burned up. There is a little basin the Forest Service built for one of the fires back in the Angels. And last year back of the little town of Siremat, they burned off a watershed. The watershed contained 128 acres.

I saw a week ago Saturday the debris basin where they are trying to haul the stuff out. That debris basin held 53,100 cubic yards, and all that dirt came off of 128 acres.

Now the citizens of Los Angeles County are going to pay $1.50 a yard to get that out of there.

And last Tuesday, a week ago today, we had a sudden intensive rain which lasted about 10 minutes and it put back another 10,000 cubic yards in that same hole. So the fires are the forerunners of terrific expense.

Now I would like, if I may, and I know you have a statement from Senator Kuchel—in this record of the Senate of February 16 there is a statement in here which you cannot include, except it could be printed along with our statement, a statement made by Senator Engle from California, which is relative to the same thing. If it could be printed along with our statement it would be appreciated.

Senator BYRD. Senator Kuchel's statement, Mr. Radford, was included in the record earlier this week, possibly late last week. He also submitted questions at that time and those questions were propounded to the witnesses and they were answered in the record.

Senator Engle's statement has already been included in the record also.

Mr. RADFORD. All right.

Thank you very much, Senator Byrd. I am not going to give you that map because that is all handwork. I just wanted you to see it. I wanted you to see the fact that we have burned in 9 years in Los Angeles County alone 347,000-some-odd acres, and it has averaged about 3 percent of the wildlife per year. Now that is 27 percent in 9 years. If we keep on going, we are going to have to move out into the ocean, I guess.

Senator BYRD. Mr. Radford, thank you again for attending our committee session. We think the testimony is very convincing.

Mr. RADFORD. Thank you very much, Senator.

Senator BYRD. Off the record.

(Discussion off the record.)

Senator BYRD. On the record.

Mr. George Miller, do you have a statement?

Off the record.

(Discussion off the record.)

Senator BYRD. Mr. George Miller, a member of Senator Kefauver's staff.

DEVELOPMENT OF FOREST SERVICE LANDS

STATEMENT OF HON. ESTES KEFAUVER, U.S. SENATOR FROM THE STATE OF TENNESSEE, PRESENTED BY GEORGE MILLER, LEGISLATIVE ASSISTANT

IMPORTANCE OF PROJECT

Mr. MILLER (reading). "Mr. Chairman, I greatly regret that I will be unable to attend the meeting of the Interior Subcommittee on March 13, 1962, and personally introduce three of my friends and colleagues from Tennessee, Mr. W. E. Michael, Mr. J. D. Lee, and Mr. Charles Hall. The untimely death of one of our Chattanooga city commissioners and a dedicated public servant, Mr. Pat Wilcox, makes it necessary for me to be in Chattanooga today.

"My colleague and friend Mr. Michael will speak better than I for the benefit of the project in which we are mutually interested this morning. I would merely like to endorse him and let him tell you the details of our request.

"I can say that I personally think it is an excellent plan and project which we are advocating this morning.

"We are requesting an appropriation for the construction of a road linking the Cherokee National Forest in Tennessee and the Natahala National Forest in North Carolina, the road to run some 40 miles from Tellico Plains in southeast Tennessee to Robbinsville in southwest North Carolina.

"This road would open up vast and beautiful virgin areas of forest and mountains to millions of Americans. Close to a million visitors see it each year now. The area is within easy reach of two-thirds of the population of the United States, and with the completion of the Interstate Highway System, 125 million people could visit it within 24 hours.

"From the Government's fiscal point of view this would mean new gasoline and automotive taxes and new access in order to market timber and timber products. These advantages are largely denied us today for lack of access to this beautiful region.

"I respectfully request the committee to give most serious consideration to the testimony and request of Mr. Michael and his presentation of the full picture of this most worthy project."

And this is respectfully submitted by Senator Estes Kefauver.

Senator BYRD. Thank you, Mr. Miller.

Off the record.

(Discussion off the record.)

Senator BYRD. On the record.

May I say to the constituents of Senator Kefauver that he is a very active and capable and highly esteemed member of this committee, the Appropriations Committee. I personally want to express my regrets that he, unfortunately, has to be in Tennessee today. In his absence I would like to say that we think a great deal of Senator Kefauver here.

Mr. W. E. Michael, of Sweetwater, Tenn., will now appear before the committee.

Mr. Michael, we are delighted to have you with us today.

FOREST ROADS AND TRAILS DEVELOPMENT

STATEMENT OF W. E. MICHAEL, OF SWEETWATER, TENN.

PREPARED STATEMENT

Senator BYRD. Mr. Michael, do you have a prepared statement?

Mr. MICHAEL. Yes, Senator.

I want to express my deep appreciation, and that of the other members of the commission, to you and your very efficient staff in making it possible for us to be here today and testify on this very important subject.

Senator BYRD. We appreciate your patience in waiting so long.

Mr. MICHAEL. I have prepared and filed with the clerk multiple copies of a prepared statement which I will not read if I may have it appear in the record.

Senator BYRD. The statement will be included in the record, Mr. Michael.

(The statement referred to follows:)

Mr. Chairman, 2 years ago, it was my privilege to appear before a subcommittee of the Senate Appropriations Committee in support of appropriations for the National Forest Service, with particular emphasis on forest development roads and trails. In that testimony, I urged the expenditure of necessary funds to build enough roads and provide enough facilities in the largest concentration of national forest lands east of the Mississippi to develop all of its vast potentials.

Specifically, I referred to the Cherokee National Forest lands in southeastern Tennessee and the Nantahala National Forest lands in southwestern North Carolina. In that testimony, I advocated the building of one connecting road linking Tellico Plains, Tenn., with Robbinsville, N.C., and making accessible from both sides of the mountain Joyce Kilmer Memorial Forest with its 38,000 inspiring acres of primitive wilderness.

Today, I would like to discuss these matters in a little more detail.

By way of identifying myself and the others who will testify on the same subject, I have served for 6 years as chairman of a nonpaid committee of citizens, appointed by the county court of Monroe County, Tenn., for the purpose of promoting the economic, industrial, and recreational development of our county and section of the State. Other members of that committee, at the present, are: Hon. Cook Carson, county judge of Monroe County; Mr. J. D. Lee, an attorney of Madisonville, Tenn.; Mr. J. L. Dyer of Madisonville, Tenn.; and Mr. Charles Hall of Tellico Plains, Tenn., a member of the county court of Monroe County. This became known as the Monroe County Industrial Committee.

On August 7, 1961, Hon. Buford Ellington, Governor of Tennessee, appointed a commission to work with a similar commission, appointed by Gov. Terry Sanford of North Carolina, in coordinating plans for the development of the area to which I have referred, and particularly to expedite the construction and finishing of the road, which has become known as the wagon train route, linking Tellico Plains, Tenn., with Murphy, N.C. This road, already in use on the Tennessee side for approximately one-half of its entire length and completed approximately one-half of the way on the North Carolina side, is planned as a joint effort of the two States and is not to be confused with the other road developments, about which we will be talking. The other members of the commission appointed by Governor Ellington are: Mr. Herbert Bates of the Tennessee Department of Highways; Mr. J. D. Lee; Mr. Charles Hall; and Judge Sue K. Hicks, retired, of Madisonville, Tenn. I am speaking today as chairman of both of these groups.

Gov. Terry Sanford of North Carolina appointed on the coordinating commission to represent the State of North Carolina: Chairman, Mr. Ted Jordan, a member of the North Carolina Highway Commission, of Robbinsville, N.C.; Representative Leonard Lloyd of Robbinsville; Mr. J. S. Howell of Robbinsville; Senator Frank Forsyth of Murphy, N.C.; and Mr. H. A. Mattox of Murphy, N.C., who is chairman of the Board of Education of Cherokee County, N.C.

The North Carolina and Tennessee commissions have worked together on this project and have met and discussed these matters at considerable length with representatives of the U.S. Forest Service from Tennessee, North Carolina, and the regional office in Atlanta, Ga. I believe that what I am about to say today represents the combined thinking of these two commissions and is thoroughly in keeping with the policies and long-range plans of the Forest Service.

When our county industrial commitee was first created, its first concern was to make a study of our assets in order to devise some means of improving the economy of the county.

Monroe County adjoins the State of North Carolina on the east and on that side of the county runs a chain of mountains, a large part of which is encompassed in the Great Smoky Mountains National Park. Approximately 40 percent of the land in Monroe County is in national forests. This mountainous area, just as ruggedly beautiful as the Smokies, is probably even more primitive.

Numerous peaks approach the 5,000-foot elevation and some exceed it. The entire area is interlaced with the finest and most extensive system of mountain streams in existence. Many Forest Service roads and timber access roads cover the area and make portions of it accessible to the sportsman or ardent outdoorsman. However, for lack of first-class roads, this great area, for all practical purposes, is closed to traveling America.

Eastern Tennessee and western North Carolina, along with southwest Virginia and north Georgia, constitute the summer vaction land of this Nation. The business of serving the needs of these millions of annual visitors has become our largest single industry.

Believing that our best hope for economic and industrial improvement lay in taking advantage of the great natural assets with which we were endowed, our committee initiated the efforts which we have been pressing for 6 years.

We enlisted the aid of Hon. James B. Frazier, Representative from the Third Congressional District of Tennessee, in whose district all of the Tennessee area lies, and Hon. Estes Kefauver, senior Senator from Tennessee, whose home town is Madisonville, Tenn., in Monroe County. Numerous civic clubs in Tennessee and North Carolina joined in this effort, and one of their great contributions was the spectacular wagon train celebration, which for 4 years has crossed the mountains from Tellico Plains, Tenn., to Murphy, N.C., on the 4th day of July.

Working first with Mr. John B. Spring, forest supervisor of the Cherokee National Forest in Tennessee, then with other officials of the Forest Service and of the States of Tennessee and North Carolina, a plan was evolved for the development of the region to which I have referred.

Basically, this plan provided that the States of Tennessee and North Carolina would acquire, construct, and maintain a highway connecting Tellico Plains with Murphy, N.C. This road would effectively bisect the area and make further development of it possible. The plan further contemplated that Federal funds would be sought to build roads, camping sites, and other necessary recreational facilities to make this vast, beautiful and primitive mountain region available to a large part of the 130 million people expected to visit our national forests annually by 1969.

I would like to file with this statement a map of region 8 of the national forest, which map is shaded to show the national forest within that area. This map discloses that the Cherokee, Nantahala, Pisgah, and Chattahoochee Nation Forests joint to make the largest concentration of national forest land, or publicly owned land, east of the Rocky Mountains.

The plan to which I have briefly alluded has been approved by unanimous resolutions, adopted by the Legislatures of North Carolina and of Tennessee. A copy of the resolution adopted by the Legislature of the State of Tennessee is attached to this statement as an addenda.

The national forests, to which I have referred, encompass approximately 2,400,000 acres of land. They almost surround the Great Smoky Mountains National Park, which is the most visited of all the national parks. The northern and eastern portions of this area have been improved by the construction of the Blue Ridge Parkway, a magnificent scenic highway, which attracts more than 5 million visitors per year.

The portion of these public lands about which I am speaking, including specifically the southern division of Cherokee National Forest, and the western portion of the Natahala National Forest, have received comparatively little funds for recreational or tourist development. Yet, this relatively undeveloped section is attracting more than 1 million visitors per year. The latest official figures that I have cover only a portion of the area, and that reports 617,000 visitors in 1958 in the Tellico-Hiwassee-Ocoee ranger districts of the Cherokee National Forest. The number of visitors is increasing rapidly each year, and with a minimum of expense per capita, this area could easily attract, hold and benefit 10 million visitors annually.

There are two other facts on which I would like to comment briefly, with reference to the location of this area. It is the only national forest area in the Eastern United States having mountains of sufficient height to provide ideal climatic conditions in the summertime, with primitive wildernesses, beautiful mountain streams, fishing, hunting, camping, and all of the other recreational potentials which the vacationing public seeks.

The second intriguing fact is that this area is within easy vacation reach of two-thirds of the population of the United States. When the Interstate Highway System has been completed, this area will be within 24 hours' travel time of more than 125 million people.

I would like to file, as an addenda to my statement, a composite map of the area under discussion which shows the Cherokee National Forest, the Nantahala National Forest, and the projection of proposed roads within the area. I understand that this system of roadways fits into the long-term planning for the development of the national forests, as submitted to the Congress by the President. As the shaded portion of the map will disclose, some of these projected roads are entirely on public lands and nearly all of them largely on public lands. The road numbered 1210, extending from Tellico Plains, Tenn., following Tellico River, to the top of the mountain, is already in service, and will be taken over by the State of Tennessee when North Carolina completes the link designated as 420. The Tennessee end of this road has been hard surfaced, and the State of Tennessee has completed the surfacing of the last 3½ miles.

The road with which I am particularly concerned today and one that I believe can be justified from any consideration is the road from Robbinsville, N.C., to Tellico Plains, Tenn. This road can be constructed entirely on public lands or it can be constructed so that the greater portion of it is on public lands. Existing roadways now are on Forest Service land, and they are 416–3, 416–2, 81, and 81–B, leading from Robbinsville, N.C., to the top of the mountain at the Tennessee line near Stratton Meadows. From that point, existing road 1234 would carry this road to within approximately 7 miles of Tellico Plains, Tenn. The numbered roads, which I have just mentioned from Robbinsville to a point some 7 miles from Tellico Plains are dirt roads of low classification, but, for the most part, have good location and good grade.

To further describe this road, it should be said that, when opened to travel, it would not only be a short connecting, and therefore useful, link, but it would be a scenic highway unsurpassed in beauty. At Robbinsville it would connect with Federal Highway No. 129, which is the principal access route to Fontana Dam and to a portion of the Great Smoky Mountains National Park. From Robbinsville, it would pass by Joyce Kilmer Memorial Forest, which is one of the most beautiful and inspiring spectacles to be seen anywhere. From that point, for about 10 miles, it climbs the mountain to the Tennessee line, which is the mountaintop. From that point, it proceeds along the road marked "1234" for several miles along a mountaintop, passing through and above vistas of primitive beauty. It will be necessary to survey and relocate a portion of this road in North Carolina and relocation of a portion of the road in Tennessee will also be necessary.

I suggest, therefore, that this route be surveyed and that funds be made available for this purpose. The Forest Service advises that, in similar terrain, the average cost of a survey is between $3,500 and $4,000 per mile. This proposed route would approximate 42 miles, and I suggest a figure of $160,000 as a reasonable amount to defer the cost of a survey.

I am also advised by the Forest Service that the cost of constructing highways, or proper classification to carry the traffic, in terrain such as this, is approximately $50,000 per mile. This figure does not include bridges. The suggested route crosses no large streams, and bridging is not a major problem. Using the estimate of $50,000 per mile and allowing $250,000 for additional bridge expenses, I submit that this road could be constructed for $2,350,000.

If this committee considers these suggestions favorable, I hope that a way can be found, without jeopardizing any other funds of the Forest Service, or for public roads, to specifically earmark such funds. I suggest the possibility of increasing the ceiling of either the Forest Service development roads and trails fund or the public lands highway fund.

In addition to the benefits that will flow to the millions of people who will enjoy our mountains and be thrilled by their beauty, local citizens and governments will benefit greatly from the money they spend. Tourism is one of our biggest industries.

We must not lose sight of many other factors that are involved. The Forest Service is dedicated to the principle of multiple use, providing for the utilization of all of the potentials of the national forests for the benefit of all of the people.

The building of roads will not only increase the tourist business and provide a vacation land, but it will make the forest accessible for the protection, harvesting, and marketing of forest and timber products. It will facilitate the fighting of fires and the control of insects and diseases that blight the forests. It will assist in the protection of drainage areas, and it will make more vast areas accessible to sportsmen for the reaping of the great harvest of fish and game.

The expenditure of money for the purposes I have suggested is not a waste or a gift. I think it should be regarded as an investment. This mountainous area is so popular that as soon as the roads are open, the traveling public will extensively use them. Every new mile that is traveled means additional tax income from gasoline and automotive taxes. It is my firm conviction that this will be a self-liquidating project, and, in the final analysis, it will be a sound investment for the taxpayers and not a drain upon their resources.

We need to keep America strong. We can best do this by protecting our natural resources and taking advantage of our natural assets. I believe the suggestions I have made for appropriations will serve for the purpose of helping to strengthen America. I earnestly hope that this committee will report favorably and earmark reasonable amounts of money to be expended for the purposes which I have suggested.

I thank you on behalf, not only of our committee and of our local government, but on behalf of all of the people in our area who are vitally concerned.

General Statement

Mr. Michael. Senator Kefauver, who had to attend a funeral today in Chattanooga, desired to appear before the committee in person. He has had his able assistant read his statement for the record. Congressman Frazier of Tennessee, who is on the House Ways and Means Committee, had to attend a meeting of that committee and has asked me to say that he wishes to insert a statement in the record in support of our request. Congressman Roy Taylor, of North Carolina, who vigorously supports this project, will be here in a few minutes to make a statement.

(See Congressman Frazier's statement on p. 1261.)

Senator Byrd. Very well.

Mr. Michael. To identify myself, I am W. E. Michael, an attorney of Sweetwater, Tenn. I am chairman of a commission appointed by Governor Ellington of the State of Tennessee to work with a commission appointed by Gov. Terry Sanford of North Carolina, of which commission, Mr. Ted Jordan who is present, is chairman.

Purpose of Commission

The purpose of the commission is to coordinate the efforts of the various agencies in developing an area of our mountains which adjoins the Great Smoky Mountains National Park and is almost entirely within public lands.

I originally came into this picture as chairman of the Industrial Committee of Monroe County, Tenn. And with that committee and the assistance of Senator Kefauver, Congressman Frazier, Congressman Taylor and those officials of the Forest Service whom we requested to join us in these meetings, we worked out a basic plan for the development of this area.

PLAN OF AREA DEVELOPMENT

In brief, that plan was that if the States of Tennessee and North Carolina would provide a State highway, connecting Murphy, N.C., with the north-south main highways in Tennessee, that we would ask, and we would hope, that the Federal Government would develop its Forest Service lands into a vast vacationland which we think would be economically feasible and advantageous. We have worked on this plan, Senator, for about 6 years. I testified before this committee 2 years ago on the national forest roads and trail fund. At that time I called attention to what we now have developed as a plan of action of these joint commissions.

LARGE CONCENTRATION OF PUBLIC LANDS

I would like, at the outset, to refer to the national forest map, region 8, if I may file it for the record. The area to which I refer is the largest concentration of publicly owned lands east of the Mississippi River. It embraces the southern division of the Cherokee National Forest in southeastern Tennessee, the Nantahala National Forest in southwestern North Carolina (the top of the mountain being the dividing line there, and the Chattahoochee National Forest in north Georgia. Taken together the Cherokee National Forest, the Pisgah, the Nantahala, and the Chattahoochee comprise the largest body of publicly owned land in the Eastern United States.

That land also is the only publicly owned land in the eastern United States where the height of the mountain is sufficient to make it attractive as a recreation and vacation attraction.

I have been provided with a composite map in color, which was furnished to me through the Department of Agriculture, showing the area to which we refer, specifically, the Cherokee National Forest and the Nantahala National Forest in shaded areas.

These roads are not my drawings, but are the roads that have been projected, named, and numbered for the development of that area. I would like to file that with the committee.

Senator BYRD. It will be placed in the committee files.

(The map referred to was made a part of the committee files.)

Mr. MICHAEL. Because it is so large, I have taken the liberty of reducing that in size and having a tracing made showing those proposed roads, together with some existing roads, which I would also like to file with the committee.

Senator BYRD. Mr. Michael, would you like the small map to be included in the record?

Mr. MICHAEL. If you please, Senator.

Senator BYRD. All right. And the larger maps will be placed in the committee files.

DEVELOPMENT PROGRAM OF THE NATIONAL FORESTS

Mr. MICHAEL. What we are asking, I believe, is entirely in line with the development program of the national forests, and certainly is in line with the program as announced by the Secretary of Agriculture and Dr. McArdle at the Asheville, N.C., meeting which I attended last fall.

SCENIC AND ACCESS ROADS

Our request is for additional funds to construct a scenic and access road between Tellico Plains, Tenn., and Robbinsville, N.C., all of which would be on publicly owned lands. It is across one of the most beautiful vistas imaginable, and would make accessible to the traveling public the Joyce Kilmer Memorial Forest, which is 3,800 acres of virgin timber, the only place, I believe, in the eastern United States that such an inspiring sight is available to the public. The spiritual value of seeing that 3,800 acres would probably justify the expenditure that we ask. I want to emphasize in my brief statement that this request comes from the State of Tennessee, from this Commission and from our people, and has been approved by the legislatures and by the Governors of both States. We work closely with the U.S. Forest Service, and I cannot speak for them but I do know that they understand and would be entirely sympathetic in the development that we suggest.

We are not suggesting a wasteful expenditure. We are in fact suggesting, as Senator Morse so eloquently pointed out this morning, an investment which will return this cost manyfold and will be almost a self-liquidating project. This is the largest primitive area left in the eastern United States, if not the only one. It is majestic in its beauty, it contains a tremendous growth of timber, and it is not accessible to the traveling public.

We are not asking to create an attraction to bring tourists there, but are asking for a road to accommodate the traveling public who already want to, and do, go there.

Senator BYRD. Has this area been included in a wilderness designation?

Mr. MICHAEL. I believe not, Senator Byrd. It has not been included in a wilderness area.

ALL ROADS NEW REVENUE SOURCES

All of the roads projected in the project would be new roads. All of the travel upon those roads would be new travel. Every tank of gasoline would mean additional revenue.

The Smoky Mountain National Park is adjacent to this area and it is already filled to overflowing. As a matter of fact, our people do not take their friends and visitors to the Smoky Mountains on a weekend for the simple reason that the traffic is so heavy they cannot get in there.

A few years ago, in 1957, it was forecast that by 1975, 3 million people would visit the Smoky Mountain National Park. Within 2 years that had been surpassed and it is yet not 1963.

RELATION TO TRAFFIC ON BLUERIDGE PARKWAY

The Blue Ridge Parkway, which is north of, and a feeder into this general area, handles between 5 and 6 million people per year. It is easily conceivable, and as a matter of fact I think it is reasonable and rational, that with the development of this area, it would accommodate 10 million people per year. The Secretary of Agriculture has estimated that 130 million people, annually, will visit our national forests by 1970. When that occurs, we will desperately need accessible areas, such as ours, in which to disperse them.

COST PER ROAD MILE

The road which we have suggested and which we are urging this committee to consider and appropriate for is 42 miles in length. The information given to me, at my request, through the Forest Service, which in turn came, I assume, from the Bureau of Public Roads, places the cost per mile of construction on the roads of that type in that terrain at $50,000 per mile, for a total of $2,350,000, including $250,000 for bridges.

Now part of this route would need to be surveyed. Existing roads of low character and classification already are in place containing some good grades. The figure they gave me would indicate an expenditure of $160,000 as a reasonable amount to defer the cost of the survey of this interconnecting access scenic highway connecting Robbinsville, N.C., with Joyce Kilmer Memorial Forest and Tellico Plains on the east.

We would like to reiterate that the road would do more than furnish tax revenues; it would do more than furnish employment to a great many people (because tourism is one of our growing industries, certainly in that section, the largest industry) and it also will enable the Forest Service to fight fires, haul out timber, aid in propagating wild life and game, and in general do all of the things that the multiple use of the forest calls for, and that is the purpose to which the Forest Service is dedicated.

FUNDS AVAILABLE

As to what funds are available, or as to how we reach that fund, and the complexities of legislation possibly necessary, are just a little too much for me to suggest. Those of us who work closely with, and admire greatly, the work that the Forest Service has done, sometimes think perhaps they are somewhat modest in their request for funds because when they take those funds and distribute them by any formula over a tremendous area of the acreage involved, it would take us several hundred years to get this road finished. I think that this is a justifiable and meritorious project. The pressing need for this road now will justify putting it in the same classification as the Smoky Mountain National Park, or the Blue Ridge Parkway, which did require, to get them started, special appropriations and a large amount of money made available to place them in operation.

Again I say this will pay its way as it goes, not only in money, but in many, many other returns that will contribute to the strength of America.

Thank you, Senator.

Senator BYRD. Thank you, Mr. Michael, for a very good statement.

Mr. MICHAEL. Congressman Taylor is here, as is also Mr. Wallace Hyde from North Carolina.

The area about which I have been talking, Senator, is in Monroe County, Tenn., the home place of Senator Kefauver. It is also the home of a very distinguished member of your staff here, Mr. Cecil McDaniel. So we are talking about places that are at least well known to the Senator and to Mr. McDaniel.

Senator BYRD. Thank you.

Congressman Taylor.

STATEMENT OF HON. ROY A. TAYLOR, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NORTH CAROLINA

SUPPORT OF PROJECT

Mr. TAYLOR. Mr. Chairman, I have read Mr. Michael's written statement and listened to him here today. I am anxious to associate myself with his remarks.

As he stated, tourism is the fastest growing industry in western North Carolina and eastern Tennessee, and the greatest demand which is being made on our public forests there is for scenic roads and tourist attractions.

I have here a tabulation showing the number of visitors who came to the Smoky Mountain National Park and those who traveled on the Blue Ridge Parkway from 1950 through 1961. I would like to place it in the record if I might.

Senator BYRD. It will be included in the record, Congressman Taylor.

(The tabulation referred to follows:)

Year	Visitors, Smoky Mountain National Park	Visitors, Blue Ridge Parkway	Year	Visitors, Smoky Mountain National Park	Visitors, Blue Ridge Parkway
1950	1,844,000	1,996,000	1956	2,886,000	5,023,000
1951	1,945,000	2,449,000	1957	2,944,000	5,048,000
1952	2,322,000	3,558,000	1958	3,169,000	4,989,000
1953	2,251,000	4,267,000	1959	3,162,000	5,589,000
1954	2,527,000	4,345,000	1960	4,529,000	5,503,000
1955	2,581,000	4,502,000	1961	4,726,000	6,048,000

GENERAL STATEMENT

Senator BYRD. You may proceed, Mr. Taylor.

Mr. TAYLOR. I just point out that in 1950, in the Smoky Mountain National Park, there were 1,844,000 visitors, in 1955 there were 2,581,000 and by 1961, last year 4,726,000. It is the most visited national park in America.

On the Blue Ridge Parkway, in 1950 there were 1,996,000 traveling on it, 1955, 4,502,000, in 1961, 6,048,000, up 10 percent since 1960 and up 300 percent in a decade. And the Blue Ridge Parkway feeds right into the Smoky Mountain National Park. And the park is surrounded by the forest land which we are discussing today.

NEED FOR NEW ROADS

Now the roads in the area, scenic roads, are overcrowded. They are taxed far beyond their capacity. We need more roads reaching into more areas in order to disperse and distribute this great flow of traffic. The present roads cannot handle it. And as Senator Morse said, this great surge of recreational use is going to continue and in another 10 years we might again double the number of visitors into that area.

I have enjoyed some visits to Joyce Kilmer Memorial Forest, the most beautiful stand of virgin timber in eastern America. And I believe that this road in question would open up one of the most beautiful sections of America. And I believe that it would be an expenditure which would serve a public need and a public demand.

That is all, Mr. Chairman.

Senator BYRD. Congressman Taylor, I appreciate your returning from the House floor again, and I wish to say I am sorry that you had to be inconvenienced by being delayed as you were. We are glad that you have come before our committee today. We will very carefully consider these requests and trust that you will come back again.

Mr. TAYLOR. Thank you.

I might add, Congressman James Frazier is very much interested in this. I saw him a minute on the House floor. He is on the House Ways and Means Committee and they are studying the trade bill this morning and are having an important hearing. He said he just ran over to the floor to answer rollcall and had to return to the committee.

Senator BYRD. Yes. Thank you very much. Congressman Frazier has left a statement with the committee which will appear in the record at this point.

(The statement referred to follows:)

STATEMENT OF CONGRESSMAN JAMES B. FRAZIER, JR., THIRD DISTRICT OF TENNESSEE

I have read with much interest the statements of Mr. W. E. Michael from my district, and of my colleague, the Honorable Roy Taylor from an adjoining district of the State of North Carolina.

It has been my pleasure to work with this projected development since its inception in 1956.

On different occasions I have gone into the area described with representatives of the U.S. Forest Service and other officials and citizens interested in the development of the area. In my opinion the plan, as proposed, represents the combined thinking and planning of all who have worked on the project for a number of years. I regard it as feasible, economical, and necessary.

The number of people visiting the Cherokee National Forest on the Tennessee side is limited only by the adequacy of the access roads. We have practically no roads in the area suitable for tourist traffic, which is rapidly growing.

I believe that this appropriation would represent a good investment of Federal funds and that it would be repaid many times.

I would like to join Mr. Taylor and Senator Kefauver in urging that this committee favorably report this request for additional appropriations.

COMMITTEE RECESS

Senator BYRD. I believe we have no further witnesses to appear at this time. The committee will be in recess until 2:30.

(Whereupon, at 1 p.m., the committee was recessed, to reconvene at 2:30 p.m. on the same day.)

(AFTERNOON SESSION, 2:35 P.M., TUESDAY, MARCH 13, 1962)

Senator BYRD of West Virginia (presiding). The committee will come to order.

Good afternoon, gentlemen.

At this time I would like to insert in the record the statement by the distinguished junior Senator from Alaska, E. L. (Bob) Bartlett.

Senator Bartlett could not be here this afternoon and he asked that we include his statement in the record, and we are very glad to do that.

(Senator Bartlett's prepared statement follows:)

STATEMENT OF SENATOR E. L. (BOB) BARTLETT

Mr. Chairman, Alaska has been a State just over 3 years which is but a short period compared with your own State which this year, along with New Mexico, celebrates half a century of self-government. I know all Alaskans would want to join me in extending congratulations not only to the States of Arizona and New Mexico but to you personally who have served the Nation in Congress for 50 years. During much of your congressional tenure you have been in a position to come to know many of Alaska's problems with which you have dealt sympathetically. Alaskans are grateful for the understanding of this subcommittee.

Although Alaska has achieved statehood the Interior Department, because of the very nature of its functions, remains one of the most important Federal agencies to the new States as it does in relation to the 11 Western States. Thus it is that I appear today to highlight a few of the allocations which would be Alaska's under the 1963 fiscal year budget for the Department and in one instance to ask for favorable consideration of additional funds to make possible a more realistic approach to the survey of lands.

BUREAU OF LAND MANAGEMENT

The Interior Department's budget would provide an allocation to the Bureau of Land Management of $1,820,000 for public land surveys in Alaska. Of this amount. $1,705,000 would be used to survey some 2,900,000 acres of land selected by the State of Alaska under the terms of the Statehood Act and to provide 2,500 miles of survey line the remaining $115,000 to be used for cadastral surveys of Federal land lying outside State selections.

It will be recalled that the Alaska Statehood Act, along with other land grants and transfers, permits Alaska in a 25-year period to select 102,550,000 acres from the vacant, unappropriated and unreserved public lands, plus 800,000 acres inside and outside the national forests for community purposes. This is a vast amount of land. As of December 31 of last year State selections had been made on about 11 million acres covering both statehood and mental health land grants, or a little over one-tenth of the Federal statehood grant. As of that same date the Federal Government had tentatively approved about 1,291,643 acres of the 11 million selected, with patent having gone to 190,392 acres. The land grants to Alaska under the Statehood Act were unique and were made to provide assistance to the State in the development of a strong economic base.

An orderly and a workable program of land selection is imperative.

In order for land patent to issue to the State the exterior boudaries of an approved selection must be surveyed by the Interior Department under the terms of the Statehood Act.

In recent months a disagreement as to selection and survey procedures has arisen between the Alaska Division of Lands and the Bureau of Land Management. That disagreement revolves around the language found in section 6(g) of the Statehood Act directing that State land selections contain no less than 5,760 acres and consist of "reasonably compact tracts, taking into account the situation and potential uses of the lands involved * * *."

Under this provision, the State has selected from available public lands tracts which exceed the minimum 5,760 acres but which are adjacent to other State-selected lands. The Bureau of Land Management, seeing the requirement of

compactness as a mandate that each State selection include all contiguous land with respect to which the State may wish to file application, has included such contiguous selections within a single external survey. In other words, the Bureau has surveyed only the exterior boudaries of two or more contiguous applications, issuing a single patent which covers the area in its entirety.

The result of this policy has been to reduce materially the value of land selected and patented to the State. On review of State patents, doubt has been expressed by title insurance firms that such surveys will be found adequate to prove insurable title.

State officials have conferred with Bureau officials to determine whether the Bureau plans to alter its present practice. No progress has been made, however, the Bureau considering itself bound by the provisions of the statehood act to apply to State selections a rigid test of compactness administratively read into the specific provisions of the act. A review of past Bureau practice with respect to statehood grants in other States has not been helpful. There is no precedent because the land grants to other States were of specified sections, already surveyed or to be surveyed before transfer.

It is my belief that the procedures now used by the Bureau in surveying only the exterior boundaries of several contiguous selections were never within the contemplation of Congress when the Alaska Statehood Act was approved. Although there is no legislative history helpful in determining the intent of Congress when it imposed the condition of compactness, the interpretation imposed by the Bureau of Land Management does not conform to the very purposes for which Congress made public lands available to the 49th State.

When the State of Alaska applies for patent to a tract of public land, its application is not an isolated incident of State planning. Each and every application submitted by the State is an integral factor in the overall planning to secure for the new State a sound and stable economic base. If the Federal Government fails to meet the fair expectations of State officials and conveys land which cannot be put into use without costly and time-consuming delay—shrouded with questions as to the validity of title—the very purposes for which the land grants were originally made possible will be undermined.

It is my hope, therefore, that the committee will include an additional $175,000 which will allow the Bureau of Land Management to fulfill Federal commitments under the Alaska Statehood Act.

To clarify to the Bureau of Land Management the meaning of the disputed language of the Alaska Statehood Act, I believe it is essential that the committee report specify that the additional $175,000 is made available to survey the exterior boundaries of each tract of public land covered by a State application, whether or not adjacent to other selected land.

BUREAU OF INDIAN AFFAIRS

I should like to express the hope here, Mr. Chairman, that the requested construction funds to provide additional schoolrooms and rehabilitate existing facilities for Alaska's native children will be approved. Nothing in Interior's 1963 fiscal year budget is more important so far as Alaska is concerned. There are hundreds of our young people attending school in old buildings, many of which are deplorably dangerous or overcrowded. Last year's program was a marvelous start, but the job to be done will suffer if the 1963 fiscal year request for Alaska is cut in any way. Under the program the Alaska allocations would provide additional room for 420 children now without facilities, plus replacing facilities for 660 children for a total construction program of $3,498,000. The

following table shows this construction program, exclusive of other planning and utility requests:

Locality	Budget request	Number of classrooms	Number of pupils
Alitak	$141,000	1	30
Eagle	159,000	1	30
Hooper Bay	519,000	7	210
Kiana	387,000	4	120
Kwethluk	230,000	3	90
Newktok	191,000	2	60
Noatak	378,000	4	120
Nondalton	219,000	2	60
Old Harbor	194,000	2	60
Oscarville	158,000	1	30
Scammon Bay	196,000	2	60
Stebbins	192,000	2	60
Tanunak	188,000	2	60
Tatitlek	186,000	2	60
Tetlin	160,000	1	30
Total	3,498,000	36	1,080

TRANSITIONAL GRANTS

The President's 1963 fiscal year budget includes $3 million for Federal transitional grants to Alaska, an item which is before you for inclusion in the appropriation bill for the Department of the Interior and related agencies. I urge approval of this request.

In 1959, as you know, Congress enacted the Alaska Omnibus Act. That act, the statehood act, and the Alaska Mental Health Act resulted in the cessation of large Federal programs and their assumption by the State. Among these responsibilities were the care of Alaska's mentally ill, the operation and maintenance of roads, the operation and maintenance of the Fairbanks and Anchorage International Airports, control of fish and game, etc.

The Alaska Omnibus Act authorized a 5-year $28½ million transitional grant program to assist Alaska in assuming these functions. The Congress appropriated $10½ million for the 1960 fiscal year and $6 million for each of the 1961 and 1962 fiscal years. There remains $6 million in outstanding authorizations, or $3 million for each of the 1963 and 1964 fiscal years.

Thus, the $3 million carried in the 1963 fiscal year budget is the fourth appropriation in the 5-year authorized program. Although not earmarked, these funds approximate the amount of money which the Federal Government would be spending in Alaska for specific purposes if Alaska were still a territory. The State has chosen to use the money largely to cover some of the Federal functions assumed. Gov. William A. Egan in the State's 1963 fiscal year budget now before the Alaska Legislature has proposed that $1,769,000 be spent for mental health and $638,000 for general health, for a total of $2,407,000 of the unearmarked $3 million in the Federal budget.

The transitional program has been of inestimable benefit during these first years of statehood and I urge that it continue as authorized for this coming fiscal year.

PUBLIC HEALTH SERVICE HOSPITAL FACILITIES AT BARROW

One other request for consideration in the appropriation bill under your jurisdiction, Mr. Chairman, which I should like to emphasize because of its importance to the welfare of Alaska's native people is the proposed allocation of $2,097,000 for a new 12-bed hospital at Barrow in northern Alaska. This amount would include outpatient and field health facilities, a heated warehouse, a potable and raw water system, sewage treatment facilities, an electrical generating plant and distribution system, roads, and related site improvements.

Because of Barrow's remote location, storage space for more than 1 year's supply of food and other materials is needed for the operation of the hospital and for needs of the staff. Providing satisfactory and practical water supply and sewage treatment facilities involves the solution of extremely difficult engineering design considerations.

It is my understanding that the proposed hospital facility to be built on pile foundations contains a gross area of about 18,000 square feet and, in addition, a heated warehouse containing a gross area of 3,500 square feet. It can be seen, therefore, that the scope of the project is considerably greater than the normal construction of a 12-bed hospital.

In view of Barrow's isolation on the Arctic Ocean resulting in high costs of building material, equipment, labor, and transportation, the amount of the appropriation request is justified. The need for the hospital is a very real one. Its construction, long desired, will be an additional step toward the provision of adequate health facilities for Alaska's Eskimo and Indian population.

Senator BYRD. Now we shall ask Mr. J. Walter Myers, Jr., of Atlanta, Ga.; Mr. J. V. Whitfield of Wallace, N.C., and Mr. Herman E. Baggenstoss of Tracy City, Tenn., to appear before the committee.

These three gentlemen represent the Forest Farmers Association, and they will appear together on the subject of forest research.

FOREST FARMERS ASSOCIATION

STATEMENTS OF J. WALTER MYERS, JR., DIRECTOR, J. V. WHITFIELD, FORMER PRESIDENT; AND HERMAN E. BAGGENSTOSS, PRESIDENT

PREPARED STATEMENT

Senator BYRD. Mr. Myers, would you please begin.

Mr. MYERS. Yes, sir, Mr. Chairman.

Certainly it is a pleasure to be here, and I have a formal written presentation and also a brochure that we have prepared in connection with our presentation.

Senator BYRD. We will keep the brochure for our files.

Mr. MYERS. Thank you, sir.

Senator BYRD. And we will include the statement in the record if you like.

Mr. MYERS. I would like just very briefly to highlight a few comments from it, if I may.

Senator BYRD. Very well.

(The statement referred to follows:)

Mr. Chairman and members of the committee, my name is J. Walter Myers, Jr., and I am executive director of the Forest Farmers Association. It is a pleasure to appear before this committee again as a representative of our association. As you may recall, the Forest Farmers Association is an organization of timberland owners—primarily small owners—in 15 Southern States. Our association headquarters is in Atlanta, Ga.

This marks the 21st consecutive year that representatives of the Forest Farmers Association have testified before congressional committees on appropriations for U.S. Forest Service, and marks the 10th consecutive year that I personally have had the privilege. During this period, the wood-using industries in the South have shown tremendous growth, and private timberland owners and forest farmers have profited greatly from increasing markets for their timber. The continuity of this progress, however, depends on a sustained and well-guided program of forest research. Only in this way can the South's forest resources keep pace with the demands of a rapidly expanding economy.

Benefits from this research will accrue to the Federal Government and all segments of our population, in addition to the timberland owners and wood-processing enterprises. This committee has repeatedly demonstrated its interest and support in maintaining a strong program of Federal research in forestry, and this has been most gratifying. The committee, I am sure is also aware of the outstanding manner in which private timberland owners, wood-using industries, and the States are cooperating with the Federal Government in promoting forest research activities, particularly at the local level.

These groups logically, however, continue to look to the Federal Government for leadership in such research activities.

Representatives of the Forest Farmers Association, in recent months, have carefully reviewed the status of forest research activities in the South with numerous key individuals and groups, including the U.S. Forest Service. We were happy to note that the 1963 budget contains an increase of $1,227,000 for strengthening existing forest research programs. We were also happy to note that the 1963 budget would provide $750,000 for equipment and auxiliary facilities at new research laboratories and buildings recently constructed or currently under construction. We strongly support these increases.

We were disappointed, however, that no funds were included for construction of new research facilities, particularly for much-needed expansion at the Forest Products Laboratory, Madison, Wis., plus funds for new laboratories at Sewanee, Tenn. ($200,000); Alexandria, La. ($900,000); and Fort Myers, Fla. ($175,000). The expansion at Madison, Wis., would provide enlarged facilities to meet expanding needs for timber utilization research; and the other laboratories, in our opinion, are vital if Federal research programs are to be made more effective at the regional level.

The Forest Farmers Association was most encouraged to note the recent request by Senator John Stennis of Mississippi for a nationwide increase in the fiscal year 1963 of $9 million to include all of the above construction items, plus $6 million for nationwide strengthening of existing forest research programs. These construction and program increases as recommended by Senator Stennis would help the South and the Nation to keep pace with expanding needs for forest research. These growing needs have been of major concern to our group. As we see the situation in the South, a minimum increase of $1,120,000 in Federal funds is clearly needed by this area in the fiscal year 1963 for strengthening existing research programs. Little of this increase appears in the original 1963 budget.

On the other hand, most of these current minimum research construction and program needs are included at an acceptable level in Senator Stennis' recommendations.

The $1,120,000 increase which the Forest Farmers Association is seeking to strengthen existing research includes programs in 11 States as follows:

Insect and disease investigation control research.—A minimum of $315,000 is urgently needed for this work centered primarily in the States of Mississippi, North Carolina, Georgia, Louisiana, and Texas. A substantial amount of these funds would be used to step up investigations on two very serious southern forest diseases—fomes annosus and cronartium fusiforme, plus work on important forest insects. Some of this money would also go to activate work at the new Biology Laboratory at the research triangle near Raleigh-Durham, N.C. This committee can take a great deal of pride in this Biology Laboratory which it helped make possible, and which will undoubtedly contribute tremendously in the South's battle against forest pests.

Silvicultural studies.—Increased demands for wood mean that southern timberland owners must seek ways to make trees grow faster, to improve quality, and to make every acre produce its maximum. A minimum of $255,000 is needed for strengthening research in this field in Alabama, Arkansas, Florida, Louisiana, South Carolina, North Carolina, and Virginia.

Utilization and engineering.—Thousands of new uses and new markets can be developed for the South's timber through research. Such new markets will stimulate more profitability and increased forest development by landowners, including more small owners. The amount of $135,000 is needed this year for strengthening such programs, primarily in Alabama, Georgia, and Louisiana.

Wildlife and range studies.—$135,000 is needed for research on wildlife and range management to keep pace with growing demands. This work is centered in Florida, Louisiana, North Carolina, and Texas.

Watershed management research.—It is highly desirable that forest owners learn to manage their lands for water production and flood control, as well as for timber and other purposes; and $100,000 is needed this year for strengthening programs in Arkansas, Mississippi, and North Carolina.

Hardwood management.—$80,000 is needed for strengthening hardwood management research in the South. Information on managing southern hardwood forests is still woefully insufficient. These additional funds are needed to maintain and expand programs in Mississippi, North Carolina, and Tennessee.

In addition, there is a continuing need to maintain, at an appropriate level, the forest survey, which provides recurrent State-by-State resource inventories. While appropriations for this program are currently at the ceiling authorized by law, the South urgently needs $100,000 additional for this activity in 1963. It is hoped that necessary legislation may soon be passed and additional funds appropriated for this important activity.

The Forest Farmers Association hopes that this committee will recommend increases for research as suggested by Senator Stennis, since these increases are urgently needed to maintain minimum progress.

I thank the committee for its courtesy in hearing me.

GENERAL STATEMENT

Mr. MYERS. My name is J. Walter Myers, Jr., and I am executive director of the Forest Farmers Association, which is an organization of timberland owners, primarily small owners, in 15 Southern States.

ASSOCIATION SUPPORT OF FORESTRY

Our headquarters are in Atlanta, Ga., and we have testified before the committee on a number of other occasions, and I know that this committee has repeatedly demonstrated its interest and support of forestry matters, and I am sure that it is also very cognizant of the cooperation that has been extended by the private landowners and other groups such as the States at the local level.

We still look to the Federal Government for leadership in research activities, however, and we have reviewed the budget for the fiscal year 1963. We certainly concur in the strengthening that appears of the Forest Service, and also the items for equipment and auxiliary facilities.

REQUESTED INCREASES ENDORSED

We want to endorse and support those increases, and we were also very pleased at Senator Stennis' request that he made in a recent speech to the Congress, to the Senate, and we would also like to endorse his comments.

We, as a group, looking at the research needs in the South, we see a need for a minimum increase of $1,120,000 in fiscal year 1963 to cover research needs in 11 of the 15 States that we operate in, and I would like to say that these items are covered at an acceptable level in Senator Stennis' comments and, very briefly, the needs that we see for insect and disease investigation and control as one category, a minimum of $315,000 in the States of Mississippi, North Carolina, Georgia, Louisiana, and Texas.

The silvicultural studies show us how to grow wood and trees faster, and so forth, a minimum of $225,000; for strengthening research in these fields in Alabama, Arkansas, Florida, Louisiana, South Carolina, North Carolina, and Virginia.

Utilization and engineering, $135,000 is needed this year for strengthening programs in Alabama, Georgia, and Louisiana.

Wildlife and range studies, $135,000 for work in Florida, Louisiana, North Carolina, and Texas.

Watershed management research, there is a need for $100,000 for strengthening programs in Arkansas, Mississippi, and North Carolina.

Hardwood management, research is woefully weak, and approximately $80,000 is needed in Mississippi, North Carolina, and Tennessee.

80391—62——59

In addition, there is a continuing need to maintain the forest survey which is the inventory of our forests at an appropriate level.

At present that is at the top ceiling authorized by Congress. We hope that, perhaps, that ceiling can be removed and funds appropriated as needed.

EXPANSION OF FOREST PRODUCTS LABORATORY FAVORED

In conclusion, I would like to say also that we strongly favor the expansion needed at the Forest Products Laboratory at Madison, Wis., plus laboratories at Sewanee, Tenn., which is a matter of $200,000; Alexandria, $900,000; and Fort Myers, Fla. of $175,000.

These construction items are likewise included in Senator Stennis' request.

I very much appreciate the opportunity to present our views, Senator, Mr. Chairman, and it is a pleasure to be here.

Senator BYRD. Thank you, Mr. Myers. You have one of the most distinguished, illustrious, capable, highly admired, and most beloved Senators who sits on this committee, Senator Russell. He has long been interested in the forestry program.

Your other equally distinguished Senator sits on the Agriculture Committee, Senator Talmadge. They are both held in the very highest esteem by their colleagues.

Of course, they are very actively engaged in promoting such work as you have described here, and I am sure that Senate Talmadge would be most interested in what you have had to say about a ceiling. Any legislation to alter the ceiling would have to pass his Committee on Agriculture.

Mr. MYERS. Yes, sir.

Senator BYRD. But the State of Georgia has two very wonderful Senators, and I count it a great privilege to work with them. I count it an honor to be on the committee here with your senior Senator, and to be on the Armed Services Committee and under his chairmanship there.

I think you have made a fine statement, and the committee will be very happy to consider your request.

Mr. MYERS. Thank you.

Senator BYRD. Mr. Whitfield, Mr. J. V. Whitfield from Wallace, N.C.

Mr. WHITFIELD. Mr. Chairman and gentlemen, it has been my privilege to be a member of the Forest Farmers Association since 1946, and I have been testifying here on forestry since 1952.

I take great pleasure in coming here today to offer a few suggestions.

FOREST FARMERS ASSOCIATION

Mr. Myers has outlined the views of the Forest Farmers Association on the South's current research needs, and I want to endorse his statement and to also speak briefly in support of the several items.

This committee and its counterpart in the House can take great pride in the substantial progress that has been made in forest research in the South and particularly in forest insect and disease investigation, and also in research on the management on our hardwood forests.

LOSS FROM DISEASE AND INSECTS

Now, up until a comparatively few years ago we did not realize we were losing more timber from disease and insects than from fire. Of course, fire is quick and spectacular, but insects, we do not see them work so often, but we have realized that, and we need to increase our appropriations for that research.

So we are requesting an increase of $315,000 for insect and disease investigation and, as Mr. Myers pointed out, $80,000 for hardwood management studies which we need.

WATER SUPPLY STUDIES

Our Nation's water supply is also tremendously important. It might be pointed out here, Senator, Mr. Chairman, that in 1900 we used 41 billion gallons of water daily; in 1945 we used 150 billion gallons daily; and now we are using 250 billion gallons daily, and our water engineers tell us by 1980 we will need 600 billion gallons daily. Where are we going to get that water?

That means one of the ways we get it is by putting every watershed in tiptop shape. That won't give us all of it, but it will help.

Having been chairman of the North Carolina Stream Sanitation Committee, this is not the point of how we are going to get more water, but you do want to emphasize that one of the facts we have got to look into is to put every watershed in the United States in tiptop shape which will help us considerably.

We can no longer delay such research of our country if it is to maintain and expand its economy in an orderly and uninterrupted manner.

As I pointed out, being chairman of the North Carolina Stream Sanitation Committee, that position—in that position I have had a firsthand opportunity to realize just how important is the wise use of our water resources. In fact, it has now become our most precious commodity

The Forest Farmers Association has increased or it is suggesting an increase of $100,000 to strengthen the existing programs in Arkansas, Mississippi and North Carolina.

STUDY ON TIMBER MARKETS

In conclusion, I want to speak briefly on the forest utilization and engineering item which Mr. Myers mentioned. An urgent need exists for new and expanding markets for timber products, and I am thinking of whole new vistas, not just the traditional lumber and pulp and paper markets.

Such new markets can make forestry a more profitable operation for the small landowner and make him more interested in development of his forest resources.

This could be a major key to small forest ownerships in North Carolina. The logical groups to spearhead such a major forest products research effort are the Government and private industry working together. I do not think that can be repeated often enough.

One hundred and thirty-five thousand dollars is requested to expand this work in Alabama, Georgia, and Louisiana.

Since all of these increases are included in a generally acceptable level in Senator Stennis' report, I, too, would want to strongly endorse Senator Stennis' recommendation, and I hope this committee may see its way clear in concurring in these recommendations.

Thank you, Mr. Chairman, for the courtesy of appearing before you.

Senator BYRD. Thank you, Mr. Whitfield, for your courtesy in giving us your testimony.

Would you like to have your prepared statement included in the record?

Mr. WHITFIELD. Please.

(Mr. Whitfield's prepared statement follows:)

STATEMENT BY J. V. WHITFIELD, WALLACE, N.C.

Mr. Chairman and members of the committee, my name is J.V. Whitfield, and it is certainly a pleasure for me to appear before this committee again. I am a small timberland owner and tobacco farmer from Wallace, N.C., and a former president of the Forest Farmers Association.

I also have had the privilege of testifying before this committee for a number of years now to offer suggestions on how existing Federal forest research programs might best be strengthened. Mr. Myers has outlined the views of the Forest Farmers Association on the South's current research needs, and I want to endorse his statement and also speak briefly in support of several of the items he mentioned.

This committee and its counterpart in the House can take great pride in the substantial progress that has been made in forest research in the South and particularly in forest insect and disease investigation, and also in research on the management of our hardwood forests.

It is essential that adequate funds be provided for this very important work, so that it can continue at an appropriate level. The Forest Farmers Association's request for an increase of $315,000 for insect and disease investigations and $80,000 for hardwood management studies would provide such funds.

Our Nation's water supply is also tremendously important, and a critical need for additional research on this resource exists. An adequate research program on water and watershed management is essential if this country is to maintain a necessary supply of water for personal as well as industrial use. We can no longer delay such research if our country is to maintain and expand its economy in an orderly uninterrupted manner.

For quite a few years, I have served as chairman of the North Carolina Stream Sanitation Committee. In this position, I have had a firsthand opportunity to realize just how important is the wise use of our water resources. The Forest Farmers Association is suggesting an increase of $100,000 to strengthen existing programs in Arkansas, Mississippi, and North Carolina.

In conclusion, I want to speak briefly on the forest utilization and engineering item, which Mr. Myers mentioned. An urgent need exists for new and expanding markets for timber products. And I am thinking of whole new vistas—not just the traditional lumber and pulp and paper markets. Such new markets can make forestry a more profitable operation for the small landowner and make him more interested in development of his forest resources. This could be a major key to further development of small forest ownerships in the South. The logical groups to spearhead such a major forest products research effort are, in my opinion, the Government and private industry working together; $135,000 is requested to expand this work in Alabama, Georgia, and Louisiana. Since all of these increases are included at a generally acceptable in Senator Stennis' request, as mentioned earlier, I too want to strongly endorse Senator Stennis' recommendations; and I hope this committee may see its way clear to concur in these recommendations.

I thank the committee for its courtesy in hearing me.

GENERAL STATEMENT

Senator BYRD. Now, Mr. Baggenstoss.

Mr. BAGGENSTOSS. I am very happy to be here again before this committee.

I have testified in the past on forest appropriations. We are very happy in our area that Senator Stennis has seen fit to request $200,000 for the Sewanee Research Center there, and also that our own Senator, Estes Kefauver, has concurred in this request and is most interested in it.

SITUATION IN AREA

We are in the area that is very much discussed, like parts of our own State, the depressed area. I myself say it will never be depressed until the good Lord puts it down beneath the sea again.

Geologists tell me that the Cumberland Plateau has risen three times, and, so far as I am concerned, we are on top of the world. But we do have problems and, basically, our area is comprised of 65 percent woodland and only about 10 percent of that is under management.

A large part of the area is being stripped for coal mining and the research center there, we have one now, but we have no building for it, is doing a great job in telling us how to manage our lands, what kind of trees to plant, what will grow on the bald banks, and such questions as need to be answered.

I have a statement which I would like to submit, and I also want to thank you for the privilege of being here.

I think in this research center we are getting at the basic things, the things that may pay off 30, 40, 50 years from now in our so-called depressed area.

Senator BYRD. Mr. Baggenstoss, your statement will be included in the record. We appreciate your appearance before the committee. The committee will find your statement helpful. We thank you for your appearance.

(The statement referred to follows:)

STATEMENT BY HERMAN E. BAGGENSTOSS, PRESIDENT, FOREST FARMERS ASSOCIATION

Mr. Chairman and members of the committee, my name is Herman E. Baggenstoss. I am a weekly newspaper editor and forest farmer from Tracy City, Tenn., and the current president of the Forest Farmers Association.

I also have had the privilege of testifying before this committee on several occasions in support of various Federal forest research items. Like Mr. Whitfield, I want to endorse Mr. Myers' statement and also speak briefly in support of several specific items.

First, let me mention that Tracy City, Tenn., is located in Grundy County on top of the Cumberland Plateau. Most of our people are row crop farmers, and a number make a living as coal miners. Opportunities in both of these fields, however, are limited, and for a number of years have been diminishing. As a matter of fact, the Cumberland Plateau area could best be described as one of the Nation's economically depressed areas which you hear referred to from time to time.

Forest farming and the development of new timber-processing plants are among the few remaining opportunities for developing new jobs in our area. While the timber resources in my area are, perhaps, not as responsive to management as timber in certain other areas, these resources have not yet been developed to their full potential. I mention these facts so that you may better understand why I am here today speaking in behalf of increased forest research. Several years ago this committee and its counterpart in the House approved the establishment of a forest research center at the University of the South at Sewanee, Tenn. This is just a few short miles from Tracy City and in the heart of the Cumberland Plateau area. It was the first Federal research center established in Tennessee, and has meant a great deal to our area. Through its good works, our people are beginning to understand the potential value of their forest lands and how the development of these lands can work to their economic advantage.

It is important, however, that the fine work of this research center be expanded if it is to meet the growing needs of this area. Last year, this committee heard a request for a $200,000 laboratory to be built in conjunction with this research center. Due, perhaps, to other considerations this request was not approved.

Now, this committee has repeatedly demonstrated its interest and support in maintaining a strong program of Federal research in forestry, and your past actions and considerations have been most gratifying. I hope that this year the committee will again review the need for this laboratory at Sewanee and see its way clear to recommend funds for its construction. Meanwhile, our local people, including various small wood-using businesses, are cooperating to the fullest with this Federal research center as is the University of the South and its forestry school. These groups appreciate and look forward to the continued leadership of the U.S. Forest Service in such research activities and are most interested in developing to the fullest their timber resources which can be so important, economically, to this depressed area.

In conclusion, I want to speak also for the hardwood management research item. The Forest Farmers Association is requesting an increase of $80,000 to maintain and expand hardwood management programs in Mississippi, North Carolina, and Tennessee. The Appalachian hardwoods in my area once comprised one of the most valuable forests in the South. Their high-grade walnut, yellow poplar, and other species once provided valuable sources of income to our people. Due, however, to many years of neglect and poor forestry practices, this valuable hardwood growing area today contains largely low-quality and poor grade trees. Foresters advise me that with more information on how to manage these forests, and with the institution of improved forest practices, this land can again grow high-quality trees. Therefore, I particularly hope the committee will give its consideration to approving this item.

All of these increases which are being asked for by the Forest Farmers Association are included to an acceptable extent in Senator Stennis' request. Therefore, I hope this committee will see its way clear to concur in Senator Stennis' suggestions and recommend their approval.

Thank you for your courtesy in hearing my views.

NATIONAL LUMBER MANUFACTURERS ASSOCIATION

STATEMENT OF MORTIMER B. DOYLE, EXECUTIVE VICE PRESIDENT

GENERAL STATEMENT

Senator BYRD. We will now ask Mr. Mortimer B. Doyle, executive vice president of the National Lumber Manufacturers Association, to appear at this time.

Mr. Doyle will appear on behalf of the expansion of forest research, specially the Forest Products Laboratory at Madison, Wis. Mr. Doyle.

Mr. DOYLE. Mr. Chairman, my name is Mortimer B. Doyle, and I am executive vice president of the National Lumber Manufacturers Association.

I want to thank you for this opportunity of presenting our views. My statement is rather brief and, with your permission, I shall proceed to read it.

Senator BYRD. Very well.

COMPOSITION OF ASSOCIATION

Mr. DOYLE. Our association is a federation of 16 regional, species, and products associations representing the lumber manufacturing industry in all parts of the United States, the fourth largest manufacturing industry in the United States in number of employees.

As you know, our Federal Government owns or controls more than 25 percent of the commercial forest land and more than 40 percent of the commercial standing timber in our country.

For the next fiscal year, it is estimated that the Government will obtain from timber sales by the U.S. Forest Service and the Bureau of Land Management on this land an annual income of approximately $156 million.

CONCERN FOR FOREST RESOURCES

In view of this responsibility for the public proprietary interest, the Federal Government has a special concern for our forest resources. In view of this—and in recognition of the fact that more than half of our total commercial forest land and three-fourths of that in private ownership is in very small ownerships and that forest products research is basic to a sound forest economy—the Federal Government more than 50 years ago embarked upon a program of forest products research and established the Forest Products Laboratory at Madison, Wis.

VALUE OF RESEARCH

Basic forest products research has made possible better forest practices by both small and large forest landowners. The additional contributions of the Madison Laboratory, numerous new products, techniques, and the more efficient and economic utilization of forest products, have been extremely important to forest landowners and all consumers of wood and wood products, in both the public and private sectors of the economy.

As a major forest land owner, the Federal Government can be expected to make increasingly heavy demands on the research facilities of the Laboratory since such research is necessary for the economic utilization of the publicly owned forest lands. The Government, therefore, as well as industry, has a major interest in seeing that these facilities are modernized and brought up to date.

COST OF FACILITIES UNDER CONSIDERATION

The total cost of all the new facilities currently under consideration has been estimated to be about $10 million. As we understand, it would be desirable for the U.S. Forest Service to begin the entire project in the upcoming fiscal year as some of the physical expansion requirements of the Laboratory are so urgently needed that further delay could possibly jeopardize a number of the Laboratory's activities. In fact, denial of funds for expansion planning last year may well result in seriously handicapping some of its research activities.

Research has been directly responsible for many of the great advances which have been made in forestry to date; we urge that Congress reaffirm its support of the Laboratory by providing promptly the funds urgently needed to expand and modernize its currently existing physical facilities.

When we learned of proposals to expand the physical facilities of the Laboratory last year, our executive committee discussed them in considerable detail. The committee concluded that much of the fundamental research done at the Madison Laboratory could not be undertaken on a regional or State basis with the same degree of efficiency, and without unnecessary duplication of expensive facilities. Concern was expressed by the committee with the apparent attempt by the Federal Government to overdecentralize its forest products research

activities on a State and regional basis. This movement toward decentralization has created some concern that these actions may have been undertaken without considering the adverse effects they might have on the overall objectives of the Government's entire forestry research program.

SUPPORT OF LUMBER INDUSTRY

The lumber industry has long supported this program. Because of the Laboratory's past record of accomplishment, and the urgent need that the forest products industry maintain its products in a more competitive position with other materials, we feel that it would be a particularly wise investment on the part of the Federal Government to permit the Laboratory to expand and modernize its present physical facilities in order to meet current and future needs.

While we do not ordinarily favor increases in Government spending, we do feel, however, that where a Government agency is performing a necessary Government service, or where an appropriation involves the prudent management of important public property, sufficient funds should be made available to enable that agency to operate at the most efficient level. The Forest Products Laboratory at Madison, Wis., in our opinion, falls within this latter category, and we appear here today to urge that the committee approve funds needed to modernize and enlarge the Laboratory's physical facilities.

REQUEST FOR DIVERSION OF FUNDS

We are heartily in accord with congressional efforts to balance our Federal budget and keep governmental expenditures to a minimum. Because of this, we would not particularly urge an increase in the overall fiscal year 1963 budget for the U.S. Forest Service. Rather, we would urge that the committee, in its review of the Forest Service's budget request, find a way to allocate the funds which are being requested for the urgently needed expansion of the Forest Products Laboratory by a diversion of such funds from other activities which, while important in their own right, are less urgent and impelling at this time.

In my letter requesting time to appear before this committee, I stated our opinion that the continued deferral of funds for this purpose would, in the long run, adversely affect the economy of many communities dependent on forest products, particularly from the national forests and, in turn, the workers and industries of such communities, as well as the Federal Government.

For these reasons we recommend that the necessary funds to achieve the planned expansion and modernization of the Madison Laboratory be included in the bill under consideration.

With that, Mr. Chairman, I again reiterate I thank you very kindly for the opportunity to present our views to the committee.

Senator BYRD. Mr. Doyle, that is an excellent statement and exceedingly well presented. We thank you very much.

Mr. DOYLE. Thank you.

Senator BYRD. Mr. J. B. Edens, Southwest Forest Industries, Inc., Phoenix, Ariz.

WESTERN PINE ASSOCIATION

STATEMENT OF JAMES B. EDENS, PRESIDENT

PREPARED STATEMENT

Mr. EDENS. Mr. Chairman, my name is James B. Edens. I appreciate the privilege of appearing before the committee.

Senator BYRD. We are glad to have you appear, Mr. Edens.

Mr. EDENS. Thank you. I filed a copy of the statement and, if I may, I request that it be included in the record.

Senator BYRD. Your statement will be included in the record.

Mr. EDENS. Thank you, Mr. Chairman.

(The statement referred to follows:)

My name is James B. Edens. I am president of Southwest Forest Industries, Inc., a company that operates three sawmills, a paper and pulp mill, and wood and paper converting operations in Arizona, Texas, and California. Our headquarters is in Phoenix, Ariz.

I am president of the Western Pine Association, a lumber trade association whose 400 member mills in 12 Western States produce approximately 9 billion board feet of lumber annually, and employ more than 100,000 people. I am also a member of the board of directors of the Southwest Pine Association, an association of lumber manufacturers in Arizona and New Mexico.

I am testifying today as a representative of these groups.

The responsible segment of the lumber industry firmly believes in research as a necessary means of achieving two crucial objectives.

The first objective is to eliminate the drain by destructive agencies on our principal raw material and one of the Nation's chief natural resources. By destructive agencies I mean fire, disease, insect infestation, etc.

The shocking extent of this drain is made evident by an analysis of the statistics on timber removal from commercial forests for 1952, the last year for which such figures are available. In the United States the total removal of live saw timber trees amounted to approximately 61 billion board feet. Of this total about 49 billion board feet was represented by commodity withdrawal and slightly more than 12 billion board feet was accounted for by the destructive drain. Only 80 percent of the timber removed that year found a useful purpose; 20 percent of it was uselessly destroyed. In the western pine region the picture was even worse. Of the 12 billion board feet of saw timber removed in 1952, 37.5 percent was destroyed by the various destructive agents, and only 62.5 percent was harvested by the forest industry.[1]

The second critical objective of research is the development of new uses for wood and new products from wood to assure fullest utilization of our timber supply and to enable the industry to retain existing markets and capture new markets.

Individual companies and associations in the industry are presently conducting such research programs which have as their goal conservation and improvement of our timber resources.

Individual companies and associations in the industry are experimenting extensively with new wood uses and products.

In spite of the fact that the lumber industry is made up of thousands of small units and that, particularly in the West, their operation is on a short-term timber supply basis, millions of dollars are being spent annually by individual companies and associations on research and promotion in an effort to maintain wood's competitive place in the market.

Without this continuing effort substitute materials and competitive products would soon replace wood with a consequent and disastrous effect on the more than 1 million employees of the industry, the communities that depend on us almost solely for their economic stability, and the Federal Government's receipts of $156 million a year from timber purchasers. Even with this continuing effort on the part of the industry the forces of economic attrition have reduced the number of operating sawmills from 53,109 in 1947 to 31,645 in 1958.[2]

---

[1] Source: Forest Service, U.S. Department of Agriculture, "Timber Resources Review."
[2] Source: Department of Commerce.

The lumber industry should not be expected to do this job alone. The fact that the lumber industry is composed mainly of small companies who have neither the facilities, the economic resources, nor the long-range outlook places a heavier burden on the private owners of timber who, in the West, account for only 23 percent of the ownership of timberland. In proportion to the total land area, private owners have contributed more than their share of the total research burden. In 1953, estimated expenditures for lumber and lumber products research by company laboratories and associations and private laboratories supported by companies totaled $5 million. That same year public agency laboratories contributed $2 million in research. With ownership of less than one-fourth of the saw timber acreage the industry, in the West, spent 2½ times as much as the public land agencies.[3]

As the largest single supplier of timber, the Federal Government has a big stake in the future of the lumber industry, and in self-interest must be responsive to the needs of the industry. Since, in the western pine area, 77 percent of the sawtimber acreage is in public lands, three-fourths of the timber we use must be purchased from the Government. During the fiscal year of 1959 western pine lumber manufacturers paid $42.5 million to the Forest Service alone for timber purchases.[4]

As the largest single supplier of timber, the Federal Government shares with the industry a responsibility for community stability, certainly, in the predominantly public lands areas. While these communities rely heavily on lumber payrolls for their continued economic existence there is an even more critical factor. Twenty-five percent of timber sales receipts from Government land are passed along to the counties in which the timber stand is located for school building and road construction. The effect on the local tax structure obviously would be grave if the volume of Federal timber sales diminished greatly.

The Forest Products Laboratory has made an immeasurable contribution in the field of lumber products development. There is still much information that needs to be developed. Specifically, there is need for fundamental information that can be used by the industry in its applied research effort. This would include:

(*a*) Dimensional stability of lumber for improved serviceability.

(*b*) Exhaustive study of fire resistance.

(*c*) Structural design information, particularly in new methods of fastening and fabricating lumber products.

(*d*) Fundamentals of adhesion need to be developed.

(*e*) Methods of finishing both in the clear and pigmented variety need adequate research to insure extended service life.

(*f*) Methods of utilizing the lower grades of lumber need to be developed to assist in the economical use of lumber products.

(*g*) Accelerated aging tests to provide rapid determination of the durability of glued components, finishes, and other product developments.

(*h*) Acceleration of the wood density study now in progress and the development of other studies to find methods of determining the basic strength values of wood.

It is, therefore, respectfully requested that the Congress favorably consider expansion of the budget and program of the U.S. Forest Laboratory for our mutual benefit.

GENERAL STATEMENT

Mr. EDENS. I am president of Western Pine Association, a lumber trade association whose 400-member mills in 12 Western States produce approximately 9 billion board feet of lumber annually and employ more than 100,000 people.

I am also a member of the board of directors of the Southwest Pine Association, an association of lumber manufacturers in Arizona and New Mexico.

I am testifying today as a representative of both of these groups.

---

[4] Source: Forest Service, Department of Agriculture.

OBJECTIVES OF RESEARCH

The responsible segment of the lumber industry firmly believes in research; they believe in it as a necessary means of achieving two crucial objectives.

The first objective is to eliminate the drain by destructive agencies on our principal raw material and one of the Nation's chief natural resources. By destructive agencies I mean fire, disease, insect infestation, and the other hazards to our timber supply.

This drain is serious. In 1952 it accounted for 37½ percent of the 12 billion board feet of live saw timber, trees removed in the western pine area.

The second critical objective of research is the development of new uses for wood and new products from wood to assure fullest utilization of our timber supply and to enable the industry to retain existing markets and capture new markets.

EXPENDITURES BY INDUSTRY

In spite of the fact that the lumber industry is made up of thousands of small units and that, particularly in the West, their operation is on a short-term timber supply basis, millions of dollars are being spent annually by individual companies and associations on research and promotion in an effort to maintain wood's competitive place in the market.

SUBSTITUTE MATERIALS

Without this continuing effort substitute materials and competitive products would soon replace wood with a consequent and disastrous effect on the more than 1 million employees of the industry, the communities that depend on us almost solely for their economic stability, and the Federal Government's receipts of $156 million a year from timber purchasers. Even with this continuing effort on the part of the industry the forces of economic attrition have reduced the number of operating sawmills from 53,109 in 1947 to 31,645 in 1958.

NEED FOR FEDERAL HELP

The lumber industry should not be expected to do this job alone. The fact that the lumber industry is composed mainly of small companies who have neither the facilities, the economic resources, nor the long-range outlook places a heavier burden on the private owners of timber who, in the West, account for only 23 percent of the ownership of timberland. The other 7 percent is publicly owned. In proportion to the total land area, private owners have contributed more than their share of the total research burden. In 1953, estimated expenditures for lumber and lumber products research by company laboratories and associations and private laboratories supported by companies totaled $5 million. That same year public agency laboratories contributed $2 million in research in the same fields. With ownership of less than one-fourth of the sawtimber acreage the industry, in the West, spent 2½ times as much as the public land agencies.

FEDERAL STAKE IN TIMBER INDUSTRY

As the largest single supplier of timber, the Federal Government has a big stake in the future of the lumber industry, and in self interest must be responsive to the needs of the industry. Since, in the western pine area, 77 percent of the sawtimber acreage is in public lands three-fourths of the timber we use must be purchased from the Government. During the fiscal year of 1959 western pine lumber manufacturers paid $42.5 million to the Forest Service alone for timber purchases.

As the largest single supplier of timber, the Federal Government shares with the industry a responsibility for community stability, certainly, in the predominantly public lands areas. While these communities rely heavily on lumber payrolls for their continued economic existence there is an even more critical factor; 25 percent of timber sales receipts from Government land are passed along to the counties in which the timber stand is located for school building and road construction. The effect on the local tax structure obviously would be grave if the volume of Federal timber sales diminished greatly.

The Forest Products Laboratory has made an immeasurable contribution in the field of lumber products development.

NEEDED INFORMATION

This, however, is still much information that needs to be developed on dimensional stability, fire resistance, structural design, adhesion and fastening methods, methods of utilizing the lower grades of lumber.

These are all needed to assist in the economical use of lumber products.

Wood density studies now in progress must be accelerated. All of this is fundamental information that can be used by the industry in its own applied research effort.

It is, therefore, respectfully requested that the Congress favorably consider expansion of the budget and program of the U.S. Forest Laboratory for our mutual benefit.

Thank you, Mr. Chairman.

Senator BYRD. Does that complete your statement?

Mr. EDENS. Yes, sir.

Senator BYRD. Mr. Edens, we are very happy to have had you appear before the committee today.

You come in a most favored position inasmuch as you are a constituent of the chairman of this committee, and I will say to you that I will be very happy to sit for a long time at the feet of Senator Hayden.

Mr. EDENS. Thank you; so will I.

Senator BYRD. He is a great Senator. Thank you very much.

Mr. EDENS. Thank you.

Senator BYRD. Mr. Donald H. Gott.

AMERICAN WALNUT MANUFACTURERS' ASSOCIATION

STATEMENT OF DONALD H. GOTT, SECRETARY-MANAGER

PREPARED STATEMENT

Mr. GOTT. Mr. Chairman, I am Donald H. Gott, secretary-manager of the American Walnut Manufacturers' Association.

Since walnut is unique to North America, particularly the Midwest, I will also attempt, with your permission, sir, to make this unique in its brevity, if I may have your permission to do so.

Senator BYRD. I will be very happy to have you include it in the record, and you may emphasize whatever portions of it you desire.

Mr. GOTT. Thank you.

(The statement referred to follows:)

Chairman Hayden, members of the Senate Subcommittee on Appropriations for the Department of Interior and Related Agencies, I am Donald H. Gott and I serve as secretary-manager of the American Walnut Manufacturers' Association. My association, founded in 1914, has its headquarters in Chicago, Ill. We are a trade association, consisting of 15 companies engaged in processing black walnut logs into veneer and lumber for a wide variety of uses; e.g., in paneling and furniture. Our member companies produce more than two-thirds of all walnut veneer made in the United States. With few exceptions, our members and affiliated companies are located in the six Central States of Ohio, Indiana, Illinois, Iowa, Missouri, and Kentucky. Although walnut occurs naturally throughout eastern United States, the growth of veneer-quality trees is concentrated largely in these same six Central States. This central area supplies the major part of the walnut timber used by domestic and foreign manufacturers.

American walnut is one of our most valuable native hardwoods. It is highly esteemed by designers and architects for many high-quality uses because of its uniquely beautiful grain, hardness, strength, and durability combined with excellent machining and finishing properties. These fine characteristics are well known to the European market and have led to heavy export demands in recent years. For example, the export of veneer-quality black walnut logs increased 17 times during the period 1954–60. During this same period consumption by domestic veneer producers increased 3.2 times. The higher prices accompanying export demand have encouraged the harvesting of immature black walnut trees.

While the demand is increasing the supply of high quality timber is declining. According to recent Forest Service publications: "The supply of veneer quality logs in Iowa may be expected to diminish gradually during the next 10 to 15 years. The young stands building up today do not contain as many black walnut trees as did the earlier forests * * *." In their report on Indiana's forest resources and industries the Forest Service said: "* * * the Forest Survey has found that the volume of high-quality wood is declining in each of the Central States, although the total volume of wood is increasing." The information that I have just given you shows clearly that the demand for black walnut is increasing while the supply of high quality timber is declining.

Our association has recognized the adverse supply trend that has been occurring over the past several years. And, in cooperation with State and Federal forestry program, we have taken steps to encourage the proper planting, management, harvesting, and utilization of black walnut. Our industry, in cooperation with more than a dozen States, assists in collecting and distributing for planting from 3 to 5 million walnut seeds and tree seedlings annually. Undoubtedly more attention is given to planting walnut than to any other hardwood in the Midwest. We have helped finance Forest Service research that will improve the quality of walnut by pruning. And only this year we contributed cooperative funds to assist the Forest Service in conducting genetics research in black walnut. This work will be of value to forest land owners and to industry throughout the several Central States.

However, not all of our efforts have been successful. For example, we are finding that only a small percent of the nuts and seedlings we have helped distribute annually over the last 30 years have actually produced young stands

of walnut timber. Solution to the problem of how to plant successfully young stands of valuable hardwoods such as walnut will require intensive research in the laboratory and greenhouse as well as in the field.

The forests of the Central States are mostly privately owned—farmers own over half of the forest land. Discovery of a successful way to plant valuable hardwoods such as walnut, will lead to diversification of farm production and to a higher income for woodland owners. Furthermore, it will lead to production of a crop not now in surplus and not likely to be overproduced in the foreseeable future.

The heavy export drain and increasing domestic demand for walnut has reduced severely the quality and size of logs available to our plants. This is creating new processing problems: e.g., in veneer cutting methods and equipment, curling of cut veneer, drying, and gluing. These are highly technical problems that we cannot solve alone. Their solution will require research such as can best be done at the Forest Products Laboratory operated by the Forest Service at Madison, Wis.

Thus, we are faced with problems of increasing demand, shrinking supplies of quality timber, planting young forests for future supplies, and methods of processing lower-quality logs. To help our industry as well as other processors of fine hardwoods survive, we strongly favor increasing research facilities of the U.S. Forest Service. Specifically, we recommend for your consideration:

1. That funds be provided this year for the Forest Service to construct and equip research laboratories, greenhouses, and offices on the campus of Iowa State University at Ames, Iowa. The Forest Service has started research at their Ames office that will determine how, when and where to plant valuable hardwoods, including black walnut. This work is being done in cooperation with the university. But, solving the problem of planting hardwoods is going to take laboratories and greenhouses not now available to either the Forest Service or the university at Ames. We recommend that $200,000 be appropriated next year so that the Forest Service can construct this important research facility.

2. That the urgently needed $10 million expansion of facilities at the Forest Products Laboratory operated by the Forest Service at Madison, Wis., be at least started next year. The needed expansion and modernization of the Forest Products Laboratory would permit more intensive research in the many technical problems facing my association as well as other wood-using industries throughout the Nation.

I want to assure you that my association and its members will cooperate to the best of our ability in State and Federal forestry programs, just as we are doing now.

It has been a pleasure to appear before you and to present testimony favoring construction of Forest Service research facilities at Ames, Iowa and Madison, Wis.

I trust that you will give full consideration to my recommendations and to other forestry research needs of the Nation when you prepare the Forest Service budget for next year.

Thank you for your kind attention.

General Statement

Mr. Gott. My association, founded in 1914, has its headquarters in Chicago, Ill. We are a trade association, consisting of 15 companies engaged in processing black walnut logs into veneer and lumber for a wide variety of uses; e.g., in paneling and furniture. Our member companies produce more than two-thirds of all walnut veneer made in the United States. With few exceptions, our members and affiliated companies are located in the six Central States of Ohio, Indiana, Illinois, Iowa, Missouri, and Kentucky. Although walnut occurs naturally throughout Eastern United States, the growth of veneer quality trees is concentrated largely in these same six Central States. This central area supplies the major part of the walnut timber used by domestic and foreign manufacturers.

VALUE OF WALNUT AS NATURAL HARDWOOD

American walnut is one of our most valuable native hardwoods. It is highly esteemed by designers and architects for many high-quality uses because of its uniquely beautiful grain, hardness, strength, and durability combined with excellent machining and finishing properties. These fine characteristics are well known to the European market and have led to heavy export demands in recent years. For example, the export of veneer quality black walnut logs increase 17 times during the period 1954–60. During this same period consumption by domestic veneer producers increased 3.2 times. The higher prices accompanying export demand have encouraged the harvesting of immature black walnut trees.

DECREASED SUPPLY FOR INCREASED DEMAND

While the demand is increasing, the supply of high quality timber is declining. According to recent Forest Service publications—

> The supply of veneer quality logs in Iowa may be expected to diminish gradually during the next 10 to 15 years. The young stands building up today do not contain as many black walnut trees as did the earlier forests * * *.

In their report on Indiana's forest resources and industries the Forest Service said—

> * * * the forest survey has found that the volume of high-quality wood is declining in each of the Central States, although the total volume of wood is increasing.

The information that I have just given you shows clearly that the demand for black walnut is increasing while the supply of high quality timber is declining.

Our association has recognized the adverse supply trend that has been occurring over the past several years. And, in cooperation with State and Federal forestry programs, we have taken steps to encourage the proper planting, management, harvesting, and utilization of black walnut. Our industry, in cooperating with more than a dozen States, assists in collecting and distributing for planting from 3 to 5 million walnut seeds and tree seedlings annually.

I might mention that this year we have the largest participation by States, namely 14, with West Virginia included, Mr. Chairman. It is our largest seed collection program.

WALNUT PLANTING

Undoubtedly, more attention is given to planting walnut than to any other hardwood in the Midwest. We have helped finance Forest Service research that will improve the quality of walnut by pruning. And only this year we contributed cooperative funds to assist the Forestry Service in conducting genetics research in black walnut.

This was through the Central States Forest Experimental Station at Columbus. This work will be of value to forest landowners and to industry throughout the several Central States.

NEED FOR INTENSIVE RESEARCH

However, not all of our efforts have been successful. For example, we are finding that only a small percentage of the nuts and seedlings we have helped distribute annually over the last 30 years have actually

produced young stands of walnut timber. Solution to the problem of how to plant successfully young stands of valuable hardwoods such as walnut will require intensive research in the laboratory and greenhouse as well as in the field.

The forests of the Central States are mostly privately owned—farmers own over half of the forest land. Discovery of a successful way to plant valuable hardwoods such as walnut, will lead to diversification of farm production and to a higher income for woodland owners. Furthermore, it will lead to production of a crop now in surplus and not likely to be overproduced in the foreseeable future.

The heavy export drain and increasing domestic demand for walnut has reduced severely the quality and size of logs available to our plants. This is creating new processing problems; for example, in veneer cutting methods and equipment, curling of cut veneer, drying, and gluing. These are highly technical problems that we cannot solve alone. Their solution will require research such as can best be done at the Forest Products Laboratory operated by the Forest Service at Madison, Wis.

Thus, we are faced with problems of increasing demand, shrinking supplies of quality timber, planting young forests for future supplies, and methods of processing lower quality logs.

WALNUT FOR MILITARY USE

Mr. Chairman, I would like to mention at this time one of the greatest improvements in walnut lumber for the military has come out of Forests Products Laboratory in the last 18 months under the heading of "Technical Paper 1662," the stabilization of walnuts for military use in gunstocks.

RECOMMENDATIONS

To help our industry as well as other processors of fine hardwoods survive, we strongly favor increasing research facilities of the U.S. Forest Service. Specifically, we recommend for your consideration:

(1) That funds be provided this year for the Forest Service to construct and equip research laboratories, greenhouses, and offices on the campus of Iowa State University at Ames, Iowa. The Forest Service has started research at their Ames office that will determine how, when, and where to plant valuable hardwoods, including black walnut. This work is being done in cooperation with the university. But, solving the problem of planting hardwoods is going to take laboratories and greenhouses not now available to either the Forest Service or the university at Ames. We recommend that $200,000 be appropriated next year so that the Forest Service can construct this important research facility.

(2) That the urgently needed $10 million expansion of facilities at the Forest Productions Laboratory operated by the Forest Service at Madison, Wis., be at least started next year. The needed expansion and modernization of the Forest Products Laboratory would permit more intensive research in the many technical problems facing my association as well as other wood-using industries throughout the Nation.

I want to assure you that my association and its members will cooperate to the best of our ability in State and Federal forestry programs, just as we are doing now.

Mr. Chairman, I do thank you for this opportunity to present our views and recommendations.

In conclusion, if I may make this request, I have here a letter from Mr. E. Howard Gatewood, executive vice president of the Fine Hardwoods Association, who is just as interested in the overall domestic hardwood program as we are here in American black walnut.

Senator BYRD. Would you like to present that for the record?

Mr. GOTT. May I, sir?

Senator BYRD. We will be glad to include it. Thank you for your statement.

Mr. GOTT. Thank you, sir.

(The letter referred to follows:)

FINE HARDWOODS ASSOCIATION,
Chicago, Ill., March 8, 1962.

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations,
U.S. Senate, Washington, D.C.

DEAR SENATOR HAYDEN: I am addressing you with respect to forthcoming appropriations for the Forest Service, which subject I understand is to be included in hearings before your committee. It will be very much appreciated if this letter can be made a part of the record of those hearings.

The Fine Hardwoods Association is supported by 35 companies who are manufacturers of hardwood veneers and lumber. Our members are located throughout the middle and eastern portions of the United States.

Our members are mainly small concerns and they depend largely on the farmer and the woodlot owner for their supply of logs.

There is currently a very heavy demand for hardwood veneer and lumber in such domestic species as walnut, cherry, maple, etc. Our association has long been a stanch supporter of good forestry practices and reforestation which will insure a continuing supply of logs.

Therefore, we very strongly endorse the requested appropriation of $200,000 for the Forest Service to construct and equip research laboratories, greenhouses, and offices on the campus of Iowa State Univesity at Ames, Iowa.

Our industry is faced with many highly technical problems which will require considerable research of the type done at the Forest Products Laboratory at Madison, Wis. Therefore, our industry will most sincerely appreciate the favorable consideration of your committee in providing the $10 million which I understand has been requested for the expansion of facilities at the Forest Products Laboratory in Madison. This much needed expansion and modernization will be of considerable benefit to the entire wood industry and we are hoping that this program can be at least started during the 1962–63 fiscal year.

We very much appreciate the privilege of submitting these views and trust that they will receive the full consideration of your committee.

Respectfully yours,

E. HOWARD GATEWOOD.

AMERICAN WOOD PRESERVERS INSTITUTE

STATEMENT OF ROBERT O. HAWES, EXECUTIVE VICE PRESIDENT

PREPARED STATEMENT

Senator BYRD. Mr. Robert O. Hawes, executive vice president, American Wood Preservers Institute.

Mr. HAWES. Mr. Chairman, I very much appreciate appearing before the committee today and presenting our views.

We have a statement that has been prepared, and we would like to ask that it be entered in the record.

Senator BYRD. It will be included in the record.

(The statement referred to follows:)

Mr. Chairman and gentlemen of the Senate committee, my name is Robert O. Hawes. I am executive vice president of the American Wood Preservers Institute. Ours is an industry that undertakes to upgrade the forest products of the United States for industrial, commercial, and residential use. Through the impregnation of selected and controlled chemicals we increase the serviceability of lumber and other forest products against the hazards of insect attack, fungi (rot), fire, and marine organisms.

Our industry does not usually encourage Government spending, but whenever prudent management of important public property is involved, we believe that the responsible agency must be given adequate funds to insure the most efficient use of that property. The appropriation now being considered by this committee for the U.S. Forest Products Laboratory at Madison, Wis., clearly falls within such definition. We are appearing here today to urge that the committee approve such funds as are needed to modernize and enlarge the Laboratory's physical facilities.

Our industry has been active in the processing of forest products since 1885. The initial and major impetus for its development as an industry was the use of railroad crossties. Since their inception, in the early part of the 19th century, the railroads of this country have used wood crossties to support their tracks. About 1885, when the cost of annual crosstie renewals reached such tremendous proportions that railway managements became actively concerned about skyrocketing costs, and foresters became alarmed about the possible exhaustion of timber supplies, wood preservation was introduced as a conservation measure. In those days the average life of untreated ties in track was only 7½ years and renewals amounted to 100 million ties annually.

As the treating industry developed, it became apparent that the impregnation of selected chemicals in crossties would provide railroads with a vastly improved return on their investment by reducing annual maintenance and replacement costs. In 1927 railroad utilization of treated ties had grown to 74,231,840 maximum. This represented approximately 70 percent of the total annual output of our industry.

From this beginning, the wood preserving industry developed techniques for processing power transmission and communication poles, foundation lumber, fire-retardant treated lumber, marine structures, permanent roadside structures, bridges, fencing, posts of many kinds, and so forth.

It should be noted that a substantial portion of lumber being processed by our industry is cut from Government lands. Therefore, the public shares a direct interest in the products of our industry.

The consumption of ties has now decreased to 23.8 percent of its 1927 requirements, and now represents less than one-third of the output of our industry, and the utility pole production has similarly been reduced to approximately one-third of the current output of our industry. Use of both of these major product groups appears likely to remain at or near present levels. Therefore, it follows that the future of our industry is substantially to be determined by our ability to expand the remaining one-third to effectively employ the capacity and investment now idle. It is estimated that less than 39 percent of the present treating capacity is being used.

It is essential for the expansion of our industry that we first develop a more sophisticated knowledge of the properties of treated wood than is now known. To obtain this knowledge, we are substantially dependent upon the effective central research effort which is being provided by the Forest Products Laboratory. For some time it has been our practice to subscribe a portion of our limited funds to the Laboratory, and jointly finance with the Government, the investigation and development of new techniques and knowledge for more effective utilization of the products of our forests.

For example, the U.S. Navy and other users and owners of timber piling have been discovering in recent years that marine borer infestation had become so acute in certain areas, that the economic use of timber in marine facilities has been largely reduced. The result has been a loss of business to our industry with a corresponding loss of jobs, a reduced use of the public forest and increased cost to the Navy and other users and owners of waterfront structures.

In 1959 the American Wood Preservers Institute jointly financed with the Government a research project at the Forest Products Laboratory to determine answers to this practical problem. As a result of this research, the Forest Products Laboratory provided our industry with a technique known as assay

measurement of preservative and defined requirements for performance which will insure a greatly reduced cost to the Navy and others in the utilization of pressure-treated forest products in marine installations.

An important new use of treated lumber protected against the ravages of fire is now being introduced. While techniques have been developed to measure fire performance, much additional information is needed if this new use is to realize its potential. The appropriation under consideration will provide test facilities to further evaluate the structural characterstics of fire-retardant treated forest products, and with the proposed facilities to make full-scale tests of new components to be certain that the new design criteria are adequate and safe for public use.

The public interest is involved in this matter, not only in terms of effective utilization of Government-owned timberland, but in terms of public safety, and in terms of increased employment opportunity provided by our industry in all timber-producing areas of our country.

Because of its record of accomplishment in finding effective and worthwhile answers to forest product technical problems, we feel that it is a particularly wise investment on the part of the Federal Government to permit the expansion and modernization of the facilities of the Forest Products Laboratory at Madison, Wis.

Because of its position as a major owner of the forest land, the Federal Government can be expected to make increasingly heavy demands on the research facilities of the Laboratroy. The Forest Products Laboratory research has so far been responsible for important advances in our industry, and improved utilization of public and private timber resources. We therefore urge the support of the Laboratory at Madison by granting it funds to expand its existing physical facilities.

GENERAL STATEMENT

Mr. HAWES. If I may, I would like to highlight a few of the points that are referred to in the statement.

Our industry seeks to upgrade the forest products of the United States by the impregnation of selected chemicals into the lumber and other wood products to increase its durability against the attacks of insects, fungi or rot, fire, and marine organisms.

The initial impetus for the development of our industry was the result of the great use that was made of railroad ties in the center and latter part of the 19th century.

About 1885 railroad consumption of railroad ties had reached a total of 100 million ties, and this heavy demand on the forests of our country, plus other uses then being made of it, presented a major concern on the durability of our forests, and because of the alarm of foresters and the railroads themselves, our industry was created by this interest, largely as a measure to conserve timber supply and timber resources.

As the treating industry developed, it developed techniques to chemically impregnate other materials, which included the transmission and communication poles, marine facilities, posts, fencing, both in farms, residential, right-of-way, and many other timber uses where durability was a major factor of its use.

In essence, in each instance we were able to provide the users of these products with a basis to vastly improve their return on their investment by reducing their annual maintenance and replacement costs.

NEED FOR KNOWLEDGE OF TREATED WOOD

We feel that it is essential to the future of our industry and to the utilization of our forest resources that a more sophisticated knowledge of the properties of treated wood be developed than is now available.

To obtain this knowledge we substantially rely upon the effect of central research, the efforts of the Forest Products Laboratory, particularly at Madison, Wis.

It has been our practice to subscribe a portion of our limited funds in times past to undertake jointly the funding of the cost of various research activities.

During the past 20 months in which I have served our industry as executive vice president of the American Wood Preservers Institute, we have had five such projects with the laboratories, either completed or in process or just now beginning.

Typical of these projects is one which was born out of a need that was created by the U.S. Navy or discovered by them and other owners of marine installations.

MARINE BORE INFESTATION

In certain areas marine bore infestation had become so active that it became necessary to substantially increase the cost of building regular wharf structures and other marine installations using nontimber in design and, as a result of this problem in 1959 our institute, with the Forest Products Laboratory at Madison, undertook to research this thing to find answers to the problem, and it was as a rseult of this particular research that we defined into existence a new quality of timber piling for this service, a new device by which the quality could be measured in advance of its service, and very recently the Navy has endorsed this, and now plans to call in from the districts of the Navy around the world all those who are connected with this area of marine installation to learn of this new technique, and this new product, so that the Navy can enjoy the savings that will accrue by using it.

Typical dock installation might require, for example, 60,000 lineal feet of piling, so that on a typical installation of this nature you could expect to save $120,000 per unit.

The Department of Commerce, for example, has in this particular instance been working with us and with the industry in general to make available to the public in the form of a commercial standard or several commercial standards the results of this research.

The Federal Housing Administration, for instance, is particularly interested in a research project that is now completed in this area which will be used for the development of property standards for residential use.

PROVISIONS OF REQUESTED APPROPRIATION

The appropriation now under consideration will provide test facilities which can be used by the laboratory to investigate many more properties of another new product of our industry, which is fire-retarded and treated wood.

The use of these expanded facilities will permit full-scale testing to develop good design criteria to protect the public, to present a good basis for building construction so that the public is involved in this matter not only in terms of effective utilization of Government-owned timberlands, but also in terms of safety and in terms of increased employment opportunities which these new developments are creating.

The Forest Products Laboratory at Madison, Wis., has so far been responsible for important advances in our industry and improved utilization of the public and private timber sources and we, therefore, urge the Senate Appropriations Committee to approve $4 million for the first stage of construction on the planned expansion of this essential Forest Service facility.

Thank you, Mr. Chairman, for this opportunity to appear before the committee.

I did ask that this statement be incorporated.

Senator BYRD. Yes, you did, and it will be included.

Thank you, Mr. Hawes, I appreciate very much your presence.

Senator BYRD. Mr. R. M. Boehm of the Masonite Corp.

MASONITE CORP.

STATEMENT OF ROBERT M. BOEHM, DIRECTOR OF RESEARCH AND DEVELOPMENT

PREPARED STATEMENT

Senator BYRD. You have a prepared statement, I see. Would you like to have the statement placed in the record at this point, and then give us the highlights?

Mr. BOEHM. If you please, Mr. Chairman.

(The statement referred to follows:)

This statement is in support of the forestry research appropriation for 1963 as outlined in the proposed budget submitted by the Honorable John Stennis, Senator from Mississippi, before the U.S. Senate on February 15, 1962. It is prepared and presented by Robert M. Boehm, director of research and development of Masonite Corp. for some 30 years and presently coordinator of affiliated plants in Australia, South Africa, Italy, Sweden, and Canada.

Masonite Corp. is the original and largest producer of hardboard products, derived from wood and used for a multitude of applications in both the industrial field and in the homebuilding field. The original and largest manufacturing plant is in Laurel, Miss., and it has constructed and operates a plant at Ukiah, Calif. It also owns and operates a wall tile manufacturing plant at Dover, Ohio, a resin producing plant at Gulfport, Miss., and fabricating plants in New Jersey, North Carolina, Illinois, and California. Its sales offices are in Chicago with central research laboratories at St. Charles, Ill. Gross sales in the United States are of the order of $72 million annually.

I appreciate the opportunity of appearing in support of the proposed amendment to the forestry research budget and particularly that of the Forest Products Laboratory at Madison, Wis., since the Laboratory has played an important part in the inception of the hardboard industry and in its continuing growth. Personally, I have spent more than 40 years in the field of pulp and paper, paperboard and wood fiber products. In this period I have seen the wood utilization field emerge from a relatively few, exploratory operations to its present magnitude. We feel that we are entering into an area of greatly accelerated growth and in this the Forest Products Laboratory has played and will play an increasingly important part.

Since Masonite Corp. is in many respects typical of the application of research to the utilization of forest products, I feel justified in describing the operation briefly. Wood, not suitable for lumber, is brought into the plant and reduced to chips. Both softwoods and hardwoods are used, depending on availability and the characteristics desired in the final product. These chips are reduced to fiber by explosion at steam pressures of up to 1,200 pounds per square inch. The fiber is refined, washed, and formed continuously into sheets of up to 3 by 18 feet in size. These wet sheets are then placed in multiple opening, steam heated hydraulic presses, where high temperatures and pressures are exerted until the fibers are bonded together primarily by the lignins, which

KANSAS STATE UNIVERSITY LIBRARY
MAY 16 1962
MANHATTAN, KAN.

bound the fibers together in the original tree. I have four samples to illustrate: Sample "A" is a piece of standard hardboard, smooth on one side and with a screen impression on the other. Sample "B" is a piece of standard Duolux, smooth on both sides. Sample "C" is a piece of Royalcote, used in home construction. Sample "D" is a piece of Benelex, a semiplastic product of great density, used in the aircraft and electrical industries. All of these are wood, with no added resin or binder. Please bear in mind that the raw material for these products is wood, too small or irregular for conversion to lumber.

When William H. Mason made this invention back in 1925, which led to the establishment of the hardboard industry, for which there are now some 15 plants in the United States and over 80 in the world, he turned to Howard Weiss, then Director of the Forest Products Laboratory, to conduct the initial technical, engineering, and marketing studies. Since then, we have called on them many times for advice and assistance and to make experimental trials on equipment not otherwise available to us. We went to them for initial experimentation on making paper from this exploded fiber, leading to this plastic material, on corrugating, on gluing, on the chemical utilization of waste products, etc. When the American Hardboard Association required the evaluation of test methods to serve as the basis for industry specifications, it was to the Forest Products Laboratory that we turned. At the present time, the association has entered into a cooperative project with the Laboratory to secure engineering data on the structural properties of hardboard. This is a continuing consultation in which the Forest Products Laboratory has always been most cooperative. Technical aid to the industry not only helps the growth of a material currently and potentially important to the Nation's economy, but has a profound effect on the improvement of our forest resources.

The establishment and continued research in an industry of this type is of great value to the national defense. In World War II at the request of the armed services, we developed millions of square feet of special products for quonset huts, shapes for fluorescent lighting reflectors, die stock to make dies for the manufacture of aircraft, lofting board for ship construction and HD128 for the manufacture of the atom bomb.

There are few large industries in the United States made up of as many small producers as the wood-using industry. These operations, many of them located in distressed areas, are very important to each local economy as well as to the total economy and particularly to the current and future home building activity. These small businessmen, using and working with wood, need a growing technical support, such as can be provided by the Forest Products Laboratory, to maintain and improve their position. We strongly recommend that you keep forest products research growing by permitting the Forest Products Laboratory program and facilities to grow with the needs of the times. We hope that this committee will take favorable action on the proposed budget submitted by Senator Stennis. We believe the items covering expanded forest research facilities are vital to the wood industry.

General Statement

Mr. Boehm. Thank you Mr. Chairman. I would just like to give you some of the highlights.

I appreciate the opportunity of appearing before the committee in support of the proposed budget advocated by Senator Stennis.

I have been director of research and development of Masonite Corp. for about 30 years, and am presently coordinator of affiliated plants in Australia, South Africa, Italy, Sweden, and Canada.

I would like to take a slightly different approach on this, judging the future by the past.

MASONITE

Masonite was invented about 35 years ago, and we first turned to Howard Weis, who was then director of the Forest Products Laboratory, for technical and engineering surveys, which he reported favorable, and since then we have gone to the Forest Products Laboratory

repeatedly for assistance, for the utilization of equipment not otherwise available.

We used their paper machines, their chemical byproduct utilization, corrugating machines, gluing studies, and painting studies, and the like.

We have a large number of cooperative projects at the Forest Products Laboratory.

When the Hardboard Association wanted to perform test methods for Government specifications, we turned to the Forest Products Laboratory for their assistance. We have just placed a $75,000 cooperative project on engineering data.

In other words, without the cooperation of the Forest Products Laboratory, it is very questionable whether we could have grown from nothing to our present size in the last 35 years.

Masonite utilizes wood which is unsuitable for lumber either because it is too small or too imperfect. We use both softwoods and hardwoods.

PROMOTIONS OF GOOD FORESTRY PRACTICES

We own some 400,000 acres of our own. We purchased something like a half million cords of wood a year from farmers and small landowners. We give away something like a million and a half seedlings a year to promote good forestry practices.

We use the wood that makes the land better for the production of timber crops by thinning and good forestry practice.

We take this small wood, reduce it to chips, explode it under high pressure steam, fiber and compress it into board products, thereby releasing some of this land for good forestry practices.

I referred in my statement to four exhibits which I would like to submit, showing the range of product, approximately. Exhibit A is standard pressed wood.

Senator BYRD. Do you want to leave these for the committee files, Mr. Boehm?

Mr. BOEHM. Yes; if you please.

Senator BYRD. All right.

OTHER WOOD PRODUCTS

Mr. BOEHM. That is the original product. All of these samples are all wood, all binders.

Exhibit B is Duolux, which is smooth on both surfaces.

Exhibit C is Royalcote, which is used in interior paneling. You may have seen that on the "Jack Paar Show" recently; and exhibit D is Benelex, which is used in electrical and other industries.

All of those are nothing but wood. It pays us to develop a strong forestry industrial setup.

I would like to mention that in the last war they came to the Hardboard Association for materials for the national defense, as the result of which we furnished the material for quonset huts, lighting reflectors, dies for metal forming, shipbuilding, aircraft, lofting board, and a peculiar board for the atomic bomb, which is still being made, and hundreds of millions of feet of these things are made and sold every year.

I believe that covers the high points, and I appreciate very much the opportunity of appearing.

Senator BYRD. Thank you, Mr. Boehm, and we are including your prepared statement in the record. We thank you for your appearance today before the committee.

Senator BYRD. The next witness will be Mr. Robert N. Hawes of the Douglas Fir Plywood Association.

Mr. Hawes?

DOUGLAS FIR PLYWOOD ASSOCIATION

STATEMENT OF ROBERT N. HAWES, ATTORNEY

PREPARED STATEMENT

Mr. HAWES. Mr. Chairman, I have a written statement and in the interest of time I will summarize it. It is not too long, but I think I can make my point without going into too much detail.

Senator BYRD. All right. We will include it in the record and you may proceed as you wish, Mr. Hawes.

Mr. HAWES. Thank you.

(The statement referred to follows:)

Mr. Chairman, members of the committee, my name is Robert N. Hawes. I am an attorney here in Washington and represent the Douglas Fir Plywood Association. I am appearing here on behalf of the 154 member plants of the Douglas Fir Plywood Association, producing softwood plywood valued at $750 million, in support of the request for a construction and modernization program for the Forest Products Laboratory.

The Douglas Fir Plywood Association operates quality control and research programs on behalf of its member companies. It has, for many years, been closely allied with the Forest Products Laboratory in research relating to conservation and utilization of our timber resources and in programs for maintaining and improving the quality standards for the plywood produced by the industry. Specific research programs such as the White Speck timber utilization have been successfully conducted in conjunction with the Forest Products Laboratory. This program resulted in the utilization of large stands of Government-owned timber in Oregon which, before the program, had not been used and was sold as cull logs by the Forest Service. This timber is now valued at millions of dollars.

It is my understanding that the U.S. Government owns 187 million acres of timber. Substantial quantities are sold each year, bringing revenues which should be available to support projects such as the Forest Products Laboratory, which contributes so much to the conservation and utilization of our timber. There is no subsidy on timber or wood products. There are subsidies on agricultural products and many other programs which are considered important to the United States. We do not advocate subsidies, but in our opinion the conservation of our timber resources, which is one of the few of our restorable natural resources, should be treated with equal importance and funds to assure a constructive and valuable program must be provided.

The Forest Products Laboratory acts as technical advisor and researcher for the entire wood products industry. There is no one segment of this industry which is large enough to undertake all the types of research required. As the United States is the principal timber owner, the research should be conducted by the United States, with the results made available to the industry so that all will participate in greater utilization of our timber resources.

Senator Stennis has recommended a construction and modernization program for the Forest Products Laboratory which would permit new facilities and modernization of the present facilities.

If the Forest Products Laboratory is to continue to make its contribution to the conservation and utilization of the timber resources, it must have adequate and up-to-date facilities to undertake overall research in conservation, utilization, and products.

The suggested program requiring $10 million is not large when we consider the many hundreds of millions which are being asked by other agencies. However, the program is to be spread over 3 years with only $4,550,000 required in the present budget.

Our members are not advocates of excessive Government spending and we have objected in many instances to extravagance which we believe completely unwarranted. However, when the utilization and conservation of such a valuable resource as our timber may be at stake we feel that this type of program is necessary to our national interests, and failure to support such a program may endanger our future in the industry.

We would like to respectfully request that your committee give favorable consideration to the Forest Products Laboratory request for construction and expansion by allowing it $4,550,000 for construction in the 1963 budget.

Thank you for allowing me to appear on behalf of the Douglas Fir Plywood Association.

GENERAL STATEMENT

Mr. HAWES. I am an attorney in Washington, the attorney in Washington, for the Douglas Fir Plywood Association which is a trade association representing 154 member plants making softwood plywood, approximately 8 billion square feet last year, valued at some $750 million.

DOUGLAS FIR PLYWOOD ASSOCIATION

The Douglas Fir Plywood Association has cooperated with the Forest Products Laboratory on many technical projects relating to quality control, utilization of lumber, and other matters under our contracts which are made between the association and the Forest Products Laboratory.

We have been very closely associated with the laboratories.

We recognize their needs. We feel that this proposed construction program is not an expenditure of funds which will not be returned but an investment in forest research, and in view of the fact that the United States is the largest single timber owner, we feel that this appropriation should be made, and through the joint cooperation of our efforts and those others in the industry, it will be, the return will be, much greater than the amount expended.

I think that about covers our position, Mr. Chairman, and I thank you very much for letting us appear and testify.

Senator BYRD. Thank you, Mr. Hawes. We appreciate your appearance.

Mr. Clark E. McDonald, managing director of the Hardwood Plywood Institute.

HARDWOOD PLYWOOD INSTITUTE

STATEMENT OF CLARK E. McDONALD, MANAGING DIRECTOR

GENERAL STATEMENT

Mr. McDONALD. Mr. Chairman, members of the committee, my name is Clark E. McDonald. I am the managing director of the Hardwood Plywood Institute, an association of 55 manufacturers of hardwood plywood. I am appearing on behalf of these manufacturers in support of an appropriation for the Forest Products Laboratory construction and modernization program.

CONCERN OVER LABORATORY PROGRAM

As manufacturers of hardwood plywood using large quantities of American hardwood logs each year, we are vitally concerned with the advancement of the Forest Products Laboratory's program for increasing and improving our stands of hardwoods by the elimination of diseases and by planned plantings. The FPL research and utilization programs for wood and wood products require modern facilities and up-to-date equipment if the best results are to be obtained.

Our association has worked closely with FPL in developing standards for hardwood plywood and hardwood block flooring. Our industry, consisting of many small companies, is not financially able to provide the research facilities which are presently furnished by FPL. Therefore, our industry's welfare is tied closely to the efficiency and availability of the FPL research facilities.

CONSTRUCTION AND MODERNIZATION PROGRAM

A construction and modernization program has been proposed for the FPL. The program will eventually cost $10 million, of which $4,500,000 is requested for this year's budget. This program is not limited to the facilities of FPL at Madison, Wis., but will include vital expansion in the field stations. We believe that expansion and modernization at Madison has been too long delayed. This work is essential, if our country is to maintain the maximum utilization of our forest resources. We have an interest, also, in the proposal to construct at Iowa University, Ames, Iowa, a laboratory, greenhouses, and offices to study "How, Where and When to Plant Hardwood Seedlings." This program should lend a tremendous impetus to reforestation of our hardwood timberlands and will be beneficial to farmers, the wood products industry and our national economy.

The United States owns approximately 190 million acres of timberlands, softwoods, and hardwoods. The FLP contribution to the maintenance and utilization of our timber resources has helped to eliminate disease and made more and better timber available to our country. The essential work of FPL should not be allowed to be curbed or handicapped by lack of facilities to do what is required in these programs. The amount required to provide for this much needed program is insignificant in comparison to the hundreds of millions which are spent each year for agricultural and export subsidy programs. We believe that if funds are not otherwise available, the amount required could be diverted from some of the other programs, which in our opinion will provide a lesser return to our economic welfare.

We appreciate the opportunity of being heard on this matter. It is our hope that your committee will look with favor on the FPL program.

Senator BYRD. Thank you, Mr. McDonald. A very good statement.

Mr. MCDONALD. Thank you, sir.

Senator BYRD. Mr. Richmond Gray, president, National Particleboard Association.

Mr. Gray, we welcome you to our committee today.

Mr. GRAY. Thank you, Mr. Chairman.

Senator BYRD. We are sorry to have kept you waiting.

NATIONAL PARTICLEBOARD ASSOCIATION

STATEMENT OF RICHMOND GRAY, PRESIDENT

PREPARED STATEMENT

Mr. GRAY. Mr. Chairman, I have a prepared statement which I would very much like to have entered in the record.

Senator BYRD. Your statement will be included in the record.

(The statement referred to follows:)

Mr. Chairman, members of the committee, my name is Richmond Gray. I am vice president of the Gray Products Co., a producer of wood particleboard located at Waverly, Va., I am also president of the National Particleboard Association, which headquarters here in Washington, D.C. The National Particleboard Association is comprised of 16 member companies having particleboard producing plants located throughout the country. Our companies produce more than 60 percent of the annual particleboard production in the United States.

We are a new industry and a new trade association. Particleboard has been produced for market in the United States only in the last decade. The national association was formed and incorporated early in 1960. The industry's products find their way into a variety of applications in the homebuilding and light construction industries and in the furniture industry. In the homebuilding and light construction field it is used as floor underlayment, in doors, as sheathing, and some finds its way into exterior applications. It is used as corestock in wood furniture, in kitchen cabinet and dinette manufacture, in paneling and doors and in a number of other end uses. The manufacture of particleboard represents an important step in the fuller utilization of the products of the forests.

As a relatively new industry we have our work cut out for us in research; in setting of standards; and in gaining the recognition which will give us public acceptance of our products. We have looked for guidance, as have many other forest products industries before us, from the Forest Products Laboratory of the United States Forest Service. In 1960 this association and the Forest Products Laboratory at Madison, Wis., jointly sponsored a seminar to evaluate industry research results and to discuss current problems. The seminar was most productive. In 1961 a meeting was held at the Forest Products Laboratory between ourselves and representatives of the resilient floor covering associations to discuss further development of the use of particleboard in conjunction with their products. Again, all profited by the advice and assistance of FPL personnel. We maintain close contact with the Laboratory on technical matters.

I do wish to make clear that our industry does not intend to rely solely on the Forest Products Laboratory. We are a new industry and we are research minded. A number of our members have substantial laboratory facilities and they conduct extensive research programs. Many of our other companies conduct research through private research organizations. But, nevertheless, only year before last the Forest Products Laboratory celebrated its golden anniversary and it must be recognized, that over the years, they have developed a body of basic research which is the foundation of much of the wood products industry's present development. We believe that the good work done in the past by the Forest Products Laboratory must be continued. Progress is a dynamic not a static thing. As it has done in the past this industry expects to continue to rely upon the counsel of the Forest Products Laboratory. In fact, we feel that much of our industry's future progress depends upon the continued work by the Laboratory.

It is for these reasons that we appear before you today. It is our understanding that the FPL is seeking an appropriation for construction and expansion requiring $10 million to be expended over a 3-year period. We submit that this is not an unusually large sum in consideration of the much greater sums being requested by other Federal agencies for work no more important than that of the Laboratory. It is our understanding that the sum requested for the forthcoming fiscal year is $4,550,000. In the interest of fuller utilization and conservation of the Nation's timber, one of its most valuable natural resources, we respectfully request that your committee increase the Forest

Products Laboratory budget by $4,550,000 to permit the establishment of the construction program which is needed to assure the effective continuation of their work.

Mr. Chairman, on behalf of our industry and this association, I thank you for the opportunity to make this appearance.

GENERAL STATEMENT

Mr. GRAY. With your permission, Mr. Chairman, inasmuch as my statement is quite brief, I would like to review the basic points.

Senator BYRD. All right, proceed.

Mr. GRAY. My name is Richmond Gray. I am vice president of the Gray Products Co., a producer of particleboard in Waverly, Va. I am also president of the National Particleboard Association which has its headquarters here in Washington.

Our national association is composed of 16 member companies which have their plants scattered pretty generally across the country and their combined production represents about 60 percent of the annual particleboard production in this country.

NEW INDUSTRY

We are a new industry and a new trade association. Particleboard has been produced for the market here in the United States chiefly over the last 10 years, with the most significant advance in production and sales during the past 5 years.

Our association was formed in the early part of 1960. Our products, particleboard products, generally find their way into the building industry, residential building, light construction, and also into the furniture industry.

USE OF NEW WOOD PRODUCT

In the building and light construction industry the product is used as floor underlayment. It is used in doors, in paneling, and there are some early beginnings of its use as an exterior product. As a core stock for furniture it goes into all types of veneered furniture. It is also used in interior panels as a core stock. They put the veneers over the board. It is used in kitchen cabinets. It constitutes a core or underlayment for plastic tops which are finding increased use in furniture. The dinette industry is a user of substantial amounts of plastic and core material, and in recent years they use a lot of particleboard as a core material.

The manufacture of particleboard I think we can say is an important step in the greater utilization, fuller utilization of products of our forests. It may interest your committee to know that some of our products are made from waste residues and they make products that have received wide acceptance, and wood residues that we use formerly had no value except as a boiler fuel. Now they are being widely used in the production of this board and generally we are using more of the tree. We are making a real contribution in the utilization of more of the tree.

As a relatively new industry we have had our work cut out for us insofar as research is concerned, setting up of standards and building acceptance for our products, and in this connection we have looked for guidance as have other forest products industries before us from the Forest Products Laboratory of the U.S. Forest Service. We have

met with the staff of the Laboratory on several occasions. Back in 1960 our association and the Forest Products Laboratory jointly sponsored a seminar for the evaluation of research that had been completed in our industry, and to discuss further problems and developments.

WORK WITH FOREST PRODUCTS LABORATORY

In 1961 we met at the Forest Products Laboratory together with the resilient floor covering manufacturers, two of their associations, for the purpose of discussing mutual problems aimed at wider use of particleboard in connection with their products.

I think there were tremendous gains made as a result of these meetings, and we maintained close contact with the Laboratory on all technical matters.

I think it would be well to make it clear that we don't fall back entirely on the Forest Products Laboratory as far as our research is concerned. We are a new industry and we are research minded, and a number of our members have very substantial laboratories. Others utilize independent research organizations.

Additionally research is being conducted for our benefit by some of our suppliers, particularly the larger chemical companies who supply us with resins, and they are constantly working on new developments, particularly in the resin field. But despite this, only the year before last, the Forest Products Laboratory celebrated their 50th anniversary and it is only fair to recognize that over this long span of years they have developed a body of basic research which is really the foundation of much of what the wood products industry has developed. And we believe that the good work done in the past should be continued in the future.

As we have done in the past, this industry expects to continue to utilize the counsel of Forest Products Laboratory. In fact, we feel that much of our industry's future progress is tied hand in hand with the cooperation and counsel that the Laboratory can supply us.

I think also it is worth of mention that we do a very careful job in our industry, I feel, in the development of our new products in being sure that they are ready for the market before we actively market them. But I think it is a safeguard for the public interest that we have such an institution as the Forest Products Laboratory that we can approach on much-needed technical advice.

SUPPORT FOR REQUESTS OF LABORATORY

It is for some of these reasons, Mr. Chairman, that we appear before you today. It is our understanding that the Laboratory is seeking an appropriation for construction and expansion of $10 million to be expended over a 3-year period. This is a lot of money but we don't feel it is excessive in relation to the funds requested by other Federal agencies who in our opinion are performing no greater service than the Forest Products Laboratory. And it is our further understanding that the amount requested for this year is $4,550,000, an increase over their formal operating budget, and in the interest of future utilization and conservation of the Nation's timber, one of the country's most valuable natural resources, we respectfully request that your committee increase the Forest Products Laboratory budget

by the above-mentioned $4,550,000 to permit the establishment of the construction program which is needed to assure the effective continuation of their work.

Mr. Chairman, that concludes my testimony.

Senator BYRD. Thank you, Mr. Gray. We appreciate your kindness and your interest in appearing before our committee.

Mr. GRAY. Thank you very much for the privilege.

Senator BYRD. Our next witness is Mr. Frank J. Hanrahan, executive vice president of the American Institute of Timber Construction.

Mr. Hanrahan, we welcome you before the committee. We are sorry that you had to wait so long to appear, but we are delighted that you could be with us.

AMERICAN INSTITUTE OF TIMBER CONSTRUCTION

STATEMENT OF FRANK J. HANRAHAN, EXECUTIVE VICE PRESIDENT

PREPARED STATEMENT

Mr. HANRAHAN. Mr. Chairman, I appreciate the opportunity to appear on behalf of the Forest Products Laboratory, and I think it was well worth the wait in order to express opinions which are well merited by the Laboratory.

I have a statement, which I have prepared, and also a resolution, which our board of directors directed to Ed Locke, both of which I would like to have placed in the record.

Senator BYRD. All right. They will be placed in the record.

(The statement referred to follows:)

Senator Hayden and gentlemen, I appreciate the opportunity to appear before you on behalf of expansion of appropriations for the Forest Products Laboratory at Madison, Wis.

My name is Frank J. Hanrahan. I am executive vice president of the American Institute of Timber Construction, which has its national headquarters in Washington, D.C.

The American Institute of Timber Construction is a nonprofit technical industrial association of manufacturers of structural glued laminated timber and of subcontractors who design, shop fabricate, and assemble load-carrying sawn and glued laminated timber members for all types of structural framing for buildings, bridges, and other structures.

The 24 active members of the institute employ thousands of people, operate in all 59 States, and represent between 85 and 90 percent of the industry, doing a business in the order of $100 million per year. The 31 associate members are composed of those having an interest in the industry, such as the United Brotherhood of Carpenters & Joiners of America.

Last year I had the privilege of testyfying before this committee urging an increased appropriation for the U.S. Forest Products Laboratory, Madison, Wis., for the purpose of additional research and land acquisition and preconstruction planning for much-needed additional facilities. At that time I outlined in more detail the value of the research at the Forest Products Laboratory to our economy.

My purpose today is to urge you to take the next logical step—approval of an adequate appropriation for the construction of these facilities and additional research. Specifically, our industry endorses and encourages the additional appropriation proposed by the Honorable John Stennis, Senator from Mississippi, for forestry research, and in particular the $4 million item for construction of new facilities at the Forest Products Laboratory, Madison, Wis. Likewise, we endorse the Honorable William Proxmire's fine statement on the urgent need for additional structural and other research at the Forest Products Laboratory.

Our industry is a rapidly growing young one with a healthy capacity and prospects of expanding much faster than the rest of the economy. It is an industry founded on research, much of which was performed at the U.S. Forest Products Laboratory in Madison. Basic research must continue if the industry is to realize its potential for expansion and growth. The industry itself has spent, and will continue to spend, considerable sums on both product development and basic research. An increasing amount of these funds may be used for cooperative basic research projects with the U.S. Forest Products Laboratory provided suitable facilities are made available for doing the needed basic research.

The funds needed for this basic research are beyond the capability of individual companies, and our industry as a whole, to provide. The industry needs assistance. In the United States there is no forest products laboratory with adequate physical facilities to perform some of the research needed.

Our laminating and fabricating industry is but a small segment of the whole lumber and wood utilization industry, which is the fifth largest employer in the Nation and adds over $10 billion annually to the gross national product. The Forest Products Laboratory's contribution to the health and growth of forest products industry at large affects, in a very direct way, the future job security and welfare of one of the largest segments of our population. Provision for increased research facilities and more research at the Forest Products Laboratory, Madison, Wis., will greatly aid the economy of our country at large. We need to take full advantage of every means to strengthen our economy in light of world conditions.

The board of directors of the American Institute of Timber Construction passed the attached resolution directed to Dr. Ed Locke, director of the Forest Products Laboratory. It explains in further detail some of our industry's research problems.

We respectfully request that this resolution and my statement be printed in the record.

Mr. Chairman, thank you and your subcommittee for this opportunity to appear in behalf of that very worthy organization, the U.S. Forest Products Laboratory at Madison, Wis.

AMERICAN INSTITUTE OF TIMBER CONSTRUCTION,
Washington, D.C., March 5, 1962.

Subject: AITC resolution on research at the U.S. Forest Products Laboratory.

Dr. ED LOCKE,
Director, Forest Products Laboratory,
Madison, Wis.

DEAR DR. LOCKE: The AITC board of directors commends the Forest Products Laboratory for the high quality of its research, and its staff for the technical contributions made and the cooperation provided in connection with basic technical data needed for the advancement of the timber laminating industry.

This industry, which is based primarily on the technical data developed by the Forest Products Laboratory, is growing rapidly. It played a very import and part in World War II. The industry has paid sufficient taxes to repay research expenditures many times. In addition, it has great economic value in terms of jobs and products.

The growth has been such that structures are being built which are much larger than could be anticipated when available basic technical data was developed. Consequently, new problems have arisen which give us concern and inhibit further development of the industry.

From previous basic research, we had assumed that tension values were much higher than the compression values, and designed structural members on this basis. Now we find that this may not be true in large members. Also, we are finding that local grain deviations in the lumber and other characteristics, which we have regarded as insignificant in the past, should be further explored. We have been extrapolating a very limited amount of basic data beyond normal engineering assumptions. Consequently, there is currently a need for more basic data pertaining to the strength of structural glued laminated timber made of commercial grades of lumber.

With the aforementioned in mind, we request that you give the highest priority to research on the program which you have outlined as a result of recommendations of the AITC research committee and item No. 5 of the NLMA special com-

mittee on technical studies. This research is urgently needed by our industry for its further sound development.

Our rapidly growing industry is based on the use of a natural, reproducible resource; namely, lumber and forests. Development of basic data leading to proper and efficient use of wood in structural glued laminated timber is a conservation measure well within the proper scope of activity of the Forest Products Laboratory.

FRANK J. HANRAHAN,
Secretary and Executive Vice President.

GENERAL STATEMENT

Mr. HANRAHAN. I will abstract a little bit from my statement if I may, Mr. Chairman.

Senator BYRD. Please proceed.

Mr. HANRAHAN. My name is Frank J. Hanrahan, executive vice president of the American Institute of Timber Construction. The AITC is a nonprofit technical industrial association of manufacturers of structural glued laminated timber and of subcontractors who design, fabricate, and assemble load carrying sawn and glued laminated timber members for all types of structural framing for buildings, bridges, and other structures.

SCOPE OF OPERATIONS

The members of our association operate in all 50 States. Our institute represents 85 to 90 percent of the industry's business, and it does in the order of a million dollars of business a year. The associate members are composed of those having an interest in the industry such as the United Brotherhood of Carpenters & Joiners of America.

Last year I had the privilege of testifying before this committee urging an increased appropriation for the U.S. Forest Products Laboratory, for the purpose of additional research and land acquisition and preconstruction planning for much needed additional facilities. At that time I outlined in more detail the value of the research at the Forest Products Laboratory to our economy.

My purpose today is to urge you to take the next logical step—approval of an adequate appropriation for the construction of these facilities and additional research. Specifically, our industry endorses and encourages the additional appropriation proposed by Senator Stennis, for the forestry research and in particular the $4 million item for construction of new facilities at the Forest Products Laboratory. Likewise, we endorse the Honorable William Proxmire's fine statement on the urgent need for additional structural and other research at the Forest Products Laboratory.

Our industry is a rapidly growing young one with a healthy capacity and prospects of expanding much faster than the rest of the economy. It is an industry founded on research, much of which was performed at the U.S. Forest Products Laboratory in Madison. There must be more basic research if the industry is to realize its potential for expansion and growth. The industry itself has spent and will continue to spend considerable sums on both product development and basic research. An increasing amount of these funds may be used for cooperative basic research projects with the U.S. Forest Products Laboratory provided suitable facilities are made available for doing the needed basic research.

FUNDS BASIC RESEARCH

The funds needed for this basic research are beyond the capability of individual companies, and our industry as a whole, to provide. The industry needs assistance. Today in the United States there is no Forest Products Laboratory with adequate physical facilities to perform some of the research needed. The funds needed for basic research we need to test very large structural members which the facilities are currently not capable of performing tests on. The new facilities contemplate such facilities.

LAMINATING AND FABRICATING INDUSTRY

Our laminating and fabricating industry is but a small segment of the whole lumber and wood utilization industry, which is the fourth largest employer in the Nation and adds over $10 billion annually to the gross national product. The Forest Product Laboratory's contribution to the health and growth of forest products industry at large affects, in a very direct way, the future job security and welfare of one of the largest segments of our population. Provision for increased research facilities and more research at the Forest Products Laboratory will greatly aid the economy of our country at large. We need to take full advantage of every means to strengthen our economy in light of world conditions.

As I mentioned before, we have a resolution presented to Mr. Locke which explains in more detail some of the requirements of our industry, and we thank you for the courtesy of appearing before you.

Senator BYRD. Thank you very much, Mr. Hanrahan. I appreciate very much your courtesy in coming.

PREPARED STATEMENTS

Senator BYRD. At this point in the record I shall place statements by Mr. H. G. Arnold, president of the Bauer Manufacturing Co.; Mr. R. E. Broderick, secretary-treasurer of the Northeastern Lumber Manufacturers Association, Inc., and Mr. Ray Platow, director of research, U.S. Plywood Corp.

(The statements referred to follow:)

My name is Harold G. Arnold. I am president of the Bauer Manufacturing Co., of Wooster, Ohio, whose product is wood ladders.

My purpose in requesting an opportunity to appear before you is to urge favorable consideration of the appropriation for the Forest Products Laboratory of the U.S. Forest Service at Madison, Wis. In doing so, I represent not only my own company, but also the American Ladder Institute, a trade association comprised of some 35 small manufacturers. I am sure, too, that what I have to say would have the concurrence of those members of the ladder industry who are not members of our institute.

Let me indicate just briefly why I—or we—have this interest in the Forest Products Laboratory.

A ladder is a product to which the user entrusts his safety and perhaps his life. All ladder manufacturers, like myself, realize this and for the most part exert every effort to make a safe product. In doing so, we find innumerable problems. Selection of the proper wood species offering adequate strength and available in the quantity required is one of the most important. Following this, we must decide on a desirable level of dryness and must insure that our suppliers use a seasoning procedure that will produce this dryness without harmful effects on strength. Upon receiving this material at our plants, we must carefully choose and select, either eliminating or carefully limiting the strength-

reducing characteristics. For maximum safety of life and limb for the user, we must exercise extreme care in this last step of selection involving the use of special techniques and frequently the exercise of judgment as to the rejection or admission of a piece of lumber containing a certain characteristic.

All of the steps mentioned must be based on thorough knowledge. My own company, like those common to our industry, is not financially able to have a research organization that can give us the necessary information, vital as it is. We must rely on the services of Forest Products Laboratory at Madison. Their research results have been invaluable to my company and the many others to whom I have referred.

I would like to say, incidentally, that my contacts with the Laboratory have been most productive. On numerous occasions I have asked, by telephone, by letter, or by personal visit, for assistance with problems. I can say that, without exception, the Laboratory personnel has gone to considerable effort to insure that we received complete and direct answers to all questions.

Ladder manufacture, as you can understand, is small business, with the total employment of each factory averaging less than 50 people. The total annual volume of our industry would represent no more than $50 million. This is, perhaps, a drop in the bucket in light of our total national economy. The welfare of our industry is, however, of vital importance not only to us as principals but in many cases is important to our communities and States as well.

In this connection, I might point out that metal and plastic ladders are making serious inroads on our business. I personally feel that dark days are ahead for the wood ladder industry. To combat this, each of us needs to take a close look at our plant efficiency and at ways to improve our product. In short, technological improvements to increase efficiency, reduce costs, and improve our product. But where are we to get the technical information we need? As I mentioned earlier, we as individuals cannot produce it, nor can we even as a group. The entire wood ladder industry, even if we were to include those not affiliated with the American Ladder Institute, is far too small to develop on its own the assistance we must have in order to stay in business. Wood ladders will continue to be of importance safetywise to the American public. The inherent objection to metal for ladders, which is conductivity, and the newness of plastics for use in ladders, necessitates years of development before such materials will be satisfactory. This continues to make wood a most necessary material for ladders, not only to industrial users, but also to consumers who comprise a market for ladders for use around their homes, since wood ladders are less costly than those built of other materials. We as an industry must keep turning to Forest Products Labratory. Accordingly, we will need increasing, rather than decreasing, amounts of technical data from them.

Naturally, my own experience is limited to knowledge of the ladder industry, but certainly there are many small industrial firms whose products are made of wood and whose total volume of business is relatively modest by comparison to that of large industries, but whose interest in Forest Products Laboratory and the services it offers is of equal importance.

It is for these reasons that I urge support for the Laboratory's appropriation—not only that for their research program, but that for the expansion of their facilities. I recently had occasion to read, in the Congressional Record, Senator Stennis' speech on forestry research. I learned from this that the proposed first stage is to house new facilities for pulp and paper and chemical research. I was, at first, somewhat discouraged by this until I learned that removal of this work from the present building will permit immediate expansion of the research areas in which I am most interested. Therefore, I say "Let's get on with it."

It would have been much more desirable for the writer to appear personally to present this report and it is regretted that the time allotted for the invitation was not convenient. It is, therefore, requested that this report be accepted and made a part of the record.

STATEMENT OF NORTHEASTERN LUMBER MANUFACTURERS ASSOCIATION, INC.

My name is R. E. Broderick, secretary-treasurer of the Northeastern Lumber Manufacturers Association, 271 Madison Avenue, New York 16, N.Y.

I am appearing on behalf of some 4,000 lumber producers in the Northeastern United States. The association territory includes the following States: New York, Pennsylvania, Maine, New Hampshire, Vermont, and Massachusetts.

The production of lumber in the Northeast amounts to about 4 percent of the total U.S. production, volumewise. Its importance in the value of the products far exceeds the importance of the total volume. The lumber manufacturing industry is composed of a large number of small businesses; therefore, the overall effect on the economy of the Northeast is very important.

The individual companies comprising the northeastern lumber industry obviously cannot finance research projects, nor can the industry as a whole set up a laboratory. The northeastern lumber manufacturing industry is perhaps in better position than the industry as a whole, but it is not prosperous at the present time because of general overproduction and competition from within and wihout the industry. Furthermore, our industry benefits but very little from the present boom in the defense industries. Its future depends in large measure on its own initiative and the research and technical assistance of the Forest Products Laboratory.

Incidentally, many of the farmers in the Northeastern States depend on the lumber industry to buy the logs produced on their farm woodlots, the income from which, in many cases, represents their principal cash crop.

The Forest Products Laboratory at Madison, Wis., is recognized as the world authority in its field. The findings of that Laboratory in the past have been very beneficial to our industry, and the cooperation of the staff has enabled this industry to progress to the point where technical advances have made the difference between the existence or the abandonment of many small enterprises.

May we cite a few examples of the valuable work of the Forest Products Laboratory?

There was a very destructive hurricane in New England in 1938. The Forest Products Laboratory and some administrators from the U.S. Forest Service provided invaluable assistance which, along with the full cooperation of the lumber manufacturing industry, resulted in the orderly disposal of tremendous quantities of blown-down timber. Without the assistance of the Laboratory, the industry would have suffered untold financial losses as well as years of disruption.

The Laboratory has cooperated with our industry in the development of log-grading standards now in use, which have not only helped the industry log buyers but has also resulted in a very considerable increase in returns to the farmer producers.

Just recently, the Forest Products Laboratory made a series of studies on the improved utilization of low-grade lumber which has been a very difficult item and extremely bothersome to the industry, particularly during the past few years when the supply of all lumber exceeded the demand. As a result of these studies, and with the continuing help of the Laboratory technicians, the industry will be able to utilize the clear portions of every board by edge and end gluing, thus making a new useful and desirable end product.

The industry anticipates the continued cooperation of the Laboratory on many present and future projects. It is, therefore, the considered opinion of the northeastern lumber manufacturing industry that the Forest Products Laboratory should be provided with the funds for the extremely necessary expansion of its physical facilities. The request for funds is very modest in proportion to the benefits that can be definitely anticipated.

STATEMENT OF R. C. PLATOW, TECHNICAL DIRECTOR OF THE UNITED STATES PLYWOOD CORP.

Mr. Chairman, members of the committee, my name is R. C. Platow and I am technical director of the United States Plywood Corp. I am appearing before you because my work requires more frequent contact with the Forest Products Laboratory than any other of our officials. I am familiar with the research by the Forest Products Laboratory, having made frequent trips to its research facilities at Madison, Wis. I am thoroughly familiar with the facilities which are operated there.

Our company is appearing to support the recommendation made by Senator Stennis, of Mississippi, that the Forest Products Laboratory budget be increased

by $4,550,000 to permit the beginning of a construction program which is required to insure the continued effective operation of the Forest Products Laboratory.

Our company operates plywood plants in the States of Oregon, Washington, California, South Carolina, Wisconsin, and Idaho; particleboard plants in California and Virginia. The particleboard plant in Virginia was put in operation within the last year. There are lumber and logging operations in California, Oregon, and Washington. All our products are distributed by our 127 warehouses scattered throughout the United States. You can see that we are primarily a wood products manufacturer and sales company. We have a tremendous stake in the future of the wood products industry, including the technical developments and the conservation and use of our timber resources.

Our company has worked closely with the Forest Products Laboratory. FPL has assisted the plywood industry in the development of commercial standards and quality control programs which have provided high quality products and guaranteed the maximum utilization of our timber resources. FPL has also made many contributions in conservation through research and technical developments, including technical research on particleboard, a product we manufacture in two large plants.

Through our use of the Forest Products Laboratory, we have become aware of some of their needs which are a handicap to the greatest results. These include construction, modernization, and expansion of the facilities for research and development. It is our opinion that the allocation of funds to this construction program will, within a few years, result in developments which will contribute substantially to the best utilization of our timber resources and to the welfare of our country.

We could detail many programs where FPL has made a contribution to the economic welfare of our industry. One of the outstanding developments was the creation of standards for use of white speck timber, a large part of which is in our national forests in the State of Oregon. This program alone has assured the usability of billions of board feet of timber which otherwise would have been worthless and a menace to healthy timber growing nearby.

Particleboard, plywood, and hardboard are a few products in which the Forest Products Laboratory has contributed technical assistance in determining tests, data, quality controls, and use data which has enabled these products to be produced with more complete utilization of timber resources.

I will be glad to answer any questions which the members of the committee wish to direct to me. Our company is giving wholehearted support to the FPL budget and the construction program and we sincerely hope that these funds may be made available for this useful purpose. Let us assure you that we are as much against extravagant Government spending as your committee; however, Government timber sales bring millions each year, there is no subsidy on timber or wood products, and therefore, we feel that reasonable and necessary funds should be provided for the Forest Products Laboratory.

PREPARED STATEMENTS

Senator BYRD. The following communications urging expansion of the Forest Products Laboratory will be printed in the record:

Letter from Mr. Charles M. Gray, manager, Insulation Board Institute;

Statement by Mr. W. Spencer Fox, chairman of the Southern Pine Industry Committee;

Letter from Mr. Donald T. Jackson, vice president and technical director, Hammermill Paper Co.;

Letter from Mr. Donald Linville, executive secretary, American Hardboard Association;

Letter from Mr. Peter E. Terzick, general treasurer, United Brotherhood of Carpenters & Joiners of America;

Letter from Mr. Robert J. Seidl, general manager, research and chemicals, Simpson Timber Co.

(The communications referred to follow:)

INSULATION BOARD INSTITUTE,
Chicago, Ill., March 2, 1962.

Subject: Expansion of research facilities at Forest Products Laboratory, Madison, Wis.

Senator CARL HAYDEN,
Chairman of Subcommittee, Senate Appropriations Committee for Interior and Related Agencies, Senate Office Building, Washington, D.C.

DEAR SENATOR HAYDEN: The history and growth of the insulation board industry parallels that of the Forest Products Laboratory in Madison, Wis., and we feel that the cooperation which we have enjoyed from FPL has been an important factor in the development of our industry into one of the major American industries utilizing forest products.

The first insulation board was produced in 1914 as a means of utilizing a residue from pulp and paper manufacture and the industry has shown a consistent growth since that time nearly a half century ago.

Insulation board is now manufactured from both wood and cane fibers by felting the pulped fiber into thick stiff building panels which are used in construction where a combination of structural properties, thermal insulation, acoustical properties, and cost satisfy important needs. At present, over 3 billion square feet, on a one-half-inch thickness basis, of this material are produced and used in the United States each year. The insulation board industry is important to the integrated utilization of the production of the forests because it uses wood that is a residue of other forest products manufacture or species of lower utility than many other phases of forest products manufacture.

As mentioned, the history of the insulation board industry has been one of steady growth which has been predicated on the development of specific products to do certain jobs as components of buildings. For example, at present, over 45 percent of the houses sheathed in this country each year use structural insulation board sheathing. The Forest Products Laboratory in Madison, Wis., has served the 15 major manufacturers of insulation board of this association on many occasions in the past in proving a new product for a specific use. Many of these uses required complex technology and equipment not available at member company facilities. Future applications and products of our industry will need even more extensive facilities for adequate evaluation of the needs for prospective uses. We consider the Forest Products Laboratory's physical plant expansion, as proposed in the $10 million building program, as sound and necessary for its future ability to conduct urgently needed research on full-size or nearly full-size structural units, such as those produced by our industry, as well as other industries utilizing forest products for construction materials.

Structural insulation board was used to some extent in World War I and to a considerable extent in World War II in providing military housing which could be quickly and economically constructed. Insulation board's contribution both to our military needs and to the general economy of the country as a forest products industry which provides thousands of jobs and positions requiring many varied types of skills and abilities is well etablished. Therefore, as an industry, which we consider of major importance to the American economy, we wish to go on record as supporting and urging the approval of the necessary funds to expand the facilities for structural research at the Forest Products Laboratory in Madison, Wis., as proposed by Senator Stennis, of Mississippi, and outlined on page 2095 of the Congressional Record—Senate for February 15, 1962.

Respectfully submitted.

CHARLES M. GRAY, *Manager.*

STATEMENT BY THE SOUTHERN PINE INDUSTRY COMMITTEE

The Southern Pine Industry Committee is a voluntary organization representing manufacturers of southern pine and hardwood lumber in the 12 Southern States of Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Oklahoma, Tennessee, Texas, and Virginia.

This committee is authorized to speak for the more than 16,000 southern lumber manufacturing establishments in the 12 Southern States enumerated above, on matters affecting the welfare of the southern lumber-producing region.

In this capacity, the Southern Pine Industry Committee has always advocated a policy of wise government expenditures in areas where such spending is necessary to the growth and advancement of government facilities with a record of proven performance in the public interest.

Consistent with this policy, we respectfully request the approval by your committee of funds needed to assure the expansion of physical facilities of the U.S. Forest Products Laboratory at Madison, Wis. We deem this to be justified in order to bring the Laboratory's capabilities in the field of forest products research to a level of industry and government needs, and at the same time redound to the benefit of the general public.

As the members of your committee are well aware, the Government of the United States has a vital interest not only in the ownership of substantial commercial forest lands, but also in the development and improvement of finished products from the standpoint of efficient utilization and application.

The record of the Forest Products Laboratory at Madison has contributed magnificently to improved forest practices among all categories of forest land owners. In cooperation with private industry to encourage good forest management, the results are self-evident in the southern region today, with growth of southern pine in sawtimber sizes in excess of drain at a level that assures permanent stature for our timber-based economy, on which millions of citizens are dependent for their livelihood.

Basic research at the Laboratory during the half century of its existence has been equally constructive in developing new and improved uses and applications of lumber products. Knowledgeable studies on the seasoning of lumber, strength and nondestructive testing, gluing processes including lumber lamination, development of modern adhesives, etc., are but few of the significant developments that have meant much to the marketability of our great renewable timber resources.

Noteworthy as these achievements have been, we of the lumber industry in the South must look for broader opportunities to market the surplus of sawtimber now growing in our forests. The very nature of our industry, with its widely scattered, small units, makes it impossible for individual producers to engage in the type of research necessary to survival in the increasing competitive pressures of our space age economy.

We feel that the expanding supply of sawtimber in the national forests creates a problem between Government and industry of mutual concern in finding markets for our future supplies.

We regard a Forest Products Laboratory, with adequate and necessary facilities, as a key factor in working toward the development of needed studies, tests, and experimentation to assure a position of prominence for lumber and lumber products in the building and construction industry of this country.

This is of pronounced importance to the southern region where the potential supply of sawtimber is greater than in any other section. Proper utilization of the harvest, and the continuing development of valid outlets are of major concern because the future of millions of forest owners and workers in the forest industries of our region are dependent on the success of future research, such as the Forest Products Laboratory can perform.

It is obvious that more research will be needed in the future. Therefore, we urge your committee to consider the importance of the above-mentioned facts, and we hope that you will give favorable consideration to the allocation of appropriations for the expansion of the U.S. Forest Products Laboratory facilities at Madison, Wis.

HAMMERMILL PAPER CO.,
Erie, Pa., March 7, 1962.

HON. CARL HAYDEN,
Chairman, Senate Subcommittee, Department of the Interior and Related Agencies, Senate Office Building, Washington, D.C.

DEAR SENATOR HAYDEN: Previous commitments prevent a personal appearance before your subcommittee which is considering an appropriation for the construction of new facilities for the U.S. Forest Products Laboratory at Madison, Wis. However, I do want to record the support of the Hammermill Paper Co. for the building project at the Forest Products Laboratory and to urge favorable consideration by your subcommittee of the request for funds to start the project.

The Hammermill Paper Co. is one of the largest companies in the United States manufacturing fine papers—business, office, and printing papers. Paper manufacturing facilities are located in Pennsylvania, New York, Ohio, Massachusetts, Michigan, and Washington State with converting and merchandising facilities also located in a number of other States.

Hammermill, like almost all paper manufacturing companies, depends on having an adequate supply of high quality woodpulp made from available pulpwood at a competitive cost. The Forest Products Laboratory has made valuable contributions to the U.S. pulp and paper industry and we feel that the high position which our industry now occupies could not have been reached without the research and development work which has been carried out by Forest Products Laboratory in the past.

The development of the patented Hammermill Neutracel process for the manufacture of high quality pulp from hardwoods, formerly considered unsuited for the purpose, was based upon excellent fundamental research work extending over many years by the Madison Laboratory. It would not have been possible to perfect the method and design and install the commercial plant at Erie now making 250 tons of Neutracel pulp per day as quickly, and possibly not at all, without the help of the Forest Products Laboratory.

As the result of the Neutracel development Hammermill has been able to continue and expand its pulp manufacture in Erie and to create an important source of jobs and income for the farmers and small wood suppliers in the economically depressed areas of northern Pennsylvania and adjacent counties in New York. This means that over $2 million which formerly went to Canada for pulpwood purchases now is channeled into the economy of this region.

Other specific contributions could be cited as to the direct value to our industry of the research and technical contributions made by the Forest Products Laboratory but perhaps this example will suffice to illustrate the practical value of the work done at Madison.

I earnestly solicit your support of the request for funds to enable the Forest Products Laboratory to provide the facilities.

Very truly yours,

DONALD T. JACKSON.

AMERICAN HARDBOARD ASSOCIATION,
Chicago, Ill., March 7, 1962.

Hon. CARL HAYDEN,
Chairman, Appropriations Committee,
Senate Office Building, Washington, D.C.

DEAR SENATOR HAYDEN: It is my understanding that a request for appropriations for the continued operations of the Forest Service of the Department of Agriculture will come before your committee in the very near future. Included in these appropriations is a budget request of $4 million for additions to the Forest Products Laboratory at Madison, Wis.

The domestic hardboard industry urgently requests that your committee give favorable consideration to this budget request. Forest Products Laboratory and the officials connected with that organization have, over the years, performed an excellent service for the forest products industry of which the domestic hardboard industry is an important segment. Our industry has recently contracted with Forest Products Laboratory for a much-needed 4-year research program which, we believe, will not only be of benefit to our industry but that the information to be developed will be helpful to the public who are users of hardboard.

We have been intensely interested in reading the speech of Senator John C. Stennis, of Mississippi, covering the field of forestry research which he made before the Senate February 15, 1962.

Your consideration for this appropriation request and specifically the budget item for Forest Products Laboratory will be sincerely appreciated by the members of our industry.

Cordially yours,

DONALD LINVILLE, *Executive Secretary.*

UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA,
Washington, D.C., February 20, 1962.

Senator CARL HAYDEN,
Chairman, Senate Appropriations Committee,
Washington, D.C.

DEAR SENATOR HAYDEN: I am writing you because we are sincerely concerned over the lack of adequate appropriations for research in the fields of forest products, engineering, and protection and forest management.

As one of the few renewable resources, timber remains one of the most valuable assets. Its true value is almost beyond estimation. Even at our present state of knowledge regarding the inherent qualities of wood, our timber assets are almost beyond price. With adequate research, the value can be multiplied many times over. Because of its versatility, availability, and adaptability, wood can do a great deal to meet many needs growing out of our rapidly expanding population. Research, and research alone, can uncover the ways in which our forests can add more effectively to our health, happiness, and safety.

We are particularly anxious to have the research facilities at the Forest Products Laboratories in Madison expanded to the point where the Laboratory can delve into the problems holding back the full utilization of wood. Any funds invested in forest research will, of course, be a burden on the taxpayer as of today, but such funds turn out to be investments rather than tax drains.

I am heartily in accord with the proposal made by Senator Stennis that an additional $10 million be allocated to step up research in the field of forestry.

We honestly solicit your cooperation in backing this measure which has vast implications for all our people.

Respectfully yours,

PETER E. TERZICK, *General Treasurer.*

SIMPSON TIMBER CO.,
Seattle, Wash., March 9, 1962.

Senator CARL HAYDEN,
Senate Office Building, Washington, D.C.

DEAR SENATOR HAYDEN: This letter is to present my views regarding appropriations for the expansion and maintenance of research at the Forest Products Laboratory at Madison, Wis. In answer to my question, I learned that the House Appropriations Subcommittee on the Department of Interior and Related Agencies is scheduled to meet during the coming week to discuss appropriations for this institution. I had hoped to request permission to appear before your committee, but since I find that I am unable to be in Washington at that time I am submitting my remarks in this letter.

You are aware that the forest products industry presently has a very serious problem of markets for its products, which threatens the health of the industry and a broad area of employment. Because the industry, unlike its major competitors for the same markets, is composed of hundreds of small units, it has not been able to keep pace with the research and product development needs that will improve market acceptance on one hand, and better utilization of its raw material on the other. An added burden to the lumber industry in the West in induced by an inequity in shipping in relation to competitors from Canada. It is clear that the forest products industry must make a concerted effort to solve technological problems that are very difficult and of long standing. Many of these problems are very complicated and require a sustained study from many skilled scientists who are backed with ample equipment and facilities. Successful problem solution will come from integrated use of raw materials in a very diverse area of products. Individual concerns in the forest products industry are not able to sustain such effort, and they must continue to rely on the Forest Products Laboratory for basic information. I believe that the funds expended at the Forest Products Laboratory are a proper and necessary service for the Government, not only as it relates to public lands, but also as it applies to the total forest resource.

I am certain that past accomplishments of this Laboratory have been brought to the attention of your committee before, and I make no attempt to repeat them here. I have had years of personal experience in the application of these research results to industrial problems, and I am convinced that the research is profitable. Unfortunately, the Laboratory is not able to supply basic information fast enough at its present level of effort. For example, markets for some of the

highest value logs are being lost because there is not enough basic data to solve the problem of longer paint and finish performance for wood. As another example, markets are being lost because basic design and structural data is inadequate, leading to wastage of wood and thus less favorable economics. Research on pulping at Madison has repeatedly demonstrated a high return on the research investment.

The Laboratory is in need of further appropriations for the purpose of expanding its facilities. Although the present Laboratory was relatively spacious when it was built (as I recall was about 1928), the facilities have become overtaxed, and more space and equipment is needed to increase their total effort for the critical problems ahead.

Because research problems overlap so many scientific disciplines, it is, in my opinion, definitely more effective that the facilities and people be concentrated at a single location. This is also more economical. Research of this type knows no State boundaries; most results have a national application. For example, our Northwest area has made good use indeed of structural data on western species, pulping and bleaching technology of Douglas-fir, and use of local hardwoods in pulping. Data on our woods are really significant only as they relate, for example, to southern pine or Lake States hardwoods, as the competition is national.

I sincerely hope that your committee will support the Forest Products Laboratory in its plans to expand and strengthen its facilities, as this institution and its research results are very important to the forest products industry.

Very truly yours,

ROBERT J. SEIDL,
General Manager, Research and Chemicals.

STATEMENT BY SENATOR HOLLAND

Senator BYRD. At this point in the record, we will include a statement by Senator Holland, of Florida, concerning certain land acquisition for the Everglades National Park; an increase in the budget for shrimp research; and construction items for Forest Service laboratories at Olustee and Fort Myers, Fla.

(The statement referred to follows:)

Mr. Chairman, I appreciate this opportunity to testify in favor of several Interior Department appropriations for Florida.

An item which I consider of primary importance is $450,000 for acquiring additional land at Everglades National Park. This item was in the budget for fiscal years 1961 and 1962 and during the past 2 years this subcommittee has restored it and fought valiantly but in vain for it in conference. Again, I am advised that this amount is in the budget as part of an item of $3,702,000 for national park land acquisition throughout the Nation. I shall appreciate your subcommittee's holding firm on this appropriation and your again recommending it for inclusion in the Interior appropriations bill.

The merits of the appropriation can be best and most concisely stated for the record by quoting from the Interior appropriations report last year:

"The $450,000 budget request for acquiring an additional 30,000 acres of land in the Everglades National Park, Fla., has been restored. This would be the first Federal expenditure for land acquisition in the park, about 1,290,091 acres having been donated by the State, local agencies, and private donors, some of which was acquired by the $2 million cash grant made by the State of Florida. This acquisition would carry out the authorization in Public Law 85-482 (July 2, 1958), which fixed final, but greatly reduced, boundaries for the park and authorized up to $2 million to complete land acquisition."

Another item which would be of great assistance to the economy of the State which I represent, in part, is the addition of $325,000 over and above the $175,000 in the budget for shrimp research, making a total of $500,000 for this purpose. Representatives of shrimp fishermen tell me that the shrimp research which such an appropriation would make possible would be of great value to their industry, inasmuch as it would make their operation more efficient and profitable. Thus, it is reasonable to expect that there would be some recapture of this appropriation in additional tax revenue resulting from improved economic returns on the part of both individuals and corporations engaged in this type of activity.

I should also like to request funds for two Forest Service laboratories in Florida. One of these, the proposed $35,000 construction item for the laboratory at Olustee, Fla., is in the budget, and I trust the House will provide the budgeted funds. This laboratory is located in the center of some of the most productive forest lands in our country and its activities are beneficial not only to forestry in north Florida and south Georgia but also to forestry activities in other parts of our country.

The other item is $150,000 for a forest and range management laboratory at Fort Myers, Fla. This item is not in the budget but I understand that it is considered by Forest Service officials as one of the most promising projects which could be added to its budget and that it is a part of the forestry research program of that agency.

This facility would develop guides on how to best manage and improve pine flatwood ranges and produce timber from the same lands. These wiregrass ranges, as they are commonly called, involve game as well as livestock and timber. The new building will provide chemical laboratory and greenhouse facilities that are not now available but which are essential to round out field experiences. Benefits to game as well as to livestock and timber could be expected.

I am advised that research work planned for this facility is of importance to the whole gulf coast of the southeast. In Florida alone there are over 1.2 million head of beef cattle and some 17 million acres of range, largely pine cutover. Such a research facility will be helpful in getting such lands back into timber production and at the same time using the land for livestock and game.

Again, Mr. Chairman, this investment could be expected to produce additional tax revenue resulting from more efficient and effective utilization of natural resources.

Thank you, Mr. Chairman, for permitting me to express this plea for appropriations in the State which I represent, in part.

STATEMENT BY SENATOR MCCLELLAN

Senator BYRD. We will include in the record a statement by Senator McClellan, of Arkansas, regarding funds for Arkansas projects.

(The statement referred to follows:)

Mr. Chairman. I appreciate having this opportunity to bring to the subcommittee's attention a need for funds for several Arkansas projects that are administered by the Fish and Wildlife Service, Department of the Interior. First let me say that the President's budget for fiscal year 1963 included requests for many important projects in my State and for this I am gratified. There are others, however, not in the budget, or which have capabilities in excess of the budget estimates, that I believe deserve the subcommittee's consideration.

GREERS FERRY NATIONAL FISH HATCHERY

The first project I should like to discuss is Greers Ferry National Fish Hatchery near Heber Springs, Ark. This subcommittee added $170,000 to the fiscal year 1962 appropriation bill to initiate construction of this hatchery, for which I am most grateful. When completed it will produce trout for stocking reservoirs and cold tailwater streams resulting from Corps of Engineers construction activities in the Little Red River Basin and other areas of Arkansas and eastern Oklahoma.

The hatchery is located adjacent to the Greers Ferry Dam and Reservoir project on the Little Red River. This reservoir project is nearing completion, and the Fish and Wildlife Service estimates that it will require about 60,000 pounds of trout annually to stock the tailwater of this dam. In addition 90,000 pounds of trout annually will be required to stock existing and future cold water habitats in Arkansas and eastern Oklahoma. Thus the Greers Ferry National Fish Hatchery, when completed, will have an annual capacity to produce 150,000 pounds of fish annually.

The budget request for fiscal year 1963 for this project is $95,000. I am advised by the Fish and Wildlife Service, however, that an appropriation of the budget request will not be sufficient to construct a producing unit. I am further informed that an additional appropriation of $170,000 would enable the Fish and Wildlife Service to provide a unit capable of producing some fish. In view of the increased demands on the streams to be served and the eminent comple-

tion of the Greers Ferry Dam and Reservoir, I hope the subcommittee will recommend an appropriation of $265,000 for Greers Ferry National Fish Hatchery for fiscal year 1963.

MAMMOTH SPRING NATIONAL FISH HATCHERY

The Fish and Wildlife Service has underway an improvement or rehabilitation program for the Mammoth Spring National Fish Hatchery, Mammoth Springs, Ark. It has not been possible to complete this program with the funds that have been provided thus far. There is nothing in the fiscal year 1963 budget for this project, but I am advised by the Fish and Wildlife Service that it has a capacity to effectively utilize $122,000 to complete the rehabilitation of this hatchery. I ask permission to have printed at this point in the printed record of the hearings a letter I have received from Hon. Frank P. Briggs, Assistant Secretary of the Interior for Fish and Wildlife, and I most respectfully urge the subcommittee to approve an appropriation of $122,000 needed for the improvements listed in his letter.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., January 29, 1962.

Hon. JOHN L. MCCLELLAN,
U.S. Senate, Washington, D.C.

DEAR SENATOR MCCLELLAN: In reply to your letter of January 20, enclosing correspondence from Dr. Don Presson, president of the Lions Club at Mammoth Spring, Ark., we are pleased to provide the following information on the need for improvements at the Mammoth Spring National Fish Hatchery.

Mr. Presson's letter gives an outline of the needs at the Mammoth Spring Fish Hatchery and includes background justifications for the items mentioned. As he noted, Congress provided some funds for the improvement of facilities at this hatchery in the fiscal years 1960 and 1961. Contracts for the construction work exceeded the original engineering estimates, even though several bid solicitations were made, and it has not been possible to complete the improvement program with the funds provided. The following items are needed to complete the current improvement program at the Mammoth Spring unit:

Install concrete raceways	$13,500
Raze old buildings	2,000
Replace residence No. 1	20,000
Storage building	10,000
Fish-holding house	26,000
Fertilizer storage building	6,000
Oil and paint house	3,000
Landscaping and walkways	4,000
Hard surface station drives	17,500
Fencing	14,000
Equipment	6,000
Total estimated cost	122,000

Funds are not available at this time for completion of the improvement program as outlined, and the Presidents 1963 budget to the Congress on January 18, did not include an item for this work at the Mammoth Spring Fish Hatchery.

We appreciate your support, and the interests of your constituent's in our activities in the State of Arkansas. The copy of Mr. Presson's letter is enclosed for your files.

Sincerely yours,

FRANK P. BRIGGS,
Assistant Secretary of the Interior.

NORFOLK NATIONAL FISH HATCHERY

The next item I should like to discuss is Norfork National Fish Hatchery at Norfolk, Ark. Fish produced at this hatchery are distributed in streams in northern Arkansas and southern Missouri. The Fish and Wildlife Service advises that since the establishment of this hatchery, requirements for trout produced there have increased 100 percent. Fishing pressure on waters now being stocked has been tremendous and has developed a need far beyond original

estimates. In recognition of these increased requirements, the Congress appropriated $150,000 in fiscal year 1962 to initiate expansion of the production capabilities at Norfolk hatchery. These funds are being used to construct a new pipeline to carry additional water from Lake Norfork to the hatchery and to construct an aeration building. To continue this expansion program, I am informed that the Fish and Wildlife Service has a capability to utilize, in fiscal year 1963, $190,000 to construct concrete raceways, further water supply facilities, and the drainage features of the plan. While the budget failed to request these funds, I hope that the subcommittee will recommend an appropriation of $190,000 for this project.

Reservoir Research in the White River Area of Northern Arkansas and Southern Missouri

In the fiscal year 1962 appropriation bill this subcommittee added $170,000 to provide a program of reservoir research in the White River interstate reservoir complex in northern Arkansas and southern Missouri. Unfortunately, this amount was reduced to $85,000 in the conference with the House, but I think it very significant that this important program was initiated by the subcommittee last year. The necessity for this research stems from the tendency of our reservoirs to become stale as far as fishing is concerned. It appears that for the first few years following the impoundment of water behind a dam, fishing is generally excellent, but after that the tendency is for the reservoir to become increasingly less productive for fish.

To find the reasons behind this phenomenon and to develop means of combating it, the Bureau of Sport Fisheries and Wildlife has undertaken the study financed by the appropriation last year; $85,000 is included in the budget for fiscal year 1963 to continue this research, but I am advised that the Fish and Wildlife Service has a capability of effectively utilizing an additional $85,000. I would hope, therefore, that the subcommittee will recommend the full $170,000 to allow this research activity to proceed as rapidly as possible.

Fish-Farming Experimental Station, Stuttgart and Kelso, Ark.

In 1959, the Fish and Wildlife Service purchased two tracts of land in southeast Arkansas to establish a fish-farming research station. One of these tracts is located near Stuttgart in Arkansas County and the other at Kelso in Desha County.

Construction of the laboratory and service buildings at Stuttgart was completed in the summer of 1961, and construction of the necessary ponds and reservoirs has been commenced. The budget for fiscal year 1963 includes an item of $195,000 to complete the pond and related development at the Stuttgart unit.

I fully support the budget request for the Stuttgart station, but also wish to bring to the subcommittee's attention a need for funds to develop the property that has been acquired at Kelso. I am advised by the Fish and Wildlife Service that it has a capability of using $225,000 at Kelso in fiscal year 1963. I am further informed that these funds would be utilized as follows:

Building renovation and rehabilitation	$2,000
Pond construction, 138 acres, various sizes, with supply and drain lines	200,000
Combination utility and storage building	23,000
Total funds needed for the program	225,000

I most respectfully urge the subcommittee to recommend the inclusion of these funds in the fiscal year 1963 appropriation bill.

Predatory Animal Control

Mr. Chairman, I deem it most important that I bring to the subcommittee's attention the urgent need for a better control program for rodents, wolves, and other predatory animals in Arkansas.

Cattle, poultry, and rice farmers, in particular, are suffering greatly from the depredations of these animals, and great losses are occurring daily in certain areas of the State. Among the worst offenders are wolves, where livestock and poultry are concerned and nutria and muskrats in the rice areas. The latter are most destructive in burrowing through and damaging dikes and ditchbanks in ricefields.

The situation is so acute that the Fish and Wildlife Service sent a representative to Arkansas earlier this month to study the problems. The representative conducted meetings in cooperation with the Arkansas Game and Fish Commission, the Arkansas Legislative Council, the Farm Bureau, and other agricultural groups in an effort to develop an effective plan of predator control for the State.

Out of these meetings has evolved the Fish and Wildlife Service's recommendation for an effective supervised program in cooperation with the State of Arkansas. This program contemplates an expansion of the current program and an increase of Federal expenditures by $50,000 in fiscal year 1963, as well as stepped-up participation by the responsible State agencies.

The current Federal expenditure and the budget request for fiscal year 1963 for predator control in Arkansas is only $10,000, which is barely enough to finance one technical adviser for the entire State. As I have said, the anticipated expanded program was formulated after the fiscal year 1963 budget for the Fish and Wildlife Service was drawn up; and consequently, the additional $50,000 is not in the budget.

In view of the urgency of the situation, I most respectfully request the subcommittee to recommend, in addition to the $10,000 in the budget, $50,000 so that this much needed expansion of the predator control program in my State can be initiated.

BLACKBIRD RESEARCH

Finally, Mr. Chairman, I should like to say a few words about the research program now being conducted by the Fish and Wildlife Service in the Southern and Eastern States to find effective methods of controlling blackbirds. Blackbird damage to rice and other crops is seriously handicapping farming operations in the delta section of Arkansas. Damage in the State from blackbirds alone is estimated by the Extension Service to amount to $5 million annually.

I hope that additional funds to finance this important research activity will be provided and that an amount sufficient to satisfy the Fish and Wildlife Service's full capability to carry on this program in the Southern States will be recommended by the subcommittee.

Again I wish to thank the subcommittee for the understanding and splendid cooperation it has shown with regard to Arkansas projects in the past, and I am sure that the requests for fiscal year 1963 will receive your usual sympathetic consideration and attention.

STATEMENT BY SENATORS SMITH AND MUSKIE

Senator BYRD. We will place in the record a letter from Senators Smith and Muskie, of Maine, regarding a proposed program of herring research to be conducted by the Bureau of Commercial Fisheries, concentrated in the State of Maine.

(The statement referred to follows:)

U.S. SENATE,
Washington, D.C., March 13, 1962.

HON. CARL HAYDEN,
Chairman, Subcommittee on the Department of Interior, Committee on Appropriations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: We are enclosing a statement on a proposed program of herring research to be conducted by the Bureau of Commercial Fisheries, on behalf of the sardine fishing industry which is concentrated in the State of Maine. The program, if fully implemented in fiscal year 1963, would require the expenditure of $486,000 in addition to those funds already being spent by the Bureau on herring research. In response to questions from members of the Maine congressional delegation, officials of the Bureau have agreed that the proposed program is essential to the future of the industry, and they have stated that the funds requested could be used effectively in fiscal year 1963. Staff and equipment for the recommended program are available.

Funds for this project were not requested in time to be considered for submission in the 1963 budget. Therefore, the Department of the Interior was not in a position to request such funds of the Congress.

We recognize the need for careful allocation of funds for the many worthy programs which have been presented to your committee. However, we believe that serious consideration should be given to an increase in appropriations for

the proposed sardine research project. The difficulties which confront the industry involve problems of supply of the raw material, apparent changes in the migrating pattern of the fish, and a lack of knowledge of how efficiently to catch and preserve in open waters.

The sardine industry has, for several years, taxed itself at a rate of 25 cents per case for the purpose of improving quality of the manufactured product, product research, advertising and promotion. The industry cannot support the kind of research program which has been recommended to the Bureau, and which is so essential to the future of the industry. Although the sardine industry is concentrated in Maine, the proposed research program would have implications reaching beyond our own industry and would be integrated with the Department of Interior's oceanographic research program.

We respectfully urge that the committee give most serious consideration to providing the $486,000 request for this additional research in the Bureau of Commercial Fisheries, and that this letter and the attached document be made a part of the hearing record.

Sincerely,

MARGARET CHASE SMITH,
U.S. Senator.
EDMUND S. MUSKIE,
U.S. Senator.

PROPOSED PROGRAM FOR ATLANTIC HEARING RESEARCH

I. BACKGROUND

The sea herring is one of the oldest organized marine fisheries of the world and presently ranks first in worldwide landings. These landings amount to approximately 12 billion pounds (FAO–1958), of which the U.S. share usually amounts to less than 300 million pounds, or less than 3 percent of the world's total. The greater portion of the U.S. landings—160 million pounds in 1959—comes from Maine waters, and, as such, is traditionally known as the Maine sardine.

In comparison with other North Atlantic fisheries, sea herring rank 11th in value and 3d in tonnage. As a source of protein, therefore, this is one of the more significant fisheries and, unlike the other principal food fisheries (i.e., haddock, redfish, scup, flounders, whiting, and cod), is harvested with much less gear and manpower.

This is a seasonal fishery and utilized almost exclusively young herring as "sardines." The present fishery is restricted largely to the Maine coast. The principal part of the catch is used by the canning industry in the production of "Maine Sardines," the trade name for this processed product. Small amounts of immature and adult sea herring, also, are landed at other ports as well for animal food and conversion to fishmeal.

The traditional problems of the Maine sardine industry center around fluctuations in abundance and availablity. The Maine sardine fishery depends principally on a single year class in any given season; hence year-to-year fluctuations in abundance or availability have more serious effects than would be the case if an accumulation of year classes were fished.

The fishery is carried out almost exclusively along the immediate shore with stop seines and fixed weirs. Purse seining at present accounts for only a minor part of the catch.

The sardine canning industry, comprising approximately 32 canneries and confined to the Maine coast, is the principal user of sardines (73 percent of Maine production in 1957). This is a seasonal industry, operating by tradition and State law only between April 15 and December 1. Processing methods have undergone many advancements in recent years and an industry-sponsored improvement in quality of the sardine pack has been effected. However, despite a rapidly expanding national economy, and this quality improvement program, the demand for Maine sardines has remained relatively stable at just under 2 million cases.

II. THE PROBLEM

The Maine sardine industry is in grave economic condition because of serious problems resulting from a recent sharp drop in supply of raw material, apparent changes in the migratory pattern of the fish, and a lack of knowledge of how to efficiently catch and preserve fish taken in open waters. For

the past 20 years the supply has undergone but minor fluctuations. In 1961, however, the schools of fish failed to appear on the normal fishing grounds; and consequently the catch dropped to approximately one-fifth of its normal size. Most of these fish were taken from the normal fishing area. Because of the lack of technological information, it has not been possible to harvest or utilize fish available in the open waters.

A concerted and diversified attack is needed to solve the problems, of the Maine sardine industry. Such an approach must be geared to provide solution of the overall problem of not being able to predict both the abundance and location of stocks of fish. It must also provide answers to some of the more basic factors affecting the biology of the fish and develop efficient and diversified methods of harvesting them wherever they occur. Also important is the development of new methods of eliminating feed from the stomachs of sardines which, if still in the fish when canned, impairs the quality of the processed product.

State agencies do not conduct research on the biology or utilization of Atlantic sardines. The industry has for several years taxed itself 25 cents per case for the purpose of improving quality of the manufactured product, advertising, promotion, and product reserach. However, as a result of the present critical condition, it will need assistance to survive the effects of this and possible future seasonal failures if it is to retain a competitive market position and continue its important contribution to the overall economy of New England.

The Bureau of Commercial Fisheries is currently conducting only a relatively limited amount of biological research on Maine sardines. However, during the 6-year period this research has been underway, invaluable basic knowledge on racial composition of the sardine stocks has been provided along with the development of research tools for defining these stocks. Because of the limited nature of these biological studies, research has necessarily been restricted primarily to basic studies of the biology of the sardine and its scope is not sufficient to provide the data that might lead to some reliable method of making advance predictions of the resource.

Similarly, the limited amount of gear research conducted in prior years by the Bureau of Commercial Fisheries has developed promising new techniques for improving the efficiency of inshore fishing. The Bureau, however, is able presently to conduct only limited investigations aimed at harvesting techniques and no research at all on the utilization of this important resource. The biological and technological programs must be both increased and diversified to solve the urgent problems of the sardine industry.

III. PLAN OF ATTACK

A. Prediction of supply

The real abundance of sardines or any marine fish, and how this abundance varies from year to year and over longer periods, is difficult to determine precisely.

Since the sardine population is beneath the surface of the sea and cannot be counted, elaborate continuing sampling methods are necessary. Because of the inshore nature of the present fishery, it is also important to understand the movement of these fish of various ages. Fish may be abundant but may not move inshore, or they may react differently to environmental conditions at different ages. Availability may be related to abundance, but should be studied separately.

Each new year class of sardines must be examined intensively from the time it is spawned until it contributes to the spawning stocks. Abundance at each stage of the life history must be determined, and the relative abundance from year to year also determined. Automatic processing of statistical information is an important part of this program.

B. Basic biological studies

Predictions may be based on observations of numbers and distribution of sardines, but such observations tell us little about the factors that underlie changes in abundance or availability of fish. If sardines are abundant or scarce in any particular year, it is important to be able to forecast such abundance or scarcity; but it is especially important to understand why there are more or fewer fish. Under our present program, biological information about factors controlling abundance is accruing at too slow a rate. Basic knowledge must advance hand in hand with information directly applicable to prediction. A broad scientific foundation is needed for any real understanding of sardine fishery and factors that influence its success.

There are many factors that may influence survival of sardines of all ages, including such things as disease, predation, physical conditions in the sea, etc. Each factor must be examined to determine its effect on survival. There may be other factors that influence productivity, behavior, and movement of sardines—factors that must be isolated and studied separately. The possible existence of separate groups of sardines must also be examined since, if such groups exist, they may vary in abundance independently of one another.

C. Harvesting and transport of raw material

Additional developmental work on Maine sardine fishing gear is urgently needed to extend fishing activities beyond the traditional shallow-water fishing grounds into the deeper water of the open bays and inlets. Present stop-seine and weir methods are limited to water depths of 30 to 40 feet and are incapable of catching large schools that frequently occur beyond these depths. Methods are needed for harvesting sardine schools that occur in the deeper waters along the coast and in offshore areas.

In order to utilize these fish, however, techniques and equipment must be designed and tested for holding the sardine catch during fishing operations and subsequent transportation to the cannery.

D. Processing research

Sardines harvested from open waters are landed dead, often with considerable feed in their stomach. These fish cannot be utilized for human food unless this feed is removed by mechanical or other means. It may be necessary to do this on vessel while at sea in order to deliver fish of suitable quality. Technological investigations must be conducted to devise an efficient method of removing the feed from the sardines, thus enabling their utilization in canning. Such studies will explore the possibility of adopting existing mechanical equipment for removing the feed from these fish or developing other suitable methods for eviscerating these fish.

In addition to the problems of availability or resource, method of capture, preservation and processing, there is also the increasing problem of remaining competitive in the distribution and marketing fields. In order to do this it is necessary that a better picture of the basic economics of the industry be developed.

IV. PROPOSED BUDGET

The proposed budget is shown in the attached table. Certain phases of this program will be concluded during the first 5 years. The more basic prediction and biological studies are continued for a 10-year period, with some change in emphasis as the program progresses. The Bureau of Commercial Fisheries presently is spending $134,000 annually on its sea herring biological program. In addition, it is spending annually about $10,000 on other projects which are of direct or indirect value to the Maine sardine fishery. Therefore, the above proposed program will require an annual expenditure of $486,000 in addition to that already being spent in the regular Bureau program.

Program for Atlantic herring research—Proposed funding and scheduling for 1st 5 years of program

LETTER FROM SENATOR WILEY

Senator BYRD. There will be placed in the record at this point a letter, with enclosures, from Senator Wiley, of Wisconsin, relative to a request for funds for a Forest Products Laboratory at Madison, Wis.

(The letter referred to follows:)

MARCH 14, 1962.

Hon. CARL HAYDEN,
Chairman, Appropriations Subcommittee on Department of Interior and Related Agencies, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: I am writing to respectfully urge approval of:

1. The recommended $3,300,000 appropriation for operation of the Forest Products Laboratory at Madison, Wis., for fiscal year 1963; and

2. The recommendations for a first-year appropriation, amounting to $4 million—the first stage of a 3-year $10 million program for necessary expansion of its facilities.

As you are aware, the forest products industry is tremendously significant to the whole U.S. economy. In 1960, for example—the latest year for which complete figures are available—the industry:

1. Provided jobs for about 1,136,000 people (a level of employment exceeded only by the machinery, food, transportation, equipment, and apparel industries; and

2. The manufacture of wood and paper products contribute about $10 billion to the Nation's income.

In Wisconsin—as in many other States—the forest products industry also ranked high in our economy, including (*a*) the creation of over 54,000 jobs; and (*b*) the output of products totaled around $1 billion.

I recognize, of course, that the requested appropriations for forest research represent a lot of money. According to expert computations, however, there is about a $70 return for each dollar invested in forest products research.

Consequently, this represents—in my judgment—a good investment.

For these reasons, then, I am respectfully urging approval of funds to carry forward—and to necessarily expand—the work of the Forest Products Laboratory at Madison, Wis.

If accomplished—as I believe it should be—it will be of tremendous significance to—

Our forest and forest products industries;

The thousands of people employed;

The business and services dependent upon the buying power of workers in the industry; and

The vast number of people, including America's homeowners, as well as many other industries who benefit from the work of the Laboratory.

I am taking the liberty of forwarding copies of letters from private industry endorsing the need for expansion of the Forest Products Laboratory. Based upon past experience, these messages reflect the significance of expanded forest research to private enterprises and the needs of the American people.

I respectfully request, therefore, that these be included in the record of the hearings.

With appreciation for the consideration which I know you will give this matter, and with kindest regards, I remain,

Sincerely yours,

ALEXANDER WILEY.

CONSOLIDATED WATER POWER & PAPER CO.,
Wisconsin Rapids, Wis., March 6, 1962.

Senator ALEXANDER WILEY,
U.S. Senate, Washington, D.C.

DEAR SENATOR WILEY: We have been advised that the Forest Products Laboratory in Madison, Wis., has a request in Congress for a $4 million construction item. They have added 12 acres of land and this new construction item will be primarily for new pulp and paper facilities.

We think the Forest Products Laboratory has done an excellent job in the past and that this new construction item is necessary and will result in considerable benefits both to the people of the State of Wisconsin and the people in the United States as a whole.

We would appreciate anything you can do to support this request.

Yours very truly,

E. A. STARKS, *Assistant Treasurer.*

ALGOMA PLYWOOD & VENEER CO.,
Algoma, Wis., March 8, 1962.

Hon. ALEXANDER WILEY,
Senate Office Building, Washington, D.C.

DEAR SENATOR WILEY: The Senate Appropriations Subcommittee on Interior and Related Agencies will take under consideration on March 12, 1962, a proposal for a building program to modernize and make additions to the Forest Products Laboratory at Madison, Wis. Our company, as you know, operates a plant at Algoma, and we have several warehouses throughout the State.

The Forest Products Laboratory in Wisconsin has rendered our company and our industry many technical services which we believe have helped to conserve the natural resources of our State and the United States. The Forest Products Laboratory has an extremely able staff and we know they are operating under a handicap due to the need for larger and more modern facilities.

We would like to strongly urge you to lend your good offices to supporting the request for a construction program for the Forest Products Laboratory. Senator Carl Hayden is the chairman of the subcommittee and we are confident a word from you to Carl Hayden would strengthen the position which we are advocating.

Thanking you for your assistance in this matter.

Sincerely,

RAY P. FULWILER,
President and General Manager.

UNIT STRUCTURES, INC.,
Peshtigo, Wis., March 8, 1962.

Senator ALEXANDER WILEY,
Senate Office Building, Washington, D.C.

DEAR SENATOR WILEY: We urge that you support the U.S. Forest Products Laboratory request for additional research funds to make more effective use of our timber resources.

The Department of Interior and Related Agencies Subcommittee of the Committee on Appropriations is being requested to include $4 million for fiscal 1963 to provide additional wood chemistry and pulp and paper research at Madison, Wis. This is part of a 3-year plan to assure $10 million of needed research facilities for increasing the serviceability of wood products, developing new uses for wood, and improving the usefulness and quality of all wood species.

This research is essential to the proper use of wood as a structural material as well as provide the processes and techniques to improve the productive potential of our forests for the paper and cellulose industries.

The personnel of this laboratory have pioneered in the development of plywood, laminating, protection from fungi, insects and fire, wood structural design criteria and wood chemistry to change low-grade species into profitable products. Your support of their request for funds will be of tremendous importance to the State of Wisconsin and to the Nation in finding new uses for the products of its forests.

Yours very truly,

MAX J. HANISCH, Jr., *President.*

HAMMERMILL PAPER CO.,
Erie, Pa., March 8, 1962.

Hon. ALEXANDER WILEY,
Senate Office Building, Washington, D.C.

DEAR SENATOR WILEY: I was very much interested in reading your speech concerning the expansion of the Forest Products Laboratory at Madison as reported in the Congressional Record of February 20, 1962. You are to be complimented on your leadership in attempting to secure funds for the new facilities which are needed to meet the demands for increased research in the utilization of the products of our forests.

The Hammermill Paper Co., has worked very closely with the Forest Products Laboratory in the past and has directly benefited from the splendid research work which has been done at the laboratory. Previous commitments prevent our appearing before the Senate Subcommittee on Department of the Interior and Related Agencies, which is now considering the request for funds to start construction of the proposed facilities at Madison. Perhaps you will find this letter of use to you in your efforts to secure favorable action on this matter by the subcommittee.

The Hammermill Paper Co. is one of the largest companies in the United States manufacturing fine papers—business, office, and printing papers. Paper manufacturing facilities are located in Pennsylvania, New York, Ohio, Massachusetts, Michigan, and Washington State with converting and merchandising facilities also located in a number of other States.

Hammermill, like almost all paper-manufacturing companies, depends on having an adequate supply of high quality woodpulp made from available pulpwood at a competitive cost. The Forest Products Laboratory has made valuable contributions to the U.S. pulp and paper industry and we feel that the high position which our industry now occupies could not have been reached without the research and development work which has been carried out by Forest Products Laboratory in the past.

The development of the patented Hammermill Neutracel process for the manufacture of high quality pulp from hardwoods, formerly considered unsuited for the purpose, was based upon excellent fundamental research work extending over many years by the Madison Laboratory. It would not have been possible to perfect the method and design and install the commercial plant at Erie now making 250 tons of Neutracel pulp per day as quickly, and possibly not at all, without the help of the Forest Products Laboratory.

As the result of the Neutracel development Hammermill has been able to continue and expand its pulp manufacture in Erie and to create an important source of jobs and income for the farmers and small wood suppliers in the economically

depressed areas of northern Pennsylvania and adjacent counties in New York. This means that over $2 million which formerly went to Canada for pulpwood purchases now is channeled into the economy of this region.

Other specific contributions could be cited as to the direct value of our industry of the research and technical contributions made by the Forest Products Laboratory but perhaps this example will suffice to illustrate the practical value of the work done at Madison.

It is hoped that you will be successful in your efforts to get the necessary approval so that construction of the much needed section for pulp, paper, and wood chemistry research can be started this year.

Very truly yours,

DONALD T. JACKSON.

MOSINEE PAPER MILLS CO.,
Mosinee, Wis., February 28, 1962.

Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D.C.

HONORABLE SIR: Included in the U.S. Forest Service budget now being submitted, there is a request which I feel is of great importance to our country and which should be given high priority. This is the assignment of moneys (I think about $4,500,000) for the enlargement and improvement of the facilities at the Forest Products Laboratory at Madison, Wis.

The directors and staff of this Laboratory, ever since it was established, have made basic contribution to the paper and pulp industry and to all wood-using industries, and have been most valuable and important in the growth and service to our Nation. The scientific research and developments have definitely increased the usability and value of our forests.

New cooking processes were developed at the Laboratory which now makes it possible to make good pulps out of specie fibers that were formerly of little value. The usable yield per acre of our national timber resource has been increased by studies and results obtained at the Laboratory. Basic contributions through the work of this institution are continuing but are retarded and handicapped by limited facilities.

The support you have always given to the work of the Forest Products Laboratory is recognized and appreciated. A continuation of this support. I am sure, will come from you, Senator Wiley, by using your great influence to obtain the amount needed by the Laboratory from the Forest Service budget now up for consideration and adoption.

Respectfully and sincerely,

N. S. STONE, *Retired President.*

WISCONSIN ALUMNI ASSOCIATION,
Madison, Wis., February 28, 1962.

Hon. ALEXANDER WILEY,
U.S. Senate, Washington, D.C.

DEAR SENATOR WILEY: Wanted to apprise you of our keen interest in the activities of the Forest Products Laboratory.

For many years we in Madison have seen the outstanding contributions that this fine Government agency has rendered to our entire Nation.

You are to be complimented for your great interest in the Forest Products Laboratory and in the strong interest that you have shown in their budget.

Keep up the good work.

Sincerely,

ARLIE M. MUCKS, Jr.

STATEMENTS OF SENATOR CARROLL

Senator BYRD. We will place in the record at this point statements from Senator Carroll, of Colorado, concerning a fish pesticide laboratory at Fort Collins, Colo.; a cooperative fishery research unit at Colorado State University; and support of appropriations requested for Bent's Old Fort, Colo.

(The statements referred to follow:)

FISH PESTICIDE LABORATORY FOR FORT COLLINS, COLO.

Mr. Chairman, I appear before you this morning to support an appropriation request for $50,000 by the Bureau of Sport Fisheries and Wildlife for site selection surveys for a new fish pesticide laboratory.

In supporting this appropriation for study of a new laboratory site, I do so with the strong recommendation that the Bureau give full attention to the advantages of locating the laboratory at Fort Collins, Colo.

The Fish Pesticide Laboratory is presently temporarily located in Denver, Colo. It is in makeshift quarters in the Federal Center.

In this connection, the Bureau is asking for $215,000 to maintain and operate the existing temporary laboratory. I support this requested appropriation also.

But the laboratory must soon be relocated, and it is to that matter that I address myself this morning.

Colorado State University at Fort Collins has, through its president, Dr. William E. Morgan, already offered to cooperate with the Bureau in selection of a site on or near university property. Dr. Morgan has indicated that, in his opinion, the known site requirements of the Bureau can be admirably met in the Fort Collins area.

I know, for example, that one of the most stringent site requirements is a proper supply of water in quantity, quality, and constancy of temperature.

These water needs can, I am confident, be adequately met at a site near the Bellvue Fish Hatchery, close to Fort Collins. Also, I am advised that sufficient land of a proper type is available near the fish hatchery.

At the same time, the university's own foothills campus, 2 miles west of the academic campus, is also an area ideal for location of a fish pesticide laboratory. This is a growing research campus anchored around a brandnew $1.3 million hydraulics laboratory. Other research being conducted at the foothills campus is as follows: hydrobiology, fisheries management, evaporation retardation, wildlife studies, veterinary science, and forest nursery.

Some of the foregoing research programs are carried out at the giant Bureau of Reclamation Horsetooth Reservoir and at College Lake and other reservoirs, all proximate to the university and the city of Fort Collins. Temperature and water quality studies of the water in Horsetooth Reservoir are in process right now and will soon be made available to the Interior Department.

There are other reasons that make Fort Collins, what to me would seem to be, an irresistably attractive site for this type of project:

The Colorado Game and Fish Department research laboratories are located on the edge of the Colorado State University campus.

CSU offers a graduate program in fisheries science associated with its Department of Forest Recreation and Wildlife Conservation.

Add to the foregoing facilities and programs the excellent CSU library and the university's many other research and graduate programs, from pathology to biochemistry and it would seem that no more ideal location than Fort Collins, Colo. could be found for a Fish Pesticide Laboratory.

Thus, Mr. Chairman, I support not only the $215,000 requested to keep the temporary Fish Pesticide Laboratory in Colorado functioning, but I also ask that you grant the $50,000 needed for a new site study, and I hope the Bureau of Sport Fisheries and Wildlife will give most thoughtful consideration to the multiple advantages of the sites now offered nearby in Fort Collins, Colo.; sites that have the benefits of good water, fish hatchery and fish science activities, and proximate access to a university (Colorado State) that has a solid, national reputation in advanced scientific achievements in natural resource and wildlife research programs.

COOPERATIVE FISHERY RESEARCH UNIT FOR COLORADO STATE UNIVERSITY

Mr. Chairman, Public Law 686 of the 86th Congress gave the Interior Department the authority to establish fishery research units on a cooperative basis with a State game and fish agency and a university offering a curriculum in fisheries science.

The necessary appropriation for a cooperative fishery research unit in a State is $30,000.

Only one such unit has been funded by the Congress since President Eisenhower signed the authorizing legislation on September 2, 1960. This unit is in our sister State of Utah. However, early in 1961, the Department of the Interior announced its intention to establish as many as 12 of these units.

I appear before you today to ask that you include in the bill before you $30,000 for a cooperative fisheries research unit to be located at Colorado State University at Fort Collins, Colo.

Mr. Chairman, there is no more logical or deserving location in the country for a research project of this type than Colorado State University. CSU originated this concept in 1949. In that year CSU established what was called the Colorado Cooperative Fisheries Research Unit, which was operated in conjunction with the U.S. Fish and Wildlife Service and the Colorado Game and Fish Department.

Federal cooperation in this research project ended in 1953. However, the university and the State have continued the program, and it is functioning today, ready once again to welcome the Federal Government to participate and avail itself of the vast knowledge and experience accumulated in a 13-year-old program.

If the Department of the Interior moves in any direction on cooperative fishery research, it will be most wasteful not to move first to reestablish its affiliation with CSU, the pioneer in this program.

Dr. William E. Morgan, president of CSU, told me a few days ago that the objectives and functions of his cooperative fisheries research unit are essentially the same as those announced by the Interior Department. As I understand it, the objective of the units proposed in Public Law 86-686 will be to offer improved and expanded training for graduate students in order to provide more and better trained personnel for the management of the Nation's recreational and commercial fisheries resources.

This is precisely what the existing program at CSU is doing.

This program can be immeasurably strengthened by once again joining hands, brains, and resources with the Federal Government.

Dr. Morgan said to me:

"There is a definite need for a vigorous fishery research training program in our part of the United States. The impact of water development projects in Colorado and the surrounding States will present many opportunities for new fishing areas, but associated with these opportunities will be serious fishing problems which will require an expanded fishery research and management effort.

"Our existing fisheries unit has a fine record of performance, and we view the announced intent of Federal participation in this educational area as an opportunity to expand and strengthen our program in the field of fishery science at CSU.

"Colorado State University is one of the few institutions of higher learning offering a degree in fishery science. Our program not only serves the needs of Colorado students but attracts students from nearby States where such courses of training are not available. We need to strengthen and expand our existing program in this area of research."

I ask your committee, Mr. Chairman, to give favorable consideration to my request for designation of $30,000 for Federal participation in the Colorado cooperative fisheries research program. This amount is sufficient, I am told by Assistant Secretary of Interior, Frank Briggs, to cover costs of salaries, travel costs related to the program, equipment, supplies, and limited funds for student assistance and graduate projects.

If the committee grants this request for $30,000 for cooperation in fishery research with the State of Colorado and Colorado State University, I can assure the committee, Mr. Chairman, that the resulting contributions to fisheries science will be of significance not only to my own State of Colorado, but all the States in the West where sport fishing abounds.

I hope the committee will add this amount to the bill before it.

BENT'S OLD FORT, COLO.

Mr. Chairman, I appear this morning in support of an appropriation request of $38,148 by the National Park Service for the preservation and development of Bent's Old Fort National Historical Site, which is located on the bank of the Arkansas River near La Junta, in southeastern Colorado.

Bent's Old Fort, for the information of my colleagues who may not yet be aware of its historical significance, is one of the most famous landmarks on the mountain route of the Old Santa Fe Trail.

Built by the three Bent brothers and Ceran St. Vrain, the Canadian fur trapper, in 1832, Bent's Old Fort was both a business and social center as well as a refuge for travelers and a supply depot for Generals Kearney and Price and John C. Fremont in their expeditions and explorations. As such, Bent's Old Fort is a highly significant landmark in our Nation's expansion in the Southern Plains area and the Southwest in general.

Since coming to the Senate, I have worked hard to see that Bent's Old Fort be made a national historical site, and in 1957, I introduced a bill (S. 2699) to this effect. In 1959, the National Parks Advisory Board completed its study of various historical sites, and favorably reported Bent's Old Fort. In 1960, both Houses of Congress passed legislation (signed into law June 30, 1960) establishing Bent's Old Fort National Historic Site and authorizing appropriations for its development and maintenance. I supported this legislation.

In 1961, the Colorado State Historical Society generously donated the 5.77 acres containing the fort site and access roadway to the Federal Government. It has long been recognized that an additional 170 acres of privately owned land would be necessary to maintain the integrity of the site and provide adequate space for parking and other facilities necessary to the park's operation.

The National Park Service appropriations for fiscal year 1962 included funds for this land acquisition (as well as for rehabilitation and maintenance of the site) and I am informed that negotiations for the purchase of this land should be completed within the next week or 10 days.

Local interest in Bent's Old Fort has been high. For the past several years the La Junta Chamber of Commerce, cooperating with James Grafton Rogers, president of the Colorado State Historical Society and many Arkansas Valley groups such as the La Junta DAR and individuals, including Mr. James Baldridge, Mr. Milt Andrus, and Mr. Fred Betz, publisher of the Lamar Daily News, have worked toward the improvement of Bent's Old Fort.

Local and State time, energy, and resources have contributed much to this project. As was recognized by the appropriations for Bent's Old Fort in the fiscal year 1962 budget, however, local resources could not be tapped indefinitely.

In supporting and urging support of the Bent's Old Fort appropriations for fiscal year 1963 ($38,148), I would remind my colleagues that this is a small price to pay for the preservation of an important part of our American heritage. Western history has been and will, I'm sure continue to be a very great part of our national culture.

In underscoring this point, I would close with a quote from a Denver Post editorial (May 29, 1960):

"Bent's Old Fort was to the West what Times Square is to New York or Piccadilly Circus is to London.

"It was the center of a universe. It deserves restoration and preservation."

Statement by Senator Stennis

Senator Byrd. We will place in the record a statement by Senator Stennis, of Mississippi, concerning the forestry research program construction, and a statement urging an additional $50,000 appropriation for the Hardwood Research Center at Stoneville, Miss.

(The statement referred to follows:)

Increase of $10,455,000 for the Forestry Research Program

Mr. Chairman, once again I wish to reiterate my interest in the Forest Service research program. I submit for your consideration a proposal to strengthen the research work along several important lines and to provide for a laboratory construction program of great significance. I described my proposals in detail before the Senate on February 15. This statement for the record will be a brief summary of my proposal.

Since the Forest Service leaders presented a well-developed and orderly program of forestry research early in 1959 you and your committee, Mr. Chairman, have wisely provided for steady growth of this important work. Unfortunately, the budget before you for fiscal year 1963 does not provide for the necessary

expansion which is needed. In fact, the proposed budget represents an overall reduction of $3,218,000 below fiscal year 162 for the research work and construction of laboratories. Eliminated almost entirely is the construction of vitally needed research facilities, a key to future development of the forestry research plan.

I do not think this country can afford to allow a step backward in this forestry research program. As has been my custom over the years, I have spent considerable time obtaining from informed people in various parts of the country an appraisal of where we are heading in forestry research and what we need to do. I have systematically visited the forests of this country, making trips into the forests of my own State and of other States, to see the problems first hand and the progress being made in forestry and in research. I cannot agree with the budget recommendation. It calls for much too slow a pace in reaching reasonable and essential research goals. It would put a halt to the construction of research facilities that are desperately needed to implement and make more effective the research work that is now underway. It would likewise interrupt with serious consequences the orderly construction of the research buildings sorely needed for the expansion of research work. This expansion must come in the near future if we are to meet the requirements of the carefully planned forestry program of the Department during the next 10 years.

For these reasons, I am again this year proposing that the budget estimates for fiscal year 1963 be increased for the research work of the Forest Service. I propose an increase of $10,555,000 over the 1962 appropriation. This increase over 1962 would be divided: $6 million for acceleration of research work, and $4,555,000 for construction of research facilities. I have a table that shows where we stand in fiscal year 1962 with respect to financing the forestry research program, the budget recommendation for fiscal year 1963, and my proposal of the funds required for fiscal year 1963 to maintain reasonable and essential progress in this very important program.

Forestry Research—Budget estimate for fiscal year 1963 and proposed increases required for planned progress

[Thousands of dollars]

Research items	Appropriated fiscal year 1962	Budget estimate fiscal year 1963	Budget estimate increase (+) or decrease (−) over fiscal year 1962	Funds required for planned progress	
				Increase over fiscal year 1962	Total fiscal year 1963
Forest and range management	$9,737	$10,214	$477	$1,950	$11,687
Forest protection	4,344	4,729	385	2,450	6,794
Forest products and engineering	4,477	4,717	240	1,200	5,677
Forest resource, economics and products marketing	2,615	2,740	125	400	3,015
Subtotal, research investigations	21,173	22,400	1,227	6,000	27,173
Construction of research facilities	5,195	750	−4,445	4,555	9,750
Total for forest research	26,368	23,150	−3,218	10,555	36,923

LABORATORY FACILITIES NEEDED

I also have a table which shows 12 high-priority construction projects that would be provided for by the funds for laboratories which I am suggesting. I also endorse the seven small projects totaling $750,000 already included in the proposed 1963 budget. The additional 12 projects are as follows:

Additional construction proposed

1. Parsons, W. Va.: Forest watershed management laboratory	$150,000
2. Alexandria, La.: Forest utilization, protection, and forestation laboratory	900,000
3. Warren, Pa.: Forest recreation and wildlife habitat management laboratory	450,000
4. Sewanee, Tenn.: Forest soil and silviculture laboratory	200,000
5. Madison, Wis.: Forest Products Laboratory addition for wood chemistry and pulp and paper research	4,000,000
6. Olympia, Wash.: Timber management and animal damage prevention laboratory	300,000
7. Ames, Iowa: Hardwood silviculture laboratory	200,000
8. Tempe, Ariz.: Forest watershed, range and wildlife habitat management laboratory	900,000
9. Fort Myers, Fla.: Forest and range management laboratory	150,000
10. Houghton, Mich.: Forest engineering laboratory	400,000
11. Logan, Utah: Forest watershed management laboratory	900,000
12. Redding, Calif.: Timber management and utilization laboratory	450,000
Total for additional construction	9,000,000

As I have said, all of these laboratories are high in priority. I developed these projects from the forestry plan we have had before us and from discussions and correspondence I have had with scientists and others. Some of these projects, such as the first five on the list, I endorsed last year. They are even more badly needed now.

One of them deserves special comment. The $4 million listed for the addition to the Forest Products Laboratory at Madison, Wis., would be the first stage of a construction program that will when completed cost $10 million. Other stages could follow within the next few years. As was developed in hearings before your committee on this point last year, it is feasible to construct these Forest Products Laboratory facilities in two or three stages. The first stage is for the work on wood chemistry and pulp and paper. I have recently checked this point with officials of the Forest Service and they have confirmed that the Madison project could be efficiently constructed in stages if the full amount could not be made available at once.

The present laboratory building at Madison is overcrowded and ill adapted to the modern scientific and experimental equipment needed for the forest products research program. I have looked into this and know that additional laboratory space there is needed. It is the same story here as at many other forestry research locations: a need now for more space and better and more modern facilities for research.

RESEARCH PROGRAM INCREASE ALSO NEEDED

In addition to an increase for research construction, I am recommending an increase for research work for fiscal year 1963; that is, $6 million—$4,773,000 over the budget estimate—to provide for a more aggressive research attack on high priority problems. Accelerated research is especially needed on forest fire, insect, and disease-protection problems; on improvement of watershed management; and on forest products utilization and marketing problems.

While substantial progress has been made in forest fire control, we need far more research on aerial firefighting methods, better firefighting chemicals, prevention of lightning fires and fires caused by man, and conversion of flammable fuels to safer cover conditions.

Insect and disease pests cause tremendous damage and probably destroy every year almost as much timber as we use. Achievements that have been made by research scientists show the outstanding gains that can come from research efforts. I cited a number of these on other occasions before this committee and

I am sure that you are well aware of the gains that come through an investment in this type of research.

Another important field of research that needs additional strengthening is watershed management. America's forests and related rangelands are our major water-producing lands. Their maintenance in a productive condition, free of erosion, is a complex technical job because these same lands must also produce timber, forage, recreation, and fish and wildlife.

But we need far more intensive effort on still unanswered problems in many regions. In New England, the Lake States, the Southwest, and the Deep South—in all parts of the Nation—we have forest watershed problems. We must get on with the forest watershed and soils program of research that is so sorely needed.

Forest-products research deserves our special attention. The pulp and paper research of the Forest Products Laboratory, for example, has led directly to methods that open up markets for species of trees heretofore unsuited for certain paper products. That work has been particularly valuable in many areas of the Nation.

The need for strengthening research on forest products utilization and marketing is especially essential in the Nation's areas of chronic underemployment. Almost all these areas are characterized by abundant forest land. The forests represent their principal raw material. There is a great deal of forest land in these difficult areas, but much of the timber is of small size and of poor quality for traditional uses. Research is needed to develop new uses and markets for it. Better marketing systems need to be developed, so that a more efficient flow of a broad variety of products gets into industrial channels, with reasonable profits all along the line. All this will mean new jobs, more abundant wood products, and flourishing wood industries. All our people, and especially those in these underdeveloped forest areas, would benefit.

In addition to the various programs I have cited as in need of an accelerated attack, there are other essential ones. These include research on the problems of reforestation, forest genetics, timber growing, range management, improvement of wildlife habitat, and forest recreation. Our forestry research program should move ahead in a balanced way, since many of the forestry problems are interrelated, and their solutions cannot be found in a lopsided or uncoordinated hit-or-miss fashion.

In conclusion let me say this: I have supported forestry research in the past, as now, because I have seen the benefits that flow from a well-conceived and strongly supported program. I am proud of the response of this committee to the needs of forestry research and I compliment it on the constructive actions it has taken on these matters. I hope that it will once again give favorable consideration to these proposals and provide $6 million for additional research and a $4,555,000 increase over fiscal year 1962 for laboratory construction. The total increase of $10,455,000 represents an insignificant price to pay for the rich rewards that will come to the people of our Nation in having a bountiful supply of wood, water, forage, wildlife and fish, and outdoor recreation.

Support of an Additional $50,000 for the Hardwood Research Center at Stoneville, Miss.

The recently completed Southern Hardwood Laboratory at Stoneville will be of particular value and will contribute greately toward achieving the necessary level of research into the management of the 40 million acres of southern hardwood forests for which the laboratory has prime responsibility. This build-up should be continued until it reaches a level commensurate with the ever-increasing demands placed on these forests.

There is a pressing need to step up hardwood seeding and planting research. The center has been working diligently in this field with some success in a limited number of species. However, it is apparent that with greater manpower, more speed can be applied. A modest increase of $50,000 over the amount proposed in the budget would allow the effort in this field to be more than doubled.

An example of the fruits of previous research initiated and carried through by this center lies in the planting of the *Populus* species, cottonwood. Hundreds of acres formerly growing only a minimum of timber or crops in the bottom land are now being successfully converted to the growth and production of this desirable timber.

The valleys and richer uplands of the South contain approximately 40 million acres of hardwood forests, whose high potentialities for growing timber are just beginning to be recognized. The southern hardwood region extends from the Roanoke River and Great Dismal Swamp in Virginia to the plains of Texas. Since 1915, this area has sustained 40 to 50 percent of the national production of hardwood lumber.

The best hardwood forests in the South are on rich, deep soils having adequate moisture throughout the growing season. The bulk of these sites occur in the bottoms of major alluvial regions. The largest single area of bottom land is that of the Mississippi Delta, where 11,600,000 acres are in hardwood forests. Adjacent uplands, known as the Brown Loam Bluffs, have about 4,400,000 forest acres. The total acreage of all other productive hardwood forest sites, both lowlands and uplands, but largely the former, is about 29 million acres. Not only mountains, plateaus, and upland pine sites, but all coastal plain sites ill-suited to the production of quality hardwoods, are excluded from this estimate.

Ten years ago, in 1952, saw timber cut for all purposes in the United States amounted to 48,840 million board feet, of which the volume of 12,214 million board feet was of hardwood species. Of that cut from broadleaf species, almost 8 billion board feet came from the whole South. Without considering quality, growth of hardwoods exceeds the cut; however, the distinctive value of hardwoods to the national economy lies in their peculiar adaptation to the manufacture of furniture, handles, flooring, implements, cooperage stock, and a myriad of other factory products requiring the technical wood properties found only in hardwoods. Growth of this quality timber, sought by industry, falls far short of equaling offtake. Only through improved hardwood forest management can this country meet the demands of an increasing population. At present, a large volume of imported hardwood timber is helping to meet the requirements of the industry.

For the past 9 years, a group of 40 hardwood landowners and industry representatives in Mississippi, Alabama, Arkansas, Louisiana, and Tennessee have contributed over $100,000 in cash to the program of hardwood research at Stoneville. In addition, there has been an unstinted contribution of land for timber for experiments and demonstrations. Two experimental forests have been leased to the Forest Service by industry for long periods at no cost to the Government The delta branch of the Mississippi Agricultural Experiment Station provides another 2,620 acres of experimental forest. Over a dozen other experimental areas in private forests are being used by research personnel. These facts are pointed out to illustrate the contributions being made by hardwood industry leaders to the Forest Service's research effort.

Mr. Chairman, let me urge your committee to provide an increase of $50,000 above the budget amount for the Hardwood Research Center at Stoneville, Miss., for fiscal year 1963. This increase is greatly needed and is fully justified.

LETTER FROM SENATOR FONG

Senator BYRD. There will be placed in the record at this point letters from Senator Fong, of Hawaii, in support of Senator Stennis' forestry research proposal, and urging establishment of a cooperative wildlife research unit at the University of Hawaii.

(The letter referred to follows:)

U.S. SENATE,
COMMITTEE ON THE JUDICIARY,
March 13, 1962.

HON. CARL HAYDEN,
Chairman, Appropriations Committee,
U.S. Senate, Washington, D.C.

DEAR SENATOR HAYDEN: I strongly urge that the committee approve the proposal of Senator John Stennis for an increase of $13,773,000 over the 1963 budget request of the President for research work of the Forest Service. This is an increase of only $10,555,000 over the 1962 appropriation.

Extending and expanding the forestry program has much merit and is timely. In my State of Hawaii, development of timber resources has become increasingly important. It constitutes the backbone of a 10-year, multiple-use program for State forest lands approved recently by the State department of lands and natural

resources. For too long Hawaii has had most of its economic eggs in just a few baskets. The 10-year program is aimed, in part, at developing a number of forest products, thus making the islands' economy more diversified.

We need to push vigorously ahead now with implementation of the research programs on the undeveloped natural resources of the State. I was delighted to learn that $26,500 is in the budget estimate of the Forest Service for fiscal year 1963 to strengthen the forest research program in Hawaii. In my judgment, this amount is relatively small to do the best work for the development of an important natural resource; however, this amount will represent a good start on the research work that needs to be done in the State. It will enable the State to further carry out the forestry survey, watershed research, and the beginning of a program in tree planting research.

I congratulate the Senator from Mississippi for his vision and leadership in calling this matter to the attention of the committee, and for the vigorous leadership he has taken in this particular field of productive agricultural research.

With kind regards and aloha,

Sincerely yours,

HIRAM L. FONG.

U. S. SENATE,
COMMITTEE ON THE JUDICIARY,
March 13, 1962

Hon. CARL HAYDEN,
Chairman, Appropriations Committee,
U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: I am writing to request inclusion in the Department of the Interior's budet for fiscal year 1963 certain funds to permit the establishment of a cooperative wildlife research unit at the University of Hawaii.

The State of Hawaii has been in consultation with the Bureau of Fish and Wildlife for the purpose of establishing a wildlife research unit in Hawaii. The possible research activities of such a unit in Hawaii could not be feasibly duplicated elsewhere in the United States. The Bureau has recognized the many advantages of such a unit and has enthusiastically endorsed this project. One of the prime reasons for the urgency of this request is the near extinction of certain wildlife in the State of Hawaii.

Heretofore the University of Hawaii has not had on its staff a faculty member to carry out the programs necessary to wildlife research nor have courses been offered at the university which are tantamount to Federal research participation at the State level. For these reasons the Department of the Interior has not entered into any cooperative agreement with the State of Hawaii and no funds have been requested previously to establish a wildlife research unit in Hawaii.

I have just been advised by the University of Hawaii that plans have been made to engage a professor who specializes in wildlife to join the university's staff beginning September 1962. This faculty member would undertake and fill the requisites of the wildlife research program envisaged by the Bureau of Fish and Wildlife. These recent developments now make it possible to finalize plans to establish this Federal-State cooperative research unit in Hawaii.

Because this has been a recent development, no allowance was made to accomodate such a unit in Hawaii by the Department of the Interior in its budget request for fiscal year 1963. In a recent study completed by the Bureau of Fish and Wildlife, the sum of $20,000 was recommended as necessary to establish this unit. Therefore, I urgently solicit the consideration of your committee to include in the budget appropriations for the Department of the Interior's Bureau of Fish and Wildlife the amount of $20,000 or such other amount as is necessary for the establishment of a cooperative wildlife research unit at the University of Hawaii.

The people of Hawaii and I will be most appreciative of any consideration you may give this request.

Aloha and best wishes,

Sincerely yours,

HIRAM L. FONG.

TELEGRAM FROM GOVERNOR LAWRENCE

Senator BYRD. There will be placed in the record at this point a telegram from Gov. David L. Lawrence, of Pennsylvania, concerning the establishment of a recreational research center in Warren County, Pa.

(The telegram referred to follows:)

MARCH 12, 1962.

CHAIRMAN, COMMITTEE ON AGRICULTURE,
U.S. Senate, Washington, D.C.

Mr. Chairman, the Commonwealth of Pennsylvania firmly supports the request of the Warren County Development Association for the establishment of the Warren Recreation Research Center. As you know, research on recreation has been carried out at the center in Warren for several years under the U.S. Forest Service. This work is inadequately housed, however, and needs adequate facilities for the successful conduct of its work. It is for this reason that we firmly support an appropriation of $450,000 to build this center.

In 1961 the general assembly approved a tourist promotion program unique in the Nation. We are the first State to subsidize local tourist promotion programs. In the 1962 session of the general assembly, I requested approval for a constitutional amendment which will be the first step toward the development of adequate recreational and tourist opportunities in Pennsylvania. We call this program Project 70 because by 1970 it will have accomplished 4 things:

It hopes to develop three great Federal recreation areas in Pennsylvania;

It will ring our national population centers with a green belt of regional parks and reservoirs;

It will develop a new American vacation land along the new Interstate Highway System;

It will preserve our vital fish and wildlife areas for the future.

Obviously, Pennsylvania has a deep interest in its recreation and tourist potential and we can assure you that we will utilize to the fullest the fruits of the research conducted at the Warren center.

DAVID L. LAWRENCE,
Governor of Pennsylvania.

TELEGRAM TO SENATOR HART

Senator BYRD. There will be placed in the record a telegram to Senator Hart, of Michigan, from Mr. W. E. Thorsen, chairman of the board of the East Jordan Area Chamber of Commerce, concerning an additional appropriation for construction of the Federal fish hatchery in the Jordan River Valley, in Michigan.

(The telegram referred to follows:)

EAST JORDAN, MICH., *March 10, 1962.*

Senator PHILIP A. HART,
U.S. Senate, Washington, D.C.

The entire membership of the East Jordan Area Chamber of Commerce request you work for the approval of the second year's appropriation of $467,000 for construction of the Federal fish hatchery in the Jordan River Valley.

W. E. THORSEN,
Chairman of the Board, East Jordan Area Chamber of Commerce.

CONCLUSION OF HEARINGS

Senator BYRD. Ladies and gentlemen, this concludes the hearings on the Department of Interior and related agencies' appropriations for the fiscal year 1963.

The committee is adjourned.

(Whereupon, at 3:45 o'clock p.m., Tuesday, March 13, 1962, the committee was adjourned.)

Material for Record

Clerk's Note.—The following material has been received by the committee and will be entered in the record:

Letter and Joint Statement From Senators Mansfield and Metcalf

U.S. Senate,
Office of the Majority Leader,
Washington, D.C., March 13, 1962.

Hon. Carl Hayden,
Chairman, Committee on Appropriations,
U.S. Senate, Washington, D.C.

Dear Mr. Chairman: It is our understanding that your Subcommittee on Interior Appropriations intends to conclude its public consideration of the fiscal 1963 estimates within a few days. It will not be possible for us to make an appearance in person to support items of importance to Montana. We do, however, wish to submit the attached joint statement for the subcommittee's consideration and ask that it be printed as a part of the record of this hearing.

We remain available for discussion of any of these items which are important to our constituents and the development of the State. We have not asked for any major increases but we do ask that the budget requests be approved at a level proposed in the administration's budget, with appropriate adjustments.

With best personal wishes, we remain,

Sincerely yours,

Mike Mansfield.
Lee Metcalf.

Statement of Senator Mike Mansfield and Senator Lee Metcalf

The 1963 budget for Interior and related agencies has several commendable increases over last year's recommendations. There are still, in our opinion, some areas inadequately financed. We hope your committee will find it possible to provide appropriate increases.

Representing a State with large Federal holdings and a virile livestock industry, we particularly appreciate the leadership of your committee which made possible the comprehensive grazing survey now being conducted by the Department of the Interior and the Forest Service. Such funds as your committee deem necessary to carry through this survey will, we are sure, be well invested.

BUREAU OF LAND MANAGEMENT

We are disappointed that no money was recommended this year for recreational development of BLM lands, following the denial by the House committee last year of the modest request for $200,000. Recreational use of BLM lands is increasing sharply, in Montana and other States. Plans this year include full-time wildlife and recreation specialists in all State offices and some district offices. But basic recreational facilities—picnic tables, sanitary facilities, water, and fireplaces—are lacking.

For example, a total expenditure of less than $60,000 would permit construction of six recreation projects on BLM lands in Montana. This figure includes cost of spur road construction and acquisition of access. In one instance, in the Lewistown area, the county and local chamber or commerce have agreed to place picnic tables and other recreation facilities along the scenic Maiden Canyon Road, if BLM will build 2 miles of access road which would cost only $6,000.

FISH AND WILDLIFE SERVICE

When the original Migratory Bird Act was passed establishing the migratory bird stamps, it was contemplated that the receipts of the $1 stamp would be utilized for acquisition of wetlands. Each time the duck stamp was raised, to $2 and $3, it was contemplated by Congress that the proceeds for migratory bird stamp sales would be utilized for land acquisition. It was only when Congress raised it to $3 and made it mandatory that all receipts be utilized for land acquisition that duck stamp revenues were no longer utilized for administration.

At the time that the $3 duck stamp and the earmarking of proceeds took place, it would have taken 300 years to acquire the land required to complete the Federal commitment for refuges. That bill speeded authority for land acquisition so it could be accomplished in 30 years. There are only 22 million acres, of the 120 million acres in the country at the time the white man came, now usable for migratory waterfowl refuge purposes.

Last session Congress passed a bill providing for $105 million to be spent over a 7-year period for wetlands acquisition. This was to be paid back at the completion of the seventh year from 75 percent of migratory duck stamp revenue, with the 25 percent continuing to be utilized for acquisition. This would buy about 75 to 80 percent of the 4½ million acres that the Federal Government is to acquire. However, the first year went by without any appropriation. We are now in the second year of the program. The President's budget provides for $7 million. To complete the program in the time required, a minimum of $15 million annually is needed for the 7 years.

The land is vanishing rapidly through drainage, urbanization, farming, and utilization for other purposes. The cost is increasing. We must have this land to preserve the migratory waterfowl in this country. The longer we delay, the more difficult the costly acquisition will be.

If we are to complete the program in time, it will take at least $15 million the first year and that will rise from $17 to $20 million as the program goes along.

Last year the Congress approved funds, based on Senate recommendations, to begin renovation and modernization of the Ennis National Hatchery in western Montana. This work will bring up to date the federally sponsored facilities in the State with the exception of the Bozeman unit, which requires some repairs as a result of the Madison Canyon earthquake several years ago. We had hoped that the administration would request additional funds to proceed with the 3-year program, but the item was not included in the proposed budget for fiscal year 1963. We request that sufficient funds be included in the Interior appropriation bill to permit the second of a 3-year modernization program to proceed. We addressed the committee in greater detail on this matter by letter of February 28, 1962.

Also, we suggest the committee consider upward revision of the pesticide research program. Only $853,000 is budgeted; $2.56 million is authorized.

In conjunction with our efforts to develop tourism in our State we have supported the necessary improvement and modernization of fish hatcheries, Federal and State, in Montana.

NATIONAL PARK SERVICE

Insofar as Montana is concerned the most significant new development in the proposed National Park Service budget for fiscal year 1963 is the request of $735,000 for the agency's participation in the construction of airport facilities at West Yellowstone. As the committee knows we both have been vitally interested in this project for a number of years.

Tourism is a major industry in Montana and these new facilities will permit airlines to provide improved service when the project is completed. In recent years there has been a greater demand for fast efficient service to the national parks and resort areas throughout the Nation. These airport facilities will make Yellowstone National Park much more accessible to the general public.

The approval of these funds for the Department of the Interior will remove the one remaining obstacle to the construction of this project. The U.S. Forest Service has agreed to make available the necessary land, the Federal Aviation Agency is prepared to obligate Federal-aid airport funds, the Montana Aeronautics Commission has agreed to sponsor the project, and the allocation of these funds to the National Park Service will complete the necessary cooperative arrangements.

We understand that preliminary reports show that $165,000 will be used for the terminal building, utilities, and landscaping, and $570,000 for runways, taxi

strips, aprons, and service roads. These funds would be obligated when the Federal Aviation Agency obligates funds in the approximate amount of $600,000.

The West Yellowstone Airport project has our enthusiastic support and we hope that the Senate Committee on Appropriations will again recommend the appropriation of funds for this work and a similar airport project which would serve Grand Canyon National Park.

We are pleased to know that the National Park Service intends to proceed with the development and modernization of facilities in Glacier National Park. Glacier is truly one of the natural wonders of the North American Continent, its majestic beauty is being enjoyed by larger numbers each year. We hope the budget requests will be adequate to continue the development of this national park under the Mission 66 program.

Montanans are quite interested in the continued construction on the International Loop Road, which when completed will provide a circular route of travel through Glacier National Park and Waterton Lakes National Park in Canada. This highway will not only facilitate tourist travel but will go far in promoting better relations with our friends in Canada. The Camas Creek section now under construction is a very important segment and we ask that sufficient funds be made available for this work.

INDIAN BUREAU

We are pleased to note a number of items in the Indian Bureau budget which will permit better living conditions for our Indian citizens. There is particular interest out home in the $200,500 request for the Big Porcupine—or Wyota—unit on the Fort Peck Indian Reservation. These funds are intended for the purchasing of equipment and materials, and to begin construction of a pumping plant, located on the Missouri River, to supply water for the irrigation of lands in the Big Porcupine unit.

The Billings area director is completing an architect-engineer contract for the design and plans and specifications for the pumping plant now. This work will be completed prior to June 30, 1962. The Bureau of Indian Affairs hopes to be able to complete the pumping plant and build the main canal during the next 2 years.

There has long been a need to replace the present 35 cubic foot per second Wyota pumping plant by a new 75-foot head 115 cubic foot per second pumping plant located on the Missouri River just downstream from the confluence with the Milk River. This new pumping plant will supply water to 6,975 acres, about three times the acreage now being furnished water from the Wyota pump.

When completed, the Fort Peck project will consist of 24,620 acres of irrigated land which will be an increase of 12,909 acres, thus doubling the size of the irrigated area on the reservation. Canals will be extended 68.9 miles, new drains in the amount of 17.8 miles, making an ultimate total of 178.1 miles of irrigation canals and 51.7 miles of drainage ditches.

INDIAN HEALTH

The $4 million budget for construction of Indian sanitation facilities under Public Law 121 will permit modification and extension of the community sewer and water systems at Browning on the Blackfeet Reservation ($184,000), construction of individual waste and water disposal facilitities in the Fort Kipp-Blair community on the Fort Peck Reservation ($49,000), and community and individual water supplies and individual waste units at St. Ignatius on the Flathead Reservation ($103,000), as well as similar work on a number of reservations in other States.

Public Law 121 is saving and lengthening lives throughout the country. The Public Health Service could move ahead with this great program in additional communities were funds available. We urge the committee to consider an additional $2 million for this program in fiscal 1963.

FOREST SERVICE

We advocate additional public investment in development of our national forest resources to put them on schedule with the needs outlined in President Kennedy's program last fall. To do so would cost $25 million more than the budget request presented to the Congress. Major items are $14 million for the road program and $11 million for forest land management.

In addition, we propose that the budget request for research be increased by $9.2 million, and that for access roads by $4 million.

You will recall that, following the President's presentation on September 21, 1961, Senator Hayden requested the Forest Service to develop a program which would carry out the needed development in 10 years.

Except for roads and trails, appropriations for this fiscal year were generally in line with needs. That part of the program dealing with national forest management, protection, and development was financed at 96.5 percent of the planned level. The major deficiency was in the item for roads and trails, underfinanced this year by some $7 million.

To stay on schedule in national forest development in fiscal 1963 would require a budget of $222.5 million. As it was sent to Congress, the budget provides $187.4 million, or 84 percent of the need. However, the budget also includes a proposed amendment to the Highway Act to provide an additional $10 million for roads and trails. If this increase is granted, as we hope it will be, the long-range forest development program would then be financed at 88.7 percent of need next year. Even with this increase, the road program would only be 81.3 percent financed, and would be short some $14 million, which should be appropriated.

Following is a summary of the 1962 and proposed 1963 road and trail program financing:

Appropriation	Planned level	Financed	Difference
1962			
Forest roads and trails	$43,330,000	[1] $37,500,000	−$5,830,000
Roads and trails for States (10 percent)	11,370,000	10,020,000	−1,350,000
Access roads	2,000,000	2,000,000	
Total	56,700,000	49,520,000	−7,180,000
1963			
Forest roads and trails	61,470,000	37,500,000	−23,970,000
Roads and trails for States (10 percent)	11,700,000	11,600,000	−100,000
Access roads	2,000,000	2,000,000	
Subtotal	75,170,000	51,100,000	−24,070,000
Proposed $10,000,000 Highway Act increase		[2] 10,000,000	10,000,000
Total	75,170,000	61,100,000	−14,070,000

[1] 1962 appropriation of $35,000,000 plus $2,500,000 of the 1963 Highway Act obligational authority being used in 1962.

[2] Increase of $10,000,000 obligational authority would require an additional $6,500,000 appropriation in 1963.

One of the most underfinanced of the forest land management programs is that of the rapidly growing recreation-public use. The 1963 request of $26.1 million is down $4.3 million from the planned level, which would be less than 86 percent financed next year unless this cut is restored. The other major increase needed in the forest land management section is $3.4 million for timber management, including reforestation and administration and management of the timber sales from which we taxpayers receive a major return on this public investment.

Money invested in forest research returns to us many times over. Forest fire research at the Forest Service's Missoula laboratory has saved millions of acres of timber and billions of dollars worth of public resources, including watersheds. Promising early results of lightning-storm modification suggest that intensified efforts will pay big dividends in future fire prevention. Studies of how to control fires by new aerial methods, chemicals, and a whole new technology are needed if we are to cut the high cost of control, if we are to reduce damage to our forest resources, save watersheds, timber, wildlife, recreation, and other national assets.

Federally financed research at Montana State College in Bozeman has two highly important objectives: First, more profitable systems of harvesting, transporting, and handling the small-sized but abundant lodgepole pine timber; and, second, safe methods of logging in mountain areas where slopes are steep and soils highly erodible.

Forest product utilization research has shown that some trees, once regarded practically as weeds, are valuable forest projects which, if properly utilized, become an important additional resource.

The need for strengthening research on forest products utilization and marking is especially essential in the Nation's areas of chronic underemployment. Almost all these areas have abundant forest land. The forests represent their principal raw material. In many areas, however, the timber is small and not suited to traditional use. Through research we can develop new uses and markets for this timber—new wood products, new jobs and a strengthened timber industry.

Research also is needed in reforestation, timber growing, range management, wildlife habitat improvement, and recreation development.

During fiscal 1962, Congress appropriated $26.4 million for forest research—including forest and range management, protection, forest products and engineering, economics and marketing, and construction of research facilities. The budget request for this year is for $23.2 million, a reduction of $3.2 million. Eliminated almost entirely is construction of facilities at which this research is to be done.

This budget should be increased by $9.2 million—$3.2 million for construction of research facilities such as those at Missoula and Bozeman, and $6 million for research.

Like other research, that in forestry must be balanced, for the problems are interrelated, and they will not be solved by hit-or-miss research.

We are richly blessed with natural resources. But these resources must be conserved, developed, and managed. Conservation, orderly development, wise management, and highest possible uses of our resources rest on research. The increased cost of the additional research we support is insignificant when compared with the benefits which will flow from a rich and varied base of water, wood, forage, wildlife, and recreation. The increased cost of the additional research we support is insignificant when compared with the damage done by one major forest fire.

A year ago, the Forest Service testified before the Senate Appropriation Committee that that agency was working on a long list of road access projects, the Federal share of which would total in excess of $5 million.

During fiscal 1962, former Chief Forester McArdle told us recently in response to a question, "We now expect to complete acquisition or obligate funds for purchase of roads totaling just under $2 million.

"However, further study carried on in the meantime by the field organizations has added to the list of last year. Consequently, we are still working on a long list of road projects that totals about $6 million for the portion we believe is the Government's fair share. This total, of course, exceeds by $4 million the $2 million for this item in the fiscal 1963 budget.

"For the road projects that total $6 million, the volume of timber served by such roads would total 19.5 billion board feet. The annual estimated allowable cut of this volume is 248 million board feet, valued at $4 million. The stands involved are averaging some annual timber loss, estimated at over 60 million board feet, valued at $1 million. The total road mileage of the projects involved would be 1,054 miles. States involved are California, Idaho, Montana, Oregon, and Washington."

In other words, Mr. Chairman, investment next year of $6 million in timber access roads would pay for itself in a year and one-half and return $4 million to the Federal Treasury each year from now on. Failure to make this investment will cost us $1 million a year. We pay for these timber access roads whether we have them or not—we pay more for them if we do not have them than if we do.

LETTER TO SENATOR COOPER FROM THE FOREST SERVICE

U.S. DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington, D.C., March 15, 1962.

Hon. JOHN SHERMAN COOPER,
U.S. Senate, Washington, D.C.

DEAR SENATOR COOPER: Reference is made to the telephone request of March 9 from Mr. Bailey Guard of your staff for information concerning research on problems associated with strip mining for coal in the Appalachian coal region. Answers to his questions follow.

1. Studies now underway or in the immediate future, with our present level of staffing, pertain mainly to the stability and placement of material overlying coalbeds. One study will be to determine the amount of volume increase for differ-

ent overburden materials when they are moved. This is basic to plans for placement of disturbed material. Another study will be aimed at determining those factors that influence internal structural stability of spoils material.

2. The research program needed as we presently visualize it will include studies that may be grouped in six subject-matter categories: coal haul roads, earth movement and placement, soil mechanics, pyritic material identification, spoil bank chemistry, and hydrology.

Studies pertaining to coal haul roads will be aimed at development of improved guides for locating, constructing, and maintaining roads to prevent serious erosion, sedimentation, and impairment of water quality and streamflow.

Studies in the earth movement and placement category will be aimed at development and evaluation of procedures for excavating, placing, and storing over burden materials removed by strip mining in steep topography so as to minimize or prevent damage to water and other forest land resources.

Soil mechanics studies will be concerned with determining and evaluating the forces and factors involved that affect the physical weathering, detachment or dislodgment, transport and deposition of rock-soil mixtures that make up spoil banks.

Studies pertaining to pyritic material identification will be concerned with developing criteria, methods, and procedures for characterizing acid-forming materials in or adjacent to coal seams.

Spoil bank chemical studies will determine the nature of chemical reactions occurring in or near the surface of spoil banks, pits, highwalls, and dumps that affect stream pollution and postmining revegetation.

The hydrology studies will determine the effect of strip-mine operations of various designs upon quality, quantity, and timing of waterflow.

3. Being specific about the eventual size of the research project is difficult at the present time. We do think that a strong team of scientists with adequate laboratory and related facilities will be needed. The 10-year forestry research program supplied for the record at the request of the Senate Subcommittee on Appropriations (fiscal year 1963), includes a projected fiscal year 1972 level of financing of $200,000 for the project. In addition to this federally financed research effort, we confidently expect supplemental assistance from others. For example, pilot testing of improved procedures will probably be carried out on national forest lands in cooperation with coal operators, wherein our scientists will design the operation based upon results of our studies, and the operators will do the actual mining using their heavy equipment and skilled workers.

4. The coal industry does not have any organized, coordinated research aimed at this general problem. The National Coal Association has financed through the Mellon Institute some research on acid waters from deep mines. Certain companies have assisted in our studies of tree planting on strip-mined land.

5. Enclosed is a publication that brings together the results of a number of Forest Service studies pertaining to forestation of strip-mined lands in the Central States. This handbook tells what, where, and how to plant, but also shows that success in forestation of these areas is contingent to a major degree upon the physical and chemical condition of the spoils material. Additional studies are needed to determine how to carry out mining operations so as to insure the required characteristics of spoil banks for successful forestation.

6. As to sediment loan data from strip-mined watersheds, we can cite one example. Waterflow and sediment load were measured over a period of 20 months on two branches of Beaver Creek, which is tributary to the Cumberland River. The watershed of one branch had considerable strip-mine activity while the other was in undisturbed forest. The mean sediment concentration in the streamflow from the strip-mined watershed during the 20-month period was 45 times that from the undisturbed watershed.

We hope this material adequately answers Mr. Guard's request. If there should be other questions please feel free to call upon us.

Sincerely yours,

RICHARD E. MCARDLE, *Chief*.
By EDWARD C. CRAFTS.

LETTER FROM SENATOR CLARK RELATIVE TO STRIP-MINED LAND IN THE APPALACHIAN REGION

U.S. SENATE,
Washington, D.C., March 16, 1962.

HON. CARL HAYDEN,
Chairman, Committee on Interior and Insular Affairs, Subcommittee on Department of the Interior and Related Agencies, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: In connection with the committee's deliberations on the 1963 appropriations bill for the Department of the Interior, I would like to record my support for the proposal recently made by Senator Cooper to add $200,000 to the budget for the Forest Service, for research on the restoration of strip-mined land in the Appalachian region.

In recent years, strip mining of coal has increased substantially in the high, forested watersheds of the Appalachian coalfield.

In Pennsylvania alone, more than 10,000 acres were strip mined in 1961.

Surface mining of this sort is, of course, a legitimate and proper way to harvest the coal resources and provide inexpensive fuel for normal heating needs. Many persons are gainfully employed in this manner.

At the same time, as everyone knows who has visited areas where strip mining is performed, these operations lay waste to the land, and all too frequently destroy our natural forest resources of timber, water, wildlife and recreation in the areas affected.

Several of the Appalachian coal States have passed laws to encourage the restoration of coal-stripped lands. In 1961, the Pennsylvania Legislature amended and strengthened a State law passed first in 1945 providing for the conservation and improvement of land affected in connection with open pit mining, by further regulating bituminous strip mining operations in connection with backfilling and overburdening strip mined areas and sloping of the high vertical wall left by such operations to prevent erosion.

To give you an idea of the growing scope of restoration efforts already being made in Pennsylvania, the State's departments of forests and waters, and mines and mineral industries report that in 1960, 9,531 acres which had been strip mined had been planted by strip-mine operators. In 1961, 11,596 acres were planted. The 1961 acreage is almost half of the entire number of acres replanted in the decade from 1945 to 1954.

I am glad to say that the Pennsylvania agencies I mentioned have had a modest research program underway in conjunction with Pennsylvania State University, and the State paid the $6,000 expenses of a U.S. Forest Service expert who participated last year in a program of testing fast-growing hybrid poplars in strip-mined areas. Another research program is underway to determine whether spring or fall planting is more effective. (State law places a premium on fall planting for the strip miners to recapture as early as possible the bonds they must post in order to conduct surface mining operations.)

But the Forest Service and cooperating State agencies would be the first to admit that more research is needed. There are 15 different types of spoil in Pennsylvania bituminous strip-mined areas alone. A huge number of species of trees should be tested in each instance to determine the best variety for a given spoil. The best possible screening to attract new industries and other new facilities into the affected areas requires much more research than has been done to date. All States with similar operations would benefit from added research.

The Forest Service has stated that it lacks facts on many other important aspects of the problem. For example, how can the operators locate, construct, and maintain haul roads to prevent erosion, contamination of streams, and damaging storm runoff? What are the engineering properties of the earth and shattered rock materials removed in mining, and how deep can such materials be placed so that they will not slide down steep slopes? Where do the acid materials that pollute streams originate, how are they released, and how can they be controlled? How much damage do mine acids and sediments actually do to streams and how far downstream do these damages occur?

Without this kind of information, sensible, practical ways of protecting and restoring forest resources in strip-mined watersheds will not be developed.

I urge action by the committee to add $200,000 to the Forest Service budget for research on the restoration of strip-mined land.

Sincerely,

JOSEPH S. CLARK.

TELEGRAM TO SENATOR HART FROM MICHIGAN STATE SENATORS MILLIKEN AND SCHWEIGERT RELATIVE TO THE JORDAN RIVER FISH HATCHERY

LANSING, MICH., *March 12, 1962.*

Senator PHILIP HART,
Senate Office Building, Washington, D.C.:

Hope that you will exert every possible effort to secure adequate appropriation for proposed Jordan River trout hatchery. As you know it would be substantial setback for Michigan's well-being if we fail to restock our Great Lakes after having brought lamprey eel under control.

State Senator WILLIAM MILLIKEN.
State Senator THOMAS F. SCHWEIGERT.

LETTER FROM SENATOR MOSS WITH A STATEMENT RELATIVE TO FUNDS FOR A FISHERY MANAGEMENT PROJECT AT SPRINGVILLE, UTAH

U.S. SENATE,
COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,
March 15, 1962.

HON. CARL HAYDEN,
Chairman, Interior Subcommittee of the Senate Appropriations Committee, U.S. Senate, Washington, D.C.

DEAR SENATOR HAYDEN: You will remember when I testified before the subcommittee several weeks ago, I mentioned that there might be additional matters which I would want to call to the attention of the subcommitee. I have since learned that no funds have been requested by the Fish and Wildlife Service for the fiscal year 1963 for the continuation of a fishery management project located at Springville, Utah, under the direction of the Bureau. This project is presently manned with an experienced fishery biologist, and several cooperative programs are underway.

The Bureau advises me that the project can be continued with an appropriation of $25,000 a year on a continuing basis. I am hopeful that the subcommittee will make these funds available. Enclosed is a statement which I would appreciate having entered into the record of the hearings.

With kindest regards.

Sincerely,

FRANK E. MOSS, *U.S. Senator.*

BUREAU OF SPORT FISHERIES AND WILDLIFE

EXTENSION AND TRAINING

STATEMENT CONCERNING A FISHERY MANAGEMENT PROJECT FOR UTAH—FUNDS REQUIRED: $25,000

A fishery management project in the State of Utah is needed for the following purposes:

(1) To provide technical assistance to the Indian reservations in that State, including the large and important Uintah-Ouray Reservation and the Goshute and Skull Valley Reservations. An excellent program in sport fishery management, including public fishing, has been initiated at the Uintah-Ouray Reservation; and continuing attention is needed to sustain it at a productive level.

(2) To provide assistance in the distribution of trout produced at the Springville National Fish Hatchery. This includes cooperative work with the Utah Fish and Game Department in determining fish-stocking requirements, planning fish distribution schedules, and evaluating results of the program.

(3) To provide technical assistance in sport fishery management to Federal areas in Utah, including Department of Defense installations, Veterans' Administration hospitals, and national wildlife refuges.

(4) To participate in fishery studies and to develop fishery management programs in the extensive Colorado River storage project. This includes a wide variety of activities, most of them carried out in cooperation with the State.

Fresh water is a highly important commodity in Utah, and every effort must be made to assure its fullest and best use in recreation, including sport fishing.

The funds indicated would provide the full-time services of two trained fishery biologists, pay their necessary expenses, including transportation costs, and enable purchase of equipment required for field operations. Principal headquarters for the project would be maintained at Springville, Utah, where a national fish hatchery is also located.

LETTER FROM SENATOR FONG PROPOSING ESTABLISHMENT OF A COOPERATIVE FISHERY RESEARCH UNIT AT THE UNIVERSITY OF HAWAII

U.S. SENATE,
COMMITTEE ON THE JUDICIARY,
March 19, 1962.

Hon. CARL HAYDEN,
Chairman, Appropriations Committee,
U.S. Senate, Washington, D.C.

DEAR SENATOR HAYDEN: I request that there be included in the Department of the Interior's budget for fiscal year 1963 the sum of $40,000 for the establishment of a cooperative fishery unit at the University of Hawaii.

The University of Hawaii is ideally situated to serve as a center for sport fishery research and training throughout the Pacific area. The islands are highly productive of sport fishes and are a very great attraction to visitors from all parts of the United States. Although the principal interest will center in the marine species, attention will also be given to fresh water varieties such as trout, bass, sunfishes, tilapia, and catfish. Training will be an important phase of the program. The university offers courses in fishery biology which will be supplemented by studies in techniques of fishery management designed to improve the yield of sport fishes. It is expected that the university will be increasingly attractive to graduate students in the sport fishery field. The economy of the State will be enhanced by such a program.

The amount of money requested will provide the salaries of two permanent employees, their transportation and travel expenses, and will enable the purchase of the necessary equipment, fishery gear, and rental of boats. It will also provide funds for graduate fellowships in the field of sport fishery research.

With kind regards and aloha.

Sincerely yours,

HIRAM L. FONG.

LETTER FROM JUSTICE N. B. JOHNSON, OKLAHOMA SUPREME COURT, RELATIVE TO APPROPRIATIONS FOR THE DIVISION OF INDIAN HEALTH

THE SUPREME COURT,
STATE OF OKLAHOMA,
March 9, 1962.

Hon. CARL HAYDEN,
U.S. Senator,
Senate Office Building, Washington, D.C.

DEAR SENATOR: As a representative of the Governor of Oklahoma on the Governors' Interstate Indian Council, I am requesting that you support the Division of Indian Health's 1963 fiscal year request for appropriations.

The appropriations are based on the latest information available which has been obtained by the Governors' Interstate Indian Council through its health committee. These appropriations are being supported by the 22 member States of the Governors' Inter-State Indian Council. As a member of the council, may I urge that the Congress provide a minimum program activities budget as follows:

1. Indian health activities, $57 million: These funds will be used for hospital health services, services for Indian patients through contractural arrangements with private hospitals, community field health services and program direction.

2. Construction $11 million: These funds will be used for the construction of new facilities staff housing and renovation of existing facilities. Out of the $11 million recommended for construction we urge you to support $6 million for sanitation facilities projects as authorized under Public Law 86–121.

We have been assured by the Public Health Service that they can adequately administer the above program during the 1963 fiscal year if the above appropriations are made.

Indian health is far below the standards of that of the non-Indian citizen, and we feel that health appropriations for Indians should be made which will be sufficient to meet this pressing need. For the most part the various States having Indian population are unable to adequately cope with the magnitude of the problems through municipal, county, or State resources.

The improvement of Indian health will be to the best interest of all the citizens with the States.

I would appreciate any support that you can give the Public Health Service request for the above appropriations.

Thanking you, I am

Sincerely,

N. B. JOHNSON.

ADDITIONAL STATEMENT OF DR. LIONEL WALFORD, DIRECTOR OF THE ATLANTIC MARINE GAME FISH RESEARCH CENTER, SANDY HOOK, N.J.

People from all over the United States fish for recreation and subsistence along the seacoast of every maritime State from Maine to Texas, from Alaska to California and Hawaii. They catch every kind of fish that will take a hook and line, the number of species being somewhere between 200 and 300.

During 1960 their total catch amounted to nearly 1½ billion pounds of fish which was nearly half of the total U.S. harvest of table fish from the sea. In addition, an unmeasured quantity of small fishes and invertebrate animals were taken as bait.

Impressive though these figures may be, they apply only to the year 1960. Judging from records which we have assembled at Sandy Hook, 800,000 more people are expected to engage in salt water angling in 1962 and 10 million more within the next 20 years.

The consequent increasing intensity of fishing in itself imposes such conservation problems as we have not experienced before. Even so, the effects of fishing are probably small compared with the damage to the innermost zone of the marine environment resulting from the rapid extension of cities along the coast with filling in of marshes for housing and industrial developments, pollution of the inshore waters, and other human activities. Because the innermost zone provides spawning grounds, nursery grounds, or feeding grounds for many if not most of the Atlantic coastal fish species, the biological effects of human activities in this precious edge of the sea can be devastating.

Thus we are dealing with a conservation problem of massive proportions and many different elements—many kinds of fishes distributed over great distances, millions of people taking tremendous quantities of fish, and a tangle of many diverse interests in the human uses of the shore environment.

Because the problem is large, complex, and continually changing in nature, it cannot be solved in a short time; nor can there be any final or simple solution. We can only begin to work at the problem now, hoping to produce results that will have practical application within the next few years, but always realizing that the fruits of our work may not mature until a generation or more hence.

Reduced to its simplest terms, the problem is this: How can we sustain the productiveness of the coastal fish resources in the face of all the growing pressures resulting from man's multifarious activities? We can conceive of a number of different courses of action to reach our goal, but it is unlikely that any single one can be sufficient.

The most obvious first possibility to consider is regulation of fishing. Regulations, however, can be worse than useless if based on *a priori* reasoning rather than on facts. They must be tailored to fit each species separately to produce the effects desired, for example according to whether people prefer a few large fish in their creels or many smaller sized ones.

Everyone who knows anything about the subject agrees that regulations of fishing (and all other courses of conservation action) must be based on knowledge. What do we need to know? One thing which is absolutely essential if we are to achieve our goal and which we lack now is continuous measures of the quantities, sizes, and species of fishes caught, and the amount of time spent fishing. Such information is available for a few coastal States, but incomplete, spasmodic, or totally lacking for most.

Statistics on the catches by commercial fishermen are excellent and probably highly accurate; but they alone cannot suffice as a basis of conservation action, since they tell us about only a fraction of the total take of table fishes. Although

on the average this fraction amounts to about one-half at present, it varies widely from one kind of fish to another; and of course it is changing progressively as the number of salt water anglers increases.

In order to collect meaningful statistics on salt water angling, there must be a staff of field biologists organized in mobile units and based at points distributed strategically along the coast. This is one activity which is absolutely essential to an effective national marine game fish program, but for which there is now no provision. The mobile units would be responsible for more than the collection of systematic catch statistics; they would also maintain records about the fishes—the times and circumstances of occurrences, sizes, states of maturity and condition of all the numerous species which anglers take.

Because we lack such information as I have described and do not have the means of acquiring it, we cannot determine the effects of natural phenomena such as last week's storm, nor can there be any satisfactory basis of measuring the results of conservation actions.

Meanwhile we lack something else which is even more important, and that is basic knowledge about the biology of most of our coastal fishes. It is not possible to devise intelligent programs of conservation of fish species without certain information about their life histories—their distribution, spawning seasons and habits, feeding habits, patterns of behavior, courses and times of migrations, enemies, diseases, parasites, and responses to oceanographic conditions. Under the marine game fish program we propose to gather such information systematically by organizing small teams of biologists to concentrate on fish species for studies limited on the average to about 3 years. Here we would devote ourselves only to filling in gaps of knowledge, and under no circumstances would duplicate work by other agencies, Federal or State. The mobile field units would provide much of the data which these teams would require for their studies.

I have been emphasizing the complexity of our problem. On the Atlantic coast we are favored by one simple fact. More than 95 percent of the Atlantic fishes taken by recreational fishermen are coastal dwellers. That is to say, they spend their entire lives closely associated with the Continental Shelf, the relatively narrow plateau bordering the land and extending from shore out to an edge where the depth drops from about 600 feet down to the abyss of the deep sea. The Atlantic coastal fishes do not ordinarily venture beyond the slope of the shelf, and they go out that far only for the winter season. As the water near shore warms in the spring, they come in toward shore to feed and reproduce. For many of them then, the most important zone is where the sea meets the land, which we call the inner zone of the marine environment. This zone, characterized by bays, inlets, protected inside waters, fertile marshes, and mud flats gives shelter and nourishment to the young of many of our most important species. Because of this zone, our Atlantic coastal fish resources are probably richer than those of any other comparable stretch of coast in the world. Without it they would rank among the poorest. And this is the zone which man is damaging progressively and can ruin. But it is also the only part of the sea where he can intercede for the improvement of fish life, where he can cultivate and enrich by appropriate modifications of habitat.

We propose therefore to assemble and collate all past records relating to the shore in order to reconstruct a historical record of what man has done to it. We propose also to take a physical and biological inventory around the entire coast to measure the area of the coastal wet lands and the biological productivity of the edge of the sea, indicating the areas which people have damaged for aquatic life or are expected to damage, and the areas where improvement projects to compensate for the damage could be undertaken.

What can be done to compensate for damage to the productiveness of the inner zone? I believe we will find the answer to that question in the laboratory. At Sandy Hook we have begun experimental programs to cultivate microscopic plants which are the basis of all food in the sea, minute animals of the plankton, which are the fodder of larger creatures, and young fishes. Our purpose here is to analyze the many elements of environment and measure how they affect the abundance and well-being of fish life.

The modest scale on which we have been able to start our experimental program is at best only preliminary to what can follow when we are able to put into operating condition some splendid large indoor tanks that are available to us at Sandy Hook and are adaptable to large scale experimental studies. There are six of these tanks (which were formerly used for storing submarine cables). Two of them are 60 feet by 40 feet; and four are 40 feet by 20 feet.

All are 10 feet deep. In them we could rear fishes through complete generations under controlled environmental conditions. These and other facilities of the Marine Game Fish Research Center would be available to visting scientists and graduate students wishing to conduct experimental work.

In planning the marine game fish research program, we look ahead to these ultimate practical applications: (1) cultivation in salt water ponds of certain species of fishes whose nursery grounds are endangered by human activities along the inner zone; (2) improvement of strains of fishes by selective breeding for rapid growth, disease resistance and other desired qualities; (3) carefully controlled introductions of species into areas that are poor in fish life; (4) improvement of shore wet lands to enlarge their fish nursery capacities; (5) reduction of undesired sea predators; and (6) development of planned programs for the regulation of fishing. These would be recommended to States through such organizations as the Atlantic and the Gulf States Fisheries Commissions.

LETTER FROM MR. WILLIAM H. SCHEICK, EXECUTIVE DIRECTOR, AMERICAN INSTITUTE OF ARCHITECTS

THE AMERICAN INSTITUTE OF ARCHITECTS,
Washington, D.C. March 22, 1962.

APPROPRIATIONS COMMITTEE OF THE SENATE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,
Senate Office Building Washington, D.C.

GENTLEMEN: The American Institute of Architects has had a long and very active part in the preservation and the recording of buildings of historic interest, as well as those of architectural value. The Historic American Buildings Survey, commonly referred to as HABS, conducted by the National Park Service, was started as a joint venture of the American Institute of Architects, the National Park Service, and the Library of Congress, and has continued to operate under a tripartite agreement, just recently renewed.

The institute has a national committee on historic preservation, composed of members actively interested in this work distributed across the Nation. Most of the institute's 137 chapters have their own committees on historic preservation, and also a "preservation officer." These committee members, and particularly the preservation officers, work closely with the HABS and are responsible for a large part of the data sheets which constitute the HABS inventory of buildings.

In this age of the bulldozer and the swinging steel ball it has become more important than ever before that due regard be paid to the retention of old buildings, both those which may have national or regional historic significance, and those which are simply fine examples of the best architecture of their period. A civilization, a nation, a city, is known by the living monuments of its past, not by those which have vanished.

The recording of these buildings, by careful measurement, drafting, and photography, is often the first step toward their preservation. But whether preserved, altered, or destroyed, the buildings deserve to be recorded in the Library of Congress, where the documents are available for use and study by architects, historians, and students from all over the country and abroad.

In view of the fast-increasing rate of destruction of old buildings, especially in cities where urban renewal projects are underway, there is an urgent need for expanding the work of the HABS. It's "cut-off" date of 1860 must be brought forward 40 or 50 years, in order to include some of the vitally important pioneer buildings in the growth of modern architecture in the United States (from whence it spread to Europe); HABS should be in a position to extend its educational activities, with traveling exhibits going not only to museums but to schools and colleges everywhere; and the HABS summer work program for students of architecture, enabling them to work at first hand on measuring and drawing some of the finest old buildings in the country, should be extended.

The American Institute of Architects wishes to go on record with your committee as most strongly urging that the appropriation for carrying on the work of the HABS for the coming year be increased.

Respectfully yours,

WILLIAM H. SCHEICK, A.I.A.,
Executive Director.

ADDITIONAL STATEMENT BY SENATOR WALLACE F. BENNETT ON FISH AND WILDLIFE CONSERVATION IN UTAH

Mr. Chairman, I appreciate this opportunity to support six important fish and wildlife conservation measures in Utah.

FISH SPRINGS NATIONAL WILDLIFE REFUGE

In cooperation with wildlife leaders in Utah and with former Secretary of Interior Fred A. Seaton, I sponsored and worked for creation of the Fish Springs National Wildlife Refuge in northern Juab County, Utah. It was established on March 10, 1959, and consists of 17,992 acres. At my urging, President Eisenhower included $247,000 in his budget submitted in January of 1960 and $285,000 in his budget submitted in January 1961. This money has been used for fencing, roads, ponds, dikes, and several buildings necessary to carrying out the vital waterfowl conservation program there.

As a continuation of this effort, the present budget includes $366,000 to construct impoundment facilities that will complete the most important phase of water development on the refuge. Unless this work is done, there will be virtually no benefit from the investment already made on the project.

The Fish Springs refuge will create an ideal nesting area along the Pacific Flyway in this near-desert section of Utah. It will also provide much needed nesting habitat for the Great Basin goose. Some population segments of this large bird are now endangered.

In addition, the budget also includes $41,030 for operation and maintenance of the refuge and $5,000 for soil and moisture conservation work. These three items total $408,030, and I respectfully urge the committee to approve the full amount.

SPRINGVILLE FISH HATCHERY

As the chairman will recall, it was my privilege to appear before this subcommittee on three past occasions in support of a modernization and expansion program at the Springville, Utah, fish hatchery. I am deeply grateful that the committee responded to my request by appropriating $40,000 in 1955 to initiate this important effort. This was followed in 1956 by a $30,000 appropriation, and in 1957 by $30,100, and culminated in 1958 with $225,000 appropriation. With this money, a new pipeline was created from the spring, many raceways were added, and two houses for employees were built, along with a fish food and cold storage building, a new shop, concrete tanks, as well as new earthen and concrete ponds.

The committee can take pride, as I do, in the outstanding contribution which this hatchery has made in Utah and portions of the intermountain area. The budget includes $79,900 to operate and maintain the Springville hatchery, and I hope the committee will approve it.

COLORADO PROJECT TECHNICAL ASSISTANCE ON FISHERIES, SPRINGVILLE

At the present time, there is a biologist headquartered at the Springville, Utah, fish hatchery, who is conducting much needed research and giving technical assistance to developing fishery management studies in connection with the Colorado River storage project. This is a cooperative program with the Utah Fish and Game Commission to develop the sport fishing possibilities in connection with the project and to provide for technical assistance to the Skull Valley and Uintah-Ouray Indian Reservations.

Unfortunately, because of limited funds, the President's budget does not include money to continue this important activity. The Bureau of Sport Fisheries and Wildlife would be pleased to continue the program because of the constructive work which has been done and that which can be done. The Bureau estimates that $25,000 a year will be needed. This would permit the employment of two biologists, who, along with the other responsibilities I have noted, would also participate in a cooperative program to distribute trout to the area noted. It should be emphasized that this program is of importance not only to Utah but also to Arizona, Colorado, New Mexico, and Wyoming. I sincerely urge the committee to approve this $25,000 item.

COOPERATIVE FISHERY UNIT AT UTAH STATE UNIVERSITY

As the committee will recall, the act of September 2, 1960, authorized a program permitting the initiation of cooperative fishery units to train fishery workers at the graduate level as well as give opportunity for supervised employment to students and to conduct surveys of water on large Federal holdings. It was my privilege both to support the bill and to work with Bureau of Sport Fisheries and Utah State University officials in establishing the first such unit at USU. There is included in the budget $30,000 to continue the activities of this unit. Thus far it has been most successful, both in training students and in carrying out research projects. It enjoys the full cooperation not only of the Bureau and of Utah State University, but also the Utah State Fish and Game Department. They join me in requesting approval of the $30,000.

OURAY NATIONAL WILDLIFE REFUGE

With my full support, the Ouray National Wildlife Refuge was established on November 20, 1960, by former Secretary of the Interior Fred A. Seaton. With the total of $90,000 included in President Eisenhower's budget submitted to Congress in 1960 and 1961 and wisely approved by this committee, 1,334 acres have been purchased in connection with the Ouray refuge. In addition, 2,222 acres are under lease. The Bureau hopes to acquire an additional 6,162 acres in the future. In supporting establishment of the refuge, I worked actively to fully protect the rights of the private landowners in the area, some of whom expressed concern.

As soon as sufficient acreage is acquired to establish a suitable operating unit, development funds will be requested by the Bureau. This year the budget includes $55,225 to operate and maintain the refuge, and the full amount should be appropriated.

BEAR RIVER NATIONAL WILDLIFE REFUGE

As the chairman will recall, I appeared before the committee earlier in support of $115,000 to reconstruct the 14-mile access road to the Bear River National Wildlife Refuge from Brigham City, Utah. Today I wish to give my full support to the $87,775 needed to operate and maintain this vital 65,000-acre refuge and the $2,000 items for soil and moisture conservation activity there.

Thank you for giving me this opportunity.

LETTER AND STATEMENT FROM SENATOR ROBERTSON

U.S. SENATE,
COMMITTEE ON BANKING AND CURRENCY,
March 22, 1962.

Hon. CARL HAYDEN,
Chairman, Subcommittee on Department of the Interior and Related Agencies, Committee on Appropriations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: I am writing to express the hope that your subcommittee will restore the budget item of $172,500 for the reconstruction of the courthouse building, village area, of the Appomattox National Monument.

I enclose a memorandum on the need for the reconstruction work in question together with a reproduction of a picture of Union and Confederate troops taken in front of the old courthouse on the day of the surrender in April 1865.

With kind regards, I am

Sincerely yours,

A. WILLIS ROBERTSON.

APPOMATTOX COURT HOUSE—CERTAIN INFORMATION CONCERNING NEED FOR RECONSTRUCTION WORK

The old village of Appomattox Court House existed at the time of the Civil War because the "courthouse" was built there in 1846. As the political and business center of Appomattox County, it was natural that shops, taverns, homes, and a jail should become a part of this development. This was the scene in the McLean House, located across the lawn from the courthouse, where the surrender of the southern troops took place on April 9, 1865. From that date and this significant event, the name "Appomattox Court House" was in-

delibly written on the pages of history. The courthouse was the largest building in the vicinity and the village's most prominent landmark. It was the reason for the existence of the village. It would be impossible to restore the village of Appomattox Court House to anything resembling its appearance at the close of the Civil War without reconstructing the old courthouse building. Visually, the restored courthouse would complete the setting provided for this small country village at the time of the surrender as shown in virtually every wartime sketch made in the area.

The 1963 budget requests $172,500 for the reconstruction of the courthouse building, village area. This envisions functional use of the building as well as completing the historic scene. In 1961, there were 156,400 visitors to Appomattox Court House National Historical Park and travel is expected to exceed 200,000 by the centennial year (1965). At present, the area is without an adequate visitor center or place where groups may be assembled under shelter for orientation and interpretive talks in inclement weather. The reconstructed courthouse would provide an auditorium for this urgent and growing visitor service need; space for administrative offices, modern comfort stations, etc., while the exterior and presence of the structure on its original site in the village setting will enhance and complete the historic scene. The rapid increase in visitation to the Appomattox Park, combined with the approach of its centennial on April 9, 1965, makes it essential that the situation be faced realistically and that this needed visitor service facility be provided in the 1963 program.

To consider the elimination of the project to restore the old courthouse building from the now nearly restored historic scene of the closing chapter of the Civil War, would, in effect, be comparable to the construction of a very fine theater complete with seats and audiovisual mechanical equipment but failing to provide electrical current and a projection screen.

AGENCY REQUESTS FOR AMENDMENTS TO HOUSE BILL

DEPARTMENT OF THE INTERIOR

U.S. DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., March 26, 1962.

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations,
U.S. Senate, Washington, D.C.

DEAR SENATOR HAYDEN: Referring to your letter of March 20, 1962, there are submitted proposed adjustments in the Department of the Interior and related agencies appropriation bill for 1963 presented in the form of amendments with an explanatory statement covering each change recommended. The amendments refer to page and line numbers of the bill as reported by the House Committee on Appropriations.

We appreciate the opportunity to present to the committee, recommendations for changes in the bill, which we consider essential to our operations. It is our desire to cooperate in every way in the consideration of these amendments.

Sincerely yours,

STEWART UDALL,
Secretary of the Interior.

BUREAU OF LAND MANAGEMENT

MANAGEMENT OF LANDS AND RESOURCES

(House hearings, pp. 58–91)
(Senate hearings, pp. 31–50)

Appropriation, 1962	$33,750,000
Estimate	41,552,000
House allowance	39,375,000
Restoration requested	2,177,000

(P. 2, line 9)

Amendment requested:

Page 2, line 9, strike out "$39,375,000" and insert in lieu thereof "$41,552,000" the estimate, or an increase of $2,177,000 in the appropriation.

HOUSE REPORT

"The committee recommends an appropriation of $39,375,000, a decrease of $2,177,000 in the budget estimate and an increase of $5,625,000 in the current year's appropriation * * *."

"* * * The reduction of $100,000 in 'General administration,' is due to the nonrecurring item provided for the current year for purchase of accounting equipment. The committee reductions reflect a disallowance of 223 of the 498 additional permanent positions requested in the estimates."

JUSTIFICATION

The amendment restores the reduction of $2,177,000 made by the House in the budget estimate. This amount is distributed to activities as follows:

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
1. Lease and disposal of land and mineral resources	$9,101,000	$10,835,000	$10,200,000	$635,000
2. Management of grazing lands	4,044,000	5,600,000	5,300,000	300,000
3. Forestry	7,181,000	8,800,000	8,300,000	500,000
4. Cadastral surveys	3,732,000	4,490,000	4,225,000	265,000
5. Soil and moisture conservation	6,429,000	8,525,000	8,525,000	
6. Fire suppression	400,000	400,000	400,000	
7. Maintenance of physical facilities	178,000	178,000	178,000	
8. Maintenance of access roads	25,000	25,000	25,000	
9. Weed control	909,000	909,000	909,000	
10. General administration	1,751,000	1,790,000	1,690,000	100,000
Committee reduction in travel, supplies and materials, and equipment			−377,000	377,000
Total	33,750,000	41,552,000	39,375,000	2,177,000

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$1,070,000
12	Personnel benefits	75,000
21	Travel and transportation of persons	118,000
22	Transportation of things	10,000
23	Rent, communications, and utilities	70,000
24	Printing and reproduction	4,000
25	Other services	571,000
26	Supplies and materials	164,000
31	Equipment	95,000
	Total	2,177,000

Committee reduction in travel, supplies and materials, and equipment.—The amendment restores $377,000, the total amount of the reduction made by the House in travel, supplies and materials, and equipment. Increases portrayed in the estimates for 1963 for these various object classes are in direct support of expanding programs of field work, especially programs of range management and rehabilitation, forest management and reforestation, cadastral surveys, and lands and minerals field examination work. The reduction in travel funds will be disruptive to the performance of field work as the preponderance of these funds is used for the per diem and local travel required in on-the-ground assignments. In this Bureau the term "travel" denotes not the usual conception of travel by supervisory personnel but largely the cost of maintaining field crews away from headquarters. This is true especially of cadastral survey, soil and moisture, and forestry crews. By doing this, it is possible to secure a full day's work in the field rather than have personnel spend several hours traveling back and forth with the consequent detriment in work performed.

Reductions in supplies and materials and equipment will defer selected projects in resource development and rehabilitation programs. Thus the committee reduction will adversely affect such programs as soil and moisture conservation and weed control for which the House has allowed in full the amounts budgeted on a program basis. Denial of these funds would affect the programs of the Bureau as indicated below:

Lease and disposal of lands and mineral resources	$50,000
Management of grazing lands	46,000
Forestry	93,000
Cadastral surveys	62,000
Soil and moisture conservation	115,000
Weed control	11,000
Total	377,000

1. *Lease and disposal of land and mineral resources.*—The program reduction of $635,000 in the lands and minerals activity would adversely affect the estab-

lished timetable for placing and maintaining this activity on a sound businesslike basis. Completion of the inventory of the public lands—initial analysis as called for by the President—would be delayed as would the subsequent detailed analysis so necessary to the development of positive long range management programs, including tenure adjustments. Both of these programs are considered essential in maintaining the gains achieved during the 18 month moratorium on nonmineral applications which is scheduled to end in September. At the end of February 1962, land office backlogs had been reduced 50 percent and several offices were in a current status. Field examination and classification backlogs had been reduced nearly 60 percent. Without full allowance of funds for the conduct of this activity these gains could be reversed once the moratorium is over and the Bureau again would be faced with mounting backlogs of applications.

The lease and sale of lands to State and local governmental bodies and nonprofit organizations would be seriously hampered. The increased trespass control program would be postponed indefinitely, prolonging and intensifying the major management problems involved.

Restoration of the full amount of the reduction is requested.

2. *Management of grazing lands.*—The House reduction of $300,000 in this activity would affect the core of this program—basic studies, management practices, and apportionment of grazing privileges. This reduction would necessitate extending the completion of needed resource inventories, dependent ranch property surveys, and adjudication of grazing privileges beyond the announced completion date of July 1, 1967. Improved trespass control also would be deferred.

Fire presuppression would be reduced and such action counteracts the efforts of the Bureau to reduce suppression costs of individual fires by investing in capability to take prompt and effective initial action on public land fires with consequent savings in resources.

Restoration of the full amount of the House reduction is requested.

3. *Forestry.*—The House reduction of $500,000 would seriously hamper the planned forestry program for fiscal year 1963. Sales offerings on the O. & C. grant lands and public domain lands would be reduced substantially resulting in a loss of revenue of approximately $2.6 million. From an economic standpoint, industry would lose an estimated 1,040 man-years of labor and the loss to the Nation because of end product and conversion values would approximate $51.3 million. Trespass work would be below the needed level and the proposed 1967 target for complete reduction of backlog cases could not be met.

The House cut would substantially reduce the Alaska protection program. There are 225 million acres of public domain land in Alaska requiring wildfire protection. Of these, only 130 million acres are receiving adequate protection. The Bureau will continue to exert positive protection on areas of high value; however, the remaining 95 million acres include the nesting ground of migratory waterfowl and the range of the caribou. Wildfires in this area are the main reason for diminishing caribou herds and waterfowl hatches.

Restoration of the full amount of the House reduction is requested.

4. *Cadastral surveys.*—The reduction of $265,000 would materially affect the survey program in the State of Alaska. These funds were to be used for 441,000 acres of State selection surveys, necessitated by the Alaska Statehood Act. In order to survey the 103,350,000 acres to which Alaska is entitled during the 25-year period established by the enabling act of July 7, 1958, it will be necessary to survey slightly over 4 million acres per year. Orderly acceleration to this annual rate of survey accomplishment would be deferred by the House reduction.

It is requested that the full amount of the reduction be restored.

10. *General administration.*—The House reduction in this activity in the amount of $100,000 is related by the committee to the purchase during the current year of accounting equipment for a like amount. The budget estimates in proposing an increase of $49,250 in this activity anticipated continued availability in the budget year of the amount related to equipment purchase. The Bureau is purchasing new equipment for two major reasons: (1) The existing accounting machines are obsolete and worn out, necessitating replacement; (2) the new equipment will have the capacity to assist in the implementation of cost accounting on July 1, 1962. Thus the equipment when installed will provide cost data by punchcards and other related needs of the cost accounting system. With the initiation of cost accounting in the budget year, the punchcard output from these machines must be processed and the other requirements of management to conduct cost accounting must be met. It is estimated that processing

costs alone will require approximately $30,000 a year in addition to the costs of preparing the detailed data. Thus the Bureau has contemplated continued availability of these funds in order to implement the cost accounting system for which the machines are being procured.

In addition, program increases in the other activities of the Bureau are substantial in fiscal year 1963. These increases place strenuous demands on Bureau administration through the sheer increased volume of procurement actions, accounting transactions, and personnel processing, recruiting, and training needs that are involved. Thus direct administrative support of expanded resource programs is the prime consideration in the proposed estimate of the modest amount over the total amount available for this activity in 1962.

In the consideration of the 1962 estimates for this activity, only the purchase of the new accounting equipment was allowed, while funds for administrative support of the Bureau's programs remained the same. The cumulative effect of expanding resource management programs in both fiscal year 1962 and fiscal year 1963 upon a stable level of administrative support will inevitably cause delays in the processing of documents and other administrative actions essential to the accomplishment of the conservation advances authorized by increased funds for those purposes. The House action places this activity in a critical position which will result in a reduction in the provision of essential cost data to management.

Full restoration is requested.

Committee reduction in permanent positions.—The reduction of 223 permanent positions from the 498 requested will seriously impede the proper performance of the Bureau's programs. While some reduction in permanent positions would be in order in those activities in which reduction of program funds have been made by the House, many of the Bureau's programs are conducted by force account in which one permanent position may supervise and professionally guide the work of a number of temporary and lesser skilled employees. In these areas reductions in permanent poistions appropriately should be modest in proportion to reduction in funds. The House reduction in requested additional permanent positions is 45 percent while the total reduction in increased funds is 27 percent. The reductions in programed funds would affect only 154 permanent positions. The balance of 69 positions would directly affect the capacity of the Bureau to organize and direct the expanded programs for which funds are provided by the House. The reductions in permanent positions by activity as a result of action by the House committee and of which full restoration is requested are as follows:

Lease and disposal of lands and minerals resources	94
Management of grazing lands	20
Forestry	70
Cadastral surveys	13
Soil and moisture conservation	6
Weed control	1
General administration	19
Total	223

BUREAU OF INDIAN AFFAIRS

EDUCATION AND WELFARE SERVICES

(House hearings, pp. 330–358)
(Senate hearings, pp. 70–85)

Appropriation 1962	$71,750,000
Estimate	82,827,000
House allowance	81,000,000
Restoration requested	1,827,000

(P. 5, line 12)

Amendment requested:

Page 5, line 12 strike out "$81,000,000" and insert in lieu thereof "$82,827,000", an increase of $1,827,000 in the appropriation.

HOUSE REPORT

"The Committee recommends $81,000,000, an increase of $9,250,000 in the 1962 appropriation and a decrease of $1,827,000 in the budget request. * * *

"* * * Due to delay anticipated in the construction of new school facilities and with appropriate economies in operations, the committee believes the reduction of $600,000 and 100 positions can readily be effected in the activity 'Expenses of educating Indian children in Federal facilities.'

"In allowing the increase of only $321,000 and 47 positions for the activity 'Maintaining law and order,' the committee feels that the Indian tribes should be encouraged to maintain this responsibility to the greatest extent possible."

JUSTIFICATION

This amendment restores the reduction of $1,827,000 made by the House in the budget estimate. This amount is distributed to activities as follows.

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
1. Educational assistance, facilities and services	$58,610,000	$68,369,000	$67,769,000	$600,000
2. Welfare and guidance services	8,391,000	9,348,000	9,348,000	
3. Relocation services	3,100,000	2,815,000	2,815,000	
4. Maintaining law and order	1,649,000	2,295,000	1,970,000	325,000
Committee reduction in travel, supplies, and materials and equipment			−902,000	902,000
Total	71,750,000	82,827,000	81,000,000	1,827,000

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$667,900
12	Personnel benefits	52,985
21	Travel and transportation of persons	545,615
26	Supplies and materials	425,500
31	Equipment	135,000
	Total	1,827,000

(*a*) *Educational assistance, facilities and services.*—The House reduced this activity on the basis of some delay in the construction of new schools and that the Bureau could effect further economies in operations. In order to have teachers available for the operation of its schools the Bureau must compete with all of the other school systems in the country in recruiting teachers. Practically all school systems recruit teachers by contract on a school year basis. This means that soon after graduation in June the new teachers begin entering into contracts for the next school year. This is also true of teachers who complete their contract with one school system at the close of the school year and begin negotiating with a different school system for the next school year. So, even if a Bureau school is only operated for half of a school year, it is still necessary to recruit the teachers as soon after the start of the fiscal year as possible and have them fully orientated and ready to begin teaching as soon as the facilities are available.

Many of the children in Alaska and on the Navajo Reservation will be introduced to the English language for the first time when they enter a Bureau school. Therefore any additional time that can possibly be devoted to the orientation and training of teachers, who will be teaching this type of student for the first time, can be used to great advantage.

The reduction of 100 positions under this activity will handicap the Bureau in its efforts to recruit teachers.

(*b*) *Maintaining law ond order.*—A reduction of $325,000 was made in the request for this activity and the report stated that "the committee feels that the Indian tribes should be encouraged to maintain this responsibility to the greatest extent possible." The Bureau has been following the policy expressed by the committee in connection with its law-and-order programs. However, the increase requested for fiscal year 1963 is needed primarily to either establish law-and-order programs on certain reservations in western Washington where there is currently no law-and-order program at all or to take over either completely or partially law-and-order programs from tribes who are financially or

otherwise unable to carry out an effective law-and-order program for the protection of life and property.

The reduction of 47 positions under this activity will mean that the Bureau will be unable to expand the prevention part of its law-and-order program by employment of probation and parole officers. Experience has shown that many of those who violate the law are repeaters and that, after a first or subsequent offense, if a counseling and guidance service in the form of a probation and parole service is provided, many of these persons will not become repeat offenders. This service would materially reduce the daily workloads of the Indian courts and relieve in a large measure the overcrowding in the reservation jails.

It will mean that the work of the Indian courts will not be made more effective and expeditious because necessary clerical help cannot be furnished. Criticism leveled at the Bureau and the Department during hearings before a constitutional rights subcommittee in 1961 dealt with the Bureau's failure to provide adequate clerical assistance, especially when departmental regulations provide for such assistance.

It will mean that the Bureau will be unable to remove Indian judges from the sphere of tribal and local political influence by making them Bureau employees. When judges are employed by tribes, the common criticism is that they are beholden to tribal councils or particular individuals and are unable to administer justice fairly or equitably. This area of Indian law and order provides perhaps the most used vehicle for critics of the Bureau and the Department as well as the Indian people themselves. The Secretary's Task Force on Indian Affairs heard many complaints of this nature. Many criticisms of this nature were made before the Subcommittee on Constitutional Rights last year during its hearings in Washington, D.C., on the Indian law-and-order system, as well as during its field hearings.

It will mean that the Bureau will be unable to take over from tribes financially unable to carry the burden the financial responsibility for reservation law enforcement. These tribes include the Oglala Sioux, the Hopi Tribe, the Gila River Pima-Maricopa Tribe, the Salt River Pima-Maricopa Tribe, and the Papago Tribe. These tribes have indicated their inability to carry on. If they can not, law enforcement and protection will be reduced by the extent of their inability. Even if they can continue, the problem is presented of divided responsibility, part of it with the Bureau and part of it with the tribe. This has never proven satisfactory as divided responsibility in this field leads to inefficient operations which are costly but not effective.

(*c*) *Committee reduction in travel, supplies and materials, and equipment.*—A general reduction of $902,000 was made by the House in travel, supplies and materials, and equipment. The travel funds requested by the Bureau under this appropriation item not only covers the cost of travel of Bureau employees who must travel great distances because of the tremendous territory covered by Bureau installations but also the travel of many Indian people. Under the education program students are transported to off-reservation schools. The major portion of these students are transported from Alaska to schools in the continental United States for additional schooling after they have completed their elementary education. The Bureau also transports Navajo students from their homes to boarding schools for elementary schooling and to off-reservation high schools when they have completed their elementary education.

Under this appropriation item, the Bureau pays for the travel of individual Indians and their families who are participating in the adult vocational training and relocation programs.

An extremely large percentage of the supplies, materials, and equipment purchased under this appropriation item are used in the operation of Bureau schools. Some of the items purchased are food, fuel for heating and cooking, bedclothing and cleaning articles for dormitories, text and library books, audiovisual aids, soundscribers and language master machines to help children hear and practice English, school buses, and numerous other items.

Even though the reduction proposed is a general reduction in travel, supplies and materials, and equipment it has a very definite direct effect on the programs financed under this appropriation item of which the education program is by far the largest.

BUREAU OF INDIAN AFFAIRS

RESOURCES MANAGEMENT

(House hearings, pp. 358–384)
(Senate hearings, pp. 109–125)

Appropriation, 1962	$29,075,000
Estimate	34,417,000
House allowance	34,300,000
Restoration requested	377,000

(P. 5, line 21)

Amendment requested:

Page 5, line 21, strike out "$34,300,000," and insert in lieu thereof "$34,677,000," an increase of $377,000 in the appropriation.

HOUSE REPORT

"The committee recommends an appropriation of $34,300,000, an increase of $5,225,000 in the 1962 appropriation and a decrease of $117,000 in the budget estimate. * * *"

JUSTIFICATION

This amendment restores the reduction of $377,000 made by the House in the budget estimate. This amount is distributed to activities as follows:

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
1. Forest and rangelands	$3,511,600	$4,300,000	$4,300,000	
2. Fire suppression	140,000	140,000	140,000	
3. Agricultural and industrial assistance	2,912,189	5,395,000	5,395,000	
4. Soil and moisture conservation	5,175,200	5,352,000	5,612,000	
5. Maintenance of roads	2,849,500	2,850,000	2,850,000	
6. Development of Indian arts and crafts	202,200	300,000	300,000	
7. Management of Indian trust property	4,649,111	5,268,000	5,268,000	
8. Repair and maintenance of buildings and utilities	8,547,400	9,562,000	9,562,000	
9. Operation, repair and maintenance of Indian irrigation systems	1,087,800	1,250,000	1,250,000	
Committee reduction in travel, supplies and materials, and equipment			−377,000	$377,000
Total	29,075,000	34,417,000	34,300,000	377,000

A breakdown of the restoration requested by objects of expenditure follows:

21	Travel and transportation of persons	$60,000
26	Supplies and materials	254,000
31	Equipment	63,000
	Total	377,000

Committee reduction in travel, supplies and materials, and equipment

Restoration of the reduction of $377,000 in the budget estimate is requested, or an appropriation of $34,677,000. This is an increase of $260,000 over the budget estimate as a result of the addition of $260,000 by the House for soil and moisture conservation.

The requested increase of $180,221 for travel and transportation of persons under this appropriation item is rather modest when the following factors are considered. The great distances that must be covered, the necessity of technical employees under this appropriation to visit the individual Indian homes, reservations, forests, farms, irrigation projects, and other installations if the Secretary is to be able to carry out his trust responsibility in the management, protection, and economic development of the natural resources of the Indian people.

The need for equipment under this appropriation item is very great. Firefighting and road maintenance equipment must be replaced when it becomes obsolete. This equipment has to be replaced not only to do the job but also for the safety of the individuals who must operate it, often times in emergencies.

Since this is a management of resources program, supplies and materials such as the necessary gasoline, oil, tires, and other parts for the operation of the above-mentioned equipment, seed and fertilizer for reseeding range lands, saplings and other supplies and materials used in reforestation, the many items of supplies and materials used in the operation of a roads maintenance program, and numerous items such as paint, putty, glass, lumber, etc., used in the repair and maintenance of buildings and utilities are extremely important.

BUREAU OF INDIAN AFFAIRS

CONSTRUCTION

(House hearings, pp. 384–437)
(Senate hearings, pp. 131–135)

Appropriation 1962	$39,561,000
Estimate	54,765,000
House allowance	52,000,000
Restoration requested	3,550,000

(P. 6, line 6)

Amendment requested:

Page 6, line 6, strike out "$52,000,000" and insert in lieu thereof "$55,550,000", an increase of $3,550,000 in the appropriation.

HOUSE REPORT

"The committee has allowed $52,000,000 for construction of Indian schools, dormitories, quarters, utilities, and other buildings and irrigation systems, an increase of $12,439,000 in the 1962 appropriation and a decrease of $2,765,000 in the budget request. It is estimated that with the present backlog and the projected increase in school population for 1963 that there will be a total of over 7,500 additional Indian pupils requiring seats by September 1963. The amount allowed will provide school facilities for about 4,000 additional students leaving an estimated out-of-school backlog of about 3,500 to be provided for in subsequent years. The appropriation will also provide for replacement of about 3,600 seats in some of the most hazardous, unsafe, and substandard buildings in the existing Bureau school plants. The amount provided includes $785,000 for construction of the Laguna Consolidated School in New Mexico. Considering the unobligated balance of over $21 million under this item as of Feb. 1, 1962, it is believed that the reduction recommended of $2,765,000 or 5 percent, will readily be absorbed through slippage in the 1963 construction program. The committee expects that the Bureau will continue to utilize standard plans and specifications and that every effort will be made to hold down construction costs."

JUSTIFICATION

The amendment restores the reduction of $2,765,000 made by the House in the budget estimate and adds $785,000 above the budget estimate for construction of the Laguna Consolidated School in New Mexico, which was added to the 1963 construction program by the House without additional funds. This amount is distributed to activities as follows:

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
1. Buildings and utilities	$35,861,000	$50,483,000	$47,718,000	$3,550,000
2. Irrigation systems	3,700,000	4,282,000	4,282,000	
Total	39,561,000	54,765,000	52,000,000	3,550,000

A breakdown of the restoration request by objects of expenditure follows:

32	Lands and structures	$3,550,000

The restoration of $3,550,000 would enable the Bureau to provide for some essential safety and sanitary projects as well as replace 1,140 classroom seats that are presently housed in buildings that are serious safety hazards to the occupants. The Bureau can prepare the necessary drawings and contracts for the entire program as originally submitted to the Congress for fiscal year 1963. The restoration would also provide for more adequate alterations and improvement program.

The restoration of the $3,550,000 will enable the Bureau to correct the following unsafe, unsanitary, or substandard facilities or utilities at the following locations:

New construction:	
Oraibi School multipurpose room	$180,000
Owyhee jail	157,000
Northern Cheyenne jail	163,000
Busby fire station	24,000
Wingate water improvements	125,000
Borrego Pass water improvements	25,000
Cove School water	105,000
Salt River water and sewer	75,000
Uintah and Ouray water storage	42,000
Colville Agency sewage lagoons	76,000
Mescalero water and sewer	250,000
Phoenix classroom building	922,000
Wahpeton dormitories	739,000
Chilocco shop building	218,000
Riverside School and dining hall	367,000
Subtotal	3,468,000
Major alterations and improvements	82,000
Total	3,550,000

Out of a total availability of $36,274,304 for buildings and utilities for fiscal year 1962, the Bureau has been able to obligate $18,853,215 through February 28, 1962. This is an extremely good record considering the fact that large amounts of time must be consumed during the first part of the fiscal year in the preparing of plans and advertising for bids on contracts. Based on the record through February 28, 1962, and the schedule for spring bid openings, it appears that the Bureau will obligate all of the funds available for the construction of buildings and utilities during fiscal year 1962.

BUREAU OF INDIAN AFFAIRS

Road Construction (Liquidation of Contract Authorization)

(House hearings, pp. 438–447, 454)

(Senate hearings, pp. 140–145)

Appropriation 1962	$16,000,000
Estimate	17,000,000
House allowance	16,000,000
Restoration requested	1,000,000

(P. 6, line 21)

Amendment requested:

Page 6, line 21, strike out "$16,000,000" and insert in lieu thereof "$17,000,000", an increase of $1,000,000 in the appropriation.

HOUSE REPORT

"The committee recommends $16,000,000, the same as the 1962 appropriation and a decrease of $1,000,000 in the budget request, to liquidate in fiscal year 1963 the obligations incurred under the contract authorization for Federal-

aid highway roads and the Navajo-Hopi roads. Because of slippage in this program during the current fiscal year, the amount provided will meet adequately cash requirements during the next fiscal year. As of February 1, 1962, the Bureau had obligated only $6,070,000 of the $17,518,000 available during the current year, and had an unexpended balance of $8,365,000."

JUSTIFICATION

The amendment restores the reduction of $1 million made by the House in the budget estimate for this appropriation. This amount is distributed to activities as follows:

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
1. Federal-aid highway roads	$11,000,000	$12,000,000	$11,000,000	$1,000,000
2. Navajo-Hopi roads	5,000,000	5,000,000	5,000,000	
Total	16,000,000	17,000,000	16,000,000	1,000,000

A breakdown of the restoration requested by object of expenditure follows:

32 Lands and structures $1,000,000

The restoration of the $1 million will allow for the full utilization of the contract authorization based on (1) acceleration of expenditures, (2) bid openings which should increase the obligations requiring liquidating funds, and (3) by using the force account method for the construction of many projects.

The expenditures through February of the current fiscal year are already $13,758,177 as compared to $13,481,479 for all of fiscal year 1961.

Schedule of bid openings during the winter months of November through March amounted to only $1,652,000 in fiscal year 1961 in comparison with $8,597,000 in fiscal year 1962.

To provide more employment for Indians, the Bureau will soon be constructing many projects by the force account method. This will require additional cash for tooling-up, payrolls, and for construction supplies and materials.

It was for this reason that it was estimated that $17 million will be required as a safe margin for payment of all bills as they become due before the end of the 1963 fiscal year.

BUREAU OF INDIAN AFFAIRS

General Administrative Expenses

(House hearings, pp. 454–458)
(Senate hearings, pp. 153–156)

Appropriations 1962	$3,967,000
Estimate	4,372,000
House allowance	4,000,000
Restoration requested	372,000

(P. 6, line 25)

Amendment requested:

Page 6, line 25, strike out "$4,000,000" and insert in lieu thereof "$4,372,000," an increase of $372,000 in the appropriation.

HOUSE REPORT

"The committee recommends an appropriation of $4,000,000, an increase of $33,000 in the 1962 appropriation and a decrease of $372,000 in the budget estimate. On an available funds basis, the amount allowed is an increase of $78,172 due to transfers in the estimates of $45,172 to the General Services Administration. The amount allowed includes $25,000 for boards of U.S. civil service examiners and $53,172 for the employee training program. The committee has also disallowed $100,000 of the proposed increase of $371,500 in the

amount budgeted for transfer from program funds for administrative expenses. The transfer allowed of $2,900,000 together with the direct appropriation of $4 million, should be adequate for these requirements during fiscal year 1963. The amount allowed reflects a reduction of 50 permanent positions from the budget request."

JUSTIFICATION

This amendment restores the reduction of $372,000 made by the House in the budget estimate. This amount is distributed to activities as follows:

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
1. Departmental office	$1,082,000	$1,202,000	$1,135,172	$66,828
2. Field offices	2,885,000	3,170,000	2,864,828	305,172
Total	3,967,000	4,372,000	4,000,000	372,000

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$157,833
12	Personnel benefits	12,766
21	Travel and transportation of persons	94,340
22	Transportation of things	3,578
23	Rent, communications, and utilities	22,000
24	Printing and reproduction	2,000
25	Other services	5,000
26	Supplies and materials	56,537
31	Equipment	17,946
	Total	372,000

The restoration of $372,000 will allow $46,828 additional for the executive training program, $160,172 for operating and travel expenses including increased travel cost authorized by Public Law 87–139, and $165,000 for increased cost of operations at the agency level.

The administrative staff at some of the agencies is as follows: Superintendent, administrative officer, property clerk, and clerk-stenographer. This staff is inadequate as the superintendent must spend a good part of his time with administrative details. The addition of one clerk at some of these agencies will allow the superintendent to spend more of his time in seeing that the programs for which he is responsible are carried out and also to spend more time working with tribal groups.

The reduction of 50 positions made by the House eliminates 32 positions financed by general administrative expenses and 18 by program funds. The 32 positions eliminated from this appropriation includes 23 general clerks, 6 property and supply assistants, and 3 executive training positions.

The restoration will allow for the filling of these 32 important positions. The employment of general and property clerks at the agency offices will materially improve the handling of administrative functions which have increased in relation to expanded program activities in education and welfare, resources management and construction. These clerks will supply the necessary clerical assistance in the receipt, distribution, and accounting for property and supplies, and to assist in the billing and collection of revenues accruing from program operations.

The Bureau has not received any increase under this appropriation item for increased cost of operations for the past 10 years. Consequently, the increased cost of heat, light, supplies and materials, equipment, and travel under Public Law 87–139 has had to be absorbed. Each time there is any increase in one of these items that must be absorbed, other items under the program must be reduced and thereby render the programs and services less effective.

The restoration of $46,828 requested for the executive training program will allow the Bureau to operate this program at the level proposed in the budget. The budget estimate of $100,000 contemplated the financing of six training positions under this program. The House allowed $53,172 or sufficient funds to fully finance the salary and expenses of three of these positions.

Under this program the Bureau proposes to train outstanding employees with potential for further development as Bureau administrators and managers.

The training given these individuals will be designed to prepare them to fill vacancies in the executive ranks as they develop. At the present time when an executive position is vacated at one of the agencies, area offices, or in the central office because of death, retirement, or for other reasons the Bureau does not always have and individual available with sufficient experience and training to immediately step into this position and keep operations running smoothly. Considering the size and complexity of the Bureau of Indian Affairs, it is felt that six training positions will enable the Bureau to train individuals in various fields and make this a more efficient and effective program.

BUREAU OF INDIAN AFFAIRS

ADMINISTRATIVE PROVISIONS

(House hearings, none)
(Senate hearings, none)
(p. 7, lines 4 and 5)

Amendments requested:

(1) Page 7, lines 4 and 5, strike out the following: "two hundred and twenty" and insert in lieu thereof the following: "two hundred and forty-six."

(2) Page 7, line 5, strike out the following: "fifty" and insert in lieu thereof the following: "seventy-one."

HOUSE REPORT

The House report made no statement concerning this item.

JUSTIFICATION

The amendments will provide authority to raise the limitation on the total number of motor vehicles that can be purchased to 246 as well as raise the limitation to 71 for the purchase of special police-type vehicles, as requested in the budget estimate for fiscal year 1963.

The overall increase in the total number of motor vehicles to be purchased is necessary for the Bureau to assume its responsibility in connection with law enforcement on certain Indian reservations.

The increase in the purchase of police-type vehicles is required to establish law and order programs on certain reservations in western Washington where there is currently no law and order program, or to take over either completely or partially law and order programs from tribes who are financially or otherwise unable to carry out an effective law and order program for the protection of life and property.

NATIONAL PARK SERVICE

MANAGEMENT AND PROTECTION

(House hearings, pp. 561–612 and 622–643)
(Senate hearings, pp. 635–665)

Appropriation 1962	$21,811,500
Estimate	27,240,000
House allowance	25,425,000
Restoration requested	1,815,000

(P. 9, line 12)

Amendment requested:

Page 9, line 12, strike out "$25,425,000" and insert in lieu thereof "$27,240,000", the estimate, or an increase of $1,815,000 in the appropriation.

HOUSE REPORT

"The committee recommends an appropriation of $25,425,000, an increase of $3,613,500 in the 1962 appropriation, and a decrease of $1,815,000 in the budget estimates. The increases allowed include: $195,000 for management of new areas including $15,000 for the Lincoln Boyhood National Memorial, Ind.; $1,225,669 for operation of newly constructed facilities; $1,114,718 for operating costs brought about by increased visitor use and extension of the operating season; $177,061 for additional ranger services and interpretive functions in the

Washington and regional offices; $150,000 for 15 additional U.S. Park Police; $96,375 to finance under this appropriation certain positions now financed from land acquisition funds; $103,450 for expansion of water resources studies; $160,800 for the archeological investigations and salvage program; $12,470 for the concessions management and audit staff; $182,300 for the employee training program; $127,700 for leasing additional communication facilities and conversion of existing park radio systems; and $251,114 for information publications, employees compensation fund payments, an additional mobile tree crew, and for soil and moisture conservation.

"The net reduction by the committee of $1,815,000 includes: an increase of $15,000 for the Lincoln Boyhood National Memorial and disallowance of $98,015 of the increase requested of $195,356 for expansion of ranger services functions in the Washington and regional offices; $330,000 of the increase of $480,000 requested for the U.S. Park Police; $300,000 to initiate a comprehensive history and natural history investigation program; $815,680 for recreation planning; and $131,305 to expand the historic American buildings and sites surveys. In addition, the committee has imposed a general reduction of $155,000 in the overall request for travel, and materials, and equipment. The reductions imposed by the committee reflect a disallowance of 147 of the additional permanent positions proposed in the budget estimate.

"As the President in his February 28, 1962, message on conservation stated that the recommendation of the Outdoor Recreation Resources Review Commission to create within the Department of Interior a Bureau of Outdoor Recreation is to be adopted to carry out the planning functions already assigned to the Department of Interior and to administer the program of Federal assistance for State agencies, the committee has deleted, as indicated above, the proposed increase of $815,680 for recreation planning. Continuation of the present appropriation level of $1,609,320 will provide adequate funds pending creation of the new bureau. At that time the committee will expect that the amounts provided in the bill for nationwide recreation planning, $504,337, and for cooperation with States and other agencies, $596,759, will be transferred to the new bureau.

"The committee does not believe that the proposed move of the regional office of the National Park Service from Omaha, Nebr., to Cheyenne, Wyo., is warranted, and has disapproved the use of any funds for this purpose.

"With the ever mounting fund requirements to construct, maintain, and manage facilities required in our national parks, the committee is concerned at the failure of the National Park Service to take appropriate steps to increase revenues. With 78 million visitors to the national parks in 1961, revenues received by the National Park Service amounted to only $5,660,000 or less than 7 cents per visitor; $4.8 million of these receipts were from automobile, admission, guide, and other fees and only $520,000 was from business concessions. Considering that these concessions had a gross income during this period of about $48 million, the committee believes that considerable increase in franchise fees is warranted. It is therefore requesting that the National Park Service study this question and report to the committee next year on appropriate steps to be taken to materially increase the revenues collected by the Federal Government."

JUSTIFICATION

The amendment restores the following reductions made by the House in the budget estimate for this appropriation:

Expansion of ranger services functions in the Washington and regional offices	$98,015
U.S. Park Police	330,000
To initiate a comprehensive history and natural history investigation program	300,000
Recreation planning	815,680
To expand the historic American buildings and sites surveys	131,305
Committee reduction in travel, supplies and materials, and equipment	155,000
Less amount added by the House for the Lincoln Boyhood National Memorial, Ind	15,000
Total	140,000
Total	1,815,000

This amount is distributed to activities as follows:

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
1. Management of park and other areas	$16,912,035	$20,400,000	[1] $19,987,041	$412,959
2. Forestry and fire control	1,097,225	1,260,000	1,244,944	15,056
3. Soil and moisture conservation	106,540	200,000	200,000	
4. Park and recreation programs	3,238,170	4,910,000	3,663,015	1,246,985
5. Concessions management	457,530	470,000	470,000	
6. Committee reduction in travel, supplies and materials, and equipment			−140,000	140,000
Total	21,811,500	27,240,000	25,425,000	1,815,000

[1] Includes $15,000 for the Lincoln Boyhood National Memorial, Indiana, which was not included in the budget estimate.

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$1,177,000
12	Personnel benefits	87,000
21	Travel and transportation of persons	65,000
22	Transportation of things	1,000
23	Rent, communications, and utilities	50,000
24	Printing and reproduction	15,000
25	Other services	240,000
26	Supplies and materials	120,000
31	Equipment	60,000
	Total	1,815,000

1. *Management of park and other areas.*—The restoration of $552,959 requested under this activity is for the following:

Additional staffing and general expense funds for ranger services functions in the Washington and regional offices	$82,959
U.S. Park Police	330,000
Travel, supplies, materials and equipment	140,000
Total	552,959

Additional staffing and general expense funds for ranger services functions in the Washington and regional offices

About 500 permanent and 700 seasonal rangers provide protective services for the national park system. These services are coincident to over 79 million visitors annually and to the preservation and use of natural, historic, and prehistoric resources under widely diverse conditions of climate, terrain, flora, and fauna. They are related not only to varying conditions within the parks, but successful operations are dependent, too, upon coordinated cooperative effort with outside individuals, groups, and agencies with interests in or adjacent to the parks. The requirements of servicewide direction for these protection activities were recognized in 1958 when funds were provided, in part, to establish the Division of Ranger Activities (now Division of Ranger Services) in the Washington office. In 1960, additional funds were appropriated to provide for a division chief in each of the regional offices except region 5.

The organization of the Division of Ranger Services, as approved by the Department on March 12, 1957, includes a Branch of Park Forest and Wildlife Protection and a Branch of Visitor Protection in the Washington office with counterparts in each of the five regional offices. Funds currently available provide for for minimum staffing for the Office of the Chief of the Division and the two branches in the Washington office; for a division chief and a secretary in four of the regional offices; and partially for a Branch of Park Forest and Wildlife Protection in all the regional offices. Presently available funds do not provide for a division chief and secretary for the region 5 office or for the staffing of the Branch of Visitor Protection or for any wildlife management positions in any of the regional offices.

With the increase in protection workload generated by the increase in park visitor use and in keeping pace with other facets of the Mission 66 program, the Service's protection functions can be more effectively executed with three

branches in the Division of a Ranger Services in the Washington office instead of two. Accordingly, a Branch of Park Protection and Branch of Wildlife Management are being established in lieu of the originally approved Branch of Park Forest and Wildlife Protection.

The Branch of Visitor Protection for which staffing is provided only in the Washington office is responsible for providing protection and assistance to park visitors and for the protection of historic, prehistoric and scientific values. The new Branch of Park Protection is responsible for the conservation and protection of all soil and vegetation in the parks. The new Branch of Wildlife Management, for which no regional office staffing is currently provided, is responsible for wildlife management and for maintaining natural conditions representing a proper balance between the plants and animals in the parks.

The following statement shows the increased staffing for the Washington and regional offices proposed in the estimate and the positions eliminated by House action:

Washington office

Office of the Division Chief:	
Training officer, GS-13	Allowed.
Clerk-stenographer, GS-4	Disallowed.
Branch of Visitor Protection:	
Statistician, GS-12	Allowed.
Statistical clerk, GS-5	Disallowed.
Secretary, GS-5	Allowed.
Branch of Wildlife Management:	
Branch chief, GS-14	Allowed.
Clerk-stenographer, GS-4	Disallowed.

Regional offices

Office of Division Chief:	
Division chief, GS-14, (1)	Allowed.
Secretary, GS-5 (1)	Disallowed.
Branch of Wildlife Management: Wildlife biologist, GS-12 (3)	Allowed.
Branch of Visitor Protection: Branch chief, GS-13 (5)	Disallowed.

The two clerk-stenographer positions included in the estimate for the Washington office, but eliminated by the House action, are badly needed for efficient operation and to insure the full utilization of the professional and administrative employees in the Division. Until such additional positions are provided, it will be necessary to assign some of the work to clerical and stenographic employees in other organizational units. This is not a satisfactory, efficient, or economical arrangement and it will not be possible to meet the full workload.

The statistical clerk position eliminated by House action is needed to assist the present activities analysis staff, consisting of two positions, and the new GS-12 statistician position, in providing data and other essential services required for management and planning as the Service meets increased visitor use. From an annual figure of 37 million visits to the parks administered just over a decade ago, the flood will reach about 83 million in 1962. The system for collecting and reporting public use statistics which was established in 1959, signaled the generation of more that 900 separate series about visitor use and activities in the parks. These series relate to such subjects as overflow camping, patronage of concessioner accommodations, patterns of party size, dispersion of visitors within parks, comparative traffic flows through different park entrances, special uses, such as boating, swimming, and skiing; and analysis, and dissemination of these data. This function has increased in volume as public use has increased. It has been broadened in scope since its inception to provide analytical data for many other National Park Service planning and operating functions. Dependable data must be available in usable form if planning and management decisions are to be made on a sound basis.

The regional office positions eliminated by the House action include a secretary for the region 5 office in Philadelphia, Pa., and a Chief of Branch of Visitor Protection for each of five regional offices. The situation with respect to the secretarial position is the same as the Washington office situation described in the foregoing. As above indicated, no staffing is currently provided for the Branch of Visitor Protection in any of the regional offices. Restoration of funds for these positions is urgently requested in order that minimum effective staffing of the regional offices for direction and coordination of visitor protection in the parks may be brought about. To meet successfully

the total visitor protection responsibility, coordinated action on a servicewide basis at all organizational levels is essential. It cannot be done on an individual park basis. Additional staffing in the regional offices is essential if the required levels of performance and accomplishment are to be attained.

Additional Park Police and to meet increased requirements of existing force

The estimate proposed an increase of $480 000 to employ 62 additional police officers bringing the total strength of the force to 284 officers and civilians and to cover increased costs of existing force. With this increase, the manpower of the Park Police force would still be 92 short of the recommended strength. The increase of 62 positions requested in the estimate would provide a realistic start toward building a force capable of providing adequate protection. However, the House disallowed $330,000 and 47 of the new positions included in the request.

The Park Police force is the only one in the metropolitan area operating one-man cruisers. This has been necessary to give as much geographic coverage as possible with the limited manpower but it is not accepted as satisfactory policing in a metropolitan area. In case of accident, one man cannot satisfactorily care for the injured, handle traffic, and make reports. In the case of outbreaks, one man is seldom able to handle the situation alone. It also means that whenever an officer is required to leave his cruiser, radio contact is lost thereby reducing the efficiency of the force.

After excluding officers necessary for supervision; operating communications; performing records, equipment, investigation, and training functions; handling crowds for approximately 400 special events per year and furnishing numerous escorts; less than one-half of the force is available for regular patrol duty. Considering that it takes 5 men to man a patrol post, only about 20 such posts can be manned regularly to protect life and property in approximately 39,000 acres of park land and regulate traffic over 200 miles of roads and parkways.

All new Park Police positions provided for in recent years have been for new parks only. It is urgent that steps be taken immediately to enlarge the Park Police force to the strength that has been determined by competent authority to be necessary. The recent increased rate of crime occurring on the streets of Washington is beginning to be felt also in the parks and unless preventive measures are taken by increasing the number of officers available for the patrol of these areas it may become literally unsafe for respectable citizens to visit the parks of the Nation's Capital.

Of the $150,000 allowed by the House, $46,000 is needed to meet increased requirements of the existing force leaving only $104,000 for 15 additional officers. This will only be sufficient to cover three patrol posts. Restoration of the full amount of the House reduction is requested.

Travel, supplies, materials, and equipment

Of the $155,000 reduction imposed by the House to be applied to the overall request for travel, supplies, and materials, and equipment, $15,000 is offset by the amount added by the House committee for initiating management functions at the newly authorized Lincoln Boyhood National Memorial, when established. This leaves a net reduction of $140,000 to be applied to the items stated in the House report, restoration of which is requested. These funds are needed for the proper balance of the whole program, in executing the operating functions of the Service. Supplies, materials, equipment, and travel expense funds must be available or the employees of the Service cannot perform their assigned work. Most of the reduction would have to be in park operating funds thus offsetting increases provided in the appropriation for management, protection, and interpretation of the parks.

2. *Forestry and fire control.*—Restoration of $15,056 disallowed by the House is requested to strengthen forest management functions of the Washington office by providing for a GS–12 forester and general expenses of the existing staff. This position is 1 of the 147 disallowed by the House. Technical staff direction, including investigation and planning, and the development of procedures and standards for vegetation protection, and structural fire control is provided for park areas under the forest management program and this position is needed to further this program.

The Washington office cannot provide adequate assistance to the parks in matters concerning forest management with the present staff. The expansion of public-use facilities under the Mission 66 program, such as new and enlarged campgrounds, road improvements, and new structures, has intensified vegetation protection and structural fire control functions. Man-caused fire risks increase

and vegetation protection and management become more complex with expanding use requiring close attention to investigations, planning, and programing to maintain a consistently high standard of protection of the basic forest resources, visitor use structures, and of the people themselves. Another factor contributing to these deficiencies relates to the development of new methods, techniques, materials, and equipment in the fields of forest fire control and insect and disease control throughout the country. The Service must keep abreast of these new developments and adopt those that are suitable and appropriate for use and will increase the effectiveness and efficiency of protection within the parks. This requires close cooperation with other agencies and the development of technical procedures and standards for application within the parks administered.

The value of the vegetative cover encompassed within the national park system is inestimable. The national parks preserve remnants of some of the finest virgin forests and other vegetative types in America. Fire constitutes the greatest menace to the enjoyment of the parks since it not only threatens their beauty but may destroy watersheds, wildlife and their habitat, valuable property, including priceless historic objects and buildings, and may even endanger human life. The values at stake require that the Service fire control organization achieve and maintain the highest standard of efficiency.

There is a demonstrated need in the Washington office for a forester position the incumbent of which will be specifically responsible for maintaining a consistently high standard of fire protection. The filling of such a position will make possible additional planning, evaluation of new techniques and equipment, improved cooperation with other agencies and specialized training of fire control personnel. Accomplishments in these fields will result in reductions in fire suppression costs and losses by fire, and the restoration of the funds disallowed by the House are fully justified on this basis.

4. *Park and recreation programs.*—The restoration of $1,246,985 requested under this activity is for the following items disallowed in total by the House:

To accelerate the programs for nationwide recreation planning, national park system planning, and cooperation with States and other agencies in their park and recreation planning	$815,680
To commence a comprehensive history and natural history investigation program	300,000
To meet increased requirements for following programs:	
Historic American buildings survey	75,825
Historic sites survey	55,480
Total	1,246,985

To accelerate the program for nationwide recreation planning, national park system planning and cooperation with States and other agencies in their park and recreation planning

The increase of $815,680 requested for fiscal year 1963 is necessary because of the increasing public demand for outdoor recreation, as reported by the Outdoor Recreation Resources Review Commission and reflected in the natural resource programs of the administration. These funds are needed to provide for recreation resource programs outlined in the President's special messages on natural resources sent to the Congress on February 23, 1961, and on March 1, 1962. Experience in the first half of Mission 66 has shown the need to accelerate the planning and acquisition of the Nation's diminishing outdoor recreation resources. This requires broad regional and statewide plans as well as the detailed planning studies required to evaluate specific park and recreation area proposals.

Of increasing importance is leadership, coordination of effort, and cooperative assistance to governmental agencies administering parks and recreation areas in meeting the unprecedented pressures now facing them. Many State, county, and local park organizations are relatively new and are operating with a minimum planning staff or none at all. While the Service's cooperative planning program has been limited in recent years to assistance to other Federal agencies and the States, the need for such assistance at county and local areas has become increasingly evident and is provided for in the requested increase in planning funds. This activity is concerned with the full cross section of problems facing park agencies—selection of areas, acquisition, planning, development, operation, and related legislation and financing.

The deletion of the total increase of $815,680 in the budget estimate for park and recreation planning which includes funds for 75 of the 147 positions eliminated by House action will seriously delay the development of coordinated plans and programs for adequate public parks and recreation areas. This will result in the loss of many opportunities to preserve and develop such areas for public use and in the weakening of the agencies and organizations that must provide outdoor recreation. Assistance to the Housing and Home Finance Agency and the Area Redevelopment Administration in the development of recreation facilities for urban regions and tourist attractions for depressed areas must, of necessity, be curtailed.

A few hundred thousand dollars of donated funds for planning made possible the whole seashore conservation program of recent years. It was a prudent investment. The Government had to seek such donated funds because appropriated funds were not available for such planning. Unless there is a substantial increase in recreation resource planning funds, as requested herein, the Federal Government will still be in the position of being unable to make adequate plans for public outdoor recreation.

In disallowing the requested increase, the House committee referred to the possibility of establishing a new Bureau of Outdoor Recreation and stated that "continuation of the present appropriation level of $1,609,320 will provide adequate funds pending creation of the new Bureau." The budget estimate requested funds for work that should be done in 1963 whether by the National Park Service in total, or partially by it and partially by a new Bureau.

The possible establishment of a new Bureau does not alter the job to be done or the fund requirement therefor. Accordingly, the required funds should be provided as requested in the estimate with the understanding that appropriate amounts thereof would be transferred to the new Bureau when it is established. As the responsibilities now assumed by the National Park Service, but which might be transferred to the proposed new Bureau have not as yet been firmed up, no basis obtains at this time upon which to determine the amounts of currently available funds that should be retained by the National Park Service and the amounts that would be transferred to a new Bureau. In view of this situation, it appears premature to specify amounts that would be expected to be transferred to a new Bureau as was done in the last sentence on page 7 of the House report.

To commence a comprehensive history and natural history investigations program

House action eliminated this item in its entirety from the budget estimate. Restoration of the $300,000 is earnestly recommended so that the Service will be in a better position to carry out its responsibility to preserve the national parks, and to provide for their appropriate use, development, and interpretation.

The purpose of the research is to seek out the wealth of data from the natural, scientific, and historical areas in the national park system, that is urgently needed to arrive at sound long-term policy decisions, and to back up action programs involved in the preservation, development, management, and interpretation of such areas.

In describing how the proposed research program would be carried out, the justification perhaps failed to establish some of the basic reasons why the program is necessary. One of the reasons is quite simple and direct. For many years park travel was quite easily absorbed, and most parks were protected by being surrounded by what was in effect wilderness. Thus, there were few problems of preservation that good practical judgment could not handle.

The situation is completely different today. The increasing millions of visitors and the developments which they require affect preservation in many ways. Of even greater importance, the parks are rapidly becoming islands surrounded by lands more and more intensively managed and used. What happens outside—reduced game range, water and air pollution, infestation of forest insects and disease, attending lumbering operations, the transmission of disease and parasites from domestic stock to native species, the use of chemicals, and the like—is becoming as great a threat to park integrity as what we or the visitors do within. The effects of these influences are sometimes dramatic, but often indirect and unrecognized, except by a trained specialist, until irreparable damage has been done. Consequently, the Service must know a great deal more about these properties than ever before—their nature, the natural processes at work in them, and also the effect of man's influence as a user and a close neigh-

bor of the parks. The Service also needs to maintain a continuous diagnosis of what is happening if park values are to be maintained.

As an example of another phase of the proposed investigations, without historical research at the recently established Wilson's Creek Battlefield, the construction of roads and facilities could obliterate or forever impair or disfigure historic terrain, historic structures, and historic remains. Research is needed to insure accuracy of historical restoration of buildings, gardens, grounds, and fences. Basic historical data is needed as a further example at Grand Portage National Monument for visitor planning, restoration of structures, interpretive publications, audiovisual presentations and wayside exhibits. Research is essential for making the areas meaningful to visitors. Historical research is the lifeblood of all programs in the historical areas of the park system.

Considerable research has been done in the parks by others, but usually not of a kind that meets the needs of park preservation or development. The program contemplates specialized investigations that arise out of and assists in performing this Service's own functions and responsibilities. The proposed research program is therefore not an academic exercise, but a tool to provide the facts to undergird policy decisions, and upon which to base resource management, public use and development, and interpretation.

Of the amount recommended for restoration, $75,000 (and 3 out of the 147 permanent positions) disallowed by the House, will be used for historical research, and $225,000 (and 4 of the 147 permanent positions) disallowed will be used for natural history research.

To meet increased requirements for the historic American buildings survey and historic sites survey

Historic American buildings survey.—House action eliminated the entire increase of $75,825 proposed in the budget. As explained in the budget justification, the increase is to provide for expansion of staff, including additional seasonal assistance, and for overall invigoration of the program above the requirements of minimal operations since its reactivation in 1958.

This need was geared to the appalling rate at which historic buildings and structures are disappearing on every hand. The tempo of destruction, accelerated by highway construction, urban renewal, and real estate developments, in addition to what is accepted as natural elements of attrition, underscores the urgency of the task. To make permanent records of our architectural heritage of significant buildings is more than ever increasingly vital to counteract these factors. The job is staggering in its needs and proportions. Add to this a realization of the importance of buildings beyond the cutoff date (approximately 1860), the field of concern is steadily widening, so that the mandate becomes overwhelming in its implications. There is no time to lose. The crusade ahead calls for marshaling additional financial aid to implement an expanded program. The need for accelerating this work is reflected in the growing requests from State historical societies, commissions, and planning groups for survey work needed but for which there is no provision within presently appropriated funds.

Since reactivation the survey has been reconstituted to serve as a supporting arm of the Service's preservation, rehabilitation, restoration, and reconstruction programs. Survey work is closely integrated and coordinated to all phases of these activities and there are a practical alinement and mutual reciprocity between the two which contribute to efficient operation. The additional funds requested will permit the Service to prosecute its work with the vigor called for, including the establishment of workable arrangements to meet increasing obligations and opportunities.

Of the 147 permanent positions reduced by the House, 5 pertain to this item. The restoration of the full amount disallowed by the House, including the five permanent positions, is respectfully requested.

Historic sites survey.—The restoration of $55,480, the total amount of the reduction made by the House, including the three permanent positions disallowed, is requested to insure that a realistic program can be attained in the discharge of the Service's responsibility as set forth in the Historic Sites Act of August 21, 1935. This increase will provide for the following:

Publication of theme studies which began in fiscal year 1962 is of special urgency. To continue the publication program on schedule, an additional $9,500 is needed to defray publication costs. With the acceleration of the registered national historic landmark program, increased emphasis on production of markers is required. An increase of $5,200 is necessary to defray the costs of marker production. With the simultaneous urgency of the publication program and

acceleration of the registered national historic landmark program, work of the survey has expanded greatly. The amount of $26,800 is needed to add two historians and one clerk-stenographer to aid in revision and preparation of theme drafts for publication, and to maintain adequately the additional workload of the landmark program. These positions comprise 3 of the 147 disallowed by the House.

In the process of work on the archeological theme studies, action has been deferred on certain legislative and other proposals involving prehistoric sites. These are on sites which appear to be of exceptional value, but which, due to absence of concrete knowledge, are not now known to possess prime significance under the survey criteria. To discharge the survey function in furnishing sound recommendations under the registry of national historic landmarks and in the national park system planning, an additional $6,500 is necessary to assemble information on which to evaluate this backlog of sites.

To maintain the schedule of work on the difficult thematic studies dealing with the Nation's cultural history which is now being studied, and to keep pace with the demands of the registry of national historic landmarks, an additional $7,480 is necessary to defray costs of supplies, materials, equipment needs, and other expenses relative to both programs.

The overall program involves surveys and studies of historic and prehistoric sites to determine which ones are of exceptional importance in commemorating and illustrating the history of the United States and are, therefore, worthy of preservation as part of the American heritage. The program also involves preparing manuscripts for publication and the operation of the registry of national historic landmarks. The work is performed by technical employees of the Service assigned to the various phases of the program, and by contracts with qualified professional historians and anthropologists outside the Service.

NATIONAL PARK SERVICE

CONSTRUCTION

(House hearings, pp. 622, 644–705)

(Senate hearings, pp. 683–695)

Appropriation, 1962	$36,726,000
Estimate	44,000,000
House allowance	40,000,000
Restoration requested	6,486,400

(P. 10, lines 7 and 8)

Amendments requested:

(1) Page 10, line 7, strike out "$8,409,000" and insert in lieu thereof "$12,135,000",—the estimate, or an increase of $3,726,000 in the limitation on land acquisition.

(2) Page 10, line 8, strike out "$40,000,000" and insert in lieu thereof "$46,486,400",—an increase of $6,486,400 in the appropriation.

HOUSE REPORT

"The committee recommends an appropriation of $40 million, an increase of $3,274,000 in the 1962 appropriation, and a decrease of $4 million and 40 positions in the 1963 budget request.

"The budget proposed a decrease of $88,900 in funds available for camping and picnicking facilities compared with 1962 and an increase of $1,663,600 for employee housing and $3,364,000 for extension of boundaries and acquiring inholdings in the national parks as discussed below. The committee does not believe this shift in emphasis is warranted in light of the estimate of 81 million park visitors in 1963 and has revised the allocation as indicated above.

"Within the amount allowed the committee has provided $36,000 for construction of an amphitheater at Carlsbad Caverns, N. Mex., and $125,000 for the Lincoln Boyhood National Memorial, Ind., including $75,000 for acquisition of lands.

"The committee has disallowed the request of $200,000 for stabilization of the canal bed, banks, locks, etc., in the C. & O. Canal National Monument. The committee does not believe that initiation of such major expenditures are warranted as long as the proposal of the Corps of Engineers to construct water resources projects in this area is under consideration.

"The committee has deleted the request of $228,000 for constructing a visitor center at the Cruz Bay development in the Virgin Islands National Park. Considering the limited number of visitors to this park, the committee believes that expenditures at this time should be restricted to higher priority areas in the national park system.

"The committee has also deleted the request of $720,000 to initiate development of park areas in the Southwest urban renewal area in the District of Columbia. Considering the delay being incurred in the construction of the inner loop and related work in this area, this item can be readily deferred to permit more adequate review of this proposal which has an ultimate Federal cost of $2,270,000. The committee does not believe that development of such park areas should be the complete responsibility of the Federal Government, but rather that a substantial portion of the cost should be assumed by the District of Columbia and the Redevelopment Land Agency. For example, the proposed Lansburgh Park, with an estimated cost of $684,000, would appear to meet the criteria under which the District of Columbia has heretofore assumed responsibility for the development of its playground and neighborhood parks. It is requested that the Park Service and interested agencies again review this proposal and recommend a more appropriate cost-sharing plan.

CIVIL WAR AREAS

"The committee is especially concerned over the cost of National Park Service plans in Civil War areas. During fiscal years 1957 to 1962 over $11.4 million has been expended for land acquisition and construction. The 1963 budget estimates include $5.1 million for this purpose and the Park Service has plans to expend an additional $16.9 million under its Mission 66 program. The committee seriously questions whether expenditures of this magnitude are necessary or warranted in these areas considering the many and costly urgent requirements to provide more adequate park facilities for our expanding population. The committee has therefore deleted $1 million proposed in the estimates for construction of three visitor centers, a storage building, and the reconstruction of the Appomattox Courthouse, pending a thorough review of this program to determine if a less costly capital outlay would not be adequate for appropriate preservation of these historic sites.

LAND ACQUISITION

"The $8,409,000 allowed for acquisition of lands includes $400,000 for Civil War areas, a decrease of $1 million in the budget request; $4 million for the Cape Cod National Seashore, Mass.; $1,500,000 for Minute Man National Historical Park, Mass.; $509,000 for newly authorized parks; and $2 million for acquiring inholdings and extending the boundaries of existing parks, a decrease of $1,864,000 in the budget request. The committee does not believe the acquiring of costly inholdings in existing national park areas is warranted where Federal ownership is extensive, such as Death Valley National Monument where present holdings total 1.9 million acres. In general, new funds should be reserved for acquiring new park lands which will meet urgent visitor requirements. The $2 million allowed should make adequate provision for acquiring key inholdings essential to the management and protection of the existing parks. The committee has specifically disallowed the request of $500,000 for acquiring an additional 25,000 acres in the Everglades National Park, Fla. The present Federal holdings, totaling over 1,300,000 acres are adequate for that area considering the many essential needs of the national parks. The committee has also denied the request of $110,000 for acquiring an additional 2,455 acres in the Joshua Tree National Monument where the Federal Government presently owns 505,000 acres.

"In making the allowance of only $400,000 of the $1,400,000 requested for additional land acquisition in Civil War areas, the committee has again considered the present annual cost of developing and maintaining over 84,000 acres of these lands already in Government ownership. More than $2 million is required in this bill just for operation and maintenance of roads and facilities in these areas during fiscal year 1963. As each additional land purchase generates large additional costs over the years, future expansion in these areas should be held to acquisition of only the most essential tracts.

"The committee recommends continuation in fiscal year 1963 of the provision in the conference report (No. 797) on the 1962 bill providing that funds made available for acquisition of lands in Civil War areas are not to be obligated until

the Secretary of the Interior has reported to the Committees on Appropriations that the local governments have adopted adequate zoning regulations to assure against future commercial development in these areas, except in those instances where the lands to be acquired are completely surrounded by lands already owned by the Federal Government or by lands on which the Federal Government has a scenic easement.

LAND OPPOSITE MOUNT VERNON

"The committee has disallowed the budget request of $937,000 to acquire land on the Potomac River shore opposite Mount Vernon, as authorized by Public Law 87-362. Authorization for acquiring these lands was rushed through the closing moments of the last session of Congress because of the threat to build a sewage treatment plant in the vicinity of Mockley Point which it was feared would mar the beauty of the Maryland shore. The basis for the passage of this legislation is clearly evident from the following quotation from Senate Report No. 1082, dated September 18, 1961, on House Joint Resolution 459:

"'Because of the prospective adjournment of Congress, both the chairman of the Interior and Insular Affairs Committee and the chairman of the Public Lands Subcommittee have attempted to obtain assurance that no steps would be taken toward construction of the sewage disposal plant before Congress meets next year, *when there would be more time to consider the matter.*

"'In both instances, the efforts were without avail. A commitment was avoided. The only way to assure preservation of the site and the scene, and maintenance of the status quo, is enactment of the joint resolution. *Congress can then, if it so desires, review the situation during its 1963 session.*'" [Italic supplied.]

"The committee believes, after careful review and consideration of the following factors that Federal appropriations for this purpose are not warranted:

"(1) Since the passage of this legislation, the Washington Suburban Sanitary Commission has by resolution given assurance 'that it will refrain from further consideration of a site on Mockley Point for a treatment plant' and 'that the Commission will not consider nor finally select any site which would adversely affect or otherwise detract from the Mount Vernon vista.'

"(2) The Maryland National Capital Park and Planning Commission has recommended the new location planned for the sewage disposal plant in the lower valley of Piscataway Creek, more than a mile from its confluence with the Potomac River. This area is 3 miles from Mount Vernon and because of intervening woods is obscured from any view from Mount Vernon.

"(3) The area in question is under adequate planning and zoning controls by the Prince Georges County commissioners and the Maryland National Capital Park and Planning Commission to preserve the view from Mount Vernon and prevent commercialization. The Maryland General Assembly in April, 1961 approved the extension of the regional district under the jurisdiction of the Maryland National Capital Park and Planning Commission to include the area in question for purposes of planning, zoning, and subdivision control.

"(4) Public Law 87-362 limited appropriations for acquiring the land in question to $937,600. This was based on the estimate that 586 acres would be acquired at a cost of only $1,600 per acre and that the acquisition of scenic easements on another 1,410 acres would be largely donated. It now appears that the per acre cost of this land will be considerably in excess of this estimate and that it will be necessary to pay for the scenic easements in many instances. It is apparent, therefore, that the present authorization and the budget request of $937,000 would be inadequate to accomplish the proposed acquisition and that an additional authorization would be necessary.

"(5) The acreage in question is primarily owned by three families which have held the property (totaling 540 acres) for generations. No evidence was given to the committee that these owners planned to dispose of their property or take any action that was not in keeping with the present rural character of this area or would not give satisfactory scenic easements.

"In light of the above the committee sees no compelling reason to make an exception to its policy that future acquisition of park lands in the Washington area, where the Federal Government now owns and maintains over 39,000 acres of such land, should generally be the responsibilty of the local jurisdictions which enjoy some of the highest per capita incomes in the country. The Maryland National Capital Park and Planning Commission has recently announced plans to expend with the State of Maryland $30 million for some 19,000 acres

of park land. The Commission should be in a position to acquire the acreage in question if it is determined desirable or necessary."

JUSTIFICATION

Explanation of amendment (1).—The amendment increases the limitation on the amount to be available for land acquisition to coincide with the appropriation increase requested in amendment (2) for the same purpose.

Explanation of amendment (2).—The amendment restores the following reductions made by the House in the Budget estimate for this appropriation:

Public service and administrative units, utilities and miscellaneous:	
Chesapeake and Ohio Canal National Monument	$200,000
Virgin Islands National Park	228,000
National Capital parks	382,400
Civil War areas	1,000,000
Total	1,810,400
Employee housing	950,000
Acquisition of lands	3,726,000
Total	6,486,400

This total amount is distributed to activities as follows:

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
(a) Buildings, utilities, and other facilities	$28,896,000	$31,153,000	$30,879,000	$2,760,400
(b) Acquisition of—				
(1) Lands	7,600,000	12,135,000	8,409,000	3,726,000
(2) Water rights	230,000	365,000	365,000	
(c) Executive Mansion and grounds		347,000	347,000	
Total	36,726,000	44,000,000	40,000,000	6,486,400

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$320,000
12	Personnel benefits	18,000
21	Travel and transportation of persons	6,000
22	Transportation of things	1,000
25	Other services	5,000
26	Supplies and materials	6,000
31	Equipment	2,000
32	Lands and structures	6,128,400
	Total	6,486,400

1. *Buildings, utilities and other facilities.*—The House committee report makes provision for the following changes in the buildings, utilities, and other facilities construction program:

Types of facilities	Increase	Decrease
Camping and picnicking facilities	$2,738,000	
Public service and administrative units, utilities, and miscellaneous		$2,062,000
Employee housing		950,000

The Service agrees that the demand for camping and picnicking facilities warrants the program level for that purpose provided for in the committee report. The Service is seriously concerned, however, with respect to the reduction for other types of facilities. The program levels for public service and administrative units, utilities, employee housing, and miscellaneous facilities provided for in the estimate, as reflected on page NP–127 of the justifications, are required to assure a rate of progress commensurate with Mission 66 objectives, the increase in visitor use of the parks, and needs for facilities in new

park areas. The reductions specified in the report, restoration of which is requested, are discussed in the following:

Public service and administration units, utilities, and miscellaneous, $1,810,400

The specific items reduced by the House committee and the restorations requested are as follows:

	House committee reduction	Restoration requested
Chesapeake and Ohio Canal National Monument projects	$200,000	$200,000
Virgin Islands National Park projects	228,000	228,000
National Capital Parks projects	720,000	382,400
Civil War areas projects	1,000,000	1,000,000
Total	2,148,000	1,810,400

Chesapeake and Ohio Canal National Monument, $200,000.—The Chesapeake and Ohio Canal National Monument is an elongated park area traversed by a canal. The canal extends from Georgetown, D.C., to Cumberland, Md., a distance of 184 miles, of which 165 miles are in the monument. The monument was established and included in the National Park System to preserve, interpret, and provide for public use of this unusual and outstanding canal gateway to the West. It possesses historic, scenic, and scientific values, and affords recreational use to thousands.

The program of $200,000 in the 1963 budget is urgently needed to provide for stabilizing and preserving features of the historic canal which are not currently involved in the area of the engineering projects being considered by the Corps of Engineers. Only about 35 miles of the 165 miles of canal in the monument are threatened by the water resources project. The remaining 130 miles should be stabilized and developed for public use as an established unit of the National Park System.

Virgin Islands National Park, $228,000.—Every visitor to Virgin Islands National Park arrives by boat at Cruz Bay, St. Johns Island. It is the receiving and initial contact point at which visitors should be introduced to the park. There are no facilities here for orienting arrivals or interpreting the area's unique values, and no protection and administrative facilities, such as the visitor center would provide, are available. Visitors must seek out information unless park personnel are at the dock to greet them. Distances from libraries and study collections make it imperative that provision be made for housing an adequate scientific library and collections. One collection on hand has a value estimated between $15,000 and $25,000, and should be safeguarded by proper storage which would be provided in the visitor center.

National Capital Parks, southwest renewal area, District of Columbia, $382,400.—The budget estimate provided $720,900 for development of park facilities in the southwest renewal area, District of Columbia. The House committee deleted the full request on the grounds that the work could be deferred in view of the delay in the construction of the inner loop and related work in this area. The House committee report also states the committee does not believe that development of such park areas should be the complete responsibility of the Federal Government, but rather that a substantial portion of the cost should be assumed by the District of Columbia and the Redevelopment Land Agency.

In view of the construction delays referred to in the report, the Service concurs in the deferral of all projects comprising the $720,900 estimate, except program item "Southwest Renewal Area 'C–1,' Park Development, M–233 (Por.)—$382,400." This program item represents a portion of the proposed Lansburgh's Park development the total cost of which is estimated at $684,000.

The National Park Service, after consultations and agreements with the Redevelopment Land Agency and the National Capital Planning Commission, plans to develop this park site as a large open space suitable for unorganized recreation. It will contain principally large tree plantings, walkways, drinking fountains, ornamental pools, and comfort facilities.

The proposed park site has been acquired by the National Capital Planning Commission under authority of the Capper-Cramton Act at a cost of $93,975, and administration of the area is now the responsibility of the National Park Service. The site has been completely cleared by the Redevelopment Land Agency

with urban renewal project funds and is available now for development as a park. This project is the first and most urgently needed area in the long-range program for park development in redevelopment areas of the city.

It is in keeping with the principles established by the First Congress of the United States in 1790 that the Federal Government should be responsible for the planning, acquisition and development of the lands necessary for the operation of the various establishments of the Government; for the Federal park lands that provide the settings of dignity and beauty for the public buildings, national memorials, and patriotic shrines; and for making possible the preservation of open spaces to meet the recreational needs of the community and to provide the esthetic ornamentation that contributes immeasurably to the beauty and inspirational qualities of the seat of the Federal Government. The history of legislation pertaining to the park and parkway system clearly indicates that it has always been the intent of Congress that the Federal Government should take an active and responsible part in the development of the Federal city. This is one of the basic reasons for selecting the present site as the location for the Capital of the new country rather than one of the cities which were thriving during that period of history.

The purpose of the proposed Lansburgh Park in the southwest redevelopment area is to carry out this intent of Congress in accordance with the principles as envisioned by the founders of the city and as defined by the Congress.

In the southwest area, the District of Columbia Recreation Department is planning and financing the development of such recreational sites as Jefferson Recreation Center, Randall Recreation Center, and the Amidon School playground from funds appropriated to the District of Columbia for these purposes.

The proposed Lansburgh Park is not intended nor is it needed to fulfill the functions of an organized playground. It is intended to be used as a Federal park area to provide a part of the open space and esthetic background enjoyed by those residing in the metropolitan area and the millions of visitors to the Nation's Capital.

As a part of the costs of providing adequate park areas in the southwest section, the Redevelopment Land Agency is acquiring with urban renewal project funds the land to comprise the additional areas included in the program. It is also providing for the design and development of three park areas in the Town Center plaza. In addition, based on the 1963 fiscal year budget requests for the National Capital Parks System, approximately 56 percent of the cost of administering, operating, and maintaining these park areas in the District of Columbia, is financed from District of Columbia funds.

Civil War areas, $1,000,000.—Visitor centers are urgently needed at Fredericksburg, Vicksburg, and Petersburg National Military Parks, Kennesaw Mountain National Battlefield Park, and Appomattox Court House National Historical Park. Visitor use at all these areas is heavy and has been increasing at a rapid rate through the centennial years. Available facilities for meeting visitors, and providing them with information and comfort facilities are woefully inadequate. Restoration of Appomattox Court House is needed to provide visitor facilities and restore the historic scene of which the court house was the focal point. At the Chancellorsville area of Fredericksburg-Spotsylvania, there is only a small one-room frame shelter without heat. It can only be manned in the summer season and then serves only to protect the man on duty from rain, and to store a small supply of guide leaflets. There are no comfort station facilities for visitors and no room for explanatory exhibits. At Vicksburg, office space, exhibits and library are housed in an old frame building shared with the Corps of Engineers. It was not designed for public contact work, and because of its nonfireproof construction, it is inadequate for proper protection of the valuable artifacts and books it houses. The situation is even more acute at Kennesaw Mountain where an old frame farmhouse has been pressed into service for park offices and visitor services. Again, it is susceptible to fire. The park is located in an economically depressed area, where the construction projects as well as the finished product might well provide widespread benefits for the community, in addition to serving the visitor and permitting more efficient operations within the park proper. At Petersburg, administrative and visitor service facilities are housed in a converted golf clubhouse which is not fireproof, obtrudes on the major features of the battlefield, and is not properly located to facilitate either protective or interpretive functions.

Employee housing, $950,000

The Mission 66 report of January 1956 considered the park employee housing problem to be so critical that it proposed the housing program be carried out during the first 5 years of the 10-year program. The program called for 1,000 family units, and 400 seasonal employee units, or a total of 1,400. During the first 5 years of the program, $14,346,000 has been appropriated for 774 units, or slightly more than 50 percent of the goal. The 1963 estimates would have provided an additional 220 units at a cost of $3,950,000. This would bring the 6-year total to 994 units as compared to the 5-year goal of 1,400, a difference of 406 units. It is recommended that the $950,000 be restored to permit construction of about 47 units, together with supporting utility connections, which would otherwise be deferred until future years.

Reduction in budgeted positions

The House committee report provides for a decrease of 40 positions budgeted for 1963 under the "Construction" appropriation. If this provision of the House report is sustained, the full reduction of 40 positions would have to be made in the staffing for the planning and execution of the buildings, utilities, and other facilities program. As the budget provided for an increase of only 15 positions under this appropriation activity, meeting the requirements of the House committee report would make necessary a reduction of 25 in the number of currently budgeted positions. This would have to be done in the face of an increase of 6.9 percent in the program level as approved by the House. The Service is already hard pressed to plan for and execute its expanded construction programs with currently authorized staffing. The reduction of 40 positions as called for in the House committee report would seriously jeopardize the Service's capacity and capability for planning and executing its construction programs in an efficient and economical manner and its ability to keep the program on schedule.

2. *Acquisition of Lands.*—It is requested that the amount of $3,726,000, the total disallowed by the House, be restored to the land acquisition program. Deferral of acquisitions provided for in the program only compounds the long-standing problems involved in rounding out the parks, and results ultimately in higher costs. As President Kennedy brought out in the outdoor recreation resources portion of his message to the Congress on conservation on March 1, 1962, the national program for providing outdoor recreation needs to move forward rapidly. The land acquisition program of the Service is an effective means of furthering the outdoor recreation policy expressed by the President. Furthermore, experience with the steady inflation of land costs gives full support to the President's comments that "Actions deferred are frequently opportunities lost, and in terms of financial outlay, dollars invested today will yield great benefits in the years to come." The items disallowed by the House are discussed below in greater detail.

Civil War areas

The Civil War Centennial extends from 1961 to 1965. Many of the areas of the Service were established in commemoration of that war. Several of the Civil War parks need further development for restoration of original scenes so as to provide sound visitor use, understanding, and enjoyment of them. The time has arrived where acquisition of several key parcels of land in the midst of Civil War battlefield areas is imperative and should not be further delayed; otherwise, a continuing erosion or even startling intrusions creep into the scene which must be preserved with reasonable fidelity or the public understanding and appreciation of such areas will be lost. Acquisition of certain lands for addition to those areas is prerequisite to such development and restoration in many instances. Funds in the amount of $450,000, $400,000, and $600,000 were provided for the purpose in the 1960, 1961, and 1962 appropriations, respectively. The House allowance, while it will provide for continued progress in the acquisition of lands for addition to the Civil War areas, will not insure having required properties in Government ownership in time to complete developments and to otherwise make preparations for the Civil War Centennial observances. It is urged that the amount of $1 million disallowed by the House be restored to the bill for this purpose in order that the Civil War area land acquisition program may go forward at the required level.

National Capital Parks

Restoration of the $937,000 disallowed by the House is requested so the Service may carry out the intent of Public Law 87-362. The law provides for the

preservation and protection of certain lands in Prince Georges and Charles Counties, Md., and authorizes the Secretary of the Interior to acquire in fee simple or lesser interests approximately 1,186 acres of privately owned land and to administer the lands and interests therein. This property will become a part of the National Capital Parks System and will be administered in accordance with the basic National Park Service Act.

The Washington Suburban Sanitary Commission has given assurance that the proposed sewage treatment plant will not be located on the specific piece of land known as Mockley Point, which is in direct view of Mount Vernon. However, the site that is now under serious consideration by the Washington Suburban Sanitary Commission is located on the south shore of Piscataway Creek and is in the direct vista looking across Piscataway Creek from the overlook at the nationally significant Fort Washington, and various points along the George Washington Memorial Parkway in Virginia, which are under the jurisdiction of this Department.

The currently proposed site is within the authorized boundaries of the new park. Due to the topography and the location of the forested cover, the sewage treatment plant at the new location would still adversely affect and detract from the Mount Vernon vista, even though the site is a mile from the confluence with the Potomac River.

In 1961, the State of Maryland General Assembly approved the extension of the geographical scope under the jurisdiction of the Maryland National Capital Park and Planning Commission, which would include the general area within which this park is located. However, the Maryland National Capital Park and Planning Commission authority is limited to recommendations to the county governing bodies with respect to zoning and subdivision controls. The ultimate decision rests with the county board of commissioners.

Consequently, it appears that the purposes of Public Law 87-362, to provide for permanent preservation, protection, and public use of the nationally significant scenic, scientific, and historic features of this area, can be accomplished as a permanent thing only by establishing the area as a park under Federal Government jurisdiction.

Of the private lands authorized to be acquired, approximately 505 acres will be donated. The owners of the lands to be donated are nonprofit organizations which are dedicated to the preservation, protection, scientific study, and educational or charitable use of these lands, and have officially agreed to donate their properties and interests therein to the Federal Government for park purposes. The remainder of the 1,186 acres to be acquired is approximately 681 acres and is in private ownership. The owner of about 90 acres of this 681-acre area, has offered to donate sufficient interests in his land for the National Park Service to establish, develop, and administer it as part of a park of national significance.

In addition to the lands to be acquired in fee simple, the legislation authorizes the acquisition of scenic easements on approximately 2,596 acres of privately owned land. Of this area nearly the entire amount is presently protected by covenants which provide more restrictive use of the land than that proposed in the National Park Service's tentative requirements for the scenic protection of this area. Since the existing covenants on this land serve the purposes of the legislation, it is not contemplated that any of the scenic easements authorized will be purchased unless some urgent purpose develops in an individual case prior to the establishment of the proposed park. The majority of these property owners have indicated a willingness to donate scenic easements to the Federal Government.

It is the intent of the National Park Service in carrying out the purposes of the act to provide only for the preservation, protection, and public use of the nationally significant, scenic, scientific, and historic features that are included within the lands authorized to be acquired. It is not its purpose or desire to carry out the responsibilities that are properly the functions of other governmental agencies and jurisdications, but only to provide, as spelled out by law, for the preservation, protection, administration, development, and interpretation of those lands and features thereon that are significant to the Nation as a whole. There is not now, nor is there envisioned, need for additional land other than that authorized in the amount of 1,186 acres required to carry out the purposes of the legislation.

A complete land use study and development program for the proposed park has not been completed at this time. However, in providing for the establishment of the proposed park, and in carrying out its responsibilities under the law, there is no additional information or evidence now known to the National

Park Service which would indicate that any additional lands, other than those so authorized, will be required.

Present plans, based on preliminary negotiations with the existing landowners, are that there will be no acquisition of any property either by donation or by purchase until firm agreements have been worked out for the entire area to be acquired for park purposes. The estimate of $937,000 included in the 1963 fiscal year budget request was based on the most recent land purchases in this area. If funds are provided without undue delay, it appears that land values will not increase to the extent that additional authorizations of funds will be required in order to carry out completely the intent of the legislation. There are no plans for extending the presently authorized boundaries or for increasing the presently authorized acreage to be acquired.

Inholdings and extension of boundaries, various parks

The value of privately owned inholdings in the parks after 1962 (not including new authorizations, such as Cape Cod National Seashore) is estimated at $45 million. The amounts appropriated for the past several years have alleviated many complex problems in connection with the management and development of the parks, but the Service still has a long way to go. The rate of progress in acquiring these privately owned lands has not been as rapid as desired. With the passage of time, it is proving to be more and more expensive to the Government. Until these privately owned lands within the park boundaries are acquired, some of the consequences which must be endured are—

(1) Private development and operation of facilities within the parks and monuments over which there is no public control but which owe their profit-making capacity to park visitors.

(2) Cutting of timber with consequent scars and impairment of park scenery.

(3) Operation of undesirable establishments or activities.

(4) Creation of real estate subdivisions.

(5) Conduct of land-scarring mining operations and, after the cessation of mining, the existence of mining debris and of deteriorating structures.

(6) Costly delays in needed developments or greater expense because of the necessity of going around private lands or establishing public developments in less desirable locations.

(7) Construction of commercial and other structures on lands whose acquisition thereafter becomes more expensive.

Legislation enacted during the 1st session of the 87th Congress authorized extension or revision of boundaries of four existing parks: (1) Cumberland Gap National Historical Park (Public Law 87–111); (2) Effigy Mounds National Monument (Public Law 87–44); (3) Fort Necessity National Battlefield Site (Public Law 87–134); and (4) Scotts Bluff National Monument (Public Law 87–68). As most of the additional acreage involved in the new authorizations is in need of protection or is threatened with adverse uses, it should be brought under Federal control at the earliest possible date so that the purposes for which the legislation was enacted can be achieved. It it contemplated that the Commonwealths of Kentucky and Pennsylvania will share in the cost of acquiring the lands for Cumberland Gap and Fort Necessity. It is, therefore, incumbent upon the Federal Government to provide funds for its share of the cost without delay.

The budget estimate requested $3,702,000 for acquisition of inholdings in various parks and $162,000 for extension of boundaries as authorized by the above-cited legislation for a total of $3,864,000. The House allowance for these purposes is $2 million or a reduction of $1,864,000 under the budget estimate. The House committee report also provided that $75,000 of the land acquisition allowance was for the acquisition of lands for the newly authorized Lincoln Boyhood National Memorial. The amendment contemplates absorption of the "Lincoln Boyhood" item within the total estimate and requests restoration of $1,789,000 for acquisition of inholdings and extension of boundaries in various parks.

The House committee report specifically disallowed the following items that were provided for in the budget within the amount for acquisition of inholdings in various parks:

Everglades National Park	$500,000
Joshua Tree National Monument	110,000

These items are discussed specifically in the following:

Everglades National Park.—Public Law 85-482, approved July 2, 1958 (72 Stat. 280) revised the boundaries of Everglades National Park and authorized an appropriation of $2 million for the acquisition of privately owned lands within the redefined area. The Federal Government and the State of Florida have already effected the contemporaneous exchange of lands as provided in the act. Therefore, adequate protection of the park as now constituted is dependent upon acquisition of the remaining private holdings of approximately 100,000 acres now existing within the park.

The 25,000 acres of key inholdings included in the budget request, with an estimated value of $500,000, comprise about 1.8 percent of the total park area. These 25,000 acres are the most urgently required of the 99,184 acres of non-Federal lands which comprise 7.6 percent of the total park area, and are threatened by imminent development, exploitation, and speculation accelerated by the increasing demand for home and commercial sites in the expansion of population out of Miami, 25 miles distant. The most pressing private land matters are within a 22,000-acre tract in the vicinity of the Royal Palm State Park which, in pursuance of provisions in the act of July 2, 1958 (72 Stat. 280), cannot be acquired without the consent of the owners. This area is nearly surrounded by lands donated to the United States by the Florida Federation of Women's Clubs and the State of Florida. It is adapted to immediate subdivision; one parcel embracing 480 acres of land, is subdivided into 407 sites, 80 of which have already been sold.

The 22,000-acre tract lies astride the main entrance road into the park, where it is highly desirable to conserve the natural scenery, and to keep open the entire area for public use. These lands are soaring in value and we can only plan to acquire an essential minimum in this area. The remainder of the 25,000 acres planned for early purchase are an aggregation of the acreage of parcels situated elsewhere throughout the park in strategic locations, surrounded by U.S. lands, which aggravate problems of administration and conservation involving poaching, hunting, mangrove cutting, and unscientific drainage.

The State of Florida's donation of lands and an additional $2 million for purchasing lands and the gifts by other friends of the park vested title in the United States to all the lands in the original park nucleus. The State of Florida has complied with the provisions of the act of July 2, 1958, as a condition precedent to the United States acquiring the remaining lands and waters within the authorized boundaries. This act authorized an appropriation of $2 million for the purchase of inholdings.

It is respectfully requested that the House committee disallowance be reconsidered and that the item be restored to the program.

Joshua Tree National Monument.—The 2,455 acres of inholdings in various ownerships which were proposed for purchase in the estimate, have an estimated value of $110,000. They are situated near monument roads, and are well suited for subdivision into 5- and 10-acre weekend desert homesites, in popular demand in this part of California. The usual "improvements" of the sites consist of unsightly shacks, without water and with primitive sanitary accommodations.

The clearing of sites often results in the cutting of the rapidly diminishing Joshua tree, a unique and spectacular member of the lily family, attaining heights up to 40 feet. The preservation of the Joshua trees, other desert plants and animals, and oases of Washingtonia palms, and the maintenance of the natural desert scene are seriously threatened by the 52,910 acres of private holdings interspersed throughout the monument.

The 2,455 acres of inholdings most suitable for development by private interests, are only 0.4 percent of the entire monument area, but they constitute administration and conservation problems exceedingly disproportionate to the area involved.

It is urged that the House committee disallowance be reconsidered and that the item be restored to the program.

NATIONAL PARK SERVICE

CONSTRUCTION (LIQUIDATION OF CONTRACT AUTHORIZATION)

(House hearings, pp. 706–730)

(Senate hearings, pp. 703–708)

Appropriation, 1963	$30,000,000
Estimate	30,000,000
House allowance	29,000,000
Restoration requested	----------

HOUSE REPORT

"The committee has allowed $29 million, a decrease of $1 million in the budget estimate and in the amount appropriated for 1962. This appropriation provides for liquidation of obligations incurred in the construction of parkways and roads and trails by the National Park Service under the contract authority provided in the Federal-Aid-to-Highway Act. The amount provided includes $2,793,800 for initiating construction of a zoo bypass in Rock Creek Park in the District of Columbia and $75,000 for initiating construction of roads and trails in the Lincoln Boyhood National Memorial, Ind.

"The committee has deleted the request of $213,200 for surfacing 32 miles of the C. & O. Canal towpath. As indicated above, the committee believes that construction in the C. & O. Canal area should be held in abeyance pending consideration of proposals by the Corps of Engineers to construct water resource projects on the Potomac River in this area.

"The committee has also deleted the $168,700 programed for buildings and utilities projects at Great Falls, Va. As the committee has indicated previously, this appropriation is not available for a campground and related construction except on a very restricted basis adjacent to parkways. All items of this nature should hereafter be budgeted under the 'Construction' appropriation.

"Also disallowed is the $250,000 proposed for initiating construction of trails, roads, and parking areas in the Virgin Islands National Park. The committee believes that the use of these funds should be restricted to areas of high visitor use until such time as higher priority items have been taken care of.

"The additional reduction of $443,100 imposed in the budget request can be met readily through slippage in the construction program. As of January 31, 1962, there was an unobligated balance of over $25 million out of the $38.4 million available for the current fiscal year."

JUSTIFICATION

The House committee deleted certain projects at three areas from the 1963 construction program. Of these, one was for surfacing 32 miles of the Chesapeake & Ohio Canal towpath in the amount of $213,200, and another was for construction in Virgin Islands National Park in the amount of $250,000. It is urged that these two program deletions be reconsidered and that the projects be restored to the programs. Each of the items for which restoration is requested is discussed specifically as follows:

Chesapeake & Ohio Canal National Monument, $213,200

Surfacing towpath.—Thirty-two miles of the Chesapeake & Ohio Canal National Monument towpath, at seven locations, were scheduled for resurfacing in the 1963 program. Only three of these locations, totaling 9 miles, are located within the area threatened by possible inundation by the proposed water resources project of the Corps of Engineers. With at least 130 miles of the canal lying outside the threatened area, no problem exists with regard to alternate locations for the resurfacing of these 9 miles.

Virgin Islands National Park, $250,000

Roads.—The North Shore Drive offers the most scenic vistas on St. John Island. The existing roads, designed for horse and donkey transportation, are passable only by jeeps or trucks and are quite hazardous. They cannot be closed to traffic and uncorrected hazards which might result in serious accidents are open invitations to costly tort claims against the Government. The proposed construction would be to low standard, and would have the primary objectives of reducing hazards and maintenance costs.

NATIONAL PARK SERVICE

General Administrative Expenses

(House hearings, pp. 730–739)

(Senate hearings, pp. 712–718)

Appropriation 1962	$1,581,000
Estimate	2,100,000
House allowance	1,900,000
Restoration requested	200,000

(P. 11, line 4)

Amendment requested:

Page 11, line 4, strike out "$1,900,000" and insert in lieu thereof "*$2,100,000*", the estimate, or an increase of $200,000 in the appropriation.

HOUSE REPORT

"The committee has allowed $1,900,000, an increase of $319,000 in the 1962 appropriation and a decrease of $200,000 in the 1963 estimate. The amount allowed includes provision for the transfer to this item of $383,000 for the salaries and expenses of certain positions currently being financed from construction funds. The committee action includes disallowance of the proposed establishment of a new division of international cooperation at a cost of $22,000. The present staff should be able to absorb any essential workload under this activity. The reduction reflects a disallowance of 25 of the proposed additional permanent positions."

JUSTIFICATION

The amendment restores the $200,000 reduction made by the House in the budget estimate. This amount is distributed to activities as follows:

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
1. Departmental expenses	$1,005,830	$1,295,000	$1,174,830	$120,170
2. Regional offices expenses	575,170	805,000	725,170	79,830
Total	1,581,000	2,100,000	1,900,000	200,000

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$163,000
12	Personnel benefits	11,000
21	Travel and transportation of persons	7,000
22	Transportation of things	1,500
23	Rent, communications, and utilities	2,000
24	Printing and reproduction	5,000
25	Other services	4,500
26	Supplies and materials	2,000
31	Equipment	4,000
	Total	200,000

To provide for financing under this appropriation the Mission 66 staff, the Office of Program Coordination staff, and three positions in the Division of Information currently financed from construction funds

Departmental expenses	$34,000
Regional offices expenses	30,000
Total	64,000

When first established as organizational units, the Mission 66 staff and Office of Program Coordination were concerned principally with the formulation and execution of the Service's construction programs. Also, in the early days of Mission 66, the Division of Information had to be expanded by three positions

to handle the greatly increased workload brought about by the Mission 66 construction program. As the major part of the effort of the employees involved was concerned with the construction programs, their salaries and expenses were, and are now being, financed from construction and construction (liquidation of contract authorization) funds.

As the Mission 66 program has progressed, the portion of the overall effort of the Mission 66 staff and the Office of Program Coordination benefiting the construction programs has diminished and the portion benefiting all other programs has increased to the point where the construction programs are no longer the principal beneficiaries. The same is true with respect to the three positions in the Division of Information. Accordingly, the estimate requested an increase for the salaries and expenses of the positions involved in the general administrative expenses appropriation. The following statement shows the number of positions and the total amount required including general expense funds for financing the functions under the general administrative expenses appropriation:

Organizational unit	Number of positions		Fund requirements	
	Washington office	Regional offices	Washington office	Regional offices
Mission 66 staff	8		$90,000	
Office of Program Coordination	10	19	90,000	$180,000
Division of Information (portion)	3		23,000	
Total	21	19	203,000	180,000

The House committee report states that "The amount allowed includes provision for the transfer to this item of $383,000 for the salaries and expenses of certain positions currently being financed from construction funds." While as indicated in the foregoing, $383,000 is the amount required for the salaries and expenses of the 40 positions now financed from construction funds but which should be financed from general administrative expenses funds, and is the amount requested as an increase for the purpose in the budget estimate, the total increase in the appropriation provided in the House allowance is only $319,000. This total increase is $64,000 short of the amount required to finance the 40 positions, the other increases requested in the estimate notwithstanding. The last sentence of the committee report under this item states "the reduction reflects a disallowance of 25 of the proposed additional permanent positions." As the budget requested a total increase of 50 positions, 40 of which were to be transferred from the construction appropriation and 10 of which represented a staffing increase, the effect of this provision of the committee report would be to disallow all 10 of the new positions and 15 of those to be transferred.

It is urgently requested that favorable consideration be given to restoration to the bill of $64,000, and to elimination of the provision disallowing 15 existing positions which are essential to the proper and efficient functioning of the Washington and regional offices, but which are proper for financing under the general administrative expenses appropriation in order that such staffing may be properly financed in the future.

Ten additional positions needed to meet the increased administrative workload, including general expense funds

Departmental expenses	$65,500
Regional office expenses	34,500
Total	100,000

The new positions requested under this heading but eliminated from the budget by House action and the amount required for salaries and general expenses are as follows:

	Washington office	Regional offices
Division of Safety:		
Assistant safety officer, GS-13; statistical clerk, GS-6	$20,000	
Field safety officer, GS-13 (2); clerk-stenographer, GS-5 (2)		$34,500
Division of Personnel: Assistant training officer, GS-12	11,000	
Division of Budget and Finance: User charges officer, GS-13	12,500	
Division of International Cooperation: Chief of Division, GS-15; clerk-stenographer, GS-6	22,000	
Total	65,500	34,500

Division of Safety.—The Service's safety staff now consists of a safety officer and a secretary in the Washington office. With this limited staff it is not possible to formulate and implement a fully effective safety program throughout the Service.

Accidents and fires involving Service employees, Government property, visitors, and contractor and concessioner operations and personnel result in unnecessarily large annual losses, not only in money, but in efficiency, morale, and suffering, and in maintaining good public relations. For the calendar year 1960, the direct total loss to the Service was $436,604. This figure does not include losses suffered by the concessioners, contractors, or the public. The indirect losses from accidents and fires such as the cost of accident investigation, processing of tort claims, etc., are considered to be from two to four times greater than the direct losses.

It is impossible at the present time for the chief safety officer to spend any time in the formulation and administration of an effective safety program throughout the Service. All of his time is now spent in handling current policy, technical, and miscellaneous matters relating to the numerous operations and activities. The tremendous increase in visitor use of the parks, the Mission 66 program, and other activities such as boating, camping, and winter use, have resulted in a tremendous workload for one man even in the handling of current matters.

To provide a minimum of badly needed safety personnel, this estimate proposed the addition of an assistant safety officer and a statistical clerk to the Washington office staff and the establishment of safety staffs in two of the regional offices; one to serve the eastern park areas and one to serve the western areas. The two regional staffs would consist of two positions each—a safety officer and a secretary. This additional staffing for an effective safety program is long overdue.

Division of personnel.—The additional training officer position requested is vitally needed to assist the training officer, GS-13. The passage of the Government Employees Training Act of 1958 (Public Law 85-507) has generated considerable additional workload for the training officer and this increase in volume unquestionably will continue to mount. The training officer, unassisted, has not been able to set up guidelines for a formal program under the Government Employees Training Act or to do other things which would make use of the provisions of the training act more effective. These things include an intensive and continuing study of training needs which could be met through use of outside facilities, reports on these needs, and establishing criteria for the selection of employees to receive the benefits of training in outside facilities. The additional training officer position requested would provide more nearly adequate leadership and assistance in management development, supervisory training, instructor training, orientation, safety training, etc., which are vital for the improvement of the career service of the bureau. It is impossible for the training officer, unassisted, to plan and execute a training program for a bureau of the size and complexity of the National Park Service. The pressures on the single training officer are mounting steadily and there are many demands on his time which he simply cannot meet.

With the additional position requested, it would be possible to do the following which now cannot be done:

(1) Work up formal orientation programs for the Washington office and pattern programs and guidelines for field offices.

(2) Develop manuals for supervisors to use in orientation training and in developing their staff members.

(3) Plan and conduct supervisory training sessions. (Considerable progress has been made on executive training and management training, but nothing at all has been done on supervisory training and this is one of the greatest needs.)

(4) Make field visits to advise on and assist in and evaluate park training programs.

(5) Assist the training officer in conducting management seminars. (Hitherto this has of necessity been a one-man job. Management seminars, properly conducted, involve a tremendous amount of planning and detail. It is too much to expect one man to handle, along with the other work a training officer necessarily must do.)

(6) Provide coverage and continuity here in Washington when the training officer is in the field, as he should be a considerable portion of the time.

Division of Budget and Finance.—One of the items in the President's special message to the Congress of February 23, 1961, on natural resources had to do with fees and other user charges at all types of Federal natural resources projects and areas. Even before the date of the President's message on natural resources, this Service had under consideration the need for a comprehensive review of its visitor fee system in the light of the many additional services and facilities that have been provided in the parks under Mission 66, and the need to intensify its day-to-day review of the system following whatever changes that may result from a comprehensive study. The House committee report on page 8 stated that "the committee is concerned at the failure of the National Park Service to take appropriate steps to increase revenues."

Through the years the Service has adhered to a policy of not charging visitor fees in a park until adequate services and facilities have been provided to warrant such action. Adequate services and facilities are now available, or soon will be available, in many of the existing parks where no fees are now charged. As new parks are added to the system, full consideration and study should be given to the charging of appropriate visitor fees. The fees being charged in the various parks should be constantly reviewed to insure that they are fair and equitable, are in accordance with governing policies and principles, and that the full revenue potential is being realized within the governing policies and principles.

The staff functions incident to management of the Service's fee system are now being handled in the immediate office of the Chief of Budget and Finance. No special staff has been provided for this function, the workload incident to which is expected to increase substantially as time goes on. Aside from the continuing study and review that are required to keep the fee system up to date, there is also a heavy workload of correspondence to be handled, as well as oral inquiries concerning the fees that are being charged. To intensify efforts to realize the full revenue potential and to insure the charging of just and equitable visitor fees the estimate requested funds for the establishment of a user charges officer position to assist the Chief of Budget and Finance in carrying out this important function.

Division of International Cooperation.—As the accepted historical and natural leader in national parks and related economic, conservation, and scientific activities, the National Park Service has responsibilities that have come about automatically which extend throughout the world. In the past, the Washington Office of the Service has divided the resultant workload among its various organizational units. This practice has had to be accepted as the best that could be done within the limitations of funds and personnel. In recent months, however, the volume has become so great that the proposal to establish an office for the purpose has been thoroughly studied following which a skeleton office has been set up on a pilot basis.

The estimate proposed the firm establishment of such an organizational unit in the Washington Office to handle this important function and thus relieve the other organization units of workload that impedes the accomplishment of the functions for which they are basically responsible. The personnel of the new office must be thoroughly informed on all matters pertaining to the philosophy, objectives, and activities of the National Park Service, including economic values, physical facilities, legislation, planning, development, operations, organization structure, and benefits and use. The personnel must be competent to conduct foreign relations work effectively and efficiently in order to best serve the world interests of the United States. The office would coordinate

National Park Service operations with related operations of American as well as of foreign national and international agencies. The operations of the organizational unit would be tailored to fit within the framework of the programs of the Department of State and the Agency for International Development. To establish the organizational unit, this estimate provided for the position of a chief (GS–15), and a secretary (GS–5). If the unit is not provided for, the workload will have to be handled, on a less than efficient and satisfactory basis, by other organizational units at the expense of depressing the progress of other programs.

Increased administrative printing requirements

Departmental expenses	$5,000

There has been no increase in the amount provided for administrative printing during the last 10 years. The increased cost of printing and the materials required therefor that have taken place during that period, coupled with increased requirements of printed material incident to the Service's expanded operations, have rendered the present printing allowance of $25,000 inadequate. Administrative printing costs under this appropriation for the 1961 fiscal year totaled $28,932 during which period it was necessary to charge some of such costs to program funds in order to satisfy requirements. The increase of $5,000 requested but eliminated by House action is essential if the administrative printing needs of the Service are to be met.

Increased general expense funds for present staff

Departmental expenses	$15,670
Regional office expenses	15,330
Total	31,000

Periodic within-grade promotions, increases in per diem and mileage rates, the necessity of absorbing a portion of the salary-increase costs authorized by Public Law 86–568, and position reallocations brought about by increased responsibilities incident to the expanded programs have progressively reduced from year to year the amount available under this appropriation for general expenses. The situation forces the charging of some travel and other costs to program funds that properly are for financing as general administrative expenses. With the expanded operations, personnel turnover has increased substantially with the result that the number of Washington office vacancies filled by transfer of field employees has risen, thereby increasing travel and transportation costs. An example of such an item was the recent transfer of an employee from Yosemite National Park to the Washington office at a total cost of $1,712. The amount requested in this estimate must be provided if the Service is to discharge adequately its administrative responsibilities and if program funds are not to be used for general administrative purposes.

It is urged that favorable consideration be given to restoring all of the foregoing items to the budget.

NATIONAL PARK SERVICE

ADMINISTRATIVE PROVISIONS

(House hearings, pp. 739–741)

(Senate hearings, pp. 719–720)

(P. 11, lines 8 and 10)

Amendments requested:

(1) Page 11, line 8, strike out the following: "thirty-five" and insert in lieu thereof the following: "fifty-nine".

(2) Page 11, line 10, after the word "fifty" insert the following: "-seven".

HOUSE REPORT

The House report made no statement concerning this item.

JUSTIFICATION

House action on the bill eliminated 24 of the 34 additional vehicles proposed in the budget. Seven of the twenty-four vehicles eliminated are police type, which exceed by $300 each the general purchase price limitation for the current fiscal year.

The increases proposed in the budget are for the following purposes:

New parks added to the system	6
Recently established parks for which vehicles have not been provided	5
New training center at Harpers Ferry National Monument, W.Va	2
U.S. Park Police	4
Police-type vehicles for other parks	10
For other protection, administrative, and interpretive functions in currently established parks	7
Total	34

The addition of new miles of roads and parkways; of new campgrounds, amphitheaters, visitor centers, entrance stations, etc., under the Mission 66 program creates the need for additional ranger, interpretive, and administrative personnel. Such personnel is being provided for through appropriation increases. The availability of passenger-carrying vehicles is a prime requisite for the effective performance of many of such employees. Also, the addition of new parks to the system brings about a need for additional passenger motor vehicles. It is essential that the 34 additional vehicles requested, including the special police-type vehicles, be provided to properly adminster the new parks that have been and are being established; equip the U.S. Park Police and the new training center; patrol new sections of the parkways that are being opened; and protect the park features and visitors because of the increased use and the extension of the visitor season.

OFFICE OF TERRITORIES

TRUST TERRITORY OF THE PACIFIC ISLANDS

(House hearings, pp. 977, 979, 1004–1034, 1049–1051)

(Senate hearings, pp. 294–317)

Appropriation, 1962	$6,304,000
Estimate	10,000,000
House allowance	6,600,000
Restoration requested	3,400,000

(P. 13, line 8)

Amendment requested:

Page 13, line 8, strike out "$6,600,000" and insert in lieu thereof "$10,000,000", the estimate or an increase of $3,400,000 in the appropriation.

HOUSE REPORT

"The committee has allowed $6,600,000, an increase of $296,000 in the 1962 appropriation, and a decrease of $3,400,000 in the budget request. The amount recommended is the maximum authorized under the current annual monetary limitation of $7,500,000 after taking into consideration the estimated transfer in 1963 of $900,000 from the Department of Navy to finance a portion of the cost of administration of the Saipan district. This district is to be transferred to the Department of Interior from the Navy on July 1, 1962. The committee will give consideration to additional requirements for administration of the trust territory as soon as pending legislation is passed amending the current monetary authorization."

"The committee has approved a proposed reprograming of the 1963 request to permit the use of $200,000 in connection with the administration of the Saipan district which was not contemplated at the time the budget esimates were prepared."

JUSTIFICATION

The amendment restores the reduction of $3,400,000 made by the House in the budget estimate, the amount being for the following:

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
1. High Commissioner's Office	$71,400	$92,000	$92,000	
2. Judiciary	86,100	87,000	87,000	
3. Grants	6,146,500	9,821,000	6,421,000	$3,400,000
Total	6,304,000	10,000,000	6,600,000	3,400,000

There is a pressing need to correct deficiencies in the programs of the trust territory notwithstanding the present limitation on the amount authorized to be appropriated annually.

We request that the reduction of $3,400,000 be restored to enable the trust territory to continue its programs to—

(*a*) Accelerate replacement of the rapidly deteriorating physical plant, most of which are remnants from the World War II period, and have become year-by-year increasingly costly to keep in service at all.

(*b*) To build more and better schools and physical facilities in order to insure that all Micronesian children have a suitable physical plant in which to become educated properly

Some $2,149,000 of the reduction was for the construction purposes outlined above, plus construction of new medical facilities and improved airfields, harbors, and other transportation and building facilities. Operation and maintenance of physical plant costs would increase $450,000. In addition, $400,000 is needed in order to upgrade the quality of the teaching personnel and to start secondary schools at Palau and Truk, plus the establishment of a 2-year teachers college at the Pacific Islands Central School. Another $339,000 is needed in order to accelerate economic development so as to provide greater employment to the Micronesians.

There is pending in the Congress a bill, S. 2775, which the Senate has already passed and which would increase the present authorization of $7,500,000 for appropriations to the trust territory sufficiently to more than encompass the entire $10 million budget requested for fiscal year 1963.

The entire restoration request will be expended under object class 41, "Grants, subsidies, and contributions."

GEOLOGICAL SURVEY

Surveys, Investigations, and Research

(House hearings, pp. 471–539)

(Senate hearings, pp. 323–347)

Appropriation, 1962	$49,820,000
Estimate	59,900,000
House allowance	56,100,000
Restoration requested	3,800,000

(P. 15, lines 15 and 23)

Amendments requested:

(1) Page 15, line 15, after "(72 Stat. 837);", insert the following: "conduct investigations of marine geology and hydrology;"

(2) Page 15, line 23, strike out "$56,100,000" and insert in lieu thereof "$59,900,000", an increase of $3,800,000 in the appropriation.

HOUSE REPORT

"The committee recommends an appropriation of $56,100,000, an increase of $6,280,000 in the 1962 appropriation, and a decrease of $3,800,000 and 183 permanent positions in the 1963 estimates. * * *

"The committee has disallowed the proposed establishment of a new Institute of Water Research to be financed by transfer of basic research projects from

the water resources investigations activity in the amount of $900,000 and a budget increase of $1,900,000. Although the committee fully appreciates the importance of basic research in the field of water, it does not believe that there has been adequate time to fully develop the expanded program and to assure that there will be complete coordination and a lack of any duplication with the work being performed by the numerous other Federal agencies in the general field of water research. In this connection, it was not possible for the agency to furnish the committee at this time data on the work being performed or expenditures by other Federal agencies in this field pending the completion of a current study by a committee under the auspices of the President's science adviser and the Federal Council of Science and Technology. It is believed desirable, therefore, to defer this matter until more complete information is available for appraisal.

"The committee has allowed $500,000 of the proposed increase of $1 million for research on geologic and hydrologic processes in oceanic areas. With a current base of $425,000, this allowance will make a total available of $925,000. This appears to be all that is warranted for expansion of this program pending extension of the Bureau's authorization for work in this area.

"The committee has allowed $100,000 for planning the proposed nuclear research building at Denver, Colo., but has deferred consideration of the construction estimate until fiscal year 1964. The committee questions the need for a building for this purpose at a cost of $900,000 and expects that the agency will make every effort to design a less expensive building."

JUSTIFICATION

Explanation of amendment (1).—The amendment is needed to clarify the availability of the appropriation for investigations of marine geology and hydrology, as authorized by the organic act of 1879 (43 U.S.C. 31) directing the "examination of the geological structure, mineral resources, and products of the national domain." The extension of such work seaward from the land seems to be clearly authorized by the Outer Continental Shelf Act, 43 U.S.C. 1332(a): "It is hereby declared to be the policy of the United States that the subsoil and seabed of the Outer Continental Shelf appertain to the United States and are subject to its jurisdiction, control, and power of disposition as provided in this Act"; and 43 U.S.C. 1340: "Any agency of the United States and any person authorized by the Secretary may conduct geological and geophysical explorations in the Outer Continental Shelf, which do not interfere with or endanger actual operations under any lease maintained or granted pursuant to this Act, and which are not unduly harmful to aquatic life in such area."

The work on marine geology and hydrology proposed for the Geological Survey for 1963 will be largely concentrated in the estuarine, nearshore, and Continental Shelf and slope areas. However, some of this work will extend to the deeper ocean floors. This is because the development of full understanding of the natural processes that govern the formation of sedimentary rocks and related mineral deposits requires a limited amount of work in the deeper waters.

Explanation of amendment (2).—The amendment restores the reduction of $3,800,000 made by the House in the budget estimate. This amount is distributed to activities as follows:

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
(a) Topographic surveys and mapping	$16,910,000	$19,500,000	$19,500,000	
(b) Geologic and mineral resource surveys and mapping	13,420,000	15,020,000	15,020,000	
(c) Marine geology and hydrology		1,000,000	500,000	$500,000
(d) Water resources investigations	14,125,000	14,530,000	15,430,000	[1] −900,000
(e) Institute of Water Research		2,800,000		2,800,000
(f) Soil and moisture conservation	185,000	185,000	185,000	
(g) Conservation of lands and minerals	3,724,000	4,065,000	4,065,000	
(h) General administration	1,456,000	1,700,000	1,700,000	
(i) Special-purpose building		1,100,000	100,000	1,000,000
Committee reduction in travel, supplies, and materials and equipment			−400,000	400,000
Total	49,820,000	59,900,000	56,100,000	3,800,000

[1] To be transferred to the Institute of Water Research, as proposed in the budget.

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$1,225,000
12	Personnel benefits	80,000
21	Travel and transportation of persons	280,000
22	Transportation of things	30,000
23	Rent, communications, and utilities	185,000
24	Printing and reproduction	100,000
25	Other services	220,000
26	Supplies and materials	165,000
31	Equipment	515,000
32	Lands and structures	1,000,000
	Total	3,800,000

Marine geology and hydrology.—Restoration is requested of the $500,000 disallowed by the House for "Marine geology and hydrology." The House recommended that the $500,000 which was allowed would, when added to the current expenditure of $425,000, make available a total amount that would be sufficient for this program. The estimated expenditure of $425,000 in the general area this year is in support of offshore extension of land-based geologic and hydrologic studies which require offshore activity for their solution. These activities would continue as parts of subactivity programs in "Geologic and mineral resource surveys and mapping" and "Water resources investigations." Hence, only $500,000, rather than $925,000, would be available to develop a formal program of research in marine geology and hydrology in fiscal year 1963. This is less than one-sixth of the amount that the Interagency Committee on Oceanography of the Federal Council for Science and Technology recommended the Survey undertake in fiscal year 1963, a recommendation fully endorsed by the Federal Council. A research program of this highly technical nature requires a heavy initial outlay for facilities and specialized equipment. The $1 million originally requested would provide for minimal facilities and equipment on the east and west coasts. It would be possible to conduct a limited program on only one coast with the amount allowed by the House.

Staffing the fully restored program of marine geology and hydrology will require 20 positions over the House allowance.

Institute of Water Research.—Restoration of the $1,900,000 (including 163 permanent positions), plus transfer of $900,000 from "Water resources investigations," as proposed for the Institute of Water Research is strongly urged. As stressed by the President in his message on conservation, the Institute would be established to "conduct basic research on surface and ground waters to develop fundamental principles and facilitate improved translation of scientific information into water management practices."

Water problems are increasing in number and complexity. New questions which require scientific research are arising more rapidly than they are being answered. Recognizing this lag in water research, the Senate Select Committee on National Water Resources pointed out that "the Federal Government can make one of its greatest contributions to water-resource development through stimulation of necessary research to guide future progress." The Institute of Water Research would follow up that committee's specific recommendation that "the Federal Government should undertake a coordinated research program on water." The urgency of the necessary research effort militates against further delay in undertaking programs of this character.

Despite tremendous growth in water requirements, water use, and water problems, no instiution anywhere in the world is devoted solely to fundamental research in water science. Many agencies conduct studies directed to specific water problems that relate to their particular responsibilities, such as studies of the efficiency of methods of water use in agriculture, the effectiveness of flood-control measures, or the relations of water quality to health. But water problems are interrelated—the solution of one may create another. For example, the development of new ground water sources may seriously reduce the flow of a nearby river by intercepting ground water in transit to the river channel. It is important, therefore, that those concerned with the development and management of water supplies be furnished basic knowledge of the entire physical and hydrologic framework within which water moves so that the consequences of any water development or conservation measure may be predicted.

The Geological Survey is singularly well qualified to provide a framework of fundamental water knowledge. It has hydrologists, hydraulic engineers, geologists, chemists, geophysicists, and scientists of many specialized fields with the tradition, training, and broad responsibility to undertake this task.

To provide an adequate framework of fundamental water knowledge—the Geological Survey's essential responsibility in the field of water resources—basic research must be broadened and strengthened. Many notable advances of modern times have come only after months or years of painstaking exhaustive research—exploration of outer space, development of polio vaccines, and the peaceful use of the atom, to name a few. The same need for research in the water field has not gained an appropriate degree of recognition. Water research has lagged because it has not received adequate financial or moral support and has not been able to attract its share of topflight research scientists. The proposed Institute of Water Research would be devoted solely to water science and only to research. A research effort so organized would enable this sorely neglected segment of our scientific frontier to achieve the attention and status it needs.

Since mid-1956, the Geological Survey has been making a special effort to assess the total water situation in the United States, to define unsolved scientific problems, and to specify fields of essential research. Aided by participation in the work of the special Subcommittee on Water Research appointed by the Federal Council on Science and Technology, the Geological Survey has carefully defined its particular responsibilities in the general field of water research and its responsibilities in relation to those of other agencies. Its research proposals are well planned and they are not duplicated elsewhere.

Special-purpose building.—The Survey's budget for 1963 provided for $1,100,000 to design and construct a special-purpose laboratory building, at the Denver Federal Center, to house facilities for research in isotope geology and hydrology involving unusual levels of nuclear radiation. The House allowed $100,000 for design of the building but deferred consideration of the remaining $1 million until 1964.

If provision is made for construction in fiscal year 1963 it is expected that design will be completed and a contract awarded for construction near the end of 1963. If provision is not made for construction until 1964, the delay will further handicap the Survey's work involving radioisotopes. In addition to the Survey's planned program of nuclear application to geologic and hydrologic research, there are commitments to the Atomic Energy Commission for special research projects. Studies of the behavior of radiocontaminants in surface and ground water are required to maintain pace with military and civilian developments in the uses of atomic energy. An item of equipment needed for these and related projects is a neutron generator; and its proper operation requires special shielding in surrounding walls. This is offered as a single example of the relationship between the Survey's planned program and its needs for a special-purpose building.

The Survey will exert every effort to achieve economical design consistent with the specialized construction required.

Committee reduction in travel, supplies and materials, and equipment.—There is complete agreement that strict control over expenditures for such objects as travel, supplies and materials, and equipment should be maintained at all times. Restoration of the 5-percent reduction in these objects is sought in order to provide proper support for the field and laboratory investigations and permit the Survey to proceed with its planned equipment purchases which will achieve significant product improvement and cost reductions.

Equipment requirements for 1963, substantially above 1961, are to outfit the additional personnel needed for an expanded program, and to take advantage of technological developments for research and automatic processing. It is the policy of the Geological Survey to free its professional staff for professional work through the use of equipment wherever possible. As an example, a recently perfected instrument will remove relief distortions from aerial photographs, improving accuracy and achieving significant reduction in costs through savings in the time required to make map revisions. Another example is digital water-stage recorders which eliminate the need for manual collecting and computing of data.

The requested funds for travel are to carry out the field investigations and the collection of basic data necessary to implement our programs. Increased travel costs result in part from the recently approved increase in per diem rate, and in part from the nature of the field investigations. Support of Survey programs

inevitably involves extensive travel for field investigations, including use of GSA-pool automobiles in local fieldwork. Restriction on travel by these employees would curtail productivity.

The fiscal year 1963 estimate for supplies and materials is $548,000 (27 percent) over fiscal year 1961 actual obligations. However, fiscal year 1961 purchases of map paper were curtailed to effect an inventory reduction. Adjusting that item to actual utilization, the fiscal year 1963 estimate is only 21 percent over fiscal year 1961, and thus is commensurate with the increment in personnel compensation.

BUREAU OF MINES

CONSERVATION AND DEVELOPMENT OF MINERAL RESOURCES

(House hearings, pp. 865–924)
(Senate hearings, pp. 191–214)

Appropriation 1962	$24,800,000
Estimate	27,000,000
House allowance	26,550,000
Restoration requested	263,000

(P. 17, line 8)

Amendment requested:

Page 17, line 8, strike out "$26,550,000" and insert in lieu thereof "$26,813,000", an increase of $263,000 in the appropriation.

HOUSE REPORT

"The committee has allowed an appropriation of $26,550,000, an increase of $1,750,000 in the 1962 appropriation, and a decrease of $450,000 in the budget estimate.* * *"

"* * * The committee has disallowed the proposed increase of $187,000 and 17 permanent positions to expand oil shale research. Effective use of the $733,000 allowed for continuation of this research should be adequate for fiscal year 1963."

"It was testified by the new Office of Coal Research, as discussed below, that it has received many meritorious contract proposals to develop new methods of mining, preparing, and utilizing coal. As the Bureau of Mines has well qualified personnel and adequate facilities available for coal research, the committee directs that not less than $500,000 of the $8,256,000 provided in the bill for bituminous and anthracite coal research be reprogramed to undertake some of these high priority projects. It is believed that the Bureau can readily curtail and defer some of the longrun research projects which it has had underway for several years without any serious loss in order to permit it to undertake some of these new shortrun projects which appear to have great promise for the coal industry. It is requested that the Bureau furnish a statement of its reprograming to the committee by July 1, 1962."

JUSTIFICATION

The amendment restores $263,000 of the $450,000 reduction made by the House in the budget estimate. This amount is distributed to activities as follows:

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
1. Bituminous coal	$7,131,000	[1] $7,214,000	$7,214,000	
2. Anthracite coal	992,000	1,042,000	1,042,000	
3. Petroleum, natural gas and oil shale	3,271,000	3,458,000	3,271,000	
4. Minerals and metals	13,040,000	14,786,000	14,786,000	
5. Foreign mineral activities	366,000	500,000	500,000	
Committee reduction in travel supplies and materials, and equipment			−263,000	263,000
Total	24,800,000	[1] 27,000,000	26,550,000	263,000

[1] Excludes $267,000 for activities transferred in the estimate to "Health and safety, Bureau of Mines."

A breakdown of the restoration by objects of expenditure follows:

21	Travel and transportation of persons	$34,000
26	Supplies and materials	88,000
31	Equipment	141,000
	Total	263,000

Travel, supplies, materials, and equipment—Unless the reduction of $263,000 made by the House is restored, the Bureau will be unable to fully carry out its planned conservation and development of mineral resources programs because travel, supplies, materials, and equipment are vital elements of such types of programs.

In the report the committee states that it believes that the exercise of stricter controls over travel, supplies, materials, and equipment would result in significant economies without diminishing the effectiveness of carrying out the required programs. The committee's concern for economies in expenditures under these objects is appreciated in full by the Bureau. With respect to this situation the Bureau is presently subjecting all travel requests to close scrutiny and is making every attempt to eliminate travel not essential to the Government's best interests. Furthermore, in considering the estimated increase in travel costs for 1963 over 1961, it should be noted that the 1963 request reflects a total increase under this appropriation of about 19 percent over actual obligations for 1961. Also, the 1961 actual figures do not reflect the additional travel costs pursuant to Public Law 87-139, 87th Congress.

The Bureau feels that travel by engineers and scientists to maintain effective contact with other researchers in their respective fields and to establish proper liaison among Bureau scientists in conducting research programs at some 22 research centers and laboratories scattered throughout the United States are requirements of modern-day research and should be encouraged. In addition, considerable travel must be performed in conducting research and investigations and testing at mine sites and in oilfields remotely removed from field headquarters areas.

In the matter of supplies, materials, and equipment, it must be remembered that the Bureau is proceeding to carry out a "crash" program on materials research. This type of research with its extreme range of temperature and pressure and high concentration of erosive or corrosive substances in gaseous, liquid, or solid forms tends to shorten the useful life of scientific equipment. Obsolescence is further hastened by new technical developments which in recent years have made substantial reequipping a usual rather than an unusual requirement. The cost of replacing obsolescent scientific equipment and acquiring new items of advanced design continues to rise as increased manufacturing costs are of necessity passed on to the consumer. There is an urgent need for restoration of these funds to provide Bureau researchers with the proper tools in order that their talents and experience can be directed more profitably and effectively toward creative research.

Bituminous and anthracite coal research.—In the House report the committee directed that not less than $500,000 of the $8,256,000 provided in the bill for bituminous and anthracite coal research be reprogramed to undertake some of the high-priority projects listed by the Office of Coal Research. The committee further requested that the Bureau furnish a statement of its reprograming by July 1, 1962.

Although the Bureau of Mines would be pleased to review its programs at this time to substantiate that there is no overlapping between its programs and Office of Coal Research programs, it should be emphasized that the programs of both the Office of Coal Research and the Bureau of Mines are under constant review in order to select projects of highest priority for budgeting. As a typical example of how rapidly changes in program emphasis occur, since the budget of OCR was presented, a draft report by Booz, Allen, Hamilton, which was produced as a result of the first contract of OCR, has identified proposed areas of research different from those presented to this committee by OCR. This report recommends research on projects, many of which are included in the program which the Bureau of Mines has submitted to this committee. Of the seven technical projects recommended by the draft report, four are already included in the Bureau of Mines program and in amounts much greater than the $500,000 recommended by the committee. In this connection, it should be emphasized that the research program of the Bureau of Mines contains many short-range as well as long-range projects. In contrast, the programs of OCR

are to be directed toward short-range programs that can develop significant coal markets quickly and the work is to be done under contract rather than by using its own facilities as is done by the Bureau of Mines.

In view of the fact that the Bureau already has included in its program four of the seven projects recommended in the report by Booz, Allen, Hamilton, it is felt that the direction of the House committee is both restrictive and unnecessary.

BUREAU OF MINES

DEVELOPMENT AND OPERATION OF HELIUM PROPERTIES

(House hearings, pp. 963–976)

(Senate hearings, pp. 238–239)

Borrowing authority, 1962	$10,000,000
Estimate	20,000,000
House allowance	6,000,000
Restoration requested	14,000,000

(P. 19, line 1)

Amendment requested:

Page 19, line 1, strike out "$6,000,000" and insert in lieu thereof "$20,000,000", the estimate, or an increase of $14,000,000 in borrowing authority.

HOUSE REPORT

"The committee recommends an additional borrowing authority of $6 million, a decrease of $4 million in the borrowing authority provided for the current fiscal year, and a decrease of $14 million in the budget request."

"This program, authorized by the Helium Act amendments approved September 13, 1960, provides for the conservation of helium now going to fuel markets as noncombustible components of some natural gases. Under the program private industry is being encouraged to finance, construct, and operate up to 12 plants for the production of helium which will be purchased by the Government under long-term contracts. Helium so acquired will be stored in the Government-owned Cliffside gasfield near Amarillo, Tex., until needed to meet demands. The borrowing authority will be used to finance payments under these contracts. To date, the Department has entered into four such contracts for the purchase of an estimated 62 billion cubic feet of helium over a 22-year period. As these plants are still under construction and will be in operation for only a portion of fiscal year 1963, it is now estimated that helium purchases will total only about $25.5 million. With the availability of income from helium sales, a borrowing authority of only $16 million will be needed, of which $10 million is currently available."

"The budget proposed the construction of a new administration building for helium operations at Amarillo, Tex., at a cost of $1,500,000. The committee believes that the present facilities, together with the rental of such private space as may be necessary, should be adequate to house the headquarters."

JUSTIFICATION

The Bureau of Mines strongly appeals the reduction (from $20 million to $6 million) in borrowing authority to sustain the Government's helium conservation program through fiscal year 1963. We respectfully request the restoration of the full amount of $20 million, which we believe is required to assure the financial integrity of the program.

A program of this kind, involving contracts with private industry, should have adequate financing to enable the Government to meet its financial obligations on time under any conceivable circumstances. This requires that adequate financing should be available to cover reasonable contingencies in the program as well as to meet estimated obligations which would be incurred in the absence of such contingencies. Such financial integrity can be achieved with adequate borrowing authority without any attendant increase in the cost of the program, because the borrowing authority will be utilized only as required to meet actual obligations.

The need for adequate borrowing authority to cover reasonable contingencies in the program is particularly great in fiscal year 1963, because it is in this first year

of the program that the greatest inherent uncertainty exists in the estimated income and expenditures in the program. Depending upon the effect of a recent price increase upon helium sales and the time required by the private plants to achieve initial operations, the Bureau of Mines estimate of income for fiscal year 1963 might be overstated by $3 or $4 million, and the estimate of expenditures understated in a similar amount. There is a further contingency, which will extend from year to year, that the enactment of appropriation acts providing subsequent additional borrowing authority will be delayed beyond July 1.

Borrowing authority in the amount of $6 million would enable the Bureau of Mines to meet its estimated obligations in fiscal year 1963, but it would not be adequate to cover as well any one of the above contingencies, much less any cumulative combination thereof.

The Bureau of Mines could accommodate a deficiency of funds in the program in fiscal year 1963 by refusing to begin purchases of helium from the private plants at a date earlier than that which would permit deliveries of only such volumes of helium as may be adequately financed. Such an accommodation, if necessary, could be achieved only with an attendant reduction in the volume of helium saved from wastage in fuel gases. Moreover, such an accommodation could be achieved only in the first year of the program. A deficiency of funds in future years would make it impossible for the Bureau of Mines to pay its bills on time.

The Bureau of Mines appreciates the desire of the Congress to maintain year-to-year fiscal surveillance over the program, but we respectfully suggest that such control can be achieved without such a tight rein as is indicated by the reduction in the borrowing authority requested in fiscal year 1963. The budget for the helium program is reviewed annually by the appropriation committees, and the Secretary of the Interior must report annually to the Congress on the progress and expenditures in the program. Any excess borrowing authority provided to cover expenditures shall not be used unless and until it is needed to carry out the program objectives as approved by the Congress. Even if there should never be an occasion to use it, some excess borrowing authority shall always be needed to assure the financial integrity of the program. In fiscal year 1963, we believe the amount of this excess borrowing authority should be $14 million, bringing the total amount of needed borrowing authority to $20 million. In future years, when the pattern of income and expenditures becomes more clearly established, the degree of uncertainty with respect to contingencies will diminish, and the amount of excess borrowing authority required to assure the financial integrity of the program will be reduced accordingly.

The Bureau of Mines also wishes to request restoration of the $1.5 million for construction of a helium administration building at Amarillo, Tex. Although there are suitable prospective alternatives, such as consolidation of the presently scattered offices into space leased in a single building, there is no alternative that would achieve the desired consolidation, and the resultant efficiencies in administration, as well and as economically as the construction of a helium administration building for this purpose. We believe it is unreasonable to believe that comparable space could be leased for a period of 20 years or longer for less than it would cost to build and maintain a building designed to meet our specific needs.

The proposed building would house the offices of the General Manager, Helium Operations, and four divisions of the helium activity under his immediate supervision. This field headquarters organization presently consists of 148 engineers, accountants, clerks, and supervisory personnel, employed in long-range planning, procurement, accounting, fiscal disbursements, and other technical, administrative, and management functions. We estimate that it will grow to about 212 persons by 1970 (about midway in the conservation program now authorized). Present offices are scattered in rented space on five floors of one building in Amarillo, rented space in a building four blocks away, and in three separate buildings on the grounds of the Amarillo Helium Plant 8 miles away. Such a dispersal of interrelated offices and administrative functions imposes unavoidable inefficiencies upon the administration of the helium program, arising out of poor communications and ineffective manpower utilization.

The Bureau of Mines has tried unsuccessfully for a number of years to remedy this situation (either by constructing a building of its own or by leasing consolidated space). The impact of the helium conservation program has made the problem extremely acute and urgent.

In view of the foregoing factors, the Bureau of Mines respectfully requests reconsideration of the reductions and restoration of the amounts requested in order that the helium conservation program may be carried on in a manner to discharge fully the responsibilities of the Bureau of Mines under the Helium Act to prevent waste of this vital resource.

OFFICE OF MINERALS EXPLORATION

SALARIES AND EXPENSES

(House hearings, pp. 743–768)

(Senate hearings, pp. 587–590)

Appropriation, 1962	$750,000
Estimate	1,000,000
House allowance	750,000
Restoration requested	250,000

(P. 19, lines 18 and 19)

Amendment requested:

Page 19, line 18, strike out "$750,000" and insert in lieu thereof "$1,000,000", an increase of $250,000 in the appropriation.

Page 19, line 19, strike out "$213,600" and insert in lieu thereof "$230,000", an increase of $16,400 in the allowance for administrative and technical services.

HOUSE REPORT

"The committee recommends an allowance of $750,000, the same as the 1962 appropriation and a decrease of $250,000 in the budget estimate. This program provides for Government loans to private industry for discovery of mineral reserves. The Government contributes not more than 50 percent of the cost which is repaid with interest if the exploration is successful.

"The committee wishes to reiterate its position that emphasis should be placed on providing exploration assistance on only those strategic and critical minerals for which there is a serious shortage in the United States. As lead, zinc, copper, and nickel do not meet this criterion, the committee directs that exploration loans for these minerals be discontinued. As the current loan program has primarily involved these particular minerals, the allowance of $750,000 should be adequate for the program in fiscal year 1963.

"The committee recommends a limitation of $213,600 on administrative and technical services, the same as 1962, and a decrease of $16,400 in the budget request."

JUSTIFICATION

This amendment restores the reduction of $250,000 made by the House in the budget estimate. This amount is distributed to activities as follows:

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
1. Financial assistance to participants in exploration projects	$536,400	$770,000	$536,400	$233,600
2. Administrative and technical services	213,600	230,000	213,600	16,400
Total	750,000	1,000,000	750,000	250,000

A breakdown of the restoration request by objects of expenditures follows:

Obligations by objects:	*Increase*
11 Personnel compensation	-------
12 Personnel benefits	$200
21 Travel and transportation of persons	5,000
23 Rents, communications, and utilities	800
24 Printing and reproduction	1,000
25 Other services	5,400
Services performed by:	
Bureau of Mines	2,000
Geological Survey	1,000
26 Supplies and materials	-------
31 Equipment	1,000
33 Investment and loans	233,600
Total	250,000

We respectfully request not only the restoration of funds reduced by the House committee, but also the removal of the committee's directive to discontinue loans for the exploration of lead, zinc, copper, and nickel. We shall endeavor in this justification to show that these four minerals should remain in the exploration assistance program.

In 1958 when defense requirements for immediately available supplies of strategic and critical materials diminished and the program of the Defense Minerals Exploration Administration was terminated, the criteria for extending exploration assistance changed also. As an element of the department's long-range mineral resources program, the objective of the new exploration program was extended to the search for new mineral deposits required to fill the needs of our expanding economy 25 to 50, and even more, years hence.

The President of the United States underscored the importance of the OME mission in his message to Congress dated March 1, 1962, when he stated:

"During the last 30 years, this Nation has consumed more minerals than all the peoples of the world had previously used. Twice in those 30 years we have doubled the rate of mineral production. Current demands are being met without difficulty primarily because of the immense technical and exploratory efforts of the 1940's and early 1950's. But present availability of raw materials must not blind us to tomorrow's requirements."

In the field of exploration and development of mineral resources, tomorrow is 25 to 50, or more years. We must explore now for the deposits for tomorrow's production. The supplies presently available, and reserves developed for immediate production, will have been consumed long before production begins from most of today's discoveries.

Between 1900 and 1950, the United States consumed approximately 22 million tons of lead, 26 million tons of zinc, 33 million tons of copper, and 2 million tons of nickel. And since 1950 the domestic production of these and many other minerals has not kept pace with domestic consumption. In 1960, the United States produced about 45 percent of its lead requirements, about 50 percent of its zinc, about 94 percent of its copper, and 13 percent of its nickel. Until recently it exported all of the mentioned minerals except nickel. The production of nickel is from one mine which contains practically all of the known reserve of the metal in the United States.

The following tabulation shows the position of the measured and indicated ore reserves of lead, zinc, copper, and nickel relative to the current needs of the Nation based upon the latest available data:

Years of measured and indicated reserves at 5-year average primary consumption rate

Commodity:	*Years*
Lead	6
Zinc	13
Copper	27
Nickel	4

Most of the known economic deposits of lead, zinc, copper, and nickel are now being exploited. To continue to meet a part of our needs for these minerals in the future, a continuous and vigorous campaign of exploration is

needed. The waiting time between the start of exploration and the flow of marketable ores from the mine is long—sometimes as much as 15 or 20 years—and the required capital investment heavy. The luxury of time is something that we can ill afford, especially in view of the astonishing projections for 1980 and 2000 shown in the following table:

Economic aggregates	1960	1980	2000
Population (millions)	180	245	330
Gross national production (1960 billions)	503	1,060	2,200
Labor force (millions)	73	102	140
Personal consumption expenditures (1960 billions)	330	660	1,320

These tables show that unless we can increase our known reserves of ore in the ground we will be wholly dependent upon foreign sources of supply. Although practically all of the surface mineral outcrops have been found, our geologists state that, based on the ratio between exposed and concealed areas, there are at least two or three times as many depoists yet to be found as have been discovered thus far. They also believe that many mining districts remain to be discovered, perhaps as many as 10 times those now known; and that among these undiscovered districts, there would be the same relative number of major districts, or "elephants," as has been found up to now. And very important, these deposits should compare favorably with the quality and grade of mineral ores that are now economic and will enable us to compete on better than equal terms with foreign imports—the only realistic longrun solution to the present problems in the domestic minerals industry. To repeat, these nebulous deposits will not be available in the future unless we make an actual inventory now.

The risk and cost of underground exploration is so great that private industry is reluctant to undertake domestic exploration. This is especially true for the small producer, who is rapidly vanishing from the scene. This is an alarming situation because it must be understood that along with adequate mineral reserves, we must have experienced small producers and miners. In the lead and zinc industry, 90 percent of the producers are considered small producers, and yet they account for only a small fraction of the total lead and zinc production. Without exploration assistance they will not survive.

The action directing the removal of lead, zinc, copper, and nickel from the OME program will not only greatly reduce the general effectiveness of the program but will be another demoralizing blow to the already depressed, hard-hit minerals industry.

The requests for increased appropriation of $250,000 and increased authorization for administrative and technical services of $16,400 were predicated on the needs and workload of the present greatly expanded program and on the desire to recover all royalties due the Government on production from exploration assistance projects.

The restoration of the $250,000 increase requested in the budget for fiscal year 1963 and the removal of the directive to discontinue exploration loans for lead, zinc, copper, and nickel are needed to safeguard the OME program whic his just now beginning to meet the challenge for which it was designed.

BUREAU OF COMMERCIAL FISHERIES

MANAGEMENT AND INVESTIGATIONS OF RESOURCES

(House hearings, pp. 148–194)

(Senate hearings, pp. 394–413)

Appropriation 1962	$12,550,000
Estimate	15,213,000
House allowance	14,600,000
Restoration requested	613,000

(P. 20, line 22)

Amendment requested:

Page 20, line 22, strike out "$14,600,000" and insert in lieu thereof "$15,213,000", the estimate, or an increase of $613,000 in the appropriation.

HOUSE REPORT

"The committee recommends an allowance of $14,600,000, an increase of $2,050,000 in the 1962 appropriation and a decrease of $613,000 in the 1963 estimate. * * *

"In addition to the direct appropriation of $1,499,000 allowed for research on fish migration over dams, it is expected that the Bureau will continue to use $250,000 from the permanent appropriation of customs duties on fishery products. Effective use of the total provided of $1,749,000 should be adequate for requirements in fiscal year 1963."

JUSTIFICATION

The amendment restores the reduction of $613,000 made by the House in the budget estimate for the appropriation. This amount is distributed as follows:

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
1. Management	$369,000	$376,000	$376,000	
2. Marketing and technology	2,672,000	3,132,000	3,132,000	
3. Research	6,619,000	7,555,000	7,555,000	
4. Research on fish migration over dams	924,000	1,999,000	1,499,000	$500,000
5. Fishing vessel mortgage insurance	51,000	51,000	51,000	
6. Columbia River fishery facilities	1,915,000	2,100,000	2,100,000	
Committee reduction in travel, supplies and materials and equipment			−113,000	113,000
Total	12,550,000	15,213,000	14,600,000	613,000

A breakdown of the restoration request by objects of expenditures follows:

11	Personnel compensation	$225,000
12	Personnel benefits	17,000
21	Travel and transportation of persons	21,000
25	Other services	80,000
26	Supplies and materials	39,000
31	Equipment	231,000
	Total	613,000

The reduction of $500,000 in the activity "Research on fish migration over dams" involved the disallowance of 25 positions. Restoration of the $500,000 and authority for the 25 additional positions is considered essential to the expeditious prosecution of this activity. Any delay in prosecuting this program, because of the lack of sufficient funds or adequate personnel, would seriously jeopardize our assignment of producing by the end of 1964, the target date set by the Secretary, the best possible information on which to base a development program for the Snake River.

The committee proposal that the Bureau use $250,000 of Saltonstall-Kennedy funds to offset in part the $500,000 reduction would require a reduction of that amount in the Saltonstall-Kennedy program proposed for the fiscal year 1963. Many emergency and urgent short-term programs which have been proposed under the Saltonstall-Kennedy program have had to be deferred because of insufficient funds.

Travel, supplies and materials, and equipment are integral parts of the Bureau's programs. The reduction of $113,000 in the amount budgeted for these items would seriously affect the efficient operation of Bureau programs and unless restored the Bureau will be greatly handicapped particularly in view of the fact that material expansion of programs is contemplated.

BUREAU OF COMMERCIAL FISHERIES

CONSTRUCTION

(House hearings, pp. 196–210)

(Senate hearings, pp. 440–446)

Appropriation, 1962	$7,561,000
Estimate	8,414,000
House allowance	7,900,000
Restoration requested	413,000

(P. 21, line 15)

AMENDMENT REQUESTED

Page 21, line 15, strike out "$7,900,000" and insert in lieu thereof "$8,313,000", an increase of $413,000 in the appropriation.

HOUSE REPORT

"The committee recommends $7,900,000, an increase of $339,000 in the 1962 appropriation and a decrease of $514,000 in the 1963 estimate. The amount allowed includes $2,002,000 for construction of a research laboratory at Seattle, Wash.; $1,198,000 for construction of a biological laboratory at Ann Arbor, Mich.; $394,000 for construction of a radiobiological laboratory at Beaufort, N.C.; $2,500,000 for construction of a fishery research vessel to replace the *Black Douglas* in the eastern Pacific; $150,000 for design of a fishery research vessel for use in the North Pacific and Bering Sea; $30,000 for rehabilitation of facilities at St. Simons Island, Ga.; and $1,626,000 for construction of Columbia River fishery facilities.

"The decreases represent a disallowance of $505,000 for equipment included in the estimates for construction of the laboratories of Seattle, Wash., and Ann Arbor, Mich., the purchase of which can be deferred to fiscal year 1964, and $9,000 in the Columbia River fisheries facilities program."

JUSTIFICATION

The amendment restores $413,000 of the reduction of $514,000 made by the House in the budget estimate for this appropriation. This amount is distributed as follows:

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
1. Fishery facilities	$6,130,000	$6,779,000	$6,274,000	$413,000
2. Columbia River fishery facilities	1,431,000	1,635,000	1,626,000	
Total	7,561,000	8,414,000	7,900,000	413,000

A breakdown of the restoration request by objects of expenditure follows:

32 Lands and structures $413,000

Of the $505,000 for equipment included in the estimates for construction of the laboratories at Seattle, Wash., and Ann Arbor, Mich., which was disallowed by the House, $413,000 was for fixed equipment such as laboratory and workbenches and cabinets, cold storage rooms, walk-in freezers, library shelving, aquariums, concrete holding tanks, banks of standard troughs, fume hoods, and similar equipment which would be permanently attached to and made a part of the structures. Restoration of $413,000 of the reduction is required to permit of the construction, procurement, and installation of this fixed equipment by the contractors in the usual manner.

BUREAU OF COMMERCIAL FISHERIES

General Administrative Expenses

(House hearings, pp. 211–217)

(Senate hearings, pp. 448–453)

Appropriation, 1962	$482,000
Estimate	616,000
House allowance	600,000
Restoration requested	16,000

(P. 22, line 4)

AMENDMENT REQUESTED

Page 22, line 4, strike out "$600,000" and insert in lieu thereof "$616,000", the estimate, or an increase of $16,000 in the appropriation.

HOUSE REPORT

"The committee has allowed $600,000, an increase of $118,000 in the 1962 appropriation and a decrease of $16,000 in the 1963 estimate. The increase provided includes $50,000 for an internal audit unit; $25,000 for additional staff at the Ann Arbor, Mich., regional office; and a nonrecurring increase of $39,000 for the purchase of bookkeeping machines."

JUSTIFICATION

The amendment restores the reduction of $16,000 made by the House in the budget estimate for this appropriation. This amount is distributed as follows:

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
1. Departmental expenses	$202,000	$272,000	$256,000	$16,000
2. Regional office expenses	280,000	344,000	344,000	
Total	482,000	616,000	600,000	16,000

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$9,500
12	Personnel benefits	800
21	Travel and transportation of persons	4,000
23	Rent, communications, and utilities	500
24	Printing and reproduction	700
26	Supplies and materials	500
	Total	16,000

The reduction of $16,000 would eliminate all but $4,000 of the $20,000 increase requested for more adequate financing of the Office of the Director and for more adequate and effective administrative staff work. Unless this reduction in funds is restored and the three positions that were eliminated are allowed the Bureau's expanding programs will be handicapped for lack of adequate supervision and inspection.

FISH AND WILDLIFE SERVICE

BUREAU OF SPORT FISHERIES AND WILDLIFE

MANAGEMENT AND INVESTIGATIONS OF RESOURCES

(House hearings, pp. 228–290)

(Senate hearings, pp. 446–485)

Appropriation, 1962	$23,315,650
Estimate	26,572,000
House allowance	26,500,000
Restoration requested	190,000

(P. 23, line 3)

Amendment requested:

Page 23, line 3, strike out "$26,500,000" and insert in lieu thereof "$26,690,000", an increase of $190,000 in the appropriation.

HOUSE REPORT

"The committee recommends an appropriation of $26,500,000, an increase of $3,184,350 in the 1962 appropriation and a decrease of $72,000 in the 1963 estimate.

"The committee has provided an increase in the budget estimate of $200,000 to expand research work on the control of blackbirds and starlings. With the base amount of $170,000, a total of $370,000 will be available for this work in fiscal year 1963. The committee has also added $30,000 for the establishment of a cooperative fishery unit at the University of Maine, as authorized by the act of September 2, 1960.

"The committee has denied the request to appropriate $190,000 under this item to continue studies of bird hazards to aircraft being conducted for the Federal Aviation Authority. The FAA has been financing this program for the last 2 years and because of the nature of the work, it is believed appropriate to continue financing under the FAA appropriation. The committee has also denied the increase requested of $50,000 under fishery research to replace Federal-aid reverted funds. It now appears that adequate funds will be available from this source in fiscal year 1963. The committee reduction of $62,000 in equipment is due primarily to the disallowance of the proposed addition of 36 passenger motor vehicles."

JUSTIFICATION

The amendment restores the $190,000 reduction in bird hazard studies made by the House in the budget estimate. This amount is for the following activities:

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
1. Management of fishery resources	$5,707,500	$6,181,000	$6,181,000	
2. Extension and training	237,000	237,000	267,000	
3. Fishery research	1,449,000	1,704,000	1,654,000	
4. Administration of wildlife resources	9,850,950	11,370,000	11,370,000	
5. Control of predatory animals and injurious rodents	2,506,300	2,506,000	2,506,000	
6. Wildlife research	2,300,900	2,690,000	2,700,000	$190,000
7. Soil and moisture conservation	208,000	705,000	705,000	
8. River basin studies	1,056,000	1,179,000	1,179,000	
Committee reduction in equipment			−62,000	
Total	23,315,650	26,572,000	26,500,000	190,000

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$105,000
12	Personnel benefits	8,000
21	Travel and transportation of persons	25,000
22	Transportation of things	2,000
25	Other services	5,000
26	Supplies and materials	25,000
31	Equipment	20,000
	Total	190,000

The amendment restores the reduction of $190,000 in the bird hazards to aircraft studies.

These studies were initiated in 1961 on an emergency basis with funds transferred from Federal Aviation Agency after the fatal crash at Logan Airport in Boston. The studies were continued in 1962 with an additional transfer of funds. Federal Aviation Agency advanced these funds with the understanding that the Bureau would take over financing the work as soon as funds could be obtained in its appropriations for this purpose. Accordingly, these funds were included in the 1963 estimates. We are advised that no funds for these studies have been included in the Federal Aviation Agency estimates. However, the Department would have no objection if the Congress wishes to provide funds for this purpose to that Agency.

Since commencing the studies, much knowledge has been gained but a resolution of the problem has not been achieved. While no aircraft fatalities attributed to birds have occurred since the Logan Airport crash, the presence of birds is still recognized as an air navigation hazard.

In view of the foregoing, restoration of the $190,000 is requested so that the vital bird hazard studies may be continued to a logical conclusion.

FISH AND WILDLIFE SERVICE

Bureau of Sport Fisheries and Wildlife

Migratory Bird Conservation Account

(House hearings, pp. 309–316)
(Senate hearings, pp. 544–546)

Appropriation 1962	----------
Estimate	$7,000,000
House allowance	7,000,000
Restoration requested	----------

HOUSE REPORT

"The committee recommends the budget estimate of $7 million to initiate the expanded wetlands acquisition program authorized by the act of October 4, 1961 (Public Law 87–383). This amount, together with the estimated $5 million to be available from receipts from the sale of Federal hunting stamps, will provide a total in the migratory bird conservation fund of $12 million for fiscal year 1963. It is estimated that this sum will provide for the acquisition of 259,000 acres of land of which 116,000 will be for migratory waterfowl refuges. The remainder will be for the waterfowl production area program with 60,000 acres to be acquired in fee and 83,000 acres controlled by easement. The committee has disallowed 35 of the 235 positions requested for administration of the program."

JUSTIFICATION

It is requested that the 35 positions disallowed for administration be restored.

The accelerated wetlands acquisition program authorizes the appropriation, within the next 7 years, of $105 million to be repaid in subsequent years from revenues from the sale of migratory bird hunting stamps. The accelerated program will be at a level much higher than in 1962. The additional personnel are needed for the greatly expanded program.

The 1963 program funds would be increased from the 1962 level of $5 million (revenues from sale of migratory bird hunting stamps) to the proposed estimates

of $12 million ($7 million appropriated funds; $5 million hunting stamp revenues) or an increase of 140 percent. The increased personnel for the expanded program is only 67 percent.

The 235 positions in the estimates are the minimum needed for the work in fiscal year 1963.

Included in the acreage to be acquired in 1963 is a large percent of small waterfowl production areas to be investigated and acquired. These are small wetlands tracts, mostly in the northern prairies, which are particularly vital for waterfowl production. They have the highest priority in the program, but require the most acquisition personnel per unit of acquisition because of their small size and scattered occurence.

There are estimated to be 2,600 ownerships in the lands to be acquired in fiscal year 1963. Each of the owners must be contacted a number of times in order to obtain purchase agreements; and, based on an average of two contacts per ownership, a total of 5,200 contacts must be made by negotiators. After lands are taken under purchase agreement, title examination and cadastral survey services are necessary. It is also necessary in most cases to do considerable curative work before title is acceptable to the Attorney General. It is estimated that some 2,200 cases will be closed during the fiscal year.

The following is a summary of personnel requirements for fiscal year 1963:

Class of work	*Positions*
(*a*) Location and ascertainment of purchase projects, realty reconnaissance, engineering surveys, and biological studies	58
(*b*) Acquisition appraisal, negotiation with owners, case closings, and cadastral surveys	136
(*c*) Supervision and general administration	41
Total	235

FISH AND WILDLIFE SERVICE

Bureau of Sport Fisheries and Wildlife,

General Administrative Expenses

(House hearings, pp. 303–309)

(Senate hearings, pp. 539–543)

Appropriation 1962	$1,071,000
Estimate	1,331,000
House allowance	1,250,000
Restoration requested	81,000

(P. 23, line 17)

Amendment requested:

Page 23, line 17, strike out "$1,250,000" and insert in lieu thereof "$1,331,000", the estimate, or an increase of $81,000 in the appropriation.

HOUSE REPORT

"The committee recommends an appropriation of $1,250,000, an increase of $179,000 in the 1962 appropriation, and a decrease of $81,000 in the 1963 estimate. The amount allowed, together with not to exceed $395,000 of funds available from other sources, should provide adequately for administrative expenses in fiscal year 1963. The committee action includes disallowance of six of the additional permanent positions requested."

JUSTIFICATION

The amendment restores the reduction of $81,000 including six permanent positions made by the House in the budget estimate. This amount is distributed by activities as follows:

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
1. Departmental expense	$264,000	$352,000	$282,000	$70,000
2. Regional office expense	807,000	979,000	968,000	11,000
Total	1,071,000	1,331,000	1,250,000	81,000

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$56,000
12	Personnel benefits	4,000
21	Travel and transportation of persons	5,000
25	Services of other agencies	5,000
26	Supplies and materials	2,000
31	Equipment	9,000
	Total	81,000

Restoration of the House disallowance of $81,000 and six permanent positions under this appropriation is essential to provide for an adequate level of administrative services to meet the operational needs of the expanding programs of the Bureau. The effect of this disallowance on the 1963 program for general administrative services is as follows:

	1963 increases	Application of House disallowance
Budgetary management	$17,000	−$17,000
Management analysis	17,000	−17,000
Civil service exam ning boards	42,000	−26,000
Property management	21,000	−21,000
Total	97,000	−81,000

Budgetary management has become increasingly difficult in recent years with the complexity and expansion of the Bureau's programs. The funds requested and disallowed are required to strengthen this function by improving procedures for the development, execution, and control of the budget. They will also permit modernization of budgetary management to provide for cost-based budgets fully integrated with program planning, cost accounting, and reporting.

Failure to restore funds for the management analysis function will mean that the present staff will not be able to do anything more than handle the continuing routine work of forms control, the incentive awards program, the management improvement program, and maintaining the administrative and technical manual. With the Bureau embarking on a program for development of a comprehensive management system, it is extremely important that the funds be restored for this function so that organization, management, and procedure studies can be undertaken to determine overall needs of management and coordinate efforts toward a common objective.

The needs for civil service examining boards in the Bureau have grown to the point where serious recruitment problems are now being experienced. The Bureau has responsibility for examining and grading applicants for positions which are unique to the Bureau, such as fish and wildlife biologists, and technicians of various types, wildlife refuge managers, fish hatchery managers, game management agents, and local wage board personnel. With the expansion of the various programs it has been difficult to keep pace with recruitment needs. As a result it has been necessary to grant many limited tenure appointments which has had an effect on the quality of recruits and stability of the work force. Intense interest exists in the field of fish and wildlife conservation as evidenced

by nearly 7,000 formal employment inquiries in 1961. Applications for examinations are being received at increasingly higher rates for each announcement. Unless restoration of the disallowance is made, the Bureau will not only face a serious recruitment problem but will be unable to answer public inquiries adequately.

Property management work at the Washington office level has suffered for lack of staff in keeping with its importance to the accomplishment of the overall Bureau program. To provide positive guidance to the programs in such important fields as construction contracting, material and service procurement, research and development contracting, equipment management, surplus and excess personnel property disposal, and acquisition space control and records management, an urgent need exists for a property management specialist. Restoration of the disallowance for this function is necessary if the Bureau is to effect needed efficiencies and economies in this field of program administration.

FISH AND WILDLIFE SERVICE

ADMINISTRATIVE PROVISIONS

(House hearings, p. 225)

(Senate hearings, pp. 462–463)

(P. 23, line 21)

Amendment requested:

Page 23, line 21, strike out the word "seventeen" and insert in lieu thereof the word "twenty-four".

HOUSE REPORT

The House report made no statement concerning this item.

JUSTIFICATION

Authority for the Fish and Wildlife Service to purchase not to exceed 117 passenger motor vehicles, of which 92 would be for replacement only, would permit the Bureau of Commerical Fisheries to purchase 16 replacement vehicles and only 4 of the 11 additional vehicles required. It is considered essential that the language be restored to authorize the Bureau to purchase the 11 additional vehicles needed. Lack of sufficient vehicles would greatly hamper efficient and economical program performance especially in connection with those programs requiring transportation of personnel, supplies, and equipment in remote areas.

OFFICE OF SALINE WATER

SALARIES AND EXPENSES

(House hearings, pp. 827–862)

(Senate hearings, pp. 573–578)

Appropriation, 1962	$5,255,000
Estimate	7,700,000
House allowance	7,600,000
Restoration requested	100,000

(P. 24, line 24)

Amendments requested:

(1) Page 24, line 24, strike out "$7,600,000" and insert in lieu thereof "$7,700,000," the estimate or an increase of $100,000 in the appropriation.

(2) Page 24, line 24, strike out "$525,000" and insert in lieu thereof "$625,000."

HOUSE REPORT

"The committee recommends an appropriation of $7,600,000, an increase of $2,345,000 in the 1962 appropriation and a decrease of $100,000 in the 1963 estimates, for continuation of research to develop low-cost processes for converting saline water to fresh water in quantities sufficient for municipal, industrial, and agricultural use. The amount allowed includes $3,275,000 for basic research,

$3,800,000 for applied research, and $525,000 for administration and coordination. The latter reflects a decrease of $100,000 in the budget estimate of $625,000. The amount allowed, which includes an increase of $175,000 over the 1962 figure, will provide adequately for administration and coordination of a research program of this size. The allowance reflects a reduction of 10 of the additional permanent positions requested."

JUSTIFICATION

Explanation of amendment (1)

The amendment restores the reduction of $100,000 made by the House in the budget estimate. This amount is distributed to activities as follows:

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
1. Administration and coordination	$350,000	$625,000	$525,000	$100,000
2. (a) Contracts and grants (non-Federal)	4,105,000	5,775,000	5,775,000	
(b) Federal laboratories	800,000	1,300,000	1,300,000	
Total	5,255,000	7,700,000	7,600,000	100,000

The restoration is distributed by objects of expenditures as follows:

11	Personnel compensation	$75,500
12	Personnel benefits	5,300
21	Travel and transportation of persons	5,800
22	Transportation of things	1,000
23	Rent, communications, and utilities	4,000
24	Printing and reproduction	2,500
26	Supplies and materials	2,600
31	Equipment	3,300
	Total	100,000

The estimate as submitted provides for acceleration of the research and development program from the 1962 level of $5,255,000 (including a $3,500,000 supplemental) to $7,700,000, with $625,000, or 8.1 percent, for administration and coordination expense. The $625,000 is to cover direct costs of the scientific, engineering, and technical staffs necessary to originate or screen research and developmental projects and to develop the contracts under which the accelerated studies will be performed.

The specific personnel increases requested for 1963 include scientific personnel to generate and screen proposals for basic and applied research, technical engineering personnel to evaluate pilot plant test results, and a professional accountant-auditor to develop standardized indexes for evaluation of pilot plant and demonstration plant costs. These increases will be essential to the prudent management of the expanded contract program.

Explanation of amendment (2)

The amendment increases the limitation on the amount available for administration and coordination from $525,000 to $625,000.

The accelerated research effort in 1963 will require that the proposals for original research and for process development be carefully selected and closely coordinated to insure maximum benefits to the program and to the public. The additional staff planned for this purpose will be responsible for the development of projects, the administration of the research, and the utilization of the results in further research or in applications to pilot or demonstration plants.

The House reduction of 10 positions will restrict the effectiveness of the research organization to the extent of delaying the examination and selection of worthwhile basic and applied research projects. The restoration of the $100,000 reduction in the limitation governing administration and coordination will permit the addition of the scientific and professional employees necessary to process the expanded workload.

OFFICE OF SALINE WATER

OPERATION AND MAINTENANCE

(House hearings, pp. 852–862)
(Senate hearings, pp. 584–586)

Appropriation, 1962	----------
Estimate	$2,085,000
House allowance	2,000,000
Restoration requested	85,000

(P. 25, lines 8 and 9)

Amendments requested:

(1) Page 25, line 8, strike out "$2,000,000" and insert in lieu thereof "$2,085,000", the estimate or an increase of $85,000 in the appropriation.

(2) Page 25, line 9, strike out "$175,000" and insert in lieu thereof "$225,000".

HOUSE REPORT

"The committee recommends an allowance of $2 million, an increase of $745,312 over the amount available for this purpose during the current fiscal year in the appropriation item 'Construction, operation, and maintenance,' and a decrease of $85,000 in the 1963 estimate. The increase provides for the operation of the two additional saline water demonstration plants which will be in operation on a partial year basis in 1963 and for operation of the three plants which will be operated on a full-year basis.

"The committee has placed a limitation of $175,000 on the amount to be available for administration, a decrease of $50,000 in the budget request. This amount, which provides for 14 permanent positions, 6 less than requested, should provide an adequate engineering staff to administer the demonstration plant program."

JUSTIFICATION

Explanation of amendment (1)

The amendment restores the reduction of $85,000 made by the House in the budget estimate. This amount is distributed to the following activity:

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
Demonstration plants	----------	$2,085,000	$2,000,000	$85,000

The restoration is distributed by objects of expenditures as follows:

11	Personnel compensation	$68,000
12	Personnel benefits	5,000
21	Travel and transportation of persons	5,300
22	Transportation of things	1,100
23	Rent, communications, and utilities	2,300
24	Printing and reproduction	1,100
25	Other services	700
26	Supplies and materials	500
31	Equipment	1,000
	Total	85,000

The restoration of $85,000 is requested to cover the estimated full-year costs of management, operation, and maintenance of the saline water demonstration plants at Freeport, Tex., Webster, S. Dak., and San Diego, Calif., and for partial costs of plants at Roswell, N. Mex., and at Wrightsville Beach, N.C. The full amount is requested in order that the requirements for adequate field and office supervision of these plants, with provision for improving the production of fresh water at lower cost, may be accomplished.

Explanation of amendment (2)

The amendment increases the limitation on the amount available for administration from $175,000 to $225,000.

The technical and engineering staff responsible for successful operation of the demonstration plants will consist of five resident process engineers, with a small headquarters engineering office to coordinate the operating results and to develop means for improving production. An increase in the limitation from $175,000, as established by the House, to $225,000, the estimate, will insure that adequate advantage is taken of opportunities to further the saline water conversion program wherever possible.

The House reduction of six positions will prevent the appointment of professional engineers considered essential to the evaluation of demonstration plant results and the improvement of processes. It is requested that authority for employment of these six additional engineers and the accompanying funds be restored.

OFFICE OF THE SOLICITOR

SALARIES AND EXPENSES

(House hearings, pp. 783–795)

(Senate hearings, pp. 565–569)

Appropriation 1962	$3,492,000
Estimate	3,747,000
House allowance	3,600,000
Restoration requested	147,000

(P. 25, line 13)

Amendment requested:

Page 25, line 13, strike out "$3,600,000" and insert in lieu thereof "$3,747,000," the estimate or an increase of $147,000 in the appropriation.

HOUSE REPORT

The committee has allowed $3,600,000 for the legal services of the Department, an increase of $108,000 in the 1962 appropriation and a decrease of $147,000 in the budget request. The increase, which provides for 20 additional positions, 6 less than requested, should provide adequately for the anticipated increased workload in the Office.

JUSTIFICATION

The amendment restores the reduction of $147,000 made by the House in the budget estimate. This amount is distributed to the following activity.

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
Legal services	$3,492,000	$3,747,000	$3,600,000	$147,000

A breakdown of the restoration by objects of expenditure follows:

11	Personnel compensation	$124,900
12	Personnel benefits	8,600
21	Travel and transportation of persons	5,000
23	Rent, communications, and utilities services	2,000
24	Printing and reproduction	1,500
25	Other services	2,600
26	Supplies and materials	1,000
31	Equipment	1,400
	Total	147,000

In urging Senate restoration of $147,000, which was deducted by the House committee from my 1963 appropriation request for a $255,000 increase over fiscal year 1962, I submit the following summary in support:

(*a*) The total requested increase was allowed by the Bureau of the Budget.

(*b*) In January 1953 this Department employed 35 more lawyers than it does today. In 1962 the volume and complexity of legal work is substantially greater than it was 9 years ago. While diligence, efficiency, and devotion may be expected from the Solicitor's Office, it cannot suffice. Our total budget request is a realistic minimum to provide essential legal service.

(*c*) In addition to expanding major old-line agency programs such as reclamation, public land management, national parks, fish and wildlife, and Indians, we must provide services to newer research programs such as saline water, coal research, and helium conservation. Emphasis on research brings new contract legal problems and accelerates problems related to timely Government patent procedures and major patent policies.

(*d*) Public land appeals, handled by the Solicitor's Office have increased from 156 in 1956 to an estimated 650 in fiscal year 1962. The staggering increase in numbers of appeals and the growing backlog demands additional lawyers.

(*e*) The recent Pan American case, 284 F(2d) 649, held that the Secretary lacked administrative authority to cancel oil and gas leases obtained by fraud, necessitating the preparation of such leases for litigation in cooperation with the Department of Justice. A decision in *Arizona* v. *California*, is imminent. The Secretary may be expected to administer the operation of the Colorado River under any court decree, a task which will present manifold legal problems. These are cited only to illustrate the increasing complex of major legal work which includes not only the established programs of the Department but such newly activated matters as high-voltage transmission and interties, international problems related to the Colorado and the Columbia, petroleum defense activities, oil shale patent applications, land acquisition for national parks, recreation areas and wet lands, access roads for public timber sustained-yield management, the Delware River Basin Compact Commission, coast line disputes under the Submerged Lands Act, lead and zinc stabilization program, etc.

The estimate provided for an increase of 26 positions. The House allowance would permit an increase of only 10. Restoration of funds for the 16 additional positions is urgently needed.

OFFICE OF THE SECRETARY

Salaries and Expenses

(House hearings, pp. 796–827)
(Senate hearings, pp. 549–562)

Appropriation 1962	$3,385,000
Estimate	3,568,000
House allowance	3,350,000
Restoration requested	111,500

(P. 26, line 2)

Amendment requested:

Page 26, line 2, strike out "$3,350,000" and insert in lieu thereof "$3,461,500", an increase of $111,500 in the appropriation.

HOUSE REPORT

The committee recommends an appropriation of $3,350,000, a decrease of $35,000 in the 1962 appropriation, and a decrease of $218,000 and 15 permanent positions in the 1963 budget estimate. Due to a nonrecurring item of $200,000 in the current fiscal year, the actual increase provided over 1962 is $165,000. The increase allowed includes $50,000 to provide four additional positions in the Office of Information compared with the requested increase of $121,500; $50,000 of the requested increase of $90,000 for administrative management services; $39,000 for program direction and coordination; $14,000 for the Office of the Secretary and the Under Secretary; and $12,000 for increased per diem costs.

The committee has deleted the request to appropriate $106,500 under this item for defense activities previously financed under the Office of Emergency Planning. As indicated above, it is planned to consider these activities separately in a subsequent appropriation bill.

JUSTIFICATION

The amendment restores $111,500 of the reduction made by the House in the budget estimate. This amount is distributed by activities as follows:

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
1. Departmental direction	$506,700	$698,300	$573,100	$71,700
2. Program direction and coordination	1,117,400	1,214,700	1,161,700	
3. Administrative management services	1,436,700	1,529,800	1,490,000	39,800
4. General services	124,200	125,200	125,200	
5. Natural resource studies	200,000			
Total	3,385,000	3,568,000	3,350,000	111,500

A breakdown of the restoration by objects of expenditure follows:

11	Personnel compensation	$100,000
12	Personnel benefits	7,200
21	Travel and transportation of persons	3,000
24	Printing and reproduction	800
25	Other services	300
31	Equipment	200
	Total	111,500

1. *Departmental direction.*—With the exception of $300, the restoration requested under this activity is for the Division of Information. The budget request for an increase of 13 positions and $121,500 in funds for the Division of Information was based on a careful review of the minimum needs for an effective information effort to meet the increased responsibilities of the Department and the greatly augmented public interest and public inquiries about its natural resource activities. The special message on conservation sent to the Congress by President Kennedy on March 1 has further intensified the need for supplying up-to-date information to schools, industrial associations, and other organizations, as well as the general public. To assure that these requirements are met, it is urged that the full appropriation request of $199,900 for the Division of Information be approved.

3. *Administrative management services.*—The House allowance for this activity provides $53,300 (including per diem costs) of the increase of $93,100 requested in the budget estimate, or a reduction of $39,800. This activity provides staff services and general direction and coordination in the area of budget and finance, personnel, management research, property management, inspections, security, and general administrative services to the bureaus and offices. The activities of these bureaus and offices have grown considerably during the past several years, but there has been no increase in the staff of this activity to meet the increased services and staff guidance which is needed. An increase of nine positions has been requested of which five were allowed by the House. The nine positions have been requested for the areas of management research, property management, and inspections where additional personnel is needed to cope with the step-up in activities and programs, and it is urged that the reduction be restored so that this need may be met.

The estimate as submitted for 1963 includes four positions for defense activities which have been transferred to another bill. If these positions are excluded, the total increase requested is 25 positions. The House allowance would provide for 10, or a reduction of 15.

Restoration of the full amount of the House reduction of $111,500, which would provide for the 15 positions with related expenses, is respectfully requested.

COMMISSION OF FINE ARTS

SALARIES AND EXPENSES

(House hearings, pp. 1428–1438)

(Senate hearings, pp. 762–764)

Appropriation, 1962	$70,000
Estimate	80,000
House allowance	70,000
Restoration requested	10,000

(P. 33, line 14)

AMENDMENT REQUESTED

Page 33, line 14, strike out "$70,000" and insert in lieu thereof "$80,000", the estimate, or an increase of $10,000 in the appropriation.

HOUSE REPORT

The committee has allowed $70,000, the same as the 1962 appropriation and a decrease of $10,000 in the budget estimate. Funds appropriated to the Commission have doubled since fiscal year 1958 and the Commission should be able to finance its activities within the present appropriation level.

JUSTIFICATION

The amendment restores the reduction of $10,000 made by the House in the budget estimates. This amount is distributed to the following activity:

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
Administration	$70,000	$80,000	$70,000	$10,000

A breakdown of the restoration by objects of expenditure follows:

11	Personnel compensation	$9,000
12	Personnel benefits	600
21	Travel and transportation of persons	400
	Total	10,000

The restoration requested will provide for an additional position in the editorial series, increased travel costs of the members, and a small amount for promotions. The additional position is needed for the compilation of annual reports, special reports, and other editorial work which is required of the Commission. The workload of preparing such reports does not permit this to be done adequately by the present staff of six employees. The workload of the Commission has greatly increased and as in the case of other agencies it is necessary to increase the staff.

The salaries paid to some of the staff are inadequate and it is felt that the proposed promotions are warranted.

The amount requested for travel, although small, will help to meet the increased cost of the members.

VIRGIN ISLANDS CORPORATION

REVOLVING FUND

(House hearings, pp. 979, 981–989, 991–1,004)

(Senate hearings, pp. 265–267)

Appropriation 1962	$881,000
Estimate	3,300,000
House allowance	200,000
Restoration requested	3,100,000

(P. 40, line 17)

Amendment requested:

Page 40, line 17 strike out "$200,000" and insert in lieu thereof "$3,300,000", the estimate or an increase of $3,100,000 in the appropriation.

HOUSE REPORT

"The committee has allowed an appropriation of $200,000, a decrease of $681,000 in the 1962 appropriation and a decrease of $3,100,000 in the budget estimate. The amount proposed in the budget estimate was for expansion of power distribution facilities in the Virgin Islands. As the Board of Directors of the Corporation has adopted a resolution proposing the transfer to the Virgin Islands Government of the physical and other assets of the Corporation and legislation to accomplish this is pending in the Bureau of the Budget, the committee does not believe it is appropriate to authorize extensive additional Federal funding at this time. To meet the most urgent power requirements on the island of St. Thomas, however, the committee has approved a requested 1962 reprograming to provide $400,000 for the purchase of a generator and has included the $200,000 in the bill to permit construction of a building to house and install the new unit early in fiscal year 1963."

JUSTIFICATION

The amendment restores the reduction of $3,100,000 made by the House in the budget estimate which is for the following activities:

Activity	Appropriation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
1. Operating capital	$611,000			
2. Minor capital improvements	70,000	$100,000		$100,000
3. Power program	200,000	3,200,000	$200,000	3,000,000
Total	881,000	3,300,000	200,000	3,100,000

A breakdown of the restoration by objects of expenditure follows:

31	Equipment	$100,000
32	Lands and structures	3,000,000
	Total	3,100,000

Restoration of the full amount of the reduction of $3,100,000 is considered essential to permit the Corporation to continue its obligation to the Virgin Islands by providing the necessary funds needed for operations and construction of power facilities. $100,000 is required to replace equipment needed in sugar operations, particularly, cane loaders which are now over 8 years old, and $3 million is to provide the facilities to cope with the increasing demand for more power on all islands; (1) $250,000 for distribution facilities; (2) $2,150,000 for purchase and installation of a 5,000-kilowatt steam turbine for St. Thomas to meet the anticipated power needs for December 1963; and $600,000 for purchase and installation of a 3-milliwatt diesel unit for St. Croix to meet power needs estimated for December 1962.

These funds are so urgently needed that any delay pending authorization of the transfer of the Corporation will lead to deficient power supply for the islands.

There is under consideration proposed legislation which would turn over to the Virgin Islands government the assets and obligations of the Corporation, such assets to include all property owned by the Corporation, real, personal, or mixed. The proposed legislation further contemplates that as consideration for the assets transferred to it, the Virgin Islands government would pay to the United States the book value of such assets. The payment would be made over a 10-year period. Therefore, any investment made now by the Federal Government to provide for the expansion of power distribution facilities on the islands would be returned to the Federal Treasury, and the responsibility for future power expansion in the islands would rest upon the Virgin Islands government.

It is also contemplated that the legislation would provide authority to the Virgin Islands government to issue bonds for the construction of public works.

However, after enactment of such authority there would necessarily be a somewhat prolonged period of time before the local legislature could take action and such bonds were sold to the public. Such a lag in time would be critical in view of the already existing power shortages in the islands.

VIRGIN ISLANDS CORPORATION

LIMITATION ON ADMINISTRATIVE EXPENSES

(House hearings, pp. 977–984)

(Senate hearings, p. 266)

Limitation on administrative expenses 1962	$180,000
Estimate	200,000
House allowance	180,000
Restoration requested	20,000

(P. 41, line 3)

Amendment requested:

Page 41, line 3 strike out "$180,000" and insert in lieu thereof "$200,000", the estimate or an increase of $20,000 in the limitation.

HOUSE REPORT

"The committee has allowed an administrative expense limitation of $180,000, the same as 1962, and a decrease of $20,000 in the budget request."

JUSTIFICATION

The amendment increases the current limitation for administrative expenses of the Corporation from $180,000 to $200,000.

Activity	Limitation, 1962	Budget estimate, 1963	House allowance, 1963	Restoration requested
Power program	$180,000	$200,000	$180,000	$20,000

In order to properly prepare the Virgin Islands Corporation for equitable transfer to the Virgin Islands government, there will be needed additional competent administrative help at an estimated cost of $20,000, including an assistant to the President to work with the local government on St. Thomas.

Department of Agriculture

Department of Agriculture,
Washington, D.C., March 27, 1962.

Hon. Carl Hayden,
Chairman, Committe on Appropriations,
U.S. Senate.

Dear Senator Hayden: In response to your letter of March 20, 1962, enclosed are statements in support of the amendments which we request be made in the Forest Service portion of the Department of Interior and related agencies appropriation bill, 1963, as passed by the House of Representatives March 20, 1962.

We urge that the following House reductions be restored:

Forest protection and utilization	$2,215,000
Forest land management:	
(*a*) For timber sales administration and management	800,000
(*b*) For acquisition of lands under provisions of the Weeks Act	200,000
(*c*) For travel, supplies and materials, and equipment	1,040,000
Forest research: For travel, supplies and materials and equipment	175,000
Access roads	2,000,000

Administrative provisions: The reduction of 27 passenger motor vehicles.

Also enclosed is a statement with respect to forestry activities in the Virgin Islands. The House report indicated that funds available under the appropriation "Forest land management" should be used for this purpose. The Department believes that, if the Congress determines that this work should not be financed through the Virgin Islands Corporation, as proposed in the President's budget, provision should be made for it under the Forest Service appropriation "State and private forestry cooperation."

No request is being made for restoration of the $300,000 for "Other pest control." The budget as submitted represented the best estimate of 1963 needs. Until actual insect infestation surveys are completed in the fall of calendar year 1962, the actual need will not be known. The House committee has recognized that completely firm estimates for insect control needs cannot be made at this early date. In the event the 1962 fall surveys should reflect a need for additional control work beyond that which can be accomplished with the $6,985,000 included in the House bill, means of financing such needs will be considered at that time.

The 1963 budget request for the Forest Service was based upon its long-range and 10-year objectives as reflected in the development program for the national forests and the research program. It was not possible to provide fully the levels of financing contemplated for these programs in 1963. The House reductions would further curtail such financing resulting in an additional lag in the accomplishment of the objectives of these vital programs.

Representatives of the Department will be glad to furnish any additional information you may need, or to appear before your committee as necessary to further discuss the 1963 budget estimates of the Forest Service.

Sincerely yours,

Joseph M. Robertson,
Administrative Assistant Secretary.

No. 1

FOREST SERVICE

Forest Protection and Utilization

Forest Land Management

(House hearings, pp. 1188–1230)

(Senate hearings, pp. 1046–1103)

1962 appropriation (includes $359,000 transferred in 1962 to General Services Administration for space rental)	$128,000,000
1963 budget estimate	140,740,000
House bill	138,400,000
Restoration requested	2,040,000

Amendments requested:

(1) Page 28, line 22, strike out "$138,400,000" and insert "$140,440,000", an increase of $2,040,000 to restore the budget estimate.

(2) Page 29, line 2, strike out "$300,000" and insert "$500,000", an increase of $200,000 to restore the budget estimate.

HOUSE REPORT NO. 1446 (P. 23)

"Because of the depressed timber market, the committee believes that the Forest Service can readily absorb the reduction of $800,000 and 100 permanent positions applied against the activity, 'Sales administration and management.' The committee has granted sizable increases in this activity in recent years and the $22,380,000 allowed should finance adequately the workload in 1963. The amount allowed includes an addition $400,000 for special small and salvage sales.

"The $300,000 allowed for acquisition of land, a decrease of $200,000 in the budget request, should provide for acquiring essential tracts in fiscal year 1963. It should be noted that the committee approved an increase in this item from $100,000 to $300,000 in fiscal year 1962.

"In disallowing $300,000 of the requested increase of $1,300,000 for 'Other pest control' work, the committee believes that the $6,985,000 allowed is all that is warranted without firmer estimates of the infestations to be encountered in the next fiscal year."

HOUSE REPORT NO. 1446 (P. 24)

"Within the total provided it is expected that the Forest Service will make $30,000 available for continuing the forestry work in the Virgin Islands which has heretofore been financed under the appropriation to the Virgin Islands Corporation."

HOUSE REPORT NO. 1446 (P. 30)

"The committee has denied the budget request of $185,000 for payment to the Virgin Islands Corporation, including $145,000 to cover losses sustained by the Corporation during fiscal year 1961 and $40,000 for the forestry and other agricultural programs. As dissolution of the Corporation is being considered and the Corporation has adequate capital to cover its losses, the committee does not believe that the requested appropriation is necessary. As indicated above, the committee has made provision for the U.S. Forest Service to continue to finance the forestry program."

JUSTIFICATION OF AMENDMENTS (1) AND (2) BY THE DEPARTMENT

The amendment proposed by the Department would restore the following reductions made in the House bill: (*a*) $800,000 for timber sales administration and management; (*b*) $200,000 for acquisition of land (amendment No. 2); (*c*) $1,040,000 for travel, supplies and materials, and equipment.

(*a*) The Department recommends that the $800,000 reduction made by the House be restored and that the associated limitation on sales administration and management staffing be eliminated. Timber sales are the principal source of revenue from the national forests, totaling $98,425,492 in fiscal year 1961,

a year of depressed timber markets. Every phase of the conduct of this business from timber appraisal, sales administration, product accountability to measurement of products cut requires high order intensive attention to protect the Government from potential cash loss. The need for more intensive timber sales administration to safeguard possible loss in revenue has been pointed out in a number of General Accounting Office audit reports. Hence, it would be highly inadvisable to establish an employment ceiling or reduce the funds requested for this activity.

While the lumber market has been depressed in fiscal years 1961 and 1962, current developments indicate a substantial recovery in fiscal year 1963. Since the first of the calendar year, prices for ponderosa pine timber, as reported in trade journals, have advanced steadily from an index of 79.14 to 82.85 on March 15 or by 4.5 percent; and for white fir from 43.77 to 60.25—an advance of 10 percent. Any artificial brake on the rate of cut and new sales during a recovering market, such as the proposed reduction in sales administration funds, would result in losses of potential revenue to the Treasury of many times the cost of sales and losses in general economic activity of several times more.

The estimate of timber cut for fiscal year 1963 has been scaled down to 9 billion board feet of regular sales. It could easily exceed this estimate by from 0.5 to 1 billion board feet. In that event a curtailment of new sales would be unavoidable in order to take care of obligations to administer cutting on sales already under contract.

Dependency of the forest products industry on national forest timber for raw material continues to increase even through the rate of cut may fluctuate with lumber market conditions. The long-term trend of national forest timber sale activity is upward toward maximum volumes which can be cut under sustained-yield limitations. The House action would require the transfer of 50 men now trained in timber sale work to other activities. Contractions of the timber sale staff when long-term trends are upward would be unfortunate.

There is increasing pressure for the offering of the practical maximum volume of national forest timber within allowable cut limitations. With virtually no other sources for purchasing timber, large segments of the forest products industries regard sale programs at less than allowable cut as monopoly actions to force up stumpage prices through artificial restriction of supply. The schedule of sale preparation in the fiscal year 1963 budget is necessary to meet market demand for stumpage within allowable cut limitations.

A reduction of $800,000 will require the elimination of about 2 billion board feet of advance sale preparation and around 700 million board feet of new timber offerings. This reduction in advance sale preparation will reduce possibilities to maintain or expand the rate of national forest timber offerings in future years. Inability to take advantage of full marketing opportunities within allowable cut limitations results in loss of potential revenue to the Treasury and less than full opportunities for economic support of dependent national forest communities.

(b) The Department recommends that the reduction of $200,000 made by the House be restored. The House allowance of $300,000 for the acquisition of land pursuant to the Weeks law of March 1, 1911, is $200,000 less than the amount included in the budget request for fiscal year 1963.

Appropriations under this authority were $100,000 per year for the 5-year period 1957 to 1961; $300,000 was appropriated for this item in fiscal year 1962. In fiscal year 1961, the last full year for which accomplishment record is available, 83 tracts totaling 8,598 acres were approved for purchase.

Assuming the same price levels in fiscal year 1963 and in fiscal year 1961, the proposed reduction of $200,000 would removed the opportunity to purchase some 17,000 acres of lands urgently needed in connection with resource programs that are underway.

The development program for the national forests which the President submitted to the Congress on September 21, 1961, sets forth for the current 10-year period, 1963 to 1972, a need to purchase approximately 500,000 acres which are important for recreational development and use and approximately 950,000 acres of privately owned lands intermingled with national forest lands which should be protected and managed as part of the national forests. This will facilitate the most efficient and economical administration of the national forests.

The purchases planned for 1963 involve key tracts for which Government ownership is vital to permit sound and effective management, utilization, protection, and development of the forest resources of the area. The full $500,000

included in the budget for such purchases should be provided so that such key tracts can be purchased during 1963.

(*c*) The Department recommends that the reduction of $1,040,000 made by the House be restored. The 1963 budget request reflects a balanced program relationship between manpower, contracting, equipment, materials, supplies, and other related costs. The reduction of $1,040,000 in travel, supplies and materials, and equipment is inconsistent with efficient, economical, and timely completion of these programs. The development program for the national forests, as submitted to the Congress by President Kennedy on September 21, 1961, outlined both the long-range objectives and the 10-year conservation program needs for the national forests and associated lands. This reduction would sharply curtail accomplishment of this program. Following are some examples relative to major programs as reflected in the budget submissions:

1. *Recreation-public use.*—This item includes $5,095,000 for sanitation, cleanup, and maintenance of 6,425 recreation areas, and $13,897,000 for rehabilitation and construction of approximately 16,600 recreational facilities. Reduction of the amount available for travel, supplies and materials, and equipment would seriously disrupt these programs as it would not be possible to accomplish the total recreational objectives without these items as they represent an integral part of the total job.

2. *Reforestation and timber stand improvement.*—This program provides for tree planting and improvement of existing timber stands. The 1963 budget request would finance the planting of 122,500 acres and timber stand improvement treatment of 347,500 acres. Much of this involves manual labor. However, the necessary tools, trees, seed, supplies, equipment, etc., must be provided if these people are to effectively accomplish this work.

3. *Forest fire protection.*—This program involves the close integration of men, equipment, supplies, travel, etc., to provide adequate fire protection. Both men and their related equipment must be strategically located and coordinated. Men are ineffective unless properly supplied and equipped. Any small saving made at the expense of such proper equipping could result in a major fire that might otherwise have been prevented or controlled at small size, with suppression costs that could far exceed any small initial savings.

We concur with the committee's expression that stricter controls can effect economies. The Forest Service consistently and constantly strives to critically review and control its programs so as to effect the maximum economy, efficiency, and production. Substantial savings have been realized. Such savings have resulted in considerable progress toward achievement of the goals and objectives as set forth in the national forest program. The proposed decrease would reduce the work that could be accomplished during 1963 under the program and would thereby postpone such projects for financing in future years. However, if the reduction is restored, any individual program savings could then be used as necessary to accomplish additional work provided for in the 10-year plan. It is therefore recommended that this amount be restored and that the Forest Service be permitted to use the full amount in the manner which will effect the greatest efficiencies, economies, and program accomplishments.

No. 2

FOREST SERVICE

Forest Protection and Utilization
Forest Research

(House hearings, pp. 1230–1251)

(Senate hearings, pp. 1051–1103)

1962 appropriation	$26,368,000
1963 budget estimate	23,150,000
House bill	22,975,000
Restoration requested	175,000

Amendment requested:

Page 29, line 10, strike out "$22,975,000" and insert "$23,150,000", an increase of $175,000, to restore the budget estimate.

HOUSE REPORT NO. 1446 (p. 24)

"The committee recommends an appropriation of $22,975,000, a decrease of $3,393,000 in the 1962 appropriation, and a decrease of $175,000 in the 1963 estimates. Due to nonrecurring funds for construction of research facilities in the current year, the amount allowed provides an effective increase of $1,052,000 for expansion of forestry research. *The decrease made by the committee reflects a general reduction in the funds requested for travel, supplies, materials, and equipment*". [Italic supplied.]

JUSTIFICATION OF THE AMENDMENT BY THE DEPARTMENT

The Department recommends that the reduction of $175,000 made by the House be restored. The fiscal year 1963 budget request of $23,150,000 for forest research would provide $22,400,000 for research programs and $750,000 for scientific equipment and auxiliary laboratory facilities. This would permit the addition of approximately 60 scientists to the research staff. Due to the nature of research work, there is a very close relationship between the timely providing of necessary equipment, materials, and supplies and the research programs in progress. Failure to provide such items in a timely and adequate manner could seriously affect the efficiency and accomplishments of the research scientists. Approximately 75 percent of the funds available for the research programs are used for employment of scientists and their related facilitating personnel. Approximately 15 percent is used for travel, supplies and materials, and equipment. In view of the ultimate values to be derived from forestry research, any disruption in its orderly accomplishment could result in material forestry resource losses that might have been avoided had the research been completed as planned.

It would not be practical to effect research program economies by placing limitations on specific cost items as all elements must be properly coordinated to achieve the end objectives. The Forest Service is consistently striving to make the most effective utilization of all funds available for its programs. Many economies have been made which have permitted further progress in the various research programs being conducted. The proposed reduction would limit the amount available for forestry research which is so vital to the proper management, utilization, protection, and development of the forest resources of both Government and privately owned lands. It is therefore urged that the $175,000 reduction made by the House be restored and that the Forest Service be permitted to utilize these funds as necessary to achieve the greatest efficiency, economy, and research accomplishments.

No. 3

FOREST SERVICE

Access Roads

(House hearings, pp. 1288–1297)

(Senate hearings, pp. 1106–1117)

1962 appropriation	$2,000,000
1963 budget estimate	2,000,000
House bill	----------
Restoration requested	2,000,000

AMENDMENT REQUESTED

Page 30, after line 7, insert the following language included in the 1963 budget but deleted by the House:

"Access Roads

"For acquiring by condemnation or otherwise additional roads needed for access to national forest lands in carrying out the Act of June 4, 1897, as amended (16 U.S.C. 471, 472, 475, 476, 551), $2,000,000, to remain available until expended."

HOUSE REPORT NO. 1446 (P. 25)

The House committee report in eliminating this items states:

"The committee has deleted the budget request of $2 million to continue this special appropriation item for acquiring by purchase private roads needed to provide access to national forest areas. Funds have been appropriated under this item for the past 3 fiscal years as it was assumed that the Forest Service did not have authority under the regular "Forest roads and trails" appropriation to require cost sharing charges of benefiting private landowners. As the Comptroller General ruled on March 2, 1962, that the regular "Forest roads and trails" appropriation is available for this purpose, the committee believes the continuation of this item is no longer warranted and that financing of the road program should hereafter be restricted to the authorization contained in the Federal Highway Act."

JUSTIFICATION OF THE AMENDMENT BY THE DEPARTMENT

The Department recommends that the $2 million reduction made by the House be restored. The special "Access roads" appropriation was initiated in the Senate in fiscal year 1960. When the fiscal year 1962 and 1963 Federal Highway Act authorizations for forest roads and trails were enacted, the toll limitations of 23 U.S.C. 301 were then considered to prevent recovery of costs from the benefiting landowners. Thus the Federal Highway Act authorizations for 1962 and 1963 were made with the recognition that in addition thereto supplemental amounts as necessary would be provided for access road purchases. Accordingly, the fiscal year 1962 appropriation and the fiscal year 1963 budget request provided $2 million of special access road purchase funds in fiscal years 1962 and 1963 in addition to the authorized financing under the Highway Act. The combination of these two appropriations, plus the permanent appropriation of 10 percent of national forest receipts, constituted the total road program for the national forests.

The proposed elimination of this special appropriation will have an immediate and serious effect by sharply retarding the program for obtaining urgently needed access to the national forests. Such access is a vital key to the proper management, utilization, protection, and development of the national forests and for the accomplishment of both the long-range and 10-year objectives as presented in the development program for the national forests. The appropriations made for the road program are so closely integrated that it is not possible to curtail any one segment without serious disruption of the balance of the work to be accomplished.

This proposed reduction would be especially critical in 1963 as negotiations are presently far enough along on the acquisition of the major road systems needed that they must now be continued to completion. Elimination of this special fund at this time would require the utilization of the forest roads and trails funds to cover these purchases which would require elimination of a corresponding amount of locally vital road construction projects now planned for 1963.

To date the roads and trails program is lagging seriously behind the other activities within the national forest program. Presently, consideration is being given to a $10 million increase in the 1963 Highway Act authorization.

Because of these factors, the $2 million of special road access funds are urgently needed in 1963 in addition to the amounts included within the "Forest roads and trails" appropriation under provisions of the Federal Highway Act authorization in order to keep the road construction work more nearly in line with the other national forest activities.

No. 4

FOREST SERVICE

ADMINISTRATIVE PROVISIONS, FOREST SERVICE

(House hearings, pp. 1314–1317; Senate hearings, pp. 1121–1122)

AMENDMENT REQUESTED

Page 31, line 18, strike out "one hundred and fifty-two" and insert "one hundred and seventy-nine", to restore the budget estimate.

JUSTIFICATION OF THE AMENDMENT BY THE DEPARTMENT

The Department recommends that the reduction in the purchase of 27 passenger motor vehicles be restored. Purchase of 179 such vehicles, of which 137 are for replacement, is needed to provide the necessary transportation for the administration of the various Forest Service programs. This represents a fleet increase of 42 units. The 1962 Appropriation Act provided for the addition of 15 such units. However, this did not allow for the total program increases included in the 1962 appropriation. The 1963 request therefore includes the factors relative to both the 1962 and 1963 program increases. These vehicles would be used in areas where GSA equipment availability and common carrier facilities cannot adequately meet program needs. Without these vehicles, the cost of providing necessary transportation would be increased as it forces an uneconomical and difficult transportation situation. The proposed fleet addition of 42 units is therefore fully justified.

FORESTRY ACTIVITIES IN THE VIRGIN ISLANDS

House Report No. 1446 (p. 24)

"Within the total provided it is expected that the Forest Service will make $30,000 available for continuing the forestry work in the Virgin Islands which has heretofore been financed under the appropriation to the Virgin Islands Corporation."

House Report No. 1446 (p. 30)

"CONTRIBUTIONS

"The committee has denied the budget request of $185,000 for payment to the Virgin Islands Corporation, including $145,000 to cover losses sustained by the Corporation during fiscal year 1961 and $40,000 for the forestry and other agricultural programs. As dissolution of the Corporation is being considered and the Corporation has adequate capital to cover its losses, the committee does not believe that the requested appropriation is necessary. As indicated above, the committee has made provision for the U.S. Forest Service to continue to finance the forestry program."

Statement by the Department

In the "Forest Land Management" section of the House committee report, page 24, it states that the Forest Service is expected to make $30,000 available for continuing the forestry work in the Virgin Islands which has heretofore been financed through the Virgin Islands Corporation. Under the appropriation "Forest land management," the work of the Forest Service is limited to national forests and lands immediately adjacent thereto. The forestry work in the Virgin Islands is principally private forestry cooperation in tree planting stock distribution, private forestry management, and forest products processing. Therefore, the Service is not authorized to carry out this work under "Forest land management."

The forestry work in the Virgin Islands cannot be absorbed under the appropriation "State and private forestry cooperation" without disrupting those activities presently financed under that item involving contributions to States for fire control, assistance in producing tree planting stock, forest management and processing assistance, and general forestry assistance. If the Congress determines that this work should not be financed through the Virgin Islands Corporation as proposed in the President's budget, provision therefor should be made in the Forest Service item "State and private forestry cooperation."

Department of Health, Education, and Welfare

The Secretary of Health, Education, and Welfare,
Washington, March 26, 1962.

Hon. Carl Hayden,
Chairman, Committee on Appropriations,
U.S. Senate, Washington, D.C.

Dear Mr. Chairman: You have asked for our comments on the action of the House of Representatives on H.R. 10802, the Department of Interior and related agencies appropriations bill for 1963. The House decreased the budget estimates for Indian health activities and construction of Indian health facilities by the amounts of $550,000 and $900,000, respectively.

I have carefully reviewed the impact on program operations of the reductions imposed by the House, and have decided to request the Senate to restore these amounts. The reduction made in Indian health activities is the amount associated with a proposed change in the method of financing advance purchase of supplies for installations in Alaska. This is a nonrecurring increase which I believe to be administratively desirable to correct a situation which unduly complicates fiscal management and budgetary presentation. It is true, however, that the House action will not significantly impair the effectiveness of the program.

The action of the House in reducing the amount contained in the President's budget for construction of Indian health facilities by $900,000 will result in a delay of at least a year on a number of construction projects designed to supply water and sanitation facilities for Indians and Alaska natives. I believe that the amount of $4 million for construction of Indian sanitation facilities contained in the President's budget represents a conservative step forward on the long-range program authorized by Public Law 86-121 to improve the sanitary conditions of our Indian population. I am enclosing with this letter our proposed amendments to the House bill, as well as a more detailed explanation of the effect of the House action. Should you or the committee desire any further information concerning these amendments, we will be happy to furnish it at once.

Sincerely,

Abe Ribicoff, *Secretary.*

AMENDMENTS REQUESTED BY DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE TO H.R. 10802, 87TH CONGRESS, 2D SESSION, IN THE HOUSE OF REPRESENTATIVES

Public Health Service

INDIAN HEALTH ACTIVITIES

Page 34, line 4, strike out "$55,284,000" and insert in lieu thereof "$55,834,000."

CONSTRUCTION OF INDIAN HEALTH FACILITIES

Page 34, line 13, strike out "$8,320,000" and insert in lieu thereof "$9,220,000."

1963 Appropriation Request

for

Indian Health Activities

EFFECT OF HOUSE ACTION

ON

ADVANCE PURCHASES FOR ALASKA

The House committee disallowed a budget proposal that a direct appropriation of $550,000 be provided to replace the present practice of utilizing contractual authority for making advance purchases for Alaska activities as provided by 58 Stat. 266 and 42 U.S.C., 2001. This one-time request does not represent any increase in program but a means of eliminating advance obligations against funds not appropriated.

Advance purchasing requires apportionment of funds by the Bureau of the Budget prior to the actual appropriation of funds by the Congress (in fiscal year 1962, obligations have already been incurred against the appropriation anticipated for 1963) and unduly complicates the format and understandability of budget estimates submitted to the Congress.

The 1963 Appropriation Request for Construction of Indian Health Facilities

EFFECT OF HOUSE ACTION ON INDIAN SANITATION FACILITIES

In this construction program the Public Health Service enters into agreements with tribal groups on specific construction projects. These agreements represent commitments of tribal participation and of appropriated Federal funds which are obligated as procurement and construction contract awards are made.

All 37 emergency projects authorized in fiscal year 1960 with an appropriation of $200,000 have been completed with the expenditure of the entire $200,000.

All 46 construction projects authorized in fiscal year 1961 have been undertaken with 28 projects essentially completed, and 18 still in progress, most in final stages of completion; an additional 8 emergency projects and 7 special investigations were completed. The entire $2,550,000 appropriation has been committed under cooperative agreements with tribes and Alaska native villages. Against these commitments, obligations as of February 28 total more than $2 million and the last major construction contract award is scheduled to be made this month.

Funds were apportioned by the Bureau of the Budget on September 27, 1961, for 57 construction projects authorized in fiscal year 1962. Forty-eight projects are now in progress and final agreements are being negotiated for the remaining nine projects. Of the $3 million appropriation authorized in fiscal year 1962, as of March 15, 1962, more than $2,300,000 has been committed through executed PHS-tribal agreements on construction projects or obligation of funds on emergency projects and special investigations. Current rate of progress indicates that substantially the entire balance of $700,000 will be committed to projects by the end of the fiscal year 1962.

In light of the above, substantially all appropriated funds for this activity to date should be committed or obligated by June 30, 1962. In effect, the House action in reducing the President's budget by $900,000 will delay for a year or more the initiation of 10 urgently needed construction projects designed to supply domestic water and sanitary waste disposal facilities at 1,152 Indian and Alaska native homes occupied by more than 5,000 beneficiaries.

The following sanitation projects would be eliminated from consideration in fiscal year 1963 as a result of this action:

South Dakota: Sisseton Reservation (Big Coulee and Old Agency District)	$96,000
Domestic water now all hauled from unprotected wells, springs, creeks, or lakes. Enteric disease rate high.	
North Dakota: Fort Totten Reservation (St. Michael's Mission District)	49,000
No acceptable water supply or waste disposal facilities now available.	
New Mexico: Laguna Reservation (Paguate)	51,000
Existing water supply inadequate in quantity and of questionable quality.	
Alaska: Unalakleet	80,000
Village water for home hauled 7 miles from unprotected shallow well and spring area.	
Wyoming: Wind River Reservation (South Fork-Trout Creek area)	82,000
Domestic water hauled from rivers and ditches. Waste disposal facilities lacking. Diarrheal diseases prevalent.	
North Carolina: Cherokee Reservation (Big Cove, Soco, Painttown District)	94,000
Unprotected springs and open streams now used for domestic water.	
Oklahoma: Cherokee County (phase III)	60,000
Most families haul water from unprotected sources. Most waste disposal facilities insanitary.	
California: Fort Yuma Reservation (Winterhaven)	103,000
Water hauled from unprotected and contaminated dug wells.	
Washington: Tulalip Reservation	36,000
Domestic water hauled from unprotected wells, springs, and open streams.	
Arizona: Navajo Reservation (Kayenta)	250,000
Planned Navajo community for relocated Indians from isolated locations.	
Total project costs of reductions	901,000

National Capital Planning Commission

National Capital Planning Commission,
Washington, D.C., March 22, 1962.

Hon. Carl Hayden,
Chairman, Committee on Appropriations,
U.S. Senate, Washington, D.C.

Dear Senator Hayden: The National Capital Planning Commission respectfully requests the restoration of the following amounts for its regular appropriation estimates in the Department of the Interior and related agencies appropriation bill for the fiscal year 1963:

Salaries and expenses, open-space study, National Capital region	$65,000
Land acquisition, National Capital park, parkway, and playground system	1,200,000

Amendatory language to accomplish these increases is attached which will provide an appropriation of $65,000 for a 2-year period for the open-space study, and $1,300,000 for land acquisition.

Funds for the open-space study and for purchase of lands for stream valley purposes in Maryland and Virginia are complementary to each other.

Funds in the amount of $65,000 for the open-space study were requested on the basis that such costs could not be absorbed within the Commission's annual budget. In somewhat the same manner the Congress provided separate funds in the total of $450,000 for the 1959 Washington regional mass transportation survey conducted by this Commission. The year 2000 plan for the National Capital region recommends general policy proposals for the future development of the region, intended to secure for the people of this area the most satisfying and efficient urban environment possible. Critical to the attainment of these objectives is the necessity to determine how to accomplish the open-space recommendations in the plan, because the urbanized development envisioned cannot be accomplished unless the open-space plans are carried out. In his recent conservation message, the President stressed the importance of preserving open space around the country's rapidly growing metropolitan areas.

We are asking the restoration of $600,000 for each of Virginia and Maryland for stream valley parks. The provision of open space is one of the fundamental attributes of a park program as a conservation activity. The stream valleys to be acquired under the Capper-Cramton Act are to be parks, natural areas where human use will be of a character that conforms to the land without impairment of its resources. These lands, for the most part, are not suited to development for organized sports or other mass activities. Although where they are needed for these purposes and the terrain is suitable, or if reclamation of marsh areas is required for health reasons, moderate provision of such facilities might be achieved.

Another conservation aspect of the program is the provision of habitat for the still abundant wildlife of the region which particularly favors stream valleys.

Sincerely yours,

Elizabeth Rowe,
Mrs. James H. Rowe, Jr.,
Chairman.

SUBJECT INDEX

[Budget titles are in italic type]

A

	Page
Alaska, transitional grants to (beginning of hearings)	743
Alaska Omnibus Act—Public Law 86-70	743
Budget justification	743
Funds appropriated to the President	743
Program and financing	745
Grants to Alaska	745
Operation and maintenance of intermediate airports	745
Statement of Acting Director	743
Statement by Hon. E. L. Bartlett	1264

C

Civil War Centennial Commission (beginning of hearings)	746
Analysis by activities	746
Budget justification	746
Chairman's statement	747
Itemization of estimate	747
Statement by Hon. Fred Schwengel	752
Statement by Dr. James I. Robertson, Jr	750
Senator Robert C. Byrd's remarks concerning the 100th anniversary of State of West Virginia	748
Senator A. Willis Robertson's remarks concerning need for construction work, Appomattox Court House	1341
Coal Research, Office of (beginning of hearings)	165
Analysis by activities	166
Administration and contract supervision	166
Contract research	166
Budget justification	165
Adjusted operations under funds allowed	181
Effect of reduction made by Bureau of the Budget	182
Funds required to complete projects	182
Itemization of estimate	167
Obligations by objects	167
Program and financing	167
Requested increase in funds for administration and supervision	180
Salaries and expenses	166
Differentiation of work of the Office of Coal Research and the Bureau of Mines	179
Director's statement	168
General Technical Advisory Committee	178
Organization, Office of Coal Research (chart)	173
Projects under contract	174
Booz-Allen & Hamilton	174, 179, 187
Bituminous Coal Research, Inc	174, 179, 187
Pope, Evans & Robbins	174, 179, 187
Projects upon which contract negotiations are largely completed	174
Project COED (Char-oil-energy development)	175, 187
Project Bootstrap	175, 187
Project Gasoline	175, 188
Project Package Boiler (intermediate industrial steam market)	175
Project Gas	175, 188
Project High-Temperature Reactions	176, 188
Optimization of underground mining	176, 188
Western coal study	176, 188
Export market study	176, 188
Development of industrial complexes based on availability of valuable minerals in or adjacent to coal seams	176, 189

Coal Research, Office of—Continued
Projects upon which considerable negotiation has been done—any one of which may be under contract within a few months ..... Page 174
Project Jet Fuel 176, 189
Project Fuel Cell 177, 189
Project Pipeline Reactor 177, 189
Project Western Coal 177, 189
Project Low-Temperature Carbonization 177, 189
Development of prefailure testing methods for mining equipment 177, 190
Coal area power 177, 190
Project Rocket 178, 190
Project Pipe 178, 190
Project Low-Ash Coal 178, 190
Report of the Special Subcommittee on Coal Research of the House Committee on Interior and Insular Affairs 183
Secretary Udall's letter to President Kennedy, dated February 15, 1962, concerning the organization and responsibilities of the Office of Coal Research. Copies of letter sent to the President of the Senate and the Speaker of the House of Representatives 171, 172
Statement of program and funds available, fiscal year 1962, and estimate 1963 186
Program obligations 186
Administration and supervision 186
Contract research 186

Departmental offices. (*See names of offices.*)

F

Federal Coal Mine Safety Board of Review (beginning of hearings) 756
Analysis by activities 759
Budget justification 756, 758
Chairman's statement 759, 760
Obligations by objects 758
Statement relating 1961–63 programs 759
Total appeals to Board 761
Fine Arts, Commission of (beginning of hearings) 762
Amendment requested 1403
Analysis by activities 762
Budget justification 762
Chairman's statement 764
Itemization of estimate 764
Number of submissions presented to the Commission of Fine Arts during fiscal years 1959–61 765
Salaries and expenses 762, 764
Fish and Wildlife Service (beginning of hearings) 375
Commercial Fisheries, Bureau of 392
Construction:
Amendment requested 1391
Analysis by activities 442
Budget justification 441
Columbia River 427
Construction of fishing vessels 440
Analysis by activities 440
Budget justification 440
Itemization of estimate 441
Columbia River fishery development program 428, 429
Summary of construction, all agencies 428, 429, 430
Idaho Department of Fish and Game 431
Oregon Fish Commission 432, 433
Oregon Game Commission 433
Washington State Department of Fisheries 434, 435
Columbia River fishery facilities 445

Fish and Wildlife Service—Continued
Commercial Fisheries—Continued
Construction—Continued Page
Fishery facilities, projects 442
Research laboratory, Seattle, Wash 442, 446
Biological laboratory, Ann Arbor, Mich 442, 443, 447
Radiobiological laboratory, Beaufort, N.C 442, 443, 447
Research vessel as replacement for the *Black Douglas* 442, 443, 444, 446
Rehabilitation of warehouse and dock facilities, St. Simons Island Lighthouse, St. Simons Island, Ga 442, 444
Contribution to the national oceanographic program 388, 389
Appropriation, activity and subactivity 390, 391
Director's statement 392, 413
Fishery loan fund 461
Administrative expenses 461
Administrative expense limitation 461
Itemization of estimate 461
Analysis by activities 461
Budget justification 461
General administrative expenses 448, 449
Amendment requested 1392
Analysis by activities (total funds) 449
Analysis by activities (annual definite) 450
Budget justification 448
General administrative services program 453
Itemization of estimate 453
Management and investigations of resources 394
Amendment requested 1389
Analysis by activities (total funds) 398
Analysis by activities (annual definite) 398
Summary of increases and decreases, 1963 396
Management 396, 398
Analysis by activity 398
Marketing and technology 398
Subactivities 396, 400
Additional funds available under the Saltonstall-Kennedy program 405
Research 397, 405
Additional funds available under the Saltonstall-Kennedy program 410
Research on fish migration over dams 397, 411
Fishing vessel mortgage insurance 398, 412
Columbia River fishery facilities 397, 412
Itemization of estimate 413
Pribilof Islands, administration of 454, 455
Analysis by activities 455
Budget justification 454
Itemization of estimate 456
Termination of supply support by the Navy of the Pribilof Islands 457
Exchange of letters between the Department of the Navy and the Department of the Interior 457, 458, 459
Special foreign currency program 438
Analysis by activity 439
Marketing and technology 439
Research 439
Itemization of estimate 440
Commissioner of Fish and Wildlife, Office of 382
Analysis by activities 385
Commissioner's Office 385
Office of Information Services 385
Office of International Relations 385
Office of Program Review 385
Budget justification 382
Itemization of estimate 385
Salaries and expenses 384
Statement of Assistant to the Commissioner 385
