NEAR EAST AND SOUTH ASIA

WITNESSES

WILLIAM S. GAUD, ASSISTANT ADMINISTRATOR, NEAR EAST SOUTH ASIA, AGENCY FOR INTERNATIONAL DEVELOPMENT
PHILLIPS TALBOT, ASSISTANT SECRETARY OF STATE FOR NEAR EASTERN AND SOUTH ASIAN AFFAIRS
CHARLES F. FLINNER, OFFICE OF THE CONTROLLER
GUY A. LEE, DIRECTOR, REGIONAL OFFICE, BUREAU OF NEAR EAST-SOUTH ASIAN AFFAIRS, STATE
ALFRED WHITE, DIRECTOR, OFFICE OF DEVELOPMENT PLANNING, NEAR EAST-SOUTH ASIA REGION, AID
CLARENCE J. MARTIN, CONGRESSIONAL LIAISON STAFF, AID
CHARLES W. QUINN, JR., NEAR EAST, SOUTH ASIA, AND AFRICA REGION, OASD/ISA
LEIGH M. MILLER, LEGISLATIVE PROGRAMS COORDINATOR, AID
STANLEY B. SCHEINMAN, LEGISLATIVE PROGRAMS COORDINATION STAFF, AID

Mr. PASSMAN. The committee will come to order.

The members of this subcommittee are certainly sorry to learn of the illness of Mr. Tennant. We hope his condition is not serious, and that his illness will not be of long duration. We have much respect and high regard for the controller.

The committee will take a brief recess.

(Short recess.)

CONTINUING PROJECTS FOR WHICH NO ADDITIONAL FUNDS ARE REQUESTED

Mr. PASSMAN. The committee will come to order.

I should like to ask Mr. Flinner, assistant to Mr. Tennant, to provide us a statement as to the number of projects in each area for which you are not requesting any funds to be used in fiscal year 1964, but which have unliquidated funds to their credit.

It is true that some projects may be terminating, but also there are projects which are not terminating and will require funds in future years. We request a listing on those also.

(The information supplied follows:)

AGENCY FOR INTERNATIONAL DEVELOPMENT

Number of projects with unliquidated obligations as of Mar. 31, 1963, for which no funds are being requested in fiscal year 1964

[Dollar amounts in thousands]

Region	Total		Terminating projects		Continuing projects	
	Number of projects	Unliquidated obligations, Mar. 31, 1963	Number of projects	Unliquidated obligations	Number of projects	Unliquidated obligations
Latin America	362	32,736	273	17,604	89	15,132
Far East	155	30,439	152	29,997	3	442
Near East/south Asia	123	19,150	117	16,926	6	2,224
Africa	153	14,914	143	12,876	10	2,038
Total	793	97,239	685	77,403	108	19,836

INCREASE OF PROJECT FUNDING THROUGH PRESIDENTIAL DETERMINATION

Mr. PASSMAN. Presidential determinations are usually made, I suppose after the agency has justified to the President the need for Presidential determination so that funds may be made available for a project?

Mr. GAUD. That is right, sir.

ADDITIONAL FUNDS FOR LAOS

Mr. PASSMAN. It would appear that on June 29, there was a Presidential determination to make additional funds available to Laos.

Could you tell us whether or not you funded this item, with which some of you are familiar, out of the regular Military Assistance Program, or out of some other account?

Mr. MILLER. There was a modification, was there not, an increase from $——— to $———.

Mr. PASSMAN. Maybe you could term that action a "modification." I would term it a "straight-out increase" at the end of the year, from $——— up to $———. Out of what account were the funds obtained?

Mr. MILLER. My recollection is, it was an increase of $——— out of 1963 funds.

Mr. PASSMAN. Out of military assistance, or some other account?

Mr. MILLER. I do not have the determination with me. I would have to check it for the record. I would be glad to provide the information.

(The information follows:)

The additional funds were made available from funds appropriated for military assistance.

Mr. PASSMAN. We were told many times in previous years that we would not be blackmailed into providing aid. But it would appear that we are getting a bit soft on this point.

I have another document here, and I quote:

We have been informed by the ——— government that while it would prefer not to accept military assistance from Communist countries, it will do so if Western countries are not willing to provide adequate assistance.

That is either blackmail or Webster has changed the definition of the word since I looked it up last.

We have with us today Mr. William S. Gaud, Assistant Administrator, under Mr. Bell, testifying for the Near East and south Asian region, and also the Honorable Phillips Talbot, Assistant Secretary of State for Near Eastern and South Asian Affairs, the same region that is under Mr. Gaud's administration.

You gentlemen will have to tell me which one would like to testify first.

Mr. GAUD. Mr. Talbot, why do you not lead off?

Mr. PASSMAN. All right, we shall first hear from Mr. Talbot.

STATEMENT OF ASSISTANT SECRETARY OF STATE FOR NEAR EASTERN AND SOUTH ASIAN AFFAIRS

Mr. TALBOT. Thank you very much.

I am glad to appear before you in support of the requested appropriations for the foreign assistance program, and to discuss with you political and economic developments of the past year in the Near East and south Asia.

Since we met a year ago this important part of the world has been touched by far-reaching and sometimes dramatic developments. Perhaps most significant was Red China's assault on India last October and India's determined resistance, assisted by the free world. In Iran the Shah's sweeping reform program is being pressed ahead and should substantially strengthen that crucial Soviet border area. In the Arab world Communist prestige and influence are at their lowest point in years.

The political and social movements in the area are generally forward and in the direction of those objectives that we and the nations of the region share. This favorable situation can be ascribed in part to the encouragement and assistance given by the people of the Western World, notably the United States. Without that assistance many of the political developments would undoubtedly have been less favorable or might have taken a different direction. We must frankly recognize that large problems remain, problems of political instability, inadequate development planning, and intraregional animosities, and so forth—but the peoples of the area, by and large, now have new hopes, plans, objectives, and a substantial part of the tools for constructive development. Our patient but firm cooperative and dependable assistance can be a continuingly significant factor in determining whether the gains already made are to be consolidated and assured or are to be allowed to wither away.

SOUTH ASIA

The Communist Chinese attack on India during the past year removes any doubt that south Asia is a prime target of Communist expansion and that what is now at stake is the entire balance of power in Asia and the political system that will dominate half of mankind. It is essential that the countries comprising the indivisible whole of this strategic area remain free and independent, that they are enabled to continue and succeed in their heroic efforts to maintain political freedom and to resist the inroads and pressures of a powerful force dedicated to the destruction of their way of life.

In terms of military and political strategy the subcontinent is indivisible. India and Pakistan are the heartland, and neither country could long endure in freedom if communism or chaos should penetrate the area. Afghanistan and Nepal are sensitive northern extremities that for political, economic, and strategic reasons are highly important if the area as a whole is to have security and an opportunity for political and economic development.

In south Asia strongly held antagonisms between groups (that is, linguistic or religious rivalries) and between countries (India and Pakistan) enormously complicate the task of these young governments, drain their resources, and invite Communist exploitation. They and we have recognized the threat of these divisive currents, and we are using all the diplomatic tools available to us to help compose differences, notably in the Kashmir dispute, in order that our energies and theirs may be concentrated on the threat of communism and on building strong societies capable of meeting the vast human aspirations in the area.

The Communist Chinese attack on India came at a time when all efforts were being strained toward achieving the goal of self-sustaining growth. The attack and the larger threat which lies behind it create a new challenge and have had far-reaching effects. On the positive side, the dramatic response to the Chinese challenge clearly revealed that Indians, in a time of crisis, would put aside their differences and work together to defend India's territorial integrity.

India, over the past decade, has been effectively using the large input of U.S. aid in achieving social and economic accomplishments that have been remarkable, in view of the great difficulties which she has had to overcome. The Chinese threat has now forced India to assume an added burden of building its defenses at the same time it continues its development efforts. While the ability of the countries of the area to meet the Communist threat will be very materially influenced by the willingness of the West to provide strength and steadfast support, the countries recognize that the battle is largely theirs. Their strong sense of nationalism fortifies them in their task, even though it sometimes makes it difficult for others to help them.

Pakistan continues to be allied with us, both bilaterally and by virtue of her association in CENTO and SEATO. It is anti-Communist, it cooperates with us in military affairs, and against great odds it has significantly improved economic conditions and social and political institutions. Under a carefully worked out development plan, Pakistan is using our assistance effectively to increase agricultural production, strengthen industry, extend its transportation system, and improve the effectiveness of public administration.

The Government of Pakistan has taken advantage of Communist overtures following the October attack on India to conclude trade and boundary agreements and to consider a civil air agreement with Red China. We have made clear our concern and our belief that, even if marginal benefits may accrue to Pakistan from these measures, the political effect is to give advantage to an enemy against which we are formally allied. Here, as elsewhere, we must seek to accomplish our objective without infringing upon the sovereign rights of another government. We continue to believe that our national interests and those of Pakistan coincide and that this is recognized by Pakistan as

well. The recent agreement to reopen the Pak-Afghan border and to resume political and trade ties is a hopeful and constructive development that reflects credit on the governments immediately concerned, justifies our policy of patient assistance, and augurs well for the future.

GREECE, TURKEY, IRAN, AND CYPRUS

Greece, Turkey, and Iran constitute an important defense line for the free world. Stanchly independent, they hold a long, exposed border and thwart any Communist dream of easy expansion through the Mediterranean, the Persian Gulf, and the Arab world. The firm CENTO–NATO corridor provides a protective screen behind which the peoples of the Near East can, in times such as the present, work out their own destiny with some assurance that there will not be direct interference from the U.S.S.R.

These nations were prompt and firmly in support of the United States at the time of the Cuban crisis. During the past year they have loyally fulfilled their NATO and CENTO obligations, and, over and above that, have continued to provide us bases, facilities, and services designed for our mutual protection. In the U.N. and in other international forums they have, as in the past, stood up for measures designed to favor free world interests. They have not hesitated to resist repeated Soviet trade and aid blandishments, despite their real material need.

Countries that elect to pursue such a dangerous course in the face of great odds entail burdens that are often commensurate. Each of these countries has peculiar defense problems because of long common borders with Communist nations. Each must maintain a military posture that will discourage Soviet attempts to support either direct or indirect aggression against it. The large military cost burdens are imposed upon economies and social structures that are desperately trying to modernize in order to meet the rising expectations of the people and the survival requirements for modern nationhood. Achievements in reaching satisfactory goals vary from country to country according to the resources available and the complexities of the problems that have to be solved in order to modernize institutions. All three countries have taken encouraging steps forward during 1962–63 and have successfully withstood internal challenges that illustrated both their essential strength and the problems with which they must continue to cope. I refer to the recent religious riots in Iran, the attempted military coup in Turkey, and the fall of the Caramanlis cabinet in Greece.

Iran has been the scene of exciting and encouraging change during the past year. The Shah of Iran has accelerated the momentum of a reform program he calls the "White Revolution." Included in it are land distribution, better profit sharing for workers, women's suffrage, and a literacy drive by a domestic peace corps. He has taken the program to the people and in a referendum in January received an overwhelming vote of approval. The elections now being readied for early fall will be held under a new electoral law under which for the first time in history there will be a registration procedure, positive identification of voters, and other reforms enabling the illiterate voter to express his political preferences.

These changes truly constitute a peaceful revolution. The combination of the landed elite and various extremely conservative forces has lost its dominant position. No doubt such groups will remain forces to be reckoned with for some time, but they no longer constitute a high but weak dam back of which a mounting flood of demagogic discontent could rise. There is now real hope for dynamic new leadership and constructive national unity.

In the past there has been criticism of the military force level which was established by a United States-Iranian agreement of July 1958. Our goal has been an optimum balance between the economic development requirements of the economy and the need for adequate forces to provide internal security and defense against limited external aggression. In order to assure ourselves that this goal was being reached, our Joint Chiefs, working with the Iranian Government, made a thorough review of military programs. As a result, the projected force levels are being reduced by 33⅓ percent and the army is being reformed and modernized under a carefully worked out schedule. Our commitments have been reduced, and our ally is strengthened both economically and militarily.

Throughout this subregion there are close relationships with Europe. Greece and Turkey are members of NATO; Greece is associated with the Common Market; Turkey is negotiating for association; and trade and cultural relations are close and important. All of the countries have received loans from various European countries and there is an increasing recognition of the desirability of multilateral devices. International consortia have been arranged for providing external financing to Turkey and Greece. Within the past few years the European states have provided an increasing proportion of the total external assistance. We are fully aware of the desirability of increased European participation and are working toward that end. In doing so, we are mindful, of course, of our own peculiar and essential security requirements in the area, and of the sensitive but highly valuable political and psychological relationship between ourselves and the countries of the area.

NEAR EAST

In the past year, there have been dramatic developments in the Near East that will undoubtedly affect the course of events there and the execution of our own policies and programs, including those relating to foreign assistance. The revolutions of September 26, 1962, in Yemen, of February 8 in Iraq, and of March 8, 1963, in Syria, and the emergence of a Ba'thist-nationalist coalition government in each of the latter two, have affected the political dynamics in the region as a whole. The manifest desire of the Arab peoples for closer relations has resulted in serious reconsideration of unity and an agreement in principle for closer political association among the United Arab Republic, Syria, and Iraq. In the area generally there are encouraging indicators that economic and social progress, requisite for any real political stability, has accelerated in recent years.

Although no substantial progress has been made in resolving the Palestine problem, serious incidents along Israel's borders have been few, relative to previous years, and have been settled through the

United Nations peacekeeping machinery, fully supported by our bilateral efforts with the parties involved. United States and United Nations efforts to facilitate a solution to the problem raised by intervention in Yemen have borne fruit and liquidation of the conflict is underway.

The Near East, unlike the other two subregions, does not directly confront the Communist world on a common border. The area is, nevertheless, a prime Communist target as evidenced by the massive aid provided by Communist states to the countries of the Near East. The United Arab Republic has received considerable amounts of arms aid as well as being a focal point of Communist propaganda. The Soviets have taken advantage of poverty and instability to further their own long-range goals, and they are obviously displeased with tactical reverses, such as their major setback in Iraq, where thousands of Communists are now in jail.

For the West, it is of signal importance that the nations of the Near Eastern area continue to maintain their strength to resist subversion, that Communist domination or subversion be thwarted, that the West continue to have peaceful passage through and intercourse with the area, that there be a continuing flow of oil from the Persian Gulf, that the Palestine problem be contained, and that there develop free modern societies, able and willing to meet the aspirations of the people.

The United States therefore is interested in the integrity and well being of all the states of the area, and our bilateral relations are premised on the need for impartiality and objectivity as between them. Assistance to the United Arab Republic, much the most populous state of the Near East, has been largely in the form of Public Law 480 foodstuffs. This assistance has helped support a rate of economic growth somewhat in excess of the rate of growth of the population. In addition to contributing to the stability and economic growth of the country, U.S. assistance has provided the United Arab Republic with an alternative to reliance on the Soviet bloc and has made easier the carrying out of the United Arab Republic's determination to follow an independent, albeit nonalined foreign policy.

In Jordan, the Government is now moving ahead on programs of modernization, reform, and economic development. It is important that we continue assistance to Jordan and assure its continued progress toward economic and political viability. Its location makes Jordan's stability a linchpin for maintenance of the relative peace and security of the entire Middle East.

Lebanon, with growing prosperity, has moved out of the foreign-aid category. In Israel, as in Greece, the combination of foreign assistance and self-help has rapidly raised the per capita gross national product. Both countries have moved away from dependence upon grants; they are now receiving limited development loans and are attracting foreign private investment; and hopefully, they will soon be able to utilize regular commercial sources of credit.

Political instability has been endemic in the Near East for the past several decades. Despite this, there has been considerable economic and social development which gives promise of providing a basis for greater political stability. In our day-to-day relations with the states of this area, we seek to maintain a strictly objective and impartial

posture, to avoid, insofar as possible, becoming involved in inter-Arab disputes, and to use our influence in support of U.N. efforts to maintain the peace in the Arab-Israel conflict. By maintaining cordial and fruitful relations with each state in the area, we are able effectively to protect and advance our interests. We believe that U.S. policy is now well understood by the governments and peoples of the area and that our relations generally are better now than they have been at any time since the years immediately after World War II. In this time of fundamental and fast-moving change in the Near East, there will be opportunities for us to assist and encourage the peoples and states of the area to our mutual advantage. To seize those opportunities we must remain firm and patient, and we must have an aid program that is sufficiently flexible to meet the new circumstances in a timely way.

CONCLUSION

In international affairs the nations of the area have taken increasingly realistic positions during the past year. Our allies have generally cooperated fully and firmly. The so-called nonalined nations have not changed their doctrine, but they have repeatedly and increasingly voted or otherwise acted in such way as to show that they know the hollowness of Communist professions in such matters as colonialism, disarmament, and freedom of trade.

Change, both violent and evolutionary, has been remarkably great in the Near East and south Asia during the past year. Outwardly at least it has been much greater than in the preceding year. The new situations that now confront us do not call for new goals. In an interdependent world we still have need for access to and passage through the area; we need strong and dependable allies in that part of the world; the resources of the area are a necessary supplement to those of the rest of the free world; we have mutual interests in trade; and we know that our kind of world could not tolerate the enslavement of such a large proportion of the world's people. The external threat remains; and the internal weaknesses still invite Communist exploitation. A continuing mutual effort to develop and sustain free and independent states is a necessity.

Encouragement and material and technical assistance from the United States, though a small part of the total resources required, have played and will continue to play a decisive role in the speed and certainty with which we and the people of the area achieve our goals.

Mr. PASSMAN. Thank you very much, Mr. Talbot. We shall have some questions to ask after Mr. Gaud has made his statement.

DEVELOPMENT LOAN TERMS

However, let me note from your remarks:

> Development loans account for 87 percent of our request for fiscal year 1964.

That refers to the so-called development credits, does it not, 40 years, 10-year grace period, no interest, and three-quarters of 1 percent service charge?

Basically, is that what you are referring to?

Mr. GAUD. Most of our loans are made on the terms you just referred to. Some are harder.

Mr. PASSMAN. I believe Mr. Fowler Hamilton said these things were half grant to begin with if you figure in the cost of the money. Are you familiar with his statement?

Mr. GAUD. I do not recall his statement.

Mr. PASSMAN. Here is what Mr. Hamilton said at page 235 of the hearings for last year:

Mr. HAMILTON. * * * It is more than half grant to start with if you figure in the cost of the money.

I asked Secretary Dillon:

In your professional position as a banker, would you actually call these things loans, if there is no interest?

Would they come under the category of hard loans?

Mr. Dillon responded:

They call them development credits, and I think it is a good name for them.

Mr. Hamilton again:

I never told anybody I thought this was a loan in any sense that a banker uses the term.

We shall be pleased, Mr. Gaud, to hear your statement.

Mr. GAUD. Thank you, sir.

STATEMENT OF ASSISTANT ADMINISTRATOR, NEAR EAST AND SOUTH ASIA

Mr. Chairman and members of the committee, I am glad to appear again before this committee to discuss the aid program of the Near East and South Asia region.

FISCAL YEAR 1964 REQUEST—NEAR EAST AND SOUTH ASIA

The total amount requested for fiscal year 1964 compares as follows with actual obligations in fiscal year 1962, and our present estimate of obligations in fiscal year 1963:

[In millions of dollars]

	1962 actual	1963 actual	1964 proposed
Development loans	756.2	779.5	890.0- 950.0
Supporting assistance	250.0	110.8	76.2
Development grants	62.5	58.3	62.4
Total	1,068.7	948.6	1,028.6-1,088.6

DEVELOPMENT LOANS

This table shows that the Near East-South Asia program is primarily a loan program. Development loans account for 87 percent of our request for fiscal year 1964. Supporting assistance accounts for 7 percent, and development grants make up the remaining 6 percent.

As the committee knows, development loans are made for specific purposes, they are usually spent wholly within the United States, and they are all repayable in dollars. During fiscal year 1963 we made development loans to 9 of the 18 countries in the region. Much the largest amounts went to India ($396 million), Pakistan ($177 million), and Turkey ($71 million). Israel, Greece, Iran, the United

Arab Republic, Cyprus, and Afghanistan also received loans in lesser and varying amounts. The pattern for fiscal year 1964 will be substantially the same, with the lion's share again going to India, Pakistan, and Turkey.

SUPPORTING ASSISTANCE

Of the $76.2 million requested for supporting assistance, $7.2 million is required for CENTO and Yemen projects, compared to $7.4 million obligated for these programs in fiscal year 1963. The rest will go to two countries: Turkey———as against $55 million in fiscal year 1963, and Jordan———compared with $36 million in fiscal year 1963.

Until fiscal year 1962, Afghanistan, Pakistan, Greece, and Iran also regularly received this type of aid. It is our judgment that only Turkey and Jordan still require supporting assistance—Turkey to help maintain its economy while carrying out its military commitments to NATO, and Jordan because it is not yet able to meet its ordinary operating expenses without grant assistance.

DEVELOPMENT GRANTS

For development grants, we are seeking $62.4 million. These funds will be used to finance programs—mostly technical assistance services—in 12 countries. In fiscal year 1962 we were carrying on such programs in 15 countries. But Greece, Israel, and Lebanon no longer require development grant assistance.

CONCENTRATION OF ASSISTANCE

If all three types of economic assistance are taken together—development grants, supporting assistance, and development loans—3 of the 18 countries in the region (Lebanon, Saudi Arabia, and Kuwait) are expected to receive no economic aid from the United States in fiscal year 1964. The same may be true of Ceylon because of the application of the Hickenlooper-Adair amendment. The 14 other countries in the region will receive economic assistance of one kind or another. Three of them (India, Pakistan, and Turkey) will receive about $828 million, or over 80 percent of the region's aid funds.

Because so much of the region's aid program is concentrated in these countries, I would like to consider them in some detail. But before doing so let me say a word as to why we place such great emphasis on development loans in this part of the world.

There is good reason for this. Most NESA countries—not all of them, but most of them—have for a number of years been committed to economic development programs of their own. India is well into its third 5-year plan. Pakistan is nearing the end of its second 5-year plan. Israel, Greece, Turkey, the United Arab Republic, Iran, and other countries in the region are, and for some time have been, devoting substantial energy and resources of their own to development.

The quality of this effort varies. Some countries have greater capacity and know-how than others, some have more resources, some have a more favorable political climate within which to work. But there exists in most parts of the Near East and south Asia a deep-rooted urge for development and a relatively high capacity to achieve devel-

opment. In short, those countries to which we are extending the bulk of our aid are independently committed to the proposition that economic development is essential to their strength, security, and independence.

ASSISTANCE TO INDIA

India is a prime example of a country committed to a course of economic development which it is in our interest to encourage and promote.

India adopted its first 5-year plan in 1951. Since then considerable progress has been made on the immense development problem presented by India's 450 million population and great poverty. National output has risen about 50 percent. Industrial production has doubled. India now produces hundreds of new products. Capacity in power, coal, steel, cement, transport—the ingredients for further growth—have all expanded substantially.

The resources for India's development have come largely from within India. India financed 84 percent of the investment made in its first two 5-year plans. This financing included use of some $1.5 billion of its foreign exchange reserves. India expects to finance from her own resources 75 percent of the much larger third plan, the second year of which has just ended. It is nonetheless true that foreign assistance provided the decisive margin which enabled India over the past decade to enlarge its production base, expand its health and education services, and progress toward self-sustained economic growth.

In the coming year India faces the task of maintaining the momentum of its development program while expanding its defense effort. Until the Chinese invasion, India had given economic development a clear priority over defense. But the new budget nearly doubles defense expenditures while limiting the increase in development expenditures to about 14 percent. Taxes have been increased sharply to help finance defense outlays.

Our aid to India has for the past several years been pledged through the consortium organized by the World Bank. The consortium met in Paris early in June to consider India's foreign exchange needs for the current year of the third 5-year plan and will meet again in July for a final pledging session. Total pledges to date amount to $914.8 million against India's stated requirement of $1,250 million. The United States has thus far pledged $375 million and has stated its willingness to pledge a maximum of $450 million depending upon the amounts of aid pledged to India by others.

The development lending level planned for India for fiscal year 1964 is ——— deemed necessary to cover the U.S. pledge for the current year of India's third 5-year plan (which ends on March 31, 1964) plus a sum which will enable AID to continue to make development loans to India for the first quarter—that is, from April 1, 1964, to June 30, 1964—of the fourth year of the plan.

Our loans in fiscal year 1964 will be substantially similar to those made during the current fiscal year. They will be of two kinds. Some loans will finance the imports of capital equipment, machinery, commodities, spare parts, and critically needed raw materials. It is estimated that about 75 percent of the items financed by these loans go into the private sector. Loans will also be made for projects in power, transport, coal, and other industries to help break bottlenecks now limiting industrial expansion.

ASSISTANCE TO PAKISTAN

Pakistan, with a population approaching 100 million, is another country whose development efforts deserve continued U.S. support in order to further Pakistan's economic development at a rate which will maximize its prospects for internal stability and its contribution to the defense of the Asian subcontinent.

Pakistan's second 5-year plan went into its fourth year on July 1. Pakistan has been making effective use of its own resources and of the assistance it has received from others. Central Government investment is estimated to have increased 80 percent since the start of the second plan. Industrial output has grown on average about 14 percent a year in the first 2 years of the plan. The Government is determined to help itself, and in its budget for fiscal year 1964 proposed new taxes to increase revenues by $63 million—the largest increase ever requested of the national assembly.

The most recent meeting of the consortium, which has been helping to finance Pakistan's development program, was held early in May. The consortium considered requirements for the fourth year of the plan (corresponding to our fiscal year 1964). The total pledges came to $425 million. One-half of this amount was pledged by the United States. The World Bank and IDA pledged $80 million while Canada, Japan, and the European countries pledged the remaining $132.5 million.

It is expected that the U.S. pledge of $212.5 million will be fulfilled to the extent of approximately $25 million by the Export-Import Bank and to the extent of $187.5 million by AID. In addition, AID will continue to make available $50 million which remains unobligated from its previous pledge. Therefore total AID lending to Pakistan in fiscal year 1964 is expected to reach $237.5 million. This is more than the $225 million shown in the presentation. Pakistan's project preparation has accelerated and improved in quality in recent months. It was the judgment of the consortium that Pakistan was in a position to use effectively all the new funds pledged plus the carryover of the unobligated portion of previous pledges.

Fiscal year 1964 loans to Pakistan will finance both projects and the import of specified commodities, capital equipment, and the like needed to increase agricultural and industrial production. Project loans will be concentrated in the field of water control and water resources development, transportation, power, and industry. The proposed development grant program of $9.9 million will be focused on the priority objectives of raising agricultural and industrial output and improving education.

ASSISTANCE TO TURKEY

We have a continuing national security interest in a strong Turkey. Continued economic improvement will enhance Turkey's political stability and its long-term value as an ally.

Turkey's determination to get on with development is symbolized by a 5-year plan which went into effect this year and by a number of policy decisions taken by the Government in support of it. These show a clear recognition of the need to follow economic policies which will foster development. Illustrative of these decisions are measures to reform budgetary and monetary practices, to improve tax enforce-

ment, reduce price controls and subsidies, and to modify controls on trade. Tax collections increased 25 percent in 1961–62 and a further 17 percent in 1962–63 in line with Turkey's intention to finance about 75 percent of the development program from its own resources. These steps furnish a reasonable basis for U.S. support of Turkish development efforts.

During the past year a consortium was formed under the Organization for Economic Cooperation and Development (the OECD) to assist Turkey in the financing of foreign exchange requirements created by its 5-year plan. The member countries have pledged a total of $154.5 million. The U.S. portion amounts to $63 million.

The consortium is also now studying Turkey's 1964 and longer term development needs in the light of the 5-year plan. It is hoped that this study will lead to greater willingness on the part of member nations to meet the volume of assistance Turkey requires to carry its development forward, and to provide the better terms of aid Turkey needs if it is to carry out a development program without again assuming a crippling burden of short-term foreign debt.

Our proposed aid program for Turkey in fiscal year 1964 includes three elements. First, a supporting assistance program at a reduced level ——— to help Turkey maintain the economy while providing military forces under its defense commitments. Second, a development grant program of $4.7 million to carry forward Technical Assistance Programs chiefly in the fields of agriculture, development planning, and education. Third, a development lending program for power, transport, water development, and industrial projects as well as for commodity imports required to support the 5-year plan. Development lending is proposed as a range —— inasmuch as the number and volume of loans to be made will depend partly upon how rapidly Turkey succeeds in implementing the 5-year plan and partly upon the amounts pledged by other members of the consortium.

The three countries discussed above—India, Pakistan, and Turkey—account for 80 percent of the funds requested for this region. Six countries—Greece, Israel, Jordan, Iran, Afghanistan, and the United Arab Republic—account for almost all of the balance.

ASSISTANCE TO GREECE

Our economic aid program to Greece is in a period of transition. A shift from grants to loans has already occurred. We are proposing less aid for fiscal year 1964 than in the past year. ———. The interest rate will be at least 3½ percent. Terms will be in the 20- to 30-year range. We envision these terms as a transition to Greek reliance on normal sources of capital to finance its development needs. We also expect the Western European countries to continue their support of Greece's development effort through a recently formed OECD consortium.

The changes in our aid program for Greece have created in Greece the fear that it foreshadowed a fundamental change in U.S. interest. This is not the case. Greece's relative economic growth was made possible in considerable part by the generous U.S. aid program of the past 16 years. Conditions have now improved to such an extent that we can foresee a closing out of AID economic aid. However, Greece will continue to need military assistance for some time to come.

ASSISTANCE TO ISRAEL

Israel's growth rate of about 10 percent is the highest in the world. Israel is rapidly reaching the point of no longer needing development loans on concessional terms. In recognition of this, development loans made to Israel in fiscal year 1963 bore a 2-percent interest rate as against the fiscal year 1962 figure of three-fourths of 1 percent. In fiscal year 1964 the interest rate is expected to move up to 3½ percent. The term of the loans will be 20 to 30 years. The loan level for fiscal year 1963 was $45 million. It is planned to reduce this to $20 million in fiscal year 1964 as a transitional step to future termination of AID lending. Its improved economic position should enable Israel to obtain the foreign exchange it needs for development from the World Bank, the Export-Import Bank, Western Europe, and conventional lending sources.

ASSISTANCE TO JORDAN

Jordan's existence is essential to the stability of the Middle East. But its existence is dependent upon the continuation of United States and United Kingdom cash subsidies. Jordan's own resources are insufficient to pay for ordinary government services, let alone meet development expenses which could eventually reduce its dependence on outside assistance. The Jordan economy has grown stronger, however. It has been possible to reduce our financing of the Government's operating expenses from $40.5 million in fiscal year 1960 to $36 million in fiscal year 1963 largely because domestic revenues have begun to show an encouraging though erratic increase. A further reduction ——— is proposed in fiscal year 1964.

Jordan has prospects for increasing its earnings from tourism, exploitation of its mineral resources, and irrigated agriculture. Our development grant program is concentrated on projects in fields which will in time improve Jordan's capacity to earn or save foreign exchange, manage its own resources better, and raise more resources internally.

ASSISTANCE TO IRAN

Iran no longer receives supporting assistance grants. Economic aid to Iran now consists of development loans for selected projects, Public Law 480, and development grants. Although Iran now nets over $300 million a year in foreign exchange from oil sales, it is a poor and largely underdeveloped country. Iran has nevertheless been financing over 80 percent of its development program from its own resources. During its second plan, one-half of its oil earnings financed development.

The Shah's land reform program is now at the center of the Iranian development effort. The proposed fiscal year 1964 program can help Iran weather economic and political dislocations resulting from that revolutionary program. Public Law 480 can play a crucial role as an offset to a potential drop in agricultural output. It can also be an important source of the local currency needed to strengthen the financial position of the new agricultural cooperatives and the agricultural bank. The proposed $4 million Development Grant Program, in addition to carrying on a number of important projects in the fields of private enterprise encouragement, development and manpower train-

ing, can provide advisory services to help the Iranians work out the many administrative and organizational problems related to creating new services to the farmers.

The concentration of government effort on the reform program has slowed its work in developing and implementing a comprehensive economic development program. Project preparation has been slower than expected. Loans in fiscal year 1963 came to $17.4 million. We are programing a higher lending level for fiscal year 1964 ——— in the expectation that Iran will accelerate its project preparation and move forward somewhat faster with its development program. These loans will bear 3½-percent interest.

ASSISTANCE TO AFGHANISTAN

Our policy for Afghanistan has been under continuing review this past year. The Afghan-Pakistan border has remained closed, although there is every likelihood that it will soon be open. We have continued our aid program despite the difficulties created by the closed border, but we have modified the program in order to absorb the increase in costs resulting from the use of the more expensive Iranian delivery route in place of the cheaper route through Pakistan. For example, because the border had remained closed for an extended period and its reopening could not be predicted, the specifications for the Kabul-Kandahar Road were changed so that two-thirds of the road will have a gravel rather than a black top. We also reduced by $4.3 million the amount of commodities initially planned for support of the fiscal year 1963 development grant program because of the difficulty and expense of shipment.

The proposed program for fiscal year 1964 consists of both development grants and development loans. Most of the funds requested will be used to carry out existing program commitments and complete projects now well underway. The major loan under consideration is for the improvement of the Herat-Islam-Qala Road. This is an 84-mile link between the Afghan road net and Iranian border where connection can be made to the railhead at Meshed, Iran. An improved road will increase Afghanistan's access to the free world.

ASSISTANCE TO UNITED ARAB REPUBLIC

The purpose of our United Arab Republic aid program is to prevent excessive United Arab Republic reliance on the Soviet bloc for its development needs, ——— and to help the United Arab Republic focus increasing attention on its development needs. The United Arab Republic's growing preoccupation with development is indicated by the fact that government investment increased 21 percent in the past 2 years.

Our support to the United Arab Republic development program will continue to be mainly in the form of Public Law 480. The United Arab Republic does not produce enough food to feed its rapidly growing population. Public Law 480 food supplies are an important element in maintaining the stability of the country and the economy. Inasmuch as the United Arab Republic is much the largest of the Arab States, its stability is of prime importance for the entire area.

We provided a $10 million supporting assistance loan financed from the contingency fund in fiscal year 1963, following the successful efforts of the United Arab Republic to raise funds in Europe for its stabilization program. In my testimony before this committee last year, I explained that we would probably make this loan (p. 219, HAC, pt. 3). We also made two development loans amounting to $36.3 million. The principal project, accounting for $30.6 million of the total, was a thermal plant which will provide power for the city of Cairo. Our fiscal year 1964 planning figure for development loans is smaller. It would allow for financing a few selected development projects. The proposed development grant program of $2.2 million will help the United Arab Republic improve agricultural production, industrial management and planning, and public administration.

REQUESTS FOR INDUS WATERS AND UNRWA TO BE EXAMINED LATER

I understand that the justification for the $43.1 million for Indus waters and $17.2 million for UNRWA will be examined by the committee at a future date as part of its consideration of the total appropriation request for international organizations. I shall be happy to appear with Mr. Cleveland, Assistant Secretary for International Organization Affairs, in support of the request for the Indus Basin works.

So much, gentlemen, for the highlights of the NESA program. I will be happy to answer your questions about those features of the program on which you would like more information.

TERMINOLOGY OF DEVELOPMENT LENDING-DEVELOPMENT CREDITS

Mr. PASSMAN. It has been admitted many times that the so-called development loan is a disguised grant, and it was put on that basis to make it more palatable for the American people. However, Mr. Gaud, in his brief statement, has mentioned development lending 31 times, by my count.

For that reason, I shall read now from page 40 of the hearings of 1962:

Mr. PASSMAN. In your professional position as a banker, Mr. Secretary, would you actually call these things loans, if there is no interest? Would they come under the category of hard loans?

Secretary DILLON. No.

Then the Secretary said:

They call them development credits and I think that is a good name for them.

And Mr. Hamilton, then the AID Administrator, again:

Mr. HAMILTON. * * * It is more than half grants to start with if you figure in the cost of money.

And again:

Mr. HAMILTON. I never told anybody that I thought this was a loan in any sense that a banker uses the term.

These transactions are development credits, but I suppose you can label them as loans if you want to.

In addition to what has already been pointed out about these transactions, no repayments on these development credits come back into the general fund of the U.S. Treasury to be applied to the public debt

or for other use in our country. Repayments, if any, go back into the foreign aid program, do they not?

Mr. GAUD. That is true.

Mr. PASSMAN. Thank you.

Mr. GAUD. I don't want to belabor the point, Mr. Chairman, but I am sure you are aware of the point that the statute which authorizes us to engage in these transactions characterizes them as development loans.

Mr. PASSMAN. The committee is well aware of that fact, sir, but it does not change the actual character of the transactions.

Now, with reference to these development credits, the nations receiving them will repay, if ever, only after they have built up their economies and foreign exchange reserves. If after the 10-year grace period has expired, they have not been able to build up their economies and dollar reserves they would not even be able to start paying the 1 percent a year that would be coming due, would they?

Mr. GAUD. If they haven't got the money they can't pay it.

Mr. PASSMAN. They do not have the money now, do they?

Mr. GAUD. To handle the amount of loans we are giving now.

Mr. PASSMAN. If they had the money they would not need these credits, would they?

Mr. GAUD. If they had the principal they would not need the credit.

Mr. PASSMAN. If they had dollars to their credit they would not need this type of arrangement?

Mr. GAUD. The lack of foreign exchange makes these loans necessary.

Mr. PASSMAN. In some of these situations—there is no real indication the economy is going to greatly improve. We have gone into nations where there has been less than one-quarter of 1 percent increase in the gross national product after 10 years of aid. In some countries it looked even a little bit worse.

Mr. GAUD. If we can do in the other countries what we have done in Lebanon, Israel, and Greece, we will have no problem.

Mr. PASSMAN. Lebanon went for years without an aid program, and they have the greatest bankers on the face of the earth there. They have a strong economy in Lebanon and we have been without an aid program there for a long period. We could fuzz it up a little bit as to why we started the aid program but I suppose there is no point in going into it at this time.

U.S. FOREIGN POLICY IN NEAR EAST AND SOUTH ASIA

Mr. Secretary, in your statement you said:

> We believe the U.S. policy is now well understood by the governments and peoples of the area, that our relations generally are better now than they have been at any time since the years immediately after World War—

now that part—

> we believe the U.S. policy is now well understood by the governments and peoples of the area * * *.

Could you tell us what our policy is? If these people understand our policy—whatever it is, beyond spending money—they know more about it than a lot of Americans.

Mr. TALBOT. I might talk about our policies in each of the 18 countries.

Mr. PASSMAN. You do not have to go into 18 countries. You made a general statement here, so just give us a general answer: What is the U.S. foreign policy in this area?

Mr. TALBOT. We are seeking in the countries of the Near East and South Asia to strengthen the world pattern of viable states having objectives roughly comparable with ours in such a way that the totalitarian states of the world do not extend their influence further than they have, and that these people in the underdeveloped parts of the Near East and South Asia may find ways to progress toward a more modern type of society. Our theory is that we can live as Americans comfortably and effectively in a world in which there are a number of nations that have the structure for taking independent positions; we are trying to strengthen these countries.

Mr. PASSMAN. We could not be accused of meddling, could we, in this general area? Do any of the countries think that we might possibly at times be, shall we say, playing both ends against the middle?

Mr. TALBOT. Well, sir, we are not playing both ends against the middle in countries that I am concerned with.

DISPUTES BETWEEN COUNTRIES IN REGION

Mr. PASSMAN. Have Egypt and Israel worked out their differences? Are they getting along very nicely now?

Mr. TALBOT. No, sir.

Mr. PASSMAN. With reference to Yemen and Jordan, I do not think they are sleeping in the same bed either, are they?

Mr. TALBOT. No, sir. One of the strongest characteristics of the area of the Near East and South Asia is that there are a number of area disputes within the area.

Mr. PASSMAN. And this kind of situation has been so practically since the beginning of history, has it not?

Mr. TALBOT. Many of them are very deep, indeed.

There have been different kinds of disputes. Some of them get solved and occasionally new ones arrive.

Mr. PASSMAN. From time immemorial they have had these kinds of differences in that part of the world, have they not?

Mr. TALBOT. They have had a variety of differences, not necessarily the same differences.

Mr. PASSMAN. Going far back in history?

Mr. TALBOT. Not necessarily the same differences.

Mr. PASSMAN. But going way back in history?

Mr. TALBOT. Yes, sir.

Mr. PASSMAN. Thank you.

Mr. TALBOT. The history of man is the history of war in a good many parts of the world, and has been.

In terms of these area disputes which are very serious matters——

Mr. PASSMAN. Certainly they are.

Mr. TALBOT (continuing). For the people of those countries and for our interests in those countries.

Our concern is, where possible, to help ameliorate them, help keep them within bounds so that they don't flare out into war and to support the peoples of the region so that they can move toward more modernized positions in which some of these disputes may be resolved.

This year I suppose one could point to the dispute between Pakistan and Afghanistan.

Mr. PASSMAN. Or the one between Pakistan and India, for that matter.

Mr. TALBOT. Pakistan and Afghanistan have a dispute which has been resolved to a large extent, as you know. They have agreed to open the border between the two countries. Their ministers met in Teheran under the aegis of the Shah of Iran and last year when we came to you, Mr. Chairman, there was a very critical dispute that was causing a breakdown of the free world intercourse with Afghanistan and it has now been resolved.

Mr. PASSMAN. Do we take credit for solving that situation, do we?

Mr. TALBOT. No, sir; we don't take credit for solving it but we think our efforts were not unhelpful.

I think that in varieties of these other disputes—our concern, for example, in the Arab countries, is to help these Arab peoples to move forward in their economic and political viability in spite of the fact that they do have these disputes at the present time. This is why we are assisting, as you know, Jordan; we are assisting Syria; we have given some local assistance to Iraq; we have given assistance to the United Arab Republic; we are giving assistance to Israel, building toward a greater viability which will help these people, we hope, get past some of these disputes.

FOREIGN ASSISTANCE AS PART OF FOREIGN POLICY

Mr. PASSMAN. I would not want to interrupt you but I think we could say this is something in the nature of a worldwide WPA type of program. I think we are in 104 out of 112 nations, if we take the foreign aid program beginning with the Marshall plan and coming up to the present time.

Mr. TALBOT. As Mr. Gaud pointed out, in this area 80 percent of our aid goes to three countries.

Mr. PASSMAN. It might be 90 percent unless we can check this steel-mill and some of the other things for India.

This is a new concept in foreign policy, though this is a nation giving its wealth to other nations, hoping that these things that you have enumerated can be accomplished. We had diplomatic relationships with many, if not most, of these countries prior to the AID program but as we think of our foreign policy, this is a new concept, is it not?

Mr. TALBOT. Mr. Chairman, we did not have diplomatic relations with countries that were under colonial rule and one of the greatest changes in our——

Mr. PASSMAN. Did we have diplomatic relations with these countries in the Middle East?

Mr. TALBOT. In the Near East and South Asia we had relations before World War II with a much smaller number than we now do.

I think it was something about half before World War II.

Mr. PASSMAN. Is this not actually a new concept in foreign policy; that is, giving aid?

Mr. TALBOT. By and large it is; yes, sir.

Mr. PASSMAN. How do we know these people are sincere when we enter into these agreements, if we have to make an aid commitment

at the time we enter into the agreements? What would be the position of a lot of these countries if you did not attach aid to these agreements we have with them?

Mr. TALBOT. I am sorry, sir, what sort of agreements do you mean?

Mr. PASSMAN. The diplomatic and foreign policy relationships.

Mr. TALBOT. As far as I know an AID agreement has never come at the same time as an agreement to establish diplomatic relations.

Mr. PASSMAN. You indicated in advance that they are going to get aid. As you know, Mr. Secretary, we were out in the various countries when they were possessions, setting up machinery, putting personnel in, giving some token aid to get them all set for a big aid program. We are in there all dressed up and ready to go before they get their independence.

Mr. TALBOT. In the Near East and South Asia, sir, the situation has not been that way.

Mr. PASSMAN. You are with the State Department and I am referring to the overall policy.

Mr. TALBOT. In our area, for example, we established diplomatic relations with India and Pakistan when they became independent in 1947 and there was no aid program for some time thereafter. Similarly with Ceylon.

Mr. PASSMAN. You didn't have an aid program when India began her independence?

Mr. TALBOT. No, sir.

Mr. PASSMAN. We got in as quickly as we could after she gained her independence, did we not? Is that same observation not also true with relation to Pakistan?

Mr. TALBOT. The AID program was started when there was a feeling there was an essential part of our foreign policy in these countries.

Mr. PASSMAN. But we actually do not know where we stand with a lot of nations, would you say, until the time comes when we would have to negotiate with them without an aid program?

Mr. TALBOT. I am not sure what you mean, sir, by "we don't know where we stand." We have our relations with these countries.

Mr. PASSMAN. We have our relations but there is always a checkbook handy. We are in 104 nations, and I am concerned about it. I think a lot of other people share this concern, too.

TAXING OF DEFENSE FACILITIES IN TURKEY

I understand that despite a NATO agreement to the contrary, our defense facilities in Turkey are taxed. The estimate is made that we have paid about $800,000 in taxes on gasoline and utilities used by American forces in Turkey. Is that assertion true?

Mr. TALBOT. I don't know, sir.

Mr. QUINN. I don't know whether that is true or not, sir. I will check it.

Mr. PASSMAN. Where could you get your information? We would excuse you while you do so.

(The following information was subsequently supplied:)

There is no evidence that the U.S. Government has paid Turkey $800,000 in taxes on gasoline and utilities used by U.S. forces in Turkey. NATO agreements and bilateral U.S. agreements with Turkey do provide relief from taxes, duties and fees for U.S. defense facilities in Turkey, and there is no evidence of Turkish

violation of the agreements. In certain instances, however, the U.S. Government has reimbursed commercial suppliers for taxes paid on aviation petroleum purchased at remote installations for use by U.S. military aircraft. The petroleum subject to this tax is a small percentage of the total consumed by the U.S. military in Turkey.

Members of the U.S. forces in Turkey are subject to individual tax on petroleum if purchased from commercial sources and official travel is not involved. Also, tax is paid on utilities if they do not live on facilities which are required for common defense. Although relief from this individual tax is considered possible under existing agreements, the benefit to be derived is considered to be too small to warrant the cumbersome and costly administrative machinery that would be required to provide this exemption.

AID AS PART OF U.S. FOREIGN POLICY

Mr. PASSMAN. May I say respectfully I still do not understand our foreign policy. But thank you for your efforts.

Mr. TALBOT. As you well know, the foreign policy is a complex of our relations with these different countries. We have particular approaches to each of these countries.

Mr. PASSMAN. I read again:

We have been informed by the government that while it would prefer not to accept military assistance from Communist countries it will do so if Western countries are not willing to provide adequate assistance.

At page 9 of your statement, you say:

The United States assistance has provided the United Arab Republic with an alternative to reliance on the Soviet Bloc and has made easier the carrying out of the United Arab Republic's determination to follow an independent, albeit nonalined foreign policy.

With reference to the first statement I read, is it not obvious that this is bordering on blackmail?

What sort of answer should people be given who make a statement like that, a foreign country?

Do you have any countries such as that one in your area?

Mr. TALBOT. The United Arab Republic did come to the United States to ask for military assistance from the United States.

Mr. PASSMAN. I did not mention the United Arab Republic with reference to the statement I was discussing.

Mr. TALBOT. I know, but it was only after the United States refused to give military assistance to the United Arab Republic that it turned to the bloc. Similarly, in Afghanistan. Afghanistan asked the United States for military assistance and it was only after the United States refused to give military assistance to Afghanistan that Afghanistan took military assistance from the bloc.

So far as the balance in the United Arab Republic is concerned, the reference to its American aid helping it to carry out the United Arab Republic's determination to follow an independent, albeit nonalined foreign policy this is correct, sir, and I think we have the evidence in a whole series of actions that the United Arab Republic has taken in the international field.

Mr. PASSMAN. Concerning the statement I read, Mr. Secretary, in this case their threat worked. That is why I asked if you had any nations such as this in your area, where this type of blackmail could succeed in getting aid.

You read that statement, did you not?

Mr. TALBOT. Yes, sir.

Mr. PASSMAN. They got the military aid on that basis.

Mr. TALBOT. I looked at this statement.

Mr. PASSMAN. In your area would they get military aid on such a basis?

Mr. TALBOT. My statement was that in these two countries in my area, the situation was different.

Mr. PASSMAN. Do you know of any countries in your area that could use this type of blackmail and get aid, by just outright threat?

Mr. TALBOT. No. sir; I don't happen to know of any.

I would say this, Mr. Chairman, that it is not necessarily in the American interest to refuse on every occasion and under every circumstance military assistance to any country which has received such assistance from the Soviet Union or the bloc.

Mr. PASSMAN. We had determined we were not going to give military aid, then the country made the bold statement that I just read into the record, "If you don't do it, here is what we are going to do." Almost immediately thereafter, by Presidential determination, they got what they wanted. That is why I asked you if we actually had a foreign policy which was not attached to the giveaway program.

Mr. TALBOT. That country is not in my area and I don't know the circumstances that lay behind the decision.

Mr. PASSMAN. If it works in one area and others find out about it, do you not think they, too, might use the same tactics?

Mr. TALBOT. I would say I am confident judgments of that kind are made in terms of American national interests.

Mr. PASSMAN. I thought every decision was supposed to be made on that basis.

Mr. TALBOT. Yes, sir.

Mr. PASSMAN. This action came on June 29, too. I hope these nations have not gotten wise that you have some uncut pies and if they just come in strong enough with their threats on the very last day of the fiscal year they can get a slice or two.

NUMBER OF COUNTRIES RECEIVING AID

In how many countries of your area, Mr. Secretary, do we not have some type of aid program?

Mr. TALBOT. There are 18 countries in the area.

Mr. PASSMAN. In how many countries of the 18 in the area do we have some type of aid program?

Mr. GAUD. We have no Economic Aid Program——

Mr. PASSMAN. Do you know of any countries out of your 18 where we do not have one or more types of aid programs?

Mr. GAUD. Kuwait and Lebanon.

Mr. PASSMAN. Lebanon is getting aid. We can establish that fact for you, I believe.

Mr. GAUD. In 1964? I don't think so, Mr. Chairman. We have had in the past.

Mr. PASSMAN. You are asking for money for Lebanon in fiscal 1964 and the amount is classified.

Mr. GAUD. Is that military aid?

Mr. PASSMAN. Yes.

Have you ever had any aid for Kuwait?

Mr. GAUD. No, sir.

Mr. PASSMAN. That is a new country?

Mr. GAUD. That is right.

Mr. PASSMAN. The per capita income there is possibly as high, or higher, than in the United States; is it not?

Mr. GAUD. I don't know.

Mr. PASSMAN. That is because of the oil. I hope you can succeed in keeping an aid program out of there so we can point to one nation in the so-called "free world" for which we do not have an aid program.

Mr. Montoya?

LEVEL OF U.S. ASSISTANCE TO INDIA

Mr. MONTOYA. You mentioned the figures and how much Pakistan and India were sharing in the total foreign aid program for this region. Will you state the exact figure for India in Public Law 480 and the total other aid aspects? Can you give me that?

Mr. TALBOT. Yes, sir.

Mr. MONTOYA. I see the figure ——— total for 1964. That is classified. But I would like to find out does that contemplate Public Law 480 too?

Mr. GAUD. Did you say a ——— figure?

Mr. MONTOYA. The figure ———.

Mr. GAUD. That does not include Public Law 480, Mr. Montoya.

The country use portion of the Public Law 480 program we project for 1964 in India is about ———.

U.S. SHARE OF EXTERNAL ASSISTANCE TO INDIA

Mr. MONTOYA. Now, Mr. Talbot, what particular benefit are we getting by assuming the more than our just share of the burden with respect to India that we would not get by reducing our help to a fair proportion in comparison with the contributions made by other countries in this consortium?

Mr. TALBOT. I suppose the first question is whether our proportion which is—do we have the percentage of that?

Mr. GAUD. For the last 2 years our proportion of the consortium pledges was 41 percent. We have no final figures yet for this year.

Mr. MONTOYA. And we have quite a few nations participating in that consortium.

Mr. GAUD. This is the U.S. share of the consortium aid to India.

Mr. PASSMAN. Will the gentleman yield?

Mr. MONTOYA. Yes.

Mr. PASSMAN. We have a copy of a statement showing nine members of the consortium, and we find that in some cases the loans are for as short a term as 8 years; the interest is high, 6 and 6½ percent, for example, and I think the United Kingdom's portion in some instances is at the regular Treasury rate plus one-quarter of 1 percent. It would appear that they are taking the same type of good, hard loans that nations have always had with other nations, from a reasonable to a high rate of interest.

Mr. TALBOT. Governor, if I may respond to your question, taking the figure of 41 percent of the contributions to the Indian development program——

Mr. MONTOYA. I understood that the 41 percent only applied to our participation in the consortium. Not the total aid.

Mr. TALBOT. This is our contribution to the Indian development program; yes, sir.

Mr. MONTOYA. Under the consortium but there is another aspect other than the consortium.

Mr. TALBOT. The Public Law 480?

Mr. MONTOYA. Yes.

Mr. TALBOT. As you know, Governor, we have been working most vigorously to draw those European countries which have gained prosperity very considerably over the last several years, partly as a result of our former aid program for them, into the aid donor field. Now quite clearly this calls for major policy decisions on their part and it is a procession, if you will, of education in one country after another.

Our efforts, it seems to me, are bearing fruit as compared with, say, 3 years ago or 4 years ago. The contributions by other nations to the particular needs of such a country as India have increased. We are continuing these efforts. We believe that the viability of India, and its general success in proceeding with this development is very much in the national interest of the United States. We also believe this is in the interest of the Western European countries and Japan, so we are pressing upon them to contribute also. Now, our own contribution is made, of course, in response to our own calculation, as to the importance of that major country and its neighbor Pakistan, on the southern rim of Asia, to the general peace of Asia and to the balance of power between the Communist world and the rest of the world.

EFFECTS OF U.S. AID TO INDIA

Mr. MONTOYA. My point, Mr. Talbot, is that we are spending too much money in India and we shall never be able to fill the exact needs which India needs to rehabilitate itself at the rate that we are going. Our money is being spread too thinly and I can't see any direct results.

Now, the picture today may seem better than it was a year ago but that is because Red China gave us an assist in bringing India closer to us. I don't attribute the closer ties with India today to the amount of foreign aid that we have extended to it.

Mr. TALBOT. Well, sir: I certainly agree that it was the attack by the Chinese which caused a lot of people in India to reappraise India's relationship to other countries in the world and as a result of that reappraisal a good many of them have felt that they needed to strengthen their relations with the United States. Over, take a period of 10 years, it seems to me the Indian development program to which the United States had contributed a marginal amount has considerably strengthened the capability of India to manage its own affairs and to maintain a democratic political structure as contrasted with China which started out with great claims and which has gone through very serious difficulties in recent years, as you know. China and India are the two great population countries of Asia or, indeed, of the world, and there is a certain inevitable competitiveness as to which system is going to work out in the end. There are a lot of people watching to see how these two go. It is very much to our

interest to give this assistance to help India move in this direction.

Now, I would agree that in terms of the needs it isn't a great deal.

Mr. MONTOYA. But it is a lot of money for our taxpayers.

Mr. TALBOT. Yes, sir. Our aid program is a lot of money for our taxpayers. Our aid program invests this money in terms of strengthening the security of the United States, as you know. We put in something less than 10 percent of our national defense budget through these channels to give an extra increment of security to the United States and this 10 percent marginal amount I think does increase our national security.

Mr. MONTOYA. This is what I am referring to, Mr. Talbot. When you start explaining the program for India to the American taxpayers—and I think I represent the same kind of thinking taxpayers as any other member on this committee, they cannot understand why we have expended billions of dollars in India and India up to now has been a neutralist, although today it might pretend to be alined with the West. And the money certainly has not contributed much to the development of India and we are assuming a great deal of the burden in trying to help India out of its doldrums.

Now, another thing that I would like to call for an answer on is, Why are we extending any aid to Egypt?

Mr. TALBOT. Yes, sir. May I respond first to the question about India. India has not pretended to be alined with us, even in this period after the Chinese attacked. However, it is quite evident that the patterns of thinking in India have been considerably closer to our patterns of thinking than they had been in earlier times. This is an investment in the security of the free countries of the world which, if it were to be ended, could cause, I think, a great distress in the long run to us as well as to a vast number of people in Asia who are not today under Communist control.

Mr. MONTOYA. Well, isn't that true of all our foreign policy with respect to almost every country in the world?

Mr. TALBOT. Yes, sir; it is.

Mr. MONTOYA. But we are trying to justify this foreign aid as an investment in trying to nurture freedom to all countries, all of these countries and to perpetuate it? Isn't that the stock answer to these problems?

Mr. TALBOT. This is a very important reason for what we are trying to do.

COMPARISON OF TERMS OF UNITED STATES AND OTHER COUNTRIES' LOANS TO INDIA

Mr. MONTOYA. Now, why is there such disparity in the repayment and the loan provisions in the consortium in respect to the United States vis-a-vis the other participating countries?

Mr. TALBOT. Mr. Gaud, would you like to speak to that one?

Mr. GAUD. The disparity, I think, is primarily because many of the other nations that belong to this consortium don't share our view of what is the best way to do the job. India's basic problem in terms of these loans is the lack of foreign exchange, the balance-of-payments situation——

Mr. MONTOYA. But the other countries are extracting foreign exchange from India in repayment; are they not?

Mr. GAUD. That is correct and we have been working on these other countries to soften their terms and we have been making a good deal of progress.

At the present time, for example, the German loans are 20 years. They used to be 8 to 10.

Mr. PASSMAN. What is the interest rate?

Mr. GAUD. Some of them are 3 percent, some are 5½. They used to be universally at the higher rate.

Mr. MONTOYA. I think this is a matter of policy and I think it comes under the Secretary's domain here: Why do we have such soft terms and the other participating countries in the consortium are doing it on a banking basis, a strictly banking basis.

Mr. GAUD. Well, it isn't really a banking basis, Mr. Montoya.

Mr. MONTOYA. Three or five percent on those large loans is pretty good banking.

Mr. GAUD. If you looked at India from the standpoint of a credit risk and you were a banker, you wouldn't lend to India for 20 to 25 years at 3 percent.

Mr. MONTOYA. That is just the point. That is why I am surprised that we are lending any money to India on any basis.

Mr. GAUD. The terms of these other countries are getting more and more generous. The British have now moved to 25 years. They have reduced the interest rate from 6½ and 6¾ to about 3.2 percent.

Mr. MONTOYA. How about ours?

Mr. TALBOT. Ours is three-quarters of 1 percent.

The Dutch are now providing some 25-year money. A number of other countries are providing 15- to 20-year money.

Mr. MONTOYA. At what rates of interest?

Mr. TALBOT. Most of it is still at a fairly high rate. Some at 3 percent but most at 5 and 5½ percent.

Mr. PASSMAN. Do the Germans have some 6¾-money in there?

Mr. GAUD. The Germans do not any more. No, sir.

Mr. PASSMAN. On their continuing project?

Mr. GAUD. The date of the loan?

Mr. PASSMAN. A loan in 1963 at 6¾ percent. This is a sheet you gave to us.

Mr. GAUD. This is on the part of an old project committed several years ago.

Mr. PASSMAN. I said a continuing project. They did have loans going in at 6¾ percent.

Mr. GAUD. All of the new loan money——

Mr. PASSMAN. This is in fiscal year 1963 that you gave us. Am I correct?

Mr. GAUD. You are correct; but that is to be refinanced to 5¾ percent.

Mr. PASSMAN. Thank you.

Mr. MONTOYA. I think you have laid a proper premise for my question now: Why doesn't the State Department negotiate a better type of loan with India and why should we extend these loans to India at three-quarters of 1 percent when these other countries are getting 3 percent and above?

Mr. TALBOT. The reason for this is that the basic need for assistance that India has is because of its very considerable poverty, its difficulties with balance of payments and it is in our interest that this development program go forward.

Mr. MONTOYA. I understand that, Mr. Secretary, but you are looking at that basic need with the same type of eyes that the Germans, the Japanese, and the other countries are looking and they can't with that kind of vision justify the propriety of making these loans at a rate of interest which does not compensate them for the use of that money. Why should we do it?

Mr. TALBOT. We do it because we think that India needs this money if its development program is to continue. At the same time, we do emphasize to these other countries which have more recently come into the development lending the importance of their getting their interest rates down and their terms lengthened. And as compared with 3 years ago they are doing this. They are improving in that progress.

Mr. PASSMAN. Mr. Montoya, will you yield?

Mr. MONTOYA. Yes.

Mr. PASSMAN. I know you want to keep the record straight and I am going to assist you in doing so. Here is the Indian News dated July 1, 1963. I think you are familiar with this publication.

Mr. TALBOT. Yes, sir; I know of the publication.

Mr. PASSMAN. Let me read from this publication with respect to West Germany:

> Considerable pressure is understood to have been brought to bear on West Germany to improve her performance which has fallen steeply from $225 million in the first year of the plan to $139 million in the second year and to $65.35 million this year.

This has all been on banker-type terms.

Mr. TALBOT. As I was saying, the problem in India is to keep that large country in its very important strategic position moving in a direction that will avert calamity and will make some progress possible and at such a speed that we don't have to give aid there forever.

Mr. MONTOYA. I know what your assigned purpose is and what the Department's assigned purpose is in making these loans but that kind of reasoning does not satisfy our taxpayers here to whom we have to answer, Mr. Talbot. That is the point I am trying to make. If the other participating countries cannot be convinced by that type of reasoning, by virtue of their high interest rates, why should we as a government when our own taxpayers don't agree with that kind of thinking? That is the point that I am trying to make.

Mr. TALBOT. Yes, sir. Without speaking for the other countries and what they regard as their portion of the responsibility of free countries to maintain conditions of peace in the world, we have our own responsibilities to try to contribute to those conditions that maintain peace and if some other countries decide they can't come in all the way but will come in part of the way for the time being, we would rather have it come in part of the way than not come in at all. While we keep up this pressure, we hope the other countries will see more clearly year by year the importance of giving assistance which is genuine assistance and not "bankable terms" to some of these countries such as India which are beginning to come toward viability.

Mr. MONTOYA. Now, Mr. Talbot, let's go into Egypt.

Mr. PASSMAN. Would you yield?

Mr. MONTOYA. Let me state before I yield, Mr. Talbot, you haven't convinced me. Your story is very plausible but you haven't convinced me.

Mr. TALBOT. I would be glad to make another try at it.

U.S. BORROWING FROM CONSORTIUM MEMBERS

Mr. PASSMAN. With respect to India and some of these countries that are a part of the consortium, making bankable loans with a medium to high rate of interest, whereas we are in on an easy-term basis, we are now borrowing money directly from some of those countries who are in on a bankable basis, are we not?

Mr. TALBOT. The U.S. Government borrowing from these countries?

Mr. PASSMAN. You are familiar with the fact that we are borrowing directly from some of the nations?

Mr. TALBOT. Are you referring, Mr. Chairman, to the purchase of U.S. paper by foreign governments?

Mr. PASSMAN. I am speaking of actually borrowing dollars directly from foreign nations and in the agreeement we repay, I believe, in the currency of their country. There are several of them. You are not familiar with those transactions?

Mr. TALBOT. No, sir; I am not.

Mr. PASSMAN. It is an interesting story and I recommend it for your study.

FORM OF GOVERNMENT IN PAKISTAN

Is there still a military dictatorship in Pakistan?

Mr. TALBOT. No, sir; it is not a military dictatorship.

Mr. PASSMAN. Earlier witnesses have referred to it as a "military dictatorship."

Mr. TALBOT. Earlier this year a new constitution had been adopted and under the new constitution there were elections through organisms called basic democracies. Then from the basic democracies in the villages there were elections of their representatives to go to higher councils and then to higher councils so that by a pattern of indirect election the Parliament was elected and the President was elected.

Mr. PASSMAN. Does that procedure follow somewhat the Soviet system?

Mr. TALBOT. I don't believe it is the Soviet system. These elections were fought out with opponents.

Mr. PASSMAN. Other people refer to its as a "military dictatorship."

I think that only recently we were somewhat concerned when the President of Pakistan entered into a civil air agreement with Red China.

U.S. RELATIONS WITH PAKISTAN

Do you see any improvement in our relationships with this man?

Mr. TALBOT. Our relationships with Pakistan are basically firm. Pakistan is allied to us.

So far as we know the Pakistan International Airways is proceeding with an agreement which would give landing rights to PIA in Communist China and reciprocal landing rights in Pakistan.

Mr. PASSMAN. Our concern notwithstanding?

Mr. TALBOT. Yes, sir.

Mr. PASSMAN. How about the economic pact that was entered into last fall after the Chinese-India border incident?

Mr. TALBOT. Are you speaking of a trade pact?

Mr. PASSMAN. Yes, sir. That is in effect, too.

Mr. TALBOT. This trade pact is in effect. As far as we can estimate it will have small import.

Mr. PASSMAN. The trade pact is in effect?

Mr. TALBOT. Yes, sir.

Mr. PASSMAN. Thank you.

REASON FOR CURRENT UNITED STATES LOAN TERMS TO INDIA

Mr. TALBOT. I might make one further comment on the Indian question, Governor. If we were to decide to give our loans at an interest rate and in terms comparable to those of other countries, make that the criterion, this would be a very different decision than assisting India in relation to its own needs. Our estimate is that the economic growth of India is likely to support the repayment of the heavy loans they are taking over a generation's time at this level. Our present estimate is that the economy is unlikely to grow rapidly enough so if India were to get these large amounts at bankable levels the repayment would be feasible. In other words, if we went to bankable terms as they have been described around this table this afternoon, they would, I think, have the result of saddling India with obligations that in our best judgment they are unlikely to be able to repay.

Mr. MONTOYA. Why should we be the guinea pigs? That is my argument.

Mr. TALBOT. Because we are the leading country in the free world.

Mr. MONTOYA. You mean because we are the leading guinea pigs in the world.

Mr. TALBOT. Because it is to our interest today that India's structure, which is still fragile, though improving, does not break down.

RATIONALE FOR UNITED STATES ASSISTANCE TO EGYPT

Mr. MONTOYA. Let's go to Egypt. On what premise are we giving aid to Egypt?

Mr. TALBOT. We are giving aid to Egypt on the premise that it has a very severe shortfall of food grains and other, certain other commodities which are surplus to our requirements and which are given under Public Law 480 and on the premise that our development loans for particular projects will be helpful to Egypt in building up its domestic economy and concentrating on its domestic economy.

Mr. MONTOYA. What diplomatic or political advantage are we deriving from this?

Mr. TALBOT. On the political front we are giving assistance to the United Arab Republic because we believe that several results favorable to the United States will come out of the kind of relationship that we are developing with the United Arab Republic.

Mr. MONTOYA. How long have we been extending this type of aid to Egypt?

Mr. TALBOT. Is it since 1958 or 1959? This type of aid has been about 5 or 6 years.

Mr. MONTOYA. What political advantages are discernible since that time insofar as Egypt is concerned?

Mr. TALBOT. So far as Egypt's posture in world affairs generally, broadly, outside its own region, we have found a moderation in the Egyptian position, in the Congo, for example.

Mr. MONTOYA. Can you trace it to this aid or has it been because of other circumstances or world events?

Mr. TALBOT. Well, sir, I would say that it has been the result of what I would describe as the normalization of our relations with United Arab Republic which is included in this aid program. I mentioned the Congo. There are a variety of other things.

Mr. MONTOYA. They are still orienting their propaganda against the United States in a very intense manner, aren't they?

Mr. TALBOT. No, sir; there has been a very considerable reduction in the propaganda against the United States.

Mr. MONTOYA. It is still going on, is it not?

Mr. TALBOT. I have not happened to see any of late, but as compared to 3 years ago it is very greatly decreased.

UNITED ARAB REPUBLIC–ISRAELI RELATIONS

Mr. ANDREWS. If the gentleman will yield, I notice on page 51 you state the United States objective is a stable and neutral United Arab Republic amicable to Western interests as the best guarantee of stability in the Near East and the survival of the smaller states in the area, including Israel.

Mr. TALBOT. Yes, sir.

Mr. ANDREWS. Those countries are bitter enemies, are they not?

Mr. TALBOT. There is a lot of stress and strain in the Near East as there has been for some time.

Mr. ANDREWS. Have we secured from the Egyptian Government officials any kind of guarantee that they will not oppress Israel in any way?

Mr. TALBOT. No, sir; we have not.

Mr. ANDREWS. Have we guaranteed in our aid to Egypt the security of Israel?

Mr. TALBOT. This is an area very hard to document. I would say the stresses between Egypt and Israel were greater when there was no aid program to United Arab Republic than they have been in the last several years.

Mr. ANDREWS. Is this aid in any way a bribe to keep them from oppressing against Israel?

Mr. TALBOT. No, sir; I would not describe it as a bribe. I would say the United Arab Republic was by far the largest country in the whole area. It is doing a good deal on its domestic front in development and it is in our interest that it should focus even more in development. The Governor asked about broader questions. I was going to say that there seems to us to have been some change in United Arab Republic attitudes with respect, for example, to nuclear testing where they stood against the Soviet resumption of tests, with respect to economic development where they have taken quite a balanced line as compared with the line that they had taken somewhat earlier, vis-a-vis with the Western countries. On the broader front I think one can see a number of changes.

CHANGE IN UNITED ARAB REPUBLIC ATTITUDE TOWARD SOVIET UNION

Mr. MONTOYA. Don't you attribute these changes in attitude toward the Soviet Union to the fact that the Soviet Union has been trying to meddle in the affairs in that region? Isn't that the greatest reason?

Mr. TALBOT. I think that has been a very important factor; yes, sir, and I think the Soviet Union has had real setbacks in that area, especially in this past year as compared with the position that it would have had before. Certainly if I had been a Soviet official in 1956, let's say, I would have assumed that by 1963 that the Soviets would take over the Near East, because they had everything going with them, so it looked. They were giving military aid to the Arab countries and the United States was not. They were supporting the Arab countries wholeheartedly against Israel, the United States was not. They must have felt they were moving rapidly forward. In point of fact, as you see, their influence in the area now is restrained.

Mr. MONTOYA. Isn't that the sole factor that has driven Egypt away from the Soviet bloc and not our foreign aid?

Mr. TALBOT. No, sir. I would say there are more factors than that. For example, Egypt this last year came into GATT. It clearly has a desire to link itself in with the Western trading countries, more than it did several years ago. I would have said that in the last couple of years or so the Egyptians have consciously been seeking to broaden their normal relations with Western countries and it is in our interest that they should continue to do so.

Mr. MONTOYA. What kind of military aid are they getting from the Soviet bloc?

Mr. TALBOT. They are getting very considerable military aid from the military bloc. I do not know what the types are, some of them I do not.

Mr. MONTOYA. Are they getting any military aid from us?

Mr. TALBOT. No, sir.

Mr. CONTE. Would the Governor yield?

Mr. MONTOYA. Yes.

UNITED ARAB REPUBLIC–ISRAELI RELATIONS

Mr. CONTE. Does the Secretary have any objection to a restriction in the aid program for the United Arab Republic should she attack Israel, Jordan, any other border country, aid should be cut off automatically? The United States contributes 25 percent of all food products to United Arab Republic.

Mr. TALBOT. Sir, I think certainly we all wish and expect that the United Arab Republic will not attack another country. I do not believe that writing such a restriction into the act is the best way to accomplish this objective.

Mr. CONTE. What is the best way?

Mr. TALBOT. A whole variety of actions intended to normalize our relationship with the United Arab Republic, to broaden our field of influence with the United Arab Republic. After the middle 1950's, we had very little opportunity even to talk with the United Arab Republic about our interests in the area or how we thought their actions in the area affected the outside world. Now we have a much broader opportunity to talk about these things.

Mr. CONTE. There are border conflicts right now between the United Arab Republic and Israel?

Mr. TALBOT. Between the United Arab Republic and Israel there is, as you know, a United Nations Emergency Force which has been there since the fighting of 1956. There have been virtually no border incidents between the United Arab Republic and Israel since that time.

Mr. CONTE. I thought I read some newspaper reports about 6 months ago that there was some shooting on the border.

Mr. TALBOT. May I amend my statement, if you please? During the period that Syria was part of the United Arab Republic there were border incidents between the Syrian portion of the United Arab Republic and Israel, and since Syria has broken away from the United Arab Republic in 1961 there have continued to be border incidents between Syria and Israel but in the past year—more than a year now—none of these has been serious enough so that the Security Council has had to get involved and the U.N. peacekeeping machinery has managed to look into each incident and the situation has been generally quieter on the border than it was earlier.

Mr. CONTE. Thank you, Governor.

Mr. PASSMAN. Will the Governor yield?

Mr. MONTOYA. Yes.

EFFECT OF SUEZ CRISIS ON UNITED STATES AID TO UNITED ARAB REPUBLIC

Mr. PASSMAN. Is it not true that we had an aid program in Egypt and then later we suspended the aid program and it remained dormant for several years, but we did, nevertheless, continue carrying in an obligated status certain credits to Egypt?

Then, finally, we resumed the aid program to Egypt, notwithstanding the fact that Nasser's pronouncements and plans remained about the same?

Mr. TALBOT. Some of the events you are speaking of occurred 11 years ago. I would want to look up the record to see what the situation was at that time.

Mr. PASSMAN. You recall we had an aid program. Later we suspended the aid program.

Mr. TALBOT. I am sorry, sir, I would rather not comment until I look up the record.

Mr. CONTE. That is right. We had some bloc commitments to United Arab Republic and we froze them at the time of the Suez crisis.

Mr. PASSMAN. We had certain credits to Egypt, and although most people thought we were out altogether, we only suspended the aid. At a later date we resumed the program and then we liquidated those credits. I think that possibly this latter action would go back 4 years, not 11.

Mr. GAUD. I have some facts on that that I would like to put in the record. As I remember, Nasser came in in 1952. We had an aid program in 1953, 1954, 1955, and 1956. Then Suez came along. We had no aid in 1957 and 1958.

Mr. PASSMAN. It was after Suez that we suspended the aid program?

Mr. GAUD. That is right.

Mr. PASSMAN. We did carry the amount we had unliquidated to the credit of Egypt. We never canceled it. We carried it completely intact. Then, when we got on either better or worse terms with Nasser, we resumed dispensing the aid. We started increasing it, for that matter.

Mr. GAUD. I do not know the facts for that.

Mr. PASSMAN. The record, then, will make good reading for you.

Mr. MONTOYA. I yield to the gentleman from Michigan.

Mr. FORD. As I recall a few minutes ago, Mr. Secretary, you said at the time of the midfifties the United States could hardly talk with the United Arab Republic. Is this substantially what you said?

Mr. TALBOT. My understanding is we had a very limited basis for discussion; yes, sir.

Mr. MONTOYA. According to what Mr. Gaud just said we had an aid program in United Arab Republic from 1953 through 1956. It was abandoned or canceled or not supplemented in 1957 and 1958.

Mr. TALBOT. I was speaking of the period 1956 to 1958.

Mr. MONTOYA. It was resumed in 1959 and was carried forward through fiscal year 1964, based on the recommendations now; is that right?

Mr. GAUD. That is right.

LEVELS OF U.S. ASSISTANCE TO UNITED ARAB REPUBLIC

Mr. FORD. Now what is the trend in United Arab Republic programing, starting with 1959 when you got back to the business? What was the amount of aid in 1959, 1960, 1961, 1962, 1963, and what are you proposing in 1964?

Mr. GAUD. In fiscal year 1959 the total economic aid was $49.2 million.

Mr. FORD. Would you repeat that again?

Mr. GAUD. In fiscal year 1959 the total was $49.2 million.

Mr. FORD. Excuse me. I still did not hear it. What I want is the total aid including Public Law 480 and the like.

Mr. GAUD. Sorry, Mr. Ford, the total figure for economic aid in 1959 is $49.2 million. That includes Public Law 480. In 1960, the total was $92.9 million. In 1961, the total was $106.4 million. In 1962, the figure was $224.1 million and the request for 1963 is $195.1 million. All these figures include Public Law 480.

Mr. FORD. The request for 1963?

Mr. GAUD. I beg pardon. The actual program for 1963 is $195.1 million.

Mr. FORD. What are you programing for 1964?

Mr. GAUD. A total for AID, $2.1 million of development grant, development loans of $——— and then Public Law 480, $132 million, which would be a total of roughly $———.

Mr. FORD. The figures that you have just recited showing that beginning in 1959 with the figure of $49.2 million, the figure of $92.9 in 1960.

Mr. GAUD. Yes, sir.

Mr. FORD. $106.4 million in 1961?

Mr. GAUD. Yes, sir.

Mr. FORD. $224.1 million in 1962.

Mr. GAUD. Right.

Mr. FORD. And $195 million in 1963, and the proposed $——— in 1964. The increases since 1959 could lead someone to the conclusion that we have been able to talk with the United Arab Republic beginning with the midfifties to the present time, primarily because of the increase in our financial support.

Someone could come to that conclusion. Is that a fair analysis?

Mr. TALBOT. Well, I think——

Mr. MONTOYA. Pretty expensive talk, indeed.

Mr. FORD. I just raised the question. I am not coming to any conclusion myself. It could be a valid conclusion.

EFFECT OF UNITED STATES ASSISTANCE TO UNITED ARAB REPUBLIC

Mr. TALBOT. I think the aid has been an important part of the process of normalizing our relations with the United Arab Republic. I also think that the aid——

Mr. GARY. It looks like the money has been doing most of the talking, has it not?

Mr. TALBOT. I think the aid is an important part of moving the United Arab Republic into a broader relationship with the West than it had had and thereby moving it rather away from the U.S.S.R. I think this has been an important factor in it; yes, sir.

Mr. PASSMAN. Is it a matter of talk is cheap, but it takes money to try to buy so-called friends?

Mr. TALBOT. Well, sir, it is not a question of buying friends. It is a question of getting the largest country in the Near East into a posture which is healthier for our interests——

Mr. PASSMAN. We hope.

Mr. TALBOT (continuing). Than the posture in which it was in the 1956 to 1958 period.

Mr. MONTOYA. In other words, since the Suez situation we have contributed in foreign aid to Egypt a little over $750 million and we still cannot claim them as our friends.

Mr. TALBOT. Well, sir, I would say we have contributed to the United Arab Republic over the long pull about $26 per capita, against say, 192 per capita for Jordan, or about $400 per capita for Israel. We have, I think, in this program, helped to bring about a situation in the Near East in which our interests are better protected than they were at a time in 1956–58 period when, you will recall, the Suez Canal was nationalized; Arab-Israel hostility was greatly intensified; the Iraq Petroleum Pipeline Co. was destroyed. There was an exchange of cultural things toward the Soviet bloc and the Communist Party activity in the area increased very substantially.

Mr. MONTOYA. You just stated a few minutes ago that you could not positively trace the better atmosphere in Egypt toward us to any part of the foreign aid program; that it might have been influenced by meddling by the Russians in the area there rather than our aid.

Mr. TALBOT. Well, sir, I would say that foreign relations encompassed the whole complex of factors. I think that the Russian meddling has been demonstrated to be a mistake from their point of view. I also think that we have been able through a fairly flexible policy to take advantage of some of the mistakes that they made.

Mr. MONTOYA. I think we have been giving them too much aid for what they have been doing for us.

Mr. PASSMAN. Will the gentleman yield?

Mr. MONTOYA. Yes.

I am through, Mr. Chairman.

DEVELOPMENT LOANS TO INDIA PER CAPITA

Mr. PASSMAN. Of the credits you are giving India I think you have indicated it was $1 per capita?

Mr. TALBOT. The development loans——

Mr. PASSMAN. Development credits.

Mr. TALBOT. For this year will be roughly $1 per capita.

TOTAL ASSISTANCE TO UNITED ARAB REPUBLIC

Mr. PASSMAN. What has been the total amount that we have given to Nasser's Egypt?

Mr. GAUD. Since 1952, Mr. Chairman, we have given the United Arab Republic roughly $784 million worth of aid.

Mr. PASSMAN. That is over three-quarters of a billion that we have given to the United Arab Republic?

Mr. GAUD. That is right.

Mr. TALBOT. And 75 to 80 percent of that in recent years has been in Public Law 480.

Mr. PASSMAN. Which is the same thing as dollars. They have to take their dollars and buy food. We take the American taxpayer's dollars and pay for the food. So far as they are concerned it is the equivalent of dollars, is it not?

Mr. TALBOT. I think not. They would not have the dollars. They would not buy food from the United States.

Mr. PASSMAN. You do not know whether they would or not. They would either buy food someplace or starve, would they not?

Mr. TALBOT. That is correct.

Mr. PASSMAN. So far as the American taxpayers are concerned, this aid represents dollars, does it not?

Mr. TALBOT. Public Law 480 costs dollars.

Mr. PASSMAN. Yes.

Mr. TALBOT. Yes, sir. Public Law 480 costs dollars.

POLITICAL SITUATION IN INDIA

Mr. GARY. What is the political situation in India right now?

Mr. TALBOT. The Congress Party maintains a majority in the Central Parliament and it controls all of the State governments. The leader of the Congress Party continues to be, by all odds, the strongest figure on the political scene. There have in the past year been several changes in the Cabinet and the people around the Prime Minister including, as you know, sir, the resignation of Khrishna Menon and much more recently the resignation of the Petroleum Minister. This has reflected a shift in the overall political leadership of the country.

The political process in India is democratic in the sense that they have had three general elections over the past 12 or 13 years and the

most recent one more than 100 million people went to the polls to vote. There has been, of course, competition between the parties.

Mr. GARY. Has there been a real break between Nehru and Menon or is Menon still wielding a great deal of influence in the background?

Mr. TALBOT. The estimates that we receive is that Menon is not wielding a great deal of influence in the background. He is not in the Cabinet councils, of course. We understand he has a limited role in the party councils. He is, of course, still a member of Parliament. There have been no elections since he left the Cabinet. He does have an interest in a newspaper and in perhaps some other publications but the estimate that we have is that he does not have great influence.

Mr. GARY. What do you know about Nehru's health?

Mr. TALBOT. Well, sir, he continues to function on a full-time basis. As far as I know it is good for a man of his age.

Mr. GARY. I was alarmed at one time when he was having some trouble with his health that we might have a situation where Menon would be in power. Do you think there is any prospect of that now?

Mr. TALBOT. No, sir. I do not.

Mr. GARY. I had hoped that was not true because I think Menon is a very dangerous man so far as we are concerned. There is no question about the fact that he is very hostile to our country. I am not too well satisfied with Nehru's activities but Menon's I think are very menacing.

Mr. PASSMAN. They still parade as neutrals.

Mr. TALBOT. They are not formal allies of ours in any sense.

Mr. PASSMAN. They have possibly been a little friendlier on account of the military aid that we have been giving them since the Red China incident?

Mr. TALBOT. Yes, sir.

Mr. PASSMAN. Mr. Natcher?

EFFECT OF U.S. AID ON DIFFICULTIES BETWEEN PAKISTAN AND INDIA

Mr. NATCHER. Will this program as submitted for 1964 bring about differences between Pakistan and India?

Mr. TALBOT. We hope that the differences between Pakistan and India would be moderated. I do not think that economic assistance, that we are discussing here today, will bring about additional differences between the Pakistan and India.

Mr. NATCHER. Do you agree with me that heretofore on more than one occasion money appropriated under this program has caused considerable trouble between these two countries?

Mr. TALBOT. I think if I might, sir, I would turn it around, that there has been considerable difficulty between the two countries and that there have been protests especially in Pakistan about United States economic assistance to India on the grounds that this assistance frees external resources so that India could buy arms. As you know, sir, the assistance on the military field that we are now giving India to strengthen its defenses against the Chinese Communist attack has caused serious concern in Pakistan.

Mr. NATCHER. Did you read the speech made before the joint session of Congress by the President of Pakistan some 2 or 3 years ago?

Mr. TALBOT. Yes, sir.

Mr. NATCHER. Do you remember the admonition that he made to the Members of Congress and those assembled at that time concerning friendship and the leaving of true and tried friends and going over to the side of the neutrals who were always against us in every crisis? This was a part of his speech. Do you remember this part?

Mr. TALBOT. Yes; I do recall that portion.

Mr. NATCHER. Did you agree with any part of that?

Mr. TALBOT. Agree that this was Pakistan's policy?

Mr. NATCHER. No; did you agree with this part of his speech.

Mr. TALBOT. I would agree that at that time he believed very strongly that he was supporting the friendship and the alliance between Pakistan and the United States; yes. I think he still supports this, though he has as you know, or his Government in this past year has, increased its relationships with the Communist Chinese.

POLITICAL SITUATION IN PAKISTAN

Mr. PASSMAN. A person high in our Government said since we started the hearings that it was, in effect, a military dictatorship in Pakistan. For how long is the president elected?

Mr. NATCHER. Six years.

Mr. TALBOT. Yes, sir.

Mr. MONTOYA. Would you yield, Mr. Chairman?

Mr. PASSMAN. Yes.

Mr. MONTOYA. The President himself stated it was a military dictatorship when he addressed the Congress and that perforce it had to be that for a while.

SOVIET RUPEE-GOLD MANIPULATION

Mr. PASSMAN. It is still that way. I shall read from a newspaper article:

Russia getting our gold. Siphons off $25 million U.S. stock since last August and makes $5 million profit.

We are going to get into examining on India, but this is some kind of a skin game it would appear they are using.

Mr. TALBOT. Mr. Chairman, may I say, first with respect to Pakistan, that Pakistan was under martial law for some time after President Ayub took over.

Mr. PASSMAN. He did take over?

Mr. TALBOT. Yes, sir. It is now under a constitution which was adopted by the legislature of the country.

Mr. PASSMAN. Did you say by indirect elections? It was a rather unique system by which he became President.

Mr. TALBOT. This was by indirect elections.

Mr. PASSMAN. I shall continue reading from the newspaper article:

According to the financial jigsaw puzzle pieced together by intelligence authorities, the Soviet is obtaining U.S. gold by obtaining dollars in exchange for Indian rupees. These rupees marketed in Chicago and New York by individuals working for the Russian Government were originally obtained in New Delhi in payment for Soviet gold sold to the Indian Government to help stabilize its currency. This financial wheeling and dealing is paying off handsomely for the Soviets. By selling its gold to India at the world price, which is considerably above the $35 an ounce the United States pays, the Kremlin makes a fat windfall profit by selling rupees for dollars in the United States and then exchanging the dollars for gold at the lower U.S. profit.

Are you familiar with that system they are allegedly using?

Mr. TALBOT. No, sir. I do not believe that system occurs between the Government of India and the Soviet Union.

Mr. PASSMAN. You do not believe?

Mr. TALBOT. No, sir.

Mr. PASSMAN. Can you disprove what this says?

Mr. TALBOT. I believe, sir, the evidence can be presented to you.

Mr. PASSMAN. Are you familiar with this charge?

Mr. TALBOT. I have heard you, I have read testimony in which you made this charge once before.

Mr. PASSMAN. Did you pick the information up from the testimony or did you know anything about the allegation earlier?

Mr. TALBOT. No, sir; I did not.

Mr. PASSMAN. How can you disprove the allegation? I hope that you can.

Mr. TALBOT. I can tell you how the arrangement works, sir.

Mr. PASSMAN. Did you check into this particular transaction that I had also read into the record earlier?

Mr. TALBOT. Yes, sir. The arrangement by which this financial transaction occurs between India and the U.S.S.R. is as follows: The U.S.S.R. receives rupees in payment for its exports to India and as repayment for aid but these can be used only for the purchase of Indian goods. Since the rupees are in a Government account they could not be used for other purposes without the Indian Government's knowledge.

Some Indo-Soviet trade-and-aid agreements provide for payment in sterling under certain conditions. The Indian Embassy assures us that no payments in sterling and no conversions of Soviet-owned rupees have occurred.

Mr. PASSMAN. You made a statement, and that is all.

Did you see this article?

Mr. TALBOT. No, sir; I did not see the article.

Mr. GAUD. May I state for the record at this point, sir, that the U.S. Treasury advises us that the last sale of gold to the Soviet Union took place in 1939.

Mr. PASSMAN. You are discounting the indirect method by which they might have come into possession. There is nothing indicated here about Russia buying gold from the United States.

You said you picked your information up from what I had said before?

Mr. TALBOT. Yes, sir.

Mr. PASSMAN. You never heard of this matter before I picked it up?

Mr. GAUD. That is correct.

Mr. PASSMAN. Let us go a little deeper into this matter and not just discount it. It is certainly worth investigating.

Mr. GAUD. We certainly have no objection to any investigation you make.

I want to call the committee's attention to the insert put in after Mr. Bell's testimony which shows the results of his investigation of this situation. The committee has it on hand here. Mr. Bell reports that after his investigation he is satisfied that there is absolutely nothing to the story.

Mr. PASSMAN. We are not yet ready to close the case.

Mr. GAUD. We are happy to have you make any investigation you like.

Mr. PASSMAN. We asked Mr. Shriver to investigate a certain matter, and he said he was going to get into it right up to his eyeballs. We found out later however, he only got into it up to his ankles. Maybe Mr. Bell looked into this thing similarly, rather superficially, although we hope, of course, that was not the case.

Mr. Rhodes?

UNITED STATES-PAKISTAN RELATIONS

Mr. RHODES. Are you familiar with a newspaper published in Karachi by the name of "Dawn"?

Mr. TALBOT. Yes, sir.

Mr. RHODES. I sent a copy of "Dawn" which was sent to me by a constitutent, to a representative of the Department of State. I do not know whether it has come to your attention or not. It deals with a quesion brought up formerly by the chairman concerning the rights of the Chinese Communists to land in Pakistan and in it there are various quotations from high officials of the Pakistani Government, including General Ayub, which, all rolled together, mount up to a feeling that Pakistan will do as it pleases about this and all other questions involved and it will not be influenced by anyone.

In effect, it tells the rest of the world to go to hell. Mentioned rather prominently in several instances was the fact that the United States is giving too much aid to India, and that India is the natural enemy of Pakistan. First, can you tell me what the political tinge of the newspaper is, and second have you heard these statements attributed to high officials. Third, in light of all this what do you think of the present relationships and the probable future relationships between our two governments?

Mr. TALBOT. First, "Dawn" is edited by a man who was close to the Pakistan independent movement before 1947 and it has consistently since 1947 taken a very strong and often rigid nationalistic view, attacking the United States quite a bit, attacking also President Ayub for his pro-Western policies on occasion. Second, so far as the Pakistani attitude on this question goes, I think a good many of the Pakistanis feel very strongly that the United States has hurt Pakistan's security by giving military assistance to India. I may say that we went through some years, as you will recall, of criticism in India whose people felt that we were hurting Indian security by giving military assistance to Pakistan, so this is the other side of the medal, as it were, and the Pakistan feelings have been running fairly high in recent months as the new U.S. programs have developed and I think the attitude expressed in this article, which has been expressed by other people in Pakistan, reflects a sense that whereas Pakistan felt that it had a privileged relationship with the United States for some years it now believes that American military assistance to India is undermining that privileged relationship.

We have, of course, been at great pains to explain to Pakistan what we are doing and why we are doing it in India and we have——

Mr. RHODES. Would you mind explaining to the committee right now what we are doing and why we are doing it?

Mr. TALBOT. On the military side?

Mr. RHODES. Military, economic, or whatever you want.

Mr. TALBOT. After the Chinese attack occurred last October the Indians appealed to us for military assistance. For a good many years they had been concentrating their resources very largely on the economic development side and they had not been purchasing military equipment. They had not be modernizing their forces for this period. When the Chinese attacked they found of course that they were short on a whole variety of items that they needed to strengthen their defenses in the Himalayan region.

Mr. RHODES. Mr. Secretary, isn't it true that the Indian armed services were trained to fight a war with Pakistan and never once thought of fighting a war in the Himalayas? They were completely unequipped to defend that border.

Mr. TALBOT. That is right, sir. As you know, the invasion route to the Indian subcontinent had been through the northwest frontier. That had always been defended. During World War II the Chinese demonstrated the northeast border was defendable, the northern range was penetrable and therefore that whoever was south of the Himalayas had to work out a defense arrangement for that whole northern region. This obviously was a much larger defense job than India had ever anticipated. They came to us for assistance. We reached an agreement with the Indians that any military assistance we gave would be directed exclusively at the defense of India against the Chinese Communists and we told the Pakistanis what the terms of this would be.

Mr. RHODES. May I stop you there briefly? Isn't that rather difficult? If you give India a fighter plane, can you fix the plane so that it won't shoot if it is shooting at Pakistani but will shoot if shooting at the Chinese?

Mr. TALBOT. We haven't given India any fighter planes.

Mr. RHODES. I used that as an example.

Mr. TALBOT. What we did by the Nassau agreement whereby the British and we agreed to give $60 million each of military assistance to India, was to work out plans to reequip about six mountain divisions. These mountain divisions will be equipped with those items that are portable and easily movable and are not at all comparable to the divisions we have equipped in Pakistan under MAP. There are not heavy tanks for example; a good deal of other sort of equipment that we have been giving to the MAP divisions in Pakistan are not on this list. We have focused on assistance which would be useful in mountain areas and we have not been giving assistance which would strengthen India to move across the plains against the West, Punjab, for example.

We have been very much conscious of this and very much concerned with how a program could work out which would give some reassurance to India, strengthen its defense capacity in relation to the Chinese Communists and which at the same time would not be a concern to Pakistan. Our program has been based on these consid-

erations, and we have moved it forward step by step and at each step we have discussed what we were doing with the Pakistan Government. We have made clear the reasons for our doing it in terms of strengthening a major country outside the bloc against attack by the Chinese Communists.

REACTION OF PAKISTAN GOVERNMENT TO UNITED STATES MILITARY AID TO INDIA

Mr. RHODES. But apparently the Pakistan Government has not bought it?

Mr. TALBOT. The Pakistan Government has been very agitated about it, this is correct, just as I say the Indian Government was when we began giving military assistance to Pakistan. But just as we felt at that time right after the Korean war, that it was important to give military assistance to Pakistan and certain other countries around the perimeter and that we would in our interests do it in spite of criticism from India, so the appraisal this year has been that it is important to give this clear signal to the Chinese Communists to do this in spite of the difficulties that it causes in Pakistan. We are convinced ourselves that there is no increased threat to Pakistan. India is a status quo country. There is nothing in Pakistan that India really wants. India knows if it were to move into Pakistan our whole relationship would break and this is a major factor.

Mr. GARY. Would the gentleman yield?

Mr. RHODES. The gentleman from Virginia.

EFFECT OF U.S. MILITARY ASSISTANCE TO INDIA

Mr. GARY. What was the alternative?

Mr. TALBOT. For——

Mr. GARY. Not helping India when it was attacked by China?

Mr. TALBOT. The alternative could well have been continuation of the Chinese attack not only in India but once it had demonstrated its capacity to move freely there against the Himalayan Kingdoms of Nepal and the areas of Sikum and Bhutan and against southeast Asia. The Chinese have demonstrated that they are in an aggressive expansionist period and that this was a part of what they were doing last winter.

Mr. GARY. And the Indians did not have the power to stop them?

Mr. TALBOT. That is right.

Mr. GARY. So without the help of the United States they could not have stopped the attack?

Mr. TALBOT. They did not have the power to stop the attack. The Chinese stopped themselves at one point.

Mr. RHODES. Nobody stopped the attack but the Chinese.

Mr. TALBOT. The Chinese did stop, this is correct, and of course, they then gradually withdrew. Military men will argue as to whether they had run to the end of their line of communication and could not have gone any farther or what the reason may have been.

Mr. RHODES. The fact remains that India did not stop them and our aid did not stop them. They stopped of their own accord.

Mr. TALBOT. Some bits of our aid were flown in during the active fighting.

Mr. RHODES. I understand that.

Mr. TALBOT. It will be a little while before our assistance really strengthens their defensive capability.

Mr. MINSHALL. Will the gentleman yield?

Mr. RHODES. The gentleman from Ohio.

EFFECT OF U.S. MILITARY ASSISTANCE TO INDIA ON PAKISTAN

Mr. MINSHALL. Aren't you painting with a pretty fine brush when you say the kind of weapons you are using in India cannot be used against the Pakistanis?

I realize you are not giving them heavy tanks. There are still other weapons of warfare that are indigenous to even a mountain division or an ordinary artillery division. Couldn't these be used against the Pakistanis with a little help of their own?

Mr. TALBOT. Of course, if one has a .22 rifle he can aim it in any direction.

Mr. MINSHALL. That is exactly the point I make.

Mr. TALBOT. We have a whole range of assurances.

Mr. MINSHALL. These are not .22 rifles. There is artillery, mortars, all types of equipment.

Mr. TALBOT. That is right.

Mr. MINSHALL. They could be pointed to the west just as easily as they could be to the north.

Mr. TALBOT. Well, sir, but if India were to move them pointing to the West, that would bring into effect a whole chain of consequences which could only be adverse to India. In other words, for India to attack Pakistan would be a total violation of the commitments that India has given to us and the reactions to that that we would have both within the U.N. and outside I think would be rapidly effective.

Mr. PASSMAN. Mr. Secretary, what would our position be if, and I want to be sure we put in "if," we should agree that the President of Pakistan is in the right and we attempted to undo these commitments to India? Then could Pakistan undo the commitments that she has made with Red China?

Mr. TALBOT. Well, sir, if I understand your question, I would say that the Pakistan Government is still a firm ally of the United States despite these actions.

Mr. PASSMAN. Thank you.

Mr. RHODES. The gentleman from Alabama?

Mr. ANDREWS. Mr. Minshall asked the question I had in mind.

Mr. RHODES. Mr. Secretary, you completed your statement concerning the rather lengthy question I asked?

Mr. TALBOT. Yes, sir.

PROBABLE FUTURE UNITED STATES-PAKISTAN RELATIONS

Mr. RHODES. Let's take up the future part of it now. What is the prognosis for the relationship between the United States and Pakistan in the light of the disappointment shown by the Pakistani Government to our stepped-up aid to India, both economic and military?

Mr. TALBOT. They certainly have expressed concern about the economic aid even though as you know our aid to Pakistan is at a much higher rate on the basis per capita or in terms of the total size of the economy than is our aid to India.

In the future our principal concern will continue to be to help these two countries to reduce and contain the disputes between them. We have, of course, been very much concerned about the Kashmir incident which has generated all kinds of emotions between these two countries. We were encouraged last winter when they began ministerial talks. These ministerial talks explored a certain amount of the difference between the two, but they did not get to a point of agreement. In recent weeks we have been talking with the two Governments about the possibility of their selecting an outside mediator who could deal privately with the two Governments to explore what possible areas of agreement there are.

It seems to us very important that both Governments keep working on the problem of resolving the differences between them, including Kashmir and other matters.

POSSIBILITIES OF RAPPROCHEMENT BETWEEN INDIA AND PAKISTAN

Mr. RHODES. Do you see any indication we are being the least bit successful in trying to bring about a rapprochement between these two countries?

Mr. TALBOT. I find this hard to judge. Both countries are still working at the questions of how to proceed in the resolution of their disputes. If in the near future some sort of mediation is accepted by the two countries, I would say yes, that promises some progress.

This obviously is a very deep emotional issue, and I would expect, like some other international issues which have taken a long time to settle such as Trieste, this is going to be a difficult, arduous effort.

Mr. RHODES. I would interpret your statement to mean that we have not seen our efforts crowned with any great and startling success so far.

Mr. TALBOT. The two countries are not having as good relations as we wish they were. Certain of the disputes between them have been ameliorated. Some of them that were very dangerous have been, such as the Indus waters dispute.

Mr. RHODES. That occurred some time ago?

Mr. TALBOT. 1960, yes.

POPULATION GROWTH IN SOUTH ASIA

Mr. RHODES. Mr. Secretary, one of the big problems in this part of the world is the population explosion?

Mr. TALBOT. Yes.

Mr. RHODES. It seems very difficult for the economy to grow fast enough to keep the per capita Gross National Product even, and not have it go down?

Is there any hope for any solution of this problem?

Mr. TALBOT. The several governments in the area are developing programs now in the demographic population control field. Some are putting in a fair amount of resources at different stages.

India, for example, as part of its 5-year plan is working on population control. Pakstan has population control projects, and there are several other countries in the region that do as well. Demographically, it is going to take either a further technological breakthrough, or a

good deal of time, I think, as a personal view, but there is very substantial progress on this problem.

In the last several years since the major development programs have been functioning in India and Pakistan and others countries, the per capita rate of growth has continued to be above the rate of population growth.

I should amend that last statement. The per capita rate of economic growth has continued to be above the rate of population growth.

Mr. RHODES. Though it is a pretty tight race?

Mr. TALBOT. Yes; it is.

U.N. RECORD OF NEAR EAST AND SOUTH ASIA COUNTRIES

Mr. FORD. How many nations are in this area we have before us today?

Mr. TALBOT. Eighteen, sir.

Mr. FORD. How many of them are members of the United Nations?

Mr. TALBOT. All of them.

Mr. FORD. You are familiar, of course, with the financial problems of the United Nations as far as the funding of its peacekeeping operations is concerned?

Mr. TALBOT. Yes.

Mr. FORD. In the last month or two, there has been an effort in the United Nations to try and work out some arrangement for the financing of these peacekeeping operations. The last I read, there was a compromise which was agreed to. It was not a unanimous agreement.

Is my observation correct, or reasonably so?

Mr. TALBOT. Yes; that is my understanding.

Mr. FORD. Speaking for myself, this was not a satisfactory arrangement, but it was a compromise.

How did the nations in this area vote, or how did they act in seeking an arrangement on this problem?

Mr. TALBOT. The situation in our area is that most of the nations do pay their regular contributions, but on special contributions the situation has been substantially less satisfactory.

As you know, a number of states have refused to pay for UNEF. On this most recent vote, my recollection is the countries of this area were deeply split.

If I may, sir, introduce an insert to give the voting record.

Mr. FORD. Will you put in the record how these nations in this area did vote on this last compromise, both those for and against?

Will you also indicate in the record at this point the status of each of these countries as far as their regular assessments and their special assessments to the U.N. are concerned?

Mr. TALBOT. I would be very glad to.

(The information follows:)

Voting record of Near Eastern and south Asian countries at the 4th special session of the United Nations General Assembly—Financing U.N. peacekeeping operations

Country	I	II	III	IV	V	VI	VII

NOTES

I. General principles to serve as guidelines for the sharing of the costs of future peacekeeping operations involving heavy expenditures (A/RES/1874).

II. United Nations Emergency Force: Cost estimates and financing for the period of July 1, 1963, to Dec. 31, 1963 (A/RES/1875).

III. United Nations operation in the Congo: Cost estimates and financing for the period July 1 to Dec. 31, 1963 (A/RES/1876).

IV. Payment of arrears in respect of assessed contributions to the United Nations Emergency Force Special Account and the ad hoc account for the United Nations operation in the Congo (A/RES/1877).

V. Terms and conditions governing the issue of the United Nations bonds (A/RES/1878).

VI. Establi hment of a peace fund (A/RES/1879).

VII. Continuation of the working group on the examination of the administrative and budgetary procedures of the United Nations reestablished under General Assembly resolution 1854 B (XVII) (A/RES/1880).

Near Eastern and south Asian countries—Balance due, 1962, and prior years' June 30, 1963

Country	Regular budget	UNEF	UNOC	Balance due 1962 and prior years
Afghanistan		$39,322	$34,366	$73,688
Ceylon				
Cyprus

U.S. AID VERSUS U.N. POSITIONS OF AID RECIPIENTS

Mr. FORD. I am very apprehensive, and extremely concerned, about what nations will or will not face up to this problem that will undoubtedly be on the agenda of the U.N. on whether or not a country will lose its right to vote in the General Assembly if they have not met their financial obligations.

I suspect this vote last month on the compromise is some indication of how they would vote. Is that a fair assumption?

Mr. TALBOT. It certainly would be an indication of how they are feeling at this stage. How they will vote when the issue comes up, I of course have no idea.

Mr. FORD. What would your reaction be to language in the appropriation bill which would say that economic and/or military assistance would not be available if a country did not vote to suspend the right of a nation to vote if it has not paid its U.N. assessment?

Mr. TALBOT. There have been several suggestions, as I understand it, of clauses or sections which would have the effect of eliminating aid to countries which do not follow one or another of the U.N. resolutions.

I think my general reaction to these would be that while it is very important for the United States that the U.N. remains a healthy organization, at the same time we do not want to hand over our foreign policy actions and our national interests to a decision of the Security Council or of the General Assembly.

Mr. FORD. Of course, this would be a decision of the General Assembly. It would not be a decision of the Security Council, as I understand it.

Mr. TALBOT. Yes, sir. In other words, what I am saying is that for reasons extraneous to our national interests a particular country may decide to vote for or against a particular U.N. proposal, or indeed a particular country may decide either to accept and adhere to a U.N. action, or not to do so. It is not necessarily the fact that if such a situation should develop, our own interest would be served by cutting off assistance to that country.

Mr. FORD. It is a little confusing, however, when we continue to give aid, both military and economic, to countries that by their failure to support the Constitution of the United Nations in effect vote to destroy the United Nations by not forcing member nations to pay their bill. This is disturbing.

Mr. TALBOT. And it is a matter of great concern to us; do not misunderstand me.

As you know, we have been working quite vigorously with other countries to get them to see this point of view. At the same time, it occasionally happens that a nation may be condemned by the United Nations for such an action and we find it in our national interest to continue to give assistance to that nation.

Similarly, a nation may fall behind in its assessments. We may have national reasons—"we may have," I say—to continue our relations and assistance to that nation.

All I am suggesting is, there is no question about the objective of getting all nations to recognize the financial implications of keeping a viable U.N. But I would raise substantial questions as to whether that objective is best achieved by the kind of limiting amendment you suggest, sir.

Mr. PASSMAN. Mr. Conte?

POLICY ON FUNDING BOKARO STEEL MILL

Mr. CONTE. Mr. Secretary, in this appropriation you are asking for, is there any money for the Bokaro steel mill?

Mr. TALBOT. The answer is, we do not know there is any money. I think Mr. Gaud might speak to this.

Mr. GAUD. The agency has not decided whether to go forward with that project.

Mr. CONTE. That is the reason I am asking the question. I want to know what your policy is on this project?

Mr. GAUD. He asked me to state the facts.

Mr. TALBOT. The answer on the money is, We do not know whether funds appropriated for development loans might be used for one loan or for another yet. Each loan application comes and is examined and a decision is made in the course of a year, so in our proposals for development loan funds, we are not at this time able to specify which particular development loan application will be accepted.

Mr. PASSMAN. You are saying this is an illustrative program. Even though you should justify funds for this project, you could always transfer them over to another project, and if you did not request funds for the steel mill project, you could take it out of some other part of the total; is that correct?

Mr. GAUD. The amounts we are asking for development are not committed to any project.

Mr. PASSMAN. That is what I say. It is an illustrative program. Even though you may have no specific plans for the steel mill, at some subsequent date, after you receive the funds, you may decide it is more advantageous to build the steel mill than carry out some other project?

Mr. GAUD. No. We are not asking money for specific projects.

Mr. PASSMAN. That is what I said, Mr. Gaud.

Mr. GAUD. It is not a question of shifting from projects we are asking you to finance and then moving to Bokaro. We are asking for so much for lending applications, and if we decide to go forward with Bokaro, in 1964, it is conceivable some of this money will be devoted to that.

Mr. PASSMAN. That is certainly what I said, it is an illustrative program.

Mr. CONTE. The reason I am asking you is because I think this is a policy question, Mr. Talbot. Let's get back to it again.

What is the policy with regard to the Bokaro steel mill if there is a policy?

Mr. TALBOT. There has been no decision on the loan application for the Bokaro steel mill. I think you are familiar with the record.

An application was made—a proposal was made—maybe I better get this straight—the question of Bokaro has come up and the U.S. Government financed a study of the feasibility, which was undertaken by the United States Steel Co.

This study indicated that the Bokaro steel mill would be feasible, subject to favorable answers to a number of questions which, in the opinion of United States Steel, had not been adequately answered by the evidence yet available.

The study further indicated that the steel mill would not be profitable in the first period, but in the second and succeeding periods would be profitable.

The proposition is that the questions which were raised in the United States Steel report are being examined, and a decision cannot be made on the Bokaro steel mill until these have been examined.

Mr. MINSHALL. Could you outline briefly what those questions are for the record?

Mr. TALBOT. I am sure Mr. Gaud can specify.

Mr. MINSHALL. What are they?

Mr. GAUD. The first question is the question of whether raw materials exist in appropriate quantities and in appropriate locations and in appropriate quality.

Mr. MINSHALL. That seems rather basic. Why do you have to have a feasibility study on that?

Mr. GAUD. We have to find out whether they exist or do not.

Mr. MINSHALL. Do you mean you think you are putting up a steel mill and you have no knowledge of that?

Mr. GAUD. I do not mean anything of the sort.

Mr. MINSHALL. What do you mean then?

Mr. GAUD. We have been asked if we will finance a steel mill.

Mr. MINSHALL. Who asked you?

Mr. GAUD. The Indian Government.

Our reply has been, the first thing we want to find out is whether there are sufficient raw materials to make this steel mill sensible. We have not yet gotten an answer to that question. That is one of the questions we are going into.

The next question is, we will have to work out satisfactory arrangements with the Indians as to the construction of the mill under American supervision, as to its design under American supervision, and as to its management for the first 10 years of its operation. This we would have to straighten out with the Indians before we would go forward with it. These are the two main areas that have not yet been explored.

The third area is whether it makes sense from an economic standpoint to devote as much foreign exchange as this plant will take to this project. That, of course, entails a study of the Indian requirement for steel, of their steel capacity, of other uses to which the money can be put and the like.

We are likewise studying these propositions.

Mr. MINSHALL. It surprises me you would not know whether or not there is sufficient ore over there to run a steel mill.

Mr. GAUD. We have not decided to go forward with this. We have been asked if we will go forward.

Mr. MINSHALL. It surprises me you would not have that information readily available—the Indian Government, or someone.

Mr. GAUD. The Indian Government says there is no question about the raw materials. We want to be satisfied on that.

Needless to say, I do not have in my office a complete index of all raw materials under the Indian real estate. We have to look into this to answer the question whether we are going forward with the project.

The same thing would be true in this country.

Mr. CONTE. Is there an application pending at the present time?

Mr. GAUD. There is no loan application pending at the present time. It is a proposition being discussed between the Indian Government and ourselves.

Mr. CONTE. Mr. Talbot, you cannot tell me one way or the other whether you have decided as Under Secretary for that area of the world whether the United States should invest money in a steel mill in India?

Mr. TALBOT. I would like to see the full evidence before making a decision.

Mr. CONTE. How long do you think it will take you to get the full evidence before you render a decision?

Mr. TALBOT. I do not know.

Mr. GAUD. No one knows the answer.

Mr. CONTE. Could you give us a ball park guess?

Mr. GAUD. As I pointed out, the principal factual problem to be settled here is the existence of the raw materials. We are sending two people out to India this week who are going to find out what information the Indian Government already has available on this question, and if it is not all there, what else has to be done to get the information we need. We do not know whether this is going to take weeks, months, or possibly even years, as has been suggested.

If you want me to make a guess, and it would be purely a guess, it would be a matter of a good many months.

Mr. CONTE. I think you ought to make some determination in the near future because there is a cloud of suspicion in the Congress. You have a bill coming out of the Foreign Affairs Committee, and you may find yourself faced with a dilemma where aid to India will be tied down restrictively because there are some Members of the House that cannot buy the Bokaro steel mill.

INDIAN STEEL NEEDS

Mr. GAUD. We cannot go ahead with the project until we know more about it than we know today. We are not prepared today to say we will not go ahead with it, because if you examine the Indian picture, the need for steel is unquestionably enormous. The demand for steel is there.

India is spending many hundreds of millions of dollars to import steel today, and India in the future needs further steel capacity. This is not a proposition you can dismiss out of hand. It is a proposition you have to investigate carefully before you come to a decision. This is what we are now engaged in.

Mr. CONTE. Mr. Talbot, is this Indian News a reliable newspaper?

Mr. TALBOT. It is issued by the Indian Embassy in Washington.

Mr. CONTE. Is it reliable?

Mr. PASSMAN. As much so as India.

Mr. CONTE. Would you say it is fairly reliable?

Mr. TALBOT. I would say it reflects the views of the Indian Government.

Mr. CONTE. In answer to Mr. Gaud's statement saying there is a shortage of steel, this publication of July 12 says:

> In spite of having six steel plants—two in the private sector and four in the public sector—altogether producing about 4 million tons of steel, the country imported annually 1 million tons of steel, its value being of the order of about $210 million.
>
> The new plants are being put up to increase the output of the Bhilai steel from 1 million tons to 2½ million tons by the end of 1965.

If this is reliable, they will have more steel in India than they can use.

Mr. GAUD. That is not a correct conclusion.

The United States Steel report which Mr. Talbot referred to a few minutes ago states quite categorically, and this confirms our own feeling on the subject, that despite the fact that India's existing mills are being expanded to their capacity, there will still remain, by the time this Bokaro mill would come into production, a very substantial shortage of steel which in fact will not be wholly met by the Bokaro production. This is the United States Steel conclusion after studying the Indian economy, and this conforms with our own judgment.

Mr. CONTE. That does not coincide with the Indian News.

Mr. GAUD. I beg your pardon.

Mr. CONTE. The Indian News says they are importing 1 million tons of steel a year, and with these new plants they will increase their production from 1 million to 2½ million.

Mr. GAUD. But their imports——

Mr. CONTE. They should have a surplus of about half a million a year.

Mr. GAUD. Their imports by no means meet their requirements. If India had more foreign exchange——

Mr. CONTE. You read the paper.

Mr. GAUD (continuing). She would be importing a good deal more steel than she is.

Mr. TALBOT. The Indian gross national product is rising fairly steadily, of course. It was on the average of about $1 a week per person, and now it is up to $1.75, something like that. Perhaps that is a bit high. As this gross national product rises, the demand for steel also rises, and the industrial complex that comes around a new steel mill increases very greatly so the uses of steel in a going economy obviously increase.

India is today using more steel than it was 3 years ago, or 4 years ago, and 5 years from now it will be using still more steel. Of course, the military program now adds new requirements for steel.

POSSIBILITY OF RESTRICTIVE AMENDMENT LIMITING ASSISTANCE TO BOKARO PROJECT

Mr. RHODES. Mr. Gaud, since it is going to take quite a while to get the information to make a decision on this, would it be out of line to suggest that there be a limitation on the appropriation this year, to the effect that no funds be spent, or obligated, for construction of this project until the Appropriation Committees have had a chance to take a look at the information you will get.

As one member of the committee I would hate to feel money we appropriate this year would go into this steel mill with as little information as you are able to give us about it right now.

Mr. GAUD. I could tell you a good deal about it right now. I have been listing the main problems still left open.

We have a great deal of information on this mill, sir, and we would be glad to make it all available to the committee.

I would personally not be enthusiastic about any restriction which would prevent the administration from going forward with any specific project, which I think is what you are suggesting.

Mr. RHODES. That is correct.

Mr. GAUD. It seems to me that would be a mistake, that kind of a restriction in the bill.

Mr. RHODES. I asked the question, and I got the answer.

Mr. TALBOT. I agree with that answer.

BASIS ON WHICH FISCAL YEAR 1964 REQUEST FOR AID TO INDIA IS MADE

Mr. PASSMAN. Upon what basis are you requesting money for India, 202(b), or some other plan?

Mr. GAUD. No, sir. We are in the process of making a commitment, or a pledge, through the Indian Consortium, subject to the appropriation of funds, we will finance development loan projects up to *x* millions of dollars next year.

We are in the course of making that pledge through the Consortium.

Mr. PASSMAN. It is an illustrative program. Everyone from your side of the table has said that it is.

When you submit your plan in detail, when we get around to India on direct questioning, are you going to be able to tell the committee how much money you want for India, and what you propose to spend the money for in fiscal year 1964?

Mr. GAUD. I will certainly tell the committee how much money we would like for India. I cannot tell on what projects we will spend it.

Mr. PASSMAN. When you get the money, you can spend it on whatever project you want to?

Mr. GAUD. Whatever projects we think are sensible, and those included in the plan.

Mr. PASSMAN. You are now telling the committee you will want *x* number of dollars to do *x* number of projects, and you estimate this is what they will cost?

Mr. GAUD. Yes.

Mr. PASSMAN. You get a lump sum?

Mr. GAUD. Yes.

Mr. PASSMAN. After you get the money, you will determine what projects you will do?

Mr. GAUD. That is correct.

POLICY ON FINANCING BOKARO PROJECT

Mr. CONTE. This bill could go through the House and the Senate, and by the time it gets to the President you could make the decision on the Bokaro plant and it might be favorable?

Mr. GAUD. Yes.

Mr. CONTE. And there is nothing the Congress could do?

Mr. GAUD. As the legislation stands, that is true.

Mr. CONTE. I want to be helpful.

Unless you take a more positive step on this, you may be in serious trouble.

Mr. GAUD. The only decision we could possibly reach at this point would be a decision to reject the proposition out of hand.

Mr. CONTE. Or give the commitment here today if you go ahead with an approval of the Bokaro steel mill plant, you will not do it out of

1964 funds. That would at least give the Congress an opportunity next year to take a crack at this project. Otherwise, you may be cut short.

There are many members who come up to me because they know I am on this committee and hope there will be no funds given to the Bokaro plant.

Mr. GAUD. I know there are feelings to that effect. I think it is due in considerable part to the proposition this is not understood. I hope we can clarify people's understanding of this project.

Mr. CONTE. We will go into detail when we go into the country projects. I wanted a policy decision here today if I could get one.

Mr. GAUD. Right.

Mr. CONTE. I have not been convinced from the discussion we have had here there is a need for one. You are projecting this way into the future. I think there are more immediate needs in India that are of much greater importance than this steel mill.

Mr. TALBOT. We will talk in detail about the steel mill when we come back.

Mr. CONTE. You will not be here. That is why I am trying to nail you down because you are the head man for that part of the world. If we could get a commitment from you, it would certainly be helpful to know you are not going to use any funds in the 1964 appropriation for the Bokaro steel mills.

Mr. TALBOT. Perhaps I better come back for that discussion.

Mr. PASSMAN. Can you give us an answer at this time, that you will not use the funds?

Mr. TALBOT. I would rather participate in the full discussion of the Bokaro funds when we get to India.

Mr. PASSMAN. It has been indicated that you have inspectors out there. Could you go into full detail?

Mr. GAUD. That is correct.

Mr. PASSMAN. That detailed information will not be available as quickly as we would like to have it, will it?

Mr. GAUD. My own guess is, and I said a moment ago it is a guess, I do not think we will know the answer to this question before the committee finishes its consideration of this bill.

Mr. PASSMAN. Did Mr. Hamilton, when he was AID Administrator, take a positive position on this question?

Mr. GAUD. Mr. Hamilton did not know any more than I know today the details of the proposition.

Mr. PASSMAN. Did he take a position regarding the socialistic features, it being public rather than private?

Mr. GAUD. Mr. Hamilton did not object to the plant.

Mr. PASSMAN. I withdraw the question, if you refuse to answer it.

Mr. GAUD. Let me answer the question.

Mr. PASSMAN. You are not answering it.

Mr. GAUD. Mr. Hamilton took the position the fact this mill was in the public sector should not debar our going into it if it made sense as an economic project. That is the position we take today.

Mr. PASSMAN. Has the President taken a position on this matter?

Mr. GAUD. The President made a statement at a press conference some time ago that, provided the plant made technical and economic sense, he thought India needed it and we ought to build it, but he recognized that the Congress may have other views.

Mr. CONTE. I hope that you can give this a lot of thought between now and the time this committee finishes its hearings and come up with a more constructive and positive decision. Your answer is much too hazy.

Mr. GAUD. It seems to me you want a negative position rather than a positive position.

Mr. CONTE. For your sake, I do. Come out and say you are going to build it or not.

Mr. GAUD. We cannot. How can we possibly say that?

Mr. CONTE. I think after the little I have discussed with you, you are going to build it. I have come to that conclusion.

Mr. GAUD. Mr. Bell has made it perfectly clear, I think, it is his position if this thing pans out, if the raw materials are available, and if we work out an appropriate contract, the AID is in favor of this mill on the ground that India needs the mill, she needs the capacity. We do not believe from all the information that we have available that it can be built in the private sector.

We believe the only way it can be built is in the public sector, and if the plant is built under American control, managed under American control for the first 5 or 10 years, it will be a credit to the United States and the aid program.

This is a statement of principle made by Mr. Bell.

We cannot go further than that because of these uncertainties I have spoken of in the facts.

Mr. CONTE. I think you should get together with the Indian Ambassador and the editor of that newspaper.

Mr. GAUD. I have read this paper, this excerpt, and it seems to me he is talking about imports rather than requirements.

The information on requirements is quite clear. I would be happy to produce that to the committee when we discuss it in detail later.

Mr. MINSHALL. Mr. Chairman, are we going to go into this Bokaro steel mill in some detail?

Mr. PASSMAN. We certainly intend to do so.

Mr. MINSHALL. I think all the members of the committee should be here when we discuss it.

I have a lot of questions on these matters, not only the socialistic aspect of it, but some of the other matters that Mr. Gaud brought up, such as raw materials being in sufficient supply.

Mr. PASSMAN. I assure the gentleman he will have full opportunity to inquire into the matter.

Mr. MINSHALL. I want to assure you from the little I found out about it today, I for one am going to oppose this project. If necessary, I am going to offer amendments to do it. This is a socialistic program that could cost the taxpayers of America over $1 billion. I am amazed that this project is even proposed—it should by all means be deleted from further consideration.

Mr. PASSMAN. We will go into this question quite thoroughly.

We shall adjourn until tomorrow at 1 o'clock.

THURSDAY, JULY 18, 1963.

INCREASE REQUESTED FOR FISCAL YEAR 1964

Mr. PASSMAN. The committee will come to order.

I believe the estimate for your region, Mr. Gaud, for fiscal year 1964, is $1,088,945,000; is that correct, sir?

Mr. GAUD. You are speaking of the total, including such matters as the——

Mr. PASSMAN. I am speaking of the total that will be handled through this subcommittee for your area, excluding military.

Mr. GAUD. $1,088,945,000.

Mr. PASSMAN. That is an increase of $105,030,000 over fiscal year 1963, I believe?

Mr. GAUD. I will accept that, sir.

UNEXPENDED BALANCE, JUNE 30, 1963

Mr. PASSMAN. What is the amount of the unliquidated funds as to the credit of your area, the estimate as of June 30?

Mr. GAUD. Yes, sir.

The figure is $1,820,956,000.

Mr. PASSMAN. That is the amount if money carried over and represents the same accounts that the $1,088,945,000 represents?

Mr. GAUD. I don't think it includes anything for the Indus. I am not sure that it includes the UNRWA funds.

Mr. PASSMAN. The same categories of funds as the $1,088,945,000?

Mr. GAUD. That is right, except for Indus and UNRWA.

U.S. PLEDGE TO PAKISTAN CONSORTIUM

Mr. PASSMAN. Under the category of "General consortiums," what was the amount of the U.S. pledge to Pakistan for fiscal 1963?

Mr.GAUD. The total U.S. pledge was $500 million for 2 years, or about $250 million for fiscal year 1963.

Mr. PASSMAN. Can you tell us the amount that you have obligated against this pledge so far?

Mr. GAUD. Yes, sir. The AID share of the fiscal year 1963 amount was $225 million. The Export-Import Bank was $25 million. AID has obligated $176,850,000 against that figure of $225 million.

Mr. PASSMAN. Could you tell us specifically the purposes for which you obligated the $176,850,000?

Mr. GAUD. Yes, sir.

There were 19 development loans included in that, sir.

Mr. PASSMAN. Development credits.

Mr. GAUD. I call them loans, you call them credits.

Mr. PASSMAN. I merely want to keep the record straight.

Mr. GAUD. There was a total of 19 loans, what I call development loans.

Mr. PASSMAN. Please put in the record a list of the 19 development credits that you just indicated and also furnish the committee with a copy of the listing.

Mr. GAUD. I will be glad to do that.

(The information supplied follows:)

PAKISTAN, UNITED STATES DEVELOPMENT LOANS AUTHORIZED, FISCAL YEAR 1963

This list shows development loans authorized for Pakistan in fiscal year 1963. Terms for repayment to the United States for all of these loans are 40 years, 10 years' grace, at three-fourths of 1 percent. One of these loans, "Sawmill and timber extraction," is a "two step" loan and is repayable to the Government of Pakistan by the East Pakistan Forest Industries Development Corp. in rupees in 10 years, 3 years' grace, at 5¾ percent.

Date authorized	Title and description	Amount authorized (millions)
Dec. 1, 1962	Sawmill and timber extraction. To expand harvesting of available timber from the Chittagong Hill tracts and to erect a sawmill at Kaptai, East Pakistan.	$2.2
Dec. 3, 1962	Malaria eradication program. To finance the foreign exchange costs for equipment and materials required for the 3d year of the on-going Government of Pakistan malaria eradication program.	3.8
Feb. 11, 1963	Chalna Anchorage. To increase the capacity of the anchorage and also to improve efficiency and safety of port facilities at Khulna, East Pakistan.	3.6
Do	General comodity imports (2d loan). To assist Pakistan in meeting its requirements for sustaining and nonproject imports necessary for maintenance and expansion of industry and agriculture.	30.0
Feb. 16, 1963	Salinity control and reclamation project (SCARP No. 2). To reclaim and properly irrigate 686,000 acres in the northern half of the Chaj Doab (the flat land between the Chenab and the Jhelum Rivers) of West Pakistan by pumping and drainage works.	10.8
Do	Airport and airway service. To improve air traffic control by procurement of communications and ground service equipment for aviation facilities in East and West Pakistan.	2.1
Feb. 22, 1963	Feasibility studies. To evaluate the feasibility of proposed development projects in the fields of water and power, agriculture, water and sewage, transport, communications and industry.	2.0
Mar. 14, 1963	Coastal Embankments, East Pakistan. To finance foreign exchange costs of materials, equipment and consulting services to construct and strengthen dikes against monsoon and tidal flooding in four coastal districts of East Pakistan	6.5
Mar. 16, 1963	Dacca jet airport. To construct an airport at Dacca suitable for commercial jet operations.	4.3
Mar. 25, 1963	Services of general consultants, East Pakistan. To provide consulting and engineering services to the East Pakistan Water and Power Development Authority in preparing a master water and power development plan. To also privide consulting and engineering services to EPWADA on specific water and power projects. To strengthen overall capacity of EPWAPDA.	4.4
Apr. 1, 1963	Operation of salinity control and reclamation project (SCARP No. 1). To provide consulting services to assist in training Pakistani operators of the nearly completed SCARP No. 1 project, and to provide spare parts required for maintenance of the newly installed equipment.	0.8
June 19, 1963	General commodities imports (3d loan). To assist Pakistan in meeting its requirements for sustaining and nonproject imports necessary for maintenance and expansion of industry and agriculture.	70.5
June 28, 1963	Services of general consultants, West Pakistan. To provide consulting and engineering services to the West Pakistan Water and Power Development Authority (WPWAPDA) in preparing a master water and power development plan. To also provide such services on specific projects, strengthening the capacity of WPWAPDA.	5.6
June 28, 1963	Public health, engineering, East Pakistan. To finance a health engineering assistance team and professional equipment. The team will be concerned mostly with water supply and to some extent with sewage disposal.	1.5

Date authorized	Title and description	Amount authorized (millions)
June 29, 1963	Machinery pool, West Pakistan. Provision of additional equipment and spare parts for the machinery pool organized, managed, and maintained by the West Pakistan Water and Power Development Authority (WPWAPDA) for use in capital development projects.	$5.0
Do	Telecommunications equipment. To improve and expand telephone and telegraph communications facilities of East and West Pakistan including provision for training facilities.	4.7
Do	Pakistan railways (5th loan). To assist Pakistan in modernization of its railroad facilities, particularly rehabilitation and replacement of rolling stock, track renewals, maintenance and service improvements and terminal facilities.	14.5
Do	Water supply and sewage disposal, Karachi. For expansion of Karachi's existing bulk water supply and sewage disposal facilities including distribution mains.	3.1
Do	Machinery pool, East Pakistan. To finance a machinery pool for the East Pakistan Water and Power Development Authority.	1.5
	Fiscal year 1963 U.S. development loans to Pakistan total	176.85

Loans made to Pakistan by the Export-Import Bank during fiscal year 1963 are as follows:

Date authorized	Title and description	Terms	Amount authorized (millions)
Sept. 21, 1962	Diesel electric locomotives for East Pakistan railways.	5¾ percent, 16 semiannual payments beginning June 1, 1964.	$11.9
Feb. 7, 1963	Pakistan Services, Ltd.: Hotel construction Dacca.	5¾ percent, 36 semiannual payments beginning 1 year after operations commence.	3.4
Feb. 14, 1963	Industrial development bank: Bank sublending to smaller private enterprises.	5¾ percent, 10 semiannual payments after 2 years' grace period.	2.5
Apr. 18, 1963	Helicopters and spare parts	5¾ percent, 5 years	2.9
	Total		20.7

Mr. PASSMAN. It would appear that approximately $49 million of the 1963 pledge has been carried over?

Mr. GAUD. That is true.

Mr. PASSMAN. Will you need any more than $176 million in fiscal year 1964, as this was the total amount that you obligated in fiscal year 1863?

Mr. GAUD. Yes, sir; we think we will.

Mr. PASSMAN. How much are you requesting for fiscal 1964?

Mr. GAUD. We are requesting for fiscal year 1964 $225 million.

Mr. PASSMAN. Did the $49 million lapse?

Mr. GAUD. No, sir; it did not.

Mr. PASSMAN. Then you would actually have for fiscal year 1964 a total of $274 million, against $176 million obligated in fiscal year 1963?

Mr. GAUD. No, sir; and I would like to explain why.

Mr. PASSMAN. You are requesting $225 million for fiscal year 1964?

Mr. GAUD. That is correct.

Mr. PASSMAN. You have a $49 million carryover, do you not, out of your $225 million for last year?

Mr. GAUD. We have this commitment to complete, yes.

Mr. PASSMAN. We know you have that commitment, but if you add the $49 million to the $225 million it will mean that you could then have $274 million for fiscal year 1964?

Mr. GAUD. May I——

Mr. PASSMAN. We first want an answer and then you may explain.

Mr. GAUD. The answer is "No."

Mr. PASSMAN. Let us find out why it is "No."

Mr. GAUD. The pledge we have made to the Pakistan consortium for fiscal year 1964 on behalf of the United States is $212.5 million; $25 million, roughly, of that will presumably come from the Export-Import Bank so that means that AID will do $187.5 million. We have the balance—$49.7 million—of the earlier commitment to complete. If you add those two together you get $237.2 million, and that is AID's total commitment to Pakistan for fiscal year 1964.

Mr. PASSMAN. Then what good are these books here? If we go to page 41 of the justifications the $225 million figure is not correct?

Mr. GAUD. The $225 million figure was put in there before the meeting of the consortium and before the end of the fiscal year 1963, so that when this figure was put in here we were not able to know either what our pledge to the consortium would be or the exact amount of any carryover.

Mr. PASSMAN. In the 9 years that I have been chairman of this subcommittee I have found these items largely a guess. You put a lot of figures in and at a subsequent date the determination is made as to what amounts will be obligated.

Mr. GAUD. The guess is on the low side, I would like to call to your attention.

Mr. PASSMAN. I think the President's request is $4.5 billion. Has the President again reduced his request in keeping with these reductions since the meeting that you had?

Mr. GAUD. Mr. Chairman, our request is for $225 million. Our needs are $237.2 million. We have not asked to increase our request.

Mr. PASSMAN. You did ask for $225 million in the justification book?

Mr. GAUD. And we need $237.2 million.

Mr. PASSMAN. That is your estimate, including the carryover of funds that you presently have; is that correct?

Mr. GAUD. That is our pledge, including the carryover.

Mr. PASSMAN. What is the total amount of your pledge?

Mr. GAUD. $212.5 million which——

Mr. PASSMAN. Let us take off the $49 million.

Mr. GAUD. Of which $25 million will be taken care of by the Export-Import Bank.

Mr. PASSMAN. How much should that leave?

Mr. GAUD. The AID part would be $187.5 million.

Mr. PASSMAN. Let us take off the $49 million carryover.

Mr. GAUD. From the $187.5 million?

Mr. PASSMAN. Surely.

Mr. GAUD. That you cannot do, sir.

Mr. PASSMAN. Do you have the funds?

Mr. GAUD. The pledge of $212.5 million is in addition to our commitment to fulfill the shortfall from last year; so the total commitment is $237.2 million.

Mr. PASSMAN. Shortfall?

Mr. GAUD. New money.

A shortfall on our pledge.

Mr. PASSMAN. What I am trying to find out is if you are not going to need the total of $225 million why the President does not again reduce his budget request, in keeping with the reductions that we are running into around the world?

Mr. GAUD. I am sorry to say I can only deal with this on a regional basis.

The requirement for Pakistan for next year is $237.2 million, which is more than the $225 million. Now, how much of that will come out of funds carried over from last year and how much out of new money is beyond my province.

Mr. PASSMAN. Your pledge is $237.2 million?

Mr. GAUD. From AID.

Mr. PASSMAN. In the event that you do have that kind of shortfall again, where would you get the funds to fund the $237.2 million? How much out of new money, how much out of the carryover?

Mr. GAUD. I don't know. This isn't my department. I have no idea. I am coming up with the requirement for Pakistan.

Mr. PASSMAN. I am speaking of Pakistan, if you please.

Mr. GAUD. So am I. The agency is given a total of money that it can use and my region will be allocated its proportionate share by the Administrator and, as far as I am concerned, I will have to meet Pakistan's requirements out of whatever is allocated to my region.

Mr. PASSMAN. Nevertheless you envision a program here of $237.2 million?

Mr. GAUD. That is right.

Mr. PASSMAN. How much of that amount will be funded out of the carryover funds?

Mr. GAUD. I don't know. I cannot answer the question.

Mr. RHODES. Mr. Chairman, will you yield at that point?

Mr. PASSMAN. Yes, I yield.

Mr. RHODES. Am I to understand the Agency has actually budgeted an underpayment of what they call a commitment? The only figure we have here that I see for this proposed program for this next fiscal year is $225 million of new money. Now the chairman is asking you as I understand it if this is what you expect to get in the form of new money, and where you will get the rest which you will need to finance your program. You should be able to answer that.

Mr. GAUD. Before you came into the room, perhaps, I pointed out this $225 million figure was our best estimate when these books were made up of what we would need.

The Pakistan consortium was held subsequent to the date these books were prepared. Likewise, the fiscal year ended subsequent to that date. We now know what our pledge to the consortium is. We now know what the carryover is. We pledged $187.5 million and in addition to that, there was a carryover in the Pakistan consortium of $49.7 million. Add those together and you get $237.2 million.

Mr. RHODES. $49 million is the shortfall that you mentioned from last year?

Mr. GAUD. That is correct.

It is my understanding, Mr. Chairman, that we reduced our appropriation request by the estimated development loan carryover, which would include this $49 million.

Mr. PASSMAN. If that is the question I asked you—we are dealing with a request and again we are dealing with a particular figure, an actual figure. You did commit $176 million to the consortium for Pakistan in fiscal year 1963?

Mr. GAUD. Yes.

Mr. PASSMAN. That gives you a recoupment of $49 million that is carried over. You carry it over, do you not, in a protected status?

Mr. GAUD. I carry over the obligation to the consortium but the amount of the President's request for an appropriation was reduced by that $49 million.

Mr. PASSMAN. You plan to commit $237.2 million in fiscal year 1964?

Mr. GAUD. If I have it.

Mr. PASSMAN. You propose to submit to the consortium $237.2 million in fiscal year 1964. Presently that is your plan; is it not?

Mr. GAUD. The new pledge plus the carryover from last year; yes.

Mr. PASSMAN. What amount does AID propose to commit for fiscal year 1964, as of this time?

Mr. GAUD. For Pakistan?

Mr. PASSMAN. Yes.

Mr. GAUD. On development loans, $237.2 million.

Mr. PASSMAN. Now, if you have a carryover of funds, unencumbered, of $49 million, that will apply against the $237.2 million?

Mr. GAUD. If we have it; yes, sir.

Mr. PASSMAN. You do have it. It has not been obligated. It is carried over.

Mr. FLINNER. This is part of the Development Loan Fund which is no-year——

Mr. PASSMAN. It carries over.

Let's subtract the $49 million from the $237.2 million.

Mr. GAUD. And you get $188.2 million.

Mr. PASSMAN. And actually what you need for fiscal year 1964 to fund your program according to present plans, if there are no more shortfalls, is $187.5 million?

Mr. GAUD. That is right, provided I have the other $49 million in the bag. The carryover is not earmarked for any particular country.

UNOBLIGATED BALANCE OF DEVELOPMENT LOAN FUNDS, FISCAL YEAR 1963

Mr. RHODES. Can we determine now what the figure worldwide will be for the carryover for the Development Loan Fund?

Mr. PASSMAN. Can you give us that information, Mr. Assistant Controller, in the development credit category?

Mr. FLINNER. I don't believe we have the final figure.

Mr. PASSMAN. Can you give us an estimate?

Mr. FLINNER. Yes, sir.

I have the unexpended——

Mr. PASSMAN. We want the amount of unencumbered funds, the unobligated, the unpledged, the uncommitted.

Mr. FLINNER. The estimate we submitted previously is $71 million.

Mr. PASSMAN. $71 million unobligated; is that correct? With $49 million of it being in this one country?

Mr. FLINNER. This estimate was probably made before this final Pakistan figure was determined.

Mr. PASSMAN. I recommend you do more research because it is paying off.

Mr. RHODES. Mr. Chairman, I understand Mr. Gaud expects to get $49 million of this $71 million to make up for his shortfall in Pakistan.

Mr. PASSMAN. It would appear that the figure may be substantially above what you gave us because it was $71 million before you found the $49 million; is that what you said, sir?

Mr. FLINNER. It was $71 million, at the time we prepared the estimate.

Mr. PASSMAN. That figure did not include the $49 million?

Mr. FLINNER. I can't say whether it included the $49 million at the time or not.

Mr. RHODES. As I understood, the 49 was not obligated. There is probably nothing included for the 49. You are probably going to take the 49 out of the 71.

Mr. PASSMAN. Can you tell us how to find out what we want to know?

Mr. FLINNER. Yes, sir. We are preparing a table——

Mr. PASSMAN. Could you go to the telephone and find out from your office the present estimate of what is being carried over in the development credit category—sometimes referred to as loans—uncommitted?

Mr. FLINNER. Sir, this is the last figure that we have, and the office is preparing a new estimate right now, but it is not available yet.

Mr. PASSMAN. Are you saying that out of the $71 million, $49 million will be the unpledged commitment to Pakistan and the other $22 million will be in the other parts of the world?

Mr. FLINNER. The $71 million will include $49 million in Pakistan.

Mr. PASSMAN. I thought you said previously they uncovered this $49 million after the earlier estimate?

Mr. FLINNER. No, sir. The $71 million was estimated some time ago and I do not know the exact amount as to how much was estimated as to be unobligated for Pakistan at that particular time.

Mr. PASSMAN. It could be that the $49 million, or a substantial part of it, might be added to the $71 million?

Mr. FLINNER. It could be.

Mr. PASSMAN. That is a fair statement; is it not?

Mr. FLINNER. Yes, sir.

(NOTE.—Additional information may be found on p. 1298.)

OTHER CONSORTIUM MEMBER COMMITMENTS TO PAKISTAN

Mr. PASSMAN. Could you tell us the status of the commitments of other countries to the consortium to Pakistan?

Mr. GAUD. The present status of their commitments?

Mr. PASSMAN. For fiscal year 1963. Did they oversubscribe or did they underfund?

Mr. GAUD. Overall, there was undersubscription.

Mr. PASSMAN. How can we find out what they did? Can you get that information?

Mr. GAUD. I haven't got it yet. It has to come from these various capitals and it is too close to June 30 for me to have it all.

Mr. PASSMAN. Some of them are on a calendar basis out there, are they not?

Mr. GAUD. This particular consortium is on the same fiscal year as ourselves.

Mr. PASSMAN. How much did these other nations agree to originally?

Mr. GAUD. For last year?

Mr. PASSMAN. Yes, sir.

Mr. GAUD. Our figure was $500 million, for a 2-year commitment out of a total consortium commitment of $945 million.

Mr. PASSMAN. Can you give us the name of the countries?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. All right, sir.

Mr. GAUD. The United States——

Mr. PASSMAN. The United States is already in.

Mr. GAUD. IBRD; that is, the World Bank and its soft-loan affiliate, IDA—International Development Association. The United Kingdom——

Mr. PASSMAN. What is the amount for the United Kingdom?

Mr. GAUD. The amont of the pledge?

Mr. PASSMAN. Yes.

Mr. GAUD. The amount of their pledge was $48 million.

Mr. PASSMAN. For 2 years?

Mr. GAUD. For 2 years.

Mr. PASSMAN. That is $24 million a year. Who is next?

Mr. GAUD. Canada.

Mr. PASSMAN. For how much?

Mr. GAUD. $23 milion in grants; $15 million in loans.

Mr. PASSMAN. That is $38 million, or $19 million per year.

Mr. GAUD. Germany, a total of $80 million.

Mr. PASSMAN. That is $40 million for 1 year.

Mr. GAUD. France, $25 million.

Mr. PASSMAN. That is $12.5 million for 1 year.

Mr. GAUD. Japan, $45 million.

Mr. PASSMAN. That is $22.5 million for 1 year.

Now we are in the other two organizations that you named, the World Bank and IDA.

TERMS OF LOANS OF OTHER PAKISTAN CONSORTIUM MEMBERS

Are these hard loans with interest the other countries are making? Tell us about them.

Mr. GAUD. I am talking now about 1962 and 1963 and not 1964.

Mr. PASSMAN. What are the terms?

Mr. GAUD. The United Kingdom, a 25-year loan, 5 to 7 years grace, 5½ to 6¾ percent interest.

Mr. PASSMAN. 5½ to 6¾ percent interest?

Mr. GAUD. That is correct.

Canada, $23 million out of the $38 million was a grant. The $15 million which was a loan was from 15 to 20 years, a 5-year grace period, 6 percent interest.

Mr. PASSMAN. Six percent interest. They are drawing interest during that grace period, are they not?

Mr. GAUD. Yes.

Germany, $80 million. $60 million of this was 20 years, 5 to 7 years grace. Three to 5½ percent interest.

Mr. PASSMAN. How much does the 3 percent apply to and how much is at 5½ percent?

Mr. GAUD. The three I think was one-third.

Mr. PASSMAN. Two-thirds of the total would be 5½ percent?

Mr. GAUD. That is correct.

Mr. PASSMAN. And they, too, collect the interest on the capital during the grace period?

Mr. GAUD. As do we.

Mr. PASSMAN. We do not collect any, unfortunately. We get three-quarters of 1 percent service charge.

What is the next country?

Mr. GAUD. France. $25 million, 12 to 15 years, 6 percent.

Mr. PASSMAN. They get a lot of interest in those countries. And where a grace period is involved, they are also collecting high rates of interest until Pakistan starts paying.

Does France permit a grace period?

Mr. GAUD. Only until delivery of the materials and supplies.

Mr. PASSMAN. What you are saying is, Pakistan does not have to start paying back until it gets the money?

Mr. GAUD. That is right.

Mr. PASSMAN. Would it not be unusual if they had to start paying before receiving the money?

Mr. GAUD. That is right.

Mr. PASSMAN. Is Japan next?

Mr. GAUD. Japan, 15 years, 5-year grace period, 6 percent interest.

Mr. PASSMAN. They, too, collect their interest during the grace period?

Mr. GAUD. That is true.

Mr. PASSMAN. Thank you, sir.

Those are the original pledges and notwithstanding the high rate of interest in most instances they are short on their pledges?

Mr. GAUD. The pledges have all not been converted into specific commitments.

Mr. PASSMAN. Could you tell us what percentage has been converted——

Mr. GAUD. I haven't that information.

Mr. PASSMAN. When will you have it?

Mr. GAUD. I talked to the World Bank about it just the other day. I hope to have it soon and I will submit it.

(The information supplied follows:)

Pakistan consortium pledges and commitments for the second and third years of Pakistan's second 5-year plan, status of commitments as of June 30, 1963

Consortium member	Amount pledged (millions of dollars or equivalent)	Amount committed	Percentage of pledge committed
United States	500	432.4	86.5
AID grants	(23)	(23.0)	100.0
AID loans	(427)	(377.3)	88.5
Export-Import loans	(50)	(32.1)	64.2
IBRD/IDA	209	90.5	43.2
IBRD	(70)	(58.0)	82.9
IDA	(139)	(32.5)	23.4
United Kingdom	48	48.0	100.0
Canada	38	35.4	93.2
Germany	80	63.3	79.1
France	25	----------	0
Japan	45	45.0	100.0
Total	945	[1] 714.6	75.6

[1] Percentage of total pledge committed, 72.2 percent.

Mr. PASSMAN. Some of them are reducing substantially, are they not, according to the information you get?

Mr. GAUD. I honestly don't know.

Mr. PASSMAN. You have no indications?

Mr. GAUD. No.

Mr. PASSMAN. It is too bad you cannot get better cooperation, Mr. Gaud. It is bound to worry you, that you are in here making all these commitments and you do not have any idea about what the others are doing.

Mr. GAUD. We were supplied with information on this up to the meeting of the consortium in May. I don't know anything about what has happened in the intervening 60 days.

Mr. PASSMAN. Could you give us an indication of the situation up to May?

Mr. GAUD. I could give it to you up to June 30, in a day or two.

Mr. PASSMAN. Do you have any idea whether they cut it in half or made it 80 percent off or something?

Mr. GAUD. Some are behind; some are pretty well up. I don't recall by country, but no member cut its pledge.

Mr. PASSMAN. Not even in May?

Mr. GAUD. No.

Mr. PASSMAN. Could you give us the totals up to May?

Mr. GAUD. No.

Mr. PASSMAN. How about December?

Mr. GAUD. I don't remember it; no, sir.

Now, would you be interested in the 1964 pledges?

Mr. PASSMAN. Let us wait until you get some more information. You have it downtown, do you not?

Mr. GAUD. I do not have the final figures downtown.

Mr. PASSMAN. I am talking about up to May.

Mr. GAUD. I have that——

Mr. PASSMAN. Then wait until you get it, if you will, and at time we shall pick this up and get into fiscal year 1964. Is that arrangement fair enough?

Mr. GAUD. Yes.

U.S. PLEDGE TO INDIAN CONSORTIUM

Mr. PASSMAN. With reference to the consortium pledge to India, what is the amount of the U.S. pledge?

Mr. GAUD. The U.S. pledge to India——

Mr. PASSMAN. For fiscal year 1964.

Mr. GAUD. India does not run on the same fiscal year that we do. For the plan year ending March 31, 1963—is that what you are interested in, Mr. Chairman?

Mr. PASSMAN. Could you give us the amount of our commitments to the consortium for India for 1963?

Mr. GAUD. As far as the consortium goes, the consortium year runs from April 1 to March 31.

Mr. PASSMAN. Do you get your money on a calendar year basis?

Mr. GAUD. On a U.S. fiscal year basis.

Mr. PASSMAN. What amount have you committed out of fiscal year 1963 funds?

Mr. GAUD. $396 million of development loans.

Mr. PASSMAN. $396 million in the development credit category. What amount did you request last year?

Mr. GAUD. Do you mean last year's congressional presentation?

Mr. PASSMAN. That is right.

Mr. GAUD. We asked for $450 million.

Mr. PASSMAN. And you committed——

Mr. GAUD. $396 million.

Mr. PASSMAN. Could you tell us at this time, or put in the record, with reference to the development credits, the commitments we have made that are firm?

Mr. GAUD. During 1963?

Mr. PASSMAN. Yes. Does $396 million represent the total?

Mr. GAUD. Yes, it does.

Mr. PASSMAN. Could you tell us whether or not you have any unobligated short fall carryover funds to the credit of India?

Mr. GAUD. AID met its portion of the U.S. consortium commitment which ended on March 31, 1963.

Mr. PASSMAN. What do you do with the difference between the amount allocated to the region and then to India and the amount of the commitment?

Mr. GAUD. There wasn't any more allocated to my region for——

Mr. PASSMAN. You committed all the money allocated to you for India?

Mr. GAUD. That is correct.

(The information supplied follows:)

INDIA, UNITED STATES DEVELOPMENT LOANS AUTHORIZED, FISCAL YEAR 1962

Terms for repayment by the Government of India for all loans authorized in fiscal year 1962 are 40 years, 10 years' grace, interest three-fourths of 1 percent. Some of these projects also have terms set in accordance with the nature of the project, repayable to the Indian Government in rupees by the ultimate recipient of the loan. Where such terms apply they are indicated below.

Date authorized	Title and description	Amount authorized (millions)
July 28, 1961	Cambay thermal powerplant. To finance dollar exchange cost of constructing a 250-megawatt thermal electric power station in the state of Gujarat and to provide associated transmission lines and substations. Terms to the ultimate recipient of the loan (State of Gujarat) are 20 years, with interest at 3½ percent.	$33.6
Nov. 30, 1961	Bandel thermal powerplant. To finance dollar exchange cost of constructing a 300-megawatt thermal electric power station with associated facilities at Bandel, West Bengal. Terms to the ultimate recipient (state of West Bengal) are 20 years and interest at 3½ percent.	38.0
Dec. 18, 1961	Premier Automobiles, Ltd. (second loan). To finance dollar exchange costs of importing automobile and truck dies to be used in the production of truck and auto sheet metal components. Terms to ultimate recipient are 15 years with interest at 5¾ percent.	3.0
Jan. 24, 1962	Patherdih coal washery. To finance dollar exchange costs of constructing a coal washery at Patherdih, state of Bihar. Terms to ultimate recipient of the loan are 15 years and interest at 3½ percent.	4.2
Mar. 23, 1962	General Commodity Imports. To finance a level of commodity imports necessary to the running of the economy and to the success of development efforts.	200.0
Do	Industrial Finance Corporation (2d loan). To finance dollar exchange to the Industrial Finance Corporation of India, a lending institution, which lends foreign exchange to industrial concerns. The IFC is lending to private entrepreneurs who plan to establish new industrial concerns, or who wish to expand existing plants. Terms to the IFC are 15 years with interest at 5 percent.	20.0
Do	Pamba-Kakki hydroelectric powerplant. To finance dollar exchange costs of establishing a 300-megawatt hydroelectric power generating station and associated facilities in Kerala, including dams on the Pamba and Kakki Rivers. Terms to the ultimate recipient of the loan are 15 years with interest at 3½ percent.	20.2
Mar. 28, 1962	Rayon tire cord factory. To finance dollar exchange costs of establishing (*a*) a plant to produce filament yarn and rayon tire cord fabric and (*b*) a related plant to produce rayon grade pulp from cotton linters. The plants are to be owned and operated by Delhi Cloth and General Mills, Ltd., and terms to this company are 12 years with interest at 5¾ percent.	9.8
May 29, 1962	Trombay thermal powerplant. To finance dollar exchange costs of purchasing and installing a 4th thermal electric generating unit of 125-megawatt capacity at Trombay. The ultimate recipients of the loan are 3 subsidiaries of Tata Industries Ltd., and terms to them are 18 years with interest at 3½ percent.	17.9
May 31, 1962	4th railway loan. To finance dollar exchange for the Government of India to expand and improve the railway system through dieselization.	43.0
June 26, 1962	Hindustan Motors. To finance dollar exchange costs of expanding the company's truck and automobile plant near Calcutta. Terms to Hindustan Motors, Ltd., are 10 years with interest at 5¾ percent.	15.8
Do	TELCO truck plant expansion. To finance dollar exchange costs for the Tata Engineering and Locomotive Co., Ltd. (TELCO) to (*a*) expand the capacity of a truck plant from 12,000 to 18,000 vehicles a year and (*b*) increase the proportion of domestically produced components for the trucks. Terms to TELCO 10 years with interest at 5¾ percent.	13.7
June 29, 1962	Delhi "C" thermal power plant. To finance dollar exchange costs of establishing a thermal electric generating station including three 60-megawatt thermal electric generating units and related equipment. Ultimate recipients of the loan are the Punjab State Electricity Board and Delhi Electric Supply Undertaking. Terms to these are 15 years, with interest at 3½ of 1 percent.	16.0
Do	Ramagundam thermal powerplant. To finance dollar exchange for the State of Andhra Pradesh to add a 60-megawatt turbine generator unit and ancillary facilities to the Ramagundam thermal powerplant. Terms to the State of Andhra Pradesh are 15 years, with interest at 3½ percent.	
Do	NAPCO Bevel Gear. NAPCO Bevel Gear of India, Ltd., is affiliated with NAPCO Industries of the United States. The loan is to finance dollar costs of moving and reconditioning machinery from the United States as well as the purchase of new equipment in order to set up a complete precision gear plant. Terms to NAPCO are 9 years, with interest at 5¾ percent.	2.3
	Fiscal year 1962 U.S. Development Loans to India total	445.9

NOTE.—One loan was made to India in fiscal year 1962 by the Export-Import Bank: Apr. 19, 1962, line of credit to finance procurement from United States $25,000,000 of equipment for communications, transport mining and industry. Terms were 15 years, 3 years grace, 5¾ percent.

India, U.S. Development Loans Authorized, Fiscal Year 1963

Terms for repayment to the United States for loans authorized in fiscal year 1963 are 40 years (10 years grace) at three-fourths of 1 percent. Some of these projects have terms set in accordance with the nature of the project, and repayable to the Indian Government in rupees, or to the U.S. Government, if foreign exchange is available. These terms are indicated below:

Date authorized	Title and description	Amount authorized (millions)
Oct. 17, 1962	West Coast Paper Mills. To provide dollar exchange for expansion of the papermill at Dandeli in Mysore. The expansion will increase the rated capacity of the plant and produce a wide variety of paper. Units will be constructed for the manufacture of rayon grade pulp, caustic soda, and chlorine. Terms to the West Coast Paper Mills: 13½ years, 3½ years, grace at 5¾ percent.	$6.3
Do.	Satpura thermal power. This loan will assist in financing the foreign exchange costs of equipment, materials, and services necessary to construct and place in operation a 300-megawatt thermal powerplant with ancillary facilities at Satpura, State of Madhya Pradesh. Loan terms call for ultimate recipient of loan funds to repay loan in no more than 20 years, including no more than a 3-year grace period. Interest is to be no less than 3½ percent.	25.1
Dec. 28, 1962	Central ropeway. This loan is to finance the erection of plant, machinery, and auxiliary equipment for extraction and transportation of sand by aerial ropeway from the Damodar River to the Jharis coalfield, Bihar State. This will ultimately increase the production of metallurgical or good coking and blending coal in India, essential for the steel industry. Loan terms call for ultimate recipient of loan funds to repay loan in no more than 15 years including no more than a 2-year grace period. Interest is to be no less than 3½ percent.	7.7
Jan. 11, 1963	2d nonproject (commodities). This loan is for the purchase in the United States of a wide range of commodities. This is a "1-step" loan with 1 set of terms.	240.0
Mar. 11, 1963	Chandrapura electrical thermal power, stage II. This project involves the construction and placing into operation of a 125- to 140-megawatt thermal unit as an extension to the station presently being constructed at Chandrapura with the assistance of DLF loan No. 125. Relending or other financial arrangements shall be in accordance with terms and conditions satisfactory to AID.	16.0
Mar. 30, 1963	Railway (loan V). To provide dollar exchange to purchase diesel locomotives for the Indian Railway System. This is a "1 step" loan with 1 set of terms.	15.9
May 6, 1963	Dugda coal washery II. To provide washed coking coal to the steel plants of Hindustan Steel Co., Ltd. Loan terms call for the Hindustan Steel Co., Ltd., to repay loan to the Government of India in no more than 15 years, including no more than a 2-year grace period. Interest is to be no less than 5¾ percent.	5.1
June 28, 1963	Tarapur nuclear power. To finance the dollar costs of a 380-megawatt atomic powerplant near Bombay. The U.S. Atomic Energy Commission will furnish an initial supply of fuel. This is a "2 step" loan with 2d step terms of 25 years, 5 years' grace, 3½ percent.	80.0
	Total, fiscal year 1963 U.S. development loans to India	396.1

Loans to India made by the Export-Import Bank during fiscal year 1963 are as follows:

Date authorized	Title and description	Terms	Amount authorized (millions)
Jan. 7, 1963	Union Carbide: Expansion of chemical facilities.	13 years; 3 years' grace; 5¾ percent.	$7.65
Mar. 28, 1963	Hindustan Almuinum: Aluminum fabricating plant.	do	5.0
Do.	Locomotive manufacturing: Diesel locomotives and parts.	15 years; 3 years' grace; 5¾ percent.	19.0
Apr. 4, 1963	Indian Rayon Corp., Ltd.: Expansion of yarn manufacturing plant; addition of cotton linter pulpmill.	8 years; 3 years' grace; 5¾ percent.	4.7
Do.	Bharat Forge Co., Ltd.: Forging and crankshaft facility.	9 years; 3 years' grace; 5¾ percent.	3.9
Total			40.25

WORLD BANK STUDY OF INDIA PLAN

Mr. PASSMAN. I shall read from Barron's, a national business and financial weekly. I am picking this out of a complete article dealing with India:

Yet the action taken there may echo across the continents. For 10 nations, which in recent years have joined under World Bank auspices to finance a huge program of grants and loans to India, came to a drastic decision. They slashed their annual contribution to the Asian subcontinent by no less than 25 percent, from some $1.2 billion to $900 million. Prompting the cutback was a secret World Bank study of New Delhi's faltering third 5-year plan, which apparently shocked the donors with its frank documentation of waste and mismanagement. The report, excerpts of which were leaked to the London Economist 10 days ago, details a dreary mixture of inflationary finance, price distortions, diversion of resources to nonproductive uses, and reckless Government controls. To date, despite the Economist's scoop, the bulky survey still bears a top-secret stamp, and the World Bank is forbidden to publish it without India's consent. The facts, however, by this time are known to U.S. diplomats and agencies, and to at least nine foreign governments. As the biggest single contributor of funds to India, the U.S. taxpayer surely has a right to be told just how his money has been used, and misused. Nor could there be a more appropriate time for such a disclosure than now, as Congress once again comes to grips with the perennial pros and cons of foreign aid.

I might also read this one sentence:

Unhappily, the billions already lavished on the land of the sacred cow have brought the free world but scant return.

Are you familiar with the reported catastrophe that has befallen the consortium arrangement?

Mr. GAUD. I have read that article, if that is what you mean.

Mr. PASSMAN. That is not what I mean. Have you gone behind the article?

Mr. GAUD. I was at the meeting in Paris.

Mr. PASSMAN. Is the World Bank document secret?

Mr. GAUD. My recollection is that it is classified by the World Bank.

Mr. PASSMAN. It is classified by the World Bank?

Mr. GAUD. It is confidential.

Mr. PASSMAN. Could this committee get hold of it, since we have to recommend the funds? Would we be off limits?

Mr. GAUD. I would be happy to find out, sir.

Mr. PASSMAN. If it were favorable I doubt if it would be off limits, or confidential, would it, Mr. Gaud?

Mr. GAUD. I prefer not to answer that question.

Mr. PASSMAN. I shall not push you for an answer.

We hope you can find out whether or not the document is too confidential for a copy to be made available to this subcommittee.

Mr. GAUD. I will look into it.

STATUS OF CONSORTIUM COMMITMENT TO INDIA

Mr. PASSMAN. The "India News" is published, is it not, by the Embassy here in Washington?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. I should think Nehru would call the Ambassador home if he should put out information that was not properly documented.

Therefore, I shall read from the "India News" for July 12:

Considerable pressure is understood to have been brought to bear on West Germany to improve her performance which has fallen steeply from $225 million in the first year of the plan to $139 million in the second and $65 million this year.

This gives me an indication that this world document may be a most interesting document.

The "Washington Post," in an article entitled "Consortium Pledges Aid on India Plan," has this to say:

The consortium for aid to India decided to cut credits of a minimum of $914,800,000 at India's disposition for the third year of its 5-year development plan. The period covered will be in 1963–64.

U.S. COMMITMENT

The United States, which will cover $375 million of the total decided on today, expressed willingness to increase this amount to $450 million if other nations will increase their contributions.

Did you read this article?

Mr. GAUD. I don't recall the article, but that is an accurate statement.

Mr. PASSMAN. That we are going to push ourselves up to $450 million?

Mr. GAUD. Depending on the amounts and the terms of additional aid coming from others.

Mr. PASSMAN. Who is making the pledge for the United States?

Mr. GAUD. At Paris I was the leader of the American delegation. The consortium is meeting again today in Washington.

Mr. PASSMAN. Did you have the authority when you were over in Paris and working on these things to jump an amount from $375 to $450 million?

Mr. GAUD. No, sir.

Mr. PASSMAN. Who made the decision?

Mr. GAUD. In this case the decision was made by Mr. Bell after consulting with the President.

Mr. PASSMAN. The President does not have much opportunity to go into a great deal of detail on matters such as this, does he?

Mr. GAUD. On this one he did.

Mr. PASSMAN. Tell us about it.

When did the President of the United States agree to increase the commitment from $375 to $450 million?

Mr. GAUD. There hasn't been any agreement to increase it beyond $375 million. It is a statement depending on what happens, we might be willing to go up as far as $450 million.

Mr. PASSMAN. If the others follow in 1964 as they did in 1963 and drop theirs, then could we too drop ours under the $375 million?

Mr. GAUD. The $375 million pledge is firm.

Mr. PASSMAN. If the others drop their pledges, ours is still firm?

Mr. GAUD. The other pledges are also firm.

Mr. PASSMAN. It seems obvious that they are not living up to their commitments, Mr. Gaud.

If they lower their contributions we are committed to go through with ours anyway?

Mr. GAUD. Mr. Passman, I think we have to distinguish between abandoning pledges and pledging more or less money each year.

Now, it is perfectly true, as that article says, that some of these countries have pledged less money to India this year than they did last. That is not true of a great many of the countries that belong to the consortium.

There is not, as far as I know, any case in which a country has failed to live up to its pledge or its commitment.

Mr. PASSMAN. How are we going to reconcile what you are saying with what these people say here:

Considerable pressure is understood to have been brought to bear on West Germany to improve her performance which has fallen steeply from $225 million in the first year of the plan to $139 million in the second year and $65 million this year?

Mr. GAUD. The Germans, like ourselves, had no commitment as to how much they would put up for the current year of the plan. This is a matter which is reviewed each year and each country decides for itself how much aid it thinks it ought to give India.

Now, it is true, as I said, that Germany has given less in each of these 3 years, but this is not a breach of a commitment or walking away from a commitment because there was no commitment as to what they would do in the future.

Mr. PASSMAN. You say here that we made a commitment for $375 million.

Mr. GAUD. And the Germans have made a commitment for $65,350,000.

Mr. PASSMAN. Where are we if the Congress does not allow you the $375 million.

Mr. GAUD. What do you mean?

Mr. PASSMAN. If the Congress does not appropriate the $375 million. You just said——

Mr. GAUD. I beg your pardon. I say it was subject to appropriation of funds.

Mr. PASSMAN. You did not say that a while ago. It is all right, though. We knew it belonged there.

Mr. GAUD. I said it when we were talking about Pakistan and I assume you would understand it applied to India and its consortium.

Mr. PASSMAN. If the other countries fail to make commitments to an extent that is sufficient to make this plan work, are we privileged to lower our $375 million substantially?

Mr. GAUD. If they don't live up to their commitments.

Mr. PASSMAN. If they do not make a commitment that is enough to accomplish the objectives of which this $375 million is a part, then what is our position?

Mr. GAUD. We made the commitment at $375 million at a time when that would bring the total pledges to India to $915 million; $375 million from us out of a total of $915 million. This is a firm commitment.

Now, there is going to be another meeting of the Indian consortium to see how much more these other people are willing to put up. We may go higher, depending on what they put up, but to date there are firm pledges of $915 million of which we have pledged $375 million.

Mr. PASSMAN. I read from the India News:

Since unlike last year the matching formula is to be applied rather loosely to the $75 million held in reserve by the United States, it is taken for granted this sum would be forthcoming anyhow.

Do they think we are that gullible?

Mr. GAUD. They are quite wrong. It is not going to be forthcoming.

Mr. PASSMAN. I yield to Mr. Andrews.

UNITED STATES POLICY ON AID TO INDIA

Mr. ANDREWS. I wanted to ask Mr. Gaud if he noticed in this morning's paper that one of the first if not the first thing Mr. Bowles said yesterday when he was greeted by quite a group at the airport upon his arrival in New Delhi was, "We are going to give you more aid." Did you see that in the paper?

Mr. GAUD. No; I didn't.

Mr. ANDREWS. I wanted to know if you knew what he meant by that. It was in this morning's Post.

Mr. GAUD. No, sir; I don't.

Mr. ANDREWS. I think he said, "We are going to give you more aid," and he was greeted by cheers, of course.

Mr. GAUD. Was this with reference, perhaps, to the military situation, that we were going to continue to give them military aid?

I am only guessing. I have no idea.

Mr TALBOT. It is the policy of this Government to give further aid to India.

PAKISTAN CONSORTIUM

Mr. RHODES. The shortfall in Pakistan—it seems to me to consist of some failure to keep the pledge which we made to Pakistan. Am I wrong in that assumption?

Mr. GAUD. I wouldn't characterize it that way. Our pledge to the consortium is to come up with—in this particular instance—for AID—$225 million provided they come up with projects that meet our criteria.

Now, when the fiscal year ended, a purely arbitrary date of June 30, we had approved $170-odd million of projects.

We had in the shop $81 million worth of projects from Pakistan on which we were working and which hadn't reached the final point of decision as to whether we would go through with them. So it was more a matter of not finishing by a specific date than letting up on a commitment.

That is why I say, and all consortium members agreed, that the shortfall in translating the pledges to specific loans in that plan year carries over to the next. In other words, they don't lose our $49 million.

Mr. RHODES. Since these are no-year funds, what significance does the shortfall have? It doesn't seem to me there is any significance at all to this shortfall. You didn't obligate the money because they hadn't complied with the conditions which you had set forth. Isn't it that simple?

Mr. GAUD. They wouldn't say it was that simple. They would say we took too long to study the projects or we were being too finicky or what have you. It is a question of the mechanics, if you will, not being finished by a specific date.

Mr. RHODES. Have we deobligated any funds that were previously obligated to Pakistan or the Pakistan consortium?

Mr. GAUD. At any time?

Mr. RHODES. Yes.

Mr GAUD. Yes, we have. We had made a loan to a development bank in Pakistan and it wasn't being used. We determined that the bank didn't need that much money and we deobligated it.

Mr. RHODES. Was that in this last fiscal year?

Mr. GAUD. It was in this last fiscal year.

Mr. RHODES. How much money was involved?

Mr. GAUD. $7.5 million.

Mr. RHODES. Is this one of the reasons that General Ayub was unhappy with the United States at this time?

Mr. GAUD I don't think this plays a very large part in it, no. We have made it quite clear to Pakistan, as have other members of the consortium, that this shortfall doesn't lapse. Certainly Pakistan has been critical of us over the past year. They say our standards are too tough, our criteria are too tough, that we spend too much time analyzing these applications, that we ought to be able to put the projects through sooner.

Mr. ANDREWS. Who said that?

Mr. GAUD. The Pakistanis.

Mr. ANDREWS. They are telling us we are too slow about giving them money?

Mr. GAUD. In dealing with projects which they think are important.

Mr. ANDREWS. Well, they are all important, I assume.

Mr. GAUD. But I don't think this is a major source of irritation.

Mr. ANDREWS. We found a country the other day, Mr. Gaud, that had planned about 29 projects and it was the assumption of those who made the plans that those projects would be helpful to the people but on the 26th day of June they deobligated funds for those 29 projects and took the amount involved—approximately $5.25 million—and on the last day of the fiscal year, June 30, put that money in a New York bank to the credit of that country. We asked whether or not that money was in a savings account and drawing interest for the country. They haven't supplied that information yet.

PURCHASE OF U.S. GOLD BY AID RECIPIENT COUNTRIES

Do you know of any countries in your areas that have taken grants from us and put them in the bank or bought gold with them?

Mr. GAUD. No, sir; I do not. There is only one country in our region to whom we give cash grants and that is Jordan. We give supporting assistance to Jordan to pay her governmental expenses. There is no other country in the region to which in the past year we provided money in this way.

Mr. PASSMAN. In that connection, let us deal with recent history, a report dated December 31, 1962.

Lebanon is in your area?

Mr. GAUD. That is true.

Mr. PASSMAN. I believe that we were giving them aid in 1962—we had some unliquidated credits. They bought $12.5 million worth of our gold.

Is Saudi Arabia in your area?

Mr. GAUD. Yes.

Mr. PASSMAN. They got $12.6 million worth of gold in 1962.

Syria got $1.3 million of our gold.

Turkey got $1.1 million.

Iran purchased $16.1 million of our gold in the last quarter of 1961, shortly after receiving a special allotment of $15 million in aid.

I could have named more nations but I shall not belabor the point.

However, I will say that in the first quarter of 1963 Egypt got $400,000 in U.S. gold; Iran, $5.9 million in gold; Syria, $100,000, and Turkey, $8.5 million.

It looks as if they are dealing pretty freely with their gold purchases from the United States.

Mr. GAUD. As to the 1961 purchase of $16 million worth of gold by Iran, that gold was used for a payment to the International Monetary Fund, which Iran was required to make under a stabilization agreement.

Mr. PASSMAN. We gave them a grant of $15 million. Then they buy our gold. Why did they not buy it from somebody else?

Mr. GAUD. May I finish my statement?

Mr. PASSMAN. Yes.

Mr. GAUD. As far as the first quarter of 1963 is concerned, the chairman is quite correct. There were four gold purchases by countries in this region. Turkey bought $8.5 million worth of gold in order to make a required payment to the IMF.

Iran bought $5.9 million worth of gold in order to make a required payment to the IMF.

United Arab Republic bought $400,000.

Syria bought $100,000.

Over the last 4 years, plus the first quarter of 1963, Mr. Chairman, the figures will show that the countries in this region which received economic aid purchased from the United States $271.6 million worth of gold and $92.9 million worth of that was purchased for payments to the IMF.

Of the remaining $178.7 million, all but $11.9 million was purchased by Greece, Lebanon, Iraq, and Israel.

Now, the point of that is this: Lebanon is no longer receiving economic aid from us.

Mr. PASSMAN. Do they not get back into the old grab bag for fiscal year 1964?

Mr. GAUD. No.

Mr. PASSMAN. Is not $——— proposed in military grant aid?

Mr. GAUD. I spoke of economic aid. May I continue?

Mr. PASSMAN. There are 16 aid spigots and it all depends on what spigot you use.

Mr. GAUD. The other countries, in addition to Lebanon, that made fairly large purchases of gold are: Greece, Israel, and Iraq. As the committee knows, we are reducing our aid to both Greece and Israel and because of their improved conditions, and our interest rates to them are going up to at least 3.5 percent. With Iraq we have a very small, almost marginal program. Apart from these four countries, you will find that in the last 4 years plus, only $11.9 million worth of gold has been bought by the other countries of the region.

Mr. PASSMAN. Other than the ones you have just named?

Mr. GAUD. That is right.

Mr. PASSMAN. I never did say every aid-recipient country bought our gold. Nevertheless, those are aid-recipient countries and if we go around the world in calendar year 1962 the net amount of gold pulled out of our Treasury reserves was $832.9 million.

It then follows that these nations you named are recipient nations of foreign aid.

GOLD PURCHASES FOR IMF REQUIREMENTS

Does the IMF Charter require that they buy their gold from the United States?

Mr. GAUD. I do not know.

Mr. PASSMAN. Would you try to find out if it is a requirement that they cannot buy the gold from any country but the United States?

Mr. MILLER. It is my understanding, Mr. Chairman, that gold supply from their own reserves with reference to their——

Mr. PASSMAN. I want to find out about what I asked.

Mr. MILLER. It is not required.

It is my understanding, Mr. Chairman, that the IMF rules require that the gold be sold and purchased at the standard price, so that it may be purchased from any country that sells or produces it at the world price. With respect to 1962 on a worldwide basis, as you brought up, it is my understanding that of those countries now receiving assistance during calendar 1962——

Mr. PASSMAN. We have already put that information in the record. We spent an hour and ten minutes on it the other day. Do you remember the exchange?

Mr. MILLER. Mr. Chairman, I think you were speaking about worldwide.

Mr. PASSMAN. That is what you are speaking of now?

Mr. MILLER. Yes, sir.

Mr. PASSMAN. Thank you.

ECONOMIST'S VIEW OF U.S. AID TO BOKARO STEEL PROJECT

Off the record.

(Discussion off the record.)

Mr. PASSMAN. Before we answer a quorum call, let me read an item from Newsweek for July 8, 1963:

> Would a subsidized Government steel industry be good for India itself? It is doubtful. Writing in the Indian magazine Swarajya, the American economist Milton Friedman declares: "The Achilles heel of the Indian economy at the moment is the artificial, unrealistic exchange rate * * *. So long as the exchange rate is as far as it currently is from a realistic rate, foreign assistance will simply be poured down a bottomless well."
>
> He adds, "India has become a protected economy in which items are produced domestically at a multiple of the cost at which they could be obtained from abroad."
>
> India wants a subsidized steel mill largely because a new privately financed mill at Bokaro simply would not pay. Aid for such a steel mill would be a direct American subsidy for foreign socialism. But it does not follow that our foreign aid program would be desirable even if it abstained from such follies. The principal reform needed in our foreign economic aid program is to abolish it.

We shall take a short recess to answer a rollcall.

(Thereupon, a short recess was taken.)

Mr. PASSMAN. The committee will come to order.

U.S. PLEDGE TO INDIAN CONSORTIUM

Under present plans, would our pledge to India for fiscal 1964 be $375 million?

Mr. GAUD. The Indian consortium is meeting this afternoon, Mr. Chairman, and we should know by tomorrow exactly what our final pledge is.

Mr. PASSMAN. What if we had held these hearings 90 days ago? What would have been your answer?

Mr. GAUD. I would have gone by the figure in the book, ——— million which is our best estimate.

Mr. PASSMAN. Have you at any time used the figure of $375 million as the estimate for fiscal year 1964?

Mr. GAUD. Have I at any time?

Mr. PASSMAN. Has the Agency done so?

Mr. GAUD. No, sir; it is not a final figure. When was it, about a month ago, we had a meeting of the consortium in——

Mr. PASSMAN. What is the consortium pledge at this time?

Mr. GAUD. The U.S. pledge?

Mr. PASSMAN. Yes.

Mr. GAUD. $375 million, to which was coupled a statement that, depending on what other countries in the consortium do in addition to their present pledges——

Mr. PASSMAN. If they did less?

Mr. GAUD. They cannot do less than what they have already pledged.

Mr. PASSMAN. Why can you not tell us what your plans are, if you know what they are going to do?

OTHER MEMBER PLEDGES TO PAKISTAN CONSORTIUM

Mr. GAUD. I know what they have done to date, but prior to today's meeting the pledges of other members of the consortium total $539.8 million.

Mr. PASSMAN. Is that the information which was read into the record earlier today?

Mr. GAUD. No, sir.

Mr. PASSMAN. We want a copy of the terms, amounts, and interest rates that you read into the record.

If we may, let us have that information before giving the other, let us deal with India for fiscal year 1963.

Mr. MILLER. Mr. Chairman, did you want that for Pakistan or India, the request?

Mr. PASSMAN. Pakistan.

Mr. GAUD. Mr. Chairman, 1962 and 1963, together, is it OK?

Mr. PASSMAN. Yes.

Mr. GAUD. I am talking about terms.

(The information supplied follows:)

Consortium pledges and loan terms for second and third years (fiscal years 1962 and 1963) of Pakistan's second 5-year plan

Consortium member	Total pledge (Millions of dollars or equivalents)	Interest rate (per cent)	Grace period (Years)	Duration (Years)
United States	500			
AID grants	(23)			
AID loans	(427)	¾	10	40
Eximbank loans	(50)	5¾	1 to 2	7 to 18
International Bank for Reconstruction and Development	70	5½ to 5¾	2½ to 5	10 to 25
International Development Agency	139	¾	10	50
United Kingdom	48	[1] 5½ to 6¾	5 to 7	25
Canada	38			
Grants	(23)			
Loans	(15)	6	5	15 to 20
Germany	80			
Loans	(60)	3 to 5½	5 to 7	20
Loans	(20)	6½		10
France	25	6		[2] 12 to 15
Japan	45	6	5	15
Total	945			

[1] Interest rate is the British Treasury rate plus ¼ of 1 percent. Hence there is a fluctuating interest rate as Treasury rate fluctuates.
[2] 10 years from time of delivery of equipment or completion of project.

LOANS TO INDIA FROM COUNTRIES OTHER THAN UNITED STATES

Mr. PASSMAN. I am talking about the same thing. You gave us a copy last year as an insert for the hearings.

Mr. GAUD. That is dated June 12, 1962, but it does not cover loans made in 1962 because it goes back as far as 1958.

Mr. PASSMAN. That statement was brought up to date as of June 12, 1962. That is as far as they could take us at that time.

Mr. GAUD. The only point I was making was that maybe I misunderstood you. Those are not the terms of aid only for 1962. They go back to 1958.

Mr. PASSMAN. We want now the latest information that is available.

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Let us bring it up to date, through June 30 by year, and pick it up with July 1, 1962, which is the first day of the fiscal year, and give it to us on that, too.

Mr. GAUD. Loans?

Mr. PASSMAN. Loans. With the amount, terms, and the rate of interest.

Mr. GAUD. Right.

Mr. PASSMAN. That is information we want.

(The information follows:)

Loans to India from countries other than the United States

[Dollars in millions]

Country—Free World	Loan value	Date authorized	Interest rate (percent)	Grace period (years)	Maximum maturity (years)
UNITED STATES, FISCAL YEAR 1962					
West Germany:					
Balance of payments	42.50	Sept. 14, 1961	3	7	20.
Rourkela refinancing [1]	21.30	May 4, 1962	5½	4	13.
Commodity aid	25.00	June 29, 1962	3	7	20.
United Kingdom:					
Capital goods	14.00	Nov. 10, 1961	Treasury rate +¼.	6½	25.
Do	28.00	May 23, 1962	do	7	25.
Durgapur expansion	61.60	do	do	7	25.
Japan: General loan	80.00	Aug. 18, 1961	6	5	15.
France: 3d plan loan, I	30.00	Feb. 5, 1962	5		10.
Italy: Petroleum projects [2]	45.00	Aug. 29, 1961	6		12.
Canada: 3d plan projects	[3] 10.60	Sept. 22, 1961, Jan. 19, 1962.	6	Up to 5	15 to 20.
UNITED STATES, FISCAL YEAR 1963					
West Germany:					
Maintenance support	18.75	Dec. 12, 1962	3	7	20.
Rourkela rel abilitation	14.00	do	3	7	20.
Projects	26.75	do	6¾ [4]	5	15.
Do	20.50	do	3	7	20.
Development banks	12.50	do	5½	5	20.
Rourkela expansion	100.00	Apr. 25, 1963	5¾	5	20.
Rourkela refinancing [1]	15.35	do	5¾	4	13.
United Kingdom:					
Capital goods	14.00	Sept. 4, 1962	Treasury rate +¼.	7	25.
Do	36.40	do	do	7	25.
Steel, etc	9.80	Apr. 9, 1963	do	7	25.
Japan: Textile machinery	10.00	July 20, 1962	6		10.
France:					
3d plan loan, II	20.00	Nov. 19, 1962	5		10.
Industrial Finance Corp	10.00	do	6		13.
Italy: Madras Aluminum [2]	8.80	Nov. 7, 1962	6	5	12.
Austria: Capital goods	5.00	Nov. 23, 1962	6	2	12.
Canada: 3d plan projects	[3] 14.40	Oct. 15, 1962	6	Up to 5	15 to 20.
Belgium: Capital goods	10.00	(5)	(5)		10 to 12.
Switzerland: Capital goods	11.40	July 13, 1962	Discount rate plus 3¾.		10.

[1] Original loan for Rourkela steel mill of about $157 million made in 1958 was for 3 years. This is being refinanced for longer periods as portions of the credit come due. Original credit loans and refinancings should not be added together since they represent essentially the same credit.

[2] Part of a general agreement singed Aug. 29, 1961, for extension of credits up to $96,000,000. Latter figure represents a commitment but not an actual loan.

[3] Canadian loans given in Canadian dollars, which are worth a little less than U.S. dollars. The total for the 2 years (Canada, $25,000,000 or about United States, $23,100,000) is believed correct, but the division between U.S. fiscal year 1962 and U.S. fiscal year 1963 is estimated. Canada has also given India substantial grant aid ($36,000,000 for 2 years, April 1961 to March 1963) as part of its consortium commitment.

[4] Rate charged by bank consortium which advanced the funds. It is expected that the German Government will subsidize the interest payments, reducing the rate to about 5¾ percent.

[5] Not available.

Loans to India from Soviet bloc countries

[Dollars in millions]

Country	Loan value	Date authorized	Percent interest rate	Grace period (years)	Maximum maturity (years)
DURING U.S. fiscal year, 1963					
Poland, mine equipment, etc	32.6	Nov. 16, 1962	2½		8

NOTE.—Other classified information was submitted to the committee.

U.S. PLEDGE TO INDIAN CONSORTIUM

Can you foresee any condition whereby our pledge to India for fiscal 1964 could be less than $375 million?

Mr. GAUD. No, sir.

Mr. PASSMAN. What are the possibilities you will hold it at $375 million?

Mr. GAUD. The meeting is actually going on at this minute. There is no decision yet as to what we are going to do. It is going to depend on what these other countries do.

Mr. PASSMAN. If they pledge a low figure——

Mr. GAUD. My best guess, Mr. Chairman, is that we will end up somewhere between $400 million and $425 million, but that is only a guess.

Mr. PASSMAN. That is based upon whether or not you get that much money? Would that be a fair statement to make?

Mr. GAUD. That is right.

PAKISTAN'S RELATIONS WITH COMMUNIST CHINA

Mr. PASSMAN. Ever since the United States went to India's aid when the Red Chinese invaded, Pakistan has been flirting with the Communist regime in Peiping. We discussed this briefly yesterday, but is the situation just about as it has been?

Mr. TALBOT. The situation, as far as I know, today is much the same as it was yesterday; yes, sir.

Mr. PASSMAN. I did not ask you if it had changed since yesterday. Would you say that Pakistan is "pouting."

Mr. TALBOT. I would say that Pakistan is troubled by some of our actions.

AID TERMS OF INDIAN CONSORTIUM

Mr. PASSMAN. Going back to 1964 and the consortium for India, I believe you said this would not be final until after they had concluded the present meeting?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. As you understand it presently, Austria is to be included for $3,850,000?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. What are the terms?

Mr. GAUD. Austria has not declared any specific terms.

Mr. PASSMAN. The next country?

Mr. GAUD. Belgium $10 million, not to exceed 12 years.

Mr. PASSMAN. What is the rate of interest?

Mr. GAUD. Unknown.

Mr. PASSMAN. Next country?

Mr. GAUD. Canada, $30.5 million.

Mr. PASSMAN. Terms?

Mr. GAUD. $18 million is a grant and $12.5 million will be loans, 15 to 20 years, with a 5-year grace period, and the interest will be at the Canadian borrowing cost, plus a charge. They reckon it will be from 5 to 6 percent.

Mr. PASSMAN. This will be the going rate plus a bonus?

Mr. GAUD. That is right.

Mr. PASSMAN. I would assume that all of these are about the same as we discussed earlier. That they draw interest as long as the loan is outstanding, covering the grace period?

Mr. GAUD. That is right.

Mr. PASSMAN. It is usually to the lender's advantage if he can have his money invested at a high rate of interest, is it not, speaking now with reference to an individual?

Mr. GAUD. That is right.

Mr. PASSMAN. And it usually is not a disadvantage to a nation to lend its money at interest rates of that type.

What is the next country,

Mr. GAUD. France, $20 million, 12 to 15 year terms, no grace period, partly 5 percent and partly 6 percent.

Mr. PASSMAN. Next?

Mr. GAUD. Germany, $65.35 million. One-third of this is for 20 years with a 7-year grace period at 3 percent.

The other two-thirds are 20 years, 5-year grace period, 5.5 percent.

Italy, $35 million. 12-year period, no grace period, and the market rate of interest, roughly 6 percent.

Japan, $60 million, 15-year terms, 5-year grace period, 5¾-percent interest.

Mr. PASSMAN. Next?

Mr. GAUD. The Netherlands, $11 million, two-thirds at 25 years, 7-year grace, 5 to 5.5 percent interest, remaining one-third at 10 years, no grace period, 5.5 to 6 percent interest.

The United Kingdom, $84 million, 25 years, 7-year grace, a waiver of interest payments during the grace period. Therefore there is an effective interest rate of about 3¼ to 3½ percent.

There is a very substantial amount of interest subsidy. This waiver of interest in the grace period cuts their interest rate in half.

For 1964, the United Kingdom has embarked on a new policy of subsidizing the interest to the extent of about one-half.

Mr. PASSMAN. 3¼ to 3½ percent, but the future will have to determine whether or not they are subsidizing anything. Any time you are above 3 percent you are dealing in a fairly substantial rate of interest, are you not?

Mr. GAUD. As far as their past policy is concerned, it is a very sharp turn downward.

It might interest you to know that on this $84 million pledge the difference between the prior British rate and this 3¼ to 3½ rate will mean a saving of about $30 million to the government.

Mr. PASSMAN. Interest rates in England may have gone down, but in America are they not going up?

Mr. GAUD. The interest rates have not gone down much in the United Kingdom.

Mr. PASSMAN. The fact is that they will be getting 3¼ to 3½ percent interest on these new loans?

Mr. GAUD. Correct. Still not as good as we would like but better than they were doing before.

On the United States the bulk of this will be AID loans at 40 years; 10-year grace period, three-fourths of 1 percent.

Roughly 10 or 12 percent will be Export-Import Bank loans.

The Export-Import rate is 5¾ percent.

Mr. PASSMAN. Let us also talk about AID.

Mr. GAUD. I put that in the record.

Mr. PASSMAN. We want to know about these credits.

Mr. GAUD. Forty years. Ten-year grace period.

Mr. PASSMAN. With three-fourths of 1 percent annual service charge?

Mr. GAUD. How much will that be?

Mr. PASSMAN. Yes.

Mr. GAUD. What?

Mr. PASSMAN. The amount of AID credits.

Mr. GAUD. Of the $375 million?

Mr. PASSMAN. Yes.

Mr. GAUD. We have not worked that out. We assume that is a partial figure.

Mr. PASSMAN. When can we be informed?

Mr. GAUD. After today, when the Indian Consortium finishes.

Mr. PASSMAN. Can you tell us under what conditions these hard loans, at from reasonable to high interest charges, are to be carried out?

Mr. GAUD. May I finish giving the list?

Mr. PASSMAN. You have other nations?

Mr. GAUD. Other pledges?

Mr. PASSMAN. Are there other nations?

Mr. GAUD. I would like to finish with the statement of the U.S. pledge and IBRD and IDA.

I have the AID part of it and the Export-Import part of it. There will be maturities from 8 to 12, possibly 8 to 15 years. Up to 3 years' grace.

Mr. PASSMAN. How much money is involved?

Mr. GAUD. Excuse me—I said a minute ago that has not been worked out until we know the total amount of the pledge.

Mr. PASSMAN. Eight to fifteen years and the rate of interest?

Mr. GAUD. 5.75 percent, grace period from 6 months to 3 years.

Mr. PASSMAN. Is that during the time they are withdrawing it or is it after they have completely withdrawn the funds.

Mr. GAUD. The grace period?

Mr. PASSMAN. Yes.

Mr. GAUD. It is from the very beginning.

Mr. PASSMAN. So, it may require 6 months for them actually to liquidate the commitment on shipments and therefore there would not be any grace period; is that right?

Mr. GAUD. That is, in effect, what it amounts to.

Mr. PASSMAN. Next?

Mr. GAUD. IBRD, $80 million, 15 to 25 years, 3- to 5-year grace period, interest rate of 5¾ percent.

Finally, IDA, $140 million, 50-year loan, 10-year grace period, and three-fourths of 1 percent.

That is the total.

SOURCE OF IBRD FUNDS

Mr. PASSMAN. What percentage of the total are we putting into IBRD?

Mr. GAUD. IBRD money which goes into the consortium is raised by the sale of securities by the Bank. No Government money is in that.

Mr. PASSMAN. We do not buy any of these bonds at all?

Mr. GAUD. The Government does not. Individuals may buy them as an investment.

Mr. PASSMAN. We have no investment in the IBRD?

Mr. GAUD. That is my understanding, in these funds that are lent to developing countries.

Am I wrong on that?

Mr. MILLER. It is my understanding there are two kinds of capital of the IBRD. There is callable capital and then there was an initial subscription. Mr. Gaud's statement is correct that the funds at the present time that IBRD uses are raised by public subscription for securities of the World Bank.

These funds cannot be attributed to anything except the public.

INTERNATIONAL MONETARY FUND LOANS

Mr. PASSMAN. The 80 members of the International Monetary Fund are eligible for IMF loans, are they not?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Would either India or Pakistan be eligible for a loan from the International Monetary Fund?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Is that fact taken into account in figuring the amount in the consortium?

Mr. GAUD. No, sir.

The IMF arrangements are quite separate from this.

Mr. PASSMAN. Would this be in addition to whatever loans they get from the International Monetary Fund, the things we are discussing today?

Mr. GAUD. Correct. IMF loans are short-term loans to meet immediate balance-of-payments problems. It isn't development money.

U.S. INVESTMENT IN IDA

Mr. PASSMAN. What portion of IDA's capital is provided by the United States?

Mr. GAUD. The U.S. percentage in IDA is roughly 40 percent of the hard currency subscription.

Mr. PASSMAN. Whenever we are involved in anything we get very liberal with the money? We have a pretty big part in IDA if we are in at 40 percent. Should not the record also show that if we are in for 40 percent of that account, this means it is $56 million more money actually coming from the U.S. taxpayer? Have I figured that correctly?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Gentlemen, I believe you are going to give us some more information tomorrow on the consortium arrangement?

Mr. GAUD. The Indian consortium; yes, sir.

ILLEGAL CHANGES OF GOVERNMENT IN NEAR EAST AND SOUTH ASIA

Mr. PASSMAN. Mr. Gaud, how many countries in your area—and I believe you said there are 18 of them—have had a change in government through some form of illegal procedure since you appeared before us last year?

Mr. GAUD. I never totted that up, Mr. Chairman.

Mr. PASSMAN. Is it not important? Money is usually involved and then the "outs" want to get in.

Mr. TALBOT. There have been three coup d'etats——

Mr. PASSMAN. Name the countries.

Mr. TALBOT (continuing). In the area, since we were here last year. That is, all countries which happened to have relatively small aid programs as compared with other ones.

One is in Yemen, one is in Iraq, and one is in Syria.

UNITED STATES RECOGNITION OF AND AID TO NEW IRAQ GOVERNMENTS

Mr. PASSMAN. I believe the King of Iraq was killed about 3 or 4 years ago; was he not?

Mr. TALBOT. The King of Iraq was assassinated in 1958.

Mr. PASSMAN. How long did we wait to recognize the new regime in Iraq?

Mr. TALBOT. We recognized the regime which took over in Iraq from Prime Minister Qasim in a matter of about 6 or 7 days, as I recall, after a number of Arab States and other states in the world had recognized them. During the preceding period, when Prime Minister Qasim was in charge in Iraq, I might add.

We had very limited relations with the Government of Iraq.

Mr. PASSMAN. Did we suspend aid in these countries while this was going on?

Mr. TALBOT. In Iraq we reduced our aid to the support of some exchange programs and some American professors at the University of Baghdad in an effort to keep the windows open and keep in contact with some of the ordinary people in Iraq whom we felt might be people of importance to us when the regime changed.

Mr. PASSMAN. Are you not dealing with the Government now?

Mr. TALBOT. We always deal with the Government.

Mr. PASSMAN. What amount did you reduce it to and from what amount did you reduce it?

Mr. GAUD. You are speaking of the reduction, I think——

Mr. PASSMAN. I am trying to find out if you reduced the aid.

Mr. GAUD. I think Mr. Talbot was speaking of a reduction in 1958; were you not?

Mr. TALBOT. Yes, sir.

Mr. PASSMAN. I am speaking about the recent overthrow of the Government.

Mr. TALBOT. There has been no change.

Mr. PASSMAN. They changed the Government by illegal procedure, but the aid program continued; is that correct?

Mr. TALBOT. The aid program has continued to Iraq; yes, sir.

Mr. PASSMAN. Thank you.

Mr. GAUD. It is an $800,000 program.

Mr. PASSMAN. What was the situation with regard to the other two countries?

U.S. AID TO NEW SYRIAN GOVERNMENT

Mr. TALBOT. In Syria, where a coup d'etat occurred in March 8 of this year, the new regime that has come in was recognized by us also after several days.

Mr. PASSMAN. Did we cut off aid to them?

Mr. TALBOT. No, sir. We did not cut off aid.

Mr. GAUD. In Syria we made two loans in fiscal 1962.

Mr. PASSMAN. Are you talking about these development credits, 40 years, no interest, three-quarters of 1 percent service charge, 10-year grace period?

Mr. GAUD. I am answering your question.

Mr. PASSMAN. You did not answer my question. Is that the typical type of credit?

Mr. GAUD. No.

Mr. PASSMAN. Tell us what kind——

Mr. GAUD. I was about to.

Mr. PASSMAN. There is no reason you cannot answer my questions.

Mr. GAUD. I am ready to answer.

Mr. PASSMAN. Then please do.

Mr. GAUD. In fiscal year 1962, we made two loans to Syria.

Mr. PASSMAN. You are speaking of fiscal 1963, Mr. Gaud?

Mr. GAUD. In fiscal year 1963, the total program for Syria was $200,000 for AID. I beg your pardon; fiscal 1963?

Mr. PASSMAN. Yes.

Mr. GAUD. The total program is $200,000. In fiscal year 1962, we made two loans to Syria; one of them was a 40-year loan, three-quarters of 1 percent, 10 years.

Mr. PASSMAN. In what amount?

Mr. GAUD. $14.7 million for grain storage. The other was a $9 million loan for 5 years at 5¾ percent.

Mr. PASSMAN. For what purpose?

STABILIZATION LOAN TO SYRIA

Mr. GAUD. That was a stabilization loan. Syria went to the IMF and worked out a stabilization program.

Mr. PASSMAN. Was that money for budgetary support?

Mr. GAUD. No, it was not. It was money——

Mr. PASSMAN. What was the purpose of the stabilization program?

Mr. GAUD. It was to prevent a run on their currency. The IMF came up with $6.6 million in a standby credit. We put up $9 million on the terms I stated and the Export-Import Bank put up a $5 million loan. Germany put up a $16 million loan, and Italy put up a $5 million loan.

As events turned out, Syria survived the financial crisis she was worried about. The time to spend that money expired in the first week of June 1963. They had not spent any of it so we took the $9 million back.

Mr. PASSMAN. We are right back to the old disguised grant—$14.7 million, 40 years, no interest, 10-year grace period? That is one credit and you extended two, but they only used one?

Mr. GAUD. No, sir; they were both used.

Mr. PASSMAN. I thought you said you took it back?

Mr. GAUD. Yes; but what Syria asked money for was to have it on hand in case there was a run on her currency.

Mr. PASSMAN. Did you liquidate the funds?

Mr. GAUD. Not a cent.

Mr. PASSMAN. You made a commitment?

Mr. GAUD. We entered into loan agreements with Syria saying that, pursuant to the program Syria worked out with IMF, together with these other which I listed, we would put up $9 million.

Mr. PASSMAN. An unused commitment?

Do I understand that correctly?

Mr. GAUD. It was used in the sense that they had those moneys——

Mr. PASSMAN. Did we draw a check for a credit to their account anywhere?

Mr. GAUD. We never disbursed any of this.

Mr. PASSMAN. It was a commitment but you did not disburse it? It may have served all kinds of good purposes, but you never disbursed it, and it has since been canceled?

Mr. GAUD. That is correct.

Mr. PASSMAN. How about the other, the disguised grant of $14 million?

Mr. GAUD. The loan of $14.7 million is being used for grain storage.

Mr. PASSMAN. I assume it is being spent for something, but you had one of a development-type assistance?

Mr. GAUD. Syria in 1962.

Mr. PASSMAN. How about 1963?

Mr. GAUD. The total AID program was $200,000.

Mr. PASSMAN. You know, I am going to stop arguing with you, you are too nice a fellow. You came right back and answered my question in the affirmative that you did have for Syria this disguised grant thing, and the other was just something that suited a good purpose but was never liquidated. I am recommending we appropriate all the money you want on that same basis, if you can assure the committee that you will not disburse the accounts. I am for that.

Mr. GAUD. I will make you even happier, Mr. Chairman. That loan of $9 million for stabilization was made from the Contingency Fund as a supporting assistance loan. When we took it back, it went to the U.S. Treasury and it did not come back to AID.

Mr. PASSMAN. It never did go out to start with, did it?

Mr. GAUD. If it had been a development loan and had been canceled, it would have come back to us.

Mr. PASSMAN. If you started disbursing it, could you have given it to them?

Mr. ANDREWS. Did you put that money in a bank in New York?

Mr. GAUD. It never left the Treasury.

Mr. PASSMAN. This was a paper commitment?

Mr. PASSMAN. How could it go back into the Treasury if it was never taken out?

Mr. GAUD. I was drawing a distinction. We had quite an exchange on this last year—on what happens when you cancel a loan. We brought out the fact that if it is a development loan and canceled, it comes back to AID. The chairman is fond of saying that I get it back in my own pocket, but this was not that kind of a loan.

Mr. PASSMAN. We made a commitment?

Mr. GAUD. For a specific purpose.

Mr. PASSMAN. If they had called upon the United States for the $9 million, we would have develivered it, would we not?

Mr. GAUD. That is correct.

Mr. PASSMAN. They could have had it if they had needed it, but it was never disturbed?

Mr. GAUD. It was never disbursed.

Mr. PASSMAN. Never used; so far as taking it out and putting it back? Am I right to that extent, that it was never taken out or returned?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Thank you very much.

I yield to Mr. Rhodes.

Mr. RHODES. Who was making a run on the Syrian currency at the time? What was the genesis of this?

Mr. GAUD. This was the aftermath——

Mr. TALBOT. Congressman, during the period Syria was part of the United Arab Republic there had been a whole series of currency restrictions put on Syria by the combined United Arab Republic Government.

Before that period, the currency in Syria had been freely exchangeable and when the new Government came into power in March of 1962 after Syria had separated itself from the United Arab Republic, one of the major objectives of the new Government was to make its currency convertible again. In other words, to become a strong financial factor in the regional situation rather than a weak one.

It seemed to us that this was a worthy objective and that it would help the situation generally in the area. In order to remove the restrictions on the currency without having the danger of a run at the moment that the restrictions were removed, they wanted a stabilization fund so this would function much as an assurance to a bank in our country when there is a danger of a run; but as soon as the funds are known to be available, the psychological pressure for a run may be substantially decreased.

Mr. RHODES. Actually, there was no run?

Mr. TALBOT. The run did not occur, but it did not occur, we think, to a considerable extent because the financial community in Syria and neighboring countries knew that a stabilization fund was available.

Mr. RHODES. Why was it to the interest of the United States that this currency become convertible?

Mr. TALBOT. Because that was the way in which Syria itself could strengthen its economy.

Mr. RHODES. Is this something we always do? Do we respond to the desires of nations around the world for changes in their status which certainly might be of some advantage to them, but might or might not, in the long range, be of advantage to the American people?

Mr. TALBOT. No, sir; we do not.

Mr. RHODES. I certainly can see why they would want this but I do not know why we would. I am pleased it did not cost us $9 million. I would have been displeased if it had.

Mr. TALBOT. We do not do this in all cases.

In this case we thought it was to our advantage because the newly separated, independent Syria was struggling to get onto its feet. We

thought it was to our advantage that it not collapse, that it not become part of a focal point for wider hostilities in this area.

Mr. PASSMAN. Has not that same Government been overthrown since then?

Mr. TALBOT. Yes, sir; on March 9 of this year; 1 year later.

Mr. RHODES. Do they have a convertible currency at this time?

Mr. TALBOT. They have some limitations on their currency at this time.

Mr. PASSMAN. We are not in with the same type of paper commitment at this time, are we?

Mr. TALBOT. No, sir; we are not.

SYRIAN GOLD HOLDING

Mr. PASSMAN. Is it true that Syria possesses more gold per capita than any other nation in that part of the world?

Mr. TALBOT. I have no information to indicate that that is true; no, sir.

Mr. PASSMAN. This is something we ought to know if we are making these commitments.

We were there, maybe it was in 1961, and I think the head of the Government was a general who was in jail at the time and we saw his home, where he lived. We were told by the Consul General that even with all upsets in their Government out there, nobody ever molested the gold and that they had a substantial amount of gold. They kept the gold intact to support their monetary system. Are you familiar with that situation?

Mr. GAUD. No, sir.

Mr. PASSMAN. Would you have a check made to see whether I am having one of those bad spells, or whether or not there is some justification for the statement?

Mr. GAUD. I can tell you why we basically went into this transaction.

Mr. PASSMAN. I thought you presented a good case.

Mr. GAUD. In reliance on the representation of the IMF that this was necessary.

Mr. PASSMAN. Would you check on what I have said about the large amount of gold they have, in terms of population, and ascertain if that is true, that they have generally kept their gold reserves intact even though they have had turmoil from time to time?

Mr. GAUD. We will check into that.

(The information follows:)

As the table below indicates, the Syrian Central Bank's holdings of gold, after dropping $5 million in 1959, remained constant from December 1959 to December 1962, the most recent date for which data are available. However, total gold and foreign exchange holdings fell sharply in calendar 1961 and have risen only slightly since that time. It was against this background that the Syrian Government first requested IMF, U.S., and European financial assistance in February 1962.

The central bank's foreign liabilities have risen from approximately $4 million at the end of 1960 to $27 million at the end of 1962.

Syrian Central Bank gold and foreign exchange

[In millions of dollars]

	Dec. 31, 1958	Dec. 31, 1959	Dec. 31, 1960	Dec. 31, 1961	Dec. 31, 1962
Total	46	52	50	35	43
Gold	24	19	19	19	19
Foreign exchange	22	33	31	16	24

U.S. RECOGNITION OF AND AID PROGRAM TO YEMEN

Mr. PASSMAN. I believe there is a new government in Yemen?

Mr. TALBOT. There was a coup d'etat in Yemen last September.

Mr. PASSMAN. We supported the old regime, and are we supporting the new regime?

Mr. TALBOT. We had diplomatic relations with the former regime and we had no diplomatic relations with the new regime for a period of about 10 weeks after it had taken over.

Then we established diplomatic relations with the new regime.

Mr. PASSMAN. You had an aid program going for the old regime and an aid program going for the new regime?

Mr. TALBOT. Yes, sir.

Mr. PASSMAN. Did we deobligate any of the funds under the new regime's administration that we had obligated under the old regime's administration?

Mr. GAUD. We continued with the same projects.

Mr. PASSMAN. And in the same amounts?

Mr. GAUD. Just about. We had a short period of inactivity during the revolution.

Mr. PASSMAN. But you did not deobligate any of the funds that had been obligated?

Mr. GAUD. No, sir.

U.S. POLICY ON RECOGNIZING NEW GOVERNMENTS

Mr. PASSMAN. Will we not some day, where they are overthrowing these governments and killing heads of governments, wait more than 3 or 4 days to resume our aid? I think maybe this sets a recent record—10 weeks.

They overthrow a friendly government and we wait 3 or 4 days, and in one instance 10 weeks, and then catch up the slack and go right along with our aid program?

We did not used to follow that kind of a policy, did we?

Mr. TALBOT. Our policy with respect to recognition of a regime is to recognize it when we are satisfied that the region controls the instruments of the state, has the general acquiescence and support of the people and specifically accepts the obligations of the state as those have been accepted by the preceding government.

UNPROGRAMED FISCAL YEAR 1964 DEVELOPMENT LOAN REQUEST

Mr. PASSMAN. Would you give us a brief explanation, if possible, for this request of $20 million in development credits which is unprogramed?

Mr. GAUD. Mr. Chairman, this is to cover the possibility of development loans in a number of countries such as Cyprus, Jordan, Nepal, and Syria, where we have not any specific amounts stated in our programs.

It is sort of a lump sum to cover a number of small possible lending programs.

Mr. PASSMAN. Could this money be used in one area or distributed in all of the small ones?

Mr. GAUD. It could be.

Mr. PASSMAN. It is, in effect, a form of a contingency fund?

Mr. GAUD. It is subject to this qualification: That we are dealing with loan applications from these four countries, from several of these four countries mentioned. The odds are that we will not make loans in anything like the amount of the applications that we have received. Rather than put a few million dollars in each case, we have put this down as a lump sum to cover those countries. It is a fair characterization to say "Contingency Fund."

CLASSIFICATION OF UNPROGRAMED LOAN FIGURE

Mr. PASSMAN. I appreciate your frankness. This is a contingency fund in development credits; yet you are dealing in a very large area and you have a $20 million development credit program, some people say loans, out of a very substantial amount, and the figure is classified. Why would this information be classified?

Mr. GAUD. What?

Mr. PASSMAN. The amount.

Mr. GAUD. All of these amounts are classified on development loan figures.

Mr. PASSMAN. When it is for no particular country, but a contingency account?

Mr. GAUD. For four possible countries.

Mr. PASSMAN. You do not say what countries are involved.

Mr. GAUD. No; we do not identify the amounts for the countries.

Mr. PASSMAN. You have $20 million that could be spent anywhere in your area and this is possibly 2 percent of the total amount you are requesting?

Mr. GAUD. Roughly.

Mr. PASSMAN. Yet you have the information classified?

Mr. GAUD. I agree. I see no reason for the classification.

Mr. ANDREWS. Mr. Chairman, the thought occurs to me that maybe you do not want those countries to know you have this. They might high pressure you into going along.

Mr. GAUD. You are dead right so far as the countries go where there is a figure shown. There are no countries named against the $20 million. He has a point.

Mr. PASSMAN. We know that the $20 million is only a very small part of $1 billion, and we could sit here the rest of the afternoon and, with all of us cooperating, could not give one valid reason why this figure should be classified.

Mr. ANDREWS. I am like you. I do not think any of this material you have classified should be so classified We have been told that the reason for classifying these amounts is to keep down jealousy.

Mr. PASSMAN. Here you are dealing with an area of 18 nations and there is $1 billion requested. There is a $20 million contingency fund in the total, and that is only about 2 percent of the total.

UNPROGRAMED LOAN REQUEST BY OTHER REGIONS

Mr. Controller, do we, by any chance, have this kind of situation repeated in any other areas of the overall program?

Mr. FLINNER. An unprogramed amount of development loans?

Mr. PASSMAN. Development credits. This is a new wrinkle on the old buck's horn, that we are running into contingency provisions within this account when you already have a contingency fund.

Mr. GAUD. I followed the same practice last year in picking a half dozen smaller loan programs.

Mr. PASSMAN. It is a contingency account and the information is classified. We want to find out if you have this kind of arrangement for other areas of the world.

Mr. MILLER. The Alliance for Progress has an amount for smaller countries——

Mr. PASSMAN. Can you tell me how much you have in that contingency account for smaller countries?

Mr. MILLER. In which development lending is contemplated and they have a loan section of $32 to $40 million which as I understand is to be available for the lending that is contemplated in the smaller countries.

Mr. PASSMAN. We are in every Latin American country with the exception of Cuba, and we are indirectly in Cuba, I believe. Do you agree that this is a contingency fund within a development credit account?

Mr. MILLER. You could call it an undistributed loan.

Mr. PASSMAN. You could call it ice cream cones, but that would not make it so. It is, as Mr. Gaud said, characterized as a contingency fund.

Mr. MILLER. In the Alliance for Progress——

Mr. PASSMAN. Thank you very much, Mr. Miller.

Mr. Controller, have you found any others?

Mr. FLINNER. No, sir. The only one I found is for Latin America.

PRIOR YEAR REQUESTS FOR UNPROGRAMED LOANS

Mr. PASSMAN. Mr. Gaud, I am looking at your 1962 and 1963 justifications. Tell us where we are going to find that figure that you had in last year that was classified.

Mr. GAUD. If you will look at that column, I think you will find some asterisks and if you add the figures that are given there they will come up to $810 million, whereas the total is shown as $850 million and that intervening $40 million is represented by the asterisks. The only change between this year and last year is that we have added the line, "unprogramed, $20 million."

Mr. PASSMAN. You could not have read into this last year, could you, that it was a contingency fund? I certainly agree with you that there is no justification that we can see at this time for classifying this information.

Gentlemen, as it is, we walk out of this room and either carry it up here, mentally, or there is no way to get the facts over to the Members of the House. Do you agree, Mr. Miller?

Mr. MILLER. I certainly do.

Mr. PASSMAN. There is so much a person can carry in his head, and that is all.

FISCAL YEAR 1963 DEVELOPMENT LOAN REQUEST, PROGRAM, AND CARRYOVER

Mr. FORD. Would the chairman yield there?

Mr. PASSMAN. Yes.

Mr. FORD. I am looking at the development loan figures which are unclassified at the top, which show that the minimum you propose, assuming the total is made available, would be $890 million and the maximum, $950 million.

Mr. GAUD. That is right.

Mr. FORD. Does that include this item to which the chairman referred?

Mr. GAUD. The $20 million?

Mr. FORD. Yes.

Mr. GAUD. Yes. Doesn't it?

Mr. WHITE. The $890 million does.

Mr. GAUD. The $950 million would also.

Mr. WHITE. Also, yes.

Mr. FORD. How much did you actually request last year at the time you were appearing and justifying? The minimum and the maximum.

Mr. GAUD. For development loans, $850 to $950 million.

Mr. FORD. What did you finally get for execution?

Mr. GAUD. You mean what did we finally obligate?

Mr. FORD. What was made available in the apportionment process?

Mr. GAUD. That varied during the course of the year.

Mr. FORD. You must have had a figure that was available in total during fiscal year 1963.

Mr. GAUD. To work against?

Mr. FORD. Yes.

Mr. GAUD. It was approximately $770 million.

Mr. FORD. That was what you were apportioned to operate against?

Mr. GAUD. Yes; but this figure did not always remain constant because there are requirements in the different regions as requirements varied throughout the course of the year, and as projects came through or fell through the regions might from time to time have their ceilings revised.

Mr. MILLER. Mr. Ford, if I might explain this, on page 2 if you will look it over, under "development loans, estimate, 1963," in the second series of columns there, you will see $770 million at the bottom and then a program adjustment of minus $65 million and the estimates for 1963 above that. This is a technique that was used when they allocated the funds in view of the fact that differing priorities would occur.

Mr. FORD. What did you finally obligate against this program in fiscal year 1963?

Mr. GAUD. $779 million.

Mr. FORD. What major changes took place between what you sought to justify and what you actually executed?

Mr. GAUD. Two principal changes, Mr. Ford. On was that at the time we were here last year the Indian consortium had not met and we were reckoning on a total U.S. pledge of $500 million. Our pledge turned out to be $435 million rather than $500 million so that was a short fall of $65 million. The other one was in the case of Pakistan which we discussed before you came in. Our pledge to Pakistan ended up with about $49 million uncommitted. We were still working on projects, but we had not decided to go through with them. That is about $110 million. Those are the two big ones.

Mr. FORD. 110 in the case of Pakistan.

Mr. GAUD. No; $50 million in the case of Pakistan and $65 million, or $115 million.

Mr. FORD. In other words, I could take the 779 figure which you executed and the 110 figure which you say fell through and that would be $880 million.

Mr. GAUD. This is very rough, obviously.

Mr. FORD. Wait a minute. Let me ask the questions.

Mr. GAUD. Go ahead.

Mr. FORD. So you actually ended up with more than your minimum figure in every country except India and Pakistan; is that correct?

Mr. GAUD. No. If you will look at the individual countries, some were higher and some lower than we estimated in the congressional presentation.

Mr. FORD. But the dollar availability for other than these two countries was up to the minimum of what you requested?

Mr. GAUD. Just about.

Mr. FORD. And any changes in the dollar amounts were an administrative decision. That was not predicated on the lack of dollars?

Mr. GAUD. That is correct.

INVESTMENT GUARANTEE AGREEMENTS

Mr. PASSMAN. Do we have an investment guarantee agreement with each country which is scheduled to receive economic assistance in fiscal 1964, Mr. Gaud?

Mr. GAUD. Not with all of them, Mr. Chairman.

Mr. PASSMAN. With which countries do you have such agreements?

Mr. GAUD. We have guarantee agreements outstanding with India, Pakistan, Greece, Turkey, Iran, Afghanistan, Nepal, Jordan, and Israel.

Mr. PASSMAN. Please name the ones with which we do not have a guarantee agreement.

Mr. GAUD. We do not have one with Ceylon, we do not have one with Cyprus, we do not have one with Iraq.

Mr. PASSMAN. Do you have one with Israel?

Mr. GAUD. Yes; we have one with Israel.

With Lebanon, we do not have one; Nepal, we do; Pakistan, we do; Syria we do not; Turkey, we do; United Arab Republic, we do.

Mr. TALBOT. It has just been signed.

Mr. GAUD. I did not name the United Arab Republic a while ago. We do have one there. We do not have one with Yemen.

I am advised we also have one with Cyprus. That gives us a total of 11.

Mr. PASSMAN. Out of the 18, you have 7 with which we do not have an agreement.

Mr. GAUD. OK.

Mr. PASSMAN. Could you tell us why this is so?

Mr. GAUD. Why?

Mr. PASSMAN. Yes.

Mr. GAUD. I cannot tell you out of hand; no. I cannot, sir, for the seven countries—Ceylon, Kuwait, Syria, Iraq, Yemen, Saudi Arabia, and Lebanon.

Mr. PASSMAN. In working out these agreements do you encounter much difficulty?

Mr. GAUD. I do not know whether there have been any negotiations with these particular countries. I am not posted on that.

Mr. PASSMAN. I am speaking of the ones with which we have had negotiations and have agreements in effect.

Mr. GAUD. As far as my experience has been, we have not had particular difficulty with any of these countries that I have named with which we have agreements.

Mr. PASSMAN. Would you give some thought to it being one of the conditions upon which they would get aid, to enter into one of these agreements? It is merely guaranteeing American business that invests there against expropriation or losses from the manipulation of currency, isn't that correct?

Mr. GAUD. Yes.

Mr. PASSMAN. I think that if a country would not give you the assurance that there would be no dishonest manipulation of currency to break the American businessman and that they will not expropriate unfairly, there is scant reason for giving them aid.

Mr. MILLER. Mr. Chairman, if I might say a word on this. In the last year there has been great progress in signing of investment guarantee agreements.

Mr. PASSMAN. We know that. My suggestion was simply, would you not give some thought to whether or not it would be feasible and advisable to make this type of agreement a part of the contract?

Mr. MILLER. This is what I was suggesting.

Mr. PASSMAN. For them to receive aid.

Mr. MILLER. Because of the rapid progress we have made, 13 signed out of the 52 within the last year, or over 13——

Mr. PASSMAN. You have one-third in Mr. Gaud's area that are not in under the agreement. Six of them are getting aid.

Mr. MILLER. We believe we are making such rapid progress——

NUMBER OF INVESTMENT GUARANTEE AGREEMENTS WORLDWIDE

Mr. PASSMAN. With how many nations, worldwide, do we have such agreements?

Mr. MILLER. Over 52.

Mr. PASSMAN. Does that mean 53 or 98?

Mr. MILLER. We have been signing them so fast——

Mr. PASSMAN. How many did you have the last time you counted them?

Mr. MILLER. The last time I counted them it was 52.

Mr. PASSMAN. That is exactly 50 percent of 104 aid-recipient nations.

Mr. MILLER. Many of those nations included within the 104 are developed nations.

Mr. PASSMAN. If you go into your favorite haberdashery establishment and make a purchase, you count your change when it is handed to you, do you not?

Mr. MILLER. Sir, on the aid program?

Mr. PASSMAN. If you go in and make a purchase in a restaurant say, of a Coca-Cola, you give them $1 bill. Do you usually count your change?

Mr. MILLER. Yes.

Mr. PASSMAN. It is a habit that helps keep some people honest.

Mr. MILLER. I am sorry——

Mr. PASSMAN. Do we have any of these investment guarantee contracts through which we guarantee their nation and they guarantee us?

Mr. GAUD. Not that I know of.

Mr. PASSMAN. I do not know why, if we set forth the purpose of helping them, we should not pledge to each other that we agree we will never take undue advantage of one another.

I think we have been too quick on the draw in the past. We are too anxious to give the money away and we do not get reasonable safeguards.

LOANS TO DEVELOPMENT BANKS

What is the total amount of money that you have committed to date to the intermediate credit institutions in your area?

Mr. GAUD. Going back from the beginning you might say, including the DLF?

Mr. PASSMAN. Yes.

Mr. GAUD. The total figure I believe, sir, is $153.8 million.

Mr. PASSMAN. To intermediate credit institutions. How many in number?

Mr. GAUD. There are——

Mr. PASSMAN. Just put the list in the record. Will you do that?

Mr. GAUD. Yes. There are loans to development banks in 10 countries.

Mr. PASSMAN. Put the pertinent information in the record, if you will, sir.

Mr. GAUD. We will do that.

(The information requested follows:)

Loans to intermediate credit institutions, fiscal year 1959 to July 1963, Near East and south Asia

Country	Borrower	Signed	Amount (millions)
Egypt	Industrial Development Bank	Aug. 31, 1960	$6.0
Greece	National Bank	Nov. 5, 1962	5.0
	Economic Development Finance Organization	do	5.0
Iran	Industrial & Mining Development Bank	Nov. 19, 1959	5.2
Israel	Industrial Development Bank	May 12, 1959	10.0
	do	Sept. 7, 1961	10.0
Lebanon	Agriculture, Industrial & Finance Development Bank.	May 4, 1960	5.0
Syria	Industrial Development Bank	Aug. 15, 1960	.5
Turkey	do	Sept. 12, 1958	10.0
India	Industrial Finance Corp	Dec. 7, 1960	10.0
	ICICI	Mar. 23, 1961	5.0
	National Small Industry Corp	Apr. 10, 1961	10.0
	Industrial Finance Corp	June 28, 1962	20.0
Nepal	Nepal Industrial Development Corp	June 20, 1961	.4
Pakistan	PICIC I	Dec. 4, 1958	4.2
	PICIC II	Jan. 15, 1960	40.0
	PICIC III	May 12, 1961	7.5
Total at July 15, 1963			153.8

SECTION 202(b) COMMITMENTS

Mr. PASSMAN. Have you made any section 202(b) commitments to any country in your area?

Mr. GAUD. Not since 1962.

Mr. PASSMAN. How many did you make in 1962?

Mr. GAUD. One.

Mr. PASSMAN. Was that one to Pakistan?

Mr. GAUD. Pakistan.

Mr. PASSMAN. Do you have any plans for 202(b) commitments in subsequent years?

Mr. GAUD. We have none in process.

Mr. PASSMAN. Thank you.

TOTAL CUMULATIVE AID TO INDIA

Page 21 of the justifications indicates U.S. capital assistance to India during fiscal year 1964 is estimated at approximately ———; is that correct?

Mr. GAUD. Maybe I have the wrong book. I figure ———.

Mr. PASSMAN. It is classified. It is on page 21.

Mr. GAUD. You are quite right, sir, that is AID and Export-Import, and subject, of course, to what happens.

Mr. PASSMAN. I think that on June 30, 1962, our aid to India amounted to $4,265,500,000. Could you add to that——

Mr. GAUD. The fiscal year 1963 aid?

Mr. PASSMAN. Yes; to get a total.

Mr. GAUD. 4 billion——

Mr. PASSMAN. I am speaking now only for fiscal year 1963.

Mr. GAUD. I beg your pardon.

Mr. PASSMAN. I want to add that sum to the figures you gave us last year.

Mr. GAUD. You want the military also?

Mr. PASSMAN. Everything; total.

Mr. GAUD. $828.7 million.

Mr. PASSMAN. Sir?

Mr. GAUD. You heard me right, sir.

Mr. PASSMAN. Get the ammonia, please.

Mr. FORD. What was that figure again, for what purposes?

Mr. PASSMAN. From all spigots.

Mr. GAUD. All purposes.

Mr. FORD. In India?

Mr. PASSMAN. That includes Public Law 480, military assistance, Export-Import Bank, all categories of aid.

That means our total aid to India has been $5,094,100,000?

Mr. GAUD. My figure here is $4,695,800,000.

Mr. PASSMAN. The $828.7 million is correct, is it not?

Mr. GAUD. My 1962 figure was——

Mr. PASSMAN. I am asking you to take your own statement and have a look at it, at your pleasure, to see whether this amount is correct. You recognize this as the Agency statement, I believe?

Mr. GAUD. All right, sir.

Mr. PASSMAN. You do that, if you will.

COMPARISON OF AID LEVELS TO VARIOUS COUNTRIES

Mr. RHODES. Is that the highest amount of aid which the United States gives or has given to any country in the last fiscal year? Perhaps Mr. Miller should answer that.

Mr. GAUD. It sounds safe.

Mr. MILLER. For fiscal year 1963, yes; that is the highest amount.

Mr. RHODES. Have we ever given any more aid than that to any country since the beginning of the program, including the Marshall plan, in any one year?

Mr. MILLER. I would have to check it.

Mr. RHODES. Furnish that for the record, if you will.

Mr. MILLER. I do recall that in the 4-year period 1954 to 1958, more was given to Korea than was given 1958 to 1962 to India. I do not have any figures on that. I will check it.

(The information supplied follows:)

Countries receiving more than $500,000,000 of foreign assistance (military and economic) in any fiscal year, fiscal years 1949–62

[In millions of dollars]

Country	Year	Amount	Country	Year	Amount
India	1960	758		1950	733
	1961	668	Italy	1949	684
	1962	775		1953	521
France	1949	1,313	Japan	1949	502
	1950	716	Korea	1956	610
	1951	781		1957	609
	1952	748		1958	622
	1953	1,507	Netherlands	1949	505
	1954	770	United Kingdom	1949	1,614
	1955	502		1950	958
Indochina	1954	1,112		1953	564
Germany (Federal Republic)	1949	1,257			

Source: Agency for International Development.

Mr. RHODES. There is a difference, though. The Korean people have decided they like us and the Indian people are still trying to make up their minds.

Mr. FORD. How does that $828 million compare with fiscal year 1962?

Mr. GAUD. Fiscal year 1962 with $775 million. There is one difference. In 1963 there was military equipment amounting to $60 million; also the Export-Import Bank loans were higher and the Public Law 480 was substantially higher; 1962 was a low year for Public Law 480; 1962 for Public Law 480 was lower than either 1961 or 1960.

COMPARATIVE AID LEVELS TO COUNTRIES IN NEAR EAST AND SOUTH ASIA

Mr. FORD. Is there any reason we cannot have in the record comparative chart material showing for the last 10 years aid to India by category?

Mr. GAUD. No reason in the world. It is right here on this tabulation.

Mr. PASSMAN. Insert the tabulation in the record, if you will; will you do that, sir?

Mr. GAUD. Yes, indeed.

Mr. PASSMAN. On page 47, it is estimated that you will have a program for Turkey of $———; is that correct?

Mr. GAUD. This is the 1964 program?

Mr. PASSMAN. Yes.

Mr. GAUD. And your figure was——

Mr. PASSMAN. $———.

Mr. GAUD. Right.

Mr. PASSMAN. Page 41 of the justifications would indicate that the fiscal year 1964 estimate for Pakistan is $———; is that correct?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Would you supply for the record the same type of information on Pakistan that was requested on India?

Mr. GAUD. For the 10-year period?

Mr. PASSMAN. Yes.

Mr. GAUD. Yes; we will.

Mr. PASSMAN. Will you also submit to the committee a table showing assistance extended to other countries in your area for the same periods?

Mr. GAUD. Each country?

Mr. PASSMAN. Yes.

Mr. GAUD. For 10 years?

Mr. PASSMAN. Yes.

Mr. GAUD. Yes, sir.

[1] Less than $50,000.

Mr. PASSMAN. There are 18 countries in your area?

Mr. GAUD. There are 18 countries.

Mr. PASSMAN. There is one of these countries, Kuwait, to which we do not give aid?

Mr. GAUD. Yes, sir.

Mr. ANDREWS. Why aren't we giving them any aid, Mr. Chairman?

Mr. GAUD. They are in the aid business themselves, Mr. Andrews.

Mr. PASSMAN. They are about to drown, speaking figuratively, in oil.

Mr. FORD. Have we ever studied their aid program organization chart and setup?

Mr. GAUD. It is somewhat smaller than ours.

Mr. FORD. Dollarwise?

Mr. GAUD. Dollarwise. I thought you meant personnelwise also.

FISCAL YEAR 1963 OBLIGATIONS FOR NEAR EAST AND SOUTH ASIA

Mr. PASSMAN. Page 2 of the justifications indicates that your development credit program for fiscal year 1963 was estimated to be $770 million; however, on page 3 of the project book you indicate that through February 28 you had approved only $414,575,000 of such credits; is that correct?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Did you have to work your people overtime in the closing days?

How did you manage to obligate so much money in such a short period of time?

Mr. GAUD. We did obligate a total of $779.5 million by the end of the fiscal year, sir.

Mr. PASSMAN. In the last 4 months you increased your obligations by $414,575,000, up to the $779 million?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Could you tell us how much you obligated during the month of June?

Mr. GAUD. Yes, sir.

Mr. Chairman, if my arithmetic is right, we obligated in June, $196.7 million.

Mr. PASSMAN. You do not have a limitation with relation to obligations in the development credit section, do you?

Mr. GAUD. In terms of when we can obligate.

Mr. PASSMAN. Yes.

Mr. GAUD. We do not.

CASH TRANSACTIONS

Mr. PASSMAN. I note that you have $34 million as an estimate for cash transaction under the supporting assistance program; is that correct?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. What country in your area is scheduled to receive this type of grant assistance in fiscal year 1964?

Mr. GAUD. ————

Mr. PASSMAN. How much?

Mr. GAUD. $34 million.

Mr. PASSMAN. That is more than they collect in revenue from their own people; is it not?

Mr. GAUD. I believe it is.

Mr. PASSMAN. Thank you.

AID TO EDUCATION

What amount do you plan to spend on the education activity in your area in 1964?

Mr. GAUD. The total amount, Mr. Chairman, is $14,577,000.

Mr. PASSMAN. How much do you have in development credits?

Mr. GAUD. For education?

Mr. PASSMAN. Yes.

Mr. GAUD. You are talking 1964? Of course, I cannot tell you how—I cannot tell you exactly how that money will be spent in 1964.

Mr. PASSMAN. If it is in the field of education, you are bound to be able to give us an estimate.

Off the record.

(Discussion off the record.)

Mr. PASSMAN. The others have been able to give similar information to us.

Mr. GAUD. In development loans for 1964?

Mr. PASSMAN. Yes.

Mr. GAUD. I cannot think of a single instance in which we have used development loans for education institutions in this region and I certainly know of no applications for it for this coming year, sir.

Mr. PASSMAN. So far as you know then, the figure that you have just listed, $14,577,000, would be the total?

Mr. GAUD. That is correct.

Mr. PASSMAN. In another area it was $32,913,000 plus $26 million, bringing it to a total of $58,913,000. The development credit part was as much as that listed on the divider sheet. But, as far as you know the $14,577,000 will be the total?

Mr. GAUD. That is right.

Mr. PASSMAN. Thank you.

ILLUSTRATIVE NATURE OF AID REQUEST

Under the development credit part of your request, you can give us an estimate of the total amount that you need for your area, but so far as the amount committed to each country and for what projects, those matters are determined after you get the money?

Mr. GAUD. That is correct.

Mr. PASSMAN. And on all others for development assistance, the several other categories of grant aid, where you are justifying individual projects, that too, is on an illustrative basis?

Mr. GAUD. That is true.

Mr. PASSMAN. You justify the funds from an illustrative standpoint, which means, in effect, that the law is broad enough so that you could substitute a different set of projects than those for which you justified the funds?

Mr. GAUD. That is right, sir.

Mr. PASSMAN. You could even take the funds out of country B, for which you justified them, and transfer then to country X?

Mr. GAUD. That is correct.

Mr. PASSMAN. Then we do agree that this thing is very broad and flexible; is it not?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Thank you.

When we speak of a plan or planning ahead, under section 202(b) of the act you could commit, we shall say, $225 million to a country and only after you get the $225 million, under 202(b), would you then plan as to how you are going to spend it?

Mr. GAUD. You could do that; yes.

Mr. PASSMAN. So we are not speaking of something that has been planned; we are talking of a country plan, and the projects that the money may be spent for are encompassed within a plan to be developed after you get the money?

Mr. GAUD. That is right.

Mr. PASSMAN. Mr. Rhodes?

SECTION 202(B) COMMITMENT

Mr. RHODES. Mr. Gaud, do you have any 202(b) agreements in your area?

Mr. GAUD. No; we had one for Pakistan liquidated the year 1963. We have none from here on—none ahead of us.

Mr. RHODES. Do you have any plans to conclude any?

Mr. GAUD. We have nothing in process at the moment. We do not.

Mr. RHODES. I know you have nothing in process. That wasn't my question. Do you have any plans or do you have any ideas of concluding any?

Mr. GAUD. We have nothing concrete, no. I merely am saving a reservation.

Mr. RHODES. You are reserving, or you have a mental reservation somewhere about 202(b), I gather.

Mr. GAUD. Let me spell it out.

Mr. RHODES. I wish you would.

Mr. GAUD. At the present time we have no prospects, no plans to enter into any 202(b) commitments during this fiscal year. However, we belong to four consortia in this region, India, Pakistan, Turkish, and the Greek. There is continuing pressure on the part of the countries that receive these funds to get long-term commitments, rather than from year to year, and as you know in both India and Pakistan we did make 2-year commitments a couple of years ago. I know that subject will be raised in a number of these cases this year. Whether we will go to a 202(b) commitment in case of any of the consortia I have no idea.

Mr. RHODES. It strikes me as being worthy of comment, that a few years ago there was such a great furor over the necessity for some gadget by which the United States could commit itself to development loan programs at the time of the enactment of authorizing legislation. Yet the enactment which came as a result of that pressure, which is section 202(b), has been used quite sparingly.

I am not complaining. I am pleased that it has been used sparingly but does this not indicate some change in the feeling of the people downtown toward the necessity of having such a gadget, or is it an

increased confidence that Congress really will honor the commitments made by the people in the executive?

Mr. MILLER. I think we could say that it is our view that 202(b) commitments should be used very sparingly and we have. I think we are reasonably satisfied with those commitments that have been made and, in connection with the future, we can only say that we would use it only in those situations in which we really believe that a long-term commitment over a long period of years is necessary. As Mr. Gaud stated, because of the consortia and other situations, we have not found we are in that kind of position at the present time. We always have confidence in the Congress.

Mr. RHODES. I was in hopes you would add that.

It would seem to me, however, that if there was ever a situation in which a device similar to 202(b) might be needed it would be in the event of negotiation through consortia. As I say, I am pleased that the administration has not seen the necessity for using it.

Mr. GAUD. There is another possibility, Mr. Rhodes, which again we might as well throw on the table and that is in the case of a very large project, one might conceivably use the 202(b) power to spread the commitment over a period of years.

Mr. RHODES. Of course, the Indus commitment is really not a very small thing.

Mr. GAUD. But that is made under special legislation.

Mr. RHODES. That is right.

I have no further questions.

AFGHANISTAN

Mr. PASSMAN. The first country in Mr. Gaud's area is Afghanistan, for which the request is ——— for fiscal year 1964, is that correct?

Mr. GAUD. Yes.

Mr. PASSMAN. That figure is ——— over fiscal year 1963.

Mr. GAUD. Fiscal year 1963 was $17,700,000; yes, sir.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

BORDER DISPUTE BETWEEN AFGHANISTAN AND PAKISTAN

Mr. PASSMAN. Do you remember when you were before the committee last year we discussed the border dispute between Afghanistan and Pakistan, and that we had accumulated several million dollars worth of aid goods on the border and we had some difficulty getting Afghanistan to open the border for us to get the aid through?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Then subsequently, in examining the total amount, we found that there was a sizable amount of money out of the contingency fund, if I remember correctly——

Mr. GAUD. That is right.

Mr. PASSMAN (continuing). That went into a total package, and we were told then the reason that you wanted to fund this project years in advance of completion was that we might have trouble getting the materials and the supplies in, so you wanted to accumulate them on the border, and if they should open the border, then we could take them

on in at one time, and if they did not open the border, that we might be able to use the materials elsewhere?

Do you remember that exchange?

Mr. GAUD. No, sir. I do not remember that that was my testimony. May I say it the way I remember it?

Mr. PASSMAN. Yes.

Mr. GAUD. That it is quite true that we funded out of the contingency fund the contract for the Kabul-Kandahar Road.

Mr. PASSMAN. When did you get some of the material across the border?

Mr. GAUD. In February.

The border was open for a 60-day period starting on January 29, 1962.

Mr. PASSMAN. For the purpose I indicated?

Mr. GAUD. Afghanistan agreed to open the border so that we could put across the goods which had been caught there when the border was closed.

Mr. PASSMAN. It was Afghanistan's second part that we were having trouble with. They were the recipients but they were the ones holding up the material.

Mr. GAUD. At that point it was, you might say, a mutual dispute. The border was closed as a result of the mutual dispute. They did agree to open the border and this stuff went through. Now subsequently——

Mr. PASSMAN. Was it Afghanistan who delayed approving the agreement to open the border?

Mr. GAUD. At that point?

Mr. PASSMAN. Yes.

Mr. GAUD. My recollection is that it was mutual. Wasn't it?

Mr. TALBOT. Yes, sir. You will recall there was a very deep dispute between the two countries which led them to break off diplomatic relations and this dispute went on from the beginning of September 1961 until some months ago and you will be pleased to know that the Governments of Pakistan and Afghanistan have now agreed to the resumption of diplomatic relations, including the reopening of the border, so the traffic will be normalized across the border between Pakistan and Afghanistan.

Mr. PASSMAN. Let me read your testimony from the record:

> If the border does not open, if the material is there, and we cannot get it in through Pakistan, there remains a possibility which we are not a bit enthusiastic about of getting it in through Iran. There is also the possibility of using this material in Pakistan where there are a great many construction projects of the same sort, basically.

Mr. GAUD. Yes, sir.

Mr. PASSMAN. That documents what I just said.

Mr. GAUD. The point that I wanted to come to was the earlier point in your statement as to why we obligated the money in June.

The reason that we obligated the money in June was that this contract had certain options in it and we had a right to exercise—it covered six segments of a road, if you will remember.

Mr. PASSMAN. I am quite familiar with the reasons why you did it. I wanted to find out if the material had gotten through.

Mr. GAUD. I know——

Mr. PASSMAN. We went over this last year.

Mr. GAUD. Let me just say, if I may, why I objected to your statement.

Mr. PASSMAN. Why you did what?

Mr. GAUD. Objected to your characterization of my testimony. We did not exercise the option in order to pile the stuff up at the border. As I have testified last year, we exercised the option because the Corps of Engineers told us that if we did not exercise the option by June 14, 1962, it would cost us many millions of dollars more than the option prices and on page 348 of my testimony I give the reasons for that.

Now you are quite right, sir. Having exercised the option I did testify last year that the border was not open and we were considering the possibility of piling this stuff up at the border so that it would be ready so the contractor could go forward when the border opened. Now, in fact, we did not do this.

Mr. PASSMAN. What you have just said was a supplement to what you said previously when someone was sitting by you and whispered the second thought, while you were sitting there last year. I wanted to ask if you did accumulate the material at the border after last year, after you left the committeeroom.

Mr. GAUD. After we left the committeeroom certain material arrived at the border. First, there were 400 tons of equipment and spare parts which had been ordered prior to the dates that we are speaking of. They arrived there after the border closed and they remained there until January 1963, when they were shipped to Afghanistan via Iran. The only other item that we sent to the border after I testified here last year was 1,500 tons of asphalt. That was ordered by the contractor in July 1962, shortly before I testified here. That arrived at the border in the fall of 1962 and it is still there. We did not store anything else at the border.

Mr. PASSMAN. Let me read some of your comment from the record for last year:

> We want to be in position to go forward with the roadwork as soon as we possibly can so we decided to take up the rest of the contract and procure the materials and have them shipped to Karachi, Pakistan, on the assumption that the border in due course will open. If the border does not open, if the material is there and we cannot get it through Pakistan, there remains a possibility, which we are not a bit enthusiastic about, of getting it in through Iran. There is also the possibility of using the material in Pakistan where there are a great many construction projects of the same sort basically. Now we did this, taking a calculated risk that we would be able to get the stuff through Pakistan.

I think it was established that the responsibility was on Afghanistan, the recipient of the aid, to open the border. Pakistan was willing to do this.

Mr. GAUD. That was certainly true.

Mr. PASSMAN. Here is a country that we want to give tens of millions of dollars to, but they are not willing to open their own border to receive our generosity.

Mr. TALBOT. The fact, Mr. Chairman——

Mr. PASSMAN. Let me finish, if I may.

KABUL-KANDAHAR ROAD PROJECT

How much of the total amount of this package that we discussed last year, including the Contingency Fund, did you obliterate for Afghanistan?

Mr. GAUD. The whole amount.

SHIPMENTS INTO AFGHANISTAN THROUGH IRAN

Mr. PASSMAN. How much of the total amount have you gotten into Afghanistan?

Mr. GAUD. For this road project?

Mr. PASSMAN. Yes. That is the only project you had going there then.

Mr. GAUD. We have shipped through Iran 7,549 tons of aid supplies for Afghanistan.

Mr. PASSMAN. What is the value of these supplies?

Mr. GAUD. I am sorry, I haven't got that.

Mr. PASSMAN. Did you increase your aid program to Iran last year?

Mr. GAUD. No, sir.

Mr. PASSMAN. How much did you have for Iran last year?

Mr. GAUD. What was our aid program in Iran?

Mr. PASSMAN. Yes.

Mr. GAUD. The total aid program in Iran last year was $23,410,000.

Mr. PASSMAN. Did that aid have anything to do with the matter of their letting us get there to get the stuff into Afghanistan?

Mr. GAUD. No, sir.

UNLIQUIDATED OBLIGATIONS

Mr. PASSMAN. How much do you have unliquidated of this package we discussed last year?

Mr. GAUD. For this project, roughly $30 million.

Mr. PASSMAN. You have $30 million of the total?

Mr. GAUD. Of the total——

Mr. PASSMAN. The total last year.

Mr. GAUD. Well, I haven't got it broken down by fiscal year.

Mr. PASSMAN. We need that information because we discussed a fixed sum last year. You were funding this project many years in advance of completion date; is that correct?

Mr. GAUD. Yes, that is right.

Mr. PASSMAN. We were even taking money out of the contingency fund to fund projects that might not be completed for 7 or 8 years. Do you believe any more of the money will be liquidated on the project?

Mr. GAUD. Yes, sir. The project is going forward.

AFGHANISTAN-UNITED STATES RELATIONS

Mr. PASSMAN. Is their attitude as hostile now as before?

Mr. GAUD. The Afghan attitude?

Mr. PASSMAN. Yes.

Mr. GAUD. No, sir. It is quite different. I think Mr. Talbot would like to speak about that.

Mr. PASSMAN. All right, sir.

Mr. TALBOT. Thank you, Mr. Chairman.

It is our judgment that the fact we were prepared to continue our assistance program to Afghanistan during the period——

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. PASSMAN. You never did stop it so far as I know. You have had an aid program going on in Afghanistan for the past 10 years, have you not?

Mr. TALBOT. Yes, sir.

Mr. PASSMAN. Thank you.

Mr. TALBOT. I said, Mr. Chairman, the fact that we were willing to continue our assistance program to Afghanistan during the period of their dispute with Pakistan, which had led to the breaking of relations between the two countries, has to our mind been a significant and important factor in the current position of Afghanistan, which is dependent much less on the Soviet Union than we think it would have been otherwise and which in recent months has seen a change in the Government and a new Cabinet, which for the first time in Afghanistan history so far as I know is composed entirely of commoners.

Mr. PASSMAN. Who appoints them?

Mr. TALBOT. A Cabinet which is drafting a new constitution, which will broaden the franchise and will I think speed up the processes of modernization in Afghanistan. We feel, therefore, that this program has been very worthwhile.

Mr. PASSMAN. We are in 104 of the other 112 nations, beginning after World War II with the Marshall plan, in Communist nations, neutralist nations, nations who are not on our side, nations who are two-thirds against us, friendly nations—we are in all of them, and, whatever we do, there is always a reason.

Mr. TALBOT. I hope there is a reason for whatever we do.

Mr. PASSMAN. I am not going to tell the story again about me breaking my leg running to the end of the rainbow.

Mr. RHODES. Would the chairman yield?

Mr. PASSMAN. Mr. Rhodes.

Mr. RHODES. Mr. Talbot, is this another reason why Pakistan is displeased with the United States?

Mr. TALBOT. No, sir; this is not, because the opening of the border was agreed to by the Governments in Pakistan and Afghanistan.

Mr. RHODES. I am not talking about that. You said one reason Afghanistan seems to be friendly toward us is our willingness to provide aid during the time they were having their dispute with Pakistan. Now if Afghanistan was happy, is it too farfetched to think that the corollary is that Pakistan was unhappy?

Mr. TALBOT. I do not believe, Mr. Rhodes, that this has been a factor in Pakistan's unhappiness with the United States of any appreciable proportion.

Mr. RHODES. It seems to me that this is a perfect case, this one and India, where we have two nations which have been neutral at the very best, unfriendly at the very worst and in between them a nation which has always been friendly, yet, because of our desire, almost mania, to

make people who do not like us love us, we apparently have alienated the one that had always been friendly to us.

Mr. TALBOT. Well, sir, on the attitude of Pakistan, first may I say that we do have a firm alliance with Pakistan, that we have given Pakistan a privileged position; that as you have noted, our aid program is very much larger to Pakistan than to India in terms of the total size of the economy or the population.

Mr. RHODES. I did not note that. You did. I certainly have not said that.

Mr. TALBOT. The fact is that our aid program to Pakistan is about twice as large.

Mr. GAUD. Relatively speaking.

Mr. TALBOT. As is that to India in comparison with the population of the two countries and our concern in the military assistance that we have been giving India in recent months, has been to strengthen that whole subcontinent against Chinese Communist threat of aggression, and we trust that it will be possible for Indian and Pakistan to compose their differences. We are very glad that Pakistan and Afghanistan have made such progress in composing their differences.

Mr. PASSMAN. It appears to me that our position with Pakistan has become worsened and their interest with Communist China has become better over the past few months.

Mr. TALBOT. In this past year. Yes; this is correct. This is a strain on our relationships and not a break in our relationships.

Mr. GAUD. As far as the Pakistan-Afghanistan situation is concerned, I think it is fair to say that while the Pakistani had their dispute with Afghanistan they would much sooner have Afghanistan independent on their border than have Russia in there and they welcome our aid program to Afghanistan. I don't think there is any question about that.

SHIPMENTS THROUGH IRAN TO AFGHANISTAN

Mr. ANDREWS. If I remember correctly, last year, Mr. Gaud, you said you could get this material into Afghanistan through Pakistan cheaper than through Iran?

Mr. GAUD. That is true.

Mr. ANDREWS. But most of it went in through Iran.

Mr. GAUD. No, sir; I said we had shipped about 7,500 tons in through Iran. That is a very small part of the total amount needed to carry out this contract. We have shipped in through Iran in the past year as little as we could to keep the contractor going. Now, this has cost more money, there is no question about that, and the total amount it has cost to ship that in there is about $369,000 but we have not sent in any more through Iran than was absolutely necessary, hoping for the day when the border would reopen when we could ship the rest of it through Karachi.

Mr. ANDREWS. The border was reopened in January and February of this year?

Mr. GAUD. No, sir; that was 1962 and it isn't open yet again.

Mr. ANDREWS. How much stuff do you have stacked up in Pakistan?

Mr. GAUD. Nothing, except the 1,500 tons of asphalt.

Mr. ANDREWS. Was that there last June?

Mr. GAUD. That got there in the fall of 1962. It was ordered in July 1962.

Mr. ANDREWS. Since you were before the committee last year.

Mr. GAUD. It was ordered just before I testified.

MATERIAL FOR AFGHANISTAN PROGRAM HELD UP IN PAKISTAN

Mr. ANDREWS. Is that all that is stacked up on the outside?

Mr. GAUD. That is all that is stacked up in Pakistan.

Mr. ANDREWS. What is the dollar value of that?

Mr. GAUD. The 1,500 tons of asphalt? About $270,000.

ADDITIONAL COSTS TO SHIP VIA IRAN

Now let me give you the whole story, Mr. Andrews. I said we have 7,500 tons of that stuff that has arrived in Afghanistan through Iran. There is another 6,600 tons en route between here and there.

Mr. ANDREWS. What is the destination of that material which is en route today?

Mr. GAUD. That is en route through Iran into Afghanistan.

Mr. ANDREWS. Adding to the cost?

Mr. GAUD. Adding to the cost and the cost of delivering that we estimate will be—an additional cost, $455,000.

Mr. ANDREWS. What was that first additional cost?

Mr. GAUD. $369,000. The two of them total $824,000.

Mr. ANDREWS. Nearly $1 million?

Mr. GAUD. That is true.

Mr. ANDREWS. What else do you plan to send over there, and when?

Mr. GAUD. Well, everything else that is on order, if the border is reopened, and there is every indication it will be in a few days, because the Afghans and the Pakistanis have agreed to reopen it and they are now about to exchange ambassadors and diplomatic representatives; everything else will be sent to Karachi and go into Pakistan.

Mr. ANDREWS. Now is there any question about brokers or agents entering this picture?

Mr. GAUD. No.

Mr. ANDREWS. With reference to Pakistan?

Mr. GAUD. No. Do you mean to handle our stuff?

Mr. ANDREWS. Yes.

Mr. GAUD. No, sir.

Mr. PASSMAN. I want to read again from the record for last year:

> We want to be in a position to advance the road work as soon as we possibly can, so we decided to take up the rest of the contract and procure the materials and have them shipped to Karachi, Pakistan, on the assumption that the border in due course will open. If the border does not open, if the material is there and we cannot get it in through Pakistan there remains the possibility which we are not a bit enthusiastic about, of getting in through Iran.

Why it is you were not enthusiastic?

Mr. GAUD. Because of the extra cost. We considered that a last resort.

Mr. PASSMAN (reading):

> * * * would not be a bit enthusiastic about getting it in through Iran.

There is no indication there that cost entered into it.

Mr. GAUD. That is why I was not enthusiastic, Mr. Chairman. That is what I meant.

Mr. PASSMAN. Would it not be difficult for us to read into what you said that your lack of enthusiasm had to do with the cost of getting it in through Iran?

Why would it cost more through Iran?

Mr. GAUD. It is a longer route, sir.

Mr. PASSMAN. I wish you would get for us the rate, we shall say, from the port of New York to the border in Pakistan and the rate from New York to the border in Iran.

Mr. GAUD. Do you mean the Afghan border?

Mr. PASSMAN. To the border where you would have the material put across.

Mr. GAUD. It costs considerably more to ship a ton of goods—it costs relatively little as far as the sea package is concerned. When it comes to going overland, you have a much shorter distance from Karachi to Afghanistan than the route through Iran.

Mr. PASSMAN. I want to read again:

> If the border does not open, if the material is there and we cannot get it in through Pakistan, there remains the possibility, which we are not a bit enthusiastic about, of getting it in through Iran.

Mr. GAUD. That is right.

Mr. PASSMAN. Also:

> There is also the possibility of using the material in Pakistan where there are a great many construction projects of the same type.

Those are your own words.

Mr. GAUD. Quite seriously, I don't understand the problem.

Mr. PASSMAN. It is the extra freight cost that contributed to the lack of enthusiasm?

Mr. GAUD. What else could it be?

POLICY AND COSTS OF UNITED STATES EDUCATION PROGRAM IN AFGHANISTAN

Mr. PASSMAN. Page 6 of the project book indicates that you propose to spend, $5,039,000 on the education activity in Afghanistan; is that correct?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. How much have you spent on education activities since we started the AID program in Afghanistan?

Mr. GAUD. I am afraid I haven't got a total figure here, Mr. Chairman.

Mr. PASSMAN. What year did we start the educational activity in Afghanistan?

Mr. GAUD. I think 1956.

Mr. PASSMAN. This is fiscal 1964. That will be 7 years we have had the program in full effect; is that right?

Mr. GAUD. Yes.

Mr. PASSMAN. What was the literacy rate in Afghanistan at the time we started our education program?

Mr. GAUD. I don't believe I know that.

Mr. TALBOT. Mr. Chairman, those figures are not available because the Afghans themselves haven't developed their statistical base to that extent.

Our policy reason, Mr. Chairman, to go ahead is to help build an educated group in the country which can assist in the public affairs and the further development of the country.

Mr. PASSMAN. A lot of Americans feel that foreigners get priority on our funds.

When a nation will not cooperate in giving statistics on many important factors that should be taken into account when we are considering foreign aid—and it is not a lack of knowledge that prompts some of them to take that position, but just a question of not being willing to give accurate statistics—is such a situation conducive of creating confidence between the donor and the recipient?

Mr. GAUD. I wouldn't accept that as a characterization of Afghanistan.

Mr. TALBOT. No, sir.

AVAILABILITY OF STATISTICAL DATA IN AFGHANISTAN

Mr. GAUD. They just don't have the statistics available. They don't know. This is one of the things we are trying to do in Afghanistan.

Mr. PASSMAN. Did you not testify differently on this same subject today?

(Discussion off the record.)

Mr. PASSMAN. Why do you not put in here "Unable to obtain?" Is that a good question?

Mr. GAUD. Yes, that is a good question. We thought we should give you what information we could.

(Discussion off the record.)

Mr. PASSMAN. Let us show for the record that the information on the divider sheet covers the years 1960, 1961, and 1963. The total expenditures for the year is classified. The defense expenditures are classified for the same 3 years. Capital outlay is classified for the same 3 years. Total domestic revenues are classified for the same 3 years. Deficit or surplus is classified for the same 3 years.

Mr. PASSMAN. Do you have the information furnished by the Afghanistan Government covering the same statistics I mentioned?

Mr. WHITE. There is budget information for 1960 and 1961.

Mr. PASSMAN. Do you people have the information?

Mr. GAUD. Why don't we see what we can find out and submit it?

Mr. PASSMAN. Do you have anything covering last year?

Mr. WHITE. I believe we have something.

Mr. PASSMAN. Do you have last year's book there?

Mr. WHITE. No, I don't.

Mr. PASSMAN. You gave the estimate last year and you did not classify it. It is on page 190.

Mr. GAUD. Are the figures the same as those which we have here for comparable years?

Mr. PASSMAN. No, they are much lower.

Mr. GAUD. As I said, we think these are more accurate figures.

(Discussion off the record.)

Mr. GAUD. I think it is probably the lack of a central budgeting system.

Mr. PASSMAN. Had we not better postpone this aid program until they can at least advance far enough to set up some kind of system to record the intake and outgo of funds?

Mr. GAUD. That is one of the things the aid program is trying to improve in many of these countries.

Mr. PASSMAN. You have an aid program going to tens of millions of dollars for this country. Creating a budget system would not require that much; would it?

Mr. GAUD. We are doing other things as well.

U.S. COMMITMENTS TO AFGHANISTAN

Mr. PASSMAN. Page 7 of your justification indicates our aid will concentrate upon fulfilling present commitments. What commitments do we have to this country, other than those given to the committee last year?

Mr. GAUD. We have a number, Mr. Chairman.

EDUCATION PROGRAM

In 1960 the executive branch made a determination to make $16,886,000 available subject to the availability of funds to assist Afghanistan in improving the educational facilities of the country. This obligation is not again wholly fulfilled.

Mr. PASSMAN. Have you testified to that fact in the past?

Mr. GAUD. The education program has always been included in the congressional presentation.

Mr. PASSMAN. This year you are asking for $5,309,000?

Mr. GAUD. That is right. The commitment was to be spread over the period of the second 5-year plan, 1962 to 1967.

Mr. PASSMAN. Do they have one of those things, too?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Can you give us an itemized list of the conditional commitments that we may have to Afghanistan?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Do you have that information with you?

Mr. GAUD. I was going to go right through them.

Mr. PASSMAN. Education is how much?

Mr. GAUD. The total was $16.866 million. Of that, up to 1964, roughly $6.9 million has already been obligated, so that there is approximately $10 million left and we propose to fund $5.3 million of that in fiscal year 1964.

Mr. PASSMAN. You actually have commitments that take us into 1965 and 1966?

Mr. GAUD. That is correct.

Mr. PASSMAN. Have you ever before told the committee about these commitments?

Mr. GAUD. It is a determination by the President in December 1960. Isn't that notified to the committee, Mr. Chairman?

Mr. PASSMAN. How much is this item?

Mr. GAUD. Roughly $10 million is left of the commitment.

Mr. PASSMAN. You indicated last year that education would be $5.672 million.

Mr. GAUD. For this year, for fiscal year 1963?

We obligated $5.3 million in 1963 on education in Afghanistan.

Mr. PASSMAN. You have less than $10 million. What did you do prior to 1963?

Mr. GAUD. On this commitment, we did $2.2 million in fiscal year 1962.

Mr. PASSMAN. How much?

Mr. GAUD. $2.2 million.

Mr. PASSMAN. What is the total amount that we have given for education since the inception of the program?

Mr. GAUD. Under this particular commitment we have done about nearly $7 million.

We have $5.3 this coming year. That takes you up to $12.3. The total commitment is $16.8. That leaves $4.5 million.

Mr. PASSMAN. I did not know you people could make commitments such as this until you got the money.

Mr. GAUD. This is subject to availability of funds.

Mr. PASSMAN. Let us get into the other categories of commitments.

HELMAND VALLEY DEVELOPMENT

Mr. GAUD. In February 1961 the Afghan Government was informed by the Ambassador that the United States was prepared to make available $10 million for irrigation drainage and other land and water development in the Helmand Valley.

Mr. PASSMAN. Who gave the Ambassador that authority?

Mr. GAUD. As far as I know he obtained it from the State Department.

Mr. PASSMAN. How much had we disbursed against that commitment?

Mr. GAUD. Prior to or——

Mr. PASSMAN. Total against the $10 million.

Mr. GAUD. In fiscal year 1962 and 1963 the total is $3.6 million.

Mr. PASSMAN. There is a commitment we did not know anything about. Category three——

POWERPLANT COMMITMENT

Mr. GAUD. In 1957 a project agreement was signed between the Afghan Government and the United States providing $500,000 for the purchase and installation of two diesel generators.

Mr. PASSMAN. Have you disbursed that money?

Mr. GAUD. Yes, sir; they were installed and subsequently in 1958 and 1959 further agreements, amendments, were signed to increase the scope of the project to include the construction of a powerplant.

Mr. GAUD. We have spent on that——

Mr. PASSMAN. How much, total?

Mr. GAUD. There was no figure in that commitment, sir.

Mr. PASSMAN. How much was spent?

Mr. GAUD. We have spent on surveys of that a total, counting $54,000 in 1963 and $70,000 in fiscal year 1964——

Mr. PASSMAN. That commitment has been completely disposed of, then, has it not, if you have already installed the generators?

Mr. GAUD. No, sir; because the project agreement calls for the construction of a powerplant and that powerplant has not been constructed.

Mr. PASSMAN. It is undetermined as to how much the powerplant would cost?

Mr. GAUD. It is undetermined, in fact——

Mr. PASSMAN. Are there any estimates?

Mr. GAUD. No, sir.

Mr. PASSMAN. Are there any other estimates or commitments?

Mr. GAUD. Yes, sir; in 1956——

Mr. PASSMAN. The powerplant is out. You do not intend to construct it out of any funds?

Mr. GAUD. Not for 1964.

Mr. PASSMAN. The reason being that you have not finished the survey and the plans?

Mr. GAUD. We are still struggling over the question of whether we ought to do it and the like. We are not eager to construct it.

Mr. PASSMAN. Why do you not say that we are not going to construct it?

Mr. GAUD. Because an agreement was entered into to construct it back in 1958 or 1959.

Mr. PASSMAN. Without knowing what it would cost? However, that is not your responsibility.

Mr. GAUD. I understand.

Mr. PASSMAN. But it is our responsibility to find out if we had some person out there making commitments to a project for which we had no idea as to what the ultimate cost would be.

Mr. GAUD. I do not know at the moment whether they had a cost estimate or not.

Mr. PASSMAN. Can some of your staff get that information for us?

(NOTE.—Additional testimony may be found on p. 1269.)

Mr. PASSMAN. Are there any more?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. You are serious, too.

Mr. GAUD. I am dead serious.

Mr. PASSMAN. Yes, sir. I am beginning to detect that you are.

Mr. GAUD. Many of these as you will see are continuing projects. In 1956——

Mr. PASSMAN. Continuing from an original firm commitment?

AIR TRANSPORTATION COMMITMENT

Mr. GAUD. The projects which are underway and which have not yet been finished. We entered into in May 1959, after a determination that it was in the U.S. interest to continue to assist Afghanistan in developing its air transportation system——

Mr. PASSMAN. How much is that account?

Mr. GAUD. An agreement was entered into to provide U.S. dollar funding to cover imported equipment and supplies, engineering construction, and the like.

Mr. PASSMAN. Is that language broad enough to cover 707's?

Mr. GAUD. This did not include any airplanes.

Mr. PASSMAN. Can you give us an estimate of what this will cost?

Mr. GAUD. I can tell you what has happened under it. Through fiscal year 1962 a total of $30.6 million was provided by the United States in constructing four airports, procuring necessary air communications equipment, and the like. The future program, which is a training program, to the existing Afghanistan airline, which is carried

on through Pan American Airways, the fiscal year 1963 level was about $4.3 million and for fiscal year 1964 we are proposing $1.1 million.

Mr. PASSMAN. You say Pan American. Is this contract with them?

Mr. GAUD. No, sir. The contract is with Ariana Airlines, which is the Afghan Airlines and they in turn have a contract with Pan American.

Mr. RHODES. Will you yield?

Mr. PASSMAN. Yes, sir.

Mr. RHODES. Pan American has a rather sizable holding in stock.

Mr. GAUD. Yes, sir.

Mr. RHODES. Is it 40 percent?

Mr. GAUD. Close to 50.

Mr. RHODES. Forty-nine, I believe.

Mr. GAUD. Very close to it.

KABUL-KANDAHAR ROAD COMMITMENT

Mr. PASSMAN. Is that all of the projects?

Mr. GAUD. No, sir; we have the Kabul-Kandahar Road which we were discussing earlier.

Mr. PASSMAN. What is the total cost of the road project?

Mr. GAUD. The total cost of that, we have funded I think $41.4 million on that. According to the Corps of Engineers which is handling the project for us, we have funded all the costs except the annual payment that we make to the Corps of Engineers to carry on the job.

Mr. PASSMAN. What is the total cost?

Mr. GAUD. I have forgotten that figure. We have it here?

It is impossible, really, Mr. Chairman, to estimate the total cost.

Mr. PASSMAN. Do you know how much money you would get if you were justifying any type of project in any of the 50 States in the United States on that kind of estimate?

Mr. GAUD. I was going to say a little bit more.

Mr. PASSMAN. You said enough there. You would not get enough ta mail a letter on that kind of testimony, and you are doing the best you can.

Do you have any other projects?

Mr. GAUD. I haven't finished this one.

Mr. PASSMAN. I thought you said it was impossible to give us an estimate. If that is a statement of fact, what else do you have to offer on it?

Mr. GAUD. I testified last year that we had funded $41.4 million to cover the cost of the contract for the road except for the expenses of the Engineers. Since last year we have changed the specifications on that road, reduced them as far as two-thirds of the road is concerned to substitute a gravel top for a paved top. A change order has been signed on that between the Corps of Engineers and the contractor. That reduces the cost of the road by $3.1 million. However, in the course of the time when this border between Afghanistan and Pakistan was closed, the contractor piled up force majeure claims which will be asserted against us.

He was prevented from doing his work by force majeure. We do not know what the claims will come to and until we know that, which will not be until sometime in the future, that is why I say we do not know what it will cost.

Mr. PASSMAN. This is another mess, another one of many.

Mr. GAUD. It is a mess.

Mr. RHODES. Every time we build a road we have a mess.

Mr. PASSMAN. In one country we started a road for $18 million and wound up with a cost of $179 million. I hope we do not have here a repetition of that condition.

We shall adjourn until tomorrow at 1 p.m.

FRIDAY, JULY 19, 1963.

Mr. PASSMAN. The committee will come to order.

I note an indication of two new projects that are supposed to be initiated by the Afghan Government in fiscal 1964.

WORLD BANK REPORT ON AID TO INDIA

Mr. GAUD. Excuse me, sir. Could I deal with a couple of leftovers from yesterday to get them out of the way?

Mr. PASSMAN. Yes.

Mr. GAUD. Mr. Chairman, you asked yesterday about the report issued by the World Bank on aid to India which was mentioned in the London Economist and also in Barron's of July 15.

I would like to make a statement on the record.

I have a copy here which I would like to give you, but I would like to say a few things about it in advance, if I may. This is a report prepared by the staff of the World Bank; it was not approved by the management of the Bank. It is a report, apparently, to India but it was also prepared for the use of the members of the consortium and was distributed to members of the consortium.

The report, as appears from its face, is designated by the Bank that it may not be published or quoted. It is marked "Restricted." Under the practices of the Bank their "Restricted" is equivalent to our "Confidential." We have been furnished this, as we have been furnished other documents of theirs in the past, with the request it not be released to the public. The Bank feels—and I think it is pretty clear why—that if confidential frank reports by its staff on the situations in various countries were made public, the Bank's work would be seriously interfered with.

We have not asked them for permission to give this to you—we did not want to drag them into this—but we are prepared to give it to you for such use as the members of the committee see fit, with the request it be treated as if it was a classified document of the United States. It is not our document, but we want you to use it. This is one of the documents which we considered and which other members of the consortium considered in deciding how much aid could be given to India in 1964.

Mr. PASSMAN. We will keep the information confidential and we will keep the document under lock and key.

Mr. GAUD. And when you are finished with it, may we have it back?

Mr. PASSMAN. Yes.

JUNE LOAN APPROVALS FOR NEAR EAST-SOUTH ASIA REGION

Mr. GAUD. One or two other matters, if I may.

Yesterday you asked me how many or what volume of dollar loans had been approved in the month of June, and I gave you the figure of $196.7 million. In going over my reports of last month I realized I had been looking at the column which showed the loans approved in my office, the regional administrator's office. In addition there was one loan my office recommended for approval in April and three others in May which were not actually approved until June. They total $94.75 million. So, to get a full picture of what the Agency acted on in June for my region, you should add those to the figure.

Mr. PASSMAN. What would these items make the total?

Mr. GAUD. $291,450,000.

Mr. PASSMAN. For June?

Mr. GAUD. Yes.

Mr. PASSMAN. And what was the total for the 12 months?

Mr. GAUD. $779 million.

Mr. PASSMAN. What percentage would $291,450,000 represent of $779 million.

Mr. GAUD. It would be around 35 percent.

Mr. PASSMAN. Approximately 35 percent of the total amount obligated in fiscal year 1963 was obligated in June?

Mr. GAUD. That is true.

Mr. PASSMAN. Thank you.

ARGHANDAB DAM PROJECT IN AFGHANISTAN

Mr. GAUD. One other matter, sir. We were discussing, shortly before we adjourned, the Arghandab project in Afghanistan and you asked what was the amount that had been estimated for that project at the time the project agreement was entered into. That figure was $2.8 million, for the power project.

Mr. PASSMAN. Is that the amount which has been spent on the project?

Mr. GAUD. No, sir. That is the original estimate.

UNITED KINGDOM INDIA CONSORTIUM TERMS

You also asked me to come up with the results of the Indian consortium. The Indian consortium met yesterday afternoon and met again this morning and is now adjourned until Wednesday.

Mr. PASSMAN. That is all right. We will get the information before the year is over.

Mr. GAUD. One more point. I do not remember whether I made this clear or not yesterday. When we were discussing the interest rates on various aid commitments I spoke of the United Kingdom interest rate as being effectively 3.25 percent. The fact of the matter is their interest rate is still the Treasury borrowing rate plus one-fourth of 1 percent, but there is a waiver of interest for the 7 years' grace period. That reduces the effective rate over the length of the loan to 3.25 percent.

Mr. PASSMAN. But the interest is the Treasury rate plus one-fourth of 1 percent?

Mr. GAUD. Yes; that is correct.

Mr. PASSMAN. And of course some of these commitments could take years before they are finally disbursed. I wonder if that fact is taken into account when you are speaking of the grace period? Each time they draw a check, is the 7 years' grace period from the time they draw the check?

Mr. GAUD. That is my understanding.

ALLEGATION OF U.S. DEFENSE SECRETS GOING TO INDIA

Mr. PASSMAN. I have here an article which was placed on my desk this morning. It is headed "U.S. Secrets Go to India—Vital Defense Installations and Military Data To Be Revealed Under Assistance Agreement." I shall read from the article:

The security clearance of these visiting scientists—the vanguard of several hundred others to follow—is being left up to the government of Prime Minister Nehru—despite strenuous objections by Pentagon security officials.

They warn that tremendous security risks are involved because the Indian Government permits known Communists to hold key scientific posts and to work in crucial defense installations.

Mr. Secretary, are you familiar with the article?

Mr. LEE. No, I am not familiar with it.

Mr. PASSMAN. Are you familiar with these visiting people?

Mr. LEE. No. I would prefer to examine the article before commenting.

(The following information was supplied later:)

There is no basis in fact for the allegation in the Allen-Scott newspaper article to the effect that a program exists under which vital U.S. military secrets are being divulged to Indian scientists. Any training the U.S. Government may provide for representatives of the Indian Government in such fields as those described in the article will be undertaken only if full security precautions are observed. That is, participants in any such training would have to be fully qualified in terms of our own security requirements for such participants as well as those of the Indian Government.

Mr. PASSMAN: All right, but I shall read now the last paragraph:

Behind the news: The State Department is picking up the tab for those Indian political leaders touring the United States in support of more aid for India. One of the officials is S. N. Dwivedy, deputy chairman of the Praja Socialist Party. He is saying that a realinement of political forces is certain after Prime Minister Nehru steps out. According to Dwivedy, if the conservative wing of the dominant Congress Party gains control, the Praja Socialists will soon become the major opposition party. If this happens it will pave the way for the return of former Defense Minister Khrishna Menon, the ousted leftist U.S.-hating intimate of Nehru. Menon still is a key adviser of Nehru, according to intelligence.

Mr. LEE. As Mr. Talbot said, that is not our current estimate of the relationship of Mr. Menon to Mr. Nehru.

Mr. PASSMAN. Anyway, we shall put this article, which was published in the Monroe (La.) Morning World, in the record at this point.

(The article follows:)

U.S. SECRETS GO TO INDIA—VITAL DEFENSE INSTALLATIONS AND MILITARY DATA TO BE REVEALED UNDER ASSISTANCE AGREEMENT

(By Allen and Scott)

That expanded military aid agreement the United States is signing with India contains an unprecedented provision for a neutral country—giving her scientists access to vital U.S. defense installations and military secrets.

Arrangements already are underway by White House assistants to bring 50 Indian scietnists here this fall to familiarize them with the development and operation of top-secret rocket launching and radar systems.

Under terms of this still-classified agreement, the Defense Department will roll out the red carpet for the Indian scientists and make available to them the most sensitive details of the Army's Nike-Hercules antiaircraft missile system, the Air Force's ground-to-air communication systems, and other vital details of U.S. radar developments.

The security clearance of these visiting scientists—the vanguard of several hundred others to follow—is being left up to the government of Prime Minister Nehru, despite strenuous objections by Pentagon security officials.

They warn that tremendous security risks are involved because the Indian Government permits known Communists to hold key scientific posts and to work in crucial defense installations.

Also citing the extremely close ties between scientific groups in India and Russia, the Defense security officials noted that under the United States-India Pact there are no effective bars against the Indian scientists' passing on knowledge they gain in this country to Soviet friends.

Squarely in line with this backstage Pentagon fear is the fact that a high-level Indian military mission is en route to Moscow to discuss a similar military agreement with the Soviet. Also, a large group of Indian scientists, among them some slated to come here, recently returned from an extended tour of Russia.

Senate Armed Services Committee members, headed by Senator Richard Russell, Democrat, of Georgia, are planning to summon Deputy Assistant Defense Secretary William P. Bundy, who drafted the Indian agreement, to question him about these disquieting backstage details.

Bundy, a former CIA official who handled the controversial jet fighter sale to Yugoslavia in 1960–61, will be grilled particularly on why he failed to transmit this information to the congressional committees he briefed on the India aid program.

Secret deal? The Senators also contemplate interrogating Bundy and other administration officials about a suppressed intelligence report that the Nehru government is considering permanently surrendering the original target of Red Chinese border aggression.

According to this intelligence document, top members of Nehru's regime favor formally acknowledging Chinese sovereignty over some 15,000 square miles of the Aksai Chin area in northeastern Ladakh. This is the region where Peiping has built a strategic road linking its Sinkiang Province with conquered Tibet.

In return for this reputed backdown—which is directly counter to the announced policy of India—Nehru would seek concessions elsewhere as part of a broad settlement of the long-pending frontier dispute with the Communists.

In recent weeks Premier Chou En-lai is known to have made to Delhi overtures for a border deal. Senate Armed Services Committee members want to know how this development may affect this country's huge military aid program to India.

They are especially bent on ascertaining whether disclosing vital U.S. military secrets to India really is essential to stem Red Chinese aggression, or if the Indian scientists are being brought here as part of an elaborate plan of a small group of administration policymakers to build India into a so-called third force military power in southeast Asia.

Behind the news: The State Department is picking up the tab for those Indian political leaders touring the United States in support of more aid for India. One of the officials is S. N. Dwivedy, deputy chairman of the Praja Socialist Party. He is saying that a realinement of political forces is certain after Prime Minister Nehru steps out. According to Dwivedy, if the conservative wing of the dominant Congress Party gains control, the Praja Socialists will soon become the major opposition party. If this happens it will pave the way for the return of former Defense Minister Khrishna Menon, the ousted leftist U.S.-hating intimate of Nehru. Menon still is a key adviser of Nehru, according to intelligence.

SYRIA

Mr. PASSMAN. A good many years ago we had an aid program in Syria, but then, at the request of Syria, we dropped the aid program and they went for several years without any type of U.S. assistance, even including the technical aid. Is that correct?

Mr. GAUD. Yes; that is true. We had a small Public Law 480 program, but we had very little until 1959 or 1960.

Mr. PASSMAN. So, in effect, we had no aid program in Syria for many years. I think maybe we had $400,000 in 1949 to 1952; then we skipped over to $300,000 in 1954; and skipped over 1955 and had $100,000 in 1956, $200,000 in 1957, and $200,000 in 1958. Those figures will add up to a little over $1 million from the inception to, let us say, 1960. But your aid program really got underway in 1960?

Mr. GAUD. That is correct.

Mr. PASSMAN. It would appear they had peace and calm in that nation during all the years of the giveaway program when we were not in there, and it would appear that when we started going in with tens of millions annually they have had little else but turmoil since we went in. Whether our aid program had anything to do with it, I do not know, but usually when you fill the till the outs want to get in. We went in in 1960 with a $14 million aid program, in 1961 with $14.9 million, in 1962 with $35.9 million, and for 1963 we do not have the figure yet.

Mr. GAUD. I can give you the figures on that. There were $200,000 development grants——

Mr. PASSMAN. Give us the total.

Mr. GAUD. The total is $1.8 million.

Mr. PASSMAN. It would appear they were getting along pretty good until we went in there with aid money and then they started overthrowing governments. Have they overthrown any this week?

Mr. GAUD. They tried.

Mr. PASSMAN. It looks as if they are about to succeed.

Mr. GAUD. My information is no later than this morning's paper which said the revolt had not succeeded.

Mr. PASSMAN. But it would appear that as long as we were not in there with aid they had relative peace and quiet, but as soon as we got in with an aid program they started fighting. I wonder if this is because there is gold in those hills?

Mr. GAUD. As far as 1963 is concerned, our aid program was $200,000 plus Public Law 480 of $1.6 million. There is no tens of millions there. As far as 1964 is concerned———

Mr. PASSMAN. You do not know what you will have in 1964. And you tell us you do not know what you will do with the money.

Nevertheless, it would appear they began to have their trouble in 1960, and that was when we started with $14.4 million, and in 1961 it was $35 million, was it not?

Mr. GAUD. In 1960 they got $14.4 million.

Mr. PASSMAN. And in 1961 they got $35 million?

Mr. GAUD. Yes.

Mr. PASSMAN. And the government toppled, and did it not topple again in 1962?

Mr. LEE. They did have a change of government in 1962, yes.

Mr. PASSMAN. So there is some indication that when you fill up the coffers there is something to fight for and trouble erupts.

Mr. GAUD. There is no doubt that in Syria at the present time there is a government in power and at least two forces eager to overthrow that government.

Mr. PASSMAN. How many governments have they had there since 1960? That is when we really started handing out the aid with a big spoon.

Mr. LEE. I would have to review it. I do not know.

Mr. GAUD. Certainly a number.

Mr. PASSMAN. Since September 1961 there have been, I believe, three changes in government in Syria.

We shall insert this news report in the record:

(The matter referred to follows:)

[From the Washington Daily News, July 18, 1963]

HEAVY FIGHTING IN DAMASCUS—SYRIA REPORTS A NEW REVOLT

BEIRUT, LEBANON, July 18 (UPI).—A revolution was reported in the Syrian capital of Damascus today, with tanks, artillery, and infantry involved in fighting.

At noon radio Baghdad in neighboring Iraq reported an attempt to overthrow the Syrian Government had been foiled.

The Syrian-Lebanese border was sealed this morning.

The British Embassy here said it received a cable from Damascus reporting fighting in the center of the city with small arms, tanks, and artillery in action within sight of the Embassy there.

CURFEW

Damascus radio announced a curfew this morning, warning citizens they risked being shot on sight. Then it suddenly went off the air.

Damascus radio indicated a coup may have been staged by followers of Maj. Gen. Ziad Hariri, former Defense Minister and chief of staff who was forced into exile in Paris this month.

Hariri helped the Baathist government of Syria oust pro-Nasser elements from power, then was purged himself.

Syrian Revolutionary Counsel President Louai Attassi went to Cairo from Damascus today for talks on reviving the United Arab Republic.

UNAWARE

Cairo reported Attassi arrived there, apparently unaware of happenings in his country.

Syria, Iraq, and the present United Arab Republic have agreed to form the new Arab union, but there have been violent dissensions in Syria on the form the union ought to take.

All telephone and telegraph communications between Syria and the outside world were cut off shortly after the British received the cable from their Damascus Embassy.

Damascus broadcast heard in Beirut reported some wounded.

It was not immediately clear who was staging the revolution, which would be the latest in a series of about a dozen uprisings in Syria since the war.

AFGHANISTAN

NEW PROJECTS

Mr. PASSMAN. Page 7 indicates two new projects are being initiated by the Afghan Government in fiscal 1964. How much of the $759,000 estimate would be used on those two projects?

Mr. GAUD. The two new activities are ground water development and self-help irrigation, with projected costs of $224,000 and $69,000, respectively.

Mr. PASSMAN. What is the average cost of the 10 participants under this project?

Mr. GAUD. $8,900 per participant.

Mr. PASSMAN. Is that the cost for 1 or 2 years?

Mr. WHITE. One year.

Mr. PASSMAN. Does that figure not set an alltime record for cost per participant?

Mr. GAUD. I would prefer to check on that.

Mr. PASSMAN. We wish you would do so.

Mr. GAUD. Yes, sir.

(The information follows:)

COST OF PARTICIPANTS, NATIONAL AGRICULTURAL DEVELOPMENT PROJECT, AFGHANISTAN

Five participants are funded for 1 year, and the training of each costs $6,000. Five are funded for 2 years, and the training cost of each of these is $12,000.

HELMAND VALLEY PROJECTS

Mr. PASSMAN. What is the total amount of funds included in fiscal 1964 for the Helmand Valley project?

Mr. GAUD. $304,000.

Mr. PASSMAN. Is that sum for one project?

Mr. GAUD. Yes.

Mr. PASSMAN. Are there not six projects, with a total cost of $1,991,000?

Mr. GAUD. There are other projects involving Helmand Valley, if that is what you mean.

Mr. PASSMAN. It would appear there are six projects. On page 8 there is one project.

Mr. GAUD. Page 10 is another; page 25 is another; and there are three others for which we are requesting less than $100,000 apiece, which are not on separate pages in the printed book. There are six projects relating to Helmand Valley, if that is the question, sir.

Mr. PASSMAN. At a total cost of $1,991,000?

Mr. GAUD. I will accept your arithmetic.

Mr. PASSMAN. Can you give the completion cost for all six of them?

Mr. GAUD. I would have to add it up.

You want to include 1964, I take it?

Mr. PASSMAN. Yes.

Mr. GAUD. $8,327,000.

Mr. PASSMAN. Will that be the amount you will spend through fiscal 1964?

Mr. GAUD. No, sir; to the completion of the project. The fiscal 1964 estimate for these projects is $1,991,000.

Mr. PASSMAN. Can you tell us when the projects will be completed?

Mr. GAUD. All of these projects?

Mr. PASSMAN. Yes.

Mr. GAUD. The Helmand Valley as a complete proposition will not be completed for many, many years. This is a very complicated irrigation and resettlement and development project that will be going on for many, many years. How long we will work on it and what we will spend on it will depend on how much the Afghans contribute, and so forth and so on.

Mr. PASSMAN. Have you used the system of consolidating projects under a capital project, where you had several projects previously scattered, but now they come under one project, and at the bottom of the list you will have the projects listed that are part of the capital project?

Mr. GAUD. We have discouraged that, but we have done some consolidation of development grant projects.

Mr. WHITE. We have noted where this was done.

Mr. PASSMAN. Here we are dealing with projects for which you do not even have an information sheet.

Mr. GAUD. Those involving less than $100,000.

Mr. PASSMAN. But you can start a project with $10,000 and wind up with $5 million.

Mr. GAUD. They are listed on page 28.

Mr. PASSMAN. That is your total, but I am asking about individual sheets. You do not have a sheet showing when it will be completed and what the total cost will be, do you?

Mr. GAUD. We do not.

Mr. PASSMAN. And that is how many of these things get started. You start with $10,000 and later it is $50,000 and the first thing you know we are getting into million-dollar projects. In the future I wonder, even if it is a 65-cent project, if you would not have a sheet for it?

Mr. FLINNER. Mr. Chairman, do I understand you want a separate project sheet?

Mr. PASSMAN. Yes. The first thing you know you begin to step them up and that is how many of these projects get started.

Mr. GAUD. I would be happy to give you the future estimates of funding on these particular three, Mr. Chairman.

Mr. PASSMAN. Let me read from page 322 of the hearings of last year on the Helmand Valley project:

Mr. PASSMAN. What is the total cost of the project to completion, from all categories?

Mr. GAUD. It is very close to $112 million, of which $61 million was the Afghanistan Government's part.

Mr. PASSMAN. How much is our money?

Mr. GAUD. AID and Export-Import Bank about $51 million spent and to be spent.

Mr. PASSMAN. I shall quote:

"The project is regarded by the royal Government of Afghanistan as an American project."

Continuing to quote:

"In view of major financed commitments from U.S. agencies, including the Export-Import Bank which loaned $39.5 million and the fact that an American contractor worked on the project from 1946 to 1959."

Am I reading correctly?
Mr. GAUD. Yes, sir.

Now, what is the figure you gave us a while ago?

Mr. GAUD. For these six?

Mr. PASSMAN. Yes, for the Helmand Valley project.

Mr. GAUD. I gave you a figure of $8,327,000 for these six.

Mr. PASSMAN. Last year you gave us a figure of $112 million.

Mr. GAUD. I beg your pardon. I thought your question was how much money are we going to spend in the future on these projects.

Mr. PASSMAN. I wanted the total.

Mr. GAUD. I misunderstood your question; I am sorry.

Mr. PASSMAN. We are trying to project it to completion. Now, could you project it to completion, the Helmand Valley project?

Mr. GAUD. What page were you reading from?

Mr. PASSMAN. Pages 322 and 323 of the hearings of last year.

Mr. GAUD. Again, we will have to go in the arithmetic, Mr. Chairman.

Mr. PASSMAN. While you are doing those figures, I think it is appropriate to note that this subcommittee could never examine on every project scattered in 104 nations and several possessions which are either continuing, concluding, or starting, when you have upward of 2,200 projects. When you scatter them like this—I do not know if it is by design or not—we cannot possibly go through and examine on every project, and I am wondering why this is done, such as in the case of the Helmand Valley projects, if it is not to cause confusion.

This is the Helmand Valley project, yet you have it scattered in three different places. You have six projects and you have sheets on only three of them. If it were consolidated in one project, then we could get some idea as to the cost.

Mr. GAUD. Mr. Chairman, that is certainly not the reason for having separate sheets, to confuse you.

Mr. PASSMAN. You will admit it is confusing?

TYPES OF PROJECTS IN HELMAND VALLEY

Mr. GAUD. These projects, as you will see, are different types of projects, involving different types of technicians, and different specific objectives.

Mr. PASSMAN. Here you have six projects which are actually one project, the Helmand Valley project. What are the six projects; briefly?

Mr. GAUD. The first one is an agricultural development project.

The next one is the power facilities project.

Mr. PASSMAN. Helping agriculture?

Mr. GAUD. In part; also industry.

Mr. PASSMAN. It is an agricultural valley; is it not?

Mr. GAUD. It is a valley in which they are also trying to promote small industry.

Mr. PASSMAN. Let us hope they succeed.

What is the next one?

Mr. GAUD. The next one is called Helmand Valley development; which is primarily irrigation.

Mr. PASSMAN. It has to do with agriculture?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. What is the next one?

Mr. GAUD. Surface water investigation.

Mr. PASSMAN. Does that have to do with agriculture?

Mr. GAUD. Yes; and also water for drinking and water for other purposes.

Mr. PASSMAN. Farmers drink water too.

What is the next one?

Mr. GAUD. The next one is public health and sanitation.

Mr. PASSMAN. That has to do with farmers in the valley?

Mr. GAUD. Yes; and other activities.

Mr. PASSMAN. What other activities?

Mr. GAUD. They are trying to promote light industry down there.

Mr. PASSMAN. What is the next one?

Mr. GAUD. The next one is the Helmand Valley Audiovisual Center which is connected with teaching agricultural techniques, drainage, and the like.

Mr. PASSMAN. It is an agricultural project and to attract small industry?

Mr. GAUD. That is essentially it.

Mr. PASSMAN. Last year the estimate was $112 million. What is the amount this year?

Mr. GAUD. We figure the total cost for completion of this project from the Afghan Government, the Export-Import Bank and AID will be $112 million.

Mr. PASSMAN. That is the same as you told us last year.

Mr. GAUD. There is a little over $8 million still to go.

MINERAL RESOURCES PROJECT

Mr. PASSMAN. The next project is the mineral resources project, on page 9, for which $363,000 is requested. What is the annual cost per participant?

Mr. GAUD. It looks like $11,000, if this is an annual figure.

Mr. PASSMAN. In order to get up to $4.5 billion, it seems that maybe the projects have to add up to that amount. We move from $8,000-plus to $11,000-plus and we are still in the same community.

Mr. GAUD. I do not accept your premise as to how this is made up.

Mr. PASSMAN. How do you arrive at the $4.5 billion if you do not add them up?

Mr. GAUD. We do not start with the $4.5 billion request and build up to that. We add up the projects and arrive at the request.

Mr. PASSMAN. Before even cranking up and moving out of the same chicken yard the participants have moved from $8,000 to $11,000. How do you account for that fact?

Mr. GAUD. I will provide a statement for the record.

(The statement follows:)

COSTS OF PARTICIPANTS, MINERAL RESOURCES PROJECT, AFGHANISTAN

Three participants are funded for 2 years, at a cost of $11,000 each.

AIR TRANSPORTATION PROJECT

Mr. PASSMAN. Page 11 indicates that through 1963 you have obligated $31,109,000 for the Air Transportation project. Is that correct?

Mr. GAUD. Yes.

Mr. PASSMAN. And your estimate for 1964 is $1,124,000?

Mr. GAUD. Yes.

Mr. PASSMAN. Projected to completion, what is the cost?

Mr. GAUD. After 1964 we estimate——

Mr. PASSMAN. Let us get the total cost.

Mr. GAUD. You mean from beginning to end?

Mr. PASSMAN. Yes.

Mr. GAUD. $34,303,000.

Mr. PASSMAN. What are we getting out of that project other than the pleasure of spending money, if you get pleasure out of it?

Mr. GAUD. We are getting several things out of it.

Mr. PASSMAN. Name one.

Mr. GAUD. When this project was first gone into, which was the late 1950's, there was every likelihood that the Soviets would take control of the air transportation system of Afghanistan. Our political specialists felt it was important that this not happen. It hasn't because of our aid program.

Mr. PASSMAN. Can you give us that information indicating whether or not you succeeded?

Mr. GAUD. We succeeded in the sense that their air transportation facilities, the air communication facilities, and so forth, are made in the United States and the traffic is carried on in English and it is a Western system.

In addition, we have built four airports, with a fifth coming up, in Afghanistan to help to open Afghanistan to the West. She has very poor access to the West and very good access to Russia.

In addition, Afghanistan has an airline in which Pan American owns 49 percent and this has enabled us to keep that presence and to develop contacts with the country.

Mr. PASSMAN. Is this a subsidy to Pan American and her subsidiary?

Mr. GAUD. No, sir.

Mr. PASSMAN. They own 49 percent of the airline you mentioned and they use these facilities to carry on their system.

Mr. PASSMAN. What was the primary purpose of the airports?

Mr. GAUD. The primary purpose was to provide Afghanistan an access to the West. Pan American certainly benefits from this, but the purpose was not to subsidize Pan American.

Mr. PASSMAN. But the indirect effect is the same thing, because Pan American goes in there, do they not, and they own 49 percent of the airline?

Mr. GAUD. Pan American does not fly planes in there.

Mr. PASSMAN. But Pan American's subsidiary airlines are domiciled in Afghanistan?

Mr. GAUD. It is an Afghanistan corporation.

Mr. PASSMAN. And the primary purpose of those airports is to make possible the operation of the airline system?

Mr. GAUD. The airlines are the principal users of the airports, yes.

Mr. PASSMAN. So this should be a substantial subsidy to Pan American?

Mr. GAUD. Pan American certainly benefits from it.

Mr. PASSMAN. Thank you.

U.S. ASSISTANCE TO COUNTRIES WITH HEAVY EXTERNAL INDEBTEDNESS TO BLOC

What would be your position—and maybe you or the Secretary have experienced this already—if we should find out some of these so-called friendly people were involved in a scheme to draw off our resources?

Mr. GAUD. I do not think we should give aid to any country unless we felt we were getting some advantage from it.

Mr. PASSMAN. If a nation that we are giving assistance to, prior to the time that we started a substantial aid program in the country had agreements with members of the Sino-Soviet bloc and had created firm obligations for commodities or equipment, would it be our position to try to get them to default on their payments or would we recommend that since they entered into the commitments they should pay their debts? What is your position?

Mr. GAUD. I do not think we have taken any position on that.

Mr. PASSMAN. Would we encourage them to liquidate an obligation to members of the bloc or just stop payment?

Mr. GAUD. If you are speaking to me as an individual, I would not encourage anybody to default on an obligation they had.

Mr. PASSMAN. We do know that Sukarno's government is heavily in debt to Russia. Now we are going in with a fantastically high aid program in Indonesia.

Mr. GAUD. That is not my understanding of the fact.

Mr. PASSMAN. What is not your understanding of the fact?

Mr. GAUD. I did not understand we were going in Indonesia with a heavy aid program.

Mr. PASSMAN. You need to get a better understanding. We are going in there with a superduper program. We know Indonesia is heavily obligated to Russia for commodities and military equipment and we are going in there in 1964 with a ——— program and in 1963 it was $38,100,000. That would be substantial, would it not? And you have another one, Public Law 480, in 1963 it was $63 million and in 1964 it is ——— and military assistance is ——— million. Would that aid not be termed rather substantial?

Mr. GAUD. Yes; but Indonesia is not in my region, and I am not acquainted with all of the facts and judgments.

Mr. PASSMAN. I was just talking about instances where we are getting a fantastically high aid program in nations heavily in debt to Russia.

Mr. GAUD. It is my understanding our policy in Indonesia, except for Public Law 480, is to condition what we do for her on stabilization.

Mr. PASSMAN. The checks go out just the same, no matter what the conditions are. We know Indonesia is heavily in debt to Russia. If they could draw heavily from us they might be able to take what they get from us to pay Russia. So it appears to me we are getting boxed in. Indonesia will earn some money from her exports and if we relieve her to the extent we give her aid, she could pay her debt to Russia.

REGIONAL TRANSIT PROJECT

The next project is on page 13, Afghan regional transit, for which your estimate for 1964 is $780,000, notwithstanding the fact that you have unliquidated as of June 30, $29,907,000.

Mr. GAUD. That $780,000 is primarily to cover the cost of the Corps of Engineers, who are supervising the building of the Kabul to Kandahar road.

Mr. PASSMAN. Here is a project started in 1958 and scheduled to end in 1965 and you have unliquidated $29,907,000 and you are asking for $780,000.

How can you determine you need any money with this much unliquidated funds on hand when you consider the amount that you disbursed in 1963?

Mr. GAUD. The bulk of this money was obligated last year to take up the contract for the construction of the entire road. We cannot use that money to pay the Corps of Engineers, which is supervising the job. We have to request an appropriation to pay the Engineers for doing the supervisory work.

Mr. PASSMAN. Is that the one we agreed yesterday was a mess? That is the word I used and you concurred?

Mr. GAUD. Yes, sir.

Mr. ANDREWS. Mr. Chairman, may I ask a question?

Mr. PASSMAN. Of course.

Mr. ANDREWS. On page 13, with reference to the Kandahar part of the road, you say:

> The decision was taken in January 1963 to continue building the road using the Iranian route to the extent necessary, but to modify the original specifications for segments III–VI from asphalt to gravel.

Mr. GAUD. That is right.

Mr. ANDREWS. I assume you want that road to be a permanent road?

Mr. GAUD. Yes.

Mr. ANDREWS. How long will a gravel road last out there?

Mr. GAUD. We made this decision on the advice of the Corps of Engineers as well as our own people. We were, of course, interested in saving money, because the cost of shipping goods through Iran is higher. They told us if we changed it from asphalt to gravel the road would carry the same traffic, and would be just as serviceable for many years.

Mr. ANDREWS. Is this a rainy area?

Mr. GAUD. No, very dry.

Mr. ANDREWS. Where will you get the gravel? From the locality?

Mr. GAUD. Yes.

Mr. ANDREWS. It looks like that would reduce the cost of the road?

Mr. GAUD. It reduces the cost by $3.1 million.

Mr. ANDREWS. But that is offset by the imported material so that the original estimate of cost is the same?

Mr. GAUD. The reduction of $3.1 million is offset to the extent of several hundred thousands by the added cost of sending goods through Iran. But there are also the unknown costs which may eat up the rest. These are the force majeure claims by the contractor, which have not been formally filed.

Mr. ANDREWS. How much will that road cost per mile?

Mr. GAUD. It is roughly a 300-mile distance and the total cost of the road is around $45 million, roughly. That is about $150,000.

Mr. ANDREWS. $150,000 per mile?

Mr. GAUD. Yes, sir.

Mr. ANDREWS. How does that cost compare with road construction costs in this country?

Mr. GAUD. I am not enough of an expert to know. The contract was let on competitive bids by the Corps of Engineers.

Mr. ANDREWS. Is it an American contractor?

Mr. GAUD. Yes.

Mr. PASSMAN. Did the Corps of Engineers have the project from the beginning?

Mr. GAUD. Yes.

Mr. PASSMAN. How did we make such a mess of it?

Mr. GAUD. It is a mess only in the sense actual construction started in August 1961 shortly before the border was closed. The border was closed 5 months, opened for 2 months, and has been closed since. We have been trying to keep the contractor going there. He has been running up force majeure claims. It just has not worked out well.

Mr. PASSMAN. What is the latest estimate on the unliquidated balance as of June 30? Do you have that information, Mr. Controller?

Mr. FLINNER. No; we do not have a later figure than is in the book.

Mr. PASSMAN. It seems that you would have something later than this. This book was made up last spring.

Mr. GAUD. Early spring.

Mr. FLINNER. We get this report from the field on a quarterly basis.

Mr. PASSMAN. What is the last period you have?

Mr. FLINNER. I do not have with me the project report from Afghanistan. The last period we would have in our office would be March 31.

Mr. PASSMAN. What amount do you show unliquidated as of March 31?

Mr. FLINNER. I do not have that with me.

Mr. PASSMAN. Could you call down and get that information?

EFFECT OF CLOSING OF BORDER ON ROAD CONSTRUCTION

Mr. RHODES. Mr. Gaud, the reason the road is a mess is largely due to the Afghans?

Mr. GAUD. Due to the fact they will not let us put our aid goods across the Pakistan border.

Mr. PASSMAN. Is it not a fact that we had the material at the border and the Afghans would not open their border for us to take the equipment in to build the road, even when it was free?

Mr. GAUD. That is true.

Mr. RHODES. We are building a road for them. It is costing us more than it should cost because of their own intransigence.

In other parts of the world, overruns are charged to the host country. Are you going to charge the overruns to Afghanistan on this road?

Mr. GAUD. We have in effect, we believe, accomplished that by changing the type of road, reducing it from an asphalt to a gravel road, which we believe will cover the additional cost. That is just what we are doing.

Mr. RHODES. Have you gotten any advice from the Bureau of Public Roads on this?

Mr. GAUD. The Corps of Engineers is handling this.

Mr. RHODES. Are they better roadbuilders than the Bureau of Public Roads?

Mr. GAUD. I would not want to say. They have been handling this project for several years, and we look to them for advice on it.

We have executed a formal change order on the recommendation of the Corps of Engineers. This change makes sense, and their estimate is that it will save us $3.1 million.

Mr. RHODES. Originally the Corps of Engineers thought this ought to be an asphalt road?

Mr. GAUD. That is a difficult question to answer for me, because I was not in on it.

I know there were a great many differences of opinion as to what kind of a road this should be. The Afghans wanted one kind of a road. Various possibilities were discussed. Our Embassy was in on it. Whether the ultimate decision was made a technical decision, or another decision, I do not know.

Mr. RHODES. The main reason you made the change is because you did not have the money to build it as originally planned?

Mr. GAUD. I would put it this way: The main reason we made it was we felt since these added costs were due to the Afghans' refusal to open the border, they should in effect pay for the additional cost.

Mr. RHODES. Mr. Gaud, we are making them pay by giving them a less efficient road?

Mr. GAUD. Not according to the advice we have.

Mr. RHODES. What are they paying?

Perhaps we should have planned to build this road that way from the first.

If you read back over the record of your own testimony, I think you will agree with me. It makes no sense at this stage of the game for us to change the type of road merely because of the Afghans' intransigence. We are trying to make them pay for overruns by giving them a road that apparently, according to the Corps of Engineers, is as good as the one you were going to build anyway, even though it is cheaper.

Mr. PASSMAN. You planned some type of hard surface road—asphalt, I believe—to begin with, did you not?

Mr. GAUD. That is right.

Mr. PASSMAN. You are substituting gravel for four segments of the road?

Mr. GAUD. That is correct.

Mr. PASSMAN. Which is an inferior type of road, is it not?

Mr. GAUD. Not necessarily.

Mr. PASSMAN. You mean a gravel road is not inferior to a hard-top road?

Mr. GAUD. Not necessarily. Certainly that is usually so.

Mr. PASSMAN. Where would a gravel road be superior to a hard surface road?

Mr. GAUD. In that country, I am not sure there would be that much difference.

Mr. PASSMAN. Why did you not plan the gravel at the beginning? You are building the gravel road now because it costs less?

Mr. GAUD. We are.

Mr. PASSMAN. You are building the road with gravel because it will cost less than surfacing with asphalt?

Mr. GAUD. The asphalt road was certainly regarded as a more desirable road by the Afghans. How much better it is in this particular situation, I do not know.

Mr. PASSMAN. If you had your way, if you could have built the hard surface road, you would have done so?

Mr. GAUD. I would.

Mr. PASSMAN. This is the first time in all my years that I have heard that a gravel road would equal a hard surface road in quality.

Mr. GAUD. Here is what we were faced with—carrying literally thousands of tons of asphalt over a long railroad haul and then over a several hundred mile truck haul; if we had to do this through Iran, I do not think anyone in his right mind would have done that.

We felt as a matter of policy that we had to continue this road. We could not leave it half finished.

Mr. ANDREWS. Why?

Mr. GAUD. We felt as far as the United States was concerned, its name would be mud in Afghanistan if we left this project half finished.

Mr. PASSMAN. We are building this road for the benefit of the Afghans?

Mr. GAUD. For them to use.

Mr. PASSMAN. Did we accumulate the road material and the machinery and what it would normally take to build this road at a border in Pakistan?

Mr. GAUD. No, sir.

Mr. PASSMAN. What was it we were talking about that the Afghans would not open the border to permit delivery?

Mr. GAUD. They closed their border in September 1961. Over the course of the next few months, material that had been ordered for Afghanistan was at the border. They opened the border for 2 months and that material all went in. After the border was closed again, we accumulated only 1,500 tons of asphalt.

Mr. PASSMAN. It was the Afghans who did not want to open the border to receive our generosity?

Mr. GAUD. That is correct.

Mr. PASSMAN. If we had said, "The American taxpayers are willing to put up their money to do these things for you in order to help your country; now, if you are that stubborn, we are going to forget the entire matter," what would have been their position?

Mr. GAUD. Mr. Talbot said yesterday in the judgment of the State Department it was worth more to the U.S. policy to stay in Afghani-

stan than to get out. Since that time, the Afghanistan Government has changed, has completely reversed its field in many respects. Query: If we had gotten out of Afghanistan at that time, what would be the position there today? It is hard to guess, but it is hard to believe it would have been as favorable to the West as it is today.

Mr. PASSMAN. That is, of course, speculation.

Mr. GAUD. Speculation, but who can tell?

Mr. PASSMAN. I never thought that I would sit across the table from intelligent people and have them tell me we are willing to be generous and give away tens of millions of dollars to a country, something that will help them, but they are not willing to open the border and receive the material and equipment so we can get in and do these things.

If I had ever been told we would reach the position where we are going to force ourselves on a nation to take our aid, as in this situation, I would not have believed it.

Mr. GAUD. Two comments, if I may.

We did not do this merely because we thought this was the best thing for Afghanistan; we did it because we thought it was in our own interest to do it.

Second, they were not refusing our aid. They were asking for our aid. They wanted us to bring it through Iran. It is not that they did not want the aid. It was their difference with Pakistan that was getting in the way. We did this because we thought it was in our own interest to do it.

Mr. PASSMAN. They were the recipients of the aid, were they not?

Mr. GAUD. That is right.

Mr. PASSMAN. They knew it would cost more to get the goods in through Iran than through Pakistan?

Mr. GAUD. They did.

Mr. PASSMAN. They were willing to forego getting the material rather than receive it through Pakistan?

Mr. GAUD. They wanted to get it through Iran.

Mr. PASSMAN. But there was a holdup there, and we had to prevail upon them to let some get in through Pakistan. But we had to take the other in through Iran?

Mr. GAUD. That is what happened.

Mr. PASSMAN. They knew this procedure would cost us more.

Mr. GAUD. Yes, they did.

I beg your pardon. I should not say that. They had disputed all the way through that it would cost more to get material in through Iran than it would to take it up through Pakistan.

Mr. PASSMAN. What if you should find out that you can get it in through Iran for less?

Mr. GAUD. We have not found that out. We have found it is more expensive to go through Iran.

Mr. PASSMAN. Why did you not find that out before you ever got into the matter, before you ever took any of the shipments through Iran?

Mr. GAUD. We did tell them.

Mr. PASSMAN. Why did you not refuse to go in that way?

Mr. GAUD. Because we believed it was to the United States interest to maintain an aid program in Afghanistan, even if we had to pay the extra costs.

Mr. PASSMAN. Notwithstanding their stubbornness.

I yield to Mr. Andrews.

Mr. ANDREWS. I always heard that you should never look a gift horse in the mouth. Maybe that is an oldtime saying. Perhaps that is too old fashioned for these modern days of jets and other things.

Could you take stuff into Afghanistan through Iran without going through some part of Pakistan?

Mr. GAUD. Oh, yes. You go in at the head of the Persian Gulf at the port of Khorramshahr. The material is put on a railroad there which goes up through Tehran and goes east to the railhead at Meshed in northeast Iran. Then it is shipped overland from Meshed to Herat in Afghanistan and on from there either to Kabul, or Kandahar.

Mr. ANDREWS. What kind of road did the Afghans want?

Mr. GAUD. From Kabul to Kandahar—they wanted a high grade, U.S. style, asphalt road.

Mr. ANDREWS. A freeway?

Mr. GAUD. Not a freeway.

Mr. ANDREWS. Did any of your people explain to them that we were willing to give it to them if they would just let us ship the material in through the most economical way, Pakistan?

Mr. GAUD. Yes, sir.

Mr. ANDREWS. What did they say about that?

Mr. GAUD. They put their dispute with Pakistan ahead of that.

Mr. ANDREWS. You still thought they wanted a road?

Mr. GAUD. They still said they wanted the road.

Mr. ANDREWS. I get back to my oldtime expression, you should not look a gift horse in the mouth. If we were going to give them the road, I think someone in the State Department should have been firm enough to say—this is it, take it or leave it.

I agree with what Mr. Rhodes said, this is the most ridiculous case I have seen documented since I have been on this committee for a period of about 8 or 10 years.

REASONS FOR CONTINUING ROAD PROJECT DURING BORDER CLOSURE PERIOD

Mr. GAUD. Here is one of the considerations I had in mind, and I am not talking political considerations. This was a commitment that had been made by the U.S. Government to build this road.

Mr. ANDREWS. I do not care who made the commitment.

Mr. GAUD. Let me finish the story.

It is a commitment that had been in existence for a great many years. It, you might say, represented the U.S. aid program to Afghanistan.

Now, suppose we had followed your suggestion, which is an extremely appealing one. The time would come sooner or later, as we expect it to come in a few days, when the border would be opened. We would be back in Afghanistan with an aid program. We would still have that commitment to finish that road.

By this time, if we had just quit work and not maintained the contractor by shipments through Iran, he would have disbanded his work force, and his equipment and he would have had to start completely afresh. Our advice was it would have cost many more mil-

lions of dollars if we had tried to pick up the construction of the road after the event than if we went along with it the way we did.

Mr. ANDREWS. What is the width of that gravel road? Put it in the record.

Mr. GAUD. I will.

(The information follows:)

WIDTH OF KABUL-KANDAHAR ROAD

The graded width of the gravel road is 32.8 feet with a 23-foot gravel surface.

Mr. ANDREWS. Mr. Natcher tells me, and he knows, that the cost of building a gravel road in this country is about $28,000 a mile, a 30-foot right-of-way gravel road. We figured out this gravel road would cost about $150,000 a mile, and you say they are getting the gravel locally.

Mr. GAUD. Two of the six parts will be asphalt.

I was including the force majeure claims in the cost of the road mile.

Mr. ANDREWS. How does asphalt get into Afghanistan?

Mr. GAUD. The only asphalt to my knowledge that has gone in there yet has gone through Pakistan.

Mr. ANDREWS. Did you build the asphalt section first?

Mr. GAUD. It has not been paved. We only started this road about 2 months before the border closed in August of 1961. There are two sections we are going to pave with asphalt, one section is near Kabul, the other is near Kandahar, the two cities.

The theory is, those will be the two most traveled parts of the road.

Mr. PASSMAN. In the beginning, you envisioned a 300-mile asphalt road?

Mr. GAUD. Yes.

KABUL-KANDAHAR ROAD COST

Mr. PASSMAN. At a cost of what amount?

Mr. GAUD. The contract cost——

Mr. PASSMAN. Your original estimate.

Mr. GAUD. A rough figure, $41.4 million. That excludes the supervisory cost of the engineers, AID financing of some earlier engineering work done on the road by a private contractor and some U.S. excess equipment provided to the contractor. The contract costs $41.4 million.

Mr. PASSMAN. We want the total, sir. That was the original estimate.

Mr. GAUD. That is the contract price.

Mr. PASSMAN. On top of that figure, let us get the estimate.

Mr. GAUD. I do not think I have that figure here, I am sorry.

Mr. PASSMAN. The contract price was what amount?

Mr. GAUD. Roughly $41.4 million.

Mr. PASSMAN. For a 300-mile asphalt road?

Mr. GAUD. Yes.

Mr. PASSMAN. But the latest figures we have here are $54,226,000 plus $760,000, plus $780,000 for a gravel road.

Mr. GAUD. This project on page 13 includes a number of items other than this road. It includes paving the Kandahar, Spin-Baldak Road, constructing a bridge over the Tarnak River, and a railway spur from the Pakistan border to Spin-Baldak.

Mr. PASSMAN. Is that within that 300-mile road?

Mr. GAUD. No.

Mr. PASSMAN. What is the present estimate to complete the road? You have a contract price?

Mr. GAUD. It is the contract price.

Mr. PASSMAN. Is it going to hold firm?

Mr. GAUD. Yes; the contract will, as far as I know. There may be change orders and that sort of business.

Mr. PASSMAN. This is a 300-mile road and it is costing $150,000 a mile to build a gravel road in Afghanistan?

Mr. GAUD. Two-thirds gravel.

Mr. PASSMAN. Are you putting two-thirds gravel and one-third hard surface?

Mr. GAUD. That is what we are doing.

Mr. PASSMAN. It costs $150,000 a mile to build a gravel road? What does it cost to build a hard surface road in Afghanistan, per mile?

Mr. GAUD. The original contract price was $41.4 million for an asphalt road in Afghanistan all the way.

Mr. PASSMAN. For the 300-mile road, how much will be asphalt?

Mr. GAUD. Roughly 100 miles.

Mr. PASSMAN. One-third will be asphalt, two-thirds gravel?

Mr. GAUD. That is the plan.

Mr. PASSMAN. What is your cost estimate on the 100 miles of asphalt?

Mr. GAUD. The Corps of Engineers tell us it will save $3.1 million.

Mr. PASSMAN. I am interested in the cost.

Mr. GAUD. $3.1 million less than $41.4 million brings you down to roughly $38 million. Divide that by——

Mr. PASSMAN. That is not the information we want at all.

You started out to build 300 miles of hard surface roads at a cost of $41.4 million. Now you are going to build 100 miles of hard surface and 200 miles of gravel. Forgetting all about putting it together in this mulligan, what does it cost in Afghanistan to build a hard surface road, as compared to what it costs to build a gravel road, per mile?

Mr. GAUD. I have no figure on the gravel road.

Mr. PASSMAN. Do you have a figure on hard surface, per mile?

Mr. GAUD. I have the contract estimate of $41.4 million.

Mr. PASSMAN. That was for hard surface?

Mr. GAUD. That is right. I have no figure on a gravel road because we never looked into that.

Mr. PASSMAN. Do you know what it costs to build a hard surface road in the United States?

Mr. GAUD. I do not.

Mr. PASSMAN. What is going to be our position when we perhaps give them about 25 percent of what they expect?

When you have a 100-mile stretch of hard surface road and you have the other 200 miles of gravel road, does it not follow that they will want you then to come in and hard surface the other 200 miles?

Mr. GAUD. I would not doubt they will ask.

Mr. PASSMAN. What will be our position?

Mr. GAUD. We have told them we are going to do this two-thirds on the gravel. If the Pakistan border is opened soon, and if we do not incur all the extra expenses we thought we might by virtue of the closing of the border, we would be prepared to look at this.

As far as I am concerned, I would not look at it otherwise.

Mr. PASSMAN. Can you tell the committee that when you liquidate this $41.4 million you are going to stop the work?

Mr. GAUD. No, sir.

Mr. PASSMAN. It may very well be we might get involved in hard surfacing an additional 200 miles at some subsequent date?

Mr. GAUD. It is possible. It is not our present intention.

Mr. PASSMAN. It is not your present intention, but you do not say that you will not do so?

Mr. GAUD. No, sir.

Mr. RHODES. How much extra will it cost to end up eventually with a hard surface road here if you gravel this 200 miles first and later have to hard surface it?

Mr. GAUD. It will cost more than if you do the hard surfacing initially, because of the level of the culverts and bridges.

Mr. RHODES. What do we think we are buying by this?

There ought to be some advantage to the American taxpayer somewhere, and it is not apparent to me.

Mr. GAUD. I do not think we are buying anything specific with this road, Mr. Rhodes. I think the road is important in terms of the development of Afghanistan.

If you are talking in terms of what we are buying with our whole aid program to Afghanistan, and this is an important part of it, it seems to me we are interested in keeping this country, which has a strategic location between Iran and Pakistan, from being wholly dedependent on the Soviet bloc, keeping it directed, at least to some extent, toward the West, and—getting to dollars and cents of it—avoiding getting ourselves into a position where the Russians are on the border of Pakistan and Iran, in which case I think we would be spending far more in military assistance in those countries.

VALUE AND USEFULNESS OF KABUL-KANDAHAR ROAD

Mr. RHODES. I wish you would "get dollars and cents" about it. I feel very much "dollars and cents about it." It disappoints me to find you apparently looking down your nose at this attitude.

Mr. GAUD. I am not looking down my nose at this attitude.

Mr. RHODES. I hope you are not.

To me this foreign-aid program makes little sense anyway, and it makes even less sense if the American taxpayer is not getting anything out of it. That is all I am trying to explore.

Mr. GAUD. Right. I think there is a difference of judgment here perhaps as to whether it is worth having a U.S. aid program in Afghanistan. I think that is the question that you face when you ask whether it is worth going forward with this road.

Mr. RHODES. Last year I think you and I, or someone and I, had a discussion about the possibility that the very existence of this road makes it much easier for the Soviets to get into Pakistan.

Mr. GAUD. You mentioned that last year.

Mr. RHODES. I guess you are still of the same opinion, that balancing interests, you would still build the road, even though last year I think you agreed with me it would possibly provide a better avenue of invasion if the U.S.S.R. wanted to use it.

Mr. GAUD. Yes; I think before the last World War, you might have said any road across France made it easier for the Germans to get to the channel, but that would not stop you from building roads in France.

Mr. NATCHER. Mr. Gaud, what type of traffic would you have on this road?

Mr. GAUD. This road will connect the two main largest cities in Afghaniston. It will be primarily truck traffic. There are no railroads in Afghanistan at all. There are limited air transport facilities. Trucks are the main way of getting around—trucks for freight and buses for people. This will be used primarily by trucks and buses.

Mr. NATCHER. Do you have any type of animals that will be used on this road, animal traffic of any type or description?

Mr. GAUD. They use camels in Afghanistan. Do you mean to carry goods?

Mr. NATCHER. Yes; would you have any type of traffic on this road other than trucks?

Mr. GAUD. I would not know.

Mr. PASSMAN. Did you get the information about the funds for us, Mr. Flinner?

Mr. FLINNER. Our March 31 figures would indicate as of June 30, the uniquidated would be approximately the same as shown in the project statement.

As of March 31, the unliquidated is $32,244,000. We spent in 9 months $6,470,000, or approximately $700,000 a month. At that rate, there would be another $2 million liquidated by June 30.

Mr. PASSMAN. What amount have you spent?

Mr. FLINNER. Through March 31, $22,249,000.

COMPARATIVE ROADBUILDING COSTS

Mr. PASSMAN. Mr. Gaud, we would like for you to find out what it costs to build a gravel road in the United States per mile, what it costs to build a hard surface road in the United States per mile, what it costs to build a gravel road in Afghanistan per mile, and what it would cost to build a hard surface road in Aghanistan per mile.

We want these figures so we might determine what this stubbornness on the part of Afghanistan is going to cost the U.S. taxpayers additionally if we ever resurface the other 200 miles.

(The information supplied follows:)

COMPARATIVE ROAD CONSTRUCTION COSTS, UNITED STATES AND AFGHANISTAN

Comparable per mile construction costs of a gravel road in the United States with the graveled sections III and IV of the Kabul-Kandahar road are: $80,000 to $100,000 in the United States and $122,300 on the Kabul-Kandahar road. For a road similar to the bituminous surfaced sections I and II of the Kabul-Kandahar road, costs in the United States are $100,000 to $120,000 as compared with $137,800 on the Kabul-Kandahar road. The costs for the Kabul-Kandahar road are based on costs prior to the border closure, i.e., force majeure and the added transit costs of the Iranian route are not included. The Kabul-Kandahar road costs do, however, include the higher mobilization costs as well as the higher freight costs of the commodities used in building the road.

U.S. figures on road construction do not normally include the cost of building structures over 20 feet in length, e.g., bridges, whereas the figures for the Kabul-Kandahar road do; therefore, the figures used for the United States have been adjusted to include structures.

Mr. GAUD. I think perhaps the answer is already available from what I have said. We were told by the corps a change order shows, that converting these four segments from an asphalt road to a gravel road will make a difference of $3.1 million.

Mr. PASSMAN. We want to first find out what it costs to build a gravel road. We know it is about $28,000, but let us get it officially, and what it would cost to build an asphalt road. If through their stubbornness they are going to cost us this additional money, and we are going to penalize them for that attitude and action by giving them an inferior road, and then we are going to turn around and give an asphalt road to them after all, we would not be penalizing them.

Mr. GAUD. There is a little more to this than penalizing.

As I said a while ago, if we had to carry 25,000 or 30,000 tons of asphalt through Iran, that would have cost an awful lot of money, quite apart from the contract. This was one of the costs we were trying to avoid.

Mr. PASSMAN. You said you penalized them by giving them a gravel road instead of asphalt. If you turned around later and gave them the asphalt road, they have not been penalized.

Mr. GAUD. We were trying to save the money. We have not had to spend as much money going through Iran.

Mr. RHODES. Mr. Gaud has said it would cost more eventually to have a hard surface road if you do it in two stages. I think we should have, in addition to the figures you asked for, the estimated cost of this road as it would be if you do decide to hard-surface it.

(The information supplied follows:)

ESTIMATED COST TO SURFACE ENTIRE LENGTH OF KABUL-KANDAHAR ROAD

If the decision to change the gravel road to asphalt in accordance with original specifications were made prior to September 1963, the road would cost an additional $3.1 million.

The cost of changing from a gravel to a paved road at a later date would depend on many factors. These would include whether or not remobilization of a contractor would be required, whether all of segments III to VI had been opened to traffic, the amount of traffic on the open sections of the road and the type of maintenance the open sections had received. We can make only the roughest of estimates of additional costs. If, however, the decision to pave is made after all segments have been opened to traffic, a very tentative estimate would be $7 million to $8 million.

Mr. PASSMAN. Do you have other fouled up situations such as this one in your area?

Mr. GAUD. I know of no other project like this in my area, sir.

NATURE OF U.S. COMMITMENT TO AFGHAN REGIONAL TRANSIT

Mr. MONTOYA. When was this project actually finalized and committed to the Government of Afghanistan?

Mr. GAUD. I think in 1956, Mr. Montoya.

Mr. MONTOYA. What was the nature of that commitment?

Mr. GAUD. We entered into a commitment to build in effect this road, to improve or build other roads connecting Pakistan and Afghanistan. The general theory being to provide Afghanistan access to the West.

Mr. MONTOYA. How many bidders did you have on this road project?

Mr. GAUD. I would have to go back in the records to find out. The Corps of Engineers let this contract on competitive bidding I do not know how many bidders bid.

Mr. MONTOYA. Were these other projects which you mention on page 13 included in the original commitment, or are they separate commitments, such as the extension of the railway and the construction of a bridge over the Tarnak River?

Mr. GAUD. Those have all been a part of the project from the beginning.

Mr. MONTOYA. Are they along this road?

Mr. GAUD. No; they are not.

Mr. MONTOYA. What do you mean they are a part of the project?

Mr. GAUD. The project is called the Afghanistan Regional Transit.

Mr. MONTOYA. They are part of the original commitment. They are part of the package?

Mr. PASSMAN. In that connection, on these other projects when Mr. Richards went out—and I always refer to him affectionately as the "black-satchel" man—was this a money commitment, and the road came along later, or was it a road commitment from the start?

Mr. GAUD. I do not know.

Mr. PASSMAN. Will you find out for us?

Mr. GAUD. I will try.

(The information subsequently supplied follows:)

COMMITMENT TO AFGHANISTAN

The United States made a commitment to Afghanistan in a 1956 aide memoire to provide assistance to the following: (1) establishment of a transit zone and warehouses in Karachi for Afghan goods; (2) extension of rail facilities in Pakistan to Afghan border points; (3) setting up within Afghanistan warehousing and customs facilities at or near the Afghan-Pakistan border, and (4) the improvement of existing roads from the proposed warehouses to Kabul and Kandahar. The first project agreement signed in 1958 provided the initial funding for various elements of the project including the Kabul-Kandahar road.

Mr. MONTOYA. You are not going to be satisfied with the completion of this project. You will probably want an alternative route in case this road is rained out, or something happens to it, will you not?

HERAT-ISLAM QALA ROAD PROJECT

Mr. GAUD. No, sir.

Mr. MONTOYA. What is the significance of the project on page 15 where you are starting another road project and it reads:

Project goal, to provide an alternate route to the free world through Iran and to give West Afghanistan a direct western trade outlet?

Mr. GAUD. I can best answer that if you will look at the divider sheet which has a map of Afghanistan on it. You see Kabul and Kandahar. The road we have been talking about runs between those two cities wholly within Afghanistan. The other part, where this bridge is, is from Kandahar down to the border in the direction of the Quetta.

Mr. MONTOYA. In the direction of what?

Mr. GAUD. Quetta. That is in Pakistan. The purpose of that project was to provide access to Pakistan. This Herat-Meshed road, if you look on the same map, Herat is in the northwest part of Afghan-

istan, and the dotted line represents the proposed improved road to Iran. It is alternate in the sense it gives Afghanistan a road to the West other than through Pakistan.

Mr. MONTOYA. Let's get back to this project on page 15, the Herat-Islam-Qala Road. You have only obligated $150,000 on this road. Is this the forerunner for another gigantic project such as we have been discussing before?

Mr. GAUD. I hope it would not be gigantic.

Mr. MONTOYA. Why are we going into any expenditures at all on any survey?

Mr. GAUD. As we say in the text here, this is a survey of the road from Herat into Iran, and we have told the Afghans we would consider a loan to them to improve the present road from Herat to the border which leads to the railhead at Meshed. It is not now a good one.

Mr. MONTOYA. What kind of a loan have you told them we would consider?

Mr. GAUD. We have not told them.

Mr. MONTOYA. Would it be a dollar loan?

Mr. GAUD. Yes.

Mr. MONTOYA. A hard loan?

Mr. GAUD. It would not be a hard loan because of Afghanistan's balance-of-payments situation.

Mr. MONTOYA. In other words, their repayments would still be under the control of their Government?

Mr. GAUD. Presumably it would be a 40-year, 10-year grace, three-quarters of 1 percent loan.

Mr. MONTOYA. So in reality, and for all practical purposes, it would be U.S. taxpayers' dollars down the drain. We would not get them back, would we?

Mr. GAUD. The assumption is we would get them back.

Mr. MONTOYA. When?

Mr. GAUD. I am assuming they would live up to their obligations and pay the loan.

Mr. MONTOYA. You are assuming their currency would be strong enough for international exchange?

Mr. GAUD. I would hope so. There is a 10-year grace period here. Yes, sir.

Mr. PASSMAN. Anything that might ever come back would go back into the foreign aid program, not to the Treasury?

Mr. GAUD. So the law provides.

Mr. MONTOYA. What is the estimate of this particular project?

Mr. GAUD. The Corps of Engineers has not finished the survey. Purely off-the-cuff information is it will run anywhere from $8 to $14 million. It is an 84-mile road.

Mr. MONTOYA. Would this be asphalt or gravel?

Mr. GAUD. We have asked them to give us estimates of various kinds of roads, and until we see them and get their opinion on what is best for that locality, I do not know.

Mr. MONTOYA. Let's say a tentative commitment.

Mr. GAUD. We have told them we would look at it; that is right.

Mr. MONTOYA. Does that not mean a commitment?

Mr. GAUD. I do not call it a commitment.

Mr. MONTOYA. Let's say a tentative commitment.

Mr. GAUD. You can call it that if you like.

Mr. ANDREWS. Who makes those commitments? Who made this one in this particular case?

Mr. GAUD. The Ambassador told the Afghans that we were prepared to survey that route.

Mr. ANDREWS. And pay for the survey?

Mr. GAUD. And pay for the survey.

Mr. ANDREWS. What else did he tell them?

Mr. GAUD. And depending on the results, if it panned out, we would be prepared to consider a loan for that road.

Mr. ANDREWS. Let me ask you this: Is Afghanistan financially able to build the road?

Mr. GAUD. No, sir.

Mr. ANDREWS. Then if we put up the money for a survey and do not plan to finance the road for them, either by gift, grants, or loans, or what not, we are wasting the survey money, are we not?

Mr. GAUD. That is true.

Mr. ANDREWS. Do you not think we have made a commitment out there? Not that I want one.

What is your frank opinion about that? Do you not think a firm commitment has been made?

Mr. GAUD. I think the odds are very heavy we are going to build that road on a loan; yes.

Mr. ANDREWS. If it is a gravel road——

Mr. GAUD. For this reason: Because we think it is important, again from the standpoint of our situation in that part of the world, that Afghanistan not be dependent on Pakistan for its access to the free world. We think it is important to improve its access to Iran.

Mr. ANDREWS. From what I hear about their attitude toward Pakistan, they do not need a road to Pakistan.

Mr. GAUD. They have got that.

POTENTIAL USE OF AFGHANISTAN ROADS TO SOVIET BLOC

Mr. PASSMAN. Would this 300-mile road give Russia improved access to Afghanistan?

Mr. GAUD. No. It is nowhere near Russia.

Mr. PASSMAN. Would it give them access through Afghanistan to Pakistan?

Mr. GAUD. This road, the Kabul-Kandahar Road, runs through the two main cities of Afghanistan. It does not go to any border at all.

Mr. RHODES. Of course, Mr. Gaud, the completion of the road from Kabul to Kandahar does not get the Russians to Kabul, but I would not imagine this would be any great trouble to them. If they get to Kandahar, there is a road which connects to a railroad to Pakistan.

Mr. GAUD. That is true.

Mr. RHODES. If you build the rest of that road, and if the U.S.S.R. wants to base an operation at Kabul, they could go into Iran or Pakistan from there?

Mr. GAUD. If you are assuming the Russians take over Afghanistan.

Mr. RHODES. That would have to be the assumption.

Mr. GAUD. This would certainly facilitate their getting around Afghanistan.

Mr. RHODES. Thank you.

TECHNICIANS UNDER REGIONAL TRANSIT PROJECT

Mr. PASSMAN. How many U.S. technicians will be furnished by your estimate of $745,000, Mr. Gaud?

Mr. GAUD. Which project are we on now?

Mr. PASSMAN. The regional transit project.

Mr. GAUD. Seventy.

Mr. PASSMAN. How much is that per technician?

Mr. GAUD. It is about $10,500 roughly.

Mr. PASSMAN. So you are actually paying as much for participants as your technicians—$11,000 for participants, and you are getting technicians for $10,500.

Mr. GAUD. I am pretty sure we are not getting technicians for $10,500.

Mr. PASSMAN. I thought that is what you said.

Mr. GAUD. I said that is the arithmetical result of this. It may be that some of these——

Mr. PASSMAN. How can we find out?

Mr. GAUD. I beg your pardon. I gave you the wrong figure.

The $745,000 is for 19 Corps of Engineers technicians rather than 70 I mentioned. The 70 are financed under the basic construction contract.

Mr. PASSMAN. What will the 19 technicians cost us, per technician, per year?

Mr. GAUD. About $39,000.

Mr. PASSMAN. What kind of technicians are they?

Mr. GAUD. They come from the Corps of Engineers and that average cost includes the overhead of the Corps of Engineers. That is not all salary, or pay, to the technicians.

Mr. PASSMAN. This figure is, I believe, about the highest we have run into for your technicians.

Could you give us a breakdown of the $745,000 for the 19 engineers? Can you work that item out for us and submit a table?

Mr. GAUD. We will.

(The information supplied follows:)

BREAKDOWN OF TECHNICIAN COSTS, CORPS OF ENGINEERS CONTRACT IN AFGHANISTAN

The estimated obligation of $780,000 for fiscal year 1964 was calculated as follows: $35,000 for the USAID Surface Transportation Division Chief and his secretary, and $745,000 for the Corps of Engineers. For the Corps of Engineers, it was estimated that there would be 10 Americans in Afghanistan, at an average direct cost of $10,900 or a total of $109,000, and 9 third-country employees at an average direct cost of $6,800, or a total of $61,200. Additional costs of the corps in Afghanistan for local employees' salaries, transportation and packing of household effects, local travel, and contingencies, were estimated at $64,400. The remaining $510,400 is to cover the supporting services provided by 34 Americans at corps headquarters in Teheran, and 6 at corps district office in Leghorn, Italy, plus supporting local and third-country staffs in those offices.

HERAT-ISLAM QALA ROAD PROJECT

Mr. PASSMAN. Did you justify last year the $150,000 you obligated for the Herat-Islam-Qala Road project?

Mr. GAUD. No, sir.

Mr. PASSMAN. Why did you not do so?

Mr. GAUD. Because the project did not arise until after we presented the fiscal year 1963 program.

Mr. PASSMAN. It could not have waited until this year?

Mr. GAUD. That was our feeling, yes.

Mr. PASSMAN. What if we fixed it so you would have to wait for authority?

Mr. GAUD. We would wait.

Mr. PASSMAN. You do not think the world would come to an end as a result of such a wait, do you?

Mr. GAUD. No, sir.

Mr. PASSMAN. What is the cost to complete this project?

Mr. GAUD. This is the Herat survey.

Mr. PASSMAN. Yes.

Mr. GAUD. The amount we are asking for 1964, if we go ahead with the loan——

Mr. PASSMAN. Are you going to start it in 1964 and end it in 1965?

Mr. GAUD. We started in 1963.

Mr. PASSMAN. And you will end it in fiscal year 1965?

Mr. GAUD. Yes; unless approval of the loan for the road is delayed for one reason or another.

Mr. PASSMAN. Can you give an estimate of the cost?

Mr. GAUD. The supervisory cost?

Mr. PASSMAN. Give us the total.

Mr. GAUD. I am doing that. The supervisory cost of the Corps of Engineers is estimated at $780,000 for the whole job.

Mr. PASSMAN. All you have when you get through is a survey?

Mr. GAUD. No, sir. This is if we build the road I was talking about with Mr. Andrews.

Mr. PASSMAN. If you do not build the road, you will have to spend $780,000?

Mr. GAUD. No. We will have spent $150,000.

Mr. PASSMAN. What is the $280,000 I am looking at you are requesting for 1964 to add to the $150,000? Let us put the three figures together.

Mr. GAUD. The $780,000 is the total cost to the end of the project.

Mr. PASSMAN. After you get through, what do you have?

Mr. GAUD. The $780,000 will have been spent, as I understand it, only if we make the loan and build the road that I talked about, so you will have the road construction supervised by the corps.

Mr. PASSMAN. You have obligated $150,000?

Mr. GAUD. We have actually obligated $80,000, because there was some delay in starting the survey.

Mr. PASSMAN. You are asking for $280,000 additional for fiscal year 1964?

Mr. GAUD. That is to complete the survey and cover the initial design costs, if we go ahead with the road.

Mr. PASSMAN. You are not going to do anything beyond the $150,000 unless credit is granted?

Mr. GAUD. Correct. A small part of the $280,000 will be required to complete the survey. We have obligated $80,000 this year, in 1963 to the Corps of Engineers for the survey.

Mr. PASSMAN. Are you going to finish your survey before you make the credit?

Mr. GAUD. Yes: we are.

Mr. PASSMAN. What if you finish the survey and you do not extend the credit, then what is the total cost?

Mr. GAUD. We will not obligate the rest of the money.

Mr. PASSMAN. Can you give us an estimate of what the survey will cost, if you do not do the construction?

Mr. GAUD. The total cost of the survey?

Mr. PASSMAN. You agree we should have that information, do you not?

Mr. GAUD. I do.

Mr. PASSMAN. Will you get it for us?

Mr. GAUD. Yes.

(The information supplied follows:)

TOTAL COST OF HERAT-ISLAM-QALA ROAD SURVEY

The original Corps of Engineers' estimate for the feasibility study was $150,000. The corps' most recent estimate is approximately $100,000; $80,000 was obligated in fiscal year 1963 so that $20,000 more will be needed in fiscal year 1964.

Mr. PASSMAN. What is the length of the road?

Mr. GAUD. Eighty-four miles.

Mr. PASSMAN. What is the ball park estimate of the cost?

Mr. GAUD. It depends on the type of road built.

Mr. PASSMAN. An asphalt road?

Mr. GAUD. I have heard figures running from $8 million to $14 million and we have nothing authoritative. That is the range that I have heard.

Mr. PASSMAN. And it will be under one of these disguised grants, 40 years, 10-year grace period, three-quarters of 1 percent service charge?

Mr. GAUD. Those will be the terms.

NATIONAL ROADS IMPROVEMENT AND MAINTENANCE PROJECT

Mr. PASSMAN. What is the cost to complete the national roads improvement project, on page 16, for which you are requesting $170,000 in fiscal year 1964?

Mr. GAUD. I believe I am right in saying the total cost of this project will be $218,000. That is what we now estimate. We obligated $48,000 this year as against that $50,000 shown.

Mr. PASSMAN. What will you have when you spend the money?

Mr. GAUD. Well, we hope the Afghanistan Government will have to show for it a much better ministry of public works than it has today.

Mr. PASSMAN. This is a paper project?

Mr. GAUD. This is to improve the ability of the Afghanistan Government to handle its road maintenance.

Mr. PASSMAN. It is a paper project. There are no actual materials involved?

Mr. GAUD. That is correct.

KABUL-TORKHAM ROAD PROJECT

Mr. PASSMAN. For this Kabul-Torkham Road project, on page 17, you have an estimate of $50,000 for fiscal year 1964. Is that correct?

Mr. GAUD. That is true, sir.

Mr. PASSMAN. What is the annual cost to finance the one contract technician for which you are requesting funds in fiscal year 1964?

Mr. GAUD. That does not appear from this page. I would have to look that up.

Mr. PASSMAN. Let us go to page 17 and see if we do not get the answer. Would it not be $44,000?

Mr. GAUD. I do not think so. That is far above the average cost of technicians.

Mr. PASSMAN. We are trying to find out.

Mr. GAUD. The contract service funds are to finance one contract technician and supporting materials and commodities.

Mr. PASSMAN. Does that cost amount to $6,000?

Mr. GAUD. That is local expenses.

Mr. PASSMAN. What other expenses would you have in connection with this contract technician?

Mr. GAUD. That is what I say, this page does not show that, and I do not know the answer.

Mr. PASSMAN. It could be $44,000?

Mr. GAUD. I think it is very unlikely. The answer seems to be that three third country technicians are also to be financed.

TOTAL OF PROJECTS AMOUNTS COMPARED WITH TOTAL REQUEST

Mr. PASSMAN. When you add up all the projects in these books, including the Contingency Fund, does the amount total the $4.5 billion of the budget request?

Mr. FLINNER. No, sir.

Mr. PASSMAN. How much does it total?

Mr. FLINNER. I have not added it up.

Mr. PASSMAN. Which is the highest, the projects as listed, or the budget?

Mr. SCHEINMAN. The projects.

The request for funds for 1964 is less than the total of programs for every country included in this presentation.

Mr. PASSMAN. If you add up all the projects included in the project books, what do they amount to? What is the total?

Mr. SCHEINMAN. Dollar requests for 1964?

Mr. PASSMAN. Yes.

Mr. SCHEINMAN. You will find that by looking.

Mr. PASSMAN. You find the information for us, will you?

Mr. SCHEINMAN. Yes, sir.

Mr. PASSMAN. The total amount for projects in all the books that you people have come down here with this year.

Mr. SCHEINMAN. Pages 2 and 3 of volume 1.

Mr. PASSMAN. What is the total?

Mr. SCHEINMAN. The estimated program for development grants is $252,670,000.

Mr. PASSMAN. I am asking you for the total amount in these books.

Mr. FLINNER. I do not have the total.

Mr. PASSMAN. You do not have the total. Mr. Scheinman said that you did.

Mr. FLINNER. I do not believe we have the total of the projects in the project books with me.

Mr. PASSMAN. Please get the total for us.

Mr. FLINNER. Yes.

Mr. PASSMAN. If what you have in these justification books does not add up to the budget request, we want to know where the difference is. We think you may be off a half billion dollars.

We want to find out whether you are requesting more money than you need, or expect to get, or whether the total amount of projects equal the President's budget. We want to know how much is guess.

Mr. SCHEINMAN. The appropriation request is less than the total of programs for each country.

Mr. PASSMAN. Then it is obvious you do not expect to get the funds you are requesting.

Mr. SCHEINMAN. No, sir. We have taken into account this year the estimates for carryover, unliquidated funds.

Mr. PASSMAN. Give us the amount of all that. Will you bring us a sheet down Monday morning?

Mr. SCHEINMAN. Certainly. It has been provided.

Mr. PASSMAN. Please provide it again.

(The information follows:)

Summary of fiscal year 1964 economic assistance program appropriation request and estimated program

[In thousands of dollars]

	Estimated recoveries	Carryover of prior year appropriations	Estimated receipts	Appropriation request	Estimated program
Development loans	25,832	71,398	3,000	1,060,000	1,160,230
Development grants:					
General authorization	15,670			257,000	272,670
Special foreign currency programs				2,000	2,000
American schools and hospitals abroad				20,000	20,000
Surveys of investment opportunities		1,000			1,000
Alliance for Progress:					
Loans	4,000	45,800	2,300	550,000	602,100
Grants	5,000			100,000	105,000
Social progress trust fund				200,000	200,000
Inter-American social and economic program					
International organizations and programs				136,050	136,050
Supporting assistance, total program					
Regular appropriation	10,060			435,000	445,060
Contingency fund used for supporting assistance purposes					
Contingency fund, net program					
Total appropriation					
Programed for supporting assistance purposes				300,000	300,000
Administrative expenses (AID)				57,250	57,250
Administrative and other expenses (State)				3,025	3,025
Total	60,562	118,198	5,300	3,120,325	3,304,385

MOTOR VEHICLE TRANSPORTATION PROJECT

I note, on page 18, that we have financed 445 buses and trucks, and, in addition, 150 knockdown buses for a motor vehicle transportation project which is designed to assist the Afghans develop a modern bus system within Kabul, and between the major cities of Afghanistan; is that correct?

Mr. GAUD. That is true.

Mr. PASSMAN. How much have we spent to date on this project?

Mr. GAUD. Our obligations are $4,638,000, plus $53,000 in 1963, which make a total of $4,691,000.

Mr. PASSMAN. If they do not have any roads, how can they use that many buses? Are they using any of them?

Mr. GAUD. They are using those that have been assembled; yes.

Mr. NATCHER. Where were the buses purchased?

Mr. GAUD. In the United States.

Mr. NATCHER. All of them?

Mr. GAUD. Yes.

Mr. NATCHER. Good.

Mr. MONTOYA. Do you have a census on how many motor vehicles you have in Afghanistan and how many you had before this purchase?

Mr. GAUD. We had, or the Afghans had?

Mr. MONTOYA. The Afghans.

Mr. GAUD. I will have to furnish that. This is before we went into this project?

Mr. MONTOYA. Yes.

Mr. GAUD. I will see what we can do.

(The information follows:)

BUSES IN AFGHANISTAN

The Government of Afghanistan's official publication, the Survey of Progress, cites registration figures of 824 buses in 1959–60 before the United States financed the purchase of 150 buses. The bus company in Kabul owned approximately 400 of these, many of which were worn out.

Mr. ANDREWS. Who will operate the bus company or system over there, Mr. Gaud?

Mr. GAUD. It has been operated by an Afghan company.

Mr. ANDREWS. A private company?

Mr. GAUD. Yes.

Mr. ANDREWS. Did they pay for the buses?

Mr. GAUD. My recollection is, and I would like to check this, these buses were sold to the company by the Government of Afghanistan.

Mr. ANDREWS. In other words, we gave the buses to the Afghanistan Government, the Government in turn sold the buses to private operators?

Mr. GAUD. That is my understanding.

Mr. ANDREWS. I wish you would correct the record if your understanding is not correct.

Mr. GAUD. I will.

Mr. ANDREWS. Do you know anything about the fares they charge for riding those buses?

Mr. GAUD. I do not.

Mr. ANDREWS. Are they intercity buses?

Mr. GAUD. Some are used inside the capital city of Kabul, and some are used in the country going from town to town—both.

Mr. PASSMAN. Go back to page 18.

The statement notes that 443 motortrucks and spare parts were procured from the 1957 ICA credit—it says "loan" here—and have been in operation for some time; 150 knockdown buses with spare parts were financed with 1960 funds.

Are they still knockdown, or have they been assembled and put in use?

Mr. GAUD. Well, as of March, which is the last date on which I have information, 36 of these buses were assembled and in operation.

These buses reached the Pakistan border just before the border closed in the fall of 1961 and they got across the border in February and March 1962.

Mr. PASSMAN. Another border incident. At least it was not an emergency order for buses? It could not be termed "emergency," could it?

Mr. GAUD. No, sir.

Mr. NATCHER. Mr. Chairman, will you yield at that point?

Mr. PASSMAN. Yes.

Mr. NATCHER. Do you have buses at the border now that you are trying to get over?

Mr. GAUD. All the buses went in in February and March 1962.

Mr. PASSMAN. How much more stuff do we have involved in this border business?

Mr. GAUD. We have 1,500 tons of asphalt.

Mr. PASSMAN. When these knocked-down buses arrived at the border in 1961, out of 1960 funds, but did not get delivered until 1962, was it again because the Afghans would not open the border?

Mr. GAUD. In that period before February 1962 I think it is fair to say it was a matter involving both the Afghans and the Pakistanis.

Subsequently Pakistan declared its willingness to let the material go into Afghanistan and the Afghans wouldn't let it in.

Mr. ANDREWS. Could you tell us, Mr. Gaud, what is at the border now?

Mr. GAUD. 1,500 tons of asphalt.

Mr. ANDREWS. Anything else?

Mr. GAUD. Not a thing.

Mr. ANDREWS. What kind of storage facilities do you have there for taking care of this asphalt or is any of it walking away? You know what I mean by "walking away"?

Mr. GAUD. I do, indeed. It is my impression it is stored in the open.

Mr. ANDREWS. It would be easy for it to walk away?

Mr. GAUD. It is a lot less likely to walk away than many other things.

Mr. ANDREWS. Is anybody guarding that asphalt?

Mr. GAUD. Yes, sir.

Mr. ANDREWS. Who?

Mr. GAUD. The contractor has local employees there.

Mr. ANDREWS. Are we paying the guards?

Mr. GAUD. Yes; indirectly.

Mr. ANDREWS. How many guards do they have?

Mr. GAUD. I don't know.

Mr. ANDREWS. Would you put that in the record?
Mr. GAUD. I will try to find out.
Mr. ANDREWS. Is it a 24-hour guard?
Mr. GAUD. I don't know, sir.
Mr. ANDREWS. Put as much as you can in the record about it.
Mr. GAUD. All right.
(The information supplied follows:)

PROVISIONS FOR PROTECTING AID COMMODITIES AT AFGHANISTAN-PAKISTAN BORDER

The asphalt is stored in barrels and guarded 24 hours a day by two guards whose salaries total $20 per week. There are no storage costs.

RESALE VALUE OF ASPHALT AT PAKISTAN BORDER

Mr. RHODES. I cannot imagine anybody in that part of the world wanting that road to be asphalt coated except the AID.
Mr. GAUD. We have had two offers to buy it.
Mr. RHODES. I suggest you sell it, especially if you can make a profit.
Mr. GAUD. This asphalt which I speak of as our having stacked up there in fact belongs to the contractor on the Kabul-Kandahar Road and there have been two offers to buy it for use in Pakistan, but it has not been sold on the assumption that it will be used to asphalt the key segments of the road that are still to be asphalted.
Mr. ANDREWS. You are going to have to send it around through Iran.
Mr. GAUD. This border is going to open, you might say, any day. The Pakistanis and the Afghans have already agreed to reopen the border. They are now in the process of exchanging ambassadors.
Mr. PASSMAN. What did it cost to put the asphalt over there?
Mr. GAUD. $270,000.
Mr. ANDREWS. For what could they sell it? Do you know what the market price would be for it? You say there have been several who tried to buy it.
Mr. GAUD. I do not know.
Mr. ANDREWS. If you can find out, put it in the record.
(The information requested follows:)

MARKET PRICE OF ASPHALT STORED AT AFGHANISTAN-PAKISTAN BORDER

The price we offered to prospective purchasers was cost plus freight to Chaman, Pakistan. The asphalt had been prepared to conform with the specifications for the Kabul-Kandahar Road, and was not a standard asphalt. Furthermore, the barrels had leaked somewhat, and mud had gathered on their sides, so that they were difficult to handle. Under these conditions buyers unwilling to pay the price asked.

Mr. GAUD. The asphalt was bought in Iran, presumably at the prevailing local price.
Mr. ANDREWS. In Iran?
Mr. GAUD. Yes, sir.
Mr. ANDREWS. And it is standing at the Pakistan border?
Mr. GAUD. This comes from the oil area down on the Persian Gulf. It is shipped by sea to Pakistan and then goes up the rail line to the railhead near the Afghan border.
Mr. ANDREWS. Do you know what it cost a ton?

materials and demonstration materials, $36,000; and construction commodities for the regional agricultural high school in Baghlan and the commercial high school, $54,000.

2. For major commodity funding beyond fiscal year 1964, approximately $397,000 will be required—about $77,000 for fiscal year 1965 and $320,000 for fiscal year 1966. In both years, the commodities are to consist almost entirely of laboratory and workshop equipment for the Afghan Institute of Technology and vocational agricultural schools; $28,000 is planned for books and demonstrational equipment for fiscal years 1965 and 1966.

Mr. PASSMAN. Is that figure going to be final, the $325,000, or is this going to lead us into other expenditures?

Mr. GAUD. This is our best estimate at the moment.

Mr. PASSMAN. To go into the building?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Have you started construction of the building yet?

Mr. GAUD. No, sir.

Mr. PASSMAN. When do you expect the building to be completed?

Mr. GAUD. We have no contract yet.

Mr. PASSMAN. You are requesting $325,000 for equipment to put into a building that you do not know when it will be built and you have not even got a project going; is that correct?

Mr. GAUD. We expect to start construction during the fiscal year.

Mr. PASSMAN. You do not have a contract and you do not know when it will be completed, but you are asking for money for the supplies to put in the building?

Mr. GAUD. That is right.

Mr. PASSMAN. Thank you.

I note that you plan to have 16 participants at a cost of $165,000. Why is the cost for participant training so high in this country?

Mr. GAUD. I don't know, sir.

Mr. PASSMAN. Try to find out for us, and put the information in the record.

Mr. GAUD. All right.

(The information follows:)

PARTICIPANT TRAINING COSTS—VOCATIONAL EDUCATION PROJECT

The $165,000 requested for participant training covers 16 participants, each of whom will study 18 months. The average annual cost of each participant is $7,000.

KABUL UNIVERSITY DEVELOPMENT PROJECT

Mr. PASSMAN. Page 20 indicates that the budget estimate for Kabul University development project is $1,888,000. Page 20 also indicates that you obligated $3,377,000 to this project in fiscal year 1963. How much did you justify to the Congress last year for this project?

Mr. GAUD. $3,420,000.

Mr. PASSMAN. Could this be true, this statement on page 20 construction of five major university buildings were to be financed under an Afghan-financed contract but because Afghanistan could not meet the foreign exchange costs of this construction the United States contributed the additional $1 million?

Mr. GAUD. It doesn't say "additional." It says "has spent $1 million."

Mr. PASSMAN. Your book says additional—a-d-d-i-t-i-o-n-a-l.

Mr. GAUD. Perhaps I am looking at the wrong place, Mr. Chairman. I apologize. I was looking at the wrong place.

Mr. GAUD. It was 1,500 tons and the cost was $270,000. That would be about $18 a ton.

Mr. MONTOYA. I think Mr. Gaud deserves a raise for trying to sustain the untenable position created by his predecessors.

Mr. ANDREWS. Mr. Montoya inserted in the Congressional Record recently a story about the efforts of some people out in his State of New Mexico pleading vainly, over a period of years, with the Federal Government to build 8 miles of road. The road was badly needed.

Mr. MONTOYA. And it was a Federal reclamation project.

Mr. ANDREWS. To a Federal reclamation project. Being unsuccessful in getting money from any branch of the Federal Government, those local citizens of New Mexico pitched in and collected money from themselves in an amount sufficient to build the 8 miles of road.

Now, Governor, could you tell us how much those 8 miles of road cost and were they gravel or asphalt?

Mr. MONTOYA. Gravel.

Mr. ANDREWS. What did they cost?

Mr. MONTOYA. $180,000.

Mr. ANDREWS. For 8 miles.

Mr. PASSMAN. The local citizens made up the money?

Mr. ANDREWS. They could not get it from the Federal Government, Mr. Chairman.

Mr. PASSMAN. May I recommend that in the future you go through AID?

Mr. MONTOYA. We are trying to incorporate within Pakistan.

Mr. PASSMAN. If you need the money you could get it quicker.

VOCATIONAL EDUCATION PROJECT

The largest project in Afghanistan appears to be the vocational education project for which you are requesting $2,867,000 in fiscal year 1964. Is that correct, sir?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Do you have any commitment to provide the $2,177,000 for construction of the new physical plant for the Afghan Institute of Technology?

Mr. GAUD. Yes, sir. I am not sure of the exact amount.

Mr. PASSMAN. Can you tell us what you expect this project to cost upon completion?

Mr. GAUD. The total cost from the beginning to the end, $8,301,000.

Mr. PASSMAN. What are you going to build?

Mr. GAUD. This is a building for this Afghan Institute of Technology which will house its electrical, automotive, and civil engineering sections. The $8.3 million also includes assistance to other schools.

Mr. PASSMAN. What type of commodity do you plan to procure at a cost of $325,000?

Mr. GAUD. Laboratory and workshop equipment would be covered.

(Information subsequently supplied follows:)

COMMODITIES PROPOSED UNDER VOCATIONAL EDUCATION PROJECT, AFGHANISTAN

1. The proposed fiscal year 1964 funding of $325,000 will cover the following: laboratory and workshop equipment for the Afghan Institute of Technology at Kabul, the vocational agricultural school in Kabul, the regional agricultural high school in Baghlan, the commercial high school and the home economics school for girls at Kabul, at an estimated cost of $235,000; nonlocal books, duplicating

Mr. PASSMAN. You do not need to apologize. It is normal to be off on these things about two-thirds of the time, anyway.

How much did you justify last year?

Mr. GAUD. $3,420,000.

Mr. PASSMAN. How much did you obligate?

Mr. GAUD. $3,851,000.

Mr. PASSMAN. Your book last year showed $1,490,000. This is on page 511.

Mr. GAUD. Perhaps I have a bad entry in here.

Mr. PASSMAN. Here, have a look at the book.

Mr. GAUD. Mr. Chairman, you are certainly right, but we consolidated two projects.

Mr. PASSMAN. Well, that is standard. Thank you.

HOSPITAL FACILITATES FOR AMERICAN PERSONNEL IN AFGHANISTAN

What type hospital facilities do you propose to fund under your technical support project and at what cost?

Mr. GAUD. Our share of operating expenses for a hospital for the U.S. personnel and dependents in Afghanistan. That is for the embassy, USIA, and AID personnel and their families.

Mr. PASSMAN. Are we now paying the cost for these agencies?

Mr. GAUD. We are paying part of the cost of operating that hospital. There are no other facilities to take care of the American community.

Mr. PASSMAN. How many employees are there in the hospital?

Mr. GAUD. I haven't got the number, Mr. Chairman.

Mr. PASSMAN. How many American personnel do you have employed in the hospital? American technicians.

Mr. GAUD. When I was last there, there were two doctors who were also working in the program serving, you might say, double time as doctors and there were one or two nurses.

Now, I will have to give you accurate figures but this was my recollection when I was last there.

Mr. PASSMAN. I believe you referred to this as a technical support project?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Since when did we start building hospitals under AID technical support?

Mr. GAUD. If we go into a country such as Afghanistan or, let us say Yemen, where there are no local facilities to take care of the American community, we have, as a matter of fact, under technical support financed some improvements in those facilities. In Afghanistan it involved renovating a leased building and providing the necessary medical equipment and that sort of thing.

Mr. PASSMAN. If we go to this technical support project, it would appear that the obligations have been $11,488,000; is that correct?

Mr. GAUD. Yes. This covers all technical support costs, not only the hospital, you understand.

Mr. PASSMAN. It says "and hospital facilities are also funded under technical support."

When did we start financing hospital facilities under technical support?

Mr. GAUD. I don't know when we financed the renovation of the building now used as a hospital, but certainly AID has financed a portion of the operating costs in 1962 and 1963.

Mr. PASSMAN. Let us get the cost for 1962 and 1963.

Mr. GAUD. The AID share of the cost of operating the hospital in 1962 was $80,000. In 1963 it is $150,000 and in 1964 we have estimated $150,000.

Mr. PASSMAN. That is the AID share?

Mr. GAUD. Yes.

Mr. PASSMAN. And you have this setup under technical support?

Mr. GAUD. Yes. Support of our program.

LOCAL EXPENSES UNDER TECHNICAL SERVICES PROJECT

Mr. PASSMAN. You have local expenses of $1 million. Will you give us a breakdown on that item?

Mr. GAUD. Of the $1,501,000?

Mr. PASSMAN. Yes, local expenses.

Mr. GAUD. Local labor, supplies and the like, $400,000; third-country nationals, $200,000.

Mr. PASSMAN. Who are the third-country nationals?

Mr. GAUD. Those are non-Afghans whom we employ in Afghanistan largely for clerical work and that sort of thing for which we can't get trained Afghans and they cost us a lot less than sending Americans out there.

Mr. PASSMAN. How many are there?

Mr. GAUD. The number of third-country nationals in Afghanistan I would have to supply you. I haven't got it here.

Mr. PASSMAN. All right, sir.

(The information follows:)

USE OF THIRD-COUNTRY NATIONALS IN AFGHANISTAN (TECHNICAL SUPPORT)

In fiscal year 1964 an estimated 42 third-country nationals will be charged to the technical support costs of the Afghan aid program.

Mr. GAUD. Next is transport cost of project commodities, $330,000. It is primarily to cover transport costs from the port in Iran or Pakistan to the Afghan border.

Mr. PASSMAN. It says local expenses.

Mr. GAUD. Well, it is local expenses in Iran and Pakistan.

Mr. PASSMAN. In what amount?

Mr. GAUD. $330,000.

Mr. PASSMAN. For what commodities?

Mr. GAUD. Whatever commodities are used in connection with a project.

Mr. PASSMAN. Should that cost not have been applied equally to the projects?

Mr. GAUD. The costs to the port are covered under the project.

Mr. PASSMAN. Could it not have been spread over all the projects?

Mr. GAUD. It could have been, but because of the border closure, the mission found it easier to handle financing in a consolidated account.

The normal practice is to fund such costs under the project.

Mr. PASSMAN. What is next?

Mr. GAUD. Housing cost, $420,000.

Mr. PASSMAN. How many people do you house?

Mr. GAUD. Our people in Afghanistan?

Mr. PASSMAN. Yes.

Mr. GAUD. We have 321 Americans in the aid program in Afghanistan.

The U.S. share of the Kabul Hospital cost, $150,000. Those add up to $1.5 million.

Mr. PASSMAN. Do all of the aid people in Afghanistan get housing?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Out of this item?

Mr. GAUD. All of those who are direct hire get it.

Mr. PASSMAN. For the local expense, $1.5 million, that money goes into their economy, does it not?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. And you pay in dollars?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. So, even though we could not claim an export against that sum, it does nevertheless provide them with this much additional money, does it not?

Mr. GAUD. That is true.

Mr. PASSMAN. And this certainly has an effect on our balance-of-payments situation.

We are waiting now for a report from downtown to find out how much money is actually spent abroad through this program, to see how much we pump into their treasury with our spending, flying, hotels, eats, and everything else.

FEASIBILITY STUDIES IN AFGHANISTAN

Of the $200,000 obligation for feasibility studies, how much has been subobligated to date, sir?

Mr. GAUD. $135,000, Mr. Chairman.

Mr. PASSMAN. Tell us when you justified this item to the Congress.

Mr. GAUD. We did not.

Mr. PASSMAN. Could you give us any idea whether or not this $200,000 that you allocated, which you did not justify to the Congress, will finish these feasibility studies?

Mr. GAUD. It will finish these.

Mr. PASSMAN. You are asking for more money for fiscal year 1964?

Mr. GAUD. We are asking for $200,000.

Mr. PASSMAN. You started this project without asking for it and allocated $200,000. Now, since we have it going, you are asking for $200,000 more to add to the $200,000 that you allocated but did not request?

Mr. GAUD. That is true.

PROJECTS BEGUN IN FISCAL YEAR 1963 WHICH WERE NOT PREVIOUSLY PRESENTED TO CONGRESS

Mr. PASSMAN. Can you tell us, from your records, how many projects you started in fiscal year 1963 for which you did not request funds from Congress? Do you have the information there?

Mr. SCHEINMAN. No, sir. I am sure we can examine the books and provide it for you.

Mr. PASSMAN. Does the Controller have the information?

Mr. FLINNER. No, sir; I do not.

Mr. PASSMAN. You do not keep account of such things?

Mr. SCHEINMAN. Well, sir, it has already been testified to here that with respect to new obligating authority——

Mr. PASSMAN. What has been testified to, the number of projects you started without money and the total amount?

Mr. SCHEINMAN. During the course of the year certain priorities occur for which we will use new obligating authority——

Mr. PASSMAN. That is not my question. Mr. Controller, tell us how many projects AID started last year for which justification was not made to Congress. Then give us the amount that you allocated out of fiscal year 1963 funds, then project each one to completion. It will not be unduly difficult to get that information, will it?

Mr. FLINNER. We can get the number. I don't know how long it will take us to get the allocation and completion estimates.

(The information requested follows:)

AGENCY FOR INTERNATIONAL DEVELOPMENT

New projects in fiscal year 1963 not included in the fiscal year 1963 congressional presentation

[In thousands of dollars]

Regions and countries, project titles and numbers	Estimated obligations, fiscal year 1963	Estimated total cost from inception to completion
LATIN AMERICA		
Argentina:		
University of Cordoba, 510-AC-66-AP-5	300	610
Agricultural Economic Institute, 510-AC-14-AG-5	50	250
Labor-Management Institute, 510-AC-44-AN-5	30	125
Housing, 510-AB-84-AA-6	50	50
Statistical services, 510-R-75-AG	65	160
Public safety, 510-S-71-AA	15	15
Fruit production: Rio Negro Valley, 510-AA-13-AI-66	30	190
Subtotal, Argentina	540	1,400
Bolivia:		
Occupational health program, 511-D-51-AD	175	255
Banco Minero, 511-D-21-AF	400	450
Civil aviation technical assistance to LAB, 511-F-37-AF	250	250
Industrial education, 511-N-61-AH	9	387
Support for national planning, 511-R-75-AE	50	50
Cooperative wool marketing, 511-A-15-AZ	90	150
Blanca Flor Oil Mill, 511-J-29-AD	20	20
Support for Codification Commission, 511-Q-72-AJ	43	100
Subtotal, Bolivia	1,037	1,662

New projects in fiscal year 1963 not included in the fiscal year 1963 congressional presentation—Continued

[4] An estimate of cost in addition to $170,000 obligated in fiscal year 1963 is currently not available pending completion of preliminary assessment.

[5] Since each feasibility study must be considered on its own merit, it is not possible at this time to project estimated future cost beyond $135,000 obligated in fiscal year 1963.

NOTE.—For Indonesia, civic action, 497-ZA-99-AB-5, estimated obligations fiscal year 1963, $1,200,000. The 1963 congressional presentation included $250,000 as part of this project under ex-servicemen's skills training, 497-N-69-AA.

For Vietnam, counterinsurgency services, 430-AA-99-AA-5, estimated obligations fiscal year 1963 $3,900,000, estimated total cost undetermined. Several projects in 1963 congressional presentation, although shown under different project titles, appear under general, counterinsurgency, sector as follows: Rural development, Y-99-AB; railway reconstruction, Y-33-AC; health services development, Y-53-AD; rural roads, Y-31-AE; and public safety, Y-71-AF.

Grand total	35,090	89,583

Mr. PASSMAN. Could you tell us how many projects you deobligated in your area in fiscal year 1963 and the total amount?

Mr. GAUD. Yes, sir.

Mr. WHITE. We will have to count them.

Mr. PASSMAN. Suppose you count them while Mr. Natcher examines, and give us the amount.

AGRICULTURE IN AFGHANISTAN

Mr. NATCHER. From time to time, Mr. Gaud, you justify the aid program in different countries to the committee, informing the committee that it is essential that the particular country be placed in a position of producing enough food to take care of the people in that country. Here in Afghanistan I notice in the justifications a statement to the effect that the future prosperity of Afghanistan, which is largely agricultural, depends on its ability to increase exports of agricultural products. Now, this is a right fascinating statement, Mr. Gaud. Do you agree that here in this country we have about $8.5 billion worth of surplus commodities—and the same situation applies in a number of other countries throughout the world. Do you believe Afghanistan would ever be placed in a position of being able to export agricultural commodities?

Mr. GAUD. It does to some extent today.

Mr. NATCHER. In sizable amounts, Mr. Gaud?

Mr. GAUD. In their terms their exports of grapes and dates are sizable, yes. Not sizable in terms of supporting the entire economy but it is one of their important—their fruit and date and nut exports are quite important to them.

Mr. NATCHER. Do you say to the committee that you sincerely believe that in Afghanistan we will be able through the aid program to put this country in a position to export agricultural commodities to the extent that the country can become a prosperous nation?

Mr. GAUD. No, not on that alone, Mr. Natcher.

Mr. NATCHER. I wouldn't think so, Mr. Gaud.

Can you tell me if they produce cotton and tobacco in Afghanistan?

Mr. GAUD. They produce—I frankly don't know about either one of those items. Whether they produce either one of them in any quantity.

Mr. NATCHER. Would any of the other witnesses be able to assist you on that, do you suppose?

Mr. GAUD. Mr. White informs me there is some cotton and a little tobacco for domestic consumption.

Mr. NATCHER. This is a right unusual statement when you base this program to a certain extent on placing Afghanistan in a position where its ability to increase exports of agricultural commodities and products will then place the country in a position where it can survive.

Mr. GAUD. Well, I certainly wouldn't think that this would be enough in and of itself. Their principal crops on which they base their hopes of foreign exchange are nuts and fruits and there is a large demand for that sort of thing in their part of the world. They export a good deal today, both to the Soviet Union and to India and

to Beirut, Lebanon, and to Iran. There is a real chance of improving their foreign exchange position by increasing their exports but I wouldn't think it is going to carry them the whole way.

Mr. NATCHER. I agree with you, Mr. Gaud. There are countries around Afghanistan who can produce the same type nuts and the same type products you have just discussed, isn't that true?

Mr. GAUD. Yes, sir.

Mr. NATCHER. You have an aid program in all of those countries over there. You are not certain at all then that you are going to place Afghanistan in the position where it can export anything in the future from the standpoint of agricultural commodities, are you?

Mr. GAUD. They have no problem in disposing of those crops today and there is much more demand than they can meet. There is clearly room for improved earnings of foreign exchange in these respects, Mr. Natcher.

Mr. NATCHER. Thank you, Mr. Chairman.

Mr. PASSMAN. Are there further questions?

Mr. RHODES. My dear friend from New Mexico said I think facetiously a while ago that you should be congratulated for trying to clean up the mess your predecessor left you and I think——

Mr. MONTOYA. That wasn't facetious.

Mr. RHODES. I was giving you the benefit of the doubt.

Let me proceed further: I think I might have agreed with him a year ago but I don't now. I think this country is a mess. I don't think we ought to be in it at all and in my opinion the best thing that you could do in your position is to get us out just as fast as you can. This is not a country which can be held in the face of an all-out Soviet attack or even a limited Soviet attack. It is a country which is historically an avenue of attack into the Indian subcontinent. You are in the middle of building a road that obviously the Afghans don't particularly want and, in my opinion, if you want to end some of the mistakes which I agree you probably did inherit, then you can do it best by just getting out of this one completely.

Mr. GAUD. I am interested in your views, of course, Mr. Rhodes, and you realize that I don't agree. But there is one factual point here that I would just like to mention and that is your statement that the Afghans don't want this road. That just is not the case. There is no question about that.

Mr. RHODES. I am inclined to think it is the case. If you are putting first things first, as you have to give most people the credit for doing, I think the Afghans put their fight with Pakistan before they do this road and if that is the situation then I have to renew my statement. I don't think they want this road. It certainly, in my opinion, doesn't do the United States any good to be so obsequious as to push something onto people that they obviously don't care much about. This is one of the worst cases of foreign aid I know of.

Mr. ANDREWS. Will the gentleman yield?

Mr. RHODES. Yes.

CLOSING AND OPENING OF AFGHANISTAN-PAKISTAN BORDER

Mr. ANDREWS. I have been under the impression, Mr. Gaud, that Pakistan was perfectly willing for the Afghans to take this material over the border. That is indicated by the fact that the Pakistanis let our people put the material at the border. So then the whole fault

of not opening the border is on the part of the Afghan Government. Is that right?

Mr. GAUD. I think that has been so since the border closed again last March.

Mr. ANDREWS. You speak of the border opening and closing?

Mr. GAUD. Yes, sir.

Mr. ANDREWS. Who does the opening and closing?

Mr. GAUD. The border was closed in the fall of 1961, you might say by mutual disagreement or by mutual agreement. The border was opened in February and March 1962 by agreement between the Pakistanis and the Afghans to allow aid goods through. The question then was should the border remain open and the Pakistanis and the Afghans could not agree on the terms for leaving it open, so it was shut. Thereafter, the Pakistanis said to us that they were perfectly willing to have the aid goods for Afghanistan transit their territory——

Mr. ANDREWS. So it is a correct statement to say that the reason why the roadbuilding equipment and materials didn't get over into Afghanistan is the fault of the Afghan Government?

Mr. GAUD. As I understand the situation, the Afghan Government could have let that material through the border, but if it did that, the Government believed it would compromise its position on the border dispute.

Mr. LEE. At the risk of repeating some of the things Mr. Talbot said yesterday and some of the things Mr. Gaud has said, I would like to try to clarify the answer to Mr. Rhodes' question and yours too. This Afghan-Pakistan quarrel is a quarrel between two nations that goes back a long way and has many features in it and the settlement of this quarrel is not simply at the discretion or the will of one party or the other. So it was a question of coming to some agreement between these two parties. I think it would be unfair to say flatly that the closure at any one time was the fault of one party or the other and we on our part in the United States were careful to avoid taking on our shoulders this quarrel which was their quarrel.

Mr. ANDREWS. Did the Afghan Government refuse to take this material into their country at any time when the border was open?

Mr. GAUD. No, sir.

Mr. ANDREWS. Then I don't understand it.

Mr. RHODES. Mr. Gaud testified previously that the Pakistanis were willing to open the border at one time but the Afghans were not willing to open the border and were not willing to let the material come across.

Mr. ANDREWS. That has been testified to.

Mr. RHODES. If the Secretary tends to disagree with that, I would like to hear him on the subject.

Mr. ANDREWS. I would like to know why this material didn't get into Afghanistan.

Mr. RHODES. If I can take the testimony of Mr. Gaud correctly, it is the fault of both of them now but at one time it was completely the fault of the Afghans.

Mr. ANDREWS. That is the impression I have.

Mr. PASSMAN. I asked the questions and Mr. Gaud was very frank. At one time we had some material there. Pakistan was willing to open the border and let the material through but the Afghans were so

contrary they themselves would not open the border and receive the material.

There is no question about the accuracy of that statement, is there?

Mr. GAUD. Let me see if I can repeat it: As I understand the situation, between September 1961 and February 1962 we had a lot of material moving to Afghanistan which was caught in Pakistan when the border closed or which arrived in Pakistan shortly thereafter. Neither party at that time was willing to open the border. The border was opened by mutual agreement for about 2 months, and that AID-financed material went across.

Subsequent to the end of March 1962 we didn't send anything to Afghanistan except 1,500 tons of asphalt plus a few hundred tons which had been shipped previously and went on through Iran. So except for the asphalt, it wasn't a question after that date of opening up the border and letting AID material in. The dispute between the two countries persisted. The Pakistanis who were unwilling to enter into a full border-opening agreement with the Afghans until certain issues were settled, nevertheless said they were perfectly prepared to let U.S.-aid goods go through their country and go on up into Afghanistan. The Afghans on the other hand wouldn't let anything in unless they had a full border-opening agreement with the Pakistanis.

Mr. PASSMAN. So they would not let the material come in that was available to be taken in. The Pakistan Government was willing but Afghanistan was not willing to receive it; is that correct?

Mr. GAUD. Yes, because they thought it would compromise their position. I am also drawing one slight——

Mr. PASSMAN. You previously said "Yes."

Mr. GAUD. With one slight qualification, that we didn't have a lot of goods there waiting to get in.

Mr. PASSMAN. You had goods.

Mr. GAUD. Fifteen hundred tons of asphalt.

Mr. PASSMAN. And Pakistan said, "Yes, you may move it in." Afghanistan said, "No."

Is that right?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Now the record is straight once again.

Mr. ANDREWS. At the time permission was given by the Pakistan Government to let the asphalt be taken over into Afghanistan; was there a need for that asphalt in Afghanistan?

Mr. GAUD. No, sir. Not at that time.

Mr. ANDREWS. Was there a subsequent need for it?

Mr. GAUD. Yes.

Mr. ANDREWS. That is the same thing, in my opinion. There was a future need for it.

Mr. GAUD. It certainly would have been used on the road before now. A good part of it.

Mr. PASSMAN. We got into this controversy last year and I think it was categorically testified to, yes, that Pakistan would open the border but the Afghans would not open the border and receive what we wanted to give to them. I think we agreed on that matter last year, and we have agreed on it this year.

Mr. GAUD. Yes, sir.

DEOBLIGATIONS UNDER FISCAL YEAR 1963 PROJECTS

You asked how many projects we deobligated money for for 1963. The only information I have in the committee room with me relates to deobligations of more than $10,000 each. We had deobligations on 105 development grant projects totaling $4,263,000.

Mr. PASSMAN. What did you do with that money?

Mr. GAUD. Mr. Chairman, we used some deobligated funds in that region on projects in accordance with the notifications given to you by Mr. Bell. To the extent we did not use this money on those specific projects we turned it back to the Agency.

Mr. PASSMAN. You deobligated over $10,000 from each of 105 projects?

Mr. GAUD. That is correct.

Mr. PASSMAN. You will get us the number under $10,000?

Mr. GAUD. If you like.

Mr. PASSMAN. We would like to have that information.

Mr. GAUD. All right.

(The information requested follows:)

Number of projects in NESA region for which amounts less than $10,000 were deobligated in fiscal year 1963

[In thousands of dollars]

Country	Number of projects	Amount deobligated	Country	Number of projects	Amount deobligated
Total	217	1,104	Jordan	29	104
			Lebanon	11	173
Afghanistan	19	27	Nepal	19	83
Ceylon	13	165	Pakistan	12	63
Cyprus	1	5	Syria	3	13
Greece	8	43	Turkey	31	147
India	21	73	United Arab Republic (Egypt)	3	18
Iran	22	94	Yemen	1	2
Iraq	4	25	CENTO	2	6
Israel	18	63			

Mr. PASSMAN. Regardless of the type legislation you are dealing with, it would have no effect on your deobligating funds for projects if the project was no longer advisable? You would deobligate the funds? You would not just keep the money obligated and outstanding for years if you had no intention of spending it, would you?

Mr. GAUD. I would hope not.

Mr. PASSMAN. Out of these deobligated funds, could you start projects that had not been justified to Congress?

Mr. GAUD. Not according to the ground rules that now exist. Mr. Bell agreed last year——

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. PASSMAN. Are any of the 105 projects you deobligated funds from, going to receive any new funds for fiscal year 1964?

Mr. GAUD. Yes.

Mr. PASSMAN. May we have a list of them?

Mr. GAUD. We did not deobligate just because we were discontinuing the project.

Mr. WHITE. You might obligate for a particular participant and then deobligate.

Mr. PASSMAN. We ran into one area where you only had two out of dozens. Will you provide for the record—a copy coming to the clerk—the number of projects that you deobligated funds from and for which you are requesting new funds for fiscal year 1964?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. I can understand a participant under the $10,000, but you get into these millions of dollars and you are not dealing with participants.

Mr. GAUD. We will give you the information.

(The information requested follows:)

Number of continuing DG and SA projects in NESA region from which funds were deobligated in fiscal year 1963, and for which NOA is requested for fiscal year 1964

[In thousands of dollars]

Country	Number of projects	Amount deobligated in fiscal year 1963	Country	Number of projects	Amount deobligated in fiscal year 1963
Total	145	3,739	Nepal	19	355
			Pakistan	7	144
Afghanistan	19	555	Syria	2	10
Ceylon	5	240	Turkey	25	337
Cyprus	1	5	United Arab Republic (Egypt)	9	217
India	16	629	Yemen	2	74
Iran	19	246	CENTO	3	16
Iraq	2	168	Regional	1	179
Jordan	15	564			

CEYLON

SUSPENSION OF ASSISTANCE

Mr. PASSMAN. For Ceylon the budget estimate is $825,000, an increase of $295,000 over fiscal year 1963; is that correct?

Mr. GAUD. Our actual obligations for fiscal year 1963 were $442,000. That program, as you know, sir, was suspended February 8 of this year.

Mr. PASSMAN. Could you tell us the amount of unliquidated funds to the credit of Ceylon as of June 30?

Mr. GAUD. $4,060,000.

Mr. PASSMAN. In all categories?

Mr. GAUD. That is correct. That also is suspended, you understand.

Mr. PASSMAN. Can you tell us the total amount of aid to Ceylon since the inception of the program?

Mr. GAUD. $25.7 million.

Mr. PASSMAN. Page 11 of the justifications indicates the Ceylon Government expropriated properties of two U.S. oil companies in 1962 and pursuant to section 620(e) of the Foreign Assistance Act, American aid was suspended because appropriate steps were not taken by Ceylon to compensate the oil companies for the expropriated property. That matter has not been settled?

Mr. GAUD. No, sir.

Our aid is still suspended and the negotiations with the companies have been broken off by the Government of Ceylon.

Mr. PASSMAN. You have over $4 million on hand unexpended to the credit of Ceylon and they have not settled this matter and the negotiations have been broken off.

Why would you be requesting more money for fiscal year 1964 for Ceylon?

Mr. GAUD. This request was prepared, as you know Mr. Chairman, in March, only a few weeks after the suspension.

POSSIBILITY OF RENEWING AID PROGRAM

Mr. PASSMAN. Have you any plans whatsoever to allocate or obligate any additional funds to Ceylon in fiscal year 1964?

Mr. GAUD. Only if the Ceylonese comply with section 620 (e) and take the appropriate steps to compensate the oil companies.

Mr. PASSMAN. Do you think maybe they might do that in order to get the $4 million plus the $825,000 released and then tighten up again?

Mr. GAUD. It certainly doesn't look that way.

Mr. PASSMAN. It is the same Government, is it not?

Mr. GAUD. It is the same Government. As a matter of fact, sir, you may be aware that the Ceylonese Government announced on June 5 that it is going to assign sole rights of distribution of petroleum products in Ceylon to the Government-owned Ceylonese Petroleum Corp. This could mean the expropriation of all the remaining distribution facilities of the oil companies in Ceylon.

Mr. PASSMAN. That is more indication that you will not need the $825,000?

Mr. GAUD. I think it is extremely unlikely that we will need any part of it.

EFFECT OF U.S. ASSISTANCE ON CHANGING ATTITUDES

Mr. PASSMAN. Do you know of one place where the habits of the aid-recipient countries and the way they do business have been changed?

Mr. GAUD. I think this is true in a good many countries.

Mr. PASSMAN. Name one, please.

Mr. GAUD. Where over the years the attitudes of countries and their people change. I think as Mr. Talbot said yesterday, there has been quite a change—not as much as we would like but quite a change in the attitude of the Indian Government.

Mr. PASSMAN. That is diplomatic language.

Mr. GAUD. You are asking for my opinion and all I can do is to give you my opinion.

Mr. PASSMAN. You are quoting Mr. Talbot.

Mr. GAUD. It is my opinion that in recent years the attitude of the Government and the people of India has changed substantially. It is my opinion that in recent years the attitude of the Government and the people of the UAR has changed considerably. I think this is true of a number of countries.

Mr. PASSMAN. I will admit the UAR changed their attitude. They want to take over all of the Middle East, do they not?

Mr. GAUD. That wasn't what I was speaking of.

Mr. PASSMAN. But it is what I am speaking of.

Mr. RHODES. Didn't Mao Tse-tung have more to do with changing the attitude of India than we did? I think as far as change is concerned AID had very little to do with it.

Mr. GAUD. This, of course, is a matter of opinion.

Certainly Mao Tse-tung and the Chinese Communists had a great deal to do with it.

Mr. RHODES. Maybe we should have the Chinese Communists attack a few more people and improve a few more attitudes.

Mr. GAUD. It is a risky business.

Mr. PASSMAN. Believing we will not be stupid enough to give Ceylon anything, I shall suspend with my questioning on Ceylon.

Are there any questions on Ceylon?

Mr. NATCHER. No questions, Mr. Chairman.

Mr. RHODES. No questions.

DEOBLIGATION OF BALANCE OF CEYLON OBLIGATIONS

Mr. PASSMAN. If we should make a specific request, would you deobligate this $4,060,000 so that it can be used elsewhere?

Mr. GAUD. That is one I would have to look into.

Mr. PASSMAN. Will you look into it and let us know what you decide?

Mr. GAUD. All right, sir.

(The information may be found on p. 1329.)

CYPRUS

Mr. PASSMAN. The fiscal year 1964 estimate for Cyprus is $1,000,000. What has been the total amount of aid extended to this country since we started the aid program?

Mr. GAUD. $3.7 million.

Mr. PASSMAN. How much do we have to the credit of Cyprus, unliquidated?

Mr. GAUD. About $3.2 million, Mr. Chairman.

Mr. PASSMAN. What was the total amount of the aid program?

Mr. GAUD. $3.7 million. It started in fiscal year 1962.

Mr. PASSMAN. So you have only disbursed $500,000?

Mr. GAUD. Yes; against the development grant program. Almost all of total aid consists of a single loan of $2.3 million which we made in fiscal year 1963.

Mr. PASSMAN. A hard-dollar loan or one of those crazy things?

Mr. GAUD. This is a 3-percent loan for 20 years.

Mr. PASSMAN. The money has not been disbursed?

Mr. GAUD. Not yet. It was just made.

The loan is for 20 years.

It is $2,275,000.

Mr. PASSMAN. The ——— million for fiscal year 1964, is that grant aid?

Mr. PASSMAN. How does that amount compare with fiscal year 1963?

Mr. GAUD. The grant aid in fiscal year 1963 was $700,000, and then there was the loan of $2.3 million, roughly——

Mr. PASSMAN. I asked just for grant aid.

Mr. GAUD. It compares with $700,000 for last year.

Mr. PASSMAN. Would you comment on your statement, on page 13 of the justifications, that there is a growing Communist influence on the island?

Mr. GAUD. Yes, sir. The island, as you know, is split between a population of Greek origin and a population of Turkish origin.

Mr. PASSMAN. It is not very much bigger than a large farm, is it?

Mr. GAUD. It is a pretty good sized farm in the part of the country I come from.

Mr. PASSMAN. How many square miles?

Mr. GAUD. 4,000 square miles.

There is a large Communist element in the Greek community, particularly in the labor movement.

Mr. PASSMAN. What do you propose to do, buy them off?

Mr. GAUD. No, sir.

We are putting relatively little money into Cyprus. We are trying these things. We have a labor program in Cyprus in which we are helping them develop moderate leaders in the labor movement. We are trying to help correct the conditions which have encouraged the growth of this Communist group. For example, using the proceeds of the first Public Law 480 program we had in Cyprus—this is, you might say, a sufficiently small country—at least one project, fixing a bridge, mending a road, mending a school, or something of that sort was done in every single village in Cyprus, bringing home to the people of Cyprus what our aid program was about. The program in Cyprus is largely of this type.

Mr. PASSMAN. This aid program goes from $679,000 up to $900,000 and up to $1 million. What is the population of Cyprus?

Mr. GAUD. The population is 600,000.

PROJECT ASSISTANCE

Mr. PASSMAN. What is the estimated cost to complete the——— project that will go through fiscal year 1967?

Mr. GAUD. Have you a page number on that, sir?

Mr. PASSMAN. Page 45.

Mr. GAUD. The total estimated cost is $435,000.

Mr. PASSMAN. Of the many projects you have there, could you give us an estimate of the cost upon completion?

Mr. GAUD. In Cyprus?

Mr. PASSMAN. Yes.

Mr. GAUD. The agricultural development program, $1,304,000; the water development program, $398,000; the project on page 45, $435,000; the economic policy and planning, $452,000; the development bank, $915,000.

Mr. PASSMAN. Is that capital for the bank?

Mr. GAUD. None is capital. The capital of that bank is being provided in two ways. One by a loan from the Germans and the other by a stock subscription which took place about the 1st of July to the Cypriots themselves and it is oversubscribed.

Mr. PASSMAN. Is the Germans' grant aid?

Mr. GAUD. The Germans have provided a loan for the capital. The terms are still to be negotiated.

Mr. PASSMAN. For how long a period?

Mr. GAUD. The period is still to be negotiated.

We have another project, desalinization feasibility study, $95,000; labor training project, $504,000; improvement of the central statistics office, $28,000; assistance to the central bank, $142,000.

I think that is it.

Mr. PASSMAN. Would we not make a better impression if we went into a little country like this, 600,000 people and 400,000 square miles, that just gained its independence, and start one or two projects of perhaps $25,000 or $50,000 and do them well, rather than seeing how many projects we can get started? You listed seven or eight just getting underway. The resources of the United States will never hold out for us to be able to keep pouring our dollars and our goods in all these countries.

They gained their independence just a couple of years ago; did they not?

Mr. GAUD. Yes.

Mr. PASSMAN. Why do you not give thought to fewer but better projects?

Mr. GAUD. We have, and I think this particular program is less subject to this criticism than any other.

Mr. PASSMAN. What program?

Mr. GAUD. The Cyprus program.

Mr. PASSMAN. You are talking about 600,000 people who just gained their independence and you have seven or eight projects underway.

Mr. GAUD. They are pretty well tied in together.

Mr. PASSMAN. What about this feasibility study?

Mr. GAUD. Cyprus lacks drinking water, particularly in the area of Famagusta. The problem is how to provide this particular area with drinking water.

Mr. PASSMAN. What did they drink all these years?

Mr. GAUD. Their wells are running dry. We have been working with the Office of Saline Water in the Interior Department as to whether or not it would be feasible to put a reasonable amount of money in a desalinization project.

Mr. PASSMAN. Have we perfected desalinization to the point of effective use in this country?

Mr. GAUD. Yes.

Mr. PASSMAN. Economically?

Mr. GAUD. Not economically from the standpoint of agriculture but there are places where it makes sense.

Mr. PASSMAN. You have two bank projects?

Mr. GAUD. We have a development bank and are giving advice to the Central Bank, which they are just setting up.

Mr. PASSMAN. That is just about as far as you can go?

Mr. GAUD. That is all they need.

GREECE

Mr. PASSMAN. You have a development credit program in Greece for 1964?

Mr. GAUD. Yes.

Mr. PASSMAN. Is that the program of disguised grants?

Mr. GAUD. These loans will be no less than 3½ percent and in the 20- to 30-year range.

Mr. PASSMAN. All of them?

Mr. GAUD. Yes.

Mr. PASSMAN. Repayable in dollars?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. What success is Greece having in attracting foreign investors in their country?

Mr. GAUD. Quite a lot. One example of that is the number of requests for Cooley loans we have had this year from American firms wanting to go in business in Greece. Another is an oil refinery and steel plant being put up in Greece with American capital. This will entail an investment of $100 million.

Mr. PASSMAN. What has been our total aid to Greece since the inception of the program?

Mr. GAUD. Since the inception of the program, military and economic, $3,086 million.

Mr. PASSMAN. Does that include Public Law 480?

Mr. GAUD. Yes.

Mr. PASSMAN. Do you have a military program for Greece in 1964?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Is that a classified figure?

Mr. QUINN. Yes.

(Discussion off the record.)

Mr. PASSMAN. If I said, "Our military grant aid assistance to Greece in fiscal 1964 is over [deleted] million," would that figure be classified?

Mr. QUINN. Yes, sir; that figure is classified. You can use the total program 1950 through 1963 unclassified.

Mr. PASSMAN. I am referring to what we will give them in the future.

Do you have a Public Law 480 program in Greece for 1964?

Mr. GAUD. Yes.

Mr. PASSMAN. In what amount?

Mr. GAUD. About $15 million.

Mr. PASSMAN. Will they pay for these commodities in local currency?

Mr. GAUD. Yes. Actually, we have not entered into an agreement yet.

Mr. PASSMAN. It is being negotiated at this time?

Mr. GAUD. Yes.

Mr. PASSMAN. Do you think you can get them to accept this aid?

Mr. GAUD. I think they need it.

They are asking for it.

Mr. PASSMAN. What were the terms of the $50-million commitment in 1962 that the Germans made for the Megalopoulis powerplant?

Mr. GAUD. Twenty years, 5 years grace, 3¾ percent.

Mr. PASSMAN. Mr. Rhodes?

GREECE SHIPPING TO CUBA

Mr. RHODES. Mr. Chairman, the Appropriation Act of 1963 for Mutual Security, section 107(a), reads as follows:

No assistance shall be furnished to any country which sells, furnishes, or permits any ships under its registry to carry to Cuba, so long as it is governed by the Castro regime, under the Foreign Assistance Act of 1961, as amended, any arms, ammunition, implements of war, atomic energy materials, or any articles, materials, or supplies, such as petroleum, transportation materials of strategic

value, and items of primary strategic significance used in the production of arms, ammunition, and implements of war, contained on the list maintained by the Administrator pursuant to title I of the Mutual Defense Assistance Control Act of 1951, as amended.

"(b) No economic assistance shall be furnished to any country which sells, furnishes, or permits any ships under its registry to carry items of economic assistance to Cuba so long as it is governed by the Castro regime, under the Foreign Assistance Act of 1961, as amended, unless the President determines that the withholding of such assistance would be contrary to the national interest and reports such determination to the Foreign Relations and Appropriations Committees of the Senate and the Foreign Affairs and Appropriations Committees of the House of Representatives. Reports made pursuant to this subsection shall be published in the Federal Register within seven days of submission to the committees and shall contain a statement by the President of the reasons for such determination.

Now, the Department of Commerce, Maritime Administration, Report No. 12, "List of Free World and Polish Flag Vessels Arriving in Cuba Since January 1, 1963," lists 39 Greek ships which have gone into Cuba. They are described as being—

exclusive of those vessels that called at Cuba on U.S. Government-approved noncommercial voyages and those listed in section 2.

I am also informed there has been no determination by the President communicated to the Foreign Relations and Appropriations Committees of the Senate and the Foreign Affairs and Appropriations Committees of the House of Representatives that it would be contrary to the national interest to withhold assistance to this country.

Now my question, Mr. Gaud, is, in view of these facts, by law, can we possibly continue to give assistance to Greece?

Mr. GAUD. Mr. Lee, are you briefed on this?

Mr. LEE. I am not briefed fully enough to give you an accurate answer on it. I would be happy to give you a complete answer for the record.

Mr. RHODES. I think we definitely should have an answer. It would appear on the face that by law we would be foreclosed from giving aid to Greece, and perhaps some other countries.

I might say for your information there is a list of 44 British ships; 23 Lebanese ships; 7 Italian ships; 7 Polish ships; 6 Norwegian ships; 5 Yugoslav ships; 2 Spanish ships; 2 Swedish ships; 1 Finnish ship; 1 West German ship; 1 Japanese ship; and 1 Moroccan ship.

Mr. LEE. This is a matter that has been of great concern to us and we do have information on it, but I would prefer to give you a full and complete answer.

Mr. SCHEINMAN. Off the record.

(Discussion off the record.)

Mr. PASSMAN. Why should that comment be off the record?

Mr. SCHEINMAN. I was just giving this for the information of Mr. Rhodes.

Mr. PASSMAN. We do not have people in Cuba watching all these ships being unloaded, do we?

Mr. SCHEINMAN. I am not prepared to answer that.

Mr. GAUD. We will certainly get an answer for you on Monday, Mr. Rhodes.

Mr. RHODES. I would like a very definite answer.

That is all.

Mr. PASSMAN. We shall adjourn until Monday afternoon at 1 o'clock.

MONDAY, JULY 22, 1963.

Mr. PASSMAN. The committee will come to order.

EFFORTS TO REVERSE IMBALANCE OF PAYMENTS

There was an article in the Washington Post for today captioned "Payments Move Recalls J. F. K.'s 'Bankrupt' Remark," and I shall insert it in the record.

(The article follows:)

[From the Washington Post, July 22, 1963]

PAYMENTS MOVE RECALLS J. F. K.'S "BANKRUPT" REMARK

(By Ruth Montgomery)

President Kennedy several months ago warned a handful of legislators: "If France and Germany should present their dollar credits for payment, the United States would be bankrupt."

The dire warning came at a private White House meeting to which J. F. K. summoned members of the Joint Atomic Energy Committee earlier this year.

It assumes particular significance at this time, due to the precedent-shattering action the President has now taken to reduce our balance-of-payments deficit.

Representative Jack Westland, Republican, of Washington, who attended the White House session, said the meeting was prompted by committee reluctance to give approval to the administration's plan for selling a super-secret Polaris submarine to our not-so-ever-loving French allies.

PRESSURE DROPPED

Mr. Kennedy, in arguing for the transaction, said the $150 million sale price would help our balance-of-payments position. The committee, unwilling to turn over one of our most effective secret weapons to the French, decided that the risk was too great, and the administration itself dropped pressure for permission after French President Charles de Gaulle showed little interest in making the purchase.

Westland, a congressional authority on balance-of-payments problems, applauded last week's Federal Reserve Board action in raising its discount rate as a step in the right direction, although numerous Democratic "cheap-money" advocates roared a protest.

A day later, the President said the United States had arranged to borrow $500 million in foreign currencies from the International Monetary Fund, and asked Congress to vote a 15 percent sales tax on U.S. purchases of foreign stocks and bonds.

GROWING IMPATIENCE

The drastic move was triggered by evidence that foreign creditors such as Germany and France are becoming impatient with U.S. pleas not to cash in their surplus dollars for gold. A heavy run on our gold supply could force us off the gold standard, or devalue the dollar.

Westland said Germany has amassed $5.5 billion in dollars and gold since 1961, and France $2.6 billion. These sums are held in central banks and U.S. Government securities, which at any time could be cashed in for gold.

If this occurred, according to President Kennedy, we would be "bankrupt."

Mr. PASSMAN. I want to assure the President that I am going to continue to do my part, limited though it may be, to help improve our extremely serious balance-of-payments situation.

RELATIONS BETWEEN PAKISTAN AND COMMUNIST CHINA

Another article of particular interest, an editorial from the Washington Post for today, will be inserted in the record at this point.

(The article follows:)

[From the Washington Post, July 22, 1963]

NONALINEMENT IN INDIA

Events in Pakistan are proceeding toward a tragedy for the Indian subcontinent, a major defense crisis for India, a dramatic reverse for American diplomacy and a serious blow to the non-Communist world. It is altogether evident, as it was made clear in the dispatch of Selig Harrison to this newspaper Saturday, that major efforts will be required to prevent some very unpleasant things from happening.

There seems to be little real comprehension in India of what it will mean to that country's future if the disaffection of Pakistan proceeds to a point where the Government is coerced into relations with China that literally open the gates of the subcontinent. It simply cannot be said that in India everything has been done that could have been done that might have persuaded Pakistan of the identity of interest of the two nations. The effort has not been commensurate with the stakes involved. The existence of a friendly, cooperative and even allied government is vital to the defense of India. If Pakistan is confirmed in its hostility and persuaded by its own paranoic fears to court a Chinese association, the disaster will make the invasion of last fall, from an Indian point of view, seem like a triviality. India will have saved Kashmir but it will have put a continent in jeopardy.

It is possible to explain away the Pakistan-Chinese border settlement—after all, the rest of China's neighbors along the border have done the same thing. It is possible to understand the Chinese-Pakistan trade agreement signed in January—it is no more than other of our allies have done. It is possible to understand the negotiation for a civil air agreement—particularly in view of British action in denying Pakistan the right to carry traffic through Hong Kong. It is simply not possible to understand the speech of Foreign Minister Z. A. Bhutto, proposing a mutual defense pact with China.

Pakistan seems to be moving into a state of hysteria and frenzy so abnormal that it would be willing to hammer its own head if that would pain India. It is very sad to see a great country in such a mental state that it seems more anxious to frighten its friends than it is to contain its enemies. That it is in this state of mind is no great tribute either to American or Indian diplomacy.

Let the fault be put where it may be, India is in danger of having an active enemy and not just a disgruntled friend on its northern border and the United States is in danger of losing one of its firmest allies.

It seems to be too late to dare even to hope that these two countries might settle the Kashmir dispute and dwell in peace. Failure must be written over this country's efforts since last fall. That failure may compel this country to abandon the posture of a nation dealing with two powers that are friends and take up the posture of a nation dealing with two friends who are enemies. Such a stance, in this country, may compel some very uncomfortable readjustments of policy. But if Pakistan and India are really to embark upon a course of settled hostility—and that seems to be the course upon which they are setting out—the United States, in such a conflict, can only take a leaf from Prime Minister Nehru's book, and pursue a policy of nonalinement. That policy will compel us to give aid to either nation with reserve and caution, to lean to neither side, to confer no military or economic advantage on one prejudicial to the other. It is not a course that is going to be easy. It may be the only course open to us on a subcontinent seething with national rivalries and hostilities that threaten to open the doors of south Asia to the Chinese.

Mr. ANDREWS. Are you familiar with the speech that is mentioned in the editorial, Mr. Secretary?

Mr. TALBOT. Yes, sir.

We had a telegram over the weekend reporting on this speech which was made late last week in a foreign affairs debate before their National Assembly in Pakistan. In the course of this he said that if India should attack Pakistan then, as I recall it, Pakistan would not find itself alone and that the largest country in Asia would also be involved.

When our Ambassador questioned him about this late last week the Foreign Minister stated categorically that there is no agreement, written or implicit, between Pakistan and Communist China that would be in effect a joint defense or mutual defense agreement.

Mr. PASSMAN. From the inception of the aid program through 1963 we had given to Saudi Arabia ——— total assistance. We also have a substantial program for Saudi Arabia for fiscal year 1964, but the category of aid is in the gray so it becomes classified. But I believe I can read a newspaper item which I have here:

KING SAUD REPORTED SETTLING IN AUSTRIA

A Vienna newspaper reported Monday that ailing King Saud of Saudi Arabia will live permanently in Austria. The independent Abendexpress said he has sent for his 80-woman harem and is spending money at the rate of $12,000 a day.

Saud has been undergoing medical treatment here. The newspaper said he would make only periodic trips to his kingdom.

Mr. GAUD. I would like to say, Mr. Chairman, the United States has not given economic aid to Saudi Arabia since 1958. The program for 1964 which you spoke of as being substantial, is only a military program of less than $2 million, considerably less than $2 million.

Mr. PASSMAN. Let me say it is substantial. When you think in terms of ——— to a small country whose king is able to support a harem of 80 women and spend $12,000 a day, I do not think you should give him anything.

Whether he needs that many I am not in position to say, but it would appear that from fiscal 1957 to 1963 he got ——— in aid.

Will you tell us what amount we have unliquidated to the credit of Saudi Arabia?

Mr. TENNANT. $2,211,000.

Mr. PASSMAN. That is the total?

Mr. TENNANT. That is all military, sir.

Mr. PASSMAN. Nevertheless, if the King had used some of the $12,000 a day that he spends in Vienna on his own country we would not need to give that much aid, do you think?

Mr. TALBOT. Mr. Chairman, in Saudi Arabia the oil production now is running something over a million and a half barrels a day.

We are getting in our favor in balance of payments a figure that I do not have precisely, but would estimate to be in excess of $300 million a year. This is a very large and substantial American investment out there. Quite clearly it is an investment that can continue to function in the area so long as the area is moving progressively toward stability.

Mr. PASSMAN. Are we doing business with them because they like us or because they find it profitable?

Mr. TALBOT. They and we find this profitable, Mr. Chairman.

Mr. PASSMAN. Are they doing business with us simply because of their fondness for us or because they find it to their advantage?

Mr. TALBOT. They find it to their advantage.

Mr. PASSMAN. Have we given them, as I said earlier, ——— for the years I have indicated?

Mr. TALBOT. Yes, sir.

Mr. PASSMAN. That is all I want to know.

U.S. VISIT OF MOROCCAN KING

We might also read this item:

HASSAN BUYS FIVE CADILLACS, FIVE THOUSAND BED AND BATH ITEMS

NEW YORK.—King Hassan II of Morocco showed New Yorkers what it means to go first-class this week, making shopping trips seem like something out of "Arabian Nights." The King, who was ending a 10-day visit to this country, Friday, included a little shopping for the royal household on his agenda. So, with one sweep of his arm, he bought more cars than the average American will purchase during a lifetime. With another wave of his hand, he ordered more blankets, towels, sheets, mats, robes, pillowcases and bedspreads than any housewife could ever dream of buying. The whole thing took less than 3 hours.

On Monday night he made his additions to the royal livery. He headed for an auto showroom where 18 cars in the General Motors line were on display, especially for him. They ran the gamut from the most luxurious Cadillac to the simplest compact. The King and his party looked at all of them within a half hour. He placed an order for at least five Cadillacs and an unspecified number of other cars through the firm's overseas division.

"There has never been anything like it," commented George R. Brown, a representative of the agency. The cars were placed so the King and his entourage—about 20 in all—could circulate freely without any congestion.

Friday the King and his party went to a textile house. The fact figures on what he bought still have not been tallied. The estimates range as high as 5,000 of the bedroom-bathroom items, including 150 blankets that will be packed to leave with the royal party. The trip lasted about 1 hour and 45 minutes. But the problems did not end there. The King wanted the royal crest, coat of arms and monograms put on every item, some of which had to be furnished for his departure.

NOTE.—Morocco received $353 million in economic aid from the United States from 1945 through 1962. It also has received military aid but the amount is classified.

It becomes more interesting as you go along. They have been recipients of a tremendous amount of aid.

DEOBLIGATION OF CEYLON PROGRAM FUNDS

Mr. GAUD. Mr. Chairman, at our last session the question came up of our unexpended balances in Ceylon where we suspended aid in February. Since we adjourned, Mr. Talbot and I have discussed this matter with Mr. Bell and we feel that it would be appropriate, as you suggested, to deobligate the amount of money that is now standing in favor of Ceylon.

Mr. PASSMAN. Congratulations. How much is it?

Mr. GAUD. This is the question I cannot answer today. A small amount is under irrevocable letters of credit. A small amount is otherwise tied up. We are trying to straighten out the red tape. I will have a figure for you before many days.

Mr. PASSMAN. Thank you.

GREEK SHIPPING TO CUBA

Mr. RHODES. Could we have a report on these ships from Greece?

Mr. PASSMAN. Yes. Do you have a report on that matter, Mr. Miller, or Mr. Gaud?

Mr. GAUD. Yes. I think the question, Mr. Rhodes, had to do with the Greek ships that have been going to Cuba, is that right?

Mr. RHODES. That is right.

Mr. GAUD. As I am sure you know from your study of this matter, the U.S. Government has been carrying on a campaign with the Government of Greece for some time to eliminate this shipping. It has found the Greek Government quite cooperative. The Greeks first did their best on an informal basis to clean up the traffic. They then issued a decree, I think it was in March, on the subject. There have still been some ships going there, in part because these ships were under charter prior to the time that the whole question came up. Under Greek law, as I understand it, the Greeks cannot abrogate these charters without a change of their Constitution. This in turn requires under their procedure prorogueing Parliament, holding new elections, et cetera, a step which they felt they were unable to take in the political situation that existed in Greece.

Mr. RHODES. I would like to get somebody's legal opinion as to that. I do not doubt your word, sir, for one moment, but I would like to have some documentation of that statement.

Mr. GAUD. All right, sir. The ships that have actually gone to Cuba fall into a number of categories. A certain number were at sea on the effective date of the amendment to the Foreign Assistance Act. The State Department and AID lawyers have ruled that ships which were already at sea were not affected by the act. There are also quite a number of ships to which you referred which went to Cuba in ballast. In other words, they took nothing in and therefore did not violate the act.

There are a number of others where the voyages were taken in fulfillment of contract arrangements entered into before the effective date of the act. Our lawyers tell us those voyages too are not affected by the amendment. There are several others where the ships carried items of economic assistance, pursuit to contracts which were entered into after the effective date of the act. But, in the judgment of our lawyers, the Government of Greece did not permit these voyages, as the act terms it, because of the circumstances that existed. What we come down to in the last analysis is that, except for these categories, there are two voyages of Greek ships to Cuba which our people are still investigating to find out whether or not they do violate the act. If they do, it will be reported to the President and he will have to determine whether or not aid to Greece will be cut off.

Mr. RHODES. There are three tankers listed from Greece. They did not go into Cuba in ballast, did they?

Mr. GAUD. I do not know the details of any of these voyages. I said that only some of these ships went in in ballast, not all of them. A number did not.

Mr. RHODES. I asked about the tankers. I understand.

Mr. GAUD. I just don't know.

Mr. RHODES. I would like very much to have a report as to each of these ships. Obviously it is available; otherwise you would not have been able to testify on this.

Mr. GAUD. It is certainly available.

Mr. RHODES. I think each one of them should be dealt with.

Mr. GAUD. Each voyage?

Mr. RHODES. Yes, sir.

Mr. GAUD. We will certainly be glad to——

Mr. RHODES. Greece is not the only country. I read other nations into the record.

Mr. GAUD. I think you referred to Greece, Lebanon, and the United Kingdom, did you not?

Mr. RHODES. No, I read all of these. I read about the Polish ships, Norwegian, Yugoslav, Spanish, Swedish, Finnish, West German, Japanese, Moroccan, Italian, Lebanese, and British. This is all available in circular No. 12 of the Department of Commerce. It won't be difficult for you to obtain.

Mr. GAUD. It is not that we do not have the information. It is that it is not within my province.

Mr. RHODES. I understand that. My question was intended to be much broader than just this particular area.

Mr. GAUD. I am sorry. I misunderstood that.

Mr. RHODES. I want some sort of an answer from the State Department as to why sections 107(a) and 107(b) of the appropriation bill for last year for mutual security have not been implemented. It appears on the face of it that they have not.

Mr. MILLER. Our position is, as Mr. Gaud indicated, Mr. Rhodes, that they have not yet come into effect with the possible exceptions of several voyages which we are still investigating. We have broken these down into various categories and developed the intelligence information about the ships. It is not a question in our view of it not being implemented but it is a question of the application of it. It has not yet come into application.

Mr. RHODES. Mr. Miller, I am sure you realize that I cannot accept generalizations like that.

Mr. MILLER. We would like to sit down and go over it with you personally.

Mr. RHODES. I do not want you to go over it with me. I want you to supply for the record the facts as to each of these voyages. This is not a matter of personal satisfaction. This involves the enforcement of an act of Congress which I think was rather clear in its intent and in its direction. On the face of it Report No. 12 of the Department of Commerce seems to indicate that this provision of the law has not been complied with. It is possible that the prima facie case can be upset by later developments but I think, sir, the burden of proof is on you.

Mr. MILLER. Of course.

Mr. RHODES. The burden of proof can only be met by dealing with each of these voyages, as I see it.

Mr. MILLER. It will, of course, have to be on a classified basis.

Mr. RHODES. I wonder why it would be. Your Report No. 12 certainly is not classified. If certain voyages must be classified, then, of course, so be it. I cannot very well see, however, how all of them would have to be classified. We will deal with that problem when it arises.

Mr. MILLER. We will only deal with those which involve intelligence information.

Mr. RHODES. We will deal with the problem as it arises. We will be reasonable about it.

Mr. PASSMAN. This is not a classified report?

Mr. RHODES. No, sir.

Mr. PASSMAN. If you have an account of the voyages and countries why would it be classified when we get the information?

Mr. GAUD. The point is how we get the information as to the details of the voyages.

Mr. MILLER. And the cargoes.

Mr. RHODES. I do not think I asked permission to do this before. May I ask permission now that Report No. 12 of the Department of Commerce be printed in the record.

Mr. PASSMAN. The report will be inserted in the record at this point.

(The report follows:)

DEPARTMENT OF COMMERCE, MARITIME ADMINISTRATION

(Report No. 12)

LIST OF FREE WORLD AND POLISH-FLAG VESSELS ARRIVING IN CUBA SINCE JANUARY 1, 1963

Section 1. Pursuant to the National Security Action Memorandum No. 220, dated February 5, 1963, addressed to the Secretary of State, the Secretary of Defense, the Secretary of Agriculture, the Secretary of Commerce, the Administrator, Agency for International Development, and the Administrator, General Services Administration, concerning U.S. Government shipments by foreign-flag vessels in the Cuban trade, the Maritime Administration is making available to the appropriate Departments the following list of vessels which have arrived in Cuba since January 1, 1963, based on information received through July 12, 1963, exclusive of those vessels that called at Cuba on U.S. Government-approved noncommercial voyages and those listed in section 2:

German (West) (1 ship) *Adolf Leonhardt*	7,066
Japanese (1 ship) *Meishun Maru*	8,647
Moroccan (1 ship) *Toubkal*	8,748

* Added to Rept. 11 appearing in the Federal Register issue of July 6, 1963.

Section 2. In accordance with the provisions of national security action memorandum No. 220 of February 5, 1963, the following vessels which called at Cuba after January 1, 1963, have reacquired eligibility to carry U.S. Government-financed cargoes from the United States by virtue of the persons who control the vessels having given satisfactory certification and assurance that no ships under their control will, thenceforth, be employed in the Cuban trade so long as it remains the policy of the U.S. Government to discourage such trade:

(*a*) Since last report—Greek (1 ship): *Kin Theseus* 9,153

(*b*) Previous reports—Flag of registry:	*Number of ships*
British	1
Danish	1

Section 3. The ships listed in sections 1 and 2 have made the following number of trips to Cuba in 1963, based on information received through July 12, 1963:

Flag of registry	Number of trips						
	January	February	March	April	May	June	July
British	5	8	8	17	13	13	2
Greek	4	6	8	8	17	9	1
Lebanese	1		2	8	8	6	
Norwegian		2	4		1	2	
Italian	1	1	1	2	3	1	
Yugoslav		2	1	1	1		
Spanish			2				
Danish			1				
Finnish						1	
German (West)					1		
Japanese	1						
Moroccan			1				
Swedish				1		1	
Total	12	19	28	37	44	33	3
Polish	2	1	1	2	2	2	

NOTE.—Trip totals in this section exceed ship totals in secs. 1 and 2 because some of the ships made more than one trip to Cuba.

Dated: July 16, 1963.

DONALD W. ALEXANDER,
Maritime Administrator.

Mr. RHODES. Along with a reprinting of the language of sections 107(a) and 107(b) which are in point in this matter.

Mr. PASSMAN. That likewise will be inserted in the record.

INDIA

Mr. PASSMAN. The next country in this area is India, for which the fiscal year 1964 estimate is ———. Is that the total?

Mr. GAUD. That is correct, sir.

Mr. PASSMAN. I believe we established last week that our aid to India for fiscal year 1963, the amount of the obligation was——

Mr. GAUD. Was $768.7 million, Mr. Chairman.

Mr. PASSMAN. And that we established, subject to any corrections, that the total amount of aid to India through fiscal year 1963 was $5 billion-plus.

Mr. GAUD. We had a slight difference on that. We had a difference on that figure. We will check that one out.

We were going to give you an insert, sir.

Mr. PASSMAN. Let us check what you gave us last year and this year.

The total amount, I believe, was $5,094 million, made up in two parts. Last year you gave us a total of $4,265 million, using round figures, and you told us last Saturday the additional figure was $828,-700,000; is that correct?

Mr. GAUD. That is right.

UNEXPENDED BALANCES

Mr. PASSMAN. Could you tell us the total amount of unliquidated funds to the credit of India from all spigots, including the estimate for June 30?

Mr. GAUD. $873,706,000. This excludes Public Law 480, does it?

Mr. TENNANT. It does not include Public Law 480.

Mr. PASSMAN. Let us get it all. This figure that you gave includes military, Mr. Gaud?

Mr. GAUD. Yes.

But not Public Law 480.

Mr. PASSMAN. You gave us a figure of $——— plus Public Law 480. What is the Public Law 480? Could you give us an estimate?

Mr. TENNANT. The December 31 figure from the Department of Agriculture of $713.2 million: That is the amount of unshipped agreements.

Mr. PASSMAN. Let us get the total. We have on hand to the credit of India unliquidated as of June 30, $1,590,906,000. We are going to add to the ——— the Public Law 480 estimate.

Mr. GAUD. I included the Public Law 480 in my 1964 figure.

Mr. PASSMAN. I thought you said you did not.

Mr. GAUD. I beg your pardon.

I did not include it but I have it here. It is ———.

We add that to the ———.

Mr. PASSMAN. It is ———.

Mr. GAUD. I make it a total of ——— and that is not counting military.

Mr. PASSMAN. What is the amount for the military?

Mr. GAUD. The military figure in the book, sir, is $———.

Mr. PASSMAN. According to the two figures that you gave to us last year and this year, we have given to India $5,094 million. We have on hand unliquidated to the credit of India as of June 30, 1963, $1,590,-

906,000, and including Public Law 480 we have an estimate for fiscal year 1964, $——— not including military?

Mr. GAUD. Yes, sir.

Mr. MONTOYA. What is the total?

Mr. PASSMAN. According to the two figures, Mr. Montoya, it is $5,094 million. That was the total, subject to correction if they find an error. The amount on hand unliquidated, repeating, $1,590,906,000; the amount for fiscal year 1964 is estimated to be $———.

Mr. GAUD. I would like to reserve on Mr. Tennant's figure about $750 million on the Public Law 480 undelivered. I am sure that is a mistake.

Mr. PASSMAN. If it is more, put it in the record.

Mr. GAUD. May I also do it if it is less?

Mr. PASSMAN. I hope that it is less.

Mr. MINSHALL. The record will speak for itself but I think it would be appropriate to have the military fund inserted in the record at this point.

Mr. PASSMAN. It is classified.

Mr. MINSHALL. How much is the military?

Mr. PASSMAN. ———.

Mr. GAUD. For next year.

Mr. MONTOYA. Would it be classified if we include the ——— without specifying it as part of the unobligated total?

Mr. PASSMAN. All 1964 figures are classified, are they not?

Mr. TENNANT. Yes, sir.

Mr. MINSHALL. How about preceding years?

Mr. GAUD. Fiscal year 1963 military aid is $60 million, Mr. Minshall.

Mr. MINSHALL. All together?

Mr. GAUD. Fiscal year 1963 was the first year. That is the only time we ever had it.

Mr. MINSHALL. You got a late start.

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Total aid to India has been $5,094 million if the figures given to us last year and this year are correct.

Mr. ANDREWS. Do I understand, Mr. Chairman, that for fiscal year 1964, if the request for ———.

Mr. GAUD. That includes the military.

TOTAL FUNDS AVAILABLE FOR INDIA PROGRAM

Mr. ANDREWS. Talking about overall, if the ——— request is granted, there will be available for expenditure in India during fiscal year 1964 for all programs a total of ———.

Mr. PASSMAN. That is the total.

Mr. ANDREWS. Is there that much available for expenditure in India for all programs?

Mr. GAUD. I think——

Mr. ANDREWS.———

Mr. GAUD. I think Mr. Tennant is about $500 million high on Public Law 480.

Mr. ANDREWS I have listed the unexpended balances as of the 1st of July, $1,590 million.

Mr. GAUD. I think that is about $500 million too high.

Mr. PASSMAN. That total would be subject to verification. The controller gives us a figure of $712 million for Public Law 480. You will make a check on that, Mr. Controller?

Mr. TENNANT. Yes, sir. That was a December figure, December 1962 figure from the Department of Agriculture statistics.

(The following was submitted later for the record:)

Pipeline of U.S. assistance to India as of June 30, 1963

[In millions of dollars]

AID:	
Unliquidated obligations and reservations	785.6
Of which—	
Development grants	17.9
Development loans	767.7
Export-Import Bank	112.1
Military assistance: Unliquidated balances	30.0
Public Law 480, title I: Amounts authorized for purchase but not yet shipped	[1] 60.4

[1] In addition to this amount, roughly $600 million remained unauthorized under terms of a 4-year sales agreement signed in May 1960, which had 1 more year to run on June 30, 1963. The balance of $600 million is equivalent to about 2 year's requirements for wheat and it is clear that the full amount will not be used in the period remaining in the agreement. Authorizations under this agreement are subject to the availability of supplies, and an annual determination as to requirements.

Mr. GAUD. Off the record.

(Discussion off the record.)

Mr. PASSMAN. I think the Controller can straighten it out for us.

Mr. GAUD. May I tell you why I question it? I am the one who is questioning it.

Mr. PASSMAN. You have a right to question it.

I think the Controller should have an opportunity to check his files as to the accuracy of the figure. You are not in position to say he is wrong?

Mr. GAUD. No. Mr. Andrews asked me if that much money would be available in India. My answer is I do not think so because I think it is an overestimate of Public Law 480, my reason being that Public Law 480 has run at the rate of $250 to $300 million a year in the past 2 years. The Public Law 480 authorized each year is drawn down rapidly. In other words, if money is authorized for a powerplant it takes several years to expend it. On the other hand, the Public Law 480 is drawn down each year according to requirements of that year. It seems unlikely to me that as much as 2 full years, more than 2 full years of Public Law 480 would be in arrears.

Mr. PASSMAN. If the figures given to us by the Controller are correct, then there will be on hand, unliquidated, to the credit of India as of June 1, $1,590,906,000?

Mr. GAUD. That is true.

Mr. PASSMAN. Then to get the total that will be available for expenditure, including fiscal year 1964, it would be ———.

Mr. GAUD. That is right.

Mr. PASSMAN. Thank you.

Off the record.

(Discussion off the record.)

Mr. ANDREWS. Mr. Gaud, what projects, if any, would be financed out of this ——— that would be available for expenditure in India during fiscal year 1964?

Mr. GAUD. All the money that is on hand on June 30 is already committed to projects.

Mr. ANDREWS. The $1,590 million?

Mr. GAUD. Let's leave out Public Law 480. Some $717 million of that covers Public Law 480. The figure I gave initially, some $800-odd million, this is the unexpended balances of loans which have been made by the agency and its predecessor, the DLF, for specific projects.

Mr. ANDREWS. Approximately $800 million?

Mr. GAUD. That is correct.

Mr. ANDREWS. And you feel as if there is a firm commitment made on the part of this Government for the financing of projects that will cost $800 million?

Mr. GAUD. Those are all the subjects of specific agreements, Mr. Andrews. The authorization was made either in fiscal year 1963, 1962, 1961, or before; loan agreements were signed and the projects in most instances are already in course of construction.

Mr. PASSMAN. There is a little mixup here. There is no need for it. The $873,706,000 represents money already obligated.

Mr. GAUD. That is right.

Mr. PASSMAN. It is subject to withdrawal as the projects progress?

Mr. GAUD. That is right.

Mr. PASSMAN. But it is on hand unliquidated?

Mr. GAUD. That is right.

Mr. PASSMAN. If the controller's figure is correct, then you have unliquidated $717,200,000 of Public Law 480 aid, making a total unliquidated in the amount of $1,590,906,000.

Adding the two figures together, if you get what you request for fiscal year 1964, you will have a total to be expended in India of ——— whether it is obligated or unobligated. That is in the pipeline to be expended?

Mr. GAUD. That is correct.

Mr. MONTOYA. Plus military assistance?

Mr. PASSMAN. No. That is everything.

Mr. GAUD. But as of this moment, Mr. Andrews——

Mr. MONTOYA. I understood military assistance was in.

Mr. PASSMAN. It is in the total.

Mr. GAUD. The chairman's figures are undoubtedly correct, subject to that one reservation, but the point I think you are driving at as of this moment, we have no funds for India which are not obligated. Until you appropriate some funds, we have no funds for India which are not obligated.

Mr. ANDREWS. In other words, to put it this way, you may not agree, but we have given you money faster than you could spend it?

Mr. GAUD. No, sir. Each year we have obligated money that will be spent over several years.

Mr. ANDREWS. You wound up the fiscal year with $1,590 million that had been reserved; that is a good word, is it not?

Mr. GAUD. I would not agree with that simply because if you enter into a contract to build a hydroelectric plant, which we did, you obviously cannot spend all of the money the day after you enter into the contract, and a lot of this money is being spent on projects like that. It takes time for the expenditures to occur. That is why the money piles up.

Mr. MONTOYA. Would you yield?

Mr. PASSMAN. Yes, when I make this one observation. It could be, for reasons being developed or later to be developed, that much of this could be deobligated, and become available to be obligated for new projects or obligated elsewhere?

Mr. GAUD. I would doubt that, sir.

Mr. PASSMAN. You have substantial funds deobligated every year in the aid program, do you not?

Mr. GAUD. Rarely with reference to loan agreements to build specific projects.

Mr. PASSMAN. This is not merely a loan or credit agreement. This is from all spigots.

Mr. GAUD. The great bulk of aid in this region is loan money.

Mr. PASSMAN. Mr. Montoya?

ESCAPE CLAUSES IN U.S. COMMITMENTS

Mr. MONTOYA. Yes. With respect to these contracts into which you have entered with India, do you have escape clauses whereby you are able to suspend the funding of any commitment?

Mr. GAUD. You mean if under the law we have to?

Mr. MONTOYA. No. Don't you have, under these contracts, a provision that you may at your discretion suspend these commitments?

Mr. GAUD. Before we start building a powerplant for example? No, sir.

Mr. MONTOYA. I am thinking of the commitments which you made, say, on page 60, for an agricultural university development.

Mr. GAUD. Yes, the development grant projects, quite.

Mr. MONTOYA. I am thinking of the agricultural extension.

Mr. GAUD. That is correct.

Mr. MONTOYA. I am thinking of the southern water conservation commitment.

Mr. GAUD. Most of those development grant projects are funded year to year, but they make up a relatively small part of the large amount of money we are discussing. They can be terminated reasonable promptly if we have to.

Mr. PASSMAN. I mentioned that you may have deobligated funds.

Mr. GAUD. We may.

Mr. PASSMAN. And experience certainly is on the side that you will have.

Mr. GAUD. No question about it, but on the loan side it is rarer.

Mr. PASSMAN. Thank you.

Mr. MONTOYA. Assuming that India went all the way with Russia in its international commitments and viewed Russia as a prime ally and us as more or less an orphan child in their bosom, what would you do, continue with these commitments?

Mr. GAUD. We would look at the facts as they then existed and make our decision on the then facts.

Mr. MONTOYA. What could you do?

Mr. GAUD. It would depend on the facts. There are certain circumstances—I can certainly envision circumstances in which we would cut off all of our aid to India.

Mr. MONTOYA. That is the point I am trying to make, that you can cut off all aid.

Mr. GAUD. That can be done.

Mr. TALBOT. You know, sir, the bulk of these contracts are with American corporations, a very large number are.

Mr. PASSMAN. It is a giveaway program just the same.

Mr. MONTOYA. You no doubt have escape clauses in those contracts. GSA in its leases has a 30-day cancellation clause. I assume you are following the same pattern or should in international commitments.

Mr. PASSMAN. Mr. Secretary, did you say that these contracts are with American producers and exporters?

Mr. TALBOT. I believe quite a number are.

Mr. PASSMAN. What difference would it make if a hundred of them were American exporters if we found India or any other nation turning completely against us?

Mr. TALBOT. If we found any nation turning completely against us as Mr. Gaud said we would certainly reconsider the whole situation.

Mr. PASSMAN. You appeared to be shoring up the thing, or endeavoring to do so, by saying contracts are with American business people.

I yield to the Comptroller.

PUBLIC LAW 480 COMMITMENT TO INDIA

Mr. TENNANT. Mr. Chairman, on the figure we were talking about, I picked it up from the report of the Department of Agriculture which keeps the official records. I think it is a question of which way one computes the unshipped amount. As Mr. Gaud indicated, the total multiyear agreements were $2 billion and shipments against that were $1.3 leaving an unshipped portion of $717 million. However——

Mr. PASSMAN. Was the $2 billion a firm commitment to India?

Mr. GAUD. No, sir; it was a 4-year sales agreement providing for annual review of requirement.

Mr. PASSMAN. Let us get this straight. Did we have a $2 billion Public Law 480 commitment to India?

Mr. GAUD. It is subject to annual review, Mr. Chairman.

Mr. PASSMAN. All this is subject to annual review.

Mr. GAUD. But not subject to appropriation of funds. The amount we ship each year is subject to decision each year.

Mr. PASSMAN. I wish you would insert in the record a copy of the agreement with India on the $2 billion in surplus agricultural commodities. Will you get a copy of the contract, Mr. Comptroller?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. I think I remember the controversy and I think that we are committed just as much as we are any place else.

(The following was submitted later for the record.)

AGRICULTURAL COMMODITIES AGREEMENT BETWEEN THE GOVERNMENT OF THE UNITED STATES OF AMERICA AND THE GOVERNMENT OF INDIA UNDER THE TITLE I OF THE AGRICULTURAL TRADE DEVELOPMENT AND ASSISTANCE ACT, AS AMENDED

The Government of the United States of America and the Government of India;

Recognizing the unique opportunity that now exists for a sustained cooperative effort undertaken by both Governments to ensure the continuing development and progress of the agricultural sector of India's economy;

Recognizing that the United States, by undertaking for the first time a four-year program of sharing its abundance of food grains—while the Government of

India devotes its energies and resources toward achieving agricultural self-sufficiency—can make a significant contribution to India's third five-year plan and to her efforts to meet current food requirements, establish food reserves, increase agricultural production and stabilize food prices;

Considering that the Indian rupees accruing from such purchase will be utilized in a manner beneficial to both countries;

Recognizing the desirability of expanding trade in agricultural commodities between their two countries and with other friendly nations in a manner which would not displace usual marketings of the United States of America in these commodities or unduly disrupt world prices of agricultural commodities or normal patterns of trade with friendly countries;

Desiring to set forth the understandings which will govern the sales, as specified below, of surplus agricultural commodities to the Government of India pursuant to Title I of the Agricultural Trade Development and Assistance Act, as amended (hereinafter referred to as the Act), and the measures which the two Governments will take individually and collectively in furthering the expansion of such trade in such commodities;

Have agreed as follows:

ARTICLE I. SALES FOR RUPEES

1. Subject to the availability of commodities for programming under the Act and issuance by the Government of the United States of America and acceptance by the Government of India of purchase authorizations, the Government of the United States of America undertakes to finance the sales up to the value of $319 million, for rupees to purchasers authorized by the Government of India, of the following agricultural commodities determined to be surplus pursuant to the Act, of the amounts indicated:

Commodity	*Export Market Value (Millions)*
A. For Consumption: Wheat and wheat products	$723.75
B. For Reserves:	
Wheat and wheat products	241.25
Rice	116.00
C. Ocean Transportation	195.00
Total	1,276.00

The provision of this Agreement, as applied to the balance of the amounts indicated in the above schedule, shall not become effective until January 1, 1961, and shall become effective then only in the event that the United States Government on or after January 1, 1961, so notifies the Government of India.

2. Applications for purchase authorizations for $319 million, including $29 million worth of rice for reserves, will be made within 90 calendar days after the effective date of this Agreement for procurement during United States fiscal year 1961 in the case of wheat and prior to December 31, 1960, in the case of rice. The amount for subsequent years will be determined on the basis of annual review to be made by the two Governments prior to the beginning of each United States fiscal year 1962–64. The reviews shall take into account United States stocks position, changes in India's production, consumption, and stocks of food grains, other imports from the United States and countries friendly to the United States, feasibility of barter for strategic or other materials as a means of providing a portion of India's food grain requirements, storage facilities, the extent to which agreement has been reached on the use of grant and loan funds, and other related matters. Purchase authorizations will include provisions relating to the sale and delivery of commodities, including the classes, types and/or varieties of food grain, the time and circumstances of deposit of the rupees accruing from such sale, and other relevant matters.

3. The United States recognizes the desire of India to accumulate, as quickly as possible, a substantial part of the one million ton reserve stock of rice provided for in this Agreement to assist in stabilizing the internal markets for this commodity in India. Under this Agreement the first annual review of rice availabilities will be made in August 1960. At that time consideration will be given to whether in the light of the United States supplies of rice available for Title I disposal, India's production, consumption and stocks of food grains, other imports from the United States and countries friendly to the United States, India's storage capacity, and other related factors, any increase would be possible in the

portion of the total rice programmed which is currently planned for procurement during the first year.

4. The two Governments agree that the issuance of purchase authorizations for wheat and rice providing for purchase after June 30, 1961, shall be dependent upon the determination by the United States Government that these commodities are in surplus supply and available under Title I of the Act at that time. The United States Government shall have the right to terminate the financing of further sales under this Agreement of any commodity if it determines at any time after June 30, 1961, that such action is necessitated by the existence of an international emergency.

ARTICLE II. USES OF RUPEES

1. The two Governments agree that the rupees accruing to the Government of the United States of America as a consequence of sales made pursuant to this Agreement will be used by the Government of the United States of America, in such manner and order of priority as the Government of the United States of America shall determine, for the following purposes in the amounts shown:

(a) For United States expenditures under subsections (a), (b), (d), (e), (f), (h) through (r) of Section 104 of the Act or under any of such subsections, the rupee equivalent of $200 million.

(b) For grant to the Government of India under subsection (e) of Section 104 of the Act, the rupee equivalent of not more than $538 million for financing such projects to promote balanced economic development as may from time to time be mutually agreed.

(c) For loan to the Government of India under subsection (g) of Section 104 of the Act, the rupee equivalent of not more than $538 million for financing such projects to promote balanced economic development as may be mutually agreed. The terms and conditions of the loan and other provisions will be set forth in a separate agreement by the two Governments.

In the event that agreement is not reached on the use of the rupees for grant or loan purposes within six years from the date of this agreement, the Government of the United States of America may use the local currency for any purposes authorized by Section 104 of the Act.

2. In the event the total of rupees accruing to the Government of the United States of America as a consequence of sales made pursuant to this agreement is different from the rupee equivalent of $1,276 million, the amounts available for the purposes specified in paragraph 1, Article II will be adjusted proportionately.

ARTICE III. DEPOSIT OF RUPEES

The deposit of rupees to the account of the Government of the United States of America in payment for the commodities and for ocean transportation costs financed by the Government of the United States of America (except excess costs resulting from the requirement that United States flag vessels be used) shall be made at the rate of exchange for United States dollars generally applicable to import transactions (excluding imports granted a preferential rate) in effect on the dates of dollar disbursement by the United States banks, or by the Government of the United States of America, as provided in the purchase authorizations.

ARTICLE IV. GENERAL UNDERTAKINGS

1. The Government of India agrees that it will take all possible measures to prevent the resale or transshipment to other countries or the use for other than domestic purposes (except where such resale, transshipment or use is specifically approved by the Government of the United States of America), of the surplus agricultural commodities purchased pursuant to the provisions of this agreement, and to assure that the purchase of such commodities does not result in increased availability of these or like commodities for export from India.

2. The two Governments agree that they will take reasonable precautions to assure that all sales or purchases of surplus agricultural commodities, pursuant to the Agreement will not displace usual marketings of the United States of America in these commodities, or unduly disrupt world prices of agricultural commodities or normal patterns of commercial trade with friendly countries.

3. In carrying out this Agreement, the two Governments will seek to assure, to the extent practicable, conditions of commerce permitting private traders to function effectively and will use their best endeavors to develop and extend continuous market demand for agricultural commodities.

4. The Government of India agrees to furnish, upon request of the United States of America, information on the progress of the program, particularly with respect to the arrival and condition of commodities and the provisions for the maintenance of usual marketings, and information relating to exports of the same or like commodities.

ARTICLE V. CONSULTATION

The two Governments will, upon the request of either of them consult regarding any matter relating to the application of this Agreement or to the operation of arrangements carried out pursuant to this Agreement.

ARTICLE VI. ENTRY INTO FORCE

The Agreement shall enter into force upon signature.

IN WITNESS WHEREOF, the respective representatives, duly authorized for the purpose, have signed the present Agreement.

DONE at Washington in duplicate this fourth day of May 1960.

For the Government of the United States of America:

s/ DWIGHT D. EISENHOWER.

For the Government of India:

s/ S. K. PATIL.

4th MAY, 1960.

The Honourable DOUGLAS DILLON,
Acting Secretary of State,
Department of State,
Washington, D.C.

EXCELLENCY: I have the honour to refer to Your Excellency's note of today's date which reads as follows:

"I have the honor to refer to the Agricultural Commodities Agreement signed today between the Government of the United States of America and the Government of India (hereinafter referred to as the Agreement) and, with regard to the rupees accruing to uses indicated under Article II of the Agreement, to state that the understanding of the Government of the United States of America is as follows:

"1. With respect to Article II, Paragraph (a) of the Agremeent:

"(i) The Government of India will provide facilities for the conversions of the rupee equivalent of $4 million (up to a maximum of $1 million per year) accruing under the subject agreement for agricultural market development purposes into currencies other than United States dollars on request of the Government of the United States of America. This facility is needed for the purpose of securing funds to finance agricultural market development activities of the Government of the United States in other countries.

"The Government of the United States of America may utilize rupees in India to pay for goods and services, including international transportation needed in connection with market development and other agricultural projects and activities in India and other countries.

"(ii) The rupee equivalent of $63.8 million, but not more than 5 percent of the currencies received under the Agreement will be used for loans to be made by the Export-Import Bank of Washington under Section 104(e) of the Agricultural Trade Development and Assistance Act, as amended (hereinafter referred to as the Act), and for administrative expenses of the Export-Import Bank of Washington in India incident thereto. It is understood that:

"(a) Such loans under Section 104(e) of the Act will be made to United States business firms and branches, subsidiaries, or affiliates of such firms in India for business development and trade expansion in India and to United States firms and to Indian firms for the establishment of facilities for aiding in the utilization, distribution, or otherwise increasing the consumption of and markets for United States agricultural products. In the event the rupees set aside for loans under Section 104(e) of the Act are not advanced within six years from the date of this Agreement because the Export-Import Bank of Washington has not approved loans or because proposed loans have not been mutually agreeable to the Export-Import Bank of Washington and the Department of Economic Affairs of the Government of India, the Government

of the United States of America may use the rupees for any purpose authorized by Section 104 of the Act.

"(b) Loans will be mutually agreeable to the Export-Import Bank of Washington and the Government of India acting through the Department of Economic Affairs of the Ministry of Finance. The Secretary, Department of Economic Affairs, or his designate, will act for the Government of India, and the President of the Export-Import Bank of Washington, or his designate, will act for the Export-Import Bank of Washington.

"(c) Upon receipt of an application which the Export-Import Bank is prepared to consider, the Export-Import Bank will inform the Department of Economic Affairs of the indentity of the applicant, the nature of the proposed business, the amount of the proposed loan, and the general purposes for which the loan proceeds would be expended.

"(d) When the Export-Import Bank is prepared to act favorably upon an application, it will so notify the Department of Economic Affairs and will indicate the interest rate and the repayment period which would be used under the proposed loan. The interest rate will be similar to those prevailing in India on comparable loans and the maturities will be consistent with the purposes of the financing.

"(e) Within sixty days after the receipt of notice that the Export-Import Bank is prepared to act favorably upon an application the Department of Economic Affairs will indicate to the Export-Import Bank whether or not the Department of Economic Affairs has any objection to the proposed loan.

"Unless within the sixty-day period the Export-Import Bank has received such a communication from the Department of Economic Affairs it shall be understood that the Department of Economic Affairs has no objection to the proposed loan. When the Export-Import Bank approves or declines the proposed loan, it will notify the Department of Economic Affairs.

"2. With respect to Article II, paragraphs 1(b) and 1(c):

"Uses of Section 104(e) and Section 104(g) rupees: The Government of India will use the amount of rupees granted or loaned to it by the United States pursuant to paragraphs 1(b) and 1(c) for projects to promote economic development with emphasis upon the agricultural sector including food reserve storage structures and facilities as may from time to time be agreed upon by the authorized representatives of the United States and the authorized representatives of the Government of India, in the following sectors:

"A. Agriculture

"B. Industry including the production of fertilizer, Irrigation and Power, Transport and Communications, and Credit Institutions.

"C. Public Health Education and Rehabilitation.

"D. Other Economic Development Projects consistent with the purposes of Sections 104(e) and 104(g) of the Act.

"The Government of India further agrees in cooperation with the Government of the United States, to coordinate the use of grant and loan funds provided for in paragraphs 1(b) and 1(c) of Article II with such direct dollar assistance as may be made available by the Government of the United States of America, so that both sources of financing may be channeled to specific and clearly identifiable economic development programs and projects.

"3. It is agreed that any goods delivered or services rendered after the date of this agreement for projects within categories A, B, and C under paragraph 2 above which may later be approved by the United States will be eligible for financing from currency granted or loaned to the Government of India.

"4. With regard to the rupees accruing to uses indicated under Article II of the Agreement, the understanding of the Government of the United States of America, with respect to both paragraphs 1(b) and 1(c) of Article II is as follows:

"(i) Local currency will be advanced or reimbursed to the Government of India for financing agreed projects under paragraphs 1(b) and 1(c) of Article II of the Agreement upon the presentation of such documentation as the United States may specify.

"(ii) The Government of India shall maintain or cause to be maintained books and records adequate to identify the goods and services financed for agreed projects pursuant to paragraphs 1(b) and 1(c) of Article II of the Agreement, to disclose the use thereof in the projects and to record the progress of the projects (including the cost thereof). The books and

records with respect to each project shall be maintained for the duration of the project, or until the expiration of three years after final disbursement for the project has been made by the United States, whichever is later. The two Governments shall have the right at all reasonable times to examine such books and records and all other documents, correspondence, memoranda, and other records involving transactions relating to agreed projects. The Government of India shall enable the authorized representatives of the United States to observe and review agreed projects and the utilization of goods and services financed under the projects, and shall furnish to the United States all such information as it shall reasonably request concerning the above-mentioned matters and the expenditures related thereto. The Government of India shall afford, or arrange to have afforded, all reasonable opportunity for authorized representatives of the Government of the United States to visit any part of the territory of India for purposes related to agreed projects.

"(iii) If the United States determines that any disbursement under paragraphs 1(b) and 1(c) of Article II of the Agreement made by it for agreed projects is not supported by the documentation submitted by the Government of India, is not made in accordance with the terms of this agreement or any applicable agreement or arrangement between the Government of the United States and the Government of India, or is in violation of any applicable laws or regulations of the United States Government, the Government of India, or is in violation of any applicable laws or regulations of the United States Government, the Government of India shall pay to the United States as may be requested by it, an amount in local currency not to exceed the amount of such disbursement which has been charged as an advance under the line of credit established by the loan agreement, the total amount charged as advances under the line of credit shall be reduced by the amount of such payment.

"(iv) The authorized representatives of the United States shall expend funds for agreed projects only in accordance with the applicable laws and regulations of the United States Government. The United States may decline to make further disbursements for any agreed projects if it determines that further disbursements would not fulfill the purpose of paragraphs 1() and 1(c) of Article II of the Agreement.

"5. I wish to confirm my Government's understanding that imports of wheat under Title I of the Act shall be over and above usual commercial imports from the United States and countries friendly to the United States during each United States fiscal year 1961–64 of not less than 400,000 MT. This figure may be adjusted or reduced on the basis of a review of India's good grain supply, financial position, and other relevant factors to be made by the two Governments prior to the beginning of each fiscal year. The first such review will be undertaken in June 1960. In the case of rice it is understood that imports under Title I shall be over and above India's present program of other imports from the United States and countries friendly to the United States during the period January–December 1960 of not less than 400,000 MT. During subsequent years of the Agreement the progress and programs of the Government of India relating to total rice imports shall be taken into account in the annual review.

"6. It is agreed that India shall not export wheat, wheat flour, or rice during the period covered by the Sales Agreement.

"Accept, Excellency, the renewed assurances of my highest consideration."

I have the honor to inform you that the contents of your note represent the understanding of the Government of India.

I would request Your Excellency to accept the renewed assurances of my highest consideration.

(S. K. PATIL)
Minister of Food and Agriculture,
Government of India.

Mr. MONTOYA. Would you, Mr. Gaud, insert the customary stock provision as to the commitment and the stock provision in these contracts which would allow you to escape the fulfillment of the commitment?

Mr. GAUD. Were we talking development grants or development loans or both?

Mr. MONTOYA. Both.

Mr. GAUD. OK.

Mr. MONTOYA. I would like to have a copy personally so that I won't have to wait to see it in the record when the hearings are printed.

Mr. GAUD. Right.

(The matter referred to is as follows:)

TERMINATION CLAUSES IN A.I.D. AGREEMENTS

Development Grant project agreements include the following:

The original Project Agreement shall enter into force when signed. Any revisions of the original Project Agreement shall be effective when signed. Either party may terminate this Project Agreement by giving the other party 30 days written notice of intention to terminate it. Termination of this project agreement shall terminate any obligations of the two parties to make contributions pursuant to Blocks 8 and 9 of this Project Agreement, except for payments which they are committed to make pursuant to noncancellable commitments entered into with third parties prior to the termination of the Project Agreement. It is expressly understood that the obligations under paragraph H relating to the use of property shall remain in force after such termination.

Loan agreements include the following:

Termination of Disbursements; Transfer of Goods to A.I.D.: In the event that at any time:

(*a*) An Event of Default has occurred;

(*b*) An event occurs which A.I.D. determines to be an extraordinary situation which makes it improbable that the purposes of this loan will be attained or that Borrower will be able to perform its obligations hereunder;

(*c*) Any disbursement would be in violation of the legislation governing A.I.D./; or

(*d*) A default shall have occurred under any other agreement between Borrower or any of its agencies and the United States or any of its agencies:

then A.I.D., at its option, may (i) decline to issue further letters of commitment, (ii) suspend or cancel outstanding letters of commitment to the extent that they have not been utilized through the issuance of irrevocable letters of credit or through bank payments made other than under irrevocable letters of credit, giving notice to Borrower promptly thereafter, (iii) decline to make disbursements other than under letters of commitment; and (iv) at A.I.D.'s expense, direct that title to goods financed hereunder shall be transferred to A.I.D., if the goods are from a source outside the Borrowing Country, in a deliverable state and have not been offloaded in ports of entry of the Borrowing Country. To the extent that any costs connected with the purchase and transportation of these goods have been financed hereunder, these amounts shall be deducted from Principal.

FILM ON FOREIGN ASSISTANCE PROGRAMS

Mr. PASSMAN. Gentlemen, the Department of State in its newsletter of July 1, 1963, notes that a black and white sound film which tells the story of the U.S. foreign assistance program, would be shown on channel 5, WTTG–TV, on Sunday, July 21, at 8:30 p.m. The film, produced by AID, according to the newsletter, defines the Agency's organization, operation, objectives and also describes shirt sleeve diplomacy in action, aid at the person to person level. Most of the motion picture, the report states, was derived from film sequences by USIA and United Nation footage shot at American assistance missions around the world. AID officials, the newsletter reports, said the film is available free of charge on a loan basis to civic organizations, clubs, churches, discussion groups, and similar audiences.

I yield to Mr. Rhodes.

Mr. RHODES. I just wanted to ask a question, Mr. Chairman, as to how much this film cost and under what provisions of the law money

to prepare such a film was provided, I would like to call your attention particularly to section 601 of the mutual security appropriations for fiscal year 1963, which reads as follows:

No part of any appropriation contained in this act shall be used for publicity or propaganda purposes within the United States not heretofore authorized by the Congress.

Would you please get us a report on that?

Mr. MILLER. Yes.

Mr. PASSMAN. If the gentleman will pardon me, we want a ruling, not merely a report, how you get around the law on this matter, if that is what is being done.

Mr. MILLER. There is no intent to get around the law on this matter. As Mr. Rhodes read, it concerns publicity or propaganda, which is prohibited by section 601. I think the legislative history of section 601 shows that there is no desire to inhibit the giving of information to the American Congress or the American public. As you know, under section 634 of the authorizing act——

Mr. PASSMAN. Did the American people ask for this film?

Mr. MILLER. We do have numerous requests for all kinds of information, sir, and we try to provide the information to the American people as best we can.

Mr. PASSMAN. What did this film cost?

Mr. MILLER. Mr. Chairman, we shall be happy to supply it.

(The information follows:)

COSTS AND JUSTIFICATION FOR FILM "THE ONLY WAR WE SEEK"

"The Only War We Seek" is a 28-minute black-and-white film describing the goals and operations of the foreign-assistance program and produced for use as a training and information film. It replaced a similar film, produced in 1957, which was obsolete. Bids for its production were advertised in May 1962, and the contract for its production was awarded to National Film Studios, Washington, D.C., on its low bid of $24,935.71. This cost included the delivery of 200 prints.

The film was delivered in March 1963, and has been used since that time for the orientation of new AID employees and for filling requests from schools, organizations, or television stations for films about the foreign-assistance program.

The General Counsel's Office has ruled that the production of the film was not violative of section 601 of the Foreign Aid and Related Agencies Appropriation Act. The General Counsel's opinion is as follows:

"The history of the statute indicates that its purpose 'is to prevent the use of foreign aid and Peace Corps funds for propaganda. It is not intended to prevent or inhibit the use of funds by the executive to continue and increase the provision of information on these programs to the American people.' (Senator Hayden, speaking as chairman of the Senate Appropriations Committee, Congressional Record, Sept. 26, 1961, p. 20066.)

"Section 601 is similar to an older provision, section 537 of the Mutual Security Act of 1952, which was known as the Dworshak amendment and which is no longer a part of foreign assistance legislation. Senator Hayden said of section 601 when it was first enacted in 1957 that it was not intended to change the Dworshak amendment which was the basic law and that it was 'not intended to prohibit and it does not prohibit the President or the International Cooperation Administration or the Departments of State and Defense from giving the American people information about the operation of those agencies or the uses to which they are putting the money appropriated for the mutual security program or what the American people are getting for their money' (Congressional Record, Aug. 29, 1957, p. 16482).

"There have been many similar expressions from the Congress. In reporting on the bill for the Mutual Security Act of 1959, the House Committee on Foreign

Affairs stated 'that the executive is applying the Dworshak amendment much too restrictively' and urged 'that fuller information be made available to the public and through the use of any appropriate means or media for making known to the public more effectively what is being done under the mutual security program and what its basic programs are.' The House Foreign Affairs Committee went on to reiterate the statement of the managers on the part of the House at the time of acceptance of the amendment by the House conferees (p. 18, H. Rept. 2031, 82d Cong., 2d sess.): '* * * The committee of conference believes that it is possible for those responsible for the administration of the Mutual Security Act to maintain a sharp distinction between propaganda and the supplying of information as to the results attained under the program, and that this section of the conference agreement should not interfere with the recognized procedures for keeping the public and the Congress informed.' (Report of House Committee on Foreign Affairs on Mutual Security Act of 1959, p. 62.)

"The Senate Foreign Relations Committee, reporting the same bill stated that: 'It is admittedly difficult to draw a hard and fast distinction between information and propaganda so as to fit all possible cases. But this problem, in the committee's view, is more theoretical than real * * * "General propaganda" should be very narrowly construed and should not inhibit action through all appropriate media to make more information about the program available to the American people. (Senate Committee on Foreign Relations report on Mutual Security Act of 1959, p. 39.)

"Against this background it would appear that the material contained in the subject film is factual and under the legislative history of section 601 not in violation of that section."

The film was produced in response to the large number of requests this Agency receives concerning the purposes and operations of AID and the material contained in the film is factual. None of the scenes were shot in connection with this particular film, but all are available as "stock footage" from other films. The distribution of the film is based entirely on requests. Public libraries and universities which stock films have been informed that it is available.

Mr. ANDREWS. May I ask a question?

Mr. PASSMAN. Certainly.

Mr. ANDREWS. Is this the first time you have ever had one of these films?

Mr. MILLER. Mr. Andrews, I believe there have been films in the past prepared for informational purposes.

Mr. ANDREWS. There has been a lot in the press this year about the program possibly being in trouble on the Hill and with Congress. Did the film, coming at this time, have anything to do with those reports or newspaper stories?

Mr. MILLER. I am not sure when this film was prepared. I would be glad to provide the information along with the cost, et cetera.

Mr. ANDREWS. Last night was the first time it was shown this year on TV?

Mr. MILLER. No. It has been prepared some considerable period, I have forgotten, months, if not a year. It had already been prepared. I am not sure of the date. We would have to provide that for you. Do you remember?

Mr. GAUD. No; I do not.

Mr. MILLER. I know it has been months and months.

Mr. PASSMAN. Sometimes when a propaganda film like that one is produced some of the detail is overlooked. So will you please find out if it is customary, for example, for the agricultural workers of Africa to wear neckties and polished shoes in the field when they are working? Have a look at the matter and give us a little report, please.

Mr. MILLER. Yes, sir.

(The information follows:)

FILMING OF "THE ONLY WAR WE SEEK"

All oversea scenes of the film were extracted from existing stock footage and were obtained by the contractor from existing or commercial sources. No on-site scenes were shot especially for this film, nor were any foreign nationals taken from one country to another or "borrowed" to take part in the film.

AID employees who reviewed the film in an effort to identify the scene to which reference was made concerning field workers wearing neckties and polished shoes were unable to find any instance of this kind.

INDIA'S EXPORT-IMPORT SITUATION

Mr. PASSMAN. I have heard some rather disquieting statements as to India's export-import situation several times in the recent past, Mr. Gaud. Therefore, we shall appreciate it if you would submit for the record a table showing the import-export situation of India for the past 5 years, and in a separate table the export-import situation relative to the United States and India, dealing with the exchange, exports, and imports.

Mr. GAUD. Yes, sir.

(The information follows:)

Indian exports and imports, 1958–63, for Indian fiscal years, April through March

[Millions of dollars]

	Exports	Imports	Trade balance
1958–59	1,210	2,161	−951
1959–60	1,310	1,949	−639
1960–61	1,324	2,310	−986
1961–62	1,402	2,054	−652
1962–63 (preliminary)	1,457	2,062	−605

U.S. trade with India, 1958–62

[In millions of dollars]

Calendar year	U.S. exports (1)	U.S. imports (2)	Trade balance (3)	U.S. exports financed by AID and Public Law 480 (4)	Net trade excluding U.S. exports financed by AID and Public Law 480 (1−(2+4)) (5)
1958	312	185	127	204	−77
1959	336	209	127	247	−120
1960	639	230	409	454	−45
1961	482	255	227	298	−69
1962 (estimated)	669	260	409	497	−88

DEVELOPMENT GRANT PROGRAM

Mr. PASSMAN. Last year, when you were testifying on the fiscal year 1963 program, you indicated that you executed $19.2 million in development grants in fiscal year 1962. Now let us go to page 405 of the 1963 hearings. Could you give us an explanation on the $1.7 million discrepancy that is indicated in comparison with the record for this year?

Mr. GAUD. I am not sure what year we are talking about.

Mr. PASSMAN. It was 1962, of course, but it is on page 405 of the 1963 hearings.

Mr. GAUD. That was for 1962. I said on page 405 last year, for 1962, our actual obligations were $19.2 million.

Mr. PASSMAN. It shows in the record——

Mr. GAUD. For 1963 we were asking last year—it appears on page 405—$15.2 million.

Mr. PASSMAN. On the justifications of this year it shows $20.9 million. Look at your justifications, on page 19, the first item, $20.9 million.

Mr. GAUD. That is right, for 1962.

Mr. PASSMAN. You said you had a program of $19.2 million. The book shows $20.9 million.

Mr. GAUD. The difference is that the $19.2 million represents obligations under the new obligational authority, and $1.7 million represents reobligated prior year deobligated funds.

Mr. PASSMAN. From what was it deobligated?

Mr. GAUD. I do not have the 1962 figures here.

Mr. PASSMAN. Please get the information.

(The information follows:)

FISCAL YEAR 1962 DEOBLIGATIONS—INDIA

The sum of $1.7 million was reobligated for India development grant projects; $1,060,000 was deobligated from prior year development grant project obligations in India. These projects are:

[In thousands of dollars]

Project	Date funding terminated	Amount deobligated
Continuing projects:		
Steel production		173
Industrial productivity improvement		90
Agriculture extension		57
Medical education		54
Power generation and distribution		44
Malaria eradication		38
Subtotal		456
Terminated projects:		
Assistance to coal industry	1962	209
Teacher training engineering education	1961	202
Electrical distribution system	1962	82
Rural institutions	1961	44
Farmers organization	1961	19
Fisheries	1961	19
River valley development	1961	16
Highways and bridges	1960	13
Subtotal		604
Grand total		1,060

The remaining $604,000 was deobligated from prior year unliquidated development grant obligations in Turkey ($172,000), Israel ($302,000), Iraq ($69,000), Lebanon ($25,000), and Ceylon ($36,000).

Mr. PASSMAN. This is another case where if you did not have the authority to reobligate then, of course, the figure of $19.2 million no doubt would have held firm. Is that a fair statement?

Mr. GAUD. That is a fair statement.

Mr. PASSMAN. Thank you.

INDIA'S DEBT SERVICING REQUIREMENTS

Would you happen to know the amount of India's annual debt servicing needs?

Mr. GAUD. Yes, sir. Requirements on India's total external debt for the year 1963–64, principal and interest, $238 million.

U.S. HOLDINGS OF INDIAN CURRENCY

Mr. PASSMAN. Could you tell us the amount of India's currency that we presently own?

Mr. GAUD. The total amount of Indian rupees available to meet U.S. requirements which we own is $362 million.

Mr. PASSMAN. What is your average annual expenditure?

Mr. GAUD. For U.S. purposes?

Mr. PASSMAN. Yes.

Mr. GAUD. About $24 million.

Mr. PASSMAN. We have rupees slightly in excess of our requirements, do we not?

Mr. GAUD. Yes, sir.

INDIA'S DEBT SERVICING CAPACITY AND EXTERNAL REQUIREMENTS

Mr. PASSMAN. Many of the countries, those which are in the consortium, are doing business in the same manner that nations have been doing business all along—making hard loans, with relatively short terms and at from substantial to high rates of interest. Many of these loans will start maturing possibly in 10 years, about the time we are supposed to start getting back 1 percent or more a year on our credits.

If the other members of the consortium that are making hard loans, with interest rates up to 6¾, demand, as it is reasonable to expect they will do, that India start retiring those loans, plus interest as they start maturing, are they not going to have to experience a very rapid growth in their economy, in their foreign exchange credits, and their exports, in order to be able to meet those demands even if Uncle Sam did not get in on it at all?

Mr. GAUD. That depends on the future developments.

Mr. PASSMAN. Is that not what I said?

Mr. GAUD. There will be no problem. India will have no problem of handling her present debt. The question is whether the debt that she will pile up from here on out is going to be on hard or soft terms.

Mr. PASSMAN. She is piling up debts now. We have already gone over this situation.

Mr. GAUD. I have before me a table prepared by the World Bank, which I would like to offer for the record, which shows that at the present time India's debt service requires roughly 12 percent of her earnings on current account. The current debt presents no problem at all.

On the other hand, if a great many of the loans to India continue to be on hard terms, the burden of debt on India will become intolerable. If, on the other hand, these countries will modify and moderate their terms, there will be no question about India's ability to continue to get foreign aid and carry it without hurting herself. That

is why we feel it so important to persuade these other nations to modify theirs.

Mr. PASSMAN. That is understood, if the other countries modify their terms and rates.

Mr. GAUD. They are modifying.

Mr. PASSMAN. Let me read this:

> The indications are that India will require at least as much external assistance in the fourth plan as in the third plan if the growth of the economy is to be maintained along the lines as presently proposed. Unless most of the assistance extended from now on is in the form of grants or loans with easy terms of repayment, the burden of debt service will rapidly become insupportable.

I am not as enthusiastic as you people are. This is going through the fourth plan. It would appear that there is going to be no letup.

Mr. GAUD. The statement quoted is true, sir. May I offer this exhibit for the record, Mr. Chairman?

Mr. PASSMAN. India's situation is not favorable, according to this statement, unless other nations which are presently making hard loans at high rates of interest modify substantially the terms by which they are making capital available to India.

Mr. GAUD. That is certainly true.

Mr. PASSMAN. We have messed our own financial situation up, but I think those countries are not about to let us mess theirs up.

Mr. GAUD. I would like to put in the record this exhibit, prepared by the World Bank, which shows on certain assumptions, which are stated here, the external service debt service projections of India.

Mr. PASSMAN. Would it be like saying that if a Congressman gets $22,500 a year salary and if he builds up his living expenses to where it requires $33,000 a year for him to make ends meet, then he is in serious trouble? The only way that condition can be alleviated is to get the salary increased or to reduce the ways of living. Is that about it?

Mr. GAUD. That is right.

Mr. PASSMAN. That is just about the type of comparison you have to draw there. These other nations, or some of them, thus far not only refuse to modify their loan terms and rates very substantially but have also greatly reduced their commitments to India, according to the Indian News.

(The chart referred to follows:)

INDIA: EXTERNAL DEBT SERVICE PROJECTIONS
(MILLIONS OF U.S. DOLLAR EQUIVALENTS)
(C) SERVICE ON EXISTING DEBT PLUS ADDITIONAL COMMITMENTS OF $500 MILLION A YEAR ON SOFT TERMS AND $300 MILLION A YEAR ON HARD TERMS
30% OF CURRENT ACCOUNT RECEIPTS
25% OF CURRENT ACCOUNT RECEIPTS
(B) SERVICE ON EXISTING DEBT PLUS ADDITIONAL COMMITMENTS OF $300 MILLION A YEAR ON SOFT TERMS AND $200 MILLION A YEAR ON HARD TERMS
20% OF CURRENT ACCOUNT RECEIPTS
15% OF CURRENT ACCOUNT RECEIPTS
10% OF CURRENT ACCOUNT RECEIPTS
(A) SERVICE ON EXISTING DEBT
DEFINITIONS: Soft loans on usual IDA terms.
Hard loans at 5½% interest, with repayment over twenty years including five years grace.
All loans disbursed in year made.
Current account receipts projected on basis of 4% a year straight-line increase in merchandise exports and no change in invisible receipts.

INDIAN FISCAL YEARS
4/26/63
IBRD - Economic Staff
2170

Mr. GAUD. I think this is one of the most important questions we face.

Mr. PASSMAN. I think it is, too. It is a question of whether we want to continue until we go completely bankrupt or whether we are going to stop when we are only two-thirds bankrupt.

I think that if you were to take all the resources of America and put them in India, in 5 years you probably would not be able to find a trace of them. I am sympathetic toward their condition, but I do not see why we should go busted because of it. It is fantastic, looking at the amount of aid they have had last year, as well as in previous years, and the amount coming up this year, and it does not appear from this report that there is very much relief in sight. Let us hope, which is about all we can do, is it not?

Mr. GAUD. Right; and work, which we are doing.

Mr. PASSMAN. Work to get our own house in order.

U.S. COMMITMENT TO INDIAN CONSORTIUM

How much did the United States agree to commit for development assistance to India during the third year of the third 5-year plan?

Mr. GAUD. As I said Friday, the consortium has been adjourned until Wednesday, and we have not made any final pledge.

Mr. PASSMAN. At the moment it is still $375 million?

Mr. GAUD. Yes, sir.

COMMITMENTS OF OTHER CONSORTIUM MEMBERS

Mr. PASSMAN. Have all members of the Aid-India Club met completely their commitments to the consortium in the past 2 years?

Mr. GAUD. Very close to it.

Mr. PASSMAN. How close?

Mr. GAUD. Total commitments for the 2 years were $2,365 million; $2,270,500,000 of that has been translated into specific loan agreements on specific projects. So that the shortfall is about $94.5 million out of $2,365 million. Of the shortfall, $34.5 million is Export-Import Bank, and $24.5 million is IBRD.

Mr. PASSMAN. Let us get the amount that has been disbursed. Do you have that information?

Mr. GAUD. Actual disbursements, expended?

Mr. PASSMAN. Yes; actual disbursements.

Mr. GAUD. I do not have that.

Mr. PASSMAN. Can you get that information?

Mr. GAUD. I will get what I can on it.

Mr. PASSMAN. Some of these nations are strict operators, as their balance-of-payments situation will indicate, as their gold reserves will indicate, and as many other phases of international trade will indicate. They are not going to be disbursing this money on any conditions other than those they agreed to originally. Would you agree to that statement?

Mr. GAUD. I would.

Mr. PASSMAN. There are some indications certainly that this thing in India is not developing as we had hoped it would?

Mr. GAUD. This figure is a translation of pledges into specific loan agreements. The money may not have been spent yet, as I said to Mr. Andrews a while ago, when it is tied up to build a plant. Those figures are no longer pledges, they are firm specific agreements.

(The information follows:)

Disbursements under Indian consortium for 1st 2 years of 3d plan

[Millions of dollars]

Donors	Pledges	Value of orders placed as of Mar. 31, 1963	Disbursements as of Mar. 31, 1963

Total, all donors	2,365.00	1,215.69	571.43

Mr. PASSMAN. But we have agreed already that under certain conditions in any country we would cancel our help; is that right?

Mr. GAUD. Yes.

Mr. PASSMAN. A lot of other countries do not have to get hit on both sides of the face and the back of the head before they see what they are doing.

Mr. GAUD. I do not know of any country that has welshed on any commitment to the Indian consortium.

Mr. PASSMAN. I do not know why they should do so, at a high rate of interest, with a hard loan.

U.S. ASSISTANCE TO POWERPLANTS IN INDIA

Mr. ANDREWS. How many powerplants are we financing in India?

Mr. GAUD. All told?

Mr. ANDREWS. Yes; three, is it not?

Mr. GAUD. We financed three this past year.

Mr. ANDREWS. That is what I meant.

Mr. GAUD. Yes; let me check that.

Mr. ANDREWS. How many are under construction and for how many are you requesting money for 1964?

Mr. GAUD. I would like to confirm that there were three power projects on which we made loans this past year, fiscal year 1963.

Mr. ANDREWS. What is the total amount of those three loans?

Mr. GAUD. The total amount of those three is $122.1 million.

Mr. ANDREWS. Have funds for that amount already been appropriated?

Mr. GAUD. Yes, sir; that was out of fiscal year 1963 funds.

Mr. ANDREWS. That is part of the $1,590 million that was available the 1st of July 1963?

Mr. GAUD. Exactly.

Mr. ANDREWS. When do you expect to complete those three projects?

Mr. GAUD. On one of those three the loan agreement was entered into in March of 1963. Manifestly, that has not got very far yet.

Mr. ANDREWS. But it has been funded?

Mr. GAUD. Yes; on the other two the loans have been authorized, we are still negotiating the terms of the loan agreements with the Indians. They are funded, but the loan agreements have not been signed.

Mr. ANDREWS. I assume work has not started on the other two.

Mr. GAUD. That is correct.

Mr. ANDREWS. Are you sure work has started on the one that was funded or where the agreement was consummated March 1963?

Mr. GAUD. I am not sure, but I can find out.

Mr. ANDREWS. All right.

(The information follows:)

STATUS OF INDIAN POWERPLANT (SATPURA)

Orders have been placed with International General Electric for the turbines and generators. The Madya Pradesh Electricity Board's contract with the Kuljian Corp. for engineering services has been reviewed and approved by AID. Kuljian has completed preparation of specifications for the balance of the equipment and buildings and they now are under study by the Indian authorities, who concurrently are mobilizing the necessary construction equipment to begin civil works.

Mr. ANDREWS. There is $122.1 million available for——

Mr. GAUD. Committed to these three projects.

Mr. ANDREWS. Work has not started on either of them?

Mr. GAUD. That is right.

Mr. ANDREWS. Is there a request in the 1964 budget for a powerplant?

Mr. GAUD. As you know, we do not know exactly what projects will be financed during this coming year.

Mr. ANDREWS. There could be?

Mr. GAUD. There could be. The Indians have indicated that they have plans for six quite small power projects which may be presented to us in the form of loan applications.

Mr. ANDREWS. For 1964?

Mr. GAUD. Yes. They have talked to us about a list of about $600 million worth of projects for our consideration for fiscal year 1964 funding.

Mr. ANDREWS. Could it be that one to six powerplants will be financed out of this request before the committee for 1964 for India?

Mr. GAUD. Yes, sir.

Mr. ANDREWS. Thank you.

TIMING OF U.S. COMMITMENT ON LOAN PROJECTS

Mr. PASSMAN. Mr. Gaud, personally I have complained about this system ever since I have been on this subcommittee. I am going to complain again. We have waited a long time to start these things. You have no legal commitment until you have negotiated a contract by which we give them this aid; is that correct?

Mr. GAUD. I assume so.

Mr. PASSMAN. Yet you actually obligate funds for the project prior to the time that you sign the contract. Why do we get in such a hurry? How can you determine conditions, amount, if you have not negotiated the matter?

Mr. GAUD. We impose certain conditions, of course, on these loans. Before the loan is approved by the Administrator, the basic terms and conditions of the loan upon which we are going to insist have been decided. It frequently takes time to negotiate the precise loan agreement after the lawyers put it in legal language. But according to our view, when we once notify a country that we will make a loan on a certain project, we feel that, while it may not be a legal obligation, we have an obligation.

U.S. DEVELOPMENT LOAN TERMS

Mr. PASSMAN. We are talking about the development credits now, are we not, the transactions that are for 40 years, with no interest, three-quarters of 1 percent annual service charge, and a 10-year grace period?

Mr. GAUD. We are as far as India is concerned.

Mr. PASSMAN. We are discussing India now.

Mr. GAUD. Yes.

Mr. PASSMAN. You know of no other exceptions, inasmuch as you want to broaden the discussion?

Mr. GAUD. I do, indeed.

Mr. PASSMAN. You know a few. Percentagewise, you had $23 million that came back.

Mr. GAUD. You mean, are there other countries in my region to which we grant loans on harder terms?

Mr. PASSMAN. The entire world. If you have information to volunteer, please put it in the record.

Mr. MONTOYA. Will the chairman yield?

Mr. PASSMAN. In just a moment, if you will. I want an answer to this question.

Mr. GAUD. I thought your question was whether I knew of any nations where we made loans on harder terms.

Mr. PASSMAN. I am talking about the majority of loans being made on the terms I just described.

Mr. GAUD. That is certainly true.

Mr. PASSMAN. Whatever we get back, if anything, goes back into the foreign aid program and not into the Treasury to reduce the public debt; is that right?

Mr. GAUD. That is right.

Mr. PASSMAN. Now I yield.

LOANS TO INDIA FOR POWERPLANTS

Mr. MONTOYA. With respect to the three powerplants for which you made commitments during the last year, what kind of loans were those?

Mr. GAUD. They were loans of the type just referred to by the chairman. That is, as far as the loan to the Government of India is concerned.

Mr. MONTOYA. Was repayment in rupees or in dollars?

Mr. GAUD. Repayment to the United States is in dollars. These loans are what we call two-step loans. We lend to the Government of India, because of its balance-of-payments situation and its shortage of foreign exchange, at three-quarters of 1 percent, 40 years, 10-year grace period. The loan agreement provides, however, that the powerplant has to pay the Government of India over a 20-year period at 3½ percent interest with only a 3-year grace period. That payment is in rupees.

Mr. MONTOYA. In other words, we are charging India three-quarters of 1 percent and India is getting 3½ percent in rupees?

Mr. GAUD. In rupees.

Mr. MONTOYA. In interest?

Mr. GAUD. The powerplant is not a foreign exchange earner, obviously.

Mr. MONTOYA. Before we go further, how will the repayment on principal back to the United States take place, in rupees or in dollars?

Mr. GAUD. Dollars.

Mr. MONTOYA. That will begin on the 10th year?

Mr. GAUD. Yes, sir.

Mr. MONTOYA. Is this three-quarters of 1 percent for these powerplants a higher rate of interest than the REA people pay here when they borrow from the Government?

Mr. GAUD. I do not know what they pay.

Mr. PASSMAN. REA pays 2 percent for their money.

Mr. GARY. Will the gentleman yield?

Mr. PASSMAN. Yes, sir.

LOAN FOR INDIAN NUCLEAR POWERPLANT

Mr. GARY. Does this deal with a nuclear powerplant?

Mr. GAUD. That is one of the three powerplants I have talked about.

Mr. GARY. It is for nuclear power?

Mr. GAUD. Yes, sir.

Mr. GARY. What are we providing in connection with that plant?

Mr. GAUD. We are lending $80 million to the Indians to build the plant. The Atomic Energy Commission is going to sell the nuclear fuel to the Indians. The terms of that have not been worked out.

Mr. GARY. Who will provide the know-how to run it?

Mr. GAUD. The Indians. The Atomic Energy Commission tells us, and Burns and Rowe have looked into this and they tell us, that there is no question of the ability of the Indians to run the plant.

Mr. ANDREWS. Will the gentleman yield?

Mr. PASSMAN. Certainly.

Mr. ANDREWS. That $80 million nuclear plant is funded by this $122.1 million figure you gave me a few minutes ago?

Mr. GAUD. That is one of the three.

Mr. ANDREWS. You mentioned the AEC would sell certain goods or facilities to the Indian Government on credit?

Mr. GAUD. Yes; the fuel.

Mr. ANDREWS. Will that be in addition to the $80 million?

Mr. GAUD. It is in addition to the $80 million.

Mr. ANDREWS. How much will that be, do you know?

Mr. GAUD. I do not know exactly. My recollection is that it is between $15 and $20 million.

Mr. ANDREWS. That nuclear powerplant will cost us about $95 to $100 million?

Mr. GAUD. There is also local currency cost, Mr. Andrews.

Mr. PASSMAN. Not our local currency?

Mr. GAUD. To be paid by the Indians themselves.

Mr. ANDREWS. To AEC?

Mr. GAUD. To be paid by the Indians themselves. We are only financing the foreign exchange cost of the plant.

Mr. ANDREWS. $80 million?

Mr. GAUD. Yes.

Mr. PASSMAN. They furnish their money to their own people?

Mr. GAUD. To build the buildings and run the plant.

Mr. PASSMAN. There is nothing unusual about that kind of operation.

Mr. ANDREWS. What will they get for $80 million?

Mr. GAUD. The foreign exchange cost of the plant. All of the equipment has to be bought in the United States.

Mr. ANDREWS. Above what they need from AEC?

Mr. GAUD. All they get from AEC is fuel.

Mr. PASSMAN. Could you get us an estimate of the cost of the fuel contract?

Mr. GAUD. Yes.

(The information follows:)

FUEL CONTRACT WITH AEC—INDIAN NUCLEAR POWERPLANT

The AEC contract with India for supply for fuel for the Tarapur atomic reactors is still in the draft stage. It is anticipated that the contract will provide for sale by the AEC to the Government of India of enriched uranium fuel elements for the initial core loadings and spare fuel elements required for backup. The initial fuel charges, estimated to cost approximately $20 million, will be replaceable beginning in the third year at a rate of one-fifth of the total loading per year.

The contract probably will provide for repayment of the $20 million over a period of 20 years with an initial grace period of 10 years before principal repayments begin.

The contract will also include provision for AEC sale of recharge loads to the GOI annually at rates similar to those charged U.S. users, and such sales will be on a cash basis. This sale arrangement will cover a 25-year period.

Mr. GAUD. The AEC will sell this fuel on credit, as I say, and according to our view, since it is being furnished on credit, that will constitute a part of our consortium commitment.

ECONOMIC JUSTIFICATION FOR NUCLEAR POWERPLANT IN INDIA

Mr. ANDREWS. What do your experts tell you about the possibility of producing electric energy by a nuclear powerplant in India? Will it be economically justified or will it be too high?

Mr. GAUD. No, sir; it will not be too high.

Mr. ANDREWS. Do they not say in this country that it is too high and cannot be produced economically?

Mr. GAUD. I think it depends on where you are. The location of this particular plant will be in a very high cost area in the sense that coal is not even remotely competitive with it in this particular location. An oil-fired plant would be competitive with it. It is a high cost area. The economic studies show that this energy will be produced, the plant will make a profit, it will sell at a competitive rate with other local energy. The plant will make a profit over and above paying back the investment.

Mr. ANDREWS. Is it a private utility or is it government owned?

Mr. GAUD. Nearly all the powerplants in India are owned by the government, and this will be.

Mr. ANDREWS. Can you put in the record a table showing the cost of power over there in India, both coal and hydro?

Mr. GAUD. Yes.

(The information follows:)

POWER COSTS IN INDIA

Nuclear power at the Tarapur site will cost 7.36 mills per kilowatt-hour. Power produced by coal would be slightly higher, approximately 8.11 mills. Hydro sources are very limited and consequently high cost.

In the Delhi area power is available both from the thermal and hydro sources. The system purchases hydro produced power transmitted from Bakhra Dam at 8.05 mills per kilowatt-hour, and the Delhi "C" Thermal Plant (being financed in part by an AID loan) will produce at an estimated 8.74 mills per kilowatt-hour.

Mr. GAUD. It varies with the area. In this area it is 7½ to 9½ cents a kilowatt-hour, very expensive. There is no coal nearby and no railroad capacity to transport the coal.

Mr. ANDREWS. Will the energy be used by commercial firms or is it residential?

Mr. GAUD. Both. This is near Bombay.

Mr. ANDREWS. What is the capacity?

Mr. GAUD. 380 megawatts. This is an area in which a great deal of industrial development is taking place. The figures show that even with this plant, they are not going to come near meeting the requirements for that area for the next 10 years.

Mr. PASSMAN. We cannot produce nuclear-powered electricity economically enough to use it in general in this country at this time; is that correct?

Mr. GAUD. This plant is almost a carbon copy of one outside of Chicago.

Mr. PASSMAN. Can we produce it in this country economically enough to meet the competition and sell the power?

Mr. GAUD. Only in certain areas.

Mr. PASSMAN. In what areas?

Mr. GAUD. I am told in some parts of the west coast.

Mr. PASSMAN. But not in India?

Mr. GAUD. It is a question of whether you have coal or water power. Nuclear power will sell at competitive rates in Bombay.

Mr. PASSMAN. I know, but they do have a standard below ours, and certainly the gross national product is down below ours, and the per capita income is about one-tenth of ours.

Mr. GAUD. Around $80 per capita.

Mr. PASSMAN. But it depends on what you can buy with the $80. Let us talk about it so we can understand it. If you relate that figure against American dollars, as to what they can by with $80 over there, it is more than you could buy with $80 here in America. Is that not correct?

Mr. GAUD. That is certainly true.

Mr. PASSMAN. We have to think of the rate we pay for electricity. You may be charging those people seven or eight times as much for electricity as we pay here. How can you even project it to the point of knowing that this plant would be successful?

Mr. GAUD. Each Indian 5-year plan has increased enormously the amount of power available for industry and for homes.

Mr. PASSMAN. If they are going to have to pay 10 or 12 cents per kilowatt, are they able to pay for it?

Mr. GAUD. There has been no problem of that sort to date.

Mr. PASSMAN. It would appear to me that if they can pay 10 or 12 cents per kilowatt in India, we would be in better shape to pay it in America. I think it is speculative as to whether this thing could ever be operated economically enough for India to use electricity.

Mr. GAUD. An oil-fired plant in this location would not produce electricity any cheaper, with the present tax on imported oil.

Mr. PASSMAN. It may be that we are trying to advance these people too rapidly. I think of electricity as a necessity, but not if you are going to give it to people who do not have sufficient earnings to pay for it at the price they have to offer it on the market. It seems to me it would be rather speculative as to whether this would be a good investment.

In our own country there are many instances of rural people getting electricity down as low as 1½ to 2 cents per kilowatt. We produce it very cheaply, maybe at one-half cent per kilowatt. However, it may cost 6 or 7 cents per kilowatt over there.

Mr. GARY. Will the gentleman yield?

Mr. PASSMAN. Yes.

Mr. GARY. Do you have any hydroelectric plants?

Mr. GAUD. Yes, sir; we are building some.

Mr. GARY. You are building some hydroelectric plants there?

Mr. GAUD. Yes, sir.

Mr. GARY. Where you have adequate water supply?

Mr. GAUD. Yes.

Mr. GARY. I take it where you are putting this nuclear powerplant you do not have adequate water supply?

Mr. GAUD. No water.

Mr. GARY. You do not have coal and do not have oil?

Mr. GAUD. Exactly.

Mr. GARY. If they have any electricity, it will have to be supplied by atomic power; is that correct?

Mr. GAUD. Yes. We concluded that this is a reasonable way to provide it within a reasonable time.

Mr. PASSMAN. We certainly know that you cannot relate the $80 per capita income as we would think of the dollar in America, but as it would apply to electricity they are going to purchase electricity at a fixed rate of so much per kilowatt. So far as the electricity is concerned, you could go back and take it on the basis of their per capita income, which in 1962 was only $81.

Mr. GAUD. The per capita income?

Mr. PASSMAN. This is a pretty serious matter if you try to relate it to how much of this $81 he can afford to spend for electricity. You can use the dollar basis there, because you are dealing with so much per kilowatt.

Mr. GAUD. I would like to say most of this electricity will be used for industrial purposes.

Mr. PASSMAN. The question was asked earlier, and you said both.

Mr. GAUD. Both. But the primary concern, as far as development is concerned and our program, the primary impetus is the industrial side.

In 1950–51, India's installed power capacity was 2.3 million kilowatts. In 1960–61 it was 5.7 million kilowatts.

I am talking about available capacity, not cost. Their capacity, existing output of energy, electric energy, has more than doubled in the last 10 years. The plants are selling all the power they can produce. Their plan calls for doubling capacity again in the next 5 years, primarily for industrial use. It is to that development that we are contributing when we finance these powerplants.

Mr. PASSMAN. Nevertheless, it looks to me, there might be a lot of places you could spend money in India on power where you could get more for a dollar than getting them started with nuclear power, something we cannot afford in this country, and especially so when you are doing it on a socialistic, or nationalized basis, and not through free enterprise.

Mr. NATCHER. Mr. Chairman.

Mr. PASSMAN. Mr. Natcher?

PROPOSED FISCAL YEAR 1964 ASSISTANCE TO IRRIGATION

Mr. NATCHER. How much irrigation are you providing for this year?

Mr. GAUD. I would have to supply you with that figure.

Mr. NATCHER. You have no idea as to the approximate number of deep irrigation wells?

Mr. GAUD. I do not have it.

Mr. NATCHER. It may be supplied.

(The information follows:)

AID TO IRRIGATION PROPOSED FOR FISCAL YEAR 1964—INDIA

It is not proposed to obligate any dollar funds in fiscal year 1964 for loan assistance specifically for irrigation development. Some construction equipment for initial use on irrigation projects might be purchased under a possible program or nonproject loan.

The fiscal year 1963 nonproject loan financed purchases of U.S. construction and earthmoving equipment for irrigation development in the amount of $35 million.

DEVELOPMENT GRANT PROGRAM

Mr. PASSMAN. The proposed Development Grant Program for India is $8,115,000; an increase of $665,000 over fiscal 1963; is that correct?

Mr. GAUD. It is that much of an increase over what we estimated.

Mr. PASSMAN. Do you have any new projects programed to start in fiscal 1964?

Mr. GAUD. In India?

Mr. PASSMAN. Yes, sir.

NUMBER OF PROJECTS—WORLDWIDE

What number of projects did you give to us, Mr. Comptroller General, while he is looking up that information, in aid for fiscal 1963?

Mr. TENNANT. I think the figure I gave you as June 30, 1962, was about 2,200. I said that was number of projects with unliquidated balances as of that date.

Mr. PASSMAN. This figure was for capital projects which did not have to do with these notes on the bottom of the book?

Mr. TENNANT. If you counted projects by the notes, it would be higher.

Mr. PASSMAN. Could you give us your estimate as of June 30, 1963, of the number of projects including those in the notes?

Mr. TENNANT. We will see what we can do.

Those are subprojects that are referred to in the notes at the bottom of the justifications.

Mr. PASSMAN. They are separate projects, subprojects the way you handle them. Would you say there are 3,500?

Mr. TENNANT. I would not hazard a guess today, sir.

Mr. PASSMAN. When are you going to give us a guess?

Mr. TENNANT. I would have to count through the figures.

Mr. PASSMAN. Please bring the information as soon as you can.

Mr. TENNANT. All right.

NEW DEVELOPMENT GRANT PROJECTS PROPOSED FOR FISCAL YEAR 1964

Mr. GAUD. We have three new projects in India in fiscal 1964.

Mr. PASSMAN. Can you tell us the cost of these three new projects, from start to finish?

Mr. GAUD. The first is the project for State industrial development. By "State," I am using that term in the sense of the States of India as distinguished from the Central Government.

The total cost of that to completion is $163,000, which is the amount we are proposing to fund for fiscal 1964.

Mr. PASSMAN. Is that amount of money actually going to complete the project if it starts now?

Mr. GAUD. That is the present estimate.

Mr. PASSMAN. This is a contract with one of the States in India, not with the Indian Government?

Mr. GAUD. That is right.

Mr. PASSMAN. Do you go through the National Government to get to the State governments or do you go directly to the State governments?

Mr. GAUD. We have an agreement with the Central Government and we work through the Central Government.

Project No. 2 is communicable disease control, working with the Institute for Communicable Disease, which asked for help in developing its capacity to attack communicable diseases. The total estimated cost is $464,000. We are asking $49,000 in 1964 to get it started.

Mr. PASSMAN. How do you know $464,000 will complete the project? You are just now starting and are asking for about 10½ percent of the total.

Mr. GAUD. This $49,000 is to cover one Public Health Service technician and two consultants and to provide training for three participants. The estimate that we have been given on this by the mission, which has worked out the program at the request of the Government, is $464,000. Manifestly, that is only an estimate.

Mr. PASSMAN. What is project No. 3?

Mr. GAUD. Third is a labor training institute in Hyderabad. We are asking for $42,000 in 1964, and the total cost to completion is estimated at $142,000.

Mr. PASSMAN. How do we get into so many projects?

Mr. GAUD. The Indian Government asked us to do many things.

Mr. PASSMAN. Do you ever turn any of them down?

Mr. GAUD. Yes, sir.

AGRICULTURAL UNIVERSITIES DEVELOPMENT PROJECT

Mr. PASSMAN. The agricultural university development project, on page 59, shows an estimate of $1,200,000, which apparently is to finance university contracts into fiscal 1966; is that correct?

Mr. GAUD. That is correct.

Mr. PASSMAN. How much has been obligated to date in U.S. dollars and U.S.-owned local currency in total?

Mr. GAUD. $13,029,000.

Mr. PASSMAN. How much of it is local currency?

Mr. GAUD. None of that is local currency.

Mr. PASSMAN. Do we make a contribution of our own local currency toward the project?

Mr. GAUD. No, sir.

Mr. PASSMAN. Your record shows $22,364,000, but——

Mr. GAUD. I beg your pardon. I overlooked that.

Mr. PASSMAN. All right, sir. The two together would add up to what amount?

Mr. GAUD. About $35 million.

Mr. PASSMAN. What is the estimated cost to complete——

Mr. GAUD. The estimated dollar cost is $20 million.

Mr. PASSMAN. What is the local currency cost?

Mr. GAUD. I have no figure on that, Mr. Chairman.

Mr. PASSMAN. It is running about possibly nearly 2 to 1, is it not?

Mr. GAUD. The local currency cost?

Mr. PASSMAN. Yes.

Mr. GAUD. Yes; it is running much higher than the dollar cost.

Mr. PASSMAN. It would appear that we have about a $55 million project; is that right?

Mr. GAUD. Yes.

STEEL PRODUCTION PROJECT

Mr. PASSMAN. On page 65, in connection with the steel production project for which you are requesting $405,000, and you say this is designed to overcome deficiencies in organization and management policies and labor skills in the government-owned Hindustan Steel Co., what countries financed the three steel plants?

Mr. GAUD. Rourkela was financed by Germany. Durgapur was financed by the United Kingdom. Bhilai was financed by Russia.

Mr. PASSMAN. I note you have planned to select a contractor in fiscal 1964 for management purposes, although on page 66 you indicate you were not requesting any funds for the management team. We cannot reconcile that discrepancy.

Mr. GAUD. We are not requesting any funds for that at present.

Mr. PASSMAN. The record states so; is it incorrect?

Mr. GAUD. No; we obligated funds in prior years for that element of the project. It doesn't need money in fiscal year 1964.

INTERNATIONAL PRODUCTIVITY IMPROVEMENT PROJECT

Mr. PASSMAN. Again on page 67, you are requesting $577,000 for the international productivity project, despite the pipeline of $910,000. Do you actually need any funds for this project?

Mr. GAUD. We need money in that for this year to continue with the contract with George Fry & Associates, Mr. Chairman. There is some unexpended participant money in the pipeline, but it is committed.

Mr. PASSMAN. You have $910,000 unliquidated as of June 30.

Mr. GAUD. That is right; we had programed for about 78 participants in fiscal year 1963.

Mr. PASSMAN. In what activity do they participate?

Mr. GAUD. They participate in training.

Mr. PASSMAN. What type of training?

Mr. GAUD. They come to the United States. The purpose is to improve their management skills.

Their purpose is to go back to India and try to improve production techniques, management policies. This is a field in which the Indians need a good deal of improvement, as most underdeveloped nations do. We try to bring the middle and high level management people here so they can do a better job of running plants back in India.

POSSIBLE EFFECT OF U.S. AID PROGRAMS ON U.S. WORLD MARKETS AND GOLD DRAIN

Mr. PASSMAN. What are the guidelines we use to protect us from getting into the same kind of problems we face now in the industrialized nations of Europe where our generosity has forced our prices so high that we are no longer competitive in many respects? Are we devising a plan, worldwide, that will finally force us right back pretty much to the borders of the United States?

Can you see any danger that some day this Nation, through its generosity, will get it prices so high that we will have but few markets left?

Mr. GAUD. I think there is a danger, but I think the day is a long way off when the United States will not be leading the pack. I think we have enough ingenuity, I think we have enough initiative, I think we have enough know-how to stay ahead of this game.

Mr. PASSMAN. The President said that two nations could bankrupt us if they exercised the right that they have.

Mr. GAUD. This can happen, but I am not a defeatist.

Mr. PASSMAN. The President said this on June 23, that there are two nations which, if they exercised the authority they have to demand gold for dollars, could in effect bankrupt America.

Did you read those statements the White House issued?

Mr. GAUD. Yes, sir. I also read that part of that same statement which pointed out how the foreign aid program had a relatively small effect on the balance-of-payments problem.

Mr. PASSMAN. He said, I believe, that it had about a 36-percent effect.

Mr. GAUD. The President pointed out that in 1960 only about one-third of the aid program expenditure was in the form of U.S. goods and services. Last year it rose to better than 50 percent.

Mr. PASSMAN. From what paper are you reading?

Mr. GAUD. The President's message to Congress.

In 1963, 80 percent of AID's commitments made were for exports of U.S. goods and services. By 1965 it is expected that the dollar drain will be not more than $500 million. In this particular region, for example——

Mr. PASSMAN. I am talking about worldwide.

Mr. GAUD. In this particular region, for 1963 the total dollar drain was $63 million of this program of about $1 billion. For 1964 it will be just over $50 million. The reason for that is obvious. The development loans are tied to U.S. procurement and services and are spent here. As U.S. procurement has risen from 1960, it has moved from less than 50 percent of the total, to a fraction——

Mr. PASSMAN. This stuff about 80 percent of our foreign aid being spent here in the United States, I do not disagree with that claim; but when those ships pull out of the ports, loaded with our goods, it is a one-way street. It is going out and not coming back.

Mr. GAUD. There is a promise to pay.

Mr. PASSMAN. In the foreseeable future, it is a one-way street, is it not? Our goods go out and we get no American dollars or no gold or none of their goods back in return; is that correct?

Mr. GAUD. All we get is the terms of the loan agreement.

Mr. PASSMAN. When these ships leave the shores, the invoice is sent down to the U.S. Treasury to be paid for out of the taxpayers' till; is that not right?

Mr. GAUD. That is right.

Mr. PASSMAN. Whatever we get from abroad, our imports, we have to pay for in dollars?

Mr. GAUD. Yes; we do.

Mr. PASSMAN. Under normal trade, instead of giving away our goods, we sell them, do we not?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Is it not true that at every level—the manufacturer, the wholesaler, the retailer, the exporter—they are in business to make a profit, are they not?

Mr. GAUD. Right.

Mr. PASSMAN. Our generosity both at home and abroad, with about $10 billion of it in foreign aid annually, advances our prices, does it not?

Mr. GAUD. Advances the price of what?

Mr. PASSMAN. The price of our commodities.

Mr. GAUD. I do not follow you, sir.

Mr. PASSMAN. If you have a $554 billion gross national product and $136 billion of that represents taxes, either at the local, State, or National level, those taxes are in that GNP.

Mr. GAUD. Some are.

Mr. PASSMAN. This tends to get our prices higher than those of our competitors, does it not?

Mr. GAUD. I am not sure of that.

Mr. PASSMAN. The 1940 dollar will only buy 44 cents worth of our 1963 production.

Mr. GAUD. That is right.

Mr. PASSMAN. Through inflation our prices have gone up.

Mr. GAUD. If you are saying the dollar is worth less, then I agree.

Mr. PASSMAN. I am saying that. And I am saying also that through our generosity, as one of the major factors, we are pricing ourselves out of the world market.

Mr. GAUD. Has not the same depreciation happened to other currencies?

Mr. PASSMAN. Not to my knowledge.

President Kennedy, when he was a Congressman, and I used to support each other on these things. For example, with reference to an amendment offered by Mr. Kennedy, I quote Mr. Kennedy:

> I cannot believe we are going to spend this money merely to set an example to these countries, some of which are ruled by oligarchies, which they might follow in the future themselves. I believe in military assistance for this area. That is a good thing. I do not think we can afford in this country to raise the standard of living of all people all over the globe who might be subject to the lure of communism because of a lower standard of living.
>
> I say it is impossible for us to think of raising the standard of living of all low standard countries of the world. I believe the funds provided in section 203 can well be cut by the amount of my amendment. The cuts can be applied proportionally to programs affected.

Then-Congressman Kennedy had pretty good insight into the facts of the matter. He knew much of this program was more than we could afford.

Let me review for you something of what has happened in the past 10 years.

On December 31, 1952, we owned $23,252 million in gold. The outflow of our gold to foreign countries from 1952 through 1962 was $7,195 million, and last December 31 we were down to $16,057 million. Gold holdings of other free world countries on December 31, 1952, amounted to $13,028 million. Gold holdings of those countries increased from 1952 through 1962 by $11,630 million, to $24,658 million last December 31. This does not include, of course, the Sino-Soviet bloc.

Back in 1952 free world countries owned $10,546,100,000 in short-term dollar assets. But on December 31, 1962, this figure had increased to $24,984 million.

From 1950 through 1962, inclusive, we had a balance-of-payments deficit amounting to $24,290 million, and all of the stuff I have read of the President's, other than this one article, has indicated that foreign aid was a substantial factor in this condition. I say it has probably been the principal factor. I am not just talking about your area or this particular bill. I am talking about all 16 spigots of foreign aid.

We are in trouble. We are borrowing from foreign nations, and we are also going into the International Monetary Fund for money.

COST OF OBSERVATION TOURS OF INDIAN PRODUCTIVITY TEAMS

What is the cost of the proposed 7 weeks' observation tour of the two eight-member productivity teams that will be traveling in the United States, Europe, and Asia?

Mr. GAUD. I cannot give you that offhand.

Mr. PASSMAN. Will you get us some information on this item?

Mr. GAUD. Yes, I will.

(The requested information follows:)

COST OF PRODUCTIVITY TEAM TOURS—INDIAN PARTICIPANTS

The two eight-member productivity teams will be sent to the United States, Europe, and Asia, for 7-week study and observation tours. The dollar cost for each team is estimated at $13,000. U.S.-owned rupees are used to pay for all travel costs.

CONSTRUCTION EQUIPMENT PROJECT

Mr. PASSMAN. What type of commodities do you plan to procure at a cost of $100,000 in connection with the construction equipment project, on page 69?

Mr. GAUD. I can only give it to you in very general terms: instructional equipment, books, and models, and that sort of thing that one cannot get in India. I can supply a more specific list if you would like.

Mr. PASSMAN. We wish that you would do so.

Mr. GAUD. OK.

(The information follows:)

CONSTRUCTION EQUIPMENT COMMODITIES

Commodities to be procured for the construction equipment operation and maintenance training center involve a variety of training and demonstration aids, including training films and filmstrips, books and other instructional materials, "exploded" and cutaway engine and transmission models, and special purpose workshop tools and equipment not available in India.

NONCOMPETITIVENESS OF U.S. STEEL PRICES

Mr. PASSMAN. Incidentally, you know that certain steel commodities can be bought from abroad and delivered dockside at New Orleans for as much as $32.10 a ton less than out of Pittsburgh?

Mr. GAUD. I am sure that that is true.

Mr. PASSMAN. This gives you an idea what I mean by pricing ourselves out of the world market.

Mr. MILLER. The same commodities?

Mr. PASSMAN. You can get wire and nails and many other commodities at $32.10 a ton cheaper.

Mr. ANDREWS. Mr. Chairman, I had a hardware man tell me last fall he had not sold anything but Belgian barbed wire in years and also nails.

Mr. PASSMAN. If you go into steel warehouses sometimes you will find that probably about 70 percent of the steel products are imported.

STATE INDUSTRIAL DEVELOPMENT PROJECT

What is the cost to complete the State industrial development project, on page 72, for which you are requesting $163,000 in fiscal 1964 to initiate the project?

Mr. GAUD. That is the one we mentioned a minute ago. It is $163,000.

Mr. PASSMAN. You have not given us a completed cost figure?

Mr. GAUD. That is it.

Mr. PASSMAN. It is one of the new projects?

Mr. GAUD. Yes, sir.

ORISSA IRON ORE PROJECT

Mr. PASSMAN. Although you are not asking for any funds, I note there is still an unliquidated balance of $6,768,000 for the Orissa iron ore project, shown on page 74.

Mr. GAUD. Yes, sir.

Mr. PASSMAN. You say in your statement that the bulk of the pipeline represents obligations for equipment now in various stages of design and fabrication. All of this project started in 1958?

Mr. GAUD. That is right.

Mr. PASSMAN. Under the Asian economic development plan?

Mr. GAUD. That is right.

Mr. PASSMAN. Did you ever get us information on those extinct funds?

Mr. TENNANT. I think we provided an insert earlier. I think it is in Mr. Bell's testimony.

Mr. PASSMAN. Is there a possibility of this money being deobligated?

Mr. GAUD. This one——

Mr. PASSMAN. Any part of it?

Mr. GAUD. It depends on the ultimate fund cost but we have——

Mr. PASSMAN. This was obligated some 6 or 7 years ago; is that correct?

Mr. GAUD. Six years ago.

Mr. PASSMAN. Tell us the amount of the original obligation.

Mr. GAUD. The amount of the original obligation was $20 million, but some funds have been deobligated, so the obligation now stands at $18,366,000.

Mr. PASSMAN. Give us the expenditures by years.

Mr. GAUD. I will have to get those. I do not have them year by year.

(The information follows:)

EXPENDITURES BY FISCAL YEAR—ORISSA IRON ORE PROJECT, INDIA

	(*In thousands*)
Fiscal year 1960 and prior years	0
Fiscal year 1961	$3,881
Fiscal year 1962	1,391
Fiscal year 1963	8,490
Fiscal years 1964–65 (projected)	5,178
Total	18,940

Mr. PASSMAN. The purchasing power of the dollar is down by nearly 7 percent since you allocated these funds?

Mr. GAUD. I expect there have been great changes, Mr. Chairman. We did deobligate $572,000 this year from this project.

Mr. PASSMAN. With a possibility there may be more?

Mr. GAUD. We do not think so, but, of course, it will depend on the final equipment costs.

Mr. PASSMAN. Are you people not usually on the conservative side when you start deobligating?

Mr. GAUD. We frequently are.

Mr. PASSMAN. Let us hope there is some more money.

BOKARO STEEL PLANT SURVEY PROJECT

Could you tell us when you justified the $750,000 for the Bokaro Steel Plant, on page 73?

Mr. GAUD. We did not.

This was a project that came up during fiscal year 1963.

Mr. PASSMAN. These things are illustrative and you could substitute an entirely different group of projects from the ones you justified in these hearings? Could you do that?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. And be within the law?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. You could even take the projects out of one country and put them in another and be within the law?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. You could possibly ask for money for a flood control project and build a railroad and still be within the law?

Mr. GAUD. Right.

Mr. PASSMAN. Could you tell us about the survey started by the United States Steel Corp. in June of 1962 and completed in April of 1963?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. When did you obligate the funds?

Mr. GAUD. We obligated the funds in 1960—I beg your pardon?

Mr. PASSMAN. What date?

Mr. GAUD. I would like to take back my answer of a moment ago. This project came up in the middle of 1962, not the middle of 1963. We obligated the funds in 1962.

Mr. PASSMAN. The date?

Mr. GAUD. I just have to get that.

Mr. PASSMAN. There have been no disbursements at all?

Mr. GAUD. There have been disbursements and we deobligated what was left over.. This is a completed transaction.

Mr. PASSMAN. Could it possibly be that with reference to this $750,000, you did not request any funds for it, but under the law, you could obligate for it anyway? You employed the United States Steel Corp. and that has led into the controversial Bokaro Steel Plant Project?

Mr. GAUD. It did not lead into this; no, sir.

Mr. PASSMAN. What was the use of spending the $750,000 for a survey?

Mr. GAUD. The Bokaro Steel Plant, the possibility of the Bokaro Steel Plant has been around for several years.

Near the end of fiscal 1962, the decision was reached to retain the United States Steel Corp. to survey this proposition and that is how this survey came into being. That survey is a seven-volume survey which has been given so much publicity within the last 2 or 3 months.

Mr. PASSMAN. Is there any connection between this $750,000 and and the Bokaro Steel Plant Project—Project No. AC–21–AF–5?

Mr. GAUD. There is a connection in the sense that this is a survey made by the United States Steel Corp.

Mr. PASSMAN. Leading up to the feasibility of this plan?

Mr. GAUD. Commenting on the technical and economic feasibility?

Mr. PASSMAN. The same plan?

Mr. GAUD. It is exactly the same plan.

Mr. PASSMAN. This was the beginning?

Mr. GAUD. My point is that this is a matter which has been under discussion for a number of years.

Mr. PASSMAN. This was actually the beginning of expenditures on the project?

Mr. GAUD. It is the first time we have ever made any expenditures in connection with Bokaro. This was for a survey only and it commits us to nothing. We have not even got a loan application from the Indians at the present time. This is under discussion.

Mr. PASSMAN. This proposition has been under discussion for several years. Why is it that the Agency did not request funds from the Congress in 1962 for this survey?

Mr. GAUD. The survey was not under discussion for several years. For several years they have wanted us to build the plant.

Mr. PASSMAN. You know a lot of times you discuss things and they never become a reality. So far as the survey is concerned, and so far as the United States is concerned, the $750,000 you allocated in 1962 was a beginning?

Mr. GAUD. You can call it that, if you like.

Mr. PASSMAN. A beginning so far as U.S. expenditures are concerned?

Mr. GAUD. As far as funding is concerned.

Mr. PASSMAN. As far as funding is concerned, but you started it without making a request even on an illustrative basis; is that correct?

Mr. GAUD. Yes; the decision to make that survey was made after the fiscal year 1963 presentation books had already been printed.

ILLUSTRATIVE BASIS OF FOREIGN AID PRESENTATION

Mr. PASSMAN. Could not some of these projects wait until you came back to the Congress the following year? I ask that question even though this program is on an illustrative basis—you can substitute a complete new set of projects for the ones you justified. You can take them completely out of one country and give them to another country, and on your development credit thing you do not enter into technical assistance agreements until you get the money. This is on an illustrative basis; is that right?

Mr. GAUD. That is right.

Mr. PASSMAN. Congress has given you permission to operate just about as you see fit, and this is indeed a regrettable fact.

MEDICAL EDUCATION PROJECTS

The medical education project, on page 78, has an estimate of $187,000 for fiscal 1964, and under the project data, I note the statement:

The present ratio of doctors to people in India is 1 to 7,000.

However, your justifications indicate there is 1 doctor in 5,000 in India.

Is there an explanation?

Mr. GAUD. I cannot explain the discrepancy.

Mr. GARY. Off the record.

(Discussion off the record.)

Mr. PASSMAN. Is the estimate correct that you propose to obligate $23,214,000 of U.S.-owned local currency in fiscal year 1964?

Mr. GAUD. On which project?

Mr. PASSMAN. The medical aid to education project.

Mr. GAUD. Yes, sir.

Mr. PASSMAN. In addition to that sum, $17,157,000 of local currency?

Mr. GAUD. Right; through fiscal year 1963.

This is to establish a graduate medical education and research institute.

Mr. PASSMAN. You have $23,213,000 in new funds and in 1958 you started the program off with $1,203,000. You have been operating now through fiscal 1963 and I just wondered if this is a typographical error.

Mr. GAUD. I do not think so.

Mr. PASSMAN. You say you are going to bring it up to about $42 million cost in fiscal 1964?

Mr. GAUD. Local currency?

Mr. PASSMAN. Dollars obligated prior to fiscal 1964, $1,203,000?

Mr. GAUD. Total cost?

Mr. PASSMAN. Plus $237,000.

Mr. GAUD. It seems the total cost of the project is a little over $2 million and we are spending also a good many millions of rupees for this purpose.

Mr. PASSMAN. I used a figure of $23 million.

Mr. GAUD. I know; but there is $2 million of dollar cost. This is a small dollar cost and a very large rupee cost project connected with the establishment and the improvement of the medical schools.

Mr. PASSMAN. What is the total cost? Local currency takes American taxpayers' dollars to generate.

Mr. GAUD. As we were saying a while ago, there is no shortage of rupees in India.

Mr. PASSMAN. Yes; but for every dollar of rupees, somewhere along the way it costs the American taxpayer a dollar.

Mr. GAUD. We own these.

Mr. PASSMAN. I know that, but we did not get them without giving them a dollar's worth of goods.

Mr. GAUD. This is the flow of rupees from our Public Law 480 programs in the past.

Mr. PASSMAN. Am I making a statement of fact, that for every dollar's worth of foreign currency we own, somewhere along the way the American taxpayer put up a dollar?

Mr. GAUD. That is right.

Mr. PASSMAN. What are you going to get for this money? Is this the first cost for this project?

Mr. GAUD. I will have to get that. We do not have here the local currency cost total to completion.

Mr. PASSMAN. Nearly $42 million is shown on the divider sheet here, and if we take all segments of the project and add to that any future years' local currency, what are we going to get for it?

Mr. GAUD. Seventy-five medical schools in India instead of 57.

Mr. PASSMAN. How many more is that?

Mr. GAUD. The difference is 18.

Mr. PASSMAN. Medical schools?

Mr. GAUD. Yes, sir; medical colleges.

Mr. PASSMAN. Is that going to be buildings and equipment?

Mr. GAUD. No equipment. It is the local currency cost and I assume the local currency construction costs of the medical colleges, teacher training institutes, dental schools, and the medical center in Delhi. I will get more details on local currency costs if you like.

Mr. PASSMAN. We are still talking about the divider sheet figure here of $40 million plus, whatever you may use in the future out of local currency?

Mr. GAUD. That is true.

Mr. PASSMAN. Do you have any hospitals involved?

Mr. GAUD. No, sir.

Mr. PASSMAN. Strictly medical schools?

Mr. GAUD. That is right.

Mr. PASSMAN. What type of equipment do you propose to procure for the nursing college project, shown on page 79?

Mr. GAUD. Teaching aids, technical books, research equipment that is used in teaching or in training nurses. It is $8,000 worth.

TECHNICAL EDUCATION PROJECT

Mr. PASSMAN. How much of the $4,162,000 obligated for the assistance of technical education projects, on page 85, is allocated to the University of Illinois, which is providing technical assistance to the Indian Institute of Technology?

Mr. GAUD. Did you say how much goes to the University of Illinois?

Mr. PASSMAN. Yes.

Mr. GAUD. Of the unliquidated amount?

Mr. PASSMAN. Yes, sir.

Mr. GAUD. I will have to check that. I do not have that here.

Mr. PASSMAN. Get the information, if you will, please.

(The information follows:)

FUNDING OF UNIVERSITY OF ILLINOIS CONTRACT UNDER TECHNICAL EDUCATION PROJECT, INDIA

Funds allocated to the University of Illinois contract total $830,500, of which $266,137 remained unexpended as of March 31, 1963.

GOVERNMENT OPERATION PROJECT

Mr. PASSMAN. Why do you need $64,000 for forward funding of contract services of four short-term consultants under the Government operation project, on page 86?

Mr. GAUD. Likewise, I will have to check that to see how much it covers. That sounds like a contradiction in terms, does it not, forward funding of short-term consultants?

Mr. PASSMAN. Yes.

(The requested information follows:)

FUNDING OF CONTRACT SERVICES—GOVERNMENT OPERATION PROJECT, INDIA

The contract funds will finance the services of a specialist team of four management consultants for 6 months to advise and assist in the planning and installation of a progress reporting and control system for the Planning Commission to provide up-to-date information on implementation status of major projects and plan components.

NEW DELHI REGIONAL SCHOOL PROJECT

Mr. PASSMAN. Could you tell us when you justified the $150,000 that you obligated for the New Delhi regional school project, on page 88——

Mr. GAUD. We never did, Mr. Chairman.

Mr. PASSMAN. You did not justify it?

Mr. GAUD. This is under section 636 for a school.

Mr. PASSMAN. We want to know if you justified it to the committee.

Mr. GAUD. I do not think so.

Mr. PASSMAN. Could you tell us what the total cost of the project is going to be?

Mr. GAUD. The total is $265,000. That is the total U.S. contribution and we show $150,000 for 1963, and $115,000 for 1965.

Mr. PASSMAN. $150,000 for 1963?

Mr. GAUD. I mean for 1964.

Mr. PASSMAN. How about 1965?

Mr. GAUD. Nothing. The $265,000 is it.

Mr. PASSMAN. Can you tell us whether the total on the previous estimate is from start to finish?

Mr. GAUD. The first funds were obligated in 1963. We asked for $150,000 for 1963 and we actually obligated $136,000. The $115,000 which is requested for 1964 is all we will need for the thing to the end. As I understand it, this is our present estimate.

Mr. PASSMAN. Mr. Gaud, you are requesting $33 million under the development credit category for the Beas Dam project, on page 102; is that correct?

Mr. GAUD. No, sir; that Beas Dam project is already funded. This is a project which is tied up with the Indus Basin agreement.

Mr. PASSMAN. Date approved, June 29, 1960?

Mr. GAUD. That is right.

Mr. PASSMAN. The loan status as of February 28, 1963, indicates it is still unsigned?

Mr. GAUD. That is correct. This is a project in India tied to the Indus Basin settlement. The Indus Basin development project is being operated under the World Bank. This particular project has just not come to fruition yet in terms of going ahead with the work.

Mr. PASSMAN. You have tied up funds and carried them in obligated status, and that money is committed for the years 1960, 1961, 1962, 1963, and we are going into 1964, and we still do not have a signed contract?

Mr. GAUD. That is true. These funds were committed in June of 1960.

Mr. PASSMAN. You made a general commitment and earmarked the funds and you do not yet know the actual cost or when the contract will be signed, do you?

Mr. GAUD. We do not.

Mr. PASSMAN. Thank you.

Is there an outside possibility that this could fall back to maybe a deobligated status?

Mr. GAUD. No, sir.

Mr. RHODES. Mr. Chairman, may I ask a question?

Mr. PASSMAN. Certainly.

Mr. RHODES. This looks like it has a tremendous storage capacity, 5.5 million acre-feet of water.

Mr. GAUD. Yes, sir.

Mr. RHODES. Yet the generation capability is only 50,000 kilowatts of firm electric power, is that right? It seems like a very small amount of power to be generated from that large a head of water.

Mr. GAUD. This is principally an irrigation project.

Mr. RHODES. I realize that.

Mr. GAUD. I do not know what the ultimate future of it will be. We are tied into this with the IBRD. As I understand it, that part of the development which has been financed or which the IBRD agreed to finance, will only go so far. I do not know whether that is the total on power generation or not.

Mr. RHODES. I wish you would check on that because unless this is the type of reservoir which covers a large area and not to any great depth, it seems to me that this is a very small amount of power to be generated from that reservoir.

Mr. GAUD. This is an irrigation project.

Mr. RHODES. I realize that, but if you produce 50,000 kilowatts of firm power, you ought to be able to produce a lot more with such a large head of water.

Mr. GAUD. It could well be.

Mr. RHODES. India being a power-shortage nation, as I understand it, this just does not make any sense.

Mr. GAUD. Yes, sir.

Mr. RHODES. Also, the cost is very modest for such a large project.

Mr. GAUD. This is not the total cost by any stretch of the imagination.

Mr. RHODES. What is the total cost?

Mr. GAUD. The IBRD is contributing to the cost and so is the Indian Government. We are only coming up with a portion of the cost.

Mr. RHODES. Find out the total cost, please.

Mr. GAUD. Yes. I am not sure it is available because we have not gone forward with our financing yet. I am not sure of the final plans but I will get that.

Mr. RHODES. I would like to have that; and also a recheck on the figures for power generation.

Mr. GAUD. Good.

Mr. RHODES. That is all.

(The requested information follows:)

FINANCIAL AND TECHNICAL DETAILS OF BEAS DAM PROJECT—INDIA

A U.S. loan for partial foreign exchange costs of the Beas Dam was agreed to in connection with the overall Indus waters settlement negotiated by India and Pakistan through the good offices of the IBRD. This dam is strictly for irrigation purposes, and water releases from the dam will be governed entirely by irrigation considerations. Firm generating capacity is that which is available 100 percent of the time. In an irrigation dam, firm capacity accordingly is only that generated by the minimum amount of water always permitted to flow for downstream utilization. The actual installed generating capacity will be 240 megawatts initially, planned to increase to 360 megawatts eventually after a projected second stage is completed. When permitted by water releases for irrigation, power generated in these larger amounts will be introduced into the regional grid and will permit a reduced operation to save fuel at thermal stations elsewhere in the grid.

The estimated total cost of the Beas Dam is $250 million, including a foreign exchange component of $54,700,000. The World Bank has agreed to loan India $23 million to complete the foreign exchange requirement. In order to obtain up-to-date information on the project for review, AID arranged in the spring of 1963, for a six-man team of experts from the Bureau of Reclamation to review final plans and cost projections in India. The Bureau's report has not been submitted but is expected in early August. It is understood that the team generally was satisfied with plans and designs but may suggest some changes which might affect cost estimates.

U.S. FUNDING OF LOAN PROJECTS ON REIMBURSEMENT BASIS

Mr. PASSMAN. Mr. Gaud, I note in the project book the number of credits that have been approved and signed but against which there have been no disbursements. Some of the credits go back to June of 1960 and one, in particular, on page 112, was signed in June of 1961.

Would you comment briefly?

Mr. GAUD. Yes, Mr. Chairman.

That one in particular, for example, the Sharavathi hydroelectric project, the Indians work on a reimbursement basis. In other words, they spend the money after we approve the project and then they come to us for reimbursement.

Mr. PASSMAN. You mean they spend the money?

Mr. GAUD. I mean they spend the money.

Mr. PASSMAN. Before we give it to them?

Mr. GAUD. They use their own money and then present us with proof of payment to American contractors.

Mr. PASSMAN. They have that kind of foreign exchange credit in dollars?

Mr. GAUD. They have not got it to spend. They have it in the short run, yes. They have limited resources and certainly for a matter of months or so they can spend and then get reimbursed, which is what they do.

In this particular contract, the Sharavathi hydroelectric project on page 112, the project is about a year behind schedule and in February 1963, orders totaling $6.9 million were placed for generators, transformers, and other equipment with the International General Electric Co. There have been major alterations on the concrete structure and there have been a number of changes in construction plans. The thing is behind schedule but it is definitely going ahead.

It is typical of a number of projects in India that work has been done, orders have been placed and the like, but this is not reflected in the amount of disbursements shown on this sheet.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

SUPPORT TO AMERICAN UNIVERSITY IN BEIRUT

Mr. PASSMAN. To digress briefly, I think you people are familiar with my position on the American University at Beirut. While I do not favor any program that gives budgetary support to such undertakings, I can see that maybe a teaching hospital in the Middle East would be a tremendous asset, and is worthy of support, since the AID agency is going to spend the money anyway. I think the President possibly assigned $5 million 2 or 3 years ago for a research center to start on this project, and you say they need about 11 more and I understand there will be a request this year.

Are you familiar with this matter?

Mr. GAUD. I am generally familiar with it but the request is not included in my region, Mr. Chairman.

Mr. PASSMAN. It is not?

Mr. GAUD. No.

Mr. PASSMAN. I thought that it was.

Lebanon is in your region?

Mr. GAUD. Right.

Mr. PASSMAN. But the request for this item is not under that category?

Mr. GAUD. That is right.

Mr. PASSMAN. It will be under Dr. Baumgartner's area?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. All right. We shall get to that matter later, then.

Mr. Natcher?

JUSTIFICATION OF AID PROGRAM TO INDIA

Mr. NATCHER. How do you justify an aid program in India?

Mr. GAUD. How do I?

Mr. NATCHER. Yes.

Mr. GAUD. Mr. Natcher, India is, as you know, the second largest country in the world in terms of population. She has 450 million people and about 1 out of every 7 people in the world is Indian. In our judgment, unless India stays free, we have no chance of defending south Asia or southeast Asia from the Communists, particularly the Chinese Communists. India, in our judgment, wants to remain free. India is devoting a very high proportion of her own resources to financing its present 5-year plan. Seventy-five percent of the resources for that plan comes from inside India. As we see it, India is doing everything she can to stay free, to stay independent.

I do not mean to imply she takes the same position we do on every international question because she does not. Nevertheless, her basic desire is to be free. She is a democracy. She is an example of a democracy for the Far East where there are very few democracies. We, with the other 10 members who belong to the consortium, believe it is in the interest of the free world and to the interest of the United States to support Indian development and that is why we have an aid program for India.

Mr. NATCHER. Mr. Andrews?

Mr. ANDREWS. No questions.

Mr. NATCHER. Mr. Rhodes?

EFFECT OF UNITED STATES AID TO INDIA ON UNITED STATES-PAKISTAN RELATIONSHIP

Mr. RHODES. Mr. Chairman, in the Washington Post of this morning, there was an editorial concerning our relations with Pakistan. I have talked about Pakistan with you and with other members of the AID administration and also the State Department part of this team. Most of the members of the State Department who have discussed the matter have been very reassuring about our status vis-a-vis Pakistan.

The Washington Post of this morning was far from reassuring and seemed to speak rather authoritatively concerning the deterioration of our relationships in Pakistan.

The thought struck me, Mr. Gaud, that perhaps Pakistan is being unreasonable. If they are, perhaps one of the reasons they are being unreasonable, is a failure on our part to brief them thoroughly as to what we are doing and why we are doing it. In other words, they do not seem in the least to equate their future freedom with the welfare of India, and they resent our aid to India.

As you just mentioned, we feel it is necessary to keep India free to defend that whole area. Pakistan apparently does not feel that way at all. A few years ago in Pakistan we had a firm friend. On the other hand, in India there was neutralism, pretty well salted and peppered with some rather frequent caustic remarks from the Chief of State of India aimed at us. There was downright hostility from time to time. So, we apparently have set about to remedy this situation and not only try to keep India free but to try to soften her less than friendly attitude toward the Western World and change what appeared to be a preference toward the Communist world.

In so doing, we have gone to a very extensive aid program for India. It looks like the main result has been a loss of confidence of the Pak-

istanis without a corresponding gain in India. I wonder if this does not illustrate a rather basic defect in the way we are handling the program? In other words, isn't this a failure to count all of the costs before we go into new programs—a pushing and rushing headlong into situations without looking at all of the facets thereof?

Mr. GAUD. I would not agree that that was a fair criticism of the situation.

Pakistan certainly enjoyed a very special relationship with the United States and still does. It enjoyed a special relationship with the United States compared to the relationship India had with the United States.

When we entered into a military aid program with Pakistan, for example, that gave Pakistan a great deal of comfort and solace for obvious reasons. It irritated the Indians tremendously. Some 8 or 9 years went by. This relationship continued and military aid as well as economic aid continued. Pakistan was a member of SEATO and a member of CENTO, and the like, a very close relationship.

In the fall of 1962, as we all know, the headlong rush was made by the Chinese Communists to invade India. Now, we had to decide at that point whether our American interests required us, made it desirable for us, to react to that invasion.

Mr. RHODES. May I stop you just briefly at this point?

Was it necessary for us to do the actual work as far as helping India is concerned? Was it not possible for the former Metropole and other countries to do this?

Mr. GAUD. I think it was not possible in terms of the United Kingdom's resources. The United Kingdom, in my judgment, just does not have the resources to take on this job by itself. In fact, when the Chinese went into India in the fall, we worked out a joint program with the British and at Nassau it was agreed they and we should each put up $60 million worth of military aid as a starter in military aid to India.

So we did our best. We brought the former Metropole along with us and ever since the fall we have been carrying on our discussions with the British. It is a fundamental tenet of the President's policy to keep the British step by step along with us to the extent we could. The fact of the matter is, as I said a moment ago, that their resources are not up to doing the whole job. So I look at it this way: There is no doubt about the fact that Pakistan is unhappy because it feels it has lost its special position, but I think we went into India with a military program after due consideration for purposes of our own national security, and for reasons we could not ignore. We did keep the Pakistanis fully informed of what we were doing all the way along and we are still doing that. They were informed before this announcement was made this morning about the contributions to India's air defense, and we are keeping them in the picture.

The fact remains that any individual or any nation which occupies a special relationship to another gets fed up if that position is modified or changed. It seems to me this is a human and inevitable reaction. At the same time, while Pakistan is unhappy about the change, I think our basic relations with Pakistan today are still good.

Mr. Talbot, I believe, said before you entered the room that the Foreign Minister of Pakistan has assured us over the weekend it is

not true that his Government has any mutual defense arrangement with the Chinese.

Mr. RHODES. The editorial was wrong?

Mr. GAUD. Yes; in that respect. He said they have no written agreement or oral agreement, express, implied, or anything else.

We are certainly going through a difficult period in our relationship with Pakistan and we hope no fundamental change is going to result.

Mr. MINSHALL. You said basic relationships with Pakistan were still good?

Mr. GAUD. I still do.

Mr. MINSHALL. You reserved some degree of doubt there?

A further question: Do you think as good as before we gave all of this aid to India?

Mr. GAUD. I said they were not as good as before we gave the aid to India. I think we gave the aid to India for valid reasons and in our own interests. This is the price we have to pay for giving military aid to India. We think the price is worth it.

Mr. RHODES. Mr. Gaud, can we not lose that part of the world just as thoroughly if Pakistan becomes unfriendly or goes into the Communist bloc?

Mr. GAUD. Yes.

Mr. RHODES. As if India did?

Mr. GAUD. Yes; the security of the continent depends on both Pakistan and India. It is indivisible.

UNITED STATES-INDIAN RADIO RIGHTS AGREEMENT

Mr. CONTE. Did I read in the paper this morning about the United States losing some radio rights in India?

Mr. GAUD. No; the United States and India have just worked out an agreement for a VOA station in India which is going to be used by us and the Indians. There is some talk of renegotiating or reworking some parts of that agreement. So far, Mr. Conte, this is talk. We do not know whether it is a serious proposition or whether it is not.

Mr. MINSHALL. That would be adverse to the United States if this were reopened?

Mr. GAUD. We are quite satisfied with the arrangement and we hope they stick with it.

Mr. MINSHALL. What prompted the Indians to even consider reopening?

Mr. GAUD. It has been suggested by some elements of the Indian community that the existence of a VOA station in India is inconsistent with India's policy of nonalinement.

Mr. RHODES. I yield to the chairman.

Mr. PASSMAN. Let us forget about Pakistan and take country X that you give preferential treatment to, and we accept them as our dependable friends, as long as we do the things they want us to do, but then the time comes when we have to make a policy decision, after proper deliberation, and then this so-called good friend gets angry. Does this fact not establish that friend as a fair-weather friend from the start?

Mr. GAUD. It establishes that it is pretty human and we all like our privileges and like to keep them as long as we can.

Mr. PASSMAN. Thank you.

Mr. CONTE. Will you yield further?

Mr. RHODES. Yes.

Mr. CONTE. I am intrigued by this sentiment in the Indian community about allowing the United States to have a VOA station there. It might commit India to our way of thinking, or at least bring them out of that nonalinement policy of theirs.

I wonder if the same people of the Indian community feel the same way, or felt the same way, when they were being attacked by the Red Chinese and they asked for military assistance, and we ran to them with that assistance? What if we had taken the attitude that we do not want to get involved in this conflict?

Mr. GAUD. There are unquestionably some people in India who are not in favor of United States military assistance to India. There is no question about that. Those people would be included in this group who would be opposed to our having a station in India from which we could broadcast whatever we liked to broadcast. I think there are others in India, others than the Menonites, let us say, who believe in this policy of nonalinement and believe that this is compromised by the presence of VOA stations. There is unquestionably, Mr. Conte, still a great feeling on the part of many Indians that they would prefer to be nonalined.

How this particular issue will come out, I do not know.

Mr. RHODES. Nonalined as between the Western World and the Russian Communists, or as between the Western World and the Chinese Communists?

Mr. GAUD. Today it is much more a matter of between the Western World and the Russians. I think that certainly a great many more Indians are disillusioned about the Chinese than used to be. There are very few today not disillusioned with the Chinese.

Mr. RHODES. I would be surprised if there were any who were not disillusioned.

Mr. GAUD. Other than some of the Indian Communists, of course.

Mr. RHODES. Yes. We would not ever expect an Indian Communist to be pleased with a VOA station?

Mr. GAUD. We certainly could not.

Mr. RHODES. Have we given up on this issue?

Mr. GAUD. No, we have a signed agreement with the Indian Government on this at the moment.

Mr. RHODES. We have a signed agreement?

Mr. GAUD. Yes, sir.

Mr. RHODES. Which we intend to insist upon?

Mr. GAUD. As far as I know; yes.

Mr. RHODES. Would you verify that, sir?

Mr. LEE. That is right. We do have a signed agreement and they have indicated some discontent, but the matter is by no means clear just how this will be implemented or when it will be implemented.

Mr. RHODES. What I want you to verify is that we intend to insist upon our position as far as the paper is concerned. If you cannot do it, say so.

Mr. LEE. This is still very much a matter of exchanges. It is complicated a little by the fact that a new Ambassador has just arrived there, so I am not clear as to just where we stand on the exchange.

Mr. RHODES. I would have thought the Ambassador would take orders from Washington in a situation like that.

I yield to Mr. Ford.

Mr. FORD. Could we have in the record the facts as to when the agreement was signed, when we were supposed to start construction under the terms of the original agreement?

Mr. LEE. It was just signed a few days ago.

Mr. FORD. It was signed, we will say, in the last several days under the terms of the agreement as we were planning or authorized to begin construction of the facility?

Mr. GAUD. We will get that information.

Mr. LEE. We will get what we can on that. I am not sure they worked this out in any detail. This is a USIA matter and the funds would be coming from either USIA or some special appropriation. We will get that.

Mr. FORD. I think we ought to have on the record what the original terms were, so that next year we can check to see whether there was any delay or any revision in the contract.

Mr. LEE. Yes, sir.

(The requested information follows:)

AGREEMENT BETWEEN THE GOVERNMENT OF INDIA AND THE GOVERNMENT OF THE UNITED STATES OF AMERICA

This Agreement made and entered into this *ninth* day of July, 1963, by and between the Government of India hereinafter referred to as G.O.I. of the one part, and the Government of the United States of America hereinafter referred to as the U.S.G. of the other part.

Witnesseth: For and in consideration of their mutual covenants and agreements herein contained, the parties hereto agree as follows:

ARTICLE I.

The U.S.G. agrees to sell to the G.O.I. one 1000 KW medium-wave radio transmitter, together with associated primary and secondary power distribution system, antennae and earth system, emergency power supply equipment, cooling equipment for transmitter components, air conditioning for control enclosure, audio equipment, test and measuring equipment, and other ancillary equipment, including installation materials as well as complete equipment for the Receiving Center. The above will not include materials for the transmitting station which are readily available in India.

ARTICLE II.

The G.O.I. agrees to pay to the U.S.G. Re. 1/- (Rupee one) only as purchase price for the entire equipment as described in Article I to be delivered C.I.F. Calcutta or Bombay (Calcutta preferred). Any and all duties, taxes, port fees, etc., on said items will be paid by All India Radio (hereinafter referred to as A.I.R.).

ARTICLE III.

As soon as feasible, the G.O.I. through A.I.R. will, at its own cost, construct a radio Transmitting Station in the vicinity of Calcutta and install the transmitter and ancillary equipment therein, completing same for full and efficient operation. A.I.R. will also construct a Receiving Centre for use with the Transmitting Station. All costs of setting up the Receiving Centre and of operating and maintaining it shall be borne by the U.S.G. with the sole exception of the cost of the land which shall be borne by G.O.I.

ARTICLE IV.

The G.O.I. through A.I.R. will, at its own cost, operate the Transmitting Station. It will also operate the Receiving Centre but the U.S.G. will reimburse the G.O.I. all costs for operation and maintenance of same. Whenever A.I.R. uses the Receiving Station for its own purposes, A.I.R. will bear proportionate cost of operation and maintenance.

ARTICLE V.

During the currency of this agreement, the U.S.G. agrees to supply to G.O.I., C.I.F. Calcutta or Bombay (Calcutta preferred), without any charge all tubes and spare parts required for the transmitter up to cost price of $45,000 (forty-five thousand U.S. dollars) only per year calculated on the basis of cost prices prevailing at the date of this agreement. If any further tubes and spare parts exceeding the above value are required by G.O.I. for the Transmitting Station, U.S.G. undertakes to supply them at Calcutta on payment by G.O.I. of the excess in rupees in India. During the currency of this agreement, the U.S.G. agrees to supply to G.O.I. at Calcutta or Bombay (Calcutta preferred) without any charge all tubes and spare parts and stores required for the Receiving Centre.

Any and all duties, taxes, port fees etc. on the said spare parts supplied by the U.S.G. will be borne by the G.O.I.

ARTICLE VI.

The G.O.I. will grant the U.S.G. the full use of the available transmitting facilities for three hours daily for relaying only Voice of America (hereinafter referred to as V.O.A.) programmes to South-East Asia in South-East Asian languages only. This use shall be in blocks of one hour each, alternating with A.I.R. in broadcasting during the two morning and four evening hours. The U.S.G. will pay the G.O.I. Re. 1/- (Rupee one) only per annum for this service.

ARTICLE VII.

This agreement shall remain in force for a period of five years from the date on which the transmitter is put into commission. Thereafter, unless the parties renew same, or enter into a fresh agreement, the U.S.G. shall be entitled to re-purchase all the items supplied by it under Article I above, subject to such deterioration as may have taken place, and all unused spare parts and stores except those paid for by G.O.I. on payment of Re. 1/- (Rupee one) only to the G.O.I. Thereupon, the G.O.I. will facilitate the re-export of same free of all duties, taxes, port fees, etc.

ARTICLE VIII.

The Director-General, A.I.R., and the Director, V.O.A., shall make appropriate arrangements for carrying out the provisions and technical features involved in this agreement. Same shall be reduced to writing by exchange of letters or otherwise.

ARTICLE IX.

If at any time during the continuance of this agreement the performance in whole or in part by either party of any obligation under this agreement shall be prevented or delayed by reason of any war, hostility, acts of public enemy, civil commotion, sabotage, fires, floods, explosion, epidemics, strikes, lock-outs, acts of God, or any other cause beyond the reasonable control of either party, neither party shall be entitled to terminate this agreement nor shall either party have any claim for damages against the other in respect of non-performance or delay in performance. In such an event, however, a period equal to the period during which the performance of this agreement has been delayed, shall be added on to the period of five years provided herein for the currency of this agreement.

ARTICLE X.

The implementation of this agreement shall commence as soon as funds are made available to the United States Information Agency by the U.S. Congress.

In witness whereof representatives of the two Governments duly authorized for the purpose have signed this agreement.

Done in New Delhi on the *ninth* day of July, 1963, in duplicate.

On behalf of the Government of India:

S/S NAWAB SINGH,
Secretary to the Government of India, Ministry of Information and Broadcasting.

On behalf of the Government of the United States of America:

S/S WILLIAM H. WEATHERSBY,
Counselor for Public Affairs, Embassy of the United States of America in India.

Mr. LEE. I might say that Mr. Talbot came in initially today and had the agreement in his briefcase. However, he had to go over to a Senate committee and he took with him, in his briefcase, the agreements, so I do not have them.

Mr. FORD. By tomorrow we can have a memorandum on the terms that were set out so the committee can see it? There is no problem is there?

Mr. LEE. No.

Mr. FORD. Now, I think we ought to find out from USIA what their original construction program was. They must have some program if the contract was signed last week and they contemplate starting construction. It is very simple?

Mr. LEE. All right.

Mr. RHODES. I think we should also have a statement from the State Department as to their attitude on insisting upon the agreement. The VOA is not going to have much to say about that. I think you agree with me?

This is a policy question and somebody is going to tell the VOA whether they go ahead or not.

I would like to have assurance whether we will do that.

Mr. LEE. I would like to come back to it later.

This agreement would be a two-way affair. The agreement envisaged the sharing of the time and envisaged the Indian operation of the station. I would presume it would be difficult to carry this out unless we arrived at a clear agreement on all of the details.

Mr. RHODES. I should not think it would be too difficult to furnish us what you have in the way of facts.

POPULATION CONTROL IN INDIA

Mr. Gaud, what is the birth rate of India at the present time?

Mr. GAUD. It is about 2.3 percent.

Mr. RHODES. Is that higher or lower than it has been in previous years? Or is it about the same?

Mr. GAUD. It is a little higher.

Mr. RHODES. I note that the per capita gross national product of India has not increased anywhere near as rapidly as the total gross national product.

Mr. GAUD. That is right.

Mr. RHODES. Is this a direct reflection on the status of the birth rate you have just mentioned?

Mr. GAUD. That is right.

Mr. RHODES. The chairman, I think, made a statement a while ago which is certainly one we should all remember. That is, in a situation like that, you can keep pouring wealth in until you have no wealth left and you are much poorer than you were, but the other side is no richer.

Mr. GAUD. Yes, sir.

Mr. RHODES. This is a problem common to many parts of the world and in some parts of the world there are remedies being applied. What is being done here?

Mr. GAUD. Quite a lot. India is doing a good deal on her own. You are talking about population control?

Mr. RHODES. Yes.

Mr. GAUD. She has grants from several foundations and quite an active sterilization program going for males and the dissemination of birth control information. India is working on this, Mr. Rhodes.

In the last 2 or 3 years, she has made quite a bit of headway on this, although I do not see much reflection in the birth rate.

U.S. ASSISTANCE TO PRIVATE SECTOR OF INDIA

Mr. RHODES. Tell me what proportion of the aid to India is going into the public sector and what proportion is going into the private sector.

Mr. GAUD. May I deal with last year?

Mr. RHODES. Yes, assuming that this year's figures will be comparable.

Mr. GAUD. Roughly the same; yes. In fiscal year 1963, we made a loan, a nonproject loan of $240 million, which covers importation of spare parts, machinery, equipment, raw materials, all that sort of thing. The study made by the mission and confirmed by the Government of India figures is that 75 percent of the imports under those nonprogram loans of ours go to the private sector. That would be $180 million. In addition, we made last year only one loan directly to a private concern in India, the West Coast Paper Mills. That was in the amount of $6.3 million.

The Export-Import Bank made $40 million worth of loans to the private sector.

That is a total in dollars of 226.5 million out the total aid between the Export-Import Bank and ourselves of $442 million.

Now in addition to that we made 18 Cooley loans in 1963 to affiliates of American firms operating in India totaling $24.6 million, so the total going to the private sector in India last year was about $251 million. It is a little better than half of the total aid.

Mr. RHODES. All of the railway system in India is government-operated and owned, is it not?

Mr. GAUD. Yes, it is.

Mr. RHODES. However, some of the other basic industry, such as steel, is split between public and private?

Mr. GAUD. That is right.

COMPARISON OF INDIAN PRIVATE AND PUBLIC SECTORS

Mr. RHODES. Do you have any figures on the comparison of costs between public and private operation of steel mills? Is it about the same or do you find an appreciable difference between the two?

Mr. GAUD. That is a pretty hard thing to have any information on. They have government-controlled prices. But we know that the private mills operate at a profit. The three publicly owned mills are relatively new, two of them are having a great deal of trouble in the break-in period. The third, built by the Russians, is much more successful. Our studies of the proposed Bokaro mill indicate that on the basis of present pricing policies the earnings to the Indian Government before taxes on Bokaro would be 22 percent and after taxes would be about 11 percent.

As I say, I find it very hard to compare. Clearly, I think one of the problems that we have all the way through the Indian economy is

inefficiency in the public administration of businesses. This is a matter on which we are working steadily and on which a great deal more work needs to be done. If I had to guess I would guess the private operation is a good deal more efficient than the public, but I cannot give you chapter, verse and the figures.

Mr. RHODES. Do operations in the public sector pay taxes?

Mr. GAUD. Yes.

Mr. RHODES. The same as private operations?

Mr. GAUD. Yes. Indian law is different than ours.

Under Indian law, the three existing public steel mills are run by the Hindustan Corp. If the Bokaro mill is built it will be under a separate corporation. Under the Indian practices these public corporations, their boards of directors consist partly of government employees and partly of people from the outside, but the public corporation is subject to exactly the same controls, taxes and the like as a private corporation. It is not like the United States.

Mr. RHODES. This does allow the dual situation to occur and to make some sense.

Mr. GAUD. It makes more sense than it would here.

Mr. RHODES. Right, because of the variation in the taxation as between the public corporation and a private corporation.

NEW PROJECTS STARTS PROPOSED FOR FISCAL YEAR 1964

How many new projects are we starting in India this year?

Mr. GAUD. Development loan projects, you mean?

Mr. RHODES. The grant projects first and loans second.

Mr. GAUD. We went over the grant projects with the chairman. There are three of those. As far as development loans are concerned——

Mr. RHODES. I am only asking about new ones.

Mr. GAUD. Of course, any loan that we make to India this year would be new, in the sense that all loans are new. Last year, in fiscal year 1963, we made eight loans to India. Of those eight loans, one was to the West Coast Paper Mill, which is a private concern; three were for powerplants; one was the nonproject loan which I spoke of; another was a railway loan for the purchase of diesel locomotives; and two others were in the coal industry, all basic industries except the one private.

U.S. LOANS CONCENTRATED IN BASIC INDUSTRIES

Mr. RHODES. Do you intend to follow the policy of making loans mainly in capital industries?

Mr. GAUD. Yes. The fields in which we are concentrating and have concentrated for several years are power, transportation, and coal—basic industries. Whenever we can, we lend to the private sector. In 1962 we made a number of more loans to the private sector than we did in 1963. One thing that held us up in making loans to the private sector in 1963 was that after the Chinese invasion the Indians completely rewrote their tax law and raised taxes 15 percent, introducing a new superprofits tax. It is levied on all corporations, and this checked the enthusiasm of a number of American and Indian firms about to make investments.

Now the picture is beginning to settle down. We hope that fairly soon we will be able to go forward with some of these loans to the private sector that have been held up within the last few months.

Mr. RHODES. You have one irrigation project in here, I think the Beas Dam.

Mr. GAUD. That is the one we were talking about a while ago.

DISTRIBUTION OF LAND IN INDIA

Mr. RHODES. As I recall the situation in India as far as land is concerned the main difficulty in most parts is that the parcels of land are too small rather than too large.

Mr. GAUD. That is true.

Mr. RHODES. When you build an irrigation project, do you set forth any requirements as far as land reform is concerned, with the idea of gathering small parcels into larger parcels so they can farm more efficiently?

Mr. GAUD. We have not done that in India. We have done that in some countries.

Mr. RHODES. Of course this is an interesting problem because it is the reverse of the situation which we find in most other countries.

Mr. GAUD. That is right. The Indians have their own program. We have had relatively little to do with it.

Mr. RHODES. That is all, Mr. Chairman.

PUBLIC LAW 480 COMMITMENT TO INDIA

Mr. PASSMAN. We established earlier that the amount of money unliquidated to the credit of India as of June 30, including Public Law 480, was $1,590,960,000. Some question came up about the amount of the Public Law 480 that should be allocated in any one year. It is not unusual in your normal aid program to have obligations dormant for 4 or 5 or 6 years before you actually disburse them but you carry them in a committed or obligated category, do you not?

Mr. GAUD. That is right, but not with respect to Public Law 480.

Mr. PASSMAN. The Controller said that you had $717,200,000 committed under Public Law 480. Do we have a contract with India that they can only draw down so much a year of the total commitment?

Mr. TENNANT. I cannot talk to the specifics of that contract.

Mr. GAUD. I can answer it, sir. We have, I think, a 4-year contract with India and it contains a total figure.

Then it provides that the specific amount to be turned over each year is subject to negotiation each year.

Mr. PASSMAN. But we do have a positive commitment to them for this amount of commodities, do we not?

Mr. GAUD. We could by mutual agreement not ship them any more.

Mr. PASSMAN. You could by mutual agreement cancel the entire aid program, could you not?

Mr. GAUD. Yes.

Mr. PASSMAN. Let us deal with specifics. You have a positive commitment, if we deal with the present, of $707,200,000?

Mr. GAUD. We have a ceiling on the total amount that can be shipped over a number of years.

Mr. PASSMAN. You also have a ceiling on all the other things, do you not?

Mr. GAUD. Yes; but that is what that figure is, it is a ceiling. It does not mean we are going to ship it.

Mr. PASSMAN. Have you disbursed it according to the original plan, more or less?

Mr. GAUD. It is slower than planned. We do not disburse it until we get an order.

Mr. PASSMAN. Mr. Tennant, please bring us up to date on this matter by day after tomorrow, if possible. I thought it should be indicated that it is not unusual to have unliquidated funds for 4, 5, or 6 years, and they are still not liquidated but they are obligated.

INDIAN GOVERNMENT SUBSIDY OF STEEL PRICES

There is certainly a difference between a Government-owned operation and an operation in the private sector of the economy. If you build this nationalized steel mill and the steel mill is operating in the red, the Government would have an obligation, would it not, to subsidize each year its losses out of the general account?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Thank you.

Mr. RHODES. If you will yield there.

Mr. PASSMAN. Yes.

Mr. RHODES. If the Government sets the price of the end product then there should not be any loss?

Mr. GAUD. You are so right.

Mr. PASSMAN. Is it not a matter of heads you win, and tails I lose?

Mr. RHODES. What they do is to raise the price and take it out of the other pocket of the taxpayer instead of the tax pocket.

Mr. PASSMAN. Mr. Ford?

Mr. FORD. What is the impact, if any, then, from imports from outside? Do they set the price on that as well?

Mr. GAUD. They set the price; yes, they do. They set the price at which the steel is sold. It is very highly subsidized.

VOLUME OF STEEL IMPORTS AND STEEL PRODUCTION

Mr. FORD. What percentage of the total amountof steel used in India is domestic and what part is shipped in?

Mr. GAUD. Today the amount of steel that is imported is very severely limited by the Government and about 1 million tons of steel—I think I am right—are being imported today. Total steel production in India today is about 4.8 million.

Mr. FORD. Let's put in the record the figures for the last 5 years.

Mr. GAUD. Of imports.

Mr. FORD. And total local production.

Mr. GAUD. Right.

Mr. FORD. It might also be well to break down—I am sure you can—the amount of local production that falls under the heading of state-owned mills and the amount from the private.

Mr. GAUD. I can give you those figures here, except for the breakdown that you asked for, but suppose I give you the imports against the production for the last 5 years, through 1962: 1958, production, 1,325,000 tons; imports, 1,127,000 tons

Mr. FORD. About 50–50?

Mr. GAUD. Nearly. 1959, production, 1 million—let me leave off the last couple of figures and give them rough: imports 1 million; 1960, production 2 million, imports, 1.2 million; 1961, production, 2.9 million, imports, 1 million; estimated production for 1962 was 3.5 million tons and the imports were slightly under a million tons.

The effective ingot capacity for 1962 in India is estimated at 5.7 million tons. In fact, ingot production amounted to something like 5 million in 1963.

Mr. FORD. You will get the breakdown between the production by the private mills and those by the public?

Mr. GAUD. Yes. I can give you that very roughly.

Mr. FORD. Why don't you put it in specifically?

Mr. GAUD. All right.

(The information requested follows:)

Steel imports and production, 1958–62; India

(thousand metric tons of finished steel)

	Production	Imports
1958	1,325	1,127
1959	1,643	1,043
1960	2,057	1,191
1961	2,901	1,038
1962	3,708	824

Domestic production of steel ingots by private and public sectors

	Private		Public	
	Amount (thousand metric tons)	Percent of total	Amount (thousand metric tons)	Percent of total
1958	1,723	97.5	44	2.5
1959	2,282	95.6	105	4.4
1960	2,569	80.0	642	20.0
1961	2,645	64.8	1,438	35.2
1962	2,757	54.7	2,285	45.3

Mr. FORD. What was the source of the imports?

Mr. GAUD. I can get that but I can only tell you that roughly, in 1963, $23 million worth of that steel came from the United States. U.S. exports in 1963 amounted to about 13 percent of India's total imports of iron and steel products. These of course were financed by AID.

Mr. FORD. And the other 87 percent?

Mr. GAUD. Came from Europe and Japan.

They draw steel from both Europe and Japan. The steel they draw from us is paid for by AID and that totaled about $25 million; in 1963 it was 13 percent of her total imports.

CUMULATIVE U.S. AID TO INDIA AND CURRENT LEVELS

Mr. FORD. Turn to page 22 of volume 2. This is the chart showing U.S. foreign assistance obligations and loan authorizations for India.

Mr. GAUD. Right.

Mr. FORD. Has this chart been included in the record and if not, can it be?

Mr. GAUD. Yes. The chairman has asked us to give figures of this sort for the last 10 years.

(Discussion off the record.)

Mr. GAUD. We are also preparing an insert showing the detail for the 10 years past.

Mr. FORD. Using this chart, let me run down some totals to see if I get the right feel for the situation.

The top line on the right-hand side shows total economic aid for India from 1946 through 1962 and the figure is what?

Mr. GAUD. $3,867 million.

Mr. FORD. What does that $3,867 million include?

Mr. GAUD. It includes everything that comes from the United States. including AID, Public Law 480, Export-Import Bank.

Mr. FORD. This includes the total for AID of $1,487,024,000.

Mr. GAUD. Yes, sir.

Mr. FORD. And those figures below that, the next five figures——

Mr. GAUD. Are a breakdown of the $1,487,024,000.

Mr. FORD. The food for peace, $1,877,800,000 is shown here.

Mr. GAUD. That is correct.

Mr. FORD. What goes to make up that figure?

Mr. GAUD. All title I sales, plus title II, plus title III. Cooley loans are also included in that figure.

Mr. FORD. To get the $3,867 million, you should add $1,487 million, and $1,877,800,000.

Mr. GAUD. That is right, then the last two lines, Export-Import Bank, $270.8 million and other U.S. economic programs, $231.1 million. That is the wheat loan, going back to 1951.

Mr. FORD. This chart does not show the military assistance?

Mr. GAUD. Yes, sir. I beg your pardon. There wasn't any military assistance.

Mr. FORD. Up through fiscal year 1962.

Mr. GAUD. That is right. It did not begin until fiscal year 1963.

Mr. FORD. And the chart that the chairman has asked for, which is an extension of this, would show that?

Mr. GAUD. Yes, sir.

Mr. FORD. And the figure, or the total in the chart the chairman has asked for is what?

Mr. GAUD. We have a little problem on that.

Mr. PASSMAN. Last year you gave us a table showing that our aid total amounted to $4,265,450,000. I believe you stated this year that our aid for fiscal year 1963 was at least $828,700,000.

Mr. GAUD. Yes.

Mr. PASSMAN. For a total of $5,094 million, with the possibility that there was some discrepancy in the figure that you gave us last year?

Mr. GAUD. That is right.

Mr. PASSMAN. But this is the sheet which you gave us last year. This may be the difference, that you included in this sheet the International Development Association.

Mr. GAUD. That is one of the differences.

Mr. PASSMAN. Of $122 million?

Mr. GAUD. That is one of the differences; yes.

Mr. PASSMAN. If that amount should come out it would be $4,972 million.

Mr. FORD. This is through fiscal year 1963.

Mr. PASSMAN. That is right. You will have an up-to-date sheet on it.

You did verify the correctness of the $828,700,000, did you not?

Mr. GAUD. Yes.

Mr. PASSMAN. That is for fiscal year 1963. This is the chart they gave me last year. I think the item mentioned would be the difference.

Mr. FORD. And the amount that is requested for fiscal year 1964 is what?

Mr. GAUD. The amount requested for fiscal year 1964 is ——— development loans, $81 million development grants, that is the total obviously of ——— and we estimate the Public Law 480 at ———.

Mr. FORD. For a total of what?

Mr. GAUD. ———.

Mr. PASSMAN. That figure is without the military aid.

Mr. GAUD. I was about to say in addition to that the congressional presentation has a figure of ——— requested for military.

Mr. FORD. In fiscal year 1963 you obligated $828 million?

Mr. GAUD. In fiscal year 1963, $828.7 million.

Mr. PASSMAN. When you were up here last year what amount did you justify?

Mr. GAUD. May we break out the Public Law 480 initially?

Mr. FORD. Break out all of it.

Mr. GAUD. Last year I came up and asked for India for a total of $465 million, $450 million development loans and $15 million development grants. On those two categories, this year, we obligated $396 million on development loans——

Mr. FORD. Congratulations.

Mr. GAUD. $396 million, I thought you would like that, Mr. Chairman, on development loans, and $6.2 million on development grants, making a total of $402.3 million as against our request of $465 million.

Mr. FORD. What were the reasons for the difference between the $465 million which you justified and the $402 million which you executed?

Mr. GAUD. There was one reason. When I was here last testifying for 1963 the Indian consortium meeting—the final figures on the Indian consortium were not available. The United States had offered to make available to India, through the consortium, up to $500 million, depending upon the pledges of other nations; $450 million of that would have come from AID, which is the figure here, and $50 million from the Export-Import Bank. In fact, the other nations pledged a total of only $435 million, $65 million less than we were prepared to meet. That is the difference.

Mr. FORD. In other words, the difference between what you justified and what you executed has no relationship to what the Congress made available in the appropriation bill?

Mr. GAUD. Well——

Mr. FORD. If I understood what you said just a minute ago.

Mr. GAUD. The Congress did not appropriate anything for India specifically.

Mr. FORD. No, but what we appropriated for AID——

Mr. GAUD. You mean was I bothered by a shortage of funds on this item?

Mr. FORD. Well, as I understood it the reason you did not execute as much as you justified was that the consortium did not put up as much money as you anticipated.

Mr. GAUD. And we did not make as big a commitment as I anticipated; that is correct.

Mr. FORD. Because of the shortage of the consortium funds.

Mr. GAUD. That is right.

Mr. FORD. So whatever changes you made in your program between what you justified and what you executed had no relationship to a reduction made in the appropriations by the Congress?

Mr. GAUD. That is true.

Mr. FORD. That is all.

APPROPRIATION OF FUNDS COMPARED WITH OBLIGATIONS

Mr. PASSMAN. We want to deal realistically with this thing. It appears to be a guessing game between the Executive and the Congress as to the actual need. What happened last year, the Congress reduced the budget request by $1,032,400,000 and, they said, it was a terrible thing we did. But it follows nevertheless that we appropriated more than they could use, even with all the waste that is involved. They have now admitted, from the White House down to the lowest echelon, that they were overfunded approximately by $260 million. I think in one item there is $100 million that will lapse and they are not even asking us to reappropriate it.

You are familiar with the complaints last year, are you not?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Are you familiar with the fact you are going to have about $260 million unobligated, a good part of which is going to lapse and you are not even asking that it be reappropriated?

Mr. GAUD. I do not know——

Mr. PASSMAN. The President said in his message there would be upward of $200 million of fiscal year 1963 appropriations that they would not use. Are you not actually, Mr. Controller, losing about $100 million in the contingency fund that you are not even asking us to reappropriate?

Mr. TENNANT. We will have an unobligated contingency of around $100 million but that is because contingencies did not arise which required use of those funds.

Mr. PASSMAN. But the money will lapse?

Mr. TENNANT. Yes; it will lapse, sir.

Mr. PASSMAN. What is now the total of unobligated funds as of June 30?

Mr. TENNANT. Those figures are being put together. They are going to be quite higher than the $260 million figure that I gave you as a previous estimate.

Mr. PASSMAN. What amount would you say?

Mr. TENNANT. I believe that the range will be somewhere close to $375 or $400 million including military.

Mr. PASSMAN. Unobligated?

Mr. TENNANT. Unobligated.

I will give you those figures in the next few days.

Mr. PASSMAN. Thank you very much. You see, it is still even clearer that the Congress appropriated too much money, and that again, as in previous years, the criticism of the cuts that were made was completely unjustified.

Mr. GAUD. I hope you do not lose sight of the fact that the fact this money is left over, take this development loan fund, bears witness to the fact that in examining the applications, we did so carefully, did not spend all our money and did not go beyond what we had to go beyond. I think this ought not to be overlooked.

Mr. PASSMAN. I hope you exercise more of that type of judgment in fiscal year 1964.

Mr. GAUD. You can count on us, Mr. Chairman.

ESTIMATED REQUIREMENTS FOR FISCAL YEAR 1964 INDIA PROGRAM

Mr. FORD. You are asking for ——— in development loans and $8.1 milion for development grants in fiscal 1964?

Mr. GAUD. Yes, sir.

Mr. FORD. As compared with what you requested last year of $465 million, of which $450 million was for loans and $15 million for grants?

Mr. GAUD. That is right.

Mr. FORD. Are the circumstances any different this year at this time than they were last year? Are your justifications any firmer and more valid now than they were a year ago?

Mr. GAUD. I can answer that question better on Wednesday than I can today. I do not know whether you were here the other day when we said the Indian consortium is now in midstream and it met a little while ago, on Friday, and is going to meet again on Wednesday.

As soon as that meeting is over, assuming it is not adjourned again—I do not expect it to be—we will know where we are with respect to our pledge to the Indian consortium, and we can give you a firm figure. That takes us up to March 31, 1964. Then you have the first quarter of the next year.

At any rate, as of next Wednesday we ought to know exactly where we are on India in terms of requirements.

Mr. FORD. What figure are you going to the consortium meeting with as the figure we are willing to put up?

Mr. GAUD. We have pledged already at the meeting in Paris; total pledges were $915 million.

Mr. FORD. Of which we——

Mr. GAUD. We pledged $375 million.

Mr. FORD. This is against ——— you are justifying for fiscal 1964?

Mr. GAUD. We have already pledged $375 million of that ———. That meeting adjourned because it was evident there were some countries that had possibilities of raising more money but had not worked it out. The meeting adjourned. The United States announced at that meeting that, depending upon what other countries did in terms of their pledges, we would be prepared to increase our pledge from $375 million up to a ceiling of $450 million.

Mr. FORD. This is regardless of what happens to the authorization and the appropriation bill?

Mr. GAUD. This is all subject to the appropriation of funds and is expressly declared to be so.

Mr. FORD. This offer is predicated on this assumption?

Mr. GAUD. That is right, and this is declared at the consortium, in the formal proceedings of the meetings, and so forth. So that as of now we are committed to $375 million. This is clearly going to be increased, but I cannot give you until Wednesday what the final figure is.

Mr. FORD. That is all.

Mr. PASSMAN. I believe you said we had no legal commitment whatsoever after June 30.

Mr. GAUD. After the last June 30?

Mr. PASSMAN. Yes.

Mr. GAUD. We have none.

Mr. PASSMAN. No legal commitment. If we had abolished foreign aid as of June 30, there would be no legal commitments outstanding?

Mr. GAUD. That is right.

Mr. PASSMAN. Thank you.

Mr. GAUD. I hope that will not happen, however.

Mr. PASSMAN. Mr. Conte?

Mr. CONTE. What part of this ——— is for the Development Loan Fund?

Mr. GAUD. ——— of the ———.

Mr. CONTE. $8 million in development grants?

Mr. GAUD. Yes, sir.

Mr. CONTE. Of that ———, how much of it is already committed?

Mr. GAUD. None.

Mr. CONTE. None at all?

Mr. GAUD. No.

Mr. CONTE. What do you have for a request?

Mr. GAUD. I think we furnished this. Mr. Conte, we have a total, not loan applications, but projects which have been submitted to us by the Indians for study totaling $963 million.

Mr. CONTE. How many applications do you have and what do they total?

Mr. GAUD. Actual loan applications at the moment total roughly $100 million, as distinguished from possible projects.

In addition to that, in addition to those loan applications, we know we will make to India, all things being equal, next year a nonproject loan that in size is between $200 million and $250 million.

Mr. CONTE. What is that for?

Mr. GAUD. That is the type of loan I referred to a little while ago, which covers the import of raw materials, spare parts, machinery,

components, what not, for the entire Indian economy and 75 percent of it goes to the private sector.

Mr. CONTE. That amounts to $300 million, $340 million.

Mr. GAUD. Mind you, none of those loan applications have been approved yet. We are only studying them.

POSSIBILITY OF DEVELOPMENT LENDING FOR BOKARO STEEL PLANT

Mr. CONTE. I realize that. Among the $100 million loan applications is Bokaro steel mill one of them?

Mr. GAUD. We have no application on that.

Mr. CONTE. None at all?

Mr. GAUD. No, sir. We are discussing it, but we have no loan application.

Mr. CONTE. What does that amount to?

Mr. GAUD. The first stage of construction of the Bokaro mill has a foreign exchange component of $512 million.

Mr. CONTE. Which would come from where?

Mr. GAUD. If we financed it, it would come from development loan funds.

Mr. CONTE. You certainly would not have enough money here to finance all these.

Mr. GAUD. No, indeed. Mr. Conte, if we decide to finance the Bokaro steel mill, I think it is quite clear that we will have to spread the financing over a number of years.

Mr. CONTE. How long does it take to process an application?

Mr. GAUD. It depends. How long is a piece of string?

Mr. CONTE. How long does it take to process an application of $512 million?

Mr. GAUD. This is a project that the AID has been discussing with the Indians now, to my knowledge, for over a year and a half. We have a great deal still to look into as regards this particular project. My guess is—it is only a guess—we would not be prepared to state for a matter of months whether we wanted to go forward with it or whether we did not. They still have to continue to study the project.

Mr. CONTE. I do not want to pin you down on this, but I think I am not getting a crystal clear answer. You are in the process of discussion now?

Mr. GAUD. That is right.

Mr. CONTE. After you discuss it and after you have made an analysis and you have these answers to the questions you brought forth the other day, you decide you are going to invest this $512 million, at that point or somewhere along the line the Indians are going to make an application?

Mr. GAUD. That is correct.

Mr. CONTE. That is months away before they make the application.

Mr. GAUD. They might make it tomorrow if they saw fit, but the odds are against it.

Mr. CONTE. They have not made it up today?

Mr. GAUD. No, sir; they have not.

Mr. CONTE. I want an answer to this question. Assuming they make application tomorrow for $512 million for the Bokaro steel mill, how long would it take you to process that application?

Mr. GAUD. We have to finish our study of the raw materials business.

Mr. CONTE. You figure that at 3 or 4 months?

Mr. GAUD. It may take months. It may take longer. We want to satisfy ourselves on a number of other problems—water, power, transportation, railroad facilities. We would not be prepared to go forward with this proposition until we had worked out a satisfactory understanding with the Indian Government as to U.S. personnel controlling the design of the mill, construction of the mill, and a management contract for a period of 5 to 10 years.

Even if the application came in tomorrow, there is an awful lot of work to be done before we could or would act on it. If you tell me what you are after——

Mr. CONTE. I want to know whether you think it would take a year or 6 months or 8 months. You have some idea. I know if I were sitting on the other side of the table, I could answer that question. If the application came in tomorrow, what do you think, or how long do you think it would take to process that application?

Mr. GAUD. I am not trying to duck your question, but let me tell you my principal problem. Certainly, the negotiations with the Indians on management, construction, that sort of business, these things could be done in a matter of 2 or 3 months. The big x here is the raw materials. United States Steel Co. went into this question. They did not have a charter to go into the raw materials question extensively. They came back and they said that further information was needed on the availability of the raw materials in the right location and in the right quality.

We have some people out in India now trying to find out what information the Indians have on this question and how much more information has to be obtained before we can make a sensible decision on the raw materials. I do not know whether it is going to take 6 months or a year or 2 years to get that information. But if this meets your concern, it may well be that we would be prepared to decide whether to grant this loan or not to grant this loan within the next few months. That may be the case. On the other hand, it may be much longer.

Mr. CONTE. I was just wondering whether if someone offered an amendment to the foreign aid bill stating that there would be no Development Loan funds used in fiscal year 1964 for the Bokaro steel mill—I do not think it would hurt anyone, based upon your answer here today.

Mr. GAUD. I do not know whether it would or not, because it is entirely conceivable to me that as the Indians maintain they have all the necessary information on the raw materials—if this is true and if we decide to go forward with the project, we might be prepared to do so within the next 3 or 4 or 5 months at the earliest.

Mr. FORD. There are two great big ifs: If they have the information, and if we proceed.

Mr. GAUD. That is right.

Mr. CONTE. It sounds like Judge Miller's iffy question here.

Mr. GAUD. It might be an amendment to which you refer would hold us up 6 months.

Mr. CONTE. An amendment of that type certainly would not prevent your continuing to study this matter, would it?

Mr. GAUD. No, sir.

Mr. PASSMAN. You just said it may hold you up 6 months. Are we that far committed on it?

Mr. GAUD. Not committed at all.

Mr. PASSMAN. If the gentleman will yield for this further question, if you had to make a decision, would you say you are 50 percent, 60 percent, or 80 percent convinced you are going to go through with the project? Where do we stand? How far out on a limb are we?

Mr. GAUD. We are still right at the bottom of the tree. We have not climbed the tree, much less are we out on the limb.

Mr. PASSMAN. There is a good chance we will never build the plant; is that correct?

Mr. GAUD. There is a chance. If these raw materials or other questions do not work out, we will not build it.

Mr. PASSMAN. If I should make a statement on the House floor that there is a possibility we shall never build this steel mill, would that be a fair statement?

Mr. GAUD. Yes.

Mr. PASSMAN. Thank you.

FEASIBILITY OF BOKARO STEEL PLANT

Mr. MINSHALL. You say we are at the bottom of the tree. How much has it cost us so far on feasibility studies to stay at the bottom of the tree?

Mr. CONTE. How far do you climb up the tree before we see the light?

Mr. GAUD. We have made one study, the United States Steel study. My recollection is that it cost about $650,000.

Mr. MINSHALL. Where is that report?

Mr. GAUD. It is down in the agency—a seven-volume report.

Mr. MINSHALL. You condensed this into eight pages. You can give the good and the bad in eight pages?

Mr. GAUD. You speak of the press release?

Mr. MINSHALL. I am talking about the good and the bad in the United States Steel feasibility report.

Mr. GAUD. By eight pages you refer to the press release?

Mr. MINSHALL. Press release from the Agency for International Development.

Mr. GAUD. We did our best. In the press release we say that a copy of the full seven-volume report is available for inspection by the press in the AID news office.

Mr. MINSHALL. How much have you spent in the way of other funds aside from the $600,000 you paid United States Steel? Do you have people in India now?

Mr. GAUD. We just sent two people over there.

Mr. MINSHALL. Are they the only people working on this project now?

Mr. GAUD. Some of my time goes into discussion on it as I am here now. There are no people assigned specifically to it.

Mr. MINSHALL. This is a very peculiar thing. You have this tremendous program, a billion dollar program, that you are considering, and you only have two people in India, in addition to yourself working on this billion dollar Bokaro steel project.

Mr. GAUD. I did not say that.

Mr. MINSHALL. Studying this. You just said this.

Mr. GAUD. I beg your pardon. I said other people, including myself, are spending time.

Mr. MINSHALL. How many people are working on this project?

Mr. GAUD. No people are working on this project full time at the moment except an engineer from my office who has other duties. He is at the moment going on this trip to work on this project. We have a raw materials expert who is normally assigned to our mission in Turkey. I sent him to India to go into the raw materials question. They are at the moment working full time on the project. Nobody else is working full time on it.

Mr. MINSHALL. Would it not be reasonable for a project of such urgency and size to have more people working on it? You have already spent three-quarters of a million dollars. You say you are still at the base of the tree.

Mr. GAUD. The $64 question at the moment is the raw material question. Until that question is resolved——

Mr. MINSHALL. You only have one man working on it, which is rather shocking

Mr. GAUD. Mr. Minshall, we have sent a man to India.

Mr. MINSHALL. A man.

Mr. GAUD. Forgive me. We have sent a raw materials expert and engineer to India to go and find out how much information the Indians have on this subject. When they report to me, I will then know how much work we need to do on it, whether we have to hire other people, whether the Indians need to do any more work. This is a factfinding question.

Mr. MINSHALL. How long has he been back in India?

Mr. GAUD. He left last week.

Mr. MINSHALL. Just last week?

Mr. GAUD. Yes.

Mr. MINSHALL. How long have you been studying this matter? When did United States Steel first get the contract to make the study? When were they brought into it, what year?

Mr. GAUD. They were brought into it and started working June 1962. I believe the contract was signed in June.

Mr. MINSHALL. When did they complete their report?

Mr. GAUD. We got their report at the end of March or April. The press release says—their report we got late in March.

Mr. MINSHALL. What makes you think it is going to take a matter of many months or years before you have this raw materials problem analyzed?

Mr. GAUD. United States Steel people said it would take 2 years, in their judgment.

Mr. MINSHALL. By how many people? What kind of group?

Mr. GAUD. I did not ask them. We are going to find out for ourselves.

Mr. MINSHALL. It might take a hundred years with one man working on it.

Mr. GAUD. We have not got one man working on it. We sent a man out there on a factfinding expedition to see how much information India needs and how much information is there. As soon as we

find out what kind of job needs to be done on raw materials, then we will decide how many men to assign to it.

Mr. MINSHALL. How many people in the AID shop are working on the Bokaro steel mill as of this moment, July 22?

Mr. GAUD. As of the moment, nobody is assigned full time to the Bokaro steel plant proposition.

Mr. RHODES. Will the gentleman yield?

Mr. CONTE. Yes.

Mr. RHODES. How much money is in this request for funds for prosecution of the investigation on this steel mill?

Mr. GAUD. None.

Mr. RHODES. There is no money?

Mr. GAUD. No. Excuse me.

Mr. RHODES. How do you expect to finance it?

Mr. GAUD. Let me make sure I understand you.

Mr. RHODES. Yes.

Mr. GAUD. We are programing ——— in development loan funds. If we decide to go forward with Bokaro during this fiscal year, some of these funds may be used for it, but nothing is assigned to it. We do not know if we can go forward with it.

Mr. RHODES. It takes money to prosecute your investigation?

Mr. GAUD. I beg your pardon?

Mr. RHODES. You already spent $650,000 on it. Now you are going to spend more?

Mr. GAUD. We do not know if we are or not. It depends entirely on what this man learns in India. If the Indians have the information, OK. If the Indians are conducting a satisfactory field survey, OK. We merely look over their shoulders. I can do that with my man from Turkey, who is already on our staff, a technician, who is a direct hire.

If, on the other hand, we find we have to get into the thing and do more work than that, then we will have to come up with some money for a survey. The problem at the moment is I just do not know what information there is available on this. I am trying to find out.

Mr. RHODES. You must have some funds somewhere in this budget that can be diverted for that purpose.

Mr. GAUD. We would have to use presumably some of our development grant funds, which is what we did when we set up the survey by United States Steel Corp.

Mr. ANDREWS. Will the gentleman yield?

Mr. CONTE. Yes.

Mr. ANDREWS. I understood you to say the other day that even though no moneys were earmarked for that steel mill, that you could use some.

Mr. GAUD. That is right; no question about it, Mr. Andrews.

Mr. CONTE. What is the communication system in India? Is it fairly adequate at the present time?

Mr. GAUD. For what purpose, sir?

Mr. CONTE. Let us take, for instance, transportation, rail transportation. What is the situation?

Mr. GAUD. The Indian rail situation is very heavily overburdened. India is spending a great deal of money trying to build it up, and a number of our aid loans go for that purpose. We made a loan last year for diesel locomotives, for example.

Mr. CONTE. That is what I imagined from reading over the justifications. There is a real dire need in India today for a better transportation system.

Mr. GAUD. That is right.

ADEQUACY OF TRANSPORTATION FOR BOKARO STEEL MILL

Mr. CONTE. Is it not true that if the Bokaro steel mill is constructed, one of the gigantic problems involved is not only the question of raw materials, but whether you can have a rail transportation system to take the finished product out to the industrial area?

Mr. GAUD. That is right. The United States Steel people made a particular note of that in their report, that the necessity for adequate rail transport is one of the more serious problems.

Mr. CONTE. If that is so, how deeply has AID gone into the study that if the Bokaro steel mill is constructed and you have to concentrate yourself on providing adequate rail transportation out of the mill to the consuming public, how will this affect the transportation program now going on in India? Will it suffer as a result of this?

Mr. GAUD. No, it will not, Mr. Conte, for this reason. Bokaro has been a part of the Indian third 5-year plan for many years. Their power requirements, railroad requirements, water requirements, all their requirements in the 5-year plan contemplate construction of Bokaro. So that from the outset they have assumed that these ancillary facilities which are essential to the plant would be built up in time, along with the plant, to serve it.

Mr. CONTE. I am no engineer, but I would imagine they would have to slow down their transportation program for other parts of India in order to concentrate on the Bokaro steel mill because United States Steel reports that it is not insurmountable but it is difficult. It is a very difficult problem.

Mr. GAUD. That is right.

Mr. CONTE. AID says, you—this must be your words—transportation will be expensive and will require unusually competent management from Bokaro.

Mr. GAUD. If those words are in quotes, they are United States Steel words and not ours.

Mr. CONTE. These are not in quotes, which is why I said they must be your words.

I thought you mentioned that this is something you have to look into, whether this will take away from the transportation program in the rest of India and concentrate it on Bokaro. Here are United States Steel words:

> There will be very little point in granting steel mills top priority if the rest of the economy has to suffer such shortages of transportation that the steel produced cannot be further processed and distributed for consumption.

Second:

> That steel and power and transportation development programs are absolutely interdependent and are to proceed at equal pace.

Mr. GAUD. That is right.

Mr. CONTE. Do you have a study available on this that we can look at?

Mr. GAUD. On these ancillary matters?

Mr. CONTE. Right.

Mr. GAUD. I have not. These are matters we still have to satisfy ourselves on. The basic proposition in this steel mill is in their plan and presumably—mind you, I am only saying presumably—they have taken care of these other facilities.

Before we make this loan, we would be satisfied, we would want to be satisfied, we would insist on being satisfied that the transportation requirements, water requirements, power requirements were going to be met. This is a part of the whole package to which we have not got the whole answer.

U.S. AID TO INDIA AS PART OF CONSORTIUM ARRANGEMENTS

Mr. FORD. You told us a minute ago that so far the consortium had agreed or we had agreed with the consortium that we were going to put up $375 million in fiscal 1964.

Mr. GAUD. 1964.

Mr. FORD. And maybe more, depending on action taken between now and Wednesday.

Mr. GAUD. Yes.

Mr. FORD. Would the Bokaro steel decision add funds over and above the $375 million or the larger figure?

Mr. GAUD. No.

Mr. FORD. It would fall within the total?

Mr. GAUD. That is right; the Bokaro project is within their plan. It can only be financed by any member of the consortium if it is financed out of pledges to the consortium. The money we are asking you for for development loans will be spent for projects in the plan, either some will go for Bokaro or if Bokaro is not financed this year, for other projects. The amount does not change whether we do Bokaro or not.

Mr. FORD. Do we have the right to pick and choose which of the projects within the plan we want to finance?

Mr. GAUD. Yes; this we do every year.

Mr. FORD. The other members of the consortium have the same right?

Mr. GAUD. That is correct.

Mr. FORD. Supposing there is one very good one that has a good return possibility and there is a little dispute over which of us—I use it in the broad sense—will have the privilege of loaning money for this operation.

Mr. GAUD. This has not happened often for a couple of reasons. One is that some countries are the obvious sources of supply for certain types of projects. Another is we have declared the field in which we are interested.

Mr. FORD. I assume these are the fields.

Mr. GAUD. Power, transportation, coal, private industry.

Mr. FORD. By doing this have we limited ourselves to the areas where the return is possibly the least, where the terms we can get are not the best?

Mr. GAUD. No, sir. I do not think that the type of project you are supporting under your aid program has anything to do with the return you get. This has been a matter of governmental policy on the part of the donor nations, the lending nations, as to what the terms should be.

Mr. FORD. Regardless of the merit of the project or possibility of return, we still make the loans at the low service charge rates?

Mr. GAUD. Our loan terms to India are based on our estimate of India's balance-of-payments capabilities.

Mr. FORD. And has no relationship whatsoever to the earning capability of the project?

Mr. GAUD. Yes; in this sense. Our loans to India, if they are going to be used for a powerplant or steel mill, are two-step loans. We make the loan to India on the soft terms because she has not, in our judgment, got the balance-of-payments capability to pay hard terms, but the loan agreement requires the Government of India to lend to the company at a higher rate of interest, and that is gaged, that interest rate, those terms are gaged in terms of the type of operation.

Mr. PASSMAN. Mr. Conte, would you yield?

Mr. CONTE. Yes.

Mr. PASSMAN. We are dealing with an illustrative program all through foreign aid. You do not know who is going to get this money until you get the money?

Mr. GAUD. That is correct.

Mr. PASSMAN. You can spend it any way you want to on any type of project?

Mr. GAUD. Knowing that I am going to face you the next year; yes.

Mr. PASSMAN. After you get the money, then you make up your mind where to spend it?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. On all the other categories of aid you justified on an illustrative basis, say 118 projects in country X, you could vacate every one of those projects and move the money to country B?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. What you have, really, is a blank check throughout, from start to finish. You get the money. After you get the money, the decision is made as to what projects it will be spent on; but the law is broad enough to permit you to vacate all projects from one nation and substitute a different set of projects in another nation.

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Thank you, Mr. Conte.

ANCILLARY PROJECTS TO BOKARO

Mr. CONTE. Another important ingredient in regard to this Bokaro steel mill, as I read your press release, is water.

Mr. GAUD. Right.

Mr. CONTE. In order to put this mill into operation then, there will have to be constructed a dam near the site of the mill; is that correct?

Mr. GAUD. Yes, sir. Not at the site of the mill.

Mr. CONTE. Near the mill, somewhere in the vicinity?

Mr. GAUD. The Damodar Valley.

Mr. CONTE. And a canal?

Mr. GAUD. That is right.

Mr. CONTE. What is the cost of the dam?

Mr. GAUD. $31 million.

Mr. CONTE. What is the cost of the canal?

Mr. GAUD. $5.7 million.

Mr. CONTE. Any other cost tied in with that?

Mr. GAUD. On the water side?

Mr. CONTE. Yes.

Mr. GAUD. Not as far as I know.

Mr. CONTE. What about power costs?

Mr. GAUD. Additional generating capacity required—and, incidentally, these figures are United States Steel estimates—additional generating capacity of 125 megawatts, estimated by United States Steel to cost $32 million.

Mr. CONTE. We could safely tack onto the $512 million another $88 million?

Mr. GAUD. You could tack on more than that. If you look on page 9 of the release, you will see these items listed.

There are a number of outside-the-fence projects. These are the ones to which we have just referred, plus some increased coal mining and coal washing facilities estimated to cost about $25 million.

Mr. CONTE. $133.857 million; is that correct?

Mr. GAUD. Yes, sir.

Mr. CONTE. That is over and above the $512 million?

Mr. GAUD. No, sir.

Mr. CONTE. This would be over the total cost?

Mr. GAUD. This would be over the total cost and these projects are the type of projects I was referring to a minute ago when I said the Indian 5-year plan would include these collateral or ancillary projects which would go along with the mill. These would be built by the Indians themselves to the extent local currency is required, or otherwise will be treated as regular consortium projects.

TOTAL ESTIMATED COST OF BOKARO

Mr. CONTE. What is the total cost of the entire Indian 5-year plan then?

Mr. GAUD. The third plan is nearly $24 billion.

Mr. CONTE. Of which $1.5 billion is the Bokaro steel mill?

Mr. GAUD. No; about half of the Bokaro steel mill is in the fourth plan, the next plan.

This present plan is over on March 31, 1966, and about half of the expenditures for Bokaro will take place after that date, and, therefore, will appear in the next Indian 5-year plan.

Mr. MINSHALL. Would the gentleman yield?

Mr. CONTE. Yes.

Mr. MINSHALL. What is the total cost of the Bokaro steel mill going to be?

Mr. CONTE. $1.5 billion.

Mr. GAUD. If you go all through all three stages to produce the 4-million ton capacity, the total cost of both foreign exchange and local currency is $1.5 billion.

The United States Steel tells us, in addition, other facilities are required which we have just been discussing, for another $133 million.

Mr. MINSHALL. You mentioned so many things——

Mr. CONTE. Wait a minute, so I can get the record clear.

Of which $891 million will come from the United States?

Mr. GAUD. No; the only thing we are discussing at the present time is step 1, which is $512 million.

Mr. CONTE. Mr. Minshall asked you what the total cost was and you said it came in three steps and $1.5 billion?

Mr. GAUD. That is correct.

Mr. CONTE. Three steps for the same mill, and the Bokaro steel mill will cost the United States $891,552,000?

Mr. GAUD. If we finance the foreign exchange costs in steps 1, 2, and 3.

Mr. CONTE. Everything?

Mr. GAUD. Yes, sir.

Mr. MINSHALL. You mentioned so many things, Mr. Gaud, about this United States Steel mill report, but did they make any recommendations one way or another?

Mr. GAUD. No, sir; they made a technical and economic feasibility study but no recommendations.

Mr. ANDREWS. They have not finished the report?

Mr. GAUD. Yes.

Mr. MINSHALL. You have mentioned many things today that you have not mentioned in your press release. I think it would be interesting to have the United States Steel report available to the committee——

I would like to make a request, Mr. Chairman, that they bring these volumes here providing it does not take too many vans.

Mr. GAUD. It is only seven volumes.

Mr. MINSHALL. Tomorrow?

Mr. GAUD. Yes, sir.

Mr. MINSHALL. I would like to study it and also have some of the staff look it over so we know more about this fantastic project. I think we've just scratched the surface.

Mr. GAUD. No problem.

Mr. MINSHALL. Off the record.

(Discussion off the record.)

Mr. CONTE. No further questions.

Mr. ANDREWS. Mr. Minshall?

Mr. MINSHALL. Mr. Chairman, we are coming back tomorrow, are we not?

Mr. ANDREWS. At 1 o'clock.

Mr. MINSHALL. All right.

Mr. ANDREWS. The committee will stand adjourned until 1 o'clock tomorrow.

TUESDAY, JULY 23, 1963.

IRAN

Mr. PASSMAN. The committee will come to order.

I believe the estimate for Iran in fiscal year 1964 is ———; is that correct?

Mr. GAUD. Yes. It is a range, Mr. Chairman ———. The actual request is ———.

Mr. PASSMAN. But you have a range going up to ———.

Mr. GAUD. Yes. We are uncertain as to just how many development loans we will make in this country.

Mr. PASSMAN. Is that the development credits you are referring to? You are not talking about hard loans; are you?

Mr. GAUD. Iran is one of four countries in the region to which we make loans at higher rates of interest and on shorter terms. Our loans to Iran for next year will all be at 3½ percent and the term will be 20 to 30 years, depending on the type of loan and the project.

Mr. PASSMAN. Did we make them a $15 million loan on that basis year before last when the Shah and his bride were over here?

Mr. GAUD. Year before last we made two loans to Iran at 3½ percent for 17 years, repayable in dollars.

Mr. PASSMAN. How about the $15 million?

Mr. GAUD. We made the $15 million loan in 1963 at 3 percent for 30 years.

Mr. PASSMAN. Did you not have a grant of $15 million in there out of the contingency fund?

Mr. GAUD. In 1962 or 1961?

Mr. PASSMAN. It may have been 1962.

Mr. GAUD. In 1962, Iran was getting budget support and that $15 million was grant.

Mr. PASSMAN. That was an outright grant?

Mr. GAUD. Part of the assistance that year was on a loan basis and part on a grant basis.

Mr. PASSMAN. I refer particularly to the $15 million.

Mr. GAUD. I believe that was the grant portion.

Mr. PASSMAN. You had cash transactions totaling $44 million, did you not, in fiscal year 1962?

Mr. GAUD. Of budget support?

Mr. PASSMAN. Yes.

Mr. GAUD. As I recollect, $14 million of that was on a loan basis and $30 million on a grant basis.

Mr. PASSMAN. In addition to the ——— scheduled for Iran, how much is the country receiving from the military assistance program and what is the amount from the Public Law 480 program?

Mr. GAUD. The military assistance program is programed at ———. The Public Law 480 is now estimated at ———, but it may well be higher than that.

Mr. PASSMAN. The military assistance program is a grant?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. What is the amount?

Mr. GAUD. ———.

Mr. PASSMAN. Add to that figure the ——— and that is ———, for a total of ———. We are giving them ——— and making some type of loans for ———.

What is the unexpended balance to the credit of Iran as of June 30?

Mr. GAUD. Roughly $27 million, Mr. Chairman.

Mr. PASSMAN. What has been the total amount of aid to Iran since the inception of the program?

Mr. GAUD. Military and economic, $1,423 million.

POLITICAL SITUATION IN IRAN

Mr. PASSMAN. I note, on page 23, that there is dissatisfaction among the elite groups with the Shah's land reform program.

Mr. GAUD. Yes, sir.

Mr. PASSMAN. There is consequent political tension, it is stated. Is that tension being alleviated to any extent or is it growing worse?

Mr. GAUD. We feel that the Shah is in control of the situation. If you will remember, there were riots in Teheran a few weeks ago led by the priests—the mullahs—which was a reflection of that dissatisfaction. There have also been troubles in certain parts of the country, led by the landowners. The situation seems to be very much in control at the moment and the Shah is planning on a general election to be held roughly 2 months from now.

Mr. PASSMAN. Who is he going to elect? He is the King is he not?

Mr. GAUD. Yes, sir. There is going to be, we are told, a free election.

Mr. PASSMAN. He is going to participate, but to what extent?

Mr. GAUD. This is to elect a Parliament. There has been no Parliament in Iran for more than 2 years. The purpose of these elections is to elect a new Parliament.

Mr. PASSMAN. Did we work this system out for the Shah?

Mr. GAUD. No, sir.

IMPROVEMENT IN CENTRAL GOVERNMENT BUDGETING

Mr. PASSMAN. I wonder why he could not work his financial troubles out as well.

Mr. GAUD. He is making progress on them.

Mr. PASSMAN. He is increasing the country's gold and foreign exchange holdings. It looks as if he might be getting along a little bit better than we are. Is that a country which has no budgetary system, or a very limited one?

Mr. GAUD. This country does not have the tight kind of budget controls that one would like. We discussed that, I think last year. During this past year they made a good deal of progress in unifying their budget. I am told by our Ambassador there that they did a much better job this year in Central Government budgeting than they have done for a good many years.

Mr. PASSMAN. There is considerable room for improvement?

Mr. GAUD. Yes, sir.

FOOD-FOR-WORK PROJECT

Mr. PASSMAN. Would you now comment on your statement, on page 25, that opportunities for substantial use of title II, Public Law 480, to support food-for-work projects will also be explored? "Will be" or is already underway?

Mr. GAUD. The "will be" speaks of several months ago. It was explored and a small program is now underway.

Mr. PASSMAN. What is the estimated cost to bring this project to completion?

Mr. GAUD. This is a part of our Public Law 480 program. The only figure we have for the moment is the estimate ——— of title I sales that I mentioned before.

We have no figures at the moment on the extent to which we will furnish additional title II to Iran for food for work. This has not yet been worked out.

Mr. PASSMAN. This plan is spreading rapidly around the world; is it not?

Mr. GAUD. Do you mean Public Law 480?

Mr. PASSMAN. This title II, food-for-work project.

Mr. GAUD. There is not a great deal of it in my region. I am not sure of the other regions.

Mr. PASSMAN. We ran into it in Morocco, in Nigeria, and Tunisia. How many countries are involved in your region?

Mr. GAUD. Total countries in my region? Eighteen.

Mr. PASSMAN. No; I mean where you have this type of plan.

Mr. GAUD. The food for work?

Mr. PASSMAN. Yes.

Mr. GAUD. This is the only one.

Mr. PASSMAN. This is a new program, just starting; is it not?

Mr. WHITE. Yes.

Mr. PASSMAN. Let us hope it works out.

RURAL DEVELOPMENT PROJECT

I notice that you are requesting $166,000 to initiate a new project entitled "Rural Development," to be found at page 138.

Mr. GAUD. Yes.

Mr. PASSMAN. What is the cost to complete this project?

Mr. GAUD. Our present estimate is $766,000, but I would like to say that that is very much of an estimate. The purpose of this project is to tie in with the Shah's land reform program and to work through the local authorities in the various ostaris where the land reform program is underway.

We are not at all clear on how far we will be able to go with this. We feel that the Iranians need a great deal of help in carrying out this program which they started themselves. This is one of the vehicles through which we hope to improve the operation of the program. Helping farm cooperatives, teaching them how to finance farmers who have been used to getting their seed and their money from their landlords and equipment and doing everything we can to get these new outfits on their feet, in terms of technical assistance.

Mr. PASSMAN. You say this is a program initiated by the Shah of Iran?

Mr. GAUD. That is right.

Mr. PASSMAN. Why do we not leave them alone and let them carry it out, to see how successful they can be?

Mr. GAUD. We have been asked by the government to help out in this program. The Iranians do not have the trained manpower, they do not have the know-how in the handling of cooperatives, they do not have the experience to handle a large-scale program such as this and they have asked for help.

Mr. PASSMAN. Well, let us hope some of these things work out better before we are down to the bottom of the barrel.

CROP AND LIVESTOCK PRODUCTION PROJECT

How many short-term consultants do you plan to utilize during fiscal year 1964, Mr. Gaud, under the crop and livestock production project, at page 139?

Mr. GAUD. Two, Mr. Chairman.

Mr. PASSMAN. What is the cost?

Mr. GAUD. It is roughly $5,000 apiece.

Mr. PASSMAN. For how long?

Mr. GAUD. In the neighborhood of 3 or 4 months.

Mr. PASSMAN. How much per day are you paying these consultants? You say 3 or 4 months. This is a 25-percent spread there.

Mr. GAUD. I know. I haven't got the detail on that here. I will have to supply that.

(The information follows:)

CROP AND LIVESTOCK DEVELOPMENT

AID is planning to recruit two consultants for a period of 3 months. Salary and per diem are estimated at $4,000 and transportation at $1,000 each.

Mr. PASSMAN. From where do you usually recruit these consultants?

Mr. GAUD. Well, it depends on what they are going to do. Frequently from our universities. From engineering societies. From business. From Government. Wherever we can get them.

Mr. PASSMAN. For crop and livestock production?

Mr. GAUD. They might come from the Department of Agriculture, they might come from the agricultural schools of the State universities.

PAHLAVI UNIVERSITY MEDICAL CENTER

Mr. PASSMAN. Page 145 indicates that you have obligated $1,776,000 to the Pahlavi University medical center.

Mr. GAUD. Yes.

Mr. PASSMAN. Could you give us an idea of what this project is going to cost from the start to finish?

Mr. GAUD. Yes, sir. $2,854,000.

Mr. PASSMAN. What are you going to get for your money when it is finished?

Mr. GAUD. We hope that Iran is going to get a very good medical center for purposes of training doctors, medical technicians, nurses, and the like.

Mr. PASSMAN. You know something about the medical school plan for Beirut?

Mr. GAUD. Yes.

Mr. PASSMAN. That plan will provide for a research center as well as a teaching hospital. If that project should actually be approved and come into being, would you need as much aid for some of these other medical projects as you are requesting?

Mr. GAUD. I think so. The requirement or demand for doctors is so enormous throughout the Middle East that no one medical school could possibly take care of the requirements, it seems to me. I don't mean by saying that to deprecate the value of the AUB unit.

Mr. PASSMAN. Do we not have a shortage of doctors in this country?

Mr. GAUD. Yes; we do.

GENERAL EDUCATION PROJECT

Mr. PASSMAN. What type commodities do you plan to procure for $54,000, under the general education project?

Mr. GAUD. Those are instructional materials to be used in teacher training, curricula development, adult literacy projects and the like.

Mr. PASSMAN. Such as?

Mr. GAUD. Books, visual aids and that sort of thing.

ADMINISTRATIVE REFORMS AND TRAINING PROJECTS

Mr. PASSMAN. Why do you need $100,000 for contract services under the administrative reforms and training projects, at page 152?

Mr. GAUD. This figure I think, Mr. Chairman, strikes me as being high and I want to look into it. It is supposed to cover the services of two specialists who are to work on a tax system reform, plus two 3-month participants. I think the figure of $100,000 is too high and I want to check into that.

MOBILIZATION OF LOCAL CAPITAL PROJECT

Mr. PASSMAN. What is your man-year cost of the consultants you propose to finance at a total cost of $135,000 under mobilization of local capital, on page 154?

Mr. GAUD. We have 10 technicians for an average period of 6 months each. That would be $13,500 each. That sounds a bit high.

The short term may make a difference there. You have the travel costs and all, spread over 6 months rather than the normal 2 years.

Mr. PASSMAN. If they happen to mobilize local capital and find sufficient local capital, would you cut ours back?

Mr. GAUD. Yes.

Mr. PASSMAN. Could you give us a little bit of encouragement that you think you are hitting pay dirt on that matter?

Mr. GAUD. This project hasn't started yet. I hope it will be successful.

Mr. PASSMAN. But you have to have some point from which to start it.

Mr. GAUD. One of the points we have been hitting hardest with the Shah and his government recently has been the need for Iran to mobilize her capital more effectively than she has been.

Mr. PASSMAN. How old is that country?

Mr. GAUD. It is thousands of years old.

Mr. PASSMAN. They have been getting along for those thousands of years, have they not?

Mr. GAUD. Well, they have been getting along.

Mr. PASSMAN. Well, that is about all any of us are doing, is it not, getting along?

Mr. GAUD. Some of us are doing better than others.

Mr. PASSMAN. We always will, won't we?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Would you recommend we give you a chance to mobilize this local capital before we appropriate money to start a lot of these projects?

Mr. GAUD. I would like to do them both at once.

Mr. PASSMAN. What will it cost to complete this project?

Mr. GAUD. The mobilization of local capital?

Mr. PASSMAN. Yes.

Mr. GAUD. $410,000 is our present estimate.

Mr. PASSMAN. You would have to raise that much to break even on it, would you not?

Mr. GAUD. The returns on this, of course, could be very high with a relatively small output of money.

Mr. PASSMAN. We do not have anything like this in America, do we?

Mr. GAUD. Well, this is something we have learned by experience how to do over the years.

Mr. PASSMAN. It still sounds all right if we limit it to just this project.

Any questions, Mr. Rhodes?

LAND REFORM PROGRAM

Mr. RHODES. Mr. Gaud, I notice that on page 24 there is discussed certain reforms calling for creation of peasant-owned cooperatives. I presume this is done because the landholdings are so small that it is not possible to work the land economically. Would that be a fair assumption?

Mr. GAUD. No, sir. These cooperatives have been formed as a part of this land reform program that I spoke of. What has happened is that the land, most of the land owned by the large landlords, has been turned over to the peasants. The peasants have no experience whatsoever in credit, in buying seed, and so forth and so on, and the cooperatives have been formed as an aid to get these services to them—services the landowners used to perform. It hasn't been that the holdings are too small, it is just a matter of ignorance on their part as to how to operate.

Mr. RHODES. How will the land be worked? As one large holding?

Mr. GAUD. No; each one works his own land.

Mr. RHODES. This isn't like a collective farm, Soviet style?

Mr. GAUD. No; not at all.

Mr. RHODES. I think I have no further questions, Mr. Chairman.

Mr. PASSMAN. Mr. Minshall?

CLASSIFICATION OF PRESENTATION MATERIAL

Mr. MINSHALL. Mr. Gaud, at page 23 I notice that about 90 percent—all with the exception of about seven lines—has been classified.

Mr. GAUD. Yes.

Mr. MINSHALL. Is there a need for such strict classification, in your opinion, as was done here?

Mr. GAUD. I am frank to say, Mr. Minshall, in reading this over, if the classification job had been up to me I would say there is not a need for a great deal of this classification.

Mr. MINSHALL. How much would you say should be eliminated?

Mr. GAUD. I personally would eliminate nearly all of it.

Mr. MINSHALL. That is all the questions I have, Mr. Chairman.

LAND REFORM

Mr. PASSMAN. In this gray matter it says:

> In support of land reforms the United States plans to use Public Law 480 to offset the expected temporary fall in domestic food production.

I would expect the food production might be up rather than down.

Mr. GAUD. Hopefully it will, but you come back to the landlord system, where the landlord doles out seed, credit, and the rest of it.

If you take the landlord away, a lot of the individuals on these farms are not going to get themselves organized the way they ought to the first year. We feel in the beginning of this there will be a decline in production.

Mr. PASSMAN. They are going to continue to till the land, are they not?

Mr. GAUD. They will if they get themselves organized in terms of being able to finance their operation. You see heretofore it was like the company store. They go to the landlord for credit and seed and the like. Now they haven't got that. Unless the government manages to get these cooperatives working—and this is a very large-scale program—then our belief is that there are going to be quite a number of peasants who will not produce as much as they have in the past. Now, this should be a temporary phenomenon.

Mr. PASSMAN. If the plan is worked out properly you should not encounter such a problem.

Mr. GAUD. That is true.

Mr. PASSMAN. If it is something they have been working on for 2 or 3 years, I should think that providing the seed and fertilizer and arranging for credit would be a part of the program.

Mr. GAUD. I am afraid we have an example of what you often have in underdeveloped countries where the reform program is going forward without the degree of planning and implementation in advance that you would like.

Mr. PASSMAN. Could we not have kept them out of that pitfall?

Mr. GAUD. As I said, this started out as a purely Iranian program and it was going to be run entirely by the Iranians. As it got along the Iranians began to realize there were problems there they needed help on and they came to us, but the reform program was not planned with our help at all.

Mr. PASSMAN. Is this speculative that it will be a shortage, or could it be just the opposite?

Mr. GAUD. It is our best guess it will be a shortage. It could be the opposite. This is our best guess.

Mr. PASSMAN. This is not just a part of an overall program, since we are getting into this type of program, to help use up our surplus U.S. commodities, is it?

Mr. GAUD. No, sir.

LITERACY CORPS

Mr. NATCHER. Mr. Chairman, would you yield at that point?

Mr. PASSMAN. Yes.

Mr. NATCHER. Mr. Gaud, how far along are they in Iran with the reform which provides for the conscription of educated young men for the service in the Literacy Corps? Can you tell me anything about that?

Mr. GAUD. I can tell you very little about it. Let me see what I can dig up on it. I know that this is a program which the Shah has announced and which he is behind. How many people they have actually got working on it I don't know but I will be happy to find out what I can, sir.

Mr. NATCHER. Thank you, Mr. Chairman.

(The information requested follows:)

LITERACY CORPS IN IRAN

The first 2,500 members of the Literacy Corps completed their training course on April 22, 1963, and shortly thereafter returned to villages near their homes to assume their teaching duties. This contingent of 2,500 is the first of 10,000 members of the corps which the Iranian Government hopes to place in villages this year.

Literacy Corps recruits undergo an intensive 4-month period of training at military installations throughout the country before being sent to the villages. Instruction is provided by army officers, regular civilian teachers, and Ministry of Education employees in Tehran. Selectees receive pay of approximately $16 per month during the training period and upon completion of training are given the rank of sergeant. Their services will also be available to the Ministries of Health, Agriculture, and Interior in carrying out programs of rural development and reform. For example, the Literacy Corps will assist in keeping the accounts of the new cooperatives.

NEW PROJECTS IN IRAN

Mr. PASSMAN. Do you have any other new projects in Iran?

Mr. GAUD. We have the rural development program we spoke of before and the next is the mobilization of local capital which we also spoke of before.

Mr. PASSMAN. We have covered those. There are no other new projects?

Mr. GAUD. No, sir.

IRAQ

Mr. PASSMAN. I believe you are requesting $975,000 for Iraq in fiscal year 1964; is that correct?

Mr. GAUD. Yes, sir; we are.

Mr. PASSMAN. That is $175,000 above fiscal year 1963?

Mr. GAUD. That is right.

Mr. PASSMAN. What has been the total amount of aid to Iraq?

Mr. GAUD. The total amount of economic and military?

Mr. PASSMAN. All of it.

Mr. GAUD. $68.5 million.

Mr. PASSMAN. What is the population of this country?

Mr. GAUD. This country has a population of 7.4 million. Over the years there was per capita aid of a little better than $9 a head.

RECENT GOVERNMENTAL CHANGES

Mr. PASSMAN. There have been no new governments there within the last few hours?

Mr. GAUD. Not since I left my office.

Mr. PASSMAN. How many have you had there since we started this foreign aid program?

Mr. GAUD. There was the government of King Faisal——

Mr. PASSMAN. He did not retire, did he?

Mr. GAUD. He was killed. Assassinated.

There was the government of Premier Qasim, who also was assassinated, and there is the present government.

Mr. PASSMAN. All this happened within 5 or 6 years?

Mr. GAUD. Faisal was killed in 1958 and Qasim was killed earlier this year.

Mr. PASSMAN. It has been 5 years. That gives them an average tenure of about 18 months. What has the tenure been before we started the aid program; do you have any idea?

Mr. GAUD. No, sir.

Mr. PASSMAN. They tell me that when you start filling up the treasuries the outs want to get in. I think along the way that has become rather well established as fact.

EFFECT OF IRAQI GOVERNMENTAL CHANGES ON U.S. AID PROGRAMS

How long did we suspend our aid to Iraq when the first king was assassinated?

Mr. GAUD. When the Qasim government came into power, it requested the withdrawal of our aid program, participant training, and what you might call a book distribution program. As a matter of fact, that is the only aid program we have had since 1958—I am talking about AID—except we signed a 3-year contract in fiscal year 1962 to provide professors of engineering for Baghdad University.

Mr. PASSMAN. Did we not continue to dispense the unliquidated part of foreign aid to Iraq immediately following the death of the first king?

Mr. GAUD. The figures show in 1958 we had a total economic aid program of $2.1 million. In 1959 it was $300,000. In 1960 it was $600,000. In 1961 it was $1.3 million. In 1962 it was $800,000. In 1963 it was also $800,000.

Mr. PASSMAN. Is that from all spigots?

Mr. GAUD. No, that is AID.

Mr. PASSMAN. Let us put it all in the record.

(The information may be found on p. 1235.)

Mr. GAUD. Except for a small amount of military aid.

Mr. PASSMAN. The AID program kept going to some extent?

Mr. GAUD. That is correct.

Mr. PASSMAN. I think the king assassinated in 1958 was a cousin to the present king of Jordan.

Mr. GAUD. He was his first cousin.

Mr. PASSMAN. We were somewhat exercised over the assassination of the king and it took us about 24 hours to recognize the new regime, I understand?

Mr. GAUD. I don't recall.

Mr. PASSMAN. Something like that.

PROFESSIONAL AND TECHNICAL MANPOWER DEVELOPMENT PROJECT

Would you comment on your statement, at page 165, with reference to the fact that 35 percent of the participants that have been programed annually have been canceled out due to their inability to meet English proficiency requirements?

Mr. GAUD. Well, that is about it. As a result of this we have been trying to improve the English language preparation program by increasing the number of hours of instruction and improving our instruction courses. We hope to be able to improve things to the point where

fewer of these people will lose their opportunity for training because of an insufficient command of English.

Mr. PASSMAN. By Mid-Eastern standards, is this one of the more prosperous countries?

Mr. GAUD. Yes.

Mr. PASSMAN. It has a substantial income from oil?

Mr. GAUD. Oh, yes. Very much so.

Mr. PASSMAN. Why do we have to be in there at all with a program? Is it just to make it about 100 percent around the world?

Mr. GAUD. No, sir. The program, as I said, consists of training these participants in the United States and sometimes in Europe and these are not students, mind you——

Mr. PASSMAN. I am speaking of all aid.

Mr. GAUD. I know; plus assistance to the University of Baghdad.

Now, the purpose of this program is to maintain contact with present and future leaders of the country.

Mr. PASSMAN. Maintain a contact with them?

Mr. GAUD. Yes.

An interesting thing, Mr. Chairman, is that in the present Government in Iraq there are 10 high-ranking members of the Government who are former AID participants.

This is precisely what our aid program has been directed at, to try to train the people who hopefully will play an important part in the country—

Mr. PASSMAN. On how to get more aid?

Mr. GAUD. And thereby condition the country toward——

Mr. PASSMAN. Ten of the present leaders in Iraq were former ICA—today AID—participants?

Mr. GAUD. That is correct.

Mr. PASSMAN. If that kind of situation spreads might we not be in a pretty tough spot?

Mr. GAUD. I don't follow you.

Mr. PASSMAN. If we start getting the AID participants, who knows this program—and may I add politely, of our gullibility—running the governments, what a drain it is going to be.

Mr. GAUD. I don't follow your reasoning.

Mr. PASSMAN. You do not think the participants could be associated with AID without knowing something about how we dispense this aid, do you?

Mr. GAUD. We still decide how much aid Iraq is going to get.

Mr. PASSMAN. That is one of the easiset things in the world for you people to do.

How about the other nations in your area, do you have a similar condition?

Mr. GAUD. I wouldn't be surprised. I have never checked it.

Mr. PASSMAN. How about doing a little checking for us?

(Discussion off the record.)

Mr. PASSMAN. When you bring them over as participants, do they get an indoctrination course in the overall operations of the aid program?

Mr. GAUD. They do not.

Mr. PASSMAN. How do they keep these high-level government positions if you do not teach them something about financing and some of the other operations of government?

Mr. GAUD. They come over for specific purposes to study specific things.

Mr. PASSMAN. One will study banking, one will study some other subject; is that the way it works?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. But collectively they get a pretty good idea of how we operate, do they not?

Mr. GAUD. How the United States operates, but they have very little contact——

Mr. PASSMAN. AID brings them over and I am sure these people are familiar with how this program operates.

Mr. GAUD. What they do when they come over here is go to universities or, for example, to the Bureau of Reclamation. They don't spend their time with us here in Washington.

It is like a scholarship. We give them, in effect, scholarships. They come over here and go to a university. They don't come over to study the AID program. They come over to study tax reform or police methods or whatever it is they are interested in and what they will go back to Iraq to work on. It may well be when they are here they develop a feeling of gratitude but they don't come over here and have anything to do with the AID program or study the AID program.

Mr. PASSMAN. I have not said that was the case. However, certainly, one would think when there are 10 people the AID program brought over as participants, and they return to their country and now hold responsible positions, they would not spend very long over here without familiarizing themselves with how easy it is to get this money.

UNIVERSITY OF BAGHDAD PROJECT

Last year, if I recall correctly, you requested $175,000 for the third year of your contract with the University of Texas. Now, according to page 166 of the project book, you are requesting again $175,000 to finance the third-year cost of the contract with the Texas University?

Mr. GAUD. Yes, sir. We did not obligate any money on that contract in 1963 because the contract was slow in getting started.

The $175,000 we are asking for for the fiscal year 1964 is to take the place of the $175,000 that we did not obligate in 1963.

Mr. PASSMAN. Are you any surer this year than last that you will need it?

Mr. GAUD. Yes. The contract is now in operation. The people are in place. There is no problem at all on it.

Mr. PASSMAN. I believe you obligated $400,000 back in 1961?

Mr. GAUD. That is right.

Mr. PASSMAN. You have on hand $315,000, unliquidated, as of June 30, 1963?

Mr. GAUD. That is right.

Mr. PASSMAN. Is it not rather difficult to justify an additional $175,000?

Mr. GAUD. No; I don't think so. This represents 1 year forward funding to completion.

Mr. PASSMAN. You are going to have practically 3 years' funding, are you not?

Mr. GAUD. I shall be glad to check into it. If we find that there is more money in the project than will be needed, we will deobligate it.

Mr. PASSMAN. That is very encouraging. The entire $350,000?

Mr. GAUD. No. Beyond the 3 years.

TECHNICAL SUPPORT PROJECT

Mr. PASSMAN. What is the cost of, and what do you mean by technical subscriptions, under the technical support project at page 167?

Mr. GAUD. The Technical Subscriptions Service makes available to returned participants, pamphlets published by the U.S. Department of Agriculture, subscriptions to technical journals, technical books, and technical booklets prepared by AID. We try to keep them up to date with developments in their field.

Mr. PASSMAN. Would you give us an idea as to the cost in your area for these types of periodicals?

Mr. GAUD. I cannot do it out of hand. I will get what I can for you on that.

(The information follows:)

COST OF AID TECHNICAL BOOKLETS FOR NEAR EAST AND SOUTH ASIA COUNTRIES

AID's annual budget for the preparation and distribution of technical booklets for participant trainees is $250,000. NESA's approximate share of this cost is $50,000.

Mr. PASSMAN. Do the publishers make their publications available at a substantial discount on account of it being AID?

Mr. GAUD. I do not know.

Mr. PASSMAN. Normally they would make a profit; would they not?

Mr. GAUD. Normally they would.

Mr. PASSMAN. Thank you.

Mr. Natcher?

NONALINED COUNTRIES IN NEAR EAST SOUTH ASIA

Mr. NATCHER. Mr. Gaud, how many countries are you responsible for?

Mr. GAUD. There are 18 countries in my region, Mr. Natcher. We do not have aid programs with all of them. There is no economic aid program in Saudi Arabia, Lebanon, or Kuwait.

Mr. NATCHER. How many of these countries are in the same position as Iraq, from the standpoint of being classified as neutral countries?

Mr. GAUD. Countries in this region?

Mr. NATCHER. Yes.

Mr. GAUD. Neutral in the sense that they are not allied to us?

Mr. NATCHER. Yes; in that category.

Mr. GAUD. Afghanistan.

Mr. NATCHER. From the standpoint of their foreign policy generally now, Mr. Gaud.

Mr. GAUD. I would say Afghanistan, Ceylon, Cyprus. India considers herself nonalined. Iraq, Nepal, Syria, the United Arab Republic, and Yemen.

Mr. NATCHER. How do you justify an aid program really to a country that assumes a neutralist position from the standpoint of its foreign policy? What advantage is it, Mr. Gaud, from the standpoint of the free countries of the world? Take Iraq, for instance.

Mr. GAUD. I think as far as Iraq is concerned the events of the past few months have justified our continuing an aid program or an aid relationship with Iraq. A few months ago Iraq was controlled by a government which was decidedly pro-Communist. It is a country on which the Communists have spent a great deal of effort. The total amount of military assistance which the Communists have given to Iraq, for example, in the last few years is ———. Now, the Iraqis have overthrown that government which was so pro-Communist. They have killed and jailed countless Communists. They are driving the Communist Party underground. The Government's orientation has shifted very markedly. Now, query: If we had not maintained our relationship with Iraq, if we had not maintained our interest in Iraq, if we had not, as it were, held out a hand to Iraq, it would have been more difficult, it seems to me, for these things to have happened. We want to continue to be in a position, vis-a-vis a country such as Iraq, to encourage this sort of thing, to take advantage of it and not make these countries feel their only recourse is to turn to the bloc for everything they need.

Mr. PASSMAN. Would the gentleman yield?

Mr. NATCHER. I yield, Mr. Chairman.

Mr. PASSMAN. We have a $1 million aid program in Iraq. They were able to do all the things you have just enumerated without our assistance. Now, would that fact not indicate that they did not subscribe to the theory of communism? Why do we have to start pouring our money in to pay them for doing what they should do?

Mr. GAUD. We haven't been pouring our money into this country in recent years.

Mr. PASSMAN. Are you starting with a program now?

Mr. GAUD. No. Our program hasn't changed a bit. We have told the new Government——

Mr. PASSMAN. Do you have a program in Iraq?

Mr. GAUD. We have a program next year of $975,000.

Mr. PASSMAN. What is your increase over the previous year?

Mr. GAUD. The program is exactly the same. The increase enables us to take care of the engineering professors at the university.

Mr. PASSMAN. What is the increase, Mr. Gaud?

Mr. GAUD. It is an increase in the cost of exactly the same activities we are carrying on and have been carrying on. We are not expanding the activities.

This government which I described as more friendly to us has come to us and asked for various kinds of help. Now, we have told the Government of Iraq, Mr. Chairman, that they have a lot of resources from their oil. They feel that their resources have been rather sadly dissipated and rather foolishly spent by the Qasim government. They have come to us and asked for assistance. We have told them that they are sufficiently strong economically to be able to get along with help from the World Bank and the Export-Import Bank. There is

now in Iraq a mission from the Export-Import Bank to discuss what the Export-Import Bank can do to help them. IBRD is sending a mission out there. We have told them we will give them no more assistance than we are giving them now—except if they want us to find technicians to be hired at their expense we will try to help them find them. We are not embarking on an aid program to Iraq. We feel that Iraq can take care of her own development on ordinary terms, Export-Import Bank terms. But we do feel it is important to give these people a helping hand to the extent of helping them out in this way if we possibly can.

Mr. PASSMAN. But you are in on almost $1 million in fiscal year 1964, which is $175,000 above the amount for fiscal year 1963.

Mr. GAUD. That is right. No change in the program.

Mr. PASSMAN. Mr. Minshall?

LONGRUN EFFECT OF U.S. ASSISTANCE TO IRAQ

Mr. MINSHALL. I don't know if Mr. Gaud can make it any more clear to me but I still do not have firmed up in my own mind as to how the aid money we have given to Iraq has helped them swing to our side. Specifically, what have we done? Why does this change their mind? They were neutral and you said they came over to our side.

Mr. GAUD. I wouldn't go so far as to say that our money had been responsible for changing their minds.

Mr. MINSHALL. What was responsible, then? You said it wasn't our money. That is what we are talking about here in the AID appropriation bill——

Mr. GAUD. Why they overthrew the Qasim government?

Mr. MINSHALL. That's not responsive.

Mr. GAUD. Why did they do this? I don't think they did it because of our aid program.

Mr. MINSHALL. Why are we giving them aid money then?

Mr. GAUD. We are doing two things. One, we had some professors in the University of Baghdad. The other, we are bringing some of their people back here—people in Government and business and the like—to go to American universities and colleges. We think that by doing this for a relatively small cost we can teach them how things work in a democracy like ours. It is a long-range proposition. I suggested earlier that I thought this had paid off because some 10 members of the present government, people high in the present government, are people whom we brought back under this participating training. My purpose in raising that was to show that there are in the Government of Iraq a number of people who have been exposed to the educational methods over here, who have been exposed to the way we do things over here. I think in the long run this will have a beneficial effect and make the people of Iraq more interested in doing things in Western ways than in doing things in bloc ways.

Mr. MINSHALL. The 10 men you discussed previously with important positions in the Iraq Government today, how long were they in training in this country?

Mr. GAUD. These participants come over here for either 1 or 2 years as a rule.

Mr. MINSHALL. How long have they held their present positions?

Mr. GAUD. The government is brand new.

Mr. MINSHALL. Who is paying them; are they on the Iraqi Government payroll or are they getting AID money in any shape or form?

Mr. GAUD. In no conceivable way. They came over on a training program. They went back to Iraq 2 years ago, and some longer ago. Our aid ended when they went back to Iraq.

Mr. MINSHALL. That is all the questions I have, Mr. Chairman.

Mr. PASSMAN. The total amount of aid given to Iraq since the inception of the aid program has been $67.6 million and we have not missed a year since we went in there in 1946 or 1948, whether it has been a friendly or unfriendly government.

In the 18 countries of your area we have an aid program in 17 of them. There is only one country where we do not have an aid program, and I believe that country is Kuwait. I am speaking of all spigots.

Mr. GAUD. You are talking about military and economic?

Mr. PASSMAN. I am talking about aid, whether it comes out of one spigot or another. We have an aid program in 17 of the countries in your region, and Kuwait, the other one, is a very small country anyway and it is drowning in oil.

ISRAEL

I believe that you are requesting $20 million for development credits to Israel?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Do you have a Public Law 480 program for Israel in fiscal year 1964?

Mr. GAUD. We do. We estimate it at $21.7 million.

Mr. PASSMAN. This is a total of $41.7 million. How about military aid?

Mr. GAUD. No, sir.

Mr. PASSMAN. Is this Public Law 480 a local currency deal?

Mr. GAUD. Yes, it is a title I.

Mr. PASSMAN. How about the development credit, $20 million, what is that?

Mr. GAUD. Three and a half percent, 20 to 30 years.

Mr. PASSMAN. I have high praise for Israel. However, are they not perhaps in better shape to make us loans than we are to make loans to them?

Mr. GAUD. They are in pretty good shape compared to most of these countries.

Mr. PASSMAN. We are not presently borrowing any money from them, are we?

Mr. GAUD. Not to my knowledge.

Mr. PASSMAN. We are borrowing from several countries.

Mr. GAUD. We have told the Government of Israel we foresee a relatively early end of the development loans on concessional terms. Before too long we would expect Israel to get her development money from organizations such as the World Bank and the Export-Import Bank.

Mr. PASSMAN. And we have also told them that we are still going to give them $20 million this year plus Public Law 480 for a total of $41 million.

Mr. GAUD. Yes, sir; but I call to your attention that the $20 million compares with $45 million this past year. The $45 million was on 2-percent terms.

Mr. PASSMAN. It is still a substantial program—$45 million for fiscal year 1964.

Mr. GAUD. Yes, it is.

Mr. PASSMAN. What is the unliquidated credit figure for Israel?

Mr. GAUD. $66.9 million.

Mr. PASSMAN. And what is the figure for the total aid to Israel since the inception of this program?

Mr. GAUD. $963.5 million.

Mr. PASSMAN. That is total, military and all?

Mr. GAUD. Yes.

Mr. PASSMAN. How much of this $20 million in development credits is actually necessary, if any? I note, on page 29 of the justifications, that Israel has become increasingly capable of dealing with its economic problems. It says:

> Israel has become increasingly capable of dealing with its economic problems. The question of U.S. aid rests increasingly on political comparisons rather than on an economic evaluation.

This $41 million is a lot of money to dish out on political considerations; is it not?

Mr. GAUD. It is a lot of money, Mr. Chairman.

Mr. PASSMAN. I am pro-Israel. I own some Israel bonds and I clip my coupons every 6 months, but I do not want us to be foolish.

Israel has built up its gold and foreign exchange reserves by approximately $100 million per year in the past 3 years. Now, would that fact not indicate that there is no justification for a program in Israel of this type and scope?

Mr. GAUD. Our aid program to Israel is now going through a transitional phase, Mr. Chairman. It was not long ago, in fiscal 1962, when we were giving her loans at three-fourths of 1 percent. In 1963 that was increased to 2 percent, and in 1964 we will decrease the amount of the loans and step up the interest to 3½ percent. We are looking toward an elimination of aid to Israel.

Mr. PASSMAN. What rate of interest do they pay to other countries, 6 or 7 percent?

Mr. GAUD. I would not know. They get a great deal of assistance in the way of contributions from world Jewry and reparations payments from Germany. On these items they pay no interest at all.

Mr. PASSMAN. If they were worth $100 billion they would still get reparations. I am for them. They have carved out a nation for themselves and are going forward at great speed. But it does not seem to me that the facts justify our Nation in continuing an aid program at this level, especially since we will have to borrow the money for that purpose.

On the $21 million, Public Law 480, what will we get for it, local currency?

Mr. GAUD. Yes.

Mr. PASSMAN. Do we have Israel currency in excess of our needs currently?

Mr. GAUD. Yes.

UNITED STATES HOLDINGS OF ISRAEL CURRENCY

Mr. PASSMAN. How much Israel currency do we have?

Mr. GAUD. We have the equivalent of $54 million.

Mr. PASSMAN. What is our annual requirement?

Mr. GAUD. $7 million.

Mr. PASSMAN. You have about an 8-year supply on that basis?

Mr. GAUD. Yes.

Mr. PASSMAN. Is this readily convertible currency?

Mr. GAUD. No; not now. We hope the day will come when it will be.

Mr. PASSMAN. We all hope so.

Mr. GAUD. This one perhaps sooner than some of the others. We have been working on a number of various plans to try to utilize this currency. We have made local currency loans of Israeli currency to various institutions and organizations and these loans are to be repaid in dollars. We have found the Israelis cooperative in working with us on schemes and plans to use up this excess local currency.

Mr. PASSMAN. From the actual records and justifications, Israel is able to pay for those purchases. These are agricultural commodities. With this approximately $100 million foreign exchange reserves and with the gold position they have, they are in a position to pay for the Public Law 480 commodities, if they wanted to do so.

Mr. GAUD. They are in much better position than many countries receiving Public Law 480. That is certainly true.

Mr. PASSMAN. Are you able to use title IV of Public Law 480, rather than title I?

Mr. GAUD. Mr. Chairman, we have entered into a multiyear Public Law 480 arrangement, a 3-year arrangement.

Mr. PASSMAN. You entered into that arrangement so now you have to go through with it.

Mr. Natcher?

EXPECTED PHASING OUT OF AID TO ISRAEL ON CONCESSIONAL TERMS

Mr. NATCHER. Mr. Gaud, can you give me some idea as to when the restitution payments from West Germany will cease?

Mr. GAUD. I think I have that here. No; I do not have the latest figures, but in 1961 reparations and restitutions payments were $160 million. They are falling. In 1966 restitution payments will be $60 million. I will have to get the final year of payments. I do not have that now.

(The information follows:)

FINAL YEAR OF REPARATION AND RESTITUTION PAYMENTS, ISRAEL

There is no terminal date on restitution payments from West Germany. Large numbers of claimants are receiving lifetime pensions. The $60 million estimate for 1966 is expected to continue at that annual rate for a number of years.

Reparation payments will cease in 1965.

Mr. NATCHER. As I understand, the payment at this time is approximately $160 million?

Mr. GAUD. Just about.

Mr. NATCHER. After the reparation and restitution payments cease, does that mean we will have to go in and help bear this additional burden?

Mr. GAUD. No, in my judgment. Israel is growing at the rate of about 9½ percent per year. By 1966 I believe Israel will no longer need aid from us on concessional terms.

Mr. NATCHER. That is all.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. PASSMAN. Mr. Conte?

Mr. CONTE. We only have a very small program left here, do we not?

Mr. GAUD. $20 million for next year in development loans and the second installment of the Public Law 480 agreement, $21 million.

Mr. CONTE. That will wind it up next year?

Mr. GAUD. Yes; one more year.

Mr. CONTE. You are not negotiating a new Public Law 480 agreement?

Mr. GAUD. We are not now. I do not know what we will do when this one expires.

Mr. CONTE. Is it confidential as to what the loan is for?

Mr. GAUD. For next year?

Mr. CONTE. Yes.

Mr. GAUD. We have no loan applications from the Israelis at the moment. I do not know. This past year we made four loans to them. One was in the amount of $2.4 million for a desalinization plant. There was also an electric and powerplant project.

Mr. CONTE. Is that an atomic powerplant?

Mr. GAUD. No, sir. This is a oil-fired powerplant.

Another loan was in the amount of $4.4 million for a copper mining operation which is now going on. This was for an expansion.

There was the $17 million loan for a powerplant for the city of Haifa.

There was a $21.2 million loan for raw materials, spare parts, equipment, machinery.

These loans were all at 2 percent, 5-year grace period, 20 years.

Next year all our loans to Israel will be at 3½ percent for 20 years.

Mr. CONTE. With a grace period?

Mr. GAUD. Yes, sir; 5 years.

Mr. CONTE. Repayable in local currency?

Mr. GAUD. Repayable in hard dollars.

Mr. CONTE. That is about the best loan we have made, is it not?

INCREASING HARDNESS OF LOAN TERMS IN NEAR EAST, SOUTH ASIA COUNTRIES

Mr. GAUD. Of the nine countries we made loans to, there were four we made loans not on the three-fourths of 1 percent terms.

In Israel we made four loans at 2 percent, 20 years.

In Greece, we made two loans, one in the amount of $10 million at 2 percent, 25 years; and one in the amount of $21.6 million for a hydroelectric project at 3½ percent interest, 5-year grace, 20 years.

In Iran we made a 30-year $15 million loan to develop a port at 3 percent with a 7-year grace period.

In Cyprus we made one loan for $2.275 million for equipment to be used primarily in surface water investigation and control at 3 percent, 5-year grace period, 20 years.

Next year in Cyprus, Iran, Greece, and Israel the loans will be for 3½ percent for a period of 20 to 30 years and a grace period of 5 years.

Mr. CONTE. That is encouraging.

Did the chairman ask for a breakdown on Public Law 480?

Mr. GAUD. Yes. That is a title I proposition.

REQUEST FOR LOAN FUNDS IN ANTICIPATION OF ISRAELI LOAN APPLICATIONS

Mr. PASSMAN. It seems to me a bit out of order that you are requesting funds for any nation when you do not have the loan application. You are just assuming that during the year they will make application and if they do you will have the money.

Mr. GAUD. And if they do not we will not lend them money.

Mr. PASSMAN. That is getting to be pretty good. We do not know whether they will need the money but if we get an application we will dish it out.

Mr. GAUD. I do not think there is any doubt of their submitting loan applications, Mr. Chairman.

Mr. PASSMAN. Not under the terms we are giving them. I hope some day we will not have witnesses telling us, "We don't have applications but we will ask for the money so that in case we get applications we will have the money available so we can dish it out."

Mr. GAUD. That is not exactly the way I characterize my testimony.

Mr. PASSMAN. You said you did not have any applications?

Mr. GAUD. That is correct.

Mr. PASSMAN. And until you have applications you do not know if they should be approved or not.

Mr. Minshall?

Mr. CONTE. Will you yield?

Mr. MINSHALL. Sure.

Mr. CONTE. This $20 million you show in your justification book, do you have some determinations such as exist in India where you mentioned you were having some projects you were looking at? Do you have such projects here?

Mr. GAUD. For Israel?

Mr. CONTE. Yes.

Mr. GAUD. I do not think we have any specific projects. The Israelis traditionally do not give us any specific projects until the fall. That has been their custom. They have been talking to us about electric power expansion, they have been talking to us about expanding their telephone system, and there are a number of industrial loans they have discussed in general terms. Each year a part of our program for Israel consists of program loans covering commodities, and we are quite confident some part of the $20 million will go for that type of loan.

Mr. CONTE. Do they have a development plan such as India?

Mr. GAUD. They do not have a plan in the sense of a 5-year plan as India does, but they do a great deal of planning and handle their resources very carefully.

UNITED ARAB REPUBLIC-ISRAEL AIR INCIDENT

Mr. CONTE. Mr. Secretary, I heard in the news this morning that two airplanes from Egypt were in Israel and were fired upon and one was damaged.

Mr. LEE. I do not have any information on that. This is not confused with the American planes, is it?

Mr. CONTE. No. Two Migs from Egypt were fired upon and sent back, one in a critical condition. I was wondering if conditions were becoming tense again?

Mr. LEE. No; I do not have any information on that.

Mr. CONTE. I think it would be well to get that information. If Egypt is going to continue being adventurous out there, we perhaps should cut out aid to them.

Mr. LEE. I can insert in the record something about the news story about the two planes, but unless this is something divergent from the recent United Arab Republic thinking, I would say it is not an indication of increased belligerency on the part of the United Arab Republic.

Mr. CONTE. It was on a 7 o'clock news broadcast this morning.

(The information follows:)

UNITED ARAB REPUBIC-ISRAEL AIR INCIDENT

On July 23, 1963, United Arab Republic and Israel jet fighter aircraft met in brief combat over the frontier some 30 miles south of the Mediterranean. According to Israel sources, the incident occurred when two United Arab Republic MIG–17's penetrated Israel airspace and were repulsed by Israel fire, one Egyptian plane being hit. According to United Arab Republic sources, the incident was caused when four Israel Mysteres penetrated Egyptian airspace and were repulsed by two United Arab Republic MIG's, which shot down one of the trespassing planes.

The United Arab Republic has reportedly asked the U.N. Truce Supervisory Organization to investigate the alleged violation of United Arab Republic airspace by Israel aircraft.

Mr. MINSHALL. Off the record.

(Discussion off the record.)

Mr. GAUD. Mr. Chairman, may I say something off the record?

Mr. PASSMAN. Yes.

(Discussion off the record.)

CLASSIFICATION POLICY

Mr. MINSHALL. Mr. Gaud, I do not like to belabor what I consider overclassification of the reports we have before us, but again on Israel, on page 29 of the report, I notice that nearly three-fourths of it is in the gray area, meaning it is classified as confidential. I ask you to examine this page and tell me how much of that you think is necessary to be so classified.

Mr. GAUD. Again I can only give you a personal opinion.

Mr. MINSHALL. That is all I am asking for.

Mr. GAUD. You understand these things go through people who have different viewpoints and objectives than mine, but looking over it from the point of view of my Agency, it seems most of this could be declassified.

Mr. MINSHALL. Do you ever go over this to see what can be declassified?

Mr. GAUD. I personally do not, but people from my office do, yes. This has to be cleared by AID, the State Department, the Defense Department, and other agencies as well, and when you have that many people looking over it you have this result.

Mr. MINSHALL. I also serve on the Defense Committee and we get very sensitive information from "Top Secret" on down. Here the things that have been marked "Confidential," it seems to me, you could read most of it in the daily newspapers.

Mr. GAUD. I agree, and I think it is important for us to do everything we can to reduce the classification.

Mr. MINSHALL. Thank you very much.

Mr. CONTE. Look at the last paragraph on page 29 under "U.S. objectives and strategy." Read that over and see if there is anything in it that should be classified?

Mr. GAUD. I could not agree with you more.

Mr. CONTE. Would it not seem ridiculous if somebody put that in the record and read that loans were being moved to more conventional terms in 1963 and 1964?

Mr. MINSHALL. I do wish you would have a close look at future reports and see if some of this cannot be declassified.

Mr. GAUD. That is a fair request, Mr. Minshall, and we will do it.

Mr. MINSHALL. That is all.

JORDAN

Mr. PASSMAN. The 1964 estimate for Jordan is $541.5 million?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. What is the total amount of aid that has been given to Jordan since the inception of the aid program?

Mr. GAUD. $414.7 million.

Mr. PASSMAN. What amount of funds do you have unliquidated to the credit of Jordan as of June 30?

Mr. GAUD. $7,753,000.

Mr. PASSMAN. They draw it out pretty fast, do they not?

Mr. GAUD. Yes, sir. Most of the aid to Jordan is in the form of budget support and that is paid out immediately.

Mr. PASSMAN. What is the revenue of Jordan from its own resources?

Mr. GAUD. The total domestic revenues in 1962 were estimated at $52.5 million. However, that included a $10 million payment by Tapline as settlement on earnings in prior years. So the $52.5 million figure is not representative of the average year.

Mr. PASSMAN. Our aid program to the Central Government of Jordan is greater that the total of their own domestic revenues?

Mr. GAUD. If you exclude the Tapline payment, that is true.

Mr. PASSMAN. You would have to do that, to put it in the proper perspective, would you not?

Mr. GAUD. Yes.

HISTORICAL BACKGROUND OF JORDAN

Mr. PASSMAN. How long has Jordan been a nation?

Mr. GAUD. Since 1948.

Before 1948, Jerusalem was in Palestine. What is now Jordan includes what used to be called Transjordan and some land west of the Jordan River.

Mr. PASSMAN. Is Jordan an old nation?

Mr. GAUD. No; it is not really. Transjordan was carved out of the Ottoman empire. It is a relatively modern nation.

Jordan did not exist until after World War II.

ECONOMIC GROWTH IN JORDAN

Mr. PASSMAN. What kind of program are we getting into when our aid is greater than the amount they get from their own revenues?

Mr. GAUD. It is not a happy situation, but the truth is Jordan was created out of nothing, you might say, with very few resources. It has been growing at a surprising rate considering its lack of resources. Our aid has been decreased from year to year and in fact the growth of Jordan has been increasing. Between 1957–58 and 1961–62, for example, Jordan has had an average annual growth rate of GNP of 7 percent.

Mr. PASSMAN. Is that rate about double ours?

Mr. GAUD. It is a great deal more than ours. Of the countries in this region Israel has the highest growth rate of GNP with 9.5 percent and Jordan is next with 7 percent. They have a long way to go but they are making progress.

Mr. PASSMAN. Will they ever be able to exist without outside support?

Mr. GAUD. I think it is unlikely that they will. They have plans underway, and we are helping them. If their plan works out, they hope to get along without budget support by 1970. I personally think that is overoptimistic.

Mr. PASSMAN. Of course budget support is just one type of aid.

Mr. GAUD. That is correct.

Mr. PASSMAN. Other types of aid would serve the same purpose; it would not have to be budgetary support to be aid.

I am just wondering if this is the only country where we have gone in with an aid program that exceeds the amount of revenue they are able to get from their own people.

Mr. GAUD. I think that may be true of Laos.

Mr. PASSMAN. I would not be a bit surprised.

Mr. MONTOYA. Bolivia?

Mr. GAUD. I do not know.

Mr. PASSMAN. Anyway, they would fall in the category of the exception rather than the rule?

Mr. GAUD. I would call Jordan an exception.

Mr. PASSMAN. Have they built up considerable foreign exchange reserves?

Mr. GAUD. They have increased some.

Mr. PASSMAN. They increased their holdings to $113 million in 1962?

Mr. GAUD. This reflects their tapline payment.

Mr. PASSMAN. What is tapline?

Mr. GAUD. The tapline is the oil pipeline which crosses Jordan. Trans-Arabian Pipeline is the company which owns the pipeline.

Mr. PASSMAN. It is still revenue.

Mr. GAUD. They derive revenue from it.

Mr. PASSMAN. Does Jordan have gold reserves?

Mr. GAUD. They hold their money in sterling, Mr. Chairman.

Mr. PASSMAN. No gold?

Mr. GAUD. No gold.

Mr. PASSMAN. Have they bought any gold from us?

Mr. GAUD. The only figures I have here go back to 1959 and during that period Jordan has not bought any gold from us.

Mr. PASSMAN. 1959 is only 4 years ago.

Mr. GAUD. I have no earlier figures in the room, but it is doubtful that they bought gold since Jordan holds its foreign exchange reserves in sterling.

Mr. PASSMAN. Page 34 of the justifications indicates that Germany and Kuwait made some loans in the past year to Jordan. Would you know the amount?

Mr. GAUD. Yes. Germany gave a loan of $3.8 million to develop the port at Aqaba.

Mr. PASSMAN. On what terms?

Mr. GAUD. Three percent for 20 years.

The Kuwait loan is a $21 million loan for economic development. It is to apply to a phosphate plant and for the building of a storage project on the Yarmouk River. I do not have the terms of that loan.

Mr. PASSMAN. When you get the information, please place it in the record.

Mr. GAUD. Yes, sir.

(The information follows:)

TERMS AND AMOUNT OF KUWAITI LOAN TO JORDAN

Twenty-one million dollars at 3-percent interest per annum with repayment over 20 years and a 6-year grace period.

Mr. PASSMAN. Do you have a Public Law 480 program for Jordan for fiscal 1964?

Mr. GAUD. Yes, we do.

Mr. PASSMAN. In what amount?

Mr. GAUD. We have just agreed to provide title II for drought relief—about $5 million. It looked earlier in the year as though there would be no drought in Jordan and that their requirements would be minimal. It turned out to be a very severe drought year. There may be some additional requirements for 1964. These are now under consideration.

EAST GHOR IRRIGATION PROJECT

Mr. PASSMAN. You have obligated $10,347,000 for the East Ghor irrigation project, mentioned on page 177?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. And your estimate for 1964 is $1.5 million?

Mr. GAUD. Yes.

Mr. PASSMAN. How much additional money do you contemplate will be required in 1965 and 1966 to complete the project?

Mr. GAUD. The total estimated cost of the project is $17,347,000, which means that from 1964 out there is $5.5 million still to come.

Mr. PASSMAN. This is taking a little different turn than the ordinary project. On this project you are requesting for 1964 $1.5 million, then you would get about $5 million in the final year?

Mr. GAUD. Yes, and I will tell you why. Most of the expense to date has come in the construction of the main canal by which the water was taken from the Yarmouk River. This included a water tunnel, and the construction of a main, lined canal, the length of which is roughly 42 miles. We have very nearly finished the construction of the main canal and there now remains to be built certain distribution systems and additional side storage dams. The construction of the side storage dams will require most of the money.

Mr. PASSMAN. What will be the cost per acre to irrigate the 25,000 acres encompassed in this project? About $700 an acre?

Mr. GAUD. Roughly $700 an acre. This expense includes a great many more things than merely building the canal.

Mr. PASSMAN. I did not say it cost that to build the canal. The primary purpose is to irrigate 25,000 acres?

Mr. GAUD. Yes.

Mr. PASSMAN. And that amounts to about $700 an acre?

Mr. GAUD. That is correct. This land will be very productive. It will grow strawberries, fruit, vegetables, and the like. They can crop it all the year around. The average production of the land today is $42 per acre. They hope it will increase to $90 an acre the first year after this project is completed, and will rise to $250 an acre in a few years.

Mr. PASSMAN. That does not alter the fact it is primarily an irrigation project and the cost will be $700 per acre. I was in hopes you would wash up some gold with such an expenditure.

Mr. GAUD. $700 an acre—if you earn $250 a year, you pay for it in 3 years, which is not bad.

Mr. PASSMAN. That is an assumption. It is speculative.

What types of local expenses are necessary in connection with this project?

Mr. GAUD. Labor costs primarily.

Mr. PASSMAN. To do what?

Mr. GAUD. To build the canal and the primary distribution and drainage systems. There is labor and local materials.

Mr. PASSMAN. Do you have any local currency involved in this project?

Mr. GAUD. Yes. To date we have obligated $2,289,000 of local currency.

Mr. PASSMAN. That brings it up to close to $800 an acre; does it not?

Mr. GAUD. Yes.

Mr. PASSMAN. Let us stop before we get this thing too high.

Mr. GAUD. Have you seen that project, Mr. Chairman?

Mr. PASSMAN. No.

Mr. GAUD. You ought to see it if you have a chance to go to Jordan. I am quite serious. It is a very stimulating project and has a great future.

Mr. PASSMAN. It should be.

Mr. MINSHALL. I want the record to show Mr. Gaud said that with a big wide grin on his face.

Mr. GAUD. But I meant it. Do not be misled by my good spirits.

Mr. PASSMAN. Is this a big river?

Mr. GAUD. The Yarmouk? Yes.

EAST GHOR RURAL DEVELOPMENT

Mr. PASSMAN. The next project is the "East Ghor Rural Development," on page 178, for which $343,000 is requested.

Mr. GAUD. Yes.

Mr. PASSMAN. Did you justify the $550,000 when you appeared before the committee in fiscal year 1963?

Mr. GAUD. We did not. This project was started after the justifications.

Mr. PASSMAN. It is indicated that you obligated $550,000 and that you have unliquidated $550,000.

Mr. GAUD. In fact we obligated $285,000, Mr. Chairman.

Mr. PASSMAN. What do you do, print these books on contract?

Mr. GAUD. We print them in March and if there are changes after March——

Mr. PASSMAN. Anyway, you obligated $285,000?

Mr. GAUD. Yes.

Mr. PASSMAN. How much do you have unliquidated?

Mr. GAUD. I do not know. It cannot be more than $285,000.

Mr. PASSMAN. You have obligated $285,000 and you do not think the unliquidated could be over $285,000?

Mr. GAUD. Yes.

Mr. PASSMAN. Then the $343,000 requested for 1964 is just to fill up space?

Mr. GAUD. No, sir.

Mr. PASSMAN. For what purpose will you use it?

Mr. GAUD. We need that to carry us through the next fiscal year.

Mr. PASSMAN. How do you know that you do?

Mr. GAUD. Mr. Chairman, it is not that my Agency does not know. I just do not have the detailed information in the committee room, but it is to finance the equipment for two agricultural cooperatives and a marketing center, local labor and costs of constructing community buildings.

Mr. PASSMAN. The books here show $550,000 obligated and $550,000 unliquidated.

Mr. GAUD. That is correct.

Mr. PASSMAN. You revised that to obligated $285,000, and now you want $343,000 and you may or may not need it. Is that a fair statement?

Mr. GAUD. Yes, sir; but we think the project will move fast enough to need it.

Mr. PASSMAN. For what purpose was the $285,000 obligated?

Mr. GAUD. The purpose of this project is to supply technical assistance to the farmers living on the 2,000 farm units on the East Ghor project. This will establish two centers to provide rural services, marketing centers, health services, and so forth. There will be supervisors who will work among the farmers. It is a form of extension work.

Mr. PASSMAN. These people were farming on this land thousands of years before America was discovered?

Mr. GAUD. Yes; and not doing very well.

Mr. PASSMAN. When I was in Jerusalem they said, "This is one of the richest valleys in the world and we know more about farming than you do."

I wonder if these people could not think of some way to protect their land and get more production without our becoming involved?

Mr. GAUD. If you will go out and take a look at that project——

Mr. PASSMAN. I have been out there. I did not see this project but you said you were teaching 2,000 farmers how to do certain things.

Mr. GAUD. There are 2,000 farm units in this East Ghor area. This is to teach the farmers who will live in this area new methods of farming and to introduce crops they have not grown before, the idea being to grow crops for which there is a demand in that part of the world, which will increase the exports of Jordan and thereby decrease the need of budget support from us. It has a direct relation to the budget support we give to Jordan.

Mr. PASSMAN. Let us hope this does not cost $800 per acre.

Could you project the cost of this project to completion?

Mr. GAUD. Yes, sir; $1,128,000.

Mr. PASSMAN. I think we have already established that this is a project you did not justify last year?

Mr. GAUD. That is true.

Mr. PASSMAN. But the other irrigation project had been underway?

Mr. GAUD. Yes, sir.

TOURISM PROJECT

Mr. PASSMAN. You have a tourism project?

Mr. GAUD. Yes.

Mr. PASSMAN. For fiscal year 1964 you estimate $391,000. The purpose of this project is not to attract tourists from Jordan to the United States?

Mr. GAUD. No, sir; it is vice versa, and from Europe and all over the Middle East. Jordan, as you know, is very rich in Biblical history.

Mr. PASSMAN. Do you not think they might be able to teach us about how to attract tourists, rather than our teaching them?

Mr. GAUD. Not in Jordan. Jordan has virtually no facilities.

Mr. PASSMAN. Do you know any place in the world to which Christians flock in greater numbers than to Jerusalem?

Mr. GAUD. They go to Jerusalem during Holy Week but the purpose of this project is to expand the tourist trade in Jordan beyond Holy Week. The tourist trade in the past has been limited largely to a couple of weeks a year. There are many antiquities well worth visiting in Jordan.

Very few tourists go any place in Jordan but to Jerusalem.

Mr. PASSMAN. Where else are you going to get them to go?

Mr. GAUD. There are many other places, and as your question shows, many people have no notion about those other places.

Mr. PASSMAN. I think I have a notion.

What amount did you justify for this project last year?

Mr. GAUD. We did not justify this last year.

Mr. PASSMAN. What amount did you obligate?

Mr. GAUD. $343,000.

Mr. MINSHALL. Mr. Chairman, could I ask a question at this point?

Mr. PASSMAN. Certainly.

Mr. MINSHALL. What are we talking about in the way of tourists? How many have they had in the recent past and what do you propose to build it up to?

Mr. GAUD. In 1959 the tourist income in Jordan was $8 million.

Mr. MINSHALL. How many tourists?

Mr. GAUD. I do not have that.

(The information follows:)

Number of tourists—Jordan

1959	104,094	1962	209,042
1960	131,699	1963 (January–April)	120,399
1961	162,058		

Mr. MINSHALL. Are most of them from the United States?

Mr. GAUD. No, mostly from Europe. In 1959 the tourist income in Jordan was $8 million and that has been increased to $14 million. In 1967 they have hopes of building that tourist trade up to $30 million a year. If they do that, again you can see the direct relationship in terms of the budget support we will have to provide them.

Mr. PASSMAN. We do not have to provide this support to them, although we will do so.

Mr. GAUD. We have to provide it if we think it is important to keep this country going.

Mr. PASSMAN. Those people got along for thousands of years.

Mr. GAUD. I beg your pardon. The country did not exist thousands of years ago.

Mr. PASSMAN. Changing the name from Transjordan to Jordan does not change the environment.

Mr. MINSHALL. Who will loan the money to build the hotels in Jordan?

Mr. GAUD. A Pan American subsidiary is building one hotel in Jordan now. The Jordanian Government itself is building quite a number of smaller hotels and guest homes. They are a long way from having the facilities they need, but they have been increasing their income from tourists considerably.

Mr. MINSHALL. You have not given the number of tourists we are talking about.

Mr. GAUD. I do not have the figure. I started to give you the employment figure. About 2,500 people are employed in the tourist business, and they expect to increase that to 10,000 or 15,000 in the next 3 years. They are putting an emphasis on this.

Mr. PASSMAN. The President the other day, according to an article I read in the newspaper, said we are concerned about how to increase our attraction to tourist to come here from abroad.

Mr. GAUD. Yes, sir.

Mr. PASSMAN. I wonder if we should not work on our own tourism problem first?

Mr. GAUD. We are working on both.

Mr. PASSMAN. We do not have a system that brings the tourists here we think we are entitled to, and I think we are worrying about the number of dollars American tourists spend abroad.

You obligated $343,000 on this project?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. How much did you spend?

Mr. GAUD. Our estimate of unliquidated as of June 30 is $301,000.

Mr. PASSMAN. Why do you want to increase the amount?

Mr. GAUD. As I said a while ago, this project did not start until after we had finished our justification last year. It will include 1 technical adviser, 15 participants, and we will help them establish a hotel training school which they themselves will build. There is some construction of rest stations, setting up of site markers and restoring antiquities.

Mr. PASSMAN. With $301,000 unliquidated out of $343,000 obligated, why do you need $391,000 for fiscal 1964?

Mr. GAUD. Most of this, $298,000, is for local expenses.

Mr. PASSMAN. For what purposes was the $343,000 obligated?

Mr. GAUD. The same types of expenses.

Mr. PASSMAN. How many people are involved?

Mr. GAUD. There is 1 technician and 15 participants.

Mr. PASSMAN. What is the cost of the technician?

Mr. GAUD. $21,000.

Mr. PASSMAN. And the participants?

Mr. GAUD. Fifteen participants for a total of $55,000.

Mr. PASSMAN. We want to know the purposes for which you obligated the $343,000.

Mr. GAUD. I will have to send a cable to Jordan to find out the details.

Mr. PASSMAN. Write them, please.

(The information follows:)

Fiscal year 1963 obligations under tourism project—Jordan

	Thousands
Technicians: 1 tourism adviser	$25
Participants: 15 participants in fields of archeology, tourist officer practices, and hotel training (10 to study in Beirut)	40
Contract services: Contract team of 3 consultants for a 12-month period to provide technical advice and assistance to existing Jordan hotels in the improvement and management of services, and advisory services to Jordan Tourism Authority in developing curriculum and establishing a hotel employees' training school	75
Commodities: Photo and graphic equipment and supplies; film prints; and 2 project passenger vehicles	54
Total	149
Local expenses:	
Constructing new resthouses, and finishing, decorating, furnishing, and landscaping 6 existing resthouses	117
Erection of route and site markers	10
Books, training materials, and teachers' salary to assist in the establishment and operation of a tourist police and guide training school	19
Fuel, oil, and maintenance of project vehicles	2
Services of 1 Jordanian surveyor-draftsman	1
Total obligations	343

Mr. PASSMAN. If we canceled it out you could obligate it after we went home and still be within the law?

Mr. GAUD. Within the law, yes.

Mr. PASSMAN. It is a fact that we are trying to find out ways of attracting tourists to America; is it not?

Mr. GAUD. Yes.

Mr. PASSMAN. If we succeed in showing these people how to set up their tourism program, maybe we can bring the same people here to work on ours.

How much in development grant funds and Public Law 480 funds have been spent in restoring historical sites in Jordan?

Mr. GAUD. This is the only project we have that relates to that, Mr. Chairman.

Mr. PASSMAN. Thank you.

How about the Public Law 480 figure?

Mr. GAUD. In this project we speak of there is $733,000 of local currency.

Mr. PASSMAN. Is this our local currency?

Mr. GAUD. That is the country-owned local currency.

Mr. PASSMAN. Originally ours, generated from dollars?

Mr. GAUD. This was generated by title II of Public Law 480.

Mr. PASSMAN. So it took U.S. dollars to buy the $730,000. We have to add that to the $343,000. Now let us project it to completion.

Mr. GAUD. The projection is $865,000 which does not include the local currency.

Mr. PASSMAN. How much do you plan to spend to establish a hotel training school?

Mr. GAUD. There is only technical assistance for it.

Mr. PASSMAN. Is it a Hilton program?

Mr. GAUD. No, sir; it is Pan American that is in this country, but we are not helping Pan American.

HIGHWAY ORGANIZATION AND MANAGEMENT PROJECT

Mr. PASSMAN. Can you tell us where you justified the highway organization and management project, on page 184?

Mr. GAUD. This project had been a part of the project which appears on page 183 and was broken out from that.

Mr. PASSMAN. You have created two projects out of one?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. You did not justify the money here as such, did you?

Mr. GAUD. I would think not.

Mr. PASSMAN. This is supposed to be looser than an American program because it is for our foreign friends.

Can you project the cost of this project to completion?

Mr. GAUD. $477,000.

Mr. PASSMAN. That is on the project you did not justify last year?

Mr. GAUD. Yes, sir.

HUMAN RESOURCES DEVELOPMENT PROJECT

Mr. PASSMAN. What type of local expenses do you anticipate will cost $449,000 in fiscal year 1964 under the human resources development project?

Mr. GAUD. This is the cost of furniture, furnishings, equipment, and fixtures that will go into school buildings and the school buildings themselves to the extent that we contribute toward them.

PUBLIC ADMINISTRATION PROJECT

Mr. PASSMAN. What is the average annual salary of the six U.S. technicians under the public administration project, on page 187?

Mr. GAUD. I am worried about that one.

Mr. PASSMAN. So am I.

Mr. GAUD. I want to check it. It looks too high.

Mr. PASSMAN. It surely does.

TECHNICAL SUPPORT PROJECT

Why do you need 93 local employees, who are funded under the technical support project?

Mr. GAUD. Those local employees are drivers, the maintenance men, clerks.

Mr. PASSMAN. What do they drive?

Mr. GAUD. Automobiles, trucks, jeeps; they are maintenance men, they are clerks.

Mr. PASSMAN. Do the technical aid people get a car and a driver?

Mr. GAUD. No, not each one. We have a motor pool in Jordan. The mission director has a car, but it is mainly a matter of a motor pool servicing the staff.

Mr. PASSMAN. How many technicians do we have in Jordan?

Mr. GAUD. We have 59.

Mr. PASSMAN. That gives them 1½ local employees per technician.

Mr. GAUD. Besides the 59 technicians; we have 15 administrative people. That is a total of 74 people roughly in Jordan at the present time.

ARAB DEVELOPMENT SOCIETY PROJECT

Mr. PASSMAN. Is the Arab Development Society project in Tel Aviv?

Mr. GAUD. That is located at the head of the Dead Sea. I have forgotten the name of the town. It is near Jericho.

Mr. PASSMAN. That is the Jericho of biblical times?

Mr. GAUD. Yes, sir. That is the one where the walls fell down.

Mr. PASSMAN. When did you justify that project to the committee?

Mr. GAUD. This project is one that has been going—it was initiated in fiscal year 1959 and we have been obligating moneys to that project ever since.

Mr. PASSMAN. What is the project supposed to accomplish, Mr. Gaud? What are we doing?

Mr. GAUD. We are providing $75,000 a year to train 100 boys at the cost of $750 a boy for a 12-month period in school. It is in a school in Jericho.

Mr. PASSMAN. Are these boys getting $750 a year?

Mr. GAUD. No, sir. The Arab Development Society runs the school. That is the total cost of housing these boys, feeding them, clothing them in some cases, and educating them for a year.

Mr. PASSMAN. These are Jordanians they are training?

Mr. GAUD. Yes, they are.

Mr. PASSMAN. Who thought that one up?

Mr. GAUD. The Jordanians.

Mr. PASSMAN. They only asked for just a little consideration on our part and that is to finance it?

Mr. GAUD. That is correct.

Mr. ANDREWS. How old is that program, Mr. Gaud?

Mr. GAUD. Since 1959, Mr. Andrews. Off the record.

(Discussion off the record.)

Mr. PASSMAN. How much did you obligate for this project last year?

Mr. GAUD. $75,000.

Mr. PASSMAN. Tell us where to find it in the justifications last year.

Mr. GAUD. I haven't got last year's book here. Did we have pages for items under $100,000 last year?

Mr. WHITE. It is under education.

Mr. GAUD. This one has been standing on its own feet for a number of years.

BREAKOUT OF GRANT PROJECTS

Mr. PASSMAN. There has been a lot of breaking out going on.

I believe we have agreed that in the future any project for over $1 we are going to have a listing in the book as a project. Did you ever figure out the number of projects for us, Mr. Comptroller?

Mr. TENNANT. I think you asked me that question last night and gave me until tomorrow to develop the information.

We have someone working on it, sir.

Mr. PASSMAN. Take your time. The information will be interesting.

Mr. Gary?

POLITICAL SITUATION IN JORDAN

Mr. GARY. What is the situation politically in Jordan now?

Mr. GAUD. It is reasonably good. You might say they have had a bad winter. There was a change of government in January 1962, when the Wasfi Telv government took over. It was a progressive government of relatively young men and they were doing a great deal in terms of the internal problems of Jordan. That government fell in February 1963. A new government came into office headed by Mr. Samir Rifai, who had been Prime Minister of Jordan several times in the past; a much older man. His government lasted about 3 weeks. It coincided with the revolutions in Iraq and in Syria. A few weeks ago, there were elections in Jordan and we now have a new government headed by Sharif Hussein Nassir, who is an uncle of the King.

It looked for a time this winter as though Jordan was in for a great deal of trouble, first because of her early involvement in the situation

in Yemen from which she withdrew before too long and more importantly later on when the announcement of unity between the United Arab Republic, Syria, and Iraq took place. If that had gone more successfully than it has, Jordan would have been under a great deal of pressure. In fact, as we all know, that marriage is not exactly prospering and I would say that the chances for working out a successful union are very slim. This will relieve Jordan of a great deal of pressure and our estimate is that the King's position at the moment is strong.

Mr. GARY. King Hussein?

Mr. GAUD. Yes, sir. Do you want to add anything to that, Mr. Lee, if you will forgive me, Mr. Gary?

Mr. LEE. That sounds like a good sketch.

Mr. GARY. I heard on television, I think it was last night, that Nasser had announced that there was no chance of developing the Arab Union as long as Syria was——

Mr. GAUD. As long as Syria is dominated by the Ba'ath Party.

Mr. GARY. We haven't gotten into Syria but what is that situation? Does it have any effect on Jordan?

Mr. GAUD. It does.

Mr. GARY. To what extent?

Mr. GAUD. Although the Ba'ath Party believes in Arab unity, it does not believe in the kind of Arab unity that Mr. Nasser is interested in. As long as the Ba'ath Party is in control in Syria, according to Nasser, you are not going to have a union between those countries. As long as you do not have union between those countries Jordan is under considerably less pressure than she would otherwise be.

Mr. GARY. Jordan never has gone into the Arab Union?

Mr. GAUD. No, sir. There are some Ba'athists in Jordan but not a great many. They are not very powerful. Of course there are some people in Jordan as there are everywhere in the Arab world who support Mr. Nasser's concept of Arab Union.

Mr. GARY. Hussein is still free from Nasser influence?

Mr. GAUD. Completely.

ECONOMIC SITUATION OF JORDAN

Mr. GARY. What is the source of their income in Jordan?

Mr. GAUD. The Government's income?

Mr. GARY. Yes.

Mr. GAUD. It is customs duties more than anything else. Their excise tax take is fairly large, and they receive a regular payment from tapline. The country earned $12 million on tourism in 1961; they earned $4.3 million on the export of phosphates. They did not earn but received $19.6 million in remittance from Jordanians who are outside the country. Their exports remain small.

The things that we have been working on in the AID program which we hope will increase the Government's income are four, really. One is the phosphates and potash deposits which could be exported and earn foreign exchange; another is tourism, which both we and they think can be built up: the third is this irrigated agriculture that we were discussing in the East Ghor project where there is very rich land which is capable of producing high-value crops for export; and

the fourth is improvement in Government budgeting and administration.

Mr. GARY. The land I saw in Jordan in traveling by auto from Amman to Jerusalem you could not irrigate to save your life.

Mr. GAUD. That is right.

Mr. GARY. We have all heard about the man who went down from Jerusalem to Jericho and fell among thieves. If the land then was like it is now the thieves probably had to steal in order to live.

Mr. GAUD. I think your description of that part of the country is accurate. One of the astonishing things about Jordan to me is that it has been arid, and dry for very many years and yet there is a considerable part of Jordan which was completely forested until about the time of World War I. The Turks then controlled that part of the world and when the Turks cut down these forests for wood for their locomotives, they literally denuded a large part of what is now Jordan. The part I am talking about that we are trying to irrigate is in the northwest part of the country along the Jordan River, the Jordan Valley. It is a matter of taking the water out of the river and extending it to the acreage on the side of the river. This is being done on the Israeli side, it is also being done now on the Jordanian side. It is perfectly astonishing what crops that soil will grow if you get water to it.

Mr. GARY. The Lebanese, as I remember, said that when Abraham set out to discover the promised land he was really looking for the Lebanese Valley and when he reached the Jordan Valley he did not know the difference. They say he didn't go far enough.

Mr. GAUD. Yes. They will show you the promontory in Jordan that he stood on when he saw the promised land.

Mr. GARY. The Lebanese Valley is a beautiful and very rich and fertile valley.

Mr. GAUD. Yes, it is.

Mr. GARY. They are producing a tremendous lot in agriculture; fruits and livestock but I couldn't see anything in Jordan at all. It looked to me like it was the most barren ground that I have ever seen anywhere, particularly the land along the Jericho Road.

Mr. GAUD. If you traveled the Jericho Road at the right season it would be all green, if they have a good year of rain. They can grow enough wheat for forage for their sheep and their goats.

Mr. GARY. I wondered how they fed their sheep and goats. I could not see what they lived on.

Mr. GAUD. In the spring, depending on whether it is January or whether it is March, whether there has been rain or whether there has not, that part of the world is completely unrecognizable.

Mr. GARY. I am glad to hear that. I did not see how they could produce anything.

Mr. GAUD. There they can grow only for forage. They cannot grow for human consumption. This has to be done near the river where there is more irrigation.

Mr. GARY. Can they raise enough food to feed their own people?

Mr. GAUD. In the past Jordan has not been too short of food. In the last 4 or 5 years, however, she has had a succession of drought years and that is why we have had a Public Law 480 program there involving mostly wheat and other food grains. I beg pardon. Mr.

White calls to my attention the fact she does import other types of food as well.

Mr. GARY. Where did those grapes come from that Joshua brought back that it took two men to hold a bunch of them? They carried them on poles that were carried on the shoulders of two men.

Mr. GAUD. You have me there. I don't know.

Mr. GARY. You read the Bible and when they came back to Moses they brought these grapes out of the land. They must have gotten over into the Lebanese Valley. I couldn't see any place in Jordan that could raise them.

Mr. PASSMAN. There is a very fertile valley in Jordan; is there not?

Mr. GAUD. The Yarmouck and Jordan; that is correct.

Mr. PASSMAN. They will tell you it is one of the richest valleys in the world.

Mr. GAUD. Yes.

NEAR EAST AND WORLDWIDE WATER PROBLEM

Mr. GARY. Isn't there some story connected with it, that there has been a change in the fertility of that area since biblical days?

Mr. GAUD. That is true of parts of that region. I do not know to what extent it is true of Jordan, except as I say, I know that some of it used to be forested and is no longer forested. Of course, sir, another thing in that part of the world which we tend to forget; there is water under the surface which has not been tapped in the last few hundreds of years.

Some of the tourist attractions in Jordan are cities which are now completely gone to ruins. Nobody lives in them at all. Once upon a time they were large cities. There is one I am thinking of, for example, which was a Roman city which had two large amphitheaters in it. Many thousands of people lived in it. Today there is almost no vegetation around it at all. To some extent Romans brought water by aqueducts but also there are parts of the world out there where there used to be plenty of water but the water level was reduced to the point where they could not bring it up under their existing know-how. So those parts went to ruin for lack of water. In the western desert, in Egypt, for example, we have two teams of well drillers working on a water project there. They have found—this is another part of the world in which there are ruins of ancient cities and now nothing but sand. There used to be plenty of water but the water table dropped to the point where they did not know how to bring it up. We are now putting in wells with the aid of the Egyptians, and training Egyptian teams to drill wells. They are bringing in artesian wells. There is no lack of water.

Our people tell us—these are Oklahoma well drillers who are working out there—our people tell us that under that western desert of the United Arab Republic is one of the largest reservoirs of water that is known in the entire world. Yet the surface of the land is just the arid sort of thing you were speaking of awhile ago that you had seen in Jordan. So that this is one of the changes that has taken place over the years. People lost the capacity to draw the water up.

Now we are trying to bring this skill back to them. It will change the face of the earth in many places.

Mr. ANDREWS. Will the gentleman yield?

Mr. GARY. Yes.

Mr. ANDREWS. Mr. Gaud, would you say water is one of the biggest problems in that area?

Mr. GAUD. It certainly is.

Mr. ANDREWS. If you can find ways and means of providing an abundant supply of water the whole area will be changed?

Mr. GAUD. Very true, sir.

Mr. ANDREWS. About how long will it take to do that?

Mr. GAUD. It will take a number of years.

Mr. GARY. Water is one of the great world problems today, is it not?

Mr. GAUD. Yes, it is, all over the world, Mr. Gary.

Mr. GARY. And becoming more so all the time. That is the reason we are spending millions of dollars trying to convert sea water into fresh water.

Mr. GAUD. That is right.

Mr. GARY. Because that is really one of the great problems that everybody recognizes we will have to face in the future.

Mr. GAUD. That is right.

Mr. PASSMAN. Will the gentleman yield?

Mr. GARY. I will be glad to yield.

Mr. PASSMAN. It is also a major problem in the United States.

Mr. GAUD. Water?

Mr. PASSMAN. Yes.

Some day I hope to see a reasonable water conservation law in America. If we do not get it we might be in about the same fix those people are in out there.

DEVELOPMENT OF TOURISM IN JORDAN

Mr. GARY. Is your tourist trade going to center around Jerusalem?

Mr. GAUD. A great deal of it will for obvious reasons, and that will, I suppose, continue to be the main point of interest in Jordan. But there are also quite a number of cities, old Roman cities, cities that predate the Roman days, and other biblical points of interests such as Jericho and the like, which also would probably be good tourist attractions.

Mr. GARY. Of course most of the Holy Land is on the Jordan side. What is the situation now with respect to getting through the gate from Jordan to Jerusalem or vice versa?

Mr. GAUD. It is a very difficult thing to go through the gate. You have to make prior arrangements. You are talking about the local people or just the tourists?

Mr. GARY. No, I mean for the local people and tourists.

Mr. GAUD. I am right, Mr. Lee, for local people they just do not go through at all, do they?

Mr. LEE. That is my understanding.

Mr. GAUD. That is my understanding, Mr. Gary. As far as tourists are concerned this can be arranged with notification. We have an American consul on the line at the gate which is under U.N. control. This can be arranged provided you give notice in advance. But the local people cannot move back and forth at all as I understand it.

UNUSED ISRAELI-BUILT HOSPITAL

Mr. GARY. There is in Jordan just across the line from Israel a modern hospital that was built by Israel, and the Jordanians closed it down.

Israel was not permitted to use it, but the Jordanians did permit a certain number of guards to pass through periodically to guard the building. Is that situation still in existence?

Mr. GAUD. I do not know about that. Do you?

Mr. LEE. No; I do not. I would be happy to look into it.

(The information follows:)

HADASSAH HOSPITAL ON MOUNT SCOPUS

According to the Israel-Jordan armistice agreement of 1949, the Hadassah Hospital was left within the Mount Scopus enclave. The enclave is wholly surrounded by de factor Jordanian territory, and lies about half a mile from de facto Israel territory (the Israel sector of Jerusalem). The Hadassah Hospital is not now being used as a hospital, and has not been so used since the Arab-Israel War of 1948–49. Under an arrangement worked out between the Jordanians and the Israelis, under the auspices of the United Nations Truce Supervisory Organization (UNTSO), the Israelis maintain guards and custodial personnel at the Hadassah Hospital. A convoy escorted by UNTSO personnel proceeds every fortnight from the Israel sector of Jerusalem via the Mandelbaum Gate, through de facto Jordanian territory, and then up to Mount Scopus with Israel personnel to replace those who have been on duty at Mount Scopus during the previous fortnight. The returning UNTSO convoy returns to de facto Israel territory the same day, carrying the Israel guards and custodial personnel who have been on duty on Mount Scopus during the preceding fortnight.

The Israelis have built a new Hadassah Hospital on their side of the armistice line in Jerusalem. The new hospital is much grander and more modern than the old Hadassah Hospital located on Scopus. Although it is regrettable that there are unused hospital facilities on Mount Scopus, attitudes of hostility between Israel and Jordan are such that there seems little likelihood any mutually acceptable arrangement will be worked out under which the unused hospital facilities could be used.

Mr. GARY. The hospital was not being used at all. It was a modern hospital built by Israel. It was within the Israel line when built but there was some change in the line. This happened to be just over the line in Jordan and the Jordanians would not permit Israel to use it at all.

Mr. GAUD. I am not familiar with that.

Mr. GARY. The building was standing there, a perfectly good building. They kept a small number of people on guard, which they were permitted to change at intervals. That was just 2 or 3 years ago when we were over there. I saw the hospital from a distance. I suppose the feeling between the two countries is just about as keen as ever.

Mr. GAUD. It is very intense. Yet as Mr. Talbot said the other day, it is a quieter border between Jordan and Israel than it is between Syria and Israel or between the United Arab Republic and Israel.

Mr. GARY. They have not had many incidents along the border recently.

Mr. GAUD. They are rather rare.

JORDANIAN INCOME

Mr. GARY. Where does the major income of the people come from?

Mr. GAUD. The Jordanians themselves?

Mr. GARY. Yes.

Mr. GAUD. I suppose what you might call the average Jordanian is a nomad whose income comes from his sheep or goats and from a little bit of farming. They are building up a limited amount of local industry, light industry. They have no great reputation or history as traders. They trade through the Lebanese primarily rather than directly themselves. They are small farmers.

Mr. GARY. In Lebanon we found they were building up a poultry industry when we were over there.

Mr. GAUD. Yes, sir.

Mr. GARY. You do not get any of that in Jordan, do you?

Mr. GAUD. Yes. Efforts are being made in Jordan to build up the poultry industry. The Near East Foundation has a demonstration poultry farm which I visited there. They are doing this with poultry, they are doing the same thing with goats to try to improve the breed of goats. One of the interesting things about this east Ghor project is that one of the jobs these technicians are supposed to do is to introduce into that part of Jordan a different type of goat, which will give a lot more milk, which will have better hair, and will be much more productive.

Mr. GARY. The Lebanese sent one of their agricultural men over to this country. He studied the poultry industry over here and he went back and established some very excellent poultry farms. We saw one or two of them. They compared favorably with our poultry farms in this country. They burned the lights to keep the hens laying at night, and had other modern improvements. He apparently was doing a very good job there. They told us at that time that the eggs from these farms were called point 4 eggs and that they sold at a premium on the local market. They said the people would ask for point 4 eggs and paid premium prices for them. It looked like a very good project.

Mr. GAUD. When I went through with the driver from the Embassy, the driver of the mission director—he had been with the mission for a number of years—he would point to an irrigation canal and say, "That is a point 4 canal" or he would point to a farm and say, "That is a point 4 demonstration farm." The name has lingered on, longer there than it has here.

Mr. GARY. That is right.

(Discussion off the record.)

Mr. GARY. That is all, Mr. Chairman.

TAKING OVER OF POULTRY PROJECT IN INDIA BY PEACE CORPS

Mr. PASSMAN. You had a poultry program going in India I believe?

Mr. GAUD. That is true.

Mr. PASSMAN. It was a project in which AID took quite a bit of pride, was it not?

Mr. GAUD. The mission director thinks that is a very useful project, that is correct.

Mr. PASSMAN. Did you not have a progressive project you were somewhat proud of, the poultry project in India? Would you say it was a successful project?

Mr. GAUD. In the last year or two.

Mr. PASSMAN. Yes.

Mr. GAUD. Yes, that is right. We consider it a successful project.

Mr. PASSMAN. Did the Peace Corps insist on taking it over when they got out there?

Mr. GAUD. I do not think so.

Mr. PASSMAN. We have found that AID has had to divide projects with the Peace Corps. I believe in Liberia, they had a very good project going. The Peace Corps moved in on them, and they turned it over to the Peace Corps.

Mr. GAUD. Mr. White says the Peace Corps people in India are doing some work in the poultry field.

Mr. PASSMAN. You have just about turned that project over to them, have you not?

Mr. GAUD. Ours is still in existence.

Mr. PASSMAN. Let us find out about that matter. Please get the information for the record.

(The information follows:)

ROLES OF AID AND PEACE CORPS IN POULTRY PROJECTS IN INDIA

The AID poultry project has not been turned over to the Peace Corps. Poultry assistance now involves the work of two AID technicians, a poultry adviser and a processing and marketing specialist. Peace Corps volunteers have been effectively active in disseminating improved poultry techniques largely based upon developmental work by AID technicians on poultry housing, low-cost feeds, protection against disease, and production and marketing cooperative organization. The Peace Corps poultry workers have been requested by the Government of India to permit a more rapid spread of these improved techniques to the village areas in which the volunteers are assigned. AID technicians and the Peace Corps volunteers work cooperatively; volunteers frequently consult the much more experienced AID technicians on specific problems encountered in the field.

AID FINANCING OF HOTELS IN NEAR EAST AND SOUTH ASIA

Mr. ANDREWS. Are you financing any hotels in this area?

Mr. GAUD. In Jordan, no, sir; we are not.

Mr. ANDREWS. You mentioned a hotel a few minutes ago.

Mr. GAUD. A subsidiary of Pan American called Intercontinental Hotels, Inc.

Mr. ANDREWS. Where is that?

Mr. GAUD. In Jerusalem. They have also put one up in Lebanon and in various other parts of the world. We have made Cooley loans to hotels in Pakistan, also put up by this subsidiary of Pan American, but I cannot think of any in the Arab-Israeli world that we have put any money in.

Mr. ANDREWS. One was built with Cooley funds?

Mr. GAUD. Partially; we have made loans to this subsidiary of Pan American, Cooley loans for a hotel in Karachi and more recently another one for a hotel in Dacca, which is the capital of east Pakistan. The Export-Import Bank has made dollar loans to both of these hotels.

Mr. ANDREWS. Describe briefly how a hotel is financed out of any of our AID programs?

Mr. GAUD. I can speak only for my region. These are the only instances that I know of where we financed a hotel. The Cooley amendment to Public Law 480, as you know, provides for making loans to American corporations or affiliates of American corporations doing

business abroad. Now Pan American has formed this subsidiary, Intercontinental Hotel Corp., which is in business all over the world. They have come to us to borrow a part of the local costs, rupee costs, that will be necessary to build their hotels and we have made loans to them on regular commercial terms.

Mr. ANDREWS. Repayable in dollars?

Mr. GAUD. No. These are loans of rupees repayable in rupees. Let me get my notes. One of these loans for the construction of the hotel in Karachi was for 2,759,000 rupees, payable in rupees. This was an increase of a Cooley loan approved by the Export-Import Bank when it handled the program. The dollar equivalent is $583,000. That loan was made in June 1962. Then in March 1963 we made a rupee loan, the equivalent of $940,000 for the construction of the hotel in Dacca.

Mr. ANDREWS. That is a different one?

Mr. GAUD. Yes. A corporation is building these hotels. The capital is owned partly by Pan-Am and partly by individuals in Pakistan.

Mr. ANDREWS. Privately owned?

Mr. GAUD. Yes.

Mr. ANDREWS. These loans that you made are repayable in local currencies?

Mr. GAUD. They are; yes, sir.

Mr. ANDREWS. To AID?

Mr. GAUD. When Cooley loans are repaid, the money goes to the U.S. Treasury, not to us.

Mr. ANDREWS. In dollars?

Mr. GAUD. No; local currency.

Mr. ANDREWS. Are they first-class hotels?

Mr. GAUD. Yes; they are. The purpose of these two hotels is, again, to promote the tourist trade.

Mr. ANDREWS. Do you know whether or not they are making money?

Mr. GAUD. The first one, the hotel in Karachi, is not finished yet and the one in Dacca, I do not believe they have broken ground unless they have done it within the last month or so.

Mr. ANDREWS. You do not have any hotels in your area that we have in any way helped finance that are operating?

Mr. GAUD. No. There is a great shortage of first-class hotels. When we got the loan application and studied it, we found there was a very great shortage of proper facilities, hotel facilities in both of these cities and I just do not see how they can miss.

Mr. ANDREWS. That is all, Mr. Chairman.

Mr. MINSHALL. Would you yield before you leave the hotel subject?

Mr. PASSMAN. Yes.

Mr. MINSHALL. Are these the only hotels that your region has been concerned with?

Mr. GAUD. In my region, yes.

Mr. ANDREWS. Karachi and Dacca?

Mr. GAUD. Yes; but so there will be no misunderstanding, I am told that the Pan-Am subsidiary is going to ask us for loans for three other hotels, one in Peshawar, Pakistan, one in Lahore, Pakistan. They have also talked to us about putting one into Nepal.

Mr. MINSHALL. Who talked to you about it?

Mr. GAUD. The Intercontinental Hotels Corp., a subsidiary of Pan Am.

Mr. MINSHALL. I wanted to make sure it is the same outfit.

Mr. GAUD. Yes, it is. Pan American had a contract, a technical assistance contract to build up the Pakistan International Airways, which is now a very successful airline, entirely on its own. They have had connections with Pakistan for quite a number of years and fly to Pakistan. From their standpoint, these things are useful in terms of taking care of their passengers. From the standpoint of Pakistan, these hotels are very useful as earners of foreign exchange from tourists and businessmen.

Mr. MINSHALL. They constructed a hotel at Karachi, I believe.

Mr. GAUD. They are bulding a hotel there now; yes. It is not finished yet.

Mr. MINSHALL. They had a temporary hotel there several years ago.

Mr. GAUD. Pan Am?

Mr. MINSHALL. Yes.

Mr. GAUD. I do not know.

Mr. ANDREWS. Do you know anything about the percentage of financing that AID does and the percentage done by the local government or by Pan Am or does the local government participate?

Mr. GAUD. We have made the loans I talked about. I don't have the detailed information here.

Mr. ANDREWS. You make the loan to the hotel company?

Mr. GAUD. Yes, sir.

Mr. ANDREWS. Do you take a mortgage?

Mr. GAUD. No; we do not. Sometimes with our Cooley loans we require a guarantee from a local bank and that is the case for these two loans. But ordinarily we do not make a Cooley loan unless the American outfit is putting equity in it and if it is a responsible concern, then our feeling is that as long as the American outfit has its own money in it, that is all we need by way of a guarantee.

Mr. ANDREWS. What about the hotel in Karachi?

Do you know how much the hotel company put in?

Mr. GAUD. I have not got the figure in my head, but I will be glad to supply it.

Mr. ANDREWS. I wish you would supply it for the record.

Mr. GAUD. All right, sir.

(The information follows:)

HOTEL COMPANY EQUITY INVESTMENT IN KARACHI HOTEL

Share capital of Pakistan Services, Limited, in the Karachi Hotel totals Rs10,600,000 (Pakistan rupees) or $2,226,000 (dollar equivalent). This represents approximately 29 percent of the cost of the project ($7,724,800).

Mr. MINSHALL. What are the general terms of these loans, the rate and all? Can you give us that briefly?

Mr. GAUD. They vary from country to country. The purpose is to make the loans on the same terms roughly as these people could borrow the money locally and I have forgotten the interest rate in Pakistan. It is quite high.

Mr. MINSHALL. Can you supply this for the record?

GAUD. It is around 6 or 7 percent.

Mr. PASSMAN. Supply the information for the record, please.

Mr. GAUD. I will.

(The information requested follows:)

COOLEY LOAN TERMS—PAKISTAN

The local currency loans for the Karachi Hotel totaled Rs5,743,700 (Pakistani rupees), or $1,206,100 in dollar equivalents. Rs2,984,600 of this amount was authorized by the Export-Import Bank during its administration of the Cooley loan program. These funds were made available at an interest rate of 6 percent, with a repayment period of 18 years commencing May 1, 1965. Additional financing has also been provided by a dollar loan of $3,462,800 from the Export-Import Bank, extended at an interest rate of 5¾ percent, with a repayment period of 18 years commencing May 1, 1965.

The local currency loan for the Dacca Hotel totaled Rs4,477,000 ($945,000) and provided for interest rate of 6½ percent and a repayment period of 18 years, beginning 12 months after the opening of the hotel or on March 15, 1967, whichever first occurs. Additional financing has been provided by an Export-Import Bank loan of $3,348,500 at 5¾ percent interest, repayable over 18 years beginning March 15, 1967.

Subsequent to these agreements, the interest rate on Pakistan Cooley loans was raised from 6 to 6½ percent. The period of maturity for Cooley loans varies according to the differing financial circumstances of each loan, the usual range of maturity being from 8 to 12 years.

Mr. ANDREWS. Do you feel that in these hotel deals that the only benefit the country gets is from tourism?

Mr. GAUD. Tourism, businessmen, and then in a place like Dacca—you mean who is going to use the hotels?

Mr. ANDREWS. I have an idea the general public will use the hotels.

Mr. GAUD. The general public also.

Mr. ANDREWS. My point is this: How long have we been in this hotel business? How long has the Federal Government of the United States been financing hotels for private corporations in foreign countries?

Mr. GAUD. As far as I know the only two instances of it are these two that I have spoken of where we have lent local currency.

Mr. ANDREWS. That is in your area?

Mr. GAUD. That is right.

Mr. ANDREWS. As far as you know the Federal Government has not financed any hotels in any other parts of the world?

Mr. GAUD. I just do not know. I have no knowledge.

Mr. ANDREWS. But we do know about these two cases?

Mr. GAUD. Yes; we do.

Mr. ANDREWS. My point is what benefit does the country get? How can AID, which is the foreign aid Agency, justify making loans of any kind to private corporations to build hotels anywhere?

Mr. GAUD. There are two justifications. The purpose of the Cooley loan amendment was to authorize us to make loans to American companies who were going to do business abroad. It does not make any difference whether it is a hotel or whether it is a company making ball bearings. We were supposed to use these Cooley loans under the law, these local currencies, to encourage and to help American firms get established abroad. That was one purpose of the law. The other purpose is, as far as the hotel is concerned, that it will earn foreign exchange for Pakistan. These hotels are all located near international airports and they will be used by businessmen and by tourists who will bring foreign exchange into Pakistan. So you serve a double

purpose with these loans; one, promoting American business abroad; two, earning foreign exchange for the underdeveloped country.

None of these are dollar loans. I think I made this clear.

Mr. PASSMAN. They are soft currency loans, but we earn the soft currency.

Mr. GAUD. Yes; and it is in excess of supply in Pakistan.

Mr. PASSMAN. Let us hope that we do not keep cheapening the American dollar until we find the American dollar is in excess of supply in some of these foreign countries.

Is it true that Pakistan is building a hotel for members of the Pakistani Parliament in Pakistan?

Mr. GAUD. It is my understanding the Pakistan Government is building a hostel, not a hotel, in Dacca for the use of the members of the Parliament.

Mr. PASSMAN. How much are we putting into that project indirectly?

Mr. GAUD. Nothing.

Mr. PASSMAN. Indirectly?

Mr. GAUD. We are not putting up anything for that project, Mr. Chairman.

Mr. PASSMAN. We are pouring hundreds of millions of dollars into Pakistan. That enables them, of course, to take their earnings from their exports and spend it any way they want to in their country. That is why I said "indirectly." All of this is a direct help on the Government, is it not, to do the things in their country that they want to do?

Mr. GAUD. Yes.

Mr. PASSMAN. Thank you.

Mr. Montoya?

JORDANIAN GOVERNMENT REVENUES

Mr. MONTOYA. Mr. Gaud, I notice here in the justifications that the total domestic revenues for Jordan for the year 1962 amounted to $52.5 million.

Mr. GAUD. Yes, sir.

Mr. MONTOYA. And the foreign aid program was in the total sum of $43 million; is that right?

Mr. GAUD. Yes, sir; total aid program.

Mr. MONTOYA. Assuming that the $43 million was channeled into Jordan for the fiscal year 1963, wouldn't you say that this contributed greatly, in fact accounted for more than the 7 percent increase in GNP which is claimed here in the justifications?

Mr. GAUD. It contributes very substantially to it, no question about it.

Mr. MONTOYA. Then the 7 percent GNP is fallacious, to say the least, as far as representing internal growth by internal motivation?

Mr. GAUD. By internal resources alone, that is true.

Mr. MONTOYA. What would you estimate this deficiency, judging only from their internal revenues and internal movement of the economy year by year? Wouldn't you say that they are going backward?

Mr. GAUD. No; definitely not, for several reasons: First, you will see that their total domestic revenues are increasing from this page you are looking at.

Mr. MONTOYA. Yes, they are increasing at the rate of about $4 million a year.

JORDAN'S FOREIGN EXCHANGE POSITION

Mr. GAUD. Please do not misunderstand me. I am not saying that they are making exceptionally rapid progress but their total domestic revenues are increasing. The foreign exchange earnings are increasing. You can see those down at the bottom of the page.

Mr. MONTOYA. I was going to ask you that question. How can we contend, in view of their domestic revenues, and how can we comprehend that gold and foreign exchange holdings are increasing year by year when their increase in revenue is only at the rate of $4 million a year and the deficits have been ranging in the neighborhood of $60 million a year? How is it possible, to build up the gold and foreign exchange with those deficits ranging at the rate of $60 million a year and the domestic revenues only increasing at the rate of $4 million a year?

Mr. GAUD. The gold and foreign exchange buildup has been almost entirely the result of the payment made to the Government by the Tapline Co. This was a sizable one-time payment. If you will notice, sir, the increase in their gold and foreign exchange growth is far, far less over the last 4 years, is far, far less than their deficit in any single year. This country cannot possibly pay its government operating expenses without outside support. It never has been able to do so. The British used to be supporting it and giving it budget support.

Mr. MONTOYA. Let me stop you there. You said that the increase in gold and foreign exchange holdings by far exceeds their deficit year by year.

Mr. GAUD. No, if I said that I misspoke myself. The deficit far exceeds the buildup.

Mr. MONTOYA. It stands to reason, in view of the statistical data which you have supplied that this country will never reach the point of its own solvency but will continue to require our support, without appreciably gaining in its economic picture. Wouldn't you agree with me on that?

Mr. GAUD. No, sir.

JORDAN'S PROGRESS TOWARD ECONOMIC VIABILITY

Mr. MONTOYA. What basis do you have for trying to give us a light of hope? The statistics certainly do not disprove that statement of mine.

Mr. GAUD. Certainly it is going to be a long time before this country—it would be a long time, if ever, before this country becomes self-sufficient. The fact is that within the last 5 years we have decreased our budget support from $43 million a year in 1958–59 to $37 million in 1962–63. That is some improvement. It is equally true, sir, that their earnings of foreign exchange are increasing considerably. If you will look at the bottom of the page there, their tourism earnings have gone up from $3.4 million in 1957 to $12 million in 1961. If they are successful in carrying out their plans, they will increase them to $30 million in 1967.

They have phosphate and potash deposits which they are exploiting. You will see the figures on the hoped for increase. Then an increase is expected from remittances from Jordanians who live abroad. In addition to these three items, we are banking on irrigated agriculture which we were discussing earlier.

OTHER EXTERNAL ASSISTANCE TO JORDAN

Mr. MONTOYA. Let me ask you this question. In addition to the aid which the United States is supplying Jordan, apparently there are some aid programs emanating from other European nations.

Mr. GAUD. That is right.

Mr. MONTOYA. What do these programs total?

Mr. GAUD. We mentioned those earlier, before you came in, I think, sir. Kuwait made a loan.

Mr. MONTOYA. I was here then.

Mr. GAUD. As far as I know——

Mr. MONTOYA. The total.

Mr. GAUD. You mean the total over the years?

Mr. MONTOYA. No, the total, let's say, for last year and the year before.

Mr. GAUD. The total foreign aid, other than the United States for the last 2 years from Germany, was——

Mr. MONTOYA. No, give me the total of all from all nations.

Mr. GAUD. Just a minute, sir. I will try to work it out.

Mr. MONTOYA. So I can put the whole thing in proper perspective here.

Mr. GAUD. I am sorry, I will have to do some arithmetic. About $38 million over the last 2 years.

Mr. MONTOYA. Combined?

Mr. GAUD. Everything. That is all non-United States. Most of that is going into projects which have not yet come into fruition. The big items are phosphate production, storage dams, various industrial projects, water supply.

Mr. MONTOYA. Are those commitments by other foreign countries repayable in foreign exchange?

Mr. GAUD. Yes.

Mr. MONTOYA. So we are the only ones in there with a foreign aid program for which there is no dollar repayment?

Mr. GAUD. I will withdraw that. The United Kingdom has put in about $11 million of that figure on a grant basis. The Kuwait and the German loans are repayable in foreign exchange.

EAST GHOR IRRIGATION AND RURAL DEVELOPMENT

Mr. MONTOYA. The irrigation project: What is the total commitment on this project?

Mr. GAUD. On our irrigation project?

Mr. MONTOYA. For rehabilitation and also construction.

Mr. GAUD. We estimate the total cost of that at a little more than $17 million.

Mr. MONTOYA. Does that include and encompass the rehabilitation of families into the project after it is completed?

Mr. GAUD. There is a technical assistance program that I was speaking of, an agricultural extension program, a rural development program, of a little over a million dollars more. That is the East Ghor rural development on page 178.

Mr. MONTOYA. Yes, but won't you have to move families into the particular project?

Mr. GAUD. No. They are there.

Mr. MONTOYA. And furnish them with new homes, et cetera?

Mr. GAUD. No, sir; nothing of that sort is contemplated.

Mr. MONTOYA. So the total cost would be $17 million plus?

Mr. GAUD. Yes, sir.

Mr. MONTOYA. And is this particular commitment a loan agreement?

Mr. GAUD. No. This is a grant.

Mr. MONTOYA. A complete grant?

Mr. GAUD. Yes, sir.

DEVELOPMENT LOANS TO JORDAN

Mr. MONTOYA. What particular loan agreements do we have with this country, the total sum, and how is the repayment provided?

Mr. GAUD. Our assistance to Jordan has always been in the form of either supporting assistance or development grants, except for two loans, one of which was made by the Development Loan Fund in 1958 for $1,200,000, repayable in local currency. The purpose of that loan was the generation of electric power by the Trans-Jordan Electric Power Co. The other loan which we have made to Jordan was made by the Development Loan Fund in 1959, $1,500,000, payable in United Kingdom pounds. The purpose of it was the development of phosphate mines.

Mr. MONTOYA. Have we received any repayments under either loan?

Mr. GAUD. Yes, we have. Under the first loan there have been repayments made of both principal and interest. Under the second loan no repayments of principal are yet due but we have been receiving interest. Neither loan is in default.

Mr. MONTOYA. That is all, Mr. Chairman.

Mr. PASSMAN. Mr. Minshall, do you have questions on Jordan?

USE OF CONSULTANTS IN JORDAN

Mr. MINSHALL. On page 188, Mr. Gaud, of the blue book you describe certain temporary duty consultants, and I quote: "Consultants whose functions are not confined to a specific project or goal." What are they assigned there for if they are not assigned to some specific project or goal?

Mr. GAUD. We have——

Mr. MINSHALL. Did I read that correctly?

Mr. GAUD. Yes, you did. Let's take for example the field of agriculture or the field of education or the field of water development. We have specific projects in those areas but these people might come in to advise on the whole general problem rather than on a specific project.

Mr. MINSHALL. How many of these people do you have and what is their per diem or how are they paid?

Mr. GAUD. It will vary from individual to individual as to how long he will be there and as to what he will be paid.

Mr. MINSHALL. From what to what?

Mr. GAUD. That is such a general question I am afraid I could not answer it.

Mr. MINSHALL. Is it $10 a day? Is that a low figure?

Mr. GAUD. That would be an extremely low figure to get an expert; don't you think?

Mr. MINSHALL. A thousand dollars a day?

Mr. GAUD. No, I think $50 a day would be more in the normal range. Why don't I get some specific examples and give them to you?

Mr. MINSHALL. All right.

And also include if you would, please, the number of the special consultants that you have.

Mr. GAUD. All right, sir.

(The information follows:)

CONSULTANTS IN JORDAN

During fiscal year 1963, an agricultural information specialist and a tax consultant were recruited for short-term assignments in Jordan and were paid a fee of $50 and $75 per day, respectively. In addition, both consultants received the standard per diem allowance for Jordan of $10 per day. Other temporary assignments funded under the technical support project in the past year included three direct-hire technicians from neighboring AID missions. These employees received, in addition to their basic salary, a subsistence allowance of $10 per day.

FEASIBILITY PROJECTS IN NEAR EAST—SOUTH ASIA

Mr. MINSHALL. Also, I should like to know how many feasibility projects you have currently going throughout your entire zone of authority.

Mr. GAUD. Throughout the region?

Mr. MINSHALL. Throughout the region.

Mr. GAUD. How many feasibility projects we are financing?

Mr. MINSHALL. Yes. You just finished one at the Bokaro steel mill in India. How many of these other feasibility projects do you have going of all types and sizes?

Mr. GAUD. You will understand that is a figure that would vary from month to month.

Mr. MINSHALL. Yes; but let's have it for the past fiscal year and what you contemplate for the current fiscal year.

Mr. GAUD. Very good.

Mr. MINSHALL. And the cost of them and a brief description.

Mr. GAUD. All right, sir.

Mr. MINSHALL. That is all.

(The information requested follows:)

NESA feasibility surveys, fiscal year 1963 obligations, fiscal year 1964 planned

	Fiscal year 1963 (thousands)	Fiscal year 1964 (thousands)
Afghanistan:		
Development grant feasibility studies (industry)	$125.0	
Short-term consultants will explore the possibility of establishing or enlarging 8 separate fields of Afghan industry as a means toward improving the country's foreign exchange position.		
Development grant feasibility studies (projects)		$200
Qualified American firms will conduct studies to assist the Afghan Government in determining the feasibility of particular projects in the second plan.		
Development grant Herat-Islam Qala	80.0	20
This U.S. Corps of Engineers survey of the proposed Herat-Islam Qala Road will provide preliminary specifications, cost estimates, and an evaluation of the road's economic feasibility.		
Cyprus:		
Development grant desalinization feasibility	95.0	
To determine whether a desalinization plant is both feasible and justifiable on economic grounds.		
Pakistan:		
Development loan feasibility studies	2,000.0	
Studies to be made in connection with 5-year plan development projects in such fields as water, power, agriculture, transportation, industry, and communications.		
Turkey:		
Development loan, Keban and Ciceroz feasibility survey	350.0	
To determine engineering and economic feasibility of constructing 2 hydroelectric projects, including consideration of alternative sites and water distribution.		
Development loan feasibility studies and consultants	3,000.0	
Various studies in connection with the water resources development program of Turkey.		
Cento: Cento railroad survey	21.5	3
To determine the feasibility of a railroad link between Turkey and Iran.		

NOTE—Bokaro steel survey ($750,000) not included in this listing since financed out of fiscal year 1962 funds.

LEBANON

Mr. PASSMAN. We have a small military program in Lebanon. This is a grant aid program for fiscal year 1964. The amount is classified, but not the fact; is that correct?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. What has been our total of aid to Lebanon since the inception of the program?

Mr. GAUD. Economic and military the total is $88.6 million.

Mr. PASSMAN. What amount do you have unliquidated to the credit of Lebanon as of June 30?

Mr. GAUD. We have $2,568,000.

Mr. GARY. May I ask one question about Lebanon, Mr. Chairman?

Mr. PASSMAN. Surely.

Mr. GARY. Has there been any change in the Presidency in Lebanon in recent years?

Mr. GAUD. No, sir; there has not.

Mr. GARY. The President is an ex-soldier who didn't want the job. He was drafted for the job. When we were over there 3 years ago he said he didn't want to be President, but they would not let him resign. Apparently he is still there.

Mr. GAUD. Yes, sir; he is.

Mr. GARY. He is doing a good job and is a great friend of the United States.

Mr. GAUD. Yes; he is, Mr. Gary.

Mr. GARY. Lebanon is doing very well on the whole?

Mr. GAUD. Lebanon is doing OK.

NEPAL

Mr. PASSMAN. For Nepal you are requesting $4.5 million for fiscal year 1964. That is an increase of $600,000 above your 1963 program?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. In addition to your dollar estimate what is your program for the use of U.S.-owned Indian rupees in 1964?

Mr. GAUD. $7 million.

Mr. PASSMAN. Making a total of $11.5 million?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. What has been the total amount of aid to this country since the inception of the program?

Mr. GAUD. $52.4 million.

Mr. PASSMAN. When did we start the program in Nepal?

Mr. GAUD. Around 1952, Mr. Chairman.

Mr. PASSMAN. We are stepping up the aid program substantially there. It started between 1949 and 1952; did it not?

Mr. GAUD. Yes, sir; it did.

Mr. PASSMAN. You had a small program there. In 1955 you went to $2.5 million and then went back to $1.9 million. You started up in 1957 and got up to $7.5 million. In 1958 it came down to $2.7 million. In 1959 and in 1960 it jumped up to $19.6 million.

Mr. GAUD. That includes grants of U.S.-owned Indian rupees; you are quite right.

Mr. PASSMAN. It is something we paid American dollars for, to get the food to sell to get the rupees.

What is the unliquidated amount for all categories?

Mr. GAUD. Just under $5 million.

Mr. PASSMAN. Is that for all spigots, including Public Law 480?

Mr. GAUD. That would not include unexpended rupees.

Mr. PASSMAN. Put the information in the record if you will.

(The information requested follows:)

Unliquidated balance—Nepal

[In millions of dollars]

		As of June 30, 1963	
		Obligated	Undisbursed
Public Law 480 Indian rupees:			
1960 allocation	16.8	16.8	2.9
1963 allocation	8.0	6.4	3.6
Total	24.8	23.2	6.5

U.S. PERSONNEL-U.S. AID—NEPAL

Mr. PASSMAN. Last year we had some discussion about the personnel in Nepal. It was being terminated or reassigned because of the redirected program. The project book indicated that you had 60 U.S. technicians in fiscal year 1962 and that you were planning to have 60 technicians in fiscal year 1963.

How many U.S. technicians did you have on duty June 30, 1962, and June 30, 1963?

Mr. GAUD. June 30, 1962, we had 64 direct hire, 9 contract, making a total of 73.

Mr. PASSMAN. U.S. technicians only?

Mr. GAUD. Those are U.S. technicians.

Mr. PASSMAN. Now 1963?

Mr. GAUD. Estimated as of June 1963, a total of—I can give you only the estimated and not the actual number on board at the moment, sir.

Mr. PASSMAN. Give us the figure comparable to the one you just gave us.

Mr. GAUD. That is what I cannot do.

Mr. PASSMAN. Let us get it in the record, please.

(The information requested follows:)

Program funded personnel, on board, U.S. AID—Nepal

	June 30, 1962	June 30, 1963
Direct hire	64	62
Contract	9	12
Total	73	74

Mr. PASSMAN. Can you project this item to the end of 1964?

Mr. GAUD. In 1964 according to positions we anticipate four more positions in June 1964 than in June 1963.

Mr. PASSMAN. Does that fact account for part of the increase in the program cost for fiscal year 1964?

Mr. GAUD. For some, but most of the increase related to one new project and a large expansion of an existing project we were considering at the time these books were prepared.

NUMBER OF PROJECTS IN NEPAL

Mr. PASSMAN. How many projects will you have in operation in Nepal in fiscal year 1964?

Mr. GAUD. Thirty projects.

Mr. PASSMAN. Can you give us, for the record, the number of projects for fiscal years 1961, 1962, 1963, and then project fiscal year 1964?

Mr. GAUD. Yes, I will.

(The information requested follows:)

Development grant projects funded in Nepal

1961	14	1963	32
1962	36	1964	29

Three new projects were started in fiscal year 1962. Except for these projects, the increase over fiscal year 1961 represents a division of several projects into separate continuing and terminating activities.

USE OF INDIAN RUPEES IN NEPAL

Mr. PASSMAN. Can we spend Indian rupees freely in Nepal?

Mr. GAUD. Do you mean are they as good as local currency?

Mr. PASSMAN. No. If we own the rupees, can we spend them in Nepal to the extent that we may need them?

Mr. GAUD. We do so only after agreement with the Indian Government.

Mr. PASSMAN. Do you have any trouble getting permission of the Indian Government to spend the amount of rupees needed for local projects?

Mr. GAUD. We haven't to date.

Mr. PASSMAN. Do you anticipate any trouble?

Mr. GAUD. No, sir.

Mr. PASSMAN. Then why do you have a dollar estimate for local expenses in Nepal?

Mr. GAUD. I will have to look into that and get the answer, Mr. Chairman.

(The information requested follows:)

JUSTIFICATION FOR DOLLAR REQUEST FOR LOCAL EXPENSE—NEPAL

Dollars obligated and disbursed for local expenses are used to purchase U.S.-owned Indian rupees held by the U.S. disbursing officer. These rupees are then used to pay support costs of U.S. technicians, such as rentals, local travel, local personnel salaries, and commodities procured locally.

FOREST PRODUCTS DEVELOPMENT PROJECT

Mr. PASSMAN. I note that you have two sawmills installed under the forest products development project, referred to at page 202. It is indicated that the local personnel problems have kept these two mills from attaining capacity production levels; is that correct?

Mr. GAUD. Yes, sir; that is true.

Mr. PASSMAN. Could you tell us about the percentage of capacity they have in operation?

Mr. GAUD. I haven't that in the committee room. I will get it.

(The information follows:)

NEPALESE SAWMILLS

The first two portable sawmill units were procured in 1956 at a cost of $40,000 each. These were later supplemented by logging equipment, spares and replacement parts at a cost of $246,000. The two one-blade portable sawmill units are currently cutting at approximately 50 percent of full capacity. This low utilization results not only from local personnel problems but also from a low volume of logging operations. We propose to procure $349,000 worth of additional commodities to be added to these two small sawmill units. This new equipment will enable the processing of all types and sizes of logs available into the end-products for which there is a market. In addition, we propose to contract for the services of an operating and management team for 3 years at an estimated cost of $323,000 to organize the operations of the sawmills, including logging, and to train the work force.

Mr. PASSMAN. Are we recognizing an error now, after we have built these sawmills? You could not get the local personnel to operate two.

Mr. GAUD. It is still a matter of training. The development of the forestry products in Nepal is a very important matter.

Mr. PASSMAN. I know it is, but also personnel to operate the mills is important and you have a shortage in trained personnel.

Mr. GAUD. With two mills you can train twice as many people as you can with one.

Mr. PASSMAN. Putting it on that basis with 50 mills you could train 50 times as many.

Mr. GAUD. That is true.

Mr. PASSMAN. You would not contemplate building another sawmill out there when you cannot operate the other two to capacity because of a shortage of personnel?

Mr. GAUD. As you will see from this same page, we are making preparations for a third sawmill in Nepal.

Mr. PASSMAN. When you cannot get personnel to operate two mills you are going to build a third one? You do not build these mills just to train people, do you?

Mr. GAUD. No, sir. The expectation is by the time we get the third mill the other two will be going strong and Nepal and will have a cadre of personnel to put in the third mill.

Mr. PASSMAN. When did you open up the first sawmill?

Mr. GAUD. When did it actually get into operation?

Mr. PASSMAN. When did you start it?

Mr. GAUD. I haven't got that date here.

Mr. PASSMAN. You stated, Mr. Gaud, that you are having your problems because you cannot get well-trained personnel to operate the two sawmills and therefore they cannot be operated at capacity. However, before being able to reach that objective, now we are thinking about starting a third mill. Well, that procedure is quite regular in the program.

You do contemplate starting a third sawmill, do you not?

Mr. GAUD. Yes, we do.

Mr. PASSMAN. How much is it costing per mill?

Mr. GAUD. I haven't got a breakdown here with me, Mr. Chairman.

INDUSTRIAL DEVELOPMENT CORP. PROJECT

Mr. PASSMAN. What is the cost for the extension of the contract for the services of the three-man team and the TDY consultants under the Nepal Industrial Development Corp. project, on page 203?

Mr. GAUD. This has already been funded. We are not asking for any funds for 1964. We are dropping that $194,000.

The contract has already been funded. We don't need the additional money to fund the contract.

Mr. PASSMAN. You have a project that started in 1956 scheduled to end in fiscal year 1969. You think the $328,000 will complete it?

Mr. GAUD. No. It will come very close to it. The total estimated cost of this project is $1,830,000. We have almost funded all but $340,000 of that.

Mr. PASSMAN. And you have unliquidated $328,000?

Mr. GAUD. That is correct.

Mr. PASSMAN. As we go through the book, Mr. Gaud, we are running into a lot of figures in this right-hand column where they have been eliminating the items. When are you ever going to work out a table of the excess dollars you have? Here you have justifications in the budget asking for $194,000 and you are going to drop it altogether. Around the world we run into so many projects, some of them quite large, where they put a figure in. Now, you come along and start dropping these figures out. I wonder if you are going to have an opportunity sometime to figure out the total amount of dropouts?

Mr. GAUD. Well, we know how much we obligated last year in the development grant area in this region.

Mr. PASSMAN. Are you sure? Just about every time the distinguished Comptroller comes up he keeps raising the figure of unobligated funds.

Mr. GAUD. We went into it yesterday or the day before, the amount of deobligations we made in this region and there is no question about how much we deobligated, Mr. Chairman.

Mr. PASSMAN. I am not talking about deobligated funds.

Mr. GAUD. That is what this is.

Mr. PASSMAN. It is estimated obligations for fiscal year 1964.

Mr. GAUD. You are talking about what we might not fund next year?

Mr. PASSMAN. Yes.

Mr. GAUD. That is correct.

Mr. PASSMAN. We are going to give you a run for your money on these deobligated funds, if you can come up with the amount you asked for when you prepared the justification what you are not going to need and get that total together. May we expect your cooperation?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Thank you.

AVIATION DEVELOPMENT PROJECT

Why would you need any funds for contract services for aviation development projects, since you state at page 206 that fiscal year 1963 funds will be used to finance 18 months of a planned contract to manage and operate the Royal Nepal Airline?

Mr. GAUD. We are not asking for any funds for fiscal year 1964 for that project. We are dropping that.

Mr. PASSMAN. You are dropping that item, too?

Mr. GAUD. Yes; we are.

Mr. PASSMAN. I am very impressed with these dropouts.

Mr. GAUD. I hope these please you, sir.

Mr. PASSMAN. We are pleased, but I wonder if the President has been notified as to how much to reduce his budget, so the two will be in line.

TECHNICAL SUPPORT PROJECT

Why do you need 240 local employees on this technical support project, sir?

Mr. GAUD. Those local employees perform all the services that are needed by our mission and also the USIA and the embassy in Nepal.

As you know, this country has relatively primitive services. We have to maintain the housing in which our people live, we have to maintain our offices, we have to maintain our automobiles, the local employees have to drive the automobiles, and they have to haul water. There are all sorts of services which they render for the Americans there.

Mr. PASSMAN. How many do we have in the aid program there locally?

Mr. GAUD. These people here serve not only our technicians and their families but also the Embassy and the USIA.

Mr. PASSMAN. How many do we have, total, in our U.S. agencies there?

Mr. GAUD. I would have to get that figure for you.

(The information requested follows:)

Total U.S. Government employees, Nepal

AID	90
Embassy	34
USIA	3
Peace Corps	69
Total	196

Mr. PASSMAN. What is the cost of the helicopter services under this project, sir?

Mr. GAUD. We entered into a contract under which the amount we pay for the helicopter depends upon the amount we use it. I confess I have forgotten the unit cost.

Mr. PASSMAN. How many helicopters do you have there?

Mr. GAUD. We are using one on contract.

Mr. PASSMAN. There is Pan American Airlines. Do they have an interest in the Royal Nepal Airlines?

Mr. GAUD. Not to my knowledge.

Mr. PASSMAN. Who owns this, the country?

Mr. GAUD. It is Government-owned.

Mr. PASSMAN. What size airline is it?

Mr. GAUD. As far as I know they operate to India. They operate now, I believe, to Pakistan. I don't know of any other operation.

Mr. PASSMAN. They do not own the large 707's or DC-8's?

Mr. GAUD. They have nothing but two-engine planes.

Mr. PASSMAN. Mr. Rooney?

Mr. ROONEY. I believe they have only 135 doctors for 10 million people in Nepal; is that right?

Mr. GAUD. Yes.

Mr. ROONEY. How many automobiles do we have in Nepal?

Mr. GAUD. Until very recently we have not allowed our people to take their own automobiles into Nepal at all. That was changed in March 1963, and we now allow shipment of jeeps or small cars.

Mr. ROONEY. They don't have any roads, do they?

Mr. GAUD. There are not many.

Mr. ROONEY. How many automobiles do you have?

Mr. GAUD. I haven't got that information. I will put it in the record for you.

Mr. ROONEY. Please furnish it at this point in the record.

(The information requested follows:)

Automobiles in Nepal

1. AID official vehicles:	
Sedans	4
Buses	2
Ambulances	1
Jeep station wagons	86
Jeep (military type)	10
Trucks	15
Total	118
2. Vehicles owned by AID personnel	7

BACKGROUND INFORMATION ON NEPAL

Mr. RHODES. The local currency used is Indian rupees?

Mr. GAUD. Yes.

Mr. RHODES. We apparently do not have a great supply.

Mr. GAUD. We hold a lot of Indian rupees; the Indian rupee circulates as legal tender in Nepal.

Mr. RHODES. Is this a self-supporting nation so far as food supply is concerned?

Mr. GAUD. Pretty much.

Mr. RHODES. What is the climate? Is it a monsoon type?

Mr. GAUD. It is a little of everything. Part of it is monsoon type. You have some valleys that are extremely pleasant and some have a lot of rain. Katmandu, they tell me, is about as attractive as any place in the world.

Mr. RHODES. Unattractive?

Mr. GAUD. Attractive.

Mr. RHODES. The people are similar to the Indians as far as their ethnic origins are concerned?

Mr. GAUD. Not really. Many of the people are Gurkhas, which is a slightly different racial background than the Indians. And in different valleys you get different strains of people. They have no particular affinity with the Indians.

Mr. RHODES. So I gather from reading the justifications. They do have the same religion, however?

Mr. LEE. They are basically Hindu at the present time, in the present century.

Mr. RHODES. That is all.

Mr. PASSMAN. Mr. Conte?

Mr. CONTE. How do do you get into Nepal?

Mr. GAUD. You can fly in and today there is a road.

Mr. CONTE. From where?

Mr. GAUD. From India.

Mr. CONTE. And the relations are good enough between the Indians and the Nepal Government to use the road?

Mr. GAUD. There was a period this winter when there was border trouble and the border was closed but currently there is no problem.

Mr. CONTE. Is that the way we bring in our supplies?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Thank you, gentlemen.

We shall adjourn until 1 o'clock tomorrow afternoon.

WEDNESDAY, JULY 24, 1963.

VOA AGREEMENT WITH INDIA

Mr. PASSMAN. The committee will come to order.

You are familiar, of course, with the proposed communications systems in India on which we thought we had reached a firm agreement, but with regard to which there now appears to be some reneging.

Have you been brought up to date on that matter, Mr. Secretary.

Mr. LEE. Yes, sir.

Mr. PASSMAN. Are they not reneging?

Mr. LEE. They are not reneging.

Mr. PASSMAN. Are they not trying to get out of going through with the understanding we had reached—the signed agreement?

Mr. LEE. Yes. As we testified the other day, they did sign an agreement.

Mr. PASSMAN. What is the difference between reneging and not going through on a signed agreement?

Mr. LEE. We are simply not certain yet what their objections are.

Mr. PASSMAN. I wonder if you will furnish to the committee, even though we are not examining on this area, whatever information you can, as soon as you can, with regard to this situation.

Mr. LEE. We were asked the other day for the agreement. I have here now a copy of the agreement, and copies of the letters exchanged in connection with it. I can either hand them to you now, or submit them with the transcript.

Mr. PASSMAN. Please submit them with the transcript.

We had an agreement with regard to the VOA transmitters. Do you interpret their present actions as meaning they are trying to get out of living up to the agreement as written?

Mr. LEE. They have internal problems.

Mr. PASSMAN. We all have internal problems and external problems, too. I am talking now about this agreement.

Mr. LEE. It was negotiated on the understanding it would be mutually beneficial. If that should not be the case, then some adjustment becomes necessary.

Mr. PASSMAN. To the mutual benefit to the United States and India?

Mr. LEE. Yes.

Mr. PASSMAN. Are they about to determine it might be beneficial to us and not to them?

Mr. LEE. They have been subjected to considerable pressure.

Mr. PASSMAN. From what quarter?

Mr. LEE. From a wide section of the public in India.

Mr. PASSMAN. From the public that is getting billions of dollars of U.S. aid?

Mr. LEE. From all political groups in India. These people have the fear this agreement is an infringement on Indian sovereignty since it permits the VOA relays from Indian territory and also places some restrictions on their broadcasts from that station. It has been criticized as marking a departure from the Indian policy of nonalinement.

Mr. PASSMAN. Why did they not determine the facts before they signed the agreement?

Mr. LEE. I wish to say further, it is apparent the Government of India either did not take a very accurate reading of the public opinion in India before signing the agreement, or else it did a poor job of informing the public of the nature of the agreement.

At the present time we are in communication with the Indian Government. It is our hope some adjustment can be made, or some ironing out of differences, or clarification of the differences can be made.

I hope before you mark up the bill the picture will be much clearer.

Mr. PASSMAN. We hope it will be clearer. You do not have any complaints from them about accepting our aid, do you?

Mr. LEE. No.

Mr. PASSMAN. Thank you, Mr. Secretary.

Mr. LEE. As Mr. Talbot explained before, I think the sentiment in India, the political attitude, is quite different from what it was, say, 5 years ago.

Mr. PASSMAN. Of course it is, because they have gotten more than $5 billion of our aid.

How far up did our Government go in getting the agreement signed? Was it at Mr. Nehru's level?

Mr. LEE. Yes.

Mr. PASSMAN. It went that high?

Mr. LEE. It went to the Nehru level, and we are trying to discuss it again at the Nehru level.

Mr. PASSMAN. At the Nehru level they approved the agreement?

Mr. LEE. That is my understanding.

NUMBER OF NATIONS RECEIVING AID

Mr. PASSMAN. I have mentioned earlier about us being in 104 out of 112 nations with the aid program, beginning with the Marshall plan. It would appear now if we just pick up fiscal year 1964 alone we get into a total of 95 nations, plus 4 territories and possessions. We are at the figure of 99 recipients for this fiscal year.

REOPENING OF AFGHAN-PAKISTAN BORDER

Mr. GAUD. Before we go to the next country, may I mention a couple of things left over from past discussions?

First, I thought the committee would be interested in knowing we heard today that the border between Afghanistan and Pakistan is opened.

Mr. PASSMAN. Do you think it will say open long enough to get our gifts entered?

Mr. GAUD. We trust it will stay open longer.

Mr. ANDREWS. What will we move in besides asphalt?

Mr. GAUD. There has now been a complete resumption of diplomatic relations between these two countries. Now we will divert what we can from Khorramshahr and send our entire aid supplies through Karachi to the Afghan border.

Mr. PASSMAN. This is not the first time there has been diplomatic relations between the two countries?

Mr. GAUD. Oh, no.

Mr. PASSMAN. Patched up and broken and patched up and broken?

Mr. GAUD. Yes.

Mr. PASSMAN. Do you have another item?

INDIAN CONSORTIUM

Mr. GAUD. If you recall, I said the other day the final meeting of the Indian consortium had been scheduled this morning.

Mr. PASSMAN. Do you have a copy of that information for us?

Mr. GAUD. No. Yesterday, the vice president of the World Bank telephoned and said the Germans had not yet made up their minds as to what they were going to do. The meeting will be held next Tuesday. Since that is after I will finish my testimony, I thought it might be useful to tell how matters stand at the present.

Mr. PASSMAN. Why do you not give to us the final agreement when it comes? We hope it indicates some worthwhile changes.

(The information supplied follows:)

INDIA CONSORTIUM AGREEMENT

The consortium of countries and institutions interested in development assistance to India concluded on August 7, 1963, a series of sessions devoted to considering India's needs for the third year (April 1963–March 1964) of her third 5-year plan. The pledges announced for the third year of the plan are as follows:

Aid pledged by consortium for Indian fiscal year 1963–64

Donor	Amount (million dollar equivalents)	Maturity (years)	Grace period (years)	Interest rates (percent)
Austria	7.00	12	2	6
Belgium	10.00	10–12		(1)
Canada	12.50	15–20	(1)	(2)
	18.00	(3)		
	30.50			
France	20.00	10		5¼
Germany	15.35	13	4	5¾
	27.50	25	7	3
	22.50	20	5	5½
	5.15	20	12	5½
	29.00	10		5½
	99.50			
Italy	45.00	10		(2)
Japan	65.00	15	5	5¾
Netherlands	7.22	25	7	(1)
	3.88	10		(1)
United Kingdom	84.00	25	7	[4] 3½
IBRD	105.00	12–25	3–5	[5] 5½
IDA	140.00	50	10	¾
United States of America:				
AID	385.00	40	10	¾
Ex-Im	50.00	10–15	3	5¾
	435.00			
Total	1,052.10			

[1] Not available.
[2] To be based on Government's borrowing cost or market rate plus an administrative charge or commission.
[3] Grants.
[4] Interest payments to be waived during 7-year grace period. Subsequent payments to be related to United Kingdom Government's borrowing rate. It is expected that the interest charge over the life of the loan will work out to less than 3½ percent.
[5] IBRD charges current market rate at time loan is made. This has recently been 5½ percent.

PAKISTAN

LEVEL OF ASSISTANCE

Mr. PASSMAN. The next country in this area is Pakistan, for which the estimate for fiscal year 1964 is $234.9 million.

Could you tell us the total amount of aid we have given to Pakistan since the inception of the program?

Mr. GAUD. Our total aid to Pakistan is $2,902,200,000.

Mr. PASSMAN. Does that figure include Public Law 480?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. What is the amount of funds unliquidated to the credit of Pakistan as of June 30?

PUBLIC LAW 480 ASSISTANCE TO PAKISTAN

Mr. GAUD. This does not include Public Law 480—$387,728,000.

Mr. PASSMAN. Let us get the amount for Public Law 480, also.

Mr. TENNANT. Unfortunately, I do not have the unexpended or unshipped authorizations. Agriculture's figures are by overall agreements and not by authorizations issued.

Mr. PASSMAN. For much of the $378 million that is obligated, it will be many years before the funds are liquidated. Give us the total amount of our commitments under Public Law 480. Do you have that information?

We understand it is a contract and it may go for 3 or 4 years.

Mr. TENNANT. On the basis of the three or four agreements, the unshipped balance, as of December 31, for Pakistan was $452 million, and there was a small Public Law 480, title II program of $29 million, or a total of $481 million. That is on the basis of agreements.

Mr. PASSMAN. You have $387,728,000 under the aid program and under the agricultural agreements, to complete them, $452 million; and under Public Law 480 agriculture, $29 million; so, the total unliquidated amount to the credit of Pakistan as of June 30, and December 31, respectively, applying that to the Public Law 480 agreement, would be $868,728,000; is that correct?

Mr. TENNANT. I do not believe you included the military figure.

Mr. PASSMAN. How much is that?

Mr. GAUD. I misled you.

Mr. TENNANT. Military is ———.

Mr. PASSMAN. We are going to get this into $1 billion. The total will be ——— dealing specifically with the items as we have put them in the record.

Mr. GAUD. Subject to my reservation of yesterday with respect to the Public Law 480.

Mr. PASSMAN. Are we liquidating the agricultural aid according to the original schedule?

Mr. TENNANT. I cannot tell you.

Mr. PASSMAN. Are we ahead or behind?

Mr. GAUD. We are running, more or less, according to the agreement. Most of the Public Law 480 commodities under the agreement are to be shipped in the future. Pakistan is not yet entitled to it.

Mr. PASSMAN. Is that not also true with the $387 million?

Mr. GAUD. That is a firm obligation; it is almost entirely development loans.

Mr. PASSMAN. When will you disburse the money? Some could be 7 or 8 years from now?

Mr. GAUD. I doubt that it would be that long.

Mr. PASSMAN. For how long does the agricultural agreement go?

Mr. GAUD. I think it is a 4-year agreement. The difference is, while the $387 million is definitely obligated, we may or may not obligate all the Public Law 480 commodities called for by the 4-year agreement.

Mr. PASSMAN. The Public Law 480 agreement will expire before you liquidate some of these obligations. It is always to be expected, and the record is good enough that you have a substantial amount of money left over after you have obligated the funds.

ASSISTANCE FROM EXPORT-IMPORT BANK AND IDA

In addition to the estimates we have just put in the record, and the amounts unliquidated, could you tell us whether or not the Export-Import Bank and IDA are in for anything?

Mr. GAUD. The Export-Import figures are included.

Mr. PASSMAN. Is anything going out of IDA to them?

Mr. GAUD. Yes.

Mr. PASSMAN. How much?

Mr. GAUD. IDA in the years 1946——

Mr. PASSMAN. What amount do you have unliquidated?

Mr. GAUD. I would have to get that from the World Bank.

Mr. PASSMAN. Perhaps you better put in the record the amount they have obtained from IDA—the obligations and the unexpended balance as of June 30.

Mr. GAUD. Right.

(The information follows:)

Statement of IDA development credits and unexpended balances as of June 30, 1963—Pakistan

[Dollar amounts in millions]

Program or project	Date of agreement	Amount	Unexpended balance
Dacca irrigation project	Oct. 19, 1961	$1.0	$0.8
Inland ports project	Nov. 22, 1961	2.0	1.7
Khairpur irrigation project	June 29, 1962	18.0	7.9
Industrial estates project	Nov. 2, 1962	6.5	6.5
Brahmaputra flood embankment	June 26, 1963	[1] 5.0	5.0
Chandpur irrigation	do	[1] 9.0	9.0
Total		41.5	40.9

[1] Credit not yet effective.

LEVELS OF U.S. AID

Mr. PASSMAN. Regarding the $2,902,200,000 that we have given to Pakistan, did that include the Public Law 480 unliquidated funds?

Mr. GAUD. That included Public Law 480 through 1963.

Mr. PASSMAN. But it did not include the $452 million?

Mr. GAUD. It would have included a part of that.

Mr. PASSMAN. $29 million?

Mr. GAUD. I am not sure.

Mr. PASSMAN. Would you tell us how much it would not include?

Mr. GAUD. That is what Mr. Tennant says he cannot tell you.

Mr. PASSMAN. It is over $3 billion if you add that in. The divider sheet indicates that, notwithstanding this tremendous generosity, Pakistan's international trade is getting worse by the year. Is that correct?

Mr. GAUD. Her international trade?

Mr. PASSMAN. Yes.

Mr. GAUD. Her trade deficit is larger in 1962 than it was in previous years.

Mr. PASSMAN. What was the amount of aid to Pakistan last year from all spigots?

Mr. GAUD. From the United States?

Mr. PASSMAN. Yes.

Mr. GAUD. It was $455.6 million.

As Pakistan moves ahead on its development program, its capital goods imports will grow and trade balance will worsen. The trade balance includes imports under AID.

Mr. PASSMAN. The grant part and all?

Mr. GAUD. Yes.

Mr. PASSMAN. That explains it.

What was the amount of the development credits we extended to Pakistan during fiscal year 1962 and fiscal year 1963?

Mr. GAUD. In fiscal year 1962 and fiscal year 1963——

Mr. PASSMAN. We would like to have it broken down, fiscal year 1962 first.

Mr. GAUD. You would like them year by year?

In 1962, the development loans totaled $207.9 million.

In 1963, the development loans totaled $176.8 million. Together, that makes $384.7 million. One 1962 loan, at $7.5 million, was canceled, so the net was $377.2 million.

Mr. PASSMAN. What were the terms?

Mr. GAUD. The terms were 40 years, 10-year grace period and three-quarters of 1 percent.

Mr. PASSMAN. That is the credit arrangement where we occasionally slip up and call them loans, on account of the legislation being drafted that way. Secretary Dillon said they were development credits. That is what we are dealing with?

Mr. GAUD. Yes.

AID TO PAKISTAN BY OTHER CONSORTIUM MEMBERS

Mr. PASSMAN. What was the amount and terms of the loans extended by other countries of the consortium?

Mr. GAUD. For what years would you like that?

Mr. PASSMAN. Fiscal 1962 and 1963.

Mr. GAUD. I believe we went through 1962 and 1963 the second day I was here.

Mr. PASSMAN. Then we shall not go through that now.

Mr. GAUD. We have not gone through 1964.

I have the figures, the pledges made at the last consortium.

Mr. PASSMAN. Please put them in the record.

Mr. GAUD. You want me to put in an insert on the 3 years?

Mr. PASSMAN. Yes, sir.

(The information follows:)

Consortium pledges and loan terms for second, third, and fourth years (fiscal years 1962, 1963, and 1964) of Pakistan's second 5-year plan

Consortium member	Total pledge (millions of dollars or equivalents)	Interest rate (percent)	Grace period (years)	Duration (years)

Loans	(2.2)	(3)	5-7	20-25
Total	425.0			

[1] Interest rate is the British Treasury rate plus ¼ of 1%. Hence there is a fluctuating interest rate as Treasury rate fluctuates.
[2] 10 years from time of delivery of equipment or completion of project.
[3] To be determined.
[4] UK waiver of interest during the 7-year grace period reduces the nominal rate of 5¾-6¾% to the above effective rate.
[5] Market rate of interest plus commission.

Mr. PASSMAN. Is Germany in on this consortium arrangement?

Mr. GAUD. Yes. For 1964, 20 years, one-third at 3 percent with a 7-year grace period, two-thirds at 5½ percent with a 5-year grace period.

Mr. PASSMAN. They draw the interest on that money during the grace period, do they not?

Mr. GAUD. Yes; they do.

Mr. PASSMAN. They get the hard loans at a profitable rate of interest, and we get the give-away.

Mr. GAUD. We are not satisfied with the progress we are making in improving the terms of other lenders.

Mr. PASSMAN. If you ever get the Germans to adopt this loose system of ours, you will be entitled to a twin star on your coat. I think they are not going to wreck themselves financially because we are willing to wreck ourselves.

Mr. GAUD. The British this year have reduced their interest rate very substantially. They still charge the Treasury rate plus a service charge, but there is a waiver of interest during the 7-year grace period. This works out to reducing the effective rate of interest to about 3.25 percent.

Mr. PASSMAN. It would appear that other than the grace period they are still getting the Treasury rate plus a bonus for making the loan. If we handled it in America on that basis, we would be getting pretty close to 4 percent.

Mr. GAUD. That is right, though the effective rate of interest would be lower.

Mr. FORD. In these consortia, we make our contributions as a government, do we not?

Mr. GAUD. Yes; we do.

Mr. FORD. Do the other nations do the same?

Mr. GAUD. Yes. These are government funds only in the consortia. There have been a few cases among the European nations, the newcomers to the consortia this year, where it is a question of government guarantees of commercial credits rather than government money. With these exceptions, it is a matter of government money that goes into the consortia.

SENATE FOREIGN RELATIONS COMMITTEE ADOPTION OF NEW DEVELOPMENT LENDING TERMS

Mr. GARY. Did not the Senate committee yesterday adopt an amendment to the authorization bill to provide that no money be loaned at less than 2 percent under the law?

Would that apply to these so-called investment credits, or whatever you call them?

Mr. GAUD. The amendment that was adopted by the Senate Foreign Relations Committee yesterday would apply to all AID loans.

A grace period of not more than 2 years and some rather complicated provisions as to the rate at which amortization must take place, but the longest limit of a loan would be 30 years.

Mr. GARY. That is in the authorization bill?

Mr. GAUD. That was the suggestion of the Senate Foreign Relations Committee.

Mr. GARY. It was an amendment suggested by the Senate Foreign Relations Committee to the authorization bill?

Mr. GAUD. That is right.

Mr. PASSMAN. Two percent, and limiting the grace period to 2 years?

Mr. GAUD. Yes.

I might say that today and tomorrow Mr. Bell is in Paris at meetings of the Development Assistance Committee and one of his principal objectives there is to press this question of loan terms with the European members.

Mr. PASSMAN. I doubt if he has much success.

NEW PROJECTS INITIATED IN FISCAL YEAR 1963

Did you initiate any new projects in Pakistan in fiscal year 1963?

Mr. GAUD. I believe there were two.

Mr. PASSMAN. Where were these two projects justified before the Congress last year?

Mr. GAUD. Let me see. The Government management project was in the presentation last year with a request for $76,000.

Mr. PASSMAN. How much did you obligate out of this $76,000?

Mr. GAUD. We obligated $297,000.

Mr. PASSMAN. Your book indicates you have obligated $424,000 out of the $76,000. Now you say you obligated only $297,000 out of the $76,000.

Mr. GAUD. That is true.

Mr. PASSMAN. You are a good operator if you can do that.

Mr. GAUD. We did not obligate $424,000. We obligated $297,000.

Mr. PASSMAN. How can you do that out of $76,000?

Mr. GAUD. We justified $76,000, and we obligated for the project $297,000.

Mr. PASSMAN. Let us find out about the other project.

Mr. GAUD. The other project is malaria eradication.

Mr. PASSMAN. How much did you request last year?

Mr. GAUD. This is one we did not justify.

Mr. PASSMAN. How much did you obligate for the project?

Mr. GAUD. $35,000.

Mr. PASSMAN. The book shows $68,000.

TRADES TRAINING CENTER PROJECT

How about this training center, on page 231?

Mr. GAUD. We made no obligation in 1963. We may do the project in 1964.

Mr. PASSMAN. What did you do with the $1 million?

Mr. GAUD. We never obligated it.

Mr. PASSMAN. You are not asking for anything in 1964?

Mr. GAUD. We have nothing in the book, but the book shows, as you point out, an obligation of $1 million in 1963 which we did not make. We still think we are going to go forward with the project, and if we do, our present estimate on what we would obligate in 1964 would be $600,000.

Mr. PASSMAN. This is a clear case of what happens when you are forced to spend money when you do not have any firm plans.

Mr. GAUD. This project was developed as a result of a conference on middle level manpower in Puerto Rico in 1962, which was attended by the United States and a great many of the underdeveloped nations.

This project was worked out by the Defense Department and the Peace Corps and AID together.

Mr. PASSMAN. By whom?

Mr. GAUD. By Defense, AID, and the Peace Corps.

The idea was to develop trades training in a number of countries. We thought the project would get started a good deal sooner than it did, which is why we showed the obligation for 1963. The plans are fairly far along now, and we believe it will get going in 1964.

Mr. PASSMAN. What will you do when you get going?

Mr. GAUD. Train people in the building trades and the mechanical and technical trades; for example, bricklaying, carpentry, motor repair and maintenance, welding, and so forth.

Mr. PASSMAN. Is it going to be a Peace Corps operation—or an AID operation?

Mr. GAUD. AID will provide equipment and technical supervision, and there will be about 100 Peace Corps instructors.

Mr. PASSMAN. How far will the Peace Corps get into the operation of AID and be doing projects for AID which you have previously been doing very well?

AVERAGE COST OF TECHNICIANS AND PEACE CORPS VOLUNTEERS

Mr. GAUD. They will not get into them any farther than we want them to. In projects where you can use Peace Corps people as instructors, you save an awful lot of money in hiring technicians that cost $20,000 to $30,000 a year, and there are some areas, like highway construction, and maintenance where the Peace Corps people can do a good job.

Mr. MINSHALL. What kind of an instructor gets $30,000 a year?

Mr. GAUD. Technicians.

Mr. MINSHALL. Technicians?

Mr. GAUD. Yes, sir.

Mr. MINSHALL. That is a good-sized salary, $30,000.

Mr. GAUD. It is not a salary.

Mr. MINSHALL. How do you break it out?

Mr. GAUD. If you take the salary, plus transportation, and in some places hardship allowances, shipping of household effects, housing, and all the rest, you will find the average cost of technicians in some areas will come close to that.

Mr. MINSHALL. What is the salary?

Mr. GAUD. The average in my region is around $11,000 for direct hire.

Mr. PASSMAN. Have you ever looked at the 34 percent they spend in the administrative part of the Peace Corps program downtown?

You know what the cost is—about $9,000 to get one of these corpsmen assigned.

Mr. GAUD. The basic difference, at least as far as the projects in my region are concerned where the two are working together, is, we try to send technicians over who will help train the teachers. Peace Corps people do the teaching themselves.

We try to train teachers, whereas Peace Corps people will be working in the schools themselves, or will be working on the roads themselves, while our technicians will be teaching teachers, or training management people, and so forth.

Mr. PASSMAN. I have here a newspaper article which says:

Asked by Representative Florence Dwyer, Republican of New Jersey, whether foreign aid expenditures were chiefly responsible for the continuing imbalance of payments, Mr. Dillon said there were three main elements.

He listed this country's expenditures overseas for its own troops, American private investments overseas, and the foreign aid program.

I think this needs no further comment at this time.

U.S. HOLDINGS AND USE OF PAKISTAN CURRENCY

In Pakistan, did you include any local currency in the figures you gave us earlier?

Mr. GAUD. No.

Mr. PASSMAN. Would you give us the total amount of U.S.-owned foreign currencies, in addition to all the other aid spigots resulting from Public Law 480?

Mr. GAUD. It is included in effect in the Public Law 480 figure.

Mr. PASSMAN. Do we have any of Pakistan's currency to our credit at this time?

Mr. GAUD. Yes, we do.

Mr. PASSMAN. How much?

Mr. WHITE. $123 million worth.

Mr. PASSMAN. What are our annual requirements?

Mr. GAUD. $11 million.

Mr. PASSMAN. You have about a 12 years' supply.

Mr. FORD. How much activity is there in the utilization of foreign currencies in Pakistan on an annual basis?

Mr. GAUD. Do you mean to what extent do we use the local currencies?

Mr. FORD. This is a secondary way of bolstering our foreign aid program.

Mr. GAUD. In fiscal year 1962, the equivalent of $129 million of rupees were used for Pakistan development plans.

Mr. FORD. Rupees generated by various programs on our part over the years?

Mr. GAUD. That is correct.

Mr. FORD. Was this about the level of utilization on an annual basis?

Mr. GAUD. Yes. We estimate in 1963 it will be about $115 million, which is not very much different.

Mr. FORD. Can you put a statement in the record showing how the $129 million was utilized in fiscal year 1963, and what you contemplate?

Mr. GAUD. Yes. I think we have already given this to the staff.

CONTRACT SERVICES—AGRICULTURAL UNIVERSITIES PROJECT

Mr. PASSMAN. Would you break down this contracting services estimate of $819,000 for the agricultural universities project, on page 217, as it appears this estimate covers contract technicians, equipment and participant training?

(The information requested follows:)

BREAKDOWN OF CONTRACTING SERVICES—AGRICULTURAL UNIVERSITY CONTRACT—PAKISTAN

AGRICULTURAL UNIVERSITY

Proposed fiscal year 1964 obligations would fund ongoing contract services by Washington State University at the Agricultural University, Lyallpur, West Pakistan, and a contemplated expansion of advisory services as explained below.

The ongoing services include: (1) a team of 14 specialists in agricultural sciences and a number of short-term staff members ($430,000); (2) first-year training for 12 new participants and completion of advanced graduate training of 15 trainees presently in the United States ($140,000); and (3) library, laboratory, and demonstration materials ($40,000). The total cost is $610,000.

In addition, we have been considering expanding this contract to include assistance on waterlogging and salinity to carry out some recommendations of President Kennedy's Science Advisory Committee on Waterlogging and Salinity. The additional services will include: (1) four irrigation engineers ($120,000); (2) a participant-training program in irrigated agriculture ($40,000); and (3) specialized equipment ($50,000). The total cost is $210,000. Final implementation of this depends upon agreements with Pakistan with regard to carrying out the recommendations of the President's Science Advisory Committee.

Mr. PASSMAN. In view of the fact you are expanding the number of U.S. technicians under the agricultural area development project, on page 219, why is the Peace Corps getting into the act at this time?

Mr. GAUD. The Peace Corps people have been working in the field beginning in late 1963, and they complement the work done by our own people who are advising Pakistan on the training program of its field staff.

Mr. PASSMAN. Why are you expanding the number of U.S. technicians? Are you going to be able to cut down on the number of U.S. technicians when these Peace Corps people get into the program?

Mr. GAUD. Not for this.

Mr. PASSMAN. You are increasing the number of U.S. technicians in the same area where Peace Corps men are coming in?

Mr. GAUD. For this project; yes.

Here is a problem we intend to concentrate on, that is the reclamation of these large areas in the Indus Basin which are lost to agriculture by waterlogging and salinity.

The President's Science Committee made a report on this situation, which we received last year. We are just getting going on work, on a plan to try to do something about this problem.

Mr. PASSMAN. You are mixing your AID technicians with the Peace Corps personnel.

Mr. GAUD. But they are doing different jobs.

Mr. PASSMAN. I shall not try to win.

Mr. GAUD. Yes, indeed, they are both engaged in this.

Mr. PASSMAN. In many instances, for this type of work it takes seasoned and well-trained engineers to do it.

Mr. GAUD. To do part of it, yes.

Mr. PASSMAN. When you start substituting a 21-year-old Peace Corps man to do the work of a seasoned engineer, how does it work out?

Mr. GAUD. It would not work out at all. We are not doing that.

Mr. PASSMAN. According to the books, they are pretty well mixed up.

Mr. RHODES. Who is your contractor on this project?

Mr. GAUD. Our present plan is to use direct hire technicians.

Mr. RHODES. This type of thing has been done so often and so successfully in Arizona that if you want a contractor, I would suggest the University of Arizona. I say that without any parochial idea of getting something for a constituent.

Mr. GAUD. I know Dr. Revelle has been in touch with them.

Mr. PASSMAN. I note, in connection with this project, and with several others in this country, that you plan an expansion of U.S. personnel from a level at the close of 1962 to a specific figure at the close of 1964.

Is that not an unusual way to justify an increase in personnel over a period?

I quote:

An expansion of U.S. personnel is projected from 5 at the close of fiscal year 1962 to 13 at the close of fiscal year 1964.

That is a little fuzzy to me. Is it to you?

Mr. GAUD. No, sir; it sounds like a clear statement to me.

Mr. PASSMAN. The statement is clear, but what you propose to do is not. How many technicians did you have in 1963?

Mr. GAUD. At the moment, we have five. We had scheduled 10, but we do not have them all on board yet.

Mr. PASSMAN. You had the same number at the end of fiscal year 1963 that you had at the end of fiscal year 1962?

Mr. GAUD. Five, that is right.

Mr. PASSMAN. Now you propose increasing them to 13?

Mr. GAUD. That is right.

Mr. PASSMAN. Does that make it clear?

Mr. GAUD. Yes.

Mr. PASSMAN. You did not say 1963 in the book.

Mr. GAUD. That is right, we did not.

The speed with which this project goes forward depends primarily upon working out arrangements with the Government of Pakistan which will insure effective Pakistan administrative control of the reclamation areas. We are still talking to them about it, and it has not got going as fast as we expected.

Mr. PASSMAN. Are you familiar with the naval expression, "Everything is snafu"?

Mr. GAUD. Yes.

Mr. PASSMAN. That matter, it seems to me, is snafu.

INDUSTRIAL PRODUCTIVITY PROJECT

I note you are requesting $835,000 for the industrial productivity project, on page 226.

Mr. GAUD. Yes.

Mr. PASSMAN. It appears from the narrative on the project that you are requesting $745,000 for contract services to finance 21 contract technicians. What is the average cost of these 21 technicians?

Mr. GAUD. That would be about $35,000.

Mr. PASSMAN. Would it not be about $35,500?

Mr. GAUD. I did it in my head.

Mr. PASSMAN. Are they a special superior type of technician to command that type of payment?

Mr. GAUD. They have to be good people. There will be a lot of overhead here.

I would like to look into that figure, Mr. Chairman, and get a little more information on it, but it does not look out of line.

Mr. PASSMAN. It could be that you might reduce your estimate on that project?

Mr. GAUD. I doubt it.

Mr. PASSMAN. Now, on page 227 you say:

> Details regarding implementation of this project are in the process of being worked out, including the precise timing for moving ahead with certain aspects of the proposals. Accordingly, any fund in excess of anticipated requirements will be deobligated.

Is that not kind of a new wrinkle on the buck's horns?

Mr. GAUD. Our book says——

Mr. PASSMAN. Did I read correctly: "Any funds in excess of anticipated requirements will be deobligated"?

Mr. GAUD. That is right. What we did in fact——

Mr. PASSMAN. You do not have anything from which to deobligate, so it is plain that you are going to ask for a lot of money. You do not think you need it, you imply, but you can give it back by deobligating it. Is that not what you are saying?

Mr. GAUD. I would like to tell you what we did.

The book shows we were going to obligate $900,000 in 1963. As we say here, we were not ready to go ahead full steam on the project, so instead of obligating $900,000, we only obligated $365,000.

Mr. PASSMAN. How much of that do you plan to deobligate, according to the language on page 227?

Mr. GAUD. None.

Mr. PASSMAN. Why did you put this language in here? Did you have more than you needed?

Mr. GAUD. If I had seen it, it would not have stayed in there.

Mr. PASSMAN. I note that you have an unliquidated balance, as of June 30, estimated at $1,116,000; is that correct?

Mr. GAUD. No. Inasmuch as we obligated only $365,000, the unliquidated balance should be $550,000 at the outside.

ILLUSTRATIVE NATURE OF PROGRAM PRESENTED TO CONGRESS

Mr. PASSMAN. The best justification you can make for this is that it is illustrative. You can put it up or down, and it can be canceled out and put to other projects. It is about that simple, is it not?

Mr. GAUD. Yes.

Mr. FORD. What percentage of validity is there to the justification books we go through every year, based on what you really execute during the pertinent fiscal year?

Mr. GAUD. I would say it is pretty high, Mr. Ford. These books are made up in February and early March, and that means we have a good many months of the fiscal year left to us. Circumstances change. Things do not go as fast as we would like, or as well as we would like, and we have to make changes. New projects come up which we feel are more important than others.

Certainly, by and large, if you go through all the projects in this project book, you will find that we went forward with pretty nearly all of them as we had planned. Of course, we adjust the amount we obligate, depending on requirements, and these are determined in part by country circumstances. If we were rigid, it would not make any sense at all in terms of the program. We have to adjust to changing conditions.

Mr. PASSMAN. The entire program, from start to finish, is illustrative; you use these justifications to get your funds, but under the law you do not have to actually go by the justifications. You could substitute new projects altogether for those that you list in the book; could you not?

Mr. GAUD. Yes.

Mr. PASSMAN. And you could, for that matter, cancel all the projects in one country and move them into another country?

Mr. GAUD. We could.

Mr. PASSMAN. The same kind of thing could be done with your development credits. You do not enter into a plan for projects until you get the money?

Mr. GAUD. We do not make any commitments to any projects until we get the money.

Mr. PASSMAN. You do not plan any projects. You do not submit any evidence to this committee as to what the project will be, do you, until you get the money?

Mr. GAUD. No, sir; not as a general proposition.

Mr. PASSMAN. The law is that broad?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. It is an uncontrolled and, in its present form, an uncontrollable program.

I am thoroughly convinced that if we continue this program we are going to have to adopt the same standards abroad that we have in America. If you have waited all these years to start a project, there is no reason why it would not wait another year or two to be sure it is planned properly.

Mr. GAUD. Mr. Chairman, the law is certainly as broad as you say it is. Coming back to Mr. Ford's question, it seems to me the basic proposition is this: The law is so broad, like many other laws, that we could flimflam Congress all around the town.

The basic question is with what spirit do we prepare this presentation here. It represents our best estimate of what we plan to do when the presentation is prepared. Obviously, you cannot plan in advance and be right a hundred times out of a hundred but most times we do go forward with our plans here, subject to changes as circumstances require. I would sum it up by saying that it is as close to being an accurate picture of what we plan to do next year as we can possibly make it.

Mr. FORD. In fiscal year 1963 we went through the same process?

Mr. GAUD. That is right.

Mr. FORD. What projects did you execute that were not mentioned at all to the committee last year in the case of Pakistan?

Mr. GAUD. There was one. We mentioned it before you came in.

Mr. FORD. For Pakistan only one?

Mr. GAUD. Yes.

Mr. FORD. You are submitting on a worldwide basis?

Mr. GAUD. Yes.

Mr. PASSMAN. You say only one?

Mr. GAUD. Only one we did not justify.

Mr. FORD. I limited the question to the projects they did not mention at all.

Mr. ANDREWS. If the gentleman will yield, as a matter of fact you could change any of these projects you want to.

Mr. GAUD. Yes.

Mr. ANDREWS. And go into any new project that you think worthy. The truth of the matter is it does not do much good to hold these hearings, does it?

Mr. GAUD. I think it does a good deal.

Mr. ANDREWS. Except to determine the total amount that the Congress is going to appropriate.

Mr. GAUD. It does that. I think also that it informs the Congress, the members of the committee, what we are doing. I think that these hearings are extremely useful to us in terms of our learning how you feel. When we go through these projects there have been a number of instances where questions have been brought up where I said I wanted to look into these things. I mean this a hundred percent. I think these hearings are mutually beneficial in many ways.

Mr. ANDREWS. Suppose the committee decided we did not want you to go forward with X project in Y country. You had discussed it here. You said it was one about which you had not made up your mind or maybe you had made up your mind. How would the committee go about expressing its wish for you not to go forward with that particular project?

Mr. GAUD. It strikes me that if the committee told us that informally, or made a statement to that effect in its report, we would think mighty seriously before we went forward with it.

Mr. ANDREWS. But I have known cases where expressed opinions of the committee have been ignored.

Mr. GAUD. Yes. It seems to me that under our constitutional system of government the final decision on these cases rests with us rather than with you, unless the law specifically prevents us from going forward with something.

I believe that we would be very hesitant to disregard an expressed wish of this committee on a specific project. We would want to feel extraordinarily sure that it was something that we ought to do or had to do before we would go forward.

Mr. ANDREWS. There isn't a single project mentioned in the appropriation bill, is there?

Mr. GAUD. No.

Mr. FORD. In the report sometimes something is mentioned.

Mr. GARY. And this committee can at any time express its disapproval of any project in the entire program and I dare say, as Mr. Gaud said, if the committee directly expresses its disapproval——

Mr. GAUD. We would think several times.

Mr. GARY. Chances are it would not be carried out unless somebody felt that it was absolutely essential.

Mr. GAUD. The secret is, is it not, Mr. Andrews, that this relationship between us on the administrative side and you on the legislative

side is a continuing relationship. To put it quite bluntly, we know we have to live with you. I think that since it is a continuing relationship, this is an important part of it.

Mr. ANDREWS. Off the record.

(Discussion off the record.)

Mr. MINSHALL. Mr. Chairman, will you yield?

Mr. PASSMAN. Yes.

Mr. MINSHALL. Mr. Gaud, we have been discussing our AID appropriation on this committee. Do you think it would be any more expedient if we appropriated on a regional basis rather than a lump sum for all foreign aid?

Mr. GAUD. No. I think it would be worse, from the standpoint of carrying out the foreign-policy objectives of the Government. It seems to me that the President, who after all basically runs this program, should have as much freedom as possible in the administration of this program, and in the administration of our foreign policy.

For example, conditions might change in country X, in the course of a year, so that you would not want to give them any aid at all for the balance of the year. Conditions might change in country Y so that you felt it was important to give them more aid than might have been allocated in a regional allocation. I think you have to have more freedom, more scope in the executive.

Mr. MINSHALL. In other words, you would be more strongly opposed to a country by country appropriation.

Mr. GAUD. Even more strongly opposed because this would indeed tie the hands of the President.

Mr. PASSMAN. I yield to Mr. Rhodes.

BOKARO STEEL MILL PROPOSAL

Mr. RHODES. Mr. Gaud, I am interested in how we might further implement this relationship. I like the statement you made. Let's take this Bokaro steel mill. We, I think, indicated that we would like to have another look at it before money is put into that steel mill.

Mr. GAUD. That is right.

Mr. RHODES. I do not know whether that would be strong enough to insure that this would come about or whether we should do something else. In other words, do you feel it is necessary for us to make some overt act like putting a request in the committee report, or is this enough?

Mr. GAUD. On this specific project, Mr. Rhodes, we are in process of thrashing out this very question, you might say, with both of the authorizing committees. They are both in midstream on this issue. I do not know where that is going to come out, but I will assure you that before you mark up this bill we will come to you and discuss this question with you.

Mr. RHODES. Thank you.

INADVISABILITY OF SOLICITING RECOMMENDATION OF U.S. STEEL ON FEASIBILITY OF BOKARO MILL

Mr. PASSMAN. Did you employ United States Steel to make a survey at the expense of some $750,000 for the steel mill?

Mr. GAUD. The $750,000 was the amount that we estimated. It cost somewhat less than that. We did employ United States Steel.

Mr. PASSMAN. Do you have a copy of their recommendations?

Mr. GAUD. I have a copy of their report which I have given to Mr. Merrill.

Mr. PASSMAN. Did they make recommendations?

Mr. GAUD. They did not. They made a report.

Mr. PASSMAN. Would not the opinion of a firm of that caliber be very valuable to the agency in determining the feasibility of this thing?

Mr. GAUD. We are certainly interested in their views; yes.

Mr. PASSMAN. Would it be proper for you to get for the committee United States Steel's recommendations? You had enough confidence in this organization to employ them to make this check.

Mr. GAUD. We have not asked them for any recommendations.

Mr. PASSMAN. Do you not think it would be prudent to get their recommendations? If you could trust them on spending upward of half a million dollars to make this survey, do you not think you could trust them on their recommendations as to whether they thought this steel mill should be built?

Mr. GAUD. I do not think they are in position to make a recommendation on the question.

Mr. PASSMAN. You would not know until you asked them, would you?

Mr. GAUD. I have talked to them about this, Mr. Chairman.

Mr. PASSMAN. Would you request a recommendation?

Mr. GAUD. No; I would not request it.

Mr. PASSMAN. Why not?

Mr. GAUD. Because I do not believe that they are in a position to make a recommendation on the question we face.

Mr. PASSMAN. Are they not in a lot better position to make a recommendation than you are, or anybody else with AID?

Mr. GAUD. They are in a position to assist us on technical questions. I do not think they are in position to make a recommendation on whether the U.S. Government in the light of its foreign policy, and its aid policy, should make this investment.

Mr. PASSMAN. If you are going to deal with whether it is wise to invest American taxpayers' dollars or give them away, it seems to me they are in position to make a recommendation. If you are willing to pay United States Steel, a reputable firm, three-quarters of a million dollars, or whatever under that amount you paid them, to give you the technical advice, I would not know why you would not want to have from them their opinion as to whether or not, since they are steel people and have to deal with this thing year in and year out, all over the world, this would likely be a sound operation.

Mr. GAUD. Their recommendation on whether there is a demand, sufficient demand for steel to justify building the plant, their recommendation on whether this plant will be profitable, their recommendation on whether there are sufficient raw materials and whether there is sufficient power, transportation, water, that sort of thing, those recommendations, I am with you a hundred percent. But on the basic question of whether the United States should make this investment in carrying out the policy enunciated in the Foreign Assistance Act; no.

Mr. PASSMAN. I agree they should not write the policy, but would it help you if we brought the officials down from United States Steel, for hearings, to get them to make a complete record as to why we should or should not go through with this proposal, based on an economic justification?

Mr. GAUD. They have given us that. They have given us a technical economic study of the situation. Now the question that remains, once we satisfy ourselves on that——

Mr. PASSMAN. Is that a matter for the agency to evaluate only?

Mr. GAUD. You might say this: They have given us the facts. Now we have to make the judgment whether on those facts, in the light of our aid policy, et cetera, we should go forward with this investment. I do not think United States Steel is in position to make that judgment.

Mr. PASSMAN. You would not mind us trying to find out more of the facts by having the people familiar with the situation come before this subcommittee? If I wanted to know whether a mill of this type could be economically justified in India, or other places, I would rather go to United States Steel than to AID people downtown. You would not quarrel with this position?

Mr. GAUD. Certainly not.

U.S. POSITION ON BOKARO STEEL PROJECT

Mr. MINSHALL. I have discussed this Bokaro steel matter at some length with some very high officials of a steel company who are familiar with it. I think it should be pointed out that they do not think much of the Bokaro steel venture that will cost the American taxpayers a billion and a half dollars over a 5-year period.

Mr. GAUD. As long as we got into this, Mr. Chairman, I would like to state, so there will be no misunderstanding on the part of the committee, just what the administration's position is on this steel mill. It will take a few moments. I think it might be worth it. The first question that you have to decide in considering this proposal is whether there is a need for another steel mill in India. Is there a sufficient demand for it? Now there are five mills.

Do any members of the committee question whether there is a demand for this steel?

Mr. PASSMAN. Surely there is a demand for it. However, they might buy the steel they need from mills in America and save money.

Mr. GAUD. Let me put into the record an excerpt from the United States Steel report which deals with the question of demand and shows quite clearly that over and above the amount of steel that will be produced in Bokaro there will still be a shortage of flat steel products in India in 1966, 1971, and 1976, which is as far as they went.

Mr. PASSMAN. Is that fact not true also in a good many other countries of the world?

Mr. GAUD. That is correct.

I am sure we agree this is one of the most important questions we have to deal with this year. I would like to get my position on the record. I will be brief as I can. The first question is whether there is a need for steel in India. These figures show very clearly that there will be. Now that is true despite the fact that the five steel mills

which are now in India, two privately owned and three publicly owned, are all going to be expanded to the limits of their capacity.

Licenses for that expansion have already been granted by the Indian Government, and it is going forward, so that plans are already in prospect to increase the existing mills to the full capacity. That is estimated to be 7.4 million tons—this is effective ingot capacity—in 1966, 11.3 million tons in 1971, and 14.4 million tons in 1976.

If we agree India needs more steel, then the next question is should she import it or should she build another plant? India has been importing about $150 million of steel a year. Her steel imports are very severely restricted because of the lack of foreign exchange. I might say that about 13 percent of imported steel came from the United States this past year—about $25 million. The rest of it came from Japan and European countries.

In the next 5 or 10 years the requirements for steel will increase to such an extent that India will have to multiply those imports. She would be spending $250 million, $300 million a year and more on steel imports unless domestic production increased. India will not have the foreign exchange for that level of steel imports. So that if we think only in terms of ways to reduce our own foreign aid burden—the period of time over which we might have to give aid—a steel mill in India will save an enormous amount of foreign exchange that India would otherwise have to lay out.

Now, will this mill be profitable, and I now go back to the United States Steel report. United States Steel reports that this mill will not be profitable in the first stage but only in the second, which begins in 1971. United States Steel looks at the proposition from the standpoint of an individual entrepreneur paying taxes and selling steel at the Government-controlled price. If, however, you look at this mill from the standpoint of the Government and the economy, where the selling price of steel exceeds the price paid to the producing mills, you will find that this mill will earn 22 percent before taxes, and 11 percent after taxes. So that we reckon that this is a sensible investment in terms of the utilization of resources and in terms of earnings and payoff.

Mr. RHODES. How can you state with such great particularity the earnings of this steel mill when you do not even know what your sources of supply are yet?

Mr. GAUD. I am using the basic figures in the United States Steel report modified to take account of the price at which steel is sold in India. The report makes certain assumptions about sources of supply.

Mr. RHODES. You had told us previously that you are still trying to block out the source of supply.

Mr. GAUD. Yes, sir. We have used the same assumptions United States Steel used in figuring future earnings.

Mr. RHODES. If you find the assumptions are based on a factual situation which does not exist, then you have an entirely different ball game.

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Is it our responsibility to spend a billion and a half dollars, or any good part of that amount, in India, considering what we have already done for them? Are we assuming this responsibility simply because they have a need for steel?

Mr. GAUD. No, sir.

Mr. PASSMAN. If it can be established as you have indicated a moment ago, that it would be a profitable venture, why do you not recommend it go into the private sector of the country's economy rather than——

Mr. GAUD. That is just exactly what I was coming to.

Mr. PASSMAN. If it is that way, why do we not suggest that the private sector pick this up, and then maybe we would make some consideration to them rather than to a socialized steel mill for India?

Mr. GAUD. It is a very fair question, sir, and it is an issue on which we have spent a great deal of time. In the course of the last few years we talked to most of the steel companies in this country as to whether they would be willing to go into such a project in India. We also talked to Indian businessmen in an effort to see if they could contribute rupee financing. The conclusion that we have come to, and this conclusion is shared by Mr. Tata, who is the head of the Tata Steel Mills and by the Indian Chamber of Commerce, that it is impossible to finance this plant in the private sector in India. The money just is not available for an investment of this size, so that the alternative, as we see it, is not between a private sector mill and a public sector mill but between a public sector mill and no mill.

Now if this mill is in the public sector, how will it work? It will be managed——

Mr. RHODES. Before you leave that point, may I again stop you?

Mr. GAUD. Go ahead.

UNAVAILABILITY OF PRIVATE SECTOR FUNDS FOR STEEL MILL

Mr. RHODES. It appears to me you have missed another possibility. Are there funds in the private sector in some other country which might be induced to make this investment?

Mr. GAUD. We have taken this up through the consortium. Don't forget, Mr. Rhodes, that the British have built a mill in India, the Germans have built a mill in India, and the Russians have built a mill in India. We have explored this with the World Bank, we have explored it with these other nations that I have mentioned, we have explored it with the Indians, talked to a lot of our own steel companies and, right or wrong, it is our judgment that you cannot do it in the private sector. We have come to that conclusion very reluctantly because we would much rather have this go in the private sector.

Mr. PASSMAN. Is that conclusion not a clear indication that we are moving this matter too rapidly?

Mr. GAUD. No——

Mr. PASSMAN. You would not think so, but it seems to make sense that we are. Several new steel mills that have gone up in recent years. Did we put up any of them?

Mr. GAUD. The British put up one, Germans put up one and Russians put up one. We have put up none.

Mr. MINSHALL. You have never had any experience with steel mills before?

Mr. GAUD. In India, no. Elsewhere, yes.

Mr. MINSHALL. In India.

Mr. GAUD. We have not.

Mr. PASSMAN. Would it indicate that as Russia has built one mill, the United Kingdom has built one, and Germany has built one, our pride is involved?

Mr. GAUD. No, sir.

It comes back again to the question I started with which is the question of demand, whether they need another mill and the issue on that according to the United States Steel people is a hundred percent clear.

Mr. CONTE. Would you yield?

Mr. PASSMAN. I am going to yield, but just a minute more, please. Would this not be about the same thing as advocating here in America the Government's starting something which could not be justified in the private sector?

Mr. GAUD. Mr. Chairman, I think we would all agree here in the room that if the test as to whether we should finance a particular enterprise in any of these underdeveloped countries was whether the private sector could theoretically undertake it, we would not be doing much. The reason we are in these kinds of projects in underdeveloped countries is that the private sector cannot raise the money or is unwilling to risk the investment.

Mr. PASSMAN. Would the record not show that we are trying to advance them too rapidly? You have not given the other three steel mills an opportunity actually to start operating full capacity. Is this matter not speculative?

Mr. GAUD. There is no question about the demand. May I move forward with my statement?

Mr. PASSMAN. Yes, but first I want to yield to Mr. Conte.

TERMS OF LOANS BY OTHER COUNTRIES FOR STEEL MILLS IN INDIA

Mr. CONTE. A very important question: In regard to the German mills, could you give me the terms of that loan?

Mr. GAUD. The German mill started out in the days in which India had very substantial——

Mr. CONTE. I just want the terms.

Mr. GAUD. Most of that money was a 3-year loan at 5½ percent interest.

Mr. CONTE. A 3-year loan, 5½ percent interest. How much? What was the total amount of the loan?

Mr. GAUD. $157 million, I think, and as the payments have fallen due, they have been rolled over by the Germans and extended by 16 years, so they ended up to be 18-year loans.

Mr. CONTE. Eighteen year loans at straight 3½ percent interest.

Mr. GAUD. No, higher, 5½.

Mr. CONTE. 5½ percent?

Mr. GAUD. That is right.

Mr. CONTE. Payable back in German deutsche marks?

Mr. GAUD. Yes, sir.

Mr. CONTE. How about the Russian loan?

Mr. GAUD. The terms of the Russian loan were 2½ percent for 12 years with a 5-year grace period.

Mr. PASSMAN. Do they, or did they, draw interest on the money during the grace period?

Mr. GAUD. It goes back to 1955.

Mr. CONTE. A 5-year grace period, no payment during that grace period and then 2½ percent interest?

Mr. GAUD. And 12-year term payable in rupees.

Mr. CONTE. It was a 17-year loan.

Mr. GAUD. No, 12.

Mr. CONTE. The 5 is included in the 12?

Mr. GAUD. Yes.

Mr. PASSMAN. But they draw interest on the loan during the five?

Mr. GAUD. That was repayable in rupees.

Mr. CONTE. And the 5-year grace period, did interest run at that time?

Mr. GAUD. Yes, sir.

Mr. ANDREWS. What was the amount of that loan, Mr. Guad?

Mr. GAUD. The amounts were $136 million.

Mr. CONTE. How about the English loan?

Mr. GAUD. The English one, again going back to 1957–58, a total of $74 million, the Treasury rate plus a quarter of one percent, partly 7 years, with a 5-year grace period, partly 20 years with an 8-year grace period.

Mr. CONTE. What was the interest rate? You said the Treasury rate.

Mr. GAUD. The Treasury rate was then around 5¾, maybe even 6.

Mr. CONTE. And, therefore, Mr. Secretary, under those terms, we could lend them money through the World Bank or the Export-Import Bank?

Mr. GAUD. Yes, we could. As I started to say, Mr. Conte, when you suggested that I leave out the frills, these loans were made at a time when India had large foreign exchange reserves, which she has since spent for her development on these mills, among other things, and her balance-of-payments situation today is very different from what it was then.

Mr. CONTE. The first mill was built in 1955?

Mr. GAUD. That is when the first loans were made.

Mr. CONTE. When was the first mill built or constructed?

Mr. GAUD. You mean when did it actually go on the line?

Mr. CONTE. Right.

Mr. GAUD. I think it was in 1960 and 1961.

Mr. CONTE. And the second one?

Mr. GAUD. They all began operation at about the same time.

Mr. CONTE. They have been in operation in recent dates?

Mr. GAUD. A couple of years.

Mr. CONTE. 1962. We are in 1963 now.

Mr. GAUD. I would think a year and a half or two years.

If I may just add a few more words.

Mr. PASSMAN. All right, sir.

PROBABLE OWNERSHIP OF BOKARO

Mr. GAUD. As I said, as we see it right or wrong we do not see any prospect for getting this mill in the private sector. If it were built, it would be owned by a government corporation; the board of directors of that corporation, consistent with the usual practice in India, would consist partly of government employees and partly of people from the public.

Public corporations in India are subject to the same laws, same taxes, same restrictions as private corporations. The Indian Govern-

ment has agreed that they will sell a substantial minority of the stock of that corporation to the public at an appropriate time in the future—insurance companies, employees, private individuals, whoever is willing to buy it—so that there will in time be a private interest in the mill.

Now one of the most basic questions, it seems to us, is that it be designed, built and constructed under American management. As I think I told the committee the other day, we would not be prepared to go forward with this proposition unless we got a satisfactory management contract.

AVAILABILITY OF BASIC RAW MATERIALS FOR BOKARO PRODUCTION

With this preface as to whether we think they need the plant, as to our judgment it must be in the public sector if it is going to be built at all, where do we come out? There are a number of unresolved problems here, as we said the other day. One is the raw materials supply question. The United States Steel people say that the raw materials are not proved up. The Indians say that they are. We do not know what the truth is. We have sent an engineer and an ore expert to India. He is out there now, with instructions to find out what information is available and what needs to be available.

Mr. CONTE. May I interrupt?

Mr. PASSMAN. I yield.

Mr. CONTE. Who is this fellow you sent over there?

Mr. GAUD. His name is Royce. He is one of our employees.

Mr. CONTE. How long has he been one of your employees?

Mr. GAUD. For less than 2 years.

Mr. CONTE. What is his background?

Mr. GAUD. I have forgotten the name of the company he was with. I would like to insert it in the record. It is one of the best known companies in the United States in this field.

(The information follows:)

BACKGROUND OF AID ORE EXPERT

Mr. Josiah Royce was chief geologist for Pickands & Mathar Co., Montreal, Quebec, a leading owner and operator of mining properties in the United States, Canada, and Latin America. He worked for that company from 1946 to 1961. He received his B.S. from Michigan College of Mining & Technology in 1943 and served in the U.S. Army from 1943 to 1946. He was employed by AID on September 1, 1961, as a geologist (ferrous metals), for duty in Ankara, Turkey.

Mr. CONTE. Do you mean to tell me the aid program has anyone who can qualify with United States Steel on a question such as this?

Mr. GAUD. Excuse me, sir, United States Steel did not go into the question.

Mr. CONTE. I thought you said they did. They said they did not feel the raw materials were there.

Mr. GAUD. United States Steel did not make a study of whether the raw materials were available. United States Steel looked at certain information furnished them by the Indians and said that this did not prove to them——

Mr. CONTE. You had better go back in your record and correct it because you said the Indians said they had the raw material and

United States Steel said they did not have the raw materials so you sent a man to India.

Mr. GAUD. United States Steel did not make a study of this question. They assumed the raw materials existed. It was not a part of their charter to go and investigate this question.

Mr. CONTE. Why didn't you hire or contract with United States Steel to go out there to find out whether the raw materials were there or not?

Mr. GAUD. Why didn't we?

Mr. CONTE. That is right.

Mr. GAUD. We may yet. We want to find out what the situation is. That is why I have sent these people out there to find what facts are available and what more has to be done.

Mr. CONTE. This is a very important point.

Mr. GAUD. Yes.

Mr. CONTE. You cannot tell me the background of this individual who has gone out there; one man. Here you have spent how much money in this contract so far?

Mr. GAUD. Roughly $650,000.

Mr. CONTE. $650,000, and now you are pitting all this against one man from the aid program, who has been with you 2 years, to come back with the answer of whether you are going to invest over a billion dollars?

Mr. GAUD. No, sir, he is not coming back on any such thing. I beg your pardon.

Mr. ANDREWS. What was the purpose of United States Steel's mission to India, for which you paid them $675,000?

Mr. GAUD. To investigate the technical and economic feasibility of building up a plant at this particular location of Bokaro.

Mr. ANDREWS. And not to determine whether or not there were ample raw materials there to keep a mill going?

Mr. GAUD. We did not hire them to go out into the field and make surveys. What they did was go and get what information the Indian Bureau of Mines offered them. The steel company was not asked, or hired, to go out into the field and make field investigations on raw materials.

Mr. ANDREWS. Mr. Gaud, have you or any other officials of this Government gone so far in connection with this proposed mill that you cannot back out of it?

Mr. GAUD. No, sir.

Mr. ANDREWS. Have you made any kind of commitment?

Mr. GAUD. Absolutely none.

Mr. ANDREWS. And no other member of this Government has?

Mr. GAUD. Not a one.

Mr. ANDREWS. The decision of whether or not you will go forward with this steel mill will depend upon the report you get from your technician that you have sent out there?

OTHER FACTORS ON WHICH FEASIBILITY OF BOKARO WILL BE JUDGED

Mr. GAUD. No. It will depend on more than that. He will come back and say how much more work needs to be done to prove the ore, and we will then have to do that work and find out if the ores can be proved. It will also depend on whether we work out satisfactory

management contracts with the Indians. It will also depend on working out the precise characteristics of the mill.

The United States Steel people assumed that the entire mill, that all the equipment of the mill, would be made in the United States and that is how they get to their figure of $512 million foreign exchange. The fact of the matter is that the Indians make refractories, they make structural steel, they make a great many items which could go into the construction of this mill.

One of the things that we will investigate before we ever go forward with this is the extent to which we can reduce the foreign exchange cost of the mill, which will result in increasing the Indians' share and decreasing our share. So, there are really quite a number of questions that we have to go into before anybody gets anywhere near a commitment.

Mr. PASSMAN. This thing has been bobbing up and down for several years, has it not?

Mr. GAUD. Yes.

Mr. PASSMAN. It has been pro and con even in AID?

Mr. GAUD. I do not know of any cons in the AID Agency in terms of general interest in the proposition.

The AID Agency has felt from the beginning that India needs steel.

This plant is included in the Third Plan. And we have always, I think, felt that this steel plant, if it was economical, if it was feasible, if the raw materials are there, made sense.

ESTIMATED COST TO THE UNITED STATES FOR STAGE ONE OF BOKARO

Mr. PASSMAN. An individual knowing that India needs steel is about like a man knowing a horse needs water. It is a question of whether we can afford this type of expenditure. The cost to the United States is estimated to be what amount?

Mr. GAUD. Of the mill?

Mr. PASSMAN. Yes.

Mr. GAUD. The first stage, step one——

Mr. PASSMAN. Let us get it all the way through.

Mr. GAUD. That is the only one we are considering—$512 million.

Mr. PASSMAN. Thank you. Has this developed into a personal project to please to some extent any particular individual?

Mr. GAUD. No, sir.

Mr. PASSMAN. Let me read from the Indian News for July 19, 1963. I think this paper is published by the Indian Embassy.

Mr. GAUD. That is correct.

Mr. PASSMAN. This item says:

> Whatever Professor Galbraith took in hand he has worked out with rare tenacity and he would have dearly loved to announce before his departure the success of his efforts to put through a U.S. assistance steel plant in Bokaro but we may be sure that on his return to the United States the unfinished part of the business will continue to occupy some of Professor Galbraith's abundant energy.

How much energy has he expended to get this thing?

Mr. GAUD. He is not back yet.

Mr. PASSMAN. This is something we can anticipate?

Mr. GAUD. That is right.

Mr. PASSMAN. You saw that item?
Mr. GAUD. Yes, I did.
Mr. GARY. Will the gentleman yield?
Mr. PASSMAN. Yes.

PROPOSED AMENDMENT TO LIMIT ASSISTANCE TO INDIA AND PAKISTAN UNTIL KASHMIR QUESTION SETTLED

Mr. GARY. Mr. Gaud, didn't I see in the paper the other day that there was some discussion in the Senate of placing in the authorization bill a provision that no money should be loaned to either India or Pakistan until the Kashmir question has been settled?
Mr. GAUD. Yes, sir.
Mr. GARY. What has been done about it?
Mr. GAUD. I believe I am right, that an amendment to that effect was defeated in the committee yesterday. This morning I understand, and this is only second or third hand, they were to take up Mr. Broomfield's amendment of reducing aid by 25 percent to those two countries unless the Kashmir issue was settled. I have not heard what happened.
Mr. GARY. Thank you.
Mr. PASSMAN. Off the record.
(Discussion off the record.)
Mr. PASSMAN. That within itself, if the amendment were adopted would not have any real effect on the bill unless you tighten up the language someplace else. It is all illustrative. Until you determine the level you could always say, "You are mistaken. This is a $2 billion level and we will knock off 25 percent until this thing is straightened out," and still give them $1,250 million.

PAKISTAN

INVESTMENT ADVISORY CENTER PROJECT

Mr. PASSMAN. Back to Pakistan—I notice that you obligated $303,000 in fiscal year 1962 for the investment advisory center project, on page 230, and you had the same amount unliquidated at the end of fiscal year 1963. You obligated an additional $300,000 and expect to have $579,000 unliquidated on June 30. It appears that you spent some $24,000 over 2 fiscal years on this project. That being so, on what date did you obligate the $300,000?
Mr. GAUD. I will have to check that. I don't have the date here.
(The information follows:)

DATE OF OBLIGATION FOR INVESTMENT ADVISORY CENTER PROJECT—PAKISTAN

AID obligated $300,000 for this project on March 22, 1963.

NUMBER OF AID PROJECTS

Mr. PASSMAN. Mr. Comptroller, did you ever get the number of the AID projects?
Mr. TENNANT. Yes, sir. The figure of 2,000 I gave you was the number of projects outstanding on June 30, 1962. When you asked me the other day, and since there were some other questions with respect to the number of projects we figured out the number of projects as of June 30, 1963, on a preliminary basis. This is based roughly on

a count which considers each one of the pages in the justifications being a project.

As you know, not all projects are in the justification books. There are 1,896 grant projects with unliquidated balances as of June 30, 1963.

Mr. PASSMAN. You said not all projects are in this book?

Mr. TENNANT. The projects for which we are not asking any new money, and on which the unliquidated balance is less than a million dollars are not reflected in the justification books.

Mr. PASSMAN. Those, too, are projects. Give us the total number of projects.

Mr. TENNANT. As of June 30, 1963, there are about 1,896 of the grant projects and 261 of the loan projects; that is, development loans, making a total of 2,157.

Mr. PASSMAN. 2,157 specific projects?

Mr. TENNANT. Yes.

Mr. PASSMAN. Under one of these projects you may have possibly 20 or 30 subprojects going; is that correct?

Mr. TENNANT. I went through the books, sir, or rather, I had one of my people run through the books noting those comments where they they are either pulling projects together or breaking them apart. They calculated that there would be 39 additional if you count the footnote.

Mr. PASSMAN. If you have 10 school buildings being built in different parts of "Randolphville" you carry that as 1 project; do you not?

Mr. TENNANT. The composition of a project really depends on the situation in each country.

Mr. PASSMAN. Say that you have 10 school buildings going under a capital project. That is listed as one project, is it not?

Mr. TENNANT. Well, depending on the way the project is set up it would be 1, or it could be 10, depending on how it is treated.

Mr. PASSMAN. You might have 5,000 projects if we break it down on the number of projects that are actually going; is that right?

Mr. TENNANT. The way we count projects, as one page per book, one page is a project.

Mr. PASSMAN. Sometimes you have four or five projects noted on one of the pages. If you have 10 school buildings being built, I am willing to accept that as 1 project. I just want to ask if that is the way it is, that you have a capital project and under that you may have a lot of subprojects going?

Mr. TENNANT. The only way I can answer you, and be honest about it, is that in some cases there may be subprojects, and in some cases there may be no subprojects.

Mr. PASSMAN. Would it be fair to say we are unable to determine actually how many individual projects there are?

Mr. TENNANT. I do not think that is fair to say. I think the count I gave you is a fair count.

Mr. PASSMAN. The other day we noted a case where you had 10 school projects going under 1 capital project, and there were some 40 projects altogether. However, you carried it as one project.

Mr. TENNANT. I know there are some projects the composition of which is similar to what you have said.

Mr. PASSMAN. As I have described?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. So it would require a great deal of research to ever break down the number of subprojects under the capital projects, would it not? If you have a capital project in the book and you have $8 million obligated, you would have to actually spread it to find out how many school buildings there would be and maybe how many pieces of road under that contract you would have to build to get to the school building. That is what I mean by subprojects.

Mr. TENNANT. Yes. I would agree that you can get into the problem of subprojects. However, I think from where we sit—we think that the composition of an integrated unit as we show on each page is the logical administrative unit to be counted as a project.

Mr. PASSMAN. I am not arguing with that proposition. I know that when we say we have 2,196 projects we are covering capital projects and not subprojects. Do you get my point?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. It would take an awful lot of research to ever break it out and get into the number of individual projects, as we define them as subprojects?

Mr. TENNANT. I think that is correct, sir.

Mr. PASSMAN. That fact is what I was trying to get. I have a difficult time getting through sometimes.

Mr. TENNANT. Perhaps I did not fully understand.

TRADES TRAINING CENTER

Mr. PASSMAN. You had two new projects in Pakistan, but you said one project. After you printed the hearings on page 231, listing $1 million, you canceled the project, did you not?

Mr. GAUD. We did not obligate in fiscal year 1963 but, as I explained, we plan to undertake it in fiscal year 1964.

Mr. PASSMAN. You might have 20 projects under this heading "Trades Training Center." I am sure we could define that you have all types of training centers, and you said that in all probability you would start it back.

Mr. GAUD. That is right.

EDUCATIONAL MATERIALS AND TRAINING PROJECT

Mr. PASSMAN. How many contract technicians and participants will be financed by the contract service estimate of $950,000, on page 235?

Mr. GAUD. There are 22 technicians and 28 participants, Mr. Chairman.

Mr. PASSMAN. What is the cost per technician?

Mr. GAUD. Twenty-two contract technicians. I think this figure ought to be nearer $750,000 than $950,000; I will look into it.

Mr. PASSMAN. We like to pick up this little extra change as we go along. It all adds up. Would it not be a great story if we had time actually to go into all the projects?

Mr. GAUD. Yes, sir.

PUBLIC SAFETY PROJECT

Mr. PASSMAN. Why are you increasing the estimate for the public safety project, on page 236?

Mr. GAUD. I would like to give you our latest figures on that project.

(Discussion off the record.)

Mr. PASSMAN. If we put all the military force together, what is the number?

Mr. GAUD. Of the Army?

Mr. PASSMAN. All forces.

Mr. QUINN. ———.

Mr. PASSMAN. How much have we given them in military aid in the past?

Mr. QUINN. Through June 30, 1963, it was———.

(Discussion off the record.)

Mr. PASSMAN. It appears to me that we get into everything.

(Discussion off the record.)

Mr. PASSMAN. We want the information anyway.

Mr. GAUD. We will give it to you.

(The information is classified and has been furnished the committee.)

GOVERNMENT MANAGEMENT PROJECT

Mr. PASSMAN. In view of the fact that you will have unliquidated, on June 30, $424,000, the total amount of the original obligation for the government management project, on page 237, why do you need $224,000 in fiscal year 1964 for five managers of contract service?

Mr. GAUD. Mr. Chairman, in 1963 we obligated $297,000 instead of $424,000, which reduces the unliquidated figure on June 30.

Mr. PASSMAN. In your region, these books do not mean very much.

Mr. GAUD. I hope you will notice that the obligations are very often less rather than larger.

Mr. PASSMAN. Occasionally; but, when you get into the big ones, they are sometimes way up. For example, you asked for $138,000, and that figure jumped to $1,719,000. That one project would offset a lot of those small ones. Anyway, that is the story.

Are you asking anything for the project for fiscal year 1964?

Mr. GAUD. Yes. We estimate that we will obligate the $297,000 in 1963, and that we will need $224,000 in 1964.

Mr. PASSMAN. For what purposes?

Mr. GAUD. That will include 10 participants. There will be several 60-day consultants. There will be several contract teams. I have not as much detail on this as I would like.

Mr. PASSMAN. Put the information in the record, please.

(The information follows:)

DETAILS ON GOVERNMENT MANAGEMENT PROJECT, PAKISTAN

The fiscal year 1963 obligations of $297,000 will finance a 2-year contract with an American consulting firm to provide advisory services to the East Pakistan Water and Power Development Authority by two full-time specialists, as well as by additional short-term consultants, and training for an estimated 16 participants now being selected for training in the United States.

The estimated obligations of $224,000 for fiscal year 1964 will cover the same type of contract services which are being planned for the West Pakistan Water and Power Development Authority.

Mr. PASSMAN. I note that you have $1,032,000 in unliquidated obligations on June 30 for the Public Administration Institute project, on page 240. For what purposes are these funds obligated?

Mr. GAUD. We did not obligate any money on that this year.

Mr. PASSMAN. The books are fouled up again.

TECHNICAL SUPPORT PROJECT

I note that you are not contemplating any increase in the total number of positions for the technical support project, on page 241; but are you proposing to furnish more man-years of service in fiscal year 1964 than you did in fiscal year 1963?

Mr. GAUD. We are proposing an increase of 2, from 81 to 83.

Mr. PASSMAN. Would you give the committee some detail as to the type of commodities you plan to procure for $300,000 for this project?

Mr. GAUD. Yes, sir, I will. It is general office supplies, equipment, vehicles, and the like.

Mr. PASSMAN. Page 3 of the project book indicates that through February 28 you had approved $54,500,000 for development credits to Pakistan. Would you submit for the record a list of the various development credits that you have extended to Pakistan since that date through June 30?

Mr. GAUD. Yes.

(The information follows:)

Development loans to Pakistan, Mar. 1, 1963, through June 30, 1963

Title of loan	Terms to maturity (years)	Grace period (years)	Interest rate	Date authorized	Amount authorized (millions of dollars)
Coastal embankments, East Pakistan.	40	10	¾ of 1 percent	Mar. 14, 1963	6.5
Dacca Jet Airport	40	10	do	Mar. 16, 1963	4.3
Services of general consultants, to East Pakistan Water and Power Development Authority.	40	10	do	Mar. 25, 1963	4.4
Operation of Salinity Control and Reclamation project (SCARP No. 1).	40	10	do	Apr. 1, 1963	.75
General commodities imports	40	10	do	June 19, 1963	70.5
Services of general consultants to the West Pakistan Water and Power Development Authority.	40	10	do	June 28, 1963	5.6
Public health, engineering, East Pakistan.	40	10	do	do	1.5
Machinery pool, West Pakistan.	40	10	do	June 29, 1963	5.0
Telecommunications equipment.	40	10	do	do	4.7
Pakistan railways (5th)	40	10	do	do	14.5
Water supply and sewage disposal, Karachi.	40	10	do	do	3.1
Machinery pool, East Pakistan.	40	10	do	do	1.5
Total					122.35

Mr. PASSMAN. Indicating the purpose of the credit and the terms.

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Mr. Rhodes?

PAKISTAN NEWSPAPER DAWN—CRITICISMS AND VIEWS

Mr. RHODES. Mr. Gaud, I had asked either you or the Secretary the political leanings of the newspaper Dawn. I do not think there was any answer.

Mr. GAUD. Yes. Mr. Talbot answered that.

Mr. RHODES. I do not recall. Would you care to refresh my memory on it? I think Mr. Talbot was going to get the answer.

Mr. LEE. I thought he characterized it and I can characterize it briefly. It is a nationalistic paper. The editor of the paper is a man who took part in the revolutionary movement back in the 1940's and he has been extremely outspoken in his nationalistic sentiment.

Mr. RHODES. Apparently recently he has become extremely outspoken in favor of Communist China and against India, the United States and the United Kingdom.

Mr. LEE. He has often been quite critical of the relationships with the United States.

Mr. RHODES. Here is an article that I think requires some investigation, or at least some answer in the record. It says this:

AIM IS TO CRIPPLE PAKISTAN ECONOMY

UNITED KINGDOM, UNITED STATES LINES COMBINE AT INDIA'S INSISTENCE

The United Kingdom and United States shipping lines have, it is reliably learned, joined hands to cripple Pakistan's economy through arbitrary increase in the freight rates. The move was initiated by the United Kingdom conference lines which proposed 15 percent increase from August 1 and the U.S. conference lines has now proposed 40 percent surcharge with effect from October 1.

Mr. GAUD. I know the facts back of that. There was a very severe cyclone in Chittagong at the end of May or early June.

The port of Chittagong is an extremely busy one, and it hasn't the port facilities really needed for normal traffic. As a result of the cyclone, a great deal of shipping piled up at Chittagong and American Lines and other lines have been reluctant to take freight to Chittagong. The conference of all shippers to that part of the world agreed on an increase of rates of 40 percent, which is to be effective October 1, in recognition of the conditions which exist there. It is perfectly clear, I think I can say safely, that if port conditions clear up this rate will not go into effect.

Mr. RHODES. Does the Pakistan Government understand the reason for it?

Mr. GAUD. Yes, they do.

Mr. RHODES. Have there been any protests from the Pakistan Government?

Mr. GAUD. No. For some time we have been working with the Pakistan Government to try to clear up the port congestion. We sent out Brigadier General Glore, who is a man with a good deal of experience not only in our Transportation Corps but in the handling of freight and shipping at ports in Pakistan and India. We and the Pakistan Government are working on this perfectly amicably.

Mr. RHODES. A further article in this newspaper which is supposed to be nationalistic. The date line is Rawalpindi. It says:

The vice president of the Pakistan Chamber of Commerce, Mr. N. H. Loan, who recently visited China as a member of the eight-man Pakistan trade delegation, expressed the hope that there were better prospects for expansion of

trade between the two countries. Addressing a press conference here last evening, Mr. Loan said that Pakistan can import iron ore and other commodities from China, and China can also import a number of raw commodities from Pakistan. Giving his impressions of the visit, Mr. Loan said that two things which impressed him most included the self-respect the Chinese people enjoy within their country and the way they live within their own means.

Mr. Loan said that he is very much surprised to see China develop so rapidly in every sphere of life within such a short period.

Do you know anything concerning this gentleman or the attitude of the Pakistan Chamber of Commerce toward Communist China?

Mr. GAUD. No, I don't, Mr. Rhodes.

Mr. RHODES. You do not, however, feel that the sentiments which are reflected by this newspaper are the sentiments of the Pakistani Government?

Mr. GAUD. Sometimes. Sometimes the views of the paper coincide with those of the Government, but as a general proposition "Dawn" takes the most extreme possible view.

Mr. RHODES. By "extreme" do you mean extremely anti-United States?

Mr. GAUD. Yes.

Mr. RHODES. Do you have any way of knowing why this paper is so friendly to Communist China?

Mr. GAUD. No, I don't. It would purely be a guess, but my own guess is that the attitude of the paper is a manifestation of the dislike and fear that the owners have for India.

Mr. RHODES. These clippings I received came from an American who is in Karachi. This is his comment:

Let's quit kidding ourselves. This is the steady diet that Pakistanis are getting and as a result of this is how they feel.

Is this fairly indicative of the type of line that the press of Pakistan has taken in the last few months?

Mr. GAUD. No. There are many times when the press of Pakistan has been taking a fairly extreme position, but I would say that "Dawn" is pretty well at the end of the spectrum. Would you agree with that, Mr. Lee?

Mr. LEE. I would agree "Dawn" is not necessarily representative of the press nor is the press necessarily representative of the views of the Government.

Mr. GAUD. Or of the people.

Mr. LEE. Or of the people.

Mr. RHODES. I think that is all, Mr. Chairman.

Mr. PASSMAN. Mr. Ford.

REQUESTS AND OBLIGATIONS FOR PAKISTAN PROGRAM

Mr. FORD. Just to get a feel of Pakistan like I did on India, let's take some figures here to see what you asked for and what you executed, Mr. Gaud.

What did you ask for last year or seek to justify last year for Pakistan? I am talking about the testimony you gave and the justification books which were submitted.

Mr. GAUD. Yes, sir. We asked for $10 million developments grants——

Mr. FORD. Give me first the total and then break it down.

Mr. GAUD. The total was $235 million; $225 million of that was development loans and $10 million was development grants.

Mr. FORD. Plus how much in Public Law 480?

Mr. GAUD. $151 million.

Mr. FORD. What did you execute in fiscal year 1963?

Mr. GAUD. The Public Law 480 was approximately the same. The development grants were $9,038,000. The development loans were $176,850,000. In addition, because of the cyclone that I referred to, we took $260,000 from the contingency fund to pay the cost of flying out emergency medical supplies for people in the damaged area.

Mr. FORD. So what was the total of executed programs?

Mr. GAUD. The total, not counting Public Law 480, was $186,-148,000.

Mr. FORD. What created the shortfalls, so to speak?

Mr. GAUD. The shortfall was created by the fact that on June 30 we were still——

Mr. FORD. What June 30?

Mr. GAUD. June 30, 1963. We were still $49.7 million short of fulfilling our consortium commitment to Pakistan. We had on hand in our shop at that time loan applications which we were working on which totaled $81.6 million. It just so happened on the arbitrary date, if you will, at the end of the fiscal year, that we had not completed action on all of these, so there was a shortfall.

Mr. FORD. You had a shortfall of $49 million?

Mr. GAUD. Yes.

Mr. FORD. Below what you justified last year and what you executed?

Mr. GAUD. Yes, and what we committed to the consortium.

Mr. FORD. Repeat that last again.

Mr. GAUD. It was a shortfall also against our commitment to the consortium.

Mr. FORD. Are they not one and the same thing, more or less?

Mr. GAUD. Well, the request of the Congress was made before we knew exactly how much we would have loaned in fiscal year 1962—the first year of the 2-year commitment. So, we were still estimating the fiscal year 1963 lending level needed to complete the commitment. As it turns out they were just about the same.

Mr. FORD. How much did the chairman indicate was unobligated in the Development Loan Fund?

Mr. GAUD. For the Agency?

Mr. FORD. Yes.

Mr. TENNANT. $92 million.

Mr. PASSMAN. $92,047,000; is that correct?

Mr. TENNANT. That is correct, sir.

Mr. FORD. So far as Pakistan is concerned in fiscal year 1963 there was more than enough unobligated funds available to consummate the program up to the level that you justified last year?

Mr. GAUD. That is right.

Mr. FORD. It wasn't a lack of money that caused any troubles with Pakistan?

Mr. GAUD. That is right.

Mr. PASSMAN. Did too much money cause any concern?

Mr. GAUD. It hasn't yet, sir.

Mr. CONTE. I have no questions on this item except some further questions on the steel mill and I will defer at this point and come back to it.

Mr. PASSMAN. Mr. Minshall?

Mr. MINSHALL. I have the same questions Mr. Conte has.

SYRIA

Mr. PASSMAN. The next country in this area is Syria. You are requesting $600,000 for fiscal year 1964?

Mr. GAUD. That is true.

Mr. PASSMAN. This is one country that appeared to be getting along very well. They did not have any aid program. Since we have gone in with an aid program I think they have overthrown about three governments; is that correct?

Mr. GAUD. They have had a number of governments recently; yes, sir.

Mr. PASSMAN. And all of it has happened since we went in with this aid program?

I shall read a news item:

> In September 1961 and after, there have been three changes in government in Syria reflecting Syria's continuing inability to form a coalition government satisfactory to the major political groups in the country.

I do not know what the reason is, but they have really been throwing over the governments since we started in with this aid program.

Anyway, you have $600,000 for this year. What has been the total amount of aid to Syria since we went into this aid program?

Mr. GAUD. $96.1 million.

Mr. PASSMAN. What amount do you have unliquidated to the credit of Syria?

Mr. GAUD. For AID ——

Mr. PASSMAN. Give it to us in full.

Mr. GAUD. A total of $17.6 million, sir.

Mr. PASSMAN. I think I should say that we were in Syria in, I believe, 1961. They told us Syria wanted no aid program, that they had substantial amounts of gold and had always kept it intact. From the inception of the program, 1946, through 1951, I think we gave Syria about $2.2 million.

We had $100,000 in 1956; $200,000 in 1957; in 1958, $200,000. In 1959, $1.2 million. Beginning with 1960 we really started going up with the aid, $14 million; $35 million, 1961; $43.9 million in 1962.

Of the total of $96.1 million we have given to them since the inception of the program practically all of that money has been given to them in the past 4 years, has it not?

Mr. GAUD. Yes, Mr. Chairman.

I would like to point out in fiscal year 1963 the total we gave them was $200,000.

Mr. PASSMAN. That is what you obligated but you liquidated more than that from previous years' credits, did you not?

Mr. GAUD. That is true.

Mr. PASSMAN. What sum did you liquidate out of the pipeline, out of these large amounts we had given in 1961 and 1962, in fiscal year 1963?

Mr. GAUD. $516,000, approximately.

Mr. PASSMAN. How much have you liquidated in the calendar year 1963 so far?

Mr. GAUD. $516,000.

Mr. PASSMAN. I said calendar year 1963.

Mr. GAUD. I beg your pardon.

Mr. TENNANT. We have no calendar year figure.

Mr. PASSMAN. What do you have on hand liquidated to the credit of Syria at this time?

Mr. GAUD. $17.6 million.

Mr. PASSMAN. Then why would you want any money for fiscal year 1964?

Mr. GAUD. $17.4 million is tied up in three loans. Almost all of it is in one loan, Mr. Chairman.

Mr. PASSMAN. That is the development credit category?

Mr. GAUD. It is a $14.7 million development loan, yes, for grain storage facilities.

Mr. PASSMAN. It falls in the general category of development credits?

Mr. GAUD. Development loans; yes, sir.

Mr. PASSMAN. Development credits, as defined by Mr. Dillon, the Secretary of the Treasury.

CIVIL AVIATION DEVELOPMENT PROJECT

What type of local expense do you have that would cost $35,000 under the civil aviation project, on page 284?

Mr. WHITE. This is local expenses of running aircraft.

Mr. PASSMAN. Are we profiting now by our experience that we had with one country out there without an aid program and it was going along nicely and we got in with $100 million in 3 years and we have just about reverted to no aid program again? They were without an aid program and when we went in with an aid program they overthrew three or four governments. Now we are coming out. We are merely liquidating what we have to their credit. Is there anything significant about that situation?

Mr. GAUD. We hope to keep this program on the modest side, Mr. Chairman.

Mr. PASSMAN. We could not call it modest for 1960, 1961, and 1962?

Mr. GAUD. No, but it was modest in 1963 and it is planned to be modest in 1964.

Mr. PASSMAN. I hope you can make it extremely modest.

TURKEY

The next country is Turkey. You are requesting ———; is that correct?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Give us the total amount of aid we have given to Turkey since the inception of the program.

Mr. GAUD. $3,963,800,000.

Mr. PASSMAN. That is from all of the spigots?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Including Public Law 480?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. What amount do you have unliquidated to the credit of Turkey as of June 30, 1963?

Mr. GAUD. $209.4 million, Mr. Chairman.

Mr. PASSMAN. Could you give us a breakdown between the economic part and the military aid?

Mr. GAUD. I beg your pardon. That doesn't include military aid.

Mr. PASSMAN. Does the $3,963.8 million include military aid?

Mr. GAUD. Yes.

Mr. PASSMAN. Of the $209.4 million, could you tell us the amount of military aid?

Mr. GAUD. Military is $252.5 million.

Mr. PASSMAN. So the total actually is $461.9 million?

Mr. GAUD. Yes, sir.

INDUSTRIAL OPERATIONS IMPROVEMENTS PROJECT

Mr. PASSMAN. Would you comment on this new project, at page 301, entitled "Industrial Operations Improvement," for which you requested $125,000?

Mr. GAUD. Yes, sir. We planned this as a 3-year project to be carried on through the Department of Industry of the Union of Chambers of Commerce in Turkey. The theory here is to improve the quality of production in specific private sector industries. We will provide a number of specialists who will work with these industries so that they might compete more effectively with imports and might even provide some exports.

Mr. PASSMAN. It looks as if this is one on which you are getting started a little late. I though we were just about ready to come out of Turkey.

Mr. GAUD. Turkey, as you will remember, Mr. Chairman, went through a period of building up the state enterprises with what you might call a signal lack of success. We are spending a great deal of effort today on trying to get the private sector going.

Mr. PASSMAN. We help socialize it and now we are trying to undo it; is that what you mean?

Mr. GAUD. That wasn't what I meant; no.

Mr. PASSMAN. Will the $125,000 requested complete this project?

Mr. GAUD. No, sir; we estimate another $100,000 for the year after. A total of $226,000 for this project.

Mr. PASSMAN. Why did you not think of this project before? I thought you developed the private enterprise sector right along with the socialistic part of it.

Mr. GAUD. This activity we have felt for a long time was important in Turkey but unless there is a willingness to support it, you can't get anywhere.

Mr. PASSMAN. I heard that was true. I also read in the paper, I believe, that in Turkey they only initiate about 10 percent of the requests for these projects. Did you see that article?

Mr. GAUD. I saw that article.

Mr. PASSMAN. Is that statement subject to any discount?

Mr. GAUD. It certainly is.

Mr. PASSMAN. How much?

Mr. GAUD. It is not true at all.

Mr. PASSMAN. You saw the article?

Mr. GAUD. This is Senator Morse's speech I think you are referring to.

COMMERCIAL TRAINING INSTITUTES PROJECT

Mr. PASSMAN. Page 309 indicates there is a Commercial Training Institute project beginning in September of 1962, which is fiscal year 1963, but your financing table indicates that you obligated $240,000 to this project in fiscal year 1962.

Mr. GAUD. Yes, sir.

Mr. PASSMAN. And the amount remained unliquidated at June 30?

Mr. GAUD. That is right.

Mr. PASSMAN. In fiscal year 1963 you obligated an additional $55,000?

Mr. GAUD. Yes, we did.

Mr. PASSMAN. You anticipated you would have $295,000 unliquidated at June 30, 1963?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Despite this rather unusual résumé of this project and despite the fact that you have all the unobligated funds in 2 fiscal years, all of which remains unliquidated, are you really requesting an additional $174,000 for fiscal 1964?

Mr. GAUD. Yes, but I would like to check it and I will.

Mr. PASSMAN. There is a lot of indication that they just have to fill in these figures in order to bring these books up to the President's budget request. But please have this checked and give us a little information on the matter.

Mr. GAUD. All right.

(The information follows:)

FUNDING FOR COMMERCIAL TRAINING INSTITUTES PROJECT—TURKEY

AID expects to sign a contract with Michigan State University in September to carry out a 5-year program in commercial training including 18 man-years of technicians services, 40 man-years of participant training, and $50,000 of books, periodicals, and teaching aids. The contract will utilize the $295,000 of unliquidated funds available from fiscal years 1962 and 1963 to cover the first 2 years of this project. At this time it is expected that fiscal year 1964 funds will not be needed for the project, and that additional funding will not be required until fiscal year 1965.

DEVELOPMENT STATISTICS PROJECTS

Mr. PASSMAN. Could you tell us when you justified the $122,000 for the Development Statistics projects, at page 310?

Mr. GAUD. We did, Mr. Chairman. This project was called Reorganization of Central Statistical Office.

Mr. PASSMAN. Can you give us some idea as to what it will cost at completion?

Mr. GAUD. Yes. $620,000 is our estimate.

Mr. PASSMAN. Do you have a research bureau that thinks up new projects such as this one?

Mr. GAUD. No, sir. I think the need for this type of project is fairly evident when you look at the difficulty you have getting statistics in Turkey. Turkey has recently adopted and put into effect a 5-year plan. It is pretty hard to do any economic planning unless you have good statistics. That is why this particular project got started.

Mr. PASSMAN. You do have a research department downtown?

Mr. GAUD. We do have a research department downtown.

ANKARA HIGH SCHOOL FOR AMERICAN DEPENDENTS

Mr. PASSMAN. Could you tell us when you justified the $650,000 that you obligated to the Ankara Junior-Senior High School project, at page 312?

Mr. GAUD. This is a section 636(c) case. Money to build a high school.

Mr. PASSMAN. When did you justify it?

Mr. GAUD. We didn't justify it, Mr. Chairman.

Mr. PASSMAN. That is a lot of money.

Could you give us an idea as to how much it will cost to complete this project?

Mr. GAUD. The $650,000 figure is outdated. We have obligated $919,000 and that is the total contribution of AID.

Mr. PASSMAN. Last year you didn't request anything for this purpose?

Mr. GAUD. That is correct.

Mr. PASSMAN. When you printed the books you figured you would obligate $650,000.

Mr. GAUD. That is correct.

Mr. PASSMAN. Later you obligated $919,000, and you say now that the completion cost will be how much?

Mr. GAUD. $919,000. It is a new school building to accommodate 800 students. It is a joint Department of Defense, State, AID project. It will benefit our people not only in Turkey but all through the Middle East.

TECHNICAL SUPPORT PROJECT

Mr. PASSMAN. The technical support project, at page 314, indicates that the number of technicians in 1963 was less than the number in 1962. How many technicians did you finance under this project in 1962?

Mr. GAUD. Seventy-four.

Mr. PASSMAN. In fiscal 1963?

Mr. GAUD. Sixty.

Mr. PASSMAN. What number is proposed for fiscal year 1964?

Mr. GAUD. Sixty.

Mr. PASSMAN. How many technician positions were transferred to the administrative rolls in this group?

Mr. GAUD. I think none, Mr. Chairman. I will check it if you like and confirm that.

Mr. PASSMAN. The book says otherwise:

The transfer of some positions to the administrative rolls.

Mr. GAUD. You are quite right. I will have to check it.

Mr. PASSMAN. All right, sir.

(The information requested follows:)

FUNDING OF TECHNICIAN COSTS, TECHNICAL SUPPORT PROJECT—TURKEY

A further check of technical support positions indicates that the reduction in 1963 resulted from deletion of positions and transfer to appropriate project rolls and there were no transfers to administrative rolls.

Mr. PASSMAN. I notice a number of projects, on pages 315 and 316, which have a total cost of $1,316,000.

Mr. GAUD. Yes, sir.

COMMITTEE ON UTILIZATION OF WATER RESOURCES PROJECT

Mr. PASSMAN. Would you comment briefly on the project entitled "Committee for Utilization of Water and Resources" for which you are requesting $10,000?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. That was the amount they wanted to start the Peace Corps with in 1960. When they came back the following year it had been increased by Presidential determination to $1.4 million, and from then on the moon is the limit.

Mr. GAUD. Through June 30, 1962, we obligated $15,000 for this project. The 1963 obligations were zero. We estimated another $10,000 in 1964. That will be $25,000 and that is all that we propose to obligate for this project.

Mr. PASSMAN. That project is for the utilization of water resources?

Mr. GAUD. Yes, sir. It is a matter of training participants, sir, and that is all.

Mr. PASSMAN. Mr. Andrews?

AID LEVELS TO TURKEY

Mr. ANDREWS. I believe you stated that the unexpended balance in all categories at July 1 was $461.9 million?

Mr. GAUD. That is true, Mr. Andrews.

Mr. ANDREWS. What is the total planned for Turkey in 1964, all categories?

Mr. GAUD. $252 million of that was military.

Mr. ANDREWS. Of the $461.9 million?

Mr. GAUD. $252 million of the $461.9 million was military.

Mr. ANDREWS. But the total amount unexpended was $461.9 million?

Mr. GAUD. That is correct. Now, we estimate the 1964 program is on the economic side at ——— Public Law 480 is $47 million. This is our estimate for fiscal year 1964.

Mr. ANDREWS. I am referring to page 49.

Mr. GAUD. That is the sales agreement. The country uses part is the $47 million. Then the military assistance program is ———. Now, adding those together, we get ———.

Mr. ANDREWS. That will give you in all categories a total available for expenditure in Turkey in 1964, ———?

PRIVATE ENTERPRISE IN TURKEY

At page 301 in the big book you state:

Private enterprise in Turkey is hindered by a lack of investment capital and by governmental inhibitions.

Explain that statement, please.

Mr. GAUD. Mr. White, would you answer that question—if you have no objection Mr. Andrews.

Mr. WHITE. The Government, for example, in the mining area has been reluctant at times to open up investment to the private sector. This is done by law and by administrative action.

Mr. ANDREWS. In other words, these people cannot help themselves because of Government inhibitions.

Mr. GAUD. This is certainly true in some respects.

Mr. ANDREWS. Have you done anything to try to correct those inhibitions?

Mr. GAUD. Yes, we have, and the Government has eased a good many controls in connection with the adoption of the 5-year plan. The climate is much more favorable for private enterprise than it has been.

We have made in the last year, for example, Mr. Andrews, quite a number of Cooley loans to American firms that are investing over there. We have now been discussing two or three very large loan applications from American firms that are thinking of going to Turkey to set up plants there. Counterpart funds and Public Law 480 proceeds have also been set aside for loans to the private sector. There has been a considerable shift in opinion in Turkey since the new government of Premier Inonu came in 2 years ago. We feel that the Turks are making a lot of headway in this direction though they have a long way to go.

EREGLI STEEL MILL LOAN

Mr. ANDREWS. I notice you are financing a very, very large steel mill for Turkey.

Mr. GAUD. Yes. The loan for that was made several years ago, in 1961.

Mr. ANDREWS. A total cost of $245 million.

Mr. GAUD. Yes. That was in the private sector. Let me modify that: The majority of the voting stock is owned by private investors. The Government owns some of the stock. The mill is to produce 500,000 ingot tons of steel a year. It is being constructed by a consortium of American firms of which the Koppers Co. is taking the lead.

Mr. ANDREWS. This mill will cost $245 million. How much of that will be U.S. money?

Mr. GAUD. U.S. Government money?

Mr. ANDREWS. Yes.

Mr. GAUD. The amount of this loan shown at page 322, that is $129.6 million.

Mr. ANDREWS. That is all this Government will lend?

Mr. GAUD. Yes.

Mr. ANDREWS. No grants?

Mr. GAUD. No, sir.

Mr. ANDREWS. It is a 20-year loan?

Mr. GAUD. It is a 20-year loan, 5¾ percent interest, repayable partly in Turkish currency and partly in U.S. dollars. The repayment goes back to the Development Loan Fund.

Mr. ANDREWS. What percentage of the money will be repaid in dollars?

Mr. GAUD. I haven't got that information here.

Mr. ANDREWS. Put that in the record.

Mr. GAUD. I will be glad to do that.

(The information requested follows:)

Percentage of repayment in dollars, Eregli steel mill loan, Turkey

	Turkish lira	U.S. dollars
Currency of repayment:		
Amount	98,600,000	$31,000,000.
Interest rate	5¾ percent	5¾ percent.
Term	20 years	20 years.
1st interest payment due	1 year after the date of beginning of operations.	1 year after the date of beginning of operations.
1st principal repayment due	1 year after the beginning of operations.	11 years after 1st disbursement.

Mr. ANDREWS. Has the mill been completed?

Mr. GAUD. No, it has not; however it is on schedule.

Mr. ANDREWS. When do you expect it to be completed?

Mr. GAUD. My best recollection is that it will be producing its first steel in calendar year 1964. I had a conference with Mr. Fred Foy week before last. We went over this in detail and the thing is entirely on schedule at the moment.

Mr. PASSMAN. Will the gentleman yield?

Mr. ANDREWS. Yes.

Mr. PASSMAN. Our steel mills are operating at about 62 percent of capacity, are they not?

Mr. GAUD. I do not know the exact figure but certainly nowhere near full capacity.

Mr. PASSMAN. If we keep building these steelmills all over the world, we might get down to 35 percent capacity; could we not?

Mr. GAUD. That I do not think has been the history of the past.

Mr. PASSMAN. But we are writing new history now.

Mr. GAUD. As you build up these nations—take the Marshall plan nations or take Japan—as their economies grew the value of our exports to them has increased rather than decreased.

Mr. PASSMAN. You are talking about these old industrial countries. Of course, you are talking about total exports and not merely steel.

Mr. GAUD. That is right.

Mr. PASSMAN. If we deal with steel, if we keep on as we are doing, instead of having 38 percent of our capacity idle we could wind up with maybe 60 percent of it idle.

Mr. GAUD. That might happen, Mr. Chairman, but I don't think it will.

Mr. PASSMAN. There is indication that it might happen.

Thank you, Mr. Andrews.

Mr. ANDREWS. Is there any question about the availability of an abundant supply of raw materials to keep the mill going?

Mr. GAUD. No, we are told there is no question of that here.

Mr. ANDREWS. Where will they get the raw materials?

Mr. GAUD. Within Turkey.

NORTHWEST ANATOLIA POWER GENERATION PROJECTS

Mr. ANDREWS. Now, it looks as if we are financing four power generating plants in Turkey.

Mr. GAUD. Which ones do you refer to particularly?

Mr. ANDREWS. On page 324. It shows we have made a loan approved in 1962, signed the 7th of December 1962, 40 years duration, interest rate three-quarters of 1 percent. Does that also include a 10-year grace period?

Mr. GAUD. Yes, it does.

Mr. ANDREWS. And to be repaid in U.S. dollars?

Mr. GAUD. That is right.

Mr. ANDREWS. This loan will finance the purchase of American equipment and services for the installation of two 100-million-watt thermal units in a new powerplant in Istanbul and two additional hydro generators, each of 40-million-watt capacity at the existing Sariyar Dam 140 miles southeast of Istanbul?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Is it three plants instead of four?

Mr. GAUD. It is two plants. There are two power units for one new plant at Istanbul and two power units for an existing plant at Sariyar.

SEFLON NYLON PLANT LOAN

Mr. ANDREWS. I notice we approved a loan for $1.8 million to finance the establishment of a privately owned nylon plant at Istanbul.

Mr. GAUD. Yes. An American firm has an interest in that plant, Mr. Andrews. The Von Kohorn Co. That firm will design the plant, construct it, and manage it, and it has an equity interest in it.

Mr. ANDREWS. Will it be privately owned or will it be owned by the Government?

Mr. GAUD. This is a privately owned firm with American and Turkish investors.

Mr. ANDREWS. That is all, Mr. Chairman.

AID POSITION ON U.S. PRIVATE INVESTMENT IN TURKEY

Mr. PASSMAN. What do you do in a case when a reputable American firm requests approval, or a guarantee, to take their industry into Turkey and we find that possibly that particular field is a monopoly of the Government? If an American firm files an application to go in with their own capital in the free enterprise sector of Turkey, what is the position of AID?

Mr. GAUD. They don't have to come to us at all if they want to go in. They only come to us if they want to borrow some money from us.

Mr. PASSMAN. Do they not come to you in the matter of investment guarantee?

Mr. GAUD. Yes.

Mr. PASSMAN. Certainly they would.

What is the position of the American firm? Let us say it is a brewery. All breweries in Turkey are, I believe, owned by the Turkish

Government and this American company would like to go in with the guarantee part of the program and in business with maybe a Turkish businessman, or businessmen.

What is the attitude of AID?

Mr. GAUD. I think our attitude would be very favorable, Mr. Chairman.

Mr. PASSMAN. Is there any reason why it should be entirely favorable with regard to an outstanding American business firm?

Mr. GAUD. No reason in the world.

Mr. PASSMAN. Thank you.

Mr. Montoya?

LOANS TO CORPORATIONS

Mr. MONTOYA. Mr. Gaud, do you have many of these loans where you lend to corporations directly?

Mr. GAUD. To American corporations?

Mr. MONTOYA. No, to foreign corporations.

Mr. GAUD. We have a fair number of them, yes.

Mr. MONTOYA. I notice you have a loan to Etibank, which is a Government corporation.

Mr. GAUD. Yes.

Mr. MONTOYA. And the nylon plant loan is made to Seflon. Is that a Government corporation?

Mr. GAUD. That is a private corporation with American and Turkish investors.

Mr. MONTOYA. It is made on a three-quarters of 1 percent interest repayment?

Mr. GAUD. This is what we call a 2-step loan. The loan is made to the Government of Turkey and is then reloaned to the corporation.

Mr. MONTOYA. I recognize that. You are lending three-quarters of 1 percent money to the Government and the Government in turn makes that loan for the project to a private corporation and gets 5¾ percent.

Mr. GAUD. We insisted on that. This was a term and condition of our loan.

Mr. MONTOYA. So in the end Turkey is making money with our money and the repayment to us will be in dollars; is that it?

Mr. GAUD. Yes, sir.

Mr. MONTOYA. Only on the principal plus the three-quarters of 1 percent?

Mr. GAUD. Yes, sir. We feel that the private corporation or the operating corporation should pay regular money market rates for the loan that it gets from the Government. But we feel the terms for repaying that foreign exchange should relate to Turkey's balance-of-payments position. The Turkish balance-of-payments situation is such that we feel that the 40-year, 10-year grace, and three-quarters of 1 percent interest rate is an appropriate rate of a dollar loan to Turkey.

Mr. MONTOYA. What has been our experience with Turkey on dollar repayment loans which we have made to it?

Mr. GAUD. We have no loans that are in default that we have made to Turkey. Of course, the AID loans are so recent that there haven't been any payments of principal that have fallen due yet.

POWER PROJECTS IN NEAR EAST-SOUTH ASIA

Mr. MONTOYA. I notice you have another powerplant or power project here involving $31.3 million.

Mr. GAUD. Yes, sir.

Mr. MONTOYA. How much of this is already disbursed?

Mr. GAUD. I think I am right in saying that the Government of Turkey has prepared specifications, but has not yet advertised for tenders.

Mr. MONTOYA. You are going in quite extensively on these power projects in India and other areas; aren't you?

Mr. GAUD. Yes. We feel they are absolutely basic. If these countries are to develop they have to have electric power and this is one of the fields in which we are expending a great deal of effort.

Mr. MONTOYA. I don't recall the terms of the loan and the commitment to India but were the repayments to be made in rupees?

Mr. GAUD. No, sir. The terms were exactly the same as this loan.

Mr. MONTOYA. Will you insert in the record for this region how many projects you are currently funding and the listing, project by project, with the total cost and commitment by the United States?

Mr. GAUD. Yes.

(The information requested follows:)

Current AID dollar capital funding of NESA power projects and total costs of projects

[In thousands]

	AID funding	Total estimated cost of project
Greece (total): Acheloos hydroelectric project	$52,600	$127,562
India:		
Chandrapura thermal power	30,000	73,000
Chandrapura thermal power II	16,000	25,500
Sharavathi hydroelectric	8,400	76,900
Sharavathi hydroelectric II	18,400	57,165
Ahmedabad thermal power	3,900	5,292
Barauni thermal power	3,800	6,500

Northwest Anatolia power generation projects	31,300	49,900
Keban and Ciceroz hydroelectric feasibility survey	350	1,000
Turkey, total	38,650	70,167
United Arab Republic (total): Cairo west power project	30,600	46,200
Total, NESA countries	647,100	1,268,546

MILITARY ASSISTANCE PROGRAM IN TURKEY

Mr. MONTOYA. Now, with respect to the Military Assistance Program, could I interject this at this point: What is the contribution in military manpower that Turkey makes to the NATO Alliance?

Mr. GAUD. Mr. Quinn, can you give that figure?

Mr. QUINN. The total strength of the Turkish forces is ————.

Mr. MONTOYA. Where are they based?

Mr. QUINN. In Turkey.

Mr. MONTOYA. What is the total cost of a Turkish soldier compared to the cost of an American soldier?

Mr. QUINN. I don't have that figure. I can supply it for the record.

Mr. MONTOYA. Would you supply that for the record. We did get those figures 2 years ago and I don't know what the figure is today.

Mr. QUINN. I will put that in the record for you.

(The information requested follows:)

ANNUAL PER CAPITA MILITARY PERSONNEL COSTS UNITED STATES VERSUS TURKEY

Cost estimates shown below are confined to pay, allowances, subsistance, and individual clothing. They do not include operation and maintenance expenditures, as no meaningful comparisons could be made due to differing weapons systems and technologies. For comparative purposes, figures are included for 1961.

Cost to maintain a soldier

	1961	1962	Net change (1962 versus 1961)	Remarks
United States	$4,014	$3,948	−$66	
Turkey	404	427	+23	Increase due to higher pay and allowances.

Mr. PASSMAN. Would you also put in the record a statement as to the effectiveness of the foreign soldier and the American soldier? Sometimes we are told it would take 30 of these foreign soldiers to accomplish as much as one American soldier.

Mr. GAUD. I have never heard anybody say that about the Turks, though.

Mr. PASSMAN. They are good fighters, I understand. An American soldier gets his salary whether he is in Turkey, Formosa, Taiwan or the United States, does he not?

Mr. QUINN. Yes.

Mr. PASSMAN. Are there 70 nations for which we have a military aid program planned for fiscal 1964?

Mr. QUINN. I don't know what the total figure is, Mr. Passman.

Mr. PASSMAN. They had 58 and decided later to go to 65 and I think it will be 71 nations in fiscal year 1964.

Mr. TENNANT. The sheets I gave you show 65 in fiscal year 1964 plus 3 credit sales countries which would make a total of 68 countries.

Mr. PASSMAN. They told us earlier 70 or 71.

Mr. TENNANT. They did?

Mr. PASSMAN. Yes.

UNITED ARAB REPUBLIC

Mr. PASSMAN. The next country in this area is the United Arab Republic. I believe that you are requesting for fiscal year 1964 ———.

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Is this the country where we had an aid program and when Nasser came in we suspended it for several years, about the time of the Suez Canal incident, and later went back?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. You suspended the program, but you did not deobligate the funds. You left the funds intact to the credit of Egypt.

What has been the total amount of aid to the United Arab Republic since the inception of the program?

Mr. GAUD. $803.5 million.

Mr. PASSMAN. Does that figure include all spigots of aid?

Mr. GAUD. Yes.

Mr. PASSMAN. What is the total amount of commitments under Public Law 480?

Mr. GAUD. The total amount of commitments under Public Law 480, $390 million.

Mr. PASSMAN. To be used over how many years?

Mr. GAUD. Three years.

Mr. PASSMAN. How many years has this commitment been in effect?

Mr. GAUD. One.

Mr. PASSMAN. Give us the total of of unliquidated funds under all contracts to the credit of the United Arab Republic.

Mr. GAUD. That would be the sum of those two figures.

Mr. PASSMAN. What is that sum?

Mr. GAUD. If you are going to put in the whole Public Law 480 when 1 year is completed.

Mr. PASSMAN. That is exactly what we are going to do, because we are qualifying it to what it is.

Mr. GAUD. $463 million on that basis.

UNITED ARAB REPUBLIC PROCUREMENT OF SOVIET BLOC MILITARY EQUIPMENT

Mr. PASSMAN. I believe that I read in the papers a day or two ago that the United Arab Republic is buying Russian Mig's and that they are using about $100 million a year of their foreign exchange for the purchase of military equipment from Russia. Are you familiar with any of those charges?

Mr. GAUD. I have heard that charge. To the best of my information it is not true. To the best of my information the United Arab Republic does not use any foreign exchange in getting military supplies from the bloc.

Mr. PASSMAN. It has never been established that Russia has given away as much as one ruble. Is the United Arab Republic buying, borrowing, stealing, or otherwise getting into their possession in any way, shape, form, or fashion, Russian military equipment?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. To what extent per year?

Mr. GAUD. I can give you a cumulative figure in the last 7 years.

Our best estimate is that the value of military aid from the bloc is ———.

Mr. PASSMAN. Are you familiar with the terms?

Mr. GAUD. No, sir.

Mr. PASSMAN. We are in with a fantastically high aid program to the United Arab Republic. And those people have rather peculiar designs, do they not, toward the Middle East?

(Discussion off the record.)

NONALINEMENT POSTURE OF UNITED ARAB REPUBLIC

Mr. PASSMAN. Are they cooperating rather freely militarily with the Soviet bloc?

Mr. GAUD. No, sir.

Mr. PASSMAN. Did you not say ——— worth of equipment they received?

Mr. GAUD. They have taken that much military aid. I wouldn't say it is accurate to say they are cooperating freely with the bloc on military matters, or any matters.

Mr. PASSMAN. You do not think there would be any concessions made to them by the Soviet bloc unless they felt they were getting some concessions, do you?

Mr. GAUD. I don't think that Nasser is cooperating with the Soviet bloc at all.

Mr. PASSMAN. Do you think he is cooperating with the United States?

Mr. GAUD. In many respects; yes. I would like——

Mr. PASSMAN. I am talking about the type of respect that we think a nation should show if they get this kind of foreign aid.

Mr. GAUD. Not in all respects, in many respects and I would like to cite, for example, the vote of the United Arab Republic on the Congo issue in the U.N., the vote on the nuclear test ban treaty in the U.N., their actions with respect to the Chinese-Indian dispute where they have very definitely taken the side of the Indians against the Chinese, and on many other matters.

There are matters in the Near East itself on which we do not agree with the posture the United Arab Republic has taken, but there are many others in which it has taken a pro-Western view. I can think of no instances recently, Mr. Chairman, where they have taken a pro-Soviet view.

Mr. PASSMAN. A few votes in the U.N. by Egypt to protect her own country and security; is it worth the type of aid we are giving them?

Mr. GAUD. That is not the issue.

Mr. PASSMAN. It is a part of the issue. That is the only thing I actually heard you say that would justify us giving as much as $18.

Mr. GAUD. I was responding to your question of their cooperating freely with the Soviet bloc. I do not think they are cooperating with the Soviet bloc at all.

Mr. PASSMAN. That is still a matter of opinion. I have the clipping, and I think they are using about $100 million in foreign exchange to buy Russian military equipment. You said you do not know anything about the terms over there.

I expect at this point my opinion would be as good as yours.

AID LEVELS

How does the fiscal year 1964 aid program for Egypt, from all spigots, compare to the total aid program in fiscal years 1962 and 1963?

Mr. GAUD. In 1962 the total aid program was $224 million.

In 1963 the total aid program was $185 million.

In 1964 we are estimating——

PURCHASES OF GOLD

Mr. PASSMAN. It would appear that in 1960 Egypt purchased $7.5 million worth of our gold.

In 1961 they purchased $7.8 million worth of our gold.

In 1962 they purchased $1.2 million of our gold.

In the first 3 months of 1963 they had purchased $400,000 worth of our gold.

Mr. GAUD. Right. The first three purchases were made to make payments to the IMF, the International Monetary Fund.

Mr. PASSMAN. Does that circumstance modify the fact they are taking our gold? They are getting aid from us at the same time and getting it in substantial amounts.

POPULATION CONTROL

If I recall correctly, the press indicated only recently that the population explosion in Egypt is going to wipe out any benefits that might be derived from Egypt's economic development plan.

Would you comment on that matter?

Mr. GAUD. Yes. That is certainly one of Egypt's most serious problems, and unless she does something about her population increase, that statement will certainly be true.

Fortunately, the Government of Egypt is aware of ths problem. They are trying to do something about it. They have instituted a population control program. As for how they stand at the moment, their economic growth rate in the last couple of years, gross, has been roughly 5 percent. The annual population growth rate is about 2.5 percent. They are still ahead of the game, but not nearly as much as one would like.

Mr. PASSMAN. We appear to be pouring our resources into a bottomless pit.

OTHER FREE WORLD AID

On page 53 of the justifications, as of June 30, 1961, it is indicated that free world sources, excluding the United States, had extended to the United Arab Republic $567 million in aid. Do you have a list of the countries which made loans, or gave any type of aid to Egypt?

Mr. GAUD. Yes.

As the statement says, these are not what you would call aid loans; these are mainly commercial credits.

Italy, between 1961 and 1962, lent the United Arab Republic $180 million on credits running from 5 to 10 years, mostly 5 to 6 years.

Mr. PASSMAN. You were saying credits?

Mr. GAUD. I call these commercial credits. This is basically selling goods on short-term credit?

Mr. PASSMAN. At what rate of interest?

Mr. GAUD. Four and a half to five percent.

Mr. PASSMAN. About the same as our Export-Import Bank; is that right?

Mr. GAUD. Yes.

Mr. PASSMAN. We call upon the Export-Import Bank to do the same thing in loans?

Mr. GAUD. Yes.

Mr. PASSMAN. This is comparable to the activity of our Export-Import Bank, making loans to buy Italian commodities?

Mr. GAUD. That is right.

Mr. PASSMAN. What is the total amount of loans made to Egypt by Israel?

Mr. GAUD. I imagine that is zero.

Mr. PASSMAN. According to the last report you had?

Mr. GAUD. Yes, sir.

EGYPTIAN-ISRAELI AIRCRAFT INCIDENT

Mr. CONTE. Do we have a report on the Migs that were flying over Israel the other day?

Mr. LEE. I asked about that this morning, and we do not have a clear report on it. There are conflicting reports coming in from the two countries.

Mr. CONTE. How about CIA?

Mr. ANDREWS. That would be more conflicting.

Mr. PASSMAN. Do you think any of that stuff will be cleared up before we finish the hearings?

Mr. LEE. I think so.

Mr. PASSMAN. We get a lot of conflicting stories. If we could clear up some of these things up before we mark the bill, it might help us.

Mr. LEE. You are proceeding much faster than we thought.

DEVELOPMENT CREDITS

Mr. PASSMAN. Would you submit for the record a list of all the development credits extended by the United States to the United Arab Republic?

Mr. GAUD. All the development loans?

Mr. PASSMAN. Development credits.

(The information follows:)

Development loans and credits to the United Arab Republic: 1947 through 1963

Obligations and purpose	Date authorized	Number of years	Currency	Grace period (years)	Interest rate (percent)	Amount authorized (millions of dollars)
AGENCY FOR INTERNATIONAL DEVELOPMENT AND PREDECESSOR AGENCIES

Total					51.3	
Grand total					106.3	

UAR'S ROLE IN YEMEN REVOLUTION

Mr. PASSMAN. What was UAR's role in the recent overthrow of the monarchy by a revolutionary group in Yemen?

Mr. GAUD. The UAR intervened in Yemen on behalf of what was the revolutionary government, which is now the recognized Government of Yemen.

Mr. PASSMAN. Were the UAR and the United States on the same side of that revolutionary move?

Mr. GAUD. We took no part in the revolution.

Mr. PASSMAN. We were giving aid to Yemen and the UAR?

Mr. GAUD. We were giving aid to both countries at the time the revolution occurred.

Mr. PASSMAN. We gave aid regardless of the revolution?

Mr. GAUD. Yes.

POSSIBLE USE OF UNITED STATES MILITARY EQUIPMENT IN YEMEN REVOLUTION

Mr. ANDREWS. Do you have any evidence in any of these fights where each side is using equipment we gave them?

Mr. GAUD. Are we on the record or off the record?

Mr. ANDREWS. I would like the answer on the record.

Mr. GAUD. I do not know whether this is classified or not.

As far as I know, Mr. Andrews, there has been no record of the Egyptian forces, or the Yemeni forces, using any American equipment.

Mr. ANDREWS. That is one fear I have about this military assistance program. We give equipment and know-how to these little countries, and at any time they might start fighting each other and using our equipment. They used our equipment to change a government in Peru last year.

Mr. GAUD. Yes.

Mr. ANDREWS. They used Sherman tanks to run the president out of the palace.

Thank you.

Mr. PASSMAN. Did we have a good relationship with Yemen under the monarchy?

Mr. GAUD. Fair.

Mr. PASSMAN. Good enough for us to give them aid?

Mr. GAUD. Yes.

Mr. PASSMAN. Then the rebels, or whatever you want to call them, overthrew the monarchy. Now we are giving the new Government aid?

Mr. GAUD. We are.

Mr. PASSMAN. What happened to the king?

Mr. GAUD. The old king died.

Mr. PASSMAN. I am talking about the one in power.

Mr. GAUD. He was succeeded by his son, who was driven out of his capital. He is still alive and is still fighting the present government.

Mr. PASSMAN. Are we supporting him, too?

Mr. GAUD. We are not supporting him.

Mr. PASSMAN. We did support him before they ran him out, did we not?

Mr. GAUD. We gave aid to the Government of Yemen.

Mr. PASSMAN. He was the king.

Mr. GAUD. We were not giving aid to him. We were giving aid to the people of Yemen.

Mr. PASSMAN. Where did old King Saud get enough money to move 80 of his wives into Vienna at $12,000 a day?

Mr. GAUD. From oil. Saudi Arabia has enormous oil deposits.

Mr. PASSMAN. Why should we give him aid when he has all that income?

Mr. GAUD. Saudi Arabia?

Mr. PASSMAN. To any country with these big incomes.

Mr. GAUD. If we were giving money to these countries you would be right.

Mr. PASSMAN. What are we giving them?

Mr. GAUD. In Yemen, what we are doing is building a road, we are putting in a water system in the city of Taiz, and training some Yeminis in Beirut. Nothing goes out there in the shape of money except what is needed to pay the local labor on the road. The program is mostly American goods and services.

Mr. PASSMAN. Are there any commodities?

Mr. GAUD. Commodities only insofar as they are necessary to build the road and carry on the other projects. But these commodities could not very well get into the public treasury.

CASH TRANSACTIONS, NEAR EAST-SOUTH ASIA

Mr. PASSMAN. We give them credit downtown at the Treasury. You know I know that much about this aid program.

Mr. GAUD. We give Jordan money.

Mr. PASSMAN. You actually take the money and send it over, dollar bills?

Mr. GAUD. In Jordan we give them a check.

Jordan is the only country in the Near East-South Asia region where we are providing aid this way.

Mr. PASSMAN. You have it all over the world. It follows, nevertheless, that if you are going to credit a country with dollars downtown from which they can requisition their needs, something they had previously bought from their own earnings, that releases money in their country for them to do with as they please.

You do not quarrel with that statement?

Mr. GAUD. That is true.

Mr. PASSMAN. Would it make any difference if I went to the grocery store to pay my bill and they said, "Mr. Gaud has picked that up"; that gives me my paycheck to do what I want to with it. Is that not an accurate way to describe it?

Mr. GAUD. That is fair.

MANAGEMENT DEVELOPMENT PROJECT

Mr. PASSMAN. Why do you need $162,00 for the management development project, on page 333?

The unliquidated balance on June 30 was $301,000, which should be more than enough to finance 2 years of contract service for a five-man team of consultants and short-term specialists.

Mr. GAUD. I am not sure we need that.

Mr. PASSMAN. With reference to the project we just asked you the question on that you are going to have to look at, did you justify last year the obligation which initiated this project?

Mr. GAUD. $339,000 we justified. We obligated $311,000.

Mr. PASSMAN. That is the one you are going to check on to see whether you need money for 1964?

Mr. GAUD. Yes.

TELECOMMUNICATIONS TRAINING CENTER PROJECT

Mr. PASSMAN. Have you negotiated a contract with RCA in connection with the telecommunication training center project?

Mr. GAUD. Yes.

Mr. PASSMAN. For what purpose is the $894,000 in unliquidated obligations on June 30 obligated?

Mr. GAUD. This is to finance that contract primarily.

There are eight technicians employed under the contract and five participants. This contract has taken a long time to work up. There is also certain specialized equipment, training, and research equipment that will be covered by this.

Mr. PASSMAN. How much did you actually obligate in fiscal year 1963?

Mr. GAUD. $435,000, Mr. Chairman.

Mr. PASSMAN. When this book was printed, it indicated you would obligate $468,000?

Mr. GAUD. Yes.

Mr. PASSMAN. That is a $33,000 savings there already which would mean you do not need the $42,000 that you are requesting for 1964.

Mr. GAUD. I agree.

PUBLIC ADMINISTRATION PROJECT

Mr. PASSMAN. On page 383, I note that you propose to add $165,000 to the unliquidated obligations of $142,000 for the public administration project.

Mr. GAUD. Yes.

Mr. PASSMAN. This total of $307,000 is to finance 18 months' services for two long-term and two short-term specialists and pay the cost of training?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Ten participants?

Mr. GAUD. Yes.

The fact is we did not obligate anything in this project in fiscal year 1963. We therefore had no unliquidated balance, and we do need the $165,000 we are asking for 1964.

At the time the book was printed, we expected to obligate $200,000.

Mr. PASSMAN. These books are making less sense every year.

Mr. GAUD. I am sorry to hear that. We work very hard on them.

Mr. PASSMAN. There are a lot of variations this year.

PUBLIC LAW 480 ASSISTANCE TO UNITED ARAB REPUBLIC

Mr. CONTE. Mr. Secretary, in Public Law 480 you stated you were giving them over $300 million a year.

Mr. GAUD. No, sir.

We entered into a 3-year agreement, the total of which was about $390 million for the 3 years.

Mr. CONTE. $130 million a year?

Mr. GAUD. That is right.

Mr. CONTE. That is all of Public Law 480.

Mr. GAUD. That is all of Public Law 480, except they get some on title III, which is distributed through Catholic charities, CARE, and the like.

Mr. CONTE. What percentage of the total food consumption is that?

Mr. GAUD. About 20 percent.

Mr. CONTE. How is this distributed?

Is this given to the Egyptian Government and then in turn sold?

Mr. GAUD. Through normal commercial channels.

Mr. CONTE. We do not have any programs out there similar to the one in Morocco?

Mr. GAUD. No, sir.

Mr. CONTE. Have you tried one of those programs out there?

Mr. GAUD. No, sir; we have not.

Mr. CONTE. It worked very well in Morocco and Liberia.

Mr. GAUD. I think this is a different situation.

YEMEN

Mr. PASSMAN. What kind of arm twisting did we do to finally get Yemen to let us in with this giveaway program that started, I believe, in 1959?

Go back and look at the records.

Mr. GAUD. I cannot answer that. I could not know the answer to that question.

Mr. PASSMAN. I am correct in saying a program did not start in Yemen until 1959; is that correct?

Mr. GAUD. That is my best recollection.

Mr. PASSMAN. Let us go to the book.

Mr. GAUD. 1959 was the first year.

Mr. PASSMAN. What has been the total aid to Yemen since the inception of the program, from all spigots?

Mr. GAUD. All spigots, $28.6 million.

Mr. PASSMAN. What amount do you have unliquidated to the credit of Yemen?

Mr. GAUD. We have unliquidated about $4.5 million.

Mr. PASSMAN. This was obligated to the old regime?

Mr. GAUD. Some of it.

Mr. PASSMAN. It carries over to the new regime?

Mr. GAUD. Yes.

Mr. PASSMAN. Are you requesting any funds for Yemen for fiscal year 1964?

Mr. GAUD. Yes, Mr. Chairman. We are requesting $6 million of supporting assistance.

Mr. PASSMAN. That means an outright grant?

Mr. GAUD. It does.

Mr. PASSMAN. Is there any Public Law 480 aid?

Mr. GAUD. There may be some Public Law 480.

Mr. PASSMAN. This little country went without the aid program from its inception up to 1959. I wonder if they could not have continued to have gotten along without it?

JUSTIFICATION FOR U.S. AID

Mr. GAUD. We did not go into this aid program solely for their benefit. We also went into it for our own benefit.

Mr. PASSMAN. We have been in 104 out of 112 nations. We are in 95 nations and 4 possessions with aid for fiscal 1964.

Mr. GAUD. It started as a matter of geography with Yemen. It is at the foot of the Red Sea at the place where it is narrowest. It is very close to our oil investment in Saudi Arabia and the Persian Gulf, which is more than $1 billion. In the late fifties, both the Chinese and Russians moved into Yemen with a rather substantial program. There was danger that control of the Red Sea could fall to the bloc.

Mr. PASSMAN. Those are the years we refused to go in?

Mr. GAUD. We did go in in 1959. We felt it was essential from the standpoint of our investment in that part of the world, our interest in that part of the world, that the bloc not take over this country altogether and that was the reason we went in there.

Mr. PASSMAN. As far as geography is concerned, it is the same?

Mr. GAUD. The geography is still the same.

Mr. PASSMAN. The oil companies in there are still the same?

Mr. GAUD. Yes.

Mr. PASSMAN. Why did you not let them spend the money? Why do we have to subsidize the oil companies?

Mr. GAUD. I would not call it that.

Mr. PASSMAN. Is it anything less than subsidizing the oil companies?

On account of the U.S. oil companies' interest, we start an aid program in Yemen.

Mr. GAUD. It is true the oil companies will get dividends from their oil, but it is equally true the whole industrial complex of the West would fall apart if they did not get that oil.

Mr. PASSMAN. If they are able to make hundreds of millions annually out of the profit of oil, they ought to take care of this $6 million.

Mr. GAUD. They are not in Yemen.

Mr. PASSMAN. It is all in the interest of our oil companies that you mentioned?

Mr. GAUD. I believe we would have a new flock of minority stockholder actions if oil corporations started fathering aid programs to Yemen.

Mr. PASSMAN. So it is a matter of letting Uncle Sam do it?

Mr. GAUD. Uncle Sam has the power to do it, the corporations do not.

Mr. PASSMAN. We had the same kind of conditions back in the years 1955, 1956, 1957, and 1958. Finally, however, we went into Yemen. We are in and I expect we shall stay in.

(Off the record.)

CENTO

Mr. PASSMAN. The next estimate is $1.6 million for CENTO. What is the average annual cost of the 12 Federal Aviation Agency technicians which you are employing on a regional civil airway system project, on page 359?

Mr. GAUD. They have varied in number. There were 18 in 1962, 24 in 1963, and there are 12 in 1964.

Mr. PASSMAN. We want the annual cost.

Mr. GAUD. I haven't the breakdown here.

Mr. PASSMAN. Please put the information in the record for us.

(The information follows:)

AVERAGE ANNUAL COST OF FAA TECHNICIANS, CENTO PROJECT

The average annual cost of a Federal Aviation Agency technican in fiscal year 1963 was $19,600. The latest estimate of average cost for fiscal year 1964 is approximately $24,300. This increase is partially due to "end of tour" and transfer costs for a number of technicians.

Mr. PASSMAN. In connection with the support of specific technical assistance request projects, on page 361, I note that you obligated $200,000.

Mr. GAUD. $218,000, in fact, Mr. Chairman.

Mr. PASSMAN. The book says $200,000.

Mr. GAUD. The figure has changed since March.

CENTO CONFERENCES

Mr. PASSMAN. You held all Conferences with this amount of money?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. What is the average cost of these Conferences, and would you give us a breakdown of the cost of one of them and put them in the record?

Mr. GAUD. There were 11 Conferences in 1963. We are planning 13 in 1964. If you take the arithmetical average there——

Mr. PASSMAN. That is about $19,000 per Conference. Where are they held and how many attend?

Mr. GAUD. They vary. The attendance varies. They may be held in Ankara, they may be held in Teheran, they may be held in Karachi and the attendance depends upon the subject, the number of people who are interested in coming from the various CENTO countries and there may be others from the outside, Americans and others, who will go there.

Mr. PASSMAN. Do you have any idea as to the number who attend?

Mr. GAUD. I can get it for you.

Mr. PASSMAN. If you can, give us a breakdown of the expense of one of the Conferences.

Mr. GAUD. I will.

Mr. PASSMAN. Let us say the last Conference. Put it in the record and give the committee a copy of it—representation allowance, travel, entertainment.

Mr. GAUD. All right, sir.

(The information follows:)

CENTO Conferences, Civil Aviation Technical Conference

This U.S.-sponsored CENTO Conference was held in Teheran, Iran, in April 1963. There were 35 participants from Turkey, Iran, Pakistan, the United Kingdom, and the United States. The British paid for their own participants. The United States financed the major costs of the Conference, the elements of which are as follows:

Participant travel	$8,547
Per diem	2,369
Cables, telephone, and other	250
Representation	100
Total	11,266

NEAR EAST-SOUTH ASIA REGIONAL PROGRAM

Mr. PASSMAN. The next item is the Near East and south Asia regional program for which you are requesting $2,730,000 for fiscal year 1964; is that correct?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. On page 365 of the project book, you indicate you propose to finance five U.S. technicians at a cost of $160,000. What is the average annual cost of these technicians?

Mr. GAUD. That would be $32,000 a technician.

AUB REGIONAL TRAINING PROJECT

Mr. PASSMAN. Page 367 indicates you want $2,545,000 to renew the American University at Beirut contract and finance the international travel of maintenance expense for up to 630 participants.

Mr. GAUD. Yes, sir.

Mr. PASSMAN. Is that contract in accordance with contracts that you have with other universities? Does it fit within the standards and the same kind of guidelines?

Mr. GAUD. I am not quite clear what you are driving at, sir.

Mr. PASSMAN. If you bring participants over from some foreign country to the United States you pay their travel.

Mr. GAUD. Yes.

Mr. PASSMAN. And if you take participants to the University at Beirut you pay their travel.

Mr. GAUD. My impression is some travel is paid with local currency. We pay their travel.

Mr. PASSMAN. Regardless of what you pay it with, you do have an established system.

Mr. GAUD. We do cover their travel.

Mr. PASSMAN. This would be the rule and not the exception, to pay the expenses of participants?

Mr. GAUD. That is certainly true.

Mr. PASSMAN. The contract with the American University at Beirut is a similar contract to that of other universities? There is no concession made to them, is there?

Mr. GAUD. Not that I know of.

Mr. PASSMAN. It is a regular contract?

Mr. GAUD. Yes, sir.

Mr. PASSMAN. I believe one of the prerequisites of getting into this college is that one must be able to read and write English?

Mr. GAUD. That is true.

Mr. PASSMAN. It is my understanding this is strictly a nonsectarian institution.

Mr. GAUD. That is right.

Mr. PASSMAN. At one time the oil companies manifested some type of indirect interest; but they do not do so now?

Mr. GAUD. I believe that is true.

Mr. PASSMAN. That is my understanding, and that the board of directors is made up of people of all creeds and faiths.

Mr. GAUD. Yes, sir.

Mr. PASSMAN. It could truly be termed a nonsectarian institution?

Mr. GAUD. And an international institution.

Mr. PASSMAN. Since you are financing the maintenance expense of students at the university at a cost of approximately $1,270 per year a student, what does the estimate for contract services of the $1,745,000 represent, the cost of tuition for this 630 students?

Mr. GAUD. This is the cost of the contract with the university.

Mr. PASSMAN. Break it down on a per student basis.

Mr. GAUD. You mean that contract?

Mr. PASSMAN. Yes.

Mr. GAUD. If we divide $1,745,000 by 630 it is nearly $3,000.

Mr. PASSMAN. I get $2,770.

Mr. GAUD. I am sure that is right.

Mr. PASSMAN. Is that cost about normal?

Mr. GAUD. It is cheaper than bringing them to the States.

Mr. PASSMAN. Do you get just as much for the student there as you would get if you would bring them to the States?

Mr. GAUD. In many cases I think you do.

Mr. PASSMAN. How much did you spend on original seminars in fiscal year 1963?

Mr. GAUD. We spent $25,000.

OPERATING EXPENSES OF UNIVERSITIES AND HOSPITALS

Mr. PASSMAN. There is operating expense for the University at Beirut. Would this item be out of the allotment for your region?

Mr. GAUD. No, sir. Dr. Baumgartner will come up with a separate justification for that.

Mr. PASSMAN. Do you have similar colleges or universities in your area which are getting aid?

Mr. GAUD. Yes, we do.

Mr. PASSMAN. I think it is bad policy to be giving budgetary support——

Mr. GAUD. Are you talking about giving budgetary support?

Mr. PASSMAN. For operating expense.

Mr. GAUD. I will take that back. As far as I know, and Mr. Chairman, let me say at the outset that this is not under my guidance or control, but my impression is that we are not giving budgetary support to any of these institutions except I believe we did to AUB at one time.

Mr. PASSMAN. You have a tremendous amount of money going into some medical schools in your area, up into the millions of dollars.

Mr. GAUD. Not by way of budgetary support.

Mr. PASSMAN. When I say budgetary support, I am talking about operating expense of the institution.

Mr. GAUD. Not in my region that I know of, sir; not with dollars.

Mr. PASSMAN. Do you remember the medical school we discussed earlier?

Mr. GAUD. There was a medical school in Iran that we were talking about where we were supplying technicians and teachers, we were supplying the equipment. We are not otherwise paying——

Mr. PASSMAN. If you are supplying equipment for the school, teaching equipment, would you not call that budgetary support? It is a normal operation of the institution to have to buy the equipment and books, is it not?

Mr. GAUD. It saves them money but I would call that investment in plant rather than budgetary support.

Mr. PASSMAN. It seems that we are getting into the habit of making a contribution to the operating expense of these schools.

I am afraid we are going to get into trouble in this respect.

Mr. GAUD. I personally feel unless we control the budget of an institution and know what it is getting into we should not pay anything for budgetary support.

Mr. PASSMAN. If you can control it, maybe it is value received.

Mr. SCHEINMAN. Sir, as you know, there have been certain institutions throughout the world chartered to Americans, run and financed by Americans as charitable institutions in education.

Mr. PASSMAN. It is a tremendous expense, nearly $300 million.

Mr. SCHEINMAN. This year, if you will note, and I am sure you have, the President has requested that the funding which is provided to those institutions be provided pursuant to a separate authorization and appropriation.

Mr. PASSMAN. I am familiar with that matter but I am talking about giving budgetary support. I do not think it is right for us to do so.

Let us take a brief recess.

(Short recess taken.)

Mr. PASSMAN. The committee will come to order.

I yield to Mr. Conte.

Proposed Steel Mill at Bokaro, India

NEED FOR SPECIAL COMMITTEE TO EXAMINE THE PROJECT

Mr. Conte. Mr. Chairman, may I preface my remarks by saying that unfortunately, unlike the witnesses, we do not have the proper staff to really go into these matters the way we should. I think that this thing is of such importance and of such magnitude I am firmly convinced in my own mind, regardless of what has been said here, that this project has been committed. It bothers me no end. It is of such importance and magnitude that I certainly wish that we could have a special committee to look into it, even further than these hearings that we are having at the present time.

Mr. Passman. I want to assure the gentleman that we are certainly going to look further into this matter.

Mr. Conte. I certainly appreciate that, Mr. Chairman.

Mr. Minshall. I think that this whole program demands very careful scrutiny, much more attention than we have been able to give it in the limited time we have. In a previous hearing I requested these seven volumes of the report of the United States Steel. They are full of material that we have not had time to even give a cursory examination to, much less read carefully. Just thumbing through the pages we have found glaring examples of reasons why we feel this steel plant should not be considered. An intensive investigation and special hearing is mandatory.

Mr. Passman. I thank the distinguished gentleman and repeat that we do indeed intend to investigate this matter more thoroughly.

ADMINISTRATION NOT COMMITTED TO FUND BOKARO

Mr. Gaud. Mr. Chairman, I would like to just make one comment if I may. I want to say this as categorically and as unequivocally and as flatly as I can, that the administration has no commitment, expressed or implied, to go forward with this project. I said that earlier when I was talking to Mr. Andrews. I repeat it.

Mr. Passman. We can understand that would be true today but it could change tomorrow, could it not?

Mr. Gaud. It could, but it won't.

Mr. Passman. If you will assure this subcommittee that you will not fund or commit this project in fiscal year 1964, we can just take your word, call the whole thing off and not have any special hearings.

Mr. Gaud. I am not prepared to do that at this time.

Mr. Passman. Thank you.

You may continue, Mr. Conte.

Mr. Conte. The other day in answering certain questions I propounded to you, you stated that it is feasible that this bill could pass the Congress, be signed by the President, and in a matter of months have the answers to certain questions about the adequacy of raw materials, and so forth—that the United States could commit themselves to this loan.

Mr. Gaud. That could happen; yes, sir.

Mr. Conte. I tried to nail it down and I couldn't do it. I asked you would you go along with an amendment withholding funds in fiscal year 1964 for this project. I was trying to help you. The

amendment would state that no funds for the fiscal year 1964 would be used for the Bokaro steel mill. You couldn't buy that amendment.

Now, Mr. Gaud, the reason you said you couldn't go along with it—I am not nailing it down verbatim because I don't have the record—was that it was possible or maybe probable these answers would come forth and the Agency could go ahead with a loan. Is that right?

Mr. GAUD. Yes, this could happen. There is no question about it.

AVAILABILITY OF ORE DEPOSITS

Mr. CONTE. Now, I have here in my hand a techno-economic survey of a proposed integrated steel mill at Bokaro, India, made by the United States Steel Corp., Pittsburgh, Pa. I have volume 2, page 20, of that report. I quote from the report:

> It will take 2 years or more, in our opinion, to find satisfactory long-term solutions to the basic raw material problems.

Now, if you have an authority such as the United States Steel, an expert witness who is willing to make that statement categorically that it will take them 2 years to find out the basic raw material problems in relation to the Bokaro steel mill, I can't see why the Agency won't go along with prolonging this for another year.

Mr. GAUD. Well, I will tell you—let me just comment on that this way, Mr. Conte. The United States Steel Corp. has said that in their judgment it will take 2 years to develop these facts. The Government of India says that they have the facts now—that they are available. Now, I don't know where the truth lies. It may well lie somewhere in between. Our own people in the Bureau of Mines here in Washington say that enough is known about the deposits of iron, coal, and limestone in India so that it does not seem likely to them that it would take 2 years to do it. As I have said earlier, we have sent two men out to India to try to find out what facts are available so as to form our own judgment as to what needs to be done next. Now, I do not know if it is going to take 2 years or 2 months or 3 years or 3 months. I haven't any idea. I was just trying to be frank with you and tell you that if this thing is resolved in a matter of months and if the answers are the way we like them and if we decide to go ahead there is a possibility that 1964 funds could be used for this mill. That is all I am trying to say.

Mr. CONTE. How much did this report cost us?

Mr. GAUD. About $650,000.

Mr. CONTE. What are we doing, throwing corn down a rathole? Here you wasted $650,000 of the taxpayer's money. Here you have an expert witness and now you are telling me that there is doubt in the minds of the AID agency because the people of the Interior Department or wherever they come from, the mining people here say that it won't take 2 years. Here we pay people $650,000 for an opinion and their opinion is that it will take 2 years to ascertain what raw materials are there, or whether the raw materials are even there.

PURPOSE OF UNITED STATES STEEL SURVEY

Mr. GAUD. They may well be right but with all due respect to United States Steel—and don't think I am trying to deprecate them—they spent a few months on this proposition and did not devote themselves—

and properly so—primarily to the subject of raw materials. We have people in the Bureau of Mines here who have literally spent years studying this subject. Now, I don't know what the truth is.

Mr. CONTE. Mr. Gaud, you are digging your hole deeper, and deeper, and deeper. Now, you are telling me that the AID agency has been lax in wasting the taxpayers' money to the tune of $650,000. What in the world could they do in 2 months to earn $650,000?

Mr. GAUD. It wasn't 2 months, sir.

Mr. CONTE. You said 2 months.

Mr. GAUD. I thought I said that I didn't know whether this information would be—in a few months.

Mr. CONTE. You said the steel people. The United States Steel people had worked.

Mr. GAUD. A few months.

Mr. CONTE. How many is a few months?

Mr. GAUD. I think the first people from the United States Steel teams went out to India in June 1962. The report was submitted in March 1963. Now, those teams—there were a number of teams that went out there. They went out to study the market, they went out to study the requirements of steel, they went out to study the capabilities—they covered a whole host of subjects. They were administrative people and the like. I haven't any doubt but what we got fair value for this money.

Mr. CONTE. Between June and March—9 months—it cost the Government of the United States—the taxpayer—it cost us $80,000 a month for this report.

Mr. GAUD. The work on this report was done not only by United States Steel. Parts of it were subcontracted to the Bechtel Corp., to Bessemer & Lake Erie Co., the Koppers Co., Arthur McKee & Co., the Stone & Webster Engineering Corp., and, in addition to this, engineering and cost data were furnished to Steel by 32 other American firms. This was a job of enormous magnitude. Not only to go out and investigate the situation in India but in effect to propose a design for a steel mill and cost it out, an integrated steel mill with a total capacity of 4 million tons. This is all the way from blast furnaces to rolling mills. A big job.

Mr. CONTE. It sure is a big job and again I go back—I feel in good conscience that United States Steel and all the other people who were involved in this study were competent, qualified experts in this field. I am willing to take their word for it. But now you are coming in here and you are hedging on it. You are saying maybe they are not right on this study, that maybe the mining people of the U.S. Government know a lot more than United States Steel. And if that is so, then we have wasted $650,000 because we should have hired these people downtown who are sitting on their hands most of the time and we should have sent them out to India for nothing.

Mr. GAUD. They could not have done the job that United States Steel did.

Mr. PASSMAN. Would the gentleman yield?

Mr. CONTE. I will be glad to yield.

Mr. PASSMAN. Why would United States Steel's knowledge not be just as valuable in establishing the other facts that are so important and pertinent to this matter? Why do you not let them carry through

to a final conclusion and then make their recommendations? Then you could have disagreed with them. But you stopped them short of a recommendation.

Mr. CONTE. Mr. Chairman, I don't doubt the veracity and the sincerity and the frankness of the witness.

Mr. PASSMAN. Neither do I.

Mr. CONTE. I know, but let me finish. But I feel maybe that he is not fully aware of all the facts involved here and maybe he hasn't been told all the facts. I feel we are committed to this Bokaro steel mill because here is what happened: We spent $650,000 for a study. The study comes up negative.

Mr. GAUD. I beg——

AVAILABILITY OF BASIC RAW MATERIALS

Mr. CONTE. Yes, it says it will take 2 years to find out whether they have the basic raw materials. And many other things which we are going into here this afternoon. And now what do we do? We try to get around the study by sending our own people over there, or one fellow from the AID agency and using evidence from the mining people of the United States Government to dispute the very report that we contracted for, which we contracted for under the AID agency.

Mr. GAUD. Let me just say one word on that, if I may, that on this business of raw materials, what the steel people say is that they found it necessary to make certain major assumptions regarding raw materials for Bokaro.

We wish to stress this point and emphasize the importance, if the project is to be undertaken, of verifying the reasonableness of these assumptions or developing adequate alternatives. This work of verification will be a considerable undertaking in terms of personnel, time and funds. From the standpoint of time alone, for example, it will take 2 years or more, in our opinion, to find satisfactory long-term solutions to the basic raw materials problems.

Now, Mr. Conte, we sent the U.S. Steel out there to look into these matters and they came back and, as is not unusual in a feasibility survey, raised certain questions which, in their opinion, and in ours, required further study. We are now engaged in giving these questions that further study. It is just as simple as that. We have made no commitment and when you speak of my not knowing whether any commitment has been made here——

Mr. CONTE. To the best of your knowledge.

Mr. GAUD. Well, my knowledge is reasonably extensive on this subject. I am in close touch with the Administrator, Mr. Bell, on it. I have discussed the matter in the last 2 or 3 days with the Secretary of State. I know what the President's views are. They have not changed since the press release that he made in May to which we adverted the other day.

Mr. CONTE. When is the last time you talked with Galbraith?

Mr. GAUD. When he was last in this country.

Mr. CONTE. When was that?

Mr. GAUD. It must have been about—I am guessing—6 or 7 weeks ago.

Mr. MINSHALL. Would the gentleman yield just a moment?

Mr. CONTE. Yes.

Mr. GAUD. Let me say Mr. Galbraith has not only had no authority to commit the United States to this project but never purported to do so.

MAJOR ASSUMPTIONS IN UNITED STATES STEEL REPORT

Mr. MINSHALL. Mr. Gaud, in volume 1 of the report there is one thing upon which they are agreed and with which you are in accord; and that is the need for this steel mill and for the extra steel in India. However, they said in that report: "As a result of the rapid changes—" and I read from volume 1 of the introduction—"as a result of the rapid changes which are taking place in India today and in the economy generally, a number of major assumptions—" I emphasize the word "major"—"had to be made in order to provide an adequate working hypothesis for the development of data. The following are the most important of these assumptions."

And they have 12 of these what they call major assumptions. Twelve of them. The only one anybody is in accord on is the need.

Mr. GAUD. That is right.

Mr. MINSHALL. But these things are all 12 doubtful things in their minds. They had to make assumptions on all of them. I think these are things we should look into. Enough of this expensive guesswork.

Mr. GAUD. There is no doubt about it. I don't think we disagree one bit on this.

Mr. MINSHALL. This is a crystal balling this thing out of all proper proportions.

AVAILABILITY OF SUITABLE LIMESTONE

Mr. CONTE. Mr. Gaud, you will agree with me that limestone is a necessary ingredient in making steel?

Mr. GAUD. There is no question about it.

Mr. CONTE. This report in the same volume, page 28, is entitled "Limestone for Blast Furnaces."

> Known reserves of Indian metallurgical grade limestone economically available to existing integrated steel plants and the proposed Bokaro plant are limited in quantity and of inferior quality.

Later it says:

> The present and prospective requirements of existing steel mill plants will take the whole of whatever output of limestone can reasonably be expected from Birmitrapur and Purnapani and there are, moreover, problems of quality and reserves in regard to both deposits.

Here is the second point we find, that the total amount of limestone deposits needed are for running of the present steel mills and there isn't enough limestone here for this new steel mill.

Mr. GAUD. There is absolutely no disagreement between us, Mr. Conte. If these raw materials are not available in appropriate quantity, quality, and location, we are not going ahead with this project.

Mr. CONTE. You paid $650,000 for this study and this is their opinion. Where else are you going to go?

Mr. GAUD. I beg your pardon. The report doesn't say that these things are not available. It requires verification as to whether they are or not.

Mr. CONTE. Wait a minute, now. I am not taking anything out of context here.

Mr. GAUD. No, you are speaking of specific deposits, are you not?

Mr. CONTE. Yes.

Mr. GAUD. My understanding is that there are other deposits. The question is whether there are other deposits available of appropriate quality, quantity, and location. That is the question on the limestone that requires study and investigation and unless we find them, you can be sure we are not going forward with this mill.

AID PERSONNEL EXPLORING AVAILABLE INFORMATION ON MINERAL DEPOSITS

Mr. MINSHALL. I brought this question up a day or so ago and still don't understand it. After spending all this money on this report and having hundreds of people employed putting it together, that you finally send one small boy, to use an expression, out to India to find out what is going on . His experience and background you were not able to give us today.

Mr. GAUD. I have forgotten the name of the company he was with. It is one of the outstanding companies in the country. It is a shame my memory is so poor. You would recognize the company.

Mr. MINSHALL. The important thing is that you only sent one man out there on a project as important and vital as this to get this information.

Mr. GAUD. We sent two men out and their only purpose at the moment is to find out what information the Indians have and to determine what needs to be done. They are not out there to determine anything but how much information is available and what is to be done to follow up on United States Steel's suggestion that there be further exploration of this subject. That is all they are there to do.

EXPLORATION OF MINERALS DEPOSITS NOT PART OF UNITED STATES STEEL SURVEY

Mr. CONTE. Mr. Gaud, are you telling me that for $650,000 United States Steel went out there and didn't look around India to determine if there were any other deposits of limestone available?

Mr. GAUD. I am telling you exactly that. They weren't asked to do that.

Mr. CONTE. They were asked to go out and study the feasibility of whether it is economically feasible to construct a steelmill?

Mr. GAUD. But they were not asked to make a mineral survey, and they didn't.

Mr. CONTE. But you told me—I started out with my first question whether limestone was a necessary ingredient in making of steel and you say "Yes." So, if you are going to go out to study whether they are going to build a steelmill you are definitely going to look around to see whether the ingredients are there to run the steelmill and produce the steel.

Mr. GAUD. It is my understanding, sir, that the United States Steel team went to the Indians and found out what information they could make available to them on proved bodies of iron ore, coal, and limestone. They felt that the Indians had not shown the existence of these items in appropriate quality and quantity.

United States Steel did not go on from there to make its own mineral survey. What they did was say to us, "We are not satisfied about this, so more work has to be done to make sure these raw materials exist."

Mr. CONTE. But they must have asked the Indians in the course of conversation, "Do you have any other limestone deposits in the near vicinity of Bokaro?"

Mr. GAUD. But here we get to the heart of the thing. United States Steel wouldn't be satisfied and I wouldn't be satisfied and you wouldn't be satisfied with a statement by the Indians that there was an ore body in such and such a county. What we want are cores which have been taken which show the extent of the deposit, the quality of the deposit, and so forth and so on.

Mr. CONTE. You are exactly right and they would have at least mentioned in their report that the Indians stated that they had these cores and deposits of lime in such and such a city or such and such a county.

Mr. GAUD. You misunderstood me. The point of what I was saying was that the United States Steel's statement is that the Indians do not have those things.

Mr. CONTE. That is exactly right.

Mr. GAUD. And that is why they say the existence of ore has to be proved. But it was no part of United State Steel's job to go out and take cores and prove the existence of these bodies when they did not find in New Delhi and elsewhere the proof of it. They came back and said, "Don't build this steel mill until you are sure this stuff is there."

Now, we are trying to satisfy ourselves that it is there. If it is not there, we won't build the mill.

Mr. CONTE. Therefore, we go back to the original premise that United States Steel said it will take 2 years, in their opinion, to find a satisfactory long-term solution to the basic raw materials problems.

Mr. GAUD. That is correct.

Mr. CONTE. This we paid $650,000 for and now are putting it in the ashcan.

Mr. GAUD. We are not going to put it in an ashcan at all. We are going to do exactly what they recommended. We are going to go and try to verify it.

Mr. CONTE. If you are going to do what they recommended, let's wait for 2 years before we make a move on this thing and let's find out whether they have the basic raw materials.

I am 100 percent for foreign aid and my record will prove it, but I am not going to buy a pig in a poke and this is a pig in a poke.

Mr. PASSMAN. I believe you mentioned earlier this afternoon certain statistics—evidently from the Indian Government—projecting this mill into full operation, the amount of tax return as well as the profit.

Mr. GAUD. Yes. These were figures taken from the basic United States Steel report data.

CONSIDERATIONS DETERMINING U.S. POSITION ON BOKARO

Mr. PASSMAN. Also, you indicated certain foreign policy considerations. All through the record we read about political considerations, that we do certain things on a political basis. Now, when we tie the political considerations into maybe the foreign policy that will probably have a lot to do with the final determination. Or will it be made on a coldblooded business basis? Do you recall the earlier statement?

Mr. GAUD. Yes, I do, indeed.

Mr. PASSMAN. I wonder what part of the valuation report would be based on political considerations, what part would be based upon our foreign policy, what part would be based upon sound economic justifications.

Mr. GAUD. If we decide to go forward with this project it will be in accordance with the criteria in the development loan section of the Foreign Assistance Act and this puts it on the ground of economics, not politics, Mr. Chairman.

Mr. PASSMAN. Did you not state that if it worked in with our foreign policy——

Mr. GAUD. I may have said that. I do recall saying in response to your question as to why United States Steel shouldn't make a recommendation on this, I said that I thought it was not appropriate for United States Steel to do it but the AID agency had to do this in the line of criteria of the Agency for International Development Act, in the light of our foreign policy and the like.

Mr. PASSMAN. All three of those matters will come into play, will they not?

Mr. GAUD. They are necessarily involved.

Mr. PASSMAN. And, of course, certainly that involves the political considerations. India appears to be dogmatic in this thing and they say, "Here are these statistics and we think they are dependable and on that basis we make our application." In that case you will have to consider it, will you not?

Mr. GAUD. We will, of course, take India's views into account. They will not weigh heavily in this decision. We won't do this just because India wants us to do it. We will do it only if it is a sound, sensible economic scheme.

Mr. PASSMAN. You would not do it if they did not want you to do it, would you?

Mr. GAUD. We would not.

EXISTENCE OF BASIC MINERALS

Mr. CONTE. I am a bit confused here. You mentioned United States Steel came back and said there was a lack of limestone.

Mr. GAUD. They said its existence needed to be verified.

Mr. CONTE. United States Steel's report.

Mr. GAUD. Yes.

Mr. CONTE. How can you give weight to this individual over there now, more so than you did to United States Steel?

Mr. GAUD. I am not giving greater weight to anybody. I am saying I don't know.

Mr. CONTE. Why do we have any reason to doubt what United States Steel has said?

Mr. GAUD. I don't doubt anything——

Mr. CONTE. That is what bothers me.

Mr. GAUD. We don't know whether these materials exist or whether they don't.

Mr. CONTE. United States Steel says they don't.

Mr. GAUD. United States Steel does not say that, if I understand United States Steel. United States Steel says their existence has to be verified. United States Steel doesn't know whether they exist or not.

Mr. CONTE. Where do you see that?

Mr. GAUD. They say, "We don't know." It says, "Arrangements regarding"——

Mr. CONTE. What page is this?

Mr. GAUD. Unhappily, I haven't a copy of the report. I am reading from excerpts of it in our press release, but they say here, for example, that:

> Arrangements regarding iron ore and coal sources are still undergoing important changes and exploration work on the proposed source of limestone is only just beginning. We therefore found it necessary to make certain major assumptions regarding raw materials for Bokaro.

Now, the only point I am making in this part of the debate is that United States Steel, as I understand it, didn't say the limestone wasn't there. They said, "We don't know whether it is there or not. You have got to do some more exploration to find out whether it is and in our judgment it will take you 2 years to find out." Now, I don't know how long it is going to take to find out. I agree 100 percent we have got to find out whether it is there or not. This is all I am trying to say.

Mr. CONTE. And all I am trying to say is that we ought to go back to the original premise where United States Steel says it is going to take 2 years to find all this out.

Mr. GAUD. They may be right.

Mr. CONTE. At this point I have no reason to doubt the opinion of United States Steel. And until we have had the opportunity to further explore this, I think we will cease at this point.

Mr. GAUD. OK, sir. We agree to disagree.

Mr. CONTE. For the record, Mr. Chairman, I don't think we have ever had a more charming and pleasant witness.

Mr. PASSMAN. I certainly agree with that observation.

SURVEYS OF INVESTMENT OPPORTUNITIES

I should like to ask the Controller to bring the committee a list tomorrow, including a complete list of the operation, the survey of investment opportunities—the amount of money that we have appropriated since the inception of the program, the amount of money that has been obligated, what we obligated it for, the amount of money that we have liquidated and for what purpose we liquidated, and the unobligated balance and the unexpended balance.

If we give Mr. Hilton, for example, expense money to go out to Pakistan to find out whether he wants to build a hotel, let us put in whatever it is. Do you understand what we want?

Mr. TENNANT. No, sir. Did you say tomorrow?

Mr. PASSMAN. We are going to get out before Christmas.

Mr. SCHEINMAN. Would you consider it appropriate if Mr. Coffin, when he appears before the committee, addresses the committee on this request?

Mr. PASSMAN. Will you please bring the information we want on this item?

Mr. TENNANT. Yes.

UNOBLIGATED BALANCES

Mr. PASSMAN. On this unobligated unreserved balances, the total, you say down here: "Does not include and does not include and does not include."

I wonder if you would make this sheet over? Let us get them all in here.

Mr. TENNANT. Those figures are on the same basis as page 2.

Mr. PASSMAN. Could you not just as easily have taken out the Contingency Fund, $117 million, and said, item No. 4 does not include the contingency money?

Mr. TENNANT. Those figures are on the same basis as page 2 of the light gray justification book.

Mr. PASSMAN. We want the agency statement to show the total of unobligated funds. Your caption will indicate what it is.

Mr. TENNANT. We will provide it in whatever form you want.

Most of that is borrowing authority and I am not sure whether borrowing authority technically fits under the column 2 heading.

Mr. PASSMAN. If it is funds that are unobligated, funds you could obligate, it should be shown.

Mr. TENNANT. Yes.

Mr. PASSMAN. We do not care where you put it. Just list it.

Mr. TENNANT. It is correct that borrowing authority is not in our annual accounts.

NATIONS TO WHICH U.S. AID IS NO LONGER EXTENDED

Mr. PASSMAN. How many nations have we had in the foreign giveaway program in which there is no longer a giveaway program in existence, beginning with the Marshall plan?

Mr. TENNANT. Ones we have been giving aid to?

Mr. PASSMAN. Yes, and to which we no longer give any type of aid.

If there are any nations where we had a program and do not have an aid program any more, will you bring that listing down tomorrow?

Mr. TENNANT. Yes.

Mr. PASSMAN. You are going to have an aid program in 95 nations and 4 possessions in fiscal 1964?

Mr. TENNANT. That is correct.

Mr. PASSMAN. We want to know the number of nations and territories where you have had some type of aid program since the end of World War II, or beginning with the Marshall plan, for which you no longer have any type of aid program.

Mr. TENNANT. How do you want to count the pipeline to Ceylon? We do not have an aid program there.

Mr. PASSMAN. You will have an aid program.

Mr. TENNANT. All right.

Mr. PASSMAN. You did not have Ceylon on the list here.

Mr. TENNANT. That list I gave you was for the fiscal year 1964 programs.

Mr. PASSMAN. You have a budget estimate for Ceylon. Any nation that has unliquidated funds is still in the foreign aid program.

Thank you, gentlemen.

We shall adjourn until 1 p.m. tomorrow.

WEDNESDAY, AUGUST 14, 1963.

PROPOSED STEEL MILL AT BOKARO, INDIA

WITNESS

HON. J. KENNETH GALBRAITH (FORMER AMBASSADOR TO INDIA)

Mr. ANDREWS. The committee will come to order.

Mr. Ambassador, we are glad to have you with us this morning and I want to commend you for what I think was a job well done while you served in India as our Ambassador.

I hope that your valuable services will continue to be available to our Government.

We are interested in the proposed steel mill in India at Bokaro and the members of this panel are members of the Foreign Operations Subcommittee of the Committee on Appropriations.

We have recently heard witnesses from the AID discuss the proposed mill and we would like to get your views with reference to the mill.

Do you have a prepared statement or would you like to make a statement off the cuff?

Mr. GALBRAITH. I will make one off the cuff, if I may.

Mr. ANDREWS. We will be glad to hear from you and at the conclusion of your statement we will have questions.

Mr. GALBRAITH. I will make my statement just as brief as I can because I know that all members of the committee have been over this subject many times and I will not track over what you already know.

This matter has been of considerable interest to me——

NO COMMITMENT FOR FINANCING THE MILL

Mr. ANDREWS. Let me ask you to start with, have you made any commitment for our participation in the financing of the mill?

Mr. GALBRAITH. Certainly not.

Mr. ANDREWS. Do you know of any U.S. Government official who has?

Mr. GALBRAITH. Let me say just a word on that.

I have worked for the Government off and on for 29 years and I know very well what my powers are. I know what the powers of a public official are and I know where the money comes from. And even if I had made a commitment, which I have not, the Indian Government knows the U.S. Government well enough so that it would not have taken it seriously.

Mr. ANDREWS. Some of us have been on this committee as long as 8 or 10 years and we know that it takes very, very little to be considered a commitment.

Mr. GALBRAITH. Well, I think I am at least normally cautious in my speech.

I am not only an economist but a writer and I know the value of words. There is nothing off the record on this subject formally or informally as between me and the Indian Government and there is nothing on the record that could be considered a promise.

As I say, it is not within my province to commit the U.S. Government. I hasten to say that my opinions on the subject are well known. I am not in the habit of concealing them. I would not conceal them from you or anyone else.

Mr. ANDREWS. When we had Mr. Gaud before the committee and asked him about this steel mill, we could not tell whether or not there had been any commitment made and after rereading his testimony, after it was transcribed. I could not conclude that there had not been any definite commitment or any halfway commitment made about the mill.

He did say in his testimony that if certain findings justified the mill, there was a possibility that the U.S. Government would finance or start the funding of the mill during fiscal 1964. He did not rule that out.

If my recollection of his testimony is not correct. I wish some member of the panel would comment.

Is that your understanding, Mr. Minshall?

Mr. MINSHALL. That is my recollection, Mr. Chairman.

Mr. GALBRAITH. Let me say one thing: I do not think anything I am saying is in disagreement with Bill Gaud, who is, incidentally, one of the most competent people I have worked with in the Government. A year ago last spring, AID invited the United States Steel Corp. to come to India and make a study to see whether the plant was feasible. This was an extremely good study by an extremely good group of people.

Mr. ANDREWS. That was United States Steel?

Mr. GALBRAITH. United States Steel. There was an impression by the Indians that if the United States Steel Corp. turned in a favorable report, this would be favorable to our going ahead with the plant. There is no doubt about that. You cannot invite people to study the feasibility of a plant without implying that if it turns out to be feasible, and sound, there will be no favorable reaction to it.

There is no question about that. However, as to there being a promise or a commitment to go ahead with the plant, there was not.

When General Clay testified before the Senate Foreign Relations Committee, or perhaps the House Foreign Affairs Committee, last spring, I was in western India. I read his testimony in which he said that there should be consideration given to the possibility of a commitment. My immediate reaction was that there might be a misunderstanding and it might also be implied that I had made a commitment. Accordingly, I then got out a statement saying there was no commitment and certainly none as far as I was concerned. It was, I said, a decision to be taken by the responsible authorities on its merits.

Mr. ANDREWS. So far as you know, no definite commitment had been made by any member of this Government to the Indian Government that we would participate in the financing of that proposed steel plant at Bokaro?

Mr. GALBRAITH. That is right, Congressman. I would also go further and say my knowledge on the subject is good.

Mr. ANDREWS. Proceed with your statement and we shall ask questions after you have completed.

Mr. GALBRAITH. This is a matter in which I think I can qualify myself as speaking perhaps for accidental reasons with something more than unusual competence.

In 1959 I was working on a book on the nature of industrial organization. I went to India—this was long before I became Ambassador—to look at the new Indian steel industry. This was a very interesting example of a country attempting to bring a steel industry into existence from almost scratch.

I spent some weeks looking at the private firms, how the steel company headquarters operated and I then visited the two publicly owned plants; the first one at Rourkela, built by the Germans, and the one at Bhilai built by the Russians. I talked at great length there and in Delhi with the people about the Indian steel industry.

I had on a previous trip also been to the Bokaro area and of course, I have since been back. At that time the Bokaro plant was not a lively topic of discussion. But it came up not very long after I arrived in India, 2½ years ago. So I had some background and some knowledge of the industry. I had some previous knowledge of the business from when I was an editor of Fortune.

I have been very close to the problem ever since.

There are some things which I believe and my conclusion which is well understood has been favorable to the mill. I think I have come to this conclusion on the practical ground of what is of interest to the United States. There are some things about the mill which are not too seriously in dispute and I will pass over those somewhat quickly.

Mr. ANDREWS. You do favor participation by this Government in the mill?

Mr. GALBRAITH. I do.

Mr. ANDREWS. Funding of the mill?

Mr. GALBRAITH. I am completely on record on that.

Mr. ANDREWS. Your position is this: As of this morning you have made no commitment and know of no person who has made a commitment or who had authority to do so for the U.S. Government, but your personal opinion is that you favor the mill?

Mr. GALBRAITH. There has been no question about that. This has been my formal recommendation to the Government.

Mr. ANDREWS. Off the record.

(Discussion off the record.)

VALUE OF STEEL MILL TO INDIA

Mr. GALBRAITH. I think the first thing that is not seriously in dispute is the need for the steel. India is a country that is very hungry for steel and this flat products mill, there is no question about the market for its output. This is confirmed by the studies of the Steel Corp. I might say parenthetically that one has to know what it is like in a country that is short of steel, as was our case during World War II, before one gets a feeling of how much importance is attached to steel.

This mill, together with the expansion in other mills, will still leave India with a relatively small steel industry and still leave India with a deficit in her steel requirements.

Actually, the present Indian steel industry supplying a population of close to 450 million people is not very much greater than that of Canada which supplies a population of—what—1/20 of that size?

The second point I think might be taken possibly out of the controversy is the impact of this mill on the Indian people. Here is something I would like to stress. We, in the past, have had a sound aid program in India. It had been a sound one prior to my service in India and I hope it did not deteriorate under my administration.

Aid has been well used for important things. We have, in general, however, disbursed our aid over a relatively large number of individual projects. We have invested heavily in helping the Indians to build up a power industry, for example. This was the largest use of our aid in India on a project basis. By the nature of this kind of a project it is of great interest to the people in the immediate area. It is not something that evokes great interest over the country as a whole.

There is nothing so important for the people of the State of Washington as a power project on the Columbia. It is not something that is of immediate interest to me in Massachusetts. The reverse is true in the case of Passamaquoddy. It is for Maine, less important in Los Angeles.

This steel plant is a national project and a large project. As a result it will focus attention on our assistance to India as nothing we have been doing there to date has done in comparable manner.

There is one other project which might be an exception and in which I have also been very active in advancing for much the same reasons. That is the big Porapur plant, the Atomic Energy plant, which is also a national symbol.

The Russians got a great deal of credit out of the steel plant they built at Bhilai, partly because they did a good job on the whole and partly because it was one of these national projects.

I have always felt we should do as good a job in our public relations as the Russians.

The third thing I might emphasize as being generally agreed is that this is a good plant from the point of view of our own heavy engineering, machine-building, and heavy construction industry. We are not, as you know, presently much expanding our steel industry in the United States. The result is that the firms that are geared to part expansion have a good deal of excess capacity and a good deal of unemployment.

Mr. ANDREWS. Your point is that the mill would create a market for this heavy equipment?

Mr. GALBRAITH. This mill would draw exclusively on products of this country and would draw where there is excess capacity. It would be taking the place—we should not disguise this—of electrical equipment or for alternative projects.

This plant, in short, would go into—if I may go off the record?

Mr. ANDREWS. Yes.

(Discussion off the record.)

Mr. GALBRAITH. For areas like western Pennsylvania, Cleveland and northern Ohio, northern Indiana, Illinois, which are in the heavy machine building industry, this plant which would provide needed jobs and orders one way or another, given the need for steel, this plant is going to be built. I would like to see it built by Americans rather than by somebody else.

I come now, just to mention the two things which are controversial about it, and very controversial, and I think are worth talking about at length and in detail.

The first is that this is a big plant and there is no question about it.

Mr. ANDREWS. I believe the estimated cost is approximately $1.9 billion?

Mr. GALBRAITH. Its ultimate cost, including the rupee cost.

Mr. ANDREWS. The amount proposed for us to finance is around $975 million?

Mr. GALBRAITH. For the full three stages.

Mr. ANDREWS. Right.

Mr. GALBRAITH. My answer to that would be a twofold one; first, it will be evident from what I have said before that I, myself, think it is sound strategy to concentrate more in a few large important jobs than to distribute our energy as we have in the past. And the dramatization of our role is actually aided by size. We should also keep in mind that while this is a large project, it is one that would spread out so that the amount in any given year, while considerable, would not be the equivalent of the total sum, or anything like it. For the first stage, the projections suggest we would get up perhaps to $180 million in the peak years.

I would, therefore, argue that the size with the drama that is associated with it is an advantage over the alternatives. We must keep in mind that we are not adding this to other projects. It is taking the place of other things. This is a hard decision, incidentally, because other things are pretty useful, too.

The final thing is that this mill is in the public sector. It is a publicly owned mill or would be a largely publicly owned mill. There is some discussion as to whether there might be some private participation in the stock, but it would be largely publicly owned.

STEEL MILLS NOW IN INDIA

Mr. ANDREWS. How many steel mills are there in India at the present time?

Mr. GALBRAITH. There are at the present time in operation five sizable mills.

Mr. ANDREWS. How many of the five are owned by the Government?

Mr. GALBRAITH. I am excluding some-odd-30 rerolling mills or other small outfits. I am excluding one small mill down in southern India which runs (or used to run) on charcoal. There are five major mills.

Mr. ANDREWS. How many of the five are owned by the Government?

Mr. GALBRAITH. Three are owned by the Government and two by private firms.

Mr. ANDREWS. This proposed mill at Bokaro would be the biggest of the five?

Mr. GALBRAITH. Ultimately it would be the biggest of the five, yes.

The argument, which I must say I respect, is that we have had the greatest success with private enterprise. Accordingly we should expect that other countries would follow our example. This is an argument which is certainly not without its compelling aspects. On the other side——

Mr. ANDREWS. This proposed mill would be owned by the Government?

Mr. GALBRAITH. Owned by the Hindustan Steel Co. which is a fully owned government corporation.

SUPPLY OF STEEL IN INDIA

Mr. ANDREWS. You say that at the present time the five major mills plus the smaller ones are not able to supply the need India has for steel?

If this proposed mill at Bokaro were built, would the total production satisfy the needs of India for steel?

Mr. GALBRAITH. No.

Mr. ANDREWS. Percentagewise, what would it be?

Mr. GALBRAITH. This is an impossible question to answer, Congressman. By the time you get out to the end products, you have hundreds and thousands.

You might be up to 100 percent in some and as low as 50 percent in others.

Mr. ANDREWS. You would not give us a guess percentagewise how much of the total need for steel would be met if this mill were completed?

Mr. GALBRAITH. I am not adding other difficulties. The demand for steel is growing by several percentage points a year. So even if the mill on the day it was finished, did close the deficit, the deficit would appear and start growing again and immediately.

If I gave you a percentage figure it would be grossly misleading.

Mr. ANDREWS. All right.

PUBLIC OWNERSHIP OF INDUSTRY IN INDIA

Mr. GALBRAITH. On the public case, I would make these points.

In the first place, there is in India a deep conviction in favor of public ownership of some part of the industrial structure. This is a conviction which exists and it is similar to the conviction of some of our people in support of power in the West, TVA, and so forth.

These are good people and people of sound democratic instinct. They want to be on our side but they believe in public ownership. It is a deep matter of faith. They have had a different experience with private enterprise than ours. Private enterprise came to India in the days of British rule. It was a projection of the big companies in London. Private enterprise, therefore, carries the obloquy of external firms coming into the country—foreign ownership and all the rest.

As Indian enterprise passes into the hands of Indians, as it is increasingly doing, these tendencies are disappearing. But they still exist. If we are intolerant of their beliefs, the people who believe deeply in public ownership have no alternative but to be against us, to be with the Communists. The Communists are of course, in favor of public ownership.

The Communists welcome a hard stand as against public ownership and there is no question about it. They used to whip me on any statement that seemed to say we are opposed to public ownership. I do not want to seem to be critical of General Clay. But I think it is fair to say, as a fact, that when the Clay report, when it came out last spring, the Indian leftwing seized immediately on its opposi-

tion to public ownership and with real pleasure. Here, they said, was real proof to the Indian Government that there was no future for any form of public ownership with the Americans.

OPERATION OF MILL

Just one other point: Arrangements have been provisionally discussed and with which, in my view at least, the Indian Government will agree, which will get us, in some respects, the best of both possible worlds. I have not been impressed by the efficiency of the Hindustan Steel Co. I say this because my practice in dealing with congressional committees is to be candid. I do not think, from my own fairly close studies of this company that it is as efficient as it should be.

The three new mills came in within a space of 2 or 3 years. Teething troubles were to be expected, but I still think there was room for better performance. I have suggested, along with Mr. Wood, my economic minister, that were this new mill to be approved, we would want some better organization. We have suggested an arrangement by which an American firm, an American construction and operating firm, would build the mill under an organization separate from the Hindustan Steel Co.

As part of the arrangement the American firm would not only build the mill, but run it in for a substantial number of years.

Mr. ANDREWS. Did you discuss the company that would operate it?

Mr. GALBRAITH. No, I did not.

In the first place it is not my decision and in the second place, it would have caused difficulties here in the United States. Any company you mention would seem to be getting a preference. So we did not mention companies. I think we avoided even mentioning any firm for illustrative purposes. There is a point here, to which I would draw the attention of the committee that is very important, not only to India and in all the underdeveloped countries. There is a tendency in these countries to think of a job as finished when you have got a plant built, when you have the machinery in, and the lines start moving. This is only half of the job. The other half of the job is to get a plant producing as an organic unit at low cost.

India needs not only a steel industry but a low-cost steel industry. She is marvelously equipped with excellent coal and the Bokaro plant sits on an enormous coal seam. She has one of the world's great ore reservoirs. But it is not enough to make steel in these countries. One must make low-cost steel. These are poor people and the Indians need also to expand their exports. This they do by having an efficient industry.

Therefore, the provisional proposal we have discussed would mean that an American firm would be operating this mill on behalf of the Indian Government for a substantial period. In other words, we would insure to the extent that American industry is efficient, that we would have an efficient operation.

I have set great store by that negotiation——

Mr. ANDREWS. In other words, if we built the plant there would have to be outside operators?

Mr. GALBRAITH. I have always thought that this part was more important. Who ran it was more important than who owns it. Mr. Chairman, this is my statement and I am ready for your questions.

DOMESTIC NEED FOR STEEL IN INDIA

Mr. ANDREWS. You mentioned exports. They are not thinking about making steel in India to export it? You say that with all six plants going, assuming the Bokaro plant is built, that would not meet the local demand for steel in India?

Mr. GALBRAITH. Any calculation of steel needs is overwhelming, you are quite right, and would be used at home.

Mr. ANDREWS. You did mention exports in connection with economic production?

Mr. GALBRAITH. That is right, but the Indian economy, to become self-sufficient over the long period of time, is going to take time to replace its dependence on outside help and needs to earn its own foreign exchange.

Some of this has to be earned from manufactured products and your manufactured products in this part of the world are competitive only if they are cheap. You have got Japan there which is also a very strong competitor, and the Indians have been building up, for example, a modest export market in two products, bicycles and sewing machines. These are two things a poor village family wants above everything else in the world.

They can only afford them if they are inexpensive and they can only be inexpensive if you have cheap, inexpensive raw materials.

I would not suppose that India would in the near future be an exporter of crude steel products.

Mr. ANDREWS. Have you finished your statement?

Mr. GALBRAITH. Yes, sir.

BACKGROUND OF CONTRACT FOR SURVEY

Mr. ANDREWS. What are the circumstances and considerations surrounding the awarding of a $686,000 contract for a survey of the proposed Bokaro steel mill?

Mr. GALBRAITH. What lay back of that?

Mr. ANDREWS. Yes.

Mr. GALBRAITH. The decision on this was taken here in Washington. Again, these are decisions that are taken by the AID agency, not by the Ambassador. I think I know the background of it although Mr. Gaud's comments on this would supersede mine if there were any conflict between them. He knows more accurately than I.

As I said in my statement, this is a very large plant. The engineering feasibility, the location, the raw materials, the requirements, and the very important question of the product mix had been studied by an engineering company, the Dastur Co. It is a competent company, but not a company with great experience. It was not felt by AID—and I think they were right—that we could consider this project until it had the imprimatur of a major American firm and engineering company.

May I say one further word on that which is of general interest? Some of the Indian officials about a year ago—quite a bit over a year

ago—were unhappy about the delay that was involved. This is related to the pressure for steel which is very great.

I made the point—one I have made many times—that we have not to date made a serious mistake in India, which has been the largest recipient of our aid. We have not made mistakes because we have taken the time to study things carefully, and indeed have also spent money on studies.

One of the worst things that will happen to the AID program—and I may say, parenthetically, to the Ambassador in charge—is when we act without care we have to explain the resulting error.

Mr. ANDREWS. You consider that survey to be very thorough?

Mr. GALBRAITH. That is a first-rate job. You have a copy of it right there.

Mr. ANDREWS. I am sure that you are familiar with it.

Mr. GALBRAITH. Yes, sir.

ADVANTAGES TO UNITED STATES FROM CONSTRUCTING MILL

Mr. ANDREWS. What advantages, if any, are expected to accrue to the United States for this expenditure of public funds?

You have touched on that in your opening statement.

Mr. GALBRAITH. I do not want to repeat my opening statement. But I would say this was the most important job to be done in India—to get a steel supply. It is the thing that is most urgent for Indian economic development and we should not shy away from doing the most important thing. I do not believe Americans should avoid big enterprises. I think we are quite up to undertaking——

Mr. ANDREWS. In other words, this proposed mill, in your opinion, is the very best thing that this country can do, so far as India is concerned, in the field of foreign aid?

Mr. GALBRAITH. Professors are sometimes as cautious as lawyers. I would say it has a top priority.

TOTAL ESTIMATED COST TO THE UNITED STATES

Mr. ANDREWS. What is the total estimated cost to the United States, should this plant be carried to its ultimate conclusion?

Mr. GALBRAITH. We are discussing here actually the first stage of this plant. The dollar cost which the steel corporation puts down in round numbers is $513 million. This would be over a period of 4 or 5 years, I suppose. There are two further stages beyond that.

Mr. ANDREWS. My question was: What is the total estimated cost to the United States, should this plan be carried to its ultimate conclusion?

I believe you stated earlier the total cost of the project would be approximately $1.7 billion, and the United States share of that would be approximately $975 million? Is that your understanding of it?

Mr. GALBRAITH. I hope I am not contradicting any testimony from my colleagues the other day, but my impression is that the only decision that would be taken now would be as to the first stage.

The further stages would be either out of Indian earnings, if they should develop to the point where they could handle it——

Mr. ANDREWS. We were told, if I remember correctly, and it is in the record, that those figures are correct; namely, the total cost would be $1.7 billion and our part would be $975 million.

Mr. GALBRAITH. The only disagreement I have is that no decision is being taken at the present time as to the second or third stages. These are some years in the future.

Mr. CONTE. No decision is being taken on the first, we have been told.

Mr. GALBRAITH. Obviously, the first one is up for decision, or we would not be talking about it here. I am not going to quarrel with you on that.

Mr. CONTE. As the chairman would say, you got caught running out of the henhouse with a hen under your arm? Then your answer you gave seems contradictory.

Mr. GALBRAITH. I certainly did not. We are not talking about whether a decision was made. We are talking about whether there is a decision to be made here.

Mr. CONTE. I'd like to go back to the record, if I may, Mr. Chairman.

Mr. ANDREWS. You say in the first stage that the cost would be $513,000,000? Is that the cost to the United States or the cost of the project?

Mr. GALBRAITH. That is the cost to the United States.

Mr. ANDREWS. That would be the U.S. part of the cost?

Mr. GALBRAITH. Yes, sir. I would have to get you those rupee figures, Mr. Chairman. I do not have them here with me.

Mr. ANDREWS. All right.

(The information follows:)

INDIAN CONTRIBUTION TO BOKARO IN FIRST STAGE

The Indian Government will contribute the $406,840,000 of Indian rupees for the first stage. No foreign exchange will be contributed by the Indian Government.

Mr. ANDREWS. Does the $686,000 amount referred to in the survey report cover the total cost of the services of the various companies that worked on the survey?

Mr. GALBRAITH. That is my understanding. You referred to the companies that participated?

Mr. ANDREWS. Yes.

Mr. GALBRAITH. That is my understanding.

SURVEY BY UNITED STATES STEEL CORP.

Mr. ANDREWS. Will additional engineering surveys be required if the proposed project is approved?

Mr. GALBRAITH. Some further work is required on the raw material problem. But I believe it is the present hope that this can be done by AID engineers.

Mr. ANDREWS. We were told that one of their technicians had recently left for India to make another survey.

Mr. GALBRAITH. That is right.

Mr. ANDREWS. To confer with Indian officials?

Mr. GALBRAITH. That is on the raw materials problem.

Mr. ANDREWS. You just stated you thought this survey by United States Steel was a good one and that they did a thorough job?

Mr. GALBRAITH. That is right.

Mr. ANDREWS. What additional information could a technician from AID come up with that is not covered in the United States Steel report?

Mr. GALBRAITH. That is a good question but there is also a good answer. The ore mass in central India on which this plant will draw has never been fully explored, but it is a great source of ore. It is now supplying ore to the Japanese industry. The iron content and, if I recall correctly, the alumina content, varies. Therefore, test borings have been necessary to establish the nature of the ore quality. The Indian Government has been following this study and has got under way a program of such borings to determine its quality. The AID engineer or engineers have gone over, as I understand it, to ascertain the nature and results from this test boring.

Mr. ANDREWS. Did not the United States Steel people do that?

Mr. GALBRAITH. The United States Steel people were not equipped and did not have, as part of their contract, going out and doing this boring. It is a fairly elaborate operation, as I understand it.

Mr. MINSHALL. Mr. Chairman, would you yield for a minute?

Mr. ANDREWS. Yes.

Mr. MINSHALL. Is that not one of the very essentials of this whole program, to determine whether or not enough ore is available?

Mr. GALBRAITH. It is not a question of whether the quantity is available, but the quality.

Mr. MINSHALL. It is one and the same thing?

Mr. GALBRAITH. The steel corporation would completely agree with you on that. They lay down here in the report the need for undertaking this survey. The Indian engineers are doing the survey rather than the Americans.

Mr. MINSHALL. One further question: Do you think this report is incomplete, the one the United States Steel charged $678,000 for?

Mr. ANDREWS. $686,000.

Mr. MINSHALL. $686,000?

Mr. GALBRAITH. No, I would not.

Mr. MINSHALL. You consider it a full and complete report for your purposes?

Mr. GALBRAITH. I think the steel corporation—and I am not speaking for the steel corporation or for AID—rightly said this is something that the ore exploration is mostly what the Indian government should do, not we. In other words, Congressman, if they had gone and done this test boring with American equipment and personnel, it would have cost more money.

Mr. MINSHALL. Do you know of any conversations or negotiations that you had with the United States Steel people to conduct a further feasibility report or study?

Mr. GALBRAITH. Beyond this?

Mr. MINSHALL. Yes.

Mr. GALBRAITH. I do not know of any.

Mr. MINSHALL. There has or has not been?

Mr. GALBRAITH. There have been none so far as I know.

Mr. MINSHALL. No negotiations?

Mr. GALBRAITH. None by me and none by AID.

Mr. MINSHALL. Thank you.

Mr. GALBRAITH. I am always uneasy speaking about what goes on in Washington when I am several thousand miles away in Delhi. I think I would have known of such negotiations. I have had none.

FINANCING OF OTHER STEEL PLANTS IN INDIA

Mr. ANDREWS. I understand there are three other steel plants in operation in India which were financed by Great Britain, Russia, and West Germany. Is that correct?

Mr. GALBRAITH. That is correct.

Mr. ANDREWS. What were the financing arrangements for each of those plants?

Mr. GALBRAITH. I can tell you in general terms.

The Soviet plant, I can get you the exact details later for the record.

Mr. ANDREWS. Correct the record and put in the correct figures and dates.

Mr. GALBRAITH. The Soviet one was financed by a loan from the Soviet Government, low interest rate loan, 2.5 percent, as I recall, covering the plant and repayable over a fairly long period of time.

The actual period of time, I do not know, but the terms were, in general, less favorable than ours—but fairly favorable terms.

The German plant was financed by relatively short-term loans, including some supplier credits, at commercial rates of interest.

The British plant, I do not have the financial arrangements for that in mind.

Mr. ANDREWS. If you can, insert in the record additional information about the three plants, including the British.

Mr. GALBRAITH. Yes, sir.

(The requested information follows:)

FINANCING ARRANGEMENTS FOR BRITISH, GERMAN, AND RUSSIAN MILL

The cost of the British, German, and Russian mill and the loans by these countries are shown below.

	Cost[1] *(millions)*
Durgapur (Great Britain)	$301
Rourkela (Germany)	385
Bhilai (Russia)	258

[1] Derived from the United States Steel report.

The terms and amount of the foreign loans in the above steel mills are as follows:

Steel mill	Date of agreement	Amount (millions)	Terms
Durgapur (Great Britain)		$74.2	
Public loan	Jan. 5, 1957	42.0	Treasury rate[1] plus ¼ percent, 20 years including 8-year grace period.
Private loan, Lazard	June 30, 1958	32.2	Treasury rate[1] plus 1 percent, 7 years including 5-year grace period.
Rourkela (Germany)	Feb. 26, 1958	163.4	6.3 percent, maturity 3 years.
This loan has been renegotiated, and maturity extended as noted.	Jan. 30, 1961	24.6	5¾ percent, maturity 4 years.
	Apr. 29, 1961	78.8	5½ percent, 13 years including 4-year grace period.
	May 4, 1962	60.0	Under negotiation.
Bhilai (Russia)	Feb. 2, 1955	136.0	2½ percent, 12 years including 5-year grace period.

[1] Great Britain's Treasury rate fluctuates. The effective rate on these loans is between about 5½ percent and about 6½ percent.

The Great Britain loan is repayable in sterling, the German loan in marks, and the Russian loan in Indian rupees.

At the 1962 yearend, the rate capacity at which these three mills were operating was as follows: Rourkela (West Germany) 87 percent, Bhilai (Russia) 100 percent, Durgapur (Great Britain) 93 percent.

ACCOMPLISHMENTS OF PRESENT STEEL PLANTS

Mr. ANDREWS. What has been the progress and accomplishments in each of these plants as compared with the original forecast?

Mr. GALBRAITH. I am not completely up to date on that question. All three plants have had teething troubles.

Mr. ANDREWS. Are these plants operated by the Indian Government?

Mr. GALBRAITH. They are operated by the Hindustan Steel Co., which is a wholly owned agency of the Indian Government; yes, sir.

All three plants have had teething troubles. The most serious of those are at the Rourkela—the German-built plant. My impression is that that plant is still giving some difficulties and is operating below capacity, and also there is still one blast furnace to be installed there.

The other two plants, on my last information, were functioning well, at or close to capacity.

Mr. ANDREWS. Both of them?

Mr. GALBRAITH. Both of them.

Mr. ANDREWS. At or close to capacity?

Mr. GALBRAITH. At or close to capacity. As I said in my prepared statement, or in my earlier testimony, I would not be sure that they are yet low-cost plants. I think they probably are producing steel at too high a cost.

Mr. ANDREWS. There are two other major plants in India that are owned and operated by private enterprise?

Mr. GALBRAITH. Yes, sir.

Mr. ANDREWS. Are they Indian companies or foreign companies?

Mr. GALBRAITH. May I correct the record to say that I would like to provide the up-to-date capacity figures on these plants?

Mr. ANDREWS. Surely.

Mr. GALBRAITH. To make sure I am correct.

Mr. ANDREWS. I suggested you correct the record and give us the latest information you can get as to the terms of the financing for these three plants.

Mr. GALBRAITH. And whether they are working to capacity?

Mr. ANDREWS. Right.

Mr. ANDREWS. Do you know anything about the operation of the two privately owned steel plants?

Mr. GALBRAITH. Yes, I am familiar with this in a general way, with both of them, but most immediately with the Tisco-Tata Iron & Steel Co. I have visited this and I am fairly well acquainted with the management.

Mr. ANDREWS. Is that plant operating at or near capacity?

Mr. GALBRAITH. I would imagine so.

Mr. ANDREWS. Do you know whether or not the cost of producing steel at that plant is cheaper than it is at one of the three government-operated plants?

Mr. GALBRAITH. I do not know whether these figures are known or not, but my impression is that it is cheaper but not cheap.

Mr. ANDREWS. You are referring to only one?

Mr. GALRAITH. Tisco-Tata Iron & Steel Co. is the largest plant.

Mr. ANDREWS. What about the other privately owned plant?

Mr. GALBRAITH. The other privately owned plant is smaller and I would guess that it is producing steel at lower cost than the publicly owned plants, too. These plants are fairly well run, and in the normal course of events one would expect them to be cheaper. The Indian iron and steel company is, in addition I believe known to be very well managed. I would like to say one word off the record.

Mr. ANDREWS. Yes.

(Discussion off the record.)

Mr. ANDREWS. I judge from your statement that the two privately owned plants are operated more efficiently than the Government-operated plants, and that the cost of production is cheaper in the privately owned plants?

Mr. GALBRAITH. Yes, sir.

I would expect the publicly owned plants, when they are fully run-in, to do much better than they are today.

Mr. ANDREWS. We all live in hope.

Mr. GALBRAITH. This would be a normal industrial expectation.

Mr. ANDREWS. What are the terms of the agreements between India and the three governments you have discussed, and you might want to supply additional information for the record.

Mr. GALBRAITH. Yes, sir.

Mr. ANDREWS. Did the country agreements include any quid pro quo arrangements?

Mr. GALBRAITH. What do you have in mind by that?

Mr. ANDREWS. Just any agreements other than the terms of the mortgage?

Mr. GALBRAITH. Not so far as I know. I would not suppose that they did.

OPERATION AND MANAGEMENT OF STEEL MILL

Mr. ANDREWS. Should this proposal be approved, would the agreement with India include any quid pro quo arrangement?

Mr. GALBRAITH. Not beyond the sorts of things that I have discussed earlier. We would be very much concerned with the management arrangements.

Mr. ANDREWS. Operation and management?

Mr. GALBRAITH. Operation and management.

Mr. ANDREWS. If you got right down to it and you reached the point of agreeing to finance the U.S. share of the total cost, and the question of operation and management came up and the Indians insisted that they operate and not have outsiders come in, what would be the situation?

Mr. GALBRAITH. Well, I would only speak for myself as a former Ambassador. My instinct would be to make us stick on this.

Mr. ANDREWS. In other words, if outside management did not operate the mill, then you would not recommend our participation in the project?

Mr. GALBRAITH. I would put the thing in a little more diplomatic form; unless it were clear that we could do a good unobstructed job of building the mill and running it in, then I would not want to do it. If I can say this without getting into trouble with a fellow citizen of Massachusetts, this is something on which the Indian Government is not in any doubt. They know that this is something I had very much in mind.

Mr. MINSHALL. Why consider putting it in the public sector at all?

Mr. GALBRAITH. I am glad you mentioned that because there is one of the things I omitted in my prepared testimony. This plan is beyond the capacity of either of the present private firms and they have made it very clear that this is so. They could not possibly raise the money for it and one of the strongest supporters of this project, most categorical of the supporters, is the head of the Tata Iron & Steel Co.

I might also say this mill has the very strong support of private sector firms in India generally.

Mr. Bharat Ram, head of the Indian Chamber of Commerce, roughly the counterpart of our chamber of commerce, has come out strongly in support of this mill.

He is particularly interested in the importance of this particular mill and is concerned with keeping the supply for the private enterprise in India, the private sector.

OWNERSHIP AND CONTROL OF THE STEEL MILL

Mr. ANDREWS. What would be the ownership and control of the Bokaro plant?

Mr. GALBRAITH. The ownership as now conceived would be by the Government of India or the people of India. The control, would for the initial period of time, be by the company that was building and bringing it in.

Mr. MINSHALL. Mr. Ambassador, if we gave the private sector the same kind of arrangement they could operate in the same way, you

say the public sector could, am I correct in that; what is your basic objection then to having the private sector get into this if they could handle it?

Mr. GALBRAITH. My basic point is the one I mentioned in my earlier testimony, Congressman. There is a strong—a very deep belief in India in favor of public ownership. Steel is one of the industries which has been marked out for mixed private and public ownership. The decision was taken years ago that this would be, broadly speaking, a public sector mill although they have not excluded some private participation.

As I said before, I do not want to force people who believe in public ownership, and believe in it deeply, to be against us. That is my basic position.

Mr. ANDREWS. Have the two privately owned companies enjoyed good relationships with the Government?

Mr. GALBRAITH. Yes, sir.

Mr. ANDREWS. How do you account for that if you say they have believed fundamentally in Government ownership of big projects?

Mr. GALBRAITH. No; I say the decision in the case of the steel industry has been to have a mixed, partly public and partly private, industry. The relations have been based partially on the fact that the demand for steel provides a market for both. They are not really fundamentally in competition.

Mr. ANDREWS. Since the demand for steel is so great over there, it looks to me like they would welcome a plant even though it were owned and operated by private industry.

Mr. GALBRAITH. Well, I only repeat what I just said to my good friend. There are Indian philosophies and convictions on these matters and they are different from our own. I try, at least in my own belief, to be tolerant of other people's views.

Mr. ANDREWS. If they have two privately owned plants operating over there and enjoying good relations with the Government and the man on the street, I do not see why the third one could not share the same experience.

Mr. GALBRAITH. If we were to do that—I am enlarging on the same answer—I am afraid that we would be accused of attempting to dictate the pattern or the shape of the Indian industrial development.

We would have more criticism for that intrusion than we would have reward for the help we are giving.

Mr. ANDREWS. Before you proceed, Mr. Flynt, I have a document which Mr. Galbraith wishes to submit for the record.

Without objection, it will be made a part of the record.

(The document referred to follows:)

THE BOKARO STEEL MILL

(Article prepared for the Washington Post by John Kenneth Galbraith)

For some years the Indian Government has been planning the construction of a flat products steel mill at Bokaro in the State of Bihar, some 150 miles northwest of Calcutta. As engineering studies have confirmed the feasibility of the plant, the Indian authorities have asked that this be one of the projects to be financed from our economic assistance funds. The decision, not surprisingly for it is an important one, has become the cause of considerable controversy.

I have, I suppose, been more intimately involved in this matter than any other American, and I more than welcome a chance to comment on it. And I have been struck by the fact that whatever their starting point, when there is full information on the project people almost always agree on its merits.

Let me first deal with those questions concerning Bokaro which are not seriously in dispute. Although it would be a large mill—an initial capacity of 1.4 million ingot tons and an eventual capacity of 4 million tons—there is no doubt that the steel is needed. In spite of the expansion of recent years, the Indian steel industry is still very small. It is roughly comparable in capacity with that of Canada and serves a population more than 20 times as large. While the plant would be costly, it would soon pay for itself in the imports that it would save. To import a million tons of flat steel products would cost the Indians about $200 million. A fully integrated mill with an annual capacity of 1 million tons of flat products—the first of the planned stages—would cost, according to the estimates of the experts of the United States Steel Corp., $513 million. Three years of operations would thus recover the dollar cost of the mill, and more. Since India combines her pressing need for steel with an equally acute shortage of dollars, the economic attraction is obvious. She could not, in fact, afford to import the steel that the mill could supply.

It is also agreed that the mill, so far from being damaging, would be profoundly helpful to the private sector of the Indian economy. The Indian steel industry is partly in public and partly in private ownership, a pattern, incidentally, which was followed by Japan and other countries in the early stages of industrialization. Because of the heavy demand for steel, there is no question of taking markets from the private producers. The head of the largest private steel mill, Mr. J. R. D. Tata, of the Tata Iron & Steel Co., stated last spring that Bokaro "is simply beyond the financial resources" of Indian private enterprise. He made clear his hope that the United States would finance the project and strongly reaffirmed this position in his annual report to his board of directors a few days ago. Meanwhile, Indian private steel users, large and small, are looking forward eagerly and even hungrily to this new source of supply. Their spokesman, Mr. Bharat Ram, the president of the Indian Federation of Commerce & Industry, the Indian counterpart of the U.S. Chamber of Commerce, and the recognized spokesman of private enterprise in India, emphatically endorsed the project this June.

There is also agreement that support for this project would be extremely well received in India. Unless a country is very short of steel it is hard to imagine how much popular interest there can be in increasing the supply. The Bokaro plant has acquired a vast symbolic interest in the subcontinent. On no subject during my tour as Ambassador was I so intensively queried as on the prospects for help on this project. When the American Mount Everest team returned to New Delhi after its successful climb it was said, jokingly, that the first question addressed to the leader at his press conference concerned his attitude on Bokaro. I have heard, incidentally, that I am supposed to have committed the American Government to this enterprise. Both the Indian Government and I are equally aware of the fact that American Ambassadors have no such breathtaking power to promise money. There is no commitment. It is a decision to be taken on the merits.

There is also agreement that Bokaro would usefully dramatize the role of American aid to India. Partly because large and dramatic projects are usually somewhat controversial, we have concentrated in the past on equally useful but less publicized enterprises. A hydroelectric plant in north India is very important to the people of the area. But in south India, it is of the same popular interest (say) the Passamoquoddy project in California. The Soviets got far more mileage out of their steel mill at Bhilai than we have from any one of our projects. I have thought our reticence a mistake. We should not look for dramatic enterprises merely because they are dramatic. But neither should we avoid such projects if they are good and useful. It is troublesome to discover the Soviets have a better sense of public relations than we.

Finally, there is agreement, or at least it would be hard to imagine disagreement, on the favorable effect of this plant on the American economy. Our own steel industry is not expanding. As a result, firms engaged in this kind of construction and machine building have a good deal of excess capacity and idle labor force. Heavy engineering firms in western Pennsylvania, Ohio, northern Indiana, Illinois, and elsewhere would especially welcome the business and employment. The rumors of the Bokaro plant had already brought their representatives to India long prior to my departure. They made no secret of their eager-

ness. If Bokaro is not approved, the orders would go for other types of equipment but not to industries where the need for business is so pressing.

I turn now to the case against the plant. This is twofold. First, that it is large. And, second, that it would be publicly or largely publicly owned.

While it would be a large plant, I have some difficulty in seeing the force of this objection. The cost would be spread over several years. And it is not as though Americans were unaccustomed to large enterprises. The cost would not be in addition to other aid. It would replace other projects, most notably in the field of electric power production (and also one might note in the public sector) and more general assistance to development that is not identified with any particular project. Because of the urgent need for steel the Indian Government has agreed to this substitution. It is the size of this project and its national character which will identify it so dramatically with our help. There is no intrinsic advantage in doing the second best things unostentatiously in a small way.

The stronger feelings are, of course, against the public ownership. Without wishing to challenge the convictions of those who feel deeply about the advantages of private ownership, I would like to plead for understanding on this issue.

In the first place, it will be seen that there is a strong practical case for public ownership, as private Indian capitalists concede and urge. As I have also noted, India is not the only country where the launching of a steel industry has required a large measure of public sponsorship and capital.

But there is also a strong preference in India for mixed public and private ownership of the steel industry. The case for public ownership is defended with something of the same passion as the case for public power in the Western United States. It is most important that we take a tolerant attitude on this issue. The experience of countries such as India with private capitalism has been different from ours. It is identified in many minds with the foreign ownership of earlier times. The Communists offer public ownership or socialism and excoriate private ownership. If we excoriate public ownership, and insist in an equally dogmatic way on private capitalism, we leave those who believe deeply in democratic socialism no choice but to aline themselves with the Communists. This is a mistake we have made in the past and which we have rectified in India with real gains for our positions. We know from experience in Scandinavia, Great Britain, Canada, New Zealand, and even our own past that a pragmatic combination of public and private ownership is quite compatible with personal liberty. If we offer a broad choice in economic organization as against the narrow Communist choice we cannot lose. If we offer a narrow alternative of a specific form of private capitalism to the narrow Communist choice we could lose.

This is not an academic issue. The Communists have been having a difficult time in India. The Chinese attack cost them heavily. They have been quick to seize upon gleams of daylight. The Clay Committee report, with its implied criticism of support to public enterprises, was greeted with unalloyed enthusiasm by the Indian leftwing press last spring. They took it as proof that the democratic Socialists had no future on our side. As I cabled at the time, the Communists were gleefully concluding on this matter that we were going back to our old maladroit ways.

We shouldn't. We have a right to insist that public enterprise be efficient. The other publicly owned steel companies in India have had serious teething troubles, and I have not been impressed by the efficiency of the operating company, the Hindustan Steel Co. As a result, the Indian Government has indicated a willingness in the case of Bokaro to set up a separate corporation and to accord the American builder not only a large measure of autonomy during the construction period but also, thereafter, for a several-year period of running in. In some ways what would be a public operation from the Indian viewpoint would be a private operation from ours. On this issue we should be both clear and firm.

But on the question of public ownership I would urge that we be tolerant and practical and that the test be not ideological preference but the American interest. There is sound precedent for such a practical view. In 1943, the late Senator Robert Taft went to Puerto Rico as a member of a subcommittee of the (them) Senate Territories Committee. On his return he addressed a letter to the War Production Board on behalf of a publicly owned glass industry in Puerto Rico. I quote from it as follows and urge a similarly broad view as regards India:

"I have just been in Puerto Rico with the Subcommittee of the Senate Territories Committee, investigating social and economic conditions there. In view of the number of people crowded into a small island, I believe that the only possibility of a decent standard of living lies in the industralization of the island. * * *

"The situation in Puerto Rico is not like that in the United States. * * * I have never been very strong for government-supported industry, but the situation in Puerto Rico is such that I believe the government has a proper function in promoting the development of new industry. * * *"

Mr. ANDREWS. Mr. Flynt.

Mr. FLYNT. Mr. Ambassador, by the same token, would it not be true that if we go in in support of a public steel mill that the people who favor private enterprise in India will have the same ill feelings toward us if the situation were reversed?

Mr. GALBRAITH. This would not be so. In the first place, this mill is supported by the head of the largest private mill. And the private industry generally accepts the concept of the government of a mixed economy. There are many dissenters but there is a broad acceptance of this idea. A great many of the private firms are very much interested in getting the increased supply of steel. Their idea is not who owns it but how quickly do we get the additional steel.

COMMUNIST INFLUENCE IN INDIA

Mr. ANDREWS. Is there any indication or any reason to believe there might be Communist infiltration of the proposed plant?

Mr. GALBRAITH. Not serious in any way. There is some Communist influence in the Indian trade union movement, but it would be no more of a hazard here than it would be anyplace else in the Indian economy. And I would not put it down as a major hazard elsewhere.

There is Communist influence in one of the major Indian unions. There is no question about that. It would be no more serious in this plant than in any other part of Indian industry.

Mr. ANDREWS. Just how strong is that Communist influence?

Mr. GALBRAITH. One of the three union groups has a very strong Communist leadership. This has long been admitted as such. There is no secret about it.

On the other hand, the Communist Party in India is not strong, and it has been, if anything, much in decline in these last few months. The Chinese invasion had a very bad effect on the Communist Party in India.

Mr. MINSHALL. What union is this that is dominated by the Communists.

Mr. GALBRAITH. I was afraid you would ask me that. I must check the name.

Mr. MINSHALL. Can you let us know a little later?

Mr. GALBRAITH. I will supply it; yes, sir.

(The information requested is as follows:)

TRADE UNION SITUATION IN THE STEEL INDUSTRY

There are about 3 million trade-union members in India, organized into several major unions. The Government of India recognizes as largest and most representative the Indian National Trade Union Congress (INTUC), which is estimated to have about 1 million members and which is linked closely to the dominant Congress Party of Prime Minister Nehru. The INTUC is considered to be relatively moderate in its political and economic orientation. The

Communist, All India Trade Union Congress (AITUC) is somewhat smaller than the INTUC, although the exact membership is difficult to determine, and it generally is more aggressive and better organized. Between them on the political spectrum is Hind Mazdoor Sabha (HMS), associated with the Praja Socialist Party, and the small Trotskyite United Trades Union Congress (UTUC). There also are thousands of independent local and regional unions of varying sizes.

All of the principal labor unions are active in the steel industry, and there is much rivalry among them for the allegiance of workers in this increasingly important organizing field. The INTUC has the largest membership in the industry, according to government figures. It has been challenged strongly by the AITUC in both of the older private sector firms, Tata and Indian Iron and Steel. In the Government-owned Hindustan Steel, Ltd. plants, AITUC claims that the management has shown favoritism to INTUC, which is recognized as the bargaining representative even at the Russian-built Bhilai mill, where in fact the HMS claims second place and AITUC is relatively weak. The union situation in these mills still is unsettled, as most workers are new to industrial employment.

Mr. ANDREWS. Have there been any acts of sabotage in any of these plants?

Mr. GALBRAITH. No; none at all.

THE INDIAN 5-YEAR PLAN

Mr. ANDREWS. Briefly, what is the 5-year plan of the Government of India? I understand that they are now in their third 5-year plan.

Mr. GALBRAITH. That's right. This is essentially a design, for integrated development of industry and agriculture, public and private, designed to get India moving into the age of industrialization.

Mr. ANDREWS. In other words, to build up the economy of India?

Mr. GALBRAITH. To build up the economy of India on a broad front.

Mr. ANDREWS. What year of the 5-year plan are they in now?

Mr. GALBRAITH. The third year.

Mr. ANDREWS. A third year of a 5-year plan?

Mr. GALBRAITH. Yes.

Mr. ANDREWS. How long do you think it will take them to achieve the ultimate goal?

Mr. GALBRAITH. It will be a long, long pull. Very long.

Mr. ANDREWS. Twenty-five years?

Mr. GALBRAITH. India still has a great many very poor people and in some ways, while they have made great progress in these last 13 years, one is appalled at how much there is yet to be done.

Mr. ANDREWS. We could talk for days about political and economic matters in India, but we are here today to discuss this steel mill, so we will stick to that subject.

SELECTION OF SITE FOR THE MILL

How was the site for the proposed mill selected? I know that the report says that a number of things will be required, including a complete township to support both laborers and managers for the plant.

Mr. MINSHALL. What is the general location?

Mr. GALBRAITH. The coal supply is in east-central India.

Mr. MINSHALL. It is actually eastern, is it not?

Mr. GALBRAITH. East-central India, including the provinces of West Bengal, Bihar, and Madhyappradesh.

The Bhilai plant doesn't show on this map, but it is in this vicinity here. It is on the railroad that runs between Bombay and Calcutta. The plant that was built by the Germans is somewhere roughly in this area. The Durgapur plant is up in this area, and the new proposed Bokaro plant is up in this area.

Mr. ANDREWS. All five existing plants are in the same general area and the proposed Bokaro plant would be in that same general area, which is the northeastern section of India?

Mr. GALBRAITH. Yes.

Here is Jamshedpur the site of the Potu plant.

Mr. ANDREWS. How far would that be from East Pakistan?

Mr. GALBRAITH. A hundred miles, I suppose.

Mr. MINSHALL. What is the largest city in this area? It is not near New Delhi or Calcutta. What city is it near?

Mr. GALBRAITH. The largest city related to the Bokaro plant is Calcutta.

Mr. ANDREWS. That plant would be about 150 miles from Calcutta, the Bokaro plant?

Mr. GALBRAITH. 150 miles northwest.

ANCILLARY CONSTRUCTION AND COSTS

Mr. ANDREWS. Going back to the question, I notice that the report says that a number of things would be required, including a complete townsite to support both laborers and managers for the plant.

In other words, you would start from scratch and build everything; the plant, the town?

Mr. GALBRAITH. That's right.

Mr. ANDREWS. What is there at Bokaro, now?

Mr. GALBRAITH. It is a dispersed industrial area, Mr. Chairman. There is a lot of coal mining in the area immediately adjacent to the site. There is no housing. Housing accommodations would have to be built.

Mr. ANDREWS. We have discussed the figure of $1,700 million as being the estimated cost of the complete steel plant. Did that figure include the housing and the other things that would be necessary to support the steel plant?

Mr. GALBRAITH. I would have to check that.

Mr. ANDREWS. You don't know?

Mr. GALBRAITH. I don't know, offhand.

Mr. ANDREWS. Find out and if the figure $1,700 million does not include housing, et cetera, supply for the record what the cost of the facilities other than the plant would be and also tell us now, if you know—if you don't, supply that for the record—how you would propose or how the Indian Government would propose to finance the construction of all facilities, including housing, railroad facilities, and everything needed in connection with the plant would be done.

Mr. GALBRAITH. I will do that.

(The information requested is as follows:)

FACILITIES NOT INCLUDED IN THE UNITED STATES STEEL COST ESTIMATE

The cost estimates do not include the foreign exchange and local currency costs of the following facilities:

Tenughat Dam	$31,127,000
Canal for Tenughat Dam	5,730,000
Bokaro townsite	40,000,000
Expansion of southeastern and eastern railroad facilities	(1)
Increased coal mining and washing facilities	25,000,000
Expansion of road network	(1)

[1] Not available.

Plans for financing these facilities have not been completed. The costs of the Tenughat Dam and the townsite would be in local currency. The remaining facilities would be a mixture of local currency and foreign exchange.

Mr. GALBRAITH. My impression is that the figure you give is the figure for the plant within the fence, without the ancillary services.

Mr. CONTE. I have, Mr. Ambassador, some figures here in regard to the Tenughat Dam, which is $31 million-plus, $5,700,000 for the canal, $40 million for the Bokaro townsite, including the water supply, and $32 million for the installation of the additional 125,000 M.W. generating capacity and $25 million for increased coal mining and washing facilities. I don't have any figures for the expansion of the railroad or the expansion of the road network.

Mr. ANDREWS. Might I say, if the gentleman will yield, that this makes a total of $133,857,000 and those figures for those purposes were disclosed in the report filed by the United States Steel Co.

Mr. CONTE. That's right, and they are not included, I don't think, in the cost of the Bokaro steel mill.

Mr. ANDREWS. And we have been talking in terms of $1,700 million.

Mr. CONTE. That is exactly right.

Mr. ANDREWS. Now, Mr. Ambassador, if you will, you check the figures against these and determine which is correct.

What about other requirements such as rail transport, power and water, highways, and particularly the availability of raw materials?

Now we have discussed highways and transport and power and water in these other figures we have just read into the record. I will ask you now to discuss the availability of raw materials.

Mr. GALBRAITH. On coal there is, of course, no problem. I mentioned the situation as regards ore. India has one of the world's largest reserves of ore. It is still, however, imperfectly explored as to quality.

Limestone, which is a further requirement and a less important one, is available—is presumed to be available in adequate quantities. I am not quite sure what the details are on that.

PROFIT POTENTIAL OF THE MILL

Mr. ANDREWS. I notice the report says the plant would not be profitable in the first step which appears to be from 1966 through 1971, but that it would become profitable beginning with the second step in 1971.

How valid, in your opinion, is that estimate?

Mr. GALBRAITH. I have great confidence in the steel corporation people and the position they make on this seems to me to be a very sound one. The economical finishing capacity, the rolling capacity has to be for a larger mill than the first step. So the finishing capacity would not be fully used by the ingot capacity of the first stage. So it is only as the subsequent stages build up to the capacity of the finishing end of the mill that you would have a balanced mill, and the mill would become profitable. This is the case they make, and it seems to me to make sense.

Mr. ANDREWS. You stated earlier there would be a teething period, as you described it.

Mr. GALBRAITH. This is not the teething period. If it were running very well, this imbalance would occur. The teething period is getting your blast furnaces going and getting knowledge of your blast furnace charge, and getting your labor force broken in. You must remember that you are dealing here with a labor force which has to be trained from scratch—which comes right off the farm.

Mr. ANDREWS. In your opinion, it would be impossible for this plant to operate without a deficit for a period of several years following the completion of the plant and the actual commencement of operations?

Mr. GALBRAITH. Well, I again put these things in a little more diplomatic form. All of these plants take a period of running in and we shouldn't be surprised at that. This would be true whatever the management.

Mr. FLYNT. Mr. Chairman, may I interject at that point?

Mr. ANDREWS. Yes.

Mr. FLYNT. Is the operating deficit of the proposed plant included in the estimated cost of $1.7 billion?

Mr. GALBRAITH. No, I believe not.

Mr. FLYNT. Any deficit operating cost would be in addition?

Mr. GALBRAITH. That would be a rupee cost paid by the Indians or the government.

Mr. ANDREWS. Who would subsidize the deficit during the first period between 1966 and 1971, and what would be the estimated deficit during that period?

Mr. GALBRAITH. I don't know whether the steel corporation came up with that figure or not. I will have to look and see.

Mr. ANDREWS. You don't know of your own opinion?

Mr. GALBRAITH. No.

TERMS OF LOAN

Mr. ANDREWS. I notice the report assumes for the purpose of this analysis, a 20-year loan at 5¾ percent interest. Isn't it true that should this loan be made, it would be more probably made for a term of 40 years at only three-quarters of 1 percent interest, and how does this compare with the interest rates and terms under the other three governmental arrangments referred to earlier?

Mr. GALBRAITH. Let me answer that question. That is a very important point.

We give the Indian Government, through the AID program, assistance at very low rates of interest. Three-quarters of 1 percent for 40 years.

Mr. ANDREWS. That is what this committee refers to as credits, rather than loans.

Mr. GALBRAITH. It does not follow that when this money is reloaned either to a private or a public firm by the Indian Government, that it should be reloaned at that rate. The Indian Government is very short of money; it is very short of foreign exchange. We are giving these loans in order not to put a strain on its foreign exchange. But when it reloans that money, the firms borrowing it should be subject to a stronger commercial test than three-quarters of 1 percent for 40 years. Almost anybody can make money at that. So in order to make the Indian firm subject to a strict commercial test, the reloaning rates are generally much higher, and in my view, should be much higher. There is no reason why an Indian firm that happens to get a loan by way of the Indian Government from the United States should have these concessional rates. So the steel corporation properly used commercial rates in calculating what the cost would be.

Mr. ANDREWS. But if the AID goes into this Bokaro program, the money we furnish will be on a long-term, 40-year basis, at three-quarters of 1 percent interest, and not payable for the first 10 years.

Mr. GALBRAITH. I don't think AID has taken any decision on that.

Mr. ANDREWS. I say if they go into it.

Mr. GALBRAITH. I really don't think this has been decided yet, what the terms would be. But if they were to go into this, the rates would certainly be concessional.

Mr. MINSHALL. I think the record should show at this point that we would have to borrow the money at a rate of 3½ percent.

Mr. GALBRAITH. But I would have to say, in response to you, Mr. Congressman, this is true of all of our AID operations.

Mr. MINSHALL. This is just another $1 billion added to the load.

Mr. GALBRAITH. It would be taking the place of other projects.

Mr. ANDREWS. Every dollar that goes into foreign aid is borrowed money. It is borrowed by this country, and we pay from 2 to 3¾, and sometimes 4 percent, depending on who holds the paper. The holder of an H-bond gets 4 percent interest after 18 months from the date of the bond's purchase. So in that case, this Government is paying 4 percent. Now, we are getting into the field of economics and so forth and so on, and we are here to discuss the Bokaro steel mill.

Mr. GALBRAITH. I would like, as an economist, to enter some reservations on this. We are not borrowing quite all this money.

Mr. ANDREWS. As I say, we don't want to get into an argument about economics. I am not an economist, but isn't it true, so long as we have a national debt and so long as we have a deficit in Government operations, we are doing business on borrowed money?

Mr. GALBRAITH. No, I would say ——

Mr. ANDREWS. We are not?

Mr. GALBRAITH. I would say overwhelmingly we are paying our way with taxes.

Mr. ANDREWS. That is not my statement. I will agree with you that taxes are overwhelming.

What is the plan concerning the actual construction of the plant?

Mr. GALBRAITH. I think I covered that in my earlier remarks.

Mr. ANDREWS. I think you did.

How would you award the contract?

Mr. GALBRAITH. Well, this is an AID decision and not something on which I am an expert.

Mr. ANDREWS. You are not familiar with that?

Has there been any discussion of the awarding of a contract?

Mr. GALBRAITH. No.

Mr. ANDREWS. Has there been any discussion of the eligible bidders, whether it be Indian, United States, or other countries?

Mr. GALBRAITH. I want to revise my testimony: There has been no formal discussion of a contract. One or two and maybe more American suppliers have been in India and some have been in to see me to ask what was happening on the contract, what was happening on the plant, whether it was in prospect and so forth. This is a normal search for business.

Mr. ANDREWS. It looks to me, Mr. Ambassador, like somebody is going a long way toward planning this plant, where no commitments have been made, somewhere along the line.

Mr. GALBRAITH. I wouldn't agree with that at all, sir.

Mr. ANDREWS. You say the contractors have been over discussing the possibility of business in connection with the construction of the plant.

Mr. GALBRAITH. At least two firms have been to see me in India to see what the prospects were, but this I would regard as completely normal. If you even have a rumor of a plant, firms will be there looking for it. I do not think this is a bad thing.

Mr. MINSHALL. What firms are those, if you know?

Mr. GALBRAITH. The Kaiser Co. was in, and Koppers.

Mr. MINSHALL. Any others?

Mr. GALBRAITH. Those are the only two I saw myself. There may have been others.

Mr. ANDREWS. Has there been any discussion of eligible bidders, whether they be Indian, United States or other countries?

Mr. GALBRAITH. Under the terms of the AID rules it could only be American contractors for anything having to do with dollar expenditures.

Mr. ANDREWS. Has there been any discussion of the type of construction and the supervision of construction of the contract?

Mr. GALBRAITH. Not beyond what I said in my earlier remarks that we would want to make sure there was a clear line for American direction of the contract.

Mr. ANDREWS. Any discussion of inspection and approval of the contract?

Mr. GALBRAITH. Not so far as I know.

Mr. ANDREWS. Production equipment, availability, and installation? Any discussion about that?

The maintenance of the plant: I believe you did say there had been some discussion, or maybe it was just your thinking about what should be done with reference to the maintenance of the plant——

Mr. GALBRAITH. No, there has been discussion, that if this one period of running in would be a long period.

Mr. ANDREWS. Do you know anything about the total manpower required for construction and the type of personnel required?

Mr. GALBRAITH. There is some discussion in the United States Steel report. Beyond that, I have no information.

Mr. ANDREWS. Do you know anything about the construction materials—availability and so forth?

Mr. GALBRAITH. There is also some reference to that, in this report, on prospective supplies of cement, lumber, and so forth. Indeed, this was part of the steel corporation's investigation.

Mr. ANDREWS. What about Indian construction capability? Would they have the capability to construct the plant?

Mr. GALBRAITH. This is a mixed situation. There would be some parts of the construction which would be paid for with rupees, which would be let out to Indian contractors. Civil engineering works, earth moving, and all this sort of thing would be a rupee cost. We would not want to do anything with dollars that could be done with rupees.

TOWNSITE FOR THE MILL

Mr. ANDREWS. Now, a few questions with reference to the proposed townsite that would be needed. What would be the size of the townsite and the location of it?

Mr. GALBRAITH. The Indian Government has for several years owned a considerable area of land in this vicinity and part of this would be used for the townsite.

Mr. ANDREWS. Donated by the Indian Government?

Mr. GALBRAITH. Yes, I believe so.

Mr. ANDREWS. What about ownership and operation?

Mr. GALBRAITH. I am not informed.

Mr. ANDREWS. Maintenance of the townsite?

Mr. GALBRAITH. I believe the practice in the other mills has been to set up a municipal corporation and run it as a regular town.

Mr. ANDREWS. Collect taxes and revenues?

Mr. GALBRAITH. Yes. Except, I think they rent the houses. I don't think they sell them. They do not sell the houses; they rent them so that anybody who gives up his job has to give up his house.

Mr. ANDREWS. The house goes with the job?

Mr. GALBRAITH. Yes.

Mr. ANDREWS. Then the municipal corporation would look after the streets, sewers, police, fire, medical, and other facilities?

Mr. GALBRAITH. That's right.

Mr. ANDREWS. That would be the same situation that you find in connection with other government-owned steel mills?

Mr. GALBRAITH. Yes, or it would be essentially the same situation that you have whenever you put a new industrial plant in a new location. At the Fairless works at Trenton, you had a brandnew townsite developed by Levitt for the steelworkers.

Mr. ANDREWS. We have discussed the cost of other facilities such as highways, railroads, water, dams, canals, power generating stations, distance, and so forth. Those figures Mr. Conte read into the record.

Mr. GALBRAITH. That's right.

Mr. ANDREWS. I believe you stated you would supply for the record what information you could as to how those costs would be met?

Mr. GALBRAITH. And on anything else I might have.

AVAILABILITY OF RAW MATERIALS, TRANSPORTATION, ETC.

Mr. ANDREWS. Tell us what you can about the availability, type, location and grade of raw materials, mining and washing facilities, transportation facilities in that area.

Mr. GALBRAITH. I think I have already made some reference to that, and I won't repeat myself. The coal situation, the plant is on a coalfield. The coal is somewhat high in ash content and has to be washed. Washeries would have to be built. The ore I have already referred to. The process water would come from the dam.

Mr. ANDREWS. How about the transportation facilities?

Mr. GALBRAITH. This is on the main Indian transportation network.

Mr. ANDREWS. Railroads?

Mr. GALBRAITH. Railroads go through the site.

Mr. ANDREWS. Highways?

Mr. GALBRAITH. I am not sure where the highway runs. This is primarily a rail operation.

Mr. ANDREWS. What would be the situation——

Mr. FLYNT. Mr. Chairman, will you yield for a question in connection with that?

Mr. ANDREWS. Yes.

Mr. FLYNT. Mr. Ambassador, what would be the volume of the supply of the free-flow water in addition to the water from the reservoir caused by the dam?

Mr. GALBRAITH. I will have to check on that. It is not a figure I carry around in my mind.

(The information requested is as follows:)

VOLUME OF FREE-FLOW WATER

There will be no free-flow water in addition to water from the reservoir.

Mr. ANDREWS. What about competition with other plants for raw materials if this Bokaro plant is built?

Mr. GALBRAITH. On coal, the coal would come from metallurgical grade coal to be coked directly for this plant.

On the ore, some that is now going to Japan would, I believe, go to this plant. The Japanese contracts would be shifted to some other ore fields. I think it is fair to say there is no competitive problem.

Mr. ANDREWS. In your opinion, there is enough raw material in that area to supply the needs of existing steel plants and the plant at Bokaro, if and when it's built?

Mr. GALBRAITH. That's right. I would rather say in the view of competent engineers, this situation exists.

Mr. ANDREWS. Is the same thing true with reference to management and manpower for the production of raw materials?

Mr. GALBRAITH. On all these things in a country like India you have to have a do-it-yourself program.

You will never have enough previously trained manpower and management, so along with the building of this plant, as with the building of the earlier plants, there must be a very large training program.

Mr. ANDREWS. Would there be private or public ownership of the raw materials?

Mr. GALBRAITH. The ore mines are publicly owned. As to the coal mines, I am not sure. There are both publicly and privately owned collieries in the area, and I am not sure upon which they would draw.

Mr. ANDREWS. What about the cost of producing a U.S. ton of steel in India now, in existing plants?

Mr. GALBRAITH. I am not sure those figures are available, but I will see what there is.

Mr. ANDREWS. Give us what information you can about that.

(The information requested is as follows:)

COST OF PRODUCING A U.S. TON OF FLAT STEEL IN INDIA

We do not have production cost data for flat steel products being manufactured in existing Indian steel mills. The cost estimate per short ton of plates, light gage, to be produced by the Bokaro mills, would be about $90. This does not include an excise tax of $11.02 charged on the finished product. This data is derived from the United States Steel report.

Mr. ANDREWS. What about the cost of producing steel at Bokaro, in the future? How would it compare with the cost of producing steel at existing steelmills?

Mr. GALBRAITH. We have had some reference to that already. In the first stage, when you are carrying the overhead of this much larger finishing capacity, it would certainly be higher.

TYPE OF STEEL TO BE PRODUCED

Mr. ANDREWS. Do you know anything about the type and quality of steel that would be produced at the Bokaro mill?

Mr. GALBRAITH. This is a flat products mill. This is the product that is most urgently in demand in India at the present time.

Mr. MINSHALL. How would they use this particular rolled sheet?

Mr. GALBRAITH. Congressman, it is basically your——

Mr. MINSHALL. What are they going to make with it?

Mr. GALBRAITH. It is generally a light manufacturing raw material.

Mr. MINSHALL. Are they going to make bicycles and sewing machines out of this? This is what you say they would need.

Mr. GALBRAITH. Some of this would certainly go to light equipment, yes.

Mr. MINSHALL. I can't see much sheet steel going into a sewing machine or a bicycle for that matter.

Mr. GALBRAITH. My impression, Congressman, is that the bicycle requirement for steel in India is not negligible, but is appreciable. This is a country which is in the bicycle age.

Mr. CONTE. Mr. Chairman, on that bicycle item, may I ask a question?

Mr. ANDREWS. Yes.

Mr. CONTE. We have a bicycle industry in my district, the Columbia Bicycle Co., which was one of the first in the United States. One of the great difficulties they have is trying to get a market for their bicycles. They are quite competitive now, but they don't seem to be able to get a license from foreign countries to sell bicycles. I am quite sure we don't have any market in India at all. During your tenure as Ambassador there, have there been any American bicycles sold in India?

Mr. GALBRAITH. I don't think so.

Mr. ANDREWS. Do they have applicable prohibitive tariffs or laws prohibiting the importation of bicycles?

Mr. GALBRAITH. I have no offhand information, but I expect they have a pretty rigid licensing system.

Mr. MINSHALL. I would like to state along the same lines of Mr. Conte, in the Cleveland and Elyria, Ohio, areas we had some of the largest bicycle manufacturers in the country. I think they made saddles and everything else, and they have gone out of business.

Mr. GALBRAITH. This is a very rapidly expanding business in India. I don't want to suggest that this is a big outlet for steel. A bicycle only uses a few pounds of steel, but it is one of the things for which there is a real scramble for steel, always.

Mr. MINSHALL. Sewing machines wouldn't take too much, either.

Mr. GALBRAITH. This is not big tonnage stuff.

Mr. MINSHALL. You brought it up. I didn't. You said this is what they needed and that is why they needed the steel mill.

Mr. GALBRAITH. I brought it up as illustrative of light manufacturing.

Mr. CONTE. We could eliminate a tremendous problem here in the bicycle shortage by giving India a development loan grant enabling them to buy bicycles. This would put some people to work in my area, where we have 6-percent unemployment.

Mr. ANDREWS. You have a good point there. However, we are discussing a steel mill here, today.

Mr. CONTE. And the steel is connected with bicycles.

Mr. FLYNT. In addition to the flat steel products, would this also include tube steel?

Mr. GALBRAITH. I don't know.

Mr. FLYNT. Would it possibly include a stainless steel component?

Mr. GALBRAITH. I would have to check up on that.

Mr. FLYNT. If that can be supplied, would you do so?

(The information requested is as follows:)

TUBE AND STAINLESS STEEL

Bokaro will not produce tube or stainless steel.

COST OF STEEL IN INDIA

Mr. ANDREWS. Mr. Ambassador, what would it cost, per ton, for the U.S. steel industry to lay down a ton of steel in India?

Mr. GALBRAITH. To import 1 million tons of flat products a year would, I am advised, cost about $200 million. It would be about $200 a ton.

Mr. ANDREWS. And tell us now, if you can, and if you can't supply it for the record, what it would cost to buy that ton of steel in India, produced in an Indian mine. Give us a comparable figure.

Mr. GALBRAITH. An Indian mill?

Mr. ANDREWS. Yes.

Mr. GALBRAITH. The cost of flat products in India?

Mr. ANDREWS. That's right. In other words, I want to get the cost of a ton of U.S. steel delivered in India compared to a cost of a ton of Indian steel.

(The information requested is as follows:)

Cost of purchasing steel products in the United States compared to production costs of steel products at the proposed Bokaro mill

Representative finished steel products	Total U.S. procurement costs [1] (per metric ton)	Bokaro production costs [2] (per metric ton)
Plate, light gage	$144.60	$94.41
Hot rolled sheet and strip, medium gage	207.00	96.68
Cold rolled sheet and strip, light gage	172.00	117.09
Galvanized sheet, heavy gage	178.00	134.28

[1] These figures include a base purchase price FAS Atlantic port and an average U.S. shipping cost to India. Freight rates vary according to shipping lines, quantity, and port of origin.
[2] These costs are taken from the United States Steel Corp. report on the Bokaro steel mill.

POSSIBILITY OF EXPANDING EXISTING PLANTS

Mr. ANDREWS. What consideration has been given to the expansion of existing plants?

Mr. GALBRAITH. There is an expansion program in process, or planned at—I hate to say all of the three public mills, but certainly in some of them. I can get you the details on that.

Mr. ANDREWS. Supply it for the record.

(The information requested is as follows:)

EXPANSION OF EXISTING STEEL PLANTS IN INDIA

Expansion programs are underway or planned for all existing steel plants in India, as detailed below:

1. *Bhilai.*—The Government-owned plant at Bhilai financed by Russia has a rated ingot capacity of 1 million metric tons per annum. This is to be increased to 2.5 million tons by the end of 1963. Construction work has already begun on new coke ovens and blast furnaces. The foreign exchange costs of the expansion were estimated last year at $114 million, including some subsidiary facilities. This is to be financed by credits from the Soviet Union.

2. *Durgapur.*—The rated capacity of this Government-owned plant financed by the United Kingdom is to be increased from 1 million tons to 1.6 millions by early 1966. Construction work for the expansion was started recently. It was reported some time ago that the expansion would cost about $125 million, including foreign exchange costs of about $70 million. The latter will be financed by the United Kingdom.

3. *Rourkela.*—The rated capacity of this Government-owned plant financed by Germany is to be increased from 1 million tons to 1.8 million tons by early 1966. Preparatory work has recently been begun. The cost of the expansion was estimated 2 years ago at $163 million, including foreign exchange costs of about $98 million. Actual costs may run somewhat higher. In April of this year, Germany made a $100 million loan to India to meet these foreign exchange costs.

4. *Tisco.*—The privately owned plant of the Tata Iron & Steel Co. has a capacity of about 2 millions per annum and is the largest in India at the present time. Although expansion plans are not yet definite, the company has submitted a proposal for expanding its plant by about 1 million tons.

5. *Iisco.*—The Indian Iron & Steel Co. plant hopes to expand its privately owned Burnpur plant from its present capacity of 1 million tons to 2 million tons by about 1966. To date, however, Government approval has been obtained in principle only for the first phase, a 300,000-on increase in annual capacity. It is reported that this will cost about $25 million, and that a World Bank loan may be requested to meet the foreign exchange costs.

6. *Mysore.*—The small Mysore Iron & Steel Works, owned by the State of Mysore, is to be converted into a special and alloy steel plant, possibly by mid-1965. West German and Austrian collaboration has been arranged for this project.

FOREIGN INVESTMENTS IN INDIA

Mr. ANDREWS. What about the Indian Government's discrimination against foreign investments, such as the General Motors case? Could you tell us anything about that?

Mr. GALBRAITH. The Indian Government does not discriminate against foreign investment as such. On the whole, it welcomes it.

In the case of General Motors as I understand it—this happened before my time—they were pressing General Motors to make greater use of domestically produced components as distinct from imported components in order to cut down the exchange loss. I gather General Motors felt they were being pressed too hard on this, and it wasn't a very big operation, and they suspended business in India. But the Indian Government does welcome foreign investment in India. It is a poor country and the prospects for foreign investment are not very extensive.

Mr. ANDREWS. Are there many foreign investors going into India now?

Mr. GALBRAITH. It varies by fields. Taking something like metals, they have considerable activity. Particularly in the field of aluminum production. But as compared with Europe or Canada, very small.

Mr. ANDREWS. Let me ask you this final question in that connection. Could a foreign corporation enjoy good relations with the people of India and the Government if they came in and built a plant of any kind?

Mr. GALBRAITH. I don't think any corporation would come in with the money that would be involved here.

Mr. ANDREWS. Let's take an automobile producing company or sewing machine company or bicycle company.

Mr. GALBRAITH. These firms, there are hundreds of them, and they enjoy, in general, excellent relations. The Indian Government does not seize plants, the tax system is fair, there is no question of confiscation, and the Government is honest. I think you will quite frequently find complaints that the Indian Government is very slow.

Mr. ANDREWS. How much control, if any, do the Germans, Russians, and English have over the steel plants that were financed by their Governments?

Mr. GALBRAITH. The Germans, none, except through technicians. A small number of technicians.

The Soviets, none, except through a relatively small number of technicians and I think perhaps they have a few more left there than the Germans.

On the British, that is the newest, and whether there is still some element of British management for completing construction, I don't know.

Mr. ANDREWS. Very little, if any?

Mr. GALBRAITH. Very little.

Mr. ANDREWS. Mr. Natcher.

ESTIMATED COST OF ERECTING STEEL PLANT

Mr. NATCHER. Do you consider the cost of erecting this steel plant of approximately $1,700 million excessive?

Mr. GALBRAITH. It is very hard to answer on that. There has been some suggestion that maybe the steel corporation leaned over backward not to underestimate. And there has been some suggestion perhaps that more of the dollars cost could be provided locally in rupees than this report suggests. But my impression is that the wise course of action would be to accept the steel corporations' figure.

Mr. NATCHER. Can you give us some idea of the cost of the plants erected by Great Britain, West Germany, and the Soviet Union?

Mr. GALBRAITH. I can get those.

(The information requested is as follows:)

Total investment in plants erected by Great Britain, Germany, and Russia

	Millions [1]
Durgapur (Great Britain)	$301
Rourkela (Germany)	385
Bhilai (Russia)	258

[1] Derived from the United States Steel report.

NECESSITY FOR ASSURING AN ADEQUATE SUPPLY OF COAL

Mr. NATCHER. You stated this coal contained quite a bit of ash, and would have to be washed.

What arrangement, if any, has been made from the standpoint of securing the necessary contracts from the private interests who own the coal property in order that the coal could be used with this plant if the plant is erected? Has any arrangement been made with the private interests who have the coal lands under control and under ownership?

Mr. GALBRAITH. Yes.

Mr. NATCHER. To what extent?

Mr. GALBRAITH. I would have to get the details on that, but the plans exist not only for opening up the coal supply, but also for the washeries. Some of the discussion of the washeries is in these reports here.

Mr. NATCHER. Mr. Ambassador, you are probably acquainted with the Tennessee Valley's operation of the new steamplant in the Green River Valley known as Paradise. This steamplant will be the largest steamplant in the world. It will generate about 1,280,000 kilowatts. It is located on Green River. Before this plant was erected or before any plans were made for the erection of the Paradise steamplant, two locks and dams were reconstructed on Green River in order that there would be an adequate supply of water and that there would be adequate navigation.

In addition to that, a contract was entered into which, by the way, is the largest coal contract ever entered into in this country, of some 65 million tons over a period of 17 years.

Now, all of these arrangements were made well in advance. They knew what would happen if the steamplant was erected—which, by the way, is to cost less than $400 million out of the $750 million bond issue approved by the Congress of the United States. They knew exactly where they would be from the standpoint of every facility necessary in the operation of the steamplant.

I am a little confused, Mr. Ambassador, about the proposal for the Bokaro steel mill from the standpoint of being at the mercy of private interests as far as coal is concerned and as far as ore is concerned.

Mr. GALBRAITH. Let me clarify my previous testimony, if I was misunderstood. The ore is publicly owned.

Mr. NATCHER. I understood you to say it was publicly owned, and also the coal, is that correct?

Mr. GALBRAITH. The coal in that field upon which Bokaro draws is partly in public ownership and partly in private ownership. Which, will be used for this mill I do not know. This has all been worked out—the plans have been developed in detail. If I may say so, you are pressing me into a considerable detail, here.

Mr. NATCHER. Isn't this necessary, Mr. Ambassador, before any money is appropriated by the Congress of the United States? Shouldn't we have some detail on it, and expert opinion, especially on the overall cost of $1,700 million, which seems to me—and as you well know, I know very little about these matters, but it seems to me that this cost is excessive to begin with. And I use the word "excessive" and it should be spelled with capital letters, throughout.

Mr. GALBRAITH. I am pleading my own lack of knowledge of the coal situation. I am not implying by that that the coal situation hasn't been thoroughly studied. My impression is that it has. I haven't read the studies.

Mr. NATCHER. Is this same type of coal used in the operation of the two privately owned steel mills in India?

Mr. GALBRAITH. Well, it is from the same area, certainly, and it is high ash coal that has to be washed; yes, sir.

Mr. NATCHER. In the course of your connection with the Federal Government, do you know about the coal pile that we have piled up in Korea? Do you know about that, sir?

Mr. GALBRAITH. No.

Mr. NATCHER. We can't use it. There are several million tons. It was shipped over there and they can't burn it.

I am just wondering if this coal in the vicinity of this proposed mill could be used for the purpose for which it would have to be if the mill was erected. You assume that it could?

Mr. GALBRAITH. I know, Mr. Congressman, of the studies, but I am not myself familiar with the studies. I have to plead that an Ambassador in this particular country has a fair range of things to do and some things are beyond one's horizon. I must say the coal industry is not one with which I am fully familiar.

Mr. NATCHER. Mr. Ambassador, I certainly want to concur in the statement of our chairman, Mr. Andrews, insofar as your duties in India are concerned. I think that you have done a good job. Your predecessor, if not your immediate predecessor, is a friend of mine, John Sherman Cooper. As you well know, he was the Ambassador to India. I thought he did a good job and represented our country well and made a wonderful Ambassador.

You made the statement, Mr. Ambassador, to our committee that if we go along on this project, it will focus the attention more as to our efforts in the AID program, and it will be a dramatic step.

Now, Mr. Ambassador, what else would we do in India other than this, if this proposed plan goes through? In other words, would we continue carrying our regular AID program in India?

You know a lot of the criticism we hear as members of this committee, in the AID program, is due to the fact that the people in the countries generally say that none of it ever gets down to the people. The people know nothing about it. Isn't this in direct opposition to what we are doing in Latin America today, from the standpoint of the AID program dealing more directly with the needs of the people?

Mr. GALBRAITH. Let me say one word. I thank both you and the chairman for the very nice comments, and I shall also say Senator Cooper is one of my closest friends.

Mr. NATCHER. And mine.

Mr. GALBRAITH. With no man, during the time I have been in India, did I consult with more frequently than with him. No man who has ever been in India is remembered with more affection than John Sherman Cooper.

It is impossible to understand the importance that is attached to steel if you don't have it. I think we had some sense of that in this country during World War II when it was scarce. And nothing supplies other business, keeps it going, nourishes small enterprise, nourishes these bicycle manufacturers and the sewing machine manufacturers that the Congressman and I have been talking about and hundreds of thousands of others like them, as a good supply of inexpensive steel. Steel in a country like India is something that does get right down to the people. One of the reasons that the private sector in India is so concerned about the steel industry is that steel is its lifeblood. This is a big plant, like the big powerplant in Kentucky. Both, though big, would serve the people.

Mr. NATCHER. Can you give me any idea as to whether or not the core drilling operation with regard to coal has been completed?

Mr. GALBRAITH. My impression is that this is a widely explored field, but you are again pressing me beyond my knowledge of detail.

Mr. NATCHER. At this point in the record, perhaps you could put in a short statement on core drilling.

(The information requested is as follows:)

CORE DRILLING FOR COAL

The data on coal availability, its quality and methods of collecting such data are being examined. No conclusions have been reached.

Mr. NATCHER. Thank you, Mr. Chairman.

Mr. ANDREWS. Mr. Flynt.

BENEFIT TO UNITED STATES FROM ERECTING MILL

Mr. FLYNT. Mr. Ambassador, you have touched on this previously, but what substantial benefit would accrue to the United States as a result of the erection of this steel mill?

Mr. GALBRAITH. I think the central benefit, Congressman, is that this is an important thing for India. We would be identified with doing a thing of central importance and doing it well. We have done thermal and hydro plants of great importance for regions. This is something that will benefit everybody in this country.

PUBLIC VERSUS PRIVATE OWNERSHIP OF THE MILL

Mr. FLYNT. Do you think the interests of the United States would be benefited more greatly by public ownership of the Bokaro Steel Mill, or by privately financed ownership of the Bokaro Steel Mill?

Mr. GALBRAITH. I think we would derive our greatest benefit, Congressman, from taking the Indian decision on this and not trying to impose our own view. This is my opinion.

We've got to see that our money is well spent. I make a distinction in my mind between doing that and trying to impose our views on the Indian Government. As I said earlier, you have these very deep beliefs about public ownership there, and the Communists will make great capital out of the Americans coming in and trying to dictate to the Indians how their country should be run.

Mr. FLYNT. It is well known that the Government of U.S.S.R. believes in public ownership of steel mills.

Mr. GALBRAITH. That's right, but a great many people in Kentucky and Tennessee believe in public ownership of the——

Mr. FLYNT. That is correct, that the Government of the U.S.S.R. believes in public ownership of steel mills?

Mr. GALBRAITH. That's right, Mr. Congressman.

Mr. FLYNT. It is generally believed that the Government of the United States believes in private ownership of steel mills?

Mr. GALBRAITH. That is right.

Mr. FLYNT. When the Government of the United States financed the construction of a steel mill in India, they insisted, I believe, upon Government or public ownership?

Mr. GALBRAITH. The issue did not arise because it was a mill that was planned for the public sector.

Mr. FLYNT. That was done notwithstanding steel production in India is partly under publicly owned plants and partly under privately owned plants?

Mr. GALBRAITH. That is right.

Mr. FLYNT. Is it not true that if this were owned by privately held Indian interests, that it would more nearly balance the public-private ownership of the steel industry than if this should go to a publicly owned steel plant or mill?

Mr. GALBRAITH. The private firms have been expanding and are expanding. I think their answer would be that they could not take on this mill, and that there is no other private source of capital and private source of management that could undertake it.

I am citing here the views of TATA, the head of the largest private mill. I could quote his words: "Bokaro is * * * simply beyond the financial resources of Indian private enterprises."

Those are his words.

Mr. FLYNT. At the present time, India derives a good deal of its foreign exchange cash input from the sale of iron ore?

Mr. GALBRAITH. That is a substantial item.

ADEQUACY OF INDIAN IRON ORE FOR EXPORT

Mr. FLYNT. Is it correct that if the Bokaro steel mill were put into operation, India would lose all or a major portion of its income from export?

Mr. GALBRAITH. It would not lose any. There is enough for both.

Mr. FLYNT. Did you state, in answer to previous questions, that if the mill were built, a substantial part of the supply of iron ore now being exported to Japan would be diverted to the Bokaro plant?

Mr. GALBRAITH. What I said was that they would draw on it. The plan, I gather, is to draw on ore now going to Japan and allot another mine to Japanese export trade.

Mr. FLYNT. Another Indian mine?

Mr. GALBRAITH. Another Indian mine.

It is a substitution, but there is enough ore there for any purpose.

Mr. FLYNT. What is the name of the corporation owned by the Indian Government?

Mr. GALBRAITH. The Hindustan Steel Co.

Mr. FLYNT. During your previous statement, you used the expression "the steel corporation" a number of times. Are you referring to the Hindustan Steel Co. or to the United States Steel Corp.?

Mr. GALBRAITH. I will check the record on that. When I refer to the "steel corporation" I was referring to United States Steel. When I referred to the Hindustan Steel Corp., I should have used that term.

Mr. FLYNT. Is the technical or correct name of a company, the Indian company, the Hindustan Steel Co.?

Mr. GALBRAITH. That is correct; a 100-percent Government of India owned firm.

Mr. FLYNT. How many steel mills does the Hindustan Steel Co. operate at the present time?

Mr. GALBRAITH. Three.

Mr. FLYNT. Are these three the same three you described as being built by the Russian Government, by the West German business consortium, and by the British Government?

Mr. GALBRAITH. The Russian Government, a consortium of West German firms—the West German Government was not in it—and a consortium of British firms. The British Government was not in it directly.

Mr. FLYNT. How is the capital invested by the consortium of West German steel companies being repaid?

Mr. GALBRAITH. Out of general export earnings. It is, in fact, being rolled over—refinanced. It was on a very short term, and the Indian Government has renegotiated the loans or some of them with the German Government to lengthen the term.

Mr. FLYNT. I think that is all, Mr. Chairman.

Mr. ANDREWS. Mr. Conte?

Mr. CONTE. Mr. Ambassador, I want to join——

Mr. FLYNT. Before you begin questioning, would you yield?

Mr. CONTE. Yes, I yield.

Mr. FLYNT. I, too, would like to joint with our distinguished chairman and my colleague, Mr. Natcher, and other members of this subcommittee in thanking you for your appearance here before us today, and also to express to you our appreciation for the services which you rendered our country while Ambassador to India.

Mr. GALBRAITH. Thank you very much.

Mr. CONTE. Mr. Chairman, I want to joint with my colleagues in extending my congratulations and gratitude for the excellent job you

have performed during your stewardship in India as Ambassador during one of the most critical times in the history of independent India.

Mr. GALBRAITH. I appreciate that from my fellow citizen of the Commonwealth.

ADVISABILITY OF FORESTALLING EXPENDITURES FOR MILL IN 1964

Mr. CONTE. Mr. Ambassador, when you read the hearings conducted by the Subcommittee on Foreign Operation, you will notice how I brought up this subject on Bokaro. I was somewhat upset by the fact that in examining Mr. Gaud at great length, and when I tried to pin him down, he or other State Department witnesses would not go along with an amendment which would forestall the spending of any funds from fiscal 1964 budget for the Bokaro steel mill.

This I could not understand, for the report made by United States Steel stated that it would take at least 2 years to determine whether the raw materials were available or not, in order to construct and operate this steel mill. I just could not understand their reasoning.

At that time, I stated I was a friend of the foreign aid program, but I anticipated a great deal of controversy over this project and the feeling of Congress was running strong against the proposed mill.

I think my opinion has borne fruit because I imagine when the foreign aid bill comes on the floor next week there will be some very crippling amendments offered which will not only hurt the program in India but the entire foreign aid program.

I gained the impression that somewhere along the line we have made a commitment on this, and I am happy to hear that we have not.

If we have not, I reiterate my offer that no funds in the 1964 fiscal year appropriations should be used for the Bokaro steel mill. We should lay our cards on the table because I think it is impossible, even if you wanted to go into this, that you could give the Indian Government any money from fiscal year funds for this mill.

Mr. GALBRAITH. I would only respond that I am not a novice around this town. I was perfectly aware when I studied this problem that this would not be an easy decision. My impression is that an ambassador as a servant of the United States should present the hard course even if it is not popular.

On the question of the ore supply, I think it is the AID impression, or it was the impression of our technicians in Delhi, that probably time could be shortened. And possibly the Steel Corp. people themselves will agree that 2 years was an unduly long period of time but I do not wish to speak for them.

Mr. CONTE. We will have them in here this afternoon, and we will ascertain that from them. Even if you cut it down to a year, you cannot expend funds for this year, as Mr. Natcher well brought out. When they went into such projects in Kentucky they were on firm ground. They knew what they were doing.

They knew what they needed. I read this report backwards and forwards and I cannot, for the life of me, see how you can proceed on this project within the year.

You have a problem here in regard to raw materials, Mr. Natcher started to bring out, with respect to coal. Your iron ore is owned

by the National Mineral Development Corp., and your coal is owned by the National Coal Development Corp.

Mr. GALBRAITH. That answers your question. That is listed there.

Mr. CONTE. Your fluxstone is owned by the Hindustan Steel Limited; so you have three different agencies of the government here and no coordination whatsoever.

You have got to come in with some concrete plans to show that the Bokaro steel mill will have complete ownership or control of all of these three commodities which are essential to run a steel mill, and until you do that, you are going to be running in every different direction.

If we are going to have a successful operation of a steel mill you must have readily available raw materials.

Mr. GALBRAITH. I do not want to debate on a technical matter with you, Congressman. I think we would be going too far to say the same corporation should own all of its raw material sources.

Mr. CONTE. Should have control of them?

Mr. GALBRAITH. They certainly should be assured, and there is no question about that.

Mr. CONTE. Correct?

Mr. GALBRAITH. As far as the ore supply is concerned, as I said before, this is one of the great ore resources of the world and it is there.

The question of proving it out, to some extent—as I said in defense of Mr. Gaud and myself, the decision to go ahead is a prerequisite of doing a lot of the things you want to have done.

If we have not taken the decision, there is very little more we can do. We should perhaps say to the Indian Government that it should try to go ahead with somebody else.

We should not go along fooling them, carrying them along on further investigations of this or that.

Mr. ANDREWS. Will the gentleman yield?

Mr. CONTE. Yes.

Mr. ANDREWS. How have we fooled them if we have not made any commitment?

Mr. GALBRAITH. I said we should not delay decision too long. I was not talking about the past.

Mr. CONTE. Wait a minute. I have to disagree with you there. I think you are putting the cart before the horse. I think first you have to determine whether these raw materials exist, and then you go ahead with your loan. You cannot get into your loan first and then determine whether these things exist.

Off the record.

(Discussion off the record.)

Mr. ANDREWS. The committee will stand adjourned until 2 o'clock.

AFTERNOON SESSION

Mr. ANDREWS. The committee will come to order.

Mr. Conte.

Mr. CONTE. Mr. Ambassador, I believe prior to the recess we were discussing the complications in constructing this steel mill in India. I had asked the question whether you felt that it would do any harm to this project if an amendment were offered and accepted by the

House and Senate to provide that no funds in fiscal year 1964 be used for the Bokaro Steel Mill.

Mr. GALBRAITH. I am obviously not speaking for the administration in this. But I would have to say I think it would be harmful, and the reason is that I think we should maintain a reputation for doing things, once we have made up our mind, with dispatch. My own view is that subject to straightening out of the problem of ore, ore quality, this is a good project. Steel is urgently needed and it is a part of the American reputation to do things right and on time. You ask my opinion, and I give it to you.

Mr. CONTE. You say once we make up our mind. How can we make up our mind within the year in view of this United States Steel report?

Mr. GALBRAITH. As I say, you have asked me my opinion. I have been living with this problem for 2 years. It is my opinion, as I said earlier this morning, that this is one of the great reserves of iron ore in the world, and it is now being exported. As the steel people themselves say in the report, and I think will confirm, it is not a question of availability of iron ore, it is a question of testing the quality. This is something which will go ahead more rapidly as and when there is a decision to go ahead with the project.

Mr. CONTE. Do you feel we are in any position at the present time to make a decision and if you do, could you give us a ball park guess of when that decision could be forthcoming?

Mr. GALBRAITH. This is a hard question. If I were sitting on your side of the table, faced with a problem of this size, my answer could be different. I have been living with this issue very actively for the last two and a half years, and I have been aware of it for some time beyond that. If I had not felt this to be the right thing to do, I would not be here advocating it.

Mr. CONTE. Mr. Ambassador, I can well appreciate your feelings, and I think maybe my feelings somewhat coincide with yours, that there is a need for steel in India. We are not in disagreement there. My point of contention with you is that we have paid $686,000 of the taxpayers' money for a report, study, investigation of the possibilities of constructing a steel mill in India known as Bokaro. This report is somewhat adverse.

ADEQUACY OF LIMESTONE DEPOSITS

Referring to page 28 of the report, it says:

The present and prospective requirements of existing steel plants will take the whole of whatever output of limestone can reasonably be expected from Birmitrapur and Purnapani; and there are, moreover, problems of quality and reserves in regard to both deposits.

Here in this report they say the present steel mills will take all of the limestone deposits.

This is a very important ingredient in making steel, limestone.

Mr. GALBRAITH. But I think they go on here someplace to say that the limestone for this will not come from there.

On the basis of information developed by the Geological Survey of India and the Indian Bureau of Mines, they have selected an area in the vicinity of Bhavanathpur, in the Palamau district of Bihar, for detailed exploratory work, and the Mine Industry of Steel and Heavy Industries has indicated that Bhavanathpur

would be the source of limestone for Bokaro, if the exploratory work yields favorable results.

I think there are some problems to be still worked out.

Mr. CONTE. Very serious problems.

Mr. GALBRAITH. Limestone, as you know, Congressman, is a product very, very liberally available in nature. I don't think there is anywhere in the world where the production of steel is limited by a shortage of limestone. It may be limited by coke, or ore.

Mr. CONTE. But the cost in transporting the limestone to the site might have a direct bearing.

Mr. GALBRAITH. It would have a bearing, but I doubt that there is any place in the world where your limestone cost is a decisive factor.

Mr. CONTE. Limestone itself may not be, but the cost of transporting the limestone to the site might be.

We have an abundance of limestone in Berkshire County, as you know. It wouldn't be very profitable, however, for Bethlehem Steel to buy limestone in the Berkshires and transport it to Pittsburg.

Mr. GALBRAITH. Without being sure, I do not think a steel company would be limited any place in the United States by the limestone supply.

Mr. CONTE. I would think they would want to consider the limestone deposits in the direct vicinity of where they are going to put the steel mill.

Mr. GALBRAITH. I am sure they would, but among all of the considerations, I myself would be very much surprised if the raw material would be a key factor.

Mr. MINSHALL. Mr. Ambassador, this limestone situation as stated in the United States Steel report is a very serious one. There is only enough for the existing mills. When you say limestone is readily available, would you think you can go out with a divining rod and find more limestone in the vicinity of this mill, or do you plan to ship it in from America or some other country?

Mr. GALBRAITH. I don't place any more faith in divining rods than you do. I am saying that as I understand the problem of plant location in this particular field, that limestone is very rarely a limiting factor.

Mr. MINSHALL. You say very rarely, but you don't know for a fact whether there is limestone economically available.

Mr. GALBRAITH. That's right, but as the report here indicates, the deposits at Bhavanathpur are presumed, subject to verification that we have been talking about, to be a source of this material.

Now, all I am saying is if it isn't available there, one can be 99 percent certain that it will be available at some other location.

Mr. MINSHALL. We have limestone in this country, but it wouldn't be economical to ship it from this country to India, would it?

Mr. GALBRAITH. No, but it would be expedient to ship it from numerous other locations.

Mr. MINSHALL. What do you have in mind?

Mr. GALBRAITH. India has other steel mills and a fertilizer industry for which limestone is available.

Mr. MINSHALL. I am amazed this report doesn't go into detail on this. I have a great regard for some of your abilities—but as a limestone expert, I don't think you are any more of a limestone expert than I am.

Mr. GALBRAITH. You are right on that.

I have been urging on the committee that——

Mr. MINSHALL. I am surprised this report would come out and make the statement they have, and then you just stated here a few minutes ago that you seem to think we are going to open up a closet door and a whole load of flux stone is going to fall out.

Mr. GALBRAITH. I think in your hearing later on today or tomorrow you will hear from the——

Mr. MINSHALL. We have too much of an investment in this thing to take chances like that, and furthermore, there are basic assumptions I want to go into later.

Mr. GALBRAITH. I would hope, in talking with the steel corporation people this afternoon or tomorrow, that this is something upon which you will press them. I have been told by them or others that in the case of limestone, it is most improbable that it is a decisive factor.

Mr. MINSHALL. They didn't mention that in their report, except to say that it was one of the critical raw materials that faced the Bokaro Steel Mill.

Mr. GALBRAITH. That's right. I was told by the team members before they left—and as I say, I can only take their word—that they did not believe there was any question of the supply of either ore or limestone as such. The question of proving out quality is something else.

Mr. CONTE. Mr. Ambassador, in view of the fact that there is a lack of limestone in the Bokaro site area, and they are now looking at this new area, which the report states is 200 miles away from the Bokaro site, would you tell the committee whether there is any rail transportation from that area to Bokaro?

Mr. GALBRAITH. I would have to look it up.

Mr. CONTE. Would you do that?

Mr. GALBRAITH. Yes.

TRANSPORTATION FOR LIMESTONE

The location of limestone and transportation to Bokaro are under examination in India.

Mr. ANDREWS. Why didn't the United States Steel team state in their report what you say about the limestone?

Mr. GALBRAITH. The general observation on raw materials which was made not once but several times, was that you have raw materials in India and in the neighborhood with which to make steel.

Now, I can only point out, Mr. Chairman, the logic of the situation. There are steelmills all around here using coal, using limestone and using iron ore and producing it at reasonable cost. I do not of my own knowledge know where the limestone comes from for Pittsburgh, but I know there are enough steel mills around Pittsburgh so you have raw materials available in Pittsburgh.

PROBLEMS OF RAIL TRANSPORTATION

Mr. CONTE. Mr. Ambassador, let's not be naive. You also know we have all types of the finest rail transportation moving into Pittsburgh from every direction, which you don't have in India.

Mr. GALBRAITH. I must tell you, Congressman, that India has a very good rail network.

Mr. CONTE. Now, you are getting into something here that is not borne out in this report. Most of it is three-gage railroads and just to transport some of this material up there it is going to take three unloadings and loadings. I will get that for you in the report. Now this is amazing. Your evidence here thus far is in complete contradiction of this report, which we paid a handsome sum for.

Mr. GALBRAITH. To what are you adverting there?

Mr. CONTE. I am talking about Bokaro and rail transportation.

Mr. GALBRAITH. Do you have the page in the report?

Mr. CONTE. I will find it. This is the Lake Erie report on transportation.

Mr. MINSHALL. I am looking at it right now.

Mr. CONTE. It says:

Bokaro is favorably situated with respect to coal or iron ore, movement and routes. Raw material transport will not impose an extra load because the site is in the midst of several important coalfields—

which you have pointed out.

Rail commodity shipment is hampered by the existence of three different gages on the Indian Railway. There are many points where goods have to be transferred from cars of one gage to cars of another. The result is delays, and restrictions on the number of cars.

Mr. GALBRAITH. They are talking about products and not raw materials.

Mr. CONTE. I am talking about train shipment to the area.

Mr. GALBRAITH. This is not the raw material shipment into Bokaro, but the product shipment out.

Mr. CONTE. I don't see where it would be any different.

Mr. GALBRAITH. All of the coal and all of the ore—I am not so sure of the limestone——

Mr. CONTE. I am talking about limestone. I concede, why take our time with iron ore and coal. I agree with you it is there.

Mr. GALBRAITH. Could I have the citation on that?

Mr. CONTE (continuing):

Most transshipment points, for example, are not equipped with any mechanical devices, so that the bulk of the work is done by slow, inefficient manual labor. The principal bottlenecks are at Mogulserai yard on the Eastern Railway and at Waltair on the Southern Railway. All of the steel mills are located so their products consigned to points in the south of India have to flow through Waltair, and the limited yards at that point are simply inadequate to permit free flow of material.

Mr. GALBRAITH. Let me suggest there, Congressman, you talk about products and not about limestone.

Mr. CONTE. Well, what's the difference? You are transporting something over the same line. If it is a three-gage railroad, you are going to have to——

Mr. GALBRAITH. Can I talk about this in general?

Mr. MINSHALL. May I cite from this record here first and you will have something to go on? I read from the cover now.

Transportation for the proposed Bokaro Steelmill, a study for United States Steel Corp., prepared by the Bessemer and Lake Erie Railroad.

Section 3, page 9, and under that subheading, "Transportation Factors Affecting Bokaro."

I quote from the very beginning:

The inadequacy of Indian transportation has two root causes; an unrealistic passenger and freight rate structure and failure to develop facilities necessary to support development in other sectors of India's economy. There is a growing awareness among India's policymakers of the infirmities to be found in their present transportation system. While recognizing the difficulties which impede renovation of the whole transport complex, the principal Cabinet members and responsible politicians are now actively encouraging development of existing and new types of transportation.

Then I skip a paragraph which is along the same vein, and the last paragraph on that page reads as follows:

At the present time the transportation conditions are a detriment to the whole economy of India. Movement of agricultural commodities and steel mill products is reasonably good, but the movement of all other rail traffic is most uncertain. The coal industry, to mention an important example, can at present mine more than can be hauled away.

And so forth and so on. This goes on page after page. You, of course, have reference to this report.

Mr. GALBRAITH. I must say, Congressman, I don't think there is anything in conflict between my comments and that. Everything is relative, but there is no other country in Asia which even approaches this rail network.

Mr. MINSHALL. This is on pages 9 to 13 of this report, and I only read two short paragraphs of it, but it goes on in the same vein. This is the study made by United States Steel Corp., prepared by the Bessemer & Lake Erie and the title is "Transportation for the Proposed Bokaro Steel Mill," and it is anything but encouraging.

Mr. ANDREWS. Without objection, I am going to ask that section 3, pages 9 through 13, be included in the record at this point.

(The information referred to is as follows:)

SECTION III. TRANSPORT FACTORS AFFECTING BOKARO

The inadequacy of Indian transportation has two root causes: an unrealistic passenger and freight rate structure, and the failure to develop an adequate network of transport facilities on the scale necessary to support development in other sectors of India's economy. There is, however, a growing awareness among India's policymakers of the infirmities to be found in their present transportation system. While recognizing the difficulties which impede renovation of the whole transport complex, the principal Cabinet members and responsible politicians are now actively encouraging the development of existing and new types of transportation.

The attitude of the railway board in particular has changed in the past few years, and what seems to have been an earlier negative attitude in regard to road and waterway development has given way to an attitude of encouragement for these competing facilities. This is particularly true in the field of short-haul trucking. The Indian railways have traditionally fought the development of roads parallel to rail lines and have only recently realized that such roads can relieve the railways of much uneconomic passenger and freight business. Neither long-distance trucking nor inland and coastal shipping have made any significant contribution toward meeting India's transportation needs, but this situation will probably improve as outlined in appendixes B and C.

At the present time transportation conditions are a detriment to the whole economy of India. Movement of agricultural commodities and steel mill products is reasonably good, but the movement of all other goods traffic is most uncertain. The coal industry, to mention an important example, can at present mine more than can be hauled away. Saunda Collieries alone at the end of July 1962, had 200,000 tons of uncovered coal awaiting movement for lack of rail cars. Transit times on individual carload shipments are inordinately long, it taking a month to 6 weeks to move a car across India in many instances. Shippers place orders for needed cars by a system of written requests designated as "in-

dents." The order, or indent, is kept on file with the railway until fulfilled. On August 31 the oldest indent on the Central Railway at Bombay had been placed on May 19. A similar situation obtained at Calcutta where, on the 22d of July, the Eastern Railway had indents filed (or placed) in November 1961. These are obviously extreme cases, but the average time from placing indent to placing of car was on the order of 5 days. Moreover, the indent system does not reflect the fact that with such unresponsive service many shippers do not even try to contract for rail movement. In the absence of well-developed highway and waterway alternatives, many necessary hauls are simply not accomplished, or if made are of a highly uneconomical character. A good example is afforded by the Indian Tin Plate Co. at Tatanagar. This company has an urgent need for movement of about 3,500 tons of tinplate a month at Calcutta, a distance of 158 miles, by rail. Lacking adequate rail service, shipments are usually made in 5-ton trucks over a road distance of 300 miles.

Rail commodity movement is hampered by the existence of three different gages on the Indian railways. Broad gage (5 feet 6 inches) constitutes about 47 percent of the trackage, but moves about 84 percent of the ton-miles. Meter gage (3 feet 3⅜ inches) has about 45 percent of the trackage, moving about 15.5 percent of the ton-miles, and the narrow gage (2 feet and 2 feet 6 inches) used primarily in mountainous regions, has 8 percent of the trackage, but handles only 0.5 percent of the ton-miles.

In spite of the fact that most shipments move exclusively on the broad gage portion of the system, there are still many points where goods have to be transferred from cars of one gage to cars of another. This, of course, results in considerable delay, inasmuch as the physical limitations at such transshipment points severely restrict the number of cars (and thus the volume of traffic) which can be handled in this manner. Most transshipment points, for example, are not equipped with any mechanical devices so that the bulk of the work is done by slow and inefficient manual labor. This imposes size restrictions on packages which can pass through the transloading process, which in turn inhibits the industrial development of areas served only by meter and narrow gage railways.

Even on the broad gage heavy traffic routes there are several bottlenecks arising from the pattern of existing railway facilities which limit the volume that can be handled between certain points, and movement through these bottlenecks is severely restricted. The principal bottlenecks are at Mogulserai Yard on the Eastern Railway and at Waltair on the Southern Railway. The bottleneck at Waltair is so bad that it is seriously impeding the industrial development of south India. All of the steel mills are located so that their products consigned to points in south India have to flow through Waltair, and the limited yard through-put capacity at that point is simply inadequate to permit the free flow of material.

Although Indian railway and transportation officials are well aware of these problems and are trying to overcome those which can be corrected, there is little hope that the physical restrictions on movement to meter gage territory can be alleviated. Likewise there is practically no prospect that substantial increments of capacity devoted to service improvement for small shippers will be secure, but plans are being implemented which should diminish most of the remaining difficulties before Bokaro goes into operation.

The biggest problem—that of coal movement—is well on the way toward solution. In August 1962, the coal controller (production) in Calcutta voiced his belief that within 6 months the railway car supply would exceed coal available for loading. The railways are constructing 500 55-ton coal cars a month: one reason for the coal controller's optimism. Further, the railways have been trying to encourage the formation of large coal stocking areas in the principal cities. These would justify movement to such areas of solid coal trains composed exclusively of these large cars. Handling in this manner would facilitate quick unloading and expeditious return of empty cars for reloads. It is estimated that coal distribution in this fashion would reduce by approximately one-half the time required for coal movement on an individual car basis. The coal would then be distributed from the stockpiles by truck to local consumers within a radius of 25 to 30 miles. There is some difficulty in initiating this plan, since it requires coordination between the coal mines, coal brokers, coal receivers, the trucking industry, the Ministry of Mines, and the National Coal Development Corp., but the railways are optimistic about the eventual outcome. Another interesting development which will help the coal industry is that for the first time steps are being taken to move coal by barge on the Ganges

River. This will avoid the bottleneck at Mogulserai and will help to ease conditions there.

Construction has already started on a rail bypyass around Mogulserai Yard, and plans are well underway to alleviate the bottleneck at Waltair. A new port at Haldea should allow more costal movement of coal, taking some of the burden from the railways now used to move coal across the width of India to the Madras, Maharashtra, and Gujarat areas. Development of the central India coalfields will also reduce the ton-miles necessary to provide coal to these areas.

Due to insufficient indigenous production, the railways have experienced considerable difficulty in getting the cars, locomotives, rails, and other material that they need. As a result many of these items have had to be imported, using scarce foreign exchange. To offset this drain on Indian reserves of foreign currency, the Government and the railways have evolved a long-term development program designed to maximize indigenous manufacture of railway requirements. A key facility in this program is a steam locomotive manufacturing plant at Chittaranjian, owned and operated by the railways, where 16 locomotives a month are produced using Indian components almost exclusively. Chittaranjian now also makes electric locomotives for direct current operation, and will start to manufacture types suitable for A.C. operation in January 1963.

This summer, in another step toward modernization, the Indian railways have contracted with American Locomotive Co. to participate in the establishment of a diesel locomotive manufacturing facility at Varanasi. This factory will commence production with a high percentage of imported components, but the ultimate goal is to manufacture all the elements in India. There is ample freight car manufacturing capacity in India, and the integral coach factory at Perambur can now build sufficient coach stock to meet current requirements. The rail mill at Bhilai Steel Works has started to roll 105-pound rail, and it, together with the similar facility at Tisco, should fill needed requirements for this basic element of the railway physical plant. The aggregate effect of these several developments will enable the Indian economy to produce substantially all of the railways' needs for rolling stock, track, and structures.

Despite the favorable factors mentioned above, it must be concluded that the Indian transport situation, and thus that of Bokaro, is beset with many problems. The additional burdens imposed by the third 5-year plan will be a further strain. Prompt, adroit, and flexible management will be required of the railway board and all transportation officials at every echelon if third plan transportation targets are to be fulfilled.

Mr. GALBRAITH. We are talking here about an industry which happily I know something about. I was for many years closely associated with one of the major rail networks on this continent and years ago had fairly intimate contact with the Indian railway system, long before I was Ambassador. All of these things are relevant. This is the best railway system in Asia. The best railway system out of the United States and Europe.

Mr. MINSHALL. It doesn't say that in this report. It says it is inadequate.

Mr. GALBRAITH. The railway service in this country is inadequate. Nobody is ever pleased with his transportation. I think we have pretty good transportation in America.

Mr. MINSHALL. I am merely quoting from this report. They say the transportation to the steel mill is inadequate.

Mr. GALBRAITH. Three of these steel mills, Congressman, are on the same line. They are all working, they are all getting their products in, and they are all getting their products out. Dieselization in the last couple of years has very substantially strengthened the motive power situation of the railroads. They are, there is no question about it, they have the legacy of history in this multiple-gage system. They started out to build a wide-gage system.

It turned out to be too expensive in the last century. People were dying of famine because you couldn't move food around, and they

substituted a meter gage and that was supplemented on an emergency basis later on with a narrowgage system. This is a misfortune. Australia has the same problem. This does not prevent the Indian railway system from getting the goods across the country. It does not prevent the present mills from operating.

Mr. ANDREWS. I would like to read one sentence here on page 11 from the report:

All of the steel mills are located so that their products consigned to points in South India have to flow through Waltair * * *

Mr. GALBRAITH. I believe that is a so-called "break-up gage point" where goods have to be shifted.

Mr. ANDREWS (continuing):

and the limited yard throughput capacity at that point is simply inadequate to permit the free flow of material.

Mr. CONTE. Mr. Chairman, that is one of the things I quoted. I don't want to argue with the Ambassador.

Mr. GALBRAITH. Congressman, I am here to be argued with.

Mr. MINSHALL. On Bokaro. You came to the right spot.

Mr. CONTE. The thing I can't understand is that we have plowed some hard taxpayers' money into this report and we are disputing it now.

Mr. GALBRAITH. On the contrary, Congressman, I say this one more time: The business of these people was to show where the weaknesses were. But one does not stop operations because you have a marshaling yard that isn't sufficient.

Mr. CONTE. I, for one, am not saying that we should stop. I am saying, let's lay our cards on the table and say no money will be spent in fiscal year 1964 for the Bokaro steel mill "because" of what this report says and until these weaknesses are corrected. Thus far no one in authority has come up here and disputed it.

Either we have thrown to the winds $686,000, or they haven't done their job and should be brought to tow. If they are wrong then bring me in another steel report from some other company telling me these people are all wrong.

Mr. GALBRAITH. I don't want to be argumentive either, but how does one correct these things? How does one correct the shortage of transportation? You correct it by finding out what's wrong, by highlighting these difficulties and doing something about it.

Mr. CONTE. You are exactly right. Why don't you come in here next year and tell us what you have done?

Mr. GALBRAITH. You and your colleague from Cleveland said a few minutes ago—you quoted from the report—that it was not possible to move all the coal that was above ground. That was true 12 months ago. Today, all coal is being moved that is above ground, and the reason for it is (and partly as a result not this study, of this of but earlier studies) there has been emphasis on improved locomotive capacity and high capacity diesels as result on coal movement to the centers of consumption in India, railroads have ceased to be a bottleneck.

Now, in any industrial society you always will have shortcomings. Nothing is ever perfect. The only think you can do is keep working on it.

Mr. MINSHALL. At page 9 of this report, the United States Steel report:

The coal industry, to mention an important example, can at the present time mine more coal than can be hauled away.

Mr. GALBRAITH. That's right, and this was written a year ago, and today, because of the dieselization of those lines——

Mr. MINSHALL. This was written just a few months ago.

Mr. GALBRAITH. Let's clarify the exact date on this.

Mr. CONTE. The report was made in March 1963.

Mr. GALBRAITH. And the team left India last autumn. This is August. Well, it is 9 months ago. In the last 9 months the movement of coal has completely caught up. One of the last things I did before leaving India was to go in to talk to the Railway Minister about the dieselization program and to congratulate him on solving this problem.

Mr. CONTE. Let's assume that that is correct. That is one weakness that has been corrected since this report was written.

Mr. MINSHALL. I don't assume that at all.

DISCUSSION OF BASIC RAW MATERIALS PROBLEMS

Mr. CONTE. It took about 4 months to make this study—at a cost of $686,000—I thought is was a handsome figure—on page 20 of their report, in volume II it states that it will take 2 years or more—

in our opinion, to find satisfactory long-term solutions to the basic raw material problems.

Now, what do you have to say about that, Mr. Ambassador?

Mr. GALBRAITH. I have already commented on that, Congressman. There is certainly a job of exploration to be done. My own guess is, and I believe the AID people here in Washington bear me out on this, that that was an unduly long time, and the drilling that the Indian Government has now underway or has completed is capable of shortening up that time very, very substantially.

Mr. CONTE. By how much?

Mr. GALBRAITH. I hesitate to say, but I would say——

Mr. CONTE. A year?

Mr. GALBRAITH. I think so, at least, yes.

Mr. CONTE. Less than a year?

Mr. GALBRAITH. I know that Mr. Bell, when he was testifying before the larger committee said that he thought that this was a matter of months. I haven't talked with him about it since I have been back, but this would be my impression, that these ore stocks can be proved out in a matter of a very few months.

Mr. CONTE. If that is the case, it will be January and you will be coming in here with your fiscal year 1965 budget, and at that time you can apply for your development loan fund or whatever grant you are going to make to India for this Bokaro steel mill. There will be no strain on anyone and you won't be hurt by amendment restricting 1964 funds for the project.

Mr. GALBRAITH. I will be coming in as a private citizen.

Mr. CONTE. I am talking about the State Department and the AID people.

Here again we find the report is wrong if you are right, for they say it will take 2 years to determine whether the raw materials are there or not. Now you say it will take several months.

Mr. GALBRAITH. I hope you will listen to the steel corporation on this. The steel corporation in my view did a good job, and I would like the record to show that.

Mr. CONTE. Mr. Ambassador, this is the old con game. You come in and you throw all kinds of compliments upon the steel company. They have done a good job. You have told that to the chairman, you have told that to every one of our members, and yet you disagree with everything that they say.

Mr. GALBRAITH. As I say, I think it was our general view that 2 years would be too long. I am not aware, sir, of having disagreed with anything else.

Mr. CONTE. This is a tremendous discrepancy, Mr. Ambassador, from 2 years to several months. That you must agree.

Mr. GALBRAITH. That is a difference, but I am not aware of disagreeing with anything——

Mr. CONTE. It is a wide difference, isn't it?

Mr. GALBRAITH. It is a wide difference. I am not aware of disagreeing with anything else.

Mr. ANDREWS. You did disagree with the statement on the transportation facilities.

Mr. GALBRAITH. With what the steel company here said or what the Lake Erie-Bessemer Railway Co. says about the shortages in transportation in India which have been known for many years. There is nothing to which the Indian railway system is addressing itself more than to these problems.

Mr. CONTE. If we knew that, why investigate? Why invest $686,000 in a study?

Mr. GALBRAITH. They are pointing out the things which still have to be improved, but——

Mr. CONTE. Well, you knew that.

Mr. GALBRAITH. I knew what these shortcomings were, certainly. I didn't know them in the same detail as this and in relation to this plant and location. But I don't think it is anywhere suggested that this plant should be held up pending—that the transportation is a decisive factor limiting the work on the plant. One has, in this business, to move everything forward at the same time. You know that.

Mr. CONTE. Certainly I know that, but I also know that some of these shortcomings will have to be overcome and will have to be answered before I , as a businessman, would want to invest a plugged nickel in this thing, and that is all I am trying to find out. I am not going to buy a pig in a poke. I say, let's hold this thing off, let's find out if these things are true or not. Let's find out if they can be overcome. I don't know.

Mr. ANDREWS. Would the gentleman yield just 1 minute?

Mr. CONTE. Yes.

UNWILLINGNESS OF UNITED STATES STEEL TO INVEST IN STEEL MILL

Mr. ANDREWS. Mr. Ambassador, when Mr. Bell was before the subcommittee, he was asked this question by Mr. Passman, the chairman of the subcommittee, which is found on page 41, part 3 of the record.

Mr. PASSMAN. They could use another steel mill?
Mr. BELL. Yes, sir.
Mr. PASSMAN. Is the United States Steel willing to go in and build it?
Mr. BELL. They may be willing to build it if somebody else pays the bill.
Mr. PASSMAN. Will they risk their own capital?—

speaking of United States Steel.

Mr. BELL. No, sir, they will not.

Would you care to comment on that?

Mr. GALBRAITH. Yes, sir. They certainly gave me the same impression.

Mr. ANDREWS. United States Steel?

Mr. GALBRAITH. Yes. But they are not interested——

Mr. ANDREWS. In investing their own capital there.

Mr. GALBRAITH. They have not in the past—so their people told us—been interested in conducting this kind of operation outside the United States.

The steel corporation does not in any other country have this kind of an operation.

DISCUSSION OF IMPORTANCE OF CONSTRUCTING STEEL MILL

Mr. CONTE. Mr. Galbraith, you pointed up that one of the reasons why this steel mill should be constructed is that we have many projects in India, but they are small projects and they are spread out. We need something that is going to be very dramatic. Is that right?

Mr. GALBRAITH. Yes.

Mr. CONTE. I am not quoting you exactly, but in essence that is what you said?

Mr. GALBRAITH. Yes.

Mr. CONTE. Mr. Ambassador, I am one of the Congressmen who fought and moved right in this committee for the Indus River Basin project. Do you call that a small project—$482 million, approximately?

Mr. GALBRAITH. Yes, but that is in Pakistan.

Mr. CONTE. It is going to benefit both India and Pakistan.

Mr. GALBRAITH. Well, the — no.

Mr. CONTE. Of course it is.

Mr. GALBRAITH. No. The Indians are I believe, putting up some of the money for this. All of the expenditures on the Indus plan are on the other side of the line.

Mr. CONTE. There is no water to be diverted for irrigation purposes to India?

Mr. GALBRAITH. This will cost money, though. The Indians will have to get the money for the water they get out of this.

The Indus project is an enormous project, and there is no question but what it fits your case, but it is regarded in that part of the world as not only let us say primarily, but exclusively, a Pakistan project. Let me put one further point in:

Primarily what the Indians get out of this is a replacement of water they already had. As I understand they get very little extra water. Some, but not very much.

Mr. CONTE. Well, Mr. Ambassador, since the inception of the AID program to India in 1946, to date—I want to be able to change the record at a future date, because I don't have an adding machine—but the total figures that I have before me, we have given approximately, in loans, development loans, soft loans, grants, Public Law 480, food for peace, about $5.1 billion to India. And certainly I don't consider that small. I think that is big money.

Mr. GALBRAITH. Yes, but may I say again what I have said before: I am not suggesting that our aid to India has been small. Our aid to India has been large. I think it has been generous. I also think it has paid off very well. I did say that we have in general in the past favored smaller individual projects.

Mr. CONTE. But there were some big projects involved.

Mr. GALBRAITH. There were some big ones, there is no question about it.

The biggest ones, however, tended, as I said in my earlier testimoney, to be regional projects. They do not have the same effect in north India as in south India or vice versa.

Mr. CONTE. Do you feel that the other steel mills that were constructed had an impact upon the feelings of the Indians toward the lending countries?

Mr. GALBRAITH. I certainly do.

Mr. CONTE. Well, Mr. Ambassador, at that point, let's look at the record.

Mr. GALBRAITH. The Soviets got a great deal of mileage out of that plant of theirs. Part of it is deserving.

Mr. CONTE. Something else you want to say about it? Go ahead.

Mr. GALBRAITH. Because of the fact they did, on the whole, do a pretty good job.

Mr. CONTE. Let's look at the record.

Here we have given in one form or another, over $5.1 billion worth of aid to India. There were, in my estimation, a lot of big projects. I have one for this year of $20 million that you approved when you were over there, for a double food-grain storage capacity. Fourteen engineering colleges in India. Sixteen million dollars alone last year in the malaria eradication program, which has amounted to $119 million thus far. And you place great stress on this Russian loan. Let's look at the loan for the record:

The Russians loaned the Indians a measly $136 million for that steel mill, compared to our $5.1 billion. And it was a hard loan at 2½ percent, repayable in 12 years.

Now, let's take the German one. Did the German one have impact upon the Indians?

Mr. GALBRAITH. Well, not nearly so much as the Soviet one did.

Mr. CONTE. The German loan was for $157 million at 5½ percent interest, repayable in 18 years; and the British loan was for $74 million, and it was a 12-year loan at 6 percent interest.

Now, let's take the hardest loan that you may give them for this Bokaro. What will the terms of that loan be?

Mr. GALBRAITH. As I say, you are going very far to make my case. That is the dramatic role here of steel. You can't understand how dramatic it is until you know what it is to have to do without steel or do with too little. And this was one of the reasons, one of the very important reasons why the Soviets got as much mileage as they did out of that Bhilai plant.

Mr. CONTE. You are not coming up before this committee or the Congress asking for a small loan of $136 million repayable in hard currency with a good interest rate, on a short term. You are coming in here asking for a loan that eventually will go $1 billion and will have, as you and I know, at least a 10 year grace period with no payments whatsoever, with an interest rate that will run about three quarters of 1 percent.

Mr. GALBRAITH. There is no question about it. Our terms are much more favorable than those of the other countries.

Mr. CONTE. You know they remind me, Mr. Ambassador—let me tell you what this reminds me of, and then I will let you answer.

I went down there to look at the refugee camp in Jerico. We pick up about $26 million a year, I believe, for aid to the refugees. I went out there, and I inspected that camp, I had lunch with them, I questioned different people in the camp, and believe me, it was a very, very small percentage who knew the United States did anything for those people.

Then they took me up on top of a hill, and they had a little water supply up there, and they had a pump to pump the water down to those people at the bottom in the village, and that pump cost $25,000 and it was given by Switzerland, and they had a big sign for everybody to see that this was given by the Swiss Government, and every native and every refugee in that camp knew that the Swiss had aided them, but they didn't know that the United States was plowing in $26 million a year in aid. Compare $25,000 with $26 million a year and the little we got out of this aid in propaganda and this is the same case that you are making here for India. You say that this Russian loan had a great impact, but what was it? It was a $136 million loan, repayable in hard currency, repayable back in 12 years.

Will you come in here for the same terms? You would have no difficulty in getting that type of a loan.

Mr. GALBRAITH. Why do you suppose I am here arguing for this steel mill? I am here arguing for the same reason that the Soviets had this success. Steel is important, and it is important to these people, and this is why it attracted the attention on behalf of the Soviets. They also did a pretty good job. I think we should do a better job.

I am not suggesting that the aid we have been giving in the past is small. We have been, as I say, generous, and I also may tell you, I have been an advocate of drawing attention to it. There has been, as you know, some complaints in India that I drew too much attention to our aid. This is a criticism that I was able to take in stride. I have felt that people should know what we were doing. I devoted a large amount of attention to making sure that so far as it was in my power, this was done.

Mr. CONTE. Mr. Ambassador, do you have any suggestion of any other program that we have now contracted for, or agreed with the

Indian Government to give them that we could cancel so we can plow our money into the steel mill, which you say will have a tremendous impact upon that Government?

Mr. GALBRAITH. My own feeling is that this should take the place of some of our hydroelectric power development. This is important, urgent, but it isn't—in a poor country you are always choosing. The steel is of immediate, higher urgency.

Mr. CONTE. They dovetail. If you do not have power you cannot run a steel mill?

Mr. GALBRAITH. That is right.

As things now stand, steel has a higher urgency in India, in the Indian economy, than power.

Mr. ANDREWS. Will the gentleman yield?

Mr. CONTE. Certainly.

Mr. ANDREWS. We have funded four powerplants for a total of about $122 million and there is a request before the committee next year for two more powerplants, at an estimated cost, if I remember correctly, of somewhere in the neighborhood of $50 million. Work has not started on any of those six plants. However, four of them have been fully funded.

Would you advocate eliminating those six powerplants for this steel mill?

Mr. GALBRAITH. No; I do not think I would. I would not advocate eliminating those, but I would advocate postponing some of the ones that are still to come and building the steel mill instead.

Mr. ANDREWS. Work has not started on any of them?

Mr. GALBRAITH. Those are funded. They are in the program and the power is needed.

My argument would be in favor of slowing down on new power and shoving ahead on steel.

Mr. ANDREWS. It looks like we are going full force ahead on power over there now with six in the works.

Mr. GALBRAITH. We have put one of our most successful operations in India and that has been power development. There is no question about it.

U.S. EXPORTS OF STEEL TO INDIA

Mr. CONTE. Mr. Ambassador, last year India imported 800,000 tons of steel and the United States lent India a total of $160 million to finance steel imports.

Do you know how much of that steel was bought here in the United States?

Mr. GALBRAITH. All of it; 100 percent. The days have long since passed when we could afford to have them buy in the world at large.

What figure did you give me of the purchases?

Mr. CONTE. 800,000 tons.

Mr. GALBRAITH. 800,000 tons.

Mr. ANDREWS. Do we have the dollar value on that? I know that we gave them $160 million to finance the imports and I believe that is about $200 a ton.

ASSISTANCE TO HINDUSTAN STEEL, LTD., MILL

Mr. CONTE. Mr. Ambassador, this year in our justifications we have a program for which has been requested $1,630,000—and estimated obligations for fiscal 1964 of $405,000—it is for—

overcoming deficiencies of organization and management policies and labor skills in the Government-owned Hindustan Steel, Ltd., so that production can be increased from 1.1 million tons in 1961 to 6 million tons of steel by 1966.

These are the mills that were constructed with Russian money, German money, and British money?

Mr. GALBRAITH. Yes. I am not sure of that. I do not know whether we are spending any of that money in Bhilai or not.

Mr. CONTE. Yes, we are. It says Hindustan Steel, Ltd., is a public sector organization operating three integrated steel mills and its mentions them. Each of them was constructed in the last 10 years with a large amount of foreign capital.

Mr. GALBRAITH. I am not completely up on the details of that. I know we have a substantial management and worker training program and I assume that that is it.

Mr. CONTE. Do you not think for a moment if we increase production from a paltry 1.1 to 6 million tons, that the Russians are going to get a lot of the credit for that?

Mr. GALBRAITH. No; this is more efficient production. This is a part of the general scope of assistance. I am a little bit out of touch with that, but my impression is that we have agreed to give some training to the management personnel at that plant. If we have to train people to compensate for some of the shortcomings of Russian training, maybe we should do it.

Mr. CONTE. They have Russian technicians there, do they not?

Mr. GALBRAITH. Yes.

Mr. CONTE. So we will be financing the Russians to——

Mr. GALBRAITH. No, no.

Mr. ANDREWS. Indirectly; they are there.

Mr. GALBRAITH. No; I would prefer to have it said that we were compensating for Russian shortcomings.

Mr. CONTE. If this could be brought to the attention of the populace of India, I would go along with you, but you and I know that that will not be so.

Mr. GALBRAITH. I do not know for sure about my successor but I would be perfectly happy to say that he will try very hard.

PROBLEM OF LABOR MARKET

Mr. CONTE. The report also says, Mr. Ambassador, that Bokaro is a rural agricultural area where no nearby city is located, and as the chairman brought out, no industrial ability besides coal mining. Locally available labor is almost entirely unskilled and to a considerable extent, illiterate.

Transportation of people is difficult since the Indian people, sociologically speaking, have close home ties.

The Indian people do not have the general background of industrialized life and therefore training must be very elementary. In various parts of India you encounter different backgrounds, different

religious beliefs, and languages. Illiteracy is another great problem and legislation supporting regulations is primarily designed for the protection of the workers and impedes or restricts management's freedom in matters of labor unions. Labor unions are politically oriented.

Have you gone into this facet, that there is no labor market there, that you are going to have to recruit people from all over India, people of different religious beliefs who are illiterate and to bring them there to train them to run this mill?

Mr. GALBRAITH. That is right; but that would be true wherever you put the mill in that country.

There is no place you could put it where this would not be needed. Where the German mill was built, Rourkela, it was a near desert. The same thing was largely true in Bhilai. The British mill had to train its people.

You are working in India with a largely illiterate labor force and there is also the question that the unions, although not a large factor in Indian life, are politically oriented. These things are all true but they are no more true, Congressman, of this particular site than any other possible site.

This is true everywhere.

Mr. CONTE. Except that this is a much larger project than the others. This is the equivalent of three steel mills put together?

Mr. GALBRAITH. This in the ultimate, yes.

LOANS FOR EXPANSION OF THERMAL POWER STATION

Mr. CONTE. Mr. Ambassador, you signed an agreement with Rajan Sundara for four U.S. loans totaling——

Mr. GALBRAITH. Mr. Sundarajan.

Mr. CONTE. Totaling $29 million for the expansion of thermal power station for increasing the producing of coking coals at Bhilai and to meet the growing demands of the Indian steel industry. Is it your opinion, Mr. Ambassador, that these loans would substantially increase the supply of thermal power at Bihar and adequately furnish the power required for the Bokara steel mill?

Mr. GALBRAITH. This is the Chandrapur powerplant, is it not?

Mr. CONTE. Andara.

Mr. GALBRAITH. I will have to check that. I am not sure just what that powerplant serves. If it is the loan I am thinking of, it is to a powerplant that is just a few miles from the site, but whether that is for existing power load or for some ultimate load, such as this plant, I do not know.

Could you give me the date of that loan?

Mr. CONTE. I do not have it but it was last year.

The power station in Andara Paradash——

Mr. GALBRAITH. No; that is another one. That is a different place. That is several hundred miles away.

Mr. CONTE. Mr. Ambassador, if they were going "Gungho" on power stations, why did you sign that contract?

Mr. GALBRAITH. I did not. I must urge you not to put words in my mouth even "Gungho."

What I said was that the urgency of power—I know a few things that are more urgent in India than power—but it is not as urgent as

steel. There is no question about the importance of power and the country is also power hungry.

Mr. ANDREWS. You told us they were steel hungry.

Mr. GALBRAITH. It is even hungrier for steel.

Mr. ANDREWS. You stated steel, in your opinion, was the top priority item.

Mr. GALBRAITH. That is right, but if I understand you, Mr. Chairman, you are saying the same thing I am. In India you are always choosing between needs and desperate needs. It is only in this case that the only thing I would say about power is that it is important but it is not as important as steel, not as urgent as steel.

Mr. ANDREWS. Mr. Conte.

AVAILABILITY OF CONTRACTORS

Mr. CONTE. In the report it says there is a shortage of contractors in India and that contractors are booked up for 5 years. I believe it is that long.

Are we going to have any difficulty, assuming that you go through with this, to get American contractors to go over there and build this steel plant?

Mr. GALBRAITH. I do not think so. My guess is that the industry is not going to be finding this business at all unwelcome. I might also say that my observation is that American contractors do an extremely good job when you get them into these places. They get along well with the people and are a credit to the United States.

CAPACITY OF PRESENT STEEL MILLS

Mr. CONTE. The present steel mills you have in mind in India are working up to capacity at the present time?

Mr. GALBRAITH. I promised the chairman to get the details on that.

Mr. ANDREWS. He told us the German plant is below capacity and the other two are at or close to capacity.

Mr. GALBRAITH. Subject to verification.

Mr. ANDREWS. And he said he would furnish the details for the record on the two privately owned plants.

Mr. CONTE. The report said that the capacity of these five plants was 6 million tons in 1962 and the total output was 4.8 million tons, metric tons.

I was just wondering whether, if they were not brought up to full capacity, if there would be a shortage of steel?

Mr. GALBRAITH. This morning I said that all three of the plants had teething troubles, more teething troubles than you would encounter in the United States: no question about that. A part of this was management but part of it is the fact that we are working with unskilled, illiterate personnel, green supervisors, and everywhere you look in India, you run into the problem of a beginning industrial civilization. To bring in a steel mill in India is not like bringing a steel mill over to Sparrow's Point.

My impression is that they are now up close to capacity and, as I say, I would like, other than the German mill, to check that. The German mill is still short one blast furnace.

Mr. CONTE. One final question.

Mr. Ambassador, do you feel that there would be any value for any members of this committee to visit India and discuss this matter with the Indian leaders and look over the site in Bokaro, and also to discuss this with some economists over there?

Mr. GALBRAITH. I have one general answer to that, which is always, yes. I have heard it said that some of my colleagues sometimes complain about Congressmen coming to visit them. But the congressional delegations I had in India during the 2½ years I was there worked hard and intelligently, and I think they learned a good deal. I think it was good for the Indians to see American legislators come in and I must say I never got notice of a congressional delegation coming out without a sense of pleasure that they were doing this.

Mr. CONTE. Specifically on this, do you think we could learn anything by visiting in India?

Mr. GALBRAITH. My answer would be "Yes." This certainly is the case. I think it would be very good for the members of the committee, or a group from Congress, to have a firsthand look at this situation.

Mr. CONTE. No further questions.

Mr. ANDREWS. Mr. Minshall?

Mr. MINSHALL. Mr. Chairman, I should like to state that I have had the privilege of visiting India several years ago. Although I took that trip as a member of Defense Appropriations, the knowledge I gained then has better enabled me to understand the situation before us on the Bokaro matter.

BACKGROUND OF BOKARO STEEL MILL PROPOSAL

Mr. Ambassador, you said you started working on the Bokaro steel mill proposition rather actively about 2½ years ago, but you also stated you had knowledge of it some years prior to that.

When was Bokaro first conceived?

Mr. GALBRAITH. That is a hard question to answer.

Mr. MINSHALL. Who gave birth to it?

Mr. GALBRAITH. It was in the spring of 1959 when I had my first detailed acquaintance with the Indian steel industry.

Mr. MINSHALL. Is that when you first were assigned to your post in New Delhi?

Mr. GALBRAITH. No; I went there as a private individual. I was working on a book on the nature of the problem of industrialization.

Mr. MINSHALL. What was the title of that book?

Mr. GALBRAITH. The book got put on the shelf in Cambridge when I went to India as Ambassador and I am now going back to——

Mr. MINSHALL. What is the general tone of it?

Mr. GALBRAITH. The general idea was to go into the problems that a country faces when it has to create an industry.

I do not want to go into detail on this but I had been teaching a large number of foreign students for some years at Harvard. I decided I needed to see this problem on the ground.

Mr. MINSHALL. Does it provide primarily for placing a country's industries in the public sector?

Mr. GALBRAITH. No; I certainly would not reach that conclusion. I would say it is essentially a practical judgment. Sometimes you

have to and sometimes you do not; but you cannot lay down any rule.

I went out there in 1959 and, as I say, I spent a month at the private sector mill at Jamshedpur and two other mills then just coming into existence; Rourkela and Bhilai.

At that time the Indian Government was talking about what it called the fourth steel mill.

I am not sure that the Bokaro site had been settled but it was being talked about.

So the plan of a further steel mill in that area had taken some form already by 1959.

Mr. MINSHALL. Do you know who first initiated the idea?

Mr. GALBRAITH. I would expect it was the Indian Planning Board, they are the people that brought the plans out. If they did not initiate it, they were the first sponsors for it.

Mr. MINSHALL. When did you go on duty there?

Mr. GALBRAITH. The first week of April 1961.

Mr. MINSHALL. You were aware of the situation in 1959 before you assumed your official duties as Ambassador?

Mr. GALBRAITH. Yes; the Bokaro plant had not made any impression on me at that time. First of all, I began to study and hear about the thing when I went out as Ambassador.

POTENTIAL IMPRESSION OF BOKARO PLANT ON PEOPLE OF INDIA

Mr. MINSHALL. Mr. Galbraith, there two key things that stand out in your testimony. One is your stating the need for steel in India, the other one is the need for placing a U.S. financed steel mill in India for one basic reason, namely, the impact it will have on the people of India—the impression it will make.

As Mr. Conte has so ably brought out, we have already spent in India in foreign aid from one spigot or another in either direct aid or development loans over $5.1 billion. By your own statements, today, you said that our efforts have fallen on blind eyes, and deaf ears. Therefore, it was necessary, and to quote you, "To do something big" to the tune of $1.5 billion for this Bokaro steel mill.

I wonder how you are going to get that across to 450 million Indians with communication facilities such as they are, with the literacy rate such as it is. It is a big country and communications are primitive.

Are you going to have an intensive mailing program? How are you going to communicate with the 450 million people of India? Are you going to stamp all of the bicycles and all of the sewing machines you said they needed, showing they were made in a U.S.-financed plant? How do you plan to do this?

Mr. GALBRAITH. I must plead with you too not to put words in my mouth.

Mr. MINSHALL. I do not think I put words in your mouth. I am merely quoting you on what you said.

I might have paraphrased it but I am sure the record will show I have not misquoted you.

Mr. GALBRAITH. I do not think the record will show that I said we have fallen flat on our face.

Mr. MINSHALL. That is my expression but the fact is that our aid program in India has made no impact and that, to me, is falling flat on our faces.

Mr. GALBRAITH. No, Congressman. I did not say——

Mr. MINSHALL. To the tune of $5.1 billion.

Mr. GALBRAITH. I did not say we had fallen flat on our face. I did not say we made no impact.

I consider our aid program in India and our Indian policy going back over the years of the Truman administration, the Eisenhower administration, and this administration, and under a succession of very wise men who have been associated with it, to have been one of the successes of our foreign policy. Ten and fifteen years ago, the choice was open as to whether India went the direction of China or whether it went the direction of a free democratic and progressive community along the lines of the West.

Now no one even thinks this choice is open. India has made that choice. The aid program as I was urging the other morning with a congressional group, is one of the things that made this difference. It eased this process, this terrible process you have seen with your own eyes in helping get a country off the ground.

This is a great achievement.

As far as the specific question here is concerned, I would not have picked out Bokaro and would not have supported Bokaro, and would not have argued for it if it were simply a glamorous project. It has this drama because it is an extremely useful and important thing. Therefore, that being the case, we should capitalize on it.

India does not have television and does not even have a very good newspaper network but even quite an illiterate people know the importance of steel. They will be aware, many of them, although not all of them, of the role which we play in this.

Mr. CONTE. Will the gentleman yield?

Mr. MINSHALL. I yield.

Mr. CONTE. Mr. Ambassador, I am not going to discount the aid we gave India. It served a useful purpose and I fought for it but I have to take issue with you.

It was not our aid that really picked them off their feet and brought them over to the West and got them off a nonalinement policy. It was the attack of the Red Chinese and our immediate military assistance to them.

You know this had the greatest impact of anything we have done in India. It woke them up.

Mr. GALBRAITH. I agree with you Congressman. But if India had not been able to put this forward, this industrial effort 10 years ago, with our help, she might not have been there to be picked up. The extremists and the radicals might well have made the decision prior to that time. There is no question about it.

But that the Chinese were a big awakening influence there; no question.

Mr. MINSHALL. Mr. Ambassador, what disturbs me is that just an hour ago you stated we had to do something big. Have I misquoted you? In other words the $5.1 billion we have spent on hydroelectric plants, et cetera, the projects were too small to make the impact they should have. You seem to think that the $5.1 billion did not get across and now you have one big project—a billion dollar one.

Mr. GALBRAITH. What I am saying is that we should always have our minds clearly on whether there is something we can do better.

One of the advantages of this project is that it is so much in the public eye.

Mr. MINSHALL. Describe how this one project is going to be so much in the public eye, when you already have three steelmills being operated by other countries, to say nothing of those being operated by TATA. How are you going to distinguish this particular steelmill's operations? What are you going to do to get it across?

Mr. GALBRAITH. I go back to what I said this morning: You get a sense of the urgency of this when you realize what it is to be short of steel. Shortage of steel slows down and arrests your entire industrial process. Let me say one word about that.

I went through this in 1940 to 1943 here in the United States when we were short of steel and one of the things which everybody in the United States knew about—many people knew of the decision to go ahead with a western steel industry—a mill at Fontana in California and a mill at Geneva, in Utah. The reason this was on everybody's mind was, again, steel has developed interest, the interest that it did, because it was scarce.

EFFECT OF BOKARO STEEL ON PRODUCTION IN UNITED STATES

Mr. MINSHALL. Mr. Ambassador, we are going to have the United States Steel officials here before we conclude these hearings. I should like to ask you now, however, how can you justify the construction of a $1.5 billion steelmill in India that is eventually geared to produce 4 million metric tons of steel a year when the steelmills in America are only operating at 60 percent of capacity?

Mr. GALBRAITH. I would make two points on that, Congressman. It is a very fair question.

Mr. MINSHALL. I am sure the unemployed steelworkers will read carefully what you say.

Mr. GALBRAITH. The first thing is that it is not a question of building the steelmill or having it imported from the United States. To import the steel in quantity that would be produced by this mill from the United States, or any substantial fraction of it, would be for something the Indians could not afford. I gave some figures to the congressional group the other day on this.

To import a million metric tons of steel, flat products, from the United States, costs somewhere in the neighborhood of $200 million. This would not be so far short of about 40 percent of the cost of the first stage of this mill. India does not have that kind of money and we are not likely to supply India with that kind of money to do it. That is the first point.

The second point I would very much address to the steelworkers and to the industry is this: If we do not build this mill sooner or later somebody else will do it. It takes a lot of steel to build a steelmill and that engineering work will come from the United States. Some of it, I venture to say, will come from your own area. We will have that business in this country. As I said this morning, it will be in an industry which needs the business.

Mr. MINSHALL. This is a matter of serious concern to the unemployed steelworkers, to be building a steel mill and increasing another country's steel capacity when we have as many unemployed steelworkers as we have here today. I grant you I am not an expert on this but we will have expert testimony along this line. On a temporary basis, this could increase our steel capacity, but after that temporary increase is over, we are going to find ourselves in a worse position than we are in today, as far as the unemployment of steelworkers is concerned.

Mr. GALBRAITH. These are matters of interpretation.

My interpretation would not be the same. My interpretation would be that we will get this engineering and construction business coming into our plants, but the practical possibility of long-term purchases of steel by India in the United States are not very good.

Mr. MINSHALL. Let us look a little bit beyond the ends of our noses on this thing.

We will probably get a little extra steel production and let us assume we do. I will go along on that assumption, that we are going to make heavy equipment and we will ship it to India. But let us face the facts that when they get into production it will then compete with our steel mills.

The same thing happened with the Marshall plan in Germany and also in Japan. After another generation, they are going to be competing with us and they will be competing with us along with all of these other countries now in the steel business and that is why I say it is a very shortsighted view. The extra steel required for the construction of Bokaro will have an infinitesimal effect on U.S. production.

I am not thinking just for myself, today, but I am thinking of my children and my children's children and the future of America in the years ahead.

Mr. GALBRAITH. There are important differences of points of view here. I would argue that India, like other countries in her situation, in one way or another is going to escape from this age-old poverty which has beset them and that if we do not help them escape, other forces, which we will not like, will take over.

For your children and my children and your grandchildren and my grandchildren, it is probably better that India industralize under democratic auspices as at present, rather than in desperation force her to experiment with alternatives.

Mr. MINSHALL. You are entitled to your view but neither of us, I believe, are experts.

I think our commonsense as we project it differs but we will have to wait for the experts on this question.

Mr. Chairman, I do not want to take any more time for the hour is getting late, for we are going into the United States Steel report at some length with the people who compiled it.

I appreciate having Mr. Galbraith's views and I feel he is sincere in what he says, but his basic beliefs and mine are at odds.

We have in the United States Steel report about 13 basic assumptions. We have gone into some of them. The only assumption in which everyone agrees is that India needs steel.

ADVISABILITY OF EXPANDING EXISTING MILLS IN INDIA

Mr. Ambassador, why wouldn't it be a better idea to expand the present steel mills in India? Let the Russians put in some more money. Let the British and Germans put in some more money.

Let us allow TATA to expand their existing facilities before we go ahead with this pig in a poke. I think we would be most foolish to go ahead and appropriate $500-some-odd million for the first phase of such a questionable project at this time.

Mr. GALBRAITH. It is obvious that we do differ.

I would just make two points: First, expansion is going on elsewhere, too. I would mention those details of the projected expansions at the other plants.

Mr. MINSHALL. You said earlier that we were going to make sewing machines and bicycles. We could manufacture in this country and send them a lot of bicycles for $1.5 billion.

Mr. GALBRAITH. I would point out to you that I was picking out those two things of a catalog rather than naming specific items. They were illustrative rather than naming the whole list of projects made out of steel.

Mr. MINSHALL. I do not know if they can make these products out of the kind of steel they are going to make at Bokaro.

Mr. GALBRAITH. I may have to concede to you on technical accounts there, because I do not know.

I was picking out samples of light manufactured products and you know light manufactured products are made out of flat steel. The other thing I would be quite serious about that it is evident I do not consider this an unwise project. I consider it a very wise and important one and I would urge in all earnestness we not ever get into a situation where all difficulties have to be corrected before we decide to do anything.

If that had been done, the Russians would not have built their mill. The British would not have built their mill. TATA, 50 years ago, would not have built their mill.

Mr. MINSHALL. We are putting in $552 million and this is just the beginning of it. They only put in, as Mr. Conte so ably pointed out, $136 million altogether, repayable in 12 years, on a hard-loan basis.

Mr. GALBRAITH. The purpose of this report, and again I say the purpose, I think, was very well served, was to focus attention on the things that needed to be done concurrently with the successful development of this enterprise.

Mr. MINSHALL. I still have not gotten a firm answer on how you plan to let the big mass of 450 million people know you are building a steel mill. What is the population now?

Mr. GALBRAITH. 440 million.

Mr. MINSHALL. Something in that ball park figure.

How are you going to do this?

Mr. GALBRAITH. Let me say just a word on philosophy on that: My own view is that the important thing is to have industrial development and progress. The hopes and aspirations of people lie in the things that come from steel, such as bicycles, sewing machines, and the irrigation pumps and so forth. That is the fundamental thing that people see and this is happening——

Mr. MINSHALL. How do they know it comes from an American steel mill and not a British, Russian, or German built plant?

Mr. GALBRAITH. I am saying the first gain from our aid program is the progress itself. The people who look at their position today and see that it is better than yesterday, they are amenable to moderate democratic processes.

If this is going to get worse, they become desperate.

Second, I do like to see this work we do in India identified with us. I was criticized the other day by somebody for having spent too much time on this. You may have seen my letter to the Times in which I defended myself on this point.

The one thing we got out of this plant is the natural concern of people for a highly important product.

PROBLEM OF INFORMING PEOPLE OF INDIA OF U.S. ASSISTANCE

Mr. MINSHALL. I have been in India, Mr. Ambassador, and that is what disturbs me. With the illiteracy rate, with the poverty, and the lack of communications, how are you going to get this word to this great mass of poor people?

Mr. GALBRAITH. There is no easy answer.

Mr. MINSHALL. They live in mud huts throughout the country with the exception of New Delhi.

It was just shocking to me. The people are never going to get the word on this.

Mr. GALBRAITH. It is something we have to keep working on and you have to——

Mr. MINSHALL. I have asked you three or four times, how are we going to get this word to them? I do not think you can, but I would like to know what your system is.

Mr. GALBRAITH. I mentioned one of the things I did last autumn. I got 30 or 40 newspaper correspondents and photographers and a train and I spent 10 days taking them around from one of our plants to another.

The native language papers as well as the Indian papers were included. I think in that 10 days' time we managed to draw the attention of a great many people to the things we were doing.

Mr. MINSHALL. What percentage of the Indian population reads newspapers?

Mr. GALBRAITH. The percentage?

Mr. MINSHALL. Yes; what is the newspaper reading population of India out of the 440 million?

Mr. GALBRAITH. I would guess maybe 20 or 25 percent at the very outside.

Mr. MINSHALL. Do you think all of these people read?

Did you get good publicity? In other words, nearly 100 million people heard of that train trip you took?

Mr. GALBRAITH. I had a lot more publicity, Mr. Congressman, than if I had not done it, and that is one thing.

Mr. MINSHALL. You are not going to have me appear so gullible to believe 100 million people heard of this trip you took with some newspapermen, are you?

Mr. GALBRAITH. Congressman Conte mentioned earlier today the question, or was asking me a question about a loan signature. The

reason I could not remember it was that I adopted the policy of having a substantial ceremony and a radio program in connection with every one of these signings.

You are asking me how many people heard that? Well, some, a few millions. What else?

We got out, I think, a pretty good paper, the American Reporter, with very wide circulation to editors, describing what we were doing.

When I had any visitor of importance, whenever I had any Senator or congressional group, I made sure they got out with the cameramen and so forth. There is no easy answer to this, but all I can say is that a good Ambassador works all the time.

Mr. MINSHALL. Thank you, Mr. Ambassador.

Mr. ANDREWS. Mr. Conte.

Mr. CONTE. Just one question, Mr. Chairman:

I do not want to trespass on the patience of our chairman who has been most kind to us today, but I believe we have explored this the way it should be explored. I think the answers have been forthright by the witness across the table and deserves further exploration.

Mr. Ambassador, some people on the floor of the House look at me with a jaundiced eye and wonder how I can stand on that floor year after year and fight for foreign aid the way I do and come back here to Congress. They say to me, "Don't you have unemployment in your district?"

MARKET FOR SEWING MACHINES AND BICYCLES IN INDIA

Sometimes I wonder. I wonder what the other side of the table is thinking and what they are doing in the administration. In my district we have pockets of unemployment which run 6 percent. I realize that this is not a valid argument against the Bokaro steel mill but you mentioned as one of your reasons for the mill is that they need steel for sewing machines and bicycles in India.

One of the industries having difficulties in my district is the bicycle industry. I did not realize there was such a market for bicycles in India. Here we have a foreign aid budget of $4 billion of which part could be used for Bokaro, what a boon to the economy it would be if you took $500 million that you are going to put into the steel mill and bought 30 million bikes for the people in India. Imagine that. Nearly every family in India would have a bicycle to travel around, with a nice little stamp on it, with the stamp of the foreign aid program, and this would really get down to the people.

I realize this is not quite possible, but you could do something for that industry and others through the foreign aid program. Yet, what do you do? When I say "you," I mean the administration. You come in with fancy doodangles like the ARA bill. Several weeks ago they asked for $450 million, spreading propaganda all over my district that if this bill goes through, it will create jobs. We had $450 million last year, I think, and it did not create one job in my district. There is no doubt that this would create many jobs in my congressional district.

I wonder if the aid people ever think of it in that light?

Mr. GALBRAITH. I must say I have been an advocate of the bicycle, as you can imagine.

Mr. CONTE. You, Dr. Dudley White, myself, and a few others.

Mr. GALBRAITH. A year ago there was a proposal in India to make a small car, a so-called people's car. I made a speech that I thought it was much more important to provide people with bicycles than a very small number of people with automobiles, and I was somewhat criticized for this. On the other hand, I suppose the problem, as you know, is, by the time everybody got bicycles to India, they would be pretty expensive.

Mr. CONTE. They would not be any more expensive than this. What could be more expensive than $5.1 billion and getting very little in return.

Mr. ANDREWS. This is an indirect way of giving them a bicycle. Give them the steel mill to make the steel to build the bicycles.

Mr. CONTE. We could deliver those bicycles dockside in India for about $25 apiece, and when you get through with this steel mill, with its built-in labor costs and everything else, those bicycles would cost about $100 apiece.

Mr. GALBRAITH. No.

Mr. CONTE. You have to include the cost of the mill.

Mr. GALBRAITH. No, they would not cost that much.

Mr. CONTE. They would cost a lot more than we could sell them for. If you are going to invest $1 billion in Bokaro based on what information you have, then give them 30 million bicycles for Christmas and make them all happy. Because I feel that this investment at this time would be unwarranted as the United States buying 30 million bicycles.

Mr. ANDREWS. Any other questions?

IDENTIFICATION OF U.S. ASSISTANCE IN INDIA

Mr. FLYNT. Mr. Ambassador, on the powerplants that have been built in India through the aid program, are there any identifying symbols or signs?

Mr. GALBRAITH. Yes.

Mr. FLYNT. Describe some of those to me.

Mr. GALBRAITH. The main entrance to all of the plants—and this is standard on the diesel locomotives which solved the coal problem we were talking about—and on any American aid product, we have a shield which resembles the shield of the United States, with vertical red and white bars at the bottom and the clasped hands of the economic assistance program. This designates it as an American aid project.

Mr. FLYNT. What sort of identifying stamps or symbols are on the bales or bags of food products, cartons and boxes of food products that are sent in?

Mr. GALBRAITH. There are two answers to that. On the food which we distribute directly, there is a stenciled shield of the United States with a sign saying, "Presented by the people of the United States to the people of India." That is on all of them. On the title I——

Mr. FLYNT. In what language is it?

Mr. GALBRAITH. That is in English.

Mr. FLYNT. Do most of these people speak or read English?

Mr. GALRBAITH. We also, I believe, put it in the local regional language, in addition, if there is a dominant language where people do not understand English.

(Off the record.)

Mr. FLYNT. In this connection, Mr. Ambassador, I have never been to India and have never seen any of these products and commodities that go over there, but I have been told from a source that I have reason to rely on greatly, that at the insistence of the Indian Government there have been instances in which we were urged and directed not to put on any of these cartons or boxes or individual containers any identifying symbol in the Hindu or local language that could be identified as having come from the United States.

Mr. GALBRAITH. This has not been true while I have been there. We have been at great pains so to identify it.

Mr. FLYNT. It also has been reported to me that although there was a policy of using the emblematic shield in a multicolor, red, white, and blue, in many instances and at the insistence of certain officials, the insignia went on but it went on in black and white only, and not in red, white, and blue.

Mr. GALBRAITH. We always have red, white, and blue. There is absolutely no truth to that one, because the only insignia we have is the red, white, and blue one. It is always in color unless it is a sack of grain which does not take the color. There have been cases of that sort, but I have never seen it except in color.

Mr. FLYNT. While I am on this, I might as well add one more that was reported to me, which is that in this case, sacks of food grain came in, in unmarked sacks, and were stenciled with marks and identifying symbols which would identify them as having been imported or given from the U.S.S.R.

Mr. GALBRAITH. No. I can assure you that that never has happened in India during the time I was there. I would have heard about it, and I also would have stopped it if it had happened.

Mr. CONTE. Mr. Ambassador, is it not so, for the great bulk of commodities which go over from the United States are not marked because we give them to the Indian Government and they, in turn, sell them?

Mr. GALBRAITH. I was talking about title III.

Mr. CONTE. This is title I.

Mr. GALRBAITH. Title I goes in in bulk, and you are quite right on that.

Mr. CONTE. For the record, we have given India $1.960 billion in title I. Compare that with $9.2 million total in emergency relief and $166 million for voluntary relief agencies. You can see there is a very small amount. The bulk of it goes unmarked.

Mr. GALBRAITH. This is one thing which has been very much on my mind. I am a little reluctant to go into the extent of my public relations activities there, because you would think I did nothing else. I got up a motion picture film showing the ships coming in and showing where the products went. I did the narration myself, showing what we did with it. It received wide circulation in the Indian theaters. Products also come in, in tankers. On one or two occasions I went down and had a press conference to welcome in a tanker shipment. I made speeches although I think speeches are greatly exaggerated as a medium of information—one of the easiest things in the world is to not listen to the speeches of an ambassador. To get attention for our food is something that I have had very much in mind. It is not easy.

Mr. CONTE. I want to commend you, because I have been all over the world, except Latin America, and I have not made my stops only at embassies; I have gone into the field and looked at the program. Believe me, I came back from Africa infuriated because we were not reaching people in Africa. We had a very poor information service in Africa. We were not explaining to them what we were doing for them. I just could not believe that we could be that naive. I am sincere when I say I want to commend you highly for this. I think it very important. I think every embassy should do this.

Unfortunately, no matter what you do, a good part of the surplus food that we send out throughout the world, not only in India but throughout the world, is sold to the government and they in turn, sell it out to wholesale houses who sell it to the people. There is a very little plus sign with the people themselves.

Mr. MINSHALL. I have one question which is brought up by the statement Mr. Conte and the Ambassador made. I have visited India, and, of course, no one is an expert on a country after visiting it for only 3 or 4 days. I made a special point, however, to make inquiry among American personnel there and American businessmen whom I met there and they thought, very frankly, the AID program was not doing anywhere near the job it should be doing.

This is no criticism of your personal efforts, Mr. Ambassador. You are only one person. But there is a limit to what one person can do. There is a limit to how many people one newspaper gets to.

Mr. GALBRAITH. You are quite right.

Mr. MINSHALL. 440 million people is a terrific amount of coverage to get to, especially in view of the conditions which exist in India. I have traveled all over this world and have seen only one other country where conditions are so deplorable. That is in Haiti.

Mr. GALBRAITH. I do not want to suggest for a moment that I got through to all the Indian people or even a majority or substantial fraction. All you can do is try.

Mr. MINSHALL. You tried, but we just have not gotten through. That is the point.

I have one other question to ask you. You are familiar, of course, with the Clay report?

Mr. GALBRAITH. Yes.

AID TO GOVERNMENTS ESTABLISHING GOVERNMENT-OWNED INDUSTRIES

Mr. MINSHALL. I should like to ask you to comment on one short sentence which appeared in that report. I quote exactly—I know you are familiar with it, but I want it for the record:

> The United States should not aid a foreign government in projects establishing government-owned industrial and commercial enterprises which compete with existing private endeavors.

If I understood you correctly, a little bit earlier you said you disagreed with a part of the Clay report. I presume that is the part of the report you disagree with.

Mr. GALBRAITH. I disagree with that.

Mr. ANDREWS. I have one final question, Mr. Ambassador. Did I understand you to say if we do not build this mill, someone else will?

Mr. GALBRAITH. I want to enlarge a little bit on that answer.

Mr. ANDREWS. I want to ask you who that someone would be.

Mr. GALBRAITH. I want to add another word to my answer to the previous question. If you construe the statement as saying that no public enterprise should put a private enterprise out of business, then it is obvious everybody would agree with it; but if you construe it as meaning there should never be both public and private firms competing with each other, I would not agree with it.

Mr. MINSHALL. The report speaks for itself there. You disagree with it. It is that simple.

Mr. ANDREWS. Now, did you get my question?

ALTERNATIVE TO U.S. ASSISTANCE IN CONSTRUCTING BOKARO

Mr. GALBRAITH. Yes. I do not know who, but given the pressure for steel, the urgency of it, in some way or other the Indians will go ahead and expand their steel mills. They have to.

Mr. ANDREWS. You cannot name the person or the corporation or the government that would build it if we did not?

Mr. GALBRAITH. My impression is that they do not have a clear prospect as to the alternative if we do not do it.

ADVISABILITY OF EXPANDING PRESENT PLANTS

Mr. MINSHALL. What would happen if these other plants were just expanded? It would put the British into the act. It would put the Germans and the Russians into the act.

Mr. GALBRAITH. I have to get to you the last details on that. My impression is that the decision to expand the Russian plant has already been taken.

Mr. MINSHALL. Are they expanding it?

Mr. GALBRAITH. Yes. My reluctance to respond to that is because I do not know whether it has been announced or not.

Mr. MINSHALL. How much more are they putting into their steel mill?

Mr. GALBRAITH. I can give it in tonnage figures. It would be about double in English tons.

Mr. MINSHALL. This would not in any way be the initial cost of $136 million?

Mr. GALBRAITH. No. This is beyond the initial cost.

Mr. MINSHALL. I understand that, but in addition, you are not implying it would be another $136 million?

Mr. GALBRAITH. Not by any means, no. You have the plant utilities and a lot of things within the fence, and you have the township and everything all built.

Mr. MINSHALL. Why would it not be easier, then—that is my whole point—to expand the present steel mills?

Mr. GALBRAITH. There are limits as to the amount of expansion you can do in any one place.

Mr. MINSHALL. It certainly could be done quicker and much cheaper and at no cost to the American taxpayer.

Mr. GALBRAITH. I come back to the main point. It is a question, not of doing one or the other, not of building the Bokaro plant or expanding the others. Given the pressure of the steel requirements, it is a question of doing whatever practical expansion you can do at the other plants, plus Bokaro.

Mr. CONTE. This could go on indefinitely, but, Mr. Chairman, I brought out that we are appropriating this year the balance of $1.6 million to increase production by new methods, which would increase the production of the steel, from 1.1 million to 6 million tons.

Mr. GALBRAITH. This puzzles me. By improved management you do not get any increase of that sort.

Mr. CONTE. Then the AID agency is giving our committee erroneous information.

Mr. GALBRAITH. I think it is just bad expression. What is in process here is a big expansion in output from 1.6 million to 6 million tons from these three mills. This has involved great management problems, and this is what the AID agency is helping on.

Mr. CONTE. You get 6 million by correcting management problems. You expand the mill so it will double its capacity. That brings it up to 12 million.

Mr. GALBRAITH. No.

Mr. CONTE. The need is only 10 million a year.

Mr. GALBRAITH. No. I do not know whether you are serious about this or not.

Mr. CONTE. Go ahead. Of course I am serious. I would not ask it if I were not.

Mr. GALBRAITH. Roughly speaking, the situation is this: The industry prior to the beginning of the expansion in the second 5-year plan was about 1.5 million tons. That was the Tata Iron & Steel Co., and the Indian Iron & Steel Co. The three new plants that have already come into production add roughly another 4.5 million tons, bringing it up to 6 million tons.

My impression is that the training program refers only to the management problems necessary to get them up to their full 6 million tons, which is their rated capacity.

Mr. CONTE. Mr. Chairman, I think this is important enough to read verbatim into the record. First of all, the obligation is for $1,630,000. This is from page 65 of the justifications, Agency for International Development, program and project data related to proposed programs, fiscal year 1964, volume IV, project description. Activity: Industry and mining, steel production, No. AC–27–AB–5. Former title: Steel training. Obligated $1,630,000, of which $405,000 is to come from this fiscal year.

Project goal: To overcome deficiencies of organization, manegement, policies, and labor skills in the Government-owned Hindustan Steel, Ltd., so that production can be increased from 1.1 million tons in 1961 to 6 million tons of steel by 1966.

Mr. GALBRAITH. Let me put the correct interpretation on that. This is the rated increase in production as a result of building these mills. This is to overcome the management and labor problems that are associated with that increase. It is not in itself designed to bring about the increase. The increase is inherent in the mill construction itself. The language may not be perfectly clear.

Mr. CONTE. It surely is not, Mr. Ambassador.

Mr. GALBRAITH. But I know what they are driving at.

Mr. CONTE. I am glad you do, because the committee would never gather that from this justification. We would gather the impression that if we invest $1,630,000 for this project, production will increase from 1.1 million tons in 1961 to 6 million tons of steel by 1966.

Mr. GALBRAITH. I have defended the AID organization enough today so perhaps they will permit me to say they were not very lucid in that one.

Mr. ANDREWS. Any other questions?

Mr. FLYNT. Yes.

Suppose in the alternative to this $1.7 billion project, the U.S. Government——

Mr. GALBRAITH. We are talking here about the first stage, which is considerably smaller than that.

Mr. FLYNT. I believe you told us the estimated cost to completion of this project would be approximately $1.7 billion, exclusive of the building of the town and community around it.

Mr. GALBRAITH. Except that the question before the House is not the full program, but the first stage.

EFFECT OF OFFER OF LOAN FOR CONSTRUCTION OF A PLANT

Mr. FLYNT. What would be the reaction of the Indian Government if the U.S. Government should offer, in the alternative, the construction of a plant estimated to cost $136 million at approximately 2½ percent interest per year, repayable in 12 years or less?

Mr. GALBRAITH. I think the honest answer is that they would be disappointed. They feel that we are closer and firmer supporters of them in financing their operations. We have given them easier terms and longer repayment terms than that.

Mr. FLYNT. They were both delighted and pleased to accept when substantially those same terms were offered by the Russian Government; were they not?

Mr. GALBRAITH. Yes. I have said many times today that there is no question that we have been a closer and better friend of India than the Soviets, and I think this is appreciated in India.

Mr. FLYNT. I believe you also stated that the planning and construction of the Russian mill had a great impact on the Indian people.

Mr. GALBRAITH. That is right, because the Russians had the good sense to pick out steel, knowing how urgent and important it is. This is one of the reasons I am here advocating the——

Mr. ANDREWS. It is too bad we did not get on steel years ago before we spent $5.1 billion.

Mr. GALBRAITH. And I am emphasizing steel to the committee for that reason.

Mr. CONTE. Mr. Ambassador, you say because we have done these things, they are much more friendly to us than they are to the Russians. When they met at Belgrade and they were all knocking us around like a punching bag when the Russians resumed nuclear testing, why didn't Nehru condemn the Soviets; why did he attack us as a colonial empire? Why did he not stand up on his two feet if he was our friend, at that time and defend the United States? Why did he not stand up and criticize the Russians for resuming nuclear testing? He certainly criticized us when we resumed nuclear testing. Is that a show and display of friendship? A good part of this friendship came about from all the good work you have done and a good part of it came about when the Red Chinese attacked them on the northern borders and the United States came to their defense.

Mr. GALBRAITH. It is very hard for an Ambassador or even for an ex-Ambassador to comment on the head of state to which he has been accredited, and I would just rather not comment on that.

Mr. FLYNT. You may take it off the record.

Mr. CONTE. I would like to get an answer to that.

Mr. ANDREWS. Go off the record.

Mr. MINSHALL. Also, I would like to have your comment on Mr. Menon, who played hanky-panky with the Russkies for so long. Off the record.

(Off the record.)

Mr. ANDREWS. This has been most interesting, Mr. Ambassador. Are there any further questions about that steel mill?

Mr. FLYNT. Yes. I want to finish my questions I began a few minutes ago.

EFFECTIVENESS OF RUSSIAN INSTALLATION OF A STEEL MILL

Are you suggesting that the Russians used better judgment, with more effectiveness, by the installation of a $136 million steel mill than we have done over a period of years with more than $5.1 billion of of economic aid in all forms?

Mr. GALBRAITH. The Russians, of course, have given a considerable amount of assistance beyond the steelmill.

Mr. FLYNT. But now you think what we need to do is to mimic the Sino-Soviet bloc aid, which takes in more than Russia, of $981 million.

Mr. CONTE. Let us get that Russian aid in there, if you do not mind, to have the record complete. Cumulatively, the entire Sino-Soviet bloc, which takes in more than Russia $981 million.

Mr. GALGRAITH. I would not use the word "mimic." In general, I think our policy in India has been more successful than the Soviet's. I do think the Soviet, in seeing the key importance of steel, made a shrewd move and one from which, frankly speaking, we should learn.

Mr. FLYNT. Which brings me to this, Mr. Ambassador: If steel is so important, why is it that somebody who preceded you as Ambassador from this country to India or someone in one of the predecessor agencies to the Agency for International Development, did not seize upon the idea that steel was important 10 or 12 or 15 years ago? It certainly has not suddenly become important. It has been important all along.

Mr. GALBRAITH. I do not want to be critical of my predecessors. Under preceding administrations, both Republican and Democratic administrations, India had some of the most talented Ambassadors that have ever been sent out of this country—Ellsworth Bunker, John Sherman Cooper, and Chester Bowles. My guess is that some attention by the Ambassador was given to steel. I think Bunker, my immediate predecessor, probably had it somewhat in mind.

The thing crystallized with this project and with the request to us for support for this project.

Mr. FLYNT. Did it crystallize with this project, or did it crystallize after Russia apparently made a success of their venture into the construction of the steelmill?

Mr. GALBRAITH. I think the success of the Russians certainly impressed us; yes.

Mr. FLYNT. Which I appreciate and which I am glad to have. But does that indicate to you that our AID officials have just been walking on a treadmill without accomplishing anything of a major nature?

Mr. GALBRAITH. No; not for a moment. As I have said repeatedly in the course of today's testimony, I consider that India is one of the places in the world where our policy has been most successful, and I consider that our aid in its various forms has been the fundamental factor in that success.

Mr. FLYNT. But in spending $5.1 billion, we have overlooked the one thing that you would put No. 1 priority on; to wit, steel.

Mr. GALBRAITH. I would say we should not do it. "Overlooked" is a word I would not like to use. I have not overlooked it. I will not be accused of that.

Mr. FLYNT. In fairness to you, I think the record should show that you did not go over there until April 1961, and that immediately upon your arrival you became interested in this No. 1 priority of steel.

Mr. CONTE. Before he got there.

Mr. GALBRAITH. No. I became really aware of Bokaro after I got there. I was familiar with the importance of the steel industry well before that time.

Mr. FLYNT. In fairness to you, I want the record to show that you are saying now what you said almost immediately upon your arrival in India, but I do go back to 12 or 15 years prior to that when, evidently, a great many people overlooked the importance of the one commodity to which you now attach No. 1 priority.

Mr. GALBRAITH. As I say, I do not want to seem to be critical, and I might also say the Kaiser Co. and the World Bank loan doubled the Tisco capacity of the Tata Co. It was a World Bank loan but an American firm. This was our first venture into the Indian steel picture. There was an American aspect to it.

Mr. FLYNT. In a private enterprise operation.

Mr. GALBRAITH. Yes. When you say why have we picked out public enterprise, the record should show we have done both. Our first venture there with Kaiser and the World Bank was with Tata, a private firm.

(Off the record.)

Mr. ANDREWS. I understood you to say, Mr. Ambassador, when you went out there in 1959 to gather information for a book, they were talking about a new steelmill.

Mr. GALBRAITH. Yes. I do not think it had a name yet.

Mr. ANDREWS. Any other questions?

I would like to ask this final question, Mr. Ambassador.

We have spent $686,000 to have a report prepared by the United States Steel Corp. in connection with the Bokaro mill. The purpose of that survey and report was to determine the feasibility of building a steelmill at Bokaro. The report points out many reasons that it would be impractical to build the mill. If AID goes ahead and constructs that mill, we have wasted the $686,000 spent for the preparation of the report. Would that be a fair statement?

Mr. GALBRAITH. Mr. Chairman, I would beg respectfully to take issue with you on that, I would say the United States Steel team that went out, in a very competent fashion pointed to the problems that must

be considered and the tasks that must be performed before the mill is a success, but nowhere in this report does the steel study team recommend against the mill or say these problems are insuperable.

Mr. ANDREWS. But they pointed out many reasons why it would be impractical to build the mill at this time.

Mr. GALBRAITH. No, I would not agree with that.

Mr. ANDREWS. That is my interpretation.

Mr. GALBRAITH. My interpretation, based on careful study of this report—I am not implying anybody else has read it less carefully than I—would be that the steel team feels that the plant is practical. As in all things done in India, there are certain tasks that must be performed to make it a success.

Mr. ANDREWS. All right, thank you, Mr. Ambassador. It has been nice to see you.

THURSDAY, AUGUST 15, 1963.

SURVEY OF BOKARO AREA BY UNITED STATES STEEL CORP.

WITNESSES

NORMAN B. OBBARD, EXECUTIVE VICE PRESIDENT, UNITED STATES STEEL CORP.
WILLIAM G. WHYTE
E. R. JACOBSEN
E. S. MacMICHAEL
J. S. TENNANT

Mr. ANDREWS. The committee will come to order.

We have with us this morning Mr. Norman B. Obbard, executive vice president of the United States Steel Corp., and members of his staff.

Mr. Obbard, this committee is making an investigation of the proposed steel mill being considered by the AID agency for construction at Bokaro, India. We have been told that the AID agency employed a survey team from the United States Steel Corp. to make a survey of the Bokaro area with a view of determining whether or not a steel mill could be justified and whether or not there was a need for a steel mill at that place and whether or not there was sufficient of the raw materials that would be needed for the operation of a mill.

We have studied the report made by the survey team from United States Steel and we would like to have the benefit of your good judgment on the subject which is being investigated by this committee.

Do you have a prepared statement that you could make to the committee?

Mr. OBBARD. I have no prepared statement, Mr. Chairman, but I would like to outline briefly what our obligations were under this contract with AID.

Mr. ANDREWS. Do you have with you any members of the team who worked on the survey?

Mr. OBBARD. Yes, sir. Mr. Jacobsen worked on the survey in India and Mr. MacMichael worked on the financial analysis of it.

Mr. ANDREWS. I wish you would tell us, Mr. Obbard, of the experience you have had in the steel industry, what position you presently occupy, how long you have held that position, how long you have been with United States Steel, and what experience you have had.

Mr. OBBARD. Mr. Chairman, I joined United States Steel on June 1, 1926, therefore I have been with them 37 years. I have occupied various positions. I started with American Bridge as engineer and draftsman. I successively became assistant to the vice president of contracting; I was in charge of our shipbuilding division during the war; I became vice president and general contracting manager after the war; and president of American Bridge in 1954. In 1956 I was made administrative vice president of United States Steel in charge of fabricating and manufacturing activities; and in January of 1960 I was made executive vice president international in charge of all of our various oversea activities. In that capacity, naturally, I have traveled through many countries, including India, and have examined in a general way steel operations throughout the world.

Mr. ANDREWS. You have had a very intimate association with the steel business since 1926?

Mr. OBBARD. In various capacities, yes.

Mr. ANDREWS. And I am sure you are familiar with all the problems that arise in connection with the production of steel?

Mr. OBBARD. That is a very broad subject, Mr. Chairman. I am generally familiar with them. I could not claim to be an expert in any particular phase.

Mr. ANDREWS. Now will you discuss with us in your own way the feasibility from all standpoints, including availability of raw materials, transportation, et cetera, and cost of this proposed steel mill at Bokaro, India.

RESPONSIBILITIES AND OBLIGATIONS OF COMPANY UNDER CONTRACT WITH AID

Mr. OBBARD. First, Mr. Chairman, I think I should outline briefly what our responsibilities and obligations were under the contract between us and AID. You are probably familiar with it. It was executed on June 18, 1962, and our obligations were strictly defined.

Mr. ANDREWS. I would like to insert that in the record at this point.

(A copy of the contract follows:)

CONTRACT BETWEEN THE UNITED STATES OF AMERICA AND U.S. STEEL CORPORATION

PIO/T 386-J-21-AD-3-20236

This Contract, entered into the 18th day of June 1962, between the Government of the United States of America, represented by the Contracting Officer executing this contract, and the U.S. Steel Corporation, a corporation duly organized and existing under the laws of the State of New Jersey (hereinafter called "Contractor"), with a principal office located at 525 William Penn Place, Pittsburgh 30, Pennsylvania;

WITNESSETH THAT:

Whereas the Government of India (hereinafter referred to as "Cooperating Government") has requested the UNITED STATES OF AMERICA to provide certain assistance in conducting a technical and economic survey of the projected Bokaro Steel Plant Project, and the UNITED STATES OF AMERICA has undertaken by agreement with said Government to provide such assistance; and

Whereas, in furtherance of the purposes of such agreement, the Agency for International Development (hereinafter called AID), an agency of the UNITED STATES OF AMERICA desires to secure the work and services set forth in Article I herein and the Contractor represents that it is qualified to perform such work and is willing to undertake the same; and

Whereas this negotiated contract is authorized by and executed under the authority of the Foreign Assistance Act of 1961, and Executive Order 10784;

Now, therefore, the parties hereto agree as follows:

ARTICLE I—STATEMENT OF WORK

A. Contractor shall conduct a technoeconomic survey of the projected Indian Steel Mill Project, exercising its best judgment and professional competence, to examine the relevant factors specified in Appendix A, attached hereto and made a part hereof, and such other factors as contractor considers relevant and to prepare and furnish a report thereon as required in paragraph B next below. Contractor shall not be required to perform any services not herein specified.

B. Within nine (9) months after the effective date of this contract, Contractor shall deliver to A.I.D./Washington, ten (10) copies of its report on the survey, which report shall be in the English language. The United States system of weights and measures shall be used throughout the report whenever weights and measures are referred to except that material and product quantities shall be expressed in the metric system.

C. Contractor undertakes to perform the work hereunder with competent personnel, but assumes no responsibility or liability in connection with any actions taken or forborne in reliance upon the report.

ARTICLE II—PAYMENT IN U.S. DOLLARS AND INDIAN RUPEES

A. A.I.D. will pay the Contractor, as consideration for its services hereunder the following amounts in U.S. Dollars:

1. For all work done by Contractor within the U.S. in connection with the study and report thereon, including engineering, accounting, supervision and other expenses incurred and further, including overhead and profit, the fixed price of $510,000.

2. For all work performed in India by Contractor's professional and technical employees and including some Consultants from the United States working under Contractor's subcontracts, a payment in lieu of compensation and all direct and indirect employment expenses for such persons, the sum of $3,000 per man-month, fractions prorated. Such payment will be made from the date of leaving his home or place of employment in the U.S. until return to such place except that travel time to and from India shall be limited to the time required to complete such travel by the most direct and expeditious public transportation and except for full days when such employees or consultants voluntarily do not make themselves available for performance of their assigned duties. Further, Contractor agrees to promptly advise and consult with the Contracting Officer whenever any of its employees or consultants in India are unable to perform their assigned duties by reason of illness or other incapacitation with a view to determining whether they should promptly return to the U.S. Reimburseable costs under this Item 2 shall not exceed the sum of $120,000 without the prior written approval of the Contracting Officer which approval must be sought and obtained before any such excess costs are incurred.

3. The net actual cost to Contractor for the services of Consultants from the United States employed under subcontracts hereunder over and above any amounts paid to Contractor hereunder for or on account of subcontractor Consultants. Reimbursement for such cost shall in no event exceed the sum of $30,000.

B. A.I.D. will pay the Contractor as further consideration for its services hereunder the following items in Indian Rupees (Rs.) except that in the case of travel, A.I.D. or U.S. A.I.D. may arrange for the issuance to Contractor of the required travel tickets and pay for such tickets directly to the carrier. The cost to A.I.D. for all such items shall not exceed the Rupee equivalent of $90,000 without the prior written approval of the Contracting Office which approval must be sought and obtained before any such excess costs are incurred.

1. For and in lieu of subsistence for each employee and consultant and in lieu of all personal costs incurred by such employees and consultants while in India but not beyond the termination of his assignment at a rate per month, the equivalent of $600.00.

2. For each employee and consultant assigned to work in India under this contract the cost of one round trip first class air transportation ticket (jet if available) from their home or place of employment in the U.S. to India and return, and the cost of up to 25 pounds of excess baggage.

3. For travel by wives of each employee and consultant assigned to work in India for a period of three months or more, the cost of one round trip first class air transportation ticket (jet if available) from the home or the place of employment of their husband to India and return, provided that the wife's journey to India shall not take place earlier than one month after the husband's departure for India under this contract. Transportation for wives under this item is intended for those authorized wives who plan to remain in India with their respective husbands for whichever is longer, one month or 50% of the remainder of her husband's assignment in India.

4. For travel by employees and consultants within India as necessary and required for performance of work under this contract, the actual cost of such travel.

5. For work done by Indian firms or persons under subcontracts, the actual cost of such subcontracts provided Contractor shall obtain the prior approval of the US A.I.D./India for all such subcontracts.

ARTICLE III—METHOD OF PAYMENT AND DOCUMENTATION

A. *U.S. Dollars:*

1. Payment of the fixed price of $510,000. will be made as follows: Seventy Thousand Dollars ($70,000) per month for six (6) months, commencing thirty (30) days after the end of the first month in which work is performed in India. The balance of Ninety Thousand Dollars ($90,000) will be paid thirty (30) days after completion of the work and delivery of the report required hereunder. Payment under Item A.2 of Article II will be made each month after services have been performed in India and within thirty (30) days after receipt of the required documentation. Payment under Item A.3 of Article II will be made after all services in India have been performed and within thirty (30) days after receipt of the required documentation.

2. Claims for payment of the aforesaid U.S. Dollar amounts must be submitted to the Office of the Controller, Agency for International Development, Washington 25, D.C., and accompanied by the documents specified in this paragraph as appropriate. Each document must be identified by the appropriate A.I.D. contract number.

(a) Voucher SF–1034, executed in original and three (3) copies.

(b) Contractor's detailed certified invoice, in original and one (1) copy indicating fully for each amount claimed the paragraph of Article II of the contract under which payment is to be made. With respect to payments claimed under Item A.2. of Article II, the invoice shall list the names of the employees and consultants and show for each the dates in authorized international travel and assigned work status and shall be accompanied by certification by the employees and consultants that for specified dates they were in authorized international travel and available work status, such certificates to be countersigned by Contractor's Chief of Party. With respect to payments claimed under Item A.3 of Article II, the invoice shall set forth specifically for each named subcontractor the net cost to Contractor for each subcontract.

B. *Indian Rupees:*

Those contract costs which are specified as Indian Rupee costs in Article IIB, if not furnished in kind by A.I.D./Washington or US A.I.D. shall be paid to the Contractor in a manner adopted to the local situation and as agreed to by A.I.D. or US A.I.D. and the Contractor. The documentation for such costs shall be on such forms and in such manner as US A.I.D. shall prescribe.

ARTICLE IV—SPECIAL AND GENERAL PROVISION

The parties hereto agree to be bound by the special provisions set forth herein next below and by all of the General Provisions set forth in "Appendix B; General Provisions" attached hereto and made a part hereof.

A. *Subcontracts:* In no event shall any subcontract under this contract be on a cost-plus-a-percentage-of-cost basis.

B. *Entire Agreement:* This contract contains contains the entire agreement between the parties hereto and all prior discussions, proposals, correspondence and understanding relative thereto have been superseded hereby.

IN WITNESS WHEREOF, the parties hereto have executed this Contract on the day and year first hereinabove written which is the date of signing by the last signatory hereto.

UNITED STATES OF AMERICA,
By:
Title. NESA Contracting Officer.
Date: 6-15-62.
UNITED STATES STEEL CORPORATION,
By: N. B. OBBARD.
Title: Executive Vice President U.S. Steel.
Date: 6-18-62.

I, M. L. Heald, certify that I am the assistant secretary of the Corporation named as Contractor herein; that N. B. Obbard, who signed this contract on behalf of the Contractor, was then Executive Vice President of said Corporation; that said contract was duly signed for and in behalf of said Corporation by authority of its governing body, and is within the scope of its corporate powers.

In Witness Whereof, I have hereunto affixed my hand and seal of said corporation, this 18th day of June, 1962.

[CORPORATE SEAL]

M. L. HEALD,
Assistant Secretary.

(Appendix A to Contract AID/nesa-21)

FACTORS FOR CONSIDERATION AND OUTLINE OF REPORT ON PROJECTED INDIAN STEEL MILL PROJECT

I. MARKETS FOR STEEL

a. Total Indian *domestic market* for steel products:
1. In start-up year of Bokaro facility.
2. At end of break-in period (3 years later).
3. In period beginning 5 years after break-in until 1975.

The above broken down into *major product groups and major consuming areas.*

b. Possible *export* markets for Indian steel products:
1. In start-up year of Bokaro facility.
2. At end of break-in period (3 years later).
3. In period beginning 5 years after break-in until 1975.

The above broken down into *major product groups* and *major consuming areas.*

(The comprehensiveness of a., and b., above will depend on the nature and accuracy of available statistical information.)

c. *Total market* for steel products, giving anticipated product mix for the above three periods.

d. Explanation of *method*, both physical and statistical, used in arriving at above forecast.
1. Sources used.
2. Other means employed.

II. SUPPLY OF STEEL

a. Share of total market (Paragraph I.c.), that can be supplied by existing Indian steel facilities (and planned expansions) in the three periods discussed.

III. UNFILLED DEMAND FOR STEEL

a. Determination of total market less available and foreseeable supply.
b. Development of a production plan and product mix which will logically fit into modern producing units that could supply the unfilled demand for steel in the three periods referred to in Part I—Markets for Steel.
c. Confirmation of mix demanded and ascertainment of product specifications through consumer contacts, as basis for mill design.
d. Ascertainment of present prices in India for products considered.

IV. RAW MATERIALS

a. Survey available sources of:
1. Iron Ore.
2. Coal.
3. Limestone.
4. Manganese.
5. Scrap.
to determine:
(*a*) Location.
(*b*) Adequacy of production facilities.
(*c*) Quality.
(*d*) Reserves.
(*e*) Adequacy of transportation facilities to proposed site.
b. Comment and/or recommendation on:
1. Selection of most favorable sources of raw materials.
2. Facility improvements required to support proposed plant with raw materials.

V. PLANT LOCATION

a. Confirmation that Bokaro is a suitable site for the steel mill in light of:
1. Market locations, including product transportation costs.
2. Raw material locations.
3. Site factors such as:
(*a*) Topography.
(*b*) Soil conditions.
(*c*) Water.
(*d*) Power.
(*e*) Fuel.
(*f*) Labor and housing.
(*g*) Climate.

VI. THE FACILITY

a. With regard to the facility, the techno-economic report will incorporate recommended:
1. Preparation of plant layout and preliminary engineering.
2. Flow diagrams.
3. Raw materials handling and, if necessary, beneficiation facilities—brief description with capacities.
4. Iron making—brief description with capacities.
5. Steel making—brief description with capacities.
6. Rolling mills—brief description with capacities—separately for various products.
7. Requirements for power and services.
8. Requirements for housing sanitation and ancillary facilities.
9. Requirement for training and management.
10. Schedule of construction.
b. Recommended capacities and product mix:
The report will appraise the sizes and tonnages of the initial line of products for the plant for the first stage production of approximately 1 million metric tons ingot steel output, bearing in mind,

i. the optimum capacity of plant and equipment selected;

ii. probable subsequent expansion of the planned production integrated into existing operations;

iii. probable future demand in India based on an examination of current consumption and anticipated developments; and

iv. transportation and other facilities necessary to cope with such levels of production.

It will recommend capacities and product mix,

i. for the first 5 years after the break-in period, and

ii. for the period following the above period until 1975 (possible second stage expansion).

VII. INVESTMENT COSTS

a. The cost of building the facility to be recommended under VI above will be broken down into costs that can be defrayed in Rupees and those to be paid in U.S. dollars. These will further be broken down into costs of:

1. Preparation of site (infra-structure).
2. Equipment.
3. Construction.
4. Contingency reserves.
5. Company formation.
6. General, prior to start-up:
   (*a*) Engineering.
   (*b*) Recruitment and training of labor; of management; formation of sales organization, etc.
   (*c*) Other owner's expenses (wages and salaries, etc.).
   (*d*) Interest on loans during construction.
7. Working capital.
8. Construction outside the plant fence (housing, etc.).

b. Total estimated cost to start of operations.

c. Scheduling of expenditures.

VIII. PRODUCT COST

a. The expected *operating cost components* will be set out for the following:

1. Raw materials—by sources, qualities, quantities and cost:
   (*a*) Ore.
   (*b*) Coke.
   (*c*) Stone.
   (*d*) Other.
2. Operating parts and supplies, by sources, quantities and cost.
3. Fuel and power, by sources, quantities and cost.
4. Labor, by quantities and cost.
5. Management, by quantities and cost.
6. Other operating expenses (e.g. rental payments).
7. Depreciation.

b. Expected *product costs* will be developed on the basis of the above for:

1. Iron.
2. Steel, ingots.
3. Steel, semi-finished.
4. Steel, finished, according to the various product categories that will make up the product mix.
5. Byproducts.

IX. CASH FLOW ANALYSIS

a. Full *Cash Flow* tables will be prepared, based on expected production costs plus sales and overhead expense and the expected proceeds from the sale of products in successive years at a constant level of costs and sales prices. Selected examples will also show the effects on cash flow of various adjustments in the selling price of the product mix. These figures will show the effect of allowance for depreciation, interest, income tax and repayment of any borrowings and cash available for technical replacements.

b. Expected *Profit and Loss* tables will also be prepared. The tables will be carried through for as many years as will be required for recovery of the investment and will indicate the expected years to recovery.

(Appendix B to Contract AID/nesa-21)

General Provisions

1. DEFINITIONS

As used throughout this contract the following terms shall have the meaning as set forth below:

(a) The term "Contracting Officer" means the person excuting this contract on behalf of the United States Government, and any other AID employee who is a properly designated Contracting Officer, provided, however, that in the case of contracts executed by an AID Washington Contracting Officer, the term shall mean an AID Washington Contracting Officer except as otherwise notified to Contractor in writing by an AID Washington Contracting Officer.

(b) The term "Cooperating Country" means the country receiving assistance from the United States and in which services are to be rendered under this contract.

(c) The term "US AID" means the United States AID Mission to, or principal AID office in, the Cooperating Country.

(d) The term "US AID Director" means the Director of the US AID, the Deputy Director of the US AID or a person duly authorized to perform the functions of the Director or Deputy Director of the US AID.

(e) The terms "authorized by AID", "AID approval", "approval of AID" and similar terms mean approval by the Contracting Officer.

(f) The term "head of the agency" or "Secretary" means the Administrator of the Agency for International Development; and the term "his duly authorized representative" means any person or persons or board (other than the Contracting Officer) authorized to act for him.

2. MODIFICATION OR AMENDMENT

No modifications or amendments shall be made to this contract except as provided in the "Changes" clause (see clause 3 below) and/or as may be mutually agreed upon in writing by the Contractor and the Contracting Officer.

3. CHANGES

(a) The Contracting Officer may at any time, by a written order, and without notice to the sureties, if any, make changes, within the general scope of this contract, in any one or more of the following: (i) statement of work or services, (ii) place of delivery, or acceptance, and (iii) the amount of logistic support and property of the U. S. or Cooperating Government to be furnished or made available to the Contractor for performance of this contract. If any such change causes an increase or decrease in the cost of, or the time required for performance of this contract, or otherwise affects any other provision of this contract, whether changed or not changed by any such order, an equitable adjustment shall be made (i) in the amount of the fixed dollar price to be paid to the Contractor, or the time for completion, or both and (ii) in such other provisions of the contract as may be so affected, and the contract shall be modified in writing accordingly. Any claim by the Contractor for adjustment under this clause must be asserted within sixty (60) days from the date of receipt by the Contractor of the notification of change: Provided, however, that the Contracting Officer, if he decides that there are special facts justifying such action, may receive and act upon any such claim asserted at any time prior to final payment under this contract. Failure to agree to any adjustment shall be a dispute concerning a question of fact within the meaning of the clause of this contract entitled "Disputes". However, nothing in this clause shall excuse the Contractor from proceeding with the contract as changed.

(b) If this contract is executed by an AID/Washington Contracting Officer, valid change orders may be issued olny by an AID/Washington Contracting Officer, or such other person as he may in writing designate for such purpose.

4. CONTRACTOR—U.S. AID RELATIONSHIPS

Contractor acknowledges that this contract is an important part of the U. S. Foreign Assistance Program and agrees that Contractor's operations and those of its employees and consultants in the Cooperating Country will be carried out in such a manner as to be fully commensurate with the responsibilities which

this entails. Although Contractor will be responsible for all professional and technical details of the work called for by this contract, its employees and consultants shall be under the general policy guidance of the U.S. AID Director.

5. CONTRACTOR, EMPLOYEES AND CONSULTANTS

(a) In all work and at all times covered by this contract, Contractor shall maintain its status as an independent Contractor and shall exercise complete control over its employees and consultants. Contractor and its employees and consultants shall conform to all applicable laws, regulations and ordinances promulgated by legally constituted authorities of the Cooperating Country and shall promptly correct any violations thereof called to their attention.

(b) Contractor shall be responsible for the professional and technical competence of its employees and consultants and will use its best efforts to select and employ for work in the Cooperating Country only those persons who in its judgment will be reliable and most likely to perform satisfactorily the terms of their employment agreements with Contractor, and who will comply with local laws, respect the local customs and conform to a high standard of moral and ethical conduct. Contractor shall furnish to AID on forms provided by AID, biographical information, including citizenship, experience, references and character information concerning all proposed employees and consultants prior to their assignment to work in the Cooperating Country, and with respect to all such information Contractor shall take such measures as are reasonable to assure the accuracy and correctness thereof. No person shall be assigned, for overseas work under this contract, nor shall any such person depart for the Cooperating Country or begin work in the Cooperating Country prior to AID's approval, notice of which shall first be given in writing to Contractor.

(c) Other than for work to be performed under this contract, no employee or consultant shall engage, directly or indirectly, either in his own name or in the name or through the agency of another person or entity, in any business, profession or occupation in the Cooperating Country; nor shall he make loans or investment to or in any business, profession or occupation in the Cooperating Country.

6. WORKMEN'S COMPENSATION INSURANCE

(a) Except as this contract may provide exclusively for the furnishing of materials or supplies, the Contractor before commencing performance under this contract shall provide and thereafter maintain Workmen's Compensation Insurance or security as is required by the Defense Base Act, as amended (United States Public Law 208, 77th Congress, as amended, 42 U.S.C. 1651 et seq.), for all employees engaged in performance of work under the contract outside the continental United States who are or were hired in the United States or who are American citizens or bona fide residents of the United States.

(b) For all other employees of the Contractors who are engaged in performance of work under the contract outside the continental United States (other than those who are or were hired in the United States or who are American citizens or bona fide residents of the United States), the Contractor shall, pursuant to the applicable law of the country in which such work is performed, provide security for compensation benefits for injury to or death of such employees sustained in the course of such employment, or in the absence of such law, adequate employer's liability insurance.

(c) In the event Contractor employs or contemplates the employment of any person in the category and for the purpose set forth in paragraph (b) above, he agrees to notify the Contracting Officer in order that a waiver of the application of the Defense Base Act may be obtained with respect to such person or persons.

(d) The Contractor further agrees to insert the provisions of this clause, including this paragraph (d), in all subcontracts or subordinate contracts hereunder, except subcontracts or subordinate contracts exclusively for the furnishing of materials or supplies.

7. EXAMINATION OF RECORDS

(a) The Contractor agrees that the Comptroller General of the United States or any of his duly authorized representatives shall until the expiration of three years after final payment under this contract, have access to and the right to examine any directly pertinent books, documents, papers, and records of the Contractor involving transactions related to this contract.

(b) The Contractor further agrees to include in all his subcontracts hereunder a provision to the effect that the subcontractor agrees that the Comptroller General of the United States or any of his duly authorized representatives shall, until the expiration of three years after final payment under the subcontract, have access to and the right to examine any directly pertinent books, documents, papers, and records of such subcontractor, involving transactions related to the subcontract. The term "subcontract" as used in this clause excludes (i) purchase orders not exceeding $2,500 and (ii) subcontracts or purchase orders for public utility services at rates established for uniform applicability to the general public.

8. REPORTS AND INFORMATION

All information gathered under this contract by Contractor and all reports and recommendations hereunder shall be treated as confidential by the Contractor and shall not, without AID's written approval, be made available to any person, party or government other than AID, except as otherwise expressly provided in the contract. Contractor shall prepare and submit such interim and final reports as provided in Article I of the contract.

9. DISPUTES

(a) Except as otherwise provided in this contract, any dispute concerning a question of fact arising under this contract which is not disposed of by agreement shall be decided by the Contracting Officer, who shall reduce his decision to writing and mail or otherwise furnish a copy thereof to the Contractor. The decision of the Contracting Officer shall be final and conclusive unless within 30 days from the date of receipt of such copy, the Contractor mails or otherwise furnishes to the Contracting Officer a written appeal addressed to the Secretary. The decision of the Secretary or his duly authorized representative for the determination of such appeals shall be final and conclusive unless determined by a court of competent jursidiction to have been fraudulent or capricious, or arbitrary, or so grossly erroneous as necessarily to imply bad faith, or not supported by substantial evidence. In connection with any appeal proceeding under this clause, the Contractor shall be afforded an opportunity to be heard and to offer evidence in support of its appeal. Pending final decision of a dispute hereunder, the Contractor shall proceed diligently with the performance of the contract and in accordance with the Contracting Officer's decision.

(b) This "Disputes" clause does not preclude consideration of law questions in connection with decisions provided for in paragraph (a) above: Provided, That nothing in this contract shall be construed as making final the decision of any administrative official, representative, or board on a question of law.

10. ASSIGNMENT OF CLAIMS

(a) Pursuant to the provisions of the Assignment of Claims Act of 1940, as emended (31 U.S. Code 203, 41 U.S. Code 15), if this contract provides for payments aggregating $1,000 or more, claims for moneys due or to become due the Contractor from the Government under this contract may be assigned to a bank, trust company, or other financing institution within the United States, including any Federal lending agency, and may thereafter be further assigned and reassigned to any such institution. Any such assignment or reassignment shall cover all dollar amounts payable under this contract by AID/Washington and not already paid, and shall not be made to more than one party, except that any such assignment or reassignment may be made to one party as agent or trustee for two or more parties participating in such financing.

(b) In no event shall copies of this contract or of any plans, specifications, or other similar documents relating to work under this contract, if marked "Top Secret," "Secret," "Confidential," or "Official Use Only," to be furnished to any assignee of any claim arising under this contract or to any other person not entitled to receive the same: Provided, That a copy of any part or all of this contract so marked may be furnished, or any information contained therein may be disclosed, to such assignee upon the prior written authorization of the Contracting Officer.

11. NOTICES

Any notice given by any of the parties hereunder, shall be sufficient only if in writing and delivered in person or sent by telegraph, or cable, or registered mail as follows:

To AID: Administrator, Agency for International Development, Washington 25, D.C. Attention: NESA Contracting Officer;

To Contractor: At Contractor's address shown in the opening paragraph of this contract;

or to such other address as either of such parties shall designate by notice given as herein required. Notices hereunder shall be effective when delivered.

12. NONDISCRIMINATION IN EMPLOYMENT

In connection with the performance of work under this contract, the Contractor agrees as follows:

(a) The Contractor will not discriminate against any employee or applicant for employment because of race, creed, color, or national origin. The Contractor will take affirmative action to ensure that applicants are employed, and that employees are treated during employment, without regard to their race, creed, color, or national origin. Such action shall include, but not be limited to, the following: employment, upgrading, demotion or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the contracting officer setting forth the provisions of this Nondiscrimination clause.

(b) The Contractor will, in all solicitations or advertisements for employees placed by or on behalf of the Contractor, state that all qualified applicants will receive consideration for employment without regard to race, creed, color, or national origin.

(c) The Contractor will send to each labor union or representative of workers with which he has a collective bargaining agreement or other contract or understanding, a notice, to be provided by the agency Contracting Officer, advising the said labor union or workers' representative of the Contractor's commitments under this Nondiscrimination clause, and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

(d) The Contractor will comply with all provisions of Executive Order No. 10925 of March 6, 1961, and of the rules, regulations, and relevant orders of the President's Committee on Equal Employment Opportunity created thereby.

(e) The Contractor will furnish all information and reports required by Executive Order No. 10925 of March 6, 1961, and by the rules, regulations, and orders of the said Committee, or pursuant thereto, and will permit access to his books, records, and accounts by the contracting agency and the Committee for purposes of investigation to ascertain compliance with such rules, regulations, and orders.

(f) In the event of the Contractor's noncompliance with the Nondiscrimination clause of this contract or with any of the said rules, regulations, or orders, this contract may be cancelled in whole or in part and the Contractor may be declared ineligible for further government contracts in accordance with procedures authorized in Executive Order No. 10925 of March 6, 1961, and such other sanctions may be imposed and remedies invoked as provided in the said Executive Order or by rule, regulation, or order of the President's Committee on Equal Employment Opportunity, or as otherwise provided by law.

(g) The Contractor will include the provisions of the foregoing paragraphs (a) through (f) in every subcontract or purchase order unless exempted by rules, regulations, or orders of the President's Committee on Equal Employment Opportunity issued pursuant to section 303 of Executive Order No. 10925 of March 6, 1961, so that such provisions will be binding upon each subcontractor or vendor. The Contractor will take such action with respect to any subcontract or purchase order as the contracting agency may direct as a means of enforcing such provisions, including sanctions for noncompliance: Provided, however, That in the event the Contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such direction by the contracting agency, the Contractor may request the United States to enter into such litigation to protect the interests of the United States.

13. COVENANT AGAINST CONTINGENT FEES

The Contractor warrants that no person or selling agency has been employed or retained to solicit or secure this contract upon an agreement or understanding for a commission, percentage, brokerage, or contingent fee, excepting bona

fide employees or bona fide established commercial or selling agencies maintained by the Contractor for the purpose of securing business. For breach or violation of this warranty, AID shall have the right to annul this contract without liability or in its discretion to deduct from the contract price or consideration, or otherwise recover, the full amount of such commission, percentage, brokerage, or contingent fee.

14. OFFICIALS NOT TO BENEFIT

No member of the United States Congress, or United States Resident Commissioner, shall be admitted to any share or part of this contract, or to any benefit that may arise therefrom; but this provision shall not be construed to extend to this contract if made with a corporation for its general benefit.

15. GRATUITIES

(a) AID may, by written notice to the Contractor, terminate the right of the Contractor to proceed under this contract if it is found, after notice and hearing by the Administrator of AID or his duly authorized representative, that gratuities (in the form of gifts, entertainment, or otherwise) were offered or given by the Contractor, or any agent or representative of the Contractor to any officer or employee of the U.S. Government with a view toward securing a contract or securing favorable treatment with respect to the awarding or amending, or the making of any determinations with respect to the performing of such contract; provided, that the existence of the facts upon which the Administrator of AID or his duly authorized representative makes such findings shall be in issue and may be reviewed in any competent court.

(b) In the event this contract is terminated as provided in paragraph (a) hereof, AID shall be entitled to pursue the same remedies against the Contractor as it could pursue in the event of a breach of the contract by the Contractor. The rights and remedies of AID provided in this clause shall not be exclusive and are in addition to any other rights and remedies provided by law or under this contract.

16. TERMINATION FOR DEFAULT

(a) AID may by written notice to the Contractor terminate this contract for default in any one of the circumstances set forth in paragraph (b). Such termination shall be effective in the manner and upon the date specified in such notice and AID shall not be required after such date to make any further payments to the Contractor except as expressly provided below.

(b) The contract may be terminated for default if—

(i) The Contractor fails to perform the services within the time specified in Article I–B, or

(ii) The Contractor refuses or fails to prosecute the work, or any separable part hereof, with such diligence as will insure its completion within the fixed time for completion specified in Article I–B, or the Contractor fails to perform any of the other provisions of this contract, and in either of such events does not cure such failure within 10 days (or such longer period as the Contracting Officer may authorize in writing) after receipt of notice from the Contracting Officer specifying such failure;

Provided, that the performance of the work shall not be terminated for default because of any delays in the completion of work due to force majeure as defined in Clause 18, if the Contractor shall promptly and in any event within thirty (30) days from the beginning of any such delay notify the Contracting Officer in writing of the causes of delay. Upon receipt of such notice, the Contracting Officer shall ascertain the facts and the extent of the delay and extend the time for completing the work specified in Article I–B or otherwise excuse the delay when in his judgment the findings of fact justify such an extension or excusing, and his findings of fact thereon shall be final and conclusive on the parties hereto, subject only to appeal in accordance with the clause entitled "Disputes".

(c) In the event AID terminates this contract as provided in paragraph (a) of this clause, AID may procure, upon such terms and in such manner as the Contracting Officer may deem appropriate, services similar to these so terminated, and the Contractor shall be liable to AID for any excess costs of such similar services.

(d) If this contract is terminated as provided in paragraph (a) of this clause:

(i) AID, in addition to any other rights provided in this clause, may require the Contractor to transfer title and deliver to AID, in the manner and

to the extent directed by the Contracting Officer, any completed or partially completed plans, drawings, studies, reports, information and other property (including contract rights) which the Contractor has specifically produced or specifically acquired for the performance of this contract.

(ii) AID shall reimburse the Contractor or allow credit in accordance with the terms of the contract for all allowable costs, if any, specified in Articles II–A–2, II–A–3 and II–B of the contract which are incurred prior to termination hereunder and which have not been previously reimbursed or otherwise discharged. AID may withhold from amounts due the Contractor hereunder, such sums as the Contracting Officer determines to be necessary to protect the AID against loss because of any outstanding claims against the Contractor.

(e) If, after notice of termination of this contract under the provisions of paragraph (a) of this clause, it is determined that the failure to perform this contract is due to force majeure as defined in Clause 18 such notice of default shall be deemed to have been issued pursuant to clause 17 entitled "Termination for Convenience", and the rights and obligations of the parties hereto shall in such event be governed by such clause.

17. TERMINATION FOR CONVENIENCE

Notice of Termination for Convenience.—The Contracting Officer may at any time terminate this contract for the convenience of AID, by written notice ("Notice of Termination") to the Contractor stating the ground for termination. Such termination shall be effective in the manner and upon the date specified in the Notice of Termination and AID shall not be required after such date to make any further payments to the Contractor except as expressly provided below. The giving of Notice of Termination shall be without prejudice to any claims which AID may have against the Contractor.

(b) After receipt of a Notice of Termination, and except as otherwise directed by the Contracting Officer, the Contractor shall:

(i) stop work under the contract on the date and to the extent specified in the Notice of Termination;

(ii) place no further orders or subcontracts for materials, services or facilities except to the extent specified in the Notice of Termination;

(iii) terminate all orders and subcontracts except to the extent specified in the Notice of Termination;

(iv) assign to AID, in the manner, at the times, and to the extent directed by the Contracting Officer, all of the right, title and interest of the Contractor under the orders and subcontracts so terminated, in which case AID shall have the right, in its discretion, to settle or pay any or all claims arising out of the termination of such orders and subcontracts;

(v) settle all outstanding liabilities and all claims arising out of such termination of orders and subcontracts, with the approval or ratification of the Contracting Officer, to the extent he may require, which approval or ratification shall be final for all the purposes of this clause; and

(vi) transfer title and deliver to AID, in the manner, at the times, and to the extent, if any directed by the Contracting Officer the completed or partially completed plans, drawings, studies, reports, information or other property (including contract rights) which, if the contract had been completed, would have been required to be furnished to AID.

(c) After receipt of a Notice of Termination, the Contractor shall submit to the Contracting Officer its termination claim, in the form and with certification prescribed by the Contracting Officer. Such claim shall be submitted promptly but in no event later than one year from the effective date of termination, unless one or more extensions in writing are granted by the Contracting Officer, upon request of the Contractor made in writing within such one year period or authorized extension thereof. However, if the Contracting Officer determines that the facts justify such action, he may receive and act upon any such termination claim at any time after such one year period or any extension thereof. Upon failure of the Contractor to submit its termination claim within the time allowed, the Contracting Officer may determine, on the basis of information available to him, the amount, if any, due to the Contractor by reason of the termination and shall thereunder pay to the Contractor the amount so determined.

(d) Subject to the provisions of paragraph (c), the Contractor and the Contracting Officer may agree upon the whole or any part of the amount or amounts, if any, to be paid to the Contractor by reason of the termination of the contract pursuant to this clause, which amount or amounts may include a reasonable allowance for profit on work done; provided that such agreed amount or amounts, exclusive of settlement costs, shall not exceed the total contract price specified in Article II–A–1 as reduced by the amount of payments to the Contractor theretofore made pursuant to Article III–A–1 and the amount of all allowable costs specified in Articles II–A–2, II–A–3 and II–B of the contract which are incurred prior to termination hereunder and which have not been previously reimbursed or otherwise discharged. The contract shall be amended accordingly, and the Contractor shall be paid the agreed amount. Failure to agree on such amount shall be a dispute concerning a question of fact within the meaning of the clause of this contract entitled "Disputes."

(e) Any dispute arising out of the termination of this contract under this clause shall be decided in accordance with the procedure prescribed in the clause of this contract entitled "Disputes."

18. FORCE MAJEURE

(a) *Definition.*—Force Majeure means unforeseeable causes beyond the control and without the fault or negligence of the Contractor, including but not restricted to, acts of God, or of the public enemy, acts of the U.S. or Cooperating Government in either their sovereign or contractual capacity, acts of another Contractor in the performance of a contract with the said Governments, fires, floods, epidemics, quarantine restrictions, strikes, freight embargoes, and unusually severe weather or delays of subcontractors due to such causes.

Mr. OBBARD. Briefly, it required us to analyze the projected market for steel in India by major product groups and major consumer areas; to explore the export markets; and to analyze the Indian requirements in the startup years at Bokaro.

We were then asked to determine what share of the total market could be supplied by the existing steel facilities, including their planned expansions in the three periods we were requested to survey.

From this information we were requested to develop a product mix for Bokaro that would be indicated by Indian market conditions. We were then asked to survey the raw materials that would be available to Bokaro, to determine the adequacy of these raw materials as to location, quality, reserves, and transportation facilities.

We were next asked to confirm that Bokaro would be a suitable site for the projected steel plant from the point of view of markets, raw materials, and the physical characteristics of the site.

We were asked to examine the type of plant, the facilities, capacities, and the product mix for a plant at Bokaro for expansion in stages through 1975.

Based on this plan we were required to develop capital costs, operating costs, product costs, and the cash flow analysis which would show the financial results in the operation of the plant.

We would like to call your attention to the fact that our contract states we are to conduct a technical and economic survey of the projected Bokaro steel plant project. In the appendix to the contract there are spelled out the factors for consideration, and it refers throughout to the Bokaro site.

If I may, I will use metric tons in answering any questions because those are the terms under which the report is made. A metric ton, as you know, is almost exactly 10 percent more than the regular U.S. net ton.

Also, I would like to use dollars, and where rupees are used they are converted at 4.762 rupees to the dollar, which is about the current rate.

Mr. ANDREWS. What is that rate?

Mr. OBBARD. 4.762 rupees to the dollar. That is also mentioned in the report.

With that I would like to say that the report has been very, very carefully prepared. We knew it was a matter of great importance and we made every effort to make it factual and entirely supportable.

I would be glad to answer any questions you might have on it.

Mr. ANDREWS. Mr. Obbard, is it the recommendation of United States Steel that the U.S. Government should finance the proposed Bokaro steel mill?

Mr. OBBARD. No, Mr. Chairman. We made no recommendation. Our contract did not require us to make a recommendation but simply to set forth the pertinent facts for the use of AID in making that determination themselves.

Mr. ANDREWS. You are familiar with the report made by the investigating team?

Mr. OBBARD. Yes, sir.

Mr. ANDREWS. Based on your experience as a man who has served many years in the steel industry, would you say that the information revealed in the report would justify the expenditure of approximately $1.7 billion for the construction of a steel mill at Bokaro, India?

Mr. OBBARD. Mr. Chairman, I could not properly answer that question. This report has been made under the specific requirements of our contract. The justification for building the mill would be a political, financial, and economic matter which we are not really prepared to answer.

Mr. ANDREWS. Assuming that political conditions were healthy for private investment in India, would United States Steel be willing to risk its capital for this investment?

Mr. OBBARD. If we made a study for our own investment purposes, Mr. Chairman, it would be a different type of study.

Mr. ANDREWS. Would you explain that statement?

Mr. OBBARD. There are many factors that we might look into, such as alternate sites; we certainly would look for Indian partners in such a matter; we would look for some understandings with the Indian Government as to their future policies in connection with investments of that nature; and we would make a study in considerably more breadth, I would not say depth, but more breadth than this specific study.

Mr. ANDREWS. When Mr. Bell, the Administrator of the AID Agency, was before the committee recently, Mr. Passman asked him this question, which is shown on page 41 of part III of the hearings:

> Mr. PASSMAN. Is United States Steel willing to go in and build it (speaking of the Bokaro plant)?
>
> Mr. BELL. They may be willing to build it if somebody else pays the bill.
>
> Mr. PASSMAN. Will they risk their own capital?
>
> Mr. BELL. No, sir, they will not.

Do you care to comment on that colloquy between Mr. Bell, Administrator of the AID agency, and Mr. Passman, the chairman of this subcommittee?

Mr. OBBARD. Well, now, Mr. Chairman, that, as I see it, is really two questions: First, whether we would be willing to build it, shall I say, on somebody else's money; and second, would we be willing to put our own money into such a mill.

Mr. ANDREWS. There is quite a difference between those two questions.

Mr. OBBARD. Yes, sir.

Mr. ANDREWS. The easiest thing in the world to do is to spend somebody else's money.

Mr. OBBARD. Well, it is not so easy. I do not think anyone should conclude that this is an easy or simple thing to build, and we have by no means concluded that if it were built by other moneys that we would be in a position to do the work. That would depend on business conditions, the number of men available, and many other factors.

REQUIREMENT FOR STEEL IN INDIA

Mr. ANDREWS. In your opinion, based on information contained in the report, are there requirements for additional steel in India and in that area of the world?

Mr. OBBARD. Based on reasonable assumptions, Mr. Chairman, which are set forth in our study—and reasonable assumptions are a continuation of aid of some sort to India and of a reasonable growth, which has been estimated at somewhat less than the Indian third 5-year plan——

Mr. Andrews. They are now in the third year of the third 5-year plan?

Mr. OBBARD. That is correct, and they are not reaching the expectations that were held out at the beginning of the third 5-year plan, which had a very rapid rate of increase.

I think perhaps if you will refer to our report, volume I, we have a chart showing the growth. On pages 22 and 24 are various charts showing the rate of increase projected.

Mr. ANDREWS. And you say the rate is not as rapid as had been anticipated?

Mr. OBBARD. In general we have projected the present rate which was achieved during the second 5-year plan on in order to arrive at a reasonable forecast of future steel requirements. That is somewhat less than the Indian forecast, but it nevertheless shows that provided progress goes forward and there are no major political upsets or wars, that there will be a need for additional capacity.

Mr. ANDREWS. Do you think, from your personal knowledge of the conditions in India and from the information that you have obtained from the survey and report, that the requirement for steel in India and in that area of the world could be met by expansion of production in the existing five mills that are operating in India today cheaper than by the construction of the proposed $1.7 billion mill at Bokaro?

Mr. OBBARD. Mr. Chairman, that is a matter which we were asked under our contract to investigate only to the extent of the present planned future expansions of the, I think, five major existing steel mills. We were not asked to study the comparative economics of expansion of present mills as against construction of a new mill.

Mr. ANDREWS. So you have no opinion that you could give the committee in answer to that question?

Mr. OBBARD. No, sir.

AVAILABILITY OF RAW MATERIALS

Mr. ANDREWS. With reference to the availability of raw materials, all types of raw materials, needed in the production of steel, and considering the availability of those materials in the Bokaro area, what is your opinion, based both on your personal knowledge and on the information revealed in the report, as to the availability of raw materials and the cost of putting them at the plant at Bokaro?

Mr. OBBARD. Mr. Chairman, we were given to understand, when contracting to make this study, that the question of raw materials had been resolved by the Indian authorities. When our survey team arrived—and of course to include a complete raw material survey in our contract would have taken much more time and was far beyond the scope of the contract—when our team arrived we found that there had not been a thorough study of the type that we are accustomed to make for our own purposes.

We did study the information available in India and, as stated in our report, we had to accept certain major assumptions given to us by the Indian Ministry of Steel and Heavy Industry. They recommended a program which appeared to be reasonable to us to use available coarse ore from the deposit set aside or earmarked, rather, for Bokaro. I might explain that those ore deposits are similar to others throughout the world in that on the surface they would be lumpy, which is pretty fair ore, and as you go down usually the ore becomes finer.

Mr. ANDREWS. What do you mean by finer?

Mr. OBBARD. More powdery and the proportion of lumpy ore becomes less.

Mr. ANDREWS. Does that mean it is of inferior quality?

Mr. OBBARD. No, the lumpy ore is all right. That is the same ore the Indian industry has been running on for many years. The fine ore has a high proportion of silica and alumina in it and no way has been found yet to agglomerate it, that is, put it in lump form for use in a blast furnace.

Mr. ANDREWS. Is that type considered inferior?

Mr. OBBARD. At the moment it is unusable, but the lumpy ore which is mixed with it is usable and by screening it and washing it there would be sufficient to start the furnaces and run, though we did not recommend that phase 2 be commenced until a solution has been found for agglomerating the fine ores or other ore deposits developed.

Mr. ANDREWS. Of the raw materials needed for the operation of a steel plant, which ones would be unavailable economically in the Bokaro area?

Mr. OBBARD. Well, there wold be sufficient raw materials of all types available if the various ministries involved performed the work which they say they will. For instance, in coal, which is of usable but not too good quality, Bokaro really sits on the coal fields. So there it is a question of the National Coal Development Corp. opening up the necessary mines, putting in coal washeries, and there must be some rather simple transportation provided which might be a rope cable.

Mr. ANDREWS. You are familiar with their rail transportation system. The report mentions the difficulty that would be encountered because of the need to reload at certain points due to the fact they have

three different gage railroads. That would add to the cost of delivery at the site, would it not?

Mr. OBBARD. The only railroad gage that is really capable of heavy tonnage is the broad gage, 5-foot 6-inch gage. They have built a line into the proposed site which would be sufficient with proper spur trackage for handling the work.

Mr. ANDREWS. Then shipping to the Bokaro area there would be no problem so far as coal is concerned assuming they get proper cooperation——

Mr. OBBARD. From the National Coal Development Corp., I believe is the right term.

Mr. ANDREWS. Are all the coal mines owned by the Indian Government?

Mr. OBBARD. Yes, in the main for the public sector mills.

Mr. ANDREWS. So coal would be no problem?

Mr. OBBARD. Provided the Indian Government does the work that needs to be done.

Mr. ANDREWS. What would be the other essential raw materials?

Mr. OBBARD. Iron ore.

Mr. ANDREWS. What about that?

Mr. OBBARD. Presently they have allocated the Kiriburu deposits. As I explained, there would be sufficient lumpy ore to commence operations possibly with the purchase of some ore from some other local mines. It would be necessary, as planned, for the Indian Government to make a substitution in an existing Japanese contract for that same lumpy ore so that the Japanese would draw their requirements from another location, and for step 2 and 3 operations it would be necessary to develop some method of agglomerating the fines.

Mr. ANDREWS. At the present time iron ore is being exported from that area to Japan?

Mr. OBBARD. That is right.

Mr. ANDREWS. So if a plant were built at Bokaro the exportation of ore from Kiriburu would have to stop in order to provide enough iron ore of good quality for the plant at Bokaro to operate economically?

Mr. OBBARD. Correct, but I would say that in the first step it does not require too much.

Mr. ANDREWS. It is the step that would cost about $513 million, is that right?

Mr. OBBARD. Of U.S. dollars, plus rupees.

Mr. ANDREWS. That is the first step of the proposed plant at Bokaro?

Mr. OBBARD. Which would require, I believe, about 2 million tons of iron ore annually.

Mr. ANDREWS. What is the next raw material that would be needed?

Mr. OBBARD. Limestone, and for that there would be two types of limestone required. The first would be for the blast furnaces and apparently a deposit can be developed about 200 miles to the west of Bokaro.

Mr. ANDREWS. In sufficient quantity?

Mr. OBBARD. Yes. As far as we know the drilling is only just commenced.

Mr. ANDREWS. Could that be transported the 200 miles economically?

Mr. OBBARD. Yes, sir.

Mr. ANDREWS. Does your company transport limestone to any of your plants from that distance?

Mr. OBBARD. Oh, yes; indeed.

Mr. ANDREWS. So that would be no problem?

Mr. OBBARD. No, sir.

Mr. ANDREWS. That is, the limestone for the blast furnaces?

Mr. OBBARD. That is right.

Mr. ANDREWS. What is the other type?

Mr. OBBARD. The other is a higher grade of limestone.

Mr. ANDREWS. A higher grade?

Mr. OBBARD. A higher grade or a different grade of limestone required for the steelmaking process.

Mr. ANDREWS. What is the situation with reference to the availability of the higher grade of limestone?

Mr. OBBARD. Exploration to develop adequate supplies is in process. We assumed for financial evaluation that the stone would come from the existing deposits in the Satna area.

Mr. ANDREWS. How far is that?

Mr. OBBARD. About 450 miles, I would say, to the west.

Mr. ANDREWS. Could that be economically delivered to the site?

Mr. OBBARD. It would be better to develop a closer deposit but very little detailed exploration work has been done on limestone.

Mr. ANDREWS. You do not know whether or not there is a site with that type of limestone nearer the Bokaro site?

Mr. OBBARD. We do not know, sir.

Mr. ANDREWS. Do you know if that is what the AID agency is now investigating?

Mr. OBBARD. I understand AID has a couple men in India now investigating the raw materials situation.

Mr. ANDREWS. That is our information. Now what is the next raw material that would be needed?

Mr. OBBARD. Those are the major raw materials. The rest are minor in quantity.

Mr. ANDREWS. I get the impression, Mr. Obbard, that the question of coal is not too bad provided the Indian Government cooperated and took certain actions?

Mr. OBBARD. That is correct.

Mr. ANDREWS. I also get the impression that the question of iron ore would be no problem if exporting that ore to Japan was stopped?

Mr. OBBARD. I do not think we can make as definite a statement as that, sir.

Mr. ANDREWS. Would you elaborate on it, then?

Mr. OBBARD. I think at the beginning of the first step there might be sufficient even with the Japanese exports.

Mr. ANDREWS. Stopped.

Mr. OBBARD. No; continued. Now as first-step production increased I certainly think that the Japanese should be served from another point.

Mr. ANDREWS. In India?

Mr. OBBARD. In India. I can refer you to this map. Might I explain that the present Japanese contract develops ore at Kiriburu. That is about 240 miles from Bokaro.

Mr. ANDREWS. It is from that spot that ore is now being exported to Japan?

Mr. OBBARD. Yes. It is being exported through Vishakhaptnam. The Indian Government is developing an ore supply at Bailadila.

Mr. ANDREWS. Is that an economical supply?

Mr. OBBARD. It is about the same.

Mr. ANDREWS. Good quality?

Mr. OBBARD. It is about the same quality as other Indian ores. It is closer to the seaport but it would take about 3 years to build the railroad.

Mr. ANDREWS. So then it is your opinion that so far as iron ore is concerned there would be no problem there so far as the first step of the proposed mill at Bokaro is concerned, and as to limestone they would need two types, one for the blast furnace, which would be available over a haul of 200 miles, and that would be economical. So the main problem is in reference to the higher grade of limestone which would have to be shipped 450 miles?

Mr. OBBARD. It is not a problem. We picked that because we know that suitable limestone is available there and also, when you say "no problem," I would like to qualify that by saying "no insuperable problem." The Indian railways have to be sure that the rolling stock for the traffic is available; the National Coal Development Corp. has to be sure that the coal is available. We have figured on the mine proper being controlled by the steel mill and working in conjunction with the steel mill.

Mr. ANDREWS. Mr. Obbard, have you been out in that area around Bokaro?

Mr. OBBARD. No, sir. I have been as far as Jamshedpur, which is not too far away.

SUITABILITY OF SITE FOR MILL

Mr. ANDREWS. What is your opinion as to the suitability of the site of Bokaro for a steel mill either in the first, second, or final stage as proposed by the Indian Government and the AID of the U.S. Government?

Mr. OBBARD. Physically the site is suitable provided that water and power are made available. Those come from yet another department of the Indian Government. The raw materials are no better and no worse than the present steel industries are working on.

Mr. ANDREWS. I am reading here from a statement issued by AID, dated April 28, 1963, on page 3:

> **Bokaro will not be profitable in the first step. It would become and remain so with full production in step II.**

Have you seen that report?

Mr. OBBARD. Yes. I have a copy of it.

Mr. ANDREWS. What is your comment on that statement?

Mr. OBBARD. Well, it must be remembered, Mr. Chairman, that our figures are based on the assumptions that these services and facilities from other Indian Government departments will be provided.

EXPENDITURES REQUIRED FOR PROJECTS ASSOCIATED WITH MILL

Mr. ANDREWS. I read further from that same report on page 9:

Assumed to be undertaken by Indian authorities are these major—outside the fence—projects, associated with and essential to Bokaro, for which estimates are also supplied.

Tenughat Dam	$31,127,000
Canal to Bokaro	5,730,000
Bokaro townsite	40,000,000
Added 125 megawatt generating capacity	32,000,000
Increased coal mine wash facilities	25,000,000
Total	133,857,000

Do I understand that it would be necessary to spend this much money for these projects before you could consider building a mill, even the first, second, or final stages at Bokaro?

Mr. OBBARD. It would have to be done parallel with the construction of the mill. There are some other items on which no estimates have been furnished. These are taken from page 109 of volume 2 of our report. You will notice there there is also expansion of railroad facilities.

Mr. ANDREWS. In other words, it would be necessary, in addition to the expenditure of $133,857,000 for the purposes we just described to spend the following amounts of money—what are they—as shown on page 109 of your report?

Mr. OBBARD. They parallel the dollar figures given in the AID digest, the summary——

Mr. ANDREWS. In addition to the $133,857,000——

Mr. OBBARD. There are also some railway and road work which we have not been able to estimate.

Mr. ANDREWS. They are described in your report on page 109 as an expansion of the southeastern and eastern railroad facilities. Do you have no estimate of the cost for such expansion?

Mr. OBBARD. Correct.

Mr. ANDREWS. Also, an expansion of road network on which you have no estimate of cost.

Do you know anything about the number of miles that would be needed in the expansion of the road work?

Mr. OBBARD. We do not, sir. We were not able to get any figures. I might point out that step I would require that some of the items on page 109 would be sufficient for the final mill such as items a and b, that is, the water supply, that the items thereafter, c, d, and f, that is, the townsite, power generation, coal mining, and washing facilities are only sufficient for the first step. That is shown at the top of page 109.

To carry it through to the third step would require more than is set forth here.

TYPE OF PLANT PROPOSED

Mr. ANDREWS. Now if this proposed plant is built, what type plant would it be?

Mr. OBBARD. It would be a modern plant principally for flat-rolled products—that is, plates, sheets, and so forth, which are apparently the growing deficiency area in the Indian economy.

TOTAL COST OF PLANT

Mr. ANDREWS. What can you tell us, Mr. Obbard, about the capital and operating costs that would be involved in the construction of the proposed plant in the first, second, and final stages?

Mr. OBBARD. We have that given in summary on page 4 of volume 3. Volume 3 is devoted principally to financial matters. I think this is repeated by the AID people. That is also quoted on page 9 of the AID release.

Mr. ANDREWS. Which shows that for the step I the cost would be $512,588,000 in foreign exchange expenditure. For the second step, $162,367,000. For the third and final step, $216,597,000, or a total of $891,552,000. Then the equivalent Indian rupee expenditure for the first step would be $314,653,000; for the second step, $75,488,000; and for the third and final step, $100,346,000; for a total of $490,-487,000.

The total of all foreign exchange expenditure and equivalent rupee expenditure would be for the first step, $827,241,000; for the second step, $237,855,000; and for the third and final step, $316,943,000; for a grand total of $1,382,039,000.

Mr. OBBARD. I must point out, in addition to that, you must have capitalized interest during the construction period and various deferred charges which are set out in the AID report.

Mr. ANDREWS. Which would be for the first step, $92,187,000; for the second step, $7,300,000; and for the third and final step, $23,240,-000, for a grand total for capitalized interest, deferred charges, et cetera, $122,727,000, making the grand total for the three steps of foreign exchange expenditure, equivalent Indian rupee expenditure, capitalized interest, deferred charges, and so forth, $1,504,766,000. In other words, that would be the cost of this mill when you take into consideration all elements of cost.

The total cost for the first step would be $919,428,000. If you carried that forward to the second step, the cost would be $245,155,000 extra. To carry it to the third and final step would entail an additional cost of $340,183,000, making the total cost of the Bokaro mill, if carried out to the finality of the plans that have been envisioned, $1,504,766,000; is that correct?

And in addition to that, in order to put a mill at Bokaro, India, you would have to spend $133,857,000 in addition to the $1,504,766,000 in order to get all of the facilities needed in the Bokaro area for the operation of a steel mill, plus undetermined cost in the area of railroads and roads; is that correct?

Mr. OBBARD. That is correct.

Mr. ANDREWS. So then my original figure of $1.7 billion is not too far out of the ball park, is it?

Mr. OBBARD. That is correct.

CONTRACTING FOR CONSTRUCTION OF PLANT

Mr. ANDREWS. Now, should the proposal be approved, Mr. Obbard, for the United States to finance this plant, will United States Steel be interested in bidding for the contract to construct and operate the plant?

Mr. OBBARD. As I explained earlier, Congressman, we have not given that full consideration and cannot do it until the matter is further along. We do not know whether we will have men available at the time when they might be required. We do not know what the terms of any proposed contracts might be, and we do not feel that we can make any proper answer to that at this time.

Mr. ANDREWS. Do you know whether or not engineering of Bokaro can or cannot be done locally?

Mr. OBBARD. There is in India a reasonably good force of consulting and design engineers, but we think that while they would be entirely competent to carry out detailed design work, for a large and most modern mill of this sort which would employ U.S. equipment, U.S. engineering should be used.

Mr. ANDREWS. If local firms were used, would it not be necessary for them to combine and greatly expand their staffs to get the job done?

Mr. OBBARD. It would need some expansion within the limits of the competent people available in India. I do not think they could do the whole job regardless of any expansion they might have.

Mr. ANDREWS. Do you know whether or not capable Indian contractor firms are fully committed at the present time for the next 3 to 5 years?

Mr. OBBARD. I have no accurate knowledge of that, Congressman.

Mr. ANDREWS. Does any member of your staff have any knowledge of the workload that Indian contractor firms have at this time?

Mr. OBBARD. I do not know, Congressman.

Of course, one must bear in mind all the other five plants have expansion programs underway at the moment so there would not be too much talent available, extra talent available in India for either design or construction.

Mr. ANDREWS. Do you know whether or not there is a lack of construction equipment in India at the present time?

Mr. OBBARD. There is a lack of some of the types of equipment which would be required—large equipment.

I believe our subcontractor's report, the Bechtel Co., lists the equipment which would be required. There would have to be a substantial amount of large construction equipment.

Mr. ANDREWS. Purchased from outside the country?

Mr. OBBARD. That is right.

AVAILABILITY OF PERSONNEL

Mr. ANDREWS. Do you know anything about the availability of mature, experienced superintendents, foremen and subforemen? What is the situation with reference to those conditions in India at the present time?

Mr. OBBARD. You mean for construction purposes.

Mr. ANDREWS. Yes, sir.

Mr. OBBARD. They are, as I said, pretty busy at the moment on the expansion of the other mills. There are some. The larger Indian construction contractors are certainly competent to do part of the work.

Mr. ANDREWS. On the bottom of page 9 and 10 it is stated in substance that an American contractor must be used with full respon-

sibility for the project and that not less than 90 percent of construction equipment must be imported. Are you familiar with that statement?

Mr. OBBARD. We employed a subcontractor, Bechtel International, who are thoroughly experienced in this.

AVAILABILITY OF EQUIPMENT

Mr. ANDREWS. I would like to read from page 8 of the Bechtel Corp. report dated January 14, 1963. As I understand it, Bechtel Corp. is one of your subcontractors.

Mr. OBBARD. Yes.

Mr. ANDREWS. This paragraph 4, on page 8, states:

Availability in India of modern, efficient, heavy construction equipment is extremely limited. This situation will probably not be alleviated in the next decade. Informed judgment agrees not less than 90 percent of construction equipment required for timely completion of Bokaro must be imported.

Mr. OBBARD. Yes, sir. That refers, of course, to the heavy construction equipment. I think that same report has a tabulation, or our report has a tabulation, on page 99 of volume 2, which gives the equipment required in some detail.

AVAILABILITY OF CONTRACTOR ORGANIZATION

Mr. ANDREWS. On page 21 of that report, the Bechtel report, I read:

During the period 1963–70, the industrial growth of India is expected to continue at not less than the rate during the past 10 years. Broadly, this means that existing reputable construction organizations will be fully occupied. Their individual capacity will be limited principally by availability of construction equipment.

Mr. OBBARD. That is correct, sir.

Mr. ANDREWS. Does that mean if work were started on the Bokaro mills, it would have to be done by outside firms?

Mr. OBBARD. It would have to be done by a major U.S. or outside India construction firm. The availability of local subcontractors depends very largely on the circumstances at the time.

Mr. ANDREWS. Reading further from the Bechtel report on page 23:

There is virtually a dearth of Indian contractor organizations qualified to perform major industrial, mechanical, or electrical engineering work. The question of adequacy of field supervision, therefore, is not material for these activities.

Quoting further:

Lack of competent field supervision for civil and structural engineering has been, and continues, a definite weakness of the Indian contractor organization.

Mr. OBBARD. That is correct.

Mr. ANDREWS. Would you care to comment on that report presented by the Bechtel Corp.

Mr. OBBARD. That bears out the stateemnt we have already made, that the construction should be handled by large, competent outside concerns which can provide the supervision, the equipment, and the coordination that is so necessary to progress any large job satisfactorily.

Mr. ANDREWS. Mr. Obbard, could you give us an estimate of what steel could be produced for at the proposed plant at Bokaro, if the plant is constructed under the first step, second step, and final step?

Mr. OBBARD. Mr. Chairman, we have that in some detail for the first step. It is set forth in volume 3, product by product.

Exhibit C–6 has the ingot cost.

Exhibits C–7 to C–16 have detailed product costs for various finished materials.

Mr. ANDREWS. Without objection, we will place these exhibits from volume 3, C–6 through C–8, in the record at this point.

(The exhibits referred to follow:)

EXHIBITS C–6.—BOKARO STEELWORKS

Product cost of ingots

MATERIAL

Description	MT/MT	Price per metric ton	Cost, metric ton ingots
Hot metal	0.8556	$22.50	$19.25
Iron scrap—molds and stools	.0346	20.58	.71
Other iron scrap	.0048	20.58	.10
Solid steel scrap, revert	.2355	31.00	7.30
Other steel scrap, revert	.0267	20.58	.55
Roll scale scrap, revert	.0504	5.25	.26
Sundry products recovered:			
Iron scrap, ladle	.0048	20.58	.10
Steel scrap, butts and conditioned ingots	.0206	31.00	.64
Steel scrap, other	.0267	20.58	.55
Additions:			
High carbon iron manganese	.00836	190.00	1.59
Medium carbon iron manganese	.00064	380.00	.24
Silicon carbide	.00014	303.00	.04
Aluminum	.00057	950.00	.54
Sodium fluoride	.00007	719.00	.05
Total, net material			29.34

COSTS OTHER THAN MATERIALS

Flux:			
Burnt lime	0.1475	$18.45	$2.72
Limestone	.0369	8.46	.31
Bauxite	.0050	10.00	.05
Oxygen (2,200 cubic feet)			.46
Other charging and melting			.49
Material handling			.18
Pit operations			1.28
Total other than materials			5.49
Total cost			34.83

	Semikilled	Rimmed	HT killed
Molds and stools	$0.62	$0.70	$0.96
Rimming and plates		.12	
Hot top service			2.69
Total, ingot cost	35.45	35.65	38.48
Excise tax	8.26	8.26	8.26
Grand total, ingot cost	43.71	43.91	46.74

NOTE.—Production, 1,400,000 metric tons.

EXHIBIT C-7.—BOKARO STEELWORKS

Product cost: Plates, light gage, commercial quality; size: 5 millimeters thick by 900 millimeters wide by 3 meters long

Description	Percent yield this process	Cost per metric ton this process		
		Cost of loss	Cost above	Total this process
Ingot, open top rimmed				[1] $43.91
Primary mill:				
Soaking pit			$1.20	1.20
Slab mill	86.21	$3.20	1.32	4.52
Slab conditioning	99.60	.17	.15	.32
Hot strip mill	96.68	1.00	4.44	5.44
Flatten and shear	90.44	2.67	1.33	4.00
Shipping			1.13	1.13
Total, operating cost				60.52
Excise tax on finished product				11.02
Administrative expense				7.05
Depreciation				26.84
Total, product cost, prime				105.43

[1] Includes excise tax on ingot, $8.26.

NOTE.—Prime yield from ingot, 75.08 percent; production, 202,612 metric tons.

EXHIBIT C-8.—BOKARO STEELWORKS

Product cost: Plates, medium gage, structural quality; size: 8 millimeters thick by 1,300 millimeters wide by 3.5 meters long

Description	Percent yield this process	Cost per metric ton this process		
		Cost of loss	Cost above	Total this process
Ingot, open top S.K				[1] $43.71
Primary mill:				
Soaking pit			$0.95	.95
Slab mill	85.03	$3.36	.93	4.29
Slab conditioning	99.60	.17	.15	.32
Hot strip mill	96.39	1.04	4.44	5.48
Flatten and shear	86.95	3.73	5.11	8.84
Shipping			1.13	1.13
Total, operating cost				64.72
Excise tax on finished product				11.02
Administrative expense				7.05
Depreciation				26.84
Total, product cost, prime				109.63

[1] Includes excise tax on ingot, $8.26.

NOTE.—Prime yield from ingot, 70.98 percent; production, 163,077 metric tons.

Mr. ANDREWS. Do you want to make a statement with reference to the charts?

Mr. OBBARD. Yes.

You will note that in the buildup of these costs there are included excise taxes. These amount in ingots to $8.26 a ton. There is a further excise tax on the finished product of $11.02 in the case of plates.

Mr. ANDREWS. Is that tax imposed by the Indian Government?

Mr. OBBARD. That is an excise tax imposed by the Indian Government.

I might further point out that due to the loss in the conversion from ingot to plate, that total excise tax adds up to approximately $22 per ton as is shown in our report. That must be considered when thinking of the total cost.

Mr. ANDREWS. Now, Mr. Obbard, in your opinion, what would a ton of steelplate produced at the proposed Bokaro mill cost to the ultimate consumer in India?

Mr. OBBARD. Well, sir, I would first like to point out that in these costs which you have put in the record there are not included financial charges for interest or repayment of debt.

Now, as regards the price to the consumer, there is a further addition which is unusual to us, but which I feel should be explained.

I should first say that the prices to consumers throughout India, in whatever part, are equalized so the freight rates are averaged out and the consumer in whatever part he may be in India pays the same price.

Mr. ANDREWS. Is that based on the old so-called Pittsburgh-plus plan that existed at one time in this country?

Mr. OBBARD. No. Far from it.

That Pittsburgh-plus included freight from Pittsburgh. This is an overall average price rather like the English system where they have a single zone price. It is a zone price like in England except that the zone covers all of India.

Mr. ANDREWS. In other words, a man living 1,000 miles from one of the existing steel plants today pays the same price for a ton of steel that the man who lives within a stone's throw of the plant pays; is that correct?

Mr. OBBARD. That is correct.

Mr. ANDREWS. That would also be the situation if another plant were built at Bokaro?

Mr. OBBARD. That is correct.

Mr. ANDREWS. Back to my question—what would a ton of steelplate cost the consumer in India if that one of steelplate were produced at the proposed Bokaro plant?

Give me the the benefit of your best judgment as to what that cost would be.

Mr. OBBARD. The selling price to the Indian customer would be $164 a ton.

Mr. ANDREWS. Now, what would the selling price to the ultimate consumer in India be for a ton of steelplate of equal quality, manufactured in the United States?

Mr. OBBARD. Peculiarly enough, it would be about the same price.

Mr. ANDREWS. $164?

Mr. OBBARD. I have to explain the Indian pricing system.

Mr. ANDREWS. You have explained that. That is kind of an OPA over there, is it not, so far as steel is concerned?

Mr. OBBARD. It is a little unusual to us, so perhaps I could explain it from the bottom up.

As far as the producing mill, they have to buy their labor and materials and take care of their depreciation. They have to pay the usual taxes we are accustomed to in this country—the corporation income tax is 25 percent plus a 25 percent surcharge, making a 50 percent corporation income tax. With all of that we are familiar.

We may regret the taxes, but we pay them.

Over and above that comes this excise tax which, as I explained, was about $22 a ton whether or not you are making money. Over and above that there is a spread between the price that the mill receives and the price that the consumer pays. The mill receives what is known as the retention price. The steel is actually sold to the consumer at $30 to $35 more than the retention price. Now, that was initiated originally when there was a general shortage of steel throughout the world. Imported steel was of high cost and the Indian Government equalized the price to all consumers. To perhaps put it graphically, if it was half Indian steel at $120 a ton, half imported steel at $180 a ton, that was averaged out and was sold to the consumer at $150 a ton.

Now, the price of imported steel, particularly from the Common Market countries, or Japan, is somewhat lower than the retention price of Indian-produced steel, therefore, that $30 to $35 a ton goes into a fund which is supposed to take care of this equalization but which is not consumed by this equalization by any manner of means these days, and to the extent of about $30 a ton is a margin which goes at the end of each year into the general funds of the Indian Government. Therefore, adding the excise tax and the difference between the present retention price and the sales price to the customer, you get about $50 a ton tax accruing to the Indian Government.

Mr. ANDREWS. Does the Indian Government have complete control over the distribution and sale of steel in the country?

Mr. OBBARD. Of all ordinary types of steel.

Mr. ANDREWS. So regardless of where the Indian Government gets it, or what they pay for it, the consumer pays the same thing for steel regardless of where it is produced?

Mr. OBBARD. That is right, regardless of where it is produced or delivered. In some cases some benefit of lower cost imports may revert to the consumer or the importer.

Mr. ANDREWS. The steel business must be very profitable to the Indian Government; is that right? I assume it is. They have a monopoly on it.

Mr. CONTE. Would you yield on the price of steel in India?

Mr. ANDREWS. Yes.

Mr. CONTE. When you mentioned the price of steel produced in India, do you consider the built-in costs of the steel mill itself, or is this just labor cost?

Mr. OBBARD. We have taken in all the costs except the finance charges, repayment of capital and interest.

Mr. CONTE. Have you gone on the assumption that the Bokaro mill would be built at a cost we have here in arriving at that figure?

Mr. OBBARD. Yes.

Mr. CONTE. You have?

Mr. OBBARD. Yes.

Mr. ANDREWS. In other words, they just take steel from wherever they can get it, average out the cost, and sell it to the ultimate consumer?

Mr. OBBARD. That is the general idea.

Mr. ANDREWS. Let me ask you this question.

Would it be more profitable to the Indian Government to produce the steel at Bokaro and put it in that pot, or import it from Japan and/or the United States?

Mr. OBBARD. From the present prices quoted from Japan, or Europe, it is just about a standoff.

Mr. ANDREWS. What is the Japanese quoted price of steel delivered in India?

Mr. OBBARD. The Japanese price—and again I will take plates.

Mr. ANDREWS. We are talking about a ton of steelplate?

Mr. OBBARD. Yes.

Mr. ANDREWS. Metric tons?

Mr. OBBARD. Yes.

Mr. ANDREWS. Which is 10 percent more than our standard net ton?

Mr. OBBARD. A ton of steelplate from Japan, f.o.b. Calcutta, including countervailing duty—technically the import tariffs have been waived—but a countervailing duty has been put on to approximately equalize the excise which I mentioned. I mentioned that excise as being approximately $22 a ton to an Indian steel producer. The countervailing duty is actually only $16 per ton for an importer.

Mr. ANDREWS. They can put on, or take off whatever they want to. My question is this——

Mr. OBBARD. Therefore, the net cost to the Government of India for the Japanese plate would be $102 a ton.

Mr. ANDREWS. $102 a ton?

Mr. OBBARD. That is right.

Mr. FLYNT. May we go off the record at this point?

(Off the record.)

Mr. ANDREWS. In other words, all steel that is imported into India is controlled by the Indian Government?

Mr. OBBARD. That is correct, sir.

Mr. ANDREWS. We are still talking about steelplate?

Mr. OBBARD. Yes.

Mr. ANDREWS. So a ton of steelplate delivered in India, consigned to the Indian Government, costs the Indian Government $102 a ton if the purchase is made from Japan?

Mr. OBBARD. That is correct.

Mr. ANDREWS. Now, what is the cost of that ton of steelplate to the Indian Government delivered in India from the United States?

Mr. OBBARD. $172 per ton. Imports from Japan I mentioned as net cost of $102 a ton; imports from European countries working under the Brussels Convention, which is——

Mr. ANDREWS. Common Market?

Mr. OBBARD. No, sir; an export price. May I call it a gentleman's agreement——

Mr. ANDREWS. All right.

Mr. CONTE. Which you would be jailed for here in the United States——

Mr. OBBARD. That is right, and we might put the gentleman in quotes—it would be $101 a ton.

Mr. ANDREWS. $101 from European countries; $172 from the United States; $102 a ton from Japan?

Mr. OBBARD. That is right.

Mr. ANDREWS. I guess they are the principal sources of supply to the Indian Government?

Mr. OBBARD. I would say those are clearly dumping prices.

Mr. ANDREWS. What does it cost the Indian Government to put into its inventory for distribution and sale a ton of steelplate made in India?

Mr. OBBARD. Of course, Mr. Chairman, we have figures only on the projected Bokaro plant.

Mr. ANDREWS. That is good enough.

Mr. OBBARD. Excluding the excise tax that would cost $87.63 plus financing charges which would be on the order of $14 a ton.

Mr. ANDREWS. We will say $102?

Mr. OBBARD. Yes.

Mr. ANDREWS. So the Indian Government is the sole controller of all steel sold in India?

Mr. OBBARD. That is correct, sir.

Mr. ANDREWS. They get their steel from four different sources principally—from their own country, which costs them $102 a ton for a ton of steelplate: from Europe which costs them $101; from the United States which costs $172 a ton; and from Japan which costs $102 a ton.

They take all of this steel and sell it to the consumer for $164 regardless of the source of production.

Mr. OBBARD. That is generally correct, sir.

Mr. FLYNT. Mr. Obbard, you mentioned that the prices from the European countries were clearly dumping prices.

Mr. OBBARD. That is right.

Mr. FLYNT. Does that mean below the normal world price in the sense you used the term there?

Mr. OBBARD. No; they are at the world price but they are below, substantially below, their internal domestic price.

Mr. FLYNT. Below the domestic prices in the country of origin?

Mr. OBBARD. That is correct.

Mr. FLYNT. Along that line, if India needs steel as badly as has been indicated to us, why would, under the Brussels agreement, the price be reduced to that low point which you described as a dumping price?

Mr. OBBARD. Because that is generally used by European countries in export to any country—the Argentine, Brazil, or anywhere else, and also the Europeans justify their dumping prices——

Mr. FLYNT. To keep up production?

Mr. OBBARD. Well, as against the Japanese.

Mr. FLYNT. That was my next question. Was it done to meet Japanese competition?

Mr. OBBARD. Yes.

Mr. FLYNT. Sold at substantially below their domestic price in order to meet Japanese competition?

Mr. OBBARD. That is right.

Mr. FLYNT. Would you then say that the dumping price as established by the Brussels agreement is below the cost of production?

Mr. OBBARD. I don't know, Congressman. It might be above incremental cost of production, but it certainly is below the true average cost of production.

Mr. FLYNT. Thank you, Mr. Obbard.

Mr. OBBARD. You understand what I mean by incremental price?

Mr. FLYNT. I think I do. Would you explain it? You can do it off or on the record. It is not a secret matter.

Mr. OBBARD. No; it is no secret.

Mr. FLYNT. I think I understand it but we would like clarification on it for our record.

Mr. OBBARD. Well, if you are running at 90 percent, the last 10 percent will cost just the additional labor and materials. And can be sold at a low price, although we ourselves consider that to be, and our laws consider that to be, an unfair business practice.

Mr. FLYNT. That was my understanding. Thank you for the clarification.

Thank you, Mr. Chairman.

STEEL EXPORTED TO INDIA

Mr. ANDREWS. Can you tell me, Mr. Obbard, the total tonnage exported from the United States into India?

If you do not have the figure would you supply it for the record?

Mr. OBBARD. We shall supply it, Mr. Chairman.

(The information requested follows:)

Exports of steel products from the United States to India

[In thousand net tons]

	Steelmill products	Other steel products	Total
1963—1st quarter	55.9	5.8	61.7
April	26.1	.9	27.0
May	30.2	.9	31.1
Total, 5 months	112.2	7.6	119.8
1962	240.5	6.7	247.2
1961	130.7	16.0	146.7
1960	150.6	2.9	153.5
1959	7.1	19.3	26.4
1958	25.1	14.0	39.1

NOTE.—Other steel products include fabricated plates and structurals, welding rods, tanks, cylinders forgings, castings, wire rope, trackwork, etc.

Source: AISI Annual Statistical Report, U.S. Department of Commerce.

Mr. OBBARD. So far as we are concerned, Mr. Chairman, we find that our company's exports to India are mostly specialty products; in other words, high quality steel such as our T–1, Cor-Ten, and special sections.

Mr. ANDREWS. You sell only to the Indian Government?

Mr. OBBARD. Or to licensed importers.

Mr. ANDREWS. It is the Government or a Government agent, is it not?

Mr. OBBARD. You have to get a license to be a private importer but it is controlled very strictly by the Indian Government.

COST OF PRODUCING STEEL AT BOKARO

Mr. FLYNT. Mr. Obbard, in the discussion a few moments ago, I was making my comparative notes on the page which contains exhibit C–8. There I show the total cost price of product costs from the projected Bokaro steelworks as $109 per ton.

In the record a while ago the figure $102 was used.

Is $109 the correct figure or is $102 the correct figure?

Mr. OBBARD. That was arrived at in this way, Congressman: We deducted from the $109.63 the $22 excise tax. We are trying to point out the cost to the Indian Government, and they receive their $22 excise tax. That brings it down to $87.63, or $88, and then there are interest charges which, as I said, are not added in here, which we put into the amount at about $14 a ton, so you come up to about $102 a ton.

Mr. FLYNT. Thank you.

Mr. OBBARD. In other words, you deduct the excise and add in the interest.

Mr. ANDREWS. Mr. Natcher?

Mr. NATCHER. Mr. Obbard, we want to thank you and the members of your staff for appearing before our committee at this time and for the excellent manner in which this subject has been presented.

COST OF CONSTRUCTING BOKARO STEELMILL

Why would the Bokaro steelmill cost $1,700 million, Mr. Obbard? Do you consider this estimated cost excessive?

Mr. OBBARD. No, sir; we built up our costs very carefully so that they are entirely capable of support.

We must remember that this is a flat-product mill, that is for plates, sheets, and the like.

It is not cheap to build because there must be consequential American supervision for the construction periods and for the breakin periods.

Even with all that, when you come out to the 4-million-ton third step you have a cost-per-ingot ton that is well in line with the costs of other Indian steel mills, although they were built mostly 5 or 6 years ago—let us say there was less inflation then—and if you will turn to exhibit F–1, volume No. 3——

Mr. NATCHER. On this exhibit do you show the cost of the other steel mills in India?

Mr. OBBARD. Yes, sir.

Mr. NATCHER. Mr. Chairman, I believe that should be in the record. Is the cost of the other steel mills in India in the record? That was to be furnished.

Mr. ANDREWS. Off the record.

(Discussion held off the record.)

Mr. NATCHER. Without objection, Mr. Chairman, we would like to have these figures submitted at this point in the record.

Mr. ANDREWS. Without objection that will be done.

(The figures referred to above follow:)

EXHIBIT F-1.—*Comparative capital cost, steel plants in India—appendix IX, Tariff Commission Report, April 1962, and Bokaro estimate, annual production at capacity*

	Tisco	Iisco	Hindustan Steel, Ltd.				Bokaro estimate [1]
			Durgapur	Rourkela	Bhilai	Total HSL	
Bokaro step I, gross investment (million)							$789.8
Production:							
Tons of ingots							1,400,000
Tons of salable steel							1,038,500
Investment:							
Per ton of ingots							$564
Per ton of salable steel							$761
Bokaro step II, gross investment (million)							$1,019.7
Production:							
Tons of ingots							2,500,000
Tons of salable steel							1,804,000
Investment:							
Per ton of ingots							$408
Per ton of salable steel							$565
Bokaro step III; Hindustan Steel plants after plan III expansion; Tisco and Iisco after additional investment authorized; gross investment (million)	$498.9	$190.3	$489.9	$693.2	$645.2	$1,828.3	$1,335.0
Production:							
Tons of ingots	2,032,100	1,016,050	1,625,000	1,800,000	2,500,000	5,925,000	4,000,000
Tons of salable steel	1,524,075	812,840	1,258,824	1,240,000	1,965,000	4,463,824	2,915,000
Investment:							
Per ton of ingots	$245	$187	$301	$385	$258	$309	$334
Per ton of salable steel	$327	$234	$389	$559	$328	$410	$458

[1] Estimated investment for Bokaro includes plant facilities plus capitalized interest. The ore mine and limestone quarry investments are excluded.

Mr. OBBARD. Might I point out, Mr. Congressman, this is a flat-rolled products mill, and that the most nearly comparable steel mill to it in India is the Rourkela mill, the German mill, which is also principally flat-rolled products.

Mr. NATCHER. Would it cost the United States Steel Corp., or one of the other companies in this country, the sum of $1,700 million to construct this plant in India?

Mr. OBBARD. Oh, yes, sir; it would cost us the same.

WATER SUPPLY AT BOKARO

Mr. NATCHER. You informed the committee that the study made pertained somewhat to the raw materials. What about water, Mr. Obbard? Would you not have to have an adequate supply of water for this mill?

Mr. OBBARD. You certainly must have.

Mr. NATCHER. What plans, if any, do you show from the standpoint of a water supply? Is this a lake, a reservoir, or what type of water supply?

Mr. OBBARD. Combined storage and a hydroelectric dam to be built by the India Damodar Valley Corp., built by a department of the Indian Government known as——

Mr. NATCHER. What river is this?

Mr. OBBARD. Damodar River.

Mr. NATCHER. Do you in the study show that this would be an adequate supply of water?

Mr. OBBARD. Yes, it would be. We had that looked into carefully by Stone & Webster.

Mr. NATCHER. Mr. Obbard, you stated that the coal supply was usable but not of good quality. I believe this coal has a lot of ash in it and has to be washed?

Mr. OBBARD. Yes.

ADEQUACY OF SUPPLY OF COAL

Mr. NATCHER. What about the supply? Is there an adequate supply of coal at this point, for the operation of this steel mill?

Mr. OBBARD. Provided the new mines are built, the washeries are built, there will be an adequate supply of coal.

India's long-term reserves of metallurgical coal are perhaps limited, but like many other metallurgical problems in India are perhaps not being fully explored.

The coal is high in ash. I think it is about 24 percent which washes down to about 18 or 19 percent.

Mr. NATCHER. Thank you, Mr. Chairman.

Mr. ANDREWS. Mr. Flynt?

Mr. FLYNT. Thank you, Mr. Chairman.

Mr. Obbard, I want to thank you and your associates for the information which you have provided to us. I have asked substantial questions previously and I shall therefore limit these to those which have not been previously covered.

HINDUSTAN STEEL, LTD., PLANT

Are you familiar with operation of Hindustan Steel, Ltd.?

Mr. OBBARD. Reasonably so.

Mr. FLYNT. Is that a wholly owned subsidiary of India?

Mr. OBBARD. Yes.

Mr. FLYNT. A separate corporation, so to speak?

Mr. OBBARD. Yes, sir, under the Ministry of Steel and Heavy Industry.

Mr. FLYNT. Is its scope of operation limited to production?

Mr. OBBARD. They also have some of the ore mines tied to this, and some limestone and some coal washeries, but by and large they are simply steel producing companies.

Mr. FLYNT. An integrated company, so to speak, where it owns the source of raw materials——

Mr. OBBARD. Only the ore.

Mr. FLYNT. Do they have a guaranteed source of the other raw materials such as limestone and coal?

Mr. OBBARD. Limestone, yes. They own some of the limestone. Coal, no. That comes under a separate department of the Indian Government.

Mr. FLYNT. Do they have a guaranteed source of supply of coal?

Mr. OBBARD. What exactly would you mean by a guarantee?

Mr. FLYNT. Does the Government of India own the coal supply?

Mr. OBBARD. Yes, sir.

Mr. FLYNT. So therefore in their dealings for their required supply of coal they would deal with another agency of the Indian Government?

Mr. OBBARD. That is right.

Mr. FLYNT. We have established that the Hindustan Steel, Ltd., is an integrated production agency. Does Hindustan Steel, Ltd., operate in the field of purchasing finished steel products from other sources?

Mr. OBBARD. No. That is controlled by the steel controller.

Mr. FLYNT. An officer of the Indian Government?

Mr. OBBARD. Yes, which also purchases, of course, or allocates from the other two private enterprise steel mills.

Mr. FLYNT. I take it, then, that the steel controller is also an official, and his office is therefore a subagency of the Ministry of Steel and Heavy Industry?

Mr. OBBARD. I wouldn't know that, sir.

Mr. FLYNT. Can you obtain that information and supply it for us?

Mr. OBBARD. We can; yes, sir. It might be a Treasury function; I don't know.

(NOTE.—The iron and steel controller does report to the Minister of Steel and Heavy Industry.)

Mr. FLYNT. My third question along that line: We have established that the Hindustan Steel, Ltd., is the production agency. The steel controller is the official and/or agency which controls purchases of steel products from external sources.

Is there still a third agency which operates as a sales organization of steel products, both internally manufactured and externally imported?

Mr. OBBARD. The steel controller acts as a distribution and allocation agency for all steel consumers in India.

Mr. FLYNT. The steel controller, in addition to his purchasing duties, has certain sales capabilities and duties?

Mr. OBBARD. Yes, sir.

Mr. FLYNT. You have stated, I believe, that the ash content of the coal supply and deposits which would be available to Bokaro amount to approximately 25 percent? The ash content is 25 percent.

Mr. OBBARD. We can say that the average is over 20.

Twenty-four was the figure that was in my mind, but it is on that order.

Mr. FLYNT. Are you familiar with the approximate ash content of the coal deposits that are available to furnish the coal supply at Duragpur?

Mr. OBBARD. It is the same coal.

Mr. FLYNT. Is that also true at Rourkela?

Mr. OBBARD. Yes.

Mr. FLYNT. And Bhilai?

Mr. OBBARD. Yes, sir. The coal all comes from the same general area, and while differing a little from mine to mine it is of the same general nature.

Mr. FLYNT. Is that generally true of any other known coal deposits in India?

Mr. OBBARD. These are the only deposits presently known which are capable of use for metallurgical purposes. I think it is shown fairly clearly on the map.

Mr. FLYNT. Is it substantially the same coal area?

Mr. OBBARD. Substantially the same.

Mr. FLYNT. Thank you, Mr. Obbard.

Mr. ANDREWS. Mr. Conte?

QUESTION AS TO ADEQUACY OF CURRENT INFORMATION FOR CONSTRUCTION OF PLANT

Mr. CONTE. Mr. Obbard, in your report in volume 2 you stated it would take you and your team 2 years or more to find satisfactory long-term solutions to the basic raw material problems.

Do you still stand by that statement?

Mr. OBBARD. Yes, sir. We stated that this mill could be started through phase 1 with available known materials which are about the same as those now being used by other steel producers in India.

To produce greater volumes there should be long-term reserves properly explored and mapped to assure continued operation of this type of mill.

Mr. CONTE. Mr. Obbard, if you were constructing a mill here in the United States would you go ahead and construct a mill with that much information or would you wait until you had further information as to the raw materials available?

Mr. OBBARD. We ourselves as a private enterprise would want to be sure that we had our raw materials known to be available, blocked out, in our possession, and so on, for considerable time ahead. You do not build a steel mill for 5 or 10 years.

Mr. CONTE. This is a sizable investment?

Mr. OBBARD. Pardon?

Mr. CONTE. The mill itself is a sizable investment?

Mr. OBBARD. It is, indeed.

Mr. CONTE. Therefore, if you, United States Steel, were in this location you would not proceed at this time to construct a steel mill?

Mr. OBBARD. Perhaps I could answer that by saying that anywhere where we constructed a steel mill we would want to be assured of our long-term capabilities of securing suitable raw materials.

Mr. CONTE. I appreciate your answer but I want to nail it down to this specific case which we have in mind. This is where you have already made the study and you have come out with certain findings.

Based upon these findings, based upon what you know, would you construct the steel mill at this site within the next year?

Mr. OBBARD. With our money we would not. As I say, we have not made any study as to what the effect would be with our money.

Mr. CONTE. You said, Mr. Obbard, on page 28 (sec. 52), with regard to limestone that the prospective requirements of existing steel plants would take the whole or whatever production of limestone can reasonably be expected from Birmitrapur and Purnapani, and there are, moreover, problems of quality and reserves in regard to both deposits.

There again, if you were to construct a steel mill in Bokaro this would be a very serious limitation, would it not?

Mr. OBBARD. Limestone is not too compelling a factor. It is the third of the basic raw materials and it can be hauled farther.

As we say in our report, our team was rather amazed to find the little amount of factual information available on long-term reserves of steelmaking materials.

Perhaps I should say that to establish a long-term reserve is an expensive and time-consuming matter. It must be drilled out, it must be delimited, quality at various depths must be found.

I can only cite from our own experience, for instance in our Orinoco ore mines, we spent approximately $7 million in exploration before we decided to go ahead with the mine. It is an expensive and time-consuming—and we spent 5 years of time.

Mr. CONTE. But in the long run it is well worth it?

Mr. OBBARD. Because we know the material is there now.

Mr. CONTE. I don't want to put you in a spot in view of the fact you are the contracting party here with the U.S. Government, but we as conscientious legislators and public servants, beholden to the taxpayers, and regardless of what we may read in print, we take these things very seriously.

Mr. OBBARD. I appreciate that, Congressman.

Mr. CONTE. I would like to have your opinion as a citizen, not as an official of United States Steel, and with your knowledge in this area of steel, if you were sitting in my shoes, would you vote for this sizable sum of money at this point with the amount of information that we have to finance this steel mill?

Mr. OBBARD. Congressman, I am afraid there are many, many factors which I am not competent to comment on—for instance, the balance-of-trade problems, foreign exchange problems of India, what India needs first. India needs many things. What comes first in its requirements I would not be prepared to say.

Mr. ANDREWS. We were told by the former Ambassador to India that the greatest need in India today is for steel—the greatest need.

Mr. CONTE. I would like to have you finish answering, but before you do you should also know that the U.S. Government has given India in one form or another of foreign aid up to today, $5.1 billion. This is not peanuts. It is a sizable amount of money.

Also, we have a staggering national debt here of $309 billion. Interest alone is $9 to $11 billion a year to the American taxpayers.

I can sympathize with what the Ambassador said regarding India's No. 1 requirement today, but I would like to get some information from you or someone across this table, people I regard as experts. You know a lot more about this than I do. You can try to help me reach a decision on this matter.

From what you know, from the exhaustive study you have made, should the U.S. Government at this time—I am not talking about the future—and when I say this time I mean within the next 12 months, commit the United States to the construction of this steel mill?

Mr. TENNANT. Might I be permitted to say something here? I am general counsel to the United States Steel Corp. I really don't think you can ask us, who are hired to do a job here, a technical study, to give the kind of opinion that you are asking.

Any information on which we might base any such judgment comes from a contract we performed for an agency of the Government. I don't feel we should go out of our capacity as experts.

We are very happy to give you any technical information we have, but you are asking for a political judgment. I don't think that is our function.

Mr. CONTE. Let us rephrase the question. Based upon the information that you have, and we paid a very handsome sum for this study, $686,000—I think for that amount of money I deserve an answer.

Based upon the information that you have, do you think it is financially sound for the U.S. Government within the next 12 months to commit itself to this investment for a steel mill at Bokaro?

Mr. OBBARD. Congressman, I don't honestly believe I can give you an intelligent answer to that. As Mr. Tennant has said, our study has been limited not even to the entire steel industry but to a steel mill at one specific site.

We have not examined the whole steel picture except as it refers to this specific mill.

We have the greatest sympathy with the Indians and their aspirations, but we could not make an intelligent reply as to whether this money should or should not be committed by the United States. It involves political and other economic considerations far beyond our scope.

Mr. ANDREWS. But you do say you would not spend your own money for this plant at this time.

Mr. CONTE. He said yes earlier.

Mr. OBBARD. That is right, under these circumstances we would not——

Mr. ANDREWS. You wouldn't spend your own money. I observed earlier that the easiest thing on earth to do is to spend somebody else's money.

Mr. OBBARD. When I say not spending our own money——

Mr. ANDREWS. I understand what you mean. In other words, you are a good businessman. You are one of the topflight businessmen in America. You represent one of the greatest industrial firms in America, a company which has had a record of success through the years.

The saying is—as goes steel so goes the Nation. You enjoy the integrity, confidence, and faith of the American people.

When you tell me that you would not spend your company's money to build a plant at Bokaro within the next 12 months based on the information you have, with regard to conditions at Bokaro and including everything, raw materials, transportation, that is a pretty good answer for me.

Mr. CONTE. Actually, Mr. Chairman, it is 24 months because if you take his statement on the page I mentioned, it states it would take 2 years to ascertain whether the raw materials are available or not.

I asked the question of whether he stands by those words today, and he says yes.

Then I asked if he were to construct a mill, and he said anywhere in the world, he would want to know those facts.

Mr. ANDREWS. Of course he would.

Mr. CONTE. So it is 2 years before United States Steel or any other American steel company would make this kind of investment.

Mr. FLYNT. Mr. Obbard, I am equally interested in the answer to the question which was asked by Mr. Conte a few moments ago.

One reason I am particularly interested in it, and I believe Mr. Conte shares this interest, is that we are concerned about whether this mill, as presently contemplated, would be capable of paying out. If it

would pay out it might be considered in the true sense of the word, a loan, a development loan.

On the other hand, if it will not pay out, and if there is no foreseeable possibility at this time that it will pay out, then it would be a grant as opposed to a development loan.

Thank you, Mr. Conte.

Mr. MINSHALL. Mr. Obbard, if United States Steel were going to invest money in a mill like the proposed one at Bokaro, you would want to conduct further investigations before you made any kind of an investment; would you not?

Mr. OBBARD. We would, sir.

Mr. MINSHALL. Along what lines would this investigation go and how much would it cost, and how long would it take?

Mr. OBBARD. Of course, if we were investigating for our own investment purposes it would be a different sort of investigation.

As I said, before we would even start there would be many matters which would have to be decided.

Mr. MINSHALL. What do you mean different? Didn't you investigate the commercial feasibility of this mill?

Mr. OBBARD. That is right; for this specific site.

Mr. MINSHALL. How would your investigation differ from the one you have already made?

Mr. OBBARD. We would investigate possible alternate sites, and that is a very difficult thing to evaluate because Indian freight rates are not representative of true freight rates.

After all, steel fundamentally is simply an accumulation of heavy raw materials and distribution of a heavy finished product.

We would investigate other sites. We would perhaps investigate, we would certainly investigate, what the price picture in the future looks like.

I can mention the retention prices that the mills receive at present. Those have been set retroactively. For instance, they were set in September of last year retroactively from March 31 of last year for the 2 years preceding. That is an almost impossible situation for a commercial company when they are making and selling stuff without knowing what the price is, so there would have to be some conclusions on that matter with the Indian Government.

Mr. MINSHALL. What else?

Mr. OBBARD. We would certainly have an extensive investigation of raw materials. As I mentioned, in one small area in Venezuela we have spent $7 million before we started a mine. It is a very costly——

Mr. MINSHALL. Adding this all up how much would this further investigation cost and how long would it take? Just give a ball park figure if you can.

Mr. OBBARD. I have to exclude raw materials.

Mr. MINSHALL. What do you mean you have to exclude raw materials?

Mr. OBBARD. Because the drilling of and proper testing of raw materials is a long and complicated business.

Mr. MINSHALL. How long would this whole investigation take? That is what we want to know. We cannot exclude anything.

Mr. OBBARD. Well, sir, we figured that a superficial look at Indian raw materials would cost us about $5 million and take about 2 years, 2 to 3 years.

Mr. MINSHALL. You said superficial. How long would it take before you made a complete investigation?

Mr. OBBARD. A superficial one would have some drilling in it. It would not determine the exact size and exact tonnage in the ore bodies, but it would be a reasonably good one.

The commercial part I think we have investigated.

Mr. MINSHALL. You said in your original statement in response to one of the queries here earlier this morning that you would also conduct a study "in more breadth." What did you mean by that as contrasted with depth?

Mr. OBBARD. Depth means confined by contract to this specific site and this specific mill.

Mr. MINSHALL. In other words, the State Department and AID people told you to look at the feasibility of a steel mill at Bokaro, period.

Mr. OBBARD. That is correct.

Mr. MINSHALL. You were limited to that?

Mr. OBBARD. That is correct.

Mr. MINSHALL. Thank you, sir.

Mr. CONTE. Do you feel that as a banker lending this money to the Indian Government, actually giving it to them even though we are calling it a loan, you would definitely investigate further different sites and also the raw material contents within the area and outside the area?

Mr. OBBARD. We would, sir. It doesn't mean we might not come back to this site, but we would take into consideration other sites.

Mr. CONTE. I hate to belabor this issue, but based upon your report here, and I have read it, we could go into it for 5 hours. You have no employees here. This is barren land. You have to construct a city.

Mr. OBBARD. That is right.

Mr. CONTE. Construct canals.

Mr. OBBARD. That is right.

Mr. CONTE. Dams, railroad tracks; there are so many things you would have to do. Then I imagine you are familiar with the Indian populace, different religious groups and different tribes, and how you have all of these conflicts among the Indians.

You have to bring all these people into this new area. You will have to train foremen, train superintendents, you have to train employees. Some of these things seem like insurmountable problems.

For instance, you say it will take 3 years of training for foremen and assistant foremen; 18 months for the training of senior operators jobs; 9 months for the training of junior operators jobs; 3 months for semiskilled jobs; 3 to 4 years for apprentice and skilled maintenance men.

Based on all these things you also found the lack of limestone, lack of depth in iron ore, good iron ore unless you find some scheme to correct the present situation when you get down to the fine iron ore, you say you might go back to this site. Would United States Steel ever go back to this site?

Mr. OBBARD. If it were the best site available, which we don't know, and if the financial results and projections turned out all right, we might.

After all, you asked a direct question—would we invest our money. We do that on the basis of forecasts of financial results. As you see from this report, there is a 20-year payout for the entire investment.

There might be other people interested in that. We don't know. We ourselves could find better places to invest our money.

Mr. CONTE. You say you may? You could?

Mr. OBBARD. We could.

Mr. CONTE. No doubt about that.

Mr. OBBARD. What money we have we can invest—we are working, after all we won't get rich on 20-year payouts.

STEEL PRODUCTION IN UNITED STATES

Mr. CONTE. As a matter of background, sir, are you running your mill to capacity at the present time?

Mr. OBBARD. No.

Mr. CONTE. What percentage of capacity?

Mr. OBBARD. I would say about now we are running at about 60 percent.

Mr. CONTE. Is that about the general percentage of all steel mills?

Mr. OBBARD. In the range of 60 to 70 is the present range. It has dropped substantially since early in the year.

Mr. ANDREWS. And it is going down now?

Mr. OBBARD. We hope it is bottoming out, sir.

Mr. ANDREWS. I was reading a few days ago about the inventories building up.

Mr. OBBARD. They did during the spring but they are now being consumed, which is one of the reasons for our low rate of operations.

Mr. ANDREWS. You will get into high gear, you hope, when the new automobiles start coming off the line?

Mr. OBBARD. We hope so.

IMPORTATION OF STEEL

Mr. CONTE. Could you tell me how much steel is being imported in the United States from Japan, West Germany, and any other exporters?

Mr. OBBARD. We could, of course, give you the detail, but I think in the overall about 4.5 million U.S. net tons this year is a fair figure.

Mr. CONTE. And how much is produced in the United States this year?

Mr. OBBARD. About 100 million ingot net tons, which would be about 70 million product tons.

Mr. CONTE. Most of the steel that is being imported, 4.5 million tons a year, comes from Japan and West Germany?

Mr. OBBARD. I do not have the exact proportions. Japan, West Germany, and Belgium are large exporters.

Mr. CONTE. Luxembourg?

Mr. OBBARD. I speak of Belgium and Luxembourg as the same.

Mr. WHYTE. In the first 5 months of this year about 40 percent of the imports came from Japan.

Mr. CONTE. Today we are running our steel mills at 60 percent capacity, and we are importing 4.5 million tons, 40 percent of which comes from Japan.

JOBS TO BE PROVIDED IN UNITED STATES BY CONSTRUCTION OF PLANT

Something was said yesterday that jobs would be provided in the United States if this mill were constructed. Could you give us a ball park figure of how many jobs you believe would be created here in the United States by the construction of this steel mill and for what period of time?

Mr. OBBARD. I could not, sir. That would be mostly equipment and supplies.

Mr. CONTE. I am talking about steel now.

Mr. MACMICHAEL. We do not have a figure on that. We could give an estimate for the record.

Mr. ANDREWS. Make an estimate and insert it in the record.

(The following was submitted for the record:)

Production of the steel required for Bokaro step I would result in employment estimated at about 900 men for 3 years. The present total employment in the steel industry of the United States is approximately half a million.

Mr. OBBARD. Of course, it is inconsequential compared to the jobs lost by dumping. You people who come from the steel-producing areas know that.

Mr. CONTE. Not only dumping of steel, but we were told yesterday by the Ambassador that India is going in the bicycle manufacturing business and also sewing machines and this mill would provide the steel for those operations. And here I sit on this side of the table representing the district in which the Columbia Bicycle Co. is located and which is having its difficulties.

Mr. OBBARD. The steel that mill would produce would make a lot of bicycles.

Mr. CONTE. For this amount of money we could give them 30 million bicycles and my area could have a boom economy.

I would like to have that answer for the record because I know that the Steelworkers' Union will be in here this afternoon and they will chip away on how many jobs this will provide for the steel industry.

Could you tell me also for the record for what period of time these jobs would be created? You can supply that for the record too.

(The information follows:)

It is estimated that the additional employment would arise over a period of about 3 years, commencing 1 year after appropriation of the necessary funds.

Mr. CONTE. If this mill was constructed and the five existing mills were expanded—we also, for your information, have a $1.6 million item, which is peanuts, compared to Bokaro investment, to help them with management policies and engineering studies, et cetera—the five existing mills, as projected, would increase production from about 5 million tons a year presently to about 7.4 million tons in 1966. With the expansion of the present mills and the construction of the Bokaro mill, do you foresee the possibility of India having a surplus of steel?

Mr. OBBARD. Not for a good many years. The only reason that they might have an exportable amount is simply to get some foreign exchange. Some countries, like Japan, demand that a certain amount of steel be exported in order that they may build up their foreign exchange.

MAN-HOURS USED IN MAKING STUDY

Mr. CONTE. In regard to the study that was made by United States Steel, could you give me the man-hours that were involved in that study?

Mr. OBBARD. I believe we kept man-hours only on the individuals assigned to India on whom we received a per diem reimbursement. The remainder was spread throughout our organization. Perhaps I could give you our total employment costs. They were $379,000 for our own people working directly on the project.

Mr. CONTE. How long were they over in India?

Mr. OBBARD. Our actual crew in India were there for 5 months, would you say?

Mr. JACOBSEN. From 1 to 5 months.

Mr. CONTE. Could you give me the number of men who were there 5 months and the number who were there 1 month? Would that be too difficult?

Mr. OBBARD. No. We could give you a breakdown. We would like to include our subcontractors. We used subcontractors such as Bechtel and Stone & Webster on the site. We also use them in this country.

Mr. CONTE. The reason I ask that is because the AID has been very generous I notice while reading the contract that it provides round-trip tickets for the wives of the individuals sent to India and I wanted to know how many wives went over there and for what period of time. This is very generous. If a politician ever took his wife on such an assignment there would be criticism.

Mr. OBBARD. I think the contract provides if a man was there 3 months or longer he could take his wife after 1 month.

Mr. CONTE. It provides for travel by wives of each employee or consultant one round-trip, first-class transportation ticket, jet if available, provided the wife's journey should not take place earlier than 1 month after the husband's departure for India under this contract. That is somewhat of an unusual fringe benefit.

Mr. ANDREWS. Not for AID.

Mr. OBBARD. I am sorry, but it is our employment policy. When we send a man to a country like India for a period exceeding 3 months, we think it only fair that he should have the benefit of his wife's accompaniment after 1 month. And, incidentally, we picked up the living expenses for the wives ourselves. You were not charged on that per diem. That simply covers the men.

Mr. CONTE. You are very sympathetic and understanding. I do not think most companies, for that short period of time, would provide that benefit.

Mr. OBBARD. It is not an uncommon practice. It is the only way we could get really good qualified men to do it. This was no job for drifters or floaters or young inexperienced men. This was a job for men experienced in the business, and you cannot get those for nothing.

Mr. CONTE. In closing I have only one thing to say. I enjoyed reading the report. I do not agree with AID. Of course, you signed a contract with them and I cannot blame you for that. They set up the specifications for what they wanted. But I think it was very poor business judgment on AID's part to spend $686,000 of the taxpayers' money and not ask you to come to a conclusion whether the U.S. Government should invest this money in this Bokaro steel mill.

To me this report does not mean a thing. You have left me hanging and the more I read it I see all these obstacles—and to me they are tremendous obstacles—and yet you do not reach the conclusion that this should or should not be done and that the hard-earned taxpayers' money should not be thrown to the wind.

Mr. OBBARD. May I speak in defense of AID?

In the first place, they could not give us a contract, neither could we accept an open-end contract that covered an enormous subject like the whole economics of steel production everywhere in India. An open-end contract would have been at least twice as much and would have taken much longer.

In the second place, I understand AID was asked specifically by the Indian Government for this specific project and under the law had to have a report.

In the third place, we, as a company, use consultants many times. For example, we might ask Stone & Webster to examine the feasibility of a steampower plant at Gary. They are very good on such plants. We would expect them to give us the final kilowatt cost of such a plant, but it would be up to us whether we built a steampower plant at Gary. That is up to the owner to decide. A consultant's job is to present the facts to the owner for his decision, and you, one way or another, are the owners.

Mr. CONTE. I think I am familiar with consultant firms. They usually have a concluding paragraph in which they say they do not think this is a good investment or they do think it is a good investment. That is one of their functions.

Mr. ANDREWS. It is now 12:30. Could you gentlemen be back at 2 o'clock?

Mr. OBBARD. Certainly, sir.

Mr. ANDREWS. Thank you. This has been a most enlightening session.

The committee will recess until 2 o'clock.

AFTERNOON SESSION

Mr. ANDREWS. The committee will come to order.

Mr. Minshall.

Mr. MINSHALL. Mr. Andrews, at the outset, I want to thank the representatives of the United States Steel Corp. for giving of their valuable time to come before this committee on a voluntary basis to give us the valuable information they have about the Bokaro steel mill. I am sure we will find it invaluable and very helpful in coming to any final conclusions we might make on this committee. I think it will be most helpful, and I again want to thank you for your help.

As you probably well know, I come from the State of Ohio. I live in Cleveland. Cleveland is in the "Ruhr" of America along with Lorain, Youngstown, Pittsburgh, and Detroit.

The people in my area, Greater Cleveland, are vitally interested in this. We have Republic, National Tube and Youngstown Sheet & Tube, plus many others throughout this general area.

Bokaro would be an expenditure, as testimony has shown, of practically $2 billion. Based on the loan arrangement setup for this at the present time, three-quarters of 1 percent for 40 years, this is to me, and I think all thinking members of the Congress and business community, an outright grant.

BACKGROUND OF CONTRACT

Now, at the very outset I should like to ask Mr. Obbard just how was the feasibility contract prepared? Under whose auspices?

Mr. OBBARD. It was done after extended discussion——

Mr. MINSHALL. Give us the background and history of it—who you dealt with at the State Department, when you first heard of it, and so forth, so we will have a better understanding of what this is all about.

Mr. OBBARD. Of course, this mill has been talked and discussed in a general way for many years. Everyone has known it is in the third 5-year plan.

The first consequential discussions we had with AID were in the early part of 1962. We explained to Mr. Fowler Hamilton, who was then head of AID, that we did not normally do this sort of work except for our own purposes. On occasion we did it for outside people, but it would disclose a wealth of information that normally we would keep to ourselves as commercial people.

We do this sort of study on every consequential investment we undertake and therefore we could not say we did not have qualified and experienced men in doing this sort of work.

There were many discussions as to the scope of the contract, as to what it would cover, such matters as expansion of existing steel mills and other methods; namely, expansion of the private sector, were discussed in a general way, but it was finally concluded that what AID wished was for us to make a specific investigation of this site since it was the one the Indians had selected in their third 5-year plan and had done some preliminary work on. With that in mind, there were fairly extensive discussions as to the scope of the contract, what would be required and the terms and conditions under which we would undertake it.

We understand other concerns were also approached as to whether they would wish to undertake it. We explained if we were selected, it would be on the basis of our qualifications only and there would be no other considerations expressed or implied in any way as to further obligations as to construction or operation. Those would be matters considered when, as, and if they arose.

Mr. MINSHALL. Do I understand correctly that the terms of the contract were spelled out and were more or less dictated by the AID people? Am I correct in that assumption?

Mr. OBBARD. We have to admit for our part we did want a specific assignment properly framed so we would know the extent of our obligations and could perform them. In other words, a broad overall hunting license would have been nothing we could have undertaken satisfactorily, and I am sure it would have been nonacceptable to the Indian Government, who on their part were a little dubious as to the necessity of even making this study. They explained they had it in their plans. They had made some preliminary investigations and as far as they were concerned it was settled in their minds. However, AID, as I understand it, under the law has to have an evaluation of the project.

Mr. MINSHALL. Who, in drafting this contract between you and the AID people decided, or made the final decision as to limiting you to one site; namely, Bokaro?

Mr. OBBARD. I would say that was made by Fowler Hamilton. He visited India in the spring of 1962 with some other gentlemen from AID and on his return he in general specified the conditions as to what we should do and what our obligations would be. I might say he exerted some moral pressure.

Mr. MINSHALL. Did he give you any reasons for limiting your study to Bokaro?

Mr. OBBARD. I think he was under very strong pressure from the Indians themselves. We met the Indians, together with the AID people, as the contract negotiations went on, and they were very insistent we confine ourselves to this site. As a matter of fact, when our team got in India they were under some criticism that they were going beyond the scope of their contract in investigating the steel consumption requirements.

You may understand, we do not simply take, let's say, planning figures as being the exact requirement. We feel we have to go to the steel-consuming industry to see what they may reasonably be expected actually to consume. We made quite a deep study on that basis. Of course, Indian statistics are not of the best. We did our best to make a proper market survey in the way we would make it in this country, or in any other country.

Mr. MINSHALL. In your dealings with the Indians, were there any reasons why they should be so insistent on limiting it to one site?

Mr. OBBARD. They are strong believers in planning. It is in the plan and there it is.

Mr. MINSHALL. Did you suggest to them that alternate sites should possibly be considered?

Mr. OBBARD. That was discussed early in the negotiations, and the idea was rejected.

Mr. ANDREWS. Mr. Obbard, could you tell us who originated the idea, or the suggestion that a steel plant be built at Bokaro?

Mr. OBBARD. That was in the Indian Planning Commission's overall plan.

Mr. ANDREWS. They conceived the idea of requesting assistance in building a steel plant, and they suggested the site of Bokaro?

Mr. OBBARD. That is right. As the plans go on, there are other plans for other parts of the country.

Mr. ANDREWS. Do you know anything about any member of this Government giving them aid and encouragement, offering a little seed of suggestion that they clamor for this plan?

Mr. OBBARD. No, sir; I know of no such thing.

Mr. MINSHALL. To the best of your knowledge, there have been no commitments made by anyone in the Government from the Ambassador on down for this steel mill?

Mr. OBBARD. We know of no definite commitments. Our team in India found no evidence of such definite commitments.

Mr. MINSHALL. You emphasize the word "definite."

Mr. OBBARD. If conversations keep on long enough and extensively enough, sooner or later somebody can take something out of context which makes them believe there has been an implied commitment.

Mr. MINSHALL. You think that is what has happened in this case?

Mr. OBBARD. It may have.

Mr. ANDREWS. You would be surprised to know how little it takes to make a commitment.

Mr. MINSHALL. Off the record.

(Off the record.)

SIZE OF UNITED STATES STEEL CORP.

Mr. MINSHALL. Mr. Obbard, just for the record so it will be complete, would you tell us just how big a corporation United States Steel is? We all know it is one of the largest, if not the largest corporation in the world.

Mr. OBBARD. I think we would have to refer to the annual report which has the figures set out.

I might say we are now, perhaps, the second largest steel corporation in the world. Mr. Khrushchev has one which is equal at least to us.

Mr. MINSHALL. How many stockholders do you have? Do you know offhand?

Mr. WHYTE. There are 364,000 stockholders.

Mr. MINSHALL. I think they would be vitally concerned about the construction of any steel mills outside the limits of the United States that might affect their interests.

I should like to ask if you know how many steel mills the AID people have built in other countries and how many they are planning to build?

Mr. OBBARD. I do not know, sir. There is a listing for that.

Mr. MINSHALL. I realize you are not the best witness for this, but I thought you might know.

Mr. OBBARD. I do not know.

Mr. MINSHALL. We can get this.

Mr. ANDREWS. Without objection, that information will be inserted in the record at this point.

(The information follows:)

AID OR PREDECESSOR AGENCY COMMITMENTS FOR AID TO IRON AND STEEL INDUSTRIES ABROAD

The attached tables indicate assistance to foreign steel industries prior to fiscal year 1964.

No applications for assistance to steel mills are under active consideration for Africa or the Far East areas. The Bokaro plant is the only steel mill project which is under consideration in the Near East and South Asia region.

In the Latin American area, no firm loan applications for steel mills have been received, although assistance to the steel industry in Brazil has been proposed.

TABLE I.—*AID or predecessor agency commitments for aid to iron and steel industry—Summary by country and fiscal year of supporting tables II–IV, July 1, 1948–June 30, 1963 (preliminary)*

[Millions of dollars or dollar equivalents]

Region and country	Total through June 30, 1963	Fiscal year—												
		1949	1950	1951	1952	1954	1955	1956	1957	1958	1959	1961	1962	1963

Yugoslavia			9,077
Iron works, Niksic	480	1958	5,610
Iron works, Sisak	480	1963	3,467

[1] Represents the use of U.S.-owned foreign currencies derived from sales of surplus agricultural commodities under sec. 402 and title I, Public Law 480. Data on Public Law 480 loans to Japan are not in sufficient detail to differentiate any loans benefiting the steel industry.

Mr. MINSHALL. The reason I bring this out is that this thing could grow like Topsy.

Mr. WHYTE. In the Congressional Record of about a month ago in a speech by, I believe, Senator Engle of California, he listed all of the money that has been loaned or granted by our Government through AID, through the Eximbank and the World Bank for steel and aluminum plants throughout the world. It is quite an interesting listing. If you like, I would furnish you the page number and the reference.

Mr. MINSHALL. I think it would be very interesting to have it.

How many employees do you have in the United States Steel Corp.?

Mr. OBBARD. Approximately 195,000.

Mr. MINSHALL. What is your annual average tonnage of production? You can supply it accurately for the record.

Mr. OBBARD. About 18 million tons of finished products over the past 5 years is the annual average.

Mr. MINSHALL. Annually?

Mr. OBBARD. Annually.

ADEQUACY OF STUDY

Mr. MINSHALL. In your initial remarks you said that the study was not complete in your opinion. You cited the fact they did not go into alternate sites and the fact if you were asked to go into it, you would want to look into the feasibility of Indian partners and who they were, you would want a more definite understanding with the Government, and you would want a larger study in breadth. Are there any other changes you would like to make in this report if you went ahead with it and did it in the manner in which you think it should be done?

Mr. OBBARD. I would like to correct the impression I do not think the study is complete. It is complete as regards this site and this operation. I mentioned that it lacked breadth inasmuch as we were confined to this site in our studies and only to the present and projected expansion plans of the existing Indian steel mills.

Mr. MINSHALL. With the knowledge you have at hand, you are not at all sure that Bokaro would be the most economical site on which to build this plant?

Mr. OBBARD. That is correct.

Mr. MINSHALL. Not to belabor the question, I believe you also said earlier if you were asked to go into this as a private corporation, the United States Steel Corp., to construct a mill in India, it would require about $5 million and several more years of intensive investigation.

Mr. OBBARD. The $5 million would be for the raw materials.

Mr. MINSHALL. Only the raw materials?

Mr. OBBARD. Only.

Mr. MINSHALL. And how much would it take to have a complete report?

Mr. OBBARD. Having reviewed and gotten the raw materials picture clearly, it would probably cost us another $1 million to make a study of the two or three sites we might select as to what in our opinion would be the best.

Mr. MINSHALL. We have also touched on rather briefly that if we did go ahead with this first phase of the Bokaro steel mill, how much would it affect the steel production in this country, the heavy

engineering production in this country, and how much would it affect employment, if at all?

It is my understanding that the present production of steel in the United States is approximately 100 millions tons annually. Am I correct in that?

Mr. OBBARD. This is ingot tons. About 70 million net tons of finished products.

EFFECT OF CONSTRUCTING BOKARO ON PRODUCTION IN UNITED STATES

Mr. MINSHALL. How would this Bokaro steel mill, the construction of it, affect industry in this country?

Mr. OBBARD. As a rough estimate, I would say that there would be required about 100,000 net tons of steel products annually spread over about 3 years, for step 1.

Mr. MINSHALL. In other words, it would be about one-tenth of 1 percent annually—a mere fraction of 1 percent?

Mr. OBBARD. Yes, sir.

Mr. MINSHALL. It would not affect really the steel production in this country in any measurable quantity?

Mr. OBBARD. That is right.

If you would spread the 300,000 net tons over 3 years, that would be 100,000 net tons a year as against 70 million U.S. production of finished products.

Mr. MINSHALL. Mr. Galbraith, who you well know, is a former Ambassador of India and has more or less guided this project from its inception. He stated very clearly only yesterday this would have a great impact on the American economy. You cannot say that, can you?

Mr. OBBARD. No, I could not say it would.

IMPORTATION OF STEEL AND STEEL PRODUCTS

Mr. MINSHALL. We also talked earlier this morning about the dumping of steel into this country from Japan and Germany and other Common Market countries.

Mr. OBBARD. Western Europe.

Mr. MINSHALL. I think this represents about 5 percent of the U.S. market; is that a fair percentage to state?

Mr. OBBARD. A little better than 5 percent. It is about 4.5 million tons out of a total of 70 million tons. That would be about 6½ percent.

Mr. MINSHALL. This really is not a true figure, is it, when you consider how it affects certain steel industries?

Mr. OBBARD. It depends. The figure I gave you was an overall figure and it does affect some districts much more severely.

For instance, the Cleveland district on pipe and barbed wire and wire rods; the east coast on pipe and reinforcing bars; the gulf coast, similarly pipe and reinforcing bars; and the west coast, pipe, nails, and merchant products.

Mr. MINSHALL. My information is that the pipe that has been sent to this country amounts to about 25 percent of our total production, and that the barbed wire amounts to about 50 percent of our total produc-

tion. If those figures are not correct, I wish you would supply them for the record along with any other specific items such as nails that would be affected so we can have the record as complete as possible.

Mr. OBBARD. We would be glad to do it.

(The information requested follows:)

Iron and steel imports into the United States

[United States net tons, thousands omitted]

A. TOTALS BY YEAR

	Total	Percent of U.S. shipments
1958	1,676	2.8
1959	4,510	6.5
1960	3,398	4.8
1961	3,123	4.7
1962	4,031	5.7
1963, 5 months	1,862	----------

B. RECENT TOTALS BY COUNTRY

	1962	5 months, 1963
Japan	1,072	742
Belgium-Luxembourg	1,278	605
Canada	390	159
West Germany	483	143
United Kingdom	271	126
All others	538	87
Total	4,032	1,862

C. RECENT TOTALS BY PRODUCT

	1962		5 months, 1963
	Total	Percent of U.S. shipments	
Ingots, blooms, etc	174	9.9	45
Wire rods	645	[1] 63.3	291
Structural shapes	366	8.4	181
Plates	150	2.4	84
Concrete reinforcing bars	607	25.4	218
Bars	385	4.5	173
Pipe and tubing	655	9.2	292
Wire and wire products	655	21.1	302
Sheet and tin plate	440	1.3	282
All others	227	15.2	79
Total	1,970	2.8	4,305

[1] Most wire rods produced in the United States are consumed in the industry.

Mr. MINSHALL. During our hearings on our Subcommittee on Foreign Operations, we went in of course to this Bokaro matter at some great length. I first "smelled the rat" on this whole project when I read one of these publications put out by the State Department, some kind of a dodger, when they quoted part of your report. The best they could report in their own publication was not too good, and that is when I requested a complete set of these volumes which led to many of these revelations we have had before this special panel, and also before our Foreign Operations Subcommittee.

BASIC ASSUMPTIONS

One of the most interesting things to me was in volume 1 on page 2 on your basic assumptions. You have about 12 or 13 of these basic assumptions. In other words, you have to "crystal ball" a lot of this proposed project.

I would like to have your comments on these basic assumptions. About the only one they are agreed on is, there is a need for steel in India.

Mr. OBBARD. Our basic assumptions were the ground rules that were worked out between ourselves and AID as the basis for the report.

Mr. MINSHALL. Yes.

Mr. OBBARD. For instance, in No. 1, we said we should only be required to calculate on the actual plant facilities. That such things as water supply, housing construction and so forth we would review but we would not make a definite report on them. As you have seen, they are just put in on convenient broad terms.

No. 2 is that the foreign exchange requirements would be met from dollar funds on a basis of 5¾ percent. I do not know what the terms of the loan to the Indian Government wold be from the U.S. Government, but these were the commercial figures we were asked to use for the loan from the Indian Government to this specific steel mill operation. It would be 5¾ percent for 20 years.

The third assumption was that the rupees for construction would be equity paid in by the Indian Government and that any additional rupee funds from the Indian Government should bear interest at 5 percent per annum on a 20-year basis.

The next assumption is that the current relationships between costs and sales proceeds would remain constant over the period under analysis. In other words, we had to assume that the excise rates and the retention prices and sales prices as they presently exist would continue.

The next assumption was that Bokaro would operate as to management as an entity separate from the present three public steel plants where Hindustan Steel Co. is having some difficulty managing successfully. They are requesting some training funds to improve and train their management.

The next was, there should be no discrimination against this mill. After all, so many of the factors are under the control of other departments such as the power supply, the water supply and coal supply, transportation, that to give this mill a fair chance it should be treated no better, but no worse, than the other Indian steel mills.

Next, we would use to the fullest extent Indian personnel. We would train them. We would include the money in here for training. That is only sensible and reasonable both in view of the Indian economy and in view of the costs. It should be possible to work eventually with Indian personnel at a lower rate than American personnel.

In other words, we would use American personnel only to the extent it was necessary, or rather, we would figure on using them, whether by ourselves or anyone else.

The next assumption was that Bokaro would be an integrated operation at least as far as the iron ore and limestone supplies are con-

cerned. I explained to you the difficulties of dealing with other government departments. To the extent practical, Bokaro should own and operate its ore mines and limestone quarries just as we do in this country.

The next assumption was that Bokaro would be designed for operation on coarse ore. That is the coarse ore fractions I described this morning as being the ones on which the present Indian steel industry runs and they are the only ones we know now that will work in a blast furnace.

Mr. MINSHALL. When you referred to fines this morning, you meant the texture of the ore, not the quality?

Mr. OBBARD. That is right.

Mr. ANDREWS. You said that was an inferior type ore.

Mr. OBBARD. It is inferior——

Mr. ANDREWS. And unusable?

Mr. OBBARD. At the moment, unusable.

Mr. MINSHALL. It is nowhere near as good as the taconite we are getting out of the Mesabi Range?

Mr. OBBARD. Taconite, while it costs quite a bit to produce, is a very superior product.

The next assumption was that the transportation, water, and power services on which Bokaro would be dependent and for which responsibilities lie with other departments of the Indian Government would in fact be available. In other words, the facilities must be there in fact, not in promise, to make this mill an operating possibility.

The next assumption was one requested by AID and the Indians that the mill would be designed to be expandible up to a 4-million-ton capacity. We put a footnote on that:

> It is important to mention here that in our opinion no expansion should in fact be envisaged until raw material problems affecting the project have been solved.

Mr. MINSHALL. In your opinion, they are far from having been solved?

Mr. OBBARD. That is right. I would not start on the second and third steps of Bokaro until they are solved.

Mr. MINSHALL. Also, you brought out in previous questioning, if you were a private concern, United States Steel Corp. would not start on the first phase?

Mr. OBBARD. Not until we saw the raw materials picture more clearly.

Mr. MINSHALL. Thank you, sir.

This report was dated, I think, March 1963.

Mr. OBBARD. That is correct, sir.

Mr. MINSHALL. To the best of your knowledge, is there anything in this report as it is presently written that has been changed in any major way because of the passage of time, or events?

Mr. OBBARD. No. The only additional matter is that a new tax for war risks has been passed by the Indian Government, I think in January or February of this year, which would add about $9 million a year to the operating costs of the mill.

Mr. MINSHALL. $9 million?

Mr. OBBARD. Yes.

Mr. MINSHALL. This has happened since the report was written?

Mr. OBBARD. Yes. That is mentioned in our report.

Mr. MINSHALL. Did you say that was a war tax? Go into detail on this tax if you will.

Mr. OBBARD. On page 26 of volume 3, paragraph 57, it states:

On January 1, 1963, the Government of India imposed a new compulsory scheme "emergency risk insurance" on business and industry. This scheme is in effect a tax on inventory and fixed assets. Under this levy the Government must be paid a quarterly insurance premium on the value of the inventory and the value of factory buildings, plant, and machinery, at the beginning of the quarter. On an annual basis, the rates are six-tenths of a percent of inventory and 1 percent on fixed assets. The insurance policy provided by these payments covers 80 percent of inventory or fixed asset losses resulting from enemy action. Because this fact was not learned until after evaluation had been completed, we have not taken account of the element of expense in our evaluation, but in step 1 the cost would amount to an estimated $9 million per year.

COMPARATIVE COST OF CONSTRUCTING MILL IN UNITED STATES

Mr. MINSHALL. We are told that this Bokaro mill would cost about $1.7 billion. I wonder if you are able to tell us how much a mill of the same capacity, namely 4 million metric tons, if it were built in Pittsburgh, or Cleveland, would cost?

Mr. OBBARD. It would cost about the same, except you would not have to have the supporting facilities—the housing, the additional railroad transportation, the power; therefore, it would cost about $1,250 million.

Mr. MINSHALL. That is about a $500 million difference.

Mr. OBBARD. Of course, the costs in India have been increased by ocean freight and duties which have to be paid on the equipment. There is a slight offset due to lower construction labor rates. By and large, it would cost about $500 million less in the United States.

Mr. MINSHALL. In making this feasibility study on the economic feasibility of the Bokaro steelmill, you stated over and over again that you were dictated the terms and breadth under which you would operate. You were more or less handcuffed.

Mr. OBBARD. When you are doing it on a contract, you must be sure that what you are required to do under that contract is spelled out to the satisfaction of your customer. As I explained, we could not expect AID to give us a blank check, neither would we take one. We expected a contract which would be specific, and which we would fully and faithfully carry out.

Mr. ANDREWS. As a matter of fact, you did what you were asked to do by AID? You went no further and you stopped no shorter?

Mr. OBBARD. That is correct, sir.

Mr. MINSHALL. To further develop an adequate feasibility study, you stated it would take at least $5 million and several more years to do the job properly.

Mr. OBBARD. Because of the lack of knowledge of the raw materials situation.

Mr. MINSHALL. That is all I have, Mr. Chairman.

Mr. CONTE. There is a phase we did not touch on at all and I might have overlooked it in the report.

OPERATION OF PROPOSED MILL

If this mill is constructed, would they set up a special corporation? Who is going to run the mill?

Mr. OBBARD. It is in the basic assumptions. The mill would be owned by the Indian Government, but it is our very strong recommendation, and all our figures were based on the fact that it would be run by a separate corporation which would be owned by the Indian Government.

Mr. CONTE. Regarding the other three public sector mills, are they set up under a special corporation?

Mr. OBBARD. They are set up under Hindustan Steel.

Mr. CONTE. And when the Soviets and Germans and British gave their loans to India, did they give them directly to India, or to the Hindustan Steel Mill?

Mr. OBBARD. I am not familiar with the arrangements behind the Russian mill. I am almost certain that the British and the German loans were handled by consortiums of equipment suppliers. The loans, I think, were to the Indian Government.

INCOME TO INDIAN GOVERNMENT FROM OPERATION OF BOKARO

Mr. CONTE. On this one here, your recommendation is that a special corporation, separate and apart from the Hindustan Steel Mill, be set up to run the mill, and we in turn would give our money to the Indian Government and they in turn would loan it to the new corporation?

Mr. OBBARD. That is correct. The assumption is they would loan the money at 5¾ percent. We did not recommend that the loan be made in any way, shape, or form. These were simply the assumptions we gathered. We discussed them with AID.

Mr. CONTE. That is good.

Now the chairman brought out an interesting point with regard to the Government of India charging the steel mills so much per ton—$22 a ton?

Mr. OBBARD. $22 excise, and $30 surcharge.

Mr. CONTE. Per ton?

Mr. OBBARD. Yes.

Mr. CONTE. Plus the $22?

Mr. OBBARD. Yes.

Mr. CONTE. So that would be $52?

Mr. OBBARD. Yes.

Mr. CONTE. $52 per ton. This mill would produce how many tons of steel?

Mr. OBBARD. Under step 1, about 1 million tons per year of finished products.

Mr. CONTE. Let's go to step 3.

Mr. OBBARD. On step 3, it would produce about 3 million tons per year. You can take a 75-percent yield from ingot to finished product.

Mr. CONTE. We can multiply 3 million tons——

Mr. OBBARD. I think we have the mathematics worked out for you as to what the Indian Government would get by way of excises and surcharge.

Mr. ANDREWS. Surcharge is another form of taxation, is it not?

Mr. OBBARD. It started as a legitimate equalizing fund. It has developed, under present circumstances, to practically another form of taxation.

Over the whole range of 20 years, assuming that the construction went forth in the steps we recommend, 5 years for the completion of the first, 4 years for the completion of the second, and 5 years for the completion of the third step, the Indian Government would derive from it in excise duties $1 billion.

Mr. CONTE. Over a period of 20 years?

Mr. CONTE. $1 billion.

Mr. OBBARD. In income taxes a half billion.

Mr. CONTE. $1½ billion.

Mr. OBBARD. Surcharges at the present rate—$1½ billion.

Mr. CONTE. And then 5¾ percent. Let us take the American contribution of $891 million. That is $45 million a year in round figures. Roughly it would be $3½ billion that the Indian Government would realize.

Mr. OBBARD. That is right.

Mr. CONTE. And the U.S. Government would realize, assuming they had currency to pay this off, a 10-year grace period with no payment at all, and then they would start making small payments.

Do you have that information in your figures, how the money would be repaid?

Mr. OBBARD. No, we have no knowledge as to any terms of loans between the U.S. Government and the Indian Government.

Mr. CONTE. The past history of all of our loans to underdeveloped countries has been a 10-year grace period and then three-quarters of 1 percent interest and a very, very small repayment over a period of 40 years. It would not be even close to $1 million we would realize during the first 20 years. The Indian Government would realize about $3½ billion.

Mr. OBBARD. And also would get about $1½ billion by way of profit and depreciation on facilities.

Mr. CONTE. So that would bring it up to $5 billion.

Mr. OBBARD. That is right.

Mr. CONTE. That is all, Mr. Chairman.

Mr. ANDREWS. Mr. Obbard, you and your staff have been most helpful to this panel. I want to personally and officially thank you for coming down and testifying before us.

As I said at the outset, the purpose of this panel is to study the overall proposal to build this steel mill at Bokaro. We will make our recommendation to the subcommittee and to the full Appropriations Committee.

Do you know of anything else you could tell us that will be helpful to us in our study which we have not touched on?

Mr. OBBARD. Mr. Chairman, I think you might be interested in the position of the private enterprise mills in India.

Mr. ANDREWS. Two of them.

Mr. OBBARD. Two of them. They are good mills and large mills.

Mr. ANDREWS. We had hoped to have a representative of one of those mills before the committee before we adjourned.

EFFICIENCY OF PRIVATELY OWNED MILLS

We were told by the Ambassador yesterday that the two privately owned mills operated much more efficiently and economically than the three Government-owned mills.

Do you agree with that statement?

Mr. OBBARD. Yes, sir, I would say that. Of course, we have studied them only to the extent that their expansion plans and operating plans are pertinent to the overall steel plan.

Mr. ANDREWS. He was talking about present-day operations there.

Mr. OBBARD. I would say that is correct, that they have been in existence a number of years, and they are a good operation.

OPERATION OF MILL AT PROFIT

Mr. ANDREWS. Assuming that this mill were completed, either in the first, second, or third stages, and went into full operation on D-day, how long after D-day would it be before the mill would operate profitably?

Mr. OBBARD. We have an exhibit in our report which shows the way in which we believe it could reasonably be expected to come into production. As you know, a steel mill does not come into full production on the day when the last brick is laid. We would expect the first stage to be brought into maximum full capacity 30 to 36 months after startup, and startup would be approximately 4½ years from the appropriation of the necessary money.

Mr. ANDREWS. My point is this: When the mill is completed and has started operations, how long would it be before it could operate in the black, so to speak?

Mr. OBBARD. Well, it would never be in the black under the present circumstances.

Mr. ANDREWS. Always operate in the red?

Mr. OBBARD. Well, on the basis of the ground rules set forth here, paying money at commercial prices and paying commercial prices for its materials, and receiving the present——

Mr. ANDREWS. In other words, if this mill were constructed, went into operation under the ground rules laid down by the proposals here, it would never operate profitably? Is that what you are saying?

Mr. OBBARD. On phase 1.

Mr. ANDREWS. Phase 1?

Mr. OBBARD. This mill should not be commenced unless there is an honest belief and prospect of bringing it through to phase 3.

Mr. ANDREWS. That means enlarging it?

Mr. OBBARD. Enlarging it to the full 4 million——

Mr. ANDREWS. Assuming that it was enlarged or built through phase 3, how long would it be after it began operating under phase 3 before it would operate at a profit?

Mr. OBBARD. If it started in the summer of 1963, and our figures were based on that——

Mr. ANDREWS. What do you mean, start of construction?

Mr. OBBARD. Appropriating the money.

Mr. ANDREWS. How long would it take to complete?

Mr. OBBARD. It would take 5 years.

Mr. ANDREWS. For phase 3?

Mr. OBBARD. Oh, no, for phase 1.

Mr. ANDREWS. Five years for phase 1.

Mr. OBBARD. Yes.

Mr. ANDREWS. And you have told us they could never operate profitably under phase 1.

Mr. OBBARD. It would never operate profitably through phase 1.

Mr. ANDREWS. And that would take 5 years?

Mr. OBBARD. That is right.

Mr. ANDREWS. What about phase 2? How long would it take to complete construction under phase 2?

Mr. OBBARD. It would take 5 years plus 4 years; 9 years.

Mr. ANDREWS. Could it operate profitably under phase 2?

Mr. OBBARD. Yes, depending on your definition of profit.

Mr. ANDREWS. Would the income be more than the expense of operating the plant?

Mr. OBBARD. Yes, in 1973 according to our figures.

Mr. ANDREWS. How long would that be after it started operations?

Mr. OBBARD. Five years.

Mr. ANDREWS. Five years after what period?

Mr. MACMICHAEL. Let me give you the numbers as they are here. In our report we had assumed the money would be appropriated in the summer of 1963, that the mill would start operations in 1968 in phase 1; that they would proceed forthwith to expand it, and that under that program the first year of any profit would be in 1973, so 1963 for the money and 1968 for the startup of phase 1 and 1973 for the first break-even year, 1976 for the startup of phase 3, and 1979 before accumulated deficits are erased.

Mr. ANDREWS. Then it would take 10 years——

Mr. MACMICHAEL. After the appropriation.

Mr. ANDREWS. It might take a year or two after appropriation before work started.

Mr. OBBARD. That is in the calculation, sir, about a year of engineering work.

Mr. ANDREWS. It would take 10 years before this mill could operate on a profitable basis.

Mr. OBBARD. That is correct.

Mr. ANDREWS. And that would be under phase 2.

Mr. OBBARD. That is correct.

Mr. ANDREWS. If you reach that point then it could operate profitably from then on out.

Mr. OBBARD. But might I point out, Mr. Chairman, that all these figures are based on 100-percent operation of the mill. In view of the forecasts of steel deficiency, this mill through phases 1, 2, and 3, the figures have been based on 100-percent operation; that is, allowing only for necessary furnace relining and maintenance.

Mr. ANDREWS. Do you have figures of operation for the five other steel mills in India?

Mr. OBBARD. So far as we know, sir, they are all now operating at about capacity. They have had difficulties but——

Mr. ANDREWS. One final question: You said it would take 10 years from the date the money was appropriated before this mill could operate profitably, and that would be under phase 2.

Mr. OBBARD. Yes.

Mr. ANDREWS. Is that comparable to what would exist in this country if a private company built a steel plant?

Mr. OBBARD. No.

Mr. ANDREWS. What is the difference?

Mr. OBBARD. The difference is the very severe squeeze put on by the low retention prices and the high excise duties on the mill's profits. They really are squeezed as to their returns.

Mr. ANDREWS. Thank you very much.

Off the record.

(Discussion held off the record.)

Mr. CONTE. Mr. Chairman, I want to take this opportunity to compliment the witness, Mr. Obbard, and his supporting witnesses who are here today.

It was the most intelligent and forthright presentation and it was one of the finest presentations I have ever heard since I have been a Member of Congress.

I only wish that some others would take a page from your book. It is an inspiration to sit here and talk intelligently as we did here today and to hear the intelligent answers we got to our questions.

Mr. ANDREWS. I wish the whole Congress could have heard you, Mr. Obbard.

Mr. OBBARD. Well, sir, as I explained at the beginning, I still have a great deal to learn about the steel industry myself. It is a very interesting industry.

It is my hope we run it on the basis of facts rather than emotion.

VIEWS ON PROPOSED STEEL MILL AT BOKARO

WITNESSES

DEAN CLOWES, INTERNATIONAL AFFAIRS REPRESENTATIVE, UNITED STEELWORKERS OF AMERICA

JOSEPH J. McDONALD, LEGISLATIVE REPRESENTATIVE, UNITED STEELWORKERS OF AMERICA

Mr. ANDREWS. We now have before us Mr. Dean Clowes.

Mr. CLOWES. President McDonald was scheduled to appear before the committee, Mr. Chairman.

Mr. ANDREWS. Will you identify yourself and state for the record what your job is and whom you represent, what experience you have had, and anything else you wish to say about yourself?

Mr. CLOWES. I am Dean Clowes. I am international affairs representative of the United Steelworkers of America.

With me is Mr. Joseph J. McDonald, our legislative representative.

My duties entailed in this job related to foreign affairs are keeping in contact with the free trade union movement throughout the world. This means that I travel a great deal.

I have spent a considerable amount of time in India. I was in India from 1960 through 1961 working in the new industrial steel belt. I visited the new steel plants on a number of occasions. Primarily my interest was with the trade unions and the labor movement of India, and specifically with the unions involved in their representation with the Hindustan Steel Co.

Mr. ANDREWS. They are the publicly owned steel plants and there are three in India?

Mr. CLOWES. That is correect.

Mr. ANDREWS. There are two privately owned plants. Have you had any connection with them?

Mr. CLOWES. Yes; I lived in Janshedpur. I also visited the Burnpur plant. I worked with the trade unions at both locations.

Mr. ANDREWS. You have a prepared statement for us?

Mr. CLOWES. Yes, sir.

Mr. ANDREWS. Will you read it? You may read it without interruption.

GENERAL STATEMENT

Mr. CLOWES. My name is Dean Clowes. I am a representative of the United Steelworkers of America, AFL–CIO. I wish to thank this committee for giving me this opportunity to express my views, and the views of our organization, on the proposal to give American financial and technical assistance to the Government of India in connection with an integrated steel mill to be built in Bokaro, which is located in Bihar State, almost 150 miles northwest of Calcutta.

As the committee is aware, the Government of India has requested this assistance from the United States. The plant would be the country's sixth integrated steel mill, and the fourth built and operated under public ownership. The other three publicly owned plants are at Rourkela, Durgapur, and Bhilai. Financial and technical assistance for these projects came respectively from West Germany, Great Britain, and the Soviet Union.

The two privately owned plants are the Tata Iron & Steel Co., Ltd., at Janshedpur, the largest steel facility in India, producing approximately 2 million ingot tons per year, and the Indian Iron & Steel Co., Ltd., at Burnpur.

Of all of these steel plants, it is charged that the one which has so far been the most successful is that which was built and operated with Soviet assistance. This, of course, has been tremendous propaganda for the Communists, not only in India but throughout southeast Asia. The development of steelmaking capacity is the first step toward industrialization, and the Soviet Union has devoted enormous amounts of energy and resources in attempting to show Asia, through its efforts in India, that the Communist way is the best way to accomplish that objective.

In 1962 India's total steel production amounted to 5,700,000 long tons or something over 5,500,000 net tons, compared with 1,700,000 long tons, or something under 2 million net tons in 1955. This is still far short of India's needs. Hence the desire for a fourth Government-owned steel plant.

Discussions between AID and the Indian Government concerning this project has been going on for some time. The Russians have also expressed an interest in this project, but we are advised that the Indians prefer an American mill and American support.

It will be recalled that the American Government in cooperation with the American Iron & Steel Institute and the Ford Foundation had provided for training of engineers to operate all three Government-owned mills. In 1956, Benjamin F. Fairless journeyed to

India and recommended this program on his return. The American steel industry, in particular United States Steel, Bethlehem, Jones & Laughlin, Republic, and National Steel have gone to great pains and expense to provide training for the engineers. The United Steelworkers of America of course also cooperated.

Last year, AID engaged United States Steel Corp. to make a technical and feasibility study of the Bokaro project. This report has now been completed. It points out, however, that there are some problems related to raw materials, transportation, skilled labor, and management. Therefore, the study recommends that if the plant is built by the United States it should not be turned over to Indian technical control until after a long training period under American management. We agree with this recommendation.

The basic question before this committee, however, is whether to commit American resources to this project. In deciding this question, we believe the following considerations must be taken into account.

1. Do we want to help a foreign country expand its steel capacity when our own steel industry is still operating at far less than full capacity, and desperately in need of new markets for its own products? This is a matter of serious concern to unemployed steelworkers. In 1962, most of India's purchases of American steel products were financed by our foreign aid. Thus, our assistance in building the Bokaro plant may tend to increase, rather than decrease, American steel shipments to Indian, since it takes a lot of steel to build and equip such a plant. India will not attain self-sufficiency in steel production in this generation, and the market for American steel which the new plant would represent in its construction is of significance.

2. The Bokaro steel plant, if built, will be state owned. Should the American Government contribute to this state enterprise?

India is already committed to a mixed economy, as are most underdeveloped countries. The new plant will not eliminate free enterprise in Indian, it will supplement it. Mr. J. R. D. Tata, who heads the largest privately owned steel mill in India and the 38th largest plant in the world, has given his support to the Bokaro project. His support states that the project does not constitute a threat to free enterprise in India or elsewhere.

3. The most important consideration, in our view, is the fact that this plant is going to be built, whether we decide to build it or not. If we turn down India's request, some other nation, probably the Soviet Union, will pick it up.

We agree with the recommendations of the United States Steel Corp. report, that the plant when completed should be continued for relatively long period under American management. What the Americans ought to turn over to India is an efficiently functioning American steel plant. It would be a serious mistake simply to ship the equipment to India and let them carry on from there. Furthermore, the contract should cover all phases of steelmaking, including provisions for labor. It would be a tragedy if after we built a mill the employees were to fall into the hands of Communist-dominated unions because of inconsiderate labor policy. We believe technical progress, democracy, free labor unions and prosperity go together in the United

States. We ought to be ready to prove that this is also possible in India.

Mr. ANDREWS. Thank you, Mr. Clowes.

What is your interest in the proposed Bokaro steel plant in India, if any?

Mr. CLOWES. As pointed out in our statement, this plant if built would certainly be a project which would require a considerable amount of American steel for construction plus steel for auxiliary equipment.

Mr. ANDREWS. In the construction?

Mr. CLOWES. In the construction.

Mr. ANDREWS. But after you have reached that point then what would the situation be?

Mr. CLOWES. We don't feel India will be able to export any steel except in rare instances, in our generation or perhaps the next generation. There will be a continued shortage of steel in India.

Mr. ANDREWS. Were any of the members of your union used on the survey team that made the study?

Mr. CLOWES. No, they were not.

EFFECT OF CONSTRUCTION OF PLANT ON PRODUCTION IN UNITED STATES

Mr. ANDREWS. What advantages or disadvantages do you think will accrue to the steel industry and steelworkers in America if this plant should be built?

Mr. CLOWES. None. Except in the construction phase of the project.

Mr. ANDREWS. You don't think it would cause unemployment?

Mr. CLOWES. No.

Mr. ANDREWS. Additional unemployment?

Mr. CLOWES. No.

Mr. ANDREWS. Do you consider those advantages or disadvantages to be synonymous with the steel industry and the steelworkers of the United States?

Mr. CLOWES. I would think that the new orders we would get during the construction of the plant and for the auxiliary equipment as well as the continuation of U.S. steel shipments presently being consumed in India would be dependent on the amount of foreign aid we continue to give.

Mr. ANDREWS. Does your organization favor or disapprove of the proposed financial assistance being requested by India from this country for the construction of a steel mill at Bokaro?

Mr. CLOWES. I don't think we are competent to determine cost figures so far as the—loan is concerned.

Mr. ANDREWS. I am not trying to determine the cost figure at this moment. My question is whether you favor the construction of the plant in Bokaro, India.

Mr. CLOWES. We have no objections to the project. However, we do have some reservations as indicated by our statement.

Mr. ANDREWS. No objections?

Mr. CLOWES. That is right.

Mr. ANDREWS. But you do not advocate it. Is that right?

Mr. CLOWES. That is correct.

OPERATION OF SOVIET STEEL MILL IN INDIA

Mr. ANDREWS. You state on page 2 that it is charged that the one which has so far been the most successful is that which was built and operated with Soviet assistance.

Mr. CLOWES. Yes.

Mr. ANDREWS. Would you elaborate on that? We are speaking of the steel mill in India.

Mr. CLOWES. The plant which was built by the Russians at Bhilai was a plant which already had been planned for construction in Russia, so what they were able to send to India was a planned steel plant. All of the equipment had been ordered. They could follow a time schedule so far as construction was concerned.

In addition they sent over their engineers, and as the plant went into operation they maintained a force of engineers at the plant to supervise production.

This is in contrast to what the West Germans did. The West Germans had about 300 contractors building different phases of the plant at Rourkela, and as each of the subcontractors finished their part of the operation they left to return home so what was turned over to the Indians at Rourkela was a finished steel plant without someone there to bring it all together and make it a functioning operation.

Mr. ANDREWS. That was the West German-financed plant?

Mr. CLOWES. That is right.

Mr. ANDREWS. You stated earlier that the Russians have also expressed an interest in this project.

Mr. CLOWES Yes.

Mr. ANDREWS. But, "We are advised that the Indians prefer an American mill and American support."

INTEREST OF RUSSIA IN ADDITIONAL PLANT

What can you tell us about any interest expressed by Russia in the construction of an additional plant in India?

Mr. CLOWES. During my stay in India I got the impression from newspaper articles and conversations with Government officials that the Soviet Union had expressed some interest in building the plant and building further facilities in India. In fact, at one point they had even suggested to the Indian Government that they would be prepared to put up Soviet small parts plants throughout India to supply the steel industry and other industries with parts.

You can appreciate if they could have done this, they could in effect control the entire industry of India.

They have suggested from time to time putting in other operations in India.

Mr. ANDREWS. Do you know of any firm commitments?

Mr. CLOWES. No firm commitments, just indications they would be willing to do this.

Mr. ANDREWS You asked a question here on page 5 of your prepared statement—

> Do you want to help a foreign country expand its steel capacity when our steel industry is still operating at far less than full capacity and desperately in need of foreign markets for its own products?

Mr. CLOWES. That is right.

Mr. ANDREWS. You are asking us that question?

Mr. CLOWES. This is a question, one of the questions, you have to consider in making your decision.

Mr. ANDREWS. Of course. Now I want to ask you that same question. What would your answer to that question be?

Mr. CLOWES. It is our feeling that the initial steel necessary for construction and to equip the mill will put some U.S. steelworkers to work.

Mr. ANDREWS. That is a one-shot proposition.

Mr. CLOWES. Correct.

Mr. ANDREWS. A one-way street. You go down that street and go into a dead end. That demand ends.

Mr. CLOWES. It is our feeling that with the construction of this plant there will be a greater demand for steel. India is not going to be able to meet its demands for steel for fabricating plants within our generation, and probably the next generation. They will not meet their own demands so there will be a continuing need for some importing of steel.

Whether or not this steel will be purchased from the United States in my opinion will depend a lot on our foreign aid programs. I don't think India would be buying steel from us today if it were not for our foreign aid.

Mr. ANDREWS. I think you are right.

Mr. CONTE. Mr. Chairman, we appropriated last year—let me get the figure. We contributed $160 million to India so they could import 800,000 tons of steel from the United States.

Mr. CLOWES. That is right.

Mr. CONTE. How long do you think we can keep that up?

Mr. CLOWES. It is probably dependent upon our foreign aid policy.

Mr. CONTE. On this type of foreign aid, we are subsidizing the Indians to buy steel from us.

Mr. CLOWES. I don't think India is in a position to buy steel from us without our foreign aid, either now or in the future, for quite some time in the future.

Mr. ANDREWS. You make the further statement on page 5, following that question we just discussed—

> This is a matter of serious concern to unemployed steelworkers.

Mr. CLOWES. That is right.

Mr. ANDREWS. You speak of American unemployed steelworkers?

Mr. CLOWES. That is right.

Mr. ANDREWS. How many are there now in America unemployed?

Mr. CLOWES. In the basic steel industry about 100,000.

Mr. ANDREWS. How many are working?

Mr. CLOWES. In the basic industry around 437,000.

Mr. ANDREWS. There are 437,000 employed?

Mr. CLOWES. In basic steel.

Mr. ANDREWS. What do you mean by basic steel?

Mr. CLOWES. The basic steel industry includes blast furnaces, steelmaking, and rolling facilities—the large operations, excluding fabricating plants.

Mr. ANDREWS. And there are 100,000 unemployed in the basic steel industry?

Mr. CLOWES. That is correct.

Mr. ANDREWS. How many are employed part time?

Mr. CLOWES. In the total of 437,000 employed would also be included people who are working less than full time.

Mr. ANDREWS. Can you give me a breakdown on that?

Mr. CLOWES. It would be very difficult.

Mr. ANDREWS. Do you have an estimate or a guess?

Mr. CLOWES. Production has been going down, as you know, ever since we entered into our new collective-bargaining agreement. There has been a cutback in orders so that there are some people now working less than 40 hours a week.

Mr. ANDREWS. Is that the standard workweek, 40 hours?

Mr. CLOWES. Yes.

Mr. ANDREWS. So of the 437,000 employed, some are employed less than 40 hours a week?

Mr. CLOWES. That is correct.

Mr. ANDREWS. When you correct your statement, if you will, put the exact number, or as nearly as you can, in the record.

Mr. CLOWES. All right, sir.

Mr. ANDREWS. Your figure of 437,000 employed does not mean that 437,000 steelworkers are working 40 hours a week?

Mr. CLOWES. That is correct.

Mr. ANDREWS. But you are definite that approximately 100,000 workers in the basic steel industry are without employment?

Mr. CLOWES. That is correct.

Mr. ANDREWS. Which means they are not working, period.

Mr. CLOWES. You must recognize that under our collective-bargaining agreement a worker remains as an employee of the company for 5 years even though he is not working. He has recall rights for a period of 5 years.

Mr. ANDREWS. How many of the 100,000 you stated are unemployed have those rights?

Mr. CLOWES. I would think all of those. In the first quarter of 1960 there were 532,000 workers employed in the basic steel industry; in June of 1963 there were only 437,000 employed.

Mr. ANDREWS. Is the rate of unemployment increasing in America?

Mr. CLOWES. In the steel industry——

Mr. ANDREWS. That is what we are talking about.

Mr. CLOWES. Yes.

Mr. ANDREWS. Mr. Natcher?

Mr. NATCHER. Gentlemen, I want to join with my chairman and the other members of our subcommittee in thanking you for your appearance at this time.

Mr. MCDONALD. We are glad to be here, sir.

Mr. NATCHER. I want to agree with your statement at the top of page 5. Again, just for the record, I want to read it:

> Do we want to help a foreign country expand its steel capacity when our own steel industry is still operating at far less than full capacity, and desperately in need of new markets for its own products? This is a matter of serious concern to unemployed steelworkers.

Mr. Clowes, I certainly agree with that statement. Thank you, Mr. Chairman.

Mr. ANDREWS. Mr. Flynt?

Mr. FLYNT. Mr. Clowes, we welcome you to our subcommittee hearing and Mr. McDonald, we are glad to have you.

Mr. MCDONALD. Thank you.

Mr. FLYNT. I wanted to go over the figures which appear at the top of page 3. I assume that the figures you use are in round numbers?

Mr. CLOWES. They are; yes.

Mr. FLYNT. On line 4, and my arithmetic may be bad, instead of something under 2 million net tons in 1955 I come up with a figure of 1,160,000, which would certainly be considerably less than 2 million net tons.

Mr. CLOWES. That is right.

Mr. FLYNT. And rounded off it would be in the nature of 1,160,000. In just a moment I will come to the reasons for clarifying this arithmetic.

Could you have your statisticians check that to see whether that should be changed?

Mr. CLOWES. All right.

STEEL PRODUCTION IN INDIA

Mr. FLYNT. The next question I come to ties in with that. This is on the production in India at the present time.

The Tisco plant, Tata Iron & Steel plant at Janshedpur produced approximately 2 million ingot tons?

Mr. CLOWES. That is right.

Mr. FLYNT. I believe you have been there, Mr. Clowes?

Mr. CLOWES. Yes; I have been through the plant several times.

Mr. FLYNT. Could you state for the record the approximate production of the India Iron & Steel Co.? Would it be in the nature of 1 million tons or 1½ million tons?

Mr. CLOWES. I will get you the exact figure.

The production of the Tata plant, the peak production, would be 2 million ingot tons. This was the target when it was expanded by the Kaiser engineers. It has not reached full capacity because they have had technical difficulties in their blast furnace operation. One of the furnaces has not operated too well, so that the last information I had was it would reach about 1.9 million.

Mr. FLYNT. And that is top?

Mr. CLOWES. Top.

Mr. FLYNT. Do you have the figures on the Indian plant?

Mr. CLOWES. Less than 1 million.

Mr. FLYNT. Which would indicate that the production of the Tata and Indian plants would constitute nearly 50 percent of the total production?

Mr CLOWES. Yes; at the present time.

Mr. FLYNT. Are they indicating a capability of continuing to increase their production?

Mr. CLOWES. There has been no indication of this; no. In fact, as you know, the Tata Iron & Steel Co. had to borrow a great deal of money from the World Bank in order to expand its facilities, something like $75 million if I am not mistaken. They borrowed this for their expansion program. From talks and conversations I have had with people at Tata, they indicated this is as far as they would go for the present.

Mr. FLYNT. Is that based on lack of skilled labor or on lack of raw materials?

Mr. CLOWES. Neither one. I think it is lack of capital. You must recognize that Tata has probably the largest group of skilled iron and steelworkers in India. This is a very old plant. They have been in operation for a great many years.

In fact, a lot of the trained personnel presently working in the other steel plants in India came from the Tata plant. The supervisors, the top officials of most of the public-owned plants are former Tata people.

Mr. FLYNT. They were able to increase their production substantially?

Mr. CLOWES. Yes.

Mr. FLYNT. By the expansion of their plant?

Mr. CLOWES. Yes, about doubled it.

Mr. FLYNT. With a $75 million loan?

Mr. CLOWES. That is correct.

Mr. FLYNT. That would indicate, then, that a $75 million loan to Tata produced the production capability of about 1 million tons per year.

Mr. CLOWES. That is correct.

Mr. FLYNT. Multipyling the output by 6, which would give us 6 million ingot tons, and also multiplying the $75 million capital investment by 6, would it be fair to give us roughly $450 million based on the same margin of increasing returns to produce the 6-million-ton capacity?

PRODUCTION ESTIMATE FOR BOKARO PLANT

Is it your understanding that six million tons is the production estimate after the completion of phase 3 of Bokaro?

Mr. CLOWES. I don't think it will quite reach that amount. However, you can't make this assumption. You must recognize that Tata was able to use a lot of their existing facilities in their expansion program. They didn't have to build a completely new steel mill. They just added on. This costs much less than if you had to start out from scratch and build a steel plant, and town facilities, et cetera.

Mr. FLYNT. Yet Bokaro would be located in the same general area with the existing plants, approximately five in number?

Mr. CLOWES. Correct.

Mr. FLYNT. That set of facts would lead you to conclude that the best return on the investment would come from an entirely new plant at Bokaro or substantial plant additions to the five existing plants?

Mr. CLOWES. As I understand it, when they built the three new public plants, they made provision for expansion. They are going to expand those facilities. They cannot expand enough to meet their requirements and hence the need for the Bokaro project.

INTEREST OF OTHER COUNTRIES IN CONSTRUCTION OF PLANT

Mr. FLYNT. On page 6 of your statement I am inclined to agree with you that the most important consideration is the fact that this plant is going to be built, whether we decide to build it or not.

Have you seen any indications from either the U.S.S.R., Great Britain—which, of course, has substantial interests in the economy of

India—or the West European or West German consortium? Have you seen any indications that either or all three would make an offer of approximately $1 billion with a 40-year timetable, 10 years grace period, and less than 1-percent interest on the repayment?

Mr. CLOWES. No, I have not, but I noted in yesterday's paper the Indian Government said, "We are going to start construction in 1966 whether the United States makes their contribution or not."

Mr. FLYNT. Was the Soviet contribution at the Bhilai plant approximately $136 million?

Mr. CLOWES. I think that is about right.

Mr. FLYNT. On a repayment period of 12 to 18 years, at approximately 2.5-percent interest?

Mr. CLOWES. That is correct.

Mr. FLYNT. Each of those figures is substantially different from what the proposal for the Bokaro plant is?

Mr. CLOWES. Yes.

Mr. FLYNT. I think all of us on both sides of this table are vitally concerned with both the magnitude of this in terms of steel production and dollar cost, as well as the impact that this plant will have, not only on Indian production but on world production.

FUTURE OF INDIA IN STEEL MARKET

How soon can you foresee India entering a world export market insofar as exports of steel are concerned?

Mr. CLOWES. I cannot foresee it in our generation or the next generation.

This is a personal opinion, of course.

Mr. FLYNT. Are we in accord that at the end of World War II, the Japanese steel industry was generally prostrated?

Mr. CLOWES. Correct.

Mr. FLYNT. Since that time with substantial assistance from the United States, predominantly U.S. assistance, they have not only met most of their domestic requirements but have entered the world market?

Mr. CLOWES. Correct.

Mr. FLYNT. And are able to sell steel at a profit, at a rate of approximately $102 a ton where the comparable U.S. product would cost $172 a ton?

Mr. CLOWES. Yes.

Mr. FLYNT. Does that lead you to believe that we might begin to lose our position in the world market in this particular type of steel, which is steel plates?

Mr. CLOWES. No. Again, you have to recognize that the work force in India is entirely a different work force than the work force in Japan. Also, they do not have trained management people in India. They have turned over the running of the steel plants to people who have been civil servants, and who have little idea how to operate a steel plant. This is a real drawback in India. This is one of the reasons we felt so strongly that if this plant is to be built then we should insist that the Americans who are going to build the plant stay there to operate it because the Indians, in my opinion, are not competent to do this at the present time.

Mr. FLYNT. How long do you think it would take them to become competent?

Mr. CLOWES. Quite some time. There would have to be some drastic changes to their approach to management.

Mr. FLYNT. Fifty years?

Mr. CLOWES. At least that under present practices.

Mr. FLYNT. Seventy-five years?

Mr. CLOWES. At least 50 years, I would think, unless there are drastic changes.

Mr. FLYNT. Do you feel that in view of that long time frame, before they would be in a position to become competitive, even in the production of steel for Indian domestic consumption, that we should perhaps back up a little bit on the magnitude of our thinking in the Bokaro project, and reappraise it in terms of a small one that they might reasonably be able to operate, let us say, in 20 or 25 years, as contrasted with 50 or 75 years?

Mr. CLOWES. I do not think I am competent to answer that question. I think they have made a certain amount of decisions based on their economic development programs and they assume that they need this amount of steel. I would, in my own personal opinion, fear that they would need a greater amount of steel than is presently indicated.

Mr. ANDREWS. Will the gentlemen yield?

Mr. FLYNT. Yes.

Mr. ANDREWS. We were told by experts that if you built a smaller plant which is described in the report as phase 1, or stage 1, you could never expect it to operate at a profit.

Mr. FLYNT. I have not been talking about a profit.

Mr. ANDREWS. Thank you.

TRAINING OF PERSONNEL

Mr. FLYNT. The training period for the skilled laborer, highly skilled laborer, and informed supervisory personnel, how soon do you think that they could be trained for this type of work?

Mr. CLOWES. I would think it would take a number of years; 10 or 15 years, to really train a good supervisory work force, responsible work force.

They would have to change a lot of personnel policies that presently exist.

Mr. FLYNT. Then if it would take 10 or 15 years, do you see any urgency for proceeding with either authorization or appropriations for this project during fiscal 1964, the current fiscal year?

Mr. CLOWES. Again, I do not feel that I am competent to answer that. I think this would be dependent on the economic development of the country and their economic programs and how this is related to other projects.

Mr. FLYNT. If it would be 12 to 15 years before the supervisory and foremen and highly skilled labor force could be developed and the construction time, including about 1 year for engineering studies, that would still give a timelag of some 6 years.

Do you think that perhaps we could defer urgent action on this for, let us say, 1 to 2 years from now while we have time to complete a more thorough study than we have had time to have presented to us?

Mr. CLOWES. Again, I would not be competent to answer that.

Mr. FLYNT. Would you want us to have the benefit of the most thorough and complete study of this project before our Government undertook to make an investment of this magnitude?

Mr. CLOWES. Certainly. I would think we should give the most careful consideration to this and I think if we are going to go into this project, we ought to do it right.

Mr. FLYNT. Do you think that the Soviet Union could make better progress in this than we could?

Mr. CLOWES. How do you mean that?

Mr. FLYNT. Well, from the statements that have been made by you and by the preceding witness, it would be a substantial period of time before this plant could operate because of the shortage of skilled labor and supervisory personnel. Since those things take time, and also the firming up of supply sources for raw materials will also take a substantial period of time, it leads me to believe that there may not be the urgency for this project that some of its advocates have expressed.

I wonder if you would concur in that?

Mr. CLOWES. I would think that what has been envisioned by the United States Steel report is that they would take over American technicians to run and operate the plant. They would not turn this over to the Indians.

They would have the Indian personnel working under Americans, under American supervision. The Americans would be responsible for production. This would probably be the best training system you could use. This is similar to the system used by the Soviet technicians.

Mr. FLYNT. Do you know whether any commitments of any kind have been made to the Indian Government with regard to the Bokaro steel mill?

Mr. CLOWES. No, I do not.

Mr. FLYNT. How soon do you think we should proceed to firm up any plans or commitments on a project of this size?

Mr. CLOWES. Again, I do not feel I am competent to answer that.

Mr. FLYNT. Thank you, Mr. Clowes.

Mr. ANDREWS. Mr. Conte?

Mr. CONTE. Mr. Clowes, I want to join my colleagues in expressing our appreciation to you for coming before this committee today. I feel somewhat close to the labor unions and the labor movement. Back in 1940 I was a member of the union. I worked in the General Electric Co. as a machinist and I have never lost my interest in the labor movement.

EFFECT OF CONSTRUCTION OF PLANT

I was interested in several observations that you made and one is that if this steel mill is built, there will still be a demand for steel to be imported by India?

Mr. CLOWES. Correct.

Mr. CONTE. We were told here today that Japan is delivering steel to India, f.o.b. at $102 a metric ton and that compares with about $174 for American steel?

Mr. CLOWES. Yes, sir.

Mr. CONTE. If this steel mill is built, in the course of 20 years, the Indian Government stands to realize a profit by excise taxes, retainers, and interest charges of about $5.5 billion. You know as well as I that it is going to be very competitive to try to sell them steel and compete with the Japanese who are selling steel at about $72 a ton cheaper than we can sell it to the Indians.

You know who will get the orders.

So I do not think we can look forward to any bonanza for the steel industry in the United States.

Secondly, you mentioned that if the steel mill is built, it will provide jobs in the United States for steel to be used in the construction of the mill.

EFFECT OF DUMPING OF STEEL IN UNITED STATES

We were told this morning that this would amount to a drop in the bucket compared to the jobs that are being lost in the United States because of dumping by Japan, Belgium, and Luxembourg here in the United States. I think this is a very serious thing.

Mr. CLOWES. I understand that presently before the Congress there are some bills with regard to dumping and that this will take congressional action to correct this problem, if it exists.

Mr. ANDREWS. Will the gentleman yield?

Mr. CONTE. Yes.

Mr. ANDREWS. Was it the Treasury Department or the Tariff Commission that recently held investigations and concluded there had been no dumping in America?

Mr. CLOWES. The Tariff Commission recently made this decision related to steel wire rods.

Mr. ANDREWS. Do you recall the amount of steel the companies claimed had been dumped in America?

Mr. CLOWES. I do not have those figures.

Mr. CONTE. That would depend on legislation?

Mr. CLOWES. Yes, sir.

Mr. CONTE. If that goes through the Congress? We know how long this could take. However, even if we could realize a small amount of employment, and it would be very small, it would be nowhere near in comparison to the jobs we have lost because of foreign steel dumping in the United States?

Mr. CLOWES. We would not subscribe to this entirely.

Mr. CONTE. You do not think we have lost jobs in the United States because of foreign steel?

Mr. CLOWES. We have lost jobs, as you know. However, about 35 percent of our capacity is not being used in the steel industry and we have got to get markets for our steel. I do not feel that the foreign competition has been a major source of the problem in the steel industry. Automation, new facilities, and competition of other materials, such as aluminium and plastics has been primarily responsible for loss of jobs in the steel industry.

Mr. ANDREWS. What is the problem, if the gentleman will yield?

Mr. CLOWES. Lack of demand for steel; we have got to get greater demand for steel. We have got to have greater use of steel in this country.

Mr. ANDREWS. Do you not agree that every time we build a new steel mill anywhere in the world, you add to the supply?

Mr. CLOWES. That is correct.

Mr. ANDREWS. You do not add to the demand by simply building an additional plant.

Mr. CLOWES. Well, take India for an example. They have put in three new steel plants and they have expanded two other plants. They are actually importing more steel into India today than they were before they had these plants.

Mr. ANDREWS. Thank you, Mr. Conte.

Mr. CONTE. Mr. Clowes, if they are importing steel it is because we are paying for the import of that steel?

Mr. CLOWES. A part of it, as I pointed out in my statement, is because of our foreign aid program, naturally, but still they have a great demand for steel.

Mr. CONTE. How many jobs would be involved in producing 5½ million tons of steel?

Mr. CLOWES. That would be difficult to say.

Mr. CONTE. Give me a ballpark guess, approximately?

Mr. CLOWES. We are producing now around 110 million ingot tons per year with around 437,000 people.

Mr. CONTE. Right.

Mr. CLOWES. So another 5 million tons would be about 5 percent.

Mr. CONTE. That would be about 20,000 jobs?

Mr. CLOWES. Yes.

Mr. CONTE. How many people do we have unemployed?

Mr. CLOWES. In the steel industry, 100,000.

Mr. CONTE. It would be quite a bit of help if we could put 20,000 people to work?

Mr. CLOWES. It certainly would.

Mr. CONTE. That is exactly how much steel was imported from Japan, Luxembourg, and Belgium in the last year, 5½ million tons of steel. They can buy steel dockside in San Francisco or Los Angeles about $70 a ton cheaper than we can produce it right here in the United States. This is a very serious problem.

Mr. CLOWES. It certainly is.

Mr. Conte. We financed some of those steel mills in Japan and elsewhere. As a result of financing those steel mills, we have 20,000 people today that would be working and this is something we have got to consider.

Mr. ANDREWS. Will the gentleman yield?

Mr. CONTE. Certainly.

Mr. ANDREWS. We were told that India planned to export some of the steel produced at Bokaro. How would that help your situation?

Mr. CLOWES. I do not think they will export steel from there, at least in our generation.

Mr. ANDREWS. I do not know whether they could or not but I say we were told by a competent witness that they did plan to export some of the steel to generate foreign currency.

Mr. CLOWES. Certainly if they were going to sell steel in the markets we are presently in, that would——

Mr. ANDREWS. I do not know whether or where they are going to sell it, but the export is to generate foreign currency.

Mr. MINSHALL. Will the gentleman yield before we leave this dumping item?

Mr. CONTE. Yes.

Mr. MINSHALL. This 5 percent, or in excess of 5 percent, that represents the amount of steel being dumped in this country is not a true figure because geographically, and especially in Cleveland, Ohio, where I live, and in the pipe and barbed wire industry for example, it represents about 25 percent of the pipe produced being dumped, and about 50 percent of the barbed wire.

In some unions you are going to have a 50-percent change in employment and in pipe, you are going to have a 25-percent change. That's quite a figure to add to our unemployment figures.

You would not approve of an arrangement like that, would you?

Mr. CLOWES. No.

Mr. MINSHALL. You do not approve of that?

Mr. CLOWES. We do not approve of dumping. We have taken serious objection to dumping and we feel there are some corrections needed under our present laws and procedures.

We are supporting bills to strengthen the antidumping provisions we presently have, but it is up to you people to enact the legislation. We can talk about it but you are the people who have to do something about it.

Mr. CONTE. I am not squeamish in telling you that I am with you, but by the same token, I do not want to be with you and find out that what I am doing is being undermined by the construction of a steel mill that eventually is going to hurt my people, hurt my people in the United States.

An Indian newspaper coming out of the Embassy stated they needed a new steel mill because they were importing 1 million tons of steel in India. If Bokaro is built, upon completion it will produce about 4 million tons a year, and that cuts off automatically that importation of 1 million tons of steel.

Mr. CLOWES. This has not worked out that way.

When they built the three new plants in the public sector, it required India to import more steel now than they did before these plants were built.

U.S. ASSISTANCE TO IMPROVE EFFICIENCY OF MILLS IN INDIA

Mr. CONTE. Let me tell you why: It is difficult to pin down some of these things because the witnesses across the table—and I do not mean you but I am talking about the AID witnesses—before our full subcommittee, they came up for $1,630,000. This was to overcome the deficiencies of the organization, management, policies, labor skills, of the Government-owned Hindustan Steel, Ltd., so that the production can be increased from 1.1 million tons in 1961 to 6 million tons of steel by 1966.

This is the reason: They are not up to full production and even though you said in your statement that this one which is constructed by the Russians was the most efficient, everything is relative. How efficient is it as compared to an American steel mill?

It is very inefficient?

Mr. CLOWES. That is correct.

Mr. CONTE. That is why we are plowing $1.6 million to try to get them to increase production from 1.1 million to 6 million by 1966.

When you expand all of the three public steel mills, and you build the Bokaro steel mill and put that into full capacity, and if you run it with American people as you recommend, at that time I think you will see that there will not be any need for the importation of steel.

We might lose, not a favorable market because India has never been a favorable market, but we will be losing somewhat of a market. This is something that we should consider.

I do not take issue with whether it should be in the public or private sector, because you have to deal with the form of government you are negotiating with. We were told by all the other witnesses, Mr. Gaud, by the people this morning, that the TATA steel mill, the private sector steel mill, it was the most efficient by far of all of the steel mills in India.

Mr. CLOWES. The thing that you have to remember about TATA, this is an old plant. It has been in operation for a great many years. They have a trained work force but they have a lot of obsolete facilities there, too.

They had at TATA—before expansion—40,000 people producing 1 million tons of steel.

This is not very efficient. You have to recognize that some of these people are working in town services, but they had 40,000 people producing 1 million tons of steel. At Sparrows Point over in Baltimore, they produce 9.5 million ingot tons and have a work force of something like 25,000.

Mr. CONTE. Here, again, everything is relative. Let us compare it with steel mills in India. This is where Ambassador Galbraith said they had the most efficient mill of the whole five.

Mr. CLOWES. At the Russian plant at Bhilai. They are now up to about 1 million ton capacity. They have a work force of somewhere around 18,000 or 19,000 including town people. You have to remember when they built the Bhilai plant they had to build a whole community and hire people to take care of the infirmaries, schools, stores, and all of the ancillary needs.

By comparing work forces, TATA certainly had a great many more people to produce 1 million tons of steel than are presently being employed at Bhilai to produce a million tons.

Mr. ANDREWS. Will the gentleman yield?

Mr. CONTE. I yield.

Mr. ANDREWS. Mr. Clowes, you stated a minute ago, India was still importing steel?

Mr. CLOWES. Correct.

Mr. ANDREWS. You predicted that if the Bokaro mill was built, they would still import steel?

Mr. CLOWES. Correct.

Mr. ANDREWS. Is not most of the steel imported by India from the United States?

Mr. CLOWES. No.

Mr. ANDREWS. What percentage would you say?

Mr. CLOWES. I would think that we are probably exporting to India 240,000 tons of steel per year.

Mr. ANDREWS. What is the figure you had, Mr. Conte?

Mr. CONTE. That was last year, 880,000 tons.

Mr. ANDREWS. One further question.

Mr. CONTE. At a cost of $160 million.

Mr. ANDREWS. There is a limit to our ability to be generous with 100 nations in the world and if we go in there and put up approximately $975 million to finance the Bokaro mill—and it will possibly run more than that because the Indian Government will have to build about $133 million plus of community facilities in the way of housing, et cetera, at the millsite—that will mean we are going to have to cut down in other areas of foreign aid to India. If we do that, then we cannot pick up the check for steel exported from here to India. Had you thought about that?

Mr. CONTE. Before he answers, Mr. Chairman, let me tell him what the Ambassador said. The Ambassador said exactly that, if this project goes through we are going to have to cut out some other projects.

Mr. ANDREWS. There is no question about that. Commonsense tells you that. India has received aid from us to the tune of about $5.1 billion and the request for this year is approximately $900 million. That is just about the price tag of this Bokaro mill.

We do not do business overseas like we do in this country and whenever we tell them we are going to finance a project, we put the money on the line.

If we build a power dam in this country that costs $100 million, that $100 million is financed over a period of sometimes 10 or 15 years as work progresses, but our foreign friends, who have been the beneficiaries of our generosity through the years, say: "No; we do not do business that way. We must have the money in hand before the contract is signed."

Figure it out for yourself. If they get $900 million from this country in any one year, it is going to mean that is it, so far as foreign aid is concerned.

IMPACT OF RUSSIAN MILL IN INDIA

Mr. CONTE. Mr. Clowes, you mentioned in your statement—and I cannot seem to find it—that this steel mill which was financed by the Russians, had a tremendous impact in India?

Mr. CLOWES. Correct.

Mr. CONTE. You realize that this steel mill, as Mr. Flynt told you, was financed with a 12-year loan, 2.5 percent interest, repayable in hard currency, and it was only for $136 million. I would be on the floor of the House fighting and spearheading such a loan for the Indian Government. I know what kind of a loan we are going to give to them.

It will be close to $1 billion, 10-year grace period, three-quarters of 1 percent interest, which we will never expect to get back. They are development credits as past experience has shown and we never expect to get this money back. I want you to think about this.

Let me explain to you how this is going to work: We give this money, close to $1 billion, to the Indian Government, and this new mill will form a corporation.

The Indian Government will lend the money to the corporation at 5¾ percent interest, plus for every ton of steel that is made in India, you know, there is a charge which the Indian Government puts on which amounts to $52 a ton. The Indian Government will realize in 20 years, out of this $1 billion alone, $5.5 billion. We are lucky if during the same period we receive back $1 million out of the $1 billion. They can take part of that $5.5 billion and buy steel from Japan, Luxembourg or other European countries. This could well be to our detriment, if there is a greater need for steel than what they are producing after Bokaro is built.

Mr. CLOWES. I would like to say that the loan and building this plant is something that is the responsibility of the people who are in the Congress and the people who are in the Foreign Aid Agency, the people who are responsible for negotiations.

This is certainly not within our purview to negotiate contracts and conditions on the financing of steel plants. We were asked to come before this committee and give our views on this steel plant. There are a number of problems in connection with it. As we have indicated in our statement.

We think that there should be some safeguards in the project, if built, but if we are going to do it, we should do it right. It is you people who are going to make the decisions as to whether this is going to be built.

Mr. CONTE. We appreciate your coming up here and giving us the benefit of your knowledge, but we are also deeply concerned, as you are with the fact that there are 100,000 people in the steel industry unemployed. We want to help you as much as we can.

You said in your statement on page 6 that if we do not build it, somebody else will. You know, even though you are not in a position to negotiate or to be a financier, or economist, and neither am I, there is not a country in the world outside of the United States that would go in there and give India such a generous development credit.

If the U.S. Government had come in and told us they were going for a loan similar to the terms of the Soviets, I do not think we would be holding these hearings right now.

FINANCING OF STEEL MILLS IN INDIA

Let me tell you about some other loans.

Here is a German loan for $157 million, 5.5 percent interest, repayable in 18 years.

Then we have our good old British friends who milked this country for years and years and decades and decades, and who were so good-hearted they gave them a loan of $74 million, repayable in 12 years, at 6 percent interest.

This is what we are up against.

If the U. S. Government and the AID people were to go in there and be hard-fisted businessmen and compete with these loans, even go down to 2 percent repayable in 20 years, which would be a very

favorable loan, I think we would be on the floor of the House supporting this measure.

Here they want to give them this money, almost $1 billion, for a steel mill which, in this report, which you have no doubt read, leaves a lot of doubts in my mind as to whether it is a good investment.

There is a lack of transportation, there is a lack of water, there is a lack of personnel. We are going to have to create a whole new city and bring employees from all over India. There is a lack of limestone.

There is a lack of good iron ore. There are many, many dozens of questions that have been brought up by United States Steel which, incidentally, cost the taxpayers over $650,000 to make this study; which questions have not been answered.

That alone would be enough to squash this thing, but assuming these things can be overcome, then we get into this question of whether it is going to hurt our people, hurt the unemployed steelworkers, whether it's the best terms we can get for our money.

I have no further questions.

Mr. ANDREWS. Off the record.

(Discussion off the record.)

Mr. ANDREWS. On the record.

Mr. Minshall?

Mr. CONTE. Mr. Chairman, one other thing, if I may and I will not prolong this.

I want to refer to this bicycle question again. The fine Ambassador said that one of the reasons they want to construct this mill was because India had gotten into the bicycle age. He said there was a great demand for bicycles in India and sewing machines, and the steel they produced here would stamp out these commodities.

I said to him:

> Mr. Ambassador, we have places in my district with 6 and 8 percent unemployment. Parts of my district are declared depressed area. The President comes up with gimmicks, such as ARA bill, and labor comes in and supports it because they are going to create jobs.

They have not created one job yet in my congressional district and I have a bicycle industry there, the first one in the United States, that is struggling to survive.

It is struggling to keep its head above water.

If you want to do something for them, give these people 30 million bicycles, I said, give every Indian family a bicycle. We would have a period of prosperity in the First Congressional District of Massachusetts. I think it is high time we started thinking about our people. I only bring this to your attention because I felt that the Ambassador hadn't made a strong case and because there is a shortage of bikes in India.

That is all.

Mr. ANDREWS. Mr. Minshall.

Mr. MINSHALL. Mr. Clowes, I, too, would like to thank you and Mr. McDonald for appearing voluntarily before this committee. As you know, I live in the heart of the Ruhr of America in Cleveland, Ohio. We are surrounded by steelmills, Lorain, and we have also Youngstown and farther to the southeast, Pittsburgh.

I have many of these steelworkers who live in my 23d Congressional District, which is a suburban area of Cleveland. I have a high admiration for them and the fine work that they are doing.

Mr. Clowes, you are an authority on labor matters and I notice on page 7 of your statement, about the second or third line, you say that the contract could cover all phases of steelmaking, including provisions for labor.

What did you have in mind when you said "including provisions for labor?"

Mr. Clowes. There have been a great many problems in the steel industry of India, and in my opinion, the Indian Government or Hindustan Steel have not taken the necessary precautions to insure the uplift of the working class in India by building these new communities and industrial facilities.

If you go into the new steel plants you find people barefoot tending blast furnaces. The west German facilities were built and they forgot to put in washrooms. They have not taken into consideration the need for safety and they have not complied with the Indian Government Labor codes.

These are the kinds of things which cause discontent. It is going to be possible for the Communists to take over the work force of these plants unless adequate labor provisions are instituted. As an example, at the plant built by the British, they held an election last year for the executive committee of the union and 10 out of 11 positions were won by the Communists because of these inconsiderate labor policies.

The Communists have taken advantage of this.

Mr. Minshall. What is the labor situation as far as Communists in unions in India are concerned?

It is my understanding that one of the three largest labor unions in India is dominated by the Communists today.

Mr. Clowes. That is true.

Mr. Minshall. What union is that?

Mr. Clowes. You have in India three major labor federations. One is the INTUC, which is attached to the Congress Party, the party in power; the HMS, which is attached to the Socialist Party; and the AITUC, which is attached to the Communist Party.

In some of the major facilities in India, you have the AITUC, at Hindustan Machine Tools, and Hindustan Aircraft. These are controlled by the Communist unions.

Mr. Minshall. If we build this steel mill in India—which, from what I have heard I hope we do not—I think it is a ridiculous, idiotic idea.

I, for one, as I said some weeks ago, am going to make every effort to insure that funds for this steel mill are not available. It makes the AID case even weaker when the fact of the Communist-dominated unions in India is brought out.

What is to prevent them from taking over the unions that are going to operate this proposed steel mill?

Mr. Clowes. If there is bad labor policy, a continuation of the existing policy in the present Government-owned steel plants; nothing.

Mr. MINSHALL. Do you not think that is rather ridiculous for us to go ahead and build a steel mill when the Commies can take over the mill and operate it?

Mr. CLOWES. If we get involved in building this steel plant, we have to make adequate provisions so these things do not happen.

Mr. ANDREWS. How would you do that?

Mr. CLOWES. By making sure all of the labor codes are adhered to, recognition of unions, making sure that provision is made for proper safety, making sure that the workers get the proper kind of equipment, that they have toilet facilities and water facilities and are treated with dignity.

Mr. ANDREWS. Would you propose to man the mill with American workers or Indian workers?

Mr. CLOWES. Indian workers.

Mr. ANDREWS. What assurance would you have they would not go over to the Communist Party if you gave them all the benefits?

Mr. CLOWES. I think if they were treated with dignity and given proper hearings, and could air their complaints through effective machinery this would not happen.

Mr. ANDREWS. You would not have any assurance they would not join the Communists. I am talking about the Bokaro mill.

Mr. MINSHALL. They will infiltrate that overnight.

Mr. ANDREWS. What would be the situation if we had a war, which we all hope and pray we will not, and India sided with the United States? What would those Communist workers in those steel mills do?

Mr. CLOWES. I think you always face a threat any time you have Communists in control of unions or Communists in industry, they are always a threat. The Indian Government seemed to move hurriedly when they had the invasion by the Chinese. They put a lot of these people in jail. They seem to have a close check on them. However, I think they have a tendency not to regard the Communists in the trade union too seriously.

Mr. MINSHALL. One of the main arguments made by Ambassador Galbraith for this steel mill is the fact that steel necessary to go into the construction of this mill would create more employment in this country.

I notice in your statement you say "Thus, our assistance in the building of the Bokaro plant" and you qualify your statement, I must confess—

> may tend to increase rather than decrease American steel shipments to India since it takes a lot of steel to build and equip such a plant.

How much steel would it take to build this plant?

Mr. CLOWES. Again the United States Steel report indicated——

Mr. MINSHALL. How many tons of steel would it take? "A lot" is a very general term.

Mr. CLOWES. I do not think it is the steel itself. It is the man-hours that go into the production that is important. I cannot competently answer that.

Mr. MINSHALL. You said "a lot." How many tons?

Mr. CLOWES. I cannot give you that figure.

Mr. MINSHALL. You pulled "a lot" out of the hat.

Mr. CLOWES. How many man-hours does it take to make a piece of rolling mill equipment?

Mr. MINSHALL. The experts from the industry say it will take at the most 100,000 tons of steel to build the Bokaro plant, including steel for the heavy equipment, and this amounts to a fraction of 1 percent of our total yearly capacity and this will be spread over a period of 5 years.

Mr. CLOWES. It is the man-hours involved to produce the rolling mill equipment and other equipment that is important.

Mr. MINSHALL. You are not going to get very many man-hours when you only increase the total steel capacity one-tenth of 1 percent.

How many men do you have working for the steelmills today?

Mr. CLOWES. A great many companies involved——

Mr. MINSHALL. You have more men going off and on sick leave than this would create employment for? The effect on total man-hours would not even be noticed.

Mr. CLOWES. Again you have to recognize that companies like United Engineering would be producing the equipment that would go into these plants.

Mr. MINSHALL. I think this statement of yours, with all respect to you, is completely in error. We had facts and figures, backed up by the chief accountants and top officials of the United States Steel Co. who spent months, on this Bokaro plant study. I think they know what impact it would have on our industry. Their testimony was it would be negative; hardly anything at all.

Mr. CONTE. They said it would be negative in comparison to the jobs lost to dumping.

Mr. MINSHALL. That is true. But it would increase our steel capacity only 100,000 tons. Our annual capacity is 100 million tons. Less than one-tenth of 1 percent of our capacity.

Mr. CLOWES. As I tried to point out to you, man-hours and not production of steel is the important thing.

Mr. MINSHALL. Tell us how many man-hours this would be. You are not going to increase the man-hours very much.

You are a reputable steel union, one of the finest in the country.

Mr. CONTE. What you are trying to say is, some of the equipment that goes in would produce man-hours of work?

Mr. CLOWES. It would not be a great deal of steel actually, but the man-hours going into the manufacture of rolling mill equipment, transformers and everything else would be high. I cannot give you the exact number of man-hours.

Mr. CONTE. Again I want to thank the representatives of the steelworkers union for coming here. Those are all the questions I have.

Mr. ANDREWS. Thank you very much.

MONDAY, AUGUST 19, 1963.

PROPOSED STEEL MILL AT BOKARO, INDIA

WITNESS

GEN. LUCIUS D. CLAY

Mr. ANDREWS. The committee will come to order.

We have with us this morning a great American, Gen. Lucius Clay.

General, I want to say first that we appreciate your taking time out of your busy schedule to come down and testify. We have under consideration at this time the proposed Bokaro steelmill in India. We have heard several witnesses. We know that you did an excellent job as chairman of a committee which looked into the overall question of foreign aid. We have read your report, and we are impressed with many recommendations in that report.

The investigation by this panel deals solely with the proposed Bokaro steelmill.

Your committee did report to the effect that you were opposed to using aid money to establish government-owned businesses or operations in competition with businesses owned by free enterprise.

General CLAY. Yes, sir.

Mr. ANDREWS. That was a categorical recommendation of the committee.

General CLAY. Yes, sir.

Mr. ANDREWS. General, I have explained to you the purpose of the hearings of this panel. We would be glad to hear any statement you care to make with reference to the proposed mill at Bokaro, India. As we understand it, the mill would be owned by the Indian Government.

At the present time there are five steel mills in India, two of which are owned by private enterprise and three owned by the Indian Government or a corporation of the Indian Government. The proposed mill, if developed through the third stage, which is the maximum size or capacity of the mill, would cost approximately $1.7 billion, and the share of that financed by the AID agency of the U.S. Government would be approximately $975 million.

We would be glad to hear from you your views with reference to this proposed mill.

GENERAL STATEMENT

General CLAY. Mr. Chairman, I would like to state that at the time we made our report, the United States Steel report on this mill had not been presented. Thus, our committee did not have before it the United States Steel report.

I have had an opportunity myself to read that report since we submitted our committee report. Therefore, the comment which we had made in the report was directed in a general sense, rather than in a specific sense, and it was, of course, as you stated, to the effect that we were opposed to the U.S. Government lending money to other governments to build enterprises which were in competition with existing free enterprises.

I think we were very much impressed with the very fact that the Alliance for Progress in South America is based upon the establishment of conditions which would attract free enterprise. It has been stated repeatedly in connection with the Alliance for Progress that unless large sums of free enterprise money come into South America, it is hopeless for government alone to try to bring about an economic rehabilitation of South America.

It seemed impossible to us that we could lend money for government enterprises in one part of the world while trying to attract free

enterprise to do the job in other parts of the world. It seemed, therefore, that to give money for this type and kind of enterprise was completely inconsistent with what we were trying to do elsewhere, and particularly in South America.

It has been stated by the owners of the steel industry, which is free enterprise in India, that they do not object to the Government going into the steel business on a larger scale. I am somewhat doubtful as to the value of their testimony in this case, because, very obviously, they would be completely at the mercy of Government-fixed prices from the Government steel mill, and the Government could, if it wanted to at any time, stifle the private steel industry of India.

This, we believe, is contrary to what we believe in. While we certainly do not have the right to dictate to any other country what kind of economy it should have, it does seem that we should have the right to say where our money will be used when it goes into economies which are in conflict with our own economic beliefs and views.

Mr. ANDREWS. At that point, may I read from your report, page 5:

> We believe the United States should not aid a foreign government in projects establishing government-owned industrial and commercial enterprise which compete with existing private endeavors.

I want to say that I completely subscribe to that statement, and I assume that was the unanimous opinion of the committee.

General CLAY. No, sir. There was one dissenting opinion.

Mr. ANDREWS. Only one?

General CLAY. Only one.

Mr. ANDREWS. So far as that particular statement is concerned?

General CLAY. The whole report was unanimously signed by nine of its members. Mr. Meany, of the American Federation of Labor-CIO, dissented from the report in its entirety, and submitted a different viewpoint.

POSITION ON UNITED STATES FINANCING THE MILL

Mr. ANDREWS. General, based on your experience and knowledge of this proposed project, do you recommend that the United States undertake the financing of Bokaro?

General CLAY. At the present time, I do not believe that the full economics of the project have been established. There is considerable question as to the availability of power, water, and transportation facilities. Certainly, until it has been definitely established that power, transportation, and water will be available, the project has yet to be established as one of economic merit.

Mr. ANDREWS. Assuming that further study reveals that the plant itself would be economically justified, that all raw materials could be found and transported economically, et cetera, as you know, the proposal is to build this for the Indian Government, and it would be a plant operated in competition with existing privately owned steel plants in India. Under those conditions, would you recommend that the plant be financed and operated as a Government-owned steel mill?

General CLAY. No, sir, I would not. I think there are ways and means, if this project were fully justified economically, if it is badly needed for Indian growth, by which money could be advanced, not necessarily all by the United States, to the Indian Government for

it to establish an authority or some other type or kind of agency which would be committed, however, over the years to sell its shares to the public and become, in the course of time, a private enterprise. I cannot conceive any other way by which it would justify support from the United States.

Mr. ANDREWS. What benefits, if any, do you think the U.S. Government would receive should the proposal be approved?

General CLAY. I think the U.S. Government is committed to a program of support of southeast Asia and Asia against the Chinese colossus, and that if we are unable to develop the full strength of the Indian and Pakistani people, we can never look forward to a time when we will have a reasonable balance of power in Asia. Thus, if we continue committed to the defense of southeast Asia, in the long run we will spend a great deal more money and be under a continuing commitment that might be lessened if we can get a self-supporting India and self-supporting Pakistan that are no longer at arm's-length with each other.

Mr. ANDREWS. Do you know of any commitment which has been made by any official of the U.S. Government to the financing of this proposed plant at Bokaro?

General CLAY. I do not know of any. I understand our Ambassador has stated that he believes a commitment has been made. I have checked as far as I can within both the State Department and AID, and I am advised they have not made any commitments. So, to the best of my information, there is no specific commitment of the United States to finance this project.

ADVISABILITY OF APPROPRIATION FOR PROJECT FOR 1964

Mr. ANDREWS. Do you believe, based on information developed so far and now available, that the Congress should appropriate funds for this project in the 1964 budget?

General CLAY. I would certainly say there is not enough information available at this time for a specific commitment of funds to be made to this project——

Mr. ANDREWS. In fiscal 1964?

General CLAY. In fiscal 1964—unless there was a specific request for relatively small sums for further study. I believe the whole question of further consideration of this steel mill must await further studies on the additional facilities, on firm understandings that these facilities will be provided, and, finally, as to what the ultimate ownership of the project will be.

I have a very real belief that India needs the steel mill. I am not questioning the need of India for this steel mill. The United States Steel people, under a very thorough survey, are convinced there is a very definite and real shortage of steel in India.

Mr. ANDREWS. I do not think there is any question about that in the minds of any of the witnesses.

Are you familiar with the study of the project made by the United States Steel Corp.?

General CLAY. Yes, sir.

Mr. ANDREWS. How does the United States Steel study compare with your report of the project?

General CLAY. Of course, the United States Steel study is a far more detailed engineering study than anything we had available when our Committee was meeting. This report had not then been made. I think it is a very excellent study, and I think it would indicate quite clearly that if the additional facilities were provided, in the long run this would be an economic project, one that eventually would stand on its own feet.

The report, however, did not go into the philosophies that were involved as to Government ownership versus private ownership. It was a simple engineering report.

Mr. ANDREWS. It was a factual engineering report.

General CLAY. Yes, sir.

Mr. ANDREWS. My understanding of the report is that no recommendations were made as to whether or not a mill should be built, but only the facts were given, and the conclusion of the report was that at the present time the mill could not be economically justified.

It appears to me if we spent $686,000 for that report and then the AID Agency went ahead in the face of that report and committed funds in fiscal 1964 for the construction of that mill, we have wasted the $686,000 spent on that report. That is just my opinion.

Do you agree with the statements and conclusions of the United States Steel report?

General CLAY. Knowing the caliber of the people who made the report, I have confidence in its being a factual and correct report, and I accept without any question the conclusions and the recommendations made in the report. I am sure it is a sound engineering report.

STATUS OF CURRENT STEEL MILLS IN INDIA

Mr. ANDREWS. Are you familiar with the three steel mills financed by West Germany, Great Britain, and Russia, now in operation in India?

General CLAY. Only in the sense that I have seen reports on them. I have not actually seen them, Mr. Chairman.

Mr. ANDREWS. What has been the success and political impact of those mills?

General CLAY. I think the mills are still not running at full capacity due to the difficulties in the training and development of crews, but they are reaching capacity and they certainly have contributed to the economic development of India.

As to whether or not they have been operated to make a return on the investment, I do not know. I have seen no figures that I could accept on that score.

Mr. ANDREWS. Our information is that the two privately owned steel mills operate much more efficiently and economically than do those three now under the operation of the Indian Government.

General CLAY. I think that is without question accepted as a fact. The privately owned mills have had the benefit of trained management and trained crews, and have been operating at reasonable efficiency. The Government-owned mills have had great difficulty in developing management and personnel, and a new mill would have even greater trouble in developing operating personnel.

Mr. ANDREWS. My next question was: What will be the probable impact of the Bokaro plant, if approved?

General CLAY. I think it would have great difficulty in developing the right type and kind of people to operate it. In point of fact, I believe the United States Steel report pointed out if such a mill were built, it should be kept under American management for a considerable period of time before it was turned over to Indian management. If we should provide money for such a mill, I think it would be imperative that it have a substantial period under American management. I think this would be the greatest assurance of its ability to operate economically.

TERMS FOR FINANCING PLANT

Mr. ANDREWS. Do you believe the proposed plant would be financed by Russia or some other government if it is rejected by the United States?

General CLAY. I think there is always the possibility that other governments and other countries, including Russia, might finance such a mill. I suspect, if they did, it would be on much harder terms than we have proposed to finance it. I think India might get the money at higher rates of interest over shorter payment periods.

Mr. ANDREWS. Harder loans.

General CLAY. Harder loans. I think it is possible they could get the money under harder loans.

Mr. ANDREWS. Of course, if the United States, through AID, were to undertake the financing of this plant, it would be done under a loan which would last for 40 years at three-fourths percent interest, and nothing repayable for the first 10 years. That is the type of loan that AID proposes to use in connection with the financing of this plant.

General CLAY. I think in our report which we made on the AID program, one of our very strong comments was that the United States could very well harden the loan terms in many instances. Certainly, if this mill is to prove economic in its operation and is to represent a return to the Indian Government, and if it also is to pay taxes as a private mill does, then indeed as soon as it reaches such a basis, the type and kind of loan we are talking about would seem to me to be unnecessary, and we could have much harder terms than anything we have talked about.

It might well be in the initial years you would have to have soft terms, but if this mill is worth building at all, it would be able to carry loans under much harder terms than the ones that we are talking about now.

TIME REQUIRED TO OPERATE MILL AT PROFIT

Mr. ANDREWS. The United States Steel representatives stated that it would be approximately 10 years before the plant could operate at a break-even basis. Do you believe this is a sound estimate?

General CLAY. Of course, this is based on the assumption, also, that the second step would not be available for some 7 years, I think. It would require a period of breaking in the second step for it to become economical.

I do agree with the report.

I also doubt very much that it would be possible to build the two steps much faster than that.

Mr. ANDREWS. We were told that the mill could never operate profitably under the first step.

General CLAY. I think that is correct, yes, sir.

Mr. ANDREWS. And that if the third step were completed, then it would be 10 years from that date before the mill could be expected to operate profitably.

General CLAY. I think in making that report, the steel company engineers were undoubtedly giving considerable consideration to the difficulties in training operating personnel and to the lack of natural mechanical ability which exists in India, which makes it very difficult to get operating personnel. I do not think such a mill in this country would require anything like that period to become profitable.

Mr. ANDREWS. Do you believe the Indian Government would be able to repay the proposed loan, or would you consider that the project would actually be a grant?

General CLAY. I think we have to assume, when the Indian Government has signed a paper promising to pay, it will pay, because there has been no record yet of any default on such notes by the Indian Government. Thus, I would believe that we would have to accept, if they agreed to repay this money, that it would be repaid.

Mr. ANDREWS. Do you believe the loan agreement with India should include provisions concerning the ownership, control, and operation of the project?

General CLAY. Yes, sir. I think if this project goes forward at all, it is essential that it be done under a lengthy period of American management, that it be done under provisions by which the ownership, at least in substantial part, eventually passes into the hands of the public, and that it has a board of directors on which the public ownership of shares would be recognized and would have the deciding and major voice in its policies and operations for the future.

MILITARY SITUATION IN INDIA

Mr. ANDREWS. General, what is the current military situation in India? You can answer that either on or off the record.

General CLAY. I think I would like to answer part of it on the record and part of it off.

Mr. ANDREWS. You tell the reporter.

General CLAY. This is on the record.

Actually, as a result of the Chinese invasion, there has been a new willingness in India to support a defense establishment. In the period prior to the Chinese invasion, a somewhat pacifist Government so neglected its defense department that it probably reached the lowest point in Indian history. It was thus not able to make a very good show of itself upon the Chinese invasion and, indeed, some of its very best troops, as I understand it, were paying more attention to the Pakistan border than they were to the Chinese border.

With the invasion, however, a very real change has been made in the defense department, and every effort is being made by the Indian Government to rebuild its army and its air force, its army particularly. I think this is very important, because it is a very real step toward the creation of a balance of power in southern Asia.

Unfortunately, the differences between Pakistan and India require both of these countries to keep their defense establishments pointed at each other, so their combined strength is not available, at least at the moment, as a deterrent to Chinese power. Their combined strength would be a very real deterrent to Chinese power.

Thus, I do believe there is a better understanding and a revived interest in maintaining the defenses in India than had existed for some time. I think it is very necessary for us to encourage this, to try to build it up.

Now if I may go off the record.

(Off the record.)

USE OF MILL FOR MILITARY PURPOSES

Mr. ANDREWS. General, is there any indication that the production from the proposed plant might be used for military purposes?

General CLAY. India is building a small military production base. However, from what I know of it, Mr. Chairman, it would not require any great amounts of steel, and I would say it would not be a factor in the need for this mill per se.

Mr. ANDREWS. In the event of military conflict in the Middle and Far East, do you feel the proposed plant would remain in Government control?

General CLAY. I think if you went into a long, protracted war out there, the Government would probably take over almost everything at first, and at the end of the war it would depend on who won it.

Mr. ANDREWS. We were told that the unions which operated at least one and, if I remember correctly, all three of the Government-owned plants over there, were completely dominated by the Communists. Do you know anything about that?

General CLAY. No, sir, I do not.

Mr. ANDREWS. Again I want to thank you, General, for appearing here before us.

General CLAY. Thank you, Mr. Chairman.

Mr. ANDREWS. Mr. Natcher.

AVAILABILITY OF RAW MATERIALS, ETC.

Mr. NATCHER. General Clay, I wish to join with my chairman in thanking you for your appearance at this time and the excellent manner in which you have presented this subject.

Are you acquainted with the steel mill that is either in operation or under construction in Greece at the present time?

General CLAY. I know of it, but I am not in detail fully familiar with it, no, sir.

Mr. NATCHER. During the past several days, I have read reports in the press from time to time concerning the overall cost of this particular mill. It seems when it started out it was to cost in the neighborhood of probably $128 million, and now it appears to exceed this figure by probably another $100 million. The operation of such large plants as Bokaro and the mill that is now under construction in Greece, of course, requires the necessary raw materials, as you well know, General Clay. Other witnesses have testified before our committee to the effect that the coal supply is not good, that the coal in

the vicinity of this mill contains too much ash, for instance, and that it will require washing and treatment. Did you run into that in your investigation along this line, General Clay?

General CLAY. Only as we read it in the United States Steel report, in which I, for one, have complete confidence. I think they stressed the fact that there needed to be further study to be sure not only of the availability of raw materials, but of other facilities, too, such as power, water, and transportation.

Mr. NATCHER. As I understand, this location is right out in the middle of a field at the present time, generally speaking. There is no community there. In addition to the plant, it would require housing and all other facilities for the people to operate this mill. Is that your information, General Clay?

General CLAY. Yes, sir.

Mr. NATCHER. According to the information which has been submitted to our committee, General, it would require some $133,857,000 in addition to the mill itself, for the operation of this particular plant. It would require a canal, a dam, a townsite, and different washing facilities for the coal, and generating facilities which are not in existence at this time.

General CLAY. That is correct.

Mr. NATCHER. That is all I have. Thank you, General Clay.

Mr. ANDREWS. Mr. Flynt.

Mr. FLYNT. General Clay, let me welcome you to our subcommittee, and also thank you for taking the time to come down and discuss this matter we have under investigation and inquiry.

At the present time, you are connected in an executive capacity with Continental Can Co.?

General CLAY. Yes, sir. I have retired as an officer but continue as a director.

REQUIREMENT FOR COMPLETE SURVEY OF PROJECT

Mr. FLYNT. This company, like many other successful companies, is constantly looking for both methods and locations to establish new plants, new mills of one kind or another, as the demand for your many products requires.

General CLAY. Yes, sir.

Mr. FLYNT. Could you very briefly tell us the kind of study that your company makes prior to beginning a new plant?

General CLAY. I think we would proceed very much as this study has been made, by employing competent engineering firms to survey the facilities available and the cost of erecting the plant, by using our own economists and also employing outside economists to predict the potential market and the return that we could secure from the investment that we would be proposing to make.

Then if it was overseas, we would take a thorough look at the stability of the country in order to know whether or not we felt warranted in going into the country. Today, due to the guarantees under AID, that is not as much a prbolem as it used to be, because you are guaranteed against takeovers through government action of that particular type.

I think these are the factors we would want to consider before we went into any such endeavor.

I have never been sure in my own mind, if the Government of India had not been willing, that a U.S. firm might well have formed agreements and arrangements with the Indian steel mill owners to produce a steel mill built and financed in substantial measure by private enterprise.

Mr. FLYNT. If you expanded a substantial amount for a comprehensive report, and the report as furnished, on the basis of a contract which provided for the report, showed on its face that the report as it then existed was incomplete and that it would require from 1 to 2 years' additional study in order adequately to complete the report, as a businessman what would be your recommendation at that point?

General CLAY. If large sums of money were involved in this report, if it represented a very substantial capital investment on our part, we in our company certainly would not move until we had full and complete reports. It it was a lesser project you might take more of a risk, but on a project that involves this much capital structure, you certainly would not move on it until you had full and complete reports.

Mr. FLYNT. To my knowledge, this is about the largest and most comprehensive single project ever recommended for implementation by the Agency for International Development or any of the predecessor agencies. From your study of this program, are you of the same belief?

General CLAY. I think it is certainly the largest of the industrial type. I am not too sure that it is as large as some of the river development programs might turn out to be, but it certainly is the largest single project of an industrial type that I know of.

Mr. FLYNT. This being true, do you believe that it is of utmost consideration, if this project is undertaken, that it be brought to successful fruition?

General CLAY. I think nothing could be more damaging to us than to start this project and not see it through to a finish.

Mr. FLYNT. We were told by one of the witnesses who preceded you that the company in which he was one of the principal executive officers recently spent 5 years and expended approximately $7 million in conducting an investigation in Venezuela preparatory to beginning a mining operation there, the size of which would be considerably smaller than this proposed industrial development in the Bokaro steel mill.

It would therefore seem to me that before we jeopardized the position of the United States, the investigation should be completed insofar as it is possible to complete it, and that we should not proceed on the basis of a partially completed study of this Bokaro steel mill proposal.

Would you agree with that and, if so, would you like to expand on it?

General CLAY. I think I would agree with it very much. In fact, I think Mr. Bell, of the AID administration, himself has stated that he had to have a great deal more information than he has now before he was prepared to make a final and ultimate recommendation. I think you would have to have positive assurance of the availability of the raw materials and facilities needed and the availability of personnel of the caliber and character needed to make this kind of project a success.

This would mean, I believe, the establishment of a very large training program to have people trained and ready to go by the time the mill was ready to go.

I think a great deal more work is necessary before a final commitment to this project. How much, I do not know, because I suspect the availability of materials, the extent of iron and coal, and so forth, have been subjected to other investigations by the Indian Government in connection with their own steel mills. There may be more information available on this aspect than we know of now.

Nevertheless, until this project can be completely sewed up, it would be very wrong to make a final decision.

In addition, as I said before, Mr. Chairman, and I would like to repeat, I can think of nothing worse than, if we once commit ourselves to this project, to let it be a failure. If we commit ourselves, it must be a success. We must be sure there are factors there to make it a success.

Mr. ANDREWS. You mean both financially and from an operational standpoint?

General CLAY. Financially and engineering wise. It would be a very bad reaction and reflection on our ability as the greatest industrial nation in the world to start on a project of this magnitude unless we were fully committed to it and know we are going to make a success of it.

Mr. MINSHALL. In view of the Communist infiltration into several of the unions in India, do you not feel there is a strong possibility that there might be a great push to make this effort, if we did go into it, fail, just for their own propaganda purposes?

General CLAY. This gets into a very difficult field. I think there would be every effort by the Communists to make it fail, but if we were not competent to carry it through in spite of their efforts, then we should not do it, because the whole purpose of building India up as an industrial country is to provide better opportunities for their people and, therefore, greater incentive for them to be other than Communists.

There is no question that anything we do in this respect will meet with tremendous Communist opposition. I do not know how important that factor is. I would only say that, regardless of that factor, if we build this mill we must be sufficiently sure of management control in its early stages to be able to fight such a battle through and win it, and I think we could.

Mr. FLYNT. Along that very same line, in your opinion, would that make it not only desirable but, indeed, imperative that before a final decision is made and before any commitments are made, the investigation be completed far beyond the point which the investigation has now reached?

General CLAY. Yes.

Mr. FLYNT. I believe you stated earlier that you have read the report submitted to the Agency by the United States Steel Corp.

General CLAY. Yes.

Mr. FLYNT. You are familiar, then, with the five existing steel mills—two privately owned, the Indian Iron & Steel Co., and the Tata Iron & Steel Co., Ltd.; and the three Government owned and operated steel mills, one installed as a result of a loan from the Union

of Socialist Soviet Republics, the second from a West German business consortium, and the third from the United Kingdom?

General CLAY. Yes, sir.

Mr. FLYNT. Is it your understanding that the value of these five mills ranges generally from a low of $100 million to a high of approximately $175 million, or have you other figures which may not have been made available to us?

General CLAY. I do not know, sir. I cannot answer that question. I have not seen any evaluation of those mills. I was under the impression that the Russian mill was substantially higher than that in cost. I do not think we have any way of knowing, really.

Mr. FLYNT. The cost or the potential operating capacity?

General CLAY. Yes.

Mr. FLYNT. If those figures are substantially correct, would it seem to you that the proposal for a three-phased operation, the first phase of which would cost approximately $575 million, would be an appropriate start, or do you think it should be modified downward?

General CLAY. I think this particular mill in this particular location can pay out only provided it is a substantial mill, a mill of large size. I doubt very much if a smaller steel mill there would serve a very useful purpose in helping India out of its steel deficit or in the long-range economic operations.

Of course, this business of constructing mills in stages, with the initial stages not very profitable, is a rather common occurrence in this country. This is the way we build mills in this country. I think the United States Steel Co. has applied some of its own techniques in its recommendations with respect to this mill.

Of course, you do have the difference in that they do have other profitable operations which carry their period of financial loss, whereas I do not understand that the Indian Government has at this moment any profitable steel operations.

Mr. FLYNT. Then, your interpretation of the report is that if this project is undertaken, it should be undertaken with the objective in view of completing the entire three-phased operation at an estimated cost of approximately $1.7 billion?

General CLAY. I do not think the project stands on its own merit unless it is completed in full eventually. It takes that to make it economical.

Mr. FLYNT. In view of the magnitude of the comprehensive project in three phases, would you say that that is all the more reason that it is mandatory that the investigation be as nearly complete as possible before any further commitments are made?

General CLAY. From the financial standpoint, I think it is essential. Even beyond that, though, I think if the United States is to lend the money for this project, it must commit itself fully to the completion of the project in its entirety. If it does not, we had better not get into it. We are going to hurt ourselves more than we help ourselves. If we are going to go into it, we should go into it with the full realization of what the total project is.

Certainly, if we are to do that, we should have all the information we can obtain as to its merits before we enter into the commitment.

Mr. FLYNT. Thank you, General Clay. I would like to tell you in the presence of my colleagues on this committee what I have told you previously, that we in your native State of Georgia continue to be proud of you and your accomplishments.

General CLAY. Thank you very much, sir. I appreciate that.

Mr. ANDREWS. Mr. Conte.

TERMS OF FINANCING MILL

Mr. CONTE. I wish to join the committee, General, in saying we are certainly pleased to have before us such a distinguished gentleman with such a distinguished career. The last time I saw you was in Berlin, when you were doing such an effective job in a period of crisis. You certainly made our trip most enjoyable and gave us food for thought at that time.

The waterfront has been covered fairly well by our chairman. One point has not been brought out, General.

In the questioning of the representatives of United States Steel, I wanted to know how this mill would be financed. In essence, they said we would lend the Indian Government this $981 million, and they, in turn, would set up most likely a corporation to run the mill or the Hindustan, Ltd., which is a Government corporation, would run it, but they would suggest a private corporation of the Government, a separate corporation of the Government, to run the mill. The Indian Government would lend them this money at 5¾ percent interest. Plus receiving this interest from the steel company, they would receive $52 a ton for each ton of steel that was produced at that mill. Taking that into consideration with the 5¾-percent interest and depreciation, in the course of 20 years the Indian Government would realize $5.5 billion. Under the terms of the loan we would give, the United States would be fortunate if it realized $1 million during that period of time.

I know you and your committee have given this foreign aid program an exhaustive study, and I wonder if you looked at that type of proposal and whether you agree with that type of proposal.

General CLAY. Earlier, Mr. Conte, I commented in a general way to the effect if we were to lend money on this mill, after the initial few years when it began to turn in some revenue, the terms of the loan should be definitely hardened, and it should not be on the low-interest, long-term payout that we now propose. To me, it would certainly make no sense whatsoever for us to lend money at three-fourths of 1 percent to the Indian Government for a steel mill which we are financing, if the Indian Government is to turn around and lend it at 5¾ percent and have the advantage of this windfall.

Obviously, during the first 2 or 3 years when the project is under construction, it will not be able to pay any interest to anybody except out of the principal which has been loaned for the construction of the mill.

As I understand the AID people, they did establish certain conditions, and these conditions themselves may stop the mill. They stated, No. 1, if they loaned this money there had to be a separate corporation established other than the present Government corporation, that it had to have a substantial percentage of its directors from outside of Government, that it had to be managed for a period of not

less than 5 years, and preferably 10 years, by American management under a firm contract, that it also had to have provision at a subsequent date for the sale of a percentage of its stock to private owners, and finally, that the question as to the rate of interest to be paid by the authority to the Indian Government had to be in balance with what the Indian Government was paying to us.

Mr. Bell has established these criteria, and in my opinion these criteria materially improve the nature of the project. However, I do not understand that the Indian Government has agreed that a majority of the ownership of this corporation will be allowed to pass into private hands.

Mr. CONTE. Also, I think the crux of the whole thing is this: Mr. Bell or Mr. Galbraith or anybody else in this program has not said they would strike for a good hard loan. I can appreciate your point in taking issue with this mill being constructed in the public sector, but I do not think they would have difficulty getting it through the Congress in the public sector because this mill would not be in competition with American mills. But the thing that bothers me is the fact we have been so darn foolish, not only in India but throughout the world, in making these soft loans. I think it is high time—and I have read your report two or three times and I agree with a good part of it—it is high time we begin being sound businessmen in these things.

AVAILABILITY OF RAW MATERIALS

On page 18 of volume II, I brought out that United States Steel had said it would take 2 years to determine whether raw materials were available to construct the Bokaro steel mill. I asked Mr. Galbraith about that and he said they revised it downward and now feel they could do it in 3 or 4 months.

The next day we had representatives of United States Steel here and I again quoted from page 18 of volume II and asked if they stood by their word, and Mr. Obbard, vice president of United States Steel, said they stood by it and thought it would take more than 2 years to determine whether raw materials were available to construct the Bokaro steel mill.

Mr. Galbraith, in the Washington Post, says, and I quote:

> Three years of operations would thus recover the dollar cost of the mill and more.

United States Steel says at least 10 years it will be in the red and then only if the three phases are carried out can it become a successful operation. His statement does not correspond with statements made by United States Steel.

Mr. ANDREWS. Will the gentleman yield?

Mr. CONTE. Yes.

Mr. ANDREWS. The representatives from United States Steel told us they could never operate profitably in the first step.

General CLAY. I think that is right.

Mr. ANDREWS. That is in the record from the steel experts.

Mr. CONTE. Let us assume for a moment Mr. Galbraith was right—only an assumption—that in 3 years this mill would operate at a profit. Then why could not the Indian Government, if this were true, get a loan from the Export-Import Bank or the World Bank?

It would be a pretty good loan, would it not, if the mill will be profitable in 3 years?

General CLAY. I think if it could be profitable in 3 years they would have no trouble getting a loan from the International Bank.

Mr. CONTE. Thank you, General.

TERMS OF LOAN FOR FINANCING PLANT

The other thing that bothers me is, Mr. Galbraith kept talking about the Russian loan. I brought out to him at that time that the Russian loan, as far as we know, based on the testimony of Mr. Gaud of the AID agency, was a loan in the amount of $136 million bearing interest at the rate of 2½ percent repayable in 12 years. This differs greatly from a $981 million loan with a 10-year grace period and with three-fourths of 1 percent interest. I am willing to take the floor of the House and fight for a loan similar to the Russian loan or a German loan or a British loan. The German loan was in the amount of $157 million, bearing 5½ percent interest, repayable in 18 years; and the British loan was in the amount of $74 million over a 12-year period and bearing 6 percent interest.

General CLAY. May I say just one thing off the record?

Mr. ANDREWS. Yes.

(Discussion off the record.)

Mr. CONTE. General, based upon testimony given by Mr. Obbard, vice president of United States Steel, that the Indian Government stands to realize a profit of $5.5 billion if the United States should give this development loan to India and they in turn construct the Bokaro steel mill, is it not possible that the Indian Government could utilize that profit to pay off the Russian, the German, and the British loans, all of which are hard loans?

General CLAY. Certainly in terms of Indian currency they could, so theoretically the answer to that is "Yes." Their ability to do this would depend on their ability to convert the Indian money into the currency of those countries.

Mr. CONTE. In view of the fact the Indian Government has gotten these three hard loans, the Russian, the German, and the British loans—incidentally, the German loan was a consortium of German businessmen——

General CLAY. Yes.

Mr. CONTE. Is it your feeling we could enter into a fairly good hard loan with India on this project or some other project in India?

General CLAY. I think we could get certainly better loan terms than we have. I doubt very much if this project in itself could carry hard loan terms for the first 10 years of its existence. After that it should be able to carry very good loan terms. If we go into it, I think we should go into it on a recognition that terms of payment for the first 10 years would be relatively soft, but after that they would harden so that they could come eventually to terms of a conventional type loan. I think this is feasible and that the project should be able to take that kind of debt structure.

Mr. ANDREWS. Will the gentleman yield?

Mr. CONTE. Yes.

Mr. ANDREWS. We were told about the method of steel sales in India and it was a very unique method. The Indian Government, under that unique method of distribution, will make money on steel regardless of what it costs them to get that steel into the country.

General CLAY. Yes.

Mr. ANDREWS. So it could be that even though steel were produced uneconomically in this proposed mill, the Indian Government would realize a profit on the steel when they sold it in that unique method; is that correct?

General CLAY. That is correct; I think it is probably happening now.

Mr. CONTE. It is happening. On the steel produced they take off the cream, $52 on every ton produced in India, and on steel imported in India they take $22 a ton off.

Mr. ANDREWS. Regardless of what they pay for the steel, they sell at a profit. Some they buy at $102 a ton and some at $172 a ton but they make money on every ton of steel they sell.

General CLAY. These figures should be taken into consideration in fixing the loan terms.

Mr. ANDREWS. I agree with you.

Mr. CONTE. That is exactly right.

MANAGEMENT OF MILL

You mentioned something about an agreement from the Indian Government that the mill should be U.S. managed for how long?

General CLAY. Five years minimum.

Mr. CONTE. They could not possibly run that mill themselves, because United States Steel said it would take 3 years to merely train the foreman, and 18 months to train the senior operative jobs, and 9 months to train the junior operative jobs, plus the fact, as the chairman brought out, there is not a city or township in Bokaro and they will have to bring these people from all over India, and you know better than I do because I have never been there, that there are different religions and different language barriers and it will be difficult to bring these people there as a unit to run this mill. The three sector mills they have now are not running at capacity, and even though steel union representatives testified they were well run, in another part of the AID program there is an item of $1.6 million for a grant to India to send American personnel to train these people how to run their present steel mills to increase capacity at those mills.

General CLAY. I think the period of 5 years Mr. Bell talked about is a period in which absolute management control would be in the U.S. Government. I think there would have to be management experts there longer than that, but this would be a period when U.S. management would be in complete control.

Mr. CONTE. There is no doubt about it, they cannot manage what they have. They are asking for help in the amount of $1.6 million for American personnel to train these people how to run their present steel mills.

That is all, Mr. Chairman.

Mr. ANDREWS. Mr. Minshall.

Mr. MINSHALL. Off the record.

(Discussion off the record.)

Mr. MINSHALL. General, I, like my colleagues, feel very comforted, and I know the American people feel very much the same way, to know we have a man of your great talents and ability in reserve to come here voluntarily to testify before our subcommittee in the hearings on the Bokaro steel project.

Several years ago I had occasion to visit you in Berlin during the crisis. On the same trip while in Vietnam I had the opportunity of visiting also with your son, Colonel Clay. He did an outstanding job out there. I know he will follow in your great footsteps.

General CLAY. Thank you, sir.

Mr. MINSHALL. General, we have covered the basic questions about the Bokaro steel mill project and anything else I might ask would be putting frosting on the cake. There are several significant things I would like to emphasize:

No. 1, one of the basic reasons Mr. Galbraith gave when he testified on the need for this mill in India, aside from the steel need which we all agree upon, was that our $5.1 billion we had already put in India over the years had not done the job it should, economically or militarily. He felt we needed something to make a great impact to counteract the effect of the Russian and German and British loans on the people in India.

Would you care to comment on that?

General CLAY. I do not think we should ever approve a project because of what we think is the impact it may have in the country it is being built just because a project is being placed there. If a project is not basically sound and cannot be operated to bring a reasonable return on the money invested, in the long run any visible impact will be lost and you will come out with a loss of prestige and not a gain.

Mr. MINSHALL. In other words, you look upon this project with some apprehension and misgiving?

General CLAY. I think we must be completely confident, if we go ahead with it, that not only will it succeed but we will support it until it succeeds. Otherwise we should not go into it.

NEED FOR MORE COMPLETE SURVEY

Mr. MINSHALL. It has been testified by you and by the United States Steel people that they would not consider going into it unless we could go successfully into all three phases, because even though the first phase may be feasible it would not be profitable. As it stands now it would take several years' more study and $5 million more before we could come up with a complete and satisfactory feasibility study.

To summarize what we have gone through here this morning, there is no doubt in your mind that we should have considerably more study on this steel mill before we go ahead with it?

General CLAY. I think we should have sufficient study to be completely sure it would be a successful operation.

Mr. MINSHALL. Do you agree with the statement made by United States Steel, by Mr. Obbard, the vice president of United States Steel, that it would probably take several years and $5 million more in feasibility study money before we could come up with something we could look at?

General CLAY. If, as an industrialist, I was investigating a steel mill, those are the people I would go to, and I would accept their answers as being completely reliable, which I do.

Mr. MINSHALL. Mr. Chairman, that is all I have and I want to thank General Clay again for coming down here. I had the privilege of talking to him on the telephone informally about a week ago and at that time he said he would be glad to come here, and I think he has been of great help to the committee.

Mr. ANDREWS. Definitely.

At this point in the record we will insert this paper entitled "Background and Summary of a Techno-Economic Survey of a Proposed Integrated Steel Plant at Bokaro, Bihar State, India, Commissioned by the U.S. Agency for International Development, by United States Steel Corp., Pittsburgh, Pa., March 1963."

(The document follows:)

AGENCY FOR INTERNATIONAL DEVELOPMENT

BACKGROUND AND SUMMARY OF A TECHNO-ECONOMIC SURVEY OF A PROPOSED INTEGRATED STEEL PLANT AT BOKARO, BIHAR STATE, INDIA

(Commissioned by the U.S. Agency for International Development, by United States Steel Corp., Pittsburgh, Pa., March 1963)

BACKGROUND

The Agency for International Development (AID) has received from the United States Steel Corp. (USS) the report of a technical and economic survey concerning an integrated steel mill for construction of which the Government of India has requested American financial and technical assistance.

The United States Steel report makes no recommendation as to whether AID should assist the project. Its purpose is to assist AID in deciding on its response to an Indian request. It analyzes technical and economic aspects of the proposed mill, and identifies problems likely to be encountered.

If built, the mill would be located at Bokaro, Bihar State, in India's chief region of heavy industry. Bokaro is about 150 miles northwest of Calcutta (see map). It would be the country's sixth integrated steel mill and the fourth built and operated in the public sector of the Indian economy. An integrated steel mill is one which carries the steelmaking process from procurement of raw materials, through production of iron and then ingot steel, to rolling of basic shapes for use by industrial steel consumers (in this case plates, sheets, and strips) and production of coke oven byproducts.

The other three public sector plants, all operated by Government-owned Hindustan Steel, Ltd., are at Rourkela, Durgapur, and Bhilai. External assistance for these came, respectively, from West Germany, Great Britain, and Russia. The two private plants are the Tata Iron & Steel Co., Ltd., at Jamshedpur, and the India Iron & Steel Co., Ltd., at Burnpur. The Government of India wishes to start Bokaro construction during the third 5-year plan, now entering its third year.

For its services under the contract with AID, United States Steel received $686,344. Subcontracts for parts of the survey work were performed by the Bechtel Corp., the Bessemer & Lake Erie Railroad Co., Koppers Co., Inc., Arthur G. McKee & Co., and the Stone & Webster Engineering Corp. In addition, engineering and cost data were furnished to United States Steel by 32 other American firms. The contract was awarded in April 1962.

SUMMARY

Principal elements of the report are very briefly stated in the numbered paragraphs which follow immediately. Somewhat more detailed material, also derived from the report, is supplied thereafter. The source throughout is the report, whether paraphrased, quoted indirectly or quoted directly.

REPORT HIGHLIGHTS

I. India needs greater steelmaking capacity, even taking into account planned expansion of existing mills.

II. Bokaro can partially fill the needs by a three-step program providing 1.4 million metric tons of annual ingot-producing capacity by 1971, 2.5 million tons by 1975, and 4 million tons by 1980. Flat steel product tonnage made from these ingots will be 1 million tons in 1971, 1.8 million tons in 1975, 2.9 million tons in 1980.

III. A successful plant at Bokaro requires that—

(*a*) Qualified operating personnel, Indian and American, be assured;

(*b*) Supplies of several important raw materials be available and brought under ownership control of Bokaro management;

(*c*) Provision be made, in some cases by other agencies than the Ministry of Steel and Heavy Industries, for—

(1) Adequate rail transport;

(2) Adequate supplies of power and water;

(3) Expansion of coal mining/washing facilities;

(4) Adequate area highways; and

(5) A townsite to support both laborers and managers.

IV. Total step I investment would be $919,428,000 of which the foreign exchange share would be $512,588,000. For purposes of its analysis, United States Steel assumed a 20-year loan at 5¾-percent interest. Total investment over a period of years would be $1,504,766,000 of which $891,522,000 would be from external sources and $613,244,000 from Indian sources. Other items cited in (*c*) above are estimated at $133,857,000, including foreign exchange needs not yet determined.

V. Bokaro will not be profitable in the first step. It would become and remain so with full production in step II.

Need for greater capacity

India's present integrated steel mills have a rated capacity of 6 million metric ingot tons annually although in 1962 they produced 4.8 million tons. Problems accounting for this lag are expected to be resolved. Without Bokaro, planned expansion of existing plants embraces 11 million ingot tons by 1971.

In terms of products, rather than ingot tonnage, the following table indicates estimated future relationship of supply, demand and deficit for Indian steel products in general, without Bokaro:

[In thousands of metric tons]

Year	Demand	Supply	Deficit
1966	6,916	5,595	1,321
1971	11,235	8,684	2,551
1976	17,000	11,075	5,925

In terms of specific things Bokaro would make, flat steel products, the following table indicates deficits and Bokaro's effect thereon:

[In thousands of metric tons]

Year and step	Deficit before Bokaro	Supply from Bokaro	Remaining deficit
1966—I	1,427	1,040	387
1971—II	2,348	1,800	548
1976—III	4,910	2,910	2,000

Manpower

Manpower problems are of "special importance" to Bokaro. "Unless fully qualified personnel, whether Indian or American, could be supplied right from the start of the project's implementation, there would be grave risk—as can be seen from the experience of other recent steel plants in India—that very costly

equipment would be unproductively used or even damaged. And, on the other hand, whatever American personnel might be needed during the early period of the plant's existence should be replaced by Indians as rapidly as possible in the interest of operating economy."

"Under the most favorable circumstances at present the manning of a sixth integrated steel plant would be extremely difficult." This is because large numbers are needed and the only source of experienced personnel is five existing steel plants. These, however, have expansion plans of their own. "Thus Bokaro would to a very large extent have to develop its own Indian organization by hiring untrained people and training them for their respective jobs. A considerable number of Americans familiar with American equipment and methods would consequently be required to provide this training and to assure proper operation until Indian personnel were fully qualified."

The Bokaro area has virtually no useful labor supply except in lowest categories. It is rural, remote, and poorly served by transport facilities. It is unattractive to the great majority of potential Indian employees, who would come from elsewhere. "The situation is even worse as regards American employees * * * and would make it difficult to attract good expatriate personnel." Thus a nearby townsite must be built and operated, including medical, recreational, educational, and shopping facilities, transport to and from the plant, and better access to the outside.

Characteristics of Indian labor as to physique, discipline, language, and other factors, plus special considerations rising from extensive government involvement in labor relations matters, require an overall plan for manpower. The United States Steel-suggested plan consists of eight closely coordinated programs in manpower and recruitment, training, personnel placement, utilization of personnel resources, compensation, employee and union relations, safety, and employee communications. Its implementation has a direct effect on conclusions about profitability of the mill.

A 10-year American management contract is assumed, although some technical help would be necessary for a longer period. Twenty Americans would be needed immediately, increasing to 670 in 1968, the expected year for starting production, decreasing to 40 in 1977. The peak figure includes 270 management and supervisory personnel and about 400 production and maintenance workers. Indian work force is expected to be about 8,200 for step I. The American management contract is a prerequisite to attaining 100-percent capacity 4 years after startup and to maintaining the relatively small and efficient work force.

Construction would involve about 20,000 men.

Raw materials

Raw materials concerned are iron ore, limestone for blast furnaces, limestone for steelmaking, and metallurgical coal. Among important assumptions made for iron ore and blast furnace limestone are that mining and quarrying will be integrated with steelmaking operations, will be under Bokaro management, and thus will be available at cost. Among assumptions about limestone for steelmaking and coal are that they will be purchased at market prices, largely from Government agencies.

"It became apparent to us at an early stage in our investigation that wholly insufficient consideration was being given to the raw materials aspect of the Bokaro project. This deficiency appears to be due primarily to the fact that present plans are for the three principal raw materials to be supplied by three separate Government entities * * *. No individual or group with overall steelmaking raw materials experience has been made responsible for coordinating Bokaro's raw materials program. We do not believe that any modern integrated steel project should be undertaken today in any country without such coordination of raw materials planning.

"In addition to this lack of coordination, work in respect of raw materials has lagged behind planning of other aspects of the Bokaro project. Arrangements regarding iron ore and coal sources are still undergoing important changes, and exploration work on the proposed source of limestone is only just beginning. We therefore found it necessary to make certain major assumptions regarding raw materials for Bokaro. We wish to stress this point and emphasize the importance, if the project is to be undertaken, of verifying the reasonableness of these assumptions or developing adequate alternatives. This work of verification will be a considerable undertaking in terms of personnel, time, and funds; from the standpoint of time alone, for example, it will take 2 years or more, in our opinion to find satisfactory long-term solutions to the basic raw materials problems."

Transportation, power, and water

All three of these problems affect Bokaro directly but arise outside its plant and are thus largely beyond its management's control. It is pointed out that within a radius of 135 miles, drawn from Jamshedpur, is concentrated 80 percent of India's steel production capacity, the raw material on which production is based, and 30 to 35 percent of steel-consuming industry. Only the Bhilai steel plant is outside this circle. "The construction of an additional steel plant within the area—in addition to major expansion of the four plants other than Bhilai—would increase the demand for these commodities and services, which are already in short supply."

Transportation.—The Bessemer & Lake Erie Railroad, a subcontractor for United States Steel, found that "transportation problems related to the proposed steel plant at Bokaro are difficult but not insuperable." Transportation will be expensive and will require unusually competent management from Bokaro. The plant is reasonably well located for coal and iron supplies, less well for moving out finished products. Moreover, the transportation situation will impose additional needs in unloading and storage facilities at the plant site.

United States Steel considers, however, that "the adequacy of the transportation system is far from assured and that fulfillment of present plans for construction of track and supply of rolling stock is a prerequisite for efficient and fully productive operation of Bokaro." Further warnings are, first, that "there will be very little point in granting steel mills top priority if the rest of the economy has to suffer such shortages of transportation that the steel produced cannot be further processed and distributed for consumption;" and, second, that steel, power, and transportation development programs are absolutely interdependent and "must proceed pari passu [at equal pace]."

United States Steel has accepted the assurance of the Minister of Steel and Heavy Industries that he is aware of the danger to steel if the railroads fail, that he works closely with the Railways Board, and that steel would not be allowed to falter for want of transport. But it stresses "that the plant's successful operation would be gravely prejudiced if transport plans are not fulfilled."

Power.—As with transportation, the report assumes that priorities necessary to adequate power for Bokaro will in fact be granted. Further assumed is that the report of a special Indian committee (Sachdev Committee), recommending power consumer priority for railway traction, coal, iron, and steel production, and waterworks, will be implemented. New generating capacity at points in the Damodar Valley Corp. system is essential and must be installed at least concurrently with steel plant construction.

Water.—Key element here is construction by the Damodar Valley Corp. of a dam and reservoir at Tenughat, for needs of Bokaro and other new industries, plus a supply canal to Bokaro. Again it is stressed that "investments and construction programs must therefore be carreid out in time to meet Bokaro's requirements and closely coordinated with the construction and step-by-step expansion of the steel plant."

Financial considerations

Background.—"In spite of the many difficulties of organizing new industries, overcoming shortages of materials and essential services, and raising low living standards and productivity, future Indian economic progress seem assured. In many places, the seeds of modern technology and production methods have been planted. To the extent that aid continues, the peaceful economic revolution of India will be promoted and hastened."

"Most Indians are still very poor and it is possible only to show slight statistical proof of improvement of living standards since the series of plans began in 1951. However, the massive dimensions of Indian population tend to obscure the fact that a real start has been made in creating a modern industrial base."

Four-fifths of the country's investment in plant, equipment, and infrastructure of transportation, power, and supporting facilities comes from Indian sources. The third plan specifies investing 75 billion rupees in the public sector and 43 billion in the private.

Representative of third plan goals is a 50-percent increase in the rate of growth for industrial production and national income. However, the upward trend is more likely to follow the gradually ascending path of recent years rather than accelerate sharply, a prediction borne out by Indian performance under the first 2 years of the third plan. This forecast is based, first, on the

prospect that external assistance may be so insufficient or delayed as to fail to fully meet India's needs for equipment and material, and second, on the view that basic factors such as transportation and power seem inadequate to the needs of the growing economy and unlikely to become adequate in the near future.

"There are serious questions about the long-term sufficiency and timing of such aid (United States, European, and Soviet bloc). For specific projects such as the expansion of the three existing public sector steel mills and power facilities' expansion, the actual letting of contracts to foreign suppliers is running months and years behind schedule * * *. A large part of the problem is the time-consuming difficulty of translating planned major industrial projects successively into detailed equipment specifications, orders on foreign equipment makers, manufacture, delivery, and installation of machinery at Indian sites."

"Our analysis of the future supply of steel in India has been prepared against the background of existing governmental regulations and policies concerning the ownership of steel-producing plants and controls on steel prices and distribution. Current Government policy classifies the steel industry as one of those industries intended basically to be Government-owned; it assumes, however, the continued existence of the present privately owned steel mills * * *. Present price controls and the current level of the retention prices do not appear (judging both from public statements made by TISCO and IISCO and from the results of this study) to permit an adequate return on invested capital * * *. Expansion in the privately owned steel industry is, therefore, most likely to be confined to the rounding out of existing facilities, and the major burden of providing future steel supplies will fall to the Government.

"This statement of the basic assumptions we have made in projecting future Indian steel capacity, and the reasons for it, are not meant to imply either criticism or approval of Indian Government policy. It is meant to describe objectively the factors we had to take into account in our forecasting, and which help to explain why the future supply of Indian steel so forecast shows that the Government-owned sector will by 1976 have expanded its capacity so very much further above the present level than the private sector."

Cost.—Heavy initial capital expenditure is characteristic of construction of flat products steel mills. There is a rapid capital expenditure decrease as production capacity is increased. Thus plant costs for step I are higher than experienced on a worldwide basis. Chiefly this refects the fact that plant layout and mills themselves are designed for their ultimate capacity of 4 million metric ingot tons annually. In the Bokaro case costs are also raised by its location, which dictates ocean freight and customs expenses as well as oversea employment of Americans. Additionally Indian conditions cause abnormally long construction periods and impose characteristics of general remoteness.

In step I a total estimated investment of $919,428,000 will be needed. Of this $512,588,000 is a long-term foreign exchange loan, $401,440,000 Indian Government equity in rupees, $5,400,000 a loan owed Japan on a coal mine Bokaro would take over. Step I spending is spread over 5.5 years with operation commencing 4.5 years after start of construction. Step I ratio of long-term debt to equity is 56 to 44 percent.

Disbursements are projected as the following table shows.

[In thousands of dollars]

	1963	1964	1965	1966	1967	1968
Total cost	3,925	100,491	298,602	280,953	118,988	24,282
Foreign exchange portion	1,950	53,992	182,765	190,597	75,207	8,147

The table below indicates estimated investment for the entire three-stop project with an ultimate 4 million ingot ton capacity. Calculations beyond step I are an appraisal, assuming capacity operation and constant cost-price ratios, rather than a projection calculated in detail:

[In thousands of dollars]

Step	Foreign exchange expenditure	Dollar equivalent Indian rupee expenditure	Total	Capitalized interest, deferred charges, etc.	Total
I	$512,588	$314,653	$827,241	$92,187	$919,428
II	162,367	75,488	237,855	7,300	245,155
III	216,597	100,346	316,943	23,240	340,183
Total	891,552	490,487	1,382,039	122,727	1,504,766

Assumed to be undertaken by Indian authorities are these major "outside the fence" projects, associated with and essential to Bokaro, for which estimates are also supplied:

[In thousands of dollars]

Tenughat Dam	31,127
Canal to Bokaro	5,730
Bokaro townsite	40,000
Added 125 megawatt generating capacity	32,000
Increased coal mine/wash facilities	25,000
Total	133,857

Cost data for expanding railroad facilities and road network are not available. Dam and power station projects would have some foreign exchange requirements, as yet unknown. "The ultimate investment involved in establishing the Bokaro plan would therefore substantially exceed $1⅔ billion on completion of step III."

Profitability.—"Operations of the plant at step I levels alone would be unprofitable even though operations are projected at full capacity following completion of startup * * * Each year of the projected period produces a cash deficit which reaches $270 million in 10 years or an average annual deficit of $27 million." Presumably Government of India loans will cover these deficits.

"Upon examination of the profitability of Bokaro it is evident that the heavy burden of excise duties and large interest payments on loans are the greatest influences on the results. Production costs on the other hand indicate that Bokaro could be a relatively low-cost steel producer based upon the facilities proposed and the assumptions made with respect to raw materials, manpower, and managerial control."

The projected Bokaro expansion in step II to 2.5 million ingot tons, with operations beginning 4 years after start of step I production, will result in profitable operations when close to 100 percent of capacity is reached and will remain profitable thereafter.

"Since the Government of India is assumed to own the mill, it is relevant to mention that during the 20-year period an estimated $1 billion of revenue would accrue to the Government of India from the Bokaro operation, through excise duties on ingots, finished steel products, and coal chemical byproducts. Income taxes paid by Bokaro would give the Government an estimated half billion dollars. In addition, the "surcharge," or difference between the retention price and selling price, would amount to about $1⅕ billion during the same period and would accrue to the Government." The selling price is the price paid by a plant's customers, the retention price the amount it is permitted to keep. Both are set by the Government.

Mr. ANDREWS. The committee is adjourned sine die.

THURSDAY, JULY 25, 1963.

INTERREGIONAL PROGRAMS

WITNESSES

FRANK M. COFFIN, DEPUTY ADMINISTRATOR FOR OPERATIONS, AGENCY FOR INTERNATIONAL DEVELOPMENT
LESTER E. GORDON, ACTING ASSISTANT ADMINISTRATOR FOR PROGRAM, AID
LEIGH M. MILLER, LEGISLATIVE PROGRAMS COORDINATOR, AID
PETER J. DAVIES, CHIEF, PRIVATE ENTERPRISE DIVISION, AID
ROY R. MADDEN, CHIEF, ADMINISTRATIVE BUDGET, AID
EDWARD F. TENNANT, CONTROLLER, AID
STANLEY B. SCHEINMAN, LEGISLATIVE PROGRAMS COORDINATION STAFF, AID
KATHERINE CLARK, CONGRESSIONAL LIAISON STAFF, AID

Mr. PASSMAN. The committee will come to order.

We have with us this afternoon the Honorable Frank M. Coffin, Deputy Administrator for Operations, Agency for International Development. Mr. Coffin is a former distinguished Member of Congress, and we welcome him most heartily.

Mr. Coffin, if you have a statement to make to the committee with respect to the interregional programs, we shall be pleased to hear from you.

Mr. COFFIN. Thank you very much, Mr. Chairman.

GENERAL STATEMENT

Mr. Chairman and members of the committee, I am pleased to appear before you to discuss the fiscal year 1964 AID request of $37,242,000 for interregional programs. As you will recall, interregional programs is a category of activities carried on mainly in the United States, but which fulfills functions which are primarily in support of oversea programs. The expenses incurred are of a type most appropriately funded on a worldwide basis rather than allocated on a country or regional basis. They represent costs which differ from administrative costs in that services are being provided for implementation of programs in cooperating countries, as contrasted with general administrative functions connected with the direction and supervision of such programs.

Two very important functions of interregional programs are funded largely under four interregional activity classifications which I shall discuss subsequently. (AID/W program staff, program support by other U.S. Government agencies, participant services, and communications resources). These functions are:

PARTICIPANT SUPPORT

The services, furnished to an estimated 10,000 nationals of some 75 countries receiving training in the United States, include the individual arrangements which must be made with 250-odd universities and colleges and with thousands of private firms and governmental and other institutions which are best suited to the trainees' goals un-

der bilateral programs in various technical fields. AID personnel and the capabilities of other Federal agencies are required to provide these services. Participant support costs paid from interregional programs funds fall into the general categories of (*a*) reimbursement of AID training staffs, (*b*) expenses of technical staffs of other agencies providing training, and (*c*) necessary special program services such as insurance fees, English language training, and contracts with outside organizations for training in certain specialized fields (public safety, community water supply, and the like).

TECHNICAL CONSULTATION AND SUPPORT

The diversified nature of the country programs necessitates a wide range of technical support activities, such as the dissemination of current technical publications to field technicians, the handling of contractual arrangements, and procurement. Such services are furnished through: (*a*) the Communications Resources, Contract, and other staffs of AID/W; (*b*) participating agency facilities and staffs; and (*c*) special program activities for the development of training techniques and the acquisition of training aids.

CLASSIFICATIONS OF INTERREGIONAL PROGRAMS

I will briefly describe each of the 11 classifications of interregional programs.

AID PROGRAM STAFF, $16,519,000

The AID/W program staff is made up of that segment of the Agency's Washington personnel directly concerned with the support of program operations. It includes personnel concerned primarily with program implementation: contract officers, development loan officers, training officers, technicians, and research and evaluation personnel. The increase in this category over fiscal year 1963 estimated expenditures is required to: (*a*) place the centralized Office of Public Safety on a full-year basis; (*b*) provide for increased workload growing out of the greater concentration on development lending; (*c*) strengthen the staff training program, which suffered from inadequate funds during the year just past; and (*d*) meet legislative requirements for an increased number of security investigations of contractor-employed U.S. nationals.

PROGRAM SUPPORT BY OTHER GOVERNMENT AGENCIES, $5,398,000

This item is for reimbursement of other U.S. Government agencies for their services in providing training to cooperating country nationals.

PARTICIPANT SERVICES, $3,400,000

To the extent that training provided by universities and other private and public institutions is reimbursable on a tuition-fee basis, such expenses are met from country or regional program funds. The costs of training provided by U.S. Government agencies are met from the "Interregional programs" category. Certain other training services of a specialized character are funded on a worldwide basis from the "Participant services" category of interregional programs. Such

services include participant orientation, reception services, English language training, interpreter services, health and accident insurance fees, land-grant college fees, and training in specialized fields as required.

COMMUNICATION RESOURCES SERVICES, $800,000

The Agency conducts a program of training and guidance, and furnishes methods and materials to make field personnel more effective and to equip cooperating countries with communications means which will stimulate self-help efforts. In this way provision is made for the local evaluation, acquisition and/or production, and dissemination of media for use by participants, technicians, and the foreign counterparts of U.S. technicians in all types of AID programs. Materials and techniques for training in education at all levels are developed and tested, technical film strips provided on a loan basis, a technical inquiry service conducted, and technical materials and advice furnished on a wide variety of problems in the area of communications.

PROGRAM SUPPORT BY DEPARTMENT OF STATE, $7,540,000

Certain services provided by the Department of State in Washington and overseas to meet communications, health, fiscal, transportation, and custodial requirements are charged to user-agencies on a pro rata basis. The portion of these costs attributable to AID program personnel and operations is charged to interregional programs. AID expects to use such services to approximately the same extent as in fiscal year 1963. The increase of $90,000 in estimated costs is due to pay increases authorized by the Postal Services and Salary Act of 1962.

INTERNATIONAL AID COORDINATION, $390,000

AID maintains a small staff as part of the U.S. mission to the OECD. It performs the function of supporting the ministerial level representation to the development assistance committee (DAC). The increase of $21,000 over the fiscal year 1963 level consists largely of incremental pay costs.

BOOK GAP, $1,100,000

Books are a major requirement in building human resources. An extreme shortage of books in all fields of knowledge exists in nearly all aid-recipient countries. AID's long-range objective in the book field is to assist in developing writing, publishing, and distributing capabilities, while our immediate objective is to make available books required in carrying out current programs. The increase in funds projected for fiscal year 1964 (approximately $550,000) is to be used to implement and expand activities initiated toward the end of the last fiscal year, and to conduct studies of measures needed to augment publishing capacity.

NUTRITION SURVEYS, $200,000

These surveys were launched during the Korean hostilities to combat malnutrition, which had been found a major handicap to military efforts. In the last few years the emphasis of such surveys has shifted from military to civilian populations of developing countries. There has been a corresponding shift in responsibility for the survey program

from the Department of Defense to AID. Beginning in fiscal year 1964, surveys will be financed from country or regional program funds. The $200,000 requested here is for expenses of the secretariat and for somewhat less than $25,000 of followup costs of surveys already carried out.

TRAINING IN COOPERATIVES, $500,000

AID contracts with U.S. private rural electric cooperatives, credit unions, and related organizations for consultative technical services to AID/W and to field missions. These services are financed from interregional program funds, while actions resulting from consultants' recommendations are ordinarily financed from regional funds.

EXCESS PROPERTY OFFICES, $445,000

AID is authorized by section 608 of Public Law 87–195 to acquire domestic or foreign excess property in advance of a known need, and to repair, maintain, and transport such property as necessary in connection with AID programs. AID excess property branch offices which have been established in Frankfurt and Tokyo will acquire an estimated $38 million and dispose of an estimated $28 million in excess property during fiscal year 1964. The increase of $137,000 in operating costs for the current year over the last fiscal year consists of $122,100 for additional staff required to carry out the program and $15,000 for increased pay costs.

GENERAL TECHNICAL SERVICES, $950,000

Technical services in support of country activities are provided on a centralized basis under this program, which funds a series of agricultural, health, educational, labor, and other activities which it would be impracticable to fund on an individual country basis. These services include advice and consultation from private institutions and Government agencies on a wide range of program problems, covering such specialized subjects as seed production and protection, community water supply design, medical education, and numerous others. The increase of $186,000 requested for fiscal year 1964 is for stepped-up training in community water supply development, for pilot projects in English language teacher training and adult education, to finance short-term consultants on municipal services, and for a number of related purposes.

These are the broad outlines of activities which AID wishes to fund under interregional programs. I shall be happy to provide additional details to the subcommittee in response to members' specific questions.

Mr. PASSMAN. Thank you, Mr. Director.

COMPARISON OF FISCAL YEAR 1963 AND FISCAL YEAR 1964 REQUESTS

In 1963, I believe you had interregional programs of $34,274,000; is that correct?

Mr. COFFIN. Yes.

Mr. PASSMAN. How much have you reduced your request for fiscal 1964?

Mr. COFFIN. The 1964 request is for $37,242,000, or $3 million above the estimate for fiscal 1963.

Mr. PASSMAN. Let us have another try at this subtraction. I believe it is $2,968,000, is it not?

How much money did you justify for interregional programs last year?

Mr. MADDEN. $31,300,000.

Mr. PASSMAN. Would you have another look at your figures?

Mr. MADDEN. Let me make a little modification. The amount was $30 million, even. This year we have in here a couple of programs that were not classified as interregional in 1963. To make things comparable with our request for this year, it would be $31,300,000.

Mr. PASSMAN. To what other programs do you refer?

Mr. MADDEN. General technical services was one of them, engineering services is another, and training cooperatives is a third. If that does not make the difference, the $35,000 for book gap will.

Mr. PASSMAN. If that does not make the difference, what would the difference be?

Mr. MADDEN. I am sure I could reconcile the difference, the $1.3 million which was not in the 1963 program.

Mr. PASSMAN. If you will, kindly put that information in the record.

Mr. MADDEN. I would be glad to.

(The information requested follows:)

INTERREGIONAL PROGRAM EXPENSES

Fiscal year 1963 request to Congress (adjusted for comparability with fiscal year 1964 presentation)

Amount requested under interregional expenses, vol. IV (p. 241), of fiscal year 1963 presentation	$30,000,000
Comparability adjustment:	
Add amounts requested under nonregional activities in vol. IV (pp. 219, 239) general technical services—education and social development:	
General technical services	990,000
Engineering services	275,000
Book gap	35,000
Total	1,300,000
Total	31,300,000

Mr. PASSMAN. In 1961 you had a program of $21,539,000; in fiscal 1962, $23,402,000; and in 1963, you had an estimate of $30 million, but you programed $34,274,000; and your 1964 request is $37,242,000.

FACTORS RELATIVE TO INCREASES IN INTERREGIONAL PROGRAMS

How do you justify an increase of almost 77 percent in this item since fiscal 1961?

Mr. COFFIN. One of the key activities making up a substantial part of this is participant training, with all of its costs, the costs we pay other agences and the costs of our in-house personnel. We are still not the leader of nations in bringing other students for training to this country.

Mr. PASSMAN. You say we are not the leader?

Mr. COFFIN. We are not.

Mr. PASSMAN. In what way do you mean that comment?

Mr. COFFIN. I mean that other countries do more of this than we have done.

Mr. PASSMAN. Do you mean that they bring our students to their countries more than we bring their students to ours?

Mr. COFFIN. Other countries bring more students and trainees from developing countries to their own country, whether it be Britain or France.

Mr. PASSMAN. What is our program, about 10,000 a year?

Mr. COFFIN. Yes, sir.

Mr. PASSMAN. What countries would surpass us in that respect?

Mr. COFFIN. I do not have the figures with me, except in my head. I would say France exceeds us.

Mr. PASSMAN. From their former colonies they bring their subjects to France; is that the way it is?

Mr. COFFIN. Yes; from many of the new African nations.

Mr. PASSMAN. How does that compare with the number we bring from Guam, the Virgin Islands, and so on?

Mr. COFFIN. These are not colonies, but countries which were formerly territories of France. Also, the United Kingdom, I think, has a very high figure. Let me make it clear that under our program we bring nobody from territories of the United States.

Mr. PASSMAN. You can understand why the members of this subcommittee would be disillusioned when you start off with a program of $21 million in 1961, and in a period of 3 or 4 years, including 1964, you go up by 77 percent. However, that is in line with the history of practically every foreign aid program we have ever started, even the Peace Corps. We thought it would start in about 10 nations, but it has already expanded to 51 nations. There seems to be no such thing as starting a program in this worldwide giveaway operation and keeping it small.

Mr. COFFIN. Other factors would be, for example, in the program staff, the Office of Public Safety, which is a new function in its emphasis on training for police actions, riot control.

Mr. PASSMAN. Is this a program you started after you presented your requests for funds last year? You submitted no justifications?

Mr. COFFIN. We have always had public safety, the teaching of police, traffic control, but the functions have expanded in the counterinsurgency field.

Mr. PASSMAN. Let us read some of these fiscal 1963 items into the record so the taxpayers will know what we are talking about: AID Washington staff, which is the biggest one, I believe, $10,200,000. Program Support by other U.S. agencies, $5,460,000. Participant Services, $4,560,000. Communication Resources Services, $900,000. Program Support, Department of State, $5,700,000. AID staff, training, and development, $2,200,000. AID Foreign Service staff and complements, $590,000. AID USRO, $250,000. Training in cooperatives, $140,000.

Would you list the comparable figures for fiscal 1964, and indicate whether or not you have any new programs in 1964 which you did not have in 1963?

Mr. COFFIN. The AID Washington program staff estimate for 1964 is $16,519,000.

Mr. PASSMAN. That is jumping up $6 million, is it not, over the request for fiscal 1963?

Mr. MADDEN. In 1964, the staff training and development and the Foreign Service staffing complements have been merged with AID Washington program staff.

Mr. PASSMAN. Have I made a statement of fact that, looking at your 1963 figures, the only thing we have mentioned when we compared what other nations were doing would be participant services, and that would be the No. 4 item, would it not, with respect to costs?

Mr. MADDEN. That is right.

Mr. COFFIN. That is correct.

NEED FOR INCREASES IN WASHINGTON PROGRAM STAFF

The AID Washington program staff has increased, as I said in my statement, partly because of the centralization of the Office of Public Safety and its increased responsibilities, partly because of the necessity for staff people working on capital development.

Mr. PASSMAN. What do you mean by working on capital development?

Mr. COFFIN. Making development loans; not only making them but following them up.

Mr. PASSMAN. Do you mean finding projects for which development credits could be made?

Mr. COFFIN. The need I am referring to is the need, when the loan is made, to see that it is carried out well, that the right documents are obtained, that progress reports are not only received but followed up on and, if there are difficulties, to get people to resolve them.

Mr. PASSMAN. How did you handle this matter prior to the establishment of this new agency? Prior to 1961, what office handled it?

Mr. COFFIN. You remember the Development Loan Fund was not established until 1958.

Mr. PASSMAN. This phase of AID started in 1961, did it not?

Mr. COFFIN. Yes, but you say how did we handle it before AID?

Mr. PASSMAN. What part of the AID operation handled this particular item, capital projects, prior to the time you established this agency?

Mr. COFFIN. That is what I am trying to say. In the making of loans in the early years of the Development Loan Fund and even in the first year of AID, the principal activity was in planning, preparing, and executing loan agreements. The money is drawn down slowly as the concrete is poured, as plants are ready for erection. It is at the point of execution, carrying out the work in the field, that we need people to see to it that it is going according to schedule, that any problems which arise in getting materials or varying from the specifications are resolved fairly and quickly. This is what we mean by capital development implementation personnel. It is a need we shall increasingly meet. We did not need it in the first year or so of development lending because the activities in the field had not moved along to that point.

Mr. PASSMAN. We have increased our giveaway program now to the point that dollarwise it is higher; is that it?

Mr. COFFIN. The progress of this development lending has come to the point that, if we are to get our money's worth, we must have

people to see to it that projects move as they should. You cannot do it all by——

Mr. PASSMAN. Your average annual disbursements in this part of our worldwide giveaway program have hit an average of about $3,200 million, I believe. It was much higher in the earlier years.

Mr. COFFIN. This figure includes military as well as economic.

Mr. PASSMAN. I put it all together because we have to consider the entire program.

BOOK GAP PROJECT

The first project is a book gap project, for which you are requesting $1,100,000, an increase of 100 percent over the obligations for fiscal year 1963.

Mr. COFFIN. Yes, sir.

Mr. PASSMAN. Why is it necessary to increase this project to such an extent?

Mr. COFFIN. Mr. Chairman, I think it is the judgment that books are important, both in the shortrun effect of getting key books in areas where they can and will be used, and also to the longer run object of getting publishing and distributing facilities in the countries. I think last year was the first year that we started this, and we felt this was enough worthwhile to put at least $1,100,000 into it. Many people say we should do far more. Admittedly, this is just a small kind of seed money for books.

Mr. PASSMAN. We have started so many projects and programs that, in the aggregate, the costs are staggering.

You start a new item, and in the following year it is double the original amount.

Mr. COFFIN. This is the only part in our program where we draw upon the immense variety of resources of our society through books to distribute them abroad, not as USIA does for a broad understanding of the culture of the United States, but, rather, to help these countries in technical fields where they need such help. Actually, it is a cheap way of giving it, Mr. Chairman.

Mr. GARY. How do you distribute these books?

Mr. COFFIN. Mr. Gary, we have asked a number of the missions in the field what they think would be most useful in that country with ministries and libraries in the host countries. They have given us a list which we have gone over, and we have sent, not to every country, but to a number of countries, a collection of books for development purposes.

Mr. GARY. They are placed in libraries in those countries?

Mr. COFFIN. Yes. They are made available to governmental people, but they are placed in libraries in those countries.

Mr. PASSMAN. I thought the USIA was the book distributor for our Government.

Mr. COFFIN. I alluded to that, Mr. Chairman. Their purpose is different.

Mr. PASSMAN. The USIA books go into libraries, do they not?

Mr. COFFIN. Yes. For example, they would be distributing the "Life of Jefferson," we will say, because this gives a basic insight into the values and objectives of our country. From our point of view, we do not do it for general information or for cultural exchange, but

to assist people in understanding the development problems, what they must do to plan, what they must do in education, a good way of starting an agricultural co-op, and that kind of thing.

Mr. PASSMAN. Last year, on page 706, you people said you would need $35,000 for this book gap program for fiscal year 1963, but according to page 820 of the justifications this year, you obligated $550,000. So, it has gone from $35,000 as a request, to a $550,000 reality.

Then you doubled it again for fiscal year 1964, and you are asking for $1,100,000. Am I using the figures correctly?

Mr. COFFIN. Yes.

Mr. PASSMAN. You justified $35,000, but you obligated $550,000, and you have jumped it now to $1,100,000 for fiscal year 1964.

Mr. COFFIN. I would put it this way, Mr. Chairman: This is a program that we think got going very well.

Mr. PASSMAN. Financially it is a big success.

Mr. COFFIN. Our usual criticism is that we are not doing nearly enough in this field.

Mr. PASSMAN. Financially?

Mr. COFFIN. No; the number and quality of books.

Mr. PASSMAN. I, for one, have never criticized you for not doing enough in the field of spending money.

Mr. COFFIN. I want to assure you, Mr. Chairman, that I did not have you in mind.

Mr. PASSMAN. You do not know at this time how much, if any, will be obligated out of this inflated amount for fiscal 1963, do you?

Mr. MADDEN. $33,049,000.

Mr. PASSMAN. How much did you say?

Mr. MADDEN. We obligated in 1963 for the interregional programs——

Mr. PASSMAN. We are in the book gap category now.

VOLUNTARY AGENCIES TECHNICAL ASSISTANCE INFORMATION CLEARINGHOUSE

On page 823, I observe that you appear to be increasing the cost of the Voluntary Agencies Technical Assistance Information Clearinghouse by over 300 percent in fiscal 1964.

Mr. COFFIN. That is correct.

Mr. PASSMAN. What is the reason for this increase?

Mr. COFFIN. The reason here is that this is the only source of information for the voluntary agencies as to what Government organizations and private organizations are doing in technical assistance, and an invaluable source of information not only for us but for the voluntary agencies, church agencies, CARE, and other groups that have their own programs.

Mr. PASSMAN. I think we have established that the capital projects in the aid program number 2,296, and sometimes under a capital project you may have as many as 100 subprojects. So, if you took the entire 50 members of the Committee on Appropriations and divided them into 10 subcommittees and asked them to do the same type of examination on this budget request that is done on all the other bills, it would take them at least 6 months to complete the task. We are getting more projects than we can possibly ask questions on.

TECHNICAL INQUIRY AND REPORT SERVICE

Page 825 indicates that you propose to expand the Technical Inquiry and Report Service project by approximately 25 percent. Is that correct?

Mr. COFFIN. That is correct.

Mr. PASSMAN. I do not know how you think up all these different projects.

Mr. COFFIN. One good answer, Mr. Chairman——

Mr. PASSMAN. I would appreciate it if you would give us a good answer.

Mr. COFFIN. This is not capital assistance. This is information. It is helpful information. If it is well used in the field, it is worth a lot more than we put into it.

Mr. PASSMAN. It looks as if there is a duplication at just about every level. USIA——

Mr. COFFIN. They would not be in this field, Mr. Chairman.

Mr. PASSMAN. Just what do you do here in this Technical Inquiry and Report Service?

Mr. COFFIN. This would be a mission director in the field working with a minister from another country. There is a problem, perhaps, in agricultural extension work, and they need information, not just for the minister but perhaps for the personnel of these countries. They would send back an inquiry to Washington, and we would go through our files, using our people here, and provide a brochure or pamphlet on that subject.

It is somewhat as the Department of Agriculture does with its many publications.

Mr. PASSMAN. Is this done by contract service?

Mr. COFFIN. No. This is done within our Communications Resources Services.

Mr. PASSMAN. The justifications indicate that these are contract services.

Mr. COFFIN. We might call upon the Department of Agriculture to provide a pamphlet, or the Department of Commerce, or the Federal Aviation Agency if it had something to do with the management of an airport.

NUMBER OF TECHNICIANS OVERSEAS

Mr. PASSMAN. What was the number of U.S. technicians overseas at the end of fiscal year 1961, 1962, and 1963? Will you provide that information for the record.

(The information requested follows:)

Number of direct-hire U.S. employees overseas, end of fiscal years 1961–63

	Administrative employees	Program technicians	Total
Fiscal year 1961	931	3,606	4,537
Fiscal year 1962	1,039	3,519	4,558
Fiscal year 1963	982	3,669	4,651

DIGEST OF CURRENT TECHNICAL INFORMATION PROJECT

Mr. PASSMAN. How much are you increasing the cost of the Digest of Current Technical Information project, on page 826? That seems to be up by about 66 percent.

Mr. COFFIN. I do not have that at the moment.

Mr. PASSMAN. Do you scatter this in about 20 different items so they will not look so large, or do they render 20 different services? As we go through, we find technical information on this, technical inquiry on another, and a digest on something else.

Mr. COFFIN. The difference between the digest and what we were just talking about——

Mr. PASSMAN. How about those in between we talked about?

Mr. COFFIN. We were talking about inquiries and reports as distinct from digests. Digests refer to publications on specific technical subject matters which are of general interest. For example, if we need something in irrigation, there would be a document put out several months or a year later, but it would still be on irrigation as a part of the series.

Mr. PASSMAN. You have the book gap, Voluntary Agency Technical Assistance, Technical Inquiry and Report Services, then the Digest of Current Technical Information project. Why could not all of this be consolidated into just one item, if they are rendering the same service out of the same office and you are still dealing with technical information?

Mr. COFFIN. It depends upon the end use. The end use in some cases is one pamphlet. The end use in another case is a series of extracts from our own work in a specific field on a continuing basis. I am speaking about the production of materials on a single technical subject.

Mr. PASSMAN. I am speaking about if you have a girl mailing, why do you have to have this under so many different headings? Why could you not have it in one office?

Mr. COFFIN. It is in one office, the Division of Communications Resources.

Mr. PASSMAN. But you are asking for your funds broken down in several different items.

Mr. COFFIN. We are trying to be responsive to you, Mr. Chairman, in showing the precise end products.

CONTRACT SERVICES

Mr. PASSMAN. Is it all done by contract service?

Mr. COFFIN. No; it is not all done that way.

Mr. PASSMAN. According to the justification, it appears to be contract services.

Mr. COFFIN. Some of it is done by our own staff in Washington. Some is done by contracts with other agencies.

Mr. PASSMAN. I am only going by what your book says. On page 826, "Contract services." On page 825, "Contract service." On page 823, "Contract service." On page 820, "Contract service."

Mr. COFFIN. I am not following you, Mr. Chairman.

Mr. PASSMAN. If you look at the bottom of the page——

Mr. COFFIN. What page?

Mr. PASSMAN. I listed all the pages. Instead of U.S. technicians, it says: "Contract services."

Mr. COFFIN. Let us take 820.

Mr. PASSMAN. That is "Contract service." 821 is "Contract service." 822 is "Contract service." 823 is "Contract service."

Mr. COFFIN. I see what you mean.

Mr. PASSMAN. Anyway, put something in the record, in explanation, will you?

(The information requested follows:)

JUSTIFICATION OF BREAKDOWN OF INTERREGIONAL EXPENSES INTO NUMEROUS PROJECTS

The projects listed as Communications Resources Services from page 821 through 826 are the operations of a single Division and together total $800,000. This is the same amount programed for these activities in fiscal year 1963. They are presented under six project headings to more fully inform Congress and to reconcile them with the presentation pattern used for country programs.

The costs presented on these pages refer to the nonsalary portion of the activity. Personnel costs are included as a part of the AID with program staff. Of the $800,000 in the six communications resources projects $227,000 are for commodities and $573,000 are for services obtained through contracts with Government and private agencies.

AID staff members plan and monitor the services performed by the contractors, determine the technical information materials to be purchased as commodities, arrange for the writing and printing of special material produced by AID technical personnel, and identify and procure considerable quantities of technical information carried in publications that are obtained free from Government and other sources.

Contractors are used to develop, write, or adapt technical information for specific needs, prepare answers to technical inquiries sent in by the field missions, obtain and circulate technical and operational information from voluntary agencies, and review and digest current technical and professional literature for use by U.S. oversea technicians and their host country colleagues.

(Discussion off the record.)

Mr. COFFIN. I want to say this means that we have contracts with other agencies.

Mr. PASSMAN. You contract either with other agencies or some outside contractor. It could be either.

Mr. COFFIN. Yes.

This is done to avoid an expanded in-house service.

Mr. PASSMAN. I am not recommending that you expand. I want to indicate you are not doing this work, as we would find on the pages here, with regular U.S. technicians. You are contracting.

Mr. COFFIN. We think that is the sound way to do it.

Mr. PASSMAN. You have program support by other U.S. Government agencies of $5,398,000. We have been discussing in the top category of projects, on page 819.

INTERNATIONAL COOPERATIVE TRAINING CENTER PROJECT

On June 30, 1962, you had $45,000 unliquidated under the "International Cooperative Training Center Project," found on page 827. You obligated $205,000 in fiscal year 1963, and you will have the total of these two sums, $250,000, unliquidated on June 30, 1963. You did not spend a dime of your 1962 and 1963 money. You finished both years with the money intact.

Despite that fact, you are requesting now $75,000 more for fiscal 1964.

Could you give us a little information as to why, with the 2 full years' sum on hand, you are asking for $75,000 to be added to that amount?

Mr. FORD. On what page is that?

Mr. PASSMAN. 827.

This is not the exception, Mr. Coffin. We find this is following pretty close to the rule as we go through the justification pages. Would you have a look at this item and insert something in the record?

Mr. COFFIN. I shall be glad to.

(The information requested follows:)

EXPLANATION OF UNLIQUIDATED BALANCES—INTERNATIONAL COOPERATIVE TRAINING CENTER

The unliquidated balance of $250,000 as of June 30, 1963, will cover the cost of operating the Center during the period June 1, 1963, to May 31, 1964. As of that date it is proposed to add $75,000 to the contract to cover instructional and overhead costs of the Center ($62,500) and services of the Board of International Cooperative Training, Inc. ($12,500) for the period June 1, 1964, through December 31, 1964. After that time it is anticipated that AID support for the Center will be limited to fees payable for participants sent to the Center for training.

AID POLICY ON PAYMENT OF INDIRECT COSTS

Mr. FORD. Mr. Coffin, do I understand in this case the contract is signed with the University of Wisconsin?

Mr. COFFIN. Yes.

Mr. FORD. How do you handle the indirect costs problem with the University of Wisconsin? Are you familiar with the problem of direct and indirect costs?

Mr. COFFIN. Generally.

Mr. FORD. What is the policy of the Agency? Do you give Wisconsin and other universities and colleges their full indirect costs, or do you permit a percentage of the indirect costs?

Mr. COFFIN. I think we follow generally the policies that other governmental agencies use in dealing with them. Each contract has to be negotiated to see what is fair, what percentage of cost shall be allowed. This is one subject where we are doing as we are in our review of contracting procedures generally.

Mr. FORD. This is a contract, and contracts are somewhat different than grants.

Mr. COFFIN. Yes.

Mr. FORD. There is a general policy established in the appropriation bill in the area of grants to colleges and universities, where they only allow 15 or 20 or 25 percent for indirect costs in relationship to the direct costs.

Mr. COFFIN. Mr. Tennant informs me that our policy is to allow the actual overhead or the actual costs on an audited basis. This involves a lot of investigation and negotiations.

Mr. FORD. This means, then, if in "A" university the indirect or overhead costs are 72 percent, and in "B" university the overhead or indirect costs are 25 percent, you allow them in both cases?

Mr. COFFIN. Whatever their actual costs are.

Mr. FORD. You make no investigation of the validity of the overhead or indirect costs?

Mr. COFFIN. They are audited. It is subject to audit as to what their actual overhead is.

Mr. FORD. You have no flat percentage figure that you will allow?

Mr. COFFIN. No. Mr. Tennant may correct me if I am wrong. We have been criticized a great deal because a university entering into an association with us would not know ahead of time what its basic arrangement would be because it would be subject to audit. They would prefer a system under which we would have general ground rules that they could count on as to how much would be allowed for indirect costs.

Mr. MILLER. Perhaps I could cast a little light on that. Public Law 87-638, which was approved by the Congress a year ago, last September, authorized the use of a 6-percent formula in computing indirect costs under Government research and development contracts with universities and other educational institutions. This applies to research and development contracts only.

The AID policy with respect to overhead expenses for operating type contracts has been that they would be on an examination of the actual overhead on an audited basis.

I might say also we have——

Mr. FORD. I am not sure that is the right policy, but that is what it is.

RURAL ELECTRIC COOPERATIVES PROJECT

Mr. PASSMAN. I note that the $75,000 you are requesting for the rural electric cooperatives, on page 828, finances the cost of a consultant, a secretary, interregional travel, and oversea cost. Is that the expense for one consultant?

Mr. COFFIN. This would be consultant, expenses, his secretary——

Mr. PASSMAN. For one individual?

Mr. COFFIN. Yes, sir.

Mr. PASSMAN. Would it cost less to hire a full-time U.S. Government employee for this project? You have some real experts in Washington on this electric cooperative matter.

Mr. COFFIN. I don't believe so, Mr. Chairman.

Mr. PASSMAN. Do you mean that we do not have experts in Washington on electric cooperatives?

Mr. COFFIN. I don't believe we can match the expertise which exists in the cooperatives in the United States. A foundation figures it costs $35,000 for just one man overseas for a year.

This is a consultant who would be working on projects in a number of——

Mr. PASSMAN. What will this consultant do, Mr. Coffin?

Mr. COFFIN. He will help the field missions when it appears that it makes sense in a given country to establish a rural electric cooperative. He will help them in their organization and training of people, their negotiations with the host country, any laws that need to be passed, anything that needs to be done to set up that kind of institution.

Mr. NATCHER. Mr. Coffin, I believe last fall you sent certain representatives to Ecuador. Do you know about this?

Mr. COFFIN. Not personally, Mr. Natcher. Is this on co-ops?

Mr. NATCHER. Yes.

Mr. COFFIN. I wouldn't be surprised.

Mr. NATCHER. I was wondering whether or not any final report had been made as to the feasibility of locating co-ops in Ecuador. I wonder if you could find out and let me know.

Mr. COFFIN. I would be glad to, Mr. Natcher.

Mr. PASSMAN. You are dealing with one cooperative consultant, worldwide? Do you have any other technicians under any other phase of the Agency operating in the same field?

Mr. COFFIN. On rural electric co-ops?

Mr. PASSMAN. Yes.

Mr. COFFIN. We have other contracts with other cooperatives. I think this is the only source with outside expert knowledge on rural electric cooperatives. We are dealing with one man, but he has the resources of his national association to draw from.

Mr. PASSMAN. I yield to the gentleman from Arizona.

Mr. RHODES. Which of these countries receiving aid are in any position to establish rural electric cooperatives? Do you know what country this could be accomplished in?

Mr. COFFIN. Yes. I would think a number of Latin American countries, Turkey would be a country where the electric system is such that this makes sense, and even parts of India. Taiwan certainly is another. Admittedly, in a small African country, where power is not available, you wouldn't have it. But in countries where we would have built power dams, for instance, then it would make sense to see that the ruaral countryside is activated through that dam.

Mr. RHODES. Do you know whether we are furnishing any money to establish rural electric cooperatives anywhere in the AID program?

Mr. COFFIN. I could find out.

Mr. RHODES. If you would, please.

(The information requested follows:)

AID SUPPORT TO ESTABLISH RURAL ELECTRIC COOPERATIVES

AID has not financed any rural electric cooperatives, but studies have been completed and are being prepared from which financing of pilot projects may be made.

Mr. ANDREWS. If you decided to build one of these electric co-ops in any of these countries you are now surveying, do we plan to finance the co-op?

Mr. COFFIN. We wouldn't finance it in the sense of paying for its operating expenses, its secretary and space. We would help them get organized, show them how to keep their books, and the kinds of laws they need. The idea would be that they would have to operate this themselves.

Mr. ANDREWS. How could these countries finance an REA project? They are quite expensive.

Mr. COFFIN. I think you will find there are a number of credit institutions in those countries which would make loans to co-ops and we would make loans to some institutions which in turn would make subloans to various kinds of cooperatives.

Mr. ANDREWS. That would be helping them financially.

Mr. COFFIN. In that sense we would give some assistance.

Mr. RHODES. Of course, the gentleman from Alabama knows, as I do, that the genius behind electric cooperatives is cheap money. If you can get 2-percent money in the United States it doesn't take an expert to tell you how to start a cooperative.

Mr. ANDREWS. If they get money under this loan they get it under 2 percent.

Mr. RHODES. That is my point.

Mr. COFFIN. I want to say something about cooperatives. A great deal of criticism about this program is that all we do is to deal with big infrastructures and not with the people. Credit unions have small programs and get to people in the countrysides.

Mr. RHODES. I was questioning the type of cooperative with which you deal here. I didn't mean consumer cooperatives and marketing cooperatives because I know nothing about them, but I know a little about rural electric cooperatives.

I have great doubts as to whether there are very many places in the world where this type of endeavor should be undertaken.

Would you please furnish for the record a list of the countries which the gentleman who is the incumbent of this position visited in this past year?

Mr. COFFIN. Yes, sir.

(The information requested follows:)

COUNTRIES VISITED IN FISCAL YEAR 1963 BY CONSULTANT, RURAL ELECTRIC COOPERATIVES PROJECT

The project director of the contract with the National Rural Electric Cooperative Association, Inc., James Ross, last year visited Brazil, Uruguay, Argentina, Chile, Peru, Bolivia, Colombia, Panama, Costa Rica and Nicaragua to discuss possibilities for development of rural electric cooperatives.

Mr. FORD. Can we put in his name, his salary under this program, and what his salary was before he was assigned to this program?

Mr. COFFIN. Yes, sir.

(The information requested may be found on p. 1722.)

Mr. FORD. As I understand it, what you have done is to sign a contract with the National Rural Electric Cooperative Association. They have supplied the man and they are providing the overhead on a reimbursable basis. Is that correct?

Mr. COFFIN. Yes.

CREDIT UNION DEVELOPMENT PROGRAM

Mr. PASSMAN. Immediately following that information—why would a full-time U.S. employee not be cheaper for the "Credit union development program" project, on page 829, as I notice this project costs us approximately $43,000 a year?

Mr. COFFIN. The answer is that the AID program is well advised not to try to duplicate all skills in its own complement. If we can find skilled people who work in the United States who can bring with them access not only to their National Credit Union but the experience of thousands of credit unions in the United States, this is the way of getting the richness of our society into the AID program in a very sensible way.

Mr. PASSMAN. I am sure Mr. Ford's question would be broad enough to cover these items, but if not, we would like to know how much is the consultant paid per day. Give us all the incidental expenses involved. Tell us how long he will be employed, whether he is being paid on a per diem basis, a monthly salary, and so forth.

Mr. COFFIN. It states "Salary," Mr. Chairman.

Mr. PASSMAN. If it is that way, we wish you would verify it.

WORLD COOPERATIVE LAND BANK PROJECT

Page 832 has an estimate of $75,000 for a new project entitled "World Cooperative Land Bank."

This estimate is to provide funds of methods to establish such a bank. Is that correct?

Mr. COFFIN. That is correct.

Mr. PASSMAN. When we create all of these different types of banks, and so on, and we finally familiarize all these people with the advantages, and if we do not have money to capitalize them, where are they going to get the money?

Mr. COFFIN. That is the reason for a study. We don't want any such institution to get started unless there is a reasonable prospect that it can be started.

Mr. PASSMAN. I read in the paper that 250 Peace Corps men are down in one Latin American country training those people how to set up cooperative banks. I thought that was a good number in just one country assigned to this one project, to teach them how to form cooperative banks.

COSTS OF COOPERATIVE PROJECTS

Mr. FORD. May I ask that the question I raised about the Rural Electric Cooperative Association be expanded? In looking through the justifications I note that similar contracts have been arranged with the Credit Union National Association, the National Farmers Union, FCH Co., Inc., a subsidiary of the Foundation for Cooperative Housing, and perhaps one or two others.

I think we should have the same kind of information we asked on the one expanded to include all of these. The name of the individual, salary before, salary now, and any other pertinent information in connection with it.

Mr. COFFIN. I would like to see it in a comprehensive submission, also. There is a section of the law which states we shall give emphasis to working with cooperatives. It makes sense to pull these several contracts together.

Mr. FORD. Whatever the facts are.

(The information requested follows:)

DETAILS ON COOPERATIVE PROJECTS

There are six contracts with national organizations in the United States to assist in the development of cooperatives, credit unions, and savings and loan associations as defined in the Humphrey amendment to the Foreign Assistance Act of 1961. The organizations are the Foundation for Cooperative Housing, National Rural Electric Cooperative Association, Credit Union National Association, National Farmers Union, National League of Insured Savings Associations, and the Cooperative League of the U.S.A. A project director has not been hired for the contract with the Foundation for Cooperative Housing. A project director is being hired for the contract with the Cooperative League of the U.S.A. Detailed information on the other contracts is shown on the following pages.

These are funded under contract services in order to marshal the resources of cooperatives, credit unions, and savings and loan associations behind the development programs and to be able to hire the type of specialists with the broad experience in organization, management, and administration that are needed in the most economical manner and for the best end results.

FCH Co., Inc.

Maximum estimated costs

	Limitations
Salaries:	
Office of project director:	
Project director	$15,000
Secretary-translator	6,000
Total	21,000
Fringe benefits (11 percent)	2,310
Total	23,310
Consultants	4,260
Travel and per diem:	
Project director	3,000
Consultants	600
Materials supplies	1,000
Miscellaneous expenses	500
Indirect costs, Washington office	7,350
Total estimated amount	[1] 40,000

[1] Funds obligated for 1 year.

NOTE.—Contract is for 1 year.

National Rural Electric Cooperative Association

Project director: James E. Ross.
Rates of pay: $10,767.
Former position: Staff economist.
Former salary: $9,964.

Maximum estimated costs

	Limitations
Salaries:	
Coordinator	$10,767
Secretary-translator	5,207
Overtime	400
Social security and payments for contractor's established retirement plan	1,488
Travel (outside of Washington area) and allowances	1,000
Miscellaneous expenses	2,100
Indirect costs at maximum rate of 85 percent of base salaries	13,578
Total estimated costs	[1] 34,540

[1] Funds obligated for 1 year.

NOTE.—Contract is subject to renewal after annual review.

Credit Union National Association

Project director: Olaf Spetland.
Rate of pay: $13,000.
Former position: Director, World Extension Division, CUNA.
Former salary: $13,000.

Maximum estimated costs

	Limitations
Salaries:	
Project director	$13,000
Secretary-translator	6,000
Social security and payments for contractor's established retirement plan and group health and life	2,175
Travel (domestic and foreign) and allowances	14,000
Miscellaneous expenses	3,000
Indirect costs at maximum rate of 25 percent of base salaries	4,750
Total estimated costs	42,925

NOTE.—Contract is for 1 year.

THE NATIONAL FARMERS UNION

Project director: Dr. John Eklund.
Present salary: $15,000 per year.
Portion from AID: 60 percent.
Former position: Director of education, NFU.
Former salary, $15,000 per year.
Administrative assistant: Marie N. Borgneis.
Present salary: $7,000 per year.
Portion from AID: 80 percent.
Former position: Secretary to secretary-treasurer, NFU.
Former salary: $7,000 per year.

Maximum estimated costs

	1st 12 months	2d 9 months
Salaries:		
Project director (60 percent of $15,000)	$9,000	$6,750
Administrative assistant (80 percent of $7,000)	5,670	4,410
Clerical (33 percent of $5,400)	1,804	1,403
Clerical (100 percent of $7,858)	7,956	6,188
Denver, 1 accountant, 43 percent time basis ($7,560)	3,291	2,560
Total	27,721	21,311
Fringe benefits, 11 percent	3,077	2,344
Total	30,798	23,655
Travel and per diem:		
Project director	7,800	5,850
Advisory committee	2,250	3,000
Insurance: Compensation, defense base act	400	300
Materials and supplies: Washington office	1,200	900
Miscellaneous expenses	1,500	1,125
Indirect costs, Washington office	2,184	1,608
Total	[1] 46,132	36,438

[1] Funds obligated for 1 year.

NOTE.—Contract is for 21 months.

NATIONAL LEAGUE OF INSURED SAVINGS ASSOCIATIONS

Project Director: Thomas Bradley.
Rates of pay: $11,750 per annum.
Former position: Consultant to Worcester Savings & Loan Association and National League of Insured Savings Association.
Former salary: $11,000.

Estimated budget

	First 12 months	Second 12 months
1. Salaries:		
Project Director	$11,750	$12,300
Secretary-Translator	6,000	6,300
1(a). Fringe benefits:		
Social security	300	300
Retirement	800	1,200
Workmen's compensation	20	22
2. Travel and per diem: Project Director	10,363	5,348
3. Materials and supplies	1,000	800
4. Miscellaneous expenses	2,000	1,200
5. Indirect costs	5,467	5,530
Total	[1] 37,700	33,000

[1] Funds obligated for 1 year.

NOTE.—Contract is for 2 years.

COOPERATIVE LEAGUE OF THE U.S.A.

Maximum estimated costs

	1st 12 months	2d 12 months
Salaries:		
Project Director (applicant under consideration)	$15,000	$15,000
Rate of pay (being negotiated) secretary-translator	5,200	5,200

Miscellaneous expenses	2,200	2,200
Indirect costs	7,793	7,893
Total	[1] 38,965	39,465

[1] Funds obligated for 1 year.

NOTE.—Contract is for 2 years.

INTERNATIONAL BANK FOR COOPERATIVES STUDY

Mr. PASSMAN. There is another new project entitled International Bank for Cooperatives, for which you are also requesting $75,000. This is a study of methods for setting up such a bank. Is that correct?

Mr. COFFIN. Yes.

Mr. PASSMAN. We go right out of cooperatives into the study groups which are setting up banks. There is a program for setting up an International Bank for Cooperatives?

Mr. COFFIN. This leads to ways and means by which private resources can be used for co-ops overseas.

Mr. PASSMAN. $29,000 was unliquidated on June 30, shown on page 834. Has that money lapsed?

Mr. COFFIN. They are all obligated; $35,000 is obligated.

Mr. PASSMAN. I believe the contract became effective in April of 1963. Is that working a little fast?

Mr. COFFIN. Is what working fast, Mr. Chairman?

Mr. PASSMAN. The contract became effective in April of 1963?

Mr. COFFIN. Yes.

Mr. PASSMAN. It was signed for a year. If it is a 1-year contract, one shot, and you have the money, why would you need $35,000 again for fiscal 1964?

Mr. COFFIN. I understand that it took some time to get the project——

Mr. PASSMAN. It is a one-shot project. You funded it. Why would you want to repeat for fiscal 1964?

Mr. COFFIN. We want to extend this contract. We want to continue the work which was set up and which is going on.

Mr. PASSMAN. You want 1 year's funds, then. You did not get around to obligating the money until April of 1963. Now you want an additional $35,000 for fiscal 1964?

Mr. COFFIN. For fiscal 1964.

Mr. PASSMAN. You have not been able to spend the 1963 money because you did not obligate the funds in time to disburse them.

Would you check that matter and put something in the record on it?

Mr. COFFIN. What I would like to do on this one, Mr. Chairman, is to give you the story from the inception of the contract, what has been done, and what is intended to be done.

Mr. PASSMAN. Tell us first how you liquidated the entire year's funds in 90 days.

Mr. COFFIN. I would be glad to.

We didn't. We obligated $35,000; $29,000 is unliquidated but obligated.

Mr. PASSMAN. You wanted $35,000 for fiscal 1963. You obligated $35,000.

You signed a contract in April of 1963. You disbursed only $6,000, leaving on hand to be disbursed in subsequent periods $29,000.

Mr. COFFIN. It has been pointed out to me that April is the date of the contract order. The contract was executed prior to April. We are talking about a task order.

Mr. PASSMAN. It says to take effect April 1.

Mr. COFFIN. That is the task order. There were a lot of details——

Mr. PASSMAN. Is that not when they started working?

Mr. COFFIN. I am not sure whether that is the date of starting work. Perhaps there was a lot of work which had been done in preparation.

Mr. PASSMAN. You spent only $6,000 in fiscal 1963, leaving the $29,000.

Please put something in the record about the mechanics of this matter.

Mr. COFFIN. I understand your question and I think it is a very legitimate one.

(The information requested follows:)

COOPERATIVE LEAGUE TECHNICAL SERVICES PROJECT

Contract negotiations to obtain the resources of the Cooperative League of the United States of America to help in one AID program began several months prior to a meeting of the Cooperative Advisory Committee to the Administrator on December 14, 1962. It was anticipated that this contract would be signed by April 1, 1962. The signing of the contract was delayed in order to be certain that there was agreement in the method of determining overhead costs and the interpretation of the contract. The contract was made for 2 years and was finally signed on the 28th of June. Money was used from fiscal year 1963 funds in order to insure that work would proceed as quickly as possible. An immediate start is necessary because of the length of time that had elapsed since the inception of negotiations. Funding from fiscal year 1964 is being requested in order to insure the second year's operation. A 2-year contract was necessary to be able to get a qualified person to administer this project. A person is now being processed through security to act as project director.

ASSISTANCE TO COOPERATIVES PROJECT

Mr. PASSMAN. Page 835 contains a project entitled "Assistance to Cooperatives." In fiscal year 1964 the estimate is $82,000. What is the reason for this project and what does it cost to complete?

Mr. COFFIN. This will contain a number of projects which will need funding in fiscal 1964 as savings and loans associations where the preparatory work has been done and we need to have funds ready to obligate in 1964 to take advantage of the work which has been done during the past year.

Mr. PASSMAN. When we finally get these people familiar with the advantages of these things, where are they going to get the money to capitalize the operations?

Mr. COFFIN. All of these projects we have been talking about are projects where we put in the money to help other people get organized in the rural——

Mr. PASSMAN. But when they get organized and do not have the money?

Mr. COFFIN. This is the way they are brought about saving. We have already seen that in the savings and loan——

Mr. PASSMAN. I am not dealing only with one item.

Mr. COFFIN. I understand that.

But these projects are the way we get at the people in the villages and rural areas.

Mr. PASSMAN. If they do not have the money and you set up a building association, where will they get the funds to capitalize this association?

Mr. COFFIN. We have already seen in some of the developing countries, even though their per capita income is very low, that if they have a device and institution they will put in pesos and peseros into the association.

Mr. PASSMAN. Some, but we are supplying a good bit of the capital all over the world; are we not?

Mr. COFFIN. And their government also will put in capital.

Mr. PASSMAN. After we put it into their government.

Mr. COFFIN. We put in some of it, but not all of it by any means.

GENERAL TECHNICAL SERVICES PROJECT

Mr. PASSMAN. Page 837 shows you are increasing from $764,000 in fiscal 1963 to $950,000 in 1964 for the general technical service project. What is that project?

Mr. COFFIN. These are activities where we call upon either other departments or universities or associations to give us specialized services which we have spelled out in our project descriptions, some agricultural services, something in the field of community water supply which is important in many underdeveloped countries, malaria eradication, industrial manpower surveys. Again we don't feel it is wise for us to try to do the whole job with in-house personnel.

Mr. PASSMAN. We are dealing here with a regional matter and not individual countries.

Mr. COFFIN. That is right.

Mr. PASSMAN. This is supplementing the projects for individual countries?

Mr. COFFIN. That is right.

Mr. PASSMAN. That does not make the matter any less complicated, does it?

Mr. COFFIN. Development is not a simple process, Mr. Chairman.

Mr. PASSMAN. I know, but we go over this and you would think it is a reprint of some of the things we went over when dealing with individual countries. If they do not get it in individual countries they get it in the interregional program.

Mr. COFFIN. You have your own library in your office but you also have the Library of Congress to draw upon or the Legislative Reference.

The point is that there is a need for both, tailored service and a general service available to any problem.

RECEPTION SERVICES PROJECT

Mr. PASSMAN. In connection with the reception services project, on page 839, I observe that the 1964 request is $165,000 and the estimate will provide for services for 5,500 arrivals during fiscal 1964. Who will arrive and where will they arrive?

Mr. COFFIN. If a foreign student from the Far East arrives in Seattle or San Francisco, for example, somebody has to be on hand to see that that student is housed, that he is provided with food, that he is given his schedule, where he goes next, and so on.

Mr. PASSMAN. He gets off the plane and a receptionist is there. They usually come in groups. They say, "We shall put you up in barracks 9," and so on.

Mr. COFFIN. Or in a private home.

Mr. PASSMAN. That is arranged for prior to their arrival, is it not?

Mr. COFFIN. Yes.

Mr. PASSMAN. So the receptionist merely takes them to, or instructs them on, how to get there?

Mr. COFFIN. Yes; but there are many times when the planes are delayed, or they come in early. Upon the functioning of these people depends the foreign student's first impression of the United States.

Mr. PASSMAN. Let it be favorable, but if you bring in 100 people would that reception cost be about $3,000?

Mr. COFFIN. You are dividing the arrivals into the total funding?

Mr. PASSMAN. It states "Reception services."

Mr. COFFIN. You must remember that a student may be in a particular town for more than a day. He may be there a week before he goes to his university or his training center.

Usually they have some orientation.

Mr. PASSMAN. Would you agree that this figure sounds excessive?

Mr. COFFIN. No; I would not, Mr. Chairman.

Mr. PASSMAN. You are paying $30 per person to some person on contract to receive these young men and women when they come in and see that they get on the next train that is going out or the next plane, or take them over to some private home.

Mr. COFFIN. There is customs service, passports, and all the rest.

Mr. PASSMAN. Please have a look at this item and let us see, for instance, who you contract with.

Mr. COFFIN. We shall be glad to provide the information.

(The information requested may be found on p. 1728.)

REPORT ON INADEQUACY OF STATE DEPARTMENT HOSPITALITY FUND

Mr. FORD. I just happened to be reading the U.S. Advisory Commission on International Educational and Cultural Affairs report, April of 1963. On page 49 of the report it states as follows:

Another financial problem which has deeply disturbed the Commission is the ridiculous inadequacy of the official hospitality fund allocated for use by

our State Department Educational and Cultural Affairs people either in the United States or in the embassies abroad.

The present allowance, $1,000 for a year's hospitality in the United States for over 5,400 foreign grantees sponsored by the State Department alone, is so low as to be undignified and a constant source of embarrassment.

The major burden of hospitality for foreign visitors is borne, and properly borne, by a vast network of volunteer private individuals and agencies. There are, however, occasions, necessary occasions, when in keeping with the interest and dignity of the United States, foreign visitors, particularly top foreign leaders and specialists, should be treated to a minimum of courtesies and hospitalities at an official level.

This the State Department representatives are not at present able to do. We strongly recommend that the Congress take the necessary steps to correct this indignity.

Is this what we are talking about?

Mr. COFFIN. The references there, Mr. Ford, were wholly to State.

Mr. FORD. What made me feel they were one and the same thing is that it mentioned 5,400 here and in the justification you indicate 5,500.

Mr. COFFIN. Yes, but I don't think that is the same figure.

RECEPTION SERVICE FOR AID PARTICIPANTS

Mr. PASSMAN. This is strictly reception here when they arrive.

Mr. COFFIN. Mr. Ford refers to people being brought in under the cultural exchange law, foreign-leader grants.

We don't do that. We would not bring in the leaders of these countries. Normally, we would bring in people for training required for an approved AID project in agriculture, industry, public administration, labor, or similar field of activity.

Mr. FORD. Can we see whether there are other agencies and whether the State Department has other funds in addition to these for this same purpose?

Mr. COFFIN. Yes.

(The information requested follows:)

AVAILABILITY OF RECEPTION SERVICE FUNDS—U.S. GOVERNMENT AGENCIES

The total amount of funds available to the Department of State annually for hospitality for exchange students is $1,300. Three hundred of this amount is made available by AID to provide hospitality at ports of entry for AID participants.

AID has approximately $2,500 each year for hospitality for 5,500 participants.

Section 636(g) of the Foreign Assistance Act authorizes $300,000 of military assistance funds to be used for extraordinary expenses in connection with the training of foreign nationals under the military assistance program. Approximately 22,500 trainees participated in this program in fiscal year 1963.

Mr. PASSMAN. If this Reception Service is broader than I noted, getting them to their hotels or motels, getting them to their homes, to their airplanes, and so forth, so indicate. We would like to have a breakdown on what is involved.

Mr. COFFIN. What is done and what is the cost?

Mr. PASSMAN. That is right.

(The information requested follows:)

BREAKDOWN OF COSTS AND SERVICES OF RECEPTION SERVICES PROJECT

In addition to making hotel reservations, arranging onward transportation, and getting the participants to their hotels or homes, the reception services assist participants in securing U.S. currency, with customs clearances, medical

attention when necessary, and arrange through volunteer groups for community hospitality if they have free time between planes.

The fiscal year 1963 budget for these activities is given below:

Reception Center services—AID reimbursement— 1963 fiscal year

	Number	Amount
Personal serivces:		
Actual rates for staff	16.0	$108,868
Less lapse rate, .6 man-year	.6	3,920
Subtotal	15.4	104,948
Civil service retirement, 6½ percent		6,675
Foreign Service retirement		402
Health benefits		679
Insurance		347
Overtime and holiday pay		11,500
Cost of living allowance, Honolulu		4,583
Pay increase		4,500
Total personal services		133,634
Program expenses		[1] 11,200
Entertainment		300
Administrative support		[2] 11,366
Total		156,500

[1] Transporting Reception Center staff to and from dock or airport and related costs.
[2] Communications between Reception Centers and Washington, D.C.

Mr. PASSMAN. I note under "Reception service projects," on page 839, that you anticipate 5,500 arrivals during fiscal year 1964 and the "Meridian House Foundation project," on page 849, will provide reception services to 5,200 participants and the orientation and related services program will be conducted for 400 to 700 participants.

Does this mean that all but 300 participants will be received in Washington and all but 800 participants will receive orientation services?

Mr. COFFIN. I think that is true, Mr. Chairman.

Mr. PASSMAN. Why would you be bringing 5,200 participants to Washington?

Mr. COFFIN. For this reason, Mr. Chairman. The Meridian House program is a program which takes about a week for each participant.

During that week they have not only a series of orientation sessions in classes but there are about 700 Washington and Virginia and Maryland families who take these students to their homes on at least one occasion. This is the way they see the United States before they go either to our other agencies in Washington or to the university.

Mr. PASSMAN. I am not referring to what you do after they get here. I am questioning whether or not, out of 5,500 participants, you have to bring 5,200 of them to Washington. Some of them may be going to the University of California. Some may be coming from the Philippines. Would you bring them all the way to Washington to see our beautiful Capital City before you return them to California?

Mr. COFFIN. I am not sure whether we do.

Mr. PASSMAN. If we do, let us stop it or find some good reason why it should not be stopped. If you will supplement what you just said and let us know whether that would be the way it is handled, if you bring them in from Far Eastern countries, whether you bring them all the way to Washington to see our beautiful city at the expense of the taxpayers and then take them back to their place of study which may be a university in California.

Mr. COFFIN. We know this. The Meridian House has about half of the participants. We know these 5,000 they have is about half.

Mr. PASSMAN. This states 5,200.

We want to know whether these participants coming out of the Far East, say the Philippines, perhaps South Vietnam, Korea, would not be sufficiently impressed to go right on to their place of study, whether it is for 6 months or a year, rather than bringing them all the way to Washington to show them the sights.

Mr. COFFIN. We shall be glad to give you that information.

(The information requested follows:)

JUSTIFICATION FOR WASHINGTON RECEPTION AND ORIENTATION PROJECT

Participants from Far East countries entering the United States on the west coast do not come to Washington prior to commencement of their training unless the training facility is located near Washington.

If these participants remain in the United States for more than 6 months, however, an effort is made to bring them through Washington at the time of their departure for a program evaluation interview or the communication seminar.

NONPROJECT ACTIVITY, INTERREGIONAL PROGRAM

AID WASHINGTON PROGRAM STAFF

Mr. PASSMAN. The second portion of this interregional program is for nonproject activity. The program is $30,292,000. The biggest portion of this activity is the AID Washington program staff for which $16,519,000 is requested.

INCREASE IN FISCAL YEAR 1963 WASHINGTON PROGRAM STAFF OBLIGATIONS OVER REQUEST

I note your statement on page 175 that fund limitation during fiscal 1963 resulted in a program inadequate to meet AID's needs for better trained personnel.

I also note your program for this purpose $14,078,000. What was the amount requested and justified last year for this purpose?

Mr. MADDEN. $12,990,000.

Mr. PASSMAN. You had better have another look.

Mr. MADDEN. The figure I quoted is comparable to the $14 million.

Mr. PASSMAN. I am talking about what you justified to the committee last year in this program.

Mr. MADDEN. It was broken down in three parts, sir. My figure merges those three parts into one.

Mr. PASSMAN. You actually justified $10.2 million. That is what you put in the record?

Mr. MADDEN. Yes, sir. In addition, we justified——

Mr. PASSMAN. Let us keep it on the one item. You requested $10,200,000 but for the same item you programed $14,078,000. Is that right?

Mr. MADDEN. No, sir.

Mr. PASSMAN. You had better reprint these justifications. I am looking at your insertion on page 730. Then I look at your justifications on page 819, and it specifically states:

AID, Washington, program staff, $14,078,000.

Mr. MADDEN. I will have to see what you are looking at, sir.

Mr. PASSMAN. Come over and we shall be glad to share our book with you.

Mr. MADDEN. That is this year.

Mr. PASSMAN. Surely 1963. Here is the same thing. You justified $10,200,000 and programed $14,078,000.

Mr. MADDEN. But you will see in last year's presentation two items which do not appear in 1963 and 1964 in this year's book. That is because these two items, shown separately last year, have been merged with "AID, Washington, program staff" in this year's presentation.

Mr. PASSMAN. Is that done to confuse the committee? If that was the purpose you did a good job.

Let us see whether that adds up.

Mr. MADDEN. $12,990,000.

Mr. PASSMAN. You actually programed $14,078,000, did you not?

Mr. MADDEN. Yes, sir.

Mr. PASSMAN. Where is the fund shortage, as the book indicates? We are at page 175.

You spent $2 million more than you justified and for which you had a fund. It does not add up.

PROGRAM SUPPORT BY OTHER GOVERNMENT AGENCIES

In connection with the amount for the Program Support by other Government agencies, bring up to date the table submitted for the record last year on page 735, part 3 of the hearings.

(The information requested follows:)

Interregional program expenses—Program support by other U.S. Government agencies—Breakdown by agencies

Agency	Fiscal year 1962			Fiscal year 1963			Fiscal year 1964

AID WASHINGTON PROGRAM STAFF

Mr. COFFIN. On this $14 million figure, Mr. Chairman, shall we submit how these several figures were put in to get a comparable basis?

Mr. PASSMAN. You requested $10,200,000. There was a complaint about the $14,078,000. They said it is up because two other items were consolidated.

Adding those consolidated items you get a total of $12,995,000.

After all of your consolidations you still obligated $14,078,000 which would make the information on page 175 null and void.

Mr. COFFIN. We shall be glad to explain the statement, Mr. Chairman.

Mr. PASSMAN. It is just that way.

Mr. COFFIN. That is right. If the statement is accurate——

Mr. PASSMAN. Let us establish whether or not it is accurate.

On page 730 of last year's justifications you will find you requested $10,200,000, AID, Washington program staff. Is that correct?

Mr. COFFIN. That is right.

Mr. PASSMAN. We commented about the obligation going to $14,078,000 and the supporting witness said that was because you consolidated two other items.

Mr. COFFIN. That is right.

Mr. PASSMAN. Then we moved into the consolidation part and he gave us $12,990,000, so you run out of anything to consolidate and you still obligated about $2 million more than the total request.

Are we correct in our assumptions so far?

Mr. MADDEN. There is a $1 million difference rather than $2 million.

Mr. PASSMAN. Even $1 million or $500,000. You take the figures—$12,990,000. It is $1,088,000. That still would rule this out when you said:

> Fund limitation during fiscal 1963 resulted in a program inadequate to meet AID's need for better trained personnel.

Could you find the extra $1,088,000 for us?

Mr. MADDEN. We had a Federal pay raise which accounts for part of it.

Mr. PASSMAN. How much is the pay raise portion?

Mr. MADDEN. I would guess about a half million dollars.

Mr. PASSMAN. How would you know if you have not checked it? Try to find out.

Off the record.

(Discussion held off the record.)

COMPARISON OF FISCAL YEAR 1963 REQUEST WITH OBLIGATIONS FOR INTERREGIONAL PROGRAMS

Mr. FORD. In this category of interregional expenses, what did you justify last year at the time you were before the committee?

Mr. COFFIN. Do you want the gross amount?

Mr. FORD. The total.

Mr. MADDEN. The figure comparable to this year's request $31,300,000.

Mr. FORD. This is what you justified?

Mr. MADDEN. Yes, sir.

Mr. COFFIN. This is taking items justified in other places but the same items which are in our unified justification this year.

Mr. FORD. According to the testimony of last year we were talking about a $30 million program.

Mr. COFFIN. Yes.

Mr. FORD. In the meantime have you made some program changes so that the figures are not entirely comparable? Is that your point?

Mr. COFFIN. Yes.

Mr. FORD. On the basis of comparability with what you are justifying this year you justified last year at this time $31,300,000?

Mr. COFFIN. Yes, sir.

Mr. FORD. That was the justification in the hearings?

Mr. COFFIN. Yes.

Mr. FORD. What did you execute in fiscal 1963? What did you obligate?

Mr. MADDEN. $33,049,000.

FACTORS OF INCREASED COSTS OF INTERREGIONAL PROGRAMS

Mr. FORD. In what areas did you have increases? You obligated about $1.7 million more than you justified.

Mr. COFFIN. One area would be the pay raise.

Mr. FORD. How much was that?

Mr. MADDEN. I don't have that figure available. I am estimating about a half million dollars.

CENTRALIZATION OF PUBLIC SAFETY PROGRAM AND STAFF

Mr. FORD. What else brought about this additional obligation?

Mr. MADDEN. The public safety program got underway.

Mr. FORD. Where is that in the justifications?

Mr. COFFIN. I don't believe it is. I think the centralization of the public safety staff took place after the congressional presentation.

Mr. FORD. Is it in the justification book for fiscal 1964?

Mr. COFFIN. Yes.

Mr. FORD. On what page? In what category does it fall in the justification book which is before us now?

Mr. COFFIN. Program staff.

Mr. FORD. How much was involved in fiscal 1963 and how much are you requesting for fiscal 1964?

Mr. MADDEN. In 1963 the planned figure——

Mr. FORD. Your planned figure at the time you justified it? All right, what was that?

Mr. MADDEN. Our planned figure for public safety at the time we prepared these books——

Mr. FORD. These books last year or this year?

Mr. MADDEN. The books this year.

Mr. FORD. All right.

Mr. MADDEN. About a quarter million dollars, $228,000.

Mr. FORD. This is what you are justifying this year?

Mr. MADDEN. This is the amount we estimated when we prepared these books for expense on public safety in fiscal 1963.

In 1964 we estimate "Public Safety" cost at $721,000, an increase of nearly a half million dollars in public safety.

This work got underway late in the fiscal year.

Mr. FORD. As I understand what you have just said, last year you justified $228,000.

Mr. MADDEN. No, sir. We didn't justify anything.

Mr. FORD. You didn't justify anything. As I understand what you said a moment ago, I think you said that when the books were prepared last year——

Mr. MADDEN. This year.

Mr. FORD. Before fiscal 1963?

Mr. COFFIN. Last year when we prepared the books, public safety officers were in the regions and in field missions under the regions. During the year we made a decision that this function was so important that we would establish a central office, pull the people out from under their sole responsibility to the regions, make those in the field responsible at least for planning professional standards for the central office, beefing up the central office with a number of professional people.

This was established, therefore, during fiscal year 1963 not on the basis of a direct presentation last year. We therefore funded part of a year's cost. The $721,000 is the estimate for 1964 of the full year's costs of this now centralized office.

Mr. FORD. But at the time hearings were held last year on fiscal 1963 budget there was no specific presentation?

Mr. COFFIN. That is right. We had no plans at all.

Mr. FORD. What did you obligate in fiscal 1963 for this program?

Mr. MADDEN. I don't have that figure. We have not refined June 30 figures as yet by organizational units. This is part of a larger allotment.

Mr. FORD. How about an estimate?

Mr. MADDEN. $228,000.

Mr. FORD. We have about $700,000 out of $1.7 million. How about the rest of it?

Mr. MADDEN. Increased pay cost.

Mr. FORD. That was $500,000. I include that in my $700,000. You still have $1 million to go.

Mr. MADDEN. No, the $700,000 plus the $500,000.

Mr. FORD. You have only $228,000. We agree on $228,000. Now what else have you got? You have $500,000 for pay raise. Is that right?

Mr. COFFIN. And $500,000 increase for this office, $1 million.

Mr. MADDEN. I'm sorry, I confused the issue, Mr. Ford is correct, the increase for "Public Safety" of $500,000 pertains to fiscal year 1964.

Mr. FORD. I am talking about 1963. You have about another $1 million someplace.

INCREASE IN STATE DEPARTMENT PROGRAM SUPPORT

Mr. MADDEN. The amount we are paying the Department of State for increase for overseas support is greater than we had previously estimated.

Mr. FORD. What did you justify last year on the 1963 budget for State Department overseas support?

Mr. MADDEN. $5,700,000.

Mr. FORD. This is what you told the committee you needed to do the job?

Mr. MADDEN. Yes, sir.

Mr. FORD. What did you execute?

Mr. MADDEN. $7.360,000.

Mr. FORD. That is $1,600,000; is that correct?

Mr. MADDEN. Yes, sir.

Mr. FORD. That takes you over this amount.

Mr. MADDEN. There would be some decreases in some other items.

Mr. COFFIN. What we will have to get is the wash figure, the pluses and minuses to lead to this.

Mr. FORD. I think it would be very helpful. Let us set it out, what you justified in each of these categories and what you actually executed. Explain the discrepancy between the two sets of figures.

Mr. COFFIN. Right, sir.

(The information requested follows:)

INTERREGIONAL PROGRAM EXPENSES

Comparison of 1963 congressional request with 1963 obligations

[In thousands]

	1963 congressional request (adjusted)	1963 actual obligations (preliminary)	Differences	Explanation of significant differences
AID Washington program staff.	$12,990	$13,382	+$392	Primarily net increases of $228 and $563 for new public safety staff and increased pay costs, respectively, offset by $386 program reduction and lapses.
Program support, U.S. Government agencies.	5,460	5,124	−336	Primarily net increase of $200 for increased pay costs, offset by $536 program reduction and lapses.
Participant services	4,560	3,605	−955	Reduction in program level.
Communications resources	900	680	−220	Do.
Program support, Department of State.	5,700	7,360	+1,660	Approximately $140 for increased pay costs; balance due to increased level of services provided and updating of the ratio of administrative to program funded personnel.
International aid coordination.	250	252	+2	
Book gap	35	520	+485	Under stimulus of Government's Advisory Committee on International Book Program, AID was able to institute four projects in 1963 which had not been expected to develop until 1964.
Nutrition surveys		314	+314	Assumption of program previously under Department of Defense.
Training in cooperatives	140	394	+254	Development of program at higher level than projected in 1963 presentation.
Excess property offices		117	+117	Program had not developed at time of 1963 submission.
General technical services	990	1,053	+63	
Engineering services	275	243	−32	
Yough program		5	+5	
Total	31,300	33,049	+1,749	

COMPARISON OF FISCAL YEAR 1963 INTERREGIONAL PROGRAMS REQUESTS AND OBLIGATIONS TO TOTALS FOR DEVELOPMENT GRANTS

Mr. FORD. You justified on a comparable basis $31,300,000 last year. You executed $33,049,000. What was granted by the Congress in this area?

Mr. MADDEN. There would be no specific earmarking on this. This is part of other funds. The appropriations bill provides an overall amount for development grants.

Mr. FORD. These funds are derived from other pots and brought into a central office for obligation and disbursal?

Mr. MADDEN. Yes, sir.

Mr. COFFIN. Derived from one, development grants.

Mr. FORD. All this money is derived from development grants; all right. What did you justify for development grants last year? What was the President's first request even before the authorization? Give it at the time of the authorization.

Mr. TENNANT. $335 million.

Mr. FORD. What did the Congress finally give?

Mr. TENNANT. $225 million.

Mr. FORD. $110 million reduction in the authorization?

Mr. TENNANT. That is correct, sir.

Mr. FORD. What was the appropriation?

Mr. TENNANT. I am sorry, I moved directly from the authorization request to the amount appropriated.

Mr. FORD. What was the authorization?

Mr. TENNANT. $300 million.

Mr. FORD. And the appropriation was what?

Mr. TENNANT. $225 million.

Mr. FORD. So you had a $110 million reduction in the overall figure for development grants, funds for interregional expenses coming out of development grant. Is that right?

Mr. TENNANT. That is correct.

Mr. FORD. And in the case of interregional expenses you actually obligated $33,049,000 in contrast to the $31,300,000 which you justified?

Mr. TENNANT. That is correct, sir.

Mr. FORD. So in this category you obligated more money than you initially requested despite the fact that in the overall there was a reduction of $110 million in the fund?

Mr. TENNANT. That is right.

Mr. FORD. How do you justify that? Were these things of higher priority?

Mr. COFFIN. These were activities which had been undertaken in prior years. This was an irreducible type of thing. Participants had been selected and were on their way over, or the arrangements had been made. The Public Safety Office in the program staff generally was involved. People may have been on board just a few months of the previous year and had to be funded for a full year. So the cuts had to be distributed in other areas of the program than in this collection of activities we are talking about today.

In other words, to allocate a cut it was much more feasible to say that a new program proposed for country X would not be funded, but that we would fund activities which were ongoing.

Mr. FORD. That may be true to some extent, but in listening to the testimony earlier, Mr. Coffin, in this area of cooperatives, that would not be true?

Mr. COFFIN. That is correct.

Mr. FORD. A relatively small amount, but you initiated these programs.

Mr. COFFIN. That is correct.

Mr. FORD. Despite the fact you had reductions.

Mr. COFFIN. That is right.

Mr. FORD. Were these of higher priority?

Mr. COFFIN. Yes, in a sense, because we had the section in the law, and up until this part year we had been unable to show that we had really made substantial progress in carrying out the change in emphasis.

ADMINISTRATIVE SUPPORT SERVICES OF DEPARTMENT OF STATE

Mr. PASSMAN. The program support Department of State estimate is $7,540,000. Would you bring up to date the table which you submitted last year on page 741, part 3, of the hearings relating to this item?

Mr. COFFIN. Yes, sir.

(The information requested follows:)

Administrative Support Services by Department of State

(Support of Oversea Operation)

Total administrative and program financing

DELAY IN PROVIDING INFORMATION TO THE COMMITTEE

Mr. ROONEY. How long does it take this Agency to get the inserts that we ask for? I notice day after day in going over the typewritten transcript and the questions where we ask for inserts that they invariably are never in the transcript when it comes back from you.

How long does it take to get these things? I have been accustomed to getting them the next day.

Here is an instance: I asked for the breakdown of the $70,000 for three people in an office in London. That should not take more than overnight to furnish.

Mr. COFFIN. The answer is that we are serving another committee in the House which also is asking for inserts and sometimes other committees not dealing with AID specifically have hearings on civil service or hearings on other policies, and the Senate——

Mr. ROONEY. I am of a suspicious nature, Mr. Chairman, if you will excuse a further interruption. It may be that if we were to see the breakdown of this $70,000 we might be amazed.

Mr. MILLER. We try to get them back as quickly as we can. We should be happy to send you copies——

Mr. ROONEY. I have not had one since we started these hearings. I have not asked for too many. Invariably when I get back the transcript I go over it, look for the requested insert, and it is never there.

Mr. MILLER. We shall be happy to send an extra copy to you at your office.

Mr. ROONEY. You need not do that.

Mr. PASSMAN. Off the record.

(Discussion held off the record.)

Mr. PASSMAN. We need this information.

Please be a little more cooperative if possible.

Mr. COFFIN. We shall endeavor to do that.

Mr. PASSMAN. You will insert this table?

Mr. COFFIN. Yes, sir.

INTERNATIONAL AID COORDINATION

Mr. PASSMAN. In connection with the international AID coordination estimate you show $390,000. Furnish a breakdown for the record of the cost of this coordination of AID staffing requirement in the OECD in Paris.

Mr. COFFIN. Yes, sir.

Mr. PASSMAN. Also show this cost for capitals of other major countries and at U.N. headquarters in New York.

Mr. COFFIN. I would be very glad to.

(The information requested follows:)

INTERNATIONAL AID COORDINATION

Breakdown of costs of staffing requirements fiscal year 1964 funded under interregional program expenses

USRO-Paris staffing:	
Salaries and related costs	$306,500
All other	83,500
Total	390,000

Positions: United States, 15; locals, 10.

Sum of $390,000 is entirely to finance the costs of the international aid coordination activity with other donors through the OECD and its Development Assistance Committee in Paris. All these people are stationed in Paris.

In addition, AID employees at United States-U.N. headquarters in New York are funded under AID Washington program staffing activity.

Positions at United States-U.N., 3.

Salaries and related costs	$37,915
All other	600
Total	38,515

EXCESS PROPERTY OFFICES

Mr. PASSMAN. You are requesting $445,000 for the excess property offices; is that correct?

Mr. COFFIN. Yes.

RESEARCH AND EVALUATION

Mr. PASSMAN. Last year you indicated the 1963 cost of the research, evaluation, and planning assistance would be $908,000, compared to $432,000 in fiscal year 1962. Is this staff still in existence and what is the 1964 estimate of the cost?

Mr. COFFIN. Do you want that now?

Mr. PASSMAN. I think we had better get something now.

Mr. COFFIN. Research is now under Dr. Baumgartner.

Mr. PASSMAN. Let us find out how much you are going to deobligate out of this and credit to the category for which Dr. Baumgartner will testify.

Are you familiar with this item we are talking about here?

Mr. COFFIN. Yes.

The research and evaluation staff is now under Dr. Baumgartner and the planning assistance is under another staff.

Mr. PASSMAN. Where was it last year?

Mr. COFFIN. All in one unit, research, evaluation, and planning assistance.

Planning assistance is now under Dr. Chenery.

Mr. PASSMAN. Can you give us a comparable 1964 estimate to the 1962 and 1963 amounts?

Mr. COFFIN. Because it has been split, I am not sure I can furnish it at this moment. We will have to supply that.

Mr. PASSMAN. You cannot give us any information on that item?

Mr. MADDEN. We have in our budget for 1964 under Dr. Baumgartner's——

Mr. PASSMAN. For comparable projects and programs as outlined here?

Mr. MADDEN. I can give it to you for 1962.

Mr. PASSMAN. It was $432,000. And I have it for 1963, $908,000. What is it for 1964?

Mr. MADDEN. $792,000 under Dr. Baumgartner, and $172,000 under Dr. Chenery's office. The total of those two would be it.

Mr. COFFIN. $964,000, Mr. Chairman.

Mr. PASSMAN. So it is up to $56,000?

Mr. COFFIN. That is correct.

TECHNICAL ASSISTANCE STUDY GROUP

Mr. PASSMAN. With regard to the technical assistance study group, the temporary unit which was established in 1960 for a period of 14 to 18 months, has that now served its purpose and there is no further request for funds?

Mr. COFFIN. I think so, Mr. Chairman.

Mr. PASSMAN. What disposition did you make of the employees assigned to this operation? Did you absorb them in some other agency?

Mr. COFFIN. Some would be absorbed into other units.

Mr. PASSMAN. Could you tell us the total number of employees you had?

Mr. GORDON. We do not have it precisely.

Mr. PASSMAN. Now it has served its purpose and it is out of existence. How many returned to the private sector and how many did you absorb in other segments of the agency?

Mr. COFFIN. We will supply that.

(The information follows:)

THE TECHNICAL ASSISTANCE STUDY GROUP

The technical assistance study group is in process of dissolution. Two professional and one secretarial employee are completing the final organization and disposition of the materials collected by the group.

At its maximum strength, the regular staff of this group consisted of seven professional and six secretarial employees. This regular staff was temporarily augmented by one college student during the summer of 1960 and by three college students (typists) during the summer of 1961. In addition: (1) the group had one private consultant (WAE); (2) several private individuals were issued invitational orders by the group to attend 1- or 2-day conferences in Washington; and (3) a number of ICA employees were loaned to the group on several occasions for special assignments extending from a few days to several weeks.

All of the regular staff were permanent employees of ICA at the time the group was constituted. The four college students hired for temporary summer employment and the single private consultant were recruited from outside the Government.

Of the seven professional members of this staff, two have left AID (one for private employment, the other to transfer to another Government agency); one has been seconded to an international organization; four continued to be employed by AID, one in the field and three at headquarters. Of the regularly employed secretarial staff, one transferred to another Government agency, five are presently employed by AID.

Mr. PASSMAN. Could we not get a little information on it now?

Mr. GORDON. The people who were brought into that were brought into it from other parts of the agency. They have all returned to other parts of the agency, not necessarily their previous jobs.

Mr. PASSMAN. You employed every one of them from some other part of the agency?

Mr. GORDON. That is my impression, yes.

Mr. COFFIN. Generally that is true. We would want to check to be sure.

Mr. PASSMAN. You merely create a new unit, take them from some other agency and when they have completed their assignment, then they are returned?

Mr. COFFIN. That is correct.

Mr. GORDON. We cannot say whether it did or did not save money. They went to jobs that may have been vacated.

TOTAL AID-FINANCED PERSONNEL

Mr. ANDREWS. Mr. Coffin, each year we have inserted in the record a table showing the total number of people employed in the AID program, on the payroll of AID, State, military, or what not.

Would your office be prepared to bring that table up to date for us?

Mr. COFFIN. Yes.

Mr. ANDREWS. Be sure and insert it in the record at this point.

Mr. COFFIN. Yes.

(The information follows:)

FOREIGN ASSISTANCE

Economic AID programs—numbers of people (including personnel equivalents) in AID-financed programs as of June 30, 1963 (preliminary)

	Numbers of people		
	U.S. nationals	Foreign nationals	Total
AID direct hire	6,818	5,275	12,093
Other personnel contributing to program:			
Other agency employees detailed to AID	566		566
Individuals paid from cooperating country trust funds		4,689	4,689
Subtotal	7,384	9,964	17,348
Indirect costs:			
Employees of AID-financed contractors [1]	1,476	([2])	1,476
Personnel equivalent of reimbursable services provided by U.S. Government agencies: [3]			
State	465	835	1,300
Other agencies	610		610
Total	9,935	10,799	20,734

[1] Does not include contractors financed from Development Loan programs which are "borrower" implemented.
[2] Not available.
[3] AID has contractual arrangements with various U.S. Government agencies under which said agencies perform certain support services for AID activities. Figures shown are approximate numbers (personnel equivalent) of personnel financed from AID reimbursements to other agencies for such services.

Military assistance program—numbers of people (including personnel equivalents) in MAP activities, estimated as of June 30, 1963

	Numbers of people		
	U.S. nationals	Foreign nationals	Total
Direct costs:			
Civilian employees (paid directly or indirectly from MAP funds)	2,971	1,211	4,182
Military personnel (paid from DOD military appropriations)	10,579		10,579
Personnel hired by Department of State for MAP functions		800	800
Indirect costs:			
Personnel hired by State Department through contractual arrangements		4,872	4,872
Personnel equivalent of reimbursable services provided by U.S. Government agencies (State Department)	129	398	527
Total	13,679	7,281	20,960

PURPOSE OF INTERREGIONAL PROGRAMS

Mr. PASSMAN. I want to restate for the record my understanding of this interregional expense, $37,247,000 for fiscal year 1964: Whatever a country gets out of this is a supplement to whatever they get out of the regular country program; is that correct?

Mr. COFFIN. Yes, these are services made available.

Mr. PASSMAN. In addition to the services provided by countries in the request?

How much damage would be done to the program if we did not have the interregional supplement to the country programs?

Mr. COFFIN. It is like the third leg of a stool that would be cut off. These are important services for the work the mission directors are trying to do.

Mr. PASSMAN. This category is growing faster than the request for the regular program for the countries.

Mr. COFFIN. That is true. This is a smaller item. Many of the contracts and services we have discussed are small, but they are applicable to more than one region.

Mr. PASSMAN. I will refer to one item, development grants, expenses authorized by section 212. The estimates are dropping, but the interregional expenses are increasing.

Mr. COFFIN. That is correct because of the work that they do serves more than one country. In a sense, this is overhead needed if any country is to do the job we expect it to do.

Mr. FORD. What bothers me, Mr. Coffin, is, you had a lower dollar level proposed for a bigger country-by-country program. When the reductions were made, you lowered your country-by-country funds, $110 million or thereabouts, but you at the same time increased your overhead. That does not make much sense.

Mr. COFFIN. Because the typical work done in these programs serves a lot of countries. We could restrict the activity of a country with less overall damage than restricting a service, a staff, a program activity that serves a lot of countries. It was a matter of judgment, and I think the judgment was well exercised. This is vital to parts of a lot of country programs.

Mr. FORD. This could lead people to the conclusion that the agencies are more interested in maintaining the sanctity of the Washington office and less concerned about the program in the field.

Mr. COFFIN. No. I think part of this is the concern rather than try to build up in the field a complete staff, to do everything they should do, we will try to use staff in Washington and other participating agencies to do work that can be applied to many countries. It is a substitute for some field staff, not because we want to build up in Washington, but because it is the type of service that can be done centrally and made available throughout our missions overseas.

I agree that should not be carried to an extreme. As you can see by this category, which is a lot of activities, some of them very small, deep cuts in that would mean cutting out entire services.

COMPARISON OF INTERREGIONAL PROGRAM LEVEL TO TOTAL DEVELOPMENT GRANT LEVEL

Mr. FORD. At what point do we reach a level where a cut in the overall fund would mean a reduction in your funds for overhead—apparently the $110 million cut last year did not accomplish that.

Mr. COFFIN. This process of increasing the interregional could not continue if the remainder of our development grants were cut down.

Mr. FORD. What is the amount you are requesting this year comparable to the original request of $335 million last year?

Mr. COFFIN. $257 million.

Mr. FORD. This year you are starting out with a request of $257 million and an overhead request of $37,242,000?

Mr. COFFIN. That is correct.

Mr. FORD. You are starting out even in a worse position this year than you did last year?

Mr. COFFIN. We are starting out lower with an overall request.

Mr. FORD. Lower with an overall request and a $4 million higher overhead request.

Mr. COFFIN. And part of that is because of the dictates of the rest of the program.

For example, in the development lending field, which is in the development lending request, many of the people here, even though they are funded out of development grants, their employment goes up because of the nature and the timing of the loan implementation work in the field. It is not a 1-to-1 relationship. There is one thing I should explain.

My staff states I have not adequately covered the Alliance for Progress yet.

Mr. MILLER. There is one thing not apparent, and that is, the Alliance for Progress grants, which are asked for separately, also contribute to this figure that we are requesting for interregional expenses of $37,242,000 for 1964. The $37,242,000 figure does not all come from the development grant request of $257 million. Part of it is in the Alliance for Progress grants request, $8 to $10 million.

Mr. FORD. It is true to say, I think, that the $37.2 million requested for fiscal year 1964 is comparable to the figure we talked about last year.

Mr. MILLER. That is right. I just wanted to point out it is not a function related solely to the $257 million.

Mr. FORD. What you are saying is not related to the point I am making, because the figure I mentioned of $37.2 million for fiscal year 1964, if I understand it, is comparable to the figure $31.3 million that you justified last year and the figure of $33,049,000 that you actually executed.

The Alliance for Progress element was in both figures; is that not correct?

Mr. MILLER. Yes. It bears on it in two respects, as I understand your point:

One, our request was going up for interregional expenses, even though our total request had come down from $335 to $257 million.

Mr. FORD. I think the record will show, I do not recall the facts, that your Alliance for Progress funds were also reduced from your original requests last year to your actual funds available.

Mr. MILLER. That is the point I was making: The $100 million we requested for Alliance for Progress grants was fully appropriated by the Congress last year, so there was no reduction. The Alliance for Progress has been in effect gearing up over the last few years. The amounts have increased, and the program has really gotten underway.

There is in that respect an element of a larger aspect of the interregional expenses that are borne by the Alliance for Progress.

Mr. NATCHER. How much of your $37,242,000 is for research?

Mr. COFFIN. It is not in this program. It is, however, a development grant funded activity. Dr. Baumgartner and Dr. Weyl will be here later on this afternoon.

FUNDING OF RESEARCH ACTIVITIES

Mr. NATCHER. No part of this $37 million is for research?

Mr. COFFIN. No.

Mr. ANDREWS. On page 3 of your statement, speaking of $16,519,000, you state it includes personnel concerned primarily with program implementation, contract officers, development loan officers, training officers, technicians, and research and evaluation personnel.

Mr. COFFIN. But I think Congressman Natcher was asking what money are we putting into research contracts. The personnel engaged in research are paid from these funds, but the money——

Mr. ANDREWS. These people work on the contracts, do they not?

Mr. COFFIN. Oh, yes. We are talking about two different things, salaries and the program itself.

Mr. ANDREWS. Do you know how much money AID is spending for research?

Mr. COFFIN. Yes. I think it is contemplated it will be $15 million for 1964.

Mr. ANDREWS. Just what research projects do you have programed?

Mr. COFFIN. Well, as I was saying, this is the subject Dr. Baumgartner is prepared to speak to later.

Mr. ANDREWS. How long has AID been interested in any research projects?

Mr. COFFIN. ICA did some research, but when AID came into existence, we had a special presentation and an office for research, and we said we were going out to do research. I think that first year it was $6 or $8 million.

Mr. ANDREWS. Now it is going up to $15 million?

Mr. COFFIN. It went down last year. Remember, the request for the first year was for $20 million. It did not reach that during the first year. In the act there is a specific authority for research.

Mr. ANDREWS. I do not know of any Government agency that is not engaged in research.

Mr. COFFIN. I think you are probably right.

Mr. ANDREWS. If you put all the money in one figure that we spend on research, it would be staggering.

Mr. COFFIN. It would be a very large sum.

Mr. ANDREWS. Could you give me a few of the typical projects which you are researching?

Mr. COFFIN. Yes. Dr. Baumgartner will be prepared to give you a list of all the projects we are funding.

Mr. ANDREWS. I may not be here.

I would like to see someone coordinate the research efforts of this Government.

Mr. ROONEY. That would cost too much money.

Mr. PASSMAN. You do have a coordinating task force, do you not?

Mr. COFFIN. We do.

Dr. Baumgartner has a committee to advise her, which in turn is coordinated with the science adviser.

UNOBLIGATED BALANCES AS OF JUNE 30, 1963

Mr. PASSMAN. Before getting into the Contingency Fund, we would like to insert in the record a list of the different programs with unobligated funds, submitted to us today by the controller. It shows the amount unobligated on June 30, 1963, $515,585,000. Of that amount, there is $117,182,000 in the Contingency Fund.

Are your footnotes sufficient to explain this list, Mr. Controller?

Mr. TENNANT. Yes.

The point I wanted to make, I think the footnotes are self-evident, but when you requested unobligated figures, earlier in the course of the hearings, we had been talking about the unobligated balances on the budgeted programs.

The programs in the presentation books are the figures for budgeted programs and they amount to $368 million unobligated in economic programs.

Mr. PASSMAN. It would not change the $117,182,000 in the Contingency Fund?

Mr. TENNANT. No, sir.

(The list referred to follows:)

Unobligated/unreserved balances as of June 30, 1963 (preliminary)

[In thousands]

	Annual accounts	No-year accounts		Total
		Appropriated funds	Borrowing authority	
ECONOMIC ASSISTANCE				
Budgeted programs:				
Development loans		$92,479		$92,479
Development grants:				
General authorization	$46,620			46,620
Special foreign currency programs	100			100
Surveys of investment opportunities	1,197			1,197
Alliance for Progress:				
Loans		90,815		90,815
Grants	4,245			4,245
Inter-American program for social progress		6,121		6,121
International organizations	431			431
Supporting assistance	7,382			7,382
Contingency Fund [1]	117,182			117,182
Administrative expenses, AID	2,036			2,036
Administrative expenses, State				
Total budgeted programs	179,193	189,415		368,608
Special revolving funds:				
Acquisition of property		3,578		3,578
Investment guarantees [2]			[3]$116,355	116,355
Borrowing authority, ECA [4]			544	544
Total special revolving funds		3,578	116,899	120,477
Total economic assistance	179,193	192,993	116,899	489,085
MILITARY ASSISTANCE [5]				
Grant aid	25,000			25,000
Sales program		1,500		1,500
Total military assistance	25,000	1,500		26,500
Grand total economic and military assistance	204,193	194,493	116,899	515,585

[1] AID has not requested reappropriation of unobligated balance of this account.
[2] Investment guaranty funds are available only for reserves against future guarantees issued and will not be expended unless there is a loss on a guarantee.
[3] Because legislation (sec. 222(e), Foreign Assistance Act of 1961, as amended) requires maintenance of unified reserve, this figure may include a small balance against the $30,000,000 appropriation which cannot be earmarked.
[4] Represents inactive borrowing authority for aid to Europe not available for current operations.
[5] Preliminary June 30, 1963, not available; figures shown represent estimates shown in budget document.

NOTE.—The executive branch's request for reappropriation of unobligated balances would result in reappropriation of a carryover of $62,011,000 on the economic and $25,000,000 on the military side.

Mr. TENNANT. We had not inserted in our prior figures the borrowing authority figures. However, all figures are in the table you now have.

Mr. PASSMAN. I think the people should know the total amount of unobligated funds.

You think this list with the footnotes is completely self-explanatory?

Mr. TENNANT. I believe it is self-explanatory.

Mr. COFFIN. Let me add, I think the figure is misleading unless the committee understands.

Mr. PASSMAN. If there was a self-explanatory document this one is. If you want to debate each item, I am willing to go for it.

Mr. COFFIN. I have a responsibility to the agency also.

Mr. PASSMAN. What responsibility do you have with respect to trying to disprove the accuracy of this statement when the footnotes state precisely what is in the $368,608,000, and what then is in the additional figures?

Mr. COFFIN. I merely want to make a statement as to what it does not mean.

A, it includes about $100 million in contingency funds which lapse. That includes——

Mr. PASSMAN. Every year, since I have been on this subcommittee, you have listed the amount of unobligated funds, and the members of the committee certainly know that all of these funds would lapse if you did not ask for part of them to be reappropriated.

Mr. COFFIN. I accept that.

Mr. PASSMAN. It has also been the custom of the subcommittee in previous years to recommend the reappropriation of all unobligated funds.

Mr. COFFIN. The other point is that you were adding this category of funds reserved for investment guarantees.

Mr. PASSMAN. That is correct, and you do have investment guarantee funds unobligated amounting to $116,355,400, and you state here:

Investment guarantee funds are available only for reserves against future guarantees issued and will not be expended unless there is a loss on the guarantee.

Mr. COFFIN. I wanted the committee to be aware we were in a sense——

Mr. PASSMAN. Is it not true that every year you submit to the committee the total of unobligated funds, just as you have submitted them here?

Do you know of any exceptions made?

Mr. COFFIN. My only point was, we are trying to add apples and oranges. As long as you are perfectly aware of the different parts of the table, that is fine.

Mr. MILLER. Considering the investment guarantee reserves—after the action last year when, you will recall, we requested appropriations for reserves for the investment guarantees, this committee was a leader in pointing out if the full faith and credit of the United States backed those guarantees, it was not necessary that we have a large amount of appropriations.

Therefore, it was possible for us to change our reserve requirements so that, although at the time we were presenting these last year, and during the year until this action was taken, we had a certain reserve requirement which would have used up almost entirely the amount of the reserves available for the investment guarantees.

Mr. PASSMAN. If we had followed your request, last year, this fund would have been about $150 million higher.

Mr. MILLER. It would have been zero, Mr. Chairman.

Mr. PASSMAN. You mean if we had appropriated the money you asked for?

Mr. MILLER. If you had not taken the action you did.

Mr. PASSMAN. You wanted a tremendous amount of money in appropriations for the investment guarantees.

Mr. MILLER. Yes, $180 million.

Mr. PASSMAN. You did not get it. You got $30 million. But had we followed your recommendation, there would have been an additional $150 million in here.

Mr. MILLER. What I am trying to explain——

Mr. PASSMAN. Is that correct?

You asked for $180 million to be appropriated. The Congress appropriated $30 million. Is that correct?

Mr. MILLER. That is correct.

What I am trying to explain is, because of the action to put the full faith and credit of the United States behind it, we could change our reserve requirements. Although at this point in time, before we could change our reserve requirements, we had used up the reserve almost entirely.

Mr. TENNANT. There is something I would like to say about the schedule. As you will recall, in Mr. Bell's testimony, he pointed out the fact that large unobligated balances are not necessarily detrimental to the way we administer our funds.

As you can see here, roughly $200 million of this amount is in no-year accounts which do not lapse at the end of the year. The fact there are amounts left over in these accounts is not an indication we had too much money.

Mr. PASSMAN. The fact that the Congress reduced the President's Contingency Fund last year would not have changed the fact you are going to have $117 million unobligated this year, would it?

Mr. TENNANT. No, sir.

Mr. PASSMAN. Thank you.

Mr. MILLER. There is a further point about the investment guarantees.

Mr. PASSMAN. We are going to have an examination on the investment guarantees.

Mr. MILLER. I think it is just on investment surveys.

As far as the reserves are concerned, we hope, of course, they will never be spent. Those are reserves for losses.

Mr. PASSMAN. Let us join with you in hoping for the same thing.

CONTINGENCY FUND

The next item is the largest Contingency Fund of the several that we have discussed, and it is usually referred to as the President's Contingency Fund.

The 1963 appropriation amounted to $250 million. You had on hand unobligated at June 30, $117,182,000. Unless the Congress, in its wisdom, reappropriates it, that money will lapse, will it not?

Mr. COFFIN. That is right.

NUMBER OF FISCAL YEAR 1963 CONTINGENCY FUND OBLIGATIONS

Mr. PASSMAN. It would appear that out of the Contingency Fund during fiscal year 1963 there were 92 transactions, through June 18 only.

Could you tell us before we hear your brief statement whether or not there have been any additional transactions since June 18, and if so, how many?

Mr. TENNANT. There were 23 more obligations.

You are talking about obligations; are you not?

Mr. PASSMAN. Yes; in addition to those given to us as of June 18.

Mr. TENNANT. I believe there are 23 more which occurred in the last 12 days of that month.

Mr. PASSMAN. That is what we refer to as transactions?

Mr. TENNANT. These are obligations—transactions.

Mr. PASSMAN. That would be 115 transactions out of the Contingency Fund during fiscal year 1963?

Mr. TENNANT. Yes, sir; transactions in this sense—an actual obligation of funds.

Mr. PASSMAN. The same as you do out of all accounts?

Mr. TENNANT. Yes.

Mr. PASSMAN. How much trouble would it be to supply us with a listing of the type of projects that were funded out of the Contingency Fund?

Mr. COFFIN. We can do that.

Mr. PASSMAN. I am speaking about the additional ones.

Mr. TENNANT. There are two types of reports we have furnished you, one a detailed quarterly report, and I believe we provided you with an insert which set forth the uses of the contingency for the whole year.

Mr. FORD. All I would like to know is whether or not there is a statement showing the total Contingency Fund obligations available this afternoon.

Mr. PASSMAN. Yes; through June 18. I put the two together to make the whole year.

You had $250 million for this Contingency Fund in fiscal year 1963. There is $117,182,000 unobligated and will lapse unless the Congress reappropriates it. You are asking for $300 million in fiscal year 1964.

Do you have a statement to make on the Contingency Fund, Mr. Director?

Mr. COFFIN. Yes.

Mr. PASSMAN. We shall be pleased to hear it.

Mr. COFFIN. I would say at the outset we feel that the performance in the Contingency Fund this year was a very good stringent one and we are not at all ashamed to turn back to the Congress the $117 million.

GENERAL STATEMENT ON THE CONTINGENCY FUND

Mr. Chairman and members of the committee, I am here today to testify in support of the President's request for an appropriation of $300 million for the Contingency Fund in the fiscal year 1964.

REDUCTION IN ORIGINAL REQUEST

As you are aware, the budget message in January included an estimate of $400 million for the Contingency Fund. However, one of the results of the subsequent review of the mutual defense and assistance budget was a reduction of $100 million in the Contingency Fund request.

That reduction reflects our belief that the application of more stringent criteria in the use of all foreign economic assistance funds will have its impact on the uses of the Contingency Fund. It also reflects our experience in the programing of the Contingency Fund in recent years.

VARYING NEEDS FOR CONTINGENCY FUNDS EACH YEAR

Contingency Fund obligations were about $149.4 million in 1963, $293.4 million in 1962, $272.6 million in 1961, and in 1960 $123.9 million for economic purposes plus $31.2 million for military assistance. The amounts varied as the needs varied, unpredictability being the typical feature of the needs for which this fund is used. In fiscal year 1962, the unforeseen demands for economic aid were extraordinarily heavy, leading to a decision to defer certain military assistance programs and to transfer $23 million from the military assistance appropriation to economic assistance accounts.

RETURN OF FISCAL YEAR 1963 UNOBLIGATED BALANCE TO TREASURY

For the fiscal year 1963, the Congress appropriated $250 million and an additional $15 million was available as carryover of unobligated funds and recoveries of prior year obligations. However, the unforeseen requirements were relatively few and we stressed rigid adherence to our criteria. As a result, we obligated only $149.4 million and over $115 million remained unobligated.

The unutilized balance in last year's Contingency Fund has been returned to the Treasury. While the President has requested the reappropriation of the unobligated balances of other categories of assistance, he has explicitly not requested the reappropriation of Contingency Fund balances. This method of handling the Contingency Fund will demonstrate clearly, we hope, the concept of the fund as a reserve to meet unforeseen needs. If the total needs do not approach the amount available, the remainder will be returned to the Treasury as a savings.

NEED FOR CONTINGENCY FUND

We do not propose any change in the legislative authority for the Contingency Fund. As in earlier years, we ask that $300 million be available to meet needs which develop during the course of fiscal year 1964 and which were either completely unforeseen at the time that our estimates for the regular categories of aid were made, or for needs which were foreseen as possible requirements, but were not sufficiently precise as to amount and nature to justify inclusion in the country programs outlined in the presentation books. Furthermore, to qualify for Contingency Funds, the need must be clearly related to our national interest, as stated in the present statutory authority for the Contingency Fund—Section 451.

USES OF CONTINGENCY FUNDS DURING FISCAL YEAR 1963

I would like to review briefly the uses of the Contingency Fund in fiscal year 1963. Further information may be found in the quarterly reports on the Contingency Fund which have been transmitted to the committee pursuant to the act. Three have already been transmitted and the fourth will be sent up as soon as final obligations figures have been received and tabulated. I would also be pleased to discuss these uses with you at the conclusion of the statement.

The $149.5 million programed may be grouped in four major categories:

1. To help bolster the defenses of independent countries facing the clear and present danger of Communist open aggression or subversion, $34.6 million. In these cases the Contingency Fund was used for support of a buildup of Thailand's defensive capabilities, of the forces in Laos opposed to Communist domination, and of internal security forces in a number of Latin American states following the October crisis over Cuba. Support for Vietnam's counterinsurgency efforts was also necessary and assistance was provided to Trinidad and Tobago related to our military base rights. In Indonesia it has been used to equip and train the mobile brigade, a special unit of the national police which will assume responsibility for dealing with civil disturbances following the termination of martial law.

2. To assist countries with unstable economies to take remedial measures designed to restore internal and external financial stability, $105.3 million. The loans to Argentina and Brazil fall in this category. In both cases, AID Contingency Funds formed an essential part of a package of assistance from the International Monetary Fund, the Export-Import Bank, the U.S. Treasury, and European countries. Aid was also given to the Dominican Republic to help adjust the country's economy to the sudden change in the sugar production and export pattern resulting from U.S. sugar legislation. Loans were made to Ecuador and Honduras for urgent budgetary needs and to the UAR as an amendment to the stabilization loan of May 1962. A loan of $17 million was made to Indonesia for purchase of U.S. spare parts and raw materials required to restore production while a general economic stabilization program could be worked out with the International Monetary Fund. The loan strengthened the position of Indonesian advocates of economic reform and encouraged the Government of Indonesia to go ahead with the painful readjustments required by a stabilization program. This program was adopted in May, a month which also brought other constructive steps in Indonesia's relations with the free world. The IMF endorsed the stabilization program on July 24 and made available a standby credit. Should an additional AID loan for current import financing be required to supplement IMF and other free world assistance to the program, it would be drawn from the Contingency Fund.

3. To assist countries which have accepted Sino-Soviet aid and have since become disillusioned with such aid to disengage themselves from Communist bloc influence—$4.9 million. Two African countries had earlier become heavily involved in aid arrangements with the Communist bloc but have subsequently become disenchanted with that relationship. In these circumstances, the United States has provided an alternative source of external aid for justifiable purposes, which were not included in the fiscal year 1963 presentation but developed during the course of the fiscal year.

4. To help relieve suffering and provide food and shelter for victims of natural disasters and other emergencies—$4.8 million. During fiscal year 1963, substantial assistance was extended to the people of northwestern Iran in the wake of a devastating earthquake, and lesser amounts were used for relief operations following floods in Morocco and Tunisia and for continuation of medical services by

American relief organizations in Algeria. An unexpected increase in our proportionate contribution to the world food program was also needed to match larger grants than we had expected from other countries.

One feature of last year's Contingency Fund uses is the extent to which we were able to provide the needed help on a loan basis—often on quite "hard" terms. In line with our general policy of not providing grants when loans will meet the need, the $149.5 million total Contingency Fund uses in 1963 included $81.5 million in loans. Interest rates ranged from 2½ to 3½ percent and terms from 10 to 20 years except in the case of the Brazil emergency stabilization loan which was at three-fourths for 40 years.

CONTINUING NEED FOR CONTINGENCY FUND

I am not, obviously, in a position to be able to define with any degree of precision the likely uses of the Contingency Fund this year. I can only note that economic and political instability still characterize important areas of the free world and that governments of countries important to our security are attempting to cope with the demands of their people for improved living standards at the very time when the masters of Russia and Red China are striving to create unrest and revolt.

The President has requested that $300 million—the same amount authorized last year—be made available for the most flexible tool of foreign assistance policy. I urge this committee to endorse this request.

Mr. PASSMAN. Thank you, sir.

POSSIBILITY OF DEOBLIGATING FUNDS OBLIGATED IN FISCAL YEAR 1962 FOR AFGHANISTAN PROJECT

Last year we were told there was a possibility Afghanistan would open its border so as to receive our generous aid. They funded this project years in advance of the completion date in order, they indicated, to take advantage of any improved relations between Pakistan and Afghanistan so they could move all the materials in.

They used $23.7 million out of the Contingency Fund to fund this project years in advance.

I wonder, since less hostile feelings seem to prevail momentarily between Pakistan and Afghanistan, if this project will proceed now on a normal basis and, if so, will you deobligate any of these funds, or will it be carried through as the package was put together last year?

Mr. COFFIN. I cannot speak with authority on that.

If the judgment is that it makes sense to go through with it, we will go through with it.

Mr. PASSMAN. It made sense only then because they might not be able to get the material in. Even if they could not do so, however, they said they could use the material elsewhere in the area.

Now we are told there is a calmer situation in that part of the world and Afghanistan and Pakistan are exchanging ambassadors now.

We wish you would ascertain whether or not you are going to leave the program funded to completion, even though it may require years to complete, or whether you will go back to an orderly manner of funding. Will you get information for us on that matter?

Mr. COFFIN. Yes.

As you will remember, part of the reason was the option date of the contract.

Mr. PASSMAN. The record shows they said if they did not use the material in Afghanistan, it could be used elsewhere in the area. I do not want to get into an argument with you. We want to find out, since there seems to be a letup in the tensions prevailing between the two countries, whether you are going to leave the project funded until it is completed, or whether you are going to deobligate some of the money.

Mr. COFFIN. I do not see the logic, or the connection, between the present good condition of peace between the two countries.

Mr. PASSMAN. Simply because they said we were going to accumulate the materials so as to take advantage of any lull in the tensions to get them across the border. Since it is no longer necessary to stockpile material at the border, and it is no longer necessary to go a very expensive roundabout way to get the materials in, there may be some savings; also, there may not be any need of this type of program. You do have substantial funds deobligated every year, do you not?

Mr. COFFIN. Yes.

Mr. PASSMAN. I merely asked the question.

Mr. COFFIN. I will be glad to provide the information.

Mr. PASSMAN. Thank you.

(The information follows:)

AFGHANISTAN-KĀBUL KANDAHAR ROAD

The construction costs of the project were funded to completion because it was necessary to pick up the last remaining option in the contract before it expired. Since the Agency was committing itself to the private contractor to finance the remaining segments of the road, funds to fully cover this commitment were needed. Funds now obligated are required to complete construction of the road. Completion of the road is scheduled for October 1966.

CONTINGENCY FUND DEOBLIGATIONS IN PRIOR YEARS

Mr. PASSMAN. I believe that every year we ask for a recapitulation of all unobligated funds, do we not?

Mr. TENNANT. Yes.

Mr. PASSMAN. We usually put these data in the record?

Mr. TENNANT. Yes; that is correct.

Mr. PASSMAN. I believe my request is just as regular this year as in previous years, other than I asked you to pick up what is in the footnotes and put it in the body of the tabulation?

Mr. TENNANT. Yes.

Mr. PASSMAN. I believe that in previous years it has been customary for the administration to ask that any unobligated funds be reappropriated. I think it has been argued that milk tastes just as good from a black cow as a white one. Money is what you want. If you have the funds already on hand, intact, they would serve the same purpose as newly appropriated dollars, would they not?

Mr. COFFIN. Yes.

Mr. PASSMAN. Can you tell us the amount of money you deobligated from the Contingency Fund in fiscal years 1961, 1962, and 1963?

Mr. TENNANT. In fiscal year 1963, $13,076,000.

Mr. PASSMAN. From prior year appropriations?

Mr. TENNANT. Prior year accounts.

Mr. PASSMAN. Insert in the record a statement showing the projects from which you deobligated this money.

Mr. TENNANT. Yes.

Mr. PASSMAN. How about the other 2 years?

Mr. TENNANT. I do not have those figures with me.

Mr. PASSMAN. Please put them in the record.

(The information to be supplied follows:)

AGENCY FOR INTERNATIONAL DEVELOPMENT

Contingency Fund recoveries during fiscal year 1963 of prior year obligations (preliminary)—Detail by project

ORIGIN AND GROWTH OF CONTINGENCY FUND

Mr. PASSMAN. Years ago when this program started off, they asked for flexibility for the President. I think 10 percent out, 20 percent in; that is, transferability from one project to the other, so as to give the President flexibility to meet contingencies that might arise during the year, and it worked out very nicely. That was before the Contingency Fund was created in the form that it is today.

The Contingency Fund came in for a small amount and it was handled sparingly. There had to be an emergency before they would spend the money. But this thing started climbing rapidly.

This thing is like measles, it is contagious.

USE OF CONTINGENCY FUNDS FOR OVERALL FOREIGN POLICY PURPOSES

We notice all through the hearings they will have a little Contingency Fund, one in particular, $20 million.

Is it customary to make a political grant or loan out of the Contingency Fund? Is that practice quite regular?

Mr. COFFIN. It is not customary to make what we would call a political gift.

Mr. PASSMAN. Credit, gift, or grant?

Mr. COFFIN. Oftentimes, the Contingency Fund is used for overall foreign policy purposes. The aid to Vietnam is political in the sense that we think Vietnam's security is very important.

Is that the sense you are using the term "political"?

Mr. PASSMAN. You had a slug that went into Iran. They later bought gold with it.

USE OF CONTINGENCY FUNDS FOR LOAN TO INDONESIA

We had an emergency loan to Egypt.

Last year, for some reason or the other, and I am sure the people in the Executive know why, there was about a $17 million development credit to Indonesia.

It says here, and this is confidential, and we might as well go off the record.

(Off the record.)

Mr. PASSMAN. In your opinion, could this thing not have waited?

Mr. COFFIN. No.

Mr. PASSMAN. Why not?

Mr. COFFIN. I think it was important at the time to take that step in Indonesia.

Mr. PASSMAN. Did the IMF make a standby credit arrangement to Indonesia?

Mr. COFFIN. I believe they have.

Mr. PASSMAN. What date was that?

Mr. COFFIN. Yesterday, July 24.

Our loan was made before that.

Mr. PASSMAN. When did you make the commitment to Indonesia for $17 million?

Mr. COFFIN. That was last fall: December.

Mr. PASSMAN. When did you obligate it to Indonesia?

Mr. COFFIN. March 6, Mr. Chairman. That was the date of the obligation; i.e., when the loan agreement was signed.

Mr. PASSMAN. The IMF endorsed the stabilization program on July 24, and made available a standby credit. When was yours made?

Mr. COFFIN. The obligation, March.

Mr. PASSMAN. That was this year?

Mr. COFFIN. Yes.

Mr. PASSMAN. It appears to me you could have waited.

Mr. COFFIN. This was a matter of political judgment.

Mr. PASSMAN. This is political judgment. I want to read a newspaper article:

RED CHINA'S LIU, SUKARNO KISS, CONDEMN WEST—SUKARNO SAYS CHINA WILL SEE FALL OF WEST

DJAKARTA, INDONESIA, April 19.—President Sukarno today called Communist China and Indonesia "the pillars of the new emerging forces" and predicted the two nations will see the day when "the old established forces" will collapse.

Sukarno spoke at a state banquet given for him by Communist Chinese President Liu Shaochi, of Red China, who ends a 9-day visit to this country tomorrow. In turn, Liu referred to Indonesia and Red China as comrades in arms.

Sukarno refers to nations in Asia and Africa and the Communist bloc as "new emerging forces." He lumps most of the West under the "old established forces" description.

Mr. COFFIN. We have two choices: One is to read this kind of statement and say we have no further hope——

Mr. PASSMAN. Should we not let the atmosphere clear a bit and perhaps find friends to give this money to, rather than to some ruler about whom there is a serious doubt whether he would ever look our way?

Mr. COFFIN. The point is, we feel the loan made when we did and the way we did it, strengthened the movement in Indonesia toward a stabilization program in cooperation with the free world. Obviously, it was a calculated risk, and it seems to have been a good one.

Mr. PASSMAN. Of course, if you had been regulated as the IMF is, you would not have made a commitment at that time. It would have been duly and properly justified to the committees of the Congress.

ILLUSTRATIVE NATURE OF PROGRAM PRESENTED TO CONGRESS

I grant you, Mr. Coffin, that you had the authority to do it. We have been told many times that your presentations are illustrative, that you say "We want *x* number of dollars for these projects in these countries," but the law is actually broad enough that you could vacate every one of those projects and substitute a different list of projects altogether. The fact is, you could even remove them from one country and take them into another country. I think that condition is also true of the development credit phase of the program.

It has been testified frequently that, in effect the Congress might just as well have one brief session some afternoon and urge you people to give the money away sparingly, because so far as actually having any legal way of controlling this spending, we do not have that right. The Congress gave it up.

Have I made a statement of fact so far as its being illustrative?

Mr. COFFIN. Our presentations are illustrative, but the overwhelming part of them do conform with what we say to Congress we will do.

Mr. PASSMAN. I am just asking if I have evaluated the thing properly, that the law is broad enough?

Mr. COFFIN. I am not sure, Mr. Chairman. I have never asked myself about that.

(Off the record.)

Mr. COFFIN. The thing that concerned me was that it was overstated. You do have development lending as a category. You cannot use development loans for supporting assistance. You have development grants as a category. You do have the 10/20 transfer. There are these categories.

Mr. PASSMAN. With reference to the development credits, they say, "Yes, the same thing applies there. We do not know what projects we shall allocate the money to until we get it." So, that makes it just as loose as the other.

We are giving you a blank check, hoping for the best.

Mr. COFFIN. We are talking about the Contingency Fund?

Mr. PASSMAN. I am talking now about the Development Credit Fund that you mentioned. Did I describe it properly?

Mr. COFFIN. Not with the tone that I would use.

Mr. PASSMAN. Let me smile, then, and ask, is it not true that you do not actually create the projects, make the allocation, until you get the money to your credit?

Mr. COFFIN. That is true.

Mr. PASSMAN. The Congress has no way of knowing for what purposes you are going to spend the money. It is a country plan.

Within that plan, it could be anything that the minds of the AID people and the recipients decide they should start.

Mr. COFFIN. Now you are getting to that tone again.

Mr. PASSMAN. I cannot smile all the time.

I want the record to show how loose this program is. The Contingency Fund is just as loose.

OBLIGATIONS DURING FISCAL YEAR 1963

The list of projects can be placed in the record for 1963, can it not, Mr. Controller? This is not classified, is it?

Mr. TENNANT. I have not seen that sheet, sir.

Mr. PASSMAN. It is your sheet.

Mr. COFFIN. It says "Confidential."

Mr. MILLER. I think one or two sections could be excised and then it could be placed in the record.

(The information requested follows:)

AGENCY FOR INTERNATIONAL DEVELOPMENT

Uses of the Contingency Fund as of June 30, 1963 (preliminary)

[In thousands of dollars]

Area and country	Amount [1]	Explanation of use
Africa	6,210	
Algeria	673	Funds were obligated for a care-medico contract which provided curative and preventative medical services to the Algerian people.
Guinea	4,198	Funds were provided for a commodity import program, larger than that anticipated during the fiscal year 1963 congressional presentation, to aid the country's balance of payments. Contingency funds were also used for a contract with Air Alaska for civil aviation services.
Libya	27	Emergency disaster relief in the form of medical supplies, blankets, and tents were provided for the victims of its Barce earthquake.
Mali	655	Funds were used to finance a 6-month POL requirement in line with U.S. strategy of assisting the country ——.
Mauritania	47	Funds were obligated to provide inland transport of Public Law 480 titles II and III foodstuffs from Dakar for famine relief.
Morocco	500	Emergency assistance in the form of tents, blankets, field kitchen, and the transport of these commodities was provided for flood victims.
Tunisia	110	Following the floods in the Gabes region, approximately 14,000 blankets were provided to the injured and homeless victims of the disaster.
Far East	46,846	
Indonesia	19,774	A loan on medium terms to finance imports from the United States of essential spare parts and industrial materials to enable part of its latent industrial capacity to be reactivated was provided as a means to stabilizing the situation. Assistance was also provided to assist in equipping and training the Mobile Brigade (Mobrig), a special unit of the national police. Disaster relief assistance in the form of medical supplies was provided for flood victims.
Laos [2]	3,896	Assistance was provided for increased air services and relief supplies needed as a result of the growing number of refugees due to the recent fighting in the Plaine des Jarres.
Thailand [2]	9,861	Contingency funds were used for the construction of feeder roads, transportation and installation of a radio transmitter lent by the U.S. Department of Defense.
Vietnam	13,315	Contingency funds were provided for a flow of commodities necessary for effective continuation and implementation of the counter-insurgency and commodity import programs.

See footnotes at end of table.

Uses of the Contingency Fund as of June 30, 1963 (preliminary)—Continued

[In thousands of dollars]

Area and country	Amount [1]	Explanation of use
Near East and south Asia.	11,956	
Iran	1,679	Funds were used for relief operations in connection with the disastrous earthquakes of September 1962.
Syria	17	Salk vaccine was provided following an outbreak of polio in the rural areas.
United Arab Republic.	10,000	An amendment to the May stabilization-loan agreement was authorized in view of the matching contributions from European nations, a condition upon which the U.S. Government has promised to provide up to $10 million of additional stabilization assistance.
Pakistan	260	Emergency assistance was provided for medical supplies and air transport of them in the wake of the severe cyclones and tidal waves in East Pakistan.
Latin America	81,711	
Argentina	20,000	A balance-of-payments loan, part of the U.S. stabilization package, was provided following evidence of self-help measures designed to alleviate the serious domestic economic crisis.
Brazil	25,500	A loan was made by AID as part of the emergency assistance package provided by the U.S. Treasury, the Export-Import Bank, and AID to support Brazilian stabilization and development.
Chile	6	Contingency funds were used for public safety equipment in connection with the Cuban crisis.
Colombia	175	Contingency funds were used for public safety equipment in connection with the Cuban crisis.
Dominican Republic.	23,925	Contingency funds were used for the special economic readjustment fund which will assist in economic diversification necessitated by the overdependence on sugar as a source of foreign exchange, tax revenues, and employment. Contingency funds were also used for public safety equipment provided in connection with the Cuban crisis.
Ecuador	7,033	Contingency funds were used for public safety equipment in connection with the Cuban crisis.
Honduras	2,000	Contingency funds were used for an emergency budget support loan.
Trinidad, Tobago and East Caribbean.	3,000	The Contingency Fund was used for a U.S. commodity import program as part of the U.S. base agreement.
Venezuela	72	Contingency funds were used for public safety equipment in connection with the Cuban crisis.
Nonregional	1,270	
Disaster relief, worldwide.	131	This amount was obligated for relief from natural disasters in countries where the United States has an interest. Ambassadors or other principal officers are authorized to give emergency assistance to areas stricken by disasters up to a limit of $10,000 per disaster.
World food program	[1] 1,139	In September 1962, the United States pledged to the experimental world food program a contribution of $40,000,000 in commodities and $10,000,000 in cash and ocean freight over a 3-year period. Cash contributions from other countries have exceeded expectations and this payment from the Contingency Fund was made to meet the pledged 40-percent matching basis.
Grand total [4]	147,993	
Potential additional obligations pending:		
Department of Defense.	1,362	
Total potential obligations.	149,355	

[1] All obligations of the Contingency Fund have been under the supporting assistance authority except $1,139,000 (world food program) which have been obligated under the contributions to international organizations authority.

[2] Includes $37,000 in obligations against $1,074,000 allocated to Department of Defense. Department of Defense field reports are not due until Aug. 8, 1963.

[3] Excludes obligations against $325,000 allocated to Department of Defense. Department of Defense field reports are not due until Aug. 8, 1963.

[4] Excludes refugees and migrants, $1,394,000; administrative expenses, refugees and migrants, $328,000; Cuban refugees, $14,472,000. These funds were allocated by AID (subject to reimbursement by its respective agencies from funds appropriated under the Refugees and Migration Assistance Act of 1962 (Public Law 87-510)) and included in the Contingency Fund report to the Congress for the quarter ending Sept. 30, 1962. AID was reimbursed during the subsequent quarter.

Mr. PASSMAN. Have you observed, Mr. Coffin, how in AID they are working a contingency fund in every region?

Mr. COFFIN. Every region has contingencies.

Mr. PASSMAN. There is a contingency fund unprogramed, to be used as they see fit.

Mr. COFFIN. You are talking about the illustrative development lending?

Mr. PASSMAN. The total amount will not add up to the capital figure, and they have a contingency account built in that they do not know what they will use it for. This thing is spreading.

Mr. COFFIN. You confuse me. You are not talking about the contingency fund?

Mr. PASSMAN. I am talking about a contingency fund, or contingency funds. I am not speaking specifically about this one. We have run into these contingency funds ever since we started the hearings, not just this one.

Mr. COFFIN. In development lending, you cannot predict with accuracy how much you will lend in an area, how much it is wise to lend or for what projects.

Mr. PASSMAN. It is something new when you work these contingencies in. This thing is catching and spreading.

I think the Congress has abdicated too much of its responsibility in making these funds available in such manner. We think the money is going to be spent there, and in subsequent days and months we find the funds are obligated for different purposes.

Mr. COFFIN. Foreign affairs are a complex and shifting field where you cannot predict what is going to happen.

Mr. PASSMAN. And there is more shifting after we have shifted the dollars in, too.

USE OF CONTINGENCY FUNDS FOR BUDGETARY SUPPORT AND ECONOMIC STABILIZATION

Back to the larger contingency fund, last year we had some discussion of the use of the Contingency Fund to provide budgetary support to various countries. Has the 1963 Contingency Fund been used for that purpose?

Mr. COFFIN. As I said in my statement, in one of the categories, that of stabilization measures, $105.3 million is considerably less than the same type of expenditure for fiscal 1962, but we did make loans for stabilization purposes.

Mr. PASSMAN. That practice is about the same as budgetary support.

Mr. COFFIN. It is for economic stability.

Mr. PASSMAN. You make the payment to the Treasury of the Government, do you not? It is earmarked to purchase commodities.

Mr. COFFIN. Which are sold and provide revenues which are useful in various ways for the Government.

Mr. PASSMAN. But the Government substitutes these dollars for dollars which, if they had earned them and paid them into the Treasury, would have paid for the commodities.

Mr. GORDON. This is additive to what they would otherwise be able to pay.

Mr. PASSMAN. We have heard that story before. There is nothing to substantiate that assertion. Had the government to which you made the grant received into its treasury dollars from its own revenues, then it would have paid for the commodities with those dollars, would it not?

Mr. COFFIN. If we gave the money directly——

Mr. PASSMAN. Let us take country X. If they collect revenues from the people, had they received sufficient revenues to pay for the commodities purchased from America, we would not have needed to provide the money; would we?

Mr. COFFIN. There would have been no contingency or no urgency.

Mr. PASSMAN. Because of the fact that they do not have the money, we make a grant to their treasury so they can pay for the commodities. Is that correct?

Mr. COFFIN. We would give them a letter of credit which would be used by them to draw——

Mr. PASSMAN. To pay for commodities that they requisitioned.

Mr. COFFIN. To pay for commodities, to enable them to get commodities which would generate currency which would be useful.

Mr. PASSMAN. Even if you want to take an indirect approach, is that type of aid not budgetary support?

Mr. COFFIN. I would say it is certainly supporting the Government in its financial needs during a critical period.

Mr. PASSMAN. I think that is good enough.

CONTINGENCY FUND OBLIGATIONS DURING JUNE 1963

How much of the Contingency Fund was obligated in the month of June, of the total amount that you obligated during the 12 months?

Mr. TENNANT. During the month of June, $87.9 million.

Mr. PASSMAN. Out of what total?

Mr. TENNANT. Out of $150 million, roughly.

Mr. PASSMAN. That is what percentage of the total that was obligated in June?

Mr. TENNANT. There are a couple of unreported items which may turn up in June.

Mr. PASSMAN. That would raise it?

Mr. TENNANT. That would raise it a million dollars, roughly.

Mr. PASSMAN. Give us what you have there. What percentage of the total amount obligated in the 12 months did you obligate in June?

Mr. TENNANT. I am sorry I gave you the wrong figures, Mr. Chairman. I was reading the wrong figures. It is $51.5 million obligated from the contingency account in June 1963.

Mr. PASSMAN. Give us the percentage of the total amount.

Mr. TENNANT. Which is roughly 30 percent.

Mr. PASSMAN. It is nearly 34 percent; is it not?

Mr. TENNANT. Yes.

Mr. PASSMAN. You really are busy down there in June.

Mr. TENNANT. Many of these transactions were programed before June.

Mr. PASSMAN. But you really do a lot of firming up right at the end of the fiscal year.

Will you give us the comparable figures for fiscal 1962 and 1961?

Mr. TENNANT. I would have to supply that for the record.

Mr. PASSMAN. Please do so.

(The information requested follows:)

June Contingency Fund obligations, fiscal years 1961 and 1962

[In thousands]

	Fiscal year 1961	Fiscal year 1962
June obligations	$50,223	$89,506

Mr. PASSMAN. How about the last day of June? How much did you obligate?

Mr. TENNANT. Subject to the same qualification about these unreported items, the figure I have is $2,932,000.

Mr. PASSMAN. That was on June 30?

Mr. TENNANT. June 30.

Mr. PASSMAN. The time of the day would not really make any difference, because I understand you people worked mighty late down there on that Sunday, June 30.

Mr. FORD. It is very interesting, Mr. Chairman, as I look at this sheet, how much was obligated in the last 3 days of the month of June.

Mr. PASSMAN. That is quite interesting. Let us take Friday, Saturday, and Sunday, the 28th, 29th, and 30th.

Mr. ROONEY. That was a lost weekend.

Mr. FORD. It may have been lost, but it was expensive.

Mr. ANDREWS. That was the last call.

Mr. COFFIN. No; it was not the last call because, in fact, we turned back more than we said we were when we were up on the Hill earlier.

Mr. ANDREWS. I mean all you did not obligate by June 30 went back to Uncle Sam's Treasury.

Mr. PASSMAN. What are those figures?

Mr. TENNANT. Approximately $25 million, sir.

Mr. FORD. How many obligations and how many dollars were involved in the first 7 days of July 1963?

Mr. COFFIN. We can supply that, but I would say toward the end of the fiscal year——

Mr. ROONEY. You would expect it would be at the same rate, would you not, Mr. Ford?

Mr. FORD. No. I was simply asking the question.

Mr. PASSMAN. Do you have that information with you for July, Mr. Tennant?

Mr. TENNANT. No, sir.

Mr. PASSMAN. You can give us July of last year.

Mr. TENNANT. Yes, we have July 1962 here. I thought Mr. Ford requested figures for July 1963.

Mr. PASSMAN. It looks like zero here.

Mr. TENNANT. That is correct, sir.

Mr. RHODES. Do these figures you have given pertain to obligations of all types of funds, or only to no-year funds?

Mr. TENNANT. We are just talking about the Contingency Fund now. It is an annual account.

Mr. FORD. You could come to some very peculiar conclusions based on this kind of record.

Mr. COFFIN. I am sure you could. I would be glad to tell you how it looks to me, from the inside, and what explains this.

Mr. FORD. I would be glad to hear it.

Mr. COFFIN. I know it looks to you as if we were just sitting back and then waiting until the last month to see how much money we could get rid of. Actually, during the year, although we may program contingency funds as we see a need arising, we do not obligate that until we are sure whether or not it will come to pass. We hold back as long as we can. In the months of May and June, we harden up our estimates. We find out what we can put over to another year and what we do not need to do at all.

There comes a time when we have to fish or cut bait, and that it toward the end of the year, and it does result in a rise of work. It is not an attempt to throw away money. We tried to prove it this year by having the best record that we have ever had in terms of money we have sent back.

Mr. PASSMAN. Did you not actually have more transactions this year than in any other year?

Mr. COFFIN. In numbers?

Mr. PASSMAN. Yes.

Mr. COFFIN. I do not know, Mr. Chairman.

Mr. FORD. I think the explanation which Mr. Coffin has made is sound. As I understand it, Mr. Coffin is saying that they held back on these emergencies as long as they possibly could, in the hope that the emergencies would not materialize. If that theory is sound and if you ignore the end of the fiscal year, the theory would be just as good if you continued it on into July; would it not?

Mr. COFFIN. We know we are going to have to meet a need unless we get rid of the need entirely. Taking Vietnam, at that point we would have to fund a program in Vietnam and we made the decision to fund it. You must have some cutoff point in terms of a fiscal year to know what is your irreducible minimum for that year.

It does show in July very little activity. Intrinsically, we could have an internal rule that instead of June being the date, we will say that July is the date or, more realistically, February is the date.

Actually, it is a problem in internal management. Our people get a late start in programing the funds. I am now talking about all programs. They really do not know exactly what money they are going to get until the fall.

Mr. FORD. That is not really the Appropriations Committee's problem. It is the delay in the authorization bill.

Mr. COFFIN. I think all of us have a share in the responsibility. We shall try to get started earlier next year.

Mr. PASSMAN. Incidentally, if it will not upset what you were going to say, I have been chairman of this subcommittee 9 years, and they have always been going to get started earlier, but it obviously is getting later. Here we are now almost to August, and there is no authorization bill in sight yet, Mr. Coffin.

Mr. FORD. May I add this. I applaud the executive department's program of not obligating all the funds in the contingency program. However, there cannot be any denial of the fact that the only reason you obligated so much in June was the fact that the money would have expired on June 30.

Mr. COFFIN. That is undoubtedly a fact. That is a cutoff point beyond which we are unable to say to the Vietnamese that we have money that we could use, because we have already by that time made our presentation for the following year. These are conditions that are current and have to be met currently.

Mr. RHODES. I think Mr. Coffin has explained it very well. This is a point at which you have to "fish or cut bait" as far as the projects are concerned. If you do not "fish," you do not have any money after July 1 to finance these particular projects.

Mr. COFFIN. May I finish my thought. We get our money in the fall. Then our people really get down to seeing what can be done with the money we have which is allocated to the various countries. During the fall they are working on getting their final programs.

Then comes the work of actual obligation. We are trying to work toward an evening out of this great curve that peaks up in the spring. This is an internal management job.

Mr. PASSMAN. What you do is entirely regular and in keeping with the legislation, but it does not keep me from being suspicious of the fact that you—if not you, the field—could possibly recommend obligating funds for projects that you had not firmed up, that later you would have to deobligate. On June 27, you show an allocation to Vietnam, $10 million for some project. Vietnam again, June 28, another project, $454,000. Vietnam still another time, $272,000. Mr. Controller, covering June only, kindly let us know when you first programed each one of the projects, from June 1 through June 30.

Mr. COFFIN. I would like to add any explanation as to why that time was picked, the history leading up to it.

Mr. PASSMAN. You may do so.

[1] In addition, obligations totaling $1,362,000 under funds allocated to Department of Defense, for which no reports have been received, are presumed to have been obligated during June. These funds are included in the amounts programed for Laos and Thailand as follows:

[In thousands of dollars]

Countries for which funds allocated	Allocations to DOD		Obligations as of May 31, 1963, reported by DOD	Potential obligations pending report by DOD
	Date programed	Amount		
Laos	Apr. 22, 1963	1,074	37	1,037
Thailand	May 20, 1963	100	--------	225
	June 13, 1963	225	--------	100
Total	--------	1,399	37	1,362

Mr. PASSMAN. We want to know when you programed each one of the projects that you obligated in June. Could you give us that information?

Mr. TENNANT. Yes, sir, surely. Do you want it now?

Mr. PASSMAN. You may put a copy in the record, but we want it submitted to the committee.

Mr. TENNANT. The June transactions.

Mr. PASSMAN. Ordinarily, how far does the obligation follow the date of programing?

Mr. TENNANT. There is no set pattern, sir. Normally after we program a transaction there are problems in negotiating with individual countries on the details. In some cases it is a fast transaction and in other cases it is slow.

Mr. PASSMAN. It is pretty generally agreed that you could not justify $200,000 or $300,000 on the type of presentations you submit here. This is the loosest thing we have ever had to deal with.

Mr. ROONEY. This Agency is no different from any of the other agencies I have come across in my time insofar as spending money in the month of June. It is just a normal accepted procedure. They work harder to get the project on the way.

Mr. PASSMAN. Off the record.

(Discussion held off the record.)

Mr. PASSMAN. Did you make any transfers from the Contingency Fund to any other appropriation during fiscal 1963?

Mr. COFFIN. There was a transfer which we made and unmade to the military. That is, toward the end of the year we thought the military—the military thought—it would have to have the transfer from the Contingency.

Mr. PASSMAN. We are familiar with that situation.

Off the record.

(Discussion held off the record.)

Mr. COFFIN. What was done was prudent on both counts. It was prudent on their part when they found out that as the accounting became clearer in the last few days of June that they had recoupments and money available to say they didn't need it, even though they realized it was awkward, but to tell us there was no longer any need, so we took it back—I think this is an example of good management on both sides.

Mr. PASSMAN. It is a smooth operation when you recoup the same amount of money that you need.

I do not want to embarrass anybody so I will go off the record.

(Discussion held off the record.)

Mr. PASSMAN. Mr. Rhodes?

Mr. RHODES. Mr. Coffin, can you deobligate in a current fiscal year funds obligated in prior fiscal years from the Contingency Fund for a particular program in a particular country and then reobligate those funds during the current fiscal year as a new Contingency Fund obligation but only for the same general purpose as the original obligation?

Mr. COFFIN. The answer is that reobligations must be for the general purposes of the appropriation category under which the original was made. For example, Contingency Funds originally obligated for a supporting assistance purpose may, if deobligated, be reobligated only for a similar purpose, that is, supporting assistance.

Mr. RHODES. In other words, if Contingency Funds are deobligated they revert to the Contingency Fund and they are then available for reobligation?

Mr. COFFIN. Yes, sir.

Mr. RHODES. And since projects are justified to Congress only under other categories of appropriations and under fiscal year 1963 legislation, reobligations are limited to projects so justified, reobligations of prior year Contingency Funds would not be available to supplement the current year's Contingency Fund appropriation.

Mr. COFFIN. That is correct.

Mr. RHODES. However, if the reobligation authority is continued, such reobligations could supplement the other appropriations.

Mr. COFFIN. That is not entirely true because Contingency Fund deobligations in fiscal year 1964, if any, will be part of the recoveries under other categories of appropriation which we estimated in making our fiscal year 1964 appropriation requests for these other appropriations.

Mr. RHODES. That is all.

SURVEYS OF INVESTMENT OPPORTUNITIES

Mr. PASSMAN. Mr. Coffin, may we now receive your statement on the surveys of investment opportunities and investment guarantees?

(The statement referred to follows:)

STATEMENT OF PRIVATE ENTERPRISE PROGRAM, AGENCY FOR INTERNATIONAL DEVELOPMENT, INCLUDING INVESTMENT SURVEYS AND INVESTMENT GUARANTEES

In the last year AID has substantially increased its program to mobilize greater participation of private enterprise in the development effort. We are not asking for an appropriation for this program, with the exception of a reappropriation of the unobligated balance from fiscal year 1963 to fiscal year 1964 for surveys of investment opportunities. Investment surveys cannot be divorced from the entire private enterprise effort; therefore the attached statement sets forth this vital program.

This administration, like its predecessors, is dedicated to the proposition that the foreign assistance effort cannot succeed without a substantial increase in the participation of private business, both from the United States and from the countries whose economic and social development is a major goal. In view of the repeated congressional articulations of the vital role which free enterprise must play, it would be presumptuous of me to dwell at length upon the reasons for this policy. I take it, however, that there are at least three major ones:

1. The United States has a national interest in the maintenance by all friendly countries of a significant measure of private initiative in these growing economies and in the avoidance of state control of all phases of economic and social life;

2. If we are to assist in the industrial and agricultural growth of these countries, we must mobilize the essential technological and management skills which are to be found in industry, agriculture, and labor and not in government; and

3. Since we are committed to the ultimate termination of external governmental assistance, we must encourage private capital, private investment and private enterprise to assume responsibility for the continuation of that development.

I

COMMUNICATION WITH THE BUSINESS WORLD

Our first function, at least in point of time, has been to communicate to businessmen, here and abroad, the basic policy of the U.S. Government regarding private investment in the foreign assistance program. If we are to achieve that synthesis of private and governmental effort which offers the only hope of success in international development, we must communicate to potential investors that our Agency and our Government strongly support private international ventures in developing countries.

The Secretary of State and the Administrator of AID have in recent months enunciated this policy with increasing emphasis. Above all, President Kennedy has demonstrated in his recent message to the Congress on foreign assistance that he regards the problem as one of the highest importance. You will recall that he said, "The primary new initiative in this year's program relates to our increased efforts to encourage the investment of private capital in the underdeveloped countries * * * Economic and social growth cannot be accomplished by governments alone."

To disseminate as widely as possible practical information regarding the concrete statutory mechanisms which the Congress has provided to our Agency to encourage and to facilitate specific private investments, AID prepared early this year a booklet entitled "Aids to Business (Overseas Investment)" which for the first time summarizes each of the programs and describes in nontechnical language when they are appropriate, how they operate, and how they may be applied for and used.

THE STATUTORY TOOLS

We have been aware that many of the mechanisms contained in our statute have needed to be given broader application or brought into sharper administrative focus. In some instances we have had to launch programs for which legal authority existed but which had not yet got off the ground. Since these are the basic tools with which we operate, I should like to refer to each of them separately.

1. *Specific-risk investment guarantees.*—The oldest and best known of all is the so-called specific-risk investment guaranty program, by which we insure U.S. investors against the political risks of expropriation, nonconvertibility of currency, and war damage.

Between calendar years 1961 and 1962, the dollar volume of new guarantees increased sixfold—from $71 million to $440 million. We estimate that in fiscal year 1964 the dollar volume will exceed one-half billion dollars. There are now outstanding approximately $900 million in such guarantees.

We anticipate that this form of guarantee will continue to increase both in amount and geographical coverage. There are still some countries where the guarantees are not available.

The Congress recognized that the geographical coverage of the program needed broadening and in 1961 paved the way for a liberalization of the form of the bilateral agreement with host countries. We have accordingly revised our contract forms and our procedures for dealing with them. We have made an intensive effort to bring additional countries into the program and we are making progress: guarantees are now available in Colombia and Venezuela; six other less-developed countries have become eligible since the beginning of 1963 bringing the total to 55; and we have been able to eliminate the legal and constitutional objections put forward by other governments.

We are now engaged, with the direct support of the President and the Secretary of State, in direct negotiations with the governments of a number of Latin American Republics, urging that the necessary agreements be concluded. We believe that the conclusion of an agreement will assist in attracting significant amounts of U.S. investment into productive enterprises in these countries when the guarantees are legally permissible.

In the past year we have also attempted to simplify the procedures for the issuance of the guarantee contracts with investors. We are working now to standardize contract forms and to make available to the public and to appropriate officials a revised and comprehensive set of ground rules. Increased personnel are being added to deal with the huge backlog of applications.

2. *Extended risk guarantees.*—The Agency has in the past year begun the implementation of the special Latin American housing guarantee provision under which we have been granted the power to insure against virtually all investment risks, so long as there is retained an appropriate private participation in the venture. Congress has in section 224 of the act established general guidelines for this pilot program and has suggested that the Federal Housing Agency guarantee be used as a model.

Five major guarantee projects in four countries have been approved and authorized and others are under intensive review.

3. *Investment surveys.*—The program to induce U.S. companies to seek investment opportunities in less developed countries has been effectively implemented in fiscal year 1963. It is developing into a useful method by which prospective investors—generally medium sized companies—are induced to invest in friendly less developed countries. This program encourages potential U.S. investors to survey specific investment opportunities in less developed friendly countries which they would not otherwise investigate. Under section 231 of the Foreign Assistance Act of 1961, as amended, AID may pay up to 50 percent of the cost of the approved surveys. If the prospective investor then proceeds with the investment, there is no cost to the U.S. Government and the investor retains exclusive rights to the survey. If the prospective investor does not make the investment, the survey becomes the property of the U.S. Government which pays up to 50 percent of the approved cost of making the survey.

To date, this program has met with a lively response from many medium-sized companies which would ordinarily not be willing to explore investment opportunities in these countries. In fiscal year 1963, 24 such investments were granted for varied purposes, including: Exploring the possibility of manufacturing prestressed concrete forms in Argentina; investigating the feasibility of a dairy plant in Colombia; undertaking an investment survey of the need for castings in four Latin American countries; investigating the possibility of a seafood industry in India; exploring the need for food supermarkets in four Latin American countries; investigating the feasibility of furniture manufacturing in Thailand. About 40 applications for investment surveys are now also under intensive review.

The names of many of the companies receiving grants are unfamiliar; such as the Crawford Furniture Manufacturing Co. of Jamestown, N.Y.; the Livingston Coating Corp. of Charlotte, N.C.; the American Concrete Crosstie Corp. of Florida, Tampa, Fla.; among others.

Because the opportunities are largely in countries of higher investment risk, some of the surveys are not expected to result in investment. However, the modest cost of these surveys will be repaid many times their value, in terms of jobs and economic growth, to the countries in which investments are made.

The total amount of money involved in this program is relatively small. The contracts already authorized and obligated involve an aggregate AID exposure of approximately $350,000 while the surveys now in the review process involve an additional contingent liability of less than $500,000 if all were approved. Yet we have found that the willingness of the U.S. Government to agree to share in the cost of making specific investment surveys preliminary to investment commitments constitutes a meaningful inducement to potential investors. It not only cuts in half the risk of loss if the survey does not eventually blossom into a project; it is a concrete demonstration that the U.S. Government is interested in having private U.S. businessmen investigate the possibilities for profitable ventures in the less-developed countries. This statutory program, perhaps more than any other, promises to be helpful in bringing medium-sized American companies into this important phase of international business.

In joint ventures similar to the ones this program seeks to induce, there is virtually no capital outflow. Rather, the U.S. partner usually provides U.S. machinery, equipment, components, or subassemblies and other materials. Dollars which are invested in the developing countries by private U.S. firms inevitably result in substantial additional exports from the United States and a return flow of dollars in the form of dividends, royalties, technical service fees, etc. Such investment is not a dollar drain. One has only to look at our dollar surplus on trade account with such countries as Canada and Western Europe, where U.S. companies have made substantial investments.

4. *Local currency loans.*—As of January 1, 1962, AID took over from the Export-Import Bank the function of making loans under the so-called Cooley amendment to Public Law 480. Under this provision, loans may be made to American companies and their affiliates, or to any firm if their use will expand markets for U.S. agricultural products, in local currency generated by the sale of surplus agricultural commodities to developing countries. A maximum of 25 percent of such local currencies can be allocated for this purpose.

Unfortunately these local currencies are not available in many countries where they would be useful. We have the equivalent of $180 million in such currencies now available for lending but approximately one-third of this sum is in India and if the available funds in Egypt, Pakistan, and Turkey are added to those in India, they represent about 70 percent of all such funds.

The lending of local currencies under the Cooley amendment has continued at an increased pace. Since the stewardship of AID began on January 1, 1962, 68 loans have been negotiated with American firms or their affiliates; the local currencies involved in these loans had an aggregate value of the equivalent of $61 million by close of fiscal year 1963. Definitive guidelines and procedures have been prepared and quarterly announcements of the availability of funds publicized. We are hopeful that the vast majority of the Cooley funds now on deposit will ultimately be loaned for productive private ventures in the respective countries.

5. *Dollar loans.*—The Foreign Assistance Act permits us to lend dollars to private firms whether they be American or controlled by nationals of the host country. Since the formation of AID in November of 1961, dollar loans to 14 private borrowers have aggregated $167 million but this figure does not include loans to or through development banks to which I shall refer later on.

For a number of reasons, the dollar lending functions of AID have been a relatively minor factor in the overall development loan picture. In the first place, the Export-Import Bank makes loans to private borrowers on roughly similar terms and AID may not lend when its sister agency is able to. Both agencies are, moreover, bound by the requirement that dollar loan proceeds be spent for goods and services in the United States. Secondly, the existence of an ever-increasing number of development banks and other intermediate lending institutions tends to meet the needs of many private borrowers. Finally, since the loan requirements of most private borrowers are for comparatively smaller amounts, it is often administratively inefficient for an agency like AID to process them; wherever possible, the applicant is advised initially to explore the possbility of borrowing from the local development bank.

A special task force is now at work within the Agency preparing a new procedural framework by which smaller loans may be handled on an expedited and simplified basis.

6. *Development banks.*—Development banks and similar intermediate credit institutions are an additional and useful tool for the assistance of private investors. Our Agency, along with the Export-Import Bank, the World Bank, and the Inter-American Development Bank, has been instrumental in providing financial assistance to institutions of this kind all over the world. They are of var-

ious types and offer assistance in the fields of industry, agriculture, and housing. They assist in the economic development of less-developed countries by financing and promoting private enterprises, particularly small and medium-sized ventures. They serve as local channels for investment in the private sector by providing capital and, in many cases, various types of management assistance.

In the past 5 years AID and its predecessors have authorized loans of $386 million to such institutions. From its inception through the close of fiscal year 1963, AID had authorized loans totaling $170 million.

Some of these banks have been operating effectively, some less so. Our Agency is now engaged in a comprehensive effort to provide expert technical guidance to those institutions which have been slow in making use of these funds. We have issued comprehensive guidance summarizing our policies and procedures with respect to loans to development banks and subloans made by them. We have, among many other things, made clear our general preference for private ownership of these institutions wherever it is feasible.

7. *Prototype programs.*—We recognized the need to concentrate the efforts of the Agency at the outset in the encouragement of private investment in a number of selected countries. Accordingly, we requested each AID regional bureau to designate one country, friendly to the United States, receptive to foreign private investment, and possessing a potential for economic growth. The countries selected for this pilot program were Colombia, Nigeria, Pakistan, and Thailand. In each country the Embassy and the AID mission were requested to select, in consultation with the host government and the local business community, a small number of industries of a priority nature that would be appropriate for private sector investment.

These industries were subsequently identified and an active program instituted to seek out specific investment opportunities to bring to the attention of potential U.S. investors. Interestingly enough, some of the industries thus selected were common to at least three of the four countries—food processing, lumber, and paper products and various forms of metalworking and machine tools.

Our Private Enterprise Division, in cooperation with the officers of our regional bureaus and with other agencies of the Government, are now engaged in matching these identified investment opportunities with the investment programs of specific U.S. firms. To this end we make full use of the industrial and publication resources of the Department of Commerce, consult with trade associations, banks, and management consulting firms and ultimately make direct contact with individual companies. In dealing with potential investors we use all the statutory devices which I have described. We act as catalysts in the creation of new joint ventures between local and U.S. businessmen. We are also sharpening the tools themselves and thereby developing techniques which we can apply later to additional countries.

I am happy to report that a number of new investments appear likely to result from this concentrated program. In Colombia, a dairy company has completed an investment survey and is proceeding with a joint venture to produce dairy products. A number of U.S. firms are considering partnership ventures in the fields of food processing, metalworking, lumber, and building materials.

In Nigeria, another major dairy company, with our assistance, has committed itself to make a half million dollar investment to build a reconstituted milk plant in Lagos with Nigerian partners; it has applied for an AID political risk investment guarantee. Likewise, a major U.S. automobile manufacturer, after intensive consultations with the AID contractor in Lagos, has submitted a proposal to the Nigerian authorities for an automobile and truck assembly plant to exceed $1.5 million, also to be guaranteed against political risks by AID. A New York bank will invest in a newly established banking corporation.

In Thailand, a joint venture between a U.S. cable and wire manufacturer and a local Thai firm is under active negotiation as a direct result of our Agency's efforts. The U.S. partner has applied for an investment survey to study the economic and technical feasibility of the proposed joint venture. Our mission in Thailand and our Far East Bureau in Washington are cooperating with a potential investor in an aluminum fabricating plant.

In Pakistan, an investment proposal for a tire plant is now going forward. Moreover, investment survey grants have been approved for Pakistan in a number of areas. Included among them are a carbon black plant, a machine tool operation, pulp and paper manufacturing plants, a plastics investment, and a seafood processing venture.

Although we are concentrating on these pilot countries, our activities in the private investment field are by no means restricted to these four. We have sent to each embassy and AID mission, in collaboration with the Commerce Department, instructions to report all likely investment opportunities in order that we may bring them to the attention of potenial U.S. investors.

A number of projects have come forward from several additional countries and are already on the drawing board or in negotiation. In Sudan, a joint venture has been organized to set up a chemical and pharmaceutical firm, making use of our Cooley loan and investment guarantee facilities. In northeast Brazil an opportunity in a bottling plant for fruit juices is being discussed with a number of American food processing companies. Textbook publishing investments are being planned in Mexico, Argentina, and Brazil. In Venezuela a group of medium-sized American firms, under the leadership of the Action Committee for International Development, is exploring a variety of concrete proposals for joint ventures.

THE IMPROVEMENT OF INVESTMENT CLIMATE

I have thus far been discussing the techniques we use to encourage new investment. Underlying all this activity is the basic AID commitment to the improvement of the investment climate in the developing countries. For many years our Agency and its predecessors have developed a variety of long-range programs to help to create a more general receptivity to private investment, local and foreign. These programs are continuing as an integral part of AID country programs.

Among the more significant efforts in this direction are the following:

1. *Assistance in the development of local laws and administrative regulations to encourage private investment.*—We have given this kind of help in Taiwan, Turkey, the Philippines, and Nigeria, among others.

2. *The organization and guidance of investment centers and development corporations.*—The Indian Investment Center has, with our assistance, undertaken a vigorous program to attract American, European, and Japanese firms to invest in Indian joint ventures; it maintains an office in the United States, conducts investment seminars with individual companies in key U.S. industrial cities and generally promotes U.S. business interests in India. The China Development Corporation has been notably effective in encouraging local as well as foreign investment.

3. *Consulting contracts.*—A number of professional firms under contract to AID have been assisting less developed countries in their efforts to promote private industrial development.

4. *Participant training.*—Our Training Division brings to this country large numbers of government and industrial personnel each year. In fiscal year 1963 almost 1,300 persons in the fields of industry and mining were trained in the United States and an additional 338 persons were sent to other industrialized countries.

5. *Vocational training and productivity centers.*—Programs of this kind are underway in many countries in Latin America, in Pakistan, in Korea, and elsewhere.

PROFIT AND RISK AS FACTORS AFFECTING INVESTMENT IN UNDERDEVELOPED COUNTRIES

There have been many recent diagnoses of maladies which beset private investment in the less developed countries. Government officials and public-spirited private citizens have sought to analyze the major deterrents to accelerated growth in the private sector. Essentially, they all agree that there are two fundamental factors—profit and risk. A low rate of return and a high degree of risk will inevitably drive investment capital away. Conversely, the prospect of a good return and the capacity to minimize risk will serve as a magnet to attract large amounts of venture capital.

To reduce the risks, our Agency proposes (1) to continue on a long-range basis all activities aimed at the improvement of investment climate, and (2) at the same time to strengthen and expand our investment guarantee program.

Accordingly, we have requested an increase in AID's present issuing authority for specific risk guaranties from $1,300 million to $2,500 million. The total amount of coverage now outstanding is approximately $900 million. This means that if the program were to continue merely at no more than its current rate, we would exceed the present ceiling by the end of the coming fiscal year. The requested increase will be adequate for several years and will assure a necessary

degree of continuity in the program. There are at present on hand 875 applications seeking guarantee coverage of a face value of more than $3 billion.

The amendments requested by AID in the investment guarantee sections of the law are responsive to the suggestions made by the 87th Congress concerning the reserves standing behind the guarantees. One amendment is, in effect, a confirmation and an explicit congressional statement to the effect that the guarantees are backed by the full faith and credit of the United States.

The most significant change is designed to make the current reserves, amounting to nearly $300 million, available to serve claims which may arise on a first come, first served basis. Any sudden influx of substantial claims would necessitate a request to Congress for further appropriations but, since the guarantees are full obligations of the Government, and the history of claims over the past 15 years indicates that the present reserves are more than adequate to take care of claims likely to arise in any one year, AID is making no request for additional appropriations for fiscal year 1964. In addition to these legislative changes, the Agency will, as I have indicated, press for broader geographical coverage for investment guarantees, will continue its efforts to simplify and standardize guarantee procedures, and will proceed to launch the extended risk program.

In order to provide additional incentive for investment in less developed countries, the President is recommending a new investment tax credit on a trial basis.

The Treasury Department is now drafting a bill which will be sent forward to the Congress when it is completed. There are many technical problems in the drafting process which require careful resolution. We are at this time unable to report in detail upon a bill which is not yet fully written, particularly when the responsibility for drafting it rests with another department.

As the President said in his message to the Congress, the bill will constitute a tax credit for all new investments made in developing countries and it will apply in some measures to reinvestment of earnings in those countries. We are confident that with the increased rate of return made possible by this proposed new tax provision, private investment in these countries will increase substantially. In those marginal cases in which a businessman is faced with a choice of places in which to invest, this tax inducement will be a decisive factor. It will serve finally to demonstrate the importance which the administration attaches to the participation by private business in the foreign assistance effort.

As the President also indicated in his message, our Agency is committed to strengthen and enlarge its activities in the area of private enterprise. In Washington and in the field a larger share of our total resources will be directed to fulfilling that commitment. We shall increase our "efforts to assist in the development of vigorous private economies in the developing countries" and we shall broaden our "facilities for mobilizing and assisting the capital and skills of private business in contributing to economic development."

*Investment surveys approved and obligated, fiscal years 1962 and 1963**

Year and company	Project	Country	Maximum AID participation	Date approved
Fiscal year 1962: Archer-Daniels Midland	Paint resin manufacturing	Pakistan	$1,750	June 30, 1962
Fiscal year 1963:				
Africa-Europe: McGraw-Hill	Book distribution	Nigeria	1,450	June 28, 1963
Far East:

*All of the above surveys have a maximum AID share of 50 percent.

Mr. PASSMAN. This is the account, the investment surveys, whereby a firm may ask for an allocation to go abroad to look for an investment opportunity. If the investment is made, and we make a loan, then you subtract the cost of the survey, and if he makes the investigation and does not apply for a loan or open up a business the Government pays for half of these expenses. Is that a correct summary?

Mr. COFFIN. That is correct.

Mr. PASSMAN. The Government pays for only half of these vacations?

Mr. COFFIN. That is right.

Mr. PASSMAN. Thank you.

REQUEST FOR REAPPROPRIATION OF UNOBLIGATED BALANCE

Mr. COFFIN. I don't want to take the time of the committee, but I want to make a brief statement and insert a longer one.

We are not asking for money in the sense of an appropriation. We do ask for a reappropriation of the unobligated balance which is about $1 million.

I think the hearings of the committee, to be complete, should have something about the program. We are very proud of it.

Mr. Davies and his associates——

Mr. PASSMAN. Please insert your statement in the record.

OBLIGATIONS AND DISBURSEMENTS UNDER INVESTMENT SURVEYS PROGRAM

What has been the amount of disbursements under this fund since its inception, Mr. Controller?

Mr. TENNANT. There have been no disbursements from his account through June 30, 1963.

Mr. PASSMAN. How much have you obligated to American firms looking for investments?

Mr. COFFIN. In fiscal 1963 we had 24 surveys with an obligation of $350,023.

Mr. DAVIES. This includes $1,750 obligated in fiscal year 1962. The actual figure is $348,273 for fiscal 1963.

Mr. PASSMAN. I did state correctly that an American business can go abroad looking for a place to invest money, and if they decide against doing so, you reimburse them for half of the expenses?

Mr. COFFIN. We exercise judgment.

Mr. PASSMAN. We know that but we want the facts in the record. That is the way it operates, is it not?

Mr. COFFIN. Yes, sir.

LIMITATION ON SURVEY COSTS

Mr. PASSMAN. How do you arrive at the limitation of expenses placed upon these individuals going abroad?

Mr. COFFIN. You mean the individual personal expenses?

Mr. PASSMAN. Let us say Parsons & Whittemore, Inc., would send some of their personnel to Honduras to check on paper, pulp, and sawmill possibilities. You obligate $46,900. How do you arrive at that sum being the cost of this firm's representatives checking on this matter?

Mr. DAVIES. Sir, we pay a maximum of 50 percent of the cost of the survey. We require a budget of both direct labor costs and other costs such as transportation for the conduct of the survey. We then go over these costs very carefully with the applicant for a survey grant.

We are in the process of considering whether any indirect costs should be paid for. At the present time we are considering a maximum payment of only 25 percent of total labor costs for indirect costs.

All of these figures are audited on the basis of vouchers which are submitted at the conclusion of the survey.

Mr. PASSMAN. You have not disbursed a dime from this account?

Mr. DAVIES. That is correct, sir.

Mr. PASSMAN. Let us take the Parsons & Whittemore, Inc., firm again. You indicate an obligation of $37,500 for them to investigate the possibility of a papermill in Thailand.

Mr. DAVIES. Yes, sir.

Mr. PASSMAN. Would you submit a breakdown of the $37,500 commitment?

Mr. DAVIES. Yes, sir.

Mr. PASSMAN. To the same company you made a commitment of $46,900 for Honduras. Will you also do the same thing there?

Mr. DAVIES. I would be glad to.

Mr. PASSMAN. We want too, a breakdown on this one: Sprague & Henwood International Corp., diamond core drill bits, $1,950. Will you get that information for us?

Mr. DAVIES. Certainly.

Mr. PASSMAN. And also Crawford Furniture Manufacturing Corp., $2,652, to Thailand.

Also you have McGraw-Hill book distributor to Nigeria, $1,450.

If you will give us a breakdown on those items we shall appreciate it.

(The information follows:)

INVESTMENT SURVEY

PARSONS & WHITTEMORE—THAILAND

Parsons & Whittemore is now completing an investment survey to determine the feasibility of establishing a paper mill and box factory near Bangkok, Thailand. Parsons & Whittemore intends to invest 20 percent of the equity in a $6.5 million kraft paper mill which would have an annual capacity of 45,000 tons. The plant when finished would employ between 400 and 500 people, and would produce paper products valued at the equivalent of $10 to $20 million. If Parsons & Whittemore should decide not to invest, AID will pay up to $37,500—one-half of the cost of the survey.

Budget

Total labor costs		$33,875.90
Living expenses in field, food, lodging, laundry, etc	$2,750.00	
International travel	7,895.30	
Local (Thailand) travel: Car, jeep, boat, airplane	1,500.00	
Local (Thailand) expenses: photographer, maps, photostats, photographs, communications, taxis, office supplies, out-of-pockets, etc	2,300.00	
Home office expenses: Printing, reproduction, composition, etc., communications, visas, out-of-pockets, etc	3,500.00	
Total expenses		17,945.30
Overhead		23,093.02
Total investment survey cost		74,914.22
AID portion, 50 percent	$37,457.11	
Parsons & Whittemore portion, 50 percent	37,457.11	
Total cost		74,914.22

PARSONS & WHITTEMORE—HONDURAS

In Honduras, Parsons & Whittemore is making an economic study of the potential for developing and operating an integrated pulp, paper and saw mill enterprise to process and market Honduras' unutilized forest resources. The survey will investigate plant sites, cost of wood and other raw materials, transportation, market studies, and an analysis of financial requirements. It is estimated that the equity portion of the plant would approximate $10 million with Parsons & Whittemore taking an equity position of approximately $2.5 to $3 million. Should Parsons & Whittemore decide not to invest, AID will pay up to $46,944—one-half of the survey cost.

Budget

Total labor cost		$38,893
Overhead		38,504
Travel		6,211
Per diem		3,780
Maps and photos		1,500
Printing		3,000
Communications and miscellaneous		2,000
Total investment survey cost		93,888
AID portion, 50 percent	$46,944	
Parsons & Whittemore portion, 50 percent	46,944	
		93,888
Total cost		93,888

SPRAGUE & HENWOOD—CHINA OR KOREA

Sprague & Henwood International Corp. of Scranton, Pa., manufacturers of diamond core drills and bits has surveyed a proposed manufacturing operation to be located either in China or Korea. Sprague & Henwood would manufacture diamond core drill bits and diamond reaming shells as well as salvage used diamond bits to reuse in manufacturing new bits. The company indicated that if the survey demonstrates that there is a sound opportunity they will proceed with an investment estimated at $145,000. If the survey does not prove feasible, AID will pay up to 50 percent of the cost—$2,950.

Budget

Round trip air ticket		$1,249.36
Per diem		867.15
Personnel cost, engineering and production		450.00
Personnel cost, other		383.56
Total investment survey cost		2,950.07
AID portion, 50 percent	$1,475.04	
Sprague & Henwood portion, 50 percent	1,475.04	
		2,950.07
Total cost		2,950.07

CRAWFORD FURNITURE CO.—THAILAND

Crawford Furniture Manufacturing Corp. undertook a survey including the investigation of the style of furniture used and manufactured in Thailand and surrounding countries, types of wood available and the limitation that might prevail in obtaining satisfactory woodworking craftsmen in Thailand and other related factors. While the company was not able to estimate a range of proposed investment, it was advised by its bankers that funds would be available for any sound project recommended by Crawford, regardless of its size. AID's maximum share of this survey would be $2,652 payable if Crawford decides not to invest and submits a technically acceptable survey.

Budget

Main airline transportation		$1,765
Local travel		1,178
Per diem		1,260
Miscellaneous		500
Communications, stenographic costs, purchase of samples, etc		600
Total investment survey cost		5,303
AID portion, 50 percent	$2,652	
Crawford Furniture portion, 50 percent	2,651	
		5,303

MCGRAW-HILL—NIGERIA

McGraw-Hill is investigating the possibility of establishing a book distributing organization in Nigeria. The survey will include market research on the most efficient and economical scheme for wholesale and retail distribution of educational, technical, scientific, and other publications. It will also study possible locations for the distribution organization. McGraw-Hill indicates it would take up to 90 percent of the equity in the investment which is expected to be in the $75,000 to $100,000 range. Should McGraw-Hill decide not to invest, AID will pay up to one-half of the cost of the survey or $1,450.

Budget

Salary of U.S. based investigation		$1,000
Transportation to and in Nigeria		1,200
Living expenses		500
Communications expenses		200
Total investment survey cost		2,900
AID portion, 50 percent	$1,450	
McGraw-Hill portion, 50 percent	1,450	
		2,900

EFFECT OF INVESTMENT SURVEYS PROGRAM ON U.S. BALANCE OF PAYMENTS

I believe the trend now is to try to get capital home rather than sending it out. Is that not what the President is thinking about?

Mr. COFFIN. That is correct.

Mr. PASSMAN. I wonder if he has canceled this program already or is thinking about it?

Mr. COFFIN. In our internal studies we have realized that the outflow of dollars is very, very small on this.

Mr. PASSMAN. Nevertheless if these people go out on these trips and do find they want to make an investment they are eligible for a loan from our Government, are they not?

Mr. COFFIN. No. They would have to justify that.

Mr. PASSMAN. You pay for the surveys?

Mr. COFFIN. Yes; up to 50 percent of the cost.

Mr. PASSMAN. The man decides he wants to open up this business in Thailand, a furniture manufacturer. Where does he get capital?

Mr. COFFIN. Perhaps from a Thai bank.

Mr. PASSMAN. Is he eligible for a loan from the Development Loan Fund?

Mr. COFFIN. On the same basis as any other applicant.

Mr. PASSMAN. That is understood. Would he be eligible?

Mr. COFFIN. We don't know until we have studied it. It may be feasible technically——

Mr. PASSMAN. I am not talking about whether you would approve the application. He is eligible to file an application?

Mr. COFFIN. Yes.

Mr. PASSMAN. If you think well of it you approve it, as you do any other application?

Mr. COFFIN. That would be so.

Mr. PASSMAN. Would you not assume that some of these people would expect American capital to help establish their businesses?

Mr. COFFIN. No; not necessarily.

Mr. PASSMAN. What is the policy on this matter?

Mr. DAVIES. Our policy is to state specifically that there will be no concern, that there will be AID financing should the applicant decide——

Mr. PASSMAN. Repeat that—"There will be no concern"?

Mr. DAVIES. There is no commitment to him that he will be eligible for AID financing.

Mr. PASSMAN. You do not tell him he will not be eligible, do you?

Mr. DAVIES. No, sir.

We will not make a grant unless there is a clear indication that the individual firm will itself be willing to make an investment abroad.

This to our way of thinking is a substitute to a large extent for foreign aid funds, provided you can get a company to put its own capital into a productive investment in that country.

Mr. PASSMAN. When we started this phase of the program 3 or 4 years ago the purpose then was to encourage capital to go out and build up interests in these nations.

Now the trend is to try to get them to come back home with their capital. Is that a statement of fact, that we are trying to bring capital and dollars back home?

Mr. DAVIES. Sir, in——

Mr. PASSMAN. Is that correct? Is that the President's policy now and our country's policy, to try to get capital home?

Mr. DAVIES. The President's policy specifically excludes the underdeveloped countries in its tax legislation and other programs to get capital back home.

Mr. COFFIN. May I add this? A fellow goes overseas to an underdeveloped country and builds his plant. To the extent that he uses U.S. materials and equipment, the outflow of dollars for that, even for the initial investment, is very small. We find this true in the whole investment guarantee program.

He has created a source of employment of people over there, earning local currency and generating foreign exchange which eventually he brings back.

The impact on the balance of payments is indeed very small initially and not at all ultimately.

Mr. PASSMAN. When we started this plan it was all right, but is it a little contrary to our presesnt policy? Is that right?

Mr. DAVIES. I would not suggest it is contrary, sir.

Mr. PASSMAN. Is it true?

Mr. DAVIES. No.

Mr. PASSMAN. How many underdeveloped countries are there out of the total of 112?

Mr. DAVIES. Approximately 80.

Mr. PASSMAN. Do you know?

Mr. DAVIES. Approximately 80, where we have AID missions or representatives?

Mr. PASSMAN. Do you include all of the new African countries?

Mr. DAVIES. Yes; most of them.

Mr. PASSMAN. You are placing how many countries out of the category of underdeveloped?

Mr. DAVIES. We are putting approximately 19 out, the developed countries.

Mr. PASSMAN. That is why—you add up to 99?

Mr. DAVIES. Some of the 112 are not AID recipients necessarily.

Mr. PASSMAN. It has been indicated, I believe, that for fiscal 1964 you intend to have 95 nations and 4 territories receiving aid.

Did you bring up that list?

Mr. TENNANT. The list is not completed. We will have it for you tomorrow.

Mr. PASSMAN. I have a lot of misgivings about this particular phase of the program.

We know the trend is different from when this thing started.

Off the record.

(Discussion held off the record.)

ANTICIPATED DISBURSEMENTS UNDER INVESTMENT SURVEYS PROGRAM

Mr. PASSMAN. You are asking for a small appropriation to continue, a reappropriation.

Do you anticipate any disbursements out of this account in the foreseeable future?

Mr. DAVIES. So far there has been none, but this is because we only got the program off the ground in July of 1962. Virtually all of the studies are still being undertaken and a decision to invest has not yet been made by these companies.

Mr. PASSMAN. Was there not an application from one of the hotel concerns to go out to Pakistan to see whether or not there should be a hotel built there?

Mr. DAVIES. Investment survey or Cooley loan, sir? There was a Cooley loan made for Pakistan.

Mr. PASSMAN. What was the firm?

Mr. DAVIES. Inter-Continental, part of Pan American.

Mr. PASSMAN. I should think they would know quite a bit about Pakistan with their investments there and their airline.

How much did it cost for the Pan American subsidiary to decide whether or not they wanted a hotel there?

Mr. DAVIES. I am not sure.

Mr. PASSMAN. Would you get that information?

Mr. COFFIN. This was not a survey.

Mr. DAVIES. This was not a survey grant.

Mr. PASSMAN. They were listed earlier. I think you will find it in the hearings.

How many of these people actually have already started moving in this direction and submitted bills for payment?

Mr. DAVIES. I believe one bill may have been submitted, and the Controller can look into it, for 1962. No bills have been submitted and paid for any of the surveys undertaken in 1963 fiscal year.

Mr. PASSMAN. This is for only one survey in 1962?

Mr. DAVIES. A report for a survey approved in fiscal year 1962 has been delivered to AID indicating that the investor does not intend to make an investment.

Mr. PASSMAN. That means you will have to reimburse him?

Mr. DAVIES. Undoubtedly we will reimburse him.

Mr. PASSMAN. That is the only one?

Mr. DAVIES. That is correct, sir.

Mr. PASSMAN. If you have the same kind of experience during the next 2 or 3 years would you think then we should give some consideration to abolishing this plan?

Mr. DAVIES. We believe many of the companies that undertake to look at relatively marginal investment opportunities will not find it feasible to make an investment. Therefore, if the program is successful in getting a few investments as a result of the program, in our view it will pay many times over the cost of having conducted these surveys.

Mr. PASSMAN. Your experience so far has been that one individual decided after going out he did not want to go into business. He submitted a statement to be reimbursed for half of his expenses?

Mr. DAVIES. That is right.

Mr. PASSMAN. If you have the same type of experience with four or five more of them in 3 or 4 years, none of them deciding to go into business, then would you conclude it would be time to stop this phase of the program?

Mr. DAVIES. If that were the case I would suggest yes.

PROCEDURE FOR ENTERING INTO INVESTMENT SURVEY AGREEMENTS

Mr. PASSMAN. Will you tell us just one firm which may have given some encouragement that they intend to go into business?

Mr. DAVIES. We have an indication from one company that it intends to make an investment in Nigeria.

Mr. PASSMAN. The name of the company?

Mr. DAVIES. A manufacturer of chemicals. We induced this company to look at an opportunity for an investment in chemicals in Nigeria.

NOTE.—Since AID is still negotiating with the American firm and Nigerian counterpart firm concerned, the Agency does not feel that their names should be released to the public at this time.

Mr. PASSMAN. You induced them? Are you soliciting people to go out and spend this money?

Mr. DAVIES. If we identify a given investment opportunity in a country where there is a joint venture local partner seeking additional capital, we do use this program to get a company to undertake to make a survey of that investment opportunity.

Mr. PASSMAN. Upon what basis do you get these people into action?

Mr. DAVIES. We obtain from our mission in the field a clear idea of what the investment opportunity may be. We then publish this in the pages of International Commerce, the Commerce Department's weekly, which is available to all firms who read International Commerce.

We will then call on any firms by letter, by telephone call, or in person that we believe would be potential investors and seek their cooperation in putting a team together to go out to that country and take a look at the investment opportunity.

We believe that a number of investments will be made in Pakistan, in Thailand, in Nigeria, in Colombia, as a direct result of this promotional effort which would not otherwise have been made.

Mr. PASSMAN. This particular one in Nigeria is what type of operation?

INVESTMENT SURVEY FOR NIGERIA

Mr. DAVIES. This operation would be in the chemical field.

Mr. PASSMAN. What company?

Mr. DAVIES. A firm out in California. I can get you the name.

Mr. PASSMAN. Do you get reports as to their capital structure and credit rating?

Mr. DAVIES. Yes, sir.

Mr. PASSMAN. Will you submit a copy of that report to the committee?

Mr. DAVIES. Yes, sir.

Mr. PASSMAN. Have you received the firm's application for a loan?

Mr. DAVIES. No, sir.

Mr. PASSMAN. Will you find out whether it is in process? Also, will you find out whether or not this firm's part of the capital is in U.S. dollars? If you are taking dollars out of the country you will agree that the effect will be the same, whether you take them from your own bank account or whether you take them out of the U.S. Treasury.

(The information requested was filed with the committee.)

Mr. DAVIES. Let me say that the particular company I was talking about did not actually obtain a survey grant. We induced it to go out to Nigeria and look at an investment opportunity there.

Mr. PASSMAN. Is this the only case where there is any indication they are ready to go now?

Mr. DAVIES. No, sir. There are others—Bressler Ice Cream Co. in Colombia, for example.

This is a fluid milk dairy which they are looking at, again on a joint venture basis with a Colombian firm, or individual.

Mr. PASSMAN. I think conditions have so changed since this thing started, there is no use to prolong it. I believe the President's message to the Congress indicates we had better start getting these dollars home.

COST OF ADMINISTERING INVESTMENT SURVEY PROGRAM

Tell us the cost of administering this survey program for fiscal year 1963. Are you the director of it?

Mr. DAVIES. No, sir.

We have in each of the four geographic regions at present one, or possibly two, people who are responsible for writing the survey application grants.

Mr. PASSMAN. The AID people have sent out individuals to these areas to receive applications from these people who go out looking for investments; is that the way it is?

Mr. DAVIES. No, sir. We receive the application from an applicant for a survey grant.

Mr. PASSMAN. The applicant is usually in the United States?

Mr. DAVIES. Always in the United States.

Mr. PASSMAN. You do not send personnel in the field?

Mr. DAVIES. Not for this purpose, not to obtain an application.

Mr. PASSMAN. How many do you have assigned to your operation?

Mr. DAVIES. In each——

Mr. PASSMAN. Total personnel.

Mr. DAVIES. Approximately six people are working on investment survey applications as part of their other responsibilities.

Mr. PASSMAN. Could you tell us the total cost of administering this survey program for fiscal year 1963, all phases of it?

Mr. DAVIES. Since this is not a full-time job——

Mr. PASSMAN. You will need to give us some idea of the cost.

Mr. COFFIN. We could give you an estimate.

Mr. PASSMAN. If you will, give us the total cost of salaries and particularly the paid advertising and the amount you have to reimburse the Department of Commerce for carrying these insertions in their publications.

As nearly as you can, give us the cost for 1963.

VALUE OF INVESTMENT SURVEYS PROGRAM

Mr. COFFIN. I would like to close this by saying it is to our interest to have American firms, private enterprise, and skills operating in foreign countries. I would think admittedly we do not know what the experience will prove, but it is very well worth while following through with for the time being.

Mr. PASSMAN. We certainly admit the trend is a little different now than when this plan started, that our balance-of-payments situation is more critical than it was.

Mr. COFFIN. This program, we think, will be a means of bringing in dollars rather than sending them out.

EXPENDITURES UNDER INVESTMENT SURVEY PROGRAM

Mr. ROONEY. Can you tell us at this moment how much has been expended to date on this program?

Mr. COFFIN. Nothing has been disbursed. We have made some obligations, but in terms of money paid out and bills coming in, nothing.

We do not pay out money until an investor who has made a survey that we approve of has come in and said he wants us to pay the 50 percent we owe him.

Mr. ROONEY. No money has been expended to date?

Mr. COFFIN. No. The surveys have been made.

Mr. PASSMAN. You have a group of bills pending for payment now?

Mr. COFFIN. Yes. This is one program——

Mr. PASSMAN. You induced a man to go out. He went out and decided against the project, and submitted his bill for payment?

Mr. COFFIN. Only one.

REQUIREMENT OF PROFESSIONAL REPORT

Mr. PASSMAN. Is it true that in three or four instances here, the expense listed just about covers the cost of an airplane ticket?

Mr. DAVIES. No. It will nearly always cover more than the airplane ticket.

Mr. PASSMAN. You know why I made the statement. What it costs to go out to Nigeria, or Hong Kong, looks like an airplane ticket.

Mr. DAVIES. In many cases it does, and in most cases it does not.

Mr. PASSMAN. If a man buys an airplane ticket and flies out to Bangkok or Hong Kong, and comes back in about a week and submits his bill for payment, I expect that if I were sitting in your place I would have a long look at the claim before I would issue the check.

Mr. DAVIES. We do, and we do require a professionally acceptable report from the applicant who has completed the survey. We would not pay for a mere vacation, but only for a professionally acceptable report which, we have the option then of making available to other companies in order to get them possibly to make an investment in one of these countries.

Mr. PASSMAN. When I indicate "vacation," that is my way of describing it. I do not ask you to second the motion. I am quite familiar with how some of these things work out.

MAXIMUM AID PARTICIPATION IN INVESTMENT SURVEYS OBLIGATED

Mr. FORD. When was this program authorized by law?

Mr. COFFIN. 1961.

Mr. FORD. Calendar 1961?

Mr. COFFIN. Yes. In the presentations for 1962.

Mr. FORD. It was authorized by law in calendar year 1961 and was presented as a program for funding in fiscal year 1962?

Mr. DAVIES. Yes.

Mr. FORD. I have in my hand this document which I presume was prepared by the agency.

Mr. DAVIES. Yes.

Mr. FORD. Which shows investment surveys approved and obligated, fiscal years 1962 and 1963. It shows in fiscal year 1962, the maximum aid participation was $1,750; is that correct?

Mr. DAVIES. Yes.

Mr. FORD. It shows that for fiscal 1963, the maximum AID participation, $348,273.

Mr. DAVIES. Yes.

Mr. FORD. As of June 30, the total obligation is the sum of those two figures?

Mr. DAVIES. Yes.

Mr. FORD. When would you normally expect these funds would be expended?

Mr. DAVIES. Only after the firm has completed the survey, analyzed the results of the survey, and its board of directors has made a decision they will not go ahead and make the investment.

Mr. FORD. That could be some time.

Mr. DAVIES. It is likely to be some time, and therefore, in the grant document we have an investment determination date by which the company commits itself to make a determination either to invest or not to invest.

Mr. FORD. What is the approximate length of that?

Mr. DAVIES. It varies considerably between one company and another. I could figure out an average for you. In many cases it is 6 months or more. In some cases it is over a year, or a year and a half.

ADMINISTRATIVE COSTS OF INVESTMENT SURVEY PROGRAM

Mr. FORD. I think it is important we have for the record, as the chairman has indicated, the total administrative cost of this program. I know it will be difficult where you have one or more people not working full time, but in the preparation of a budget I should think you would have to have some figure that was usable in working out the total budget for AID.

Whatever that figure is, let's put it in the record. I think it is important to show the salary grade, the total cost in every way you can so we can see whether this program is carrying its load or not.

Mr. COFFIN. I would say we are still in the experimental stage, and I would not predict you would find from the results we have you can be sure how many actual investments——

Mr. FORD. I think it is important to put in the record the number of applications and the projects that had not yet reached this stage.

Mr. DAVIES. There are approximately 45 applications in process for investment survey grants.

Mr. COFFIN. We will give you the whole story.

(The information follows:)

ADMINISTRATIVE COST OF INVESTMENT SURVEY PROGRAM

1. The following data are based upon indications from the four regional bureaus processing investment survey applications as to the time people within the bureaus spend processing investment surveys.

FE: 1 GS–12 ¼ of each day, ¼×$9,475	$2,369
LA: 1 FSR–2 ½ of each day, ½×$15,900	7,950
NESA: 1 GS–15 ⅕ of each day, ⅕×$14,565	2,913
1 GS–7 ½ of each day, ½×$5,540	2,770
AFE: 1 GS–15 1/20 of each day, 1/20×$14,565	728
DFPE: 1 GS–15 1/10 of each day, 1/10×$14,565	1,457
1 GS–13 ⅓ of each day, ⅓×$11,150	3,717
Subtotal	21,904
Secretarial support estimated at ¼ of $21,904	5,476
Legal and Controller's support estimated at ⅛ of $21,904	2,738
Total	30,118

2. No funds were expended on advertising the investment survey program although it was mentioned in a brochure entitled "Aids to Business" prepared by the Office of Development Finance and Private Enterprise which describes all of the private enterprise programs administered by AID. In addition, press releases are issued on many of the surveys granted.

3. No payment was made to the Department of Commerce for carrying insertions in that Department's magazine, International Commerce.

Mr. FORD. In theory, I think it is a good program, but I must concede, based on the achievement so far, it is of dubious value.

Mr. COFFIN. I do not think you can judge as yet.

Mr. FORD. Off the record.

(Off the record.)

Mr. FORD. I think you mentioned you had two men assigned to each area.

Mr. DAVIS. Approximately one, and in some cases two.

Mr. PASSMAN. Thank you very much, gentlemen.

THURSDAY, JULY 25, 1963.

AMERICAN SCHOOLS AND HOSPITALS ABROAD

WITNESSES

HON. LEONA BAUMGARTNER, ASSISTANT ADMINISTRATOR, HUMAN RESOURCES AND SOCIAL DEVELOPMENT, AGENCY FOR INTERNATIONAL DEVELOPMENT
DR. HAROLD ENARSON, DIRECTOR, EDUCATION SERVICE, AID
EDWARD F. TENNANT, CONTROLLER, AID
LEIGH M. MILLER, LEGISLATIVE PROGRAMS COORDINATOR, AID
STANLEY B. SCHEINMAN, LEGISLATIVE PROGRAMS COORDINATION STAFF, AID
DAVID MAYER, CHIEF, EVALUATION DIVISION, AID
KATHERINE CLARK, CONGRESSIONAL LIAISON STAFF, AID
DR. F. JOACHIM WEYL, DIRECTOR OF RESEARCH, AID
HERBERT W. DODGE, EDUCATION SERVICE AID

Mr. PASSMAN. We shall now hear from Dr. Baumgartner with relation to American schools and hospitals in the program.

General Statement

Dr. Baumgartner. Mr. Chairman and members of the committee, it is a pleasure to appear before you to discuss the request for a separate appropriation of $20 million to assist American sponsored schools and hospitals abroad.

No nation can develop to its full potential without responsible scientific, political, and economic leaders. Their number and quality bear directly on a country's growth and character. To further the well-rounded training of qualified leadership in developing countries, the United States has provided funds to American sponsored schools and institutions abroad. The Congress authorized such assistance under section 400(c) of the Mutual Security Act of 1954 and section 214 of the Foreign Assistance Act of 1961 which specifically authorizes dollar grants from regular development grant funds to such schools and libraries. It also authorizes local currency allotments for hospitals and medical centers.

JUSTIFICATION FOR SPECIAL AUTHORIZATION AND APPROPRIATION

Therefore, these institutions have had to compete for grant funds with technical assistance development programs in aid recipient countries. Financial support to the 10 institutions now being assisted simply does not fit into the conventional categories of foreign assistance. These are schools and hospitals chartered in the United States—with trustees made up largely of Americans and with American leadership—operating in foreign lands with the permission of the host governments. In the past, grants have been made directly to the schools, and are not channeled through the AID field missions. Such grants are not properly viewed as part of the country programs.

As the President stated in his message of April 1 to the Congress:

> Until now some assistance has been made available to these schools from general economic aid funds, but this is becoming increasingly inappropriate. Separate authorization and appropriations would be used to help these schools carry out long-term programs to establish themselves on a sounder financial footing, becoming gradually independent, if at all possible, of U.S. Government support.

DESCRIPTION OF SCHOOLS AND HOSPITALS FOR WHICH FUNDS ARE REQUESTED

In addition the Congress should have full opportunity to review the special considerations which justify limited financial support to American-sponsored schools and hospitals abroad.

I should like to describe briefly these schools and hospitals, outline the valued contributions they are making to the U.S. interest, point out why U.S. Government financial support is essential to their survival, and, finally, tell the committee the basis on which AID now proposes to proceed in materially strengthening their financial base.

Ten schools and hospitals have been given assistance in recent years. The eight schools in the Middle East are as follows: American University at Beirut, American University at Cairo, Robert College, American Farm School, Pierce College, International College, Athens College, and Anatolia College. One, the Escuela Agricola Panamericana, is in Tegucigalpa, Honduras, Central America. The American Research Hospital for Children is located in Krakow, Poland.

Generalizations about the nine schools can be dangerous. Each institution is unique, distinctive; each was established for a particular purpose to serve a particular student clientele. Moreover, each has evolved in its own fashion, adapting itself to the country, the people, the customs. The American University at Beirut, for example, is a complex, multipurpose institution of higher learning with advanced graduate programs serving students from many lands and fulfilling a unique role as a regional university. I can think of no other university anywhere in the world with this kind of special mission. The American Farm School in Greece, on the other hand, has as its single purpose the training of Greek youth from the villages in modern farm methods—a very narrow self-assignment.

A thumbnail sketch of each school is attached for review by the committee. The committee will note that some schools have received very little direct AID support while others have received relatively substantial amounts. This, too, reflects the fact of variety. Some schools can go it alone with little additional support. Others face extremely serious financial problems requiring substantial U.S. Government support, at least for the near future.

Yet the fact of variety cannot obscure the central features which the nine schools, without exception, share in common.

1. Each of the schools is American to the core, in the best sense of the word, in presenting in foreign lands what is distinctive in American education. The schools were set up by Americans, are led by Americans (both trustees and presidents or directors), depend on American sources of income, and—most important of all—uphold and maintain American standards of education. What does this mean? It means small classes, attention to the individual student, encouragement of initiative. It means that discussion is encouraged, that libraries and laboratories introduce the student to 20th century science and technology, that the spirit of free inquiry is insistently maintained. It means, in short, that the United States has in four countries of the Middle East living laboratories of American educational theory and practice.

No one can put a price tag on the contribution of these schools over the years to the educational systems of the host countries. But it can be said with confidence that important as has been the past contribution of these American "exports" their potential for future service to the developing nations, and thereby to the U.S. national interest, is even greater. The American schools abroad came into existence not through government fiat but through the determined efforts of dedicated Americans who believed that American education—with its emphasis on equality of opportunity, on free inquiry in the pursuit of truth, in freedom from ideological dogma—had something special to contribute to the troubled lands of the Middle East. The vision of these American pioneers has been fulfilled. These schools, colleges, and universities are distinctive, and distinctively American.

2. Each of the schools has had significant impact on the country and/or the region they serve. An impressive number of persons educated in places such as Robert College (Turkey), American University at Beirut (Lebanon), now play key roles in the political, scientific, and cultural life of the Middle East. Many of the ministers and other governmental and community leaders now in pivotal posi-

tions in the Middle East owe their college education to the American colleges. For example, Charles Malik, of Lebanon, former President of the United Nations General Assembly, is a graduate of the American University at Beirut and currently teaches at that institution. Again, no one can place a price tag on the value of a good education. However, it is a fact that graduates of the American schools take pride in their alma mater. Perhaps there is no better index of a school's performance.

3. Each of the schools is accepted by the host government, whether in Greece, Turkey, Lebanon, the United Arab Republic, or Honduras, as an honorable contributor to the immense educational task which these countries face. This alone is a striking achievement, for these schools are in fact and in the eyes of Greeks, Turks, Egyptians, Lebanese, Hondurans, foreign schools. And in an age of rising nationalism, suspicion of foreign intervention comes easy. In the life of any nation, education is a sensitive area. Foreign intervention is not tolerated, nor should it be. The schools have persisted through wars and revolutions only because they have operated with a keen sense of their limitations and of the proprieties. Americans are not operating schools abroad to propagandize the American way of life, or to sell U.S. theories of instruction or learning. The schools have survived because they have done only what they purported to do—to teach medicine, engineering, farming, etc., using the best of current American educational methods and technologies. In sum, acceptance has been earned because the schools in fact contribute to the country's needs and operate without antagonizing.

4. Each of the schools is making an increasing contribution to the development needs of the modernizing economies of the Middle East and Central America. The key to economic growth and social progress is talented manpower. This is the bottleneck in development plans around the world. The critical need is for doctors, engineers, administrators, farm technicians, well-trained businessmen. Put more bluntly, the need is for engineers and agricultural leaders who are not afraid to get their hands dirty; for businessmen familiar with the tools of modern business and trained to innovate; for administrators who know how to get things done rather than why things cannot be done.

The American schools do not graduate large numbers, nor will they ever do so. In last analysis, a nation must supply its own educational needs through its own energies. However, the American contribution is strategically important. Frequently, it is the graduate of American University of Beirut, American University at Cairo, or Robert College, for example, who has the special skills and attitudes so essential to modernization efforts on the farm, in the factory, and in the community.

Also, the research contribution should not be overlooked. Increasingly, the colleges and universities are launching research efforts tailored to contribute directly to economic growth or to public health. For example, the American University at Cairo has initiated several research projects in economic planning. The medical research programs of the school of medicine, American University at Beirut, are designed to contribute to the critical health problems of the Middle East.

The Escuela Agricola Panamerica in Honduras has become a great regional center for training and educating Latin American young men for the vital task of increasing the agricultural productivity of their homeland. How well this job has been done is revealed in the fact that 799 out of 806 graduates since the school began are presently actively engaged in some form of agricultural activity in 15 Latin American countries.

5. Each of the schools, to greater or less degree, faces serious budget problems even to maintain existing program levels. As private institutions, the American schools are dependent on income from endowments, gifts, and grants from U.S. foundations and agencies. For the most part, tuition charges cannot be increased without denial of opportunity to promising students. Alumni support continues to be meager; there simply is no tradition in the Middle East of private giving to schools and universities.

No school or college can stand still. Even if no increase in enrollment is permitted and no new programs are initiated, it is essential to repair the physical plant, to renovate and rebuild, to purchase new scientific equipment, and add books to the library. The schools must compete in the academic labor market of the United States for scarce faculty members. The cost of the faculty, books, equipment, new construction, climbs steadily upward.

The result has been growing deficits and intensifying pressure on the U.S. Government for emergency financial assistance. The American schools abroad have turned to the U.S. Government—for books, buildings, laboratories, salary supplements, and now for direct operating costs—because they feel that they have no place else to turn. Both the schools and the U.S. Government now find themselves in a situation which neither anticipated, desired, or enjoys—a situation of growing dependence upon U.S. Government support.

Clearly, the U.S. Government has an interest in seeing that the American schools survive and function effectively. The schools, libraries, hospitals, and medical centers founded or sponsored by American citizens are recognized for their value as study and demonstration centers for American ideas and practices. They serve as models for improved educational methods, materials, and teaching procedures. But it is equally clear that it is not in the long-term interest of the United States or of the schools for the U.S. Government to underwrite current operating deficits of indefinite amounts for an indefinite future.

AGENCY GROUND RULES ESTABLISHED AIMING TOWARD INSTITUTIONAL SELF-SUFFICIENCY

For this reason, the Agency for International Development has revised the ground rules under which requests for assistance will be reviewed. In recent letters to each of the nine schools, Mr. David Bell, AID Administrator, has pointed out that "a prime consideration in planning U.S. Government assistance to any of these institutions is to help the institution move in the direction of financial self-reliance." In order to do this, the AID proposes to encourage and review with each school long-term plans, to discuss with the officials of each school the role which each institution envisages it can best play in the country and region it serves, the financial implications of such long-term plans,

and, finally, what the U.S. Government might appropriately contribute in the light of the national interest. For example, the American University of Beirut needs to expand its already crowded facilities. The proposed appropriation would encourage the university to plan effectively for orderly growth—and thus to maintain its important and respected position in the Near East.

In short, AID hopes to work with each school toward a mutual understanding concerning the kind and amount of assistance most likely to strengthen the financial basis of the school, develop goals and aim toward self-sufficiency.

Will a cooperative approach to long-term planning work? Much depends on the attitude of the schools themselves. Surely this approach is superior to the present practice of 1-year programs of assistance, each handled as a special, but recurring, emergency allocation which presently must compete for funds with technical assistance grant programs in aid recipient countries. The present practice discourages long-term planning by the schools, since they have no assurance from one fiscal year to the next concerning the dollar amount or the kinds of programs that AID can support or will be able to support.

U.S. SUPPORT IN PRIOR YEARS

In fiscal year 1959 total funds in the amount of $3 million were granted to the American University of Beirut and the American University in Cairo to improve campus facilities in those two schools. A total of $3.3 million was made available in fiscal year 1960 to the American University of Beirut and five other schools currently in the program. The U.S. support increased to $4.5 million in fiscal year 1961—$6.5 million in fiscal year 1962, and for fiscal year 1963 approximately $5 million has been made available for this purpose.

NEW AUTHORIZATION AND APPROPRIATION REQUESTS

The President has recommended an amendment to the Foreign Assistance Act which would authorize the appropriation of funds for American-sponsored schools and hospitals. This amendment, also, would authorize appropriations on a continuing basis for this activity. Thus, the schools would be able to plan their programs over several years instead of annually.

Under the authorization which has been requested, the President has proposed a fiscal year 1964 appropriation of $20 million. Approximately $11.5 million is intended to finance a proposed new teaching hospital for the medical school at the American University at Beirut assuming that final evaluation of the site survey team field investigation and analysis demonstrates that support of this proposal is justified. The appropriation would also provide $2.2 million for the Polish Children Hospital, some current operating expenses while long-range planning is being developed and the balance will be available for items which would be included in the long-range programs which AID contemplates developing with each institution. In addition $1.6 million would be used to assist Project Hope. This assistance will help continue this unique training-demonstration in American methods of medical education and care.

The schools need both the incentive and opportunity to make long-term plans. A campus building program cannot be operated by fits and starts. Educational needs, whether for renovation of buildings or expansion of library and laboratory, must be anticipated by at least 4 or 5 years. Indeed, good practice dictates 10-year plans for new capital outlay. Moreover, it is virtually impossible to fit the cycle of planning, designing, financing, and constructing a new building within a single fiscal year.

CHILDREN'S HOSPITAL, POLAND

The American Research Hospital in Poland, Inc., a private organization, is building a 300-bed children's hospital in Krakow, Poland, with the assistance of funds appropriated by the U.S. Congress. The hospital and research facilities will provide a unique opportunity to demonstrate American hospital construction and planning techniques.

The hospital, now about one-third finished, will have two pediatric clinics and one surgical clinic along with research and teaching facilities. Construction is being carried out by a Polish agency according to plans and specifications originally prepared under the supervision of the Cooperative for American Relief Everywhere (CARE). It is hoped to complete the hospital by June 1964, to coincide with the 600th anniversary of the establishment of the University of Krakow.

The sum of $3.9 million in local currency is requested for fiscal year 1964 to complete financing of local costs of this project. In addition, 2.2 million in dollars for imported equipment needed to complete the hospital is included in the appropriation request for $20 million for American schools and hospitals abroad.

A request for $2 million in local currency was included in the President's budget for the Polish hospital. Completion of a section 611, Foreign Assistance Act, review of revised cost estimates has necessitated a request for an additional $1.9 million in local currency for the hospital. Also, we are planning to finance the major portion of assistance proposed for the American University in Cairo in local currency; $790,000 in local currency is requested for this purpose.

VALUE OF AMERICAN-FOUNDED SCHOOLS AND HOSPITALS ABROAD

In conclusion, the schools and hospitals founded by Americans and operating as living educational laboratories and demonstration centers in foreign lands constitute an invaluable resource to the United States. The president of the American University at Cairo has said, "If the American University in Cairo did not exist, the U.S. Government would be doing all in its power to create it." Perhaps the point is overstated, but it is a fact that AID is seeking in many of the developing countries to set up demonstration centers of one kind or another in order to encourage wholesale modernization of the host country's educational system. It makes good sense ,therefore, to capitalize on an existing resource which is already established and accepted within the host country. By assisting American-sponsored schools and hospitals abroad, the United States is supporting private initiative, capitalizing on existing investments, and utilizing the skills and knowledge of Americans already working in the educational field abroad. The critical need for trained manpower in these modernizing nations will make these American schools a strategic resource in the

years ahead. It is against this background of need and opportunity that the request for American-sponsored schools and hospitals abroad should be viewed.

I shall be happy to answer to the best of my ability any questions which members of the committee may have, and to supply for the record any detailed information you may require. Thank you.

Annex I

AMERICAN-SPONSORED SCHOOLS ABROAD—214 PROGRAMS

SUMMARY DATA SHEET

1. American University of Beirut

(*a*) Name and location of the institution: American University of Beirut, Beirut, Lebanon.

(*b*) Control: This university is controlled by a board of trustees incorporated under the laws of the State of New York.

(*c*) President of the institution: Mr. Norman Burns.

(*d*) Chairman of the board: Mr. John C. Case.

(*e*) Founded: This institution was founded by American missionaries led by Dr. Daniel Bliss on April 24, 1863 (date when the State of New York granted the charter).

(*f*) Program: The curriculum at American University of Beirut include graduate and undergraduate programs in: the arts and sciences, education, business administration, medical sciences which covers the schools of medicine, public health, pharmacy, and nursing; engineering, and agriculture.

(*g*) Enrollment: 2,901.

(*h*) Faculty: 407 (about 25 percent American).

(*i*) U.S. Government support: $14,725,000.[1]

Fiscal year	Amount	Purpose
1959	$2,500,000	400(c) funds under the MSA to provide faculty apartments, telephone system, laboratories, kitchen plumbing, and campus planning.
1960	2,075,000	400(c) funds to provide Fisk Hall, College Hall, museum, amphitheater and other facilities and equipment.
1961	3,700,000	400(c) funds to provide for rehabilitation of Dodge Hall, physics facilities, educational equipment and materials plus $2.5 million for a medical complex.
1962	4,500,000	214(a) funds under the FAA of 1961 to provide staff salaries, science facilities, educational equipment and materials plus another $2.5 million for the medical complex.
1963	1,950,000	214(a) funds that will be provided for staff salaries, faculty apartments, scholarships and educational equipment and materials.

(*j*) Kinds of persons trained: Scientific and engineering leaders, economists and business leaders, diplomats and political leaders, medical doctors, nurses and public health leaders, educators, and agricultural experts.

2. International College of Beirut

(*a*) Name and location of the institution: International College of Beirut, Beirut, Lebanon.

(*b*) Control: This school is controlled by a board of trustees that initially received a charter from the Commonwealth of Massachusetts in 1903. It is associated with the American University of Beirut.

(*c*) President of the institution: Mr. Thomas C. Schuller.

(*d*) Chairman of the board: Dr. Daniel Bliss.

(*e*) Founded: This institution was founded in 1891 as a high school in Smyrna, Turkey. In 1936 because of difficulties in Turkey the college came to Beirut and affiliated itself with American University of Beirut on its campus and in 1958 it became a separate corporate body in Lebanon.

(*f*) Program: The curriculum at the international college begins at the kindergarten age and takes students via three languages to the sophomore year of

[1] Additionally $12,782,819 is the amount provided for a contract through June 30, 1963, for the enrollment and training of AID participants.

university study (general education). It is a preparatory program for American University of Beirut.

(*g*) Enrollment: 1,621.

(*h*) Faculty: 125 (7 Americans).

(*i*) U.S. Government support: $1,114,000.

Fiscal year	Amount	Purpose
1960	$714,000	400(c) funds to partly cover costs involved in construction of a new campus.
1961	400,000	Do.

(*j*) Kinds of persons trained: The International College of Beirut trains students to enter higher education.

3. The American University in Cairo

(*a*) Name and location of the institution: The American University of Cairo, Cairo, Egypt.

(*b*) Control: This university is controlled by a board of trustees incorporated in Washington, D.C.

(*c*) President of the institution: Dr. Raymond F. McLain.

(*d*) Chairman of the board: Prof. J. Edward Dirks.

(*e*) Founded: This institution was founded by Americans residing in Cairo with private support from the United States in 1919.

(*f*) Program: The curriculum at this school is primarily that of a liberal arts college with M.A. programs in anthropology, sociology, English literature, and Arabic studies. There is also a large evening program in adult education with emphasis in the language.

(*g*) Enrollment: 900 (550 adult education noncredit).

(*h*) Faculty: 63 (20 Americans).

(*i*) U.S. Government support: $2,376,279.

Fiscal year	Amount	Purpose
1959	$500,000	400(c) funds to provide a science building.
1960	465,828	Public Law 480 funds to provide faculty salaries, construction of student service center, scholarships, and educational equipment and materials.
1961	30,000	440(c)funds to provide library books and professional materials.
1962	500,000	Public Law 480 funds to renovate and equip library plus faculty salary assistance.
1962	70,000	214(a) funds to provide educational materials and books.
1963	315,000	Public Law 480 funds to provide faculty salaries, scholarships.
1963	495,451	214(a) funds will be provided for faculty salaries, construction of classrooms, educational equipment and materials.

(*j*) Kinds of persons trained: Political and administrative leaders, managerial level leaders, and educators.

4. Robert College (including American College for Girls)

(*a*) Name and location of the institution: Robert College, Istanbul, Turkey.

(*b*) Control: This institution is controlled by a board of trustees incorporated under the laws of the State of New York.

(*c*) President of the institution: Dr. Patrick Murphy Malin.

(*d*) President of the board: Mr. Grinnell Morris.

(*e*) Founded: Robert College was established in 1863; the first American college founded overseas. The American College for Girls was orginally founded in 1891 as the first women's liberal arts college in the Near East. These two schools were legally united in 1959.

(*f*) Program: Robert College offers a 3-year academy, a school of engineering, a school of business administration and economics, and a school of science and language. The engineering school grants the equivalent of the B.S. and M.S. degrees; the latter two schools—the equivalent of the B.A./B.S. The College for Girls has a preparatory school and offers the first 2 years of college in the liberal arts and sciences.

(*g*) Enrollment: 1,540 (638 girls).

(*h*) Faculty: 157 (78 Americans).

(*i*) U.S. Government support: $4,760,574.

Fiscal year	Amount	Purpose
1958	$1,000,000	Public Law 480 funds for the construction of an engineering building.
1960	500,000	400(c) funds for engineering equipment.
1960	696,898	Public Law 480 funds for construction, equipment, and faculty salaries.
1961	270,000	400(c) funds for construction of dormitory and faculty housing.
1962	300,000	214(a) funds for furniture, equipment, and construction materials.
1962	268,676	Public Law 480 funds for faculty salaries and scholarships.
1963	875,000	Public Law 480 funds for faculty salaries, renovations, and scholarships.
1963	850,000	214(a) funds will be granted for faculty salaries and educational equipment, materials, and books.

(*j*) Kinds of persons trained: Political and business leaders, military officers, scientists, engineers, teachers, and educated wives and mothers.

5. Athens College

(*a*) Name and location of the institution: Athens College, Athens, Greece.

(*b*) Control: This college is controlled by a board of trustees incorporated under the laws of the State of New York.

(*c*) President of the institution: Mr. Charles W. Rice.

(*d*) Chairman of the board: Mr. Kyriakos P. Tsolainos.

(*e*) Founded: This school was founded in 1925 by Greeks and Americans together.

(*f*) Program: The curriculum at this school covers a 10-year period including secondary school and what would be compared to junior college in the United States. It is classical in nature with more emphasis being placed on science. It completes general education.

(*g*) Enrollment: 1,200.

(*h*) Faculty: 97 (10 Americans).

(*i*) U.S. Government support: $896,159.

Fiscal year	Amount	Purpose
1958	$185,617	Public Law 480 funds for the construction of a dormitory and scholarships.
1960	163,042	Do.
1960	20,000	400(c) funds for educational and support equipment.
1961	17,000	Do.
1962	220,000	214(a) funds for a library science building.
1963	25,000	Public Law 480 funds for scholarships.
1963	265,500	214(a) funds will be granted for equipping science building; renovation; educational equipment, books and supplies; English language training; and scholarships.

(*j*) Kinds of persons trained: Athens College trains Greek students to enter higher education.

6. Orlinda Childs Pierce College for Women

(*a*) Name and location of the institution: Orlinda Childs Pierce College for Women, Athens, Greece.

(*b*) Control: This college is controlled by a board of trustees incorporated under the laws of the State of Colorado.

(*c*) President of the institution: Dr. Margaret Steward.

(*d*) Chairman of the board: Mrs. Douglas Horton.

(*e*) Founded: This school was established in Smyrna, Turkey, in 1875 but it was forced to close in 1922 and in 1923 it set up operations in Greece.

(*f*) Program: The curriculum at this school follows the 6-year course as established by the Greek Government for the national gymnasia. Additionally 10 more periods in English language are given. The entire upper division (junior college level) is conducted in English. The School of Commercial Studies teaches American business methods and the School of Social Welfare stresses scientific approach to problems in this field.

(*g*) Enrollment: 600.

(*h*) Faculty: 75 (8 Americans).

(*i*) U.S. Government support: $1,236,000.

Fiscal year	Amount	Purpose
1962	$611,000	214(a) funds for construction of a new campus.
1963	25,000	Public Law 480 funds for scholarships.
1963	600,000	214(a) funds for construction of a new campus.

(*j*) Kinds of persons trained: Social welfare workers, secretaries, business leaders, and students to proceed further in higher education.

7. *Anatolia College*

(*a*) Name and location of the institution: Anatolia College, Thessaloniki, Greece.

(*b*) Control: This college is controlled by a board of trustees incorporated under the laws of the State of New York.

(*c*) President of the institution: Dr. Howard W. Johnston.

(*d*) Chairman of the board: Mr. John F. Chapman.

(*e*) Founded: This institution was founded in 1886 in Merzifon, Turkey by a group of American missionaries. It has been located in Thessaloniki since 1923 when it was reestablished by Venizelos, the Greek Prime Minister.

(*f*) Program: The curriculum at Anatolia College provides all the studies in the Greek program for secondary education in addition to a thorough training in English. The full 7-year course at Anatolia College corresponds with the American junior and senior high and junior college programs combined.

(*g*) Enrollment: 690 students (340 boys, 350 girls).

(*h*) Faculty: 62 (14 Americans).

(*i*) U.S. Government support: $702,650.

Fiscal year	Amount	Purpose
1958	$130,000	Public Law 480 funds to provide for the construction of girls' dormitories, the renovation and remodeling of 4 faculty residences, and scholarships.
1960	195,650	Public Law 480 funds to provide for the construction of a science building with necessary equipment and funishings and scholarships.
1960	15,000	400(c) funds to provide educational equipment.
1961	20,000	400(c) funds to provide educational equipment and office equipment and a telephone system.
1962	90,000	214(a) funds to renovate existing boys' dormitories and construct a dormitory to house 46 students.
1963	25,000	Public Law 480 funds to provide faculty salaries.
1963	227,000	214(a) funds to be provided for scholarships and teachers salaries, to equip and furnish boys' dormitories, and to renovate and equip a classroom building.

(*j*) Kinds of persons trained: Anatolia College trains students to enter higher education.

8. *The American Farm School*

(*a*) Name and location of the institution: The American Farm School, Thessaloniki, Greece.

(*b*) Control: This school is controlled by a board of trustees incorporated under the laws of the State of New York.

(*c*) Director of the institution: Mr. Bruce M. Lansdale.

(*d*) President of the board: Mr. Craig R. Smith.

(*e*) Founded: This institution was founded in 1904 by the American missionary, John Henry House.

(*f*) Program: The American Farm School has a comprehensive program for helping the Greek people help themselves in every area of village life. Four-year courses for the students in the school provide agricultural and technical training in the practical departments plus some academic instruction. The school also offers an extensive program of courses for 800 villagers in such fields as farm machinery, irrigation, livestock, and rural electrification. There is also a village development program which trains village leaders. The school maintains a model farm for demonstration and conducts a livestock distribution program.

(*g*) Enrollment: 200.
(*h*) Faculty: 44 (5 Americans).
(*i*) U.S. Government support: $765,802.

Fiscal year	Amount	Purpose
1958	$99,000	Public Law 480 funds to provide scholarship assistance.
1960	229,302	Public Law 480 funds to provide for construction, equipment, and scholarships.
1960	20,000	400(c) funds to provide for farm equipment.
1961	13,000	400(c) funds to provide for a diesel generating unit.
1962	95,500	214(a) funds to provide for renovation, improvement of facilities, and training equipment.
1963	25,000	Public Law 480 funds to provide faculty salaries.
1963	284,000	214(a) funds to be provided for scholarships, training of Greek staff, for the improvement of facilities and extension of a classroom building, laboratories, and to subsidize a community development program.

(*j*) Kinds of persons trained: Competent farmers, agricultural leaders at the village level, and village leaders.

9. Escuela Agricola Panamericana

(*a*) Name and location of the institution: Escuela Agricola Panamericana, Tegucigalpa, Honduras.
(*b*) Control: This school is controlled by a board of trustees incorporated under the laws of the State of Delaware.
(*c*) Director of the institution: Mr. Albert S. Muller.
(*d*) President of the board: Doris Z. Stone.
(*e*) Founded: This institution was founded by the United Fruit Co. in 1941.
(*f*) Program: This school offers a general agricultural program. It offers no courses in literature, geography or history. Four semesters of English are required. The University of Florida accepts the school's graduates with credit for 96 hours. Most of the training involves practical work in the fields.
(*g*) Enrollment: 164.
(*h*) Faculty: 25 (5 Americans).
(*i*) U.S. Government support: $464,000.

Fiscal year	Amount	Purpose
1961	$50,000	400(c) funds to provide faculty housing, furniture, and agricultural equipment.
1962	114,000	214(a) funds to provide books, educational equipment, agricultural equipment, and improve facilities.
1963	300,000	214(a) funds to be provided for scholarships and salaries, to improve teaching facilities, to establish labor housing and for agricultural equipment.

(*j*) Kinds of persons trained: Expert farmers, government leaders in agriculture, managers of estates and plantations.

FISCAL YEAR 1964 REQUEST FOR AMERICAN SCHOOLS AND HOSPITALS ABROAD

Mr. PASSMAN. Thank you very much for your statement, Dr. Baumgartner.

This is a new item in the President's request, $20 million for American schools and hospitals abroad, is it not?

Dr. BAUMGARTNER. It is, sir.

Mr. PASSMAN. The foreign aid bill in prior years has included funds under the various appropriations for schools and libraries, and the Congress has also appropriated local currencies for hospitals and medical centers; however, the proposed legislation would authorize an appropriation of $20 million for American-sponsored schools and hospitals abroad; is that correct?

Dr. BAUMGARTNER. That is correct.

PROPOSED ALLOCATION OF FUNDS FOR 1964

Mr. PASSMAN. How do you propose to allocate the $20 million that you have requested for this purpose in fiscal year 1964?

You may insert the information in the record.

Also, please let us have the comparable information for 1962 and 1963 and spread the $20 million as you propose to allocate it in 1964, particularly getting into one category, research.

(The information follows:)

American sponsored schools and hospitals abroad

	Fiscal year 1962	Fiscal year 1963	Pending fiscal year 1964
American University of Beirut	$4,500,000	$1,950,000	$2,000,000
American University of Beirut (Medical Center)			[1] 11,500,000
American University in Cairo	70,000	495,451	[2] 150,000
Robert College	300,000	850,000	2,000,000
Athens College	220,000	265,500	100,000
Pierce College	611,000	600,000	600,000
Anatolia College	90,000	227,000	200,000
American Farm School	95,500	284,000	75,000
Escuela Agricola Panamericana	114,000	300,000	300,000
Project Hope			1,600,000
Polish Children's Hospital			[3] 2,200,000
Total	6,000,500	4,971,951	20,725,000

[1] This item tentative, pending Agency review of site team evaluation.
[2] Plus $790,000 in U.S.-owned Egyptian pounds.
[3] Plus $3,900,000 U.S.-owned zlotys.

REQUESTED APPROPRIATION TO PURCHASE ZLOTYS FOR CHILDREN'S HOSPITALS

Mr. PASSMAN. Under another section of the bill, the Congress is being requested to appropriate $2 million for the purchase of Polish currency for the children's hospital in Crakow, Poland. This particular estimate also includes, I believe, $2.2 million for imported equipment for this hospital.

Dr. BAUMGARTNER. I think the $2.2 million is to complete some of the building, but largely for equipment in dollars.

In addition, there is $3.9 million in U.S.-owned zlotys, Polish currency, that will be used to complete this building, and it is proposed to do this and get through with the Polish hospital.

Mr. PASSMAN. Are you requesting $2 million in Polish currency for fiscal year 1964?

Dr. BAUMGARTNER. $3.9 million are my figures.

Mr. SCHEINMAN. Recently there has been an examination pursuant to section 611 of the Foreign Assistance Act, and that indicated that $1.9 million additional in zlotys would be necessary for local costs in Poland. Therefore, the President's request will be amended.

Mr. PASSMAN. You have changed your signals since you presented this bill. If it is $3.9 million rather than $2 million, let the record show that fact. It will be in local currency?

Mr. SCHEINMAN. Polish local currency.

Mr. PASSMAN. Will that sum be sufficient to complete the hospital?

Dr. BAUMGARTNER. That money, plus the $2.2 million, will complete the hospital. The reason for hurrying on this is to complete it

by the time of the 600th anniversary of the university there as a gesture——

Mr. PASSMAN. I want to keep the two separated. One is dealing with Polish currency. You will need $3 million. We shall appropriate dollars, but it will be converted into currency we cannot use otherwise?

Dr. BAUMGARTNER. That is right.

Mr. PASSMAN. The only cash, or dollar, outlay will be approximately $2.2 million that will be used to purchase equipment for the hospital. That will be American equipment?

Dr. BAUMGARTNER. That will be American equipment.

PERMANENT IDENTIFICATION OF AMERICAN CONTRIBUTION TO POLISH HOSPITAL

Are you going to insist that this hospital be properly identified as being donated by America?

Dr. BAUMGARTNER. It is called the American Children's Hospital. There are permanent markers on the building.

Mr. PASSMAN. Is it plain enough so the people who read that will know it is an American contribution?

Dr. BAUMGARTNER. I have not been there.

Mr. ROONEY. I have been there. It is plainly identified.

Dr. BAUMGARTNER. I think there is another thing about this children's hospital. I was in Krakow in 1961, and I looked at the medical staff there. This was long before I was here. They have an excellent group of Polish doctors, well-trained. Many of them trained in this country and they will staff that hospital.

Mr. ROONEY. And mostly female?

Dr. BAUMGARTNER. That is true of many doctors in Poland.

Mr. PASSMAN. Do you have an architect's version of how the hospital will look when completed?

Dr. BAUMGARTNER. I will try to get you one.

Mr. PASSMAN. Off the record.

(Off the record.)

Mr. PASSMAN. When will the hospital be completed?

Dr. BAUMGARTNER. Within the year 1964.

Mr. PASSMAN. During calendar year 1964?

Dr. BAUMGARTNER. The budget year 1963—the spring of 1964 it opens.

Mr. PASSMAN. The $2.2 million will be used for American equipment?

Dr. BAUMGARTNER. Correct, sir.

Mr. PASSMAN. Will it not be necessary that certain of the equipment be procured and installed prior to completion of the hospital?

Dr. BAUMGARTNER. I think that is planned, sir.

Mr. ROONEY. Part of the equipment will be the elevators?

Mr. PASSMAN. Would that be out of the $2.2 million?

Dr. BAUMGARTNER. I understand it is, sir.

Mr. PASSMAN. Off the record.

(Off the record.)

AMERICAN UNIVERSITY OF BEIRUT MEDICAL CENTER

Mr. PASSMAN. There is one other hospital I am familiar with in this program and that is at the American University of Beirut.

Dr. BAUMGARTNER. Right.

Mr. PASSMAN. I think the President has expressed an unusual interest in the construction of this hospital. I think it may be that it was on his recommendation they got the original $5 million for the research center.

Dr. BAUMGARTNER. That is right.

Mr. ROONEY. There is an inadequate children's hospital there?

(Off the record.)

Mr. PASSMAN. I had to have medical attention during my last trip to Beirut. I met the dean of the medical school, Dr. Sam Kirkwood. He is a graduate of Harvard. I was very favorably impressed by him. I spent considerable time discussing this matter with him, going over the blueprints and the architect's drawings.

I believe this is a project in which the President has indicated a very special interest?

Dr. BAUMGARTNER. We have a very special interest in it ourselves.

As a physician, I do. There are some problems. $11.5 million is a lot of money.

U.S. ASSISTANCE CONTINGENT UPON AVAILABILITY OF AMERICAN UNIVERSITY OF BEIRUT OPERATING FUNDS

We want to be sure what it will give in return in terms of better health to the people in that area; and second, we want to know what it is going to do to the operating funds of the university as well as the hospital.

Mr. PASSMAN. We certainly share your concern. It is only upon that basis, of course, that we are considering your money request.

The first phase of this medical center has already been approved, I think. I believe they are entering into the construction phase of it now.

Dr. BAUMGARTNER. We have had a team looking at this.

Mr. PASSMAN. I am speaking of the educational building for which you allocated $5 million. That is underway?

Dr. ENARSON. That is right.

Mr. PASSMAN. The hospital is the second part of a total unit?

Dr. BAUMGARTNER. Yes.

Mr. PASSMAN. They are requesting $11.5 million to build a hospital. It is to be a teaching hospital.

Dr. BAUMGARTNER. So we understand.

POSSIBILITY OF AN ENDOWMENT FUND

Mr. PASSMAN. It is my understanding that the criteria established by which these people might get this item approved would be they could create an endowment to be able to pay their operating expenses.

Dr. BAUMGARTNER. That is exactly the question we are addressing ourselves to. We want to know what their plans are for operating expenses, because we all know how much the operating expenses

of a teaching hospital can run into and the drain they can be on the operating costs of the university.

Mr. PASSMAN. I would not recommend appropriating a dollar if they cannot justify it.

Word has reached me that Saudi Arabia has entered into a firm contract to support the medical school for $500,000 yearly.

Dr. BAUMGARTNER. One gift of $500,000 with no definite commitment for similar contributions in future years.

Mr. PASSMAN. I think there possibly has been an amendment to that commitment, that it will be $500,000 per year.

Is it going to be your recommendation, Doctor, that they create an endowment fund?

Dr. BAUMGARTNER. It is certainly going to be our recommendation, and we have asked them to show us where they think the operating costs of this hospital are going to come from. If we are not careful, I think, these institutions—and this is not only with regard to this hospital—have growing operating deficits, and this makes them increasingly dependent on the U.S. Government, and this worries us.

Mr. PASSMAN. Do you have any way of getting together statistics on this matter?

Dr. BAUMGARTNER. That is exactly what we are looking for.

Mr. PASSMAN. Do you have similar operations that are self-supporting in other parts of the world? Have you anything to go by, any guidelines by which you can determine whether or not it would be self-supporting?

Dr. BAUMGARTNER. I think this would depend on the particular circumstances in each teaching hospital and in each medical school.

FAVORABLE LOCATION IN BEIRUT

Mr. PASSMAN. Would Beirut be about as favorable as any place in the Middle East, because of the relatively high per capita income of the Lebanese as compared to other countries in that area?

Dr. BAUMGARTNER. The Lebanese have a higher per capita income. They also have access to other rich countries in the area. This is one of the reasons we are happy that there has been a commitment of some kind from a neighboring country.

Mr. PASSMAN. What other rich countries in that area?

Dr. BAUMGARTNER. The Middle East oil-rich countries. If they can be persuaded to put their money into this hospital, I think this may increase the possibility of the hospital's supporting itself.

OPERATING EXPENSES PROBLEMS OF UNIVERSITIES AND HOSPITALS

Mr. PASSMAN. In numerous instances, I believe, we are providing operating expenses and giving budgetary support to old, established institutions in many parts of the world which heretofore have been able to pay their own expenses.

I am for you on your capital investment request, but I am not going to recommend that you make a habit of subsidizing the budgets and operating expenses of these institutions.

Dr. BAUMGARTNER. This is a real problem these institutions have, because the costs of education go up even as they go up here, and it

becomes increasingly difficult to meet the bills; they ask for books; they ask for libraries; they ask for equipment. After all, this is like giving a woman either a new dress or an increase in her allowance. In one or the other, you are helping her operate.

Mr. PASSMAN. What is your estimate for research and development for fiscal 1964?

Dr. BAUMGARTNER. I do not know if you would like to have me talk a little bit about the points that were raised by some of the members of the committee who are not here now, in terms of why we think research is a good idea.

U.S. ASSISTANCE SINCE INCEPTION OF PROGRAM

Mr. FORD. May I ask a question or two on this other aspect about which you and Dr. Baumgartner were talking?

Mr. PASSMAN. Certainly.

Mr. FORD. This is the first year of this one program, is it not?

Dr. BAUMGARTNER. Which program, sir?

Mr. FORD. Aiding and assisting the hospital in Beirut and the like.

Dr. BAUMGARTNER. This is the first time it has been earmarked as a program. It was our feeling we ought to come to you and tell you what our intentions were. It is the first opportunity you have had to look at these funds. Before this, these activities have been funded out of development grants, and you did not have an opportunity to look to see what our intentions were.

Mr. FORD. Could you put in the record the extent of these programs in past years, in dollars and to specific colleges and universities?

Dr. BAUMGARTNER. We would be happy to. There are nine schools that are being supported.

Dr. ENARSON. Very briefly, fiscal 1963 is the 5th year for this program. The rate of spending currently is roughly $5 million a year, but it threatens to go up very rapidly unless we put some reasonable checks on it, as the chairman has indicated.

Mr. FORD. This is what I was anxious to find out. What was the program cost at its inception, and the trend up to the present, including fiscal 1964? I would also like some idea of what you think the program will generate into as we go down the road. Can you tell us that? What would be your best estimate?

POSSIBILITY OF GROWING OPERATING DEFICITS

Dr. BAUMGARTNER. I think this is one of the things that disturbs us. If you look at what we have spent to date since 1959, which I have in front of me, you see we have varied around $4 to $5 million, but as you look individually, which we have done this year in taking this hard look the chairman has been talking about, we see a possibility of growing operating deficits in these institutions. Whether we can some way or another help them find the matching funds, the endowment funds, the kind of funds that will keep them going, I think is the real question. Otherwise, it would be my own guess that they will come to us for operating deficits, and I do not know whether I consider it a proper expenditure of our money over a period of time.

Mr. FORD. Do they fully realize your attitude about operating deficits?

Dr. BAUMGARTNER. They do, indeed. We are not very popular, I am afraid, in some circles.

Mr. FORD. In other words, the money you are proposing in fiscal 1964 is how much?

Dr. BAUMGARTNER. $20 million. It is roughly what it is this year, with the addition of $11.5 million for the medical center which the chairman has just been talking about, $2.2 million for the Polish Children's Hospital, the American Hospital in Krakow, and $1.6 million for project Hope which we have given to before, but it always has come out of contingency funds or something else of this kind.

Mr. FORD. The total program is $20 million in fiscal 1964?

Dr. BAUMGARTNER. That is right.

Dr. ENARSON. For purposes of comparison, sir, using the basis I gave you a moment ago, of $5 or $6 million each year, the comparable figure for fiscal 1964 would be $5.5 million, holding that at current levels.

Mr. FORD. The $14.4 million is for purposes other than the kind of program you have carried on heretofore?

Dr. BAUMGARTNER. That is right.

Mr. FORD. If you do not get these additional contributions from other sources, the $5 to $6 million you have been spending would go up substantially.

Dr. BAUMGARTNER. Unless these schools are able to find additional money for operating costs.

Mr. FORD. What magnitude are you thinking of if you do not accomplish this objective?

NECESSITY FOR INSTITUTIONAL LONG-TERM PLANNING

Dr. BAUMGARTNER. One of the things we are trying to make these schools do is some long-term planning and cut their costs. We have asked them for long-term plans, which is the first time we have done that. We want to study those very carefully before we give an exact estimate. What I would give you now would be a guess.

AID TO POLISH CHILDREN'S HOSPITAL

Mr. FORD. In the $20 million, are we including the completion funds for the hospital at Krakow?

Dr. BAUMGARTNER. We are.

Mr. FORD. And also some interim financing for operations?

Dr. BAUMGARTNER. We are including money at about the same level that we have given them in the past year.

Dr. ENARSON. Do you mean operating funds for the hospital at Krakow?

Dr. BAUMGARTNER. No, no operating funds for them. We have never done that.

Mr. FORD. As I read your statement, I think you are planning on some for fiscal 1964.

Dr. BAUMGARTNER. We are not planning on any operating funds ever for the hospital in Krakow, not dollars.

Mr. FORD. Zlotys from our foreign currencies?

Dr. BAUMGARTNER. That might be possible. We would hope that they would carry on the operation. They have agreed to staff it with

Polish doctors at their own expense. Knowing hospitals as I do and knowing the way hospitals run into deficits, I always hate to predict what a hospital will do 5 years from now.

Mr. FORD. And also knowing the availability of zlotys in Poland——

Dr. BAUMGARTNER. We have a tremendous quantity of American-owned zlotys in Poland.

Mr. FORD. I would venture to forecast that you will be importuned to utilize them. I am not saying that will succumb, knowing their substantial availability, but I am sure such request will be forthcoming. Again, I say this may not be the worst way to use those. It might be the very best.

U.S. ASSISTANCE SINCE INCEPTION OF PROGRAM

Dr. BAUMGARTNER. I can give you right now the money given since 1959, since we began.

Mr. PASSMAN. Please insert that information in the record.

(The information requested follows:)

Grants to American institutions of higher learning abroad under authority of sec. 214(a) of the Foreign Assistance Act of 1961 and 400(c) of Mutual Security Act of 1954

Name of school	Location	Fiscal year 1959	Fiscal year 1960	Fiscal year 1961	Fiscal year 1962	Fiscal year 1963	1959-63 Total
Near East and south Asia:							
1. American University of Beirut	Beirut, Lebanon	$2,500,000	$2,075,000	$3,700,000	$4,500,000	$1,950,000	$14,725,000
2. International College of Beirut	do		714,000	400,000			1,114,000
3. American Farm School	Salonika, Greece		20,000	13,000	95,500	284,000	412,500
4. Anatolia College	do		15,000	20,000	90,000	227,000	352,000
5. Athens College	Athens, Greece		20,000	17,000	220,000	265,500	522,500
6. Pierce College	do				611,000	600,000	1,211,000
7. Robert College	Istanbul, Turkey		500,000	270,000	300,000	850,000	1,920,000
8. American University in Cairo	Cairo, Egypt (United Arab Republic)	500,000		30,000	70,000	495,451	1,095,451

Total for institutions of higher learning		3,000,000	3,344,000	4,500,000	6,000,500	4,971,951	21,816,451
Total for the program		4,275,000	4,000,000	4,500,000	6,000,500	[1] 4,986,000	23,761,500

[1] Includes $14,049 for administrative cost.

Mr. PASSMAN. I certainly support the hospital for Beirut and the hospital for Poland, if they can convince you they can pay their operating expenses. I do not, however, think we should continue subsidizing their budgets.

Dr. BAUMGARTNER. One of our reasons for coming to you for this kind of authorization is that we hope to use the ceiling that you give us as a kind of warning to these schools that they had better get out and find their own money.

Mr. PASSMAN. You will admit we are just a little bit boxed in on this matter. You tie your subsidy to their budgets right in with the capital funds request. If we happen to cut the subsidy to the budget, the money could be taken out of construction, because the funds are not earmarked.

Dr. BAUMGARTNER. I think we are boxed in, too, because these schools do create a good American image abroad. For example, there is a school in Honduras that does about as practical a teaching and training job, that an American dirt farmer would be proud of, as you can see. People come from all over Latin America to go to that school. They are going back and working in agriculture. If I remember correctly, out of some 800 graduates, most of them are back in their countries at work in agriculture. This is the kind of American-sponsored schools abroad that we Americans are proud of.

We are boxed in on these schools in terms of deciding whether we wish to carry this American picture on or whether we do not. But this will be your choice.

(Off the record.)

DEVELOPMENT RESEARCH PROGRAM

Mr. PASSMAN. What is the estimate for research and development for fiscal 1964?

Dr. BAUMGARTNER. The estimate is $15 million.

Mr. PASSMAN. Under what appropriation?

Dr. BAUMGARTNER. This will be a part of the grant fund. We have about $3 million of this that was obligated in 1963, and an additional $5 million in research projects that have been approved under the new system that we have set up within the last 6 months, that are now ready for obligation in fiscal 1964. Of this, there are about $2.9 million to continue work that is being done under projects which were begun in prior years, and about $2.3 million that are ready for obligation.

I might point out that in the little over 6 months since I have taken over this activity—and we will remember this is a new program which is only 17 months old, anyway—we have given considerable attention to an examination of the program and the way it was operating and its goals and objectives. We have learned some lessons out of this internal review. We have also benefited by extensive discussions with other governmental agencies with long records of distinguished achievement in Government-financed research.

We have explored various kinds of activities that have led to success on the part of organizations like the Rockefeller Foundation and other people.

All of this has led up to a reshaping of the research program within the last 6 months. The chief aspects are three. No. 1, we have appointed an objective advisory committee composed of nongovernmental scientists from foundations, industry, and universities. We have sitting with the committee, however, advisers from other governmental agencies, too. Members of that committee are chosen because they know of AID's problems in attempting to transfer and particularly to adapt the scientific techniques that have been found successful in this country, to the developing areas. Some of these people also have been associated with companies that know pretty much about how research adds to the profits of the country. We have done a study of management, and we have tightened up the management.

The last step has been the appointment of an outstanding sicentist, long experienced in a Government program which we thought was extremely important, of analysis as well as research, a program which has contributed most effectively to the efficiency of another Government operation; namely, the Navy. The Office of Naval Research, as I think you probably know, has a most splendid reputation, a long and solid record of achievement. The gentleman is with me—Dr. Weyl. He has had a keen interest in AID's problems over a period of time.

Over a year ago, he was brought in to consult on the research program, so he does not come to the aid field inexperienced, and certainly he is not inexperienced in the field of tight Government research. He has been appointed science adviser to Mr. Bell in guiding the research program itself. He is here, and could discuss with you some of the new areas that make us confident that over and above the approximately $5 million that we need to keep ongoing work——

Mr. PASSMAN. We want you to insert your statement in detail in the record.

(The information requested follows:)

THE AID PROGRAM OF DEVELOPMENT RESEARCH

Statement by Dr. F. J. Weyl

The program in development research, analysis, and evaluation to be funded in fiscal year 1964 will address itself directly to the need for a better understanding of the problems of development, for improvements in the approach to their solution, and for the creation of objective bases of evaluation, as these have been recognized in the operation of the foreign assistance program. Much work has been done in the course of the last 2 to 3 years, both within AID and by carefully selected groups of outside advisers, in order to identify and define these requirements for research and analysis.

As has been stated, the continuation of projects initiated with prior-year funds, as well as the funding of projects which had been scientifically approved but were caught in the pipeline at the end of the last fiscal year, will require some $5 million of fiscal year 1964 funds. We estimate that another $10 million can be prudently obligated for systematic analyses and experimental investigations during the remainder of the current fiscal year. There is on hand a sizable backlog of proposals for such projects, submitted by research organizations who think or have heard that AID may need help along such lines, which would require funding considerably in excess of our fiscal year 1964 request. It is now necessary to select out of the mass of these proposals those that best fit into a program which is responsive to AID's needs, makes use of relevant work done earlier elsewhere, and relies as far as it can on capabilities provided elsewhere within the Government—such as in the Department of Agriculture, the Department of Health, Education, and Welfare, etc.

This is a job of a small research and evaluation staff (whose name and structure may well change in the course of the fiscal year as we further improve the management of our research program along the lines indicated by Dr. Baumgartner). It consists of about 20 professionals, assisted by advisory committees both of staff from other AID offices and of eminent outsiders.

I will list some examples of high priority requirements for increased knowledge, as well as for newly conceived methods of approach, regarding the problems of less-developed societies. The bulk of the research program which AID proposes to fund in fiscal year 1964 will focus on at least one of these. At the same time, we shall keep our eyes open for other opportunities that may be presented by the discovery of new scientific capabilities or by the availability of specially qualified research teams.

1. Systematic analysis and evaluation of programs, using current quantitative techniques, are now being applied over an increasing range of the Federal Government's major commitments. Improvements in the planning and operation of foreign assistance can be expected if such tools of analysis are generated and adapted for use in these activities.

2. Major operational aid commitments are currently being made in west Pakistan toward accelerating rural development, including particularly the solution of waterlogging and salinity problems affecting a large portion of that country's arable land. A program of relevant research projects is taking shape to analyze the interdependence of various factors both physical and economic, to identify possible alternative procedures and to assist in selecting good ones. Some of the areas of science and technology involved are agriculture, hydrological engineering, nutritional patterns, and the economics of fertilizer production and use.

3. Our success in initiating the kind of upswing in agricultural productivity that forms the basis of any accelerated development program has been spotty; we have succeeded in some areas, failed in others, succeeded with some crops, failed with others. It is therefore worthwhile to analyze in some breadth what needs to be investigated, and then engage in these investigations, in order to improve our score. It is recognized that causes of the differences are to be found not just in agricultural technology but in a much wider range of factors. Proposals on hand for projects addressed to the agricultural aspects alone amount to more than $5 million.

4. The problems of transporting people, goods, power, and information form an important aspect of development. Moreover, they appear in forms which allow the sort of quantitative measurement that makes them amenable to modern scientific analysis. At the same time, numerous economic forces and other aspects of national and community development are influenced in a subtle way by alternative solutions of the transport problems. These interdependencies must be better understood, and deeper insight must be gained on the influence proper shaping of a transport and communication system can have on a developing society.

5. By far the most important, the most difficult, and the most delicate problem is that of people; education continues to be the most powerful tool in the development process. Notwithstanding the problems that continue to be with us in our own system of education, we must work energetically on learning how to assist in shaping and improving those of developing societies as well. The extent and variety of these needs constitute a challenge we must meet if the goals of the U.S. development assistance are to be reached. The sooner we discover practical ways to mobilize new concepts and knowledge, new techniques and materials for education in these societies, the sooner they will be ready to accept responsible membership in the free world community. The results of such research may even turn out to be of direct benefits to ourselves.

STATEMENT OF DR. LEONA BAUMGARTNER TO THE FOREIGN OPERATIONS SUBCOMMITTEE OF THE HOUSE APPROPRIATIONS COMMITTEE RESEARCH PROGRAM

It is also a pleasure to discuss with you briefly the Agency's research program. This, as you know, is a new venture launched only 17 months ago and one which has been in operation only a little over a year. This is obviously too short a period within which to expect demonstrable results though we have already improved our operating program as a result of some of these efforts.

It is a little over 6 months since the research activities were transferred to my sphere of activity. Considerable attention has been given to an examination of

the program, the way in which it was operating, and its goals and objectives. Some lessons have been learned from this extensive internal review. We have also benefited by extensive discussions with other governmental agencies with long records of distinguished achievement in Government-financed research, as well as careful exploration of the kinds of activities that have led to success on the part of organizations, like the Rockefeller Foundation, which have long been in the field. Important actions taken so far include:

(1) The appointment of an objective advisory committee composed of leading scientists from Government, foundations and industry. Members of that committee know of AID's problems in attempting to transfer and adapt the techniques that have been found successful in this country to the developing areas. Some of them have been associated with companies whose success involves the careful and continuing analysis of their own operations. There are also Government advisers from other departments who have been particularly successful in analyzing carefully the problems of operation.

(2) Study of management with tightening of important controls.

(3) The appointment of an outstanding scientist long experienced in a Government program of research and analysis which has contributed most effectively to the efficiency of another Government operation; namely, the Navy. The Office of Naval Research as, I am sure, many committee members know, has one of the longest and most solid records of achievement in the Federal Government. Actually, the new appointee who will guide AID's research and analysis efforts has had a keen interest in AID's problems over a period of time and over a year ago was brought to AID to consult on some of these problems. So he does not come to the field inexperienced in the specific problems of AID.

Dr. F. J. Weyl is the individual concerned and has been appointed as science adviser to Mr. David Bell, AID Administrator, and as a science director guiding the research program.

These moves to strengthen the research and evaluation program of the Agency, I am sure, will pay rich dividends. However, this does not mean that the Agency has stood still in the last 6 months. In addition to steps mentioned above, we have been looking at some of the specific problems associated with increasing agricultural productivity, finding new and improved ways to make up for the deficiences in education in these countries, etc.

Since the program began, funds amounting to approximately $11 million were obligated—about $3 million of this total in fiscal year 1963. We estimate that in 1964 we will obligate $2.9 million to continue work being done under projects begun in prior years. New projects now ready for obligation amount to $2.3 million. All have been approved by our outside objective advisers.

Dr. Weyl is here and he will discuss some of the new areas that make us confident that the $15 million which has been requested is a reasonable sum.

Mr. PASSMAN. I think you missed my question. What is the estimate for research and development in fiscal 1964, complete?

Dr. BAUMGARTNER. $15 million.

Mr. PASSMAN. Under what appropriation?

Dr. BAUMGARTNER. Development grants.

Mr. PASSMAN. What was the size of the program for fiscal 1963?

Dr. BAUMGARTNER. The size of the program actually committed in 1963 was some $3 million, with some additional $2.3 million which is now ready and some of it getting out in July, now that we have a continuing resolution to move forward.

Mr. PASSMAN. Will you give it to us covering the comparable figures——

Dr. BAUMGARTNER. 1962 was the first year.

Mr. PASSMAN. Give it to us for 1962, 1963, and then 1964. This appears to be growing rather rapidly, jumping from $2 million to $15 million.

Dr. BAUMGARTNER. We do not want to support research, sir, just because it is research.

Mr. PASSMAN. Research is a broad field.

Please insert in the record the 1962, 1963, and 1964 figures, and then the spread.

(The information requested follows:)

Obligations for research projects by fiscal year

Fiscal year:	Obligations
1962 (actual)	$8,593,000
1963 (preliminary estimate)	[1] 3,183,000
1964 (proposed)	[2] 15,000,000

[1] A detailed breakdown by individual project is provided in a subsequent tabulation. (See insert submitted on p. 1816.)

[2] Includes some $5,000,000 for the continuation of projects initiated with prior-year funds and for the funding of projects which had been scientifically approved but were still in the contract pipeline at the end of fiscal year 1963.

TYPE OF RESEARCH UNDERTAKEN

Mr. FORD. Is this product development or military research? What kind of research is it?

Dr. WEYL. No. This would be research that takes the form of systematic analyses, investigations, studies, using quantitative methods where they are indicated, in order better to understand the problems of development, improve our approaches to their solution, and create increasingly broad bases of objective evaluation of what really has happened. In this sense, it is not hardware oriented. It is not hot war but cold war oriented.

Mr. FORD. Are these research projects where we send American scientists and technicians abroad, or do we employ foreign scientists and technicians, or both?

Dr. WEYL. Both, sir. The majority of the projects would naturally be based in the United States, in U.S. institutions, employing U.S. scientists. Most of them would involve fieldwork for observations and data collection. Many of them, it is hoped, might also involve direct cooperation of scientists of the countries in which the research is conducted and the problem to which the research is addressed.

Dr. BAUMGARTNER. Mr. Chairman, someone says I said we are asking for $20 million. We are asking for $20 million for American schools abroad, and $15 million for research.

(Off the record.)

FISCAL YEAR 1963 RESEARCH PROJECTS

Mr. PASSMAN. Did you decide administratively to limit the research program to $6 million, referring now to page 202, volume II, or did the Congress make that decision?

Dr. BAUMGARTNER. Congress made that decision.

Mr. PASSMAN. Would you furnish for the record the number of projects you funded in fiscal 1963, the purpose of the project, the cost, and with whom you contracted for the project?

Dr. BAUMGARTNER. I would be happy to do so.

(The information requested follows:)

Research projects funded in fiscal year 1963 (preliminary, as of June 30, 1963)

Project title	Contractor or grantee	Project director	Amount obligated
1. Land tenure and reform in Puerto Rico.	U.S. Department of Agriculture Economic Research Service.	Dr. Howard L. Hill, agricultural economist, Economic Research Service.	$22,500
2. Analysis of factors associated with differences and changes in agricultural production in the less developed countries.	do	Dr. Raymond P. Christensen, Chief, Economic Development Branch, Economic Research service.	125,000
3. Development and use of improved varieties of the major cereal crops of Africa.	U.S. Department of Agriculture, Agricultural Research Service.	Dr. George F. Sprague, leader, corn and sorghum investigation, Agricultural Research Service.	146,625
4. Research on the sterility method method of tsetse fly control or eradication.	do	Dr. Edward F. Knipling, Director, Entomology Research Division, Agricultural Research Service.	3,500
5. Improvement of grain legume production in the Near East-south Asia and Far East regions.	do	Dr. Martin G. Weiss, Associate Director, Crops Division, Agricultural Research Service.	2,000
6. Analysis of data on the nutrient status of soils in Latin America and West Africa.	University of North Carolina.	Dr. Walter Fitts, head, Department of Soil Science, North Carolina State (College) of the University of North Carolina.	750,000
7. Appraisal of the administration of technical assistance programs, with special emphasis on technical assistance in agriculture.	Syracuse University	Dr. Irving Swerdlow, director of Maxwell Center for Overseas Operations Research, Syracuse University.	355,475
8. Research in foam plastics for housing.	University of Michigan.	Dr. Stephen Paraskevopoulos, associate professor of architecture, University of Michigan.	90,000
9. Malaria eradication research	Communicable Disease Center, U.S. Public Health Service.	Dr. George Pearse, director, Savannah Laboratory, Communicable Disease Center.	235,000
10. Malaria insecticide research—DDVP field testing.	do	do	100,000
11. Effect of investment in health and education on economic growth.	Harvard University (grant).	Dr. Robert Hamlin, chairman, Department of Public Health Administration, Harvard School of Public Health.	51,000
12. Mathematics curriculum development in Africa (phase I).	Educational Services, Inc.	Mr. Stephen White, executive officer, Educational Services, Inc.	241,117
13. Analysis of socioeconomic impact of power in rural self-help situations.	Peace Corps, Fairbanks-Morse (procurement only).	Mr. George Van den Berghe, USAID, Bogotá, liaison officer for Peace Corps.	17,800
14. Diffusion of information through radio and supporting media (pilot project in Ecuador).	American Institute for Research.	Mr. Paul Spector, American Institute for Research.	39,075
15. Research on factors contributing to maladaptation of U.S. employees overseas (joint AID-State-USIA-Carnegie Foundation study).	Department of State	Mr. Regis Walther, State personnel.	[1] 5,000
16. World trade patterns—Projection and analysis.	Yale University	Prof. Bela Belassa	3,800
17. Effect of foreign aid on the U.S. balance of payments.	Haverford College	Prof. Philip Bell and Dr. Lawrence Lynn	6,555
18. Research Information Service	Department of State	Dr. William J. Nagle, Director, External Research, INR.	25,000
19. Substantive backstopping of U.S. participation in U.N. Conference on Science and Technology (inhouse activity, under the direction of Mr. David Tilson).			[2] 394,000
20. Other projects and undistributed expenses.			[3] 569,553
Total			3,183,000

[1] AID only.
[2] Includes $294,000 for personal services and travel expenses of the U.N. Science Conference Staff.
[3] Includes $536,000 for personal services, travel, and other expenses attributable to research and evaluation activities of the Office of Human Resources and Social Development.

Mr. PASSMAN. Will you tell us the amount of the unliquidated funds to the credit of the research project as of June 30?

Mr. TENNANT. $10.5 million was our estimate. I believe the 1963 program is a little lower than estimated. The unliquidated will probably be less than our estimate.

Mr. PASSMAN. Do you have your 1962 program there? What was it in dollars?

Mr. TENNANT. $8,593,000.

Mr. PASSMAN. And in 1963?

Mr. TENNANT. I believe it is around $6 million.

Dr. BAUMGARTNER. This was the hard look I was talking about. We would not let all of these go through.

FISCAL YEAR 1964 RESEARCH PROGRAM LEVEL

Mr. PASSMAN. Are you going to reduce this $15 million?

Dr. BAUMGARTNER. We will have a hard look, but we have already had a hard look at a part of this.

Mr. PASSMAN. It still went from $3.3 million to $15 million.

Dr. BAUMGARTNER. No. We have an additional $5 million, sir, that are solid things right now. So all we are leaving ourselves is a margin of $10 million for everything else in 1964.

Mr. PASSMAN. But you have still increased the size of the program from $3.3 million to $15 million.

Dr. BAUMGARTNER. I think it depends on how you wish to interpret this. I am saying we actually obligated up to July 1, about $3 million-something. We have an additional $5 million which carries on some of the work begun in 1963, and a few newly approved projects to be funded out of the $15 million we are requesting. We have had a hard look at it. The research committee has looked at it. I have looked at it. Thus, we have an additional $10 million that is not that hard yet.

Mr. PASSMAN. I should have asked the question this way: What was the appropriation for fiscal 1962, comparable to this program? Is there any way to establish it?

Dr. BAUMGARTNER. There was no line item.

Mr. PASSMAN. Is there any way to establish the amount of money you obligated for projects comparable to what you are going to spend in 1964?

Mr. TENNANT. That is the figure I gave you, $8 million.

Mr. PASSMAN. What was the amount for fiscal 1963?

Mr. TENNANT. $3 million-odd.

Mr. PASSMAN. That was the amount you obligated?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. How much did Congress appropriate?

Mr. TENNANT. No line item appropriation as such.

Mr. PASSMAN. You have $10 million unliquidated?

Dr. WEYL. Some $5 million will be needed to continue work being done under projects already begun, and to fund a few new projects in the fiscal year 1963 program that got stuck in the pipeline on June 30. They were ready to go, scientifically approved, with the seal of Good Housekeeping upon them. They will go now.

Mr. PASSMAN. The time ran out on you, and you did not get them obligated. So far as I am concerned, I am impressed with the fact

that you are willing to carry them over rather than obligate them hastily on Sunday, June 30.

Mr. ROONEY. Because you give them 50 percent of the money, there is less chance of this sort of thing happening.

Mr. PASSMAN. The money was there. The money is lapsing. You would rather take a chance on losing the money than to obligate it without having the projects completely firm?

Dr. BAUMGARTNER. That is right, sir.

Mr. PASSMAN. I wish we could get the entire Agency operating on such a basis. Plan the projects and, after you plan them and know they are sound, then get your money.

Mr. TENNANT. I think that is part of the reason we have the large unobligated balance this year.

Mr. PASSMAN. That is fine but, Dr. Baumgartner, I got my point over, did I not?

Dr. BAUMGARTNER. You did, sir. That is exactly the reason the money was not obligated.

Mr. PASSMAN. Mr. Ford?

RESEARCH ADVISORY COMMITTEE

Mr. FORD. I think it would be helpful for the record if we had a list of the people who are on your advisory committee and their background.

Dr. BAUMGARTNER. I would be happy to supply that.

Mr. FORD. In addition, would you indicate for the record the size of your office. I gather you have two separate offices or two separate functions.

Dr. BAUMGARTNER. Right.

Mr. FORD. One on the portion that you testified to originally.

RESEARCH AND EVALUATION STAFF

Dr. BAUMGARTNER. We will be happy to give you the staff associated with American schools abroad and the staff associated with research. We are reorganizing the research division.

Mr. FORD. Just indicate the size of the staff, the kind of staffing pattern you have, and whether it has changed materially upward or downward, so we get some feel of just what the extent of the organization is.

Dr. BAUMGARTNER. Those expenses, incidentally, are not in this request. They were in a previous request.

Mr. FORD. That is all, Mr. Chairman.

(The information requested follows:)

OFFICE OF HUMAN RESOURCES AND SOCIAL DEVELOPMENT STAFFING

The Office of Human Resources and Social Development is the Agency staff office concerned with the administration of AID's research program and with the development of agencywide policy and professional standards for technical assistance in these sectors: agriculture, community development, education, health, housing, industrial development, labor, public administration, and transportation.

Currently, the Office is divided into two major functional areas—the technical services and the research and evaluation staff. As Dr. Baumgartner indicated in previous testimony, the latter is undergoing intensive study with a view

toward more effective program development and the major technical positions are only now being filled. The technical services, too, are under major review.

Human Resources and Social Development [1] *staff, fiscal year 1962–64*

Human Resources and Social Development offices	Fiscal year 1962	Fiscal year 1963	Requested for fiscal year 1964
Assistant administrator's office	[2] 6	[3] 16	[3] 16
Executive office	3	9	[4] 0
Management support staff	0	0	12
Agriculture	3	4	10
Community development	3	3	5
Education	5	5	6
Book gap	0	2	2
English language	0	1	1
American schools abroad	2	2	3
Health	3	5	14
Malaria eradication	6	6	8
Community water supply	5	5	9
Housing	3	2	2
Industrial development	3	2	3
Labor	3	5	4
Public administration	3	2	5
Public safety	3	(5)	(5)
Transportation	4	3	2
Interregional projects	2	2	0
Nuclear energy	1	1	0
Research	18	19	29
Evaluation	10	13	10
Research-administration	6	(6)	(6)
U.N. Science Conference Staff (temporary)	16	16	(7)
Contract staff	5	4	(8)
Technical assistant, advisory staff	4	4	(7)
Planning assistance	9	0	(5)
Total	126	131	141

[1] The Office of Human Resources and Social Development now includes 8 services (technical sectors), a research division, an evaluation division, and a management support staff.
[2] Prior to November 1962 research and evaluation functioned as a separate staff.
[3] Includes 1 officer assigned to UNESCO, 4 positions for consultants used temporarily in different areas for specific tasks.
[4] Transferred to assistant administrator's, Human Resources and Social Development management support staff.
[5] Function transferred to AA/PC.
[6] Included in executive office.
[7] Function ended June 30, 1963.
[8] Transferred to A/MR.

Members of the A.I.D. Advisory Committee for Research

The members of the A.I.D. Advisory Committee for Research are:

Dr. Walsh McDermott, Chairman
Dr. Harrison S. Brown
Dr. Robert W. Cairns
Dr. Robert A. Charpie
Prof. Merle Fainsod
Prof. Allan R. Holmberg
Dr. Max F. Millikan
Dr. Albert H. Moseman
Dr. Arthur T. Mosher
Prof. Kenneth H. Parsons
Dr. Roger Revelle
Mr. Eugene B. Skolnikoff
Dr. Abel Wolman
Dr. Jerrold R. Zacharias

Biodata for each of the above Committee members follows.

Walsh McDermott

Physician, educator; b. New Haven, Oct. 24, 1909; s. Terence and Rosella (Walsh) McD.; B.A., Princeton, 1930; M.D., Columbia, 1934; married Marian Anne MacPhail, November 11, 1942. Intern in medicine N.Y., Hosp., 1934, asst. resident physician, 1935–37; with Cornell U., 1937–, successively instr. medicine, asst. prof., asso. prof., 1937–55, Livingston Farrand prof., chmn. department pub.

health and preventive medicine, 1955–; Member of the National Advisory Health Council, 1955–. Recipient Lasker award, 1955. Mem. Am. Soc. Clin. Investigation, Assn. Am. Physicians, Am. Clin. and Climatol. Soc., Interurban Clin. Clum. Clubs: Century Assn. (N.Y.C.). Editor Am. Rev. Respiratory Diseases, 1948–; coeditor: Cecil-Loeb Textbook of Medicine, 1953–59. Office: 1300 York Av., N.Y.C. 21.

HARRISON S. BROWN

Chemist, educator; b. Sheridan, Wyo., Sept. 26, 1917; s. Harrison H. and Agatha (Scott). B.; B.S., U. Cal., 1938; Ph.D., Johns Hopkins, 1941; LL.D. (hon.), University of Alberta, 1961; married Rudd Owen, Nov. 11, 1949; 1 son, Eric Scott. Instr. chemistry Johns Hopkins, 1941–42; asst. dir. chemistry Clinton Labs., Oak Ridge, Tenn., 1943–46; research asso. plutonium project U. Chgo., 1942–43, asst. prof. Inst. for Nuclear Studies, 1946–48, asso. prof. 1948–51; prof. geochemistry, Cal. Institute Tech., 1951–. Director Hycon Manufacturing Co. (Monrovia, Cal.). Recipient Lasker Found. award. Mem. Nat. Acad. Scis., Am. Chem. Soc. (received award in pure chemistry, 1952). Am. Phys. Soc., Geol. Soc. Am. A.A.A.S. (annual award, 1947), Am. Astron. Soc., Am. Geophys. Union, Phi Beta Kappa, Sigma Xi. Author: Must Destruction Be Our Destiny? 1946; The Challenge of Man's Future, 1954, The Next Hundred Years, 1957, Editor-at-Large Sat. Rev. Home: 5155 Stoneglen Rd., La Canada, Cal. Office: Cal. Inst. Tech., Pasadena, Cal.

ROBERT W. CAIRNS

Research executive; was born at Oberlin, Ohio, December 23, 1909; the son of William D. and Iva (Crofoot) C.; student University of California at Berkeley, 1926–27; A.B., Oberlin Coll., 1930; Ph. D., Johns Hopkins, 1932; m. Katharine Kuhn, Oct. 22, 1932; children—Lindsey Ann, Michael John, Robert Christopher, Stephen William Waldo. Research chemist Firestone Tire & Rubber Co., Akron, O., summers 1930–33; fellow Bartol Research Found., Swarthmore, Pa., 1933–34; research chemist explosives research div. research center Hercules Powder Co. 1934–40, asst. to dir. research, 1940–41, dir. research center, 1941–45; dir. development dept. Radford Ordnance Works, Va., 1942–43, asst. dir. research, 1945–55, dir. research, 1955–60, company director, 1960–; vice chairman of research and development board Department Def., Washington, 1953, spl. asst. to sec. def., 1953–54, dep. asst. sec. def. for research and development, 1953–54; spl. asst. to asst. sec. def. 1955–56, cons. AID ADMINISTRATIVE EXPENSES

WITNESSES

FRANK M. COFFIN, DEPUTY ADMINISTRATOR FOR OPERATIONS, AGENCY FOR INTERNATIONAL DEVELOPMENT
EDWARD F. TENNANT, CONTROLLER, AID
ROY R. MADDEN, CHIEF, ADMINISTRATIVE BUDGET, AID
LEIGH M. MILLER, LEGISLATIVE PROGRAMS COORDINATOR, AID
STANLEY B. SCHEINMAN, LEGISLATIVE PROGRAMS COORDINATION STAFF, AID
BYRON ENGLE, DIRECTOR, OFFICE OF PUBLIC SAFETY, AID
HARRY ACKERMAN, CONGRESSIONAL LIAISON STAFF, AID

Mr. PASSMAN. The committee will come to order.

Mr. Director, kindly proceed with your statement.

GENERAL STATEMENT

Mr. COFFIN. Mr. Chairman and members of the committee, I welcome this opportunity to appear before your committee to present the administrative expense budget for the Agency for International Development. The amount involved, while small in relation to the larger sums appropriated for foreign-assistance programs, is vital to properly managing and protecting the investment of the American taxpayer.

The request for administrative expenses for fiscal year 1964 is $57,-250,000. This is $5,083,000 more than was available in fiscal year 1963 taking into account the fiscal year 1963 appropriation of $49,500,000, the reappropriation of $1,277,000 from prior year unobligated balances and the fiscal year 1963 supplemental authorization of $1,390,000 for the increased Federal pay costs authorized by Congress last fall.

The proposed increase of $5,083,000 over this year's availability consists of:

1. Sum of $1,425,000 for people to carry out the increased programs in Latin America;
2. Sum of $2,040,000 for essential items deferred this year due to inadequate funds, and
3. Sum of $1,618,000 for increased pay costs.

Of these three items only one—the increase of $1,425,000 for Latin America—involves an increase in personnel. No increases in personnel are being proposed elsewhere either in Washington or overseas. The other two increases, accounting for $3,658,000, or more than 70 percent of the total increase proposed, are to maintain the current level of operations with the increased pay costs resulting from Government-wide salary increases.

Contrary to what might seem to be a natural conclusion, fiscal year 1964 administrative requiremnts do not have a direct relationship to the fiscal year 1964 congressional appropriation of program funds. Administrative needs are, in large measure, determined by a workload derived from programs and projects initiated in prior years. For example, the volume of vouchers to be examined and paid is roughly in proportion to AID expenditures arising out of prior year commitments. However, our administrative costs of AID are only 1.7 percent of program appropriations.

STRENGTHENING ADMINISTRATION IN LATIN AMERICA

The increase of $1,425,000 for a higher level of administrative operations in Latin America would permit an increase in oversea American staff of 65 positions and an increase of 130 foreign national employees. In former years, before the Alliance was launched, our Latin American missions were staffed to provide for a different and more limited type of program, which required a smaller staff to achieve its goals. The impact and acceleration of the Alliance for Progress requires us to realine and strengthen our missions to enable them to provide adequate administrative backstopping for more diversified program activities and to safeguard the interests of the U.S. Government.

These staff additions are virtually mandatory in order to strengthen the capability of the missions in Latin America. Approximately 33 percent of the proposed increase in American staffing and 75 percent of the proposed increase in local employees will be employed in oversea auditing and accounting of the expenditure of U.S. funds for capital projects and other economic assistance, such as food-for-peace shipments. The balance will have such responsibilities as analyzing country development plans to determine those goals to which the United States should commit funds; and reviewing proposed capital projects in terms of their economic and financial feasibility.

Within this decade, the Alliance faces an extraordinary rather than a conventional challenge. Maximum attainment of results must be

achieved each single year. The increase we are requesting for intensified AID administrative support of the Alliance is a modest one which is urgently needed and vitally important.

ITEMS DEFERRED DURING FISCAL YEAR 1963

The increase of $2,040,000 is due to the deferral of essential items until fiscal year 1964. It will be recalled that we proposed an administrative budget of $55 million to this committee last year. The amount finally appropriated for this purpose was $49,500,000, and this did not become available until October—3 months after the beginning of the fiscal year. It will also be recalled that in fiscal 1963 for the first time the Foreign Assistance Act legislation prohibited our use of contingency funds or the authority for transfer between appropriations to augment administrative expenses, for emergency situations.

We were thus faced with substantially less funds than required for the task at hand. AID was not able to maintain a monthly rate of expenditures equal to those of the first 3 months of the year. We had to abandon the then current staffing plans, and take the stringent action of putting a 3-month freeze on all employment. Controllable items of expense, such as travel, overtime, use of consultants, and purchase of ordinary office supplies and equipment were rigidly curtailed. A worldwide review of manpower utilization was undertaken to determine which of AID's most pressing needs could be met within available resources. The major shifts in personnel strength resulting from this review required curtailment of some activities so as to permit adequate domestic redirection of oversea operations and minimum steps toward strengthening operations of Latin America.

To further curtail and control expenditures in fiscal year 1963, central training and foreign service staffing complements were abolished. Funds and personnel incident to the various complements were transferred to the appropriate regional bureaus to administer within their respective resources and in competition with the priorities of day-to-day operations. The dissolution of these central complements in this manner had the anticipated effect of minimizing overall expenditures of AID in this area of operations, but with some sacrifice of training and development.

By these actions, AID realined its personnel and resources to meet priority operating needs and averted a major reduction-in-force which could have damaged employee morale and program operations.

In curtailing costs for other than personal services, we were limited in our ability to effect changes in the rate of obligations for fixed costs, such as rents, communications, utilities, and home leave travel for oversea personnel. We were forced, however, to curtail obligations for such items as supplies and materials, equipment, repairs and alterations to buildings, rest and recuperation travel, and training.

All told, for costs in this category we programed in fiscal year 1963 nearly $1,500,000 less than was used for this purpose in fiscal year 1962. As a temporary expedient and a short-term measure, it has produced the needed effect. However, it is not feasible to prolong this situation. We postponed many expenditures which must inevitably be made. For each of our oversea missions, and for our headquarters, I have complete details of those postponed items which can be made a part of the record if the committee so desires.

The increase also includes $500,000 for training which should have been initiated in fiscal year 1963. These funds will be used to provide advanced training for selected employees who have demonstrated high potential for professional growth.

INCREASED PAY COSTS

This is an item of increase over which AID has no control. The Postal Service and Federal Employees Salary Act of 1962 provided for a two-step increase in salaries; the first step was effective in October 1962 and the second in January 1964. Of the $1,618,000 requested for these mandatory increases, $643,000 is to make the first step increase applicable to current employment on a full year basis and $720,000 is to provide the same employees the second step increase for 6 months beginning in January 1964. The balance of this increase, $255,000, provides for 2 extra paid days occurring in fiscal year 1964 compared with fiscal year 1963. We will have 262 paid days in fiscal year 1964 compared to 260 paid days in fiscal year 1963. Although this act also provides for a 20 percent increase in postal rates beginning in January 1963 these additional costs to AID are being absorbed within the funds requested.

MANAGEMENT EFFORTS

On the management side, we have tackled and either advanced or completed many measures in our continuing effort to make the Agency a more effective operating organization. Among these are:

Specific responsibilities have been assigned to the bureaus, offices and staffs, and tight staffing levels have been established for all headquarters units.

Our efforts have continuously been directed toward an overall improvement in manpower utilization. Our management office is currently conducting a study which we hope will provide us with better controls for utilizing existing manpower resources and to increase productivity.

Attention has also been directed toward the difficult problem of making the best use of office space. AID and State are mutually concerned and are cooperating closely toward the end of closer proximity of State and AID offices leading to improved operations and better administration. The demolition of some of the 12 different buildings which presently house State and AID, is forcing a decision on other office moves. We intend to proceed as effectively and economically as we can, faced as we are with a logistical problem that is not easy to solve.

Delegations of authority have been worked out for the principal functions, such as approving loans, contracts and interagency service agreements, and for personnel operations, so that each regional bureau now has adequate authority to perform its responsibilities.

Modification of our management procedures, and our reporting and control systems is substantially underway.

A new program development system outlined in a set of guidance documents known as the Program Guidance Manual, has been developed and put into effect for the fiscal year 1964 program.

In addition, we have engaged in extensive efforts to increase productivity, improve management, and hold down total employment and administrative costs:

We have conducted detailed "functional surveys," notably of (*a*) contract negotiating and implementing (*b*) personnel processing, and (*c*) management reporting. We have aready eliminated many reports and are simplifying many others, thus cutting down the workload such reports generate at both the reporting and receiving ends.

We are increasing the application of automatic data processing in our management control, personnel, fiscal accounting, and other activities.

We are enforcing productivity increases and are stressing at all echelons of supervision the need for better management of the work to be done with the staff at hand.

To this end, Mr. Bell earlier this month sent a personal memorandum to the heads of all our Washington and field offices calling on them to take vigorous and continued action to eliminate nonessential activities and positions and to increase productivity by improved manpower utilization and strengthened supervision. He is making the head of each bureau, office, and field mission responsible for the application of strict tests of esentiality in determining their manpower requirements. He is requiring them to make every effort to meet any new workload requirements by adjusting existing projects, activities, and procedures rather than by adding new employees.

CONSOLIDATED ADMINISTRATION AND DELEGATED POSTS

In an effort to reduce administrative overhead and at the same time maintain a high level of program effectiveness, the Agency in the past year entered into agreements with the Department of State and the U.S. Information Agency to establish consolidated administrative management organizations at six medium-sized posts in Africa. This undertaking is an experiment but it is our firm hope that savings can be realized through such an arrangement while the same or an improved level of support is rendered.

A further effort to reduce administrative overhead has been undertaken in 10 of the small African posts by delegating to the Ambassador the authorities which are usually vested in an AID mission director. While this technique has resulted in a reduction of support personnel, it is only applicable where the Agency's program is extremely limited.

REVIEW AND REVISION OF PROCEDURES

The Agency's management efforts during 1962 were directed primarily at problems of organization, executive staffing, and a sweeping overhaul of programing processes. With these substantially accomplished, we concentrated in 1963 on efforts to improve procedures for the execution of approved programs and projects.

The Agency has until now been operating under somewhat divergent procedural systems, inherited from its predecessors, the DLF and ICA. Accordingly, we undertook a comprehensive internal survey of our activity planning, approval, and implementation methods. Mr. Bell's decision in January of this year to launch this study, known

within AID as the implementation project, was one of his first official acts as Administrator.

The objectives of this agencywide project, now in its final phase, are, first, to accelerate the implementation of approved programs and projects; second, to codify operating policies and instructions; third, to improve relations with cooperating countries, other U.S. agencies, contractors, private investors, banks, and the academic community; fourth, to extend increased authority to the oversea missions, within the limitations of their varying capabilities; and fifth, to reduce reports and documentation to the minimum consistent with prudent management.

The implementation project has focused on the essential areas of Agency activity: capital projects, technical assistance, commodity import programs, local currency programs, reporting and evaluation techniques, and contracting and procurement. Its work product will be in the form of updated and detailed instructions to AID personnel governing all phases of operations.

The scope and objectives of the implementation project are of considerable dimension. We have no illustions that this project will solve all our administrative problems. Its results may not be visible outside the Agency for some time and a great deal will remain to be done.

Yet I am confident that the project represents a major step in the direction of procedural effectiveness and that, as a result, improvement in the performance of the AID program can be expected.

I can assure the committee that these problems will continue to receive the close personal attention of the Administrator and myself.

This concludes my general statement, Mr. Chairman. I shall be pleased to answer any questions the committee may have.

Mr. PASSMAN. Thank you, Mr. Coffin, for your comprehensive statement.

REQUEST FOR ADMINISTRATIVE EXPENSES FOR FISCAL YEAR 1964

Last year you had an actual appropriation for administrative expenses for AID of $49.5 million; is that correct?

Mr. COFFIN. Yes, sir.

Mr. PASSMAN. How much has that amount been reduced in your fiscal 1964 request?

Mr. COFFIN. We are requesting $57,250,000.

Mr. PASSMAN. It is an increase?

Mr. COFFIN. Yes, sir. Last year we got $49.5 million in appropriations.

Mr. PASSMAN. What is the asking price this year above what you received last year?

Mr. COFFIN. Let me finish with what we had to work with.

We had to work with an appropriation of $49.5 million, a reappropriation of $1.277 million, and the supplemental authorization of $1.390 million for the increased Federal pay costs. The total was $52,167,000.

We are asking, in effect, for $5,083,000 more than we had to work with last year.

Mr. PASSMAN. The asking price exceeds by $5-million-plus the total you received last year?

Mr. COFFIN. Yes, sir.

Mr. PASSMAN. Where did you get the additional $2,740,000 you just referred to; out of what appropriation?

Mr. COFFIN. Part of it was a reappropriation of prior year unobligated balances; part of it was the supplemental pay raise authorization.

Mr. PASSMAN. From what appropriation did you get the funds?

Mr. COFFIN. That was from program——

Mr. MADDEN. The reappropriation——

Mr. PASSMAN. But you had to get additional money out of some other appropriation to meet the salary increases. From what appropriation item did you get the money?

Mr. COFFIN. We got this under the authorization. We took it from five categories: $575,000 from development loans, $290,000 from Alliance for Progress loans, $190,000 from development grants, $95,000 from Alliance for Progress grants, $239,850 from supporting assistance, making a total of $1,389,850.

Mr. PASSMAN. Add that to the unappropriated funds.

Mr. COFFIN. $2,667,000.

Mr. PASSMAN. Then we are out of balance a little somewhere because there was $2,740,000; am I correct?

Mr. MADDEN. I think you are including—no, I do not know.

Mr. TENNANT. Where did you get your $2,740,000?

Mr. PASSMAN. Did Mr. Coffin not give it to us a moment ago?

Mr. COFFIN. No.

Mr. PASSMAN. Give us the total amount. You programed $52,240,000 although the Congress appropriated $49.5 million, and there is a difference of $2,740,000; is that correct?

Mr. TENNANT. I think the——

Mr. PASSMAN. We are just trying to make the books balance.

Mr. TENNANT. Our request for the supplemental appropriation for the pay act was for $1,463,000 and the last figures Mr. Coffin gave you was for the amount enacted by the Congress which was slightly less, $1,389,850.

Mr. PASSMAN. You got those sums out of the appropriation we made last year; is that correct?

Mr. TENNANT. Out of other appropriations, yes, but when the book was printed it was the first supplemental bill——

Mr. PASSMAN. You actually did not get any additional appropriation over and above what Congress appropriated last year. You just made revisions in the several appropriations so as to meet the pay act cost and other items; is that correct?

Mr. COFFIN. That is correct.

Mr. TENNANT. I would like to emphasize that to make that transfer from the other appropriations——

Mr. PASSMAN. It required legislation?

Mr. TENNANT. There was a separate act.

Mr. PASSMAN. Will you reconcile your figures so as to make them balance? We have used the correct figure have we not, that the total was $52,240,000?

Mr. TENNANT. That is correct, at the time the books——

Mr. MADDEN. The availability is $73,000 less than that because Congress put a 5-percent cut on every agency that went up for pay costs.

Mr. PASSMAN. Make your adjustments in there, will you, gentlemen?

Mr. MADDEN. $73,000 less, yes.

EMPLOYMENT IN LATIN AMERICA

Mr. PASSMAN. The proposed increase for fiscal year 1964 is made up of three elements of cost, the first of which is to strengthen the administration in Latin America for which you are requesting $1,425,000.

What were the man-years of employment in Latin America during fiscal years 1961, 1962, 1963, and what is proposed for fiscal year 1964? Put that information in the record, if you will, and give the committee a copy of it.

Mr. COFFIN. Concerning the added people—65 U.S. nationals and 130 nationals—most of the foreign nationals are for auditors, accountants, and a third of the U.S. nationals are for this purpose.

Mr. PASSMAN. Give us a list for the years 1961, 1962, 1963, and 1964.

(The information follows:)

Man-years employment in Latin America, fiscal years 1961, 1962, 1963, 1964 (proposed)

	Fiscal year 1961	Fiscal year 1962	Estimated, fiscal year 1963	Proposed, fiscal year 1964
Man-years:				
U.S. nationals	147.0	171.2	203.1	252.5
Locals	269.5	315.6	354.7	448.0

USE OF FOREIGN NATIONAL EMPLOYEES FOR DISBURSING AND AUDITING WORK

Mr. PASSMAN. Are you hiring foreign nationals to audit the foreign aid expenditures?

Mr. COFFIN. Yes, we have foreign nationals as voucher clerks, I believe, and auditors.

Mr. PASSMAN. Is that practice not unusual?

Mr. COFFIN. I do not believe so, Mr. Chairman.

Mr. TENNANT. We have been doing this ever since the Marshall plan began and the principle under which it operates is that normally we hire an American senior auditor and then the country hires some locals to work for him. This is due to language and other problems, so we find this the most effective way at getting at the details of the audit.

Mr. PASSMAN. Are they active in the disbursement of these funds?

Mr. TENNANT. No; these people postaudit after disbursements are made.

Mr. PASSMAN. They have nothing to do with disbursements?

Mr. TENNANT. There is another type of person I would identify separately as voucher examiners who get involved in disbursements. For the most part, I might say 100 percent, but I am not sure, though,

these vouchers are certified by Americans. While the detailed work done by the locals the Americans certify them.

Mr. PASSMAN. Would the foreign nationals, the auditors, check invoices or bills for payment and prepare the vouchers until it moves up to the American auditor to initial them?

Mr. TENNANT. That is correct, sir.

Mr. PASSMAN. Do you not think we ought to have a good close look at that operation, Mr. Director?

Mr. COFFIN. All of these auditors are in the field but, in turn, we have Washington inspectors and auditors go out and check their records. Then we have the Inspector General and our Management Inspection Staff and Mr. Tennant's office, who are making checks.

Mr. TENNANT. That is correct, Mr. Chairman.

After the American initials these payments they are sent to the U.S. disbursing officer under State Department control. He actually makes the payments.

We use essentially the same procedures that are used by State and USIA and other agencies.

Mr. PASSMAN. I wonder if I may just refresh your memory on what this practice could possibly lead up to?

OVERPRICING OF COMMODITIES IN LAOS

For example, suppliers' invoice in overpricing of commodities. This is on page 9 of the Summary of Nonmilitary Assistance Program for Laos.

The Tian Hiap Hen & Co. furnished 20 generators, submitted an invoice for $162,000 and AID paid it; it was established later the real value was $20,000.

Then you had the Dah Chong Hong Trading Corp., for sewing machines, submitted an invoice of $3,500 and AID paid it, but it was established later it had a value of $1,000.

The Charoen Suk Phanit Co., sawmill equipment, submitted an invoice for $42,000. AID paid it and discovered later it had a value of $12,000.

Those three items alone amounted to $207,500 and AID paid that sum, but they had a value of only $33,000.

Two of them we lost and one of them we are trying to collect now from Laos.

PERSONNEL FOR AUDITING AND INSPECTION

Had we had the proper type of auditing and inspection in all probability we would not have had a list such as this one. This is only an extract from pages of this kind of stuff.

Mr. TENNANT. I think, Mr. Chairman, it should be pointed out that these recoveries you talked about are generated by our own audit system.

Mr. PASSMAN. It does not make any difference. It happened. Had you done the auditing before it happened, you would not have had to disclose these discrepancies after it happened.

Mr. TENNANT. I think it is very difficult during an audit to disclose sometimes whether it is a fraudulent invoice or not.

Mr. PASSMAN. As far as I am concerned, I think it is a lot better, since we are the dispensers of this generosity and money, that at least we hire American auditors.

Mr. COFFIN. A good part of our request for personnel for Latin America is for American auditors.

Mr. PASSMAN. You had requests in prior years and you hired foreign nationals. We have been told already that this is the established procedure, to hire foreign auditors. You have turned back money you could not spend.

Mr. COFFIN. A substantial part of the U.S. nationals component of the Latin American program is auditors and controllers.

Mr. PASSMAN. He said that after a fact, sometimes, and others before.

Mr. TENNANT. That is true. I think the payments you referred to, I would like to check, were made through banking channels, Stateside.

Mr. PASSMAN. I merely mentioned it to remind that there was some looseness. You do not dispute that fact, do you?

Mr. COFFIN. I think there is a great deal less than there was in the early days of the Laos program.

PHASING OUT OF USE OF SERVICES IN LATIN AMERICA

Mr. PASSMAN. What type of essential functions proviously performed by the servicio are now performed by the AID staff in Latin America?

Mr. COFFIN. As I understand it, Mr. Chairman, this was a form of organization which consisted partly of foreign nationals in the host country, partly U.S. officials working in the organization with them, doing a function which might be in the field of agriculture or health. In most of these cases now this function has been taken over by the Government and we are not working through such organizations to anywhere near the great extent that we did. There are some still left but for its time, it performed a useful service.

Mr. PASSMAN. You are phasing it out?

Mr. COFFIN. I think that is a fair statement.

TRAVEL COSTS IN LATIN AMERICA

Mr. PASSMAN. Why do you require $97,500 for travel and transportation of persons; post assignment?

Mr. COFFIN. For travel to posts?

Mr. PASSMAN. No; travel and transportation of persons; post assignment.

Mr. COFFIN. Can you answer that?

Mr. MADDEN. This is to get the people there; 65 U.S. nationals.

Mr. PASSMAN. Let us see where we are going to take them and how much that is, per person.

Mr. COFFIN. You were speaking, Mr. Chairman, of the money proposed to transport the new Latin American personnel to their posts?

Mr. PASSMAN. I am just picking this up out of the justification book. Why $97,500 for transportation of persons; post assignment?

You said 65 people, to take them to the place of assignment? Are you talking about Americans?

Mr. MADDEN. Yes, sir.

Mr. PASSMAN. How much is that per person?

Mr. MADDEN. Roughly, about $1,500 or $1,400.

Mr. PASSMAN. Is that not pretty high?

Mr. COFFIN. These are people with families, Mr. Chairman.

Mr. PASSMAN. It is costing $1,500 per person?

Mr. COFFIN. Per family.

Mr. PASSMAN. It is going to cost $1,500 per individual to get him from America to his post in Latin America? Then if he has dependents——

Mr. COFFIN. $1,300, Mr. Chairman.

Mr. PASSMAN. They gave me the $1,500 figure. I did not work it out.

How much do you get, Mr. Controller?

Mr. TENNANT. I believe I get $1,500.

Mr. PASSMAN. When you recruit them, do they all move into Washington and then do you take them out, or do you take them from where they are selected to their assignment?

It sounds to me like this is an excessive figure. You can get a ticket to some of these places in Latin America out of Washington for $285, or $320, or $340.

Do you take them tourist class?

Mr. COFFIN. Yes, tourist class, but this is for the technician or employee, plus his wife and children joining him.

Mr. PASSMAN. It seems that you are selecting people with large families. You do not have any rule that you cannot work unless you have a certain number of children, do you?

Mr. COFFIN. No, we do not have that.

Mr. PASSMAN. I think the Peace Corps sent a family of 15 out to the Philippines.

Mr. COFFIN. This is from his home in the United States to his post overseas.

Mr. PASSMAN. We are talking about Latin America, are we not?

Mr. COFFIN. Yes.

Mr. PASSMAN. If you are in New Orleans and you drop a man off down in, let us say, Guatemala you are dealing with maybe $112 for an airplane ticket, are you not? If you are going to drop him off at the most distant South American country, you are only going to get up to about $380, are you not?

Mr. COFFIN. I would not know.

Mr. PASSMAN. Would you give us a breakdown on this item?

Mr. TENNANT. In most cases, Mr. Chairman, these people are brought into Washington for orientation, the principal employee.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. PASSMAN. Give us a list of how this matter is handled and why the cost is so high.

Tell us about the average size of the family and everything that makes up a part of this $1,500. If you have to project it into 1964, use the information you have on 1963. That is understood, is it not?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. This is a relatively small item but it appears that when we get into something like this that you can pin down, so many times we find it is excessive. I think you, too, would like to know the cost?

Mr. COFFIN. We agree with you 100 percent, Mr. Chairman.

(The requested information follows:)

TRAVEL AND TRANSPORTATION OF PERSONS TO LATIN AMERICA

The travel estimate of $97,500 was computed on the basis of past experience—an average cost of $1,500 per family traveling by air tourist class, a family consisting of two adults, one child over 12 and one under 12. The following illustrative cost table is predicated on travel from Chicago, Ill., with a 42-day stopover in Washington for orientation and then to the cities indicated.

	Single fare rate			Cost for 3.5 travelers	42-day per diem for orientation: 21 days at $16 and 21 days at $12, in Washington, D.C.	Per diem en route to post	Excess baggage (22 pounds per person), 88 pounds	Total cost
	Chicago to Washington	Washington to country	Total					
Rio de Janeiro	$33.95	$344.30	$378.25	$1,323.87	$588	$24	$217	$2,152.87
Buenos Aires	33.95	345.50	379.45	1,328.07	588	24	217	2,157.07
Asunción	33.95	340.50	374.45	1,310.57	588	24	227	2,149.57
Santiago	33.95	324.70	358.65	1,255.27	588	24	228	2,095.27
Panama City	33.95	156.70	190.65	667.27	588	24	84	1,363.27
Guatemala City	33.95	149.70	183.65	642.77	588	24	70	1,324.77
Mexico City	33.95	112.00	145.95	510.82	588	24	61	1,183.82
Santo Domingo	33.95	101.30	135.25	473.37	588	24	59	1,144.37
Lima	33.95	272.70	306.65	1,073.27	588	24	176	1,861.27
Quito	33.95	188.70	222.65	779.27	588	24	124	1,515.27

TRANSPORTATION COSTS IN LATIN AMERICAN REGION

Mr. PASSMAN. What is the basis for the increase of $305,500 for transportation of things?

What kind of things?

Mr. MADDEN. Household furnishings.

Mr. PASSMAN. Does that cost also apply to the same 65 people?

Mr. MADDEN. Yes, sir.

Mr. PASSMAN. That is a part of it?

Mr. MADDEN. Yes, sir.

Mr. PASSMAN. How much is that item for each of the 65?

Mr. COFFIN. I would say $4,700, but I have been wrong before, Mr. Chairman.

Mr. PASSMAN. What do you get, Mr. Controller?

Mr. TENNANT. The same figure, roughly $4,700.

Mr. PASSMAN. $4,700 and $1,500. When you bring this individual back, you have to incur the same type of expense, do you not?

Mr. COFFIN. Yes, sir.

Mr. PASSMAN. That is $12,400, it is costing for one technician and whatever number of dependents he should take with him, and his household furniture?

Mr. MADDEN. Yes, sir.

Mr. PASSMAN. Thank you.

Mr. COFFIN. Mr. Chairman, this compares with what it costs any organization, whether it be a private foundation or a government body, to take a person and his family and effects and transport him overseas.

Mr. PASSMAN. I am talking about AID. To me, this appears to be excessive and I wish you would give us a breakdown on what he takes down for the $4,700 and $4,700 back.

(The information follows:)

Shipping allowance—Latin America

Residential furnishings (Government issue):	
Average cost per shipment:	
Export packing	$661.75
Freight from factory to post, at average cost of $1.60 per cubic foot (Baumritter Corp., 145 East 32d St., New York 16, N.Y., or Kroehler Manufacturing Corp., P.O. Box 167, Harperville, Ill.)	1,538.25
Total	2,200.00
$2,200 by 65 shipments	143,000.00
Shipment of personal effects of a family of 4 to a limited post (where residential furnishings are issued by the Government):	
Average cost per shipment:	
Automobile	500.00
Door to door shipment of household effects, maximum allowance for a family of 4 to a limited post, 2,700 pounds at a cost of $0.50 per pound	1,350.00
Unaccompanied baggage, 200 pounds allowance per traveler for 4 persons; 800 pounds at $0.38 per pound	304.00
Air freight, 100 pounds allowance per traveler for 4 persons, 400 pounds at $0.96 per pound	384.00
Total	2,538.00
$2,500 (rounded) by 65 shipments	162,500.00
Total	305,500.00

Mr. PASSMAN. You are getting close to $10,000 just for the cost of taking his furniture down and bringing it back. Equipment, residential furnishings, $292,500. What is that item?

Mr. FORD. Off the record.

(Discussion off the record.)

Mr. MADDEN. This is furniture that is bought and shipped down there. This will be Government furniture.

Mr. PASSMAN. Will that be in addition to this other cost?

Mr. MADDEN. Yes, sir.

Mr. PASSMAN. Let us go over this again. Let us take the $292,500 and divide that by 65. How much is that for the 65?

Mr. MADDEN. I get $4,500.

Mr. PASSMAN. Now we are up to $16,900 on this technician.

This is from the United States to and from some country in Latin America for this one technician and the amount is $3,000 for personal transportation; $9,400 for transportation of his furniture, and then the Government is going to give him $4,500 worth of furniture.

We are up to $16,900, if the figures you have given us are correct.

Mr. MADDEN. Yes, sir.

Mr. PASSMAN. Thank you.

Mr. ANDREWS. Mr. Chairman, may I ask a question?

Mr. PASSMAN. Yes, sir.

Mr. ANDREWS. What is the need of buying residential furnishings for an employee if the Government is going to pay for sending his own furniture down there?

Mr. MADDEN. I wanted to correct one thing.

Mr. PASSMAN. Please do.

Mr. MADDEN. The household furnishings included in transportation of things does not include the same items as is included in residential furniture that we are sending down. The employee is allowed a certain amount of poundage of dishes and things like that to take down. I will furnish for the record the exact poundage that the estimate is based upon, but as far as the residential furnishings are concerned, these are left at the post.

Mr. ANDREWS. I understand that.

Mr. MADDEN. And used by the man who comes in later.

Mr. ANDREWS. Maybe used 15 or 20 years, as long as this program continues?

Mr. MADDEN. Right.

Mr. PASSMAN. The transportation for this individual going out and coming back, for whatever number of dependents he may have, will average $3,000?

Mr. MADDEN. Yes, sir.

Mr. PASSMAN. The cost of transportation on his furniture to and from the Latin American country will be $9,400?

Mr. MADDEN. Let us not call it furniture.

Mr. PASSMAN. Let us say his possessions.

Mr. FORD. Personal effects.

Mr. PASSMAN. Then we are only figuring one way on what the Government is going to send down and that is $4,500; that is $16,900 per technician, is it not?

Mr. MADDEN. Yes, sir.

Mr. PASSMAN. Does that cover the cost of getting the man down and back or do you have some other incidentals?

Mr. MADDEN. That looks like all.

Mr. PASSMAN. We certainly hope so.

DISTRIBUTION OF ADMINISTRATIVE EXPENSES IN LATIN AMERICA BY OBJECT CLASSIFICATION

Will you submit for the record at this point, following your justifications for some of the proposed increases, included in 1964, of $1,425,000 for strengthening administration in Latin America, a table showing the distribution of obligations by object class for Latin America for fiscal years 1961, 1962, 1963, and 1964?

And will you also furnish a copy of the insert to the committee?

Mr. MADDEN. Yes, sir.

(The requested information follows:)

Distribution of administrative expenses by object classification—Latin America, fiscal years 1961, 1962, 1963, and 1964

[In thousands of dollars]

Object classification	Fiscal year 1961	Fiscal year 1962	Estimated, fiscal year 1963	Budget estimates, fiscalyear 1964
Compensation:				
Salaries:				
U.S. nationals	1,691.0	2,033.0	2,614.0	3,169.4
Locals	647.0	804.5	951.4	1,270.2
Regular pay above 52-week base	7.0			31.1
Post differential	100.0	105.9	129.1	163.4
Cost-of-living allowances	21.0	26.4	52.3	77.7
Overtime and holiday pay	31.0	44.2	36.8	37.0
Total, compensation	2,497.0	3,014.0	3,783.6	4,748.8
Benefits:				
Quarters allowance	240.0	302.3	424.9	614.9
Education allowance	39.0	50.4	71.8	128.2
Contributions to retirement funds	102.0	123.4	169.1	201.4
Other benefits (life insurance; health benefits, etc.)	17.0	20.8	22.9	25.2
Total, benefits	398.0	496.9	688.7	969.7
Travel and transportation of persons:				
Operational		108.8	99.1	134.1
Consultation		81.4	52.9	52.9
Post assignment		151.6	156.5	257.0
Home leave		94.6	96.2	153.3
Rest and recuperation			4.3	14.3
Medical			4.3	4.3
Total, travel and transportation of persons	255.0	436.4	413.3	615.9
Transportation of things	217.0	322.8	331.2	664.7
Rent, communications, and utilities:				
Communications		37.3	47.1	47.1
Rents:				
Office		99.4	137.7	137.7
Residential		119.6	137.9	156.9
Total, rent, communications, and utilities	203.0	256.3	322.7	341.7
Printing and reproduction	6.0	4.2	4.2	4.3
Other services:				
Representation allowances:				
U.S. AID Director	21.1	18.8	26.3	27.3
Other	16.9	19.6	23.2	24.0
Official residence allowance	(1)	12.5	16.6	19.5
Services of other agencies	(1)			
Miscellaneous contractual services	51.0	129.0	76.5	112.0
Medical			33.1	33.1
Total, other services	89.0	179.9	175.7	215.9
Supplies and materials	58.0	68.7	58.7	108.1
Equipment:				
Office furnishing and equipment		100.3	55.1	117.3
Residential furnishings		128.7	143.2	435.7
Vehicles		14.1	9.1	9.1
Other		3.1	1.2	1.2
Total, equipment	173.0	246.2	208.6	563.3
Grants, subsidies, and contributions				
Insurance claims and indemnities		0.3		
Total	3,896.0	5,025.7	5,986.7	8,232.4

[1] Included in miscellaneous contractual services.

Mr. PASSMAN. I yield to Mr. Ford.

Mr. FORD. It is awfully hard to believe these figures are accurate.

Mr. COFFIN. No, Mr. Ford.

Mr. FORD. Are you really justifying these figures?

Mr. COFFIN. This is based upon the experience in the Agency on the cost of sending to posts overseas.

There is, as Mr. Madden said, an allowance for poundage for personal effects.

This is an estimate as to the number of people that will be in the families of the 65 technicians who have not as yet been recruited.

This is not inexpensive. That is what I said to the chairman a little while ago.

Mr. FORD. That is obvious.

Mr. RHODES. Would the gentleman yield?

Mr. FORD. I cannot believe they are serious.

Mr. RHODES. How do you send their personal effects, by air express?

Mr. COFFIN. Roy, do you know?

Mr. MADDEN. I do not know how they send them.

Mr. TENNANT. A small amount, usually 100 pounds, depending on the size of the family, goes by air.

Mr. ANDREWS. That is the most expensive way to get it down there, is it not?

Mr. MADDEN. The small amount going by air is that which is needed for immediate use, and the balance goes by ship.

MILITARY SERVICE PRACTICES ON TRANSPORTATION AND SHIPMENT

Mr. FORD. When you ship your personnel overseas, is there any effort made at all to tie in with the military contracts that they have with commercial airlines? They get a very substantial reduced rate and as a consequence they save a considerable amount of money. It is well below the regular commercial rate. I see no reason why AID could not benefit from those as the military do as a whole.

This is a completely ridiculous figure and if the military were doing this, at this rate the budget for the Defense Department would be 50 percent more.

They ship people; they ship families; they ship automobiles. They ship personal effects. I have never seen, and I do not think Mr. Andrews has ever seen, a figure anywhere near comparable.

Mr. ANDREWS. If I remember, it is around $1,400 per family.

Mr. PASSMAN. That is why we asked for a complete breakdown, Mr. Ford. We want to have another look at this estimate.

However, this is just about what they spend according to figures given us once before, as I think I recall the testimony.

Mr. RHODES. Mr. Chairman, may I ask a question?

Mr. PASSMAN. Yes, indeed.

Mr. COFFIN. I wonder if we could get an answer to Mr. Ford's question. Have we looked into the military arrangements?

Mr. TENNANT. Our arrangements are fairly closely tied to State rather than the military. We have some joint arrangements with State, and so forth.

Mr. FORD. I am talking about personnel going overseas. The military have an arrangement through what they call MITMA, whereby they make a contract with various commercial airlines to send personnel at a rate about 75 percent of the commercial rate, if my recollection is accurate.

They are in the same service but because MITMA makes a contractual relationship on a price established by CAB, they get a substantial savings.

Mr. PASSMAN. We are going to ask our staff assistant to contact the Defense Department and get a similar table as to what it costs to get their personnel from the United States to Latin America. We want to get an average of what it costs for personal effects to Latin America, and then, also, what their figure is for the amount of furniture provided for the personnel that go down; civilian, please.

Then we shall get a separate breakdown on the uniformed personnel.

I yield to Mr. Rhodes.

FISCAL YEAR 1963 TRANSPORTATION OBLIGATIONS

Mr. RHODES. Mr. Coffin, can you tell us what amount was actually obligated under this heading in this last fiscal year?

Mr. COFFIN. For Latin America or for other countries?

Mr. RHODES. A figure comparable to the one from which you have been testifying.

Mr. MADDEN. For transportation of things, worldwide-overseas portion in 1962, it was $1,755,000.

Mr. RHODES. The estimate for 1963 was $1,419,200?

Mr. MADDEN. Yes, sir.

Mr. RHODES. Is this the amount actually obligated or do you have that before you?

Mr. MADDEN. We do not have that yet. The reports are not in.

Mr. RHODES. When you get this information, will you submit it for the record?

Mr. MADDEN. That may be a month.

Mr. RHODES. Do not worry. We will still be holding hearings.

ESSENTIAL ITEMS DEFERRED DURING FISCAL YEAR 1963

Mr. PASSMAN. The second portion of your proposed increase in fiscal 1964 is $5,010,000 and there is an estimate of $2,404,000 of items deferred during fiscal 1963.

How much did you obligate for these various items in fiscal 1963?

Mr. MADDEN. Again, we do not have that information at this time.

For 1962 for these items deferred, we spent $5,222,000.

I am looking at page 7 of the submission, if you want to follow it across.

We programed in 1963, $3,777,000, a decrease of aproximately $1.5 million below what we actually spent for these purposes in 1962.

Mr. PASSMAN. If you do not have a firm figure, how could you use that as a comparison between 1962 and 1963?

Mr. MADDEN. When we got our budget submission from the various missions, we were confronted with what appeared to be a stringent funding situation in 1963.

Mr. PASSMAN. What do you mean by that statement?

Mr. MADDEN. In Washington we whacked a lot of these items out of the missions' budgets and did not allot money to them.

Mr. PASSMAN. What do you mean by that statement about the funding situation?

Mr. COFFIN. This is the situation that faced us, Mr. Chairman, last year when the final appropriation was passed: The request had been cut $5.5 million.

Mr. PASSMAN. You are talking about this particular appropriation?

Mr. COFFIN. I am talking about the administrative expenses appropriation.

Mr. PASSMAN. I understand, but this particular part of it?

Mr. COFFIN. Plus the fact that, as you will remember, last year the law was changed to prevent any transfer from the contingency to administrative expenses. Therefore, at this point in the year we adopted a stringent policy of deferring items: not realizing we could not draw on our contingency for any emergencies that might develop later on in the year, realizing we would have to be overcautious insofar as we would find deferrable expenses, and we did defer them.

Mr. PASSMAN. In 1962 you obligated $51,093,500, and in 1963 you obligated $52,240,000. Certainly there was no cut but rather there was a substantial increase. Am I reading the figure correctly?

Mr. MADDEN. Yes, sir; but between 1962 and 1963 we had increased our personnel gearing up to the job we thought we had to do, and then along about October we found out that we were not going to be able to finance for the rest of the year at the obligation rate we had started the year——

Mr. PASSMAN. In effect, were you increasing the staff in anticipation of an increase in the appropriation?

Mr. COFFIN. No: that is not correct, Mr. Chairman.

Mr. PASSMAN. That, I think, is what, in effect, the gentleman said, and I would not want to——

Mr. COFFIN. Gearing up, to do the work that had to be done. Loans that had been made for projects being carried on.

Mr. PASSMAN. Mr. Director, all of this housekeeping is not just servicing loans. There is a lot of plush stuff in here.

When you refer to items deferred during fiscal 1963, does that mean you have incurred expenses in 1963 that will be paid out of the 1964 appropriations?

Mr. MADDEN. No, sir.

Mr. COFFIN. It means that, taking supplies and materials, for example, instead of replenishing stocks, in the missions that were needed, we drew down on those and, to a certain extent, we will have to replenish them.

Mr. PASSMAN. In effect is it not actually deferring to another year items that should be paid for in the current year?

Mr. COFFIN. I think so.

Mr. PASSMAN. I want to thank you again for your frankness. It follows then that you are not living within the appropriation.

Mr. COFFIN. This is a matter of judgment. That is, how long can you use equipment before it wears out?

Mr. PASSMAN. You make adjustments and would not be anticipating what you asked for out here, and building up your expenses, personnel, and otherwise, based upon what you believe you are going to get? Then some adjustments are made and you are not able to live within them?

The Congress fixes these amounts and as far as I am concerned—and I am sure it would be unanimous on this side of the table—when the Congress finally approves an appropriation, you should live within that appropriation?

Mr. COFFIN. That is what we did, Mr. Chairman.

Mr. PASSMAN. You have not done so when you defer expenses incurred in one year to be paid out of a future year's appropriation.

Mr. TENNANT. Mr. Chairman, I think there is a misinterpretation of language here. When we defer expenses we defer the purchase. I think you interpreted Mr. Coffin's remarks to purchase but defer the payment.

Mr. COFFIN. Mr. Chairman, we did not purchase things on the deferred basis. We did not, in a going sense of the word, obligate ourselves to live beyond our means. We merely cut to the bone certain things which ordinarily we would think good management would require us to do.

Mr. PASSMAN. Do your books not show you were unable to maintain the monthly rate of expenditures equal to those of the first 3 months of the year?

Mr. COFFIN. Yes. So we cut them down.

Mr. PASSMAN. Then you come in and say you have deferred. I do not think you could get any other interpretation of deferred, but we will try to understand it our way and get all of the mileage that we can out of it.

Mr. COFFIN. So long as you understand what I mean.

Mr. PASSMAN. We shall accept your defense of what was done and decide later whether it is weak, medium, or superior.

I yield to Mr. Rhodes.

Mr. RHODES. I just want to ask one question.

Mr. Coffin, have there been any transfers of funds out of the account known as "Administrative expenses, AID," during fiscal year 1963?

Mr. COFFIN. Transfers out of administrative funds?

Mr. RHODES. Yes.

Mr. COFFIN. No, sir.

Mr. RHODES. Your statement says that there could be no transfers into?

Mr. COFFIN. That is correct.

Mr. RHODES. So the amount of money you have been dealing with was just the amount of money appropriated, $49.5 million, plus the amount reappropriated?

Mr. COFFIN. Right; but plus the specifically authorized supplemental funds for increased pay costs.

Mr. RHODES. Off the record.

(Discussion off the record.)

Mr. PASSMAN. Since your proposal for fiscal 1964 for these purposes is $5,726,500, should not the increase above fiscal 1963 be an increase of $1,853,000, rather than an increase of $1,540,000 as indicated on page 7 of the justifications?

Mr. MADDEN. I am not sure that I have the question.

Mr. PASSMAN. Since your proposed fiscal 1964 budget estimate for these purposes is $5,726,500, should not the increase above 1963 be $1,853,400, rather than an increase of $1,540,000?

Mr. COFFIN. I can answer that, Mr. Chairman.

One and one-half million dollars is the difference between our estimate for 1963 and actual expense for 1962. We were $1.5 million below 1962.

Taking into account what we have already debated under the term of "deferrals," doing the things we think should be done plus serving on a current basis the people that are on board, the difference between the 1963 estimate and what we are asking is the figure that you state, $1.8 million.

Mr. PASSMAN. We think we have been very liberal in making funds available for administrative purposes.

When we speak of deferrals, what if the Congress this year should make what it believes to be proper adjustments? Do you mean that you are going to keep on cutting down on your supplies and housekeeping items, and going to have bare shelves, or work out some economies, such as maybe reducing personnel?

Mr. COFFIN. What we intend to do is to hold our personnel, for the other three regions, where they are. The only area of increase is in Latin America. It is hard to answer your question because we would have to live within the amount you gave us. We would have to curtail wherever we could, doing the least damage to the program.

PROPOSED INCREASE FOR SUPPLIES AND MATERIALS—FAR EAST REGION

Mr. PASSMAN. I should think that you people would know that you have more money than you need in all of these accounts. This is indicated by the very fact that we did not get down to your taking price last year. This is one field where there is a lot of criticism, administrative expenses. We hope you have a good, hard look at it.

I note on the detailed breakdown of the proposed increase for supplies and material, by area, of equipment, transportation of things, and contractual services, that the Far East region has the second highest request, Africa being first.

I am somewhat at a loss to understand why the Far East should rank so high in the need for increased funds, especially in view of the fact that the number of positions in this area has dropped from 290 in fiscal 1962 to 235 proposed for 1964. Even on a man-year basis, I note the number of U.S. technicians for fiscal 1962 is 266.5 and it dropped to 264 in fiscal 1963, and shows a substantial drop in fiscal 1964, down to 226; is that correct?

Mr. MADDEN. Yes, sir.

Mr. PASSMAN. Thank you.

SUPPLIES AND MATERIALS FOR U.S. MISSION IN YUGOSLAVIA

Under the estimate for supplies and materials, I notice an item, on page 8, of $2,600 for Yugoslavia. Would you comment concerning this request?

Mr. COFFIN. As you know, Mr. Chairman, the only program we have there involves Public Law 480. That does require people to administer it and keep account of the moneys generated by these commodities.

Mr. PASSMAN. You have to have these people in Yugoslavia?

Mr. COFFIN. If we want to protect our record of accounting and keeping track of expenditures.

Mr. PASSMAN. Do we have an Embassy there?

Mr. COFFIN. We have an Embassy there.

Mr. PASSMAN. Are they not able to take care of that matter, or does this money go to the Embassy?

Mr. COFFIN. We do not have a separate mission director in Yugoslavia. We have the Ambassador and the AID functions are carried out in the Embassy, I believe.

Mr. PASSMAN. According to their arguments, they say this is a sales agreement by which we ship our commodities and we get local currency. If they requisition so many thousands of bushels of wheat, or other commodities, this goes out at a fixed price and we get local currency. Then why do we have to be there and supervise the distribtuion of something they are supposed to purchase?

Mr. COFFIN. We have only three U.S. nationals working on this.

Mr. PASSMAN. Do you have any need at all?

Mr. COFFIN. Yes, we do.

Mr. PASSMAN. How about U.S. exporters who do business all over the world, who pack the goods, ship them out, take the bills of lading down to the bank and draw on the importer's account? Do they send people out to be sure the goods arrive in good order, and are distributed by the purchaser?

Mr. COFFIN. What these men do not have to do and what we have to do is to keep accounts for the Treasury, for Agriculture, and AID, and submit reports.

Mr. PASSMAN. Why could you not do that when you ship?

These people requisition, say, so many thousands of pounds of dried eggs, and then you ship it out and it is weighed down to the last pound and here is an invoice covering it. When it goes out, you fill their order and then you get local currency, so why do we have to go out there and check on that transaction?

Mr. COFFIN. I believe the General Accounting Office would not allow us to do this on an absentee basis. I believe that a minimum of U.S. personnel is required.

Mr. PASSMAN. Other exporters selling commodities to a country do not send men from their firms out to be sure the goods are received and distributed; do they?

Mr. COFFIN. I am not familiar with that.

Mr. PASSMAN. How about finding out, Mr. Coffin, because maybe we could save a little money.

Have you found anything interesting in that book?

Mr. COFFIN. Yes.

The book I was looking at refers to our obligation under the law to take safeguards with commodities, to see that ordinary U.S. marketings are not interfered with and goods are not transshipped. The Congress is very interested in commodities not being transshipped.

Mr. PASSMAN. I am just as suspicious of Yugoslavia as you are indicating, unintentionally, you are. You mean they requisition the surplus commodities? We ship them and we charge them and accept local currency, and we are going to stay there and follow them right to the mouth of the individual who finally eats them?

Mr. COFFIN. There are end-use checks, Mr. Chairman.

Mr. PASSMAN. We have these commodities for sale; do we not?

Mr. COFFIN. Yes, sir.

Mr. PASSMAN. Once you sell commodities to another country, do we stay with them until they are finally consumed?

Mr. COFFIN. We have an obligation to see that those commodities are used, under the purposes of the agreement, and are not transshipped, and also are used according to the provisions of these agreements.

COSTS OF ADMINISTERING YUGOSLAVIA PROGRAM

Mr. PASSMAN. At least it makes some good jobs for some of these people. Could you give us an estimate of the total amount that we are paying for personnel and relating costs to administer the aid program in Yugoslavia?

Mr. TENNANT. Mr. Chairman, Yugoslavia has title III programs where we are required to add it and check to see that these donations do get into the hands of needy people.

Mr. PASSMAN. Is this not a small part of the total?

Mr. TENNANT. It is a small part except it is a very troublesome program to audit.

Mr. PASSMAN. Give us now a total of the salaries and related expenses.

Mr. MADDEN. In 1963, $84,600. In 1964 we are proposing $59,900.

Mr. PASSMAN. That amount would have to be added to the aid program that we have under another section or another law, would it not, to get the total?

Mr. COFFIN. I don't believe so. This is the administrative cost.

Mr. PASSMAN. Nevertheless it is credited to Yugoslavia, is it not? We are spending it in Yugoslavia to administer an aid program, are we not?

Mr. COFFIN. To administer the food program, yes, sir.

Mr. PASSMAN. That is an aid program, is it not?

Mr. COFFIN. Yes.

Mr. PASSMAN. You get no dollars for it, do you? You get local currency that cannot be spent.

Will you add the $54,000 to the other figure, which is classified, to get the grand total? I want to be fair in trying to put together these figures. Would this be a part of the aid program to Yugoslavia if we wanted to get the grand total?

Mr. COFFIN. It would give the grand total cost.

Mr. PASSMAN. Thank you.

EQUIPMENT FOR WASHINGTON OPERATIONS

Mr. Director, under the item in the amount of $583,900 for equipment, I note a request for $107,000 for domestic operations. Will you explain this item?

Mr. COFFIN. What page is that, Mr. Chairman?

Mr. PASSMAN. It is on page 9.

Mr. MADDEN. We reduced our programing of funds for equipment into Washington as well as overseas.

Mr. PASSMAN. We are glad you reduced it.

Tell us what this is for, the $107,000 for domestic operations.

Mr. MADDEN. Ordinary desks, chairs, and things like that.

Mr. COFFIN. Typewriters?

Mr. MADDEN. Typewriters.

Mr. PASSMAN. Is that for overseas?

Mr. MADDEN. No, sir, this is for Washington.

Mr. PASSMAN. On page 10, under the item for contractual services, I note again a request for $200 for Yugoslavia, or is that $200,000?

Mr. MADDEN. These tables are in thousands of dollars, I haven't found the page yet.

Mr. PASSMAN. It is page 10.

Mr. MADDEN. That is $200.

Mr. PASSMAN. This is about the lowest figure I have ever heard discussed in an aid program. I did not know you could get a machine to work at that low a figure in this program.

REST AND RECUPERATION TRAVEL

I note that you are requesting an increase of $107,900 above your 1963 program of $96,100 for the "Rest and recuperation travel" item. Who is doing this resting?

Mr. COFFIN. This is the cost of travel for leave in the missions indicated where personnel are allowed—this is not home leave, but leave during the year when they can go to certain prescribed places. They cannot travel wherever they want but they can take leave.

Mr. PASSMAN. Leave 1 is home leave. This is leave 2?

Mr. COFFIN. This is an interim leave.

Mr. PASSMAN. Does it affect the cumulative leave they get which is established under regular tenure?

Mr. MADDEN. It is charged against regular leave whenever they qualify for this type of travel.

Mr. FORD. But they get paid for going out, is that right?

Mr. MADDEN. This is a new law that hasn't been in effect too long and it applies to State and all other international agencies. The theory is to prevent a person from cracking up and to keep him at his post for possibly 3 years instead of 2 years; they let him take a trip to one of these rest spots designated. He may then stay at the post a total of 3 years or longer rather than coming home after 2 years.

Mr. PASSMAN. On this recuperation travel item, who pays for the travel?

Mr. MADDEN. The Government pays for the travel.

Mr. PASSMAN. Let us find out whether or not the Government does not also pay the regular salary while the person is on leave.

Mr. MADDEN. It does.

Mr. PASSMAN. And whether or not this is charged against the accruals back here.

Mr. TENNANT. It is charged against the accruals.

Mr. FORD. The justification says:

Under recent legislation, rest and recuperation travel is authorized.

What is the citation for that legislation?

Mr. MADDEN. I don't have it handy.

Mr. RHODES. Was it in last year's authorization?

Mr. COFFIN. Yes; I think so. I think it was in last year's bill.

Mr. PASSMAN. How much did you request and justify for this purpose last year?

Mr. MADDEN. Nothing specifically for this.

Mr. PASSMAN. Would this be a deferral if you did not ask for it last year?

Mr. MADDEN. The program just got underway officially about in March or April, I believe.

Mr. PASSMAN. Did you have a deferral here under this——

Mr. MADDEN. This is probably not properly classified as a deferral. It is included in with these items because it is somewhat comparable but——

Mr. PASSMAN. Could you tell us how much of the 1963 accrued expenses in this category will be paid out of fiscal year 1964 funds?

Mr. MADDEN. No one has taken leave in 1963 which will be paid from 1964 funds. This doesn't happen. This amount here represents the increased amount of rest and recuperation travel estimated for 1964 compared with what can be done this year.

Mr. PASSMAN. You had nothing for this purpose in 1963? There was no recuperation travel during the year?

Mr. MADDEN. There was some in 1963.

Mr. PASSMAN. Did you pay any 1963 amounts for all expenses you incurred in connection with this item?

Mr. COFFIN. Yes.

Mr. MADDEN. Yes.

Mr. PASSMAN. That was $96,100?

Mr. MADDEN. Yes, sir.

Mr. PASSMAN. When did the law become effective?

Mr. MADDEN. The law became effective probably around the first of July 1962 but we didn't get to implement it fully until March or April. We were working with the State Department and USIA in order that all agencies might approach this problem uniformly and in getting agreement between all of the agencies. The implementation of this law wasn't officially gotten off the ground until the spring of 1963.

Mr. PASSMAN. What has been your experience with AID personnel in the past having to be given special relief on account of approaching maybe, shall we say, a crackup point?

Mr. MADDEN. I am not familiar with the——

Mr. PASSMAN. Are you familiar with this matter, Mr. Controller?

Mr. TENNANT. I believe our Director of Personnel could obtain information on people who have had emotional problems.

Mr. COFFIN. I have no aggregate figures but I know of cases where we have had to bring people home.

Mr. PASSMAN. Just a few?

Mr. COFFIN. In my own personal knowledge; yes.

Mr. PASSMAN. Would it not save money to bring them home rather than to spend $500,000 in this manner?

Mr. COFFIN. I think this is an ounce of prevention, Mr. Chairman.

Under the conditions under which these people work I think it is a necessary part of any oversea program.

Mr. PASSMAN. You have not had this plan before, have you? And we are going into the 17th year of the aid program.

I yield to Mr. Ford.

Mr. FORD. I would like the citation of this legislation giving the date of its enactment and also the exact provisions that authorize this program. In addition I would like the regulations which have been promulgated under it.

(The information requested follows:)

CITATION OF LEGISLATION ON REST AND RECUPERATION TRAVEL, AND AGENCY REGULATIONS

Citation of law: Rest and recuperation travel is provided for by subsection (9) of section 911 of the Foreign Service Act of 1946, as amended. Subsection (9) was added by section 708(a) of the Foreign Assistance Act of 1961, Public Law 87-195, approved September 4, 1961. It provides as follows:

"SEC. 911. The Secretary may, under such regulations as he shall prescribe, pay—

* * * * * * *

"(9) the travel expenses of officers and employees of the Service who are citizens of the United States, and members of their families, while serving at posts specifically designed by the Secretary for purposes of this paragraph, for rest and recuperation to other locations abroad having different environmental conditions than those at the post at which such officers and employees are serving, provided that such travel expenses shall be limited to the cost for each officer or employee and members of his family of one round trip during any continuous two-year tour unbroken by home leave and two round trips during any continuous three-year tour unbroken by home leave."

Regulations: Regulations currently in effect are quoted below. These consist of Foreign Affairs Manual Circular No. 108, as Amended, and Foreign Affairs Manual Circular No. 114, both issued by the Department of State, with concurrence of the other two agencies, as Joint States-AID-USIA circulars.

FOREIGN AFFAIRS MANUAL CIRCULAR NO. 108, MARCH 1, 1963, AS AMENDED BY FOREIGN AFFAIRS MANUAL CIRCULAR NO. 113, MARCH 14, 1963

JOINT STATE, AID, USIA, CIRCULAR

Subject: Rest and Recuperation Travel

1. PURPOSE

This is a joint State Department, Agency for International Development (AID), and United States Information Agency (USIA), communication which supplements existing procedures for authorizing rest and recuperation travel at Government expenses from a post of assignment to a rest area. The provisions of this circular supersedes and supplements the provisions of 3 FAM 143.1-6.

2. BACKGROUND

a. The duration of an employee's assignment is determined by the interaction of a variety of factors. Important among them is the recognition that through continuity of service at a post it is possible to benefit from acquired knowledge and understanding of the post, country and area.

b. At certain posts, however, the benefits of continuity may be significantly diminished by a progressive loss of personnel efficiency due to altitude, climate, health hazards, isolation, lack of recreational opportunities, etc. At some of these posts, it is impractical, because of high costs of transportation, to expect that an employee and his family will be able to travel to the closest place that offers beneficial changes of climate and environment.

c. In order to alleviate such conditions and make it possible, in some instances, for an employee to remain at the post for longer periods of time, and, in other instances, to assist an employee to maintain his efficiency, the following amendment was obtained to the Foreign Service Act (section 911.9).

"The travel expenses of officers and employees of the Service who are citizens of the United States, and members of their families, while serving at posts specifically designated by the Secretary for purposes of this paragraph, for rest and recuperation to other locations abroad having different environmental conditions than those at the post at which such officers and employees are serving [may be paid], provided that such travel expenses shall be limited to the cost for each officer or employee and members of his family of one round trip during any continuous two-year tour unbroken by home leave and two round trips during any continuous three-year tour unbroken by home leave."

3. GENERAL PROCEDURES

3.1 *Designation of Posts from Which Travel May Be Granted*

a. The Department, AID and USIA, acting jointly, will designate those posts from which employees who are citizens of the United States, and members of their families, are eligible to travel at Government expense for rest and recuperation. A decision to so designate a post will be made if it is found (a) that conditions of life at the post present distinct and significant difficulties for an employee and his family of sufficient severity to justify temporary relief therefrom during a period of assignment, and (b) that the post is located so far distant from a suitable relief area which provide a beneficial change in climate and environment as to make it unreasonable to expect that the employee could finance his family's travel to the relief area. Appendix I to this circular contains a list of posts that have been designated for this purpose. This list will be amended from time to time to reflect changing circumstances.

b. The general criteria governing the selection of posts eligible for rest and recuperation will include such factors as: unfavorable climatic conditions, isolation, inadequate transportation within the country, lack of adequate recreation facilities, unsuitable housing and sanitary conditions, lack of essential services, lack of medical or dental care, prevalence of communicable diseases, and unusual personal hazards.

3.2 *Scheduling Trips.*

a. Posts will be responsible for scheduling rest and recuperation trips. Keeping in mind the basic purpose of this leave, posts should generally not grant such travel to be taken within six (6) months of the beginning or end of the employee's scheduled tour of duty including extensions of tours of duty.

b. The intent of the law is to provide a measure of relief from climatic and environmental conditions existing at posts listed in Appendix I to this circular. To qualify for R. & R. travel, an employee must be assigned to one or more of the posts so listed as designated for a total scheduled tour of such posts of two or three years unbroken by home leave. Authorized transportation costs will be limited to one round trip during any continuous two-year tour of duty and two round trips during any three-year tour of duty unbroken by home leave.

c. If, during the previous nine months, a single employee or a married employee (accompanied by his family) travels from an eligible R. & R. post at Government expense on consultation or temporary duty to a place which affords the necessary physical and psychological change described in paragraph 3.3 below, that travel shall be considered the equivalent of R. & R. travel.

d. In scheduling trips, the authorizing officer should seek to make them at the least possible cost to the Government. For example, whenever possible, posts should utilize those facilities which are available for travel of U.S. Government personnel without charge or at reduced charge to appropriated funds (such as MATS, or contract carriers of State or AID), to provide all or part of the travel to the designated relief areas; take advantage of special excursion rates; schedule travel at times when specially low air fares apply or in conjunction with other official travel of the head of the family such as attendance at conferences, temporary details to other posts, consultation trips, etc., schedule travel by surface transportation if it results in savings of travel costs.

3.3 *Designation of Relief Areas*

a. In each country included on the attached list the principal officer, in conjunction with the responsible representatives of other Government agencies with employees in the area, shall recommend relief area for each post concerned. The name of the agreed-upon relief area shall be communicated to the Department by operations memorandum, subject: "PERSONNEL: Rest and Recuperation." Copies should be send to AID and USIA. The communication should state the cost in dollars of the necessary round-trip ticket for one fare by economy class travel by the recommended means of transportation to the relief area.

b. A suitable relief area is a place possessing a significant change in climate, altitude and environment which will provide the rest and recuperation necessary to a restoration of personal efficiency. In selecting a relief area, economy to the Government will be a major consideration.

c. The Department in collaboration with the participating agencies will designate and inform each eligible post of the relief area to which rest and recuperation travel will be authorized.*

d. If recommendations for relief areas have already been submitted in response to FAMC No. 72, it is not necessary to do so again, unless the principal officer, for valid reasons, wishes to change his original recommendations.

4. TRAVEL

4.1 *Authorization*

The principal or administrative officer at the post, or corresponding officer of the appropriate agency, may authorize or approve the cost of round-trip transportation of an employee or dependent to the established relief area, subject to the limitations of paragraph 4.2. Unaccompanied or excess baggage to and from the relief area will *not* be authorized at Government expense.

4.2 *Employee Contribution*

Every eligible employee whose salary is $8,000 or less per year shall pay the first $50 of the total travel cost for himself and his family with the Government paying the balance. An employee whose salary exceeds $8,000 will similarly pay the first $100 of the total travel cost. The employee and members of his family may travel separately on different trips.

4.3 *Mode of Travel*

Actual travel may be performed from the post to a suitable rest area other than that named in accordance with paragraph 3.1 above, *provided* the criteria in paragraph 3.3 are met, but the cost of such travel may not exceed the transportation expenses that would have been incurred for direct routing via round-trip common carrier economy or tourist travel, whichever is lower, between the authorized points of origin and destination. Implicit in the approval of such travel should be the principal officer's acceptance of the fact that it will meet the objectives of the program. The transportation expenses allowed shall in no case exceed allowable transportation expenses actually incurred.

4.4 *Per Diem Allowable*

No per diem shall be allowed the traveler in connection with authorized rest and recuperation trips.

4.5 *Charge to Leave*

The employee's absence for rest and recuperation and necessary travel time shall be charged to annual leave, leave-without-pay, or sick leave, as appropriate.

4.6 *Use of Government Transportation*

The appropriate authorizing officer of any post should, whenever practicable, issue travel orders for an employee and dependents to depart from the post for the purpose of taking leave when transportation of other United States Government agencies can be utilized on a space-available basis at no expense to the Department of State, AID or USIA or at lesser cost than that of commercial carriers.

4.7 *Eligibility of Resident Staff Employees*

Resident American employees are not eligible for Rest and Recuperation travel except as dependents of employees who are eligible for such travel in their own right. In such cases, the cost of travel will be charged to the agency by which the head of the household is employed.

5. INDIVIDUAL AGENCY PROCEDURES

Each agency is responsible (a) for designating which employee and family will be authorized to take rest and recuperation at Government expense, and (b) for establishing procedures of budgeting and issuing travel orders for the purpose of rest and recuperation travel.

6. EFFECTIVE DATE

Posts will be notified of the effective date when travel may commence under provisions of this circular.

---

*FAMC No. 113 dated March 14, 1963, added section 3.3 c and renumbered former section 3.3 c as 3.3 d.

7. REPORTING

At the end of each quarter, each post shall submit a report in duplicate to the participating agencies concerning:

a. Rest and recuperation trips performed during that quarter, including names of travelers, destination, and the cost of each trip. (The report as of March 31, 1963, should cover the three quarters preceding); and

b. Estimated cost of Rest and Recuperation travel for the balance of the fiscal year and the estimated cost of each trip including the names of travelers who will be granted R and R travel orders and the months in which travel is expected to commence.

These reports should be directed to the attention of the following offices:

USIA employees—One copy to IOA/PS.
One copy to IOA/B.
AID employees—One copy to appropriate Regional Bureau.
One copy to C/BUD.
State employees—One copy to appropriate Regional Bureau.
One copy to PER/POD.

Foreign Affairs Manual Circular

JOINT STATE, AID, USIA, CIRCULAR NO. 114, MARCH 27, 1963

Subject: Rest and Recuperation Travel—Employee Contributions.

1. This circular transmits a Joint State, AID, USIA instruction which supplements Foreign Affairs Manual Circular No. 108, dated March 1, 1963, as amended by FAMC No. 113 dated March 14, 1963, and sets forth procedures for handling employee contributions toward the cost of travel for rest and recuperation purposes.

2. Appropriate changes will be made in the Foreign Affairs Manual to reflect the provisions of this circular.

Subject: Rest and Recuperation Travel—Employee Contributions.

1. PURPOSE

This is a Department of State, Agency for International Development (AID), and United States Information Agency (USIA) communication which sets forth procedures for handling employee contributions toward the cost of travel for rest and recuperation purposes.

2. BACKGROUND

Paragraph 4.2 of Foreign Affairs Manual Circular No. 108, dated March 1, 1963, provides that each employee authorized rest and recuperation travel under the provisions of that circular shall pay the first $50 of the total travel cost for himself and his family if his salary is $8,000 or less, or the first $100 of such cost if his salary exceeds $8,000, with the Government paying the balance. The Department, AID, and USIA desire that these contributions be treated in ways that preclude the necessity of collecting and reporting the amounts thereof as deposit or trust funds. For this reason, and to insure uniformity in the handling of such contributions, this circular prescribes the following procedures.

3. TRAVEL ACCOMMODATIONS PROCURED BY TRANSPORTATION REQUEST

When travel accommodations are procured by transportation request, the applicable employee contribution shall be handed to the carrier together with the transportation request, which shall be prepared to cover only the balance of the cost of the accommodations. Paragraphs a and b below prescribe the additional statements to be included in the transportation request.

a. The reverse of the original and the memorandum copy of the transportation request shall contain a receipt in the amount of the employee's contribution, or the equivalent thereof in the applicable currency, which shall be signed by the carrier on payment to him of that amount.

b. The following shall be shown on the face of the transportation request:

Total cost of transportation: (*amount*)
Less amount paid by traveler: (*amount*)
Balance to be billed: (*amount*)

For this purpose free space in the "Fiscal Data" block may be used.

4. TRAVEL ACCOMMODATIONS PROCURED BY OTHER DOCUMENTS

When travel accommodations are procured by purchase order, letter, or other document, the applicable employee contribution shall be handed to the carrier together with the procurement document covering the balance of the transportation costs. A receipt in the amount of the employee's contribution, or the equivalent thereof in the applicable currency, shall be typed at the bottom of the document or attached thereto, which shall be signed by the carrier on payment to him of that amount. The procurement document shall contain billing instructions equally as explicit as those prescribed for transportation requests in paragraph 3b above.

5. TRAVEL ACCOMMODATIONS PROCURED WITH EMPLOYEE'S PERSONAL FUNDS

When an employee elects to procure travel accommodations with his personal funds, his claim or the voucher for reimbursement shall show the applicable employee contribution as a deductible item.

6. TRAVEL BY PRIVATELY OWNED MOTOR VEHICLE

When travel by privately-owned motor vehicle has been authorized, the employee shall present his claim for mileage in the normal manner, except to show the applicable employee contribution as a deductible item.

7. EFFECTIVE DATE

The procedures prescribed by this circular will become effective with the commencement of rest and recuperation travel under provisions of FAMC No. 108.

Mr. FORD. Let's turn to one of these examples shown at page 11 of the justifications.

AGENCIES GRANTING REST AND RECUPERATION TO EMPLOYEES

Mr. GARY. Does this law apply only to the foreign aid program? To what agencies does it apply?

Mr. MADDEN. State, USIA. Beyond that I don't know.

Mr. PASSMAN. But this is a brand new program as far as AID is concerned?

Mr. MADDEN. Yes.

Mr. GARY. Will you put in the record the agencies to which it applies?

Mr. MADDEN. Yes, sir.

(The information supplied follows:)

U.S. AGENCIES WHICH MAY GRANT REST AND RECUPERATION TRAVEL

Under existing law, the rest and recuperation travel benefit provided for by the Foreign Service Act of 1946, as amended, is applicable to Foreign Service

employees of the Department of State, the Agency for International Development (including employees of other Federal agencies participating in the foreign economic assistance program), the U.S. Information Agency, and the Peace Corps.

Peace Corps volunteers, including volunteer leaders, are not eligible for the rest and recuperation travel benefit provided for by section 911(9) of the Foreign Service Act, as amended; however, the Peace Corps Director has authority under the Peace Corps Act to make this benefit available to Peace Corps employees serving overseas. (See the Peace Corps Act, Public Law 87-293, as amended: sections 5(a), 6, 7(c)(1), 7(c)(2); Executive Order 11041, Aug. 6, 1962; and State Department Delegation of Authority No. 85-11 A, Aug. 6, 1962.)

Mr. PASSMAN. AID people may possibly have a different tenure abroad than State Department and other agencies.

We should also note again that for 16 years of operation of AID this is the first time you have had such a program, in fiscal year 1963? This is the first time we have ever had a request for money and it is the first time you have had a program and in 1963 you obligated $96,100 for this purpose; is that correct?

Mr. MADDEN. I would assume that people who qualify now under this in the past may have come home on medical travel or something like that.

Mr. PASSMAN. So far as you know there has been no program of this kind in the past and there has been no request for funds for this type of program to this committee?

Mr. MADDEN. I can say that we have never prepared a budget request for this type of a program before.

Mr. PASSMAN. And your record shows there were no expenditures made for this type of program prior to 1963; am I correct?

Mr. MADDEN. That is right. We had no way of accumulating that information before.

Mr. PASSMAN. You show a blank in the book, that there were no obligations made for this purpose until the beginning of 1963. Am I correct?

Mr. MADDEN. Yes, sir.

Mr. PASSMAN. In 1963 you spent $96,100?

Mr. MADDEN. Yes, sir.

Mr. PASSMAN. Yet the law became effective July 1, 1962.

Mr. MADDEN. Approximately, yes.

FISCAL YEAR 1964 REST AND RECUPERATION PROGRAM

Mr. PASSMAN. So you had 1 year's authorization under this law, and you spent $96,100, but for fiscal year 1964 you are asking for $204,000; is that correct?

Mr. MADDEN. It is $200,000-plus, I believe.

Mr. PASSMAN. You are asking for $204,000, which is more than double what you had in fiscal year 1963.

Mr. Ford, did you want to ask a question?

Mr. FORD. Yes. At page 11 of the justification book under the heading "Rest and Recuperation Travel, $107,900." Does that figure refer to the increase, or is this the total?

Mr. MADDEN. The increase.

Mr. FORD. What is the total for the fiscal year that you are justifying for the whole agency in this item, "Rest and recuperation, travel"?

Mr. COFFIN. $204,000.

Mr. FORD. And that is justified at page 11; is that right?

Mr. COFFIN. Yes.

Mr. FORD. Let's turn to one of the specific items shown at page 11. The amount for rest and recuperation is $11,300. How many people are involved in this?

Mr. MADDEN. Which figure do you refer to?

Mr. FORD. $11,300 proposed for rest and recuperation travel for AID personnel stationed in Indonesia.

Mr. MADDEN. In Indonesia it is estimated that there would be 54 travelers. This is not only the U.S. nationals but their families.

Mr. FORD. That is 54 travelers at a cost of $11,300?

Mr. MADDEN. That is the net cost to the Government.

Mr. FORD. Now let's use a little mathematics here and see how that works out.

Mr. MADDEN. That is the increase. I am sorry. The total cost for the 54 is $16,000.

Mr. FORD. Wait a minute. What was that last figure—$16,000?

Mr. MADDEN. $16,000 for 54 travelers.

Mr. FORD. You arrive at that figure of $16,000 by taking the $11,300 which is for the increase——

Mr. MADDEN. And adding it to our 1963 costs for 16 travelers which was $4,700.

Mr. FORD. You are going to pay for the 1963 costs out of the 1964 budget?

Mr. MADDEN. No, sir.

Mr. TENNANT. The total cost for 1964 is $16,000, which is $11,300 over the prior year.

Mr. FORD. So this figures out about $300 per traveler. How often do they get this rest and recuperation pay for transportation?

Mr. MADDEN. I am not too familiar with this law but a person cannot take it, as I understand, until he has been at the post for a period of time—6 months or a year, I don't recall which—and he cannot take this rest and recuperation travel within 6 months of when he is due home leave.

Mr. FORD. Do you mean if a person goes on the post for 6 months then he is eligible for rest and recuperation travel reimbursement?

Mr. MADDEN. I don't recall now whether it is 6 months or a year but after he is there a period of time he becomes eligible for the rest and recuperation travel. From that point, up to a point within, I believe, 6 months of the time when he is due for home leave or reassignment, he is eligible.

Mr. PASSMAN. Is there a limitation placed on them for travel? What if an individual decided he wanted to go 1,600 miles or 1,400 miles?

Mr. COFFIN. There are designated relief areas. For example, if you are in Bolivia the area is Lima.

Mr. MADDEN. In Indonesia, for example, it is Hong Kong.

Mr. FORD. That is not a bad place to go, I hear.

Mr. PASSMAN. It is quite a little jump, too.

Can they take their dependents with them at Government expense for travel?

Mr. MADDEN. Yes, sir.

Mr. PASSMAN. The Government pays the travel expense of the dependents?

Mr. MADDEN. Yes, sir. The regulations do require that the employee pay out of his own pocket the first $50 or $100, I forget what it is, but over and above that the Government pays the difference.

Mr. PASSMAN. Is that for food, hotel, travel, and everything?

Mr. MADDEN. It is only the travel.

Mr. PASSMAN. If a man and his wife and nine children are involved he pays the first $50 and the Government pays the rest?

Mr. MADDEN. To my recollection. As I say, I am not fully competent on this.

Mr. PASSMAN. So far as you know that is correct?

Mr. MADDEN. Yes; in principle it is, anyway.

Mr. FORD. I have never been there but I always had the understanding that Indonesia was—isn't Bali in Indonesia?

Mr. TENNANT. Indonesia is practically on the Equator. It is pretty hot and there are health hazards. All year round it is a tropical climate.

Mr. FORD. I can't help think of the cost, Mr. Andrews, we are going to get in the military budget if this same type of a program is instituted for military personnel.

Mr. TENNANT. Page 290 of the Foreign Service Act contains the legislation.

Mr. PASSMAN. Determine for us what monetary limitations are placed upon these people. If a man has a wife and nine children you could not afford to say, "You have too many children, you may take only two." Let us see how broad this is.

Mr. TENNANT. We will provide a complete insert on it.

BREAKDOWN OF COSTS FOR REST AND RECUPERATION PROGRAMS

Mr. FORD. Mr. Chairman, I ask if the record may show the total cost for each country where you have this program in effect as you are justifying it for fiscal year 1964. The number of people involved and the authorized place for travel such as Lima, Bolivia; Hong Kong for Indonesia and the like.

Mr. PASSMAN. Yes, and also, as this program was fully operative in fiscal year 1963 and you spent only $96,100, we want to know why you need more than double that amount for fiscal year 1964—to be exact, $204,000. Give us the breakdown of this $94,000, the number who participated, the number of dependents who participated with the employees and from where to where the trips were made.

Will you prepare that information for us?

Mr. TENNANT. Yes.

Mr. MADDEN. Yes.

Mr. COFFIN. Yes.

Mr. PASSMAN. We may be able to help you stop this plan before it gets out of control.

(The information requested follows:)

Estimate of fiscal year 1963 requirements for rest and recuperation travel

[Dollar amounts in thousands]

U.S. aid	Post differential	Designated relief area	Estimated number of travelers		Estimated obligations
			Employees	Dependents	
Latin America:	*Percent*				
Bolivia	25	Lima	6	18	$4.3
British Guiana	20	Caracas			
Surinam	15	do			
Total, Latin America			6	18	4.3

Upper Volta	25	do			
Total, Africa-Europe			47	94	49.6
Total			112	187	96.1

Mr. COFFIN. Mr. Chairman, of course you are perfectly justified in examining this very closely. As far as the idea is concerned it is good management to give our personnel in some of these difficult areas to work in, an occasional period when they can go for a rest without coming back to the United States, particularly when it means that in some instances we can prevail on people to take a longer tour than 2 years, it is well worth it.

Mr. PASSMAN. But you are talking about some nations where there are good recreational facilities, pleasure spots, and a lot of people will save up for half a lifetime in order to go for a visit where some of these people are employed. I can understand a rest period but why you have to move them from Indonesia to Hong Kong, for example, and why the American taxpayer should pay for the trip I do not know. Give us what information you can as to this travel.

Mr. COFFIN. Again, we will be pleased to supply this information and we think you should have it but it is a very modest amount compared with the administrative budget and the program budget we are working on.

Mr. PASSMAN. Most of these programs are relatively modest when they start, such as Mr. Shriver and his Peace Corps. He came up and said, "Let us try this out. Give us this amount of money and if it doesn't work stop it."

Congress appropriated the money and now the Peace Corps is the fastest growing agency in the Federal Government, and within 2½ years they are in 51 nations. I have never known of any Federal agency or item that did not grow rather rapidly once it got started, and we are going to try to help you watch this one.

Mr. FORD. Does the Peace Corps qualify for this particular benefit?

Mr. MADDEN. If they have Foreign Service employees I imagine it would apply to them.

Mr. RHODES. The Peace Corps volunteers do not qualify for this?

Mr. MADDEN. I don't know.

Mr. TENNANT. I would say no, because I don't think they are in Foreign Service.

Mr. GARY. I don't see why not. They lead about as rigorous a life as any of them over there. It would seem they ought to get this benefit if others in the Foreign Service get it.

Mr. TENNANT. We will be glad to supply an insert on the Peace Corps.

(The information requested may be found on p. 1854.)

Mr. FORD. May I supplement a question I asked a moment ago, Mr. Chairman?

Mr. PASSMAN. Surely.

REST AND RECUPERATION TRAVEL, INDONESIA MISSION PERSONNEL

Mr. FORD. Do I understand in Indonesia you will have 54 people who will participate in this program in fiscal year 1964?

Mr. MADDEN. Yes.

Mr. FORD. How many employees will you have in Indonesia in fiscal year 1964? How many did you have there in fiscal year 1963, what are you programing for fiscal year 1964?

Mr. MADDEN. I read from page 27—27 people in each year.

Mr. COFFIN. Wait just a minute. Your request includes program funds. The rest and recuperation cost we are discussing applies to administrative employees. The people I will give are administrative employees. The two are comparable.

Mr. FORD. You had in fiscal year 1963, 27 people. You had 27 American or U.S.-national employees in Indonesia in fiscal year 1963. You expect to have in fiscal year 1964, 27 employees. You are budgeting for travel for these rest and recuperation items in Indonesia 54 people.

Mr. MADDEN. $16,000 and 54 people.

Mr. FORD. Now let's have the pay scale of the 27 people you have scheduled for Indonesia.

(The information may be found on p. 1861.)

Mr. GARY. So we will know just exactly what we are talking about here, this provision of the law is very short and I think I will read it into the record. It is a part of the Foreign Service Act. It is part B, "Travel and Related Expenses" and under "General provisions," section 911, it says:

The Secretary may under such regulations as he shall prescribe pay—

And then it goes on and sets out five items. This seems to be in subsection 9:

He may pay the travel expenses of officers and employees of the service who are citizens of the United States and members of their families while serving at posts specifically designated by the Secretary for purposes of this paragraph, for rest and recuperation to other locations abroad having different environmental conditions than those at the post at which such officers and employees are serving, provided that such travel expenses shall be limited to the costs for each officer or employee and members of his family of one round trip during any continuous 2-year tour, unbroken by home leave and two round trips during any continuous 3-year tour unbroken by home leave.

That is the provision of the law.

Mr. FORD. Mr. Chairman, may I just follow up on this one point to make the picture clear?

Mr. PASSMAN. Yes.

SALARY AND ALLOWANCES FOR AID EMPLOYEES IN INDONESIA

Mr. FORD. I asked for the pay and fringe benefits for the 27 people who are stationed in Indonesia with AID. I want the figures to show the basic salary, the post differential, the cost-of-living allowances, the overtime and holiday pay, if any, the quarters allowance, the education allowance, the contributions to retirement funds and the other benefits as listed at page 19. What we want is a full, complete and total picture for these 27 employees so we get a specific location with employees involved, their pay and allowances and the like, so we get some feel for what the situation is.

(The information requested follows:)

Compensation and allowances [1] of employees stationed in Indonesia, fiscal year 1964

Position title	Grade	Salary	Hardship post differential	Education allowance	Total
Mission director	R-1	$19,800	$5,000		$24,800
Deputy mission director	R-1	19,100	4,800		23,900
Executive assistant	R-6	9,300	2,300		11,600
Secretary	S-7	5,800	1,400		7,200
Executive officer	R-3	14,000	3,500		17,500
Assistant executive officer	R-4	13,800	3,400	$1,400	18,600
General service officer	R-4	11,900	3,000		14,900
Personnel officer	R-5	9,900	2,500		12,400
Records supervisor	S-4	8,000	2,000		10,000
Assistant records supervisor	S-7	6,800	1,700		8,500
Records clerk	S-9	5,000	1,200		6,200
Controller	R-3	15,800	3,900		19,700
Deputy controller	R-4	12,300	3,100		15,400
Auditor	R-4	11,500	2,900		14,400

[1] Employees in Indonesia are housed in Government leased or owned quarters and hence receive no quarters allowance. They are eligible, however, for such personnel benefits as Government contributions to retirement, life insurance, health insurance, and miscellaneous allowances.

Mr. PASSMAN. We have had a foreign aid program for 16 years and we have had personnel assigned to these nations who qualify for this special consideration and we have had for years, have we not?

Mr. MADDEN. We have had employees there; yes, sir.

Mr. PASSMAN. I am talking about employees. You have had them assigned to these posts for years.

The American who goes to Indonesia, for instance, gets the 25-percent hardship bonus from the start, does he not?

Mr. MADDEN. Twenty-five percent; yes.

Mr. PASSMAN. In all of the nations where these people qualify under this special act, they get various bonuses for serving there on account of the location; do they not?

Mr. MADDEN. Yes.

Mr. PASSMAN. It would appear to me that these special considerations would be sufficient compensation to start with without, after 16 years, getting into the act with this plan.

Mr. TENNANT. Mr. Chairman, the allowances we pay our employees are the same allowances provided by the Foreign Service Act of 1946 as amended.

Mr. PASSMAN. You are just as fair as you can be. I would never say two wrongs would make a right, but we are talking about foreign aid now and we can recognize that this plan came in from the State Department after this agency had been in operation for 16 years.

Mr. TENNANT. No, these allowances have been in for——

Mr. PASSMAN. I am not talking about the allowances. I am talking about this other thing.

Mr. TENNANT. The rest and recuperation; yes.

REST AND RECUPERATION TRAVEL, VIETNAM

Mr. FORD. The only point I wanted to make here is that we have gotten the camel's nose under the tent. Take Vietnam. We have 11,000, more or less, military employees stationed there. How many people do you have in Vietnam?

Mr. MADDEN. Thirty-nine administrative employees.

Mr. FORD. How much will you pay for rest and recuperation travel in Vietnam in fiscal year 1964?

Mr. MADDEN. In 1964, total cost to the Government, $8,000.

Mr. FORD. For how many employees?

Mr. MADDEN. Thirty-nine.

Mr. FORD. What is the point or destination for rest and recuperation in Vietnam?

Mr. MADDEN. Hong Kong.

Mr. FORD. What does that figure per person?

Mr. MADDEN. Seventy travelers at a total cost to the Government of $8,000.

Mr. FORD. You have 39 employees there for AID. They get this benefit. You have 11,000 military personnel who do not derive this benefit. Now, how can you justify this discrimination? And if we are going to get into a similar program for the military, the $8,000 you have in Vietnam for AID employees will be peanuts compared with the comparable military cost.

Mr. COFFIN. Mr. Ford, the AID employees overseas are people of varying ages but to the extent they are technical experts or are apt to be in their late thirties or forties—I think the average age is in the forties—they will have families.

Mr. FORD. That is pretty young.

Mr. COFFIN. I think it is very young, Mr. Ford. They have families, however. They are not in a career service as is the military. The question is, really, is this necessary to attract good people to do a job well overseas? We believe that this is necessary to attract people at that stage of life and specialty away from their academic institution or their company and to keep them in a foreign land for a period of several years. It is not analagous to the situation facing the troops.

Mr. FORD. I was going to say you really must concede that the 11,000 military personnel there are having a pretty tough time too.

Mr. COFFIN. Certainly.

Mr. GARY. Was this item of rest and recuperation added to the law for the State Department also for the first time last year or was it something they have had before and it was extended to cover your agency?

Mr. SCHEINMAN. The provision was added for the entire Foreign Service pursuant to the amendment which you quoted.

Mr. GARY. Prior to that amendment none of the Foreign Service had ever gotten it before; is that correct? It was an innovation in the law so far as the entire Foreign Service is concerned?

Mr. SCHEINMAN. That is correct.

Mr. PASSMAN. I thought it was testified this plan was added for AID because the State Department had it.

Mr. FORD. Mr. Chairman, just to make the point that I think is very serious, the discrimination between the Foreign Service and/or AID and the military, let's take the circumstances with the 39 employees you have in Vietnam. Let's get all the information in the record as to their pay, allowances, and so forth and so on. I want a full and complete picture position by position and what the tour of duty is and how long they have been with AID. I don't want you to identify them by name. You can make it merely X, Y, and Z, but I do want something where we can make a valid comparison.

(The information requested follows:)

Personnel and other data for employees stationed in Vietnam, fiscal year 1964[1]

Position title	Grade	Annual salary	Hardship post differential	Education allowance	Total	Home leave eligibility	Entered on duty with AID
Mission director	C-3	$22,700			$22,700	August 1964	September 1950.
Deputy mission director	R-1	19,800	$5,000		24,800	November 1963	June 1949.
Secretary	S-6	7,700	1,900		9,600	January 1964	January 1955.

Total, Africa/Europe			141	49.6	295	118.6	9.7	108.9	59.3

Mr. PASSMAN. As you operated a full year for $96,000, would there be any great harm done, since this is a new program, if we placed on a limitation of the same amount for fiscal year 1964?

Mr. MADDEN. I think in answer to your question, sir, it isn't an item that you can control dollarwise. You either have to have the program or not because otherwise then you would be picking and choosing among which employees could get this type of travel.

Mr. PASSMAN. Then maybe we had better strike the entire thing out.

INCREASED PAY COSTS

The third portion of your proposed increase of $5,010,000 is the estimate of $1,290,000 to "annualize" the first step of the Federal Employees Salary Act of 1962 and to provide the second step increase which is effective January 1, 1964; is that correct?

Mr. COFFIN. Yes.

Mr. PASSMAN. The balance of this proposed increase for the fiscal year 1964 is $255,000 to provide for two extra days occurring in fiscal year 1964. Is that also correct?

Mr. COFFIN. Yes.

OVERSEA EMPLOYEES IN INTERREGIONAL PROGRAMS

Mr. PASSMAN. Yesterday, in connection with your testimony on interregional expenses, I believe you stated that the number of U.S. employees overseas had been reduced and I note on page 13 the same statement. However, looking at page 4, I note that in connection with oversea operations that the end-of-year employment on June 30, 1962, was 1,034 U.S. nationals; on June 30, 1963, it was 972; but in fiscal year 1964 it goes back up to 1,037, an increase of 3 over fiscal year 1962. Would you comment?

Mr. COFFIN. I lost you, Mr. Chairman.

Mr. PASSMAN. In the testimony yesterday dealing with the interregional expenses you stated, I think, that the number of U.S. employees overseas had been reduced. Now to abbreviate it, as you go on through you will find it is an increase of three rather than a reduction. Would you reconcile the difference between the two statements?

Mr. COFFIN. The 1964 estimate includes the additional employees proposed for Latin America. We say that we have reduced and we are holding the line in the other regions but this is where we need to have these 65 people.

Mr. PASSMAN. The statement yesterday, as I recall it, would indicate a decrease rather than an increase, and I am only establishing that you do actually have an increase.

Mr. COFFIN. The increase would be in 1964—

Mr. PASSMAN. It is still in the administrative expenses and you are dealing with a worldwide program.

Mr. COFFIN. But I am not sure there is an inconsistency.

Mr. PASSMAN. Yes, if one day you say there is a decrease and when we actually go to the records and start working it over and we find it is an increase, we just want the record to show——

Mr. COFFIN. I thought from hearing you—I may be mistaken—that the statement was that we had decreased but that the increase of three——

Mr. PASSMAN. That, I think, was the testimony yesterday, that you had decreased the number of employees. Now, we do not deal with administrative expenses by saying, "Well, yes, there is a decrease but when you include this region it is an increase." You deal with this item, administrative expenses, on a worldwide basis, do you not?

Mr. TENNANT. I don't recall the colloquy too well yesterday but I think it applied just to regional activity and this is administrative activity, the figures you read today. They are two separate items.

EMPLOYEES OF WASHINGTON STAFF OFFICES

Mr. PASSMAN. How many employees are assigned to the information staff?

Mr. MADDEN. Thirty-one people are provided for in this budget against 32 positions.

Mr. PASSMAN. How many are assigned to the congressional liaison staff?

Mr. MADDEN. Twelve.

Mr. PASSMAN. How many are in the Office of Program Coordination?

Mr. MADDEN. Fifty-one positions. We are budgeting for 48 employees.

Mr. PASSMAN. By what designation is Mr. Miller's office known?

Mr. MADDEN. His office is included in those figures.

Mr. PASSMAN. What is his office?

Mr. COFFIN. Legislative Program Coordination Staff.

Mr. PASSMAN. What is the cost of operating Mr. Miller's office?

Mr. MADDEN. I have only the total cost of the Office of Program Coordination.

Mr. PASSMAN. Could you tell us the cost of the congressional liaison staff, per year?

Mr. MADDEN. For 1964 congressional liaison staff, $176,000.

Mr. PASSMAN. Just what are their duties?

Mr. COFFIN. Mr. Chairman, this 12 includes professional personnel and clerical personnel. Their principal job is to respond to requests from Congress for information on problems that bother them.

I think this is probably one of the smaller liaison offices of the governmental agencies but their job is to serve the Congress with whatever requests come down and oftentimes it will be a question from a Congressman about either an issue—it can be a letter to the Administrator—on Indonesia or Ghana or Guinea or sometimes it concerns a question of a contract for his constituent. Sometimes it is personnel, people in his constituency who have come to him and want to make application to a Federal agency for employment and the request is, can we set up interviews for that person. It is a similar function to that performed by the military liaison.

Mr. PASSMAN. I thought you people handled most of those matters by correspondence.

Mr. COFFIN. Correspondence is a great deal of the activity.

Mr. PASSMAN. Is it about like the State Department liaison that works on foreign aid?

Mr. COFFIN. Well, they work on all matters connected with foreign affairs.

Mr. PASSMAN. Do you have to reimburse them for anything they do insofar as footwork for foreign aid is concerned?

Mr. COFFIN. There is a separate staff.

Mr. PASSMAN. We do reimburse State in many instances for personnel. Is that part of it?

Mr. MADDEN. We reimburse them to a considerable degree for oversea support of our people.

Mr. PASSMAN. But nothing at the Washington level?

Mr. MADDEN. Not for this purpose; no, sir.

Mr. PASSMAN. Please break down these three items:

The employees of the information staff.

The congressional staff.

The program coordination staff.

And all related expenses.

(The information follows:)

Breakdown of administrative expenses for information, congressional liaison and program coordination staffs

	Estimate fiscal year 1963				Estimate fiscal year 1964			
	Positions	Man-years	End of year employment	Cost	Positions	Man-years	End of year employment	Cost

Last year I believe you testified your maximum payment for consultant services was $75 a day. Has there been any increase in the maximum per diem or is it holding steady?

Mr. COFFIN. No.

Mr. PASSMAN. Your estimate for consultation travel, page 17, is estimated to be $266,000 in fiscal year 1964; is that correct?

Mr. MADDEN. $266,600; yes sir.

Mr. PASSMAN. What is "consultation travel"?

Mr. COFFIN. For example, we have an advisory committee of economists and educators. When they come to Washington for a meeting we would pay their travel to and from Washington.

Mr. PASSMAN. Would this be the same people who may get this per diem payment?

Mr. COFFIN. They would get per diem as a consultant.

Mr. PASSMAN. Would they fall in this same category, though, as a consultant—this is the travel part of it?

Mr. MADDEN. No, sir. This consultation travel is our own employees primarily.

Mr. PASSMAN. Your employees?

Mr. MADDEN. We will call a mission director in to Washington to discuss various problems.

Mr. PASSMAN. Is there any regulation dealing with how close to home leave they could be called in on these consultations? It would be a break for him if he happened to be called in just about the time home leave was ready; would it not?

Mr. COFFIN. We couldn't plan that. If there was a serious problem in a country—

Mr. PASSMAN. If that is the way things worked out, occassionally a person would get such a break; would he not?

Mr. COFFIN. What would be the benefit to him?

Mr. PASSMAN. The Government would pay his expenses.
