Mr. COFFIN. I think on home leave the Government pays his expenses.

Mr. PASSMAN. There is no milage there at all?

Mr. MADDEN. We do get this mileage, when they come home on leave we consult with them too, to take advantage of it.

Mr. PASSMAN. It does not work against leave while they are being consulted? I do not want to pinch pennies, I just want to understand it.

Mr. MADDEN. If they are on duty consulting with us at headquarters it is not leave time.

Mr. PASSMAN. What has been your experience with this account in the past 5 years, this consultation travel? Can you give it to us beginning with 1961?

Mr. MADDEN. We can give you the cost.

Mr. PASSMAN. Please do so, for 1960, 1961, 1962, 1963, and estimated for 1964.

(The information requested follows:)

Consultation travel, fiscal years 1960–64

Actual obligations:	
Fiscal year 1960	$231,165
Fiscal year 1961	191,835
Fiscal year 1962	282,400
Estimated obligations:	
Fiscal year 1963	265,200
Fiscal year 1964	266,600

REPRESENTATION ALLOWANCE

Mr. PASSMAN. How much money do you have budgeted for fiscal year 1964 for the representation allowance, total?

Mr. MADDEN. $184,900.

Mr. PASSMAN. How does that figure compare with 1960, 1961, 1962, and 1963?

Mr. MADDEN. 1961, $154,406——

Mr. PASSMAN. Put the others in the record, please.

(The information requested follows:)

Grand total	157,307	154,406	154,800	193,800	[1] 181,700

[1] [1] The original budget estimates for fiscal year 1964 included the following amounts for representation allowance: Haiti, $1,500; Surinam, $1,200; Ceylon, $500.
[2] Included in mission amounts; distribution not available.

Mr. PASSMAN. What is it this year?

Mr. MADDEN. Our estimate this year is $193,800.

Mr. PASSMAN. Why is there such an increase in a matter of 3 years?

Mr. COFFIN. Part of the reason is that some of the posts in Latin America have been more important under the Alliance and partly because of an increase in the number of the African posts.

Mr. PASSMAN. But your number of personnel has remained about the same?

Mr. COFFIN. The question would be related to the senior personnel, the mission director and the deputy mission director who would be the chief users of the representation funds. It isn't a direct ratio of total people but of the post——

Mr. PASSMAN. That situation has been true all along, has it not?

Mr. COFFIN. I believe so.

Mr. PASSMAN. Then why do you have about a $70,000 increase from 1960 to 1964?

Mr. COFFIN. Either added missions or added responsibilities.

Mr. PASSMAN. I thought you had fewer missions.

Mr. COFFIN. We have combined our submissions with the State Department, and we have delegated some missions but we still have more missions than we had before all of the 30 African countries became independent.

Mr. PASSMAN. The year you gave us was 1960.

Mr. MADDEN. I gave you 1961.

Mr. PASSMAN. How many missions do you have there?

Mr. MADDEN. I don't know.

Mr. PASSMAN. Please furnish that information—the number of missions and the representation allowance, 1960 through 1964 inclusive.

(The information may be found on p. 1871.)

INTERNATIONAL AID COORDINATION

Mr. PASSMAN. If I recall correctly, during your testimony yesterday you indicated that you were requesting $390,000 under the regional expense program for international aid coordination. Is that correct?

Mr. COFFIN. Yes, sir.

Mr. PASSMAN. Would you comment briefly and tell us for what purpose you require the $59,400 as shown on page 41 of your justifications? This is in addition to the $390,000?

Mr. MADDEN. Yes, sir. This item is for our former General Counsel, Mr. Rubin, who is now our Minister to this Development Assistance Committee, and his secretary.

Mr. COFFIN. This is our top AID official in Paris, working with the other European countries and Canada and Japan, working to improve their terms of aid, working to increase the amount of aid that those countries are giving, working to coordinate our aid efforts, for example, so we do not take a project that a German unit might be taking.

Mr. PASSMAN. You have Mr. Rubin over there trying to talk them into cutting their interest rate, maybe increasing their terms from 7 to 10 years or from 10 to 15 years. Another man is over there trying to borrow money from the same nations so we can continue this program and reduce our international balance-of-payments deficit. Do they have the same rank?

Mr. COFFIN. Mr. Rubin serves under Ambassador Leddy, our Ambassador to OECD. Ambassador Leddy is in charge of the monetary

dealings as well as trade dealings and, of course, he is in a position of a superior over Rubin, even though Rubin is the specific AID man.

Mr. PASSMAN. He served well in AID and got a deserved promotion; is that right?

Mr. COFFIN. He is doing a good job.

Mr. PASSMAN. I understand he is doing a good job because he has the equivalent rank of Minister; does he not?

Mr. COFFIN. Mr. Rubin used to be an Assistant Secretary of State. This rank is consistent with his ability and his background.

Mr. PASSMAN. I think that, rather than appropriating more money for this activity, we had better do a little bit of coordinating. If I am not mistaken, the State Department administrative item also contains money for the OECD. Do you happen to know the amount contained in that appropriation for this purpose, Mr. Director?

Mr. COFFIN. No.

Mr. PASSMAN. This thing is so mixed up I do not believe it can ever be untangled. You have these little pockets stuck around. You find money here for this purpose. When you get into State, you have some money; regional, you have money. It is so scattered that it would take 12 months to ever conduct an examination, item by item. We just hit the surface a little, spatter it and go on. Get the total cost of this outfit, will you—State, AID, and from any other source that it may be getting its appropriation—and give us one total.

Mr. COFFIN. All right.

(The information to be supplied follows:)

Total estimated fiscal year 1964 U.S. administrative cost of OECD

Department of State	$1,068,600
Agency for International Development:	
Administrative expenses	59,400
Interregional program expenses	390,000
Total	1,518,000

Mr. PASSMAN. I believe you estimate $2,700 for representation allowance under the nonregional item; is that correct?

Mr. MADDEN. Yes, sir.

Mr. PASSMAN. We agreed yesterday that the nonregional fund is a supplement to the country programs; each country where you have a program may get some out of the nonregional money?

Mr. COFFIN. Yes.

Mr. PASSMAN. Is that also true in the representation allowance?

Mr. MADDEN. $2,700 of that is for——

Mr. PASSMAN. Representation allowance, you say.

Mr. MADDEN. That goes with the international aid coordination.

Mr. COFFIN. This is the Rubin staff.

Mr. MADDEN. This $2,700 would be in the figure that you have already picked up for Rubin of $59,400.

Mr. PASSMAN. But it is not in this other representation allowance we talked about earlier, is it, administrative expense representation?

Mr. MADDEN. It is part of the $184,000. In 1964 we estimate $184,900 for representation, as against $193,000 in fiscal year 1963.

Mr. PASSMAN. On the other items, regional, you break it down from your country programs. When it comes into representation al-

lowance, this $2,700 for Mr. Rubin, is that included in the $190,000 or is it a separate item?

Mr. MADDEN. It is included in the $190,000, but the $190,000 is spread throughout this book country by country.

Mr. PASSMAN. Why does Mr. Rubin need this $2,700, for trying to get these people to modify their aid terms?

Mr. COFFIN. In Paris particularly if he is going to deal with ambassadors and ministers and cabinet people from other countries and they invite him for lunch. Also he has to give a number of receptions, lunches, dinners for them. This is part of the diplomatic life, particularly in a leading European capital such as Paris. It is part of the job.

Mr. PASSMAN. The Lido is expensive, too?

Mr. COFFIN. Yes.

Mr. PASSMAN. That is part of the trade.

ADMINISTRATIVE EXPENSES FOR DOMESTIC AND SUPPORTING OPERATIONS

For fiscal year 1964 you estimate $27,395,100 for what you might call the cost of administrative expense for operating the AID headquarters.

Mr. COFFIN. The figure was what, Mr. Chairman?

Mr. PASSMAN. $27,395,100.

Mr. MADDEN. That is our estimate for the Washington expenses.

Mr. PASSMAN. What percentage of the total does that represent? About half of it is Washington, about half other parts?

Mr. MADDEN. A little less than half.

Mr. PASSMAN. What percentage would that be of the total AID request of $4.5 billion?

Mr. COFFIN. We figure our total administrative expense is about 1.7 percent of the total AID program. This would mean that the Washington office would be about 0.85 percent.

Mr. PASSMAN. But of the $4.5 billion request, this is 1.7 percent, or would it be double that to get the worldwide amount?

Mr. COFFIN. I have not actually divided; 1.7 percent is what was in my statement. I applied that against the economic program.

Mr. PASSMAN. I am trying to reconcile that percentage because I think the Peace Corps spent about 34 percent for administrative purposes. This looks like a good record.

Mr. COFFIN. I think it is a good overall record.

SERVICES OF OTHER AGENCIES

Mr. PASSMAN. Give us a breakdown for the record, if you will, of the $3,674,500 for services of other agencies.

(The information follows:)

Breakdown of services of other agencies

[In thousands]

Purpose	Agency	Amount
Administrative services (such as communications, health, fiscal, transportation, and custodial) in support of oversea activities.	State, Department of	$2,267.1
Participating agencies' administrative costs in support of their program activities.	Agriculture, Department of	120.0
	Commerce, Department of	80.7
	Federal Aviation Agency	66.6
	Federal Communications Commission.	11.3
	Health, Education, and Welfare, Department of.	203.0
	Housing and Home Finance Agency	18.0
	Interior, Department of the	103.4
	Labor, Department of	49.0
		652.0
Space rental, moving services, space alterations, miscellaneous repairs, motor pool, etc.	General Services Administration	352.9
Security investigations	Civil Service Commission	245.5
In house training of AID employees at Foreign Service Institute.	State, Department of	157.0
Total		3,674.5

ENTERTAINMENT EXPENSES—AID/WASHINGTON

Mr. PASSMAN. Under the "General operating expenses" estimate of $3,220,500, on page 52, I note an estimate of $23,300 for entertainment. What is the difference in entertainment and representation allowance?

Mr. COFFIN. Representation is overseas, entertainment is representation in Washington for foreign visitors.

Mr. PASSMAN. Under entertainment, it might be the same brands but carried under different headings in the justification?

Mr. COFFIN. This is the money used by the Administrator here in Washington.

Mr. PASSMAN. If it is overseas, it is representation allowance; if it is in Washington, it is entertainment; is that correct?

Mr. COFFIN. I believe so.

Mr. PASSMAN. What will be representation and entertainment? Is there any way to put it all together? It is the same thing; is it not?

Mr. MADDEN. Yes.

Mr. PASSMAN. What Washington AID official received this money in fiscal 1963?

Mr. COFFIN. We can supply that.

Mr. PASSMAN. We do not want to know the names. Is it just the very top level?

Mr. COFFIN. Yes. It is the Administrator if he has a dinner for a foreign minister; it is for me if I am entertaining visiting aid officials or for the head of the regional bureau.

Mr. PASSMAN. Do you mean that some of our AID officials come back to Washington and you entertain them?

Mr. COFFIN. Not ours; a foreign visitor.

Mr. PASSMAN. I did not know you had aid people in other parts of the world. They do business on a coldblooded, old line, regular loan basis.

Mr. COFFIN. I can make my speech on what other countries are doing in aid.

Mr. PASSMAN. I have heard and read some of your speeches.

ADMINISTRATIVE SUPPORT SERVICE BY STATE DEPARTMENT

On page 52, you propose to reimburse the Department of State for $2,267,100 for administrative support services; is that correct?

Mr. MADDEN. Yes, sir.

Mr. PASSMAN. Are they getting that money in addition to the next item on which we are going to examine, administrative expenses, State?

Mr. MADDEN. Yes, sir.

Mr. PASSMAN. Again you have to put the two figures together to know what the State Department is actually getting, do you not?

Mr. COFFIN. These are services they perform for us.

Mr. PASSMAN. I know that is true, but under aid you have another administrative expense for the State Department for services they render for you, do you not?

BATTLE ACT EXPENSES

Mr. MADDEN. Not for AID; for the Foreign Assistance Act.

Mr. PASSMAN. It is still AID, is it not?

Mr. COFFIN. Battle Act.

Mr. PASSMAN. Is it still part of AID?

Mr. COFFIN. The Battle Act is not.

Mr. TENNANT. It is to the Department of State.

Mr. PASSMAN. You are asking this committee to appropriate for AID out of AID's request for funds about—what is the amount for State?

Mr. MADDEN. $2,267,000 for support of our oversea missions.

Mr. PASSMAN. You are going to in just a litle while justify another item for State in their administrative account. How much is that?

Mr. TENNANT. $3,025,000.

Mr. PASSMAN. That comes out of the AID appropriation, does it not?

Mr. TENNANT. Yes, that comes out of section 637(b) of the Act, which is appropriated to the Department of State, as I recall it, but it is the mutual security.

Mr. PASSMAN. Where do you get the $3,025,000? Is it out of the $4.5 billion of the President's request?

Mr. TENNANT. Yes.

Mr. PASSMAN. So it is part of AID?

Mr. COFFIN. Part of the bill you consider.

Mr. PASSMAN. Part of the bill we consider, and whatever we appropriate for AID, this $3,025,000 comes out of the total?

Mr. COFFIN. Yes.

Mr. PASSMAN. Let us pick up the other amount for State, which is $2,267,100. That is another item for which you reimburse State directly out of your administrative expense; is that correct?

Mr. COFFIN. Yes.

KABUL HOSPITAL

Mr. PASSMAN. Where is Kabul Hospital?

Mr. COFFIN. Afghanistan.

Mr. PASSMAN. Is there an item of $36,400 for the Kabul Hospital?

Mr. MADDEN. Yes.

Mr. PASSMAN. This is coming out of the administrative expense part?

Mr. MADDEN. Yes, sir.

Mr. PASSMAN. On page 24 of your justifications you give us a total for hospitals. This is $150,000. That is for the hospital out of the technical assistance support. What is this for? It is a little confusing when we had it under the technical support project for Afghanistan, $150,000, and we run into it again.

Mr. TENNANT. Essentially, sir, this is total cost, it should be considered together. We have prorated part of the cost to the administrative account and part to the program account.

Mr. PASSMAN. These people justified $150,000.

Mr. TENNANT. The total would be $186,400. Since the hospital is partially used by program people and partially by administrative, we have prorated the cost in accordance with normal concepts.

Mr. PASSMAN. They get this sum plus this $150,000?

Mr. TENNANT. That is correct, the two together.

Mr. PASSMAN. This is just like shooting a shotgun out in the field, a load of birdshot, and then trying to find all the shot.

Mr. RHODES. Is this the hospital used by American personnel?

Mr. TENNANT. That is correct. My understanding is this hospital is State, ourselves, and any other U.S. people.

Mr. RHODES. Not for Afghans?

Mr. TENNANT. Not for Afghans.

Mr. PASSMAN. You have two items, and we were given a figure as the total, but to get the total you have to add this amount to it.

Mr. RHODES. Is the other item under the country?

Mr. PASSMAN. Yes, under the country, hospital, just pinned down completely.

Mr. COFFIN. I would like to know myself. Does this serve Afghans?

Mr. TENNANT. No, sir. It is for U.S. Government employees. That is under technical support.

Mr. PASSMAN. What we are trying to do, as we go along, is find out how much we have for a project. You have $150,000 under technical support. Then again under this you have the additional $36,400 also going to the hospital. To get the grand total you have to put the two together. We shall say one of the subtotals, because for the grand total, we put these two and get a different figure from the one justified here.

Mr. RHODES. I suggest you clean the record up on this.

Mr. COFFIN. We will be glad to.

Mr. PASSMAN. This is not unusual.

Mr. RHODES. I am just naive. I am a little shocked.

PARTICIPATING AGENCIES SUPPORT

Mr. PASSMAN. On page 53, you propose to contract with participating agencies in fiscal year 1964 in the amount as indicated by the books, $652,000. Are there any organizational units within these aid departments or agencies wholly financed by this AID agency item?

Mr. MADDEN. This is the administrative cost of these agencies for training the participants.

Mr. PASSMAN. What agencies particularly?

Mr. MADDEN. They are listed on page 53.

Mr. PASSMAN. Please insert page 53 in the record.

(Page 53 follows:)

PARTICIPATING AGENCY SUPPORT TO AID

In its program of furnishing assistance to cooperating countries and their nationals, AID capitalizes on the technical competencies of other U.S. Government agencies. Pursuant to covering interagency agreements, technical personnel of such participating agencies provide domestic support to AID through (1) development of specific training programs and the actual training of foreign nationals, and (2) technical backstopping of overseas technicians and projects. Administrative funds are required in funding such arrangements to compensate the participating agencies for the management costs of the program services provided and for the costs of supporting the technical personnel so engaged. Also, where the special contacts of a particular agency are utilized for recruitment of AID overseas technicians the services of the participating agency's personnel performing such recruitment for our account are administratively funded, as are any other such special services that may be requested.

The 1964 level of participating agency training activity will be the same as in 1963. The increase of $29,000 is to cover increased pay costs.

Administrative support services by participating agencies

[In thousands of dollars]

Agency	Fiscal year 1962	Estimated, fiscal year 1963	Fiscal year 1963 funds adjusted to fiscal year 1964 program objectives	Budget estimates, fiscal year 1964	Increased pay costs

Mr. PASSMAN. One department reimburses another department, this department reimburses some other department. I wonder if someday we could not work out a system that certain concessions be made? The cost of that paperwork must be tremendous, is it not, Mr. Controller?

Mr. TENNANT. We have a large program, and our cost of administering it is high.

Mr. PASSMAN. I wonder what it actually costs in the Government. Has there ever been an estimate of what it costs for all these interdepartmental transactions? It could go into the tens of millions of dollars, could it not?

Mr. TENNANT. I really have no idea of the size, sir.

Mr. PASSMAN. I wonder if someday some person should not give some thought to trying to pin down what it actually costs for these intergovernmental exchanges of vouchers. It is bound to be tremendous.

Mr. TENNANT. I think to the extent we could not get other agencies to perform this service for us, we would have to contract it out.

Mr. PASSMAN. Let them perform the services, but it all comes out of the same till. Rather than have four or five exchanges of vouchers—you give the State Department something, they give some other agency something for doing it. I understand sometimes as many as seven vouchers are drawn to cover one item. It would appear to me that there might be something better than all this bookkeeping.

Mr. Natcher?

EMPLOYMENT OF LOCAL NATIONALS

Mr. NATCHER. What system do you use in employing your locals? Assuming that the salary is the amount set forth on page 17 of $3,591,200 is that same salary paid to the locals in all countries for performing the same task?

Mr. COFFIN. It is my understanding that the basic arrangement, salary schedules are set by the State Department, the embassy in the country. So that if we are hiring clerks or USIA or the embassy, we would follow the same schedule.

Beyond that, I would have to call on Mr. Madden, but these would differ from country to country.

Mr. NATCHER. There would be a difference from country to country?

Mr. COFFIN. Yes.

Mr. NATCHER. Even for the same task?

Mr. COFFIN. Yes.

Mr. NATCHER. What is the highest salary you pay locals?

Mr. TENNANT. I can give you an average salary.

Mr. NATCHER. What is the average?

Mr. TENNANT. The average salary is approximately $1,500. However, that is deceiving in the sense that a local employee in Caracas would get substantially more than a local employee in Kabul for the same service because of the different standard of living in those two countries; but it is, as Mr. Coffin pointed out, it is a wage scale worked out by the embassy in terms of the local conditions of that country.

Mr. NATCHER. Thank you, Mr. Chairman.

Mr. PASSMAN. Mr. Rhodes?

ITEMS DEFERRED IN FISCAL YEAR 1963

Mr. RHODES. On page 21 I notice you have a column under "Proposed increases in fiscal year 1964" for items deferred during fiscal year 1963 for each country.

Mr. COFFIN. Yes.

Mr. RHODES. I want to ask you this again. Are these items for which some liability has been incurred?

Mr. COFFIN. No.

Mr. RHODES. These are actually projected expenses that you would have made in 1963 but had not the money for?

Mr. COFFIN. This is the result, as I understand it, of requests for supplies or equipment or other items that we discussed earlier that were received and that we did not honor. We did not allow them to make these expenditures.

Mr. RHODES. I just have never seen a column headed quite like this in any previous justifications. Was it done this way in order to illustrate a point? In other words, the point that you did not have enough money last year and, therefore, you have these items hanging fire. In other words, your justification would be just as complete, really, without it except that——

Mr. COFFIN. I think it is fair to say we wanted to prove the point to you, Mr. Rhodes, that we did follow a very austere program on some items; that we wanted to call your attention to it. Is that fair, Mr. Tennant?

Mr. TENNANT. I think that is fair.

Mr. RHODES. You feel we got into the bone a little bit last year; do you?

Mr. COFFIN. We had to be austere. We hope that you will not feel that this is something that we can continue on the same basis. We think there is a need that has to be met.

Mr. RHODES. You were able to operate, though. I notice that in some instances home leave was deferred.

Mr. COFFIN. Yes.

Mr. RHODES. And this other category of rest and recuperation apparently was somewhat inhibited. I correct myself right there. The category had never been in operation before, but it was initiated this last fiscal year. Would it be fair to say it was not carried on at the level you would have liked to have carried it on?

Mr. COFFIN. That is correct.

Mr. RHODES. To what extent have your supplies been drawn down because of failure to have funds to replenish them? Is there any way that you can answer this question in a meaningful way?

Mr. MADDEN. All we can tell you is we just cut these items out of the mission budgets when they sent in their requests. We got some flak but we held the line.

Mr. RHODES. Do you take a worldwide inventory of physical assets?

Mr. MADDEN. No, sir.

Mr. RHODES. So when you mention that supplies are down, this is an estimate on somebody's part of the situation as it now is compared to what it was a year ago. You cannot illustrate it with figures?

Mr. MADDEN. That is correct.

Mr. RHODES. I think that is all, Mr. Chairman.

Mr. PASSMAN. Mr. Ford?

COMPARISON OF ADMINISTRATIVE EXPENSES FOR OVERSEAS OPERATIONS

Mr. FORD. I think it might be quite helpful if we would put in the record the chart material which is on pages 19 and 20, leaving out the third column. I see no purpose in having the third column.

Mr. COFFIN. The third column is a confusing title, but it is an attempt to get the items that are comparable.

Mr. FORD. To people on this committee it is confusing. To somebody opening the volume without some background information it would be even more confusing.

Mr. TENNANT. We would have no trouble eliminating that column.

Mr. FORD. Off the record.

(Discussion off the record.)

Mr. FORD. Let us make that pages 17 through 20.

(The material referred to follows:)

RESIDENTIAL FURNISHINGS FOR STAFF HOUSING OVERSEAS

Mr. FORD. Turning to page 20, on the title of "Equipment, residential furnishings," fiscal 1962, $552,000; estimated for fiscal 1963, $271,000; budget estimate for fiscal 1964, $878,000—what residences do you furnish that in fiscal 1964 will cost almost a million dollars?

Mr. MADDEN. What this illustrates is the deferments we have been talking about; of postponing these purchases in 1963. As you will see, the estimated obligations in fiscal year 1963 because of the deferment of these equipment purchases, dropped nearly $300,000 below the actual obligations for this purpose in 1962.

Mr. FORD. How many residences do you furnish?

Mr. MADDEN. I think we are practically on a worldwide basis now providing residential furnishings for our employees. Latin America was the last to get fully in line with our worldwide policy of providing residential furnishings.

Mr. FORD. Does this avoid shipment of an individual's personal furniture to a country?

Mr. MADDEN. Yes, sir; there and back.

Mr. TENNANT. Our general services people have calculated this out and figured it is cheaper to do it this way than to have people carting their furniture all over.

Mr. FORD. Who makes an evaluation whether you have to replace or buy new furniture? Who makes that determination?

Mr. MADDEN. Our General Services Division has set scales as to when something can be qualified for replacement. For an automobile, for example, the governmentwide policy is 6 years. I do not know what it is for the particular items of furniture.

Mr. FORD. That is all, Mr. Chairman.

Mr. PASSMAN. Thank you.

INTERNAL SECURITY PROGRAM

I ran into another item here on page 171. You have the internal security, a nice sounding title. This is a police academy located down in Panama; is that right?

Mr. COFFIN. I thought we were going to talk about the Inter-American Police Academy.

Mr. PASSMAN. We are going to get on that matter. We ran into this item. We overlook a lot of them.

Mr. COFFIN. Mr. Chairman, this is Mr. Engle, Chief of our Office of Public Service.

POLICE ACADEMIES

Mr. PASSMAN. Mr. Engle, this item No. 171, internal security, is called a police academy at the Panama Canal; is that right?

Mr. COFFIN. Right.

Mr. PASSMAN. When did it come into being?

Mr. COFFIN. It came into being last summer, I believe.

Mr. PASSMAN. What did you justify for this last year?

Mr. ENGLE. May I answer?

Mr. PASSMAN. Yes.

Mr. ENGLE. This is not in the Panama Canal.

Mr. PASSMAN. Where is it?

Mr. ENGLE. This academy is not in existence. This is an academy which——

Mr. PASSMAN. Would you have another look to see whether it is not at the Panama Canal, that you are not training these people? You are head of the department.

Mr. ENGLE. No, sir; this is not in the Panama Canal. This is an academy which is planned to be established in Washington, D.C., for training of foreign police.

Mr. COFFIN. I think the chairman will get to this item later, but he wants to talk about Panama.

Mr. PASSMAN. I am going to talk about this item of a million dollars you have for internal security for fiscal 1964.

Mr. ENGLE. Correct.

Mr. PASSMAN. How much did you have for this item in fiscal 1963?

Mr. ENGLE. None, sir.

Mr. PASSMAN. This is a new agency within an agency set up for what purpose?

Mr. ENGLE. This is a new academy to be set up. It is not in existence. It is for the training of foreign police.

Mr. PASSMAN. Foreign police under AID?

Mr. ENGLE. Correct.

Mr. PASSMAN. Where did that idea originate?

Mr. COFFIN. At this point may I request we go off of even this record?

Mr. PASSMAN. You have it in the record here. Is the matter confidential?

Mr. COFFIN. I think Mr. Engle's presentation to you can be much better if it can be off the record.

Mr. PASSMAN. You are not going to be able to keep this thing under the chip always. At one time did you give some consideration to opening this up in the Panama Canal Zone?

Mr. ENGLE. Not this one, sir.

Mr. PASSMAN. You have another one?

Mr. ENGLE. There is an academy in the Panama Canal.

Mr. PASSMAN. Financed by AID funds?

Mr. ENGLE. Yes, sir.

Mr. PASSMAN. How long has that one been in existence?

Mr. ENGLE. Since July 1963.

Mr. PASSMAN. How much money did you request for the academy last year?

Mr. ENGLE. That is new as of July 1.

Mr. PASSMAN. You did not request any money for it. Where did you get the funds, out of what appropriation, to start this program?

Mr. ENGLE. Are we speaking now of the——

Mr. PASSMAN. Of this academy you opened up recently in the Canal Zone. You said you opened it July 1, 1963.

Mr. ENGLE. That is correct.

Mr. PASSMAN. It is only about 3 weeks old.

Mr. ENGLE. I am in error. I meant calendar 1962. I was talking about fiscal year 1963.

Mr. PASSMAN. It is a new program in AID. You have an academy in the Panama Canal you started operating at the beginning of this fiscal year 1963, is that correct?

Mr. ENGLE. The opening of the academy was in July a year ago—July 1962.

Mr. PASSMAN. Calendar year 1962, fiscal year 1963?

Mr. ENGLE. Yes.

Mr. PASSMAN. How much money did you request for the academy in the Panama Canal for fiscal 1963?

Mr. ENGLE. I was not in AID at the time.

Mr. TENNANT. I do not believe we had an item in there.

Mr. PASSMAN. That is right. I just want it verified. Out of what appropriation did you get money to start the Academy No. 1 at the Panama Canal?

Mr. ENGLE. Again I have to refer to Mr. Tennant because I was not present.

Mr. COFFIN. Development grants.

Mr. TENNANT. I believe it was development grants.

Mr. PASSMAN. How much did you take out of development grants for the Academy for fiscal 1963?

Mr. ENGLE. I can give you the approximate figure.

About $475,000.

Mr. PASSMAN. Do you have any money in the fiscal 1964 budget for this item?

Mr. ENGLE. I do not know whether this is broken out specifically for the Panama Academy.

Mr. PASSMAN. If it is hidden, what appropriation is it hidden in? There may be reasons for it. I am not questioning the advisability of it. Maybe there is some reason that we should not indicate.

What do you propose for the total expense in fiscal 1964 for this entirely new operation under police academies? I am talking about the Canal Zone and Washington.

Mr. ENGLE. The Academy in the Canal Zone and Washington will cost approximately a million dollars. There is nothing confidential about the existence of public safety programs or the academies.

Mr. GARY. Mr. Chairman, who are they going to train at these academies?

Mr. COFFIN. Let me state something that is undoubtedly confusing you at the moment. We requested for the new Academy a million dollars.

Mr. PASSMAN. For fiscal 1964.

Mr. COFFIN. For fiscal 1964.

Mr. PASSMAN. But you did not request any money for fiscal 1963 when you started this new operation?

Mr. COFFIN. That is correct. I want to say our original estimate for this new Academy has been scaled down from $1 million to $500,000 principally because we have found better and cheaper space accommodations. So that Mr. Engle is correct when he says that the total of the two would be roughly a million dollars.

Mr. PASSMAN. Where did this thing give birth?

Mr. ENGLE. May we go off the record, please?

Mr. PASSMAN. Yes.

(Discussion off the record.)

Mr. PASSMAN. Will you give us the total cost of this internal security program, all phases of it, for fiscal 1960 through 1964?

Mr. ENGLE. I cannot give you the figures on 1960.

Mr. PASSMAN. What year can you pick up?

Mr. ENGLE. I can give you the estimated figures for 1964.

Mr. PASSMAN. You cannot give it to us before that?

Mr. ENGLE. I can also give you what our estimated expenses were for 1963.

Mr. PASSMAN. You could not give it to us for 1962?

We are trying to see how fast it is growing.

Mr. ENGLE. No, sir; I cannot because I am not aware of those figures. I can give you the estimated for 1964. We have programs in 30 countries, police assistance activities.

Mr. PASSMAN. Can you name a few of those countries? Are some in the Far East?

Mr. ENGLE. Yes, sir; Vietnam, Cambodia, Thailand.

Mr. PASSMAN. Would it not be better to send our people out there to teach these techniques rather than spending this money bringing them here?

Mr. ENGLE. We only bring a small number here.

Mr. PASSMAN. A million dollars is not very small. I have watched these programs start.

Mr. GARY. Will you train any American military police in this Academy that operate in foreign countries?

Mr. ENGLE. No, sir.

Mr. PASSMAN. This is strictly to take policemen from Paris or Rome or Bangkok and to bring them in and teach them our techniques of policing; is it not?

Mr. ENGLE. They would not be from any place in Europe.

Mr. PASSMAN. I mentioned cities, but that is the purpose, to bring policemen from foreign countries and cities and train them in our police work here; then they return to their countries and do police work as they always have; is that it?

Mr. ENGLE. Not as they always have, we hope.

Mr. PASSMAN. You know what I mean, return to the same beat, the same gun, the same locale.

Mr. ENGLE. They would return to their same country, yes.

Mr. PASSMAN. In effect, it is a form of what we call technical assistance?

Mr. ENGLE. Correct.

Mr. PASSMAN. You bring certain participants over to operate in the Department of Agriculture, learn to put down tube wells. You bring these people over, teach them to be policemen; is that correct?

Mr. ENGLE. To improve their police techniques.

Mr. PASSMAN. In what respect is this activity confidential?

Mr. ENGLE. This is not confidential, Mr. Chairman.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. PASSMAN. On project 20, which we have been discussing, please furnish to the committee the cost for fiscal 1960, 1961, 1962, 1963, and then your estimated cost for 1964, all segments of it, whether it be item 1 and item 2 and item 3 that you have handled in the past, and give us that total. Will you do that?

Mr. ENGLE. Yes.

(The information to be supplied follows:)

Public safety program

Fiscal year:	*Obligations*
1960	$13,119,000
1961	10,612,000
1962	13,283,000
1963	25,110,000
1964 (estimated)	23,560,000

Mr. FORD. Mr. Chairman. Off the record.

(Discussion off the record.)

Mr. PASSMAN. We have just been discussing Project 20, and how many of these outfits are buried in this foreign aid program this committee recommends money for we do not know anything about.

Mr. COFFIN. This kind of technical assistance was always revealed in one of the technical services of ICA.

Mr. PASSMAN. As a technical aid program?

Mr. COFFIN. Yes, sir.

Mr. PASSMAN. When you get it as a separate office, it becomes classified?

Mr. ENGLE. It is not classified in any way, sir.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. PASSMAN. Thank you, sir.

DEPARTMENT OF STATE ADMINISTRATIVE EXPENSES

FRIDAY, JULY 26, 1963.

WITNESSES

VERNE B. LEWIS, DEPUTY ASSISTANT SECRETARY OF STATE FOR BUDGET AND FINANCE
ROBERT WRIGHT, DIRECTOR, MUTUAL DEFENSE, CONTROL STAFF, STATE
RONALD SPIERS, DEPUTY DIRECTOR, ATLANTIC POLITICAL AND MILITARY AFFAIRS, STATE
DEANE R. HINTON, DIRECTOR, ATLANTIC POLITICAL ECONOMIC AFFAIRS, STATE
FRANK M. BRYAN, BUDGET ANALYST
STANLEY SCHAUB, BUDGET ANALYST
EDWARD F. TENNANT, CONTROLLER, AID
LEIGH M. MILLER, LEGISLATIVE PROGRAMS COORDINATOR, AID
STANLEY B. SCHEINMAN, LEGISLATIVE PROGRAMS COORDINATION STAFF, AID

Mr. PASSMAN. We shall be pleased to hear your statement, Mr. Secretary.

GENERAL STATEMENT

Mr. LEWIS. Mr. Chairman and members of the committee, I am grateful for the opportunity to appear before this committee to explain the Department of State's request for funds under section 637(b) of the Foreign Assistance Act of 1961, as amended.

FISCAL YEAR 1964 REQUEST

Our request for $3,025,000 is for two major activities of the Department of State related to the foreign assistance program. These are the U.S. mission to the North Atlantic Treaty Organization and the Organization for Economic Cooperation and Development (USRO), for which we are requesting $2,182,000; and the mutual Defense Assistance Control Act (MDAC), for which we are requesting $843,000.

This request for $3,025,000 is an increase of $325,000 over the $2,700,000 appropriated for fiscal year 1963 under section 637(b) of the Foreign Assistance Act, and $236,200 over the $2,788,800 available, because of supplemental pay act funds and carryovers from prior years.

U.S. MISSION TO NATO AND OECD

The fiscal year 1964 request for the U.S. mission to NATO and OECD (USRO) is for $2,182,000, an increase of $250,100 over the $1,931,900 available for fiscal year 1963. USRO provides U.S. representation to the NATO Council and subsidiary committees and to the OECD Council and subsidiary committees. The United States attaches great importance to NATO and OECD. By coordinating our political, military, and economic policies with our Atlantic partners we are enhancing our security and welfare.

Since its establishment in 1949 the primary objectives of NATO have been to plan and provide for the defense of the North Atlantic Treaty area. To date this objective has been accomplished by the cooperative efforts of the 15 member countries. However, constant efforts and negotiations are required to improve the systems for integrated defense, including the equitable distribution of the defense burden.

In 1963 most of the efforts of our mission to NATO were devoted to the strengthening of NATO defenses, the achievement of a better balance between nuclear and conventional weapons, and the increased readiness of forces in connection with the Berlin crisis. The staff engaged in intensive consultation on political problems with our allies in NATO and participated in the review of military programs in member countries.

The Organization for Economic Cooperation and Development (OECD) which was organized officially on September 30, 1961, grew out of U.S. initiative first made public in a communique issued at the conclusion of the Western summit meeting in December 1959. The U.S. Government had become convinced that more had to be done to develop cooperation and coordination of the industrialized nations of Western Europe in meeting the economic challenges of the postwar era and therefore took the leadership in establishing the OECD. The United States became a member of the OECD on September 30, 1961, by virtue of the advice and consent to the OECD Convention by the Senate on March 16, 1961.

The United States has sought to strengthen the Atlantic partnership by vigorously using the OECD to coordinate economic policies and programs to obtain rapid economic growth, expanded trade, improved cooperation in dealing with international payments problems, and increased assistance to the developing countries.

The staff of our USRO mission provides support to our representatives to NATO and the OECD. It interprets and analyzes developments and submits recommendations for U.S. action to Washington, maintains liaison with various American Embassies in connection with obtaining assistance in persuading other countries to accept a U.S. position on current NATO or OECD problems, and represents the United States at meetings when there is no representation from Washington.

The intensified pace and widened scope of OECD activities require that we augment USRO's staff. This involves an increase of seven positions and $250,100 for fiscal year 1964. The increases not related to the seven positions are for within-grade promotions, overseas wage and price increases, allowances and travel, and increased participation in NATO conferences. The increased positions and funds will be needed if USRO is successfully to maintain this country's position and obtain our objectives during the coming year.

In this regard it should be noted that the basic formative work for policy decisions which are later taken by governments in the North Atlantic Council must of necessity be done in various working-level sessions of national representatives qualified in the field under discussion. Decisions which are taken in these meetings, although subject to final review in the Council, have a distinct influence on the final action which will be taken in NATO. Too often in the past the United States has, for lack of the funds necessary to send qualified delegates to working level meetings, found itself faced with proposals, supported by a majority of the Council, which it has been forced to reject at that level, with resulting strains in the Alliance which could otherwise have been avoided. In order to protect U.S. positions on questions which not only have considerable political impact but which could result in expenditures of NATO funds, it is essential that we be adequately represented in these working sessions, as well as the final decision making body.

Our participation in the work of NATO, is to insure that our policies are carried out and that our national interests are furthered by actions taken by NATO. Our participation, politically or financially, is in the interest of the security of the United States.

OPERATIONS OF THE MUTUAL DEFENSE ASSISTANCE CONTROL ACT

The second activity, the operations of the Mutual Defense Assistance Control Act (MDAC), will require $843,000 next fiscal year, or $13,900 less than the $856,900 available this year. The Control Act program based on Public Law 213 of the 82d Congress, is directly related to the overall defense efforts of the United States. The act makes mandatory the termination of U.S. aid to any country which knowingly ships arms, ammunition, or certain atomic energy items to the Sino-Soviet bloc and also provides for use of the President's discretion in continuing or terminating aid if a shipment involves certain listed strategic commodities. The Department plays a very important function in attaining these objectives by determining items to be included on the lists for control purposes, negotiating satisfactory controls with aid recipient countries, making reports to the Congress on shipments of listed items by such countries, and making recommenda-

tions to the President concerning termination of assistance because of shipment of listed commodities. The Department coordinates all U.S. activities concerning security trade rules exercised by other countries, and keeps countries receiving foreign aid informed of revisions in the list of strategic materals which should not be shipped to the Sino-Soviet bloc.

I and other members of the Departmen of State here today are prepared to explain our request in further detail and answer any questions the committee may have.

Mr. PASSMAN. Thank you very much, Mr. Lewis.

FISCAL YEAR 1964 REQUEST

The fiscal year 1963 appropriation for this purpose was $2.7 million. What is the net reduction below that amount for fiscal 1964?

Mr. LEWIS. There is an increase of $325,000.

Mr. PASSMAN. This appropriation is divided into three functions, of which the first is the U.S. mission to NATO and the European regional organizations, for which fiscal 1964 estimates are $2,182,000.

Incidentally, this is an increase over fiscal year 1963 of $250,100; is that correct?

Mr. LEWIS. That is right.

Mr. PASSMAN. What are the major increases under this function and what is the cost of each increase?

Mr. LEWIS. The major increase in this function, Mr. Chairman is for seven positions; two in Washington and five in Paris.

This will be at a cost of $87,000.

Mr. PASSMAN. Why do you have to increase your personnel?

Mr. LEWIS. These increases, Mr. Chairman, are primarily in connection with the OECD.

FUNCTIONS OF OECD

Mr. PASSMAN. Describe the OECD functions, if you please.

Mr. LEWIS. I would like to have Mr. Hinton do that.

Mr. HINTON. The OECD has three main purposes. First, it is an organization in which the industrialized countries, the wealthy countries, concert and coordinate and try to do better in the aid field, promoting economic development.

It is an organization, secondly, which is dedicated to promoting economic growth in the industrialized countries of the world, by harmonizing our economic policies.

Third, the OECD seeks to expand multilateral trade on a nondiscriminatory basis.

Mr. PASSMAN. How old is this agency, or this office?

Mr. HINTON. The OECD, sir, was constituted in its present form with U.S. membership in 1961. The organization itself goes back to the Marshall plan days and it was originally an organization of Europeans in which we were observers.

Mr. PASSMAN. I believe Mr. Rubin is in this program, is he not?

Mr. HINTON. Mr. Rubin, sir—if this is Sy Rubin—is the American Minister on the delegation to the OECD who handles AID matters.

Mr. PASSMAN. That is right, AID matters. His job is to get the nations in his area to ease their loan terms to the countries where we have the consortia; is that correct?

Mr. HINTON. His general job, sir, is to work for increases in the amount of aid from member countries of the OECD, to improve terms of this aid, coordinate programs of aid in the consortia that you have mentioned and in other informal ways.

Mr. PASSMAN. He consults with his counterparts, we shall say, in Germany, the United Kingdom, France, and discusses with them the aid consortia of which they are a part.

Let us take India, for instance, where you have a consortium. We make a contribution and the other nations make loans. One of his purposes of assignment there is to get them maybe to lengthen their terms and reduce their interest; is that correct?

Mr. HINTON. Yes, sir. I think that is a fair statement of one of his purposes.

Mr. PASSMAN. We have already established in the hearings that without exception all of the other nations—since we mentioned India—are making hard loans as they have always made, with a high rate of interest, and with the exception of the United Kingdom, if they give a grace period, then India must pay interest on the money during the grace period, whereas ours is on a 40-year basis, 10-year grace period, no interest, and three-quarters of 1 percent service charge.

We were told that we also have a man in Europe working out a program whereby we could borrow money from seven or eight of those countries which have dollars in excess of their needs.

I wonder if that is likewise handled out of this account or is it handled out of some other account?

Mr. HINTON. Mr. Chairman, could I make a point of explanation?

Mr. PASSMAN. I want my question answered first. We do know that we are now borrowing money from foreign nations with which to lessen the impact on our international balance-of-payments deficits, and the man is over there at this time, and I want to know whether or not it works out of this appropriation or whether it is some other appropriation?

Mr. HINTON. No, sir. It is not out of this appropriation.

Mr. PASSMAN. Thank you.

U.S. MISSION TO REGIONAL ORGANIZATION

I note, on page 4, that the U.S. mission to regional organizations is a five-agency team with staffing from the Department of State, Defense, Treasury, AID, and USIA; is that correct?

Mr. LEWIS. That is right.

This appropriation covers only the State portion of that delegation.

Mr. PASSMAN. How much does each one of these five agencies contribute to this organization?

Mr. LEWIS. I do not have the figures, sir, on the other agencies.

Mr. PASSMAN. Put the information in the record, please.

Mr. LEWIS. All right.

(The information follows:)

OTHER AGENCY CONTRIBUTIONS TO USRO

Contributions to U.S. mission to regional organizations by Department of State, Defense, Treasury, AID, and USIA for fiscal year 1963.

State	$1,931,900
Treasury	56,000
USIA	107,000
Defense (includes direct administrative costs of $503,000)	922,000
AID	396,000
Total	3,412,900

WASHINGTON BACKSTOPPING FOR USOECD MISSION

Mr. PASSMAN. Why does the OECD require a Foreign Service officer and secretary to bolster OECD backstopping in Washington, D.C.

Mr. LEWIS. Do you want to take that one?

Mr. HINTON. Mr. Chairman, my office in the Department provides staff support for the OECD mission in the trade field.

We have presently an expansion of this program in Paris where we are under pressure to develop positions, positions jointly consulted on, in preparation for the United Nations Trade and Development Conference.

This is a major economic conference to be held next year.

The Western Powers are trying to deal with the issues and trying to talk them out among themselves. This is virtually the entire range of economic trade, development issues, and to deal with the flow of communications and for the consultative purpose we need another position in my office in Washington on trade matters, sir.

Mr. PASSMAN. I wonder if Mr. Rooney's subcommittee, which handles State Department appropriations, recommended appropriation of any funds for this organization of Mr. Herter?

Mr. HINTON. Mr. Herter's organization?

Mr. PASSMAN. Yes.

Mr. LEWIS. That is carried in a separate appropriation, Mr. Chairman, in the White House budget.

Mr. PASSMAN. Let us show in the record at this point what the abbreviation OECD means.

Mr. HINTON. It is the Organization for Economic Cooperation and Development, Mr. Chairman.

REQUEST FOR INCREASED REPRESENTATION ALLOWANCE

Mr. PASSMAN. I note you are requesting an increase of $6,000 above the fiscal year 1963 estimate for representation allowance.

Mr. LEWIS. That is right.

Mr. PASSMAN. Why the increase?

Mr. LEWIS. Part of it is for wage and price increases.

Mr. PASSMAN. I am talking purely about the increase in the representation allowance.

Mr. LEWIS. Representation includes the service of food abroad, for example.

It is price and wage increase for the cost of putting on functions overseas.

Mr. PASSMAN. It is still a representation allowance?

Mr. LEWIS. Yes, sir.

Mr. PASSMAN. If the bourbon had been costing $6 a bottle and on account of the increase in wages, it goes to $6.25, that means you pay 25 cents more per bottle and that is where the wage increase comes in?

Mr. LEWIS. That would be part of it but a minor part of it. This item covers also the wages of servants who serve the food.

Mr. PASSMAN. If a filet mignon costs $7 in Paris, then if this waiter got an increase of $12 a week, that steak has to go up to $7.35, and that is part of the increase?

Mr. LEWIS. That is right.

Mr. PASSMAN. I think you have to go pretty far afield to follow you on your reasoning but since you agreed there, thank you very much.

Mr. LEWIS. There are other elements in this increase of representation.

Mr. PASSMAN. Let us say tips. If they had an organization saying that anything under 50 cents, you had to give it back to them, and they agreed to move the tip from 40 cents up to 50 cents, and if this be true, as I have noted, then that extra dime tip would also come in the increase; is that right?

Mr. LEWIS. That is right.

In addition to wage and price increases, I would like to point out that the increase for representation includes an element for new officers, $1,250.

Mr. PASSMAN. What is that?

Mr. LEWIS. Part of the $6,000, includes representation funds for the new officers we are requesting.

Mr. PASSMAN. We are still talking about the same component parts of representation; is that right?

Mr. LEWIS. That is right.

REQUEST FOR INCREASED TRAVEL ALLOWANCES

Mr. PASSMAN. Why do you need an increase of $48,725 in travel allowance?

Mr. LEWIS. That consists of several parts; $2,870 is for the travel of the new officers overseas we are asking for.

Mr. PASSMAN. New officers?

Mr. LEWIS. Yes, sir—three new officers overseas. This is for normal administrative travel for them and $8,775 is for what we call international travel. That is the cost of transferring people from here to overseas, home leave, and that sort of thing.

A major part of the increase, $12,000, is for NATO conference participation. This year one of the ministerial meetings will be in Ankara, whereas last year it was in Ottawa. The cost of travel is therefore increased by $12,000.

Mr. PASSMAN. I wondered if we could have just thought at the time we accepted that invitation about the extra cost and kept it a little closer home. But that is water under the bridge, is it not?

Mr. LEWIS. That is already committed.

MUTUAL DEFENSE ASSISTANCE CONTROL ACT EXPENSES

Mr. PASSMAN. The second portion of your estimate is the Mutual Defense Assistance Control Act, referred to as the Battle Act?

Mr. LEWIS. Yes, sir.

Mr. PASSMAN. For which the fiscal year 1964 estimate is $843,000? This is a decrease of $13,900 below the fiscal 1963 program. Congratulations.

We usually do not see decreases and we are afraid to ask the reason, afraid to run into a typographical error.

Mr. LEWIS. This is no typographical error. I think you can take some credit for that, Mr. Chairman. You cut the appropriation last year, or the Congress did, and as a result we reduced the number of positions engaged in this program from 65 to 56. The way the numbers work out here, there is a further saving in fiscal year 1964 as a result.

Mr. PASSMAN. I note that one of the functions of the Department of State is as administrator of the Battle Act, and to recommend determinations by the President with respect to termination of assistance to aid recipient countries.

Has the State Deparment ever exercised this responsibility before?

Mr. LEWIS. I would like to have Mr. Wright, Director of the Mutual Defense Control Section, answer that.

Mr. PASSMAN. Has the State Department ever exercised this responsibility before?

Mr. WRIGHT. Yes, sir.

There have been some 22 Presidential determinations that have continued aid to aid-recipient countries; since this committee considered the appropriation last year, there have been two Presidential determinations. One was toward the end of last year and one in April of this year.

Mr. RHODES. Would you yield at that point?

Mr. PASSMAN. Yes.

RELATION OF SECTION 107 OF FOREIGN ASSISTANCE APPROPRIATIONS ACT OF 1963 TO BATTLE ACT

Mr. RHODES. Had you not better get ready for another one after Circular 12 of the Department of Commerce listed the ships of the free world that have gone into Cuba since the passage of the Mutual Assistance Act of 1963, in which act sections 107(a) and 107(b) specifically prohibit further foreign aid to nations which ship certain types of goods into Cuba?

Mr. WRIGHT. Well, sir, these vessels and voyages to which you refer have not carried Battle Act commodities, to the best of our knowledge.

Mr. RHODES. This is different, then, from the section 107(a) and (b) type commodity?

Mr. WRIGHT. The Battle Act deals with strategic commodities. Section 107 does include in it a prohibition on the continuation of aid to countries that carry strategic commodities to Cuba.

We are satisfied that there have not been any such shipments.

Section 107(b) also does deal with non-Battle Act commodities.

In that regard, the State Department has made considerable efforts to persuade other countries to get their ships out of the Cuba trade, and there has been a very considerable reduction in the number of vessels that have engaged in this trade. It is true that there are vessels still in the trade.

Mr. RHODES. I have asked for a full report on certain vessels which are listed in this Department of Commerce circular as having gone into Cuba. I presume Mr. Scheinman or Mr. Miller will get the information for us at some time in the not too distant future?

Mr. SCHEINMAN. Yes, Mr. Rhodes.

The specific details reviewing each one of the voyages listed on the report 12 have been prepared for the committee and you. As you will recall, it has been testified before this committee that no determination by the President has been required under those sections because it has been found that the sections have not come into effect.

Mr. RHODES. I thought we passed the law.

Did we pass it with a delayed punch, or something?

Sections 107 (a) and (b) have not come into effect?

Mr. SCHEINMAN. The prohibitions contained therein require the happening of certain factual situations which, according to counsel of the Department of State and AID, have not occurred.

Mr. RHODES. I presume you are going to give me a further memorandum on that?

Mr. SCHEINMAN. Certainly.

Mr. RHODES. The court remains unconvinced.

Mr. PASSMAN. I want to get a definition of an expression I heard, "We boxed you in." Let us see if this applies to this committee.

Mr. RHODES. There is no doubt about that. The only trouble is we have been boxed in partly by ourselves and partly by some of our colleagues who sit in this building but down the hall a way.

Mr. PASSMAN. I know what you are talking about.

Gentlemen, we thank you for this brief meeting with us.

Mr. LEWIS. Thank you very much, Mr. Chairman.

Mr. PASSMAN. Best wishes to you.

MONDAY, JULY 29, 1963.

INTERNATIONAL ORGANIZATIONS AND PROGRAMS

WITNESSES

HON. HARLAN CLEVELAND, ASSISTANT SECRETARY OF STATE FOR INTERNATIONAL AFFAIRS
WALTER G. FARR, DIRECTOR, OFFICE OF AFGHANISTAN-PAKISTAN AFFAIRS, AGENCY FOR INTERNATIONAL DEVELOPMENT
DR. JAMES WATT, CHIEF, DIVISION OF INTERNATIONAL HEALTH, HEW
ALGIE WELLS, DIRECTOR, DIVISION OF INTERNATIONAL AFFAIRS, ATOMIC ENERGY COMMISSION
MRS. VIRGINIA WESTFALL, DIRECTOR, OFFICE OF INTERNATIONAL ADMINISTRATION, STATE
CARTER HILLS, OFFICE OF INTERNATIONAL ADMINISTRATION, STATE
TALCOTT SEELYE, OFFICER IN CHARGE, ARABIAN PENINSULA AFFAIRS, STATE
ROGER STEWART, DEPUTY DIRECTOR, AGRICULTURAL RESOURCES DIVISION, AID
STANLEY B. SCHEINMAN, LEGISLATIVE PROGRAMS COORDINATION STAFF, AID
EDWARD F. TENNANT, CONTROLLER, AID

Mr. PASSMAN. The committee will come to order.

Secretary Cleveland, we shall be pleased to hear from you, but first there is a matter which I believe should be discussed off the record.

(Discussion off the record.)

Mr. PASSMAN. Now, Mr. Cleveland, we shall hear your statement.

GENERAL STATEMENT

Mr. CLEVELAND. Mr. Chairman, I am appearing today in support of the request for the fiscal year 1964 appropriation of $136,050,000 for U.S. voluntary contributions to eight international organizations and programs. They are described in volume II of the classified presentation, beginning on page 157.

As you know, the AID Administrator looks to the Bureau of International Organization Affairs to administer this portion of the foreign assistance program. Our Bureau of the State Department is also responsible for 2 other categories of contributions—the so-called regular or assessed contributions to 32 international organizations which are carried in the State Department appropriation, and the contributions toward the peacekeeping functions of the United Nations, which have typically consisted of both an assessed and a voluntary portion—except this past year when, as you know, they have been met by the purchase of U.N. bonds. The estimates presently before you do not include any funds for assessed contributions or for peacekeeping operations. In the case of peacekeeping, our assessed share of the declining costs of U.N. forces in the Middle East and the Congo will be handled as a supplemental appropriation request.

The United States has made many voluntary contributions to many international organizations; but in every instance it has been a unilateral, ad hoc decision to contribute voluntarily so-and-so many dollars for a specific purpose at a specific time. These decisions do commit our Government to support those programs. In each case, of course, the decision has been authorized and the funds appropriated by acts of Congress after careful review by congressional committees. No other nation and no international organization can make our decisions for us in these matters.

FOUR CATEGORIES OF VOLUNTARY CONTRIBUTIONS

These voluntary contributions fall into four major categories. There are, first, voluntary payments which have helped to finance extraordinary expenses of major peacekeeping operations under U.N. auspices.

The second category includes voluntary contributions to help finance the U.N. expanded program of technical assistance, the U.N. Special Fund, and the U.N. Children's Fund. These are the central and major agencies of the United Nations for channeling resources from the industrially developed members to the newly developing members—resources in the form of technical know-how and grants in support of resource surveys and technical training institutes in countries struggling to modernize their societies.

These development assistance funds are financed entirely by voluntary contributions. For the past several years, under a ceiling authorization set by the Congress, we have pledged voluntary contributions of 40 percent of total contributions to the technical assistance and special fund programs, taken together. This is still, in our judgement, an appropriate level of contributions; it is a fair proportion of the total; it places our actual contributions on a matching basis; it exerts pressure on others who are able to contribute; and it is an appropriate action for us to take, as leader of the development efforts of the free world and a sponsor of the U.N. decade of development.

This matching principle in the case of the United Nations Children's Fund has enabled us to bring our share of total contributions down from 72 percent in 1946 to 40 percent proposed for 1964. It has, at the same time, generated an increasing level of contributions from other nations participating in this organization's well-administered program in the fields of health services, disease control, and nutritional education for children and mothers in less developed countries.

There are, third, voluntary contributions to programs of the specialized agencies, and other multilateral organizations temporarily financed outside of their regular budgets. At the time I assumed responsibility for this particular chapter, in February 1961, such contributions covered the NATO science program, malaria eradication, community water supply, and medical research in the World Health Organization and the technical assistance operations of the International Atomic Energy Agency. The United States had helped initiate a number of these programs. We have taken the position that when specialized programs financed by voluntary contributions prove to be of continuing value to the membership as a whole, they should be moved over into the regular budgets of the organizations concerned

and financed by assessments. This has already been done in the case of the WHO malaria eradication program and the NATO science program. It is being done in connection with the WHO pure water supply program. We are negotiating in the IAEA to accomplish the same shift of that Agency's technical assistance program, now financed on a voluntary basis. And the medical research item in the program before you is intended to be the last one in this field.

There is, fourth, the special case of the U.N. Relief and Works Agency for Palestine Refugees. As this committee knows from testimony in previous years, we are unhappy about the fact that other governments' contributions have been at a low level and that therefore our contribution has been around 70 percent of the total cost of maintaining that subsistence level program of relief for the refugees. We have constantly pressed for a meaningful rectification of the relief rolls; and some progress has been made in this direction. We have taken action to reduce the dollar outflow to this program through the utilization of U.S.-owned local currencies and Public Law 480 foodstuffs. As you also know, we have decided with considerable reluctance, year in and year out, that it is in the national security interests of the United States to go as far as we do in helping the U.N. to keep the lid on that particular cauldron of double-trouble in the Middle East. Our vital interests in this sensitive area of the Near East could be seriously jeopardized by a precipitate reduction of our contribution to the Palestine refugee program.

VOLUNTARY CONTRIBUTIONS REQUEST, FISCAL YEAR 1964

This year's request of $136,050,000 is about $12 million less than the amount appropriated in this chapter for fiscal year 1963 and also a reduction by three of the number of programs for which funds are sought. These changes represent the net effect of several trends: (1) One result of the evolving situation in the Congo is the shift from multilateral to bilateral channels of the major U.S. support of the economic stability of and development of the Congo. In the foreign aid budget, this produces a shift of most U.S. assistance to the Congo from the contributions appropriation to bilateral supporting assistance and development grants. (2) As I have already noted, the costs of U.N. peacekeeping operations are not included. (3) Several programs, including the science activities of NATO and the malaria eradication program of WHO, have been absorbed in the regular assessed budgets of the respective organizations and therefore no longer require voluntary contributions. (4) In this year's budget, contributions to regional organizations operating in the field of economic and technical assistance are included in the estimates for development grants. Last year estimates for the Asian Productivity Organization and the Commission for Technical Cooperation in Africa were included in the request for voluntary contributions on which I testified.

I would like now to review briefly the programs for which we are requesting fiscal year 1964 funds.

TECHNICAL ASSISTANCE AND SPECIAL FUND

Our request for the U.N. expanded program of technical assistance and the Special Fund totals $55 million. Several years ago the United States actively supported the establishment of a target of $150 million for these two programs. The first provides experts, fellowships, and demonstration supplies and equipment to countries at their request. The Special Fund helps to promote—through surveys and feasibility studies, and through manpower training and technical education—the fuller exploitation of national resources. The level of contributions to these programs has increased from $20 million in 1951 to about $112 million in 1962. In the case of the Special Fund, 288 projects have been approved at a cost to the Fund of somewhat over $253 million, while an additional $400 million has been provided by the recipient governments.

In the fall of 1962, as in other recent years, the United States pledged a contribution of 40 percent of total contributions to the two programs for the calendar year 1963, up to a maximum of $60 million.

In preparing our fiscal year 1963 budget request, we had previously estimated that contributions from other governments to the calendar year 1963 program would draw down a contribution of $50 million from the United States. However, pledges from other governments have already been recorded at a higher level than we anticipated, and additional pledges may be made before the cutoff date—December 30, 1963. The $50 million available from fiscal year 1963 funds are therefore insufficient to meet our pledge.

We propose therefore to use a small portion of the $55 million requested for fiscal year 1964 to complete the funding of our 1963 pledge, in the manner suggested by this committee during my testimony on this item last year. The remainder of the $55 million would be used to finance our pledge to the 1964 programs of the two agencies; as in previous years we propose a pledge of 40 percent of total contributions, up to $60 million. In the event that the $55 million does not meet the shortfall in our calendar year 1963 program and our pledge for calendar year 1964, we will seek additional funds next year, rather than using money from the AID contingency fund, which was the previous practice.

U.N. ECONOMIC AID FOR THE CONGO

The picture in the Congo has changed sharply since last year's presentation. The success of the U.N. peacekeeping force in reestablishing a measure of relative political stability has enabled the United Nations and the Government of the Congo to turn realistically to the serious problem of economic stability. To avoid the risk of rivalry inherent in bilateral programs, the United States is seeking to form a "Congo Club" of friendly governments who would share this task by contributing bilateral assistance under arrangements for coordination that have been worked out with the U.N. and the Congo Government.

Mr. Hutchinson of AID has already testified on the fiscal year 1964 requests for U.S. bilateral economic aid to the Congo under these arrangements. In addition to this bilateral aid, we support the continua-

tion of a residual U.N. technical assistance program, under which at present about 1,200 school teachers, doctors and other medical personnel, communication experts, air traffic controllers, and other technicians are providing vital services in the Congo. We are requesting $5 million to be contributed by the United States for this purpose. We would administer these funds so that they would not exceed 50 percent of the total contributed by all countries through the U.N. for economic purposes in the Congo.

PALESTINE REFUGEES

Our contribution for the United Nations Relief and Works Agency for Palestine Refugees remains at the same level as last year—$17.2 million in cash and about $7.5 million in surplus agricultural commodities, within a maximum of 70 percent of total contributions. Initiatives are underway which should lead to the achievement of a greater degree of refugee self-support by using a greater proportion of UNRWA's resources for vocational training and to a reduction in relief costs through rectification of the rolls of relief recipients.

U.N. CHILDREN'S FUND (UNICEF)

The U.N. Children's Fund carries out a well administered program in the fields of health services, disease control, and nutritional education for children and mothers in the less developed countries. Due to the widespread support of this activity by member nations around the world, we now consider it appropriate that the U.S. share be reduced to 40 percent in 1964.

WORLD FOOD PROGRAM

You may recall that in September of last year Secretary Freeman pledged U.S. support of the world food program initiated through the Food and Agriculture Organization. The initial program is of 3 years duration and our request is the second installment against our cash pledge of $6 million for the 3-year period. The first installment of $1,638,000 was paid from fiscal year 1963 foreign assistance funds. Our major contribution to the world food program is, of course, surplus agricultural commodities available under Public Law 480, of which $40 million have been pledged.

ATOMIC ENERGY

Our proposed cash contribution of $750,000 to the operational program of the International Atomic Energy Agency, which provides fellowships, experts, and equipment in the field of nuclear energy to the less developed countries is offered on a 50 percent matching basis. Our estimate also includes $500,000 to finance the provision of American experts, of training in American nuclear energy installations and some equipment in order to acquaint the scientists of developing countries with U.S. leadership in the field of peaceful uses of the atom. I have already mentioned that we are working to bring about the incorporation of the Agency's operational program within the regular budget.

MEDICAL RESEARCH

The 1964 request includes $500,000 for special programs of the World Health Organization. We are pleased to report that our initial voluntary contributions in support of the malaria eradication program have now enabled the Organization to move this program into the regular budget. We are urging the same action with respect to the community water supply program. Our contribution for 1964 is intended to complete our voluntary support for the medical research program and is designed to establish a research unit in WHO on human reproduction.

INDUS WATER PROJECT

Our request for contributions to the Indus waters fund is $43,100,000. This is a 10-year program conceived as a solution to one of the major sources of friction between India and Pakistan. The funds are administered by the International Bank for Reconstruction and Development. Our request for 1964 is somewhat above our 1963 contribution and is occasioned by the accelerated pace of the construction of works called for under the original settlement plan. Mr. Farr is here to discuss this program in greater detail.

ANNUAL REVIEW

All in all, these international agencies manage a very mixed bag of projects, in all of which the United States has a lively interest. Our motives in helping to support them range from humanitarian motives—in the case of the Children's Fund—through development objectives—in the case of the U.N. Special Fund and technical assistance programs—to a desire to maintain a precarious peace in the Middle East. Many of these programs will continue; some will change; and others no doubt will be proposed as time goes on.

The point which I should like to stress as forcefully as I can is that the sensible thing is to continue reviewing these special programs every year, program by program, in the light of conditions prevailing at the time, so we can decide each year just how much the United States wishes to contribute in its own interests as it then sees them. This is hard work, tedious and time-consuming work for us—and is hard work, tedious and time-consuming work for this committee and the Senate Appropriations Committee as well as the authorizing committees. But I know of no better way for the United States of America to exercise its sovereign decision each year, to avoid getting locked into long-term decisions about rapidly changing international programs, and to keep our national interest in each program under constant review. We are at your service for such a review in this committee, today, for the fiscal year 1964 program of voluntary contributions.

MANAGEMENT IMPROVEMENT

In closing, I would like to mention briefly the various steps we have taken during the past year to improve the management of our participation in international organizations.

A year ago a Special Study Group was established, financed from the President's Management Improvement Fund and staffed by senior people from the Bureau of the Budget, AID, the Civil Service Commission, and the Department of State. At the same time, an Advisory Committee on International Organizations, composed of 10 distinguished citizens with a variety of backgrounds but all with an interest in public administration, was appointed to advise the Department of State on various aspects of U.S. participation in international organizations. After reviewing the studies made by the Special Study Group, the Advisory Committee has published two reports—one on the problems of staffing of international organizations and the second on the technical cooperation programs of the United Nations. A third report on financial management is in process of preparation.

As a result of the Advisory Committee's report on staffing, we are taking steps to strengthen the existing small recruitment service which has been working to help place Americans with international organizations. We have long recognized the inadequacy of efforts which have been made in the past and we are hopeful that the increasing emphasis on this aspect of the work of the Department will produce a greater number of qualified Americans for service with international organizations.

We have also taken steps to press in the technical assistance field for a merger between the expanded program of technical assistance and the Special Fund. We believe such an amalgamation will produce a more efficient operation which will be more responsive to the needs of the less developed countries. We have urged the strengthening of the role of the U.N. resident representative as the U.N. officer responsible for directing and coordinating all U.N. economic activities in a country, as well as for assuring that the U.N. activities are geared to country development plans.

In order to produce closer coordination between the U.S. bilateral aid programs and U.N. technical assistance programs, a senior AID official has been assigned to the U.S. mission in New York.

We have also undertaken a concerted effort to develop U.S. views on program and budget levels of international organizations earlier in their budget cycles, so that our views may be more adequately reflected in the programs adopted for implementation.

In the past several months escrow accounts have been established with the Treasury for our contributions to the U.N. Special Fund and UNICEF so that funds will not be released from the Treasury until cash is actually needed by the agencies.

Finally, we hope to get agreement at the General Conference of the International Atomic Energy Agency this fall on a charter amendment which would merge the operational program with the assessed budget in the same fashion as NATO and WHO programs, previously supported by voluntary contributions, have been folded into the regular activities and budgets of those organizations.

Mr. PASSMAN. Thank you very much, Mr. Cleveland.

Mr. Farr, may we hear your statement?

General Statement on Indus Waters Project

Mr. Farr. Mr. Chairman and members of the committee, the Indus waters project, conceived as a solution to one of the major causes of friction between India and Pakistan, involves a free world commitment of almost $1 billion, stretching over a period of 10 years, to finance diversion to India of waters now used in Pakistan and replacement of these waters by an elaborate system of dams, reservoirs, and link canals in Pakistan. The funds are administered by the International Bank for Reconstruction and Development (World Bank) as contemplated under section 303 of the Foreign Assistance Act. Commitments to the Indus Basin Development Fund (the Indus Fund) includes foreign exchange grants by Australia, Canada, New Zealand, Germany, and the United Kingdom as well as the United States, a U.S. local currency grant, a large payment by India in both local currency and foreign exchange and loans by the United States and the World Bank.

The World Bank calls for foreign exchange grant contributions from the United States and other contributing governments in October and April of each year on the basis of its estimate of the total payments which it will have to make during the succeeding 6-month period to contractors constructing the Indus works. The shares of the United States and other contributing governments are fixed in the Indus Fund Agreement. The World Bank thus determines the amount of the U.S. contribution in any given period by calculating our fixed share of whatever expenditures must in fact be made.

The request for an appropriation for contributions to international organizations includes $43.1 million to cover the U.S. share of grant contributions to the Indus fund during fiscal year 1964. This amount was arrived at last winter on the basis of then available estimates of the calls the World Bank would make in October 1963 and April 1964. Since then the World Bank has revised its estimates and advised that it plans to call for dollar grant contributions of $48.9 million from the United States during fiscal year 1964 to meet expected disbursements under construction contracts alread awarded. While this estimate is also approximate, it is quite possible that there will be an additional fiscal year 1964 requirement of $5.8 million beyond the $43.1 now requested. This additional amount would represent a potential claim on the contingency fund. By contrast, our early estimate last year proved too large, because of late phasing of letting of contracts, and the World Bank called for only $24.6 million of the $30 million requested for our fiscal year 1963 Indus contribution.

Last year we advised this committee that the amount of the total contribution the United States might ultimately be called upon to make to the Indus fund was in doubt. This is still the case. The development program originally contemplated for works in Pakistan would cost almost double the $895 million commitment of the World Bank and the contributing governments, including the United States. Negotiations are still underway with the Government of Pakistan toward agreement upon the final scope of the system of irrigation and power facilities in the Indus Basin which would be financed out of the fund. Until agreement is reached we cannot determine the total cost of works to be financed or the U.S. share thereof. Right now the United States is committed only to the original amount in the Indus

fund agreement of $482 million. We reconfirm our undertaking to advise this committee promptly of any new commitment.

Construction is progressing extremely well. Some $500 million of contracts have been let to construct the key Mangla Dam on the Jhelum River and important link canals designed to continued irrigation water to Pakistan farms. All of the contractors are on schedule. The Mangla Dam contractor, Guy F. Atkinson Associates, of the United States, is actually ahead of schedule and hopes to finish fully a year before its contract deadline.

The operation of the fund appears to be having a net favorable effect on the U.S. balance of payments. The largest single contract has been let to a U.S. firm. This contract represents about 75 percent of the value of all contracts let to date. In contrast the U.S. commitment to the fund represents 54 percent of the total committed in all currencies and only 39 percent of total foreign exchange commitments. Furthermore, about 85 percent of the foreign exchange actually disbursed so far by the fund has been paid to U.S. contractors, while the United States has so far been called upon to contribute only about 53 percent of the total foreign exchange called for by the fund to date.

Mr. PASSMAN. Mr. Farr, we want to thank you, too, for your statement.

COMPARISON OF 1963 AND 1964 BUDGETS

Mr. PASSMAN. I believe that last year the contributions to international organizations and programs amounted to $148,900,000; is that correct?

Mr. CLEVELAND. That is correct.

Mr. PASSMAN. How much less are you requesting for fiscal year 1964?

Mr. CLEVELAND. For fiscal year 1964 our request is $136,050,000.

Mr. PASSMAN. It would appear, however, that on a comparable basis your request is $23 million above the 1963 appropriation, is it not, as the economic assistance program for the Congo will be financed in fiscal year 1964 under the supporting assistance program?

Mr. CLEVELAND. Mr. Chairman, as I indicated in my statement the downward change represents a combination of four different changes.

Mr. PASSMAN. But you are getting out of supporting assistance funds to do the same thing that you did out of the direct contribution to international organizations in fiscal year 1963?

Mr. CLEVELAND. In the Congo; yes.

TOTAL OF CONTRIBUTION TO INTERNATIONAL ORGANIZATIONS FROM ALL SOURCES

Mr. PASSMAN. The total for fiscal year 1963 amounted to $148,900,000. The total for fiscal year 1964 is how much?

Mr. CLEVELAND. $136,050,000.

Mr. PASSMAN. Plus the amount out of supporting assistance.

Mr. CLEVELAND. If you count——

Mr. PASSMAN. We will have to count it because last year you financed the Congo out of your regular appropriation to the U.N., did you not?

Mr. CLEVELAND. Yes; that is right.

Mr. PASSMAN. Let us put the two together.

Mr. CLEVELAND. The total amount for the Congo——

Mr. PASSMAN. No; the total amount of contribution to international organizations and programs from all sources.

Mr. CLEVELAND. $136 million, because the Congo——

Mr. PASSMAN. I am trying to show at this point in the record the total amount of money that you will have in fiscal year 1964 to do the same thing you spent the $148,900,000 for in fiscal year 1963. You are going to have to add the other programs, are you not, to this?

Mr. CLEVELAND. Yes, sir.

Mr. PASSMAN. Could we do it at this point so as to ascertain whether you have an increase or a decrease? Do you have that information?

Mr. CLEVELAND. Yes, sir. So far as the Congo is concerned——

Mr. PASSMAN. I do not care whether it goes to Congo or "Randolphville." We want to get the total. Then we will get into the Congo.

Mr. CLEVELAND. You would have to add for the Congo $——— under supporting assistance.

Mr. PASSMAN. Previously did you get money for that purpose out of the U.N., our contribution to organizations and programs?

Mr. CLEVELAND. Our comparable amount was in chapter 3.

Mr. PASSMAN. Let us get the total.

Mr. CLEVELAND. That would make $———.

Mr. PASSMAN. Let us get the other programs, too. This thing is being scattered.

Mr. CLEVELAND. The other items that are comparable would be——

Mr. PASSMAN. Asian productivity organization, do you not have something like that in the bill? How much is that item?

Mr. CLEVELAND. That is in the request for Far East development grants for fiscal year 1964.

Mr. PASSMAN. We still have to get this total together. Could we ask the Controller for the information?

Mr. TENNANT. $200,000.

Mr. PASSMAN. Let us get the others.

Mr. CLEVELAND. What about the African regional?

Mr. TENNANT. $1,525,000 for the African regional organizations.

Mr. PASSMAN. Are there any others?

Mr. TENNANT. I believe that is everything.

Mr. PASSMAN. They have been scattered. Now let us get the total. Let us see what the increase is. On a comparable basis to the $148,900,000 that you had last year you are asking for fiscal year 1964, ———, or an increase of ———; is that correct?

Mrs. WESTFALL. Some ———, I believe, Mr. Chairman.

Mr. CLEVELAND. That is correct on a comparable basis for these programs.

ACTIVITIES RECEIVING FUNDS FROM OTHER U.S. AGENCIES

Mr. PASSMAN. Will any of the AID organizations or programs listed on page 157 of the justifications receive any appropriation from other U.S. Government appropriations?

Mr. CLEVELAND. There are two agencies that receive some assistance from other parts of the U.S. Government. One is the International Atomic Energy Agency.

Mr. PASSMAN. Would you know the amount?

Mr. CLEVELAND. I do not know.

Mr. PASSMAN. Put the information in the record, if you will.

Mr. CLEVELAND. Yes. The other is the World Health Organization which gets some research grants from NIH.

Mr. PASSMAN. Is that a new activity?

Mr. CLEVELAND. No. This has been going on right along. In effect, the WHO competes at the NIH, along with everybody else in the world, for the research money.

Mr. PASSMAN. Specifically, would you furnish to the committee a copy of the amount in research?

Mr. CLEVELAND. Right, Mr. Chairman.

(The information requested follows:)

RESEARCH ACTIVITIES OF THE INTERNATIONAL ATOMIC ENERGY AGENCY FINANCED BY OTHER U.S. APPROPRIATIONS

In fiscal year 1963 the U.S. Atomic Energy Commission made available to the International Atomic Energy Agency $50,000 worth of special nuclear material for use in research projects, pursuant to authority contained in section 54 of the Atomic Energy Act of 1954, as amended. In addition, under a joint research program with the International Atomic Energy Agency, the AEC placed 13 contracts through the Agency, in the amount of $174,202, for research in areas of direct interest to the Commission. It is anticipated that a similar research program will be carried out in 1964 from fiscal year 1964 appropriations.

RESEARCH ACTIVITIES OF THE WORLD HEALTH ORGANIZATION FINANCED BY OTHER U.S. APPROPRIATIONS

In fiscal year 1963, $614,000 was made available to the World Health Organization in research grants funded under appropriation for the National Institutes of Health for projects of interest to our domestic program. It is estimated that a similar amount will be made available from NIH appropriations for fiscal year 1964 for ongoing costs of current projects.

The fiscal year 1963 NIH program provided research grants to WHO for the following projects:

Bilharziasis research	$88,000
Virus diseases, immunological surveys, and vaccine studies	188,000
Hypovitaminosis A-Xerophalmia and Keratomalacia	65,000
Insecticide resistance and vector control	273,000

Total U.S. assistance to WHO's medical research programs in 1963 were funded as follows:

State Department regular budget	$480,000
AID, voluntary	500,000
National Institutes of Health	614,000
Total, United States	1,594,000

REDUCTIONS IN PERCENTAGE OF U.S. CONTRIBUTIONS

Mr. PASSMAN. What steps are you taking, if any, to reduce the percentage of our contribution to those programs in which the amount of our dollar contribution is determined by our pledges to contribute a certain percentage to the programs?

Mr. CLEVELAND. We have pushed quite hard in connection with several of these programs to reduce the U.S. percentage of the total. In the case of the U.N. technical assistance program and the Special Fund, the technical assistance program started out at something like 60 percent of the total and being paid by the United States. It is now down to 40 percent and it is pegged at 40 percent under our pledge.

The Special Fund was started at 40 percent. In the case of the Congo, during the emergency we were providing more than 80 percent of the total of U.N. Congo Fund.

PLEDGES TO U.N. TECHNICAL ASSISTANCE AND SPECIAL FUND

Mr. PASSMAN. I note on page 6 of your statement that in connection with the U.N. program of technical assistance and the Special Fund that during calendar year 1963 pledges from other governments have already been recorded at a higher level than we anticipated and additional pledges may be made before the cutoff date of December 31, 1963. Consequently you state, our appropriation for fiscal year 1963, also of $50 million appears at this time to be insufficient.

It would appear to me that this might be one place where we could reduce our percentage contributions and not have serious impact on the program.

Mr. CLEVELAND. Mr. Chairman, I think the main reason that the pledges and contributions are going up in that case is precisely the incentive effect of this matching pledge of ours.

Mr. PASSMAN. If they are going up it appears we would be on the reducing side, on account of the very serious financial condition we find ourselves in today. Our international balance-of-payments situation is very critical and it is obviously going to get worse before it gets better. The same thing applies to our gold reserves. There is also the fact that our public debt, one nation, exceeds by $24 billion the combined public debts of all the other nations of the world. I wonder why we would not now start renegotiating these agreements to maybe get ours down to a reasonable basis?

Mr. CLEVELAND. In this case, in the case of the U.N. technical assistance activity, we think that 40 percent of the total that is put up mostly by the developed countries as assistance to the underdeveloped countries is a reasonable level.

Mr. PASSMAN. We would have thought so until these countries grew so wealthy. Have you had a chance to look at the balance-of-payments situation of some of the European countries, the number of free dollars they have, the amount of gold that they have on hand and their favorable trade balances? How many countries are contributing to this program?

Mr. CLEVELAND. Altogether about 100 countries contribute to this program.

Mr. PASSMAN. Could you furnish for the record a list of contributing countries, taking Uncle Sam at the top, 40 percent, then break down the contributions by the other nations?

Mr. CLEVELAND. Yes, sir.

Mr. PASSMAN. Break it down into dollars. Forget about those who make contributions that are never used, like the ruble. They are in with their contribution. I do not think you are using them yet; are you?

Mr. CLEVELAND. Some of them are.

Mr. PASSMAN. They are designated by Russia as to where they will be used. Give the information to us in dollars and the percentage of the total.

The information supplied follows:

[1] Chad has pledged a total of $60,000 to the Special Fund and to the expanded technical assistance program, the distribution of which will be announced later.
[2] Estimated for 1963.

RESTRICTION ON USE OF FUNDS

Mr. CLEVELAND. Yes, sir. In these programs, Mr. Chairman, every country can, and a good many do, place some limitation on the use of the funds.

Mr. PASSMAN. Do we do so?

Mr. CLEVELAND. Do you mean how much of it can be convertible, and so forth?

Mr. PASSMAN. Do we place a limitation?

Mr. CLEVELAND. Sometimes where it has to do with supplies, as in the Congo import program, yes; but on technical services, no.

Mr. PASSMAN. I refer to as it would apply to countries.

Mr. CLEVELAND. I was talking about a different kind of limitation, a limitation on the convertibility of the currency that is put up.

Mr. PASSMAN. How about Russia? Do they designate the nation and also the technicians in order for you to be able to get the rubles?

Mr. CLEVELAND. They do not designate the recipient nations; no. The international organization itself does.

Mr. PASSMAN. In what nations are you spending rubles?

Mr. CLEVELAND. However, they do in fact limit the use of their contribution to the payment of Soviet technicians, the purchase of Soviet supplies, and so forth.

Mr. PASSMAN. Would you know the number of countries in which the rubles are being spent out of this fund?

Mr. CLEVELAND. We will have to supply the list.

Mr. PASSMAN. Please do so.

(The information follows:)

EXPANDED TECHNICAL ASSISTANCE PROGRAM AND SPECIAL FUND USE OF RUBLES

During 1962, Byelorussia, the Ukraine, and the U.S.S.R. contributed rubles equivalent to $1,175,000 to the special fund and $2,350,000 to the expanded technical assistance program. Both of these programs use these rubles by employing Soviet experts (see below). In addition, the expanded technical assistance program awarded 73 fellowships for study in the Ukraine and 327 fellowships for study in the U.S.S.R. The special fund procured project equipment in the U.S.S.R. at a value equivalent to $280,900 during 1962.

Experts on the rolls as of June 1, 1963, were assigned to projects in the following countries or regions:

	Expanded technical assistance program	Special Fund		Expanded technical assistance program	Special Fund
Afghanistan	13	9	Nigeria	2	
Asia regional	1		Sudan	1	
Burma	2	1	Syria	1	
Cuba	2		United Arab Republic	2	2
Ghana	1		Yemen	1	
Guinea	1		Yugoslavia	4	9
India	29	2			
Indonesia	4		Total	83	23
Interregional	18				
Kenya	1				

CUBAN PARTICIPATION IN U.N. TECHNICAL AID AND SPECIAL FUND

Cuba is still eligible to participate in this U.N. Technical Aid fund?

Mr. CLEVELAND. Yes. They are eligible to participate in theory. As you know, the Communist countries as a group put a good deal more into these programs than the Communist underdeveloped areas take out.

Mr. PASSMAN. That is another argument, and I question whether you could win it if we had time to get into it.

We are putting up 40 percent of the total in this special fund. The Cubans can participate in this fund?

Mr. CLEVELAND. They can participate in the fund taken as a whole.

Mr. PASSMAN. It goes in this pot, does it not, Mr. Cleveland, when we make our contribution? It is taken over by some arm of the U.N. Then they have charge of the funds and who should get it from that point on, do they not?

Mr. CLEVELAND. The machinery that has charge of the fund includes an intergovernmental committee on which we are represented.

Mr. PASSMAN. I know we are represented. After it goes into the U.N. that committee determines what nations are to get the money, does it not?

Mr. CLEVELAND. Yes.

Mr. PASSMAN. If there is a hundred million dollars in this fund, that means we contribute $40 million, does it not?

Mr. CLEVELAND. Yes.

Mr. PASSMAN. If you give to Cuba—this is hypothetical—$10 million, it simply means $4 million would be American dollars, or the equivalent?

Mr. CLEVELAND. It would depend——

Mr. PASSMAN. It makes no difference where it comes from. If we put up 40 percent of the total whatever goes to any nation, 40 percent of it would be the U.S. contribution.

Mr. CLEVELAND. There are two points, Mr. Chairman.

Mr. PASSMAN. If we put up 40 percent of the total fund, and after it leaves us and gets into the U.N. the committee determines what applications will be approved. Then if you make a contribution, say, of $10 million to Cuba, technically $4 million of that would be the U.S. contribution, would it not?

Mr. CLEVELAND. Technically it would not be unless——

Mr. PASSMAN. Straight to the point, it would be, would it not?

Mr. CLEVELAND. Not unless a part of the services supplied by the U.N. agency to Cuba were paid for from the U.S. contribution.

Mr. PASSMAN. Do we designate the nations to receive our money and for what projects and in what amount?

Mr. CLEVELAND. No, sir.

Mr. PASSMAN. Does the money go into one pot, then you make distributions out of that fund?

Mr. CLEVELAND. It goes into one pot as things now stand but in the case of the Special Fund project that was discussed so much, the planned use of resources there did not in fact include any of the U.S. contribution.

Mr. PASSMAN. We contribute 40 percent of the total of this Special Fund. After it is turned over to the U.N. they receive applications from all over the world and they decide what applications will be approved, do they not? Do they make that determination?

Mr. CLEVELAND. Yes, when you say they——

Mr. PASSMAN. Do we have the right to say on this particular project, "No part of any U.S. funds will be available."

Mr. CLEVELAND. No, we have the right to oppose the project as a whole.

Mr. PASSMAN. The entire project?

Mr. CLEVELAND. Yes.

Mr. PASSMAN. But when the contribution gets into this account, whatever distribution is made, each grant, 40 percent of it represents American dollars, does it not, or the equivalent?

Mr. CLEVELAND. No, sir; not quite. It depends on where the resources come from.

Mr. PASSMAN. Forty percent of the total comes from the United States.

Mr. CLEVELAND. But not of each project. Some projects are financed entirely by sending them experts from the United States.

Mr. PASSMAN. Let us try to put the shoe on the other foot. Can you assure the committee that no part of this 40-percent contribution we are making is going to reach Cuba directly or indirectly?

Mr. CLEVELAND. No, sir; because that depends——

Mr. PASSMAN. You answered my question the hard way.

Mr. CLEVELAND. What I mean is that the 40 percent contribution does not buy us 100 percent control over the U.N.

Mr. PASSMAN. I am not talking about control. I am talking about the end results, Mr. Cleveland.

Mr. CLEVELAND. In order to answer your question, yes, I would have to say that 40 percent contribution buys us 100 percent control over the organization.

Mr. PASSMAN. It does or does not?

Mr. CLEVELAND. It does not.

Mr. PASSMAN. Here is a fund that is created. We put in 40 percent, some other nation puts in one-half of 1 percent, some other nation 3 percent. When you get through you wind up with a certain amount of money.

Mr. CLEVELAND. Yes.

Mr. PASSMAN. Forty percent of the total represents a U.S. contribution.

Mr. CLEVELAND. That is right.

Mr. PASSMAN. When you start distributing this money, whatever allocation you make to a project in any country, would you not have to say 40 percent of this represents an American contribution?

Mr. CLEVELAND. Not of each project because it does not work that way.

Mr. PASSMAN. Do you know of some projects where we are putting up all of the money?

Mr. CLEVELAND. Yes, sir.

Mr. PASSMAN. What projects, for instance?

Mr. CLEVELAND. There are some projects that involve one or two experts who are in fact recruited in the United States and those projects under the expanded technical assistance program——

U.N. TECHNICAL ASSISTANCE TO CUBA

Mr. PASSMAN. Of the last grant made to Cuba do you know the amount the U.N. approved?

Mr. CLEVELAND. If we are talking about the special fund project——

Mr. PASSMAN. Yes; the technical aid project for which you made an allocation to Cuba last year, the total amount.

Mr. CLEVELAND. The special fund project has not gotten off the ground yet. No money has been allocated.

Mr. PASSMAN. Has it been approved?

Mr. CLEVELAND. Yes; it was approved by the Managing Director.

Mr. PASSMAN. How much has been approved?

Mrs. WESTFALL. For the expanded technical assistance program and the total was the $405,780 for the 2 years 1963–64.

Mr. PASSMAN. What part of this to which you refer is U.S. funds?

Mrs. WESTFALL. For the Special Fund project we have been discussing, the total cost of the project is $1,150,000.

Mr. PASSMAN. What part of that $1 million would be U.S. funds?

Mr. CLEVELAND. None of it.

Mr. PASSMAN. How do you arrive at that statement?

Mr. CLEVELAND. Because the plan is to import experts and equipment for the agricultural station from places other than the United States.

Mr. PASSMAN. Where are they paid from? What fund?

Mr. CLEVELAND. From contributions from other governments.

Mr. PASSMAN. Are they paid out of this total U.N. fund?

Mr. CLEVELAND. Yes.

Mr. PASSMAN. To which we contribute 40 percent?

For the past 5 years give us a spread of every project, what part of each project would be United States, what part another nation, what part was a hundred percent United States, what part 80 percent, what part 20 percent; if you force me into that we will ask for it. You have this special fund in the U.N., to which we contribute 40 percent.

Mr. CLEVELAND. Of the foreign exchange; yes, sir.

TOTAL U.N. SPECIAL FUND IN FISCAL YEAR 1963

Mr. PASSMAN. We contribute 40 percent of the aggregate to the total fund. What was the amount for calendar year 1963? Does the Comptroller have the information?

Mr. TENNANT. No, sir.

Mr. PASSMAN. I hope you will help us on this, Mr. Cleveland. What was the total amount of this special fund? We would like to have that figure for 1963.

Mr. CLEVELAND. The special fund taken by itself——

Mr. PASSMAN. That is what we want.

Mr. CLEVELAND (continuing). For 1963, the total amount is $74,500,000.

Mr. PASSMAN. Of the $74,500,000, what percentage of that sum did the United States put up?

Mr. CLEVELAND. Forty percent. There is an additional element in each project.

Mr. PASSMAN. Let us deal with the total.

Mr. CLEVELAND. My point is that the way they count it, it is not the total because there is an additional element of the local costs put in.

Mr. PASSMAN. If we do something for the local people they are supposed to put in something.

Mr. CLEVELAND. I agree with you.

U.S. CONTRIBUTION TO U.N. SPECIAL FUND

Mr. PASSMAN. Let us talk about the contribution. We put up 40 percent of this total?

Mr. CLEVELAND. Yes, sir.

Mr. PASSMAN. Say that an application comes in to the U.N. committee for a million dollars to Cuba. If you approve this application, whether you pay Cuba with rupees, rubles, yen, kip, or U.S. dollars, when you have finally met that payroll of a million dollars out of the $74,500,000, you have reduced the $74,500,000 to $73,500,000, have you not?

Mr. CLEVELAND. Yes, sir.

Mr. PASSMAN. Would you agree that when you make this allocation you are reducing the grand total, of which we contribute 40 percent, by the amount of the allocation, whether it is fodder, hay, rupees, or rubles that you give them?

Mr. CLEVELAND. I would like to agree with you with a preamble, if I may.

Mr. PASSMAN. Thank you for agreeing with me.

Mr. CLEVELAND. Excuse me, Mr. Chairman. There is a problem here.

Mr. PASSMAN. I know there is a problem.

RESTRICTION ON U.S. CONTRIBUTIONS TO U.N. FUNDS

Mr. CLEVELAND. The House Foreign Affairs Committee has passed an amendment to the foreign aid bill proposing to limit the U.S. contribution by country. That is to say, to provide that none of the U.S. dollars we provide to this program can be made available to Cuba. We are studying whether it is constitutionally possible in the U.N. system for that kind of limitation to apply or whether that amendment has the effect, if you will, of deratifying the U.N. Charter and making it impossible for us to contribute to the U.N. at all.

Mr. PASSMAN. It is not difficult for me to understand what the purpose is.

Mr. CLEVELAND. It depends, I think. Various people would vote for it for various purposes, but I do not know just how we will come out on that point. I therefore do not want to be in the position of saying to you here that there is no legally feasible procedure whereby it is impossible to make that kind of an end use restriction on U.S. foreign aid funds.

As things now stand, I would say (a) this is a pot and is administered as such, in spite of the fact that not every project consists of exactly the same proportion of everybody's fund as every other project, and (b) in my judgment it is in the U.S. interest to maintain a U.N. that can have a pot of funds and not encourage the Soviets to come in with a limitation that none of their funds can be used for Nationalist China, et cetera, which would gradually break up the unified system that has been built there.

Mr. PASSMAN. The pot system that we talked about?

Mr. CLEVELAND. Yes. I would prefer the U.N. to operate as a pot, but I am faced with the situation in which another committee of this House has for the moment proposed a different view.

Mr. RHODES. If the chairman will yield, I would like to know what the other committee has proposed.

Mr. CLEVELAND. The other committee, as I understand it, has proposed that no funds in the new authorization for the foreign aid bill be available for any project that helps the current regime in Cuba for any project. This, in turn, was a substitute for another proposal, which was defeated, that no funds from this bill could be used to assist any international organization that had any Cuba aid project, which would have amounted to abolishing the whole system as far as U.S. participation is concerned.

Mr. RHODES. Doesn't the first one amount to abolishing the whole system?

Mr. CLEVELAND. We are now studying whether it is possible—whether in our view it is possible for the Secretary General of the U.N. to accept money with that string tied to it. Whether we think he ought to be able to accept it is the next question.

If we decide he should, the third question would be to decide whether he and the other countries involved would be willing to accept such a political string to our contribution. There is no doubt it begins to fragment the idea of having an international organization and it encourages the Soviets to do what they try to do anyway through the U.N., which is to use the U.N. as a cover for bilateral aid. We are trying to prevent them from doing that.

Mr. RHODES. Actually, Mr. Secretary, the U.N. has very little use for rubles anyway, outside of the Soviet bloc. Isn't that correct?

Mr. CLEVELAND. Well, they have considerable difficulty in using the contribution of the Soviet Union, yes. There are so many countries that do not want Russian experts.

Mr. RHODES. Actually, there could be very little effective retaliation on the part of the Soviets, even if they were to set up the same type restrictions as the other committee of the House contemplates. Isn't that correct?

Mr. CLEVELAND. But if you have all of the Communist countries and then all of the other countries who have particular pet hates among the countries of the world putting on similar strings and following our example, the system inside of 2 or 3 years would be unable to operate. In my judgment it would be very bad business for this whole kind of enterprise and I think we get a lot more out of it than we put in because we get a lot of contributions from other countries, which we are not as successful in getting when we use our own technicians under bilateral programs.

Mr. RHODES. It seems to me we could accomplish the same thing by having our contribution go toward foreign exchange for certain nations or toward paying for certain types of skills to be used in those nations without necessarily being wedded to the idea of a common hotchpot to be administered by the U.N.

Mr. CLEVELAND. Well, first of all the common pot contains more Communist contributions than the Communists get in the way of project help so that the free world is making a net profit on the transaction politically. In the second place, it is possible for us to administer all of our aid programs entirely bilaterally. If we did that we would reduce the amount that other countries contribute to the foreign aid business by the proportion between 40 and 60 percent that they put into the U.N.

Mr. RHODES. Mr. Cleveland, is it not true, though, that practically all of the aid which comes from contributions to the Special Fund by the Communist nations is used in the Communist nations?

Mr. CLEVELAND. No, sir.

Mr. RHODES. Can you give us any figures or any sort of a table which would show what aid given by Soviet bloc nations is actually applied or spent outside of the Soviet bloc?

Mr. CLEVELAND. Yes, sir.

Again, it is a contribution to a pot. You have to take the whole list of what the pot is being used for but in fact a good deal more money is contributed by Communist countries to the U.N. Special Fund and to the expanded technical assistance program and to the Children's Fund than these organizations invest in the underdeveloped members of the Communist club, mostly Cuba and Albania.

Mr. RHODES. It seems to me this could be done. The contribution to the Special Fund by Communist countries is made, in currencies of the Soviet bloc. Those currencies can be used to buy goods or services only in certain parts of the world, so wouldn't it be possible to trace through the application of these currencies the countries in which that aid actually takes effect?

Mr. CLEVELAND. To the extent it is a distinguishable currency it would be, yes.

Mr. RHODES. This is what I am asking for.

Mr. CLEVELAND. Even in the case of the Russians they have been pushed into making a small amount of their contribution convertible.

Mr. RHODES. May I ask one other question?

Mr. PASSMAN. Certainly.

Mr. CLEVELAND. I think that it would be useful to provide for the record a statement, if you will, of the political balance of payments between the Soviet bloc and the free world on each of these programs because it is rather striking that the free world gets more out of the Communists than it puts into the Communists, taken all in all.

[2] Includes projects authorized up through June 1963.

Mr. RHODES. It seems to me that you will find if you make a study such as the one I have suggested that this fund, instead of being a fund which you visualized as being everything thrown together and parceled out by an international organization actually compartmentalizes itself by the very nature of the type of currencies which are represented. This is a suspicion on my part but it is something I certainly would like to see studied.

Mr. CLEVELAND. It certainly should be possible for the accountants when they line up all the figures to say what contribution they used for buying each expert and each piece of equipment.

RESTRICTIONS ON CONTRIBUTIONS OF OTHER NATIONS

Mr. RHODES. Can you tell me how many other nations have strings on their aid given through the U.N. Special Fund?

Mr. CLEVELAND. Many nations have strings in the sense of currency convertibility strings. For example, China pays only 25 percent of her pledge in convertible U.S. dollars; that is, currency that is convertible, Denmark, 15 percent, et cetera. The kind of strings that we are talkabout here, that is, strings as to who can be aided by the money, no country now has that kind of a string attached.

Mr. PASSMAN. Ours, of course, is convertible. There are no strings attached to our 40 percent contribution?

Mr. CLEVELAND. Yes; that is correct.

Mr. PASSMAN. Why would you not endeavor to get this account so that all nations would have the same type of agreement? We put up 40 percent. There are 76 nations. Some of them put up as little as one-half of 1 percent, do they not?

Mr. CLEVELAND. Yes, sir.

Mr. PASSMAN. If we are willing to contribute 40 percent of the total of $74,500,000, thinking of fiscal year 1963, entirely on a convertible basis what would be the difficulty in getting the nation which is putting up only one-half of 1 percent to enter into the same type of agreement? If you make exceptions for a lot of the others, why could the exception not be made for the United States also, that we, too, would start earmarking our funds and have other restrictions? Why would a country which is putting up one-half of 1 percent of the total pot against our 40 percent have a lot of concessions made to them?

AMOUNTS OF OTHER COUNTRIES' CONTRIBUTIONS TO U.N. SPECIAL FUND

Mr. CLEVELAND. Some of those countries, of course, are putting up amounts which in their terms are as large as our amount.

Mr. PASSMAN. What do you mean by that statement?

Mr. CLEVELAND. Well——

Mr. PASSMAN. What is France's total?

Mr. CLEVELAND. Compared with——

Mr. PASSMAN. Some of the countries are in better shape than we are financially if you take into account the obligations against the gold reserve, and so forth. Other than the United States, what country is the next largest contributor?

Mr. CLEVELAND. The United Kingdom.

Mr. PASSMAN. How much does the United Kingdom contribute?

Mr. CLEVELAND. On the technical assistance——

Mr. PASSMAN. I am referring to the total of $74,500,000, of which we put up 40 percent. What percentage of the total did the United Kingdom put up?

Mr. CLEVELAND. They put up $6¼ million.

Let me get the percentage calculation.

Mr. PASSMAN. You are going to put it in the record?

Mr. CLEVELAND. Yes. We will put it in the record.

Mr. FORD. Mr. Chairman.

Mr. PASSMAN. I yield.

Mr. FORD. Could we go off the record a minute and talk about a matter that concerns you and I think the committee?

Mr. PASSMAN. Yes.

(Discussion off the record.)

POLICY ON MATCHING FUNDS CONTRIBUTED BY OTHER COUNTRIES

Mr. PASSMAN. In connection with the technical assistance program, last year you testified that you had established a cutoff date 2 years following the close of a given U.N. fiscal year for making matching payments to the contributions to other governments. Is this still the policy?

Mr. CLEVELAND. Yes, sir.

USE OF FISCAL YEAR 1964 FUNDS TO COMPLETE FISCAL YEAR 1963 PLEDGE

Mr. PASSMAN. I note, on page 6 of your statement, that you propose therefore to use a small portion of the $55 million requested for fiscal year 1964 to complete the funding of our 1963 pledge in a manner suggested by this committee during the testimony on this item last year. I am a little vague as to when the committee suggested that you fund your 1963 pledge in this manner. Would you refresh our memories on that matter?

Mr. CLEVELAND. Yes, Mr. Chairman. You will recall last year we used Contingency Fund money and other transfers into the contributions to international organizations——

Mr. PASSMAN. And we registered our disapproval of that action, did we not?

Mr. CLEVELAND. Yes, sir.

One of the points made at that time during the testimony, I believe by you, Mr. Chairman, was that if funds did not actually need to be spent immediately before the end of the then current fiscal year why not come back up here for that small overage and include it in next year's program rather than——

Mr. PASSMAN. Would you recite to us the part in the hearings where I made any such suggestion?

Mr. CLEVELAND. You were objecting to the use of——

Mr. PASSMAN. I am still objecting to the use of the Contingency Fund for this purpose, but I want to know when I suggested that you come up here for a deficiency appropriation.

Mr. CLEVELAND. Not a deficiency, a part of the regular program for the following fiscal year.

Mr. PASSMAN. That is the equivalent of a deficiency appropriation. I want to correct the record immediately if you gained such an impression from any of my comment. That would be, in effect, suggesting a deficiency appropriation. If you finish one fiscal year with

an overdraft then you are going to take it out of some subsequent year's appropriation and it is in effect suggesting a deficiency appropriation.

Mr. CLEVELAND. The thought was to be able to——

Mr. PASSMAN. Did I say something of that nature directly or did you read such an interpretation into my remarks?

Mr. CLEVELAND. My recollection is that this reflects what you said last year.

Mr. PASSMAN. Let us find the colloquy because if you gained that impression then I want to correct it immediately, because I do not advocate in foreign aid that you carry over an overdraft and come back and get a deficiency appropriation.

On what page is the discussion?

Mr. CLEVELAND. 1053–1054.

Mr. PASSMAN. That is in reality what you are doing now. You have an overdraft and you are not asking for a supplemental appropriation but you are asking for an increase so as to take care of the deficiency.

Mr. FORD. What is the amount of the overdraft?

Mr. PASSMAN. That we do not know. I am going to get into the matter now, however.

Where am I quoted?

Mr. CLEVELAND. It is in the middle of page 1054 after we talked about obligating the funds. You asked whether it shouldn't carry over in the following fiscal year.

Mr. PASSMAN. I am talking about the obligation of the fiscal year 1963 funds, am I not?

Let me read:

They make a pledge and they have 2 years in which to put up the money.

Mr. CLEVELAND. That is right.

Mr. PASSMAN. Why do you people have to take out of the Contingency Fund and build our contributions to 40 percent right off the bat?

Mr. CLEVELAND. Well, we have not passed over the funds that are involved, most of them.

Mr. PASSMAN. You obligated funds, did you not?

Mr. CLEVELAND. We obligated the funds.

Mr. PASSMAN. They are out of our reach now; is that correct?

Mr. CLEVELAND. That is correct.

Mr. PASSMAN. Could this not carry over to fiscal year 1963?

Mr. CLEVELAND. We obligated the funds.

Mr. PASSMAN. They are out of our reach now; is that correct?

Mr. CLEVELAND. That is correct.

Mr. PASSMAN. Could this not carry over to fiscal year 1963?

I was talking about the funds. I think the colloquy between us would certainly establish that fact.

Mr. CLEVELAND. It was my understanding——

Mr. PASSMAN. I was referring to the obligation of funds—that it would come nearer being a surplus rather than a deficit, according to my understanding of the exchange there; that right off the bat you have to go slug it into them, then when it gets in the pot you cannot get it out. So let the record show that was my intent, because if you start running an overdraft or a deficit there is no limit.

Are we involved in this matter to the extent that you must either ask for a supplemental appropriation or increase your 1964 money request to offset the debts that you have from calendar year and fiscal year 1963——

Mr. CLEVELAND. You don't need a supplemental appropriation.

Mr. PASSMAN. You have an overdraft. Normally you would come to Congress for a supplemental appropriation. I am not suggesting that you do so, but how much are you overextended on these commitments as of this time?

Mr. CLEVELAND. Mr. Chairman, if I may just explain this: For 1962 we made a pledge.

Mr. PASSMAN. Calendar 1962?

Mr. CLEVELAND. Calendar.

Mr. PASSMAN. Out of fiscal year 1962 funds?

Mr. CLEVELAND. Out of fiscal year 1962 funds. Our pledge was to contribute 40 percent of whatever amount is collected by the U.N. for technical assistance and the Special Fund up to a total of $150 million or $60 million as our share. But we predicted in this same committee last year that they would not collect that much—although that is the General Assembly target for the Special Fund—and that they would only collect $125 million. We predicted therefore that our share would turn out on that contingent pledge to be $50 million.

Now, the previous year we had been conservative in that estimate and had to add a little bit to the predicted figure in order to meet the terms of our pledge.

In the committee hearings, I understood it to be your view that if this happened again that rather than funding it immediately out of the contingency fund for the current year, the requirement ought to be carried over and justified to this committee as part of the program for the next fiscal year.

On page 1057, when we were discussing that payment, I said, "We have obligated it in order to show that our pledge is real and we have the money."

You responded: "You could have delayed this action until fiscal year 1963 and stated 'we think we shall need money on account of thus and so'."

It was in this exchange here——

Mr. PASSMAN. Earlier you used another exchange.

Mr. CLEVELAND. The point on page 1054 had to do with——

Mr. PASSMAN. I was trying to slow down the process of obligating all the money, and putting it into a pot in advance. That was my intent.

Mr. CLEVELAND. This is what we are trying to accomplish here.

Mr. PASSMAN. You put it all in the pot and even went back and got some out of the contingency fund.

Mr. CLEVELAND. The previous year. But that is what we didn't do this year and that is what I am pointing out in my statement.

Mr. PASSMAN. I understand that you have a right to your interpretation of the intent of our exchange, but you have to read the beginning of it to understand the meaning, that it had to do with obligations.

On page 1057 it says:

> I am interested in specifics. Could you have postponed until fiscal year 1963 your request for this $5 million, then include it and say, "Here is why we need an increase?"

This year I can follow your justifications there, but specifically it is $1 million.

Mr. CLEVELAND. Specifically it is a little over $1 million. Our present estimate is $1,190,000 but there may be additional pledges before the end of the year which would make the figure a little higher.

Mr. PASSMAN. Are you taking into account some of the nations which may be putting up one-half of 1 percent or 1 percent who may get 5 percent out of the pot, and they are increasing their pledge? If you are houseman, you do not mind rolling $5 if you can slip $15 out of the pot.

As long as Uncle Sam is putting in 40 percent, are there not some who are willing to put in a little bit if they are going to get a lot more out?

Mr. CLEVELAND. As in the case of the World Bank, you try to collect something from everybody to give everybody the idea of being a contributor to as well as a beneficiary of the business.

Mr. PASSMAN. Are we one of the recipients of this fund?

Mr. CLEVELAND. No, sir.

Mr. PASSMAN. Do you see what I mean now?

Mr. CLEVELAND. Yes.

POSSIBILITY OF FURTHER REDUCTION IN U.S. CONTRIBUTIONS

Mr. PASSMAN. You are a good businessman, Mr. Cleveland. We would like to see you supporting some policy to get our contribution down to 15 or 20 percent. We are no longer able to play Santa Claus to the world.

Are you giving any thought to reducing the percentage of our contribution?

Mr. CLEVELAND. In the case of this program it is our view that by the reduction of these percentages to 40 percent, we have gone about as far as we should go at the present time.

Mr. PASSMAN. I have been talking about 40 percent all along. You have not advocated any decrease below that percentage, have you?

Mr. CLEVELAND. For this class of program——

Mr. PASSMAN. That is what I am talking about. This program specifically. Have you advocated reducing our contribution?

Mr. CLEVELAND. Not below 40 percent.

Mr. PASSMAN. Do you think there is any merit——

Mr. CLEVELAND. We took the percent from 60 to 40 percent.

Mr. PASSMAN. At one time we gave 100 percent. Do you not think the time has come for us to get our financial house in better order than it is? This is a lot of money. If someone can put up 50 cents and get back $6 this thing might grow to the point that this contribution would double. There is some indication that is true today and that is why we want you, Mr. Cleveland, to furnish the committee a list of each one that is contributing, the percentage of the total, and to break it down on a dollar basis so we can actually see what is happening.

What would be wrong with this country—one of the 100-odd contributors—getting its total down a little bit? Has there been any thought given to this matter at all or is it just 40 percent and no lower?

Mr. CLEVELAND. Sir, there was a great deal of thought given to it——

Mr. PASSMAN. How far has this thinking advanced?

Mr. CLEVELAND. And the conclusion I am stating is in fact the result of the thinking that our people have given to getting the percentages of our contributions down to reasonable percentages. Our conclusion is that a range of 30 to 32 percent is all right on a regular budget where everybody is putting up housekeeping expenses——

Mr. PASSMAN. You mean everybody is promising it.

Mr. CLEVELAND. I stand corrected. Everybody is promising. And some of them not even promising it very enthusiastically.

But on a technical assistance activity, that 40 percent of the foreign exchange component is not only a reasonable percentage but a better deal, to the extent that we can do it through international organizations, which have their own limitations, rather than doing it on a 100-percent bilateral basis.

Mr. FORD. Would the chairman yield?

Mr. PASSMAN. I shall be happy to yield.

Mr. FORD. Turning to page 2 of your prepared text, Mr. Cleveland, let me read two sentences. The first is as follows:

> For the past several years under a ceiling authorization set by the Congress we have pledged voluntary contributions of 40 precent of the total contributions to the technical assistance and special fund programs taken together. This is still, in our judgment, an appropriate level of contribution. It is a fair proportion of the total.

And then the sentence goes on.

However, when you turn to page 9 of your prepared text let me read this statement:

> But I know of no better way for the United States of America to exercise its sovereign decisions each year, to advocate getting locked into long-term decisions about rapidly changing international programs than to keep our national interests in each program under constant review.

It seems to me those two statements taken together are conflicting.

Mr. CLEVELAND. I don't see why they conflict.

Mr. FORD. You said in the one case that we have decided that 40 percent is a fair proportion of the total.

Mr. CLEVELAND. We keep this under constant review and it was our feeling last year and it is still our feeling this year that this particular decision is still right. We look at it every year, we change a number of other aspects. I have in my statement a whole series of management improvements we have made over the last year. We are working very hard on the management of these funds. I am a professional manager and we are all working very hard on the management of these operations. It is our judgment this year as a matter of policy that 40 percent of a technical assistance program in the United Nations is a reasonable proportion for the United States.

Mr. FORD. Is this what you are advocating in perpetuity?

Mr. CLEVELAND. No, sir.

Mr. FORD. Or is this your statement for this year and this year only?

Mr. CLEVELAND. This is my statement for fiscal year 1964 and I don't have a view about 1965 until we work on it for another year. These are voluntary contributions. They are not an assessment and I think we should take a coldblooded look at them every year.

Mr. FORD. This 40 percent then as you state here is not a long-term decision, it is not locking us into this percentage?

Mr. CLEVELAND. That is correct. Each year there is a pledging meeting. Each year we have to decide all over again what the U.S. position is going to be in that pledging conference within whatever limitations have been placed by the Congress.

Mr. FORD. I just want to be sure that your statement about this being a fair percentage is not one that the executive branch will advocate in the future necessarily.

Mr. CLEVELAND. I think, for example, if the Germans were to become members of the United Nations, or if there were an earthquake on a whole continent, the situation might change. Depending on what happens we have to take a fresh look at this percentage each time.

Mr. FORD. But I can read into your statement that you as representatives of our Government in these negotiations in subsequent years will not look upon 40 percent as sancrosanct, you will seek to get it at a lower level, is that what I can honestly interpret from what you said?

Mr. CLEVELAND. I don't know about the lower level. I know for 1964 I think the 40-percent level is the one we ought to pledge for.

Mr. FORD. This seems to be in conflict with what I thought you said a minute ago.

Mr. CLEVELAND. There is a target which was set by the General Assembly several years ago of $150 million. Once we get to that, which may be during the next year or two——

Mr. MONTOYA. Will the gentleman yield?

CONTRIBUTIONS OF NEW NATIONS TO U.N. SPECIAL FUND

Mr. Cleveland, have you taken into consideration the fact that we have had quite a few nations going into the United Nations and that they in turn are adding themselves as contributors into this Fund? Are you taking that into consideration?

Mr. CLEVELAND. But the new nations are precisely the ones who on a net basis are, of course, recipients.

Mr. MONTOYA. Yes, but they are assessed as contributors are they not?

Mr. CLEVELAND. This is not an assessed fund.

Mr. MONTOYA. I don't mean that. They are voluntary contributors into this Special Fund, are they not?

Mr. CLEVELAND. They supply a few experts where they happen to have a good source of experts but most of the African countries aren't able to put up a significant contribution.

Mr. MONTOYA. But quite a few of the new nations have contributed into this Special Fund, have they not?

Mr. CLEVELAND. Yes, but not to the extent that they take out.

DECREASING PERCENTAGES BUT INCREASING DOLLAR CONTRIBUTIONS

Mr. MONTOYA. Here is a point that I want to make, that while the percentage of our contribution has decreased from 60 to 40 percent the dollar contribution has increased in the last few years; is that correct?

Mr. CLEVELAND. Yes, because it has been our policy or the policy of most of the developed countries, including the European countries, to try to build up in the United Nations a facility for sharing the burden of technical assistance among ourselves.

Mr. MONTOYA. So actually as far as the American taxpayers are concerned they are getting a net return of 10-percent reduction, whereas they are expending more in dollars for that reduction.

Mr. CLEVELAND. But they are getting even more, they are getting proportionately more contributions from the other advanced countries into these underdeveloped areas where otherwise we would probably have to pick up the whole check on a bilateral basis.

Mr. PASSMAN. In fiscal year 1963 our contribution was 40 percent of $74.5 million and it would appear at this time that there is a deficit of $1,190,000.

PLANNED SIZE OF U.N. FUNDS

Did I understand you to say that we planned maybe to get up to maybe $150 million next year?

Mr. CLEVELAND. Well, the pledge——

Mr. PASSMAN. Did you say it may get up to $150 million?

Mr. CLEVELAND. Our hope would be other countries would put up enough to make 60 percent of $150 million.

Mr. PASSMAN. If you go from $74.5 to $150 million, our 40 percent would double the amount of dollars?

Mr. CLEVELAND. No, sir, the $150 million target applies to the Special Fund and the expanded technical assistance program taken together.

Mr. PASSMAN. Let us keep it on the part we have been talking about, the technical aid part, the $74.5 million.

Mr. CLEVELAND. The $74.5 million is for the Special Fund.

Mr. PASSMAN. What total sum do you envision that fund going to next year?

Mrs. WESTFALL. Mr. Chairman, if I may speak to that point, the U.N. Special Fund and technical assistance programs have developed gradually over a period of time, until now the total contributions to the two run about $125 million. We are working toward a target of $150 million.

Mr. PASSMAN. Break the funds in two. What is the comparable figure to the $74.5 million figure in fiscal year 1965?

Mrs. WESTFALL. In terms of the breakdown of $150 million, the goal is roughly $50 million for the expanded technical assistance program and $100 million for the Special Fund.

Mr. PASSMAN. $50 million for our part?

Mrs. WESTFALL. No, $50 million in toto for the expanded program.

Mr. CLEVELAND. The Special Fund would go up from the present level and the expanded technical assistance program would decline from the present level.

Mr. PASSMAN. But you are always increasing your dollar requests.

Mr. CLEVELAND. The purpose of U.S. policy on this particular subject is to try to build this facility because we think that we can get a lot more contributions from other countries in the field of technical assistance to the underdeveloped areas this way than any other method we know of.

Mr. PASSMAN. We have agreed that if a country can put 50 cents in the pot and get out $6, it is to their advantage to put up the 50 cents. Next year if that country can put in $1 and get back $12, that is more to their advantage.

You know, Mr. Cleveland, for fiscal year 1964 we are in 99 nations with the foreign aid program; that is, 95 countries and 4 territories and possessions?

Did you give us those figures, Mr. Controller?

Mr. TENNANT. That is correct, sir.

Mr. PASSMAN. The time is coming when we will have to get back down to earth.

REIMBURSEMENT TO DOD FOR CONGO OPERATIONS

Last year you testified, at page 1082 of the hearings, that it was possible that the Department of Defense would be reimbursed for its expenses in the Congo operation from the collection of some of the arrearages and from some of the bond proceeds. How much has been reimbursed since your testimony last year?

Mr. CLEVELAND. A total of $23.6 million has been reimbursed to the Department of Defense. I will have to get you the figure from my testimony last year, which is not the way we broke it down.

Mr. PASSMAN. Let us get the total that has been reimbursed to the Department of Defense——

Mr. CLEVELAND. All right, the Department of——

Mr. PASSMAN. Out of the bond proceeds.

Mr. CLEVELAND. The bond proceeds just became part of the general funds of the U.N.

Mr. PASSMAN. Give us the total otherwise, then.

Mr. CLEVELAND. Since they started selling bonds the Department of Defense has been reimbursed $17,740,000 by the U.N.

U.N. BOND PURCHASES AND PLEDGES

Mr. PASSMAN. Have they sold any bonds to anybody other than the United States?

Mr. CLEVELAND. Yes, sir.

Mr. PASSMAN. Put a list of the bond sales in the record, if you will.

Mr. CLEVELAND. We will be glad to.

(The information requested follows:)

U.N. bond purchases and pledges by other nations, July 1, 1963

	Amount	Nations

See footnotes at end of table.

U.N. bond purchases and pledges by other nations, July 1, 1963—Continued

	Amount	Nations
In favor, but amounts not announced		10
Under consideration		19
Do not plan to subscribe at present		19
New members		7
Total nations		116
Less purchases by non-U.N. members		5
Total present U.N. membership		111

[1] Iran purchased $250,000 of its $500,000 pledge on Apr. 7, 1963, and is, therefore, listed under both "actual purchases" and "publicly announced pledges." It is included in the number of nations under "actual purchases."

NOTE.—Summary information on U.S. purchases and pledges:

U.S. purchases to date:	
Bond No. 33, Nov. 2, 1962	$44,103,000
Bond No. 43, Dec. 18, 1962	15,569,840
Bond No. 53, Mar. 7, 1963	5,543,000
Bond No. 64, June 25, 1963	6,854,082
Total	72,069,922
Available to match actual purchases by others not yet matched	200,000
Available to match pledged by others who have not yet purchased	2,170,975
Balance of $100,000,000 authorized for new pledges, the matching use of which depends upon pledges-purchases by others	25,559,103
Total, U.S. authorization	100,000,000

INCREASE IN U.S. CONTRIBUTIONS TO INTERNATIONAL PROGRAMS

Mr. PASSMAN. What was the U.S. contribution in percentage and dollar amount for fiscal year 1963 to each one of the programs formerly financed by this appropriation that have been shifted over to the regular budget of the organizations concerned? I believe you told us earlier that on a comparable basis for fiscal year 1964 you are asking for $177,750,000, compared to $148.9 million for fiscal year 1963, or an increase of $28,850,000. Is that correct?

Mrs. WESTFALL. Yes.

(The information supplied follows:)

U.S. share of total contributions decreases as programs are transferred to regular (assessed) budgets

[Dollars or dollar equivalents]

I. WHO SPECIAL PROGRAMS

	1961	1962	1963 (estimate)	1964 (estimate)
Total WHO special programs	6,139,000	5,440,000	7,862,000	7,613,000
U.S. share	4,992,000	2,630,000	4,035,000	2,727,000
U.S. percent	81.32	48.35	51.32	35.82
Malaria eradication	4,464,000	3,590,000	5,562,000	5,363,000
U.S. assessed	----------	634,000	1,268,000	1,679,000
U.S. voluntary	4,000,000	1,000,000	[1] 1,500,000	----------
U.S. percent	89.61	45.52	49.77	31.29

[1] Funded from fiscal year 1962 appropriation.

Mr. FORD. Is there explanation of this in the record?

Mr. PASSMAN. We have asked for a spread on it. Where we have been expecting these things to go down, you are continually going up. Now you are spreading it out, out of other appropriations and occasionally we just have to pull it back in and use a comparable figure, because you are getting the money out of other appropriations. It is an increase—a decrease if you look at it as just coming out of one category, but if you put it all together and get the comparable figure it is still going up.

Mr. CLEVELAND. We are now trying to put in this appropriation only contributions to U.N. and worldwide programs and put the contributions to regional organizations programs with the regional programs.

Mr. PASSMAN. That is all right. We did state that fact for the record, did we not?

Mr. CLEVELAND. Yes.

REDUCTION IN PERCENTAGE BUT INCREASE IN AMOUNT OF U.S. CONTRIBUTION TO UNTA

Mr. PASSMAN. What year did we reduce our contribution to the special fund to 40 percent?

Mr. CLEVELAND. In the case of the special fund we set it up that way to begin with in 1959.

Mr. PASSMAN. I am talking about the one where you made the appointment earlier—I believe it is the technical aid part. What year did you reduce it to 40 percent?

Mr. CLEVELAND. That was 1959 or 1960. In the case of the Children's Fund——

Mr. PASSMAN. What year did you reduce this technical aid fund to 40 percent of the total contribution?

Mrs. WESTFALL. 1959, sir.

Mr. PASSMAN. And what was the dollar amount we were contributing in that year?

Mrs. WESTFALL. The dollar amount for the expanded program in 1959 was $11.7 million——

Mr. PASSMAN. $11.7 million as compared with what amount for fiscal year 1963?

Mrs. WESTFALL. For fiscal year 1963 it is $21 million roughly, sir. The $11.7 million was for our contribution to the expanded technical assistance program.

Mr. PASSMAN. Now, the comparable figure in fiscal year 1963 for the same fund?

Mrs. WESTFALL. The comparable figure for fiscal year 1963 for the same fund is roughly $21.4 million.

Mr. PASSMAN. It has just about doubled and doubled in 4 years?

Mrs. WESTFALL. Yes.

Mr. PASSMAN. Now give it to us by year, if you will, from the inception.

Mrs. WESTFALL. That goes back to 1950 when the program began.

Mr. PASSMAN. Include the total percentage and work it down to the 40 percent and bring it up to date through fiscal year 1963.

Mrs. WESTFALL. Would you like that for the record, sir?

Mr. PASSMAN. Yes.

(The information requested follows:)

Government pledges and local costs as of May 31, 1963

[1] Detail may not add to totals due to rounding.
[2] As of May 31, 1963, for expanded technical assistance program and June 30, 1963, for Special Fund.

Mr. FORD. Will this show the dollar amount each year and the percentage?

Mr. PASSMAN. The dollar amounts, because since we have reduced it to 40 percent our contribution has just about doubled; has it not?

Mrs. WESTFALL. We started out at 60 percent, sir.

Mr. PASSMAN. I am talking about the first year that you reduced it to 40 percent, which was 1959. It was $11 million. In 1963 fiscal year it is $21 million-plus.

Mrs. WESTFALL. Yes, sir.

Mr. PASSMAN. Almost double. So you had better not reduce it if that is the way it is going to work in the future.

Mr. CLEVELAND. This represents success in getting other countries to do even more.

Mr. PASSMAN. Success all depends on who is evaluating it. I want to come back and say it is like a crap game. If you shoot a dime and pull in $3 it is a good investment. The nation that puts in 50 cents and gets back $6, you would expect them to put in $1 and take out $12.

Mr. CLEVELAND. The people who have been putting up more and more are the Europeans and just precisely the countries we think are getting rich enough to share this thing with us.

Mr. PASSMAN. Let the committee make up its mind about this thing when you put those percentages in the record.

CONTRIBUTIONS TO U.N. SPECIAL FUND

Now, rather than to ask a lot of questions, we want the same type of information on the Special Fund. The dollars, our percentage, the percentage contributed by each member and the percentage of the total.

(NOTE.—The information requested may be found on p. 1935.)

STATUS OF CUBA CONTRIBUTIONS

Mr. PASSMAN. Does Cuba make a contribution presently?

Mr. CLEVELAND. I think a very small one; yes.

Mr. PASSMAN. Are they up-to-date with their pledge?

Mr. CLEVELAND. Not in fiscal year 1963. In fiscal year 1962 they are.

Mr. PASSMAN. You do not have to pay money in order to get money unless you are suspended. If a country indicates it wants to put in 1 percent and does not put in anything and files an application it would be a little bit inconsistent with good business practice to approve the request for funds.

Mr. CLEVELAND. That isn't one of the criteria for approval of projects.

U.N. RELIEF AND WORKS AGENCY FOR PALESTINE REFUGEES

Mr. PASSMAN. I notice your statement, on page 4, that our vital interest in this sensitive area of the Near East could be seriously jeopardized by reduction of our contribution to the Palestine refugee program. It would appear to me that you are possibly inviting the Congress to make a modest reduction in the appropriation for Palestine refugees. Is that correct?

Mr. CLEVELAND. That is not correct, Mr. Chairman.

Mr. PASSMAN. If there is anything I am in sympathy with it is this program, but if a person goes out there and checks on these people, the way they have to exist, it is quite distressing.

Mr. RHODES. May I ask a question?

Mr. PASSMAN. Yes.

Mr. RHODES. What is the comparison between the number of Palestine refugees now and the number a year ago? Can you give us the total for each of the last 5 years?

Mr. CLEVELAND. It goes up about 30,000 a year with the excess of births over deaths, actually. It is just under 1.2 million now who would have refugee status, of whom 880,000 are drawing rations.

(The information requested follows:)

5-year table on numbers of Palestine refugees

	Full ration recipients	Total registered refugees
June 1958	836,781	1,019,201
June 1959	843,739	1,053,348
June 1960	849,634	1,087,628
June 1961	854,268	1,151,024
December 1962	865,754	1,189,573

Mr. RHODES. Who bears the cost of this program? Do we bear the whole cost?

Mr. CLEVELAND. We bear about 70 percent of the cost. The British and the Canadians put in most of the rest. There is a large number of contributors. Most of them are very small. Then the host countries pay some kinds of expenses for the refugees that are in their countries.

PROBLEMS OF RESETTLEMENT

Mr. RHODES. Is there any indication that this problem will ever be solved?

Mr. CLEVELAND. I wish I could tell you there were. We tried very hard last year through the United Nations to get some kind of a deal between the Israelis, the Arabs, and the U.N. to start on the process of resettling some Arabs here and there around the Middle East but the Arabs continue to insist that all of the refugees have the right of repatriation into what is now Israel. The Israelis continue to insist that all the refugees must be sent out to be resettled in the Arab countries and that none have a right of repatriation. It has been impossible so far to get a meeting of minds on this which in turn, of course is only part of that still unliquidated war between the Arabs and the Israelis.

Mr. RHODES. Has anybody thought of trying to get the parties to agree to resettling the number equaling the increase each year, rather than aggravate the problem? Would it be possible to get that sort of agreement?

Mr. CLEVELAND. A few move out because they get educated in the camps and decide they don't want to live there for the rest of their lives. Conditions are very much as the chairman described.

The Arab leadership in all of the countries continues to take the position that they all have a right to go back to Israel and this, in effect, is used as a part of the political game out there. So there is no encouragement at all from any of the Arab countries to take them in and resettle them as things now stand.

Mr. RHODES. Just how much worse off are the people in those camps as far as their living conditions are concerned than are the poorer people in the cities of the Middle East?

Mr. CLEVELAND. In the case of the Gaza strip I think they really are worse off, in physical terms and also because there isn't any opportunity for the children.

When you get over into Lebanon and Syria the camps aren't as bad and the conditions are more even, so there is actually some flow out.

Mr. CONTE. The camp in Jericho, the people who live in that camp are as well off as the ordinary citizens in Jericho and Jordan.

Mr. CLEVELAND. In Jordan the standard of living of the surrounding population is so poor there isn't much to choose.

Mr. CONTE. I don't think we will ever get them out. They have fine water and schools, plus our rations. Has anyone given any thought to trying to urge the Israelis to settle this by way of monetary payments?

Mr. CLEVELAND. It was a part of the arrangement proposed last year that the U.N. collect the money, including some from the Israelis, and do precisely that but arrange for a least a few of them to go back to Israel at the same time. It broke down over the right of repatriation.

Mr. CONTE. There was no question about getting the money up?

Mr. CLEVELAND. Our feeling has always been it would be an expensive proposition but you could collect the money to do this job if you could get a political formula. The latter is the trouble.

Mr. CONTE. In the long run we would save money, wouldn't we?

Mr. CLEVELAND. We certainly would. We have put up $300 million for Palestine refugees since the end of the war.

SURPLUS FOOD CONTRIBUTIONS

Mr. CONTE. A couple years ago I pursued a line of questioning on giving surplus food as part of our contribution and I notice you are doing that. Why don't we do more of that? Is most of our aid to the refugees in rations?

Mr. CLEVELAND. We are providing the bulk of the wheat and all the edible oils that are used in the ration programs. As far as the rest of the program is concerned, it does not consist of materials that are currently regarded as surplus here.

Mr. CONTE. What would you use that $17 million for?

Mr. SEELYE. Rice is not in surplus. We were providing rice up until about 2 years ago but it is no longer in surplus. Of the $17.2 million which is contributed in cash in addition to the $7.5 million in Public Law 480 commodities, $4 million is in local currencies, leaving $13.2 million as our dollar contribution. This goes into vocational training, education and the administration of the program of relief services.

EDUCATION AND VOCATIONAL TRAINING

Mr. CONTE. That seems a fairly high figure. I would like to have you supply for the record just what we supply in the way of education and vocational education. If you are going to stop this outflow of gold, if there is anything material, or manpower or food that you could supply here in the United States and send it over you should do that.

(The information supplied follows:)

U.S. SUPPORT TO EDUCATION AND VOCATIONAL EDUCATION PROGRAMS, UNRWA

Approximately one-third of UNRWA's expenditures are for education and vocational training. Accordingly, it is correct to assume that approximately one-third of the annual U.S. Government contribution to UNRWA, or about $8 million, is spent on educational and vocational training.

In order to assure that part of our contribution would be used specifically for UNRWA's 3-year, expanded vocational training program, the United States earmarked part of its contribution in 1961, 1962, and 1963 specifically for this purpose. Over the 3-year span this part of the U.S. contribution amounted to $3.9 million.

Mr. SEELYE. We are constantly endeavoring to follow that policy. We supply all the edible oils, and make contributions in local currencies whenever we can purchase them from the U.S. Treasury. We own no local currency of Lebanon or Jordan, so we cannot make any dollar savings.

We are now trying to work on UNRWA to reduce the component of expenditures that go into relief in order that less money will be spent on the dole and more money on educational and vocational training which is a positive element and actually contributes to the settle-

ment of the refugees. We are hoping that this fall's session of the General Assembly will allow us to place emphasis upon this positive aspect: namely, vocational training and education and the gradual reduction of the relief component.

Mr. CONTE. Did you say we have no local currency in Jordan?

Mr. SEELYE. No local currency that can be used, no U.S.-owned funds generated by Public Law 480 sales.

Mr. CONTE. There is nothing generated there?

Mr. SEELYE. That is correct. Nothing that we can use for this purpose.

REFUGEE CONDITIONS IN JORDAN

Mr. PASSMAN. The first impression usually is the lasting one. I have always been in sympathy with the individuals involved, these refugees.

I visited Jordan. I went out to the Gaza strip, a few miles out of Jerusalem. The people are actually living in little pens. Possibly in an area not more than 20 percent the size of this room there are a few stones and some kind of dilapidated tarpaulin. You would see a baby in one room, a man dying of tuberculosis lying right down on the ground, and I think the total expenditure per refugee per year was in the neighborhood of $29. They would show you the American flour, beans, rice, sugar they would get per month. It is a bare existence. Maybe you do have a better situation in some of the other countries but in Jordan it was just about the most deplorable thing I have experienced in my life. I have not checked on the situation recently, but am I correct about the $29 as being the total amount for food?

Mr. SEELYE. Well, it is over $30 now.

Mr. PASSMAN. Perhaps a pregnant woman will get a little extra ration, but that is it. Either you exist on it or you die. There is no employment. I do not think I have exaggerated the conditions, have I?

Mr. CLEVELAND. You certainly have not.

Mr. PASSMAN. That is one refugee camp I think of when I think of the $29, now $30 worth of food those people get and there is no employment available for them other than a few of them in the country of Jordan.

VOCATIONAL TRAINING IN REFUGEE PROGRAM

Mr. PASSMAN. I note from your statement on page 7 that:

> Initiatives are underway which should lead to the achievement of a greater degree of refugee self-support by using a greater proportion of UNRWA's resources for vocational training and to a reduction in relief costs through rectification of the rolls of relief recipients.

It would seem to me this is the same type of statement we have been receiving for the past several years, but does not seem to be much accomplishment, if any, in solving this very critical problem.

Would you comment on that situation?

Mr. CLEVELAND. There has been a good deal of accomplishment in getting more children into school, and more vocational education. But it is not nearly enough in our judgment. We think we ought to move

more in that direction by cutting down on the relief without increasing the total amount that we have to put up.

Mr. PASSMAN. I hope you do not cut down on the $30 per year for food, because that is about all they get in certain sections to live on.

Mr. CLEVELAND. That is correct.

Our hope is to slice off some of the refugees who really can go out and make their own living and buy their own food.

Mr. PASSMAN. I certainly endorse that plan. I am speaking of certain regions where there is no employment.

Mr. CLEVELAND. Where there is no employment, we have to continue the relief.

Mr. PASSMAN. And you do have certain sections where there is no employment?

Mr. CLEVELAND. Yes.

Mr. PASSMAN. I note in your statement on page 160 of the justifications that this may involve some slight increase in the dollar component of our program.

Could you give us about the amount of the increase per capita?

Mr. CLEVELAND. The point is we would spend more on education and less on relief——

Mr. PASSMAN. The aggregate will be up how much?

Mr. CLEVELAND. The aggregate will be the same.

Mr. PASSMAN. You are switching from commodities to education?

Mr. CLEVELAND. Yes.

Mr. PASSMAN. That is only in certain sections?

Mr. CLEVELAND. That is right. It would not be a relatively large amount.

Mr. PASSMAN. You could not do much switching where a person is getting $30 a year for food?

Mr. CLEVELAND. That is correct.

PROGRESS IN SOLUTION OF REFUGEE PROBLEM

Mr. ANDREWS. Mr. Cleveland, you state the basic problem remains unsolved. Do you see any hope for solution of the problem? It has been with us now for over 15 years.

Mr. CLEVELAND. It has, indeed. We are still working at trying to cut this Palestine refugee question out from the general rivalry in the Middle East. We have not been successful in doing that. Neither side wants to abandon its position on that subject except as part of a general peace.

Mr. ANDREWS. I believe you also stated that the refugee population is increasing.

Mr. CLEVELAND. The refugee population; yes, sir.

Mr. ANDREWS. How about the young people who graduate from school or vocational classes? Are they leaving the camps and going to work or are they staying in the camps?

Mr. CLEVELAND. Some are leaving, but not nearly enough because there isn't nearly enough of a vocational training program in and around the camps. It is precisely our hope, as a small and indirect attack on this problem, to see whether we can increase the education, at the expense of the relief within the total figure.

Mr. ANDREWS. Then this will proceed from the old generation to the new generation of these people?

Mr. CLEVELAND. It is being transferred; yes. Some of the young people, of course, have never known anything else and they live in this illusory hope that they are going to go back to that place across the line and they are going to be happy some day because they are going to get back into Palestine and get rid of all the Jews. The fact that this isn't going to happen in the real world doesn't penetrate.

Mr. GARY. Those camps have been pretty well closed up in Germany, have they not, or do you still have a lot of refugees in Germany?

Mr. CLEVELAND. I am not familiar with the precise status, but it is just about cleaned up. The camp refugee problem in Europe is just about over now. We still have a considerable escapee problem, of course, of people coming over from the Iron Curtain countries.

Mr. GARY. You had a very bad refugee problem there right after the war. I happened to be over there and inspected some of those camps. There were a great many Jewish refugees in the camps in Germany at that time.

Mr. CLEVELAND. The setting up of the State of Israel helped solve that problem because they did then have some place to go.

Mr. GARY. For the U.N. technical assistance program and Special Fund your estimate is $55 million, an increase of $5 million above fiscal year 1963; an increase of $10 million above the 1962 appropriation. Is that correct?

Mr. CLEVELAND. That is correct.

U.N. ECONOMIC ASSISTANCE TO THE CONGO

Mr. PASSMAN. The second program is the U.N. economic assistance to the Congo, for which the fiscal year 1964 estimate is $5 million. How much will the Congo receive from the United States on a bilateral aid basis?

Mr. CLEVELAND. $——— supporting assistance and an estimate of $——— more under Public Law 480.

Mr. PASSMAN. A total of $———.

Mr. CLEVELAND. A total of $———.

MILITARY PROGRAM IN THE CONGO

Mr. PASSMAN. How about the military aid?

Mr. CLEVELAND. There is no substantial military aid program. There is discussion of a retraining program to which some small amounts of technical assistance and equipment might be provided——

Mr. PASSMAN. But it would be a military aid program if this is put into effect?

Mr. CLEVELAND. It will be a small one, but the main responsibility will be that of the Belgians.

Mr. PASSMAN. That is to be determined after they create the program.

Mr. CLEVELAND. That is correct.

AMOUNT OF U.N. TECHNICAL ASSISTANCE PROGRAM

Mr. FORD. You asked, for example, in the case of the expanded technical assistance program, the Special Fund, what the amount was for fiscal year 1963, which is $50 million. Was this the amount that was justified last year? I think it might be helpful to not only get the amount you executed but also the amount you justified when the hearings were held.

Mr. CLEVELAND. That was in fact the amount we justified, as an estimate of what would be possible to collect from other countries. As we were explaining a while ago, probably that figure will work out to about $51 million or so. If there is an overage of that kind, we would use the fiscal year 1964 funds for that purpose.

Mr. CONTE. Will the chairman yield?

Mr. PASSMAN. Yes; I yield.

BILATERAL PROGRAM FOR THE CONGO

Mr. CONTE. Mr. Cleveland, why are they changing their policy in the Congo? A few years ago they came before this committee and said they were against a bilateral foreign aid program in the Congo because it would bring the cold war into the Congo and that it would be much better to funnel this aid through the United Nations, and now you are taking a completely reverse stand.

Mr. CLEVELAND. Well, this is the measure of the relative success of the U.N. effort in the Congo over the 3 years.

Mr. CONTE. If it is successful, why stop it?

Mr. CLEVELAND. We are getting things sufficiently clamped down so that it is possible for the Congo to operate a little more like a normal country and not to have to depend upon a big emergency effort.

In effect, all the countries, and the specialized agencies, too, had put on a tremendous emergency program. They put in more than a thousand technicians—doctors, teachers, airport controllers, communications controllers, and everything else. It was charged to a special Congo fund which was financed by vountary contributions, theoretically from all the member countries but actually mostly from us.

Our feeling is that it is now important to have the Congo learn to govern itself and to handle its own aid relationships with other countries in a manner more or less comparable with other countries. Our feeling is with the Belgians, the Germans, the British, and others in the picture that this ought to be possible instead of our putting up 70 or 80 percent of the whole amount that is put in, which is what we have been doing on the economic side up to now, that it ought to be possible for us to limit ourselves to putting in about half of what goes in, as the Clay Committee recommended, and have the Belgians and the Germans and the others come in also on a bilateral basis.

TOTAL U.S. CONTRIBUTIONS TO THE CONGO

Mr. CONTE. What was our contribution last year in the United Nations?

Mr. CLEVELAND. Including food for peace, the economic aid to the Congo for fiscal year 1962 totaled $64.8 million, mostly through the U.N. plus a few bilateral projects. In 1963, we put in about $80.6

million. Those represented very high percentages of the inputs from all countries.

Mr. CONTE. What are you asking for this year? What is your projection this year?

Mr. CLEVLAND. The projection this year would be about $———.

Mr. CONTE. $———.

Mr. CLEVELAND. Altogether, including $5 million through the U.N. and $——— bilateral.

Mr. PASSMAN. $——— and $5 million?

Mr. CONTE. So actually you are only reducing it $———.

Mr. CLEVELAND. There is no reduction in the need. Their problem of stabilization is one of the most serious ones anywhere in the world. But there is no reason why it has to be such a big task for the U.N. machinery, now that the security threat and the threat of external intervention, which brought the U.N. into the Congo to begin with, has tailed off a good deal.

PERCENTAGE OF U.S. CONTRIBUTION TO THE CONGO

Mr. PASSMAN. In connection with the $5 million to the Congo, this $5 million represents not to exceed 50 percent of the total contributed by all countries through the U.N. for a residue of the U.N. technical assistance program in the Congo; is that correct?

Mr. CLEVELAND. That is correct.

Mr. PASSMAN. Why do we move up to 50 percent?

Mr. CLEVELAND. On the economic assistance side, we have been over 80 percent. In total U.N. contributions, economic and military, we have been about 67 percent. So we are moving down.

Mr. PASSMAN. Why did you not bring it down to, say, 25 percent, since we are 1 or 112 nations and our money is running out, our gold is running out, our credit is running out, and our public debt is going up?

Why do we have to play Santa Claus and say, "We will put in as much as all the others"? What is the justification for it?

Mr. CLEVELAND. In this case, our judgment is the amount other countries will realistically be able to put into this will be perhaps $——— altogether.

Mr. PASSMAN. We are putting in 50 percent of the total. Do you people ever try to negotiate these things downward? You get these new agreements started, and Uncle Sam is in for half of it, and the other 111 nations of the world put up the other half. They should maintain some kind of an interest in this proposition out there.

Mr. CLEVELAND. We are expecting to get it down to 50 percent——

Mr. PASSMAN. Why do you not go down to, say, 25 percent?

Mr. CLEVELAND. Then you wouldn't be in business on this Congo operation.

Mr. PASSMAN. Is this not the same old deal: put in 50 cents and get out $6?

There are 112 nations, but good old Santa Claus has to get in for half of it and you defend this on the basis, "Well, before this time we put up a higher percentage."

If you have negotiated it on this new basis, I do not see why you cannot work it down to a lower figure.

I yield to the gentleman.

Mr. GARY. What is the political situation in the Congo now?

Mr. CLEVELAND. Politically, Cyril Adoula, the Prime Minister, is still in charge. It is a rather precarious situation, as he, himself, described it the other day. None of the top politicians in the Congo really has a national party yet. So it is still a loose federation of local tribal interests put together in sort of a modern political form.

On top of that, you have a Government that is spending 5 francs for every franc it takes in and is in a very difficult situation financially. It has an army that still is not retrained and still is not up to the job of maintaining internal security. So it is no plum to run that country.

Our feeling is that the big possibility of external intervention, which was certainly there in 1960, has tapered off somewhat now. And if the Congo can begin to learn to govern itself with our help and the help of the other leading countries, particularly the Europeans, we can get out of the woods in this—particularly, if the Congolese invite the Belgians back in on a reasonable basis. Then it would be possible for them to pick up some of the check and we would not have to pick it all up. This is the operation we are now engaged in.

Mr. GARY. What is the situation in Katanga?

Mr. CLEVELAND. Well, they have split the province in two. Tshombe has been in Paris. They have split his former domain into two different provinces now. Much of the basis of his political power has evaporated. There is still a number of diehards who have weapons hidden away. It is still rather precarious, but the mines are operating, and the European population there is reconciled to being a part of the Congo. Indeed, the big mining combine came up the other day with a remarkable suggestion. They wanted the U.N. to stay in Katanga longer than the U.N. wants to stay.

Mr. GARY. Did I not see in the paper Tshombe is going back to——

Mr. CLEVELAND. He is going to the Riviera at the moment.

Mr. GARY. I thought he was leaving Paris and going back to the Congo. He said he was going to help the main government.

Mr. CLEVELAND. He stopped off either in the Riviera, or Majorca, or some place. It is sort of a detour. He will wind up back in Katanga, and then the question will be—what political power does he have left. His political power was copper revenues, and he does not have those any more.

Mr. GARY. What about the Ellender report?

Mr. CLEVELAND. His report from his trip around——

Mr. GARY. Yes.

Mr. CLEVELAND. What about it?

Mr. GARY. Insofar as the Congo is concerned?

Mr. CLEVELAND. I think I would have to provide you with a careful analysis of it.

Mr. GARY. I believe he said no country in Africa is capable of governing itself, did he not?

Mr. CLEVELAND. Well, that, I think we have to disagree with.

Mr. PASSMAN. I do not think he said it exactly that way.

Mr. GARY. I am asking.

Mr. PASSMAN. He did not make the statement just that way, that there was no country in Africa capable of governing itself.

Mr. GARY. That is the way he was quoted in the paper, I thought. I am just asking for information.

Mr. PASSMAN. I think he is one of the most able Members of the U.S. Senate. He is outspoken, and on account of being outspoken, he sometimes does not please a lot of the people in the State Department. I would bet my money on the side of Senator Ellender being correct in his report—I am not talking about this particular statement, but about the facts in his report.

Will you look up the exact statement Senator Ellender made? He said he had been quoted differently than the statement he actually made.

Do you recall that comment?

Mr. CLEVELAND. Yes.

Mr. PASSMAN. Please look it up.

Mr. MONTOYA. Is that on the record?

Mr. PASSMAN. Yes.

TOTAL PROPOSED U.N. PROGRAM FOR THE CONGO

Mr. CONTE. This $——— that you speak of, that is the U.S. contribution to the Congo?

Mr. CLEVELAND. The $——— I speak of is the total from all different kinds of U.S. resources of which the U.N. part this year would only be $5 million. We are cutting the U.N. back in effect to simply being a large technical operation rather than the channel for import aid.

Mr. CONTE. The $——— then takes in our bilateral aid program in the Congo?

Mr. CLEVELAND. Including surplus commodities, yes; including Public Law 480.

Mr. CONTE. So when you speak of cutting our aid to the Congo 50 percent, that takes in the U.N. and bilateral aid?

Mr. CLEVELAND. Our estimate is they are going to need about $——— all in all.

Mr. CONTE. The Congo?

Mr. CLEVELAND. The Congo.

Our hope is other countries will put in, as they have not been putting in up to now, $——— of resources.

Mr. CONTE. I want to make sure I am clear on this.

Is $——— needed to prime the pump in the Congo?

Mr. CLEVELAND. Yes.

Mr. CONTE. It will come from all sources, U.N. sources, bilateral programs, and multilateral programs, right?

Mr. CLEVELAND. Yes; and our hope would be the U.N. part of that would be around $10 million, of which we would put up $5 million, which would go entirely for services—teachers, doctors, and so forth.

Mr. CONTE. How does that compare with last year?

Mr. CLEVELAND. Last year everything that went into the Congo in the way of economic aid barring $3.1 million bilateral technical assistance went in through the U.N.

Mr. CONTE. I am talking about dollars and cents.

What did the United States contribute last year?

Mr. CLEVELAND. The United States contributed, for fiscal year 1963, $80.5 million.

Mr. CONTE. From all sources?

Mr. CLEVELAND. All through the U.N., except the $3.1 million for technical assistance.

Mr. CONTE. This year we are contributing $——— from all sources?

Mr. CLEVELAND. All U.S. sources.

Mr. FORD. Are you talking about military now?

Mr. CLEVELAND. Economic.

As far as the military is concerned, there is a tremendous drop.

Mr. PASSMAN. You have three segments, $———, $———, and $5 million, to make the $———. It is transferring out from the U.N. program to a bilateral program.

Mr. CLEVELAND. Speaking of the economic program, that is correct.

Mr. PASSMAN. Since our total contribution to the Congo will be $——— for economic aid, it appears we will again be the largest contributor to the program, despite the fact that on page 159 of the justifications it is indicated that a much larger share of the total assistance to the Congo should come from other member governments.

Would you comment on that matter?

Mr. CLEVELAND. The other countries have not been putting up anything like that amount in the past.

Mr. PASSMAN. We made the contribution through the U.N. We transferred it out of many different accounts to the U.N., and from the U.N. to the Congo.

Will you give us a spread on the money that we put up last year and what the other nations put up? Can you tear it apart to that extent?

Mr. CLEVELAND. Yes. We made a study of that when I went over to the Congo.

(The information supplied follows:)

Economic assistance to the Republic of the Congo, estimated, 1963

[In thousands of dollars]

	Total	United States	Other
Aid provided through the U.N.:			
U.N. Fund for the Congo	7,400	4,400	3,000
Import assistance	42,000	35,000	[1] 7,000
U.S. Food for Peace	33,691	33,691	
Title I		(30,000)	
Title II		(3,691)	
Subtotal	83,091	73,091	10,000
Bilateral aid:			
Technical assistance	35,100	3,100	32,000
United States		(3,100)	
Belgium			(20,000)
European Economic Community			(6,500)
West Germany			(4,000)
Others			(1,500)
U.S. Food for Peace (title III)	4,000	4,000	
Subtotal	39,100	7,100	32,000
Grand total	122,191	80,191	[2] 42,000

[1] West Germany, $5,000,000; United Kingdom, $2,000,000.

[2] In addition, Belgium is providing about $28,000,000 for servicing the foreign debt of the Congo.

UNITED NATIONS CHILDREN'S FUND

Mr. PASSMAN. The next program is the United Nations Children's Fund, known as UNICEF.

U.S. CONTRIBUTION FROM INCEPTION OF PROGRAM

The 1964 estimate is $12 million. What has been the dollar amount of the U.S. contribution and the percentage for each year since the inception of the program?

Will you put that information in the record?

Mr. CLEVELAND. Yes.

(The information supplied, follows:)

UNICEF—U.S. contributions

[Dollars in thousands]

Calendar year	Contribution	Percent	Calendar year	Contribution	Percent
1947	$15,000	71.55	1957	$10,000	55.00
1948	27,123	71.55	1958	11,000	52.50
1949	18,151	71.55	1959	11,000	50.00
1950	14,626	71.55	1960	12,000	48.00
1951	5,850	71.55	1961 (estimate)	12,000	46.00
1952	6,667	71.28	1962 (estimate)	12,000	44.00
1953	9,814	68.79	1963 (estimate)	12,000	42.00
1954	8,300	60.99	1964 (estimate)	12,000	40.00
1955	9,000	57.58			
1956	9,700	55.41	Total	216,231	

AMOUNT OF FISCAL YEAR 1964 CONTRIBUTION

Mr. PASSMAN. I think that every year since I have been on the committee, without exception, we have given this program every dime they asked for. But you are asking for an increase this year, are you not?

Mr. CLEVELAND. No, sir.

Mr. PASSMAN. Is it the same amount?

Mr. CLEVELAND. $12 million, and we are projecting an increase from other countries.

Mr. PASSMAN. If you get increases from other countries, ours will still remain $12 million?

Mr. CLEVELAND. That is right.

Mr. PASSMAN. It is a question of getting the others to doing more?

Mr. GARY. And it will decrease our percentage?

Mr. CLEVELAND. Yes.

Mr. PASSMAN. You are still going to ask for $12 million?

Mr. CLEVELAND. Yes.

Mr. PASSMAN. We seem to be making decreases in percentages and winding up with an increase in dollars. Even though we are getting an increase from other nations, we are still going to be called upon to put up $12 million?

Mr. CLEVELAND. Yes; no increase in the U.S. dollar contributions is involved.

EFFORTS TO OBTAIN INCREASED CONTRIBUTIONS

Mr. FORD. Why do we maintain the same dollar amount in this program despite the fact that the other contributors are adding more dollars, whereas in some of the other programs the reverse is true.

Mr. CLEVELAND. I have been doing this for 3 years now—and we are again trying to use our contributions as an incentive to others to contribute. We have said, "Look, we would like to see this program larger, as almost every country would like to see it larger. It is a very popular program in most countries. Even the contributing countries. But we do not want to increase our amount. We will approve an increase in the total program if you, the director, will go out and collect more money." He is a very good money collector.

Mr. FORD. Why do you not use the same rationale on the other programs?

Mr. CLEVELAND. I think when we get on programs where we are above the 40-percent level, that is the rationale we will be using.

Mr. FORD. You start at 40 percent. That is the basis for your rationale?

Mr. CLEVELAND. When we get to the point where we have reached the target on the special fund and ETAP then we need to consider, I think, whether to keep our money figure the same and try to decrease our percentage, or just what strategy will produce the most money from other countries, which is the main purpose of the effort.

Mr. FORD. The exercise does not work out the same way. By your own statement, this is a very popular program. You have a very able solicitor, so to speak. Perhaps you ought to put him in another job and you could do better in some of these other areas where we are not doing so well.

Mr. CLEVELAND. It would be good if we had a number of directors like Maurice Pate.

Mr. FORD. Perhaps he could teach some of the other fellows to do it as well as he.

Mr. GARY. Off the record.

(Off the record.)

Mr. PASSMAN. Do you know of any program as such—you have shifts and adjustments—that we have ever cut back on? Once we get these things moving we have a lot of changes in the statistics and strategies, but dollarwise it is usually moving upward all the time, is it not?

Mr. CLEVELAND. Yes, sir; where we are still trying to build the program—as with U.N. technical assistance—and get other countries to contribute proportionately more.

Mr. PASSMAN. All this is meritorious. But if you should confiscate all the wealth in America, you still would not have sufficient funds to do all the things labeled "desirable."

UN—FAO WORLD FOOD PROGRAM

The next program under this appropriation is the world food program, for which the 1964 estimate is $2 million; is that correct?

Mr. CLEVELAND. Yes.

Mr. PASSMAN. How does that amount compare with last year?

Mr. CLEVELAND. Could I make a comment?

Mr. PASSMAN. Surely.

Mr. CLEVELAND. I should like to mention in the case of UNRRA, which is probably the biggest international relief program there has ever been, which was tapered off and finished prior to the Marshall plan.

Mr. PASSMAN. The Marshall plan was substituted for it.

Mr. CLEVELAND. Well——

Mr. PASSMAN. It is a matter of statistics.

Mr. CLEVELAND. And the International Refugee Organization, which was handling the European refugee problem that Judge Gary referred to earlier, no longer exists, and at one time that spent a quarter of a billion dollars.

Mr. PASSMAN. You certainly must be familiar with the Public Law 480 program that came into being. You might find that program bigger than all of those others put together. You might change the name of the activity, and you might give them peas rather than sugar, but the program is still there under a different name.

You did not give us the answer on the Food and Agriculture Organization. Is the $2 million an increase or decrease?

Mr. CLEVELAND. This is a part of the 3-year program we mentioned last year.

Mr. PASSMAN. The $2 million estimate——

Mr. CLEVELAND. It is an increase of about $400,000 from the amount we obligated this year.

FISCAL YEAR 1963 PROGRAM

Mr. PASSMAN. What amount did you ask for last year for this program?

Mr. CLEVELAND. You will recall at the time we were up before this committee last year, this program was still in the process of formation. We therefore did not put a specific amount in, but we said——

Mr. PASSMAN. In the neighborhood of what amount? Did you have an estimate?

Mr. CLEVELAND. We spoke not before this committee, but the Senate committee later on after the program had been negotiated with the other countries.

Of the $6 million cash contribution, in addition to the surplus commodities over a 3-year period——

Mr. PASSMAN. How much did you fund for this program last year?

Mr. CLEVELAND. We funded $1.6 million.

Mr. PASSMAN. So you are actually asking for $400,000 more for fiscal year 1964 than the loose-end allocation you made in fiscal year 1963?

Mr. CLEVELAND. Yes, sir.

Mr. PASSMAN. I think you said you did not justify a figure, and I would not accuse you of obligating less than you needed; even under that program, you are up $400,000.

Mr. CLEVELAND. We estimated less than what we thought we needed on the Indus water projects.

SIZE AND EXTENT OF PROGRAM PLANNED

Mr. PASSMAN. We want to find out if the program this year will be $400,000 more than last year. It is a 3-year program. Are you going to phase it out in 3 years?

Mr. CLEVELAND. This is an experimental program; if it works, we may want to have a sizable, in effect, international Public Law 480 program.

Mr. ANDREWS. It looks as if you are planning a $100 million project under this program. Is that over a period of 3 years, or $100 million a year?

Mr. CLEVELAND. That is $100 million over a period of 3 years. Mostly that represents the value of surplus commodities rather than cash.

Mr. ANDREWS. Our share will still be 40 percent?

Mr. CLEVELAND. Not more than 40 percent of the cash component.

Mr. ANDREWS. Plus $4 million in transportation?

Mr. CLEVELAND. Yes, plus $6 million in cash. It is the cash we are talking about funding in this program.

Mr. ANDREWS. This program has grown from $500,000 last year to $2 million this year?

Mr. CLEVELAND. We obligated in fiscal year 1963 a total of $1.6 million.

Mr. ANDREWS. The book shows $500,000.

Mr. CLEVELAND. Only $500,000 was obligated at the time the presentation volume was prepared. That amount was subsequently increased to a total of $1.6 million.

Mr. ANDREWS. You plan to spend $2 million in fiscal year 1964?

Mr. CLEVELAND. Yes.

Mr. ANDREWS. And over the next 3 years, you plan to spend $50 million——

Mr. CLEVELAND. A total of $6 million in cash only over the 3 years.

Mr. ANDREWS. And $40 million in surplus commodities?

Mr. CLEVELAND. And $40 million in surplus agricultural commodities, and about $4 million in shipping services.

Mr. ANDREWS. Is the $6 million on a matching basis toward the cost of administration; is that in cash?

Mr. CLEVELAND. Yes. This $2 million we are talking about here is the middle slice of the $6 million.

Mr. ANDREWS. It looks to me as if, with food and all, you plan to spend about $50 million in the next 3 years.

Mr. CLEVELAND. If everyone else does their share too.

Mr. PASSMAN. Does everyone else put up food?

Mr. CLEVELAND. Yes, and some countries, shipping services and cash as well.

LIST OF PLEDGES

Mr. FORD. What countries are planning to put up food and what kind of food, and how much?

Mr. CLEVELAND. We have a detailed list of the pledges here so far.

Mr. FORD. You have a list of them?

Mr. CLEVELAND. Yes.

Mr. FORD. Is it a long, extensive list?

Mr. CLEVELAND. Well, the summary list is only a couple of pages.

Mr. PASSMAN. Put it in the record, please.

Mr. CLEVELAND. Yes.

(The information supplied follows:)

1952

World Food Program

Pledges received to May 20, 1963

[In U.S. dollars [1]]

Contributing country	Commodities	Services	Cash	Total

Yugoslavia			[7] 100,000	[6] 100,000
Total	65,930,702	5,815,736	18,105,198	89,851,636

[1] All figures are pledges made in U.S. dollars, except those followed by an asterisk; these latter are contributions which were quoted in national currencies and converted to dollars, as in the case of Belgium, Indonesia, Malagasy, Norway, Pakistan, Philippines, Rhodesia and Nyasaland, Sierra Leone and Rumania, or where the estimated value of commodity offerings was calculated, as in the case of China, Cuba, Greece, South Africa, and Turkey.

[2] Subject to parliamentary approval; in the case of Sweden, two-thirds of contribution still subject to parliamentary approval; in the case of Germany and Norway, for second and third years.

[3] Available in 1964.

[4] To be delivered on a cost, insurance, and freight basis, with the German exporters free to use shipping pledges on the most advantageous terms irrespective of the flag of the vessels concerned.

[5] Includes services.

[6] Nonconvertible currencies.

[7] Utility to be determined by negotiation.

[8] For shipping services.

[9] U.S. contribution sub ect to a number of reservations, including necessity for Executive Director and the United States to concur in each separate project or commodity purchase in which U.S. contribution is to be employed, and including limitation that U.S. contribution in cash will not exceed 40 percent of the total cash contribution and is subject to legislative action.

Mr. PASSMAN. This is a new organization, is it not?

Mr. CLEVELAND. This is an experiment to see whether the Public Law 480 idea, the food-for-peace idea, can be internationalized in a situation where a number of countries are beginning to have some surpluses which ought to be put to use for these purposes.

Mr. PASSMAN. The first thing you know, other people will be making these decisions and not us. You are getting into a new worldwide program.

AUTHORITY FOR U.S. PARTICIPATION IN FAO

Under what specific authority of the law is the United States participating in this program?

Mr. CLEVELAND. The Public Law 480 authority——

Mr. PASSMAN. I am talking about the money part of it.

Mr. CLEVELAND. The money part would be a part of the aid program.

Mr. PASSMAN. State for the record at this time the specific authority you have for the c-a-s-h part of this program.

Mr. CLEVELAND. This would be part of our authority under——

Mr. PASSMAN. Give us the exact law by which you are using this cash. You did not justify it to the committee last year. Now we are well on the way.

Mr. CLEVELAND. It would be the AID authorizing legislation.

Mr. PASSMAN. Give us the specific section, if you will.

Mr. CLEVELAND. Section 301(a).

Mr. PASSMAN. Read it, please.

Mr. CLEVELAND (reading):

Section 301. General authority.

(a) When he determines it to be in the national interest, the President is authorized to make voluntary contributions on a grant basis to international organizations and to programs administered by such organizations on such terms and conditions as he may determine, in order to further the purposes of this part.

Mr. PASSMAN. Did you ask the Foreign Affairs Committee for legislation last year to undertake this program?

Mr. CLEVELAND. For legislation to do——

Mr. PASSMAN. To set up this new organization that is going to lead you into a $50 million contribution.

Mr. CLEVELAND. We mentioned it in the discussion. Most of the authority is Public Law 480, not aid legislation.

Mr. PASSMAN. Here you started out on an organization. We are not going to fuss about some surplus food, but when you start talking in term of $50 million, that is a lot of money.

Now you are requesting $2 million for fiscal year 1964. You say you are going to experiment with this for 3 years. We want you to be as specific as you can as to where this thing originated.

Mr. FORD. Mr. Cleveland handed me a moment ago a summary sheet of the world food program which shows the contributing country, the commodities, the services, the cash, and the total. The sheet which was supplied has several footnotes.

Footnote 2 says:

Subject to parliamentary approval. In the case of Sweden, two-thirds of the contribution still subject to parliamentary approval. In the case of Germany and Norway, for second and third years.

Footnote No. 9 says, and this refers to the United States:

The U.S. contribution is subject to a number of reservations, including necessity for the Executive Director and the United States to concur in each separate project, or commodity purchase, in which U.S. contributions are to be employed, and including limitation that U.S. contributions in cash will not exceed 40 percent of the total cash contribution.

I think the several footnotes bear on the question raised by the chairman, apparently this program is subject to parliamentary approval in Switzerland, Sweden, Norway, New Zealand, Japan, Italy, Ireland, Iran, German Federal Republic, Finland, Chile, Ceylon, and Australia, but it is not subject to parliamentary approval in the United States.

Mr. CLEVELAND. It is.

As far as authorizing legislation is concerned, the President does have authorizing authority to participate in each part of this, the commodity part through Public Law 480 and the cash part through AID. It is subject to "parliamentary approval" through the appropriation process.

Mr. PASSMAN. Let us go back to last year, on page 48, of the House Agricultural Committee's hearing on the Food and Agriculture Act of 1962.

I believe Secretary Freeman appeared before the committee and made this specific request, and I quote:

A new title V to promote multilateral programs for food aid by authorizing the President to negotiate and carry out agreements with international organizations and other intergovernmental groupings involving grants of agriculture commodities.

The committee turned it down, and you started the program anyway.

Go over to the hearings on the Food and Agricultural Act of 1962, page 382, and I quote from a statement:

The other point is in title V, and what you are proposing here, as you tell us in your statement, is that we have already engaged in a conversation, and we are now in the process of committing ourselves to this proposition, at least in memorandums, without the authority resting in law to fulfill that commitment unless this amendment is offered; is that right?

And then further on the next page:

Mr. MCINTYRE. Yes, but we are actually negotiating?

Mr. IOANES. Hoping that the Congress will authorize.

Mr. MCINTYRE. What we are doing is to explore, we are engaged in exploration and in the development of a draft program and making known explicitly that any arrangement that is developed as an ad hoc arrangement which would not become effective until congressional authorization.

Where is the authorization other than going back to some original act for it?

Mr. CLEVELAND. The Department of Agriculture evidently thought at that time they needed new authority. The matter had not been adequately studied. And the Senate committee in fact suggested this ought to be done under existing authority——

Mr. PASSMAN. When Congress turned it down they found a law to do it anyway. Is it not that simple?

Mr. CLEVELAND. They did not need to go up for a new law because they did not need one.

Mr. PASSMAN. You did not do that?

Mr. CLEVELAND. I did not ask for the authorization.

Mr. PASSMAN. I am speaking of the people downtown. They ask for something. They do not get it and they will find a law to do it anyway.

With reference to foreign aid, the witnesses will look straight at you and say, in effect, "This is illustrative. We have the right to vacate every one of these programs and substitute something in their place.

"We want the money for these nations, but we have the right to take the money and spend it wherever we want to. We want this money for flood control projects in the Congo, but if we want to build a brick building in Argentina with the money, the program is just that broad."

And then you get into the development credits, called loans. You say, "We do not dare discuss a project or tell what we are going to do until we get the money. When we get the money, then we will make up our mind what we will spend it for."

You ask for it. You do not get it. You go ahead and do it anyway.

Mr. CLEVELAND. As you know, Mr. Chairman, we announced last year in this committee and the Senate committee that this world food program was under discussion.

At the time of the hearing with the Senate committee, we were able to describe the dimensions of it. Now we are able to come back and testify specifically on it.

Mr. PASSMAN. Did you people not tell us when this thing firmed up you were going to come back to this committee and see about the money?

Mr. CLEVELAND. Yes.

Mr. PASSMAN. Will you tell us whether you came back?

Mr. CLEVELAND. We did not until this hearing, sir.

Mr. PASSMAN. Certainly, you did not. That would be a small obstruction in the way you people are doing what you want to do.

It just burns me up to think the agency will say, "We need specific legislation. We are asking for legislation; we want an authorization to do this," but when you did not get the authority, you did it anyway.

You told this committee when you finally got this thing firmed up you were going to come back up and discuss the money needs with us. You did, after you obligated $1,630,000 and the thing was well underway.

Are you going to get FOA and FAO mixed up?

Mr. CLEVELAND. There was a predecessor of AID, known as FOA, Foreign Operations Administration.

Mr. PASSMAN. This is going to be known as FAO, the abreviated term; is that correct?

Mr. CLEVELAND. FAO is the Food and Agriculture Organization of the U.N. The world food program is a joint FAO–U.N. sponsored undertaking.

Mr. PASSMAN. We are going to continue knowing it by that name?

Mr. CLEVELAND. Yes.

CONTINGENCY FUND FINANCING OF THE FAO

Mr. ANDREWS. How was this program financed, if you did not get the money from the committee?

Mr. CLEVELAND. It was financed to the extent of the first $500,000 by reallocation of funds within the "contributions to international organizations appropriation," and to the extent of the other $1.1 million by the only transfer we made this last year from the contingency fund to this program.

Mr. ANDREWS. Then the chairman is eminently correct when he said it does not make any difference whether you get money specifically for a program, you can take it from one of the other spigots, as you did in this case?

Mr. CLEVELAND. In a first-year program, if you have the authorizing legislation, and the President already has the authority to act, which he did in this case, that is right. It is possible for the President to go ahead and act for 1 year on the basis of the contingency fund, or other authorized source.

But before the second year rolls round, we are back up here discussing the details of the second-year program.

Mr. ANDREWS. And if you do not get it, you can reach over into the contingency fund?

Mr. CLEVELAND. There are some strings on that fund as far as this chapter is concerned. There is a limitation on how much can be transferred into this chapter.

AUTHORITY FOR THE WORLD FOOD PROGRAM

Mr. PASSMAN. You needed a specific authorization. You asked for it and you did not get it. I am talking about the agency.

Mr. CLEVELAND. Not me.

Mr. PASSMAN. I am talking about the agency downtown. Whoever is charged with the responsibility of getting the authority thought they needed a specific authorization. They asked for it.

Mr. CLEVELAND. The Department of Agriculture——

Mr. PASSMAN. They asked for an authorization, did they not?

Mr. CLEVELAND. Yes.

Mr. PASSMAN. And the Congress did not give it to them?

Mr. CLEVELAND. Well——

Mr. PASSMAN. Please. You did not get a specific authorization from the Congress, did you?

Mr. CLEVELAND. I believe the request was withdrawn; yes.

Mr. PASSMAN. You did not get a specific authorization?

Mr. CLEVELAND. I am not clear——

Mr. PASSMAN. The authorization you asked for, specific authority to do this was not forthcoming?

Mr. CLEVELAND. I am not clear whether they turned it down or it was withdrawn.

Mr. PASSMAN. You did not get an authorization to do it. You will agree that is correct?

Mr. CLEVELAND. The Department of Agriculture did not.

Mr. PASSMAN. Subsequently, they decided they did not need an authorization, that the law was broad enough to do what they wanted to do without a specific authorization; am I correct?

Mr. CLEVELAND. Yes.

NO REQUEST SUBMITTED TO COMMITTEE FOR FUNDS PRIOR TO OBLIGATING FUNDS

Mr. PASSMAN. You told the committee you would come back and let us know when this got firmed up, and you did not come back, when you wanted the money.

I have to protect the integrity of the committee.

You did say you would come back, and you did not?

Mr. CLEVELAND. That is right.

We did justify——

Mr. PASSMAN. You are not in a class by yourself.

Mr. CLEVELAND. We did justify this in the Senate.

Mr. PASSMAN. We are not doing business in the Senate. This is a subcommittee on appropriations of the House of Representatives.

EXPENDITURES

Mr. PASSMAN. How far extended are you on this program?

How much have you liquidated out of the obligation?

Mr. CLEVELAND. $500,000.

Mr. PASSMAN. For what purpose or purposes?

Mr. CLEVELAND. A transfer to the world food program.

Mr. PASSMAN. Have there been any disbursements made out of the $500,000?

Mr. CLEVELAND. By them?

Mr. PASSMAN. Yes.

Mr. CLEVELAND. I will have to find out.

Mr. PASSMAN. Please find out.

(The information follows:)

EXPENDITURES OF WORLD FOOD PROGRAM

Through June 30, 1963, cash contributions received by the world food program totaled $4,148,406. Of this sum, the United States had paid in $500,000 or 12 percent. As of the same date, expenditures by the world food program from its cash contribution account amounted to $590,893.

As of June 30, 1963, the Department of State had obligated $1,138,096 in addition to the $500,000 previously obligated and contributed, making total fiscal year 1963 obligations $1,638,096. The latter figure represents the United States matching, at 40 percent, of total actual cash contributions of $2,457,145 from other countries reported by the world food program as of May 27, 1963.

The initial U.S. payment of $500,000 was designed to provide the program with resources to get underway. The United States will make further cash contributions as the administrators of the program demonstrate cash needs.

You ask for an authorization, you do not get it. Then you find a way to do it anyway. Then you tell the committee after you get it firmed up you will come back and ask for the money. You did not come back.

Mr. CLEVELAND. On the consultation point, Mr. Chairman——

Mr. FORD. I am not one that normally defends Mr. Freeman, but I note on February 7, 1962, the Secretary of Agriculture Freeman appeared before the House Committee on Agriculture on behalf of the Food and Agricultural Act of 1962, which I understand was H.R. 1010.

This proposed legislation which was the subject of testimony by Secretary Freeman included Title V: General Provisions, which, according to him on page 48 of the printed testimony, was for the purpose:

> We have likewise expanded our use of food in the foreign aid program under Public Law 480. Last year the Congress passed amendments extending and improving that act.
>
> In order that our food-for-peace program can be made more effective, the bill provides a new title V to promote multilateral programs for food aid by authorizing the President to negotiate and carry out agreements with international organizations and other intergovernmental groupings involving grants of agricultural commodities.

I would gather——

Mr. PASSMAN. The Congress did not pass it.

Mr. FORD. I would gather Secretary Freeman was authorized by the President and/or the Bureau of the Budget to appear on behalf of a legislative recommendation of the executive branch of the Government.

Mr. PASSMAN. That is exactly what I read into the record.

When he did not get specific authorization, the project was started anyway.

Mr. FORD. That is certainly the only conclusion you can come to.

Mr. PASSMAN. It is specific.

It was our understanding, and I think, Mr. Cleveland, that the record will show that you stated, after this was firmed up you would come back and discuss money with us.

You are back before the committee, but only after you have obligated $1,638,000 to the program and it is well underway before we have had a look at it.

Mr. FORD. Could Mr. Cleveland tell us whether or not agreements have been signed with these various countries that are listed on that sheet?

Has there been an international agreement made without this authorizing legislation which the executive branch requested specifically on February 7, 1962?

Mr. CLEVELAND. The President already had the authority asked for on that occasion.

Mr. FORD. What was the purpose of asking for the legislation then?

Mr. CLEVELAND. Search me.

Mr. FORD. Someone does not know how to run a railroad.

Mr. CLEVELAND. Occasionally something falls between the slats, even in the executive branch of the United States.

Mr. FORD. $100 million fell between the slats in this case. The executive branch obviously did not know what was being done by its various top officials, the right hand did not know what the left hand was doing.

Mr. CLEVELAND. It was already a paved street here. We already had the authority to do this program.

Mr. FORD. I wish the word had gotten to the Secretary of Agriculture. He apparently did not think so.

Mr. PASSMAN. I am going to refer you to page 1005, part 3, of our hearings, fiscal year 1963.

Mr. CLEVELAND. On the point about consultation——

Mr. PASSMAN. Are you going to let me read this into the record? Please, if you will:

World food program. Need for administrative improvements.

Mr. CLEVELAND. We will be back up here consulting with you when the plans for this program are a little further along because there may be a need for some aid funds for this program for the fiscal year 1963 period.

Mr. CLEVELAND. On the consultation point, Mr. Chairman, your point is well taken.

Mr. PASSMAN. Thank you.

Mr. CLEVELAND. The advice I got, which I think I should not have followed, was that it would be enough to rehearse this in the next regular hearing.

Mr. PASSMAN. You are not in a category by yourself, so do not feel embarrassed.

INTERNATIONAL ATOMIC ENERGY AGENCY

The next program is the International Atomic Energy Agency, for which the fiscal year estimate is $1,250,000. Is this $1,250,000 a voluntary contribution in addition to our assessed contributions?

Mr. CLEVELAND. Yes, sir.

WORLD HEALTH ORGANIZATION

Mr. PASSMAN. The next program is the World Health Organization special program, for which the fiscal year 1964 estimate is $500,000.

In addition to this voluntary contribution, what is our assessed contribution to this organization, and from what appropriation is it approved?

Mr. CLEVELAND. The assessed contribution, $9,611,000, is funded from the State Department appropriation under the "Contributions to the International Organization's" part of that appropriation.

MEDICAL RESEARCH IN HUMAN REPRODUCTION

Mr. PASSMAN. This $500,000 estimate seems to be for the purpose of establishing a unit for medical research in human reproduction; is that correct?

Mr. CLEVELAND. That is correct.

Mr. PASSMAN. This is just the first year. Is this not contrary to the previous position of the administration that you will not give cash aid?

Mr. CLEVELAND. No.

Mr. PASSMAN. I thought the President made a statement on this matter.

Mr. CLEVELAND. Dr. Watt is here from the Public Health Service.

Mr. PASSMAN. I thought the administration, maybe the President, had issued a statement we would not make a contribution to this thing.

Mr. CLEVELAND. The United States has not been extending aid earmarked for population control.

Mr. PASSMAN. If it is human reproduction; is that not the same thing?

Mr. CLEVELAND. Aid for medical research in a field where there are apparently very few facts.

Mr. PASSMAN. We are going in the back door rather than the front door; is that a fair statement?

Mr. CLEVELAND. I think it is in a different room.

Mr. PASSMAN. It may be in another room in the house, but the visit is there for the same purpose.

Mr. GARY. If we could solve that problem, we could do away with the foreign aid program.

Mr. PASSMAN. I just want to know if this is doing the same thing that the President said we would not do, other than you have changed the name of it a little, and it is a multilateral thing to which we are making a contribution?

Dr. WATT. I am not aware of any contradiction in policy.

Mr. PASSMAN. Did the President issue a statement that we would not make any contribution through our aid program with respect to research in population control?

Mr. CLEVELAND. No.

Mr. HILLS. I understand a special exception was made in this case.

Mr. PASSMAN. He did issue a statement and now they are making an exception in this case; is that correct?

Mr. HILLS. That is my understanding from the Budget Bureau.

Mr. PASSMAN. He made an exception in this case.

Thank you.

Mr. FORD. I am a little confused as to what the statement was, what the exception was. Let's get the statement on the record, and let's get the exception.

Mr. PASSMAN. I think we are talking about birth control.

Mr. FORD. I am a little in the dark what you were talking about.

What was the President's statement, and what exception agreed to by the Bureau of the Budget?

Mr. PASSMAN. Tell us what the President said, and why he agreed to make the exception.

Mr. HILLS. My knowledge does not extend quite that far.

However, I do recall being advised by the Bureau of the Budget that there was a policy in connection with the balance-of-payments problem to restrict any new starts in the field of international research, but apparently the White House felt this project was sufficiently important in terms of its implications for population growth, et cetera, to make an exception to that policy.

Mr. PASSMAN. Are you familiar with the President's original public statement?

Mr. HILLS. No, sir; I am not.

Mr. CLEVELAND. There is no general policy, Mr. Chairman, opposing assistance to research through international organizations in the population field. Indeed, we announced last fall in the General Assembly that that was a possibility.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. PASSMAN. Is this a new program?

Mr. CLEVELAND. The medical research program of WHO has been going on some time.

Mr. PASSMAN. I am talking about this phase of it, medical research in human reproduction.

Mr. CLEVELAND. This would be a new effort.

Mr. PASSMAN. And it is contrary to the original policy, but they agreed to make the exception in this instance?

Mr. CLEVELAND. No——

Mr. PASSMAN. Is that not what the doctor says?

Mr. CLEVELAND. The point he was making about an exception is outside the population field. There was a general rule against starting a lot more international research in a lot of different fields.

In this field, in this subject field of medicine, it was decided this was sufficiently important to be worth making an exception to that rule, which had been instituted for balance-of-payment reasons.

Mr. PASSMAN. You do know, of course, in the aid program, as such, under Dr. Baumgartner, there is a little item of $15 million for research.

They tell me if you put all the amount of money in all the bills for research together, it would exceed the amount of the total budget a few years ago. In everything you look at, there is a lot of money for research.

Mr. ANDREWS. There is over $7¼ billion in the Defense budget.

Mr. PASSMAN. Everywhere you go, there is research.

Mr. FORD. You have NASA, NIH.

Mr. ANDREWS. Every agency, including AID and civil service, has research programs.

Mr. CLEVELAND. And every private corporation too.

Mr. MONTOYA. I want to ask this question of the doctor—the listing and justification for this project is research in human reproduction not human deproduction.

Dr. WATT. That is correct.

Mr. MONTOYA. The justification for this particular project is to do medical research in human reproduction, not human deproduction.

Mr. ANDREWS. Will the gentleman yield?

Mr. MONTOYA. I think that explains the position of the President before and the President's position now. I do not see any inconsistency.

Mr. ANDREWS. I thought the problem was overproduction in the world—the exploding population.

Mr. GARY. It is. And there is not any question about it.

Mr. ANDREWS. It looks like here we are going to add to that problem.

RESEARCH PROGRAM OF WHO

Dr. WATT. If I may, sir, I would like to give a brief statement about this.

The research program of the World Health Organization was started by this country some 6 years ago with a planning grant. We made a grant of $300,000. Each year since that time we have given a voluntary contribution of $500,000 to the development of the planned program.

In addition to that, through their regular budget, there has been an increase in the regular budget of the WHO for research, and in addition, there have been grants-in-aid from other sources.

This particular contribution, in line with the discussions we have had here previously, will be in an amount of $500,000 with the idea that this will be a terminal grant of this voluntary contribution, not the first one, but the last of a series.

I believe this is the fifth.

In discussing the most effective way to see to it the program of the WHO would be of greatest importance to us, we felt, after considerable discussion, that of the four items which the Director General had suggested he would like to see built into this research program, the one that would be most important to us generally was this one on human reproduction.

So this last contribution is a matter of finishing a program rather than starting a new one.

Mr. PASSMAN. Thank you, doctor.

However, as far as the budget is concerned, it was looked upon as starting a new program in the Organization, and they had to take this as an exception.

Have I stated it correctly, according to your understanding, since you have to deal with the budget?

Mr. HILLS. In relation to the Budget Bureau, yes, sir.

PURPOSE OF PROGRAM FOR RESEARCH IN HUMAN REPRODUCTION

Mr. FORD. How does the doctor define what is meant by research in human reproduction?

Dr. WATT. I can illustrate, I believe, by a few examples, probably as well as any way.

One of the things we know very little about is just what are the processes which lead to an increase or decrease in fertility in a given population group.

Mr. FORD. Increase or decrease in fertility?

Dr. WATT. That is right—either one.

We know of some populations where birth rates go up, others where they come down. We have no understanding of the forces that bring it about.

Looking at populations about the world, we talk of the population explosion but, just the same, they are not exploding uniformly in all parts of the world, nor is it true it is going up in all parts of the world.

One of the important things to know from a health angle is, what are the facts in the environment that tends to lead to this increase or decrease. That is one sample.

Another type of example—we know very little in a systematic way—we can get a lot of old wives' tales—about the effect on physiology of the forces in the environment of crowding of one type or another, of competition for available foodstuffs, so again, because of the differences around the world, it is important that a systematic review and a systematic set of records be available. This is important to both the research people in this country and any other place that wants to get into this problem of the understanding of human reproduction.

It is in this context that we are hoping and planning to work with the WHO to provide this type of information on a worldwide basis so we will know and can determine in our own context how we relate to other countries.

Mr. PASSMAN. It is correctly stated, is it not, this $500,000 estimate seems to be for the purpose of establishing medical research in human reproduction? That is the way to define it?

Dr. WATT. That is correct.

Mr. GARY. Is this $500,000 the extent of the program, or is the World Health Organization going to put more than the $500,000 into the program?

Dr. WATT. The intent of this is to assure in their total research program there will be incorporated a unit for the study of human reproduction. Until such time as a senior scientific leader is found and put on the job, I do not know how to estimate the direction or scope of the program, but it is in our thinking that whatever is done would be reviewed and brought into their program through their normal budget rather than through voluntary contributions.

In other words, this contribution enables them to get started with such a plan, and if programs develop which require more or less, it would be reviewed in the regular way through their regular budget.

Mr. GARY. Is it not true that the population explosion today is one of the great problems that we are facing in the world?

Dr. WATT. Yes, I think so, and especially an understanding of it.

I am not sure it is as much a threat as many people believe. I think that it is our lack of knowledge about what is going on in the population of the world that causes us a great deal of difficulty, as much difficulty as is caused by the real factors involved.

Mr. GARY. And this money is supposed to furnish some of that knowledge?

Dr. WATT. Yes, sir.

Mr. GARY. To give us a greater knowledge of that subject?

Dr. WATT. That is right.

Mr. GARY. But it is a subject that is of great importance?

Dr. WATT. I think myself that the scientific aspects of this subject has been one of the really woefully neglected aspects. I think scientists as a whole must share some of the blame for our lack of knowledge for our failure to put this on a scientific rather than a hearsay type basis. I think it has been long overlooked both here and in other parts of the world.

PROGRESS IN THE MALARIA ERADICATION PROGRAM

Mr. GARY. What is the present status of the malaria program to which we have been contributing for a long time?

Dr. WATT. You are speaking financially, sir, or about the program itself?

Mr. GARY. I mean the general status of the program. We were told about 6 or 7 years ago, if we put up so much money for 5 years that they would guarantee the eradication of malaria at the end of 5 years.

Frankly, I thought that that was an optimistic goal at that time but I did think it was a very important program and I do know that they have had great success with it.

I would like for you to tell us something about the success of the program thus far and what the prospects are at the present time. It has obviously not been completed.

Dr. WATT. I can illustrate that with several figures, sir, to take first the success and then I hope to discuss some of our problems if I may.

This past year—and I am drawing on my memory for it, I believe I am approximately right when I say that something like 240 million people moved from an area where malaria was being transmitted to an area with no transmission. This did not mean they moved. It meant that malaria had been pushed out and so that something over 240 million people in this past year moved from what we call the attack phase to the consolidation phase, where it is a matter of holding malaria out. A lot of countries which have had malaria which are still shown as under attack have reduced the amount of transmission markedly but within many areas we have run into a hard core problem as we call it, of resistance, either the mosquitoes are not responding to the insecticide or one or another factor in the environment has meant that transmission still continues.

In this hemisphere we have two or three important areas in Central America, for example, where we are having a great deal of difficulty with the anopheles mosquitoes, just not falling into the trap we set for them. We put DDT on the walls and we hope the female, after having bitten, will go and sit there long enough to be killed. One of the fascinating stories I have heard about this is that for some reason the habits of these mosquitoes either have changed or they never did like to rest after they ate. Instead of staying in the rooms they bite and leave and go on out to the forest. We have also run into the same kind of problem in areas, nomad tribes for example, where the people sleep in tents or outdoors—they do not really have a house and therefore we have to find some other way of killing the mosquitoes.

These problems are being attacked by trying to come at it from another direction. One way is to find a long-acting drug which would in effect interrupt transmission, killing the malaria parasite in man and thus preventing the mosquito from picking up the parasite and then carrying it on to another person. This past year we have had in this country an outstanding success in terms of finding such a drug, in collaboration with drug houses. Research workers have actually found that a single dose of this drug prevents an individual from acquiring malaria for almost a year. If we can get such a drug to the point where a small amount—this is a very tiny amount—can be given the patient in such a way as it does not cause any complications this could be the way to interrupt transmission even though the mosquitoes themselves have gotten resistence.

Dr. Coatney of NIH is currently in Pakistan looking into the possibility of field testing this particular drug. We are planning on trying this in some other areas. I would say, sir, that we have a real mixture of extraordinary success in some areas and of unanticipated obstacles in others. If I may, I want to add one further point, that at this last World Health Assembly this was the first time that I am aware of in which all the nations of the world enthusiastically committed themselves to carry malaria eradication on to completion. Before this there had been reservations from a number of countries.

This year, without equivocation, they all committed themselves to carrying on this job, so that I think even though it will take us a little longer I do not have the reservation about our ability to accomplish eradication of malaria.

FISCAL YEAR 1964 PROGRAM FOR MALARIA ERADICATION

Mr. GARY. What is the budget for that program for next year?

Dr. WATT. All of the financing for this next year will be incorporated in the regular budget of WHO, at least insofar as our contribution is concerned. It is about $6¼ million. The total cost of the program which was originally met largely by voluntary contributions from us will be incorporated into the regular budget of WHO in 1964. We also are continuing to work with other countries on a bilateral basis of course, which you have heard about in other testimony, I am sure, sir. This program of global eradciation of malaria is one that I feel where we have set our sights for something really important and I believe we are going to get there.

Mr. GARY. I think you have made remarkable progress. I have been very much interested in the program from the very beginning and as I have said, I thought the original estimates were too optimistic but I thought the program was worthwhile and I think it has accomplished a great deal. I think it should be carried on to completion.

Dr. WATT. If I may add one little point, sir: I think one of the more serious things facing us in this country today. The fact is that we have as a nation—because we have gotten rid of malaria ourselves—have not continued to train people in this field so that we can contribute something more than funds to the program. I think we should go back and begin to train some of our young people so that they really can participate in these programs where the mosquitoes are and where the malaria is. We have a real problem in that we are sending our own people overseas. They go overseas and they get malaria. They come back to this country. If we do not have people who know and understand the disease we are not going to be able to detect it soon enough. We can get a reintroduction in this country because we still have the mosquitoes. I think we must continue to train our people to be able to carry on the right kind of surveillance here, sir. That is not a problem for your committee.

Mr. GARY. Thank you, Mr. Chairman.

Mr. CONTE. Mr. Chairman, will the gentleman yield?

Mr. PASSMAN. Yes.

RESEARCH ON HUMAN REPRODUCTION

Mr. CONTE. In regards to Mr. Gary's question concerning the $500,000 demographic study, are you cooperating with other nations? We had someone in here from India, I believe, saying there was a study going on there.

Mr. FORD. Not from India.

Mr. CONTE. I mean a State Department witness.

Dr. WATT. Mr. Chairman, one of the important purposes in this study is to permit coordination from different parts of the world in a central agency like the World Health Organization of what is going

on. We recently finished a study of the amount of money going into studies of human reproduction from U.S. sources. The NIH published a study about the first of the year. It showed something in the way of, I think, $6 or $7 million in research—again I do not recall the exact amount—but much of this was nongovernmental funds. The Ford Foundation and other foundations were putting money into different countries on studies of this sort. I feel it is most important for an organization like the World Health Organization to be in a position to know effectively where these studies are going on and assure that the results of these studies get widely distributed and widely known very promptly.

Mr. GARY. I would like to make a statement that I noticed in the paper just yesterday, in a Richmond paper, that a study is going to be made by the Rules Committee on this question of the amount of money that is being spent on research. I think my colleague, Congressman Howard Smith, is initiating such a study. I do not know how the Rules Committee is going to conduct it but I think it is a study that is well worth while. We are spending billions of dollars in research and I am afraid that there is a great deal of duplication. I think research is most helpful and we certainly can afford to spend a large sum on it, but with the great amount of research that is going on today there ought to be absolute certainty that there is no duplication and that the funds are being properly spent. I hope there will be a proper study of that kind. I am very glad to see that my colleague from Virginia, Mr. Smith, has suggested such a study and apparently is going to take steps to see that it is accomplished.

Off the record.

(Discussion off the record.)

Mr. PASSMAN. Mr. Montoya?

PUBLIC LAW 480 CONTRIBUTIONS TO INTERNATIONAL ORGANIZATIONS

Mr. MONTOYA. Mr. Cleveland, the total voluntary contributions for which you have sought justification is in the amount of $136,050,000; is that correct?

Mr. CLEVELAND. That is correct.

Mr. MONTOYA. Does this encompass the use of Public Law 480 funds or expenditures?

Mr. CLEVELAND. It does not and that of course does not appear in the AID program as such.

Mr. MONTOYA. What amount is contemplated to be spent in Public Law 480 under the Public Law 480 program in support of these special organizations?

(Information subsequently supplied follows:)

Uses of Public Law 480 for contributions to international organizations, fiscal year 1963–64

	Estimated, fiscal year 1963	Estimated, fiscal year 1964
1. UN-FAO world food program	$2,573,000	$16,500,000
Commodities at market value	2,189,000	15,000,000
Ocean freight	384,000	1,500,000
2. UNICEF skimmed milk (estimated CCC value)	17,055,000	11,434,000
3. UNRWA:		
Portion of contribution granted in title II foodstuffs (estimated CCC value)	7,500,000	7,500,000
Title III contribution through UNICEF of milk for supplementary feeding program (estimated CCC value)	1,002,000	421,000
Purchases of Public Law 480, title I, local currencies from Treasury	4,000,000	4,000,000
4. UNESCO: Title I sales proceeds to be used in agreement with United Arab Republic for Nubian monuments program		11,000,000–13,000,000
5. U.N. economic assistance to the Congo	33,691,000	(1)
Title I commodities at market value and ocean freight	30,000,000	
Title II (estimated CCC value)	3,691,000	

[1] Classified.

Mr. CLEVELAND. One amount that takes the form of a contribution to an international organization, which is what we talk about here, is the $40 million for the world food program we were discussing before. There is also a $——— item in the Congo but that is now on a bilateral basis so it does not take the form of a contribution to an international fund.

Mr. MONTOYA. What do you mean a bilateral basis?

Mr. CLEVELAND. It is covered by a direct agreement between the Congolese Government and the U.S. Government.

Mr. MONTOYA. Is that going to be administered by one of the special organizations in the U.N.?

Mr. CLEVELAND. No. It will be administered by the Congolese Government with our AID mission looking over its shoulder.

Mr. MONTOYA. Why do you include them in this picture?

Mr. CLEVELAND. Because previously it has been part of the total amount that we have considered as programed for the Congo and the whole of the Congo operation was considered something to be discussed as a U.N. program. But we have changed that for fiscal year 1964.

Mr. MONTOYA. So this $——— for the Congo under Public Law 480 will not be administered in the U.N. context?

Mr. CLEVELAND. No.

Mr. MONTOYA. We have $———. What other?

Mr. CLEVELAND. The other principal item is the Palestine refugee program we use as much as possible of the money that is provided by the Congress in the form of surplus commodities, thereby saving the dollars.

Mr. MONTOYA. But that will be under the $17 million request which you are making?

Mr. CLEVELAND. Well——

Mr. MONTOYA. Or would that be in addition to the $17 million?

Mr. CLEVELAND. That is in addition. Our total request would actually be $24.7 million had we not knocked that down for purposes of

this cash discussion to the $17.2 million, on the assumption that we can use $7½ million worth of surplus foods.

Mr. MONTOYA. Any other Public Law 480 projects?

Mr. CLEVELAND. No others in this group of agencies.

There is a contribution in kind to UNICEF, but again it is not part of this request for cash contributions. The Children's Fund does draw some powdered milk and distribute it around the world but, again, that is not part of the amount of money we are talking about here.

Mr. MONTOYA. How much is that?

Mr. CLEVELAND. I do not know that I know offhand.

Mr. MONTOYA. In round figures, more or less.

Mr. CLEVELAND. I think I have the weight, but not the money. I do not think that we have the amount since it is not part of this program as such. I will have to get that and furnish it for the record.

Mr. MONTOYA. What I am trying to establish is, In addition to the $136,050,000 which you request here, is it your intention to expend under the Public Law 480 program an additional sum of $47,500,000?

Mr. CLEVELAND. That is correct—through international organizations.

Excuse me. There is a problem of the time period. The $40 million is for a 3-year period. The money we are talking about here is for a 1-year period so you would have to sort of take one-third of the 40.

PUBLIC LAW 480 PROGRAM IN FISCAL YEAR 1963

Mr. MONTOYA. How much of the Public Law 480 did you expend last year?

Mr. CLEVELAND. For the world food program, very little. It has only just got off the ground. Ten million was programed. That much did not get off the ground. I would think we would use probably $10 or $15 million this next year out of the $40 million.

INCREASE IN CONTRIBUTIONS TO U.N. ORGANIZATIONS

Mr. MONTOYA. You are actually increasing the Public Law 480 program under United Nations organizations. You are actually increasing it, aren't you?

Mr. CLEVELAND. Yes. That has been the idea. That has been a constant theme also in this committee.

Mr. MONTOYA. You are actually increasing the contributions into the special organizations of the U.N., the dollar contributions, aren't you?

Mr. CLEVELAND. To these organizations, except for the Congo operation where we have cut it way back and planned to handle most of it bilaterally.

Mr. MONTOYA. Leaving the Congo figure out last year, how much are you in excess over last year in contributions into these voluntary organizations?

Mr. CLEVELAND. Leaving out the Congo?

Mr. MONTOYA. Because I understand the Congo contribution last year was on account of the sending of troops in there and we had to assume most of the burden; is that correct?

Mr. CLEVELAND. That is correct.

Mr. MONTOYA. That is why I am trying to exclude it because it is not a special situation this year.

Mr. CLEVELAND. Speaking of U.N. organizations only.

Mr. MONTOYA. Yes.

Mr. CLEVELAND. The answer to your question would be $5.4 million. In addition there is an increase in the Indus waters which you will be coming to in another connection.

Mr. MONTOYA. What do you mean "5.4," because you are asking for $136,050,000 this year. How much was it last year without the Congo situation?

Mr. CLEVELAND. Without the Congo and the regional programs, such as Indus waters. The comparable figures are $82,550,000 for fiscal year 1963 and $87,950,000 for fiscal year 1964.

DETERMINATION OF U.S. PERCENTAGE CONTRIBUTION TO U.N.

Mr. MONTOYA. You have indicated here that the goal of the United States is to establish a basis of 40-percent contribution.

Mr. CLEVELAND. For certain kinds of programs only.

Mr. MONTOYA. That has been your goal?

Mr. CLEVELAND. Yes, for most of the assessed programs we are way below that; we are in the 30 percent, 20 percent, or sometimes the teens.

Mr. MONTOYA. On voluntary contributions you are 40 percent.

Mr. CLEVELAND. For technical aid, yes.

Mr. MONTOYA. What has made you establish this as a base?

Mr. CLEVELAND. It represents something like a fair share of the gross national product of all of the contributing countries in the world. Actually, on a strictly fair basis our percentage would be somewhat higher than 40 percent.

Mr. MONTOYA. What about on a population basis?

Mr. CLEVELAND. It would be——

Mr. MONTOYA. It would be very low, would it not?

Mr. CLEVELAND. It would be somewhat lower but if you take just the contributing countries, you see——

Mr. MONTOYA. Are you using the gross national product as a criterion more or less?

Mr. CLEVELAND. Yes; it is a good criterion for us to use. Other countries, of course, think you should apply to this situation a progressive taxation formula, that the richer countries should pay comparatively more. We have said, "No, let's make it close to a straight gross national product basis."

RESTRICTIONS ON USE OF U.S. CONTRIBUTIONS TO U.N.

Mr. MONTOYA. With respect to the U.N. special contribution for technical aid and the special fund, I did not get to ask you all the pertinent questions a few moments ago when we went into that but I can still not reconcile in my own mind the thought which you imparted to the effect that when we contribute into this fund and it is used for, say, a nation like Cuba, that we are actually not expending our own dollars in that effort. That is what I thought you had said.

Mr. CLEVELAND. The question of whose money is spent in any particular project is really a question of what services and supplies are

bought. If they hire all Danes, the Danish contribution will get used and ours won't get used. If they hire Americans, they will tend to use ours.

Mr. MONTOYA. Well, then, you are possibly contending that we could disidentify ourselves from any contribution to Cuba by just telling the Russians, "You assume rubles and we will go into another country and spend our dollars," but doesn't that amount to the same thing?

Mr. CLEVELAND. No. I have always taken the line that an international organization ought to be an undifferentiated pot into which all contributors put their money and then they agree on the constitutional arrangements for approving the expenditures from the pot. But there have been suggestions, and that is why this comes up, including a suggestion—in another committee of this House—that we should distinguish in some fashion and tie some kind of a string to our contribution, saying that none of our contribution could be spent for Cuba.

Mr. MONTOYA. What is wrong with that?

Mr. CLEVELAND. Well, because it presents the Secretary General with the problem of whether he is going to get this kind of a string from every country; every country is going to say, "You can only help our friends."

Mr. MONTOYA. What about narrowing it down to this proposition: To make that restriction apply only to those particular nations with which we do not enjoy diplomatic relations?

Mr. CLEVELAND. That still is a political string on a U.N. technical assistance program. The Soviets would probably encourage this because this would tend to break up the U.N. program and that is what, of course, they are always trying to do in one way or another.

Mr. MONTOYA. As a matter of fact, how many nations are there in the U.N. with which we do not enjoy diplomatic relations?

Mr. CLEVELAND. Several.

Mr. MONTOYA. Which ones?

Mr. CLEVELAND. Albania, Outer Mongolia, Cuba.

Mr. MONTOYA. How many nations in the U.N. with which Russia does not have diplomatic relations?

Mr. CLEVELAND. Rather——

Mr. MONTOYA. It would be less than that; would it not?

Mr. CLEVELAND. No. You have the Republic of China that they do not recognize, so there would be several in their case, too.

Mr. MONTOYA. It is about three or four nations both ways; is that right?

Mr. CLEVELAND. Yes. There probably would be a few more. South Vietnam would be another one, which is in the U.N. and not recognized by the Soviets. The Soviets have come right up to the brink of opposing particular projects for Vietnam and the Republic of China.

Mr. MONTOYA. Do we have any projects in Taiwan under U.N. sponsorship?

Mr. CLEVELAND. Oh, yes, indeed. Quite a lot. Vietnam, too.

Mr. MONTOYA. Did we oppose the participation of the U.N. in this Cuban project?

Mr. CLEVELAND. Yes, we did, on economic grounds.

Mr. MONTOYA. Did we vote against it? Did Mr. Hoffman vote against it?

Mr. CLEVELAND. Mr. Hoffman works for the U.N.

Mr. MONTOYA. He is an administrator of this particular——

Mr. CLEVELAND. He is the administrator of the U.N. Special Fund. It was the Governing Council of the Fund which approved the project.

Mr. MONTOYA. What did we do to oppose that, on the record?

Mr. CLEVELAND. We campaigned against it. We made a very vigorous record against it on several different occasions when it came up but we couldn't get even our best European friends to go along with it because they felt that if we once broke the line by tying this kind of political string to the program it was the beginning of the end of having a U.N. program in this field, so we literally did not get any other member of the Governing Board to go with us.

Mr. MONTOYA. Would you have any serious objection to a formula under which if any aid was extended, say to Cuba, that we would reduce next year's voluntary contribution by the proportion of contribution that would in effect go into Cuba through such a project?

Mr. CLEVELAND. That wouldn't present the same kind of constitutional problem at all.

Mr. MONTOYA. That would be all right, wouldn't it?

Mr. CLEVELAND. The amount of money going to Cuba is so small it wouldn't affect our contribution very much either way. But any political string to these appropriations I think would create difficulties between us and our friends in the U.N.

Mr. MONTOYA. I had this in mind, Mr.——

Mr. CLEVELAND. I think that is the most practical one of the various possibilities.

Mr. PASSMAN. Would my distinguished colleague yield?

Mr. MONTOYA. Yes.

Mr. PASSMAN. We spoke earlier today about this being a pot into which we make a 40-percent contribution. We make our contribution with no strings attached; is that correct?

Mr. CLEVELAND. The only string we have on it is the matching, Mr. Chairman.

Mr. PASSMAN. But there are no other strings?

Mr. CLEVELAND. That is right.

Mr. PASSMAN. If we had $74.5 million in the pot, and country X—we shall say Cuba—has an application for $1 million and it is approved that merely reduces the pot to $73.5 million; is that correct?

Mr. CLEVELAND. That is correct.

Mr. PASSMAN. Then if you have a further request, we shall say, from Cuba for $2 million and it is approved that would merely reduce the pot to $71.5 million; is that correct?

Mr. CLEVELAND. It sounds like they are getting an awful lot of money.

Mr. PASSMAN. You know what I am indicating. There is no way that you can unscramble this pot and say specifically that these U.S. dollars will not help Cuba.

Mr. CLEVELAND. Another committee of the House has suggested that we do just that.

Mr. PASSMAN. I am dealing with the present. There has been an allocation made to Cuba and whatever amount they approve, when it is finally disbursed just merely reduces the amount in the pot, does it not?

Mr. CLEVELAND. I think we should regard it as a pot. I agree with you.

Mr. PASSMAN. We make dollar contributions to the U.N. for our part of this fund, do we not?

Mr. CLEVELAND. That is right.

Mr. PASSMAN. Any liquidation of this fund, as it is presently administered, means the liquidation of our 40 percent of dollars, does it not?

Mr. CLEVELAND. Well, only if our kind of money is required for the particular project.

Mr. PASSMAN. It does not make any difference. The pot gradually works itself on down according to the allocation made on the same percentages put it. We do not specifically say, "No American dollars may be used to help this country and none to help that country."

Mr. CLEVELAND. No; we put no such condition on our contribution.

Mr. PASSMAN. No distinction with relation to the countries is made at all if it is approved by the U.N.; is that correct?

Mr. CLEVELAND. That is correct.

Mr. MONTOYA. To follow up what the chairman has asked, assuming that your approach and your analysis would be carried out with respect to Cuba—namely, that our dollars would not be used but that instead possibly rubles would be used, isn't it possible under the present structure of the Special Fund that that agency, the U.N. agency, could use our dollars to buy rubles to pay for Russian technicians? We have no control over that, do we?

Mr. CLEVELAND. The question that has been raised——

Mr. MONTOYA. Just answer my question: Is that possible?

Mr. CLEVELAND. I don't know whether it is constitutionally possible. That is what I was saying, but that we are now——

Mr. MONTOYA. I am not arguing the constitutionality of it. Isn't that practically possible?

Mr. CLEVELAND. It certainly is today; yes. If we tied that specific string presumably they could use our dollars to buy other currencies.

Mr. MONTOYA. We have tied no strings along those lines?

Mr. CLEVELAND. Since we have tied no strings today that certainly is possible. That isn't done as a matter of fact because the problem is they have too many rubles and so forth and not enough dollars. So the transfers don't get made that way.

Mr. MONTOYA. That is all, Mr. Chairman.

Mr. PASSMAN. Mr. Conte?

CHANGE OF U.S. POLICY TO BILATERAL PROGRAM IN THE CONGO

Mr. CONTE. Mr. Cleveland, I am not satisfied with your answer in regard to our change of policy in the Congo. I was there a few years ago and I interviewed quite a few people in the Congo and at that time I said, "Why do we have to funnel all this money to the United Nations? Why can't we do it on a bilateral program?" Because at that

time, as you will recall, the U.N. was in financial trouble and they had to come to the Congress for authorization for U.N. bonds. The purchase of U.N. bonds. I was told in the Congo and by witnesses across this table "We don't want to get into a bilateral program. That is the last thing in the world. We have to keep doing this through the United Nations because we don't want to get tangled in a cold war in the Congo with the Russians. If we start stepping in the Russians will start stepping in. Before you know it we are tangled in a cold war and we bring the Congo into the cold war."

That made a lot of sense. Now all of a sudden you change your policy. You are moving from a multilateral program to a bilateral program.

I am just wondering whether you are doing this because you want to keep the United Nations out of this mess, that you just can't afford to continue on this way, and if you had to continue on this way you would have to come back to the Congress for more money, which would be a very serious thing and it would be very difficult to obtain. And also whether you are getting to the point where under this World Court decision, these countries that have reneged and have not paid their contribution to the United Nations for the Congo fund, such as Russia, France, and any other country, that we are getting to the point now where they are either going to pay up or get out and lose their membership in the United Nations; is that right?

Mr. CLEVELAND. That is right.

Mr. CONTE. Are we trying to avoid that showdown?

Mr. CLEVELAND. These are two different kinds of money. The economic money we are talking about has never been assessed against all the members and was never involved in the Soviet attack on the peacekeeping operation and the article 19 debate and the U.N. bond issue—that whole side of the problem. That all had to do with the Congo military operation, the peacekeeping operation.

Mr. RHODES. Will the gentleman yield?

Mr. CONTE. Yes.

Mr. RHODES. Is that correct, Mr. Secretary? I thought when the U.N. bonds were up for debate on the floor of the House that we were told that if nations did not make payments necessary to retire the bonds, there would be some impingement on the right to vote.

Mr. CLEVELAND. There will indeed. Absolutely. I am just saying that the economic aid, the supporting of the Congolese account, in technical assistance and imports and so forth, has never been financed by assessed funds and it is only the assessed funds that raise this constitutional problem about: If you don't pay, you lose your vote.

VOLUNTARY ASPECT OF U.N. ECONOMIC PROGRAM IN THE CONGO

Mr. CONTE. Let me stop you there. I want to make the record clear: How about the United Nations economic program, is this completely a voluntary program?

Mr. CLEVELAND. It is entirely a voluntary program.

Mr. CONTE. No assessments at all?

Mr. CLEVELAND. No assessments at all.

Now, we found ourselves paying rather more than 80 percent of the economic aid for the Congo. That is to say what we put up turned out to be more than 80 percent of the total contributed through the United Nations on a voluntary basis for economic assistance. This was supportable in an emergency for a very short time when there didn't seem to be any alternative. But once the three secessions had been taken care of by the central government and the U.N. working together—once a central government had come into power which had moderate orientation— once the Soviets, having tried two or three times to intervene, were really thrown out by the Congolese—once the objections to the Belgians coming back in had tapered off because the Congolese didn't resent them so much any more—once the Congo was unified again—then most of the members of the U.N. said to themselves, and so did we, "Maybe we shouldn't be putting up a lot of special money for the Congo. Maybe the Congo ought to be just like other countries and govern itself without not quite so much U.N. presence there."

In addition to that we had a special motive. As long as we continued to fund the program on a voluntary basis through the United Nations, we were likely to have to pay most of the tab. The Belgians were still fighting with the U.N. over various claims and troubles in the Congo. The Germans who were the next biggest potential contributor are not even members of the U.N. and so it is easier for them to work bilaterally than make a contribution to an organization that won't let them in. The British had domestic political reactions to the Katanga issue and they were also a little bit skittish about a U.N. contribution for this particular purpose. So altogether it looked as if the best way to get reasonably large contributions from other countries was to have a kind of consortium, a group of parallel bilateral programs, but also to maintain in the Congo a U.N. technical assistance operation covering the medical and educational and air traffic and some of the other services that the Congolese were not yet prepared to carry on themselves until they train more people. That is why we then reorganized our aid to the Congo, kept the U.N. Congo fund as a straight technical assistance fund—and that is where this $5 million would apply, on a 50-percent matching basis—and put the rest of our proposed assistance for the Congo into the regular African regional program. And it is also provided in that regular regional program that we would try to manage that Congo money so that our share of the total input from all sources wouldn't come out to more than about half. This is the recommendation, as you will recall, that the Clay Committee made, as a special case.

Mr. CONTE. I can see your point. I am not as optimistic as you are with regard to Adoula's government.

Mr. CLEVELAND. I am not optimistic. I am hopeful, but I am not optimistic.

U.N. TROOPS AND CIVILIANS IN THE CONGO

Mr. CONTE. How many United Nations personnel have we pulled out of there since we reverted to this policy?

Mr. CLEVELAND. On the military side, the troops have come down from over 19,000 to about 7,200 or so today.

Mr. CONTE. 7,200 remaining?

Mr. CLEVELAND. And they are coming down below that. They will probably be down to about 6,000 in the next few months. Then the question is, Are we going to keep the U.N. Force in there for a while to help on the internal security side or are we going to pull those troops out and risk a deterioration in the situation? This subject is currently being debated, as you know, in the newspapers and elsewhere.

Mr. CONTE. How many employees have they pulled out of the U.N. from the economic picture?

Mr. CLEVELAND. Well, none, really, net. They still have about 1,200 technicians in there.

Mr. CONTE. Does that include administrative personnel?

Mr. CLEVELAND. Yes, but most of them are really technical people working inside the Congolese Government; teachers, doctors, or whatever.

Mr. CONTE. Does that 1,200 figure take in everyone in any way affected or tied in with the United Nations in the Congo?

Mr. CLEVELAND. That is the civilian operations program.

Mr. CONTE. What else do you have there?

Mr. CLEVELAND. In addition, you have the 7,200 troops plus their headquarters operation, and that is all.

Mr. CONTE. 1,200 is your top figure?

Mr. CLEVELAND. 1,200 is the figure for civilian operations.

ACTION AGAINST COUNTRIES IN ARREARS ON ASSESSMENTS

Mr. CONTE. Coming back to the World Court decision now, are we actually going to enforce that decision by taking away the right to vote of these countries that have not met their assessments in regard to the military programs for the United Nations in the Congo?

Mr. CLEVELAND. Yes. The evidence so far is, faced with that possibility, countries come in and pay up instead.

Mr. CONTE. Let us have a list of those countries that have not met their assessment.

Mr. CLEVELAND. We can put our arrearage table in here.

(The table follows:)

Summary as of June 30, 1963, collections and arrearages for 1962 and prior years of United Nations accounts for the regular budget, Emergency Force and the Congo [1]

Year	Gross assessments	Credits and reductions	Net assessments	Amount received	Percent received	Balance due
United Nations regular budget: [2]						
Calendar year 1961	[3] $69,399,839	$5,321,143	$64,078,696	$63,527,314	99.1	$551,382
Calendar year 1962	74,124,117	7,450,960	66,673,157	61,511,476	92.3	5,161,681
Total balance due						5,713,063
United Nations Emergency Force:						
Calendar year 1957	15,028,988		15,028,988	11,077,188	73.7	3,951,800
Calendar year 1958	25,000,000		25,000,000	17,798,241	71.2	7,201,759
Calendar year 1959	15,205,000	41,226	15,163,774	10,849,800	71.6	4,313,974
Calendar year 1960	20,000,000	3,553,223	16,446,777	11,755,633	71.5	4,691,144
Calendar year 1961	[3] 19,000,000	1,754,991	17,245,009	12,442,254	72.1	4,802,755
January–June 1962	9,750,000	1,467,296	8,282,704	5,909,237	71.3	2,373,467
Total balance due						27,334,899
United Nations Congo account:						
July–December 1960	[4] 48,500,000	3,900,000	44,600,000	28,030,301	62.8	16,569,699
January–October 1961	100,000,000	15,305,596	84,694,404	54,870,802	64.8	29,823,602
November 1961–June 1962	80,000,000	11,457,858	68,542,142	42,929,802	62.6	25,612,340
Total balance due						72,005,641
Total amount due, regular budget, UNEF, and UNOC						105,053,603

[1] Source: United Nations statement on the collection of contributions as at June 30, 1963.

[2] Contributions to the regular budget, prior to 1961, are fully collected.

[3] Includes new members' assessments.

[4] Total costs, including airlift, amounted to $60,000,000.

Balance due, 1962 and prior years, June 30, 1963

[1] United Nations Emergency Force.
[2] United Nations operation in the Congo.

Mr. CLEVELAND. Just before the last General Assembly, the one a couple of months ago, there were 10 countries that were more than 2 years behind in their dues and everyone of them finally came in and paid up.

Mr. CONTE. Do they pay up entirely or do they just pay up to a certain point?

Mr. CLEVELAND. Just enough. One of the Latin American countries paid up just what it needed to pay plus $1.

However, that means every time there is a new assessment they have to pay it in full in order to stay with their nose above water.

The Soviets will be 2 years behind in their dues next year, 1964, if they continue to boycott as they say they will, all peacekeeping operations.

Now, our view is that article 19 is self-enforcing; that is, the President of the General Assembly just doesn't allow anybody in that position to vote. There obviously would be a big row about it and appeals to the Chair and so forth. We obviously will have to go into whatever is the first General Assembly session in 1964, whether it be the regular fall session or a resumed session or a special session in the spring, as we have had for each of several years past. We will have to be sure that we have a solid majority willing to defend the U.N. against this attack on the U.N.'s capacity to act. With a solid majority, a dependable majority in the Assembly the voting situation can be controlled and the Soviet vote can be removed.

Now, our guess is that the Soviets will do as usual. That is to say they will come kicking and screaming and shouting down to the intersection, barreling at top speed on a collision course, shouting for everybody to get out of the way because otherwise the U.N. is going to be ruined. Then, just at the very last psychological moment they will veer off and there won't have to be a collision. But they won't veer until the very last moment and they won't veer then unless they are perfectly sure they would be licked by a majority of the General

Assembly. If they are perfectly sure they will be licked they will drop this—and probably start something else.

Mr. CONTE. Will they try to appeal the ruling of the Chair in re article 19?

Mr. CLEVELAND. Just what procedure they would use I don't know. Undoubtedly they would appeal. If you war game the parliamentary situation, an appeal is already about 4 or 5 steps down the line. There are several steps they could take before that which I won't suggest to them on the record here. They may not have thought of all of them.

DURATION OF U.N. OPERATIONS IN THE CONGO

Mr. CONTE. One more question, Mr. Secretary: How long do you think the United Nations operations will have to continue on in the Congo? Do you have any projection?

Mr. CLEVELAND. We are now discussing with the U.N., and with our people in the Congo, whether the U.N. peacekeeping operation ought to stay there beyond the end of this year. It is only financed now to the end of this year. Some of the U.N. people are inclined to say, "Why don't they solve their own internal problems? Let's stop bleeding the Organization."

On the other hand, a great many African countries, the Congolese themselves, and most of the representatives of countries who are in the Congo think that you might get too many massacres and too much trouble if the internal security effect of those U.N. troops were removed too quickly. I am not ready to say what the administration position will be on that subject because we probably won't really have one for several more weeks while we watch the situation develop in the Congo. On the economic side my guess is that U.N. technical aid would be needed for another 2 or 3 years especially for and training of the Congolese until the Congolese can resort to a sort of normal underdeveloped status whereby their aid will come mostly from bilateral programs and directly from the specialized agencies of the United Nations in the usual way.

Mr. CONTE. Can we suggest the bilateral programs be eliminated at that point or just the U.N.?

Mr. CLEVELAND. As you perhaps know, I went over there for the President and made a survey of just this problem and concluded that this was the sweetest underdeveloped country in the world. If they could just get so they could govern the country they wouldn't have an economic problem. They can produce a surplus of resources and start exporting to other places. But they have got to get so they can govern the country and that means a massive job of leadership training and technical training. That is the kind of thing you can't hurry beyond a certain speed, and do it right. So my projection has been that inside of 5 years—and perhaps sooner if the internal security situation settles down enough—they ought to be off everybody's back. This is unlike most of the countries of the world. This is one that should not be on our back for a long time. They really have the resources.

Mr. PASSMAN. Thank you Mr. Conte.

Thank you, Mr. Cleveland.

21-178—63—pt. 4——54

I believe this concludes that part of the U.N. request for which you are testifying.

INDUS WATERS PROJECT

We have with us Mr. Walter Farr, Jr., who will testify on the Indus waters project.

Mr. Farr's statement is already in the record.

The 1963 program was $30 million; is that correct, sir?

Mr. FARR. The 1963 request was $30 million; that is right.

Mr. PASSMAN. Your estimate for fiscal year 1964 is $43.1 million?

Mr. FARR. That is right.

Mr. PASSMAN. This is a project for which in 1962 the agency requested $16.9 million and the Congress approved that sum in full, but you ended up the year obligating $34.5 million for the project which you succeeded in doing by transferring from the Contingency Fund, the use of deobligated funds and transfers from the development grant program.

Have I stated that situation correctly?

Mr. FARR. I am not sure exactly from what funding categories the transfers were made in 1962. They were transferred from various accounts. I think it was correctly stated in the record last year where the money did come from.

Mr. PASSMAN. You requested $16.9 million but you ended up the year obligating $34.5 million. You requested $30 million for this program in fiscal year 1963; is that correct?

Mr. FARR. That is right, sir.

Mr. PASSMAN. What amount did you obligate for the project in fiscal year 1963?

Mr. FARR. $24.6 million.

Mr. PASSMAN. What happened to the other $5.4 million?

USE OF FISCAL YEAR 1963 FUNDS ALLOCATED TO INDUS FOR CONGO ECONOMIC ASSISTANCE

Mr. FARR. It was not obligated for this purpose. It presumably was used for contributions to other international organizations.

Mr. PASSMAN. Specifically, for what projects?

Mr. FARR. I cannot answer that question.

Mrs. WESTFALL. May I speak to that, Mr. Chairman: The original request for U.N. economic assistance to the Congo was $34.3 million. The total obligation was $39.4 million. The saving on the Indus project went to the Congo.

Mr. PASSMAN. For the Indus waterways you requested $30 million, but you obligated $5.4 million less?

Mrs. WESTFALL. Yes, sir; and $5.1 million was transferred within the contributions to international organizations appropriation.

Mr. PASSMAN. To what project, specifically?

Mrs. WESTFALL. To the program of economic assistance to the Congo, sir.

Mr. PASSMAN. To what accounts, just the fund for the Congo?

Mrs. WESTFALL. The U.N. economic program for the Congo; yes.

Mr. PASSMAN. Did we actually, after making our adjustments last year, provide the full amount that you requested for the Congo?

Mrs. WESTFALL. I believe you appropriated the full amount we requested.

Mr. PASSMAN. If that is true, that was for every program in this appropriation; is that correct?

Mr. TENNANT. That is correct.

Mrs. WESTFALL. That is correct.

Mr. PASSMAN. Why would you not have permitted the $5.1 million to lapse rather than to increase the other programs?

Mrs. WESTFALL. The need for the Congo was greater than had been initially estimated, sir.

Mr. PASSMAN. By what evaluation? It is money we are dealing with, you know. Who made the determination, and when was it made?

Mrs. WESTFALL. Given the achievement of political security that was beginning to occur in the Congo it was worthwhile to move ahead with the Government's plan for economic stabilization.

Mr. PASSMAN. Who made that decision and determination?

Mrs. WESTFALL. I believe it was finally made by the AID Administrator, sir, but I would be happy to get the whole story on that and put it in the record.

Mr. PASSMAN. We wish you would do so.

(The information requested follows:)

JUSTIFICATION FOR INCREASE IN U.S. CONTRIBUTION TO PROGRAM OF U.N. ECONOMIC ASSISTANCE TO CONGO

Actual fiscal year 1963 contributions to U.N. economic assistance programs for the Congo totaled $39,400,000 as compared with $34,300,000 requested in the fiscal year 1963 congressional presentation. The increase of $5,100,000 was required to help meet a critical gap in external import financing which resulted from a shortfall in the level of contributions expected from other countries and a worsening of the economic situation in the Congo. The Congo Government plans to launch a major stabilization effort involving a series of measures to bring Government expenditures and prices under control. In order to assure the success of these measures it was essential, among other things, to provide for an adequate flow of imports this calendar year.

ANTICIPATED ADDITIONAL FISCAL YEAR 1964 NEEDS FOR INDUS PROJECT

Mr. PASSMAN. The estimate for fiscal year 1964 is $43.1 million, which would certainly indicate that now you are asking for an increased amount for this project to offset the amount that you did not need last year. When you found out you did not need it then you allocated it to other programs in the Congo.

I note on page 2 of your statement that you indicate there may be an additional fiscal year 1964 requirement of $5.8 million beyond the estimate and, further, that this additional amount would represent a potential claim on the contingency fund; is that correct?

Mr. FARR. Yes, sir; that is correct.

Mr. PASSMAN. It is disappointing that programs are so loosely worked up and justified, and the actual estimates are so uncertain, that you have this range where it is impossible for the committee to know, the Congress to know, and the taxpayers to know even how much you are giving away on a project of this type.

How do you arrive at these conclusions?

Can you give us some reasons for what you are doing?

Mr. FARR. I can give you some reasons.

Mr. PASSMAN. We wish that you would.

Mr. FARR. The contributions that the U.S. Government makes to the Indus fund are based on a treaty which the United States and other nations and the World Bank signed. That treaty sets forth certain percentages the various countries contribute.

The total amounts which are to be contributed during each year depend upon the amount the World Bank, as administrator of the fund, must actually pay out to contractors who are building the Indus works.

ESTIMATED TOTAL COST OF FUNDING INDUS PROJECT

Mr. PASSMAN. What is the total cost of the project?

Mr. FARR. The total amount that the governments and the Bank have agreed to——

Mr. PASSMAN. What is the total cost of constructing the Indus waterway project?

Mr. FARR. As Mr. Gaud indicated last year, we were then, and still are, in negotiation with the Government of Pakistan to define just what formula we will use and what works we will finance through the Indus fund, and it was in connection with that problem that the representatives of other governments and the World Bank are now meeting.

Mr. PASSMAN. We have been working on it about 2 years. We have not yet determined actually what our costs will be?

Mr. FARR. We said last year we would tell you when we had anything definite. We really do not have anything definite now. I would be happy to tell you where we stand.

Mr. PASSMAN. Can you give us an estimate as to what it is going to cost the American taxpayer to finally meet our commitments?

Mr. FARR. The plan now under consideration would mean that all of the contributing governments, including the World Bank, will not have to contribute more than an additional $— hundred million——

Mr. PASSMAN. Let us talk about the U.S. contribution.

Mr. FARR. The United States——

Mr. PASSMAN. We want the total cost of the project, you understand, but we are primarily interested in AID's contribution to it.

Mr. FARR. Under the treaty, AID, or the U.S. Government, is presently obligated to contribute $177 million in grants.

Mr. PASSMAN. Give us the total.

Mr. FARR. It is a total of $482 million, including all currencies.

Mr. PASSMAN. What percentage is $177 million of the total?

Mr. FARR. The U.S. contribution in all currencies is approximately 54 percent of the total. This is under the treaty.

We now know on the basis of current cost estimates, which include a number of contracts that have already been let so they are firm and other cost estimates which are as firm as one can make them, that the replacement work alone will cost in foreign exchange approximately $275 million more than has been committed under the treaty.

Mr. PASSMAN. I note, on page 2 of your statement, that the amount of the total contribution that the United States might ultimately be called upon to make to the Indus fund is in doubt?

Mr. FARR. Yes.

Mr. PASSMAN. On page 3 you say you will advise this committee promptly if there is any new commitment above the $842 million.

This is fantastic.

Could you give us a general idea of what part we will be called upon to contribute of the additional $— hundred million?

Mr. FARR. I said $315 million.

Mr. PASSMAN. We are still in the field of uncertainty as to developments?

Mr. FARR. Yes.

Mr. PASSMAN. Why could we not get some better estimate before we become involved in a project such as this?

Mr. FARR. The Indus fund agreement was essentially a political agreement to solve a political problem, to prevent a war.

Mr. PASSMAN. It may be a $5 billion problem.

This is tied in with a lot of other things. I am speaking not of just this project, but related projects. We have given a great deal of money to that country.

Mr. FARR. We are contributing substantially.

Mr. RHODES. In your statement you say:

> The development program originally contemplated for Pakistan would cost almost double the $895 million commitment of the World Bank and the contributing governments, including the United States.

Does that mean we will be stuck for our portion of $895 million in addition to the $482 million to which we are already committed?

Mr. FARR. No, sir; it does not mean that.

It means the Pakistanis would like it to mean that, but we do not intend to do that. That is the issue which is under negotiation right now.

FINANCING OF TARBELA DAM

Mr. PASSMAN. Later on you say:

> Negotiations are still underway with the Government of Pakistan toward an agreement upon the final scope of the system of irrigation and power facilities in the Indus Basin which will be financed out of the fund.

What does that statement mean?

Mr. FARR. That means in more popular parlance that the Pakistanis would like us to finance the Tarbela Dam, which is a large dam on the Indus River which was originally contemplated in the works. That dam—just the dam, not any hydroelectric facilities, canals, or anything else—is presently estimated to cost some $780 million in all.

Mr. PASSMAN. In addition to the Indus?

Mr. FARR. That is in addition to another figure. That is in addition to the $895 million, plus the $275 million that I mentioned as being the cost of replacement works above the total contribution. You add to that $780 million for the total cost of the Tarbela Dam, and that is where we get this double figure.

Now, the contributing governments and the Bank have no intention of fully financing the Tarbela Dam out of the Indus fund.

Mr. PASSMAN. Could you give us a general idea what our limitations will be?

Mr. FARR. Yes, sir.

Mr. PASSMAN. Do you have any idea as to whether——

Mr. FARR. I can tell you what we are trying to do now and what this meeting is discussing this afternoon.

The political commitment, if you will——

Mr. PASSMAN. You are discussing this with the Pakistan people, or our own people?

Mr. FARR. With representatives of the United Kingdom, Germany, Canada, Australia, New Zealand, and the World Bank.

Mr. PASSMAN. Today?

Mr. FARR. Starting at 4 this afternoon.

Mr. PASSMAN. You are talking about money that may not be disbursed for 6 or 7 years.

Could you put the grant total together so we will know what the plans of the Pakistanis may be?

Mr. FARR. What we are talking about is a political settlement with the Pakistanis.

Mr. PASSMAN. You have mentioned several figures. I think you would want to show in the record all phases of it. You have the Indus water project.

Mr. FARR. That is what we are talking about.

Mr. PASSMAN. You also have the Tarbela Dam project.

Let us get all the figures you mentioned, including the Tarbela Dam. How much is involved?

Mr. FARR. There are two things you have to separate.

You have to separate how much money is going to be contributed.

ESTIMATED TOTAL COST OF INDUS PROJECT

Mr. PASSMAN. We want the total cost.

Mr. FARR. That is one thing.

Another thing is what the total works will cost, and they are quite different things; they are quite different figures.

Mr. PASSMAN. Let us get the estimated cost of these projects. We have been dealing with this for years—not this project, but how other projects are worked out.

Could we arrive at an estimate of the total cost?

Mr. FARR. If the Indus fund were to finance all of the replacement works—the canals that connect the rivers—the Mangla Dam and the Tarbela Dam, the total cost would be in excess of $2 billion. We do not intend to finance all of this.

Mr. PASSMAN. We hope you do not. We hope the figure will be different from the past. It is my understanding the total cost of the construction program for the Indus water project has almost doubled.

Mr. FARR. Yes; if we financed all the works.

U.S. SHARE OF FINANCING

Mr. RHODES. If you financed them all, what would the U.S. share be?

Mr. FARR. This is pretty "iffy" because we have no intention of doing it.

In the fund the U.S. Government has financed 54 percent of the total cost. However, we have only financed, I believe, 39 percent of the foreign exchange cost.

Mr. PASSMAN. Let us keep it all together now.

Our contribution is about 54 percent?

Mr. FARR. Including rupees.

Mr. PASSMAN. It took dollars to accumulate rupees originally, so we are still dealing with dollars; therefore, it is 54 percent?

Mr. FARR. That is right.

Mr. PASSMAN. We are not willing to charge off these foreign currencies as just paper because it took American dollars to get those rupees, so it is 54 percent. Is that our treaty agreement?

Mr. FARR. Our treaty agreement is in terms of rupees and dollars.

Mr. PASSMAN. For a total of what amount?

Mr. FARR. It works out that we agreed to contribute under the treaty $482 million worth of currencies.

Mr. PASSMAN. Which is 54 percent of the estimate at that time?

Mr. FARR. Which is 54 percent of the then commitment. The commitment and the treaty provided that the nations would contribute $895 million toward the construction of certain works.

Mr. RHODES. Can you break this down between rupees and dollars?

Mr. FARR. Yes; I can.

Of the U.S. contribution, $235 million was in Pakistan rupees, $70 million was in a development loan, and $177 million was in grant contributions. That adds up to $482 million, or 54 percent of the full $895 million.

Since these funds clearly will not pay even for the works to replace the water for irrigation in Pakistan which is being diverted to India, and since the political obligation of all of these governments and of the Bank was to furnish Pakistan with replacement water plus an element of development, the issue is what kind of a political settlement, using money, of course, can the contributing governments and the World Bank make with Pakistan to settle this matter once and for all.

Mr. PASSMAN. Should we not indicate at this point that when we are talking about replacement, we are speaking in terms of replacing the water that normally would go to Pakistan? It has been diverted into India?

Mr. FARR. That is right.

Mr. PASSMAN. That is a commitment on our part of $482 million for just the replacement of what they are losing by diversion.

Now, the second phase would be whether or not you wanted to develop it so that you would increase the water supply for Pakistan?

Mr. FARR. Actually——

Mr. PASSMAN. Would that be the second phase of the project?

INACCURACY OF ORIGINAL COST ESTIMATE

Mr. FARR. I do not believe that is stating it quite right.

The $482 million worth of dollars and Pakistan rupees, which the United States agreed to contribute, was a contribution toward replacement and some development. At that time, back in 1960, the cost estimates which were pretty terrible we will all agree, indicated that this amount of money would pay for the replacement works and, in addition, would pay for some tube wells and a dam on the Indus.

Now, it has turned out that this $895 million will not come anywhere near paying for all this.

Mr. PASSMAN. It may be double?

Mr. FARR. It certainly would be double to do all these things.

Mr. PASSMAN. What would you have if you double the $895 million? What would you have over and above the replacement?

Mr. FARR. The figure is something over $2 billion. It is really more than double if you want to be honest.

It is more than double, really. What you would have——

Mr. PASSMAN. Is this not an awful predicament for a respectable nation, or a group of nations, to get into, when they do not know anything about what it is going to cost or accomplish? Yet we get involved to half a billion dollars. We know now to accomplish what we thought we would accomplish in 1960, that the cost will be doubled, and we are still not getting into the Tarbela project and all the rest.

Mr. FARR. If all Indus fund contributors more than doubled their contributions, there could be built a very substantial dam at Tarbela which would be a very substantial development project in Pakistan.

Mr. PASSMAN. What do we get?

I am speaking about the recipients of the expenditure, if we stop at $895 million, the original figure considered?

Mr. FARR. We would get the replacement works, but only two-thirds finished.

Mr. PASSMAN. This is a terrible mess we have gotten into. What is going to be our position?

Mr. FARR. Our position?

Mr. PASSMAN. What is going to be our position, as we have committed ourselves to $482 million, the U.S. share of the $895 million, which is 54 percent, and we find that the other contributing nations——

TYPE OF U.S. ASSISTANCE

Mr. FARR. They are all making grants. We are the only country making a loan.

Mr. PASSMAN. Is this not the old 40-year, three-quarters of 1 percent credit?

Mr. FARR. That is our loan. The other governments are making grants.

Mr. PASSMAN. Have I made a statement of fact? Is this the type of credit we are making, a 40-year, three-quarters of 1 percent service charge?

Mr. FARR. The loan portion is that kind of a loan.

Mr. PASSMAN. Is the $235 million that type of credit?

Mr. FARR. No, sir. Those are Pakistan rupees.

Mr. PASSMAN. The development credit part is $70 million?

Mr. FARR. That is right.

Mr. PASSMAN. That is no interest, three-quarters of 1 percent service charge, 40-year payout, 10-year grace period?

Mr. FARR. That is right.

Mr. PASSMAN. The $177 million is an outright grant on our part?

Mr. FARR. That is right.

BREAKDOWN OF COMMITMENTS TO INDUS FUND

Mr. PASSMAN. Will you furnish for the record a spread of the other nations, and the amount that they are contributing? Give us a list of those who have pledged the other 46 percent.

Mr. FARR. Yes, sir; I have that right here.

(The information follows:)

Indus Basin Development Fund—Commitments in fund agreement

[In U.S. dollar equivalent]

Contributor	Foreign exchange		Pakistan rupees	Total, all currencies	
	Grant	Loan		Commitment	Percent of total

Source: Indus Basin Development Fund Agreement, progress report by the Administrator for the period July 1, 1962–Dec. 31, 1962.

STATUS OF FUNDING TABELLA DAM

Mr. PASSMAN. What is the present status of the Tarbela Dam project?

(Discussion off the record.)

Mr. FARR. The U.S. Government does not intend that the Indus fund will fully finance the Tarbela Dam.

Mr. PASSMAN. As it stands at this time——

Mr. FARR. As to whether the Tarbela Dam will ever be financed with U.S. money, I cannot say.

U.S. SHARE OF ADDITIONAL COSTS

Mr. PASSMAN. What is the U.S. position on the doubling of the $895 million?

Mr. FARR. We do not intend that the Indus fund be doubled.

Mr. PASSMAN. Have you given any thought as to how much over and above the $482 million will be considered?

Mr. FARR. We have given a great deal of thought to that.

Mr. PASSMAN. Have you gotten far enough so that you can impart that knowledge to the committee?

Mr. FARR. I can.

Mr. PASSMAN. How much?

(Discussion off the record.)

Mr. FARR. We think it is important to the U.S. Government that this matter be settled.

Mr. PASSMAN. I would have a lot of serious discussion before I would reach any figure.

INADEQUACY OF PRESENT FUNDING FOR PROPER PROJECT COMPLETION

Mr. RHODES. If you should happen to enter into such an agreement as this with Pakistan, what sort of an end product would you have? Would you have a project which is operable?

Would you have one which is anywhere near adequate, or would you have partially finished dams and canals?

Mr. FARR. We would not. The plan we are discussing with the World Bank and the other contributing governments is a sensible plan, we think.

Mr. PASSMAN. But you said earlier on the $895 million, that is as far as we can go today? Beyond $895 million, it is something we may get into later?

Mr. FARR. That is right.

Mr. PASSMAN. If you stop at $895 million——

Mr. FARR. You really have nothing.

Mr. PASSMAN. Why did we ever get into that predicament?

We got our money together rather rapidly. You transferred out of the contingency fund to get it up. Now we find that instead of doing the job you intended to do, it will do only half a job.

Mr. FARR. I agree it is an unfortunate situation.

Mr. GARY. It was a political deal.

NATURE OF INDUS FUND AGREEMENT

Is my understanding right on this, it is a treaty?

Mr. FARR. It is a treaty.

Mr. GARY. The administrative branch and the Senate got us into it; did they not? It had to be proposed by the President of the United States and ratified by two-thirds of the Senate; is that correct?

Mr. FARR. Well, I frankly am not sure whether the Indus Development Fund Agreement is a treaty which is ratified by the Senate.

Mr. PASSMAN. I do not think so.

Mr. FARR. I do not think it is.

(Information subsequently supplied follows:)

LEGAL CHARACTER OF INDUS FUND AGREEMENT

The Indus Basin Development Fund Agreement is an executive agreement entered into pursuant to the authority of the Mutual Security Act of 1954, as amended, and did not require Senate consent.

ORIGINAL COST ESTIMATES

Mr. PASSMAN. The AID people had to make the recommendations, and approve the estimate; is that not right?

Mr. FARR. Well, the AID people have never done the cost planning.

Mr. PASSMAN. Who arrived at the cost of $895 million as being the magic figure to take care of replacement?

Mr. FARR. Well——

Mr. PASSMAN. Do you not think we are entitled to know?

Mr. FARR. The Pakistanis and the World Bank did it, but——

Mr. PASSMAN. And the AID people took it that way and they did not go behind it.

Mr. FARR. No. There will not be unfinished dams and unfinished canals, but it will not be possible within that sum of money to contract for all of the canals that are necessary to transport water from the northern rivers down to the southern rivers. Only some of the canals can be financed. The World Bank is in a position where it can let a contract for only one more of the system of link canals. It cannot let the remaining contracts until the contributing governments or somebody comes up with some additional money.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. PASSMAN. If we go to $895 million and stop, no doubt there will be a great deal of dissatisfaction. There would just be rather general turmoil, would there not?

Mr. FARR. That is right.

Mr. PASSMAN. As to why we ever started unless we were going to finish it?

Mr. FARR. That is right.

Mr. PASSMAN. Would you be in position to state to the Pakistanis, "You got us into this mess. We accepted your data as to the cost and we funded on that basis. We were misled and that is it"?

Mr. FARR. I do not think we would be in position to make quite that statement, sir.

Mr. PASSMAN. They got us into it. You said earlier you made the commitment based on a study made by the Pakistanis in connection with the World Bank, did you not?

Mr. FARR. Yes.

Mr. PASSMAN. If these people got us into the mess, why would you not be in position to say something of that nature to them? If we would make this kind of a commitment based upon engineering data they were so sure was correct, and they got you into it, why would you not say, "We have discharged our obligation and we are going to stop"? You have had a look at the money we have given Pakistan. Is it not in excess of $3 billion already?

Mr. FARR. It may be, sir. I do not know the figure.

Mr. GARY. He also said that there were some U.S. engineers mixed up in it.

Mr. FARR. There were.

It would be a very difficult thing for the United States to take the position we would not contribute anything toward the completion of these works.

(Discussion off the record.)

Mr. PASSMAN. I wish you would give us some information now as to what American engineers got involved in this matter.

Mr. FARR. They were engineering firms which were hired by the Pakistan Government.

There were a number of such firms, very good ones.

Mr. PASSMAN. Could you provide us with a list of the firms?

Mr. FARR. I certainly can, sir.

Mr. PASSMAN. How about our own Corps of Engineers?

Mr. FARR. They were not involved; except that the chief engineer working for Pakistan was former head of the Corps of Engineers.

Mr. PASSMAN. What was his name, Wheeler?

Mr. FARR. Wheeler works for the Bank. General Itschner is on contract with the Pakistan Government.

Mr. FARR. No. There will not be unfinished dams and unfinished canals, but it will not be possible within that sum of money to contract for all of the canals that are necessary to transport water from the northern rivers down to the southern rivers. Only some of the canals can be financed. The World Bank is in a position where it can let a contract for only one more of the system of link canals. It cannot let the remaining contracts until the contributing governments or somebody comes up with some additional money.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. PASSMAN. If we go to $895 million and stop, no doubt there will be a great deal of dissatisfaction. There would just be rather general turmoil, would there not?

Mr. FARR. That is right.

Mr. PASSMAN. As to why we ever started unless we were going to finish it?

Mr. FARR. That is right.

Mr. PASSMAN. Would you be in position to state to the Pakistanis, "You got us into this mess. We accepted your data as to the cost and we funded on that basis. We were misled and that is it"?

Mr. FARR. I do not think we would be in position to make quite that statement, sir.

Mr. PASSMAN. They got us into it. You said earlier you made the commitment based on a study made by the Pakistanis in connection with the World Bank, did you not?

Mr. FARR. Yes.

Mr. PASSMAN. If these people got us into the mess, why would you not be in position to say something of that nature to them? If we would make this kind of a commitment based upon engineering data they were so sure was correct, and they got you into it, why would you not say, "We have discharged our obligation and we are going to stop"? You have had a look at the money we have given Pakistan. Is it not in excess of $3 billion already?

Mr. FARR. It may be, sir. I do not know the figure.

Mr. GARY. He also said that there were some U.S. engineers mixed up in it.

Mr. FARR. There were.

It would be a very difficult thing for the United States to take the position we would not contribute anything toward the completion of these works.

(Discussion off the record.)

Mr. PASSMAN. I wish you would give us some information now as to what American engineers got involved in this matter.

Mr. FARR. They were engineering firms which were hired by the Pakistan Government.

There were a number of such firms, very good ones.

Mr. PASSMAN. Could you provide us with a list of the firms?

Mr. FARR. I certainly can, sir.

Mr. PASSMAN. How about our own Corps of Engineers?

Mr. FARR. They were not involved; except that the chief engineer working for Pakistan was former head of the Corps of Engineers.

Mr. PASSMAN. What was his name, Wheeler?

Mr. FARR. Wheeler works for the Bank. General Itschner is on contract with the Pakistan Government.

U.S. FUNDS OBLIGATED

Mr. PASSMAN. This is a pretty good kettle of stew here. How much have we funded already of our total commitment for the three segments? What has been the total amount that we have already obligated?

Mr. FARR. $235 million in all currencies.

Mr. PASSMAN. Could you give us a breakdown of the amount of it that is in rupees and in dollars?

Mr. FARR. The equivalent of $99.1 million in rupees. The entire $70 million loan has been obligated; although it has not all been disbursed.

Mr. PASSMAN. I am more interested in obligating, because you get behind that obligation curtain and we cannot get much of it back.

Mr. FARR. That is right, sir, $65.9 million of the dollar grants have been obligated. To recapitulate, it is $65.9 million grants, $70 million loans, $99.1 million worth of rupees, which I add to $235 million.

Mr. PASSMAN. Are the other members of the consortium meeting their commitments as originally agreed?

Mr. FARR. Yes, sir.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. PASSMAN. Good luck to you.

Mr. FARR. Thank you, sir.

PERCENTAGE OF PROJECT WHICH COULD BE COMPLETED UNDER CURRENT FUNDING

Mr. RHODES. Mr. Farr, could you give us an estimate as to what percentage of the project will be completed with this $895 million, sort of a ballpark guess? Will it be 40 percent, 50 percent, 60 percent, or what?

Mr. FARR. I honestly cannot. You are talking about two things. You are talking about physical facilities and you are talking about money.

Mr. RHODES. Let's put it on the basis of——

Mr. FARR. It depends upon what physical facilities you deem part of the works. That is what we negotiate on.

Mr. RHODES. Let me set the guidelines a little closer. You are supposed to bring into being a certain amount of water as an additional resource for Pakistan. Is that a fair statement?

Mr. FARR. The first thing which we feel, at least politically, obligated to do is to finance the construction of such canals and dams as are necessary to channel water from the northern rivers into the three southern rivers, which are being diverted by India. That we define as replacement works or works to replace the water which is being diverted by India.

Mr. RHODES. Can you do all of that?

Mr. FARR. No, we cannot.

Mr. RHODES. You cannot even do the replacement job for that?

Mr. FARR. No, we cannot.

ADDITIONAL FUNDS NEEDED FOR REPLACEMENT WORKS

Mr. RHODES. How much can you do?

Mr. FARR. In terms of money we presently estimate if an additional

$275 million of foreign exchange is put in, this could be accomplished. Now in addition to that $275 million of foreign exchange there would have to be some additional rupees, which it would be up to the Pakistan Government to contribute, so that you cannot simply add 275 and 895. You have got to add 895, 275 and then some additional rupees. I can tell you how many they are if you want to know.

Mr. RHODES. Please do.

Mr. PASSMAN. That makes it double.

Mr. FARR. Yes, pretty nearly. The total cost of the replacement works, including a special reserve of $28 million which would be necessary to indemnify the Indians at the rate of $9 million a year if the replacement works are not finished by 1970, is approximately $1,300 million.

Mr. PASSMAN. Would you repeat that figure?

Mr. FARR. $1,300 million. You will recall that the present resources pledged to the fund add up to $895 million, which leaves a shortfall in all currencies of approximately $405 million.

Mr. RHODES. So with the money which is projected, $895 million, you can complete about 70 percent of the job of replacement of water?

Mr. FARR. I guess you would say that.

DEVELOPMENTAL ASPECT OF INDUS PROJECT

Mr. RHODES. How much more is involved in this project? Are we supposed to go forward and do more than just replace water?

Mr. FARR. The language of the agreement talks in terms of replacement plus an element of development.

Mr. RHODES. In those words?

Mr. FARR. In those words. An element of development might be interpreted by the Pakistanis as an $800 million dam. We consider that to be much more than an element of development.

Mr. RHODES. A very ambitious interpretation.

Mr. FARR. That is right. We are thinking in terms of an element of development as being ———.

Mr. RHODES. Quite a spread.

Mr. FARR. And this would go a long way toward increasing the height of the Mangla Dam which we are financing, or it could finance a number of other projects.

(Discussion off the record.)

Mr. PASSMAN. Will the gentleman yield?

Mr. RHODES. Yes.

Mr. PASSMAN. They are on the receiving end. They have everything to win and nothing to lose. We do not have to go actually crawling to those people, do we, about this?

Mr. FARR. No.

NEED OF INDIA FOR WATER

Mr. PASSMAN. Are the Indians in need of all the water that they have diverted that would normally go to Pakistan? Is it in excess of their needs or not?

Mr. FARR. Is Arizona in need of all the water that it is getting from the Supreme Court decision?

Mr. PASSMAN. I do not know. What is the answer to my question? Do they need all the water?

Mr. FARR. The answer is that there is a great deal of vary arid land in the neighborhood of these rivers as they rise in India and there are

a great many people who are land hungry in India, so that certainly the Indians need more irrigated land and they need more power.

Mr. PASSMAN. They are not taking something they do not need and cannot use, but they are taking something that nature did not give to them; is that correct?

Mr. FARR. Well, the legal——

Mr. PASSMAN. I am not talking about the legal part. They are diverting water.

Mr. FARR. Rights to water are difficult to resolve in the United States and are even more difficult to resolve when you have two sovereign countries, particularly countries like India and Pakistan, with the pent-up hostility between them.

Mr. PASSMAN. Had it been left up to nature's way of handling it, of course, there would have been more of this water going to Pakistan rather than India because it is a manmade project that diverted it; is it not?

Mr. FARR. Yes.

Mr. RHODES. Off the record.

(Discussion off the record.)

Mr. RHODES. Thank you.

AMERICAN ENGINEERING FIRMS ASSOCIATED WITH INDUS PROJECT

Mr. PASSMAN. Give us some information on the American engineering firms.

Mr. FARR. You want to know the names of the American engineering firms.

Mr. PASSMAN. The name of the American engineering firms that Pakistan employed to develop this project for them. I can understand how AID can get involved, but I think we ought to find out the American engineers who got us into this. I would like to refer to it as a "mess."

Mr. FARR. May I make one observation because I do not like to have aspersions cast on American engineering firms.

Mr. PASSMAN. If they miss it by a hundred percent, I am interested in knowing who they are.

Mr. RHODES. Their own work indicts them. I would not try to defend them if I were you.

Mr. PASSMAN. We want to know who the engineering firms are who say, "Come along, this is it, get your money," and we find they are off 100 percent.

(Information requested follows:)

U.S. ENGINEERING FIRMS PARTICIPATING IN INDUS COST ESTIMATES

The following U.S. engineering firms participated in the preparation of cost estimates of the Indus works before execution of the Indus Treaty:

Harza Engineering Co. International;

Tippetts, Abbott, McCarthy & Stratton; and

Tipton & Kalmbach, Inc.

Mr. PASSMAN. Did AID finance the engineering contracts that the Pakistans employed them for?

Mr. FARR. I can answer that and the answer is "No."

Mr. PASSMAN. At least if they did it was indirectly. You pour $3 billion into a country, and you pay them the dollars, they have to get the dollars somewhere. The engineers did not work for rupees.

Thank you, gentlemen, we shall adjourn until 1 p.m. tomorrow.

TUESDAY, JULY 30, 1963.

LATIN AMERICA

WITNESSES

TEODORO MOSCOSO, ASSISTANT ADMINISTRATOR FOR LATIN AMERICA, AGENCY FOR INTERNATIONAL DEVELOPMENT
STERLING J. COTTRELL, ACTING ASSISTANT SECRETARY OF STATE FOR INTER-AMERICAN AFFAIRS
REUBEN STERNFELD, DEPUTY ADMINISTRATOR FOR DEVELOPMENT PLANNING AND PROGRAM, AID
BARRY PASSETT, PROGRAM OFFICER, LATIN AMERICA, AID
JOSEPH CARWELL, DEPUTY DIRECTOR, OFFICE OF INTER-AMERICAN REGIONAL ECONOMIC AFFAIRS, STATE
HERBERT K. MAY, DEPUTY ASSISTANT SECRETARY OF STATE FOR INTER-AMERICAN AFFAIRS
EDWARD F. TENNANT, CONTROLLER, AID
HARRY ACKERMAN, CONGRESSIONAL LIAISON STAFF, AID
LEIGH M. MILLER, LEGISLATIVE PROGRAMS COORDINATOR, AID
STANLEY B. SCHEINMAN, LEGISLATIVE PROGRAMS COORDINATION STAFF, AID
TOM KILLEFER, U.S. EXECUTIVE DIRECTOR, INTER-AMERICAN DEVELOPMENT BANK
ALEXANDER ROSENSON, DEPUTY U.S. EXECUTIVE DIRECTOR, INTER-AMERICAN DEVELOPMENT BANK

Mr. PASSMAN. The committee will come to order.

We shall be glad to hear at this time from the Honorable Sterling J. Cottrell, Acting Assistant Secretary of State for Inter-American Affairs.

STATEMENT OF ACTING ASSISTANT SECRETARY OF STATE FOR INTER-AMERICAN AFFAIRS

Mr. COTTRELL. Mr. Chairman and members of the subcommittee, I am pleased to have this opportunity to appear before you to support the fiscal year 1964 AID program of the Alliance for Progress. The Alliance for Progress is based on a recognition of fundamental changes in the social, economic, and political fields in Latin America. It helps give form and continuity to those changes. It reflects the goals set forth in the Act of Bogotá and the Charter of Punta del Este, which calls for societies based on freedom and social justice to be achieved through self-help, basic reform, and external cooperation. The funds requested will be used to support self-help effort and increased political stability achieved in substantial agreement with U.S. political objectives.

IMPORTANCE OF ALLIANCE FOR PROGRESS

Our relations with the American Republics in the era of the sixties rests on the Charter of Punta del Este, signed by all of the members of the Organization of American States, except Cuba. It is perhaps more compelling than a treaty—it is a commitment to mutual efforts

freely undertaken by 19 Latin American countries and the United States to carry out social and political improvements, thus adding an essential dimension which was lacking in the good-neighbor policy of the thirties.

President Kennedy has described Latin America as "the most crucial area in the world today." For the Soviets, Latin America is an area offering unusual possibilities. Since the advent of Castro in 1959, Communist subversion in the hemisphere has been intensified, taking the form of infiltration and popular front action.

Castroism has recently cast a shadow of violence and bloodshed across some parts of the continent. The violence of Castroism has stemmed in part from pangs of frustration. Radio attacks and Fidelismo violence constitute honest and unimpeachable testimony to the increasing difficulties met by Communist subversion. Despite Castro's drive to export subversion throughout Latin America his conquests have been small. Indeed there is evidence that for the present he has lost ground even among groups who once looked upon him as a hero. Latin Americans are learning that Castroite terrorism brings them privation and suffering. We have learned that, when a better way opens before them, they will tend to reject violence.

ROLE OF THE ALLIANCE

The Alliance for Progress and all related endeavors perform a double role in this shrinking world. On the one hand they contribute positively to the establishment of a healthy relationship between the United States and our neighbors. On the other hand, it contributes to economic and social growth of the Latin American countries. Changes are never wholly popular. The forward movement of any program must spark controversy and the Alliance is no exception to this rule. Yet differences over tactics cast no doubt on our strategic commitment to achieve the goals of this 10-year effort, called for by President Kennedy in his address of March 13, 1961, on the Alliance for Progress. In this address he stated that:

> Our hemisphere's mission is not yet completed. For our unfulfilled task is to demonstrate to the entire world that man's unsatisfied aspiration for economic progress and social justice can best be achieved by free men working within a framework of democratic institutions.

OBJECTIVES OF THE ALLIANCE

We hear two kinds of criticism of the Alliance for Progress. Some people are troubled by the weakening of old institutions. Others are convinced that change comes far too slowly. Between these two extremes we must be guided by practical and limited goals. Always we work within the climate of a given way of life, cooperating with people, attack specific evils and to reach specific goals. The first objective of the Alliance has been to halt the deterioration of the Latin American economies, and to achive a measure of aggregate economic growth.

Those in this country and in Latin America who complain that the Alliance is too slow should remember that stunted economic growth and political instability cannot be corrected in a few years. Progress is social and political as well as economic.

ACCOMPLISHMENTS OF ALLIANCE

What the Alliance has accomplished thus far is to halt the deterioration of the Latin American economies and to concentrate attention on positive, constructive goals. There are impressive signs of improvement. Estimates of gross national product in 1962 shows an increase of over 4 percent over 1961 levels for the region as a whole, except for Argentina which shows the only decline, one of over 3 percent. Export earnings of the Latin American Republics in 1962 reached record levels and were 6 percent higher than in 1961, despite decreases suffered by Brazil, Guatemala, and Uruguay. The preliminary figures for 1963 show a further upward trend with export prices relatively stable. Increased earnings by most countries stemmed largely from increases in the volume of export sales. Argentina, the Dominican Republic, Haiti, and Nicaragua showed increases in export earnings over 1961 in excess of 20 percent. Ecuador, El Salvador, Mexico, Paraguay, and Peru showed increases ranging from 10 to 20 percent. Most remarkable of all is that export earnings in 1962 were over $1 billion higher than in 1954, when prices of Latin American export commodities were at an all time high. This clearly demonstrates the underlying vigor and dynamism of the Latin American economies.

The growth in GNP in 1962 over 1961 and the increase in export earnings has permitted Latin American countries to remain the best customer for U.S. goods and services. Exports from the United States to these countries reached $3.2 billion in 1962.

A series of measures are now underway further to strengthen Latin American export earnings. Among the most important are the proposed International Coffee Agreement, the IMF program to stabilize export receipts (compensatory financing), the proposal for export financing adopted at the recent Caracas meeting of the Inter-American Development Bank, and a variety of other efforts to reduce restrictions on the import of Latin American products, particularly in European markets.

PROGRESS IN ECONOMIC INTEGRATION AND DEVELOPMENT PROGRAMS

Considerable progress has been made in integrating the Central American Economies which by mid-1966 will have completed the formation of a common market. No area in the world today compares with Central American determination to proceed with full economic integration. As an economic association it provides for the free movement of persons, goods, and capital across natural borders.

As the European Common Market began to take shape, nine South American countries and Mexico adhered to the Treaty of Montevideo of 1960 bringing into being the Latin American free trade area. It is at present a mechanism for conducting reciprocal negotiations for the reduction of tariffs over a 12-year period. At the end of that period, a free trade area should become operative. The creation of regional markets should help break down internal artificial rigidities and stagnation in production. This would provide an incentive for increased investment by domestic and foreign enterpreneurs. As the European experience has shown, once Latin American countries learn to cooperate among themselves, they will be able to compete better in world markets.

With increasing vigor, the Latin American countries both unilaterally and through the various organs of the Inter-American System are forging tools which will help chart the direction of peaceful change through well-defined long- and short-range economic development programs. The practical lesson gained from this activity is it is necessary to involve as many different sectors of society as possible in the formulation of the policies of change. For there is a growing belief in Latin America that until people have a role in economic progress, there will be no economic progress.

STRENGTHENING OF INTERNAL SECURITY AND CONTROL OF COMMUNIST SUBVERSION

We witnessed last October the Soviet-Cuban attempt at nuclear blackmail. This was followed by internal Communist subversion and guerrilla warfare in Peru and Venezuela. The insidious character of this type of warfare has created new requirements for training and equipment for the Latin American military and civilian security forces. Many of the governments of Latin America moving through difficult, formative periods of democracy look to us for help in developing the special capability required to deal with forces of disorder. They must seek out and take into custody loads of arms and bands of men that move clandestinely across their land, sea, and air borders for subversive purposes; must deal effectively with public disorders in cities; and must prevent or control guerrilla outbreaks in rural areas.

Recognizing the threat of Castroism, President Kennedy and the Isthmian Presidents met in San Jose March 18–20, 1963. In accordance with the decisions taken by the Presidents, the ministers of the respective countries responsible for internal security met in Managua, Nicaragua, on April 3–4 to develop common measures to control subversive activities. At that meeting, the ministers agreed to recommend to their governments the taking of steps to: (1) prohibit travel to Cuba of Latin Americans for training in subversion; (2) impede clandestine movement of arms into the Isthmian countries; (3) prevent the introduction of subversive Communist propaganda materials; (4) establish a cooperative system of surveillance to impede clandestine movement of persons, propaganda materials, and arms for subversive purposes; (5) establish organizations in each country to counteract Communist subversion in the isthmus; and (6) to consult further on ways to combat subversion.

On July 3 the Council of the Organization of American States approved the transmission to member governments of the LaValle report containing recommendations to deal with travel to Cuba for (a) training for subversion in Latin America and (b) flow of subversive propaganda from Cuba and (c) the transference of funds to support Castro-Communist subversive activities in the hemisphere. In transmitting this report to member governments, the Council urged that implementation of specific measures be taken as rapidly as possible. The report provides bases for (a) unilateral action in dealing with the Communist subversive threat and (b) cooperation among governments to strengthen unilateral actions.

PUBLIC SAFETY AND CIVIC ACTION PROGRAMS

However, the strengthening of the internal security posture of these forces cannot be considered apart from social and economic development since each contributes to the progress of the other and both are essential to halt Communist ambitions. In developing internal security programs for Latin America, we have found that the civil police forces in many countries want assistance in police administration, training, and operational techniques, and particularly require greater mobility and more adequate communications, largely related to riot control and other threats. Consequently, the public safety program is planned to meet these requirements. Closely allied to, and an integral part of our internal security programs are civic action programs which are designed to contribute to economic and social development by using the valuable skills and resources of the armed forces of the Latin American countries in improving the welfare of the people and contributing to the economic growth of the nation.

POSITIVE ROLE OF LATIN AMERICAN MILITARY

It is most heartening to observe the increasing awareness of the Latin American military of the immense good to be derived by their contribution in the field of civic action. In some countries, they aid the local populace of depressed areas in the construction of school buildings, pure water supplies and access roads; they provide for periodic visits of medical teams to isolated areas to improve health conditions and to advise on methods of improvement in sanitation and prevention of disease; they furnish military inductees with occupational training which will increase their contribution to the national economy after release from service; and in other countries, they contribute to colonization of remote areas by building airstrips, delivering construction materials, and transporting colonists to their destination. Thus, by assisting the peasant or rural dweller to identify himself with the national government and realize that the military representatives have his interest and future in mind, the military in Latin America can and are establishing themselves in the public mind as a constructive and economically responsible element in the national life.

Considerably more emphasis is being given in our programs on training selected Latin American military personnel in our military schools in the United States and the Canal Zone in riot control, counterguerrilla operations and tactics, intelligence and counterintelligence, public information, psychological warfare, and other subjects which will contribute to the maintenance of public order and the support of constitutional governments.

Political democracy is rapidly gaining ground throughout Latin America and the military in recognition of this fact have become defenders of constitutionalism. This year we have seen both in Peru and Argentina the military concerned with constitutional succession and withdrawing from the political scene following the election of a head of state. In Ecuador where a military junta seized power, one of its first acts was to set a time limit within which to hold a democratic election. What the Latin American military appears to have learned is that to govern effectively requires the loyal support of the electorate.

U.S. CONTRIBUTION TO THE ALLIANCE

We are living in a shrinking world with increasing proximity to each other of people of different income, or different political traditions, of different social standards. This increasing proximity has in past eras led to tensions and antagonisms. Fortunately, the U.S. experience has provided a key to the solution of this problem. We have lived by the simple rule that people who work together for common goals and mutual interest achieve a measure of concord. This concord issues from peoples need for each other in economic accomplishment and political stability.

Those in Latin America who minimize the U.S. contribution to the Alliance because it constitutes only one-tenth of the projected financial investment in this "decade of progress" do not minimize the spark that this contribution has inspired. The manner in which the U.S. contribution is utilized, the careful choice of purposes, has the result of bringing about maximum stimulation and at the same time a deeper understanding of the task upon which we have embarked in the Alliance. In requesting AID funds, we are mindful of the responsibility to continue our quest for those directions of effort which will enable the Latin American countries to increase their per capita income, raise their standard of living, improve production methods, build low cost houses, help provide educational opportunities for the people.

In the achievement of these goals lies the most effective force in the building of dynamic societies. In requesting these funds for the Alliance for Progress, we are utilizing economic means to achieve political goals—namely the safeguarding of their political independence without which their security and our security is constantly threatened.

Mr. PASSMAN. Thank you, Mr. Secretary.

We shall now hear from the Honorable Teodoro Moscoso, Assistant Administrator for Latin America, Agency for International Development.

STATEMENT OF U.S. COORDINATOR, ALLIANCE FOR PROGRESS

Mr. MOSCOSO. Mr. Chairman and members of the committee, I am pleased to come before you to discuss the fiscal year 1964 program of the Alliance for Progress. My purpose today is to outline the basis for our request for appropriations of the funds necessary for U.S. participation in the Alliance, and to try to answer your questions.

AID AND THE ALLIANCE

The proposed program for fiscal year 1964 compared with actual authorizations and obligations in fiscal year 1962 and preliminary authorizations and obligations in fiscal year 1963 follows:

[In millions of dollars]

	1962	1963	1964
Development loans	288.7	[1] 342.8	602.0–722.0
Development grants	82.3	[1] 121.5	[2] 105.0
Supporting assistance	107.2	104.4	17.7

[1] Includes bilateral inter-American program for social progress funds.
[2] Includes $11,200,000 for Latin American share of nonregional program expenses.

FISCAL YEAR 1964 REQUEST

The request is made up of new appropriations of $550 million for development loans, $100 million for development grants, and $17.7 million for supporting assistance. In development lending, we foresee loans on the basis of requirements above the $550 million request, within the range of $602 to $722 million. To achieve this level, all the unutilized funds from the past year will be necessary. In addition, the region has programed $5 million of grant fund recoveries for reobligation. This year, we are also requesting an additional $200 million for the Inter-American program for social progress, the program for which the Congress appropriated funds in May 1961. Of this, $195.5 million will go for increased lending authority to the Social Progress Trust Fund, under the trust agreement between the United States and the Inter-American Development Bank. An additional $4.5 million is requested to carry forward special projects of the Organization of American States.

INSTRUMENTS OF U.S. PARTICIPATION IN THE ALLIANCE

The United States participates in the Alliance for Progress through several institutions. Food for peace utilizes our farm surplus in the pursuit of U.S. policy and humanitarian interests. The Export-Import Bank makes hard loans favoring U.S. suppliers. The Peace Corps provides a person-to-person transfer of skills and democratic attitudes. In addition, the international lending agencies continue to assist private enterprise and public infrastructure projects, such as roads, communication systems, and power as well as stabilization programs in Latin America.

ACTIVITIES OF SOCIAL PROGRESS TRUST FUND

The Social Progress Trust Fund supports housing, water supply, land settlement, and higher education activities essential to the success of the Alliance charter goals. The Trust Fund has been a significant force in carrying forward the self-help and multilateral orientation of the Alliance for Progress.

As of June 30, the Trust Fund had made 64 loans which, with technical assistance and administrative costs, amounted to $357 million. Of these loans, $157 million went for housing, $112 million for water supply and sanitation, $67 million for improved land use and settlement, and $13 million for advanced education. Some $8.7 million has gone for technical assistance and administration. As of June 30, the Trust Fund had $37 million left to lend against priority applications amounting to over $300 million. The $37 million is earmarked for loans for which approval is imminent within 60 days. During the life of the Trust Fund, applications in excess of $1 billion have poured in—notwithstanding the fact that, when it became apparent last summer that the Trust Fund could be overcommitted within its first 18 months, a deliberate effort was made to discourage new applications.

AID'S ROLE IN THE ALLIANCE

With the AID's portion of the Alliance funds, we have tried to establish a new mode of operations, a break from the past. Our

emphasis is on a program of building continuing and self-sustaining institutions—school systems, credit institutions for private businessmen and farmers, and many others which are vital elements in our own free society. These institutions are designed to help the Latin American nations move ahead with self-help and reforms, as required under our aid agreements.

The principal tool through which we aim to effect long-run growth is the development loan. Latin America is not an area which merely needs some economic stimulus as provided by the hard loans of the Export-Import Bank and World Bank. Nor are all the countries in a purely preliminary growth stage in which the primary requirement is the basic know-how necessary before major development can begin. Most of Latin America lies between these poles. These nations are taking first steps—planning, stabilization, tax reforms, building of modern institutions—on the path of major evolutionary change. Our aid is marginal but it can provide the impetus for such developmental change.

As an example, let us take a savings and loan system. Technical assistance alone will not suffice to set it up. We may have to provide the seed capital to get it started. Time is needed to lay the groundwork, develop the machinery, and get the operation moving. It will not come about under the requirement of repaying, in 5 or 10 years, funds for a project which will be capable of returning initial capital only after a much longer time.

The development loan or credit is not, in a purely economic sense, as favorable to the United States as a hard loan, but it is what development in Latin America requires. It does mean that upon its fruition the United States can expect both the achievement of central Alliance objectives and the return of U.S. dollars.

INTER-AMERICAN PROGRAM FOR SOCIAL PROGRESS

The loans which the Social Progress Trust Fund has made and the technical assistance given by the Organization of American States have contributed a strong multilateral influence for reform. I cannot overemphasize the significant role which these organizations, working with funds appropriated by Congress for the Inter-American program for social progress, have played in creating the climate for self-help and development which now exists in Latin America.

For example, the Trust Fund's high standards and the IDB's willingness to refuse projects of less than top priority have helped to raise the standards for sound planning and project preparation all over Latin America.

REFORMS ACCOMPLISHED

As pointed out by the Clay Committee, the Alliance is a long-term venture of great scope and complexity, "and the Alliance should not be judged on whether it has accomplished in 2 years what must take much longer." As we look back, however, at our program's operation over the past 2 years we find a great measure of satisfaction.

Major fiscal reform programs are underway in 11 countries: Argentina, Bolivia, Brazil, Colombia, Chile, Costa Rica, Dominican Republic, El Salvador, Mexico, Panama, and Venezuela. Seven

other countries have improved their tax systems and administration or have fiscal reform legislation pending.

Venezuela, the Dominican Republic, Colombia and two States in Brazil have initiated major land reform programs. Other, more limited land reform programs, are underway in Chile, Panama, Uruguay, and Central America. Trust Fund and AID efforts in farm credit, resettlement, and increasing production are helping move the reform effort forward.

Seven Latin American countries have submitted development plans to the OAS Panel of Experts: Colombia, Chile, Bolivia, Mexico, Venezuela, Honduras, and Panama. Brazil, Ecuador, Peru, and others are expected to submit plans shortly.

There are self-help housing programs in Argentina, Bolivia, Colombia, Costa Rica, Dominican Republic, Ecuador, El Salvador, Guatemala, Honduras, Panama, Peru, and Venezuela. Of the 162,000 housing units financed under Social Progress Trust Fund programs, over 40 percent will be built under aided self-help and mutual aid systems, where families participate directly in the construction of their homes. Savings and loan associations have been or are being established in Argentina, Chile, Dominican Republic, Ecuador, El Salvador, Guatemala, Panama, Peru, and Venezuela.

Private development banks have been established or are in the process of being established in seven countries: Bolivia, Brazil, Honduras, Panama, Colombia, Dominican Republic, and Ecuador. Other intermediate credit institutions for relending to small- and medium-sized private firms have been established in Peru, Mexico, and Chile. Investment guarantee agreements are in force between the United States and 17 countries.

ALLIANCE BASED ON MUTUAL CONFIDENCE

Our experience has shown us that, in order to meet the self-help and reform requirements of the Alliance, and in order to capture the imagination and confidence of the Latin American people, (1) we must be prepared to refuse to commit or to spend unless we are convinced that it will be in our national interest and (2) we must be prepared to offer U.S. assistance whenever a Latin American nation initiates the social and economic changes we are encouraging.

We have made our request for funds on our very best estimates, country-by-country, on what will be needed to fulfill the goals of the Alliance and our strategy for each country over the coming year. These estimates are based on the most careful analysis of each country's plans and prospects by U.S. country teams in the field, staff here in Washington, and in some cases through evaluation of national efforts by the OAS Panel of Experts or the World Bank.

The Alliance is based on mutual confidence. When this confidence is called into question, the Communists and other opponents of the Alliance are quick to jump on the entire concept of the Alliance and create those crises of confidence which lead to capital flight, political instability, and further disillusionment for the people of Latin America. Whether we fully utilize the funds requested will in the last analysis depend on Latin American performance. But if the United States is to enter into an undertaking, we must exercise leadership:

we must show our confidence, and we must have behind us the wherewithal to make the undertaking a success, provided the requisite conditions are met.

It should not be surprising that large amounts of our fiscal year 1964 program are planned for countries plagued by major political problems. If Latin America is to move from stagnation and instability to economic progress and political stability, the United States cannot turn its back on countries which are facing such problems. For example, Brazil is currently in the midst of a struggle to undertake difficult economic and financial measures designed to combat inflation. If our economic assistance is to be part of our total foreign policy to strengthen the forces of freedom and stability, we cannot sit back. We must meet Brazil's requests for assistance—if and as Brazil lives up to the Alliance's objectives of stabilization and growth.

Our aid is a great deal more than a banking venture, however. Through aid, we extend a hand to those fighting for common goals, a hand which must be extended firmly the more intense that struggle becomes. The hand has several fingers: the hemispheric multilateral institutions, such as the Social Progress Trust Fund and the OAS, are actively engaged in the struggle with us.

MAJOR PROGRAMS IN 1964

Major programs for fiscal year 1964 are as follows:

BRAZIL

In Brazil, the Alliance focus is on continued growth within a stabilized economy—vital to the solution of the major economic and political problems. The bulk of our development loan assistance, and that of other U.S. and international agencies, will be concentrated in fiscal year 1964 on the development effort. AID strategy is to provide development lending both on a project and a program basis. In addition, the United States has joined with the Government of Brazil in a series of special programs for the northeast where Castro Communists are concentrating their efforts. The United States will continue its assistance to improve the living conditions in seriously depressed communities, improve the human and economic resource base, and help improve land use and increase the food supply. The Trust Fund is helping Brazil's major effort to provide water and sewerage facilities, particularly in its great urban centers.

ARGENTINA

Argentina is coming out of a period of political and fiscal chaos. Throughout that period, Argentina remained firmly on the side of the United States and the Alliance in international affairs. Elections promised by the military after last year's coup have been held. The prospects for forward movement in this potentially rich country are good. The United States will assist in Argentina's attempt to increase farm exports by an average annual rate of 10 percent over the next 5 years. The Argentines will bear the bulk of the burden themselves. AID expects to help the Argentines work toward this goal by considering loans for agricultural credit and rural development.

The Trust Fund has a major housing development program in operation. This program will help to provide visible evidence of progress under the Alliance while the stabilization program takes hold.

COLOMBIA

Colombia's continued success in meeting Alliance goals depends on her ability to mobilize increasing amounts of domestic resources for development. Much progress has been achieved. Financial reforms, including devaluation, have been undertaken. The stable political situation and incentives to new private industry have contributed to a high investment level. The United States is playing a key role in the formation of an international consultative group, under the leadership of the World Bank, to provide the external financing called for in the Colombian development program. It is expected that the IBRD, the IDB, and DAC countries will be major participants. AID has been particularly active in helping Colombia to establish or expand intermediate credit institutions in industry, agriculture, and housing. This effort will continue in fiscal year 1964. The Trust Fund is helping to build housing for 80,000 people and to provide water and sewerage for 4 million.

CHILE

Chile provides a similar potential for accelerated self-help and progress toward Allinace goals. The Government of Chile has a strong general reform orientation—beginning with the politically courageous financial revaluation of last fall and extending to land, tax, and public administration reform efforts. The United States is supporting Chile's stabilization and development efforts by strengthening internal credit and financial institutions. The focus for 1964 is on improved public administration, private sector growth, rural improvement and education. The World Bank and the IDB are also expected to participate heavily in Chile's development program. The Trust Fund has major programs underway in housing, water, agriculture, and higher education.

Other major Alliance efforts will take place in Peru and Central America.

PERU

Peru's return to constitutional government offers great promise for the fulfillment of Alliance goals there. The U.S. program is designed to help the Peruvians move forward in tax reform, public administration and planning; and development of the depressed southern mountain areas.

CENTRAL AMERICA

Achievement of economic growth in Central America will depend both on the performance of the individual countries and on regional economic integration. Accordingly AID is providing some grant and loan assistance to national development programs, even as new assistance is shifted to the development of regional institutions: The Central American Bank for Economic Integration, a regional transportation program, and the creation of other facilities promoting Central American integration.

PRIVATE INVESTMENT

Economic assistance in fiscal year 1964 will continue to strengthen the vital role of the private sector. We recognize that, as the Clay Committee pointed out, public actions are often the keys to business confidence. Since the Latin American's themselves are financing 80 percent of Alliance investment, over $8 billion last year, this confidence must be nurtured. Public actions cover a whole gamut of monetary, fiscal, and investment decisions. To strengthen private enterprise and build confidence, we have actively supported stabilization and exchange reforms. Our experience in Colombia, Chile, and other major Latin American countries shows that less inflation means increased private investment. The financial reforms underway in several of the major countries are already helping to abate capital flight and to increase confidence in the business community.

GROWTH OF CREDIT INSTITUTIONS

In addition to our effort to help create conditions of stability in which free enterprise can flourish, AID and the IDB are moving directly to stimulate the growth of credit institutions which will have a long-range multiplier effect on productive investment in Latin America. Loans to agricultural development banks, industrial banks, and savings and loan associations are reaching the farmer, the small businessmen, and the homeowner directly. To be sure that these groups are helped and not burdened by such credit, we insist that the rates of relending be carefully controlled. They provide a means for those who, although eligible in the past, have been unable to gain credit from commercial lending sources. The new institutions help to create local savings, expand the tax base, and build confidence and entrepreneurial spirit among a new group of investors.

STEPS TAKEN TO ENCOURAGE U.S. PRIVATE INVESTMENT IN LATIN AMERICA

We have also taken steps to encourage U.S. private investment in Latin America such as the expanded use of investment guarantees. There is $260 million worth of investment guarantees active in Latin America today. We are promoting joint ventures, housing guarantees, investment surveys and local currency Cooley loans. The President is proposing a 30-percent tax credit for investment in less developed areas.

While a "wait and see" attitude has been present in many quarters, U.S. business firms are not fleeing Latin America. Certainly, in manufacturing there is a new inflow of U.S. capital. A $10 million assembly plant for one of Detroit's top automobile manufacturers opened in Venezuela this year. The Chase Manhattan Bank has invested in buying into banks in Brazil and Venezuela, opened new branches in the Caribbean, and generally expanded its activities in the region. As David Rockefeller pointed out in a speech in Mexico City the other day, many major U.S. industrialists are "bullish" about the investment future in Latin America. New net direct investment in manufacturing was over $100 million in 1962, and total investment, including reinvested earnings, depletion and depreciation allowances, was close to a billion dollars.

As I reported to you last year, we are continuing to encourage the participation of private U.S. organizations and individuals in the Alliance—labor groups, cooperatives, farm organizations, universities, business committees, and the like. For example, the American Institute for Free Labor Development has initiated a vital labor leader training program, is setting up a series of free trade union centers in Latin America, and is bolstering local union activities in social development fields.

U.S. ADMINISTRATION

We can also report progress in the solution of our own problems of administration and policy. Coordination between AID, other U.S. agencies, and the international institutions has improved. Coordination with the Inter-American Development Bank has been extremely close as our two new organizations have learned from each other. The DAC nations increased their long-term official and private capital flow to Latin America to some $300 million in calendar year 1962, a 50-percent increase over 1961. And we in AID have been able to focus our development effort more sharply; 75 percent of our development lending is programed for Brazil, Argentina, Colombia, Chile, and Central America. No AID development lending is programed for Venezuela this year. This nation has reached a point where she can, with technical assistance to strengthen her human resources and long-term loans from international banking institutions, continue to carry forward her development program from more conventional lending sources. We have terminated technical assistance activities in British Honduras and Surinam and closed out our AID missions. In Haiti, where it appears impossible to use economic assistance to reach U.S. objectives, we have cut off our development aid.

CONCLUSION

The Alliance is gaining speed. In some countries and in some cases, when self-help measures and performance on commitments have not been forthcoming, we have withheld our assistance. But across the board, in general economic progress and in self-help, the countries of Latin America have commenced a major new chapter in their 400-year history. The Alliance has brought into being 140,000 new houses and 8,000 new classrooms, it is supplementing the diets of one out of every four schoolchildren in the region. The Inter-American Development Bank, the OAS, and other regional institutions have provided great impetus for progress and development. We cannot let this process of social and economic change slacken.

Above all, there is a new spirit of solidarity abroad in Latin America. It is based on mutual confidence, under the Alliance for Progress. Above the disagreements and frictions that we read about from day to day—and that are natural in a continent in ferment—there was unity when it counted, last October, in the Cuban crisis. While the world watched this most serious postwar crisis with bated breath, the hemisphere republics stood as one.

Let us not forget that the Alliance for Progress is the framework within which we can anchor and institutionalize this basic unity of our republics in the continuing struggle for the preservation of the essential values of our free society.

Mr. PASSMAN. Thank you, Mr. Moscoso, for your comprehensive statement.

The committee will take a very brief recess to respond to the House rollcall.

(Brief recess.)

IMPORTANCE OF SUCCESS FOR THE ALLIANCE FOR PROGRESS

Mr. PASSMAN. The committee will come to order.

Let me say that I am thoroughly convinced of the importance of making the Alliance for Progress workable and successful.

I am also thoroughly convinced, regardless of the shortcomings in the program and the fact that funds far in excess of the needs for the program are being requested, that Mr. Moscoso is trying to do a good job.

Mr. FORD. Off the record.

(Discussion off the record.)

SPEEDUP OF AID TO PERU

Mr. PASSMAN. I would like to insert in the record a newspaper article headed "Peru President Sworn, Asks Aid Speedup." The article goes on to state:

LIMA, PERU, July 29 (AP).—American-educated Fernando Belaunde Terry was sworn in as President of Peru yesterday and called for a speedup in aid from the U.S.-sponsored Alliance for Progress.

(The article referred to follows:)

PERU PRESIDENT SWORN, ASKS AID SPEEDUP

LIMA, PERU, July 29.—American-educated Fernando Belaunde Terry was sworn in as President of Peru yesterday and called for a speedup in aid from the U.S.-sponsored Alliance for Progress.

The 51-year-old architect, whose inauguration ended more than a year of military rule, told a joint session of Congress he was grateful for the Alliance for Progress but that it must overcome certain faults.

"Otherwise there will continue to hang over Latin America the threats of discord and violence which must be banished from the continent," he said.

Mr. Belaunde criticized the requirement of detailed studies before projects are approved for Alliance aid. There might not always be time for such studies, he said.

Mr. Belaunde said prices for raw materials in Latin America are "ridiculously low" and must be raised to stamp out poverty.

"The times should be over in which prices are cut to the extent that men can be sacrificed in order to produce raw materials," he said.

Mr. Belaunde, embarking on a 6-year term as Peru's 68th President, was cheered by the crowd in the gallery as he entered the Chamber of Deputies.

Gen. Nicholas Lopez Lindley, leader of the military junta which seized power last July to prevent Victor Raul Haya de la Torre from winning the presidency, said the junta had kept its promise to turn over the Government to freely elected civilian leaders.

In the June election, Mr. Belaunde was high man and Mr. Haya de la Torre ran second.

COMPARISON OF FISCAL YEAR 1963 APPROPRIATION AND FISCAL YEAR 1964 BUDGET

Mr. PASSMAN. This program must work for Latin America and we must work together to see that it works.

I believe that in fiscal 1963 you had a request for $425 million for the Alliance for Progress development credits and $100 million for development grants, making a total of $525 million. Is that correct?

Mr. Moscoso. That is the correct appropriation.

Mr. PASSMAN. Could you tell us how much below that figure your 1964 request is? Since you did not need all the money we gave you last year, we thought maybe you had made adjustments.

Mr. Moscoso. The request is $550 million for development loans.

Mr. PASSMAN. Let us talk about the original budget request now. Is it down or up over last year?

Mr. Moscoso. It is above last year's.

Mr. PASSMAN. What amount are you requesting for the Alliance for Progress for fiscal year 1964?

Mr. Moscoso. $550 million for development credits.

Mr. PASSMAN. Is that the original budget request?

Mr. Moscoso. No.

Mr. PASSMAN. Let us deal with the budget request.

Mr. Moscoso. $600 million.

Mr. PASSMAN. The original budget estimate was $667 million, was it not?

Mr. STERNFELD. $600 million was the original budget estimate. It was amended down to $550 million.

Mr. FORD. Amended when and on what basis?

Mr. PASSMAN. I repeat, $667,700,000 was the original budget estimate; was it not?

Mr. STERNFELD. Just for development credits the original request printed in the President's budget message was $600 million in new appropriations. This was amended down to $550 million when it was estimated that we would have a carryover larger than originally estimated in the budget.

Mr. PASSMAN. I think you are mistaken and I think you want the record to show the facts. Your actual request was $667,700,000, and I refer you to page 11 of your own justifications. Let us either accept that as being the original budget estimate or let us cut it down.

Mr. Moscoso. This is supporting assistance?

Mr. PASSMAN. Development credits and supporting assistance.

Mr. Moscoso. $667 million is right.

Mr. PASSMAN. Is it $667,700,000?

Mr. Moscoso. If you include——

Mr. PASSMAN. The Social Progress Trust Fund?

Mr. Moscoso. $200 million.

Mr. PASSMAN. So the original budget estimate was $667,700,000?

Mr. Moscoso. That is right.

Mr. PASSMAN. So the increase is actually $342,700,000 over the fiscal 1963 appropriation?

Mr. Moscoso. Over the request?

Mr. PASSMAN. No; over the appropriation.

Mr. STERNFELD. Over the appropriation, $332 million.

Mr. PASSMAN. Is it not $342,700,000? And subsequently the President reduced or amended the budget request; did he not?

Mr. STERNFELD. No. This is the amended request, the figures you have before you.

Mr. FORD. On page 11?

Mr. STERNFELD. On page 11.

Mr. PASSMAN. The one in January was about $50 million higher; was it not?

Mr. MOSCOSO. Mr. Chairman, the comparison of these two figures would not be fair unless we mentioned in the year before we did not ask any funds for a program separate and apart from the program we are asking funds for now. We did not ask any funds for the social progress trust fund. If you were to add to the $525 million the $200 million available under the social progress trust fund, you will find it is $725 million.

Mr. PASSMAN. What we have to do is take your request for 1 year against your request the following year, because every year new programs are given birth.

Mr. MOSCOSO. But these are not new programs. The Social Progress Trust Fund is an old program.

Mr. PASSMAN. But if you exclude that fund you are still $142 million higher than fiscal 1963.

UNLIQUIDATED FUNDS AVAILABLE FOR LATIN AMERICA—ALL SOURCES

Could you tell us the amount of unliquidated funds to the credit of Latin American countries, all 16 spigots?

Mr. STERNFELD. Do you want gross for the World Bank——

Mr. PASSMAN. We are talking about U.S. funds, all spigots but not the World Bank. Of course we should include IDA.

Mr. MOSCOSO. May I give you the figure? The Alliance loan or credit, $510 million.

Mr. PASSMAN. Give the total.

Mr. MOSCOSO. For economic assistance, $995,702,000.

Mr. PASSMAN. That is economic assistance. Let us get the other spigots.

Mr. MOSCOSO. Supporting assistance, $71,387,000.

Military assistance, $81,377,000.

The grand total is $1,148,466,000.

Mr. PASSMAN. That sum does not include Public Law 480?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. Can you give us the amount of Public Law 480, unliquidated?

Mr. MOSCOSO. We have the figures on the currencies.

Mr. PASSMAN. We want to deal with the unliquidated credits to see what the total available funds are.

Mr. MOSCOSO. $124 million total for Latin America up to December 1962.

Mr. PASSMAN. Now, have you included any of the banks, such as the Inter-American Development Bank?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. Could you give us that unliquidated credit?

Mr. MOSCOSO. $241,300,000 plus $100,700,000, a total of $342 million on loans made through the ordinary capital and Fund for Special Operations of the Inter-American Development Bank.

Mr. PASSMAN. So according to those data, and not picking up any of the several other spigots, you have $1,614,466,000 in unliquidated funds to the credit of all Latin American programs with which you deal?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. But this does not include IDA?

Mr. MOSCOSO. No.

Mr. PASSMAN. What do you have in IDA now?

Mr. MOSCOSO. $60.8 million.

Mr. PASSMAN. How about the Export-Import Bank, unliquidated?

Mr. MOSCOSO. May I give you the World Bank?

Mr. PASSMAN. Not the World Bank. Let us go to our own money agencies. What is the Export-Import Bank unliquidated?

Mr. MOSCOSO. $388 million.

Mr. PASSMAN. That is a total of $2,063,266,000.

Mr. STERNFELD. Mr. Chairman, I think we gave you a figure on IDB which includes non-U.S. funds.

Mr. PASSMAN. How much of the $60.8 million would be non-U.S. funds?

At least this much is available in the pipeline for disbursement in future years, with the exception of whatever amount of non-U.S. funds is in IDB?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. That is still a lot of money and I am sure you want to put all the figures together, the same as I do.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Mr. Director, did any countries, territories, offices, or other units receive any economic assistance from the United States for the first time in fiscal 1963 in your area?

Mr. MOSCOSO. New countries?

Mr. PASSMAN. Or territories or offices or other units?

Mr. MOSCOSO. No, sir; no new program in any of these countries.

NEW PROGRAMS IN FISCAL YEAR 1963

Mr. PASSMAN. The question is, Did any countries, territories, possessions, units, or offices receive any economic assistance from the United States in 1963 that had not been receiving aid in prior years?

Mr. MOSCOSO. The only thing I can remember is the Caribbean Commission that received about $110,000, I believe. That is the only thing I can think of.

REGIONAL OFFICE FOR CENTRAL AMERICA AND PANAMA

Mr. PASSMAN. What about ROCAP?

Mr. STERNFELD. That was in existence last year.

Mr. PASSMAN. Did you justify funds for both of the items last year?

Mr. FORD. What is ROCAP?

Mr. MOSCOSO. Regional Office for Central America and Panama. This is an attempt to try to assist the Central American countries in integrating their facilities and becoming one single trading area.

Mr. PASSMAN. Can you tell us when you justified this item and the page of the hearings?

Mr. MOSCOSO. On page 12 of last year's presentation book under "Proposed fiscal 1963 program" you will find Central American region, $4,500,000, last year.

Mr. STERNFELD. And we discussed this item before the committee, Mr. Chairman.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. MOSCOSO. Mr. Chairman, on July 25, last year, on page 43 of the hearings, you will find near the bottom of the page an explanation of the proposed economic integration of Central America, and I mentioned there the establishment of the regional group.

Mr. PASSMAN. Page 1 of the justifications indicates you propose to transfer $10 million from the Alliance for Progress grants to supporting assistance in fiscal 1963. Did this transfer occur?

Mr. STERNFELD. Yes, sir.

Mr. MOSCOSO. It did occur; yes, sir.

DEVELOPMENT GRANT TOTAL FOR 1963

Mr. PASSMAN. What was your final Alliance for Progress development grant total for fiscal 1963?

Mr. MOSCOSO. $121,500,000.

INVESTMENT GUARANTEE AGREEMENTS IN LATIN AMERICA

Mr. PASSMAN. Does the United States have an investment guarantee with each country or territory which is scheduled to receive economic assistance in fiscal 1964?

Mr. MOSCOSO. We do have, except with Brazil and Mexico. We have a partial agreement with three countries, and we have agreements with the rest of them.

Mr. PASSMAN. Partial agreements?

Mr. MOSCOSO. Yes, in the sense that they do not provide the same coverage as the others.

Mr. PASSMAN. Is there a question of these governments not being willing to enter into agreements, or is it that you have not had time to negotiate the final agreements?

Mr. MOSCOSO. I would say, Mr. Chairman, it is probably the latter; that we have not perhaps devoted as much time as we should to convince these countries of the desirability of making these agreements.

Mr. PASSMAN. Do they need any convincing to be honest and fair with us?

Mr. MOSCOSO. Yes, sir; they do, because we have to take into consideration, Mr. Chairman, that there is a considerable amount of nationalism which makes some of the countries in Latin America pretty much the same as Canada and Australia—they are a little bit leery of too much of the means of production being owned by one single country.

Mr. PASSMAN. Would you, Mr. Director, tell us your understanding of the investment guarantee agreements?

Mr. MOSCOSO. We have three types of guarantees.

Mr. PASSMAN. Let us take the most comprehensive one.

Mr. MOSCOSO. The most comprehensive is the extended risk guarantee, in which we cover any risk, but cover only about 75 percent of whatever risk there is.

Mr. PASSMAN. What are you covering them against?

Mr. MOSCOSO. We also have specific risk guarantees which cover them against war, expropriation, revolution, insurrection, or lack of convertibility of the currency.

Mr. PASSMAN. Devaluation of the currency, any manipulation other than what could be termed a formal depreciation. Is that spelled out? You could have a fluctuation of 2 or 3 percent over a period of years.

Mr. MOSCOSO. It is spelled out in the agreement.

Mr. PASSMAN. Why would they object to entering into an agreement as applied to expropriation?

Mr. MOSCOSO. We have agreements on convertibility with all countries except Brazil and Mexico.

Mr. PASSMAN. Have you a stipulation, saying "If your currency should lose 2 or 3 percent in purchasing power over a period of 5 years, the guarantee would apply," or does it have to be some planned——

Mr. MOSCOSO. There is a stipulation in the agreement.

Mr. PASSMAN. Do you remember what it may be?

Mr. MOSCOSO. No, sir; I do not.

Mr. PASSMAN. Why would any nation object to entering into an agreement that it would not expropriate the properties of foreign investors?

Mr. MOSCOSO. The expropriation agreements are in force in all countries except Brazil, Mexico, Chile, and Peru.

Mr. PASSMAN. Why would they object to entering into such agreements?

Mr. MOSCOSO. Some countries will object because there is a substantial ownership of some of their public utilities by foreign companies, and these Latin American countries feel that as they grow they should be able to operate their own public utilities. As you know, Mr. Chairman, right here in the United States it is possible at times for the States——

Mr. PASSMAN. I do not know of any property we ever expropriated, do you, unless it was some adjustment for freezing accounts?

Mr. MOSCOSO. Yes; there have been.

Mr. PASSMAN. Have we actually expropriated, just for pure meanness, foreign investments?

Mr. MOSCOSO. No.

COMAP REPORT ON INVESTMENT IN LATIN AMERICA

Mr. PASSMAN. Here is what I led up to:

U.S. INVESTORS REPORTED SHUNNING LATIN AMERICA

Investors are shunning Latin America because risks are too great and earnings too low, according to J. Peter Grace, an adviser to the Kennedy administration on the Alliance for Progress.

The investment climate is worse now than ever, Mr. Grace told a news conference yesterday, warning that the Alliance cannot stimulate Latin American economic development without substantial help from private capital.

This item is from the Evening Star, Washington, D.C., for Wednesday, April 10, 1963.

Mr. MOSCOSO. I agree with the last part of the statement.

Mr. PASSMAN. What is erroneous about the rest of it, that investors are shunning Latin America? This is serious business, and we shall have to call an ace an ace if we are ever to help these people. You agree to that, do you not?

Mr. Moscoso. Oh, yes; of course.

Mr. PASSMAN. You read the article, I am sure.

Mr. Moscoso. Yes, sir; in the first place, Mr. Chairman, this is a report which was not exactly agreed upon by all the members of the COMAP committee.

Mr. PASSMAN. But the majority approved the report; did they not?

Mr. Moscoso. There was so much to-do in the press, I never got to know whether any vote had been taken on this thing. The important thing is that a very substantial group of business people thought this was Mr. Grace's opinion. In other instances, that was not exactly the case. We have a great deal of information contrary to Mr. Grace's opinion that the investment climate is worsening.

CUMULATIVE U.S. AID TO BRAZIL

Mr. PASSMAN. Incidentally, how much have we given Brazil, which so far has not entered into this agreement? Could you give us the total amount of aid to this country?

Mr. Moscoso. Yes.

Mr. PASSMAN. Include all spigots.

Mr. Moscoso. Economic——

Mr. PASSMAN. Give us the total.

Mr. Moscoso. $1,736 million since 1946.

Mr. PASSMAN. Through when?

Mr. Moscoso. 1962.

Mr. PASSMAN. How about 1963?

Mr. Moscoso. May I say, Mr. Chairman, that they have already repaid $756 million of that, $791 million including interest.

Mr. PASSMAN. In local currency?

Mr. Moscoso. No, sir; in dollars.

Mr. PASSMAN. All right, the net is $1 billion that we have given. Why do they object to entering into this investment guarantee agreement?

Mr. Moscoso. Mr. Chairman, if it was a gift——

Mr. PASSMAN. A lot of it is a disguised grant, labeled development loans, and even my good friend, the economist from New York over here, called this thing by its right name, development credits.

Mr. Controller, what has been the total to Brazil?

Mr. TENNANT. $1,955 million through 1962. That includes military, Public Law 480, economic, and Exim.

Mr. Moscoso. I did not mention military. That would be added to that.

ADVISABILITY OF UNIFORM INVESTMENT GUARANTEE AGREEMENT

Mr. PASSMAN. I am just wondering if we could not have a uniform investors' guarantee contract and say: "This is it." We have never been accused of being unfair. We are generous. We want to help our neighbors. What if we just said: "This is the contract. We want to help you. We will help you. We will encourage private capital to come in. But it requires this type of contract."

Mr. Moscoso. Mr. Chairman, I think nothing would please some of the extreme leftist elements in the congresses of some of the Latin

American countries more than to have something like this happen. This would really put the economies of these countries into a tailspin.

Mr. PASSMAN. I do not know why, if they are only guaranteeing us that they will not steal from us or expropriate, legal stealing. We shall take a brief recess.

(Brief recess.)

Mr. PASSMAN. We have the reputation of being fair, generous, considerate, and helpful, and there is no reason in the world why we should not have a uniform contract. Then there would not be any question about these people coming in. When you are wishy-washy and they know they can continue getting aid without such a contract, why would they not operate on such a basis? That is human nature.

Mr. MOSCOSO. Mr. Chairman, I am not a lawyer, but I have tried to get into this quite deeply because I was just as concerned as you are, why. It so happens the Constitution of each country varies. Most of these agreements require that the United States be able to take certain positions in case there is a default and we have to make good on one of these guarantees. For instance, some countries have constitutions which do not allow foreign companies to own property in their countries.

Mr. PASSMAN. If they have such types of constitutions, then why do you not just stay out until they have a constitution and meet it?

Mr. MOSCOSO. The difficulty, Mr. Chairman, is that it does not sound too outlandish for a country to have in its constitution a prohibition against a foreign company's owning property within the country.

Mr. PASSMAN. I am not asking these people to go beyond reason, but you said earlier that the reason this thing had been held up was that you had not had time to negotiate.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. You would not have to negotiate if you had a fixed document and said: "This is it. Take it and read it and see how you like it. If you are not in, you are not in, that's all." There would not be any bickering.

Mr. MOSCOSO. I wish it were that easy, Mr. Chairman.

Mr. PASSMAN. It is that easy if we just stop appeasing people and saying: "We have some money to give you, and we would like to do it on our basis, but if we cannot give it to you on our basis, we will do it on yours. How much, please?"

Mr. MOSCOSO. The trouble is that we are dealing with the private sector of the United States. In many instances they have markets which they want to protect. They want to go in there and manufacture and not let a foreign company preempt the market. They want us actually to come to terms with these people and work out these agreements. If we had——

Mr. PASSMAN. You indicated that you had such guarantees in all the countries but two or three or four.

Mr. MOSCOSO. That is right. We are getting to it now.

Mr. PASSMAN. Of course, this goes around the world. There are nations which have not yet actually worked out their constitutions. They know what is going on over here. If people are able to get aid without this kind of guarantee, in all probability they will insist on the same kind treatment, but that is enough as far as I am concerned.

I note you have proposed programs for British Guiana, Jamaica, and Trinidad for fiscal 1964. Are these units of government members of the Alliance for Progress?

Mr. Moscoso. No, they are not, Mr. Chairman. They are part of the Western Hemisphere, but they are not——

Mr. PASSMAN. Sure they are, just the same as Louisiana is in the Western Hemisphere, but that does not answer my question.

Mr. Moscoso. No; they are not.

Mr. PASSMAN. Thank you. Is each of them an independent nation now?

Mr. Moscoso. Jamaica and Trinidad are independent nations, of those three.

Mr. PASSMAN. Which ones are not independent nations?

Mr. Moscoso. Two are independent nations. Jamaica and Trinidad are now members of the U.N. and of the IBRD.

Mr. PASSMAN. Let us get the answer.

Mr. Moscoso. British Guiana is not an independent nation.

Mr. PASSMAN. Is that the only one?

Mr. Moscoso. That is the only one.

Mr. PASSMAN. Is British Guiana a possession of some other nation?

Mr. Moscoso. British Guiana——

Mr. PASSMAN. Is a possession or territory——

Mr. Moscoso. Of Great Britain.

Mr. PASSMAN. How much aid do you have requested for British Guiana for fiscal 1964?

Mr. Moscoso. $1,500,000.

Mr. PASSMAN. You know we are today in so much serious trouble with our gold reserves and our international balance-of-payments situation, and it is getting worse. And we are now borrowing money directly from some of the European nations. I wonder if we are trying to borrow money from the United Kingdom?

Mr. Moscoso. I would not know, Mr. Chairman.

Mr. PASSMAN. Do you have to get the United Kingdom's permission before you can start one of these aid programs in one of their territories or possessions?

Mr. Moscoso. I do not know the history.

(Off the record.)

Mr. PASSMAN. If you do not have the answer, some of the supporting witnesses may answer. Do you have to get the permission of the country of which they are a territory before you can give them aid?

Mr. Moscoso. I am told that we do have.

Mr. PASSMAN. Would we not look silly if we went to Great Britain and said, "We want to borrow some dollars that you have," if you have them, "to deal in commerce so we can give your territory down in Latin America some aid."

What useful purpose does it serve for this country to start aid programs in territories and possessions of these old countries such as France and Great Britain? Is not the obligation first that of what we call the metropole?

Mr. Moscoso. Yes, sir. In the case of British Guiana, as you know, Britain has proposed a constitution, and the granting of independence to British Guiana.

Mr. PASSMAN. I know, but that has not happened yet. That is like trying to figure out whether it will be a boy or girl before it happens. You can do a pretty good job of guessing.

Mr. MOSCOSO. I see the chairman's point.

NUMBER OF NATIONS RECEIVING U.S. AID

Mr. PASSMAN. You do know, of course, Mr. Director, that for fiscal 1964 we have an aid program planned for 95 nations and 4 possessions. That is the latest count. There may have been some more brought in since we were given that information.

Would it not cause you a little concern to think that out of 112 nations of the world, this thing has gotten so wild and woolly that in fiscal 1964—forgetting about those we had in earlier years that are out now, and there are a few of those which you can count on two hands and have some fingers left—you have a program for 95 nations and 4 territories? Does that fact worry you a little?

Mr. MOSCOSO. It would, because I would like to be sure that I know that I was getting something out of it. I think the United States is getting something out of it.

Mr. PASSMAN. I never said you are not possibly getting something out of it, but sometimes it is quite difficult to ascertain what it is.

This country has a public debt that exceeds, by $24 billion, the combined public debts of all the other nations of the world. We do not have sufficient gold to meet the demands, if they should be made, for even half what we owe, subject to call if other countries exercised that right.

If you include what it requires to support our monetary system, then you only have $3.5 billion in gold to pay off $25 billion, mathematically. Would that situation not warrant some consideration before we fool around and get in every nation of the world with an aid program?

Mr. MOSCOSO. Mr. Chairman, the national security of the United States is involved, and it is obviously desirable for the United States to have a program if it thinks that this is going to be to its benefit.

Mr. PASSMAN. I would agree with you if we could ever envision that our money reservoir is of the same dimensions as the Pacific Ocean and all you have to do is just tap it and start drawing out, and you have an inexhaustible supply of funds, but that is not true. We have to borrow money now from future generations, and there is no assurance we can ever pay it back.

I wonder why we do not use a little more common sense. We are in Communist nations with aid. We are in dictatorships. We are in neutralist nations. We are just as easy to make as the loosest one you ever met.

PHASING OUT OF U.S. AID TO BRITISH HONDURAS

Mr. MOSCOSO. Mr. Chairman, I want to state that I had taken two or three positions which have given me a considerable amount of satisfaction because I think it goes to show that we do not do these things unless there is a good purpose to be served.

For instance, British Honduras is going to be given independence, has been offered independence by the United Kingdom, and will be an independent nation.

Mr. PASSMAN. How many AID people have we there now?

Mr. MOSCOSO. We have closed what we had there. That is one of the comments I wished to make.

AID TO BRITISH GUIANA

Now, in the case of British Guiana, we have a problem which is well known by anybody who reads the newspapers, and I am sure the chairman knows it.

Mr. PASSMAN. Could you not get Great Britain alarmed over this situation?

Mr. MOSCOSO. ———.

Mr. PASSMAN. Why do you not let them take care of it? But, do you not know that the prospering nations such as Great Britain, France, and Italy, which have had phenomenal recovery, will not come in as long as we pick up their tabs? Why do you not turn one loose and see what they will do?

Mr. MOSCOSO. Mr. Chairman, the question is ———.

Mr. PASSMAN. ———.

Mr. MOSCOSO. ———.

Mr. PASSMAN. You are not selling the British, the French, and the Italians that short, are you?

How firm is the estimate for the British territory, British Guiana, which seems to be on the verge of going Communist, if it has not already done so?

Mr. MOSCOSO. This is primarily a technical assistance program.

Mr. PASSMAN. It is technical to the extent of $1,500,000.

Mr. MOSCOSO. $1,500,000.

Mr. PASSMAN. That is a lot of money. How much have we given this territory in the past?

Mr. MOSCOSO. We have given them $4.3 million through fiscal year 1963.

CLASSIFICATION OF INFORMATION

Mr. MINSHALL. Mr. Director, I have directed a similar line of questions to other regional directors. On page 81 of your justifications, you have a shaded or gray zone which means it is classified and not available for public consumption. It is marked "Confidential."

Why is this material on page 81 marked "Confidential"? About 90 percent of it is so marked. Half of it you can read in your daily newspaper.

Mr. MOSCOSO. This is a sensitive area.

Mr. MINSHALL. Why is it sensitive?

Mr. MOSCOSO. Take the third paragraph:

(Off the record.)

Mr. MINSHALL. Now let us look at the next column. Quoting from this same page:

According to the U.S. economic planning team, the rate of growth * * *.

You discuss the rate of growth. What is classified about the rate of growth?

Mr. MOSCOSO. I really do not see it.

Mr. MINSHALL. I could point out numerous instances. Maybe some of this should be classified, but by and large, most of this material is overclassified.

Mr. Moscoso. I could not agree with you more, Congressman. I do not see it as a classified matter.

Mr. MINSHALL. There are many other items like this. I do not want to take the committee's time now to point them out. I hope next time, before you bring the bill to this committee, you will go over this yourself and find out why they have made the classifications they have.

Mr. Moscoso. I will make a note of it and see that instructions are given to the peope who are responsible for this.

Mr. MINSHALL. They are gray-shade happy here, whatever you want to call it.

Mr. PASSMAN. In the same connection, page 81, to which I think you referred, ———.

They are practically to the other philosophy, but we believe we can buy them back to our side?

Mr. Moscoso. May I ——

Mr. PASSMAN. You may say anything you wish.

USEFULNESS OF ECONOMIC ASSISTANCE TO PREVENT SUBVERSION

Mr. Moscoso. I am grateful to have this opportunity.

I personally think that, properly used, economic assistance, with the reforms we require to be made in order to get it, is one of the ways of preventing outside forces from subverting democratically elected governments.

Mr. PASSMAN. What outside forces?

Mr. Moscoso. The Soviet bloc.

Mr. PASSMAN. If those people are inclined to go Communist, if they lean in that direction——

Mr. Moscoso. We should not push them.

Mr. PASSMAN. Certainly, do not push them. But do you have to give away the wealth of unborn generations, Mr. Director? You are trying to buy them away from following a philosophy that they obviously subscribe to.

Mr. Moscoso. Mr. Chairman, I hate to differ with you, but it so happens that I have had some personal experience with——

Mr. PASSMAN. Where?

Mr. Moscoso. I come from a part of the United States where, if we had not had an economic development program, there would have been a really difficult problem.

Mr. PASSMAN. Where was that place?

Mr. Moscoso. In Puerto Rico, with a net income per capita of $121 per year in 1940.

Mr. PASSMAN. It all depends on what you can buy with $121. I know Puerto Rico had a weak economy, but I could tell you stories of what many of us have had to endure in our lives, including myself, and we never thought about going Communist, we never thought about the Government giving us a handout. All we wanted was an opportunity.

ASSISTANCE TO BRITISH GUIANA

Mr. MINSHALL. Before you leave British Guiana, Mr. Chairman, I would like to ask one question.

How many people are there in the AID mission there?

Mr. STERNFELD. Eleven technicians.

Mr. MINSHALL. You are going to demonstrate to the people, and I quote:

through a small, well-placed technical assistance program, that the United States continues to maintain an interest in their social and economic well-being.

Describe this small, well-placed technical assistance program which costs $1.5 million.

Mr. MOSCOSO. It is right here, Mr. Minshall.

Mr. MINSHALL. Paraphrase that for us in capsule form at this point in the record.

Mr. MOSCOSO. To improve agricultural institutions and services to farmers; transportation, to conduct preliminary studies for the development of roads in the area; health and sanitation, programs to combat yellow fever and to eradicate filariasis.

Mr. MINSHALL. The total cost is $1.5 million and eleven people are in charge of these programs?

Mr. MOSCOSO. Eleven technicians.

Mr. MINSHALL. That is all I have, thank you.

SUSPENSION OF AID TO HAITI

Mr. PASSMAN. On Haiti, the original budget request, or estimate, was $1,700,000 in supporting assistance. That is grant aid for fiscal year 1964.

Is this estimate still firm, in view of the fact that our Government has suspended aid to Haiti?

Mr. MOSCOSO. Sir, the only program we have there right now at this moment is this humanitarian program——

Mr. PASSMAN. How about the $1,700,000? Do you still have the budget request in?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. How much do you have on hand unliquidated to the credit of Haiti at this time?

Mr. MOSCOSO. May I say why we have this program?

Mr. PASSMAN. Let me get this answer first.

I know malaria eradication is important.

Mr. MOSCOSO. We have Santo Domingo right next door.

Mr. PASSMAN. Let us get right down and discuss facts. How much do you have unliquidated to the credit of Haiti?

Mr. TENNANT. $9.5 million was our estimate of unexpended. I believe the actual unliquidated figure would be slightly under $5 million.

Mr. PASSMAN. In all spigots?

Mr. TENNANT. Yes, sir; military and economic.

Mr. MOSCOSO. It has all been shut off.

Mr. PASSMAN. How much have you deobligated from Haiti since the President reinaugurated himself?

Mr. MOSCOSO. This is another term.

Mr. PASSMAN. Since he elected himself to another term. You have deobligated $4.4 million?

Mr. STERNFELD. Yes; $4.4 million of supporting assistance and $200,000 of development grants.

Mr. PASSMAN. From what projects and funds did you deobligate this amount?

Mr. MOSCOSO. We do not have the information here. We will be very glad to supply it for the record, Mr. Chairman.

(The information supplied follows:)

Haiti—Deobligations of prior-year funds during fiscal year 1963

Project No.	Description	Amount deobligated
		Thousands
	Supporting assistance:	
521-A-12-AC	Roads, south peninsula	$334
521-A-14-AB	Rural credit	200
521-A-19-AA	Agricultural production	2,243
521-A-19-AA	Agricultural production (Artibonite Valley)	1
521-W-31-AF	Municipal street repair	2
521-W-31-AE	Port-au-Prince, Cayes Road	6
521-P-51-AA	Malaria eradication	13
521-W-52-AK	Water distribution construction	69
621-N-67-AB	Adult literacy	98
521-N-69-AA	Assistance to rural education	1,343
521-Q-75-AA	Public administration	54
621-W-76-AL	Haitian-American Development Organization, Central Office	50
521-Z-99-AA	Technical support	11
	Total, supporting assistance	4.424
	Development grant:	
521-A-12-AC	Assistance to public works department	2
521-W-12-AI	Cooperative service in public works	1
521-A-19-AA	Technical assistance in agriculture (Artibonite Valley)	7
521-W-19-AI	Cooperative service in agriculture	44
521-W-59-AA	Technical assistance in health and sanitation	16
521-W-59-AB	Cooperative service in health and sanitation	29
521-X-69-BB	Technical assistance in education	20
521-X-71-BC	Assistance, traffic control	1
521-W-99-AD	Poté Colé housing project	7
521-Z-99-AA	Technical support	2
521-Q-75-AA	Public administration	62
	Total, development grant	191
	Grand total	4.615

Mr. PASSMAN. How about the development credit for the airport in Haiti?

Mr. MOSCOSO. That has been suspended.

Mr. PASSMAN. I am not talking about suspended. Let us not get the word "suspension" mixed up with the amount deobligated, that you took out and used somewhere else.

Mr. MOSCOSO. No, that has not been deobligated.

Mr. PASSMAN. Why has it not been deobligated?

Mr. MOSCOSO. It has been suspended.

Mr. PASSMAN. You are talking about funds that we have suspended and not actually diverted to other purposes.

Mr. MOSCOSO. This has been deobligated.

Mr. STERNFELD. The $4.4 million, Mr. Chairman, was deobligations of supporting assistance funds which was reported to the committee in connection with the report on the use of deobligated money. We refused that $4.4 million on projects which had been earlier presented to the committee.

INCREASE IN FISCAL YEAR 1963 TRINIDAD PROGRAM

Mr. PASSMAN. You deobligated here and spent it and increased programs in Trinidad. Now you are coming in and asking for some of the money to be put back into the pipeline?

Mr. MOSCOSO. No. The deobligated funds which were used in the Trinidad program were used for projects which were presented.

Mr. PASSMAN. I did not say they were not presented, but you supplemented the original allocation to the same amount that you deobligated from Haiti. Is that a statement of fact?

Mr. STERNFELD. The program was increased by that amount.

Mr. PASSMAN. Is it a statement of fact?

Mr. MOSCOSO. You are right.

Mr. PASSMAN. There was a supplement to the original allocation?

Mr. MOSCOSO. In the case of Trinidad, yes.

PAYMENT TO DOMINICAN REPUBLIC FROM CONTINGENCY FUND

Mr. PASSMAN. Last year the committee had some discussion with you regarding the possibility and feasibility of using $22 million out of the fiscal 1963 contingency fund to reimburse the Dominican Republic for $22 million on their sugar quota. As you will recall, you and the chairman of this subcommittee had some correspondence dealing with this matter, and which finally ended up suggesting that you seek an appropriate authorization for this purpose.

How was this particular problem finally resolved?

Mr. MOSCOSO. Mr. Chairman, as you recall, there was a sugar bill at that time which was being considered by the Congress, and no resolution had as yet been made with regard to this matter. The question of time is important in this. There was no possible way that we could know in what manner this thing was going to be resolved.

The $22 million had become one of the significant political issues that had been taken up in the Dominican political campaign.

The decision was taken to utilize contingency funds to make available for developmental programs in the Dominican Republic this amount of money.

Mr. PASSMAN. Even after agreeing—I believe that you did—there should be a specific authorization, they used the contingency fund to give these people $22 million?

Mr. MOSCOSO. We thought——

Mr. PASSMAN. I am just asking the question.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. What happened to the court cases?

Mr. MOSCOSO. Those court cases, I understand, were withdrawn.

Mr. PASSMAN. Was that done as soon as we gave them the money?

Mr. MOSCOSO. No; I do not recall when it was done.

Mr. PASSMAN. Let us find out what date they were withdrawn, because I thought we agreed that there should be legislation, and you asked for specific authorization, did you not? When and where and how and at what level did they call that litigation off?

Mr. MOSCOSO. I can get that.

(The information follows:)

DOMINICAN REPUBLIC LEGAL ACTION

The Government of the Dominican Repubic's suit for return of the sugar fees was dismissed in February 1963, on petition of the GODR. The suit was dismissed with prejudice, which means that it cannot be reinstated. This action occurred under the Council of State Government, prior to the inauguration of President Bosch. The $22,750,000 grant agreement with the Dominican Republic was signed on March 12, after the inauguration of the new Government.

Mr. PASSMAN. I think they are taking us everywhere. I realize that this thing is as loose as can be but it looks as if occasionally we could keep our word to each other on something upon which we agree.

Last year a witness said specifically about another program, "Before we do anything or spend any money, we will come back and discuss it with you." They did so this year after they had spent $1,638,000 in inaugurating a $50 million program.

Have we given the Dominicans the $22 million? Has it been allocated?

Mr. MOSCOSO. It has been made available to them through the letter of credit system for U.S. procurement.

AID TO DOMINICAN REPUBLIC SINCE FALL OF TRUJILLO

Mr. PASSMAN. Will you tell us the total amount of our commitments to the Dominican Republic since this new regime came into power?

Mr. MOSCOSO. The new regime that come to power in January?

Mr. PASSMAN. It does not make any difference as long as you keep it within the meaning of the new regime or, we shall say, since Trujillo was assassinated.

Mr. MOSCOSO. $55.6 million.

Mr. PASSMAN. How many spigots have you put together there?

Mr. MOSCOSO. AID sources.

Mr. PASSMAN. How long?

Mr. MOSCOSO. Since the assassination of Trujillo.

May 30, 1961.

Mr. PASSMAN. In just 2 years we have committed ourselves to $55,600,000. If you had just given them $35,600,000 and said the other will be forthcoming when the court has handed down its decision, do you think we would have lost them?

Mr. MOSCOSO. Mr. Chairman, it is one of those things—unless it is lost, you never know for sure it would have been lost.

Mr. PASSMAN. Do you think they would have been any closer to us if you had made it $44 million rather than $22 million?

Mr. MOSCOSO. A political assessment was made by people who are trained in those things, and the political——

Mr. PASSMAN. This was a political judgment?

Mr. MOSCOSO. That is right.

These funds were not put in anybody's hands. These funds were used for projects for which we established a certain degree of supervision.

Mr. PASSMAN. If you send groceries to my house, it is reasonable to assume that I am going to eat out of the same groceries; is that not right?

Mr. MOSCOSO. That——

PAYMENT TO DOMINICAN REPUBLIC DURING PENDING COURT CASE

Mr. PASSMAN. I thought we had an agreement that it was proper that you get an authorization. This thing was pending in the courts. Now you come back this year and tell us, "No, we did not go through with the authorization. We gave them the $22 million. Then they withdrew the suits." You did not even permit the courts to decide the issues.

Mr. MOSCOSO. Mr. Chairman, at that time we thought that, in the preparation of the Sugar Act, there would be legislation inserted, and it was not possible because that Sugar Act was one of the most difficult pieces of legislation.

Mr. PASSMAN. You had something important pending, waiting for a court decision. Then you give the people the $22 million that you are in court to decide whether or not they had a legal claim to it.

After you gave them the $22 million, it is obvious then that the court would not hand down an opinion.

Anyway, I thought we concurred that we were pursuing it on that basis.

PROPOSED FISCAL YEAR 1964 ASSISTANCE TO DOMINICAN REPUBLIC

What amount do you have proposed for the Dominican Republic for fiscal 1964, all 16 spigots?

Mr. MOSCOSO. $———, of which $——— would be supporting assistance. Development lending is also contemplated.

Mr. PASSMAN. We are in accord, it was a political consideration by which we gave them the $22 million out of the contingency fund?

Mr. MOSCOSO. Yes; $2.5 million in grants and $——— in supporting assistance is the specific 1964 request, plus loans.

Mr. PASSMAN. Supporting assistance is grants, also, is it not?

Mr. MOSCOSO. Grants.

Mr. PASSMAN. It either is or is not. Is it a grant?

Mr. MOSCOSO. These will be grants.

Mr. PASSMAN. Is there any Public Law 480 aid in there?

Mr. MOSCOSO. $——— programed for next year.

Mr. PASSMAN. Let us put it all together. Also the military.

Mr. MOSCOSO. $———.

Mr. PASSMAN. What is the total?

Mr. MOSCOSO. $———.

Mr. PASSMAN. I read here:

> $22,750,000 has been programed to the Dominican Republic for urgently needed assistance for diversification of its economy which had been adversely affected by loss of income from sugar production and export. Contingency funds were used for such a cash grant to meet the demands upon its economy.

If it was a cash grant, it is budgetary support; is it not?

Mr. MOSCOSO. Yes; out of the contingency fund.

Mr. PASSMAN. It is budgetary support, though.

Mr. MOSCOSO. Mr. Chairman, I will tell you this is one of the finest pages of Latin American history written by the United States; the fact that we did what we did.

Mr. PASSMAN. You say it is a good investment?

Mr. MOSCOSO. Yes, sir.

We supported the dictatorship there for 31 years, Mr. Chairman.

CONTINGENCY FUND PAYMENT TO DOMINICAN REPUBLIC BASED ON POLITICAL CONSIDERATIONS

Mr. PASSMAN. If this regime turns into a dictatorship, we will still support them. It does not make any difference. Dictatorships get it just as freely as any others. However, I am just a little bit peeved about the fact that practically every day we uncover things where

the committee had an understanding that certain things would happen, and we find later that it happened, but we were not told about it or that it was done in a different way, as in this matter with the Dominican Republic.

Mr. Moscoso. I want to see we do have a complete record.

The impression one might get, and I do not think it is intended, Mr. Chairman, is that we do these things without rhyme or reason, without considering the interests of the United States, et cetera. I think we should give an opportunity to my colleagues——

Mr. PASSMAN. We are going to hear from them in future days. However, we shall get along with these money questions.

You have already said this other matter was on a political basis. You could not make it any plainer. It was budgetary support. You could not make that any plainer.

I know I made a statement of fact that you said we should have an authorization. We expected an authorization. We felt you would not give it away. Then you come along later and say that, based upon political considerations, we will give them $22,750,000 out of the contingency fund into their budget as a cash grant.

Mr. Moscoso. We have a democratically elected non-Communist government——

Mr. PASSMAN. Off the record.

(Discussion held off the record.)

SECTION 202(B) COMMITMENTS

Mr. PASSMAN. Last year you indicated a possibility of the United States making a section 202(b) commitment to Colombia and possibly to Chile. Did either of these possibilities materialize during the fiscal year?

Mr. Moscoso. No.

U.S. AID TO EDUCATION IN LATIN AMERICA

Mr. PASSMAN. Page 32 indicates that you have $27,143,000 proposed for the development grants in the education sector. In addition to this estimate, how much did you anticipate would be made available under the development credit appropriation for capital construction?

Mr. Moscoso. Including everything, including training and——

Mr. PASSMAN. Everything in the education sector.

Mr. Moscoso. Over $100 million in all economic assistance for education. We can't give you the exact figure.

Mr. PASSMAN. Around $100 million. That is in the field of education?

Mr. Moscoso. Yes, sir.

Mr. PASSMAN. Do you have any hospitals or any hospital programs, either capital investments or grants for training, maintenance, and so on?

Mr. Moscoso. I don't recall any hospitals, Mr. Chairman.

Mr. PASSMAN. Or facilities in connection with hospitals?

Mr. Moscoso. Equipment?

Mr. PASSMAN. Yes.

Mr. Moscoso. We have some mobile health units operating in Central America. These are jeeps equipped——

Mr. PASSMAN. We shall take a short break to enable me to answer the phone.

(Discussion held off the record.)

Mr. MONTOYA. Mr. Chairman, was the previous questioning to elicit how much capital expenditures had been made and the answer was $100 million?

Mr. PASSMAN. Off the record.

(Discussion held off the record.)

Mr. PASSMAN. We were talking about both segments of the educational program—development credits and the development grants. Put the two together and it is $100 million in Latin American for fiscal year 1964.

Is that correct?

Mr. MOSCOSO. That is the estimate.

Mr. PASSMAN. It could go higher?

Mr. MOSCOSO. Or lower.

Mr. PASSMAN. How does this proposal for fiscal year 1964 aid to education program compare with the fiscal year 1963 program, all segments of it, for Latin America?

Mr. MOSCOSO. This is about the same, Mr. Chairman.

Mr. PASSMAN. As the curtain has been drawn on fiscal year 1963, can you give us the exact amount spent in this field?

Mr. MOSCOSO. May we supply that for the record, Mr. Chairman?

Mr. PASSMAN. Yes.

(The information requested follows:)

Fiscal year 1963 program in education

The fiscal year 1963 obligation figures for education programs in Latin America are as follows:

	Thousands
Development grants (education projects)[1]	$33,755
Development grants (training)[2]	7,870
Development loans[1]	12,045
Public Law 480 (child feeding)	30,020
Peace Corps (education and training)	5,400
OAS education and training	4,100
Total	[3] 93,190

[1] Includes education components in other projects.

[2] Includes all AID participants training for Latin America in other than designated education projects. Training component which is built into the latter is an additional $451,000. This amount is included in the development grants (education) total above.

[3] Local currency loans and grants from Public Law 480 sales in Brazil will provide an additional $21,700,000 for school building and other educational purposes in northeast Brazil.

Mr. PASSMAN. You stated it was about $100 million. It could be higher or lower for 1963; is that correct?

Mr. STERNFELD. It is $100 million—subject to checking it.

We will supply the firm figure for 1963.

Mr. PASSMAN. You have a bilateral agreement with every country and territory scheduled to receive grant aid in fiscal 1964?

Mr. MOSCOSO. So far as I know we do.

TOTAL FISCAL YEAR 1964 U.S. SUPPORT TO OAS AND PAHO

Mr. PASSMAN. I note that the Organization of American States and the Pan American Health Organization are proposed to receive $2,-

850,000 and $2,300,000, respectively, in the 1964 grant program. In addition to these sums of money how much will these two organizations receive from other foreign assistance appropriations and from other U.S. appropriations—for example, the State Department?

Mr. MOSCOSO. I wouldn't have that information, Mr. Chairman.

Mr. PASSMAN. Can you get the information?

Mr. MOSCOSO. Yes; I would be glad to get it for the record.

(The information supplied follows:)

Contributions and grants to the Organization of American States

	Fiscal year 1962	Preliminary fiscal year 1963	Programed for fiscal year 1964
From Department of State—OAS, regular budget contribution	6,452	8,682	9,659
From AID—			
(1) Special Alliance for Progress grant: 1961 IAPSP appropriation, (pending request)	6,000		4,500
(2) Pan American highway survey, Darien	2,000		
(3) OAS, free world fellowship program		610	300
(4) Public information program		1,600	
(5) Dominican Republic election observers		57	
AID grants administered by State Department:			
(1) Pan American Health Organization:			
(a) Malaria	2,000	2,000	2,000
(b) Water	300	300	300
(2) OAS, technical cooperation program	1,850	2,200	2,300

FISCAL YEAR 1964 UNPROGRAMED LOANS

Mr. PASSMAN. Page 11 of the justifications indicates that you have a range of $32 to $40 million in unprogramed development credits; it that correct?

Mr. MOSCOSO. Unprogramed loans?

Mr. PASSMAN. Unprogramed development credits, a range of $32 to $40 million.

Mr. MOSCOSO. That is right, sir.

ILLUSTRATIVE NATURE OF PROJECTS PRESENTED TO COMMITTEE

Mr. PASSMAN. We are dealing with many uncertainities in this program, many wide ranges.

Other witnesses say these programs are illustrative, that the law is broad enough that they could, shall we say, vacate every project in this book and substitute new projects in their stead.

Under "Development credits" they do not know what projects or what programs or what countries they will give the money to until they get the money.

Is it your understanding that the language is that broad, that these are illustrative—not that you will but that you could, if you should decide to transfer these projects from, we shall say, flood control to a brick building somewhere, or what you justify for country X you can give it to country Y—is that your understanding of the program?

Mr. MOSCOSO. Insofar as lending——

Mr. PASSMAN. So far as having the legal right to do it?

Mr. MOSCOSO. Insofar as lending is concerned; that is correct. Insofar as——

Mr. PASSMAN. How about the other types of programs?

Mr. Moscoso. The other types of programs, this is the best estimate we can make.

Mr. PASSMAN. But they are illustrative. If you go according to the law, it is broad enough that you could transfer funds from one country to another, substitute one program for another, and you could, not that you will but you could, and still be within the law, void every program in this book and substitute new programs for them?

Mr. Moscoso. That is correct.

Mr. PASSMAN. That is a little loose; is it not?

Mr. MILLER. The statute does establish certain criteria for each of the categories.

U.S. CONTRIBUTION TO OAS AND PAHO

Mr. Moscoso. You wanted a quick answer to this information and it is here, Mr. Chairman, on the Pan American Health Organization. The U.S. makes a contribution to the OAS.

Mr. PASSMAN. That is the Organization of American States.

Mr. Moscoso. U.S. contribution is $8,688,000 in 1963.

The Pan American Health Organization is $3,392,000 for 1963.

UNPROGRAMED DEVELOPMENT LOANS

Mr. PASSMAN. To go back to page 11 of the justification, you have a range of $32 to $40 million in unprogramed development credits?

Mr. Moscoso. That is right.

Mr. PASSMAN. Could that item be considered a contingency account?

Mr. Moscoso. No, sir. These are the ranges of proposed development lending for those countries where there is an asterisk.

Mr. PASSMAN. It is unprogramed.

Mr. Moscoso. It is the total of the proposed programs for those countries.

Mr. PASSMAN. You have indicated in your justifications by country what the program is. This is an amount that you have entered as unprogramed which you may or may not use.

Is that correct?

Mr. Moscoso. If we do not get the loans we will not use them.

Mr. PASSMAN. I believe you misunderstood the question. You have many of these countries indicated here which will have certain funds.

Mr. Moscoso. That is right.

Mr. PASSMAN. Now we get to the bottom of the page and you put in from $32 to $40 million in an unprogramed category. Is that, plainly stated, a contingency account which could be used in addition to that part which you justified for each individual country?

Mr. Moscoso. In other words, if we took some of these unprogramed funds and used them——

Mr. PASSMAN. I am afraid you still do not understand. When you have added up all your programs by country, and I believe there are 20 in your area; is that correct?

Mr. Moscoso. For proposed development lending; yes.

Mr. PASSMAN. When you put together the totals by country, then in addition to that amount you have a range from $32 to $40 million unscheduled.

Mr. MOSCOSO. If we don't put——

Mr. PASSMAN. It is actually unscheduled. You have no program for it. You may or may not use the $32 to $40 million during the year. Is that correct?

Mr. MOSCOSO. It is the total program for those countries where the asterisks appear.

In each of these countries we have not indicated a specific amount and we have put down here under the program loans the range of funds that we believe will be utilized——

Mr. PASSMAN. But you may not have any.

Mr. MOSCOSO. We have an idea of what——

Mr. PASSMAN. However, you have no specific programs, as you say "unprogramed" for the $32 to $40 million.

Mr. MOSCOSO. Like all lending organizations, and I know that the chairman is familiar——

Mr. PASSMAN. One is contingency fund. The other people answered yes, it is a contingency account in that you have no specific programs.

Mr. MOSCOSO. In this case it is not a contingency because we know there will be development loans or credits requested of us from these countries in certain amounts.

Mr. PASSMAN. How do you know?

Mr. MOSCOSO. We have country missions——

Mr. PASSMAN. You are requesting for your area a total of $667,-700,000 which would go into several spigots. You have programs in this book which would add up to that total until you get into the unprogramed items. This is a supplement to any other program you may have. Is that correct?

Mr. MOSCOSO. It is included in the $667 million.

Mr. PASSMAN. I know it is, Mr. Director, but it is unprogramed.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. You may or may not use it.

Mr. MOSCOSO. In any event, Mr. Chairman, all the amounts we are asking for development lending may or may not be used, but——

Mr. PASSMAN. This money would be more uncertain than the other parts of it?

Mr. MOSCOSO. No. The situation is this: In many instances where we have asterisks there now we have specified by this time a number of loan requests.

Mr. PASSMAN. Have you been told about this by some of your counterparts in other regions? Some of them recognize it as a contingency account and so acknowledge it? Are you guarding against the same thing?

Mr. MOSCOSO. I don't know about it.

Mr. PASSMAN. So far as I am concerned it is a contingency fund if you do not have programs for it. It is unprogramed.

Mr. MOSCOSO. If I may continue, Mr. Chairman. We have an asterisk before that country's name, for example. Nevertheless, we already have information from our mission to the effect that a loan request will be made for a private development bank——

Mr. PASSMAN. When did that request come in from a private development bank?

Mr. MOSCOSO. May of 1963.

Mr. PASSMAN. If everything worked out as it should have——

Mr. MOSCOSO. This would have appeared.

Mr. PASSMAN. If everything had worked out as it should have this bill would have moved possibly in May or early June. What we pass this year will be retroactive to July 1.

Had we examined you on this request sometime in February or March, and we hope to do so next year, the answer would be yes, there are no programs and it would have to be accepted as a contingency account. It is late in the year and you are getting requests now for this contingency money.

Mr. MOSCOSO. No, Mr. Chairman, and I will tell you why. We start to get the country assistance programs about the beginning of the winter or by the end of fall.

Mr. PASSMAN. A contingency is something unforseen and you have no specific program but they may be programed. Is that your understanding of a contingency—it is made available in the event you have programs which develop after you get the appropriation?

Mr. MOSCOSO. We have been trying to get together this development bank for quite a while.

Mr. PASSMAN. I want to know if we have the same understanding of a contingency. It is an amount put in the bill to meet emergencies for which there is no ready program but during the year something may develop for which you will need money out of this contingency fund to meet a specific program or programs.

Mr. MOSCOSO. That would be a good definition but this is not——

Mr. PASSMAN. At the time you printed these books you arranged from $32 to $40 million in here as nonprogramed.

I read from page 11 now: Unprogramed and revised on July 10, 1963.

I cannot make it any clearer.

Now tell us about the bank.

Mr. MOSCOSO. I think next year you will find fewer asterisks in there.

We shall be able to give you a better idea of the loans which are already in the making.

Mr. PASSMAN. Congratulations.

PRIVATE DEVELOPMENT BANK

Now tell us about the bank.

Mr. MOSCOSO. The private development bank for that country; yes, sir.

The seed capital for the industrial bank.

Mr. PASSMAN. How much seed capital?

Mr. MOSCOSO. $———. As you know, Mr. Chairman, in this country the entire banking system is nationalized. We believe this is holding back development and we want the private sector to be bolstered, to be encouraged, so we are trying to have this private development bank set up.

Mr. PASSMAN. You let the Government in on what you are doing in this country?

Mr. Moscoso. It will have to be done with the approval of the Government. In order to obtain a charter for this bank we will have to obtain Government approval.

Mr. ANDREWS. Won't that be putting your proposed bank in competition with the Government?

Mr. Moscoso. The Government does not have a bank of this type. This will be a development bank.

Mr. ANDREWS. But it is a lending institution. All banks are lending institutions, and you would be directly competing with the Government.

Are you sure the Government will give you a charter to go in competition with them?

Mr. Moscoso. The Government has shown a certain degree of reluctance, not for that particular reason but for other reasons.

Mr. ANDREWS. You don't know what the real reason is. Many times you can cover up your reason.

Mr. PASSMAN. They showed a reluctance to our giving ——— for seed money for this bank?

Mr. Moscoso. Ideologically they feel they should have only Government-owned banks. We feel that is to the detriment of private enterprise and we would like to see the private sector flourish, as we would like to see it flourish all over Latin America.

Mr. PASSMAN. Who is requesting this loan?

Mr. Moscoso. A group of businessmen who will participate and put up capital of their own. They will have to put up a substantial amount of capital.

Mr. PASSMAN. How far have you gone with this commitment?

Mr. Moscoso. We are trying very hard, Mr. Chairman. This is something which I think is a desirable thing for this country, and for the sake of the type of society we believe in, the free enterprise society, which has done a lot of good for this country.

Mr. PASSMAN. Would this bank be in connection with the savings and loan associations?

Mr. Moscoso. No, sir; but it would mobilize local savings for utilization in local industrial development.

Mr. PASSMAN. Does it involve cooperatives and loan associations?

Mr. Moscoso. No, sir.

U.S. PROMOTION OF COOPERATIVES IN LATIN AMERICA

Mr. PASSMAN. Do you have that program going in Latin America, also?

Mr. Moscoso. Yes; in several countries.

Mr. PASSMAN. I read this—"$50 million." That is a lot of seed capital, is it not, for cooperatives?

Mr. Moscoso. That is not it.

Mr. PASSMAN. We have so many here; let us check it. This involves cooperatives.

Mr. Moscoso. I know the projects.

Mr. PASSMAN. They do not pay taxes. A news report states:

> Most U.S. aid to the cooperative movement will be furnished by the Agency for International Development, but some would come from the Social Progress Trust Fund, administered by the Inter-American Development Bank, and from the Peace Corps.
>
> About 250 members of the Peace Corps, for example, will help in the organization of about 1,000 cooperative credit unions.

Did you read that statement?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. We shall insert that article in the record.

(The article referred to follows:)

[From the Washington Post, June 20, 1963]

U.S. PLANS $50 MILLION FOR LATIN COOPERATIVES

(By Dan Kurzman, staff reporter)

The United States expects to spend more than $50 million this year on the promotion of a cooperative movement in Latin America under the Alliance for Progress.

This program, it is hoped, will simultaneously strengthen free enterprise on the continent and deprive the Communists of their favorite propaganda argument—that capitalism means subservience to feudal interests and the United States.

"As the cooperatives will be owned and controlled by the people themselves," a U.S. official said, "the Communists will have a hard time attacking them."

The development of such democratically owned and operated institutions will also help to foster democracy among long-exploited villagers who have never before had the opportunity to decide anything, U.S. officials believe.

TO PHASE OUT SUPPORT

Furthermore, the program is expected to speed up economic development. The United States will phase out its support gradually, leaving a self-sustaining cooperative movement in each Latin country that can continue to expand on its own.

Since Washington inaugurated this cooperative program a year ago, it has spent about $4 million—$3 million on contracts with American cooperative organizations for the export of cooperative techniques and $1 million for the maintenance of experts in the Latin countries.

By fall, the United States expects to provide a $50 million fund for the establishment of an inter-American cooperative finance system, which would comprise a central bank in Washington and branch banks in 12 to 15 Latin countries.

These institutions would be used exclusively to finance the development of cooperatives, which would eventually own the banks. Each time a cooperative borrowed from a national branch it would be required to purchase stock equal to 5 percent of the loan until the entire debt incurred by the United States was retired.

MORE THAN 75 PLANNED

More than 75 cooperative projects in 15 Latin American countries are now under study or in the process of being established with the help of U.S. cooperatives. Major schemes, in addition to the banking program, are planned in the credit union, housing, supermarket and agricultural fields.

The National Farmers Union recently brought 70 Latin American farmers from 6 Latin countries to live for a year in U.S. farm communities, mainly in the Northwestern States, to learn how to operate farming cooperatives. In the future, about 75 will be trained here each year.

Under study now are such diverse projects as a cooperative development administration, similar to that of Puerto Rico, to help the Dominican Republic movement, a bus transportation cooperative in Peru, a grain marketing cooperative in Ecuador, and fishing cooperatives in Colombia.

Most U.S. aid to the cooperative movement will be furnished by the Agency for International Development, but some will come from the Social Progress Trust Fund, administered by the Inter-American Development Bank, and from the Peace Corps.

JOB FOR PEACE CORPS

About 250 members of the Peace Corps, for example, will help in the organization of about 1,000 cooperative credit unions in some 600 remote Central American villages.

Alliance-financed mobile medical health units will charge villagers 50 cents a visit. The money will be deposited in a credit union for use in financing community schools, hospitals, sewage systems, and other projects.

AID has contracted with the Cooperative League of the United States to establish a new hemispherewide cooperative organization for the promotion of cooperative development through media such as newsletters.

Mr. MOSCOSO. There are quite a number of those already organized, Mr. Chairman. May I take one moment on this?

This is an idea which has been brought up.

This is an attempt by a group of Latin American countries which have co-ops to try to establish a system similar to the U.S. system of co-op banks.

They would like to establish something similar to this, and that is all that is being considered at this time.

Mr. PASSMAN. Are we not getting off fast, putting 250 Peace Corps men out to help establish these outfits?

Did you read that report earlier?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. How about the other thing we were talking about, the $——— of seed money?

Mr. MOSCOSO. This is a private development bank in order to provide industrial credit to small- and medium-sized industrialists.

Mr. PASSMAN. Would they be eligible to apply for larger credits out of any of the 16 other spigots through which we dispense foreign aid?

Mr. MOSCOSO. The bank would be under certain criteria. They would have to have certain paid-in capital; they would have to be well managed——

Mr. PASSMAN. Well heeled?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. If they are well heeled why let them in on it? You did not mean to say well heeled, did you?

Mr. MOSCOSO. I didn't say that.

Mr. PASSMAN. I asked you and you said yes.

Mr. MOSCOSO. Well managed.

Mr. PASSMAN. Then this would place them in position to make applications for larger and more loans from certain functions of the AID Agency. Is that right?

Mr. MOSCOSO. The normal way in which the borrowers lend these funds provides that we approve all sub-loans over and above a certain level.

Mr. PASSMAN. I thought you approved them at all levels.

Mr. MOSCOSO. No, it would be impossible. When you get down to $1,000 loans it would cost more to——

Mr. PASSMAN. How much can you get without it being approved. What is the limit?

Mr. MOSCOSO. In this bank we have not been able to arrive at that point yet.

Mr. PASSMAN. What is the amount you can get without having it approved?

Mr. MOSCOSO. In this particular bank this has not been decided.

Mr. PASSMAN. How about one where you have decided?

Mr. MOSCOSO. $100,000 in some and up to $50,000 in others. It all depends on the capabilities of the people running the bank.

Mr. PASSMAN. Are you letting incapable people dish money out up to $50,000 and you pick up the capable category above $50,000?

Mr. MOSCOSO. In the first place, we try to assure ourselves that the people running the operation are capable.

Mr. PASSMAN. But you do not approve it. They have the right to approve it up to $50,000?

Mr. MOSCOSO. Up to a certain level depending on their capability. If people are not experienced we try to make that level the lowest possible level.

Mr. MINSHALL. I am not quite clear yet as to how the bank is organized. You put in $——— for seed capital. How much other money is going in and whose money is going in? Tell us more about it.

Mr. MOSCOSO. This would be private enterprise supplying the capital.

Mr. MINSHALL. How much is that?

Mr. MOSCOSO. This is subject to negotiation.

Mr. MINSHALL. How much are you figuring on?

Mr. MOSCOSO. We are not yet at that stage.

Mr. MINSHALL. Have you any idea?

Mr. MOSCOSO. Yes, we have an idea.

Mr. MINSHALL. What are you shooting for?

Mr. MOSCOSO. We try to get 50–50, 50 percent participation by the private sector. We don't get it all the time.

Mr. MINSHALL. What do you hope to get out of this country?

Mr. MOSCOSO. We will try to get half. I can assure you that when we don't get as much as that, it is because we have exhausted every possible device in order to get them to put up as much of their own money as possible.

Mr. MINSHALL. What is the minimum you will go for before you put up your money?

Mr. MOSCOSO. It depends on the country.

Mr. MINSHALL. We are talking about ———.

Mr. MOSCOSO. In the case of this country, this is one of those cases where I would be willing to let the ratio be a rather low one in order to maintain the private sector.

Mr. MINSHALL. How low?

Mr. MOSCOSO. I would go as low as 25 percent.

Mr. MINSHALL. In other words, they put up $——— and you put up $———?

Mr. MOSCOSO. That would be 33 percent.

Mr. PASSMAN. The total would be $——— then.

Mr. MINSHALL. How much does the national bank get for its money?

Mr. MOSCOSO. Interest rate?

Mr. MINSHALL. Yes; what do they get and what do you plan to get?

Mr. MOSCOSO. What we hope to do is to be able to supply credit at a lower interest rate and be able to make it available for private enterprise so that the public sector does not preempt all the credit available in the country.

LOANS MADE TO INTERMEDIATE CREDIT INSTITUTIONS

Mr. FORD. How many of these banks in toto, in all of these countries, have you established? Give us a general figure and then supply the precise figure for the record.

Mr. MOSCOSO. Bolivia, Brazil——

Mr. PASSMAN. Off the record.

(Discussion held off the record.)

Mr. FORD. Also I would like the percentage we have contributed and the percentage others from the private sector have contributed in each instance.

Mr. MOSCOSO. Right, we shall do that.

(The information requested follows:)

Loans to intermediate credit institutions, as of June 30, 1963

[In thousands of dollars]

Country	Institution	Loan amount	Agreement date	Interest rate (percent)	Host country contribution	Subloans [1]		
						Number	Aggregate amount	Interest rate (percent)
	Development banks:

Venezuela	Agriculture & Livestock Bank	10,000	September 1962	¾	10,000			3-6
Total (loans)		75,900						
Grand total		235,500						

[1] As of Mar. 31, 1963.

[2] These loans were to private institutions for private sector relending. The remaining loans, with the exception of the Chilean Development Corp. went to public institutions explicitly for private sector relending.

[3] These loans have 2-step repayment procedure, where the host government may repay the loan to the U.S. Government at ¾ percent fee.

[4] Not available.

Mr. ANDREWS. Off the record.

(Discussion held off the record.)

LABOR PROBLEMS IN LATIN AMERICA

Mr. PASSMAN. I indicated we wanted to work with you in helping to make this Alliance for Progress program work. I mean that.

However, it will not work until we tighten it up and approach it on a businesslike basis.

Here is something, on page 96, dated June 7, 1963, from Time magazine:

LATIN AMERICA, PADDING THE PAYROLLS

Featherbedding is a business malaise in many parts of the world, but in Latin America it is a hallowed institution enjoyed by the participants, cheered by the masses, and endorsed by the politicians. Now the featherbeds are getting softer than ever.

Four men to a job. The problem spreads across the whole range of industry. At least 5,000 of Bolivia's 25,000 mineworkers and 30,000 of Argentina's 180,000 railway workers are superfluous. Chile's creaking national railroad employs 87 men per mile of track versus 27 in Britain, where that number is considered heavy featherbedding. Brazilian 10,000-ton freighters have an average 49 crewmen each, while similar ships under other flags use only 37. Argentina's depressed auto manufacturers, producing at scarcely 30 percent of capacity, are desperately trying to thin their ranks; but when Kaiser tried to do so, workers seized the plant and threatened to burn it along with management hostages trapped inside. Peru's Lima-Callao tramcar company, which recently pulled out of bankruptcy, is not permitted by the unions to fire anyone, although it has four workers for every real job.

Latin American labor unions are clamoring for still more stretching of the available work. Last week in Argentina, where payroll padding is a costly legacy from Peron's days, 2 million unionists staged a paralyzing 1-day walkout in hopes of pressuring the Government to create still more jobs. And in Venezuela, labor unions celebrated a new contract virtually forbidding United States—

and so on.

I imagine you read this article.

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. How long do you believe it will be before these people come to their senses and recognize we want to help them, we are helping them, we shall continue to help them, but they will also have to help themselves?

Mr. MOSCOSO. Will you give me a few moments to answer this question, Mr. Chairman?

Mr. PASSMAN. Surely.

Mr. MOSCOSO. I think your concern is very valid and it has been my concern, too. It also has been the concern of people in our Agency.

This has to stop. Now, can you stop it at once or how long will it take to stop it?

The answer is that it will depend on the various countries and it will depend on the governments of those countries. It will depend on the economic growth taking place in those countries, the creation of new job opportunities which will permit the displacement of these superfluous workers.

I agree with you they are too abundant in many cases.

Every time we have an opportunity to make a contract with any one of these countries where we can influence the reduction of this surplus labor group in these entities we try to do it.

Mr. PASSMAN. What happened in Bolivia yesterday? Let us get something current.

Mr. MOSCOSO. There was a strike in the mine there. Off the record.

(Discussion off the record.)

Mr. PASSMAN. And the miners struck?

Mr. MOSCOSO. The miners struck.

Mr. PASSMAN. Is there any indication there has been any progress whatsoever?

Mr. MOSCOSO. Yes. Great progress has been made.

Mr. PASSMAN. That is by your evaluation.

I have a letter here from a friend of yours regarding a disgruntled Argentinian.

U.S. RELATIONS WITH ARGENTINA

Mr. MOSCOSO. Relations between the United States and Argentina never have been better. My colleague here can vouch for that.

On October 22 we were sitting at the edge of our chairs. The first country in Latin America to come forth and offer to assist us in surrounding Cuba was Argentina.

TOTAL U.S. AID TO ARGENTINA

Mr. PASSMAN. How much did it cost us to get them in that frame of mind? Let us find out how much we have given Argentina since the inception of the program.

Mr. TENNANT. $617.5 million.

Mr. MINSHALL. They were the first country?

Mr. MOSCOSO. Yes. Every country joined us.

Mr. PASSMAN. Let us get the total and then subtract it. Can you give us the whole thing?

Mr. TENNANT. $617.5 million.

Mr. PASSMAN. That is Public Law 480 and everything else?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. How much local currency do we have?

Mr. MOSCOSO. Deduct $156 million from that.

ARGENTINA'S GOLD TRANSACTIONS

Mr. PASSMAN. A half billion dollars we gave Argentina, then.

When the AID program started these people started demanding dollars for what they earned from their exports. They took our money to pay for what they normally would buy with their money and evidently accumulated money to their credit in excess of their needs to deal in commerce.

In 1960 they purchased $50 million of our gold.

In 1961 they purchased $90 million of our gold.

In 1962 they sold us back $85 million of our gold.

They have drawn $55 million of our gold in those 3 years.

Mr. MOSCOSO. I shall say this. The Argentine gold holdings have dropped substantially.

Mr. PASSMAN. I have given it to the penny from the Treasury statements.

Mr. MOSCOSO. We are talking about two different things.

Mr. PASSMAN. I refer to the amount of gold they have extracted from the U.S. Government.

The net amount of gold they have drawn out of the United States is the amount I mentioned. It started with this fantastically high AID program.

OBLIGATIONS OF SOCIAL PROGRESS TRUST FUND

How much has been obligated with the Inter-American Bank out of the $394 million out of the Social Progress Trust Fund in 1962?

Mr. MOSCOSO. $357 million.

Mr. PASSMAN. What is the unobligated balance left in the fund as of June 30, 1963?

Mr. MOSCOSO. $37 million.

Mr. PASSMAN. What is the unliquidated balance out of the $394 million?

Mr. MOSCOSO. $339 million.

Mr. PASSMAN. So the actual liquidations would be only——

Mr. MOSCOSO. $55 million.

Mr. PASSMAN. In how many years?

Mr. MOSCOSO. Two years.

Mr. PASSMAN. Can you supply for the record a list of the obligations by country, by date, and the amount?

Mr. MOSCOSO. Yes, sir; we shall be glad to do that.

Mr. PASSMAN. And the purpose of the credit?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. We shall also insert in the record at this point the justification, pages 99 through 106, which list the loans approved from the Trust Fund with the name of the borrower, the purpose, the amount, and the terms.

Mr. MOSCOSO. Yes, sir.

(The information referred to follows:)

Date authorized	Borrower	Date of loan contract	Purpose of loan	Total cost of project or program in U.S. dollars or equivalent	Percent of total cost provided by SPTF and dollar amount
1961 Aug. 3	Instituto de Vivienda y Urbanismo de Panama. Guarantor—Government of Panama.	*1961* Aug. 22	Housing for low-income groups ($800-$2,400 a year). 3,000 units—⅓ self-help. Relending rate per year to ultimate borrower—6 percent; 20-year terms.	$10,444,917	73% $7,600,000
Aug. 3	Banco Central de Reserva de El Salvador for use of the Federacion de Cajas de Creditos. Guarantor—Government of El Salvador.	Nov. 24	Relending to small farmers for development of agriculture (not coffee) and livestock. Relending rate per year to ultimate borrower—9½-12 percent; 10-year terms.	2,800,000	71% $2,000,000
Aug. 3	Banco Obrero de Venezuela for use of Division de Vivienda Rural de Ministerio de Sanidad y Asistencia Social. Guarantor—Government of Venezuela.	Nov. 15	Rural housing for low-income groups. ($550-$800 a year) 35,500 units—all self-help. Relending rate per year to ultimate borrower—up to 3½ percent; 20-year terms.	45,950,000	26% $12,000,000
Aug. 10	Instituto Nacional de Vivienda y Urbanismo de Costa Rica.	Oct. 31	Urban housing for low-income groups ($648-$1,440 a year). 5,725 units—purchasers' savings. Relending rate per year to ultimate borrower—8 percent; 20-year terms.	16,000,000	22% $3,500,000
Aug. 10	Banco Central de Reserva de El Salvador for use of Administracion Nacional de Acueductos y Alcantarillados. Guarantor—Government of El Salvador.	Nov. 17	Community sanitation facilities in 5 principal cities.	1,400,000	60% $840,000
Oct. 12	do	Nov. 17	Community water supply and sanitation facilities in 34 small towns.	3,830,000	71% [2] $2,700,000
Oct. 19	Republic of Peru for use of the Instituto de la Vivienda.	Nov. 24	Urban and rural housing for low-income groups ($355-$1,120 a year) 35,200 units between 50 to 80 percent self-help. Relending rate for year to ultimate borrower—5 percent; with 20 year terms.	48,700,000	47% [3] $22,800,000
Oct. 19	Cooperativa de Credito Central del Peru. Guarantor—Government of Peru. Footnotes on page 2052.

(Footnotes for table on pages 2038 through 2051.)

[1] In addition to interest, a commitment fee af 0.75 percent payable in U.S. dollars, is charged on all operations. This fee covers the administrator's administrative costs.
[2] El Salvador provides $1,400,000 equivalent annually for the total water—sewerage program for 80 towns
[3] Also DLF loan of $5,000,000 (10 percent).
[4] Colombian resources will supply over 70 percent of 10-year program.
[5] During 1961–65, Colombia proposes to spend in this field $60,200,000, of which 75 percent will be from local resources.
[6] Water.
[7] Sanitation.
[8] IDB loan from ordinary capital.
[9] SPTF loan.
[10] Part of a total project.
[11] Plus $7,057,000 loan from Fund for Special Operations (IDB); total, $8,325,000, 51 percent. Additionally, the Administrator provided technical assistance for $265,000.
[12] An additional $667,000 U.S. grant of counterpart funds from agricultural surplus under Public Law 480 (3 percent).
[13] $11,500,000 loan from the resources of the IDB's Fund for Special Operations.
[14] An additional $1,667,000 U.S. grant of counterpart funds from agricultural surplus under Public Law 480 (3.1 percent).
[15] The Government of Venezuela will also provide schools, community centers, etc., costing $2,200,000 at the present official exchange rate (3.35 Bs. to $1). The Government is planning to spend $166,089,000 in housing.
[16] Includes $112,000 for technical assistance.
[17] $733,300 Public Law 480 "counterpart funds", 4 percent.
[18] Nacional Financiera, S.A., Banco Nacional de Comercio Exterior, S.A., and Banco de Mexico, S.A., will provide over $500,000 annually to cover the annual operating expenses of the Instituto, including provision of $40,000 for purchase and maintenance of equipment.
[19] In addition, the benefited farmers will invest $490,000 in agricultural equipment over a period of 4 years following completion of the project.
[20] In addition, the savings received by the savings and loan associations during the 2 disbursement years are conservatively estimated at 2,800,000 escudos ($2,000,000), which would increase the total combined resources to $9,697,000 of which the SPTF loan represents 51 percent.
[21] Taking into account the construction of sewerage and other sanitation projects which IDAAN plans to finance during the next 4 years with its own resources under the national program, IDB's contribution would diminish from 72 percent to approximately 47 percent.
[22] $2,500,000 loan from Fund for Special Operations and $4,000,000 loan from the Bank's ordinary capital resources; total $15,000,000, 42 percent.
[23] Includes $100,000 for technical assistance.
[24] ICIV.
[25] CCAP.
[26] In addition, a $2,700,000 loan from the Fund for Special Operations, 3 percent. Includes $200,000 for technical assistance.
[27] The Ford Foundation contributed $623,000 to the financing of this program, 9 percent.
[28] Includes $120,000 for technical assistance.
[29] Another 29 percent expected to come from other external sources.
[30] The remaining 46 percent will be contributed by other institutions.
[31] In addition $2,600,000 granted from the Fund for Special Operations; total $9,100,000, 12 percent. Includes $200,000 for technical assistance.
[32] The remaining 10.7 percent of the cost will be provided by other foreign aid.
[33] In addition, 776,000 (14.1 percent) from the food for peace program.
[34] The Ford Foundation will contribute an additional $300,000, or 12.5 percent.
[35] In addition, an IDB loan from its ordinary capital; $25,500,000, 40.9 percent.

Mr. PASSMAN. In that same package we had $6 million for the Organization of American States. Furnish information on that matter, please.

Mr. MOSCOSO. Yes, sir.

(The information supplied follows:)

Unobligated and unexpended balance of IAPSP funds (as of June 30, 1963)

[Amounts in millions of dollars]

	Appropriation	Unobligated balance	Unexpended balance of total appropriations
Pan American Union (OAS)	6	0.1	2.3
Chile reconstruction	100	0	18.0
Social Progress Trust Fund (IDB)	394	37.0	339.5
ICA/AID	100	1.5	54.7
Total	600	38.6	414.5

CHILEAN EARTHQUAKE REHABILITATION LOAN

Mr. PASSSMAN. In that same package we had $100 million for the Chile earthquake rehabilitation loan.

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. What happened to that money?

Mr. MOSCOSO. We obligated it all.

Mr. PASSMAN. Has it been liquidated?

Mr. MOSCOSO. All but $18 million where the papers are being processed.

Mr. PASSMAN. As I recall it, they had unliquidated certain of the commitments made by the U.S. Treasury. Are you familiar witht those commitments?

Subsequent to the earthquake the Treasury made available certain credits to Chile which had not been utilized at the time we brought out the bill for the $100 million.

Mr. MOSCOSO. This might be stabilization loans made by the Treasury.

Mr. PASSSMAN. Find out the amount and whether we used it.

Mr. MOSCOSO. I shall be glad to find that out, sir.

(The information supplied follows:)

UNLIQUIDATED CHILEAN EARTHQUAKE COMMITMENTS

The U.S. Treasury approved a 1-year, $15 million standby credit for the GOC on February 10, 1961, the same date the IMF approved a standby agreement with Chile. The GOC never drew on this standby credit and it expired on February 10, 1962.

Mr. PASSMAN. Off the record.

(Discussion held off the record.)

Mr. PASSMAN. We shall now adjourn until 1 o'clock tomorrow afternoon.

WEDNESDAY, JULY 31, 1963.

WITHDRAWALS FROM U.S. TREASURY

Mr. PASSMAN. The committee will come to order.

I hold in my hand the Treasury statement dated July 25, 1963. The Treasury has collected during the first 25 days of this fiscal year $4,924,588,494.32, but they have withdrawn from the Treasury $8,991,068,877.97.

As far as establishing an alltime deficit, if this trend continues, or if we compare this to withdrawals from the U.S. Treasury for the corresponding period last year, we have withdrawn in excess of $1 billion more this year than we did in the corresponding period last year, for 25 days.

I want to say to the distinguished Secretary, we are always glad to have you with us.

Mr. COTTRELL. Thank you.

REPORTED LOSS OF GRAINS SHIPPED TO AUSTRIA

Mr. PASSMAN. This is from a letter addressed to a colleague:

The reported loss of $24 million worth of grains sent to AID, Austria, has not brought forth any word of explanation and a fixing of responsibility or any

indication of interest from the President, the Secretary of State, the Secretary of Agriculture, or anyone else in the administration.

I fear this is typical of the irresponsible way foreign aid is being administered.

I wonder if you would see if you can get us a little information on that matter?

Mr. SCHEINMAN. Certainly, sir.

I would be very happy to provide that.

(NOTE.—See additional information on p. 2139.)

O. ROY CHALK INTERESTS IN THE PHILIPPINES AND LATIN AMERICA

Mr. PASSMAN. This item is dated Wednesday, July 31, 1963, from the Washington Post:

Chalk marks AID off his slate.

Among the many interests of O. Roy Chalk, president of D.C. Transit System, Inc., are the Alliance for Progress and a 795-mile railroad in Central America. The railroad he controls; the Alliance he does not. The railroad and the Agency for International Development's Alliance for Progress brushed briefly this spring and then drew apart—but in the wake of their fleeting contact bruised feelings developed on both sides.

What we want to find out is if Mr. Chalk made this trip to Latin America to check this investment using the investment survey account.

You did have an application from him and he is listed. It was to go somewhere?

Mr. MOSCOSO. The Philippines.

Mr. PASSMAN. Did you also ask for consideration to go to Latin America?

Mr. MOSCOSO. He has been going there on several occasions to look into this railroad which he acquired from the——

Mr. PASSMAN. Has not yet turned in an expense account under the investment survey but his name is there for a trip to the Philippines? Is that a statement of fact?

Mr. MOSCOSO. That is what I understand.

Mr. PASSMAN. Is it true? Is he on the list?

Mr. MILLER. The list which was submitted to the committee, I believe, concerning applications under the investment survey program listed D.C. Transit System to do a transportation system study in the Philippines.

Mr. PASSMAN. Is this the same Mr. Chalk and the same D.C. Transit?

Mr. MILLER. I believe——

Mr. PASSMAN. Also figuring on building a railroad in Central America, is that right?

Mr. MILLER. My understanding is that Mr. Chalk has an interest——

Mr. PASSMAN. This is the same O. Roy Chalk, and the same D.C. Transit System, Inc., that went to Latin America, the same fellow who went to the Philippines?

Mr. MILLER. Mr. Chalk has an interest in the D.C. Transit System and Mr. Moscoso, I believe——

Mr. PASSMAN. The O. Roy Chalk who has an interest in the D.C. Transit System, Inc., went to the Philippines to check on whether it would be feasible and advisable for him to make an investment there, and he asked the investment survey fund to participate in the expenses under a legal arrangement; is that true?

Mr. MOSCOSO. I presume it is, Mr. Chairman.

Mr. PASSMAN. Let us find out.

Mr. MOSCOSO. You said——

Mr. PASSMAN. Is it the same man?

Mr. MOSCOSO. I do not really know.

Mr. PASSMAN. Is it, Mr. Miller?

Mr. MILLER. All I can testify to is that the D.C. Transit System has an approved application on October——

Mr. PASSMAN. We want to know whether or not O. Roy Chalk, president of the D.C. Transit System, Inc., applied to the Investment Survey to be reimbursed for part of his expenses to go to the Philippines. We want to know if this is the same O. Roy Chalk who went to Central America to look into a 795-mile railroad project.

Mr. NATCHER. Mr. Chairman, will you yield?

Will you let me answer that question?

Mr. PASSMAN. Yes, sir.

Mr. NATCHER. Mr. Chairman, you are referring to one and the same man.

Mr. PASSMAN. Thank you very much, Mr. Natcher.

Do you know whether or not he has applied, or will apply, for consideration to be reimbursed for expenses to Latin America?

Mr. MOSCOSO. No.

Mr. PASSMAN. You do not know of any application?

Mr. MOSCOSO. I do not know of any application, Mr. Chairman.

Mr. PASSMAN. Would he be eligible?

Mr. MOSCOSO. This application of his was for a loan to rehabilitate an already existing railroad which he bought from the purchasers, the original owners, who were the United Fruit Co.

Mr. PASSMAN. I am trying to clear up the record because it says: "Chalk at a stockholders meeting of the railroad, took out after AID."

This clipping will be made a part of the record.

(The clipping follows:)

[From the Washington Post, July 31, 1963]

CHALK MARKS AID OFF HIS SLATE

(By Jerry Doolittle, staff reporter)

Among the many interests of O. Roy Chalk, president of D.C. Transit System, Inc., are the Alliance for Progress and a 795-mile railroad in Central America.

The railroad he controls; the Alliance he does not.

The railroad and the Agency for International Development's Alliance for Progress brushed briefly this spring and then drew apart—but in the wake of their fleeting contact bruised feelings developed on both sides.

It all began in October 1962, when interests headed by Chalk bought control of the International Railways of Central America, a line formerly owned by United Fruit Co. which carries bananas and other freight through El Salvador and Guatemala.

The new owners revived an already pending request to AID for $3.2 million to bear half the cost of replacing the line's steam locomotives with 44 diesels.

On May 29, two things happened. AID notified Chalk that he could have the loan only if he got the Governments of El Salvador and Guatemala to guarantee it. And Chalk, at a stockholders' meeting of the railroad, took out after AID.

"I merely said," he recalls, "that they didn't have the guts to make a decision."

Getting governmental guarantees, he said, was an impossible condition which would involve getting the legislatures of both countries to pass special acts.

In the meantime, Chalk had been at work finding private financing for the diesel locomotives, and announced at the same stockholders' meeting that he had succeeded.

And in late June, he ran in the Washington Post and the New York Times a paid ad which described itself as "an editorial of great interest reprinted as a public service by America's largest Spanish language daily."

This was El Diario-Las Prensa, which Chalk also owns. The editorial blasted AID for its supposed inability to make decisions and its lack of "people-to-people programs."

An AID spokesman suggested yesterday that Chalk's failure to get the Alliance for Progress loan may have lain behind the criticism.

But Chalk himself denies this vigorously. "I'm not mad at anybody," he said yesterday. "I was merely applying constructive criticism, which I feel it's my duty to do."

He said there was no connection whatsoever between the loan application affair and the appearance of the editorial.

"I had had recent dealing with them, and I had personal experience with the way they have to get all sorts of agencies to agree before they go ahead and do anything. I felt it was my duty as a citizen and an editor to put it before the people and the Congress and the President."

Mr. MILLER. Mr. Chairman, I did not mean to be unresponsive.

It is my understanding that the D.C. Transit System is not involved in the railroad arrangements made in Central America.

Mr. PASSMAN. I did not say anything about being involved.

Mr. Chalk did go down to check the situation, did he not?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. I wanted to know if it was the same O. Roy Chalk and that is all I was trying to find out.

Mr. MOSCOSO. It is the same.

Mr. PASSMAN. When the Administrator of AID is out of the city, then the Assistant Administrator, the Deputy Administrator, becomes the Acting Administrator; is that correct?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. If the AID Director is in Washington, could the Deputy write letters signing them "Acting Administrator"?

Mr. MOSCOSO. Yes.

Mr. MILLER. According to the delegation of authority——

Mr. PASSMAN. He could be Acting Administrator in this office with the Administrator being the Administrator in an adjacent office?

Mr. MILLER. It would be highly unusual.

Mr. PASSMAN. I thought it would be unusual.

I got a letter from the Deputy Administrator signed "Acting Administrator" when I believe, the Administrator was in town.

Mr. MILLER. I believe the date of that letter, Mr. Chairman, the Administrator was not in town.

Mr. PASSMAN. He was in town attending a meeting of the Foreign Affairs Committee the day before yesterday.

Mr. MILLER. The following morning, on July 30, he was in town.

Mr. PASSMAN. I am just trying to find out how you run this outfit.

Mr. MILLER. Mr. Chairman, if you like his signature——

Mr. PASSMAN. If you like, I will give you both letters.

REPAYMENT OF LOANS TO LATIN AMERICAN COUNTRIES

Mr. Director, yesterday you mentioned several times the amount paid back to the United States by Latin American countries. I assume you were talking about hard Export-Import Bank loans?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Not AID credits?

Mr. MOSCOSO. That is right.

Most of those are Export-Import Bank loans, that is right.

Mr. PASSMAN. Most, or all of them?

Mr. MOSCOSO. I would say most, because there are some that are not——

Mr. PASSMAN. This could go back to the inception of the Export-Import Bank loans to Latin America, could it not?

Mr. MOSCOSO. I was trying to convey, Mr. Chairman and members of the committee, the fact that in Latin America, they are a good client of the lending agencies and they have a good repayment record.

Mr. PASSMAN. You are dealing now with the old, established Export-Import Bank hard loans?

Mr. MOSCOSO. Right.

Mr. PASSMAN. You picked up figures that may have gone back many years, did you not?

Mr. MOSCOSO. No, sir; they are mostly from 1946 to 1962.

Mr. PASSMAN. At least that clears the record and we know what it is all about.

SOCIAL PROGRESS TRUST FUND

The estimate for the Social Progress Trust Fund for fiscal 1964 is $200 million; is that correct?

Mr. MOSCOSO. That is right, sir.

Mr. PASSMAN. Yesterday, we ended our hearings with a request for some information on the Social Progress Trust Fund, and I believe you indicated the unobligated balance as of June 30, 1963, of the $394 million which was appropriated for this Trust Fund in fiscal year 1963 was $37 million; is that correct?

Mr. MOSCOSO. That is right, sir.

Mr. PASSMAN. The fiscal 1964 estimate is $200 million, of which $195.5 million is to be allocated to the Social Progress Trust Fund, and $4.5 million is to be allocated to the Organization of American States; is that correct?

Mr. MOSCOSO. That is right.

REPAYMENT OF SOCIAL PROGRESS TRUST FUND LOANS

Mr. PASSMAN. What are the terms of the loans by the Social Progress Trust Fund to the Latin American nations?

Mr. MOSCOSO. The terms vary according to the field of social development involved.

Mr. PASSMAN. Are these hard-dollar loans or are they repayable in local currency?

Mr. MOSCOSO. They are repayable either in local currency or in dollars, at the option of the borrower.

Mr. PASSMAN. How many of the loans that you have made to date are repayable in dollars?

Mr. KILLEFER. The borrower has an option to pay in dollars——

Mr. PASSMAN. How many loans are repayable in dollars and how many in local currency? The borrower has the option?

Mr. KILLEFER. He has the option.

Mr. PASSMAN. Would they have an advantage today in repaying these loans with dollars rather than local currency?

Mr. KILLEFER. To meet your question headon, I think that it is obvious that most Latin American countries find great difficulty in paying with dollars; and that is the reason we are trying to help them.

Mr. PASSMAN. There would not be any advantage whatsoever for these countries electing to repay these loans in dollars rather than in their own currency, as long as they have that option?

Mr. KILLEFER. Some countries like Panama, the dollar is freely convertible with the local currency. There really is not any difference.

Mr. PASSMAN. If there is no difference, why do you not have a contract whereby they repay in dollars and not in local currency?

Mr. KILLEFER. As a matter of fact, in the year and a half of our operation under this Fund, the repayments have been approximately $1.4 million, of which about $400,000 has been in dollars.

Mr. PASSMAN. What countries paid in dollars and what countries paid in local currency?

Mr. KILLEFER. I will supply that for the record. I do not have the breakdown here.

(The information follows:)

SOCIAL PROGRESS TRUST FUND—ADMINISTERED BY INTER-AMERICAN DEVELOPMENT BANK

U.S. dollar collections as of June 30, 1963

Country	Interest [1]	Service charge [2]	Principal [1]	Total
Argentina		$503		$503
Brazil		9,220		9,220
Chile	$8,454	7,188	$72,500	88,142
Columbia	9,189	13,705	10,000	32,894
Costa Rica		10,259		10,259
El Salvador		9,888		9,888
Guatemala		35		35
Honduras		221		221
Nicaragua		1,175		1,175
Panama	21,912	6,285	38,000	66,197
Peru		35,284		35,284
Venezuela	25,966	18,302	120,000	164,268
Total	65,521	112,065	240,500	[3] 418,086

[1] The payments of interest and principal in U.S. dollars reflects the exercise of the option of the borrowers to make such payments in their own currencies or in U.S. dollars.

[2] A service charge of ¾ of 1 percent payable in U.S. dollars is a requirement of all Social Progress Trust Fund loan contracts.

[3] In addition to these dollar collections, there were collections in Latin American currencies equivalent to $996,059.

Source: Office of the Treasurer, August 6, 1963.

Mr. PASSMAN. Do you know of any nation where it would be to its advantage to repay in dollars? If you do not know, if it is a convertible currency and one is as good as another, why do you not have it repaid in dollars?

Mr. KILLEFER. I have already explained to you that normally, of course, it is to the great disadvantage of a country——

Mr. PASSMAN. I appreciated your reply but I thought you were hedging and trying to reverse your prior statement.

Maybe I misinterpreted the meaning.

Mr. KILLEFER. Perhaps you did.

What I meant to say, Mr. Chairman, was that in some countries, dollars are no better than the local currency. It does not happen often, but Panama is one example.

Mr. PASSMAN. I believe Panama has a currency that is equivalent to the dollar; does it not?

Mr. KILLEFER. They have a currency called the balboa. It is equivalent to the dollar.

Mr. PASSMAN. It is equal to the dollar. Just like in Okinawa they used to use yen and now they use American currency out there.

Mr. KILLEFER. Similarly, Mr. Chairman, the Guatemala quetzal is equal to the dollar.

Mr. PASSMAN. If they are in that good shape, why are you in with an AID program? Why can you not require those countries to repay these loans in dollars?

Mr. KILLEFER. We do make a good many loans repayable in dollars, Mr. Chairman.

Mr. PASSMAN. I am talking about the Social Progress Trust Fund, and why you have in there an option that if the country is in as good shape as it is, and has a currency that is convertible, then why do you want to complicate it by having this repaid in local currency?

Did you make any social progress loans to Haiti out of this fund?

And what about Peru?

Mr. MOSCOSO. None to Haiti.

Mr. PASSMAN. Peru?

Mr. MOSCOSO. Some to Peru.

U.S. HOLDINGS OF PERUVIAN CURRENCY

Mr. PASSMAN. Could you tell us the amount of Peruvian currency we have to our credit?

Mr. MOSCOSO. At the end of March 1963, the dollar equivalent was——

Mr. PASSMAN. The dollar equivalent was how much?

Mr. MOSCOSO. Otherwise we get all fouled up; $6,887,000 as of March 31, 1963.

Mr. PASSMAN. Is that in excess of our needs for that currency?

Mr. TENNANT. This is not an excess local currency country.

Mr. PASSMAN. This is the balance as of March 31, 1963. Are you looking at Peru now?

It would appear you are picking only one item, but do we not have $334,873,044?

Mr. TENNANT. The figure Mr. Moscoso read to you was the amount credited to the AID program.

Mr. PASSMAN. There is a lot of difference between $334 and $6 million.

Mr. STERNFELD. That is $334,000.

Mr. PASSMAN. Then, is the $6 million figure also supposed to be thousands?

Mr. STERNFELD. There is a larger figure on the other table there.

Mr. PASSMAN. Gentlemen, you still do not have it.

Mr. Controller, do you have this chart? Will you identify this, as to whatever it represents?

Mr. TENNANT. These are the Treasury account figures.

Mr. PASSMAN. Tell us about that information. You run into $6 million in one place, do you not? What is the second big figure, that $334 million?

Mr. TENNANT. This shows $334,873,000 U.S. dollar equivalents.

Mr. PASSMAN. That is the way you figured it, is it?

Mr. TENNANT. Excuse me. This is $334,873.

Mr. PASSMAN. Is the top figure $6,000 rather than $6 million?

Mr. TENNANT. $6,782.

Mr. PASSMAN. You used millions earlier?

Mr. TENNANT. I see what happened here, sir.

I think the local currency column is in thousands of units and the dollars are not.

That figure should be——

Mr. PASSMAN. Could you see why there would be confusion?

Mr. TENNANT. That depends on whether or not you are talking——

Mr. PASSMAN. We are talking about the dollar equivalent currency, and I only wanted to know how much Peruvian currency we own, and I must admit I do not know as much as I did when we started, because we got two figures.

I thank you for trying, though.

Mr. TENNANT. The total the AID program has is $6,887,000 as of March 31, 1963.

Mr. PASSMAN. He said $6 million, and then, again, we are off.

Mr. TENNANT. I think we just corrected that.

Mr. MOSCOSO. The answer is this, Mr. Chairman——

Mr. PASSMAN. Let us start over again.

Mr. MOSCOSO. It says here in thousands of units.

Mr. PASSMAN. Then the $6 million becomes $6,000, and the $334 million becomes 0? You are still dealing with millions? You have confused the units?

Mr. MOSCOSO. It is wrong.

Mr. PASSMAN. Would you want to bet your salary as to which one is right?

Here we have one little country and you cannot even figure out whether that figure is in millions or thousands.

Mr. MOSCOSO. Mr. Chairman, may I?

Mr. PASSMAN. Do you want to take your position now, finally?

Mr. MOSCOSO. I think it will be necessary to see what is wrong with these figures, but I can see that the figures Mr. Tennant has there apparently are the correct figures and the heading is correct, too.

Mr. PASSMAN. Your assistant is getting ready to disagree with you.

Mr. MOSCOSO. This may be reporting two different things.

Mr. TENNANT. Mr. Chairman, the Treasury Department figures include some funds not available to AID.

Mr. PASSMAN. I do not care what they are available for. You have 16 spigots from which you draw this stuff. Do not confuse it by saying we get back out of repayment in this spigot this certain amount.

I asked about the total amount.

Mr. TENNANT. We misunderstood you and we will give the official Treasury figures for all holdings.

(Information supplied follows:)

Local currency holdings acquired without payment of dollars per Treasury Department records as of Dec. 31, 1962

Peru account:	Dollar equivalent of local currency holdings
U.S.-owned currency:	
In Treasury accounts	3,558,128
Transferred to AID accounts	5,356,296
Transferred to State Department accounts	2,118
Total	8,916,543
Country-owned counterpart funds	19,328
Total, all accounts	8,935,871

REPAYMENT OF S.P.T.F. LOANS IN LOCAL CURRENCY

Mr. PASSMAN. Is the Social Progress Trust Fund the only source of hard dollar loans which are repayable in soft currency?

Mr. MOSCOSO. No; I think the Fund for Special Operations of the IDB also has loans repayable in local currency or dollars.

I am talking about the Inter-American Development Bank. U.S. sources?

Mr. PASSMAN. Then I am correct; am I not?

Mr. MOSCOSO. Public Law 480?

One of the U.S.——

Mr. PASSMAN. Am I correct in my assumption that the Social Progress Trust Fund is the only source of hard dollar loans repayable by option in local currency?

Mr. MOSCOSO. From this program; yes, sir.

Mr. PASSMAN. From the AID program?

Mr. MOSCOSO. Yes, sir.

SINGLE AID PACKAGE FOR THE ALLIANCE

Mr. PASSMAN. Last year when you—and when we speak of "you," we mean the Agency, or the executive branch—requested authorization for the Alliance for Progress program from the Congress, was it your intention to authorize a single package of aid to Latin America, which was to emphasize the Alliance and bring aid together for Latin America in one package?

Mr. MOSCOSO. Did I say that?

Mr. PASSMAN. I asked the question whether last year when the executive branch requested authorization for the Alliance for Progress program from the Congress, was it your intention, or the executive branch's intention, to authorize a single package of aid to Latin America, which was to emphasize the Alliance and bring aid together for Latin America into one package?

Mr. MOSCOSO. No; the requests that we are making here are for AID participation, but there are other requests.

Mr. PASSMAN. That is not answering my question.

Mr. MOSCOSO. That was last year. I do not know. I would like to understand the question.

Mr. PASSMAN. Last year when the executive branch requested an authorization for the Alliance for Progress from the Congress, was it the executive branch's intention to authorize a single package of

aid for Latin America, which was to emphasize the Alliance, and bring aid together for Latin America in one package?

Mr. MOSCOSO. No, sir; this is exclusively——

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. PASSMAN. Mr. Miller, will you give us your understanding of this matter?

Mr. MILLER. Mr. Chairman, my understanding was that the first part of your statement is correct; that the presentation last year was to emphasize the Alliance for Progress. There were, however, other sources of funds available for Latin America in this bill.

Mr. PASSMAN. In the AID package?

Mr. MILLER. In the AID package, including supporting assistance. There was existing at the time the Social Progress Trust Fund which was appropriated 2 years ago, Public Law 480, and the Export-Import Bank. Mr. Moscoso's duties as Coordinator——

Mr. PASSMAN. If you limit it to AID and get away from Public Law 480 and the Export-Import Bank, then is it correct?

Mr. MILLER. "Supporting assistance" is in a separate category and is used in Latin America to some extent.

Mr. PASSMAN. What did you request last year for the Alliance for Progress program? Did you not ask for a single package authorization?

Mr. MILLER. For development loans and grants, we did.

Mr. PASSMAN. Is this presently being justified on that basis?

Mr. MOSCOSO. That plus the Social Progress Trust Fund, which is included in the request for funds.

Development grants and loans for the Alliance for Progress are being justified here.

Mr. PASSMAN. Not in one package, and it is still scattered?

Mr. MOSCOSO. It is divided between grants and loans.

Mr. PASSMAN. But you intended last year to have a single package covering the items you just mentioned; is that correct?

Mr. PASSETT. I thought you might be referring to the funding level, the original request for funds in those two categories.

Mr. PASSMAN. May I suggest we take a brief respite from our labors while we go down and vote, and then see if you can come up with a unified answer to the question?

(A short recess was taken)

Mr. PASSMAN. The committee will come to order.

Before we recessed briefly to go to the floor, I stated that last year it was my understanding that when the executive branch requested authorization for the Alliance For Progress program from the Congress it was perhaps your intention, or that of the executive department, to authorize a single package of aid to Latin America, which was to emphasize the Alliance and bring aid together for Latin America into one package. Is that correct?

Mr. MOSCOSO. No, sir.

UNOBLIGATED BALANCES OF IDB

Mr. PASSMAN. Thank you.

What is the amount of the unobligated balance available to the ordinary capital of the Inter-American Development Bank and what

is the unobligated balance in the Special Operations Fund of the Inter-American Development Bank?

Mr. MOSCOSO. May I have the U.S. Director answer the question on that, sir?

Mr. PASSMAN. Yes.

Mr. KILLEFER. With respect to the ordinary resources of the Bank, the balance of uncommitted capital June 30 this year was $286,614,000, including both dollars and Latin American currency.

Mr. PASSMAN. Yesterday, when you gave us the grand total of unliquidated funds to the 21 Latin Americans countries in which we have an aid program, did that include this item?

Mr. MOSCOSO. The unobligated balances?

Mr. PASSMAN. We put together the unliquidated funds. Does that include this item?

Mr. MOSCOSO. Yes. But, Mr. Chairman, you will recall that I corrected——

Mr. PASSMAN. I am familiar with the fact that there was one fund that had a portion of other currencies, but I just wanted to know——

Mr. MOSCOSO. This is in this fund.

Mr. PASSMAN. If you included it.

Mr. MOSCOSO. Yes, sir; this is the fund we are talking about right now, regular fund.

Mr. PASSMAN. What figure did you give us, sir?

Mr. KILLEFER. The figure I just gave you was $286,614,000 of ordinary resources. That includes local currencies and dollars.

Mr. PASSMAN. Yesterday we were given a figure of $342 million, in round figures. How can we go about reconciling the difference? Or could it be that this is one fund and now you will add to it some additional funds?

Mr. STERNFELD. $342 million out of ordinary capital and Funds for Special Operations. This was the undisbursed balance on loans already made. I assume it did not include the drawdown on the callable capital.

Mr. PASSMAN. Gentlemen, we have two answers, the one you gave us yesterday, the one you gave us today. Will you try to reconcile the difference between the two?

Mr. MOSCOSO. We will be glad to, Mr. Chairman. I have this from ordinary capital, $241.3 million I gave yesterday.

$342 million was the undisbursed balance of loans already made—$241.3 million from ordinary capital, and $100.7 million from the Fund for Special Operations. This does not include the unobligated balance.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

LOANS APPROVED BY IDB WHICH MAY HAVE BEEN REJECTED BY AID

Mr. PASSMAN. Do you have a list of any loans approved by the Inter-American Development Bank from any or all of the three windows for projects that AID originally rejected?

Mr. MOSCOSO. Approved by the Bank that we rejected?

Mr. PASSMAN. Yes, previously. You have the Inter-American Development Bank, with three windows. You have applications going to the Bank; you have applications coming to AID.

Mr. MOSCOSO. We could give you——

Mr. PASSMAN. You could not say categorically they have not approved loans that AID originally rejected?

Mr. MOSCOSO. Chances are——

Mr. PASSMAN. If you cannot make a positive statement, will you have a look at the facts and give us an answer?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Thank you.

(The information supplied follows:)

AID–IDB PROJECT REFERRALS

Although numerous projects are referred between AID and the IDB, neither agency has approved a project formally rejected by the other. Continuous coordination between the two agencies, statutory requirements for the approval of the IDB loan projects by the National Advisory Council, and U.S. participation through the U.S. Executive Director of the IDB in determining eligibility for Social Progress Trust Fund projects, all preclude the possibility of IDB approval of a loan to finance a project rejected by AID. AID loans are processed through similar channels before approval, and it is thus unlikely that an IDB rejected project would be approved by AID.

AID, the "lender of last resort," has cooperated with the IDB in seeking the best utilization of available resources, with AID in some cases referring projects to the Trust Fund which may have been submitted first to AID. With the need and demand for help in the social progress field overwhelming, IDB has been flooded with applications, and has had to assure that its limited resources are not overcommitted in one country or one sector. In those cases where Trust Fund resources were inadequate, high priority loan applications have been taken by AID or jointly financed with AID.

REFORMS IN TAXES AND LAND DISTRIBUTION

Mr. PASSMAN. What have the Latin American countries done in the way of self-help and reform in the field of taxes and land reforms since September 1960? I am talking about something substantial, not bills that have been introduced that are pending, not tax bills that become laws that have not been enforced. We want you, if you will, to answer the question with some positive facts with a spread of 3 years, 1960, 1961, and 1962. Maybe we had better start with September of 1960.

We agree this thing is going to have to work. We should not be imagining it is working maybe when it is not. We want positive information. For each nation that we have helped, we want the amount of taxes they collected in 1960, in 1961, 1962, and 1963, beginning with September of 1960. Not just money accruing to the treasury, because we had a lot of cash grants. We are talking about actual taxes paid in to the government. If you will get that information for us, we shall be grateful.

Then, if you would, tell us the number of acres of land in each country that has been parceled out to the individuals, and the percentage. Do not mix it up with public lands. You know the type we are talking about, where they are breaking up these large estates. Give us the number of acres by country that have been turned over to the individuals and the percentage of the total cultivatable land. Then you may also tell us the amount of public land that has been deeded to individuals. Cite your authority in each instance. Do you have it now on taxes?

(Information supplied follows:)

LAND DISTRIBUTION IN LATIN AMERICA

While the basis of any agrarian reform program is the redistribution of rights to own and cultivate land, certain changes in institutions and services (credit, technical assistance, price policies, transportation, and storage) are required to assure that redistribution is meaningful and productive. Once an agrarian reform law is passed, it is necessary to organize institutions to apply the law, and for these institutions to in turn prepare basic studies necessary for effective implementation. In most cases, the first step, passing of an agrarian reform law, has only recently occurred in Latin America. As exceptions, the programs of Bolivia and Mexico, have been in effect over the years. Those programs have recently been stepped up, and can be considered an important part of the Alliance effort.

"With respect to the implementation of agrarian reform programs in countries that have recently passed laws on this subject, it is worth noting that none of them has shown substantial progress in its land redistribution program. This is partly due to the fact that it has only been a few months since the laws were issued and the specialized institutions responsible for applying them organized" (Inter-American Economic and Social Council, report of the second meeting of Special Committee II, "Agricultural Development and Agrarian Reform, 1963," p. 8).

Nevertheless, land has been distributed. Total by source of land (private or public) as available to AID, follow:

Country	Year	Number of acres [1] distributed by sources				
		Private [2]	Private acquired for distribution	Private distributed as percent cultivated	Public	Total
Argentina	1961 to 1963				246,000	246,000
Bolivia [3]	September 1960 to 1962	3,378,000		9.58	2,549,000	5,927,000
Brazil [4]	September 1961 to 1963	100,000		.03	300,000	400,000
Chile [5]	1962 to 1963	9,000	(189,000)	.06	1,420,000	1,429,000
Colombia [6]	April 1962 to 1963	18,000	(191,000)	.04		18,000
Dominican Republic [7]	do	14,000	(8)	.44		14,000
Ecuador	1961 to 1963	[9] 23,000		.25	(10)	23,000
Guatemala	1961 to 1962				98,000	98,000
Honduras	November 1962 to 1963				10,000	10,000
Mexico [11]	September 1960 to September 1962.	13,740,000		6.17	3,435,000	17,175,000
Paraguay	1961 to 1963	[12] 339,000		11.15	234,000	573,000
Peru	1962 to 1963	[13] 4,000	(108,000)	.01	73,000	77,000
Uruguay	1961 to 1962	71,000		.18		71,000
Venezuela	do	536,000	(240,000)	1.04	220,000	756,000
Total		17,449,000			7,994,000	25,443,000

[3] Social Progress Trust Fund, 2d Annual Report. Private land distributed as percent of total is IDB estimate.

[4] USAID Brazil estimate.

[5] Submission to agricultural development and agrarian reform committee and Embassy airgrams July 3d and Oct. 9, 1962; includes land distributed by the church. In addition to public land distributed to new owners, provisional or final deeds for former public land have been granted to occupants in area of 1,495,000 acres.

[6] Embassy message of Apr. 10 and airgram of July 26, 1963.

[7] Estimate from report of the 2d meeting of Special Committee II, "Agricultural Development and Agrarian Reform, 1963."

[8] Land distributed is part of project to distribute estimated 600,000 to 1,000,000 acres of lands formerly belonging to Trujillo and associates (Embassy airgram Apr. 8, 1963). Several thousand acres have been donated to the land reform program by private individuals and companies.

[9] In spite of the fact that agrarian reform legislation has not been passed, the National Land Settlement Institute has made 23,000 acres available through purchase from a private company to 700 occupants.

[10] Titles have been adjudicated for 50,000 acres of public lands.

[11] President of Mexico's Report to Congress, September 1960 and September 1961. Private land distributed as percent of total is IDB estimate.

[12] Principally grazing lands.

[13] Distributed since April 1963.

Mr. MOSCOSO. The taxes, Argentina, total revenue in pesos, 1961——

Mr. PASSMAN. Break it down to the equivalent of dollars.

Mr. MOSCOSO. I could not convert it in my head.

Mr. PASSMAN. Have it converted and we will take it up tomorrow.

Mr. CONTE. Why not get the pesos for now?

Mr. PASSMAN. The gentleman may ask for anything he wants.

Mr. CONTE. How many pesos to the dollar, Mr. Chairman?

Mr. PASSMAN. Give the gentleman anything he wants. As far as my question is concerned, it deals with dollars.

Mr. MOSCOSO. I have it here converted, Mr. Chairman.

Mr. PASSMAN. All right, if you have it converted. Argentina, 1960 tax collections?

Mr. MOSCOSO. 1960, 1962 is preliminary, 1963 estimated.

Mr. PASSMAN. You are dealing positively with the year 1960?

Mr. MOSCOSO. 1961.

Mr. PASSMAN. Give it to us for 1961.

Mr. MOSCOSO. Argentina, $880 million.

Mr. PASSMAN. From what sources?

Mr. MOSCOSO. Total tax revenues.

Mr. PASSMAN. Is that the amount paid in in taxes and has nothing to do with any other money accruing to the Treasury?

Mr. MOSCOSO. This is tax revenues.

Mr. PASSMAN. What amount did they collect in 1960?

Mr. MOSCOSO. I have 1961, 1962——

Mr. PASSMAN. You already have 1962 as an estimate.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. If you do not have——

Mr. MOSCOSO. No, it is not an estimate. It is the preliminary figures.

Mr. PASSMAN. Would it not be better to go back to 1960 and deal with the positive part of it? You have 1960 and you have 1961. Those 2 years are positive. If you get into a year where it is just an estimate and preliminary, we do not have anything proved.

Mr. MOSCOSO. I think it is preliminary and acceptable.

Mr. PASSMAN. If you do not mind, sir, can you get the information for 1960?

Mr. MOSCOSO. Yes, we can get it.

I do not have it here. I would have to get it.

Mr. PASSMAN. I am going to specifically request that you get us the information for the year 1960. Then we shall move into 1961, and when we make a positive case of the increase, then it will be all right to deal with a preliminary figure.

Mr. MOSCOSO. 1960, Argentina, $645 million. 1961, $880 million. 1962, $1,292 million.

Mr. PASSMAN. You said in 1962 it was preliminary.

Mr. MOSCOSO. Just like all the figures that come out at the end of the fiscal year.

Mr. PASSMAN. Let us deal with the 2 years dealing with positive figures, $645 million to $880 million. How much of that could you charge to inflation and how much——

Mr. MOSCOSO. These are in dollars.

Mr. PASSMAN. I know they are in dollars. Let us discuss briefly the inflationary spiral they had in Argentina. Come down now to

cost-of-living index 1960 and 1961. What we are trying to find out is whether any of these tax laws have brought in more dollars.

Mr. MOSCOSO. I can prove it if you give me the opportunity.

Mr. PASSMAN. You will have the opportunity. You give us the differences for those 2 years. Then if you could give us an estimate of how much the new tax laws brought in, and then how much possibly would be from increase in the economy. There are a lot of different factors.

Mr. MOSCOSO. This is a report, Mr. Chairman, of the Inter-American Development Bank. It has the various taxes accrued, laws approved.

Mr. PASSMAN. How do you relate that information to the cost-of-living index on the same page?

Mr. MOSCOSO. While it is not deflated to reflect the cost-of-living index, it is converted at a single rate of exchange. It is already done.

ARGENTINA'S BUDGETARY DEFICITS

Mr. PASSMAN. Your taxes, 1960, $645 million; 1961, it was $880 million. Now if we deal with the deficit, instead of being decreased, it increased; is that correct?

Mr. MOSCOSO. Yes; it increased.

Mr. PASSMAN. If we project that on to the estimate for 1962, in just 2 years the deficit went from $141 million to $500 million. Does that fact indicate anything significant?

Mr. MOSCOSO. That indicates a serious——

Mr. PASSMAN. Inflation?

Mr. MOSCOSO. Not necessarily. Serious fiscal difficulty they are having.

Mr. PASSMAN. It follows, nevertheless, that as the domestic revenues start up, then the deficit starts up. It really goes wild in 1962 over 1961, in that the deficit went to $500 million from $150 million. Of the $1,292 million, could you tell us——

Mr. MOSCOSO. 1962 was a rather unusual year. They had a change in government, there were increases in defense expenditures, there were increases in capital outlays. That by itself accounts for about half of the budget deficit.

Mr. PASSMAN. You had in fiscal 1963, I suppose, which was their 1962 year, $88,800,000 in aid. Is that sum reflected in the $1,292 million?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. That would make it even more one-sided because without that money the deficit then would have been $588 million; would it not?

Mr. MOSCOSO. No; these funds were not disbursed during that particular year.

Mr. PASSMAN. Let us consider 1962, when you had $22 million in aid; is that correct?

Mr. MOSCOSO. That is right.

RELATION OF BUDGETARY DEFICITS TO DEVELOPMENT PROGRAMS

Mr. PASSMAN. In 1960 you had a deficit of $141 million, but during that year we gave Argentina $22 million and yet their deficit jumped up to $150 million. It does not appear that aid is helping at all. We

see that our aid is growing, but the minute you step up your aid, their budget deficit goes up. You would expect it to be the other way, would you not?

Mr. Moscoso. I would interpret that they are not supporting their budget with our aid.

Mr. PASSMAN. What are they doing with it?

Mr. Moscoso. They have other capital outlays and other necessities.

Mr. PASSMAN. Much of what they originally spent their own budget for they are doing now out of aid, which should take the pressure off their budget; should it not?

Mr. Moscoso. No, sir. It goes to show that it was not taken off because the budget deficit increased.

Mr. PASSMAN. The budget deficit increased; yes. If you had a subsidy coming in to the U.S. Government that we could spend on our public works projects here in America, that would certainly relieve the budget, would it not, or the Treasury Department from spending that money? Would it not improve the condition?

Mr. Moscoso. Supposing an increase in public works were to take place also at the same time and concurrently.

Mr. PASSMAN. The more aid we give them, the larger the deficit is going to be?

Mr. Moscoso. Let us put it this way. The more public works will be built, the more infrastructure will be put in, the more development will take place. I do not think it necessarily follows that the deficit will be larger, Mr. Chairman.

Mr. PASSMAN. You may not think so. I do. You have a fantastically high aid program now going into Argentina. When you started this program, they were operating with a $141 million deficit. You put in $22 million. The following year the deficit went up to $150 million. Then you put in $88 million. The deficit jumped up to $500 million. I thought we were helping them, but if this is what is happening, it simply means inflation will follow. Would you understand it that way?

Mr. Moscoso. Yes, and we have a program now with Argentina to stabilize the cost of living in the country. They have an IMF agreement which they have kept up.

Mr. PASSMAN. Is that one country where you have that tremendous inflation?

Mr. Moscoso. It has been pretty much restrained now. The peso has been stable over the last 3 or 4 months now. As a matter of fact——

Mr. PASSMAN. I am not talking about 3 or 4 months, but the past 2 or 3 years. Have you had a considerable amount of inflation?

Mr. Moscoso. Yes, they had strong inflation beginning in 1962.

Mr. PASSMAN. Is that fact not positively reflected in budget receipts as well as the annual deficit?

Mr. Moscoso. Normally when there is a deficit, you have inflation—normally. It does not necessarily follow.

EFFECT OF INFLATION ON BUDGETARY SITUATION—ARGENTINA

Mr. PASSMAN. Can you tell us whether or not it was inflation that created the budget receipts or whether or not it was by tax laws they passed?

Mr. Moscoso. Tax laws. Not only that, but better administration of the tax laws.

Mr. PASSMAN. Better administration is one thing. That is something we should have everywhere.

Mr. FORD. Would the chairman yield?

Mr. PASSMAN. Yes, when I get this one question about the tax laws. Can you tell us the dates the laws were enacted and specifically what the new tax laws brought in in the way of dollar equivalent?

Mr. Moscoso. February 1962.

Mr. PASSMAN. Is that the date of the act?

Mr. Moscoso. Yes.

The legislation enacted by Congress, tax reforms. The main provisions as follows: (a) The General Tax Division was given administrative autonomy to permit maximum flexibility in its collection operations. The nontaxable minimum was increased from 24,000 pesos to 36,000 pesos annually for all categories, except for income from——

Mr. PASSMAN. Are you dealing specifically with the new laws?

Mr. Moscoso. Yes, sir.

Mr. PASSMAN. What is the total that you got from the new laws?

Mr. Moscoso. In the case of——

Mr. PASSMAN. Argentina.

Mr. Moscoso. We do not have it broken down by various laws.

Mr. PASSMAN. I will not pursue it today, but I want to make this one observation, and then I shall yield to Mr. Ford.

Please go with me now to page 28 of 1961. You estimated that the domestic revenues would be $1,753 million. Now let us take your optimistic estimate of what you are going to get, which is $880 million, or just about half.

If that indicates success, I cannot comprehend. Look at my book and see if I am reading it correctly.

Mr. Moscoso. This is converted at 85 pesos to the U.S. dollar.

Mr. PASSMAN. You said it would be $1,753 million, but when you come up with your estimate, it is only $800 million.

Mr. Moscoso. You have a different conversion figure. If you convert at 120 pesos per dollar——

Mr. PASSMAN. This is broken down. This is inflation. You told us it inflated everything. This was your estimate. When you come to the actual, it is 50 percent of that amount.

Mr. FORD. I understand because I am sure you are reading from last year's justifications and this year's book.

Mr. PASSMAN. Domestic revenues, estimate would be $1,753 million. We get to this, and it is only $880 million.

Mr. FORD. I am looking, Mr. Moscoso, at the words at the top of that area in the justification book, and it says million dollar equivalents in the 1962 book.

Mr. Moscoso. That is right.

Mr. FORD. And in the 1963 book the same phraseology is used.

Mr. Moscoso. That is right. I converted at 120 pesos per dollar.

Mr. PASSMAN. It is either inflation—but even with the inflated figure, you only got half of what you estimated you would get for that year. We have to make this thing make sense.

This thing is either succeeding or it is not succeeding. If it is not, then we are going to have to work together to make it work. We just cannot tear up the estimate you gave us previously.

Mr. Moscoso. I would like to——

Mr. PASSMAN. Both have been adjusted to the dollar equivalent, and this was the estimate of what you would get in 1961, but now it winds up at just a little over half that sum.

Mr. FORD. There needs to be some reconciliation.

Mr. PASSMAN. There is no way to reconcile it other than accept the facts where the dollar equivalent was presented last year and this year. The estimate was one figure last year, and this year it indicates that it is just about 50 percent which has been realized of what they expected.

We will have to break it down on every nation when we get to it. We shall return to Argentina when we get to the individual nations.

AUDITING AUTHORITY OF GAO AND INSPECTOR GENERAL UNDER SPTF

Do the General Accounting Office and the Inspector General of the State Department have any authority to audit expenditures made under the Social Progress Trust Fund program of the Inter-American Development Bank?

Mr. Moscoso. They can ask for any information.

Mr. PASSMAN. Is the authority presently broad enough for them to do the auditing?

Mr. Moscoso. They can do it through us.

Mr. PASSMAN. Do they have the same access and same authority to apply to the Inter-American Development Bank as they do to all other AID projects?

Mr. Moscoso. They would have to do it through us, Mr. Chairman, because it is not normal for the U.S. Comptroller to go into the books of an international——

Mr. PASSMAN. Do they have to get permission from the Bank? The Inspector General, under the present authorization, does not have the right to audit the books of the Inter-American Bank under the present authority?

Mr. Moscoso. They can get any information they want doing it through us.

Mr. PASSMAN. Does the General Accounting Office or the Inspector General of the State Department have authority to audit the expenditures made under the Social Progress Trust Fund program of the Inter-American Development Bank without having to get special permission, or authority, from AID or the executive or some other branch—the present authority is not broad enough for them to go into audits without permission?

Mr. Moscoso. I think it is sufficiently broad right now to be able to get any information he wants.

Mr. PASSMAN. Under the present authority can the auditors from the General Accounting Office or the Inspector General of the State Department move in without advance notice and do the same type of audit on the accounts of the Inter-American Bank as they can on the AID accounts around the world?

Mr. MILLER. I can speak only to the Inspector General.

Mr. PASSMAN. Speak to that.

Mr. MILLER. His statutory authority is found under section——

Mr. PASSMAN. Can you tell us whether or not the authority would apply equally to the Inter-American Development Bank without advance notice or permission as it would to other AID accounts?

Mr. MILLER. I was trying to be very precise. His authority is covered by section 624(d)(2).

Mr. PASSMAN. I am familiar with the authority, but is it broad enough to permit the auditors to move in on the same basis and make the same kind of audit of the Inter-American Development Bank accounts as they would the the AID agency and possibly Development credits?

Mr. MILLER. Under the authority he only has authority to review and to conduct such reviews as he believes necessary for U.S. programs.

Mr. PASSMAN. Thank you. You know very well the authority is not that broad.

Mr. MILLER. I am trying to answer your question.

Mr. PASSMAN. You know the answer.

Mr. MILLER. The answer is only under U.S. programs but not under programs administered by the Inter-American Development Bank.

Mr. PASSMAN. Let us limit it to the Social Progress Trust Fund then, specifically.

Mr. MILLER. He has authority, it is my understanding, only to review whatever residual rights the United States has in——

Mr. PASSMAN. Then the auditor does not have the right?

Mr. MILLER. He does not have the right to go in——

Mr. PASSMAN. Thank you. Why do you make it so difficult for us to ever get an answer?

Mr. MILLER. I am trying to be precise, Mr. Chairman.

NATIONAL DEVELOPMENT PLANS IN LATIN AMERICA

Mr. PASSMAN. How many members of the Alliance for Progress program have completed national development plans and how many have been approved by their own government and the panel of nine?

Mr. MOSCOSO. All the members are now doing planning, and the following have already submitted their plans to the panel of experts: Colombia, Chile, Bolivia, Mexico, Panama, Venezuela, Honduras.

Mr. PASSMAN. How about the other countries?

Mr. MOSCOSO. Brazil and Ecuador and Peru are expected to submit theirs very shortly, and we expect other countries to follow before the end of the year. There might be one or two exceptions. We have 10.

Mr. PASSMAN. Could it be that they are getting their aid a little easier some other way?

Mr. MOSCOSO. I do not understand the question, sir.

Mr. PASSMAN. I speculated that maybe they are getting all the money they want or need from some other source, because we would have thought that all of them would have been in rather promptly with a plan to get into this program. Would you not have thought so?

Mr. MOSCOSO. No; because planning is an extremely difficult job. In some countries that have not done——

Mr. PASSMAN. Under the aid program they are getting billions of dollars of assistance, are they not, without any plans?

Mr. MOSCOSO. For projects in the majority of the cases.

Mr. PASSMAN. This phase deals with the same type of programs and projects, does it not?

Mr. MOSCOSO. There are two kinds of plans, general plans and sectoral plans.

Mr. PASSMAN. Some of the nations, I think you named seven, have completed plans.

That leaves 12 yet to complete their plans?

Mr. MOSCOSO. Yes; there are 19 countries.

Mr. PASSMAN. How long has the Alliance for Progress program under this section been in effect? How long would they have been eligible for consideration out of this fund, since 1960? Calendar 1961, I suppose.

Mr. MOSCOSO. 1961. May of 1961.

Mr. PASSMAN. Two years. Of the 12 nations that have not yet completed their national development plans, could you insert in the record the total amount of aid to each of them for the years 1961 and 1962?

Mr. MOSCOSO. Yes.

(The information supplied follows:)

Total U.S. economic assistance to Latin American Republics without national development plans submitted to the OAS panel

[In millions of dollars]

Country	Fiscal year 1961	Fiscal year 1962	Country	Fiscal year 1961	Fiscal year 1962
Argentina	68.8	78.8	Haiti	11.8	7.5
Brazil [1]	303.9	202.5	Nicaragua	11.8	13.7
Costa Rica	10.0	10.3	Paraguay	10.7	8.0
Dominican Republic	0.1	36.6	Peru	58.9	78.2
Ecuador	13.1	36.5	Uruguay	2.8	6.7
El Salvador	6.6	23.2			
Guatemala	31.8	9.3	Total	530.3	511.3

[1] Brazil has completed a plan but has not yet submitted it to the OAS.

NOTE.—The 7 countries with plans received a total of $408,700,000 in U.S. assistance in fiscal year 1961 and $581,000,000 in fiscal year 1962.

U.S. ASSISTANCE TO LATIN AMERICAN DEVELOPMENT PLANNING ACTIVITIES

Mr. PASSMAN. How much money has the United States extended under the Alliance for Progress program in the form of grant aid for assistance to the various Latin American countries in developing their national development plans?

Mr. MOSCOSO. In 1963 for development planning activities, including feasibility surveys and public administration, technical assistance——

Mr. PASSMAN. It falls under the same category. Give us the amount of grant aid out of Alliance for Progress funds.

Mr. MOSCOSO. Grants—$4,740,000.

Mr. PASSMAN. For what year?

Mr. MOSCOSO. 1963.

Mr. PASSMAN. Could you give the information for 1962?

Mr. MOSCOSO. No, sir, we do not have it. We do not have it, but will be glad to get it for the record.

Mr. PASSMAN. How about for 1961 also while you are getting it?

Mr. MOSCOSO. 1961 also.

(The information supplied follows:)

Development planning activities

Total, fiscal year 1961	$450,000
Total, fiscal year 1962	3,072,000

Mr. PASSMAN. Off the record.

(Discussion off the record.)

UTILIZATION OF FUNDS BY PAN AMERICAN UNION FOR THE OAS

Mr. PASSMAN. I believe the OAS received $6 million under the original appropriation for the Inter-American program for social progress; is that correct?

Mr. MOSCOSO. That is correct.

Mr. PASSMAN. How did the OAS utilize this money?

Mr. MOSCOSO. The projects are the following:

Agriculture and agrarian reform, $524,600. Taxation and tax reform, $336,620. Public administration, $125,940. Education and training, $422,056. Education and training, engineering and science education, $16,580. Urban and community developments, and housing, $291,620. Public health, $170,284. Public information, organization and methods, $19,500. National planning agencies, $71,166. Export commodities—market problems, $50,236. Support of missions, $200,000, task forces. That gives a total of $2,228,616.

The details of the balance are technical assistance, Alliance for Progress mission technical pool, $100,000.

Technical advisory mission to Brazil, $350,000. Technical advisory mission to Chile, $10,000. Technical advisory mission to Ecuador, $296,600. Technical advisory mission to Haiti, $67,710. Technical advisory mission to Panama, $23,000. Technical advisory mission to Paraguay, $188,625. Technical advisory mission to Uruguay, $269,-459. Technical advisory mission to the Dominican Republic, $103,580. Central American regional mission, $350,000. Technical advisory mission to Brazil for agriculture and agrarian reform, $8,000. Technical advisory mission to Colombia for agriculture and agrarian reform, $111,039. Technical advisory mission to Venezuela for agriculture and agrarian reform, $7,000. Support of technical advisory missions, $134,600. Support of the Panel of Nine, $800,000. Unprogramed as of December 31, 1962, $351,771. That adds up to $3,171,384. Overhead of $600,000.

Mr. PASSMAN. Overhead for what purpose?

Mr. MOSCOSO. For handling the whole program.

Mr. PASSMAN. Who gets that money?

Mr. MOSCOSO. The Pan American Union, broken down in salaries and personnel contracts, $302,000; equipment, $90,000; rental of office space, $165,000; miscellaneous, $43,000; total of $600,000.

Mr. PASSMAN. Did you have much difficulty distributing this money in so many different categories?

Mr. MOSCOSO. The budget was submitted to us by the Pan American Union. Over a period of weeks we discussed it.

OAS TECHNICAL ADVISORY MISSIONS TO LATIN AMERICAN COUNTRIES

Mr. PASSMAN. We are talking only about $6 million. Could you now give us the total amount of money that each of these countries and projects got out of all other aid spigots, comparable to this, during the

same period? We do not like to do business in these odd figures. It is $394 million and we decided to make it $400 million. They could not justify it for $396 million and we wanted to round it out. This is just a little extra sweetener in the pie.

We want to find out what countries received money for similiar accounts, if it is technical assistance, you had an awful lot of missions going out. Of course, you do have AID missions going out all the time. If you will, give us that information.

Mr. Moscoso. Would it help if I explained the purpose of these missions?

Mr. PASSMAN. Go ahead and do so.

Mr. Moscoso. I would like to have the opportunity to explain.

U.S. AND OAS TECHNICAL ADVISORY MISSION TO BRAZIL

Mr. PASSMAN. Take a technical aid mission for $350,000 for——

Mr. Moscoso. Brazil?

Mr. PASSMAN. The technical advisory mission to Brazil.

Mr. Moscoso. To assist them in developing their planning.

Mr. PASSMAN. Let us find out the number. How many went in the mission?

Mr. Moscoso. I do not have the detail.

Mr. PASSMAN. What were they supposed to do, if anything?

Mr. Moscoso. They were supposed to assist the Brazilians in doing comprehensive national planning. The reason for our not getting involved in that is we think the national planning efforts of a country are a very delicate operation and should be handled primarily by the nationals themselves or by people that they themselves pick without any intervention on our part.

Mr. PASSMAN. Did we give something out of another account for the same purpose, national planning, to Brazil, to the Latin American pot divided up similar to this? How much did the mission get out of the second pot to do the same thing? Let us get the two together.

Mr. Moscoso. We gave $650,000.

Mr. PASSMAN. To Brazil?

Mr. Moscoso. Yes; for the Northeast regional plan.

Mr. PASSMAN. To do the same type of planning?

Mr. Moscoso. No; it is a different type of planning.

Mr. PASSMAN. A national plan?

Mr. Moscoso. But this is regional planning of the northeast area. We did it jointly with a Brazilian agency.

Mr. PASSMAN. For Brazil, though?

Mr. Moscoso. Yes; with Brazil.

Mr. PASSMAN. Here we have two little items, $650,000 out of one spigot, or account, $350,000 out of another. Did you use the same mission, Mr. Moscoso, to accomplish the same purpose?

Mr. Moscoso. No; this is an entirely different mission.

Mr. PASSMAN. What kind of plans did they work out for the $350,000?

Mr. Moscoso. That has not been spent because I am told the mission was not able to get there.

Mr. PASSMAN. How about the $650,000?

Mr. STERNFELD. That is being spent. We are actually working with the SUDENE at this time.

Mr. PASSMAN. You got one mission there for the $650,000 but did not get the mission for the $350,000, speaking of the U.S. mission that could not get there?

Mr. MOSCOSO. This was not a U.S. mission. The mission I am talking about that did not get there is the OAS mission.

Mr. PASSMAN. What was the reason it did not get there?

Mr. MOSCOSO. We are having difficulty in getting personnel for some of these operations. Planning is a difficult job.

Mr. PASSMAN. This is a function of the OAS, is it not, this $350,000 planning part of the $6 million?

Mr. MOSCOSO. They accepted responsibility for taking on the planning function or developing plans, to assist countries in developing plans, in most Latin American countries.

Mr. PASSMAN. When do you suppose you will call this back in and deobligate it?

Mr. MOSCOSO. I imagine that we would deobligate only when we have information from OAS that definitely they are not going to be able to do it.

Mr. PASSMAN. Do all other projects fall in the same general category?

Mr. MOSCOSO. As far as I know——

Mr. PASSMAN. We only want to examine on one or two. If this is the exception rather than the rule——

Mr. FORD. Will the chairman yield?

Mr. PASSMAN. Yes.

Mr. FORD. When was this effort initiated with this $350,000 mission?

Mr. STERNFELD. The Brazilian mission was delayed by the various changes that have taken place in the Brazilian Government and particularly in the changes of ministers in charge of the effort Brazil is doing in the planning field. There have been changing organizations to deal with. The Brazilian Government asked for this type of assistance, I think it was in 1962. The OAS has been attempting since October to send a mission down there. In May 1962 the Government of Brazil, through its representative on the Council of American States, presented a written request for technical assitance to assist the organization known as Coplan, the Brazilian National Planning Commission. This commission has undergone a series of reorganizations. As a matter of fact, as of July 11, this month, the President of Brazil reorganized the whole planning effort in Brazil. It is our hope that with this new organization, which is a strengthening of the planning mechanisms, the Government of Brazil will again request the OAS to provide this kind of assistance.

It has been held up from moving ahead in that both the Brazilians and the Pan-American Union did not feel that this assistance would be used, given the disorganization taking place in the Government of Brazil's planning effort.

The other figure talked of, the $650,000, is for a planning organization in the northeast of Brazil similar to our TVA, a regional organization (Sudene). This is an effort in which the United States was directly involved and by which we have continued to provide them assistance, particularly in the area of industrial and social research.

Mr. FORD. How soon do you expect this smaller one, $350,000, to get off the ground?

Mr. Moscoso. We have the mission director, the U.S. AID mission director for Brazil, here. I think he can give us an accurate and up-to-date bit of information.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. KUBISH. I would say prospects are very good that the Brazil planning organization will be able to receive and will warrant support of this $350,000 on planning in the very near future. In the last 3 months of last year Brazil hastily developed a 3-year development plan. They put together a broad outline of a plan. In the early months of this year proposals were made to set up a minister for planning. Just on July 11, as Mr. Sternfeld pointed out, the President of Brazil signed a decree bringing all planning operations in Brazil directly into the Executive Office of the President. He indicated he would meet with them once a week, and he was going to endeavor to carry forward on economic planning and development of projects in Brazil that would make it possible for the country to develop faster.

We believe that he will go ahead with this plan and that it will be possible for them to get assistance from abroad on planning that they desire and that we are willing to make available.

Mr. ANDREWS. Will the gentleman yield?

Mr. FORD. Yes.

Mr. ANDREWS. I wonder if the Director could tell us how many technicians are involved in this $350,000 project.

Mr. PASSMAN. Mr. Moscoso did not know the number.

Mr. KUBISH. These are people coming through OAS.

Mr. ANDREWS. You do not know how many will be involved in the $350,000 project?

Mr. KUBISH. No, sir, I do not.

ADVISORY MISSION FOR URUGUAY

Mr. PASSMAN. You have $269,459 for Uruguay listed for the same purpose. What has been the progress there?

Mr. Moscoso. An advisory mission was sent to help the Government of Uruguay.

Mr. PASSMAN. An OAS mission?

Mr. Moscoso. Yes, jointly sponsored by OAS and the Inter-American Development Bank and Economic Commission for Latin America.

Mr. PASSMAN. If you could get technicians for Uruguay for the same type of project, why could you not get them for the $350,000?

ADVISORY MISSION TO BRAZIL

Mr. Moscoso. In the case of Brazil, by the time they had been able to—this is an OAS operation—to get the technicians, there was a request from the Government of Brazil that in view of the fact that they were reorganizing the COPLAN operation, that the OAS should hold back.

Mr. PASSMAN. It was not a question, then, of not being able to recruit technicians?

Mr. Moscoso. Both.

Mr. PASSMAN. You said earlier you could not recruit the technicians and now you say Brazil asked you to hold them up. Off the record.

(Discussion off the record.)

Mr. MOSCOSO. On the record, both things.

Mr. PASSMAN. You did not say that a while ago, but now you say both.

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. How many technicians did you recruit before Brazil served notice to hold back?

Mr. MOSCOSO. I do not know. This is an Organization of American States operation.

Mr. PASSMAN. I thought you said earlier they could not get there because you could not recruit personnel. Now you say it is a combination of reasons. You could not recruit personnel and they asked you to hold personnel up.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. How many did you recruit and what disposition did you make of them after you received the request from Brazil to hold it up?

Mr. MOSCOSO. In the first place, I did not receive the request.

Mr. PASSMAN. I mean the agency. When I say "you", I am talking about——

Mr. MOSCOSO. I do not know how many persons.

Mr. PASSMAN. Does the gentleman from Brazil know?

Mr. KUBISH. In the case of OAS, sir, I do not know if any technicians were recruited. In the case of technicians to go to the northeast of Brazil there has been great difficulty in getting people to go there.

Mr. PASSMAN. I am talking about the $350,000. We were told earlier that you had not liquidated the fund because these people could not get there. Pursuing it, they could not recruit the people. Now we find out they could recruit them but Brazil said they did not want them. How much progress have you made, if any, toward recruiting personnel, from the $350,000?

Mr. STERNFELD. We would have to check with the OAS here in Washington.

Mr. PASSMAN. If you had told us that a while ago——

Mr. MOSCOSO. I said so, Mr. Chairman.

Mr. PASSMAN. You answered directly a while ago as to the reason. Now we find out it is different.

ADVISORY MISSION TO URUGUAY

Mr. STERNFELD. In the case of Uruguay we have the names of the people, work they are doing, and we can supply to the committee if it so desires a report of the kind of actions it has been carrying out in Uruguay, the amount of money that is spent on the services, professional service contracts, amount on travel and——

Mr. PASSMAN. Put the information in the record, please.

(The information follows:)

MISSION TO URUGUAY

1. Organization and composition

An advisory mission to assist the Government of Uruguay in the formulation and execution of a general economic and social development program was sent under the joint sponsorship of the OAS, IDB, and ECLA, and organized on the basis of an agreement between the OAS and the Government of Uruguay. The group began its work in February 1962, and is scheduled to remain in the field for approximately 1 year.

Mr. Angel Monti was named chief of the joint group, and Mr. Julio Melnick as program coordinator. The other members of the mission were:

Name	*Field of Activity*
Richard F. Berendt	Social programing
A. O. Cataldi	Demography
Alberto Fracchia	National accounts
Ricardo Garcia Posada	General economics
Roque Garcia Frias	Statistics
Jorge Irisity	General programing
Thomas Boyd Jabine	Statistics
Ernesto Horacio Monteverde	National accounts
Luisa Quesada	Census
Francisco Sibauste	Census
Alejandro Vegh Villegas	Industry

2. Program as of December 21, 1962

This tripartite mission has been given responsibility for assisting the government in the formulation of both a short- and a long-term development program, including, in particular, a detailed diagnosis of the principal obstacles to development in the various sectors of the economy and in the social field, notably housing. The mission is currently engaged in assisting the authorities in preparing a detailed public investment program for 1964; projections for the quadrennial budget period 1964–67; and a broad perspective plan for the next 10 years. These are to be considered by the new government that will take office in March 1963. The mission has been handicapped by the lack of basic economic data and particularly by deficiencies in budget information on the general government sector and the many autonomous agencies with responsibilities in the economic and social fields. Much of the current activity of the mission is devoted to coping with the problems raised by the institutional organizational problems within the government structure and by the lack of statistical data arising largely from delays in taking a census.

3. Results and perspectives

During the 11 months it has been working the mission has—

(*a*) Been instrumental in establishing a number of interagency working groups to coordinate activities and develop and improve the administrative machinery for planning. These groups have been formed in the fields of agriculture, communications, health, housing, and education. In order to promote greater public understanding of and participation in the national planning effort, both Government officials and experts drawn from the private sector are included in the groups.

In the field of agriculture 11 of these interagency working groups are presently reviewing prospects for the major commodities (including cereals, sugar products, and animal products) and are to make recommendations on certain aspects affecting agricultural output.

(*b*) Prepared an inventory of investment projects in the public sector; with the cooperation of the working groups described above. The inventory includes projects such as roads, communications, educational institutions, and power installations underway or in the formulation stage. Information is given on the scope of the project, the extent to which feasibility has been determined, and the authorities responsible for the different stages of its execution. It also provides an indication of the need of any further studies or technical assistance required for implementation.

(*c*) Successfully completed a first training program in the field of economic planning.

(*d*) Nearly completed a comprehensive study of the budgetary system and is engaged in assisting authorities in determining specific measures for improving and reorganizing present budgetary procedures. This work is based on intensive efforts to obtain from the 63 autonomous Government agencies all the detailed data concerning their operations as well as their investment plans—efforts that began when the mission first started.

(*e*) Also advanced in the preparation of a consolidated budget account for the public sector that will, among other things, give a more precise indication of the impact of these activities on the total economy and furnish a systematic framework for public sector plans.

(*f*) Progressed in the preparation of a detailed analysis of the tariff system, designed to provide the basis for a trade policy that will be in line with general development and fiscal policy, and promote the objectives of the Latin America Free Trade Association (LAFTA).

(*g*) Almost completed an assessment of longer term needs and requirements in the social fields; namely, housing, education, and health and sanitation facilities. This work is providing the basis for developing further projects in the fields concerned. In connection with these studies the mission has undertaken special statistical compilations in order to fill the gaps in the availability of basic information.

(*h*) Undertaken with regard to sectoral programing, an analysis of the potentialities of the pulp and paper industry and a comprehensive survey of the textile industry. Similar studies of the chemical and food-processing industries are also in process. All of the studies are intended to determine the domestic market prospects of these industries and their outlook within the Latin American free trade area.

(*i*) Virtually completed a well-integrated set of national accounts estimates, for which data have been organized according to the principal areas of economic activity. In addition, much work has also been done to improve the nation's statistical services and extensive surveys of industry, transport, and communications have been undertaken to obtain the necessary data.

The mission, as can be seen from the above, is now completing the initial phases of its work. The next phase is to assist authorities in readying projects for financing and execution, particularly in the fields indicated above. Moreover, in order to allow further precision and refinement in planning, a comprehensive survey of natural resources should be made. More intensive effort in launching a massive housing program, improving public administration, taking a census and formulating a meaningful agricultural plan are among the priority fields still to be covered. It is expected that within a few months the Government of Uruguay will be ready to submit its development plan for evaluation by an OAS ad hoc committee and be in a position to start the systematic implementation of the plan later this year.

Alliance for Progress

Status of project funds, by object class of record as of Dec. 31, 1962

Object class code	Object class title	Project budget	Allotment of funds	Obligations incurred				Unobligated allotments (col. 4 − col. 7)
				Disbursements	Unliquidated obligations	Total obligations incurred	Unobligated budget (col. 3 − col. 7)	
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
01	Salaries and personal service contracts	$169,600	$169,600	$28,727.28	$17,855.81	$46,583.09	$123,016.91	$123,016.91

	Total	269,459	269,459	60,433.02	23,030.60	83,463.62	135,995.38	185,995.38

MULTIPLICITY OF AID ORGANIZATIONS

Mr. PASSMAN. Examining on this bill several years ago, we firmed up, and I think it is still in the hearings, subject to correction now, that you had seven funds and different brands of a general size furnishing technical aid to the Latin American countries—OAS, FOA, bilateral technical aid, multilateral technical aid, all doing the same thing. Why would you people not recommend, since it is all a giveaway anyway, consolidating this thing in one package? Then you can make loans out of it, you can give grants out of it, but at least you would not have five technical aid missions maybe getting off five different planes coming in. You check the record. I think, subject to correction, that it is either six or seven technical aid activities doing identically the same work. You had them financed out of the different organizations that I named. Now you have taken the technical aid and put it in with some other account. It is all stirred up together. You cannot find it.

Mr. TENNANT. You are probably referring to development grants.

Mr. PASSMAN. Development grants. It is all mixed up.

I yield to the distinguished gentleman from New Mexico.

AUTHORITY TO ALLOCATE U.S. FUNDS TO THE OAS

Mr. MONTOYA. Mr. Moscoso, by what authority are you expending aid funds through the OAS in this particular aspect of operation?

Mr. MOSCOSO. When Ambassador Gordon came before this committee in 1961, I was not around, but I read the hearings. I understand that he mentioned the desirability of a small amount of these funds from the social progress program being made available for planning this program and that these funds should be made available through the Pan American Union, to give it the multilateral character that the program required.

Mr. MONTOYA. Do you make a special grant to the OAS and to the Pan American Union?

Mr. MOSCOSO. We have.

Mr. MONTOYA. By what authority in the law? Aren't the international organizations coming in a separate category?

Mr. MOSCOSO. "Latin American development and Chilean reconstruction assistance," Public Law 86–735.

Mr. MONTOYA. What is the provision of the law that authorizes your agency to make specific grants to the OAS and to the Pan American Union?

Mr. MOSCOSO. May I read it just a minute?

> * * * supports the consolidation of the public institutions and agencies of inter-American cooperation insofar as feasible within the structure of the Organization of American States and strengthening of the personal resources on authority of the Organization in order that it may play a role of increasing importance in aspects of hemispheric cooperation.

Mr. STERNFELD. This was included in the appropriation act which this committee enacted in 1961, Public Law 87–41.

Mr. MONTOYA. Then if you can make one grant of a few thousand dollars to OAS and to the Pan American Union, then perhaps you can make grants of all the moneys to the OAS and Pan American Union for disbursement to Latin America.

Mr. Moscoso. This was discussed with the Congress at that time. I remember reading even the amount was discussed.

CONTROL OF ALLIANCE FUNDS BY OAS

Mr. MONTOYA. This is what I am getting to, Mr. Moscoso. A few weeks ago Mr. Kubichek came out with a very glowing recommendation that what the United States should do was that it should turn over all the Alliance for Progress funds and bilateral aid funds to an agency of the Organization of American States and that that organization or agency should decide with Latin American direction how these funds should be spent.

I don't think we are about to accept such a recommendation.

Mr. Moscoso. No. We are not accepting that recommendation as a desirable one to handle this program. This has been said publicly.

Mr. MONTOYA. This was the opening of the door.

Mr. Moscoso. I think the members of this committee have seen my statements to that effect.

FUNDS PROGRAMED FOR OAS

Mr. PASSMAN. If the Congress approves some part of the $200 million for the inter-American program for social progress in fiscal year 1964, the OAS is scheduled——

Mr. Moscoso. $4.5 million; that is right.

Mr. PASSMAN. OAS is scheduled to receive $4,500,000?

Mr. Moscoso. That is right.

Mr. PASSMAN. How does the OAS plan to utilize this $4½ million?

Mr. Moscoso. It will be used for similar purposes to the purposes that I have just enumerated.

Mr. PASSMAN. Is it not somewhat premature to request any $4½ million for projects now where for some of them you have not disbursed a dime, on account of not being able to get personnel?

Mr. Moscoso. Mr. Chairman, what happened in the case of Brazil is that by the time they were able to get personnel this reorganization had taken place in the Brazilian Planning Organization.

May I say that we have to keep in mind that getting personnel of this kind is a difficult job.

NEED FOR ADDITIONAL FUNDS FOR THE INTER-AMERICAN PROGRAM FOR SOCIAL PROGRESS

Mr. PASSMAN. We established yesterday that you have more than $2 billion unliquidated to the credit of the Latin American countries. We are not going to think about the billions we have already given them. We are talking about in excess of $2 billion unliquidated. Then we find this type of a statement, on page 110 of the justifications:

> Renewal of the trust fund will demonstrate the serious desire of the United States to assist Latin American development.

Does it take $200 million more after the billions we have given them and another billion more in the pot to convince them?

Read this:

> Renewal of the trust fund will demonstrate the serious desire of the United States to assist Latin American development; especially to assist the people

of Latin America and do so not only through bilateral aid but also appropriate lending terms through multilateral.

Does it take this kind of action to convince them? This is $200 million extra.

Mr. Moscoso. Mr. Chairman, you know that last year we testified here about the great difficulties the Latin Americans had had in claiming the attention of the United States in getting assistance in their economic development. You will recall I mentioned the fact that in comparison with other regions of the world they had been neglected. The Latin Americans felt that way. The Latin Americans have felt also that the United States should, for historical and traditional reasons, have special interest in their welfare. I also mentioned the fact that after the disastrous visit of our Vice President in Latin America in 1958, it had become quite evident that there was a need for a revision of this policy, which eventually resulted in President Eisenhower initiating the Social Progress Trust Fund at the conference held in Bogotá and I believe that if the funds which are required for the continuation of this program are not made available, it will be read or will be considered by the Latin Americans that we are not going to continue to assist them.

Mr. PASSMAN. Even if the Congress should appropriate a substantial part of the $667,700,000, do you still have to keep this one shot in the arm proposition going, notwithstanding the fact that you have 10 or 15 times that much planned out of other spigots in subsequent years?

Mr. Moscoso. I will tell you why, sir. This is the one opportunity in which there is a multilateral approach for Latin America.

Mr. PASSMAN. Define "multilateral."

Mr. Moscoso. In which the Latin Americans themselves will participate in the——

Mr. PASSMAN. How much have they contributed to the Social Progress Trust Fund?

Mr. Moscoso. In the sense of funding——

Mr. PASSMAN. How much have they contributed directly to this account in this Fund?

Mr. Moscoso. Nothing in the Fund. They have contributed in their effort and they have contributed in their local participation.

Mr. PASSMAN. They are supposed to do that. They are the recipients of the aid.

Mr. Moscoso. That is right, sir.

Mr. PASSMAN. This is supposed to be a one shot-in-the-arm proposition. You tell these people, "We are willing to do this if you do that." We have disbursed about $45 million of the total fund; is that correct?

Mr. Moscoso. No; it is more than that. It is $55 million.

Mr. PASSMAN. You have disbursed $55 million out of the $394 million approved by the Congress?

Mr. Moscoso. That is right.

CONSOLIDATION OF FUNDS FOR LATIN AMERICA

Mr. PASSMAN. We have also established that you have a total of $2 billion unliquidated in all the spigots that we enumerated. It would appear to me that the time is coming, that since you are going to ac-

complish the same thing out of the other funds, that we just should not keep all these different accounts and different funds and different projects going because believe me, Mr. Director, you can go to the record and you will find in many instances six, seven, or eight different branches of the aid program are doing identically the same kind of work. You change the rules too often. You are getting it to the point that it is impossible to administer. Why would you not be satisfied to get a substantial appropriation under this fantastically high request and try to coordinate the efforts of these people under the special fund and get along with the program in the Alliance for Progress?

Mr. Moscoso. To start answering your question, Mr. Chairman, I must insist that this was not a one-shot operation. The witnesses who testified much before I ever came here to Washington—but I have read their hearings—in several instances indicated that there would be a request made again, and this year precisely. I remember Ambassador Gordon——

Mr. PASSMAN. That was before you had an Alliance for Progress program. That program came along later. How well do I remember that when the distinguished chairman of the Foreign Affairs Committee, in justifying this item to the Congress, said over and over again,

> We will not ask the Congress to appropriate any money against this authorization until necessary reforms and tax laws have been passed and are being carried out,

but the ink was still wet on the document when we made the appropriation.

Subsequently the Alliance for Progress program came along. It was determined by President Kennedy that this thing should be greatly stepped up. We have stepped it up greatly. We are cooperating with you, but you want to keep alive, also, something that was created prior to the Alliance for Progress.

MULTILATERAL ASPECT OF SOCIAL PROGRESS TRUST FUND

Mr. Moscoso. Mr. Chairman, because of the multilateral qualities of this fund, I think the additional appropriation should be made.

Mr. PASSMAN. The multilateral part comes in the voting, and does not come in the other members making a contribution into this fund.

Mr. Moscoso. Except, sir, that if you obtain a loan from a bank to build something—a silo—you are not going to get a 100-percent loan. You are going to have to put up quite a bit of your own money and of your own effort. That is what the Latin Americans are doing. If they had the money, they would not come to us for assistance.

Mr. PASSMAN. It is to their benefit to put up something, is it not?

Mr. Moscoso. That is right. They are doing it.

LATIN AMERICAN INVESTMENT IN OWN DEVELOPMENT

I will show how much they put down, in the words of David Rockefeller, president of Chase Manhattan Bank; $8 billion.

Mr. PASSMAN. They should have put up 10 times that amount if they can afford it. They are the recipients.

Mr. MOSCOSO. These are the words of Mr. Rockefeller:

Investments in significant areas of Latin America have shown signs of resiliency. During the initial year of the Alliance for Progress, Latin American nations invested over $8 billion of their own public and private funds.

Mr. PASSMAN. That is encouraging information.

If they are able to do that, it seems to me they do not need all the money that you are requesting.

Mr. RHODES. If the Chairman will yield, those are not your figures, are they?

Mr. MOSCOSO. These are the figures of Mr. Rockefeller.

Mr. RHODES. Do they square with your figures?

Mr. MOSCOSO. "On the basis of my own recent travels in Latin America and our research specialists"——

Mr. RHODES. You are the witness, not Mr. Rockefeller. Do those figures square with the figures which you have?

Mr. MOSCOSO. They do square. We do not have the exact figures of Mr. Rockefeller. He says over $8 billion. Ours is a little higher, closer to $9 billion.

Mr. PASSMAN. Could you tell us the amount they spent on the same projects the year before they got this?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. You have only disbursed $55 million of this fund?

Mr. MOSCOSO. Yes, sir; $55 million.

Mr. PASSMAN. If they are able to put up $8 billion to our $55 million——

Mr. MOSCOSO. That is not what I mean, sir. I meant they have made an effort, and they are investing their funds. I am not saying this has been a matching operation.

Mr. PASSMAN. How much have they disbursed for the projects?

Mr. MOSCOSO. $55 million has been disbursed.

Mr. PASSMAN. That is what we have disbursed. They have disbursed $8 billion?

Mr. MOSCOSO. Not in matching operations, sir. I mean in total investment in Latin America. Some of that money has obviously been made available as local participation by these countries because the Inter-American Development Bank requires something like 50-percent participation in order to be able to get the——

Mr. PASSMAN. Let us pin it down.

Mr. MOSCOSO. 53 percent.

Mr. PASSMAN. They have disbursed——

Mr. MOSCOSO. $55 million.

Mr. PASSMAN. $55 million, and the Latin Americans have disbursed $8 billion. What is Mr. Rockefeller talking about, then?

Mr. MOSCOSO. He is talking about the substantial amount of money they have invested.

Mr. PASSMAN. They spent that much money in their country.

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Would they have spent eight and a half billion if we had not given them anything?

Mr. MOSCOSO. $8 billion, less the amount required for local participation in order to get the loans from the Social Progress Trust Fund from the Inter-American Development Bank.

Mr. PASSMAN. In fact, you do not know what they spent. I do not, either. You are dealing with an $8 billion item that may have been spent in Latin America simply because we went in with $55 million. There may not be any relationship whatsoever.

Mr. MOSCOSO. I think the best relationship, sir——

Mr. PASSMAN. I am speaking of these two items, Mr. Moscoso.

Mr. MOSCOSO. I want to relate them. I think the best thing would be for, and I can bring this in to you, for the value of the participation of the several countries in the projects for which the Bank loaned $55 million.

Mr. PASSMAN. $55 million of our money generated $8 billion that was spent in those countries?

Mr. MOSCOSO. I am not trying to imply that. If I did that I would like to have that implication erased from the minds of the members.

Mr. PASSMAN. How do you relate the $55 million to the $8 billion figure?

Mr. MOSCOSO. You cannot relate it.

Mr. PASSMAN. I did not think so.

I yield to Mr. Ford.

COMMITMENTS UNDER SOCIAL PROGRESS TRUST FUND

Mr. FORD. Mr. Director, in what year was the $394 million made available?

Mr. MOSCOSO. 1961.

Mr. FORD. In fiscal year 1961?

Mr. MOSCOSO. May of 1961. Calendar 1961. The fund was set up in fiscal 1962.

Mr. FORD. How much in loans, face value, has been committed?

Mr. MOSCOSO. Everything except $37 million, but there have been disbursements of only $55 million.

Mr. FORD. So you have committed in loans $394 million less $37 million?

Mr. MOSCOSO. Yes, sir.

Mr. FORD. You have had disbursements in cash of $55 million?

Mr. MOSCOSO. $55 million.

Mr. FORD. How much do you have in a backlog of applications?

Mr. MOSCOSO. $300 million.

Mr. FORD. Are those of recent vintage?

Mr. MOSCOSO. No.

Mr. KILLEFER. Some of them are as old as a year, Mr. Ford, and then others are as new as about 6 months ago but about 6 months ago the Bank began discouraging additional applications because the funds were beginning to run short.

Mr. FORD. These loans are for how long a duration?

Mr. MOSCOSO. Up to 25 years.

Mr. FORD. Can you give us an average?

Mr. MOSCOSO. 15 to 25 years.

REPAYMENT OF LOANS UNDER SOCIAL PROGRESS TRUST FUND

Mr. FORD. When is the first repayment expected?

Mr. MOSCOSO. There are some already on which they are repaying, Mr. Ford. I understand there are some repayments already coming in.

Mr. FORD. Do you have the figure on repayments?

Mr. MOSCOSO. Yes.

Mr. KILLEFER. $1,400,000 has been repaid already

Mr. FORD. Is that repayment in local currencies or in hard U.S. dollars?

Mr. KILLEFER. $400,000 of it is in dollars and the balance in local currencies.

Mr. FORD. So $1 million in local currencies and $400,000 in U.S. dollars?

Mr KILLEFER. That is correct.

Mr. FORD. Is that the ratio you expect in the future?

Mr. KILLEFER. I think so.

Mr. FORD. How do you determine whether it should be repaid in dollars or in local currency?

Mr KILLEFER. The Social Trust Fund, the contract that sets up the Trust Fund, the contract entered into by the United States and the Bank under which the Bank acts as administrator, that agreement, Mr. Ford, provides that repayment can be made in the currency of the borrower, even though the loans are always made in dollars, at the option of the borrower or he can pay back in dollars if he wishes. In addition to the interest rate that is charged on the loan there is a service charge of three-quarters of 1 percent that always must be paid in dollars and the purpose of that is to pay the Bank for its cost of administering the loan so those amounts will always be paid in dollars. The other amounts may be either in dollars or local currencies and I would think that the proportion would probably be about the same, but it is impossible to tell now.

Mr. PASSMAN. Will the gentleman yield?

Mr. FORD. Yes.

INTEREST RATE

Mr. PASSMAN. Are these interest-free loans, other than the three-quarters of 1 percent service charge?

Mr. KILLEFER. No, sir.

Mr. PASSMAN. Is that three-quarters of 1 percent in addition to the interest?

Mr. KILLEFER. Yes, sir.

Mr. PASSMAN. What is the interest rate?

Mr. KILLEFER. The interest rate on all the Social Progress Trust Fund loans is 1¼ percent, except for loans for water, where there normally is a 2¾ percent interest rate.

Mr. PASSMAN. Plus in every instance a three-quarters of 1 percent service charge?

Mr. KILLEFER. Yes, sir.

Mr. FORD. The three-quarters of 1 percent is always repaid in dollars?

Mr. MOSCOSO. Yes, sir.

Mr. FORD. And it is optional with the Board of Directors?

Mr. KILLEFER. No; with the borrower. The borrower has the right to either pay dollars or local currency.

Mr. FORD. Is there any incentive to him to repay in dollars?

Mr. KILLEFER. Normally not, except where there isn't any difference between the dollar and this local currency, as is the case in some countries.

REUSE OF LOAN REPAYMENTS

Mr. FORD. When the service charges are paid and when the loan amount plus interest is repaid, what happens to the funds?

Mr. MOSCOSO. Revolving.

Mr. FORD. It is a revolving fund?

Mr. MOSCOSO. Yes. It can be reloaned.

Mr. FORD. It requires no further congressional approval?

Mr. MOSCOSO. No, sir.

Mr. FORD. It can be utilized as the Board of Directors sees fit?

Mr. MOSCOSO. Until the trust is extinguished and then the funds have to go back to the Treasury of the United States.

U.S. TERMINATION RIGHTS UNDER SPTF AGREEMENT

Mr. FORD. Who has the right to cause termination of the basic agreement? What are our rights of termination?

Mr. MOSCOSO. We can do it under certain conditions. The U.S. Director can give us the conditions.

Mr. KILLEFER. Termination is covered in article 7 of the agreement. It is very short. I could let you see it, sir.

Mr. FORD. I have a copy here.

Mr. KILLEFER. It is on page 9.

Mr. MOSCOSO. You are reading from a different document.

Mr. FORD. What page is it?

Mr. PASSMAN. Go to page 116 and you will find it, Mr. Director.

Mr. KILLEFER. I am reading from the Trust Fund agreement and it is article 6. Section 602 of that article provides that "If at any time it appears to the Administrator"—that is, the Inter-American Development Bank—"or to the United States that the Fund is no longer necessary or that the purposes of the Fund can no longer be appropriately or effectively carried out, the parties hereto shall forthwith consult with one another concerning the measures to be taken. If a decision to terminate the agreement is reached, or if no decision is reached within 30 days, or if pursuant to article X of the agreement establishing the Bank and the Bank suspends or terminates its operations, then the operations of the Fund shall cease and its liquidation shall be commenced upon the election of either party unless both parties agree on another course of action."

Mr. FORD. Read the next section, will you please?

Mr. KILLEFER. The next section, 603, provides that, "Any assets remaining in the Fund at the time of termination, including outstanding loans, shall revert to the United States upon the settlement of all accounts due and payable from the Fund."

TERMS OF SPTF LOAN REPAYMENTS

Mr. FORD. What would be wrong with requiring that these funds be repaid in dollars, not only the service charge but the principal and interest?

Mr. MOSCOSO. Mr. Chairman, as you know, the dollar shortage is one of the problems that the Latin-Americans have and we would just be imposing an additional burden upon them. I believe that maybe 5 or 10 years from now, something like that could be considered with-

out creating any problem but at this time it might create a substantial problem. Notice that our lending is done in dollars, but our lending is done at a much longer term than their lending. In a sense these terms of the Social Progress Trust Fund are not hard but neither are they soft because they pay two and a quarter plus three-quarters of 1 percent. That gives you a total of 3 percent and terms of 16 or 20 years, which is about the average that they are lending, is not to be considered exactly soft so in exchange for that, the semihardness of the term, they have the option of paying either in dollars or in local currency.

ESTIMATED SPTF DISBURSEMENT IN FISCAL YEAR 1964

Mr. FORD. What are you forecasting in disbursements for the current fiscal year, based on the funds presently available?

Mr. MOSCOSO. In the Social Progress Trust Fund?

Mr. FORD. Yes, sir. You disbursed $55 million. What are you forecasting for fiscal year 1964?

Mr. MOSCOSO. I think there is a rising curve.

Mr. FORD. I assume that. What are we talking about specifically?

Mr. MOSCOSO. Maybe the Director of the Bank can give it to us.

Mr. KILLEFER. The best way to get at that, Mr. Ford, is the disbursements have been just about doubling every 6-month period and I would estimate that the amount disbursed by the end of this calendar year would be somewhere around $100 million of these funds.

Mr. FORD. $100 million over the $55 or $100 million including?

Mr. KILLEFER. Cumulatively $100 million.

Mr. FORD. That leaves you $294 million still not disbursed as of January 1, 1964?

Mr. KILLEFER. That is right.

Mr. FORD. Is that a good record?

Mr. KILLEFER. I think it is a splendid record.

Mr. FORD. If that is true, why do you need $200 million more?

Mr. MOSCOSO. Because of the fact that the funds, except for $37 million, have been already committed. In other words, the loan agreements have been signed. It is a question of the disbursement that is going to take place at that rate.

May I mention something in support which I think is very important in connection with the repayment in dollars or local currency? That is this: Most of these are social projects. As a matter of fact, the great bulk of them are social projects and their dollar earning value is pretty nearly nil except in the long run. That is another one of the reasons why the option was working to this agreement.

CONVERTIBILITY OF LATIN AMERICAN CURRENCIES

Mr. PASSMAN. Did you testify earlier today that all of these currencies were convertible?

Mr. MOSCOSO. No, sir; or if I did, it was a mistake.

Mr. PASSMAN. Did the Bank representative so testify?

Mr. KILLEFER. I did not say that. If I did, I misspoke myself.

Mr. MOSCOSO. There are certain countries that have comparable currencies, Panama, Guatemala.

Mr. PASSMAN. Someone said, I think, that these currencies were convertible. I said, I believe if that be so, why would you have an optional clause in there? Do you remember me saying that?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. If we get a half dozen different types of answers we will all be confused.

Mr. ANDREWS. May I ask a question about one of these loans, Mr. Chairman?

Mr. PASSMAN. Certainly.

RELENDING RATES OF CREDIT INSTITUTIONS IN LATIN AMERICA

Mr. ANDREWS. On page 99 you describe a loan of $2,700,000 guaranteed by the Government of Peru and the loan is made to the Cooperative of Credit Central of Peru and the purpose of the loan is for small loans through local credit cooperatives for housing, improved land use, potable water and sanitation facilities. The SPTF put up a million of that loan and the local resources provided amounted to $1.7 million.

Mr. MOSCOSO. 63 percent.

Mr. ANDREWS. That loan is for 21 years. The rate of interest is 1¼ percent, plus the service charge of three-quarters of 1 percent, making it 2 percent.

Now my question has to do with the way that money is reloaned. You state here that "The reloaning rate to the Credit Cooperative, 8 percent, to the ultimate borrower, 12 percent." In my opinion that is all out of line. You are not helping the ultimate borrower by charging him 12 percent interest on money that the co-op gets for 2-percent interest.

Mr. MOSCOSO. Is that the question?

Mr. ANDREWS. That is all I want to ask.

Mr. MOSCOSO. Subject to additional information that the U.S. Director may bring in I want to remind the Congressman, in this particular case I do not know whether the option was to repay in dollars.

Mr. ANDREWS. I am not concerned about how the option to repay is worded but my point is this loan was made for the purpose of helping that ultimate borrower, the man who buys his home, and you are making him pay 12-percent interest, which is usurious, in my opinon.

Mr. MOSCOSO. There are two factors involved. No. 1 is the cost of handling the loan, and the other one is the risk of maintaining the value of the loan for repayment purposes.

Mr. PASSMAN. Would you yield?

Mr. ANDREWS. Yes.

Mr. PASSMAN. Are you penalizing those who can pay and will pay because some of them cannot and will not pay? Did you say that this rate is on account of the risk involved?

Mr. MOSCOSO. It is not the risk, Mr. Chairman. The risk is in connection with the exchange rates. You see, if you have to make a dollar repayable loan, or maintain the original value when repaying in local currency and because of inflation or other factors the local currency deteriorates in value, in respect to the dollar——

Mr. PASSMAN. You have the option of repaying either way, and if you are dealing with the currency on that basis, local currency, out

at this 12-percent level, it certainly would trace right back to the 2-percent borrowing level.

Mr. MOSCOSO. In this particular case——

Mr. PASSMAN. I think you said that it is the risk involved, so you are penalizing the man who can pay and will pay. Since you are dealing in local currency at the 12-percent level, you are also dealing with local currency at the 2-percent level, are you not?

Mr. MOSCOSO. No, you are not. In this particular case this loan is repayable in dollars or local currency.

Mr. PASSMAN. It is optional, is it not?

Mr. MOSCOSO. Yes, but they agreed in the contract to repay it in dollars and then in that particular——

Mr. ANDREWS. Then it is not optional. It is mandatory it be paid in dollars.

Mr. PASSMAN. It is optional that these loans be repaid either in dollars or local currency?

Mr. KILLEFER. That is right.

Mr. PASSMAN. So far as I am concerned it would appear you would want to extend that same consideration right out to the 12-percent level.

Mr. KILLEFER. May I?

Mr. PASSMAN. Certainly.

Mr. KILLEFER. Mr. Chairman, this institution that the loan was made to is one that is really managed by Father Dan McClellan, a U.S. Catholic priest down in Latin America and one of the very best loans imaginable. It hits the smaller person, not with a 12-percent interest rate which is usurious, as the impression has been thus far this afternoon, but quite the contrary.

Mr. ANDREWS. Your book says, "Relending rate to the credit cooperative, 8 percent. To the ultimate borrower, 12 percent."

Mr. KILLEFER. That is correct.

Mr. ANDREWS. That means if a man borrows $100 he is going to repay $112 at the end of the year.

Mr. KILLEFER. That is right.

Mr. ANDREWS. That is just as plain as ABC.

Mr. KILLEFER. That is right. Let me explain the reason for it and how it came about.

Up until the time this institution was created, there was not any facility available at all for credit in Peru except by going to usurers who would charge as much as 12 percent a month. This loan represents a tremendous reduction from that amount. The reason for the 12 percent, 12 percent sounds high, I agree, but the reason is we have already established in these countries that there is inflation, but this fellow, who is the ultimate borrower, he continues to pay——

Mr. ANDREWS. What type man is he? Is he a worker?

Mr. KILLEFER. Yes. These loans are made to people who are in an extremely low income bracket.

Mr. ANDREWS. That is all the more reason why I think it is bad to be charging them 12 percent. I do not care how you figure it out. You are not helping him when you charge him 12-percent interest.

Mr. KILLEFER. Yes, you are.

Mr. PASSMAN. We fought this thing out for you in conference.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Let us understand what it is all about. They said directly and to the point, we are having to charge this rate because these high rates have been customary in the country from time immemorial and if we went in and cut the rate you would break all the others and those who owed money would not pay it. We fought this thing out in conference for you on the basis that this has been an old, established policy, to charge these high rates of interest.

You remember that controversy?

Mr. MOSCOSO. Yes, sir.

Mr. GARY. Let me ask, isn't this exactly the same situation? Don't they operate under the same system as our industrial banks in this country? You go to an industrial bank. They lend you money for, say, a year. You pay 6 percent interest on the full amount borrowed for the duration of the loan. The interest is deducted and you receive cash for the balance. Then you pay back so much a month and because you do not hold all of the money for the entire period of the loan it finally works out that you actually pay about 12 percent interest but you are charged 6 percent interest to begin with. You pay 6 percent for a year. Then you repay the loan in weekly or monthly installments and because you do not hold all of the money for the entire year the interest averages out about 12 percent for the year. Isn't that the situation?

Mr. PASSMAN. I am going to get on the record if the gentleman does not mind.

You answer that question, please.

Mr. MOSCOSO. Yes.

Mr. PASSMAN. When this bill went to conference, it was rather a mean conference and representatives from the other side insisted on a lower interest rate. We had been filled in by the people downtown, those who recognized the age-old policy in Latin America to charge high interest rates, that it would be unworkable and if you did lower the interest rate you would defeat the purpose of the appropriation.

It seemed that this was good reasoning because you had millions of these people who made their investments in these small associations, receiving interest rates up as high as 12 percent on their investments, and if you lowered this all of them would immediately withdraw their savings and you would bankrupt every institution doing business. Do you remember that discussion, Mr. Miller?

Mr. MILLER. Yes.

Mr. PASSMAN. Upon that basis we carried the fight for you. It would appear now that these people have had an opportunity to start working it down to where it will be more advantageous to this little man and that action I certainly endorse.

Mr. MOSCOSO. Mr. Chairman, may I inject this, that there is also the question of maintenance of value of the loan. In case there should be a deterioration of the currency of the country the group to whom we loaned the money would not have sufficient pesos to convert into dollars to pay us for the loans, to pay the Bank for the loans.

Mr. PASSMAN. I gave you the reason that you brought to us and asked if we would carry the battle for you. We went in and carried

the battle. We used the same argument then that I have reviewed today, because it is the argument you gave us.

What is the trend now? Is it downward? Do the other people now start paying less interest on the savings?

Mr. Moscoso. I would say the trend is definitely down, sir. You will be interested to know that some of the loans are now being made at 9½ and 10 percent.

Mr. PASSMAN. The trend now is the rates are working down. That is for the other banks?

Mr. Moscoso. Yes, sir.

Mr. GARY. Mr. Chairman, may I ask this one question? Isn't it also true, you lend this money to the building and loan association?

Mr. Moscoso. That is right.

Mr. GARY. They are obligated to you. It is a simple transaction. You lend them the money. They pay you back.

Mr. Moscoso. That is right.

Mr. GARY. But when they get that money they lend it to any number of small investors.

Mr. Moscoso. That is right, sir.

Mr. GARY. They have to collect from those small investors monthly or weekly or whenever they can get it and the building and loan association has to bear the costs of servicing these loans among the hundreds and possibly thousands of borrowers they have.

Mr. Moscoso. That is right.

Mr. GARY. That is an expense. That has to be figured in, in the rate of interest that they charge these borrowers.

Mr. Moscoso. You are right, sir.

Mr. ANDREWS. Mr. Chairman.

Mr. PASSMAN. Mr. Andrews.

Mr. ANDREWS. In my opinion 12 percent is a high rate of interest.

Mr. GARY. They are charging it in your State right along.

Mr. ANDREWS. I don't think so.

Mr. GARY. I think the industrial banks and building and loan associations charge it.

We have a legal rate in my State of 6 percent, but they still charge this 12-percent interest because they charge you 6 percent on the loan when you get it and you pay it back in installments. You do not keep the entire amount the whole time and they have figured out that over the period——

Mr. MONTOYA. Discount rate.

Mr. GARY. The fact it is paid back, weekly or monthly, it averages out about 12 percent.

Mr. ANDREWS. All I can say is the man who pays 12 percent has my sympathy.

Mr. GARY. The man who has to borrow money has my sympathy if he pays 4 or 5 percent.

Mr. ANDREWS. Here is another loan—Venezuela—on the same page, for rural housing for low income groups.

Relending rate per year to the ultimate borrower, up to 3½ percent, and then one for Panama, the first one on that page, another project loan for low income groups, relending rate per year to ultimate borrower, 6 percent.

PROJECTS FINANCED BY AID WHICH WERE TURNED DOWN BY IDB

Mr. PASSMAN. Has AID approved any project that you know of in any country which was turned down by the Inter-American Development Bank?

Mr. MOSCOSO. No; I said, sir, that I did not know of any case in which that had happened.

In this particular case we have had, that is right; we have had cases in which the Inter-American Development Bank could not make the loan, for a number of reasons.

Mr. PASSMAN. You mean they did not make the loans, and the AID Agency made them?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Provide us with a list of those loans, if you will.

Mr. MOSCOSO. We will.

(NOTE.—See statement on p. 2064.)

INCREASE IN SOCIAL PROGRESS TRUST FUND

Mr. PASSMAN. Has the Inter-American Development Bank agreed that the social progress trust fund may be increased in accordance with section 302 of the trust fund agreement?

Mr. MOSCOSO. Yes.

ESTIMATED EXPENDITURES UNDER SOCIAL PROGRESS TRUST FUND

Mr. PASSMAN. Your liquidations for the first 2 years amounted to $55 million. Do you expect for it to be $45 million in 1963?

Mr. MOSCOSO. No.

Mr. PASSMAN. The gentleman said so over here, and Mr. Ford said, "Then you will have liquidated $100 million on January 1, 1964."

Mr. KILLEFER. I would say the 6-month disbursement period from the end of June 1963, to the end of this year, would be roughly the amount of the disbursement up until this time, so it would be around $100 million. It is impossible to tell how much——

Mr. PASSMAN. Did I not say $55 million? Then during this year it will be $45 million, to bring it to $100 million?

Mr. MOSCOSO. Six months.

Mr. KILLEFER. The $45 million you mentioned is a fair figure from what I said, but it only relates to the last 6 months of this year.

Mr. PASSMAN. Which will mean that you will have liquidated on December 31, calendar year, $100 million.

Mr. KILLEFER. You mean disbursed?

Mr. PASSMAN. Disbursed.

Mr. KILLEFER. Yes.

Mr. PASSMAN. When I say liquidated, I mean disbursed, which will mean, and I think this was established earlier in an exchange with Mr. Ford, $294 million in the fund unliquidated?

Mr. KILLEFER. Yes; that is right.

Mr. PASSMAN. And at this time you have $37 million unobligated.

Mr. KILLEFER. $37 million.

We expect those funds will have been obligated in another 60 days, Mr. Chairman.

(Additional information supplied follows:)

SOCIAL PROGRESS TRUST FUND EXPENDITURES

Total expenditures for the trust fund for the year ending June 30, 1964, are estimated at $125.6 million, made up as follows:

	Million
Disbursements against loans	$110.4
Letters of credit outstanding [1]	10.0
Administrative expenses	3.0
Technical assistance grants	2.2
Total	125.6

[1] Representing outstanding bank letters of credit opened with the IDB's guarantee in favor of suppliers. The Bank's commitments under these letters of credit while not constituting actual disbursements, are virtually equal to disbursements.

Total expenditures from the inception of the trust fund to June 30, 1964, are estimated at $185.1 million as follows:

	Million
Expenditures to June 30, 1963 (include administrative expenses and T/A grants)	$59.5
Expenditures in year ending June 30, 1964	125.6
Total	185.1

The major item in total expenditures is, of course, disbursements against loans. As is natural in a new institution, disbursements began slowly, but have been increasing at an accelerating rate. This can be seen from the following table showing loan disbursements by 6-month periods up to the middle of 1963:

Period	*Disbursements*
June 19 through Dec. 31, 1961	$850,000
Jan. 1 through June 30, 1962	5,473,170
July 1 through Dec. 31, 1962	16,419,183
Jan. 1 through June 30, 1963	31,770,874

The estimate for disbursements in the year ending June 30, 1964, is based partly on past trends and partly on a careful examination of the status of outstanding loans.

In considering the trust fund's disbursements record, it should be borne in mind that disbursements can begin only after the signing of the respective loan contracts. Until very recently it has been the Bank's procedure to negotiate the details of the contracts after making the respective authorizations, the time lag between authorization and signature of the contract having been about 90 days.[2]

The Bank has a rigorous system of control over disbursements in order to assure that funds will be used only for the purposes for which they have been borrowed and that U.S. procurement provisions are adhered to as required. Such controls unavoidably slowed up disbursements somewhat, particularly during the early days of the trust fund when procedures were being formulated and the borrowers had to familiarize themselves with the control requirements.

Finally, it should be noted that many trust fund loan contracts contain special provisions relating to the reform or reorganization of the borrowing institutions, as conditions precedent to disbursement. In some cases, disbursements have had to be held up because of unavoidable delays in such reforms.

It is expected that by the latter part of fiscal year 1964 (ending June 30, 1964) disbursements on trust fund loans will reach a rate approximating $200 million per annum.

[2] This system was changed as of July 1, 1963. At the present time, the formal loan resolution is not presented to the Board of Directors for approval until the contract provisions have been substantially agreed upon with the borrower.

MEXICAN URBAN DEVELOPMENT PROJECT

Mr. PASSMAN. In 1961 we were told that a Washington architect, or engineer, had worked out an agreement with his counterpart in Mexico City. They had moved up to a high echelon in the Mexican Government to get their cooperation and recommendations of carving

out a little subcity about 20 miles out, at a tremendous cost. I wonder if that application ever reached your desk. If so, did you turn it down?

Mr. Moscoso. I do not recall receiving any application of that kind, sir.

Mr. PASSMAN. Do you remember the project that I am talking about?

Mr. Moscoso. I remember that you mentioned the fact that you had a Mexican project that you were worried about and we sent a wire down to the field to identify the project, but we could not find any.

Mr. KILLEFER. I am not familiar with it. We have made no such loan. It did not come up to our bank department.

Mr. PASSMAN. You had the application.

Some members of the subcommittee came to my office, and we heard direct reports. We decided later to trust the good judgment of the people who administered the program to say "no."

Mr. Moscoso. Apparently they guessed we would say "no," and the thing was not submitted. I couldn't find it.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. PASSMAN. Mr. Gary?

NEED FOR TAX AND LAND REFORM IN LATIN AMERICA

Mr. GARY. Mr. Chairman, I have some questions on this fund. This Alliance for Progress Trust Fund is a matter that I have been very much interested in because I feel the threat of communism to America in Latin America is one of the most serious threats that we face today. It is one thing to have communism in Russia, but quite another to have it right next to our own borders. Therefore, I think anything we can do to stop the development of communism in those countries is to our advantage.

It is for that reason that when the Alliance for Progress was first initiated, I was thoroughly in favor of it because it was my understanding we were going to have an alliance, and that the South American countries and our country would work together to improve some of the conditions that were creating a fertile soil for the spread of communism.

I have heard various reports as to what has been accomplished in this direction, and I am informed that in Latin America you have a great many wealthy people and a great many poverty-stricken people. I am informed that the reason so many poverty-stricken people are to be found is because they have not had adequate tax laws there to tax those who can afford to pay to remedy those conditions, and even after the tax laws were enacted, the people who had the most money and were most able to pay evaded the taxes. Therefore, they do not have the money to carry out the reforms that are necessary in those countries.

I also understood that there were certain conditions of land ownership that added to the difficulties. I, for one, am not willing to tax American taxpayers to remedy those conditions which have been created by their own people. I am willing to see our country help the governments of Latin America to straighten out their affairs, but

not until the Latin Americans themselves cooperate to the fullest. What progress has been made in this respect?

The Alliance is based on the assumption that the countries of Latin America will increase the amount of resources they devote to economic development, Mr. Moscoso, but can you give us a clear description of the amounts the Latin Americans are investing in their own development and something of the progress they are making toward fulfilling the pledges they made at Punta del Este?

Mr. Moscoso. We have in our country programs, as they have come in from the field, an estimate of the amount of public and private investment which is being made in the several countries.

As I said a while back the estimate we have now is close to $9 billion.

FISCAL REFORMS UNDERTAKEN

The fiscal reforms, I believe, are good ones insofar as the efforts of the Latin American countries are concerned. I am considering the fact that they do not have a great tradition of taxing. We have major structural tax reform programs in 11 countries in Latin America at this time, and we have 7 countries that have improved their tax systems and the administration of these systems.

Mr. GARY. Can you give us a list of those countries?

Mr. Moscoso. Yes.

Major tax reform programs are going on in Argentina, Bolivia, Brazil, Colombia, Chile, Costa Rica, the Dominican Republic, El Salvador, Mexico, Panama, and Venezuela.

Mr. GARY. Does that mean that they have passed more equitable tax laws to distribute the burden?

Mr. Moscoso. Yes, sir.

They have also undertaken better administrative procedures.

ASSISTANCE TO LATIN AMERICAN COUNTRIES BY U.S. INTERNAL REVENUE

I would like to show the Congressmen an article that appeared recently. Unfortunately, it does not show the photograph but there was a photograph of an Internal Revenue agent assisting us in tax reform, tax administration reforms, in Chile. This person is working with us as a part of the team and is part of an inter-agency arrangement which we have with the Internal Revenue Service.

There are literally dozens of these people assisting us in Latin America and so much so that the Department of the Treasury has created a special Division of Technical Assistance, international technical assistance, in order to cope with this problem. They have assigned a very able person to head this division and he has, on several occasions, in front of me, made presentations to officials of the several governments to induce them to utilize the services of his Division in increasing substantially the tax take of the country without necessarily having to go to their congresses or parliaments for changes in the legislation.

I remember perfectly well the meeting right after the San Jose Conference in Nicaragua in which this gentleman, Harold Moss, made a presentation and induced right there in that meeting two countries to request the services of his division and sign a contract with the service in order to perform this same job you see described in this report from Chile.

Mr. GARY. Would you like to have this inserted in the record?

Mr. MOSCOSO. If you want to have it; yes. It is a very interesting indication that there is something going on.

Mr. RHODES. Would the gentleman yield?

Mr. GARY. Yes.

Mr. RHODES. Does he offer his services to these countries for a fee?

Mr. MOSCOSO. No; this is part of the technical assistance program we provide in most countries.

Mr. RHODES. Mr. Moss works for you?

Mr. MOSCOSO. Yes; but he is an employee of the Treasury Department, Internal Revenue.

Mr. RHODES. In other words, when this job of analysis of tax structure is done, is it done in-house, or do you contract for it?

Mr. MOSCOSO. They are done in-house. Primarily, it is done right there in the field. Of course, some people have been brought up for training here at the U.S. Treasury.

Mr. RHODES. Thank you.

Mr. GARY. Off the record.

(Discussion off the record.)

Mr. MOSCOSO. If you will allow me, there is a postscript to a letter from a U.S. official in Chile in which mention is made of the effect of legislation being implemented in Chile at this time. He says that, regarding tax reform, "I think it would be interesting to hear how much griping, complaining, and dire prophecies re decapitalization one hears from the people." That is one of the reasons why we have to think in terms of assisting some of these countries with outside aid during this traditional process.

He says that this man was "almost in tears today at lunch time" and goes on further to say, "This is no sham reform but one that really affects the pocketbooks of many. The inheritance tax is also very high and so far it looks as though it will pass.

Mr. PASSMAN. Would the gentleman yield?

Mr. GARY. Yes, sir.

Mr. PASSMAN. I said in the beginning that we had to make this Latin American program work.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. But the people from the very top echelons say it is not working and it has been one of the most disappointing things we have ever dealt with. Only during the last few months did they kind of soften up on this a little.

We are going to help you make this program work, but you cannot make it work by imagining and reading beautiful things into the record.

We are going to put this article in the record.

(The article referred to follows:)

[From Parade, May 19, 1963]

SOMETHING NEW IN SOUTH AMERICA—HERE COMES THE U.S. TAX COLLECTOR

(By Ed Kiester)

SANTIAGO, CHILE.—Latest export of the United States to this Latin American Republic are nine men with business suits, pleasant manners, and sharp unyielding minds.

They are tax collectors. These boys from the U.S. Internal Revenue Service have been operating here for the last 2 years. Their mission: to teach their Chilean counterparts the secret of how to part a taxpayer from his money. And so far, to the despair of shocked and reluctant Chileans, they have been wildly successful.

Since the Americans came, tax collections here have increased between $30 and $50 millions a year. They are expected to jump twice that next year. But increased revenue is only part of the story. The Americans have helped close loopholes, modernize procedures, and crack down on chiselers. And, to the wonder of all Chile, they have taken 2 persons to court, have 2 others awaiting trial, and are investigating an additional 50.

THE GOOD OLD DAYS

All this is a far cry from the way things used to be here. In the entire country—in fact, in all Latin America—no one, but no one, had ever been tried for tax fraud. In whole regions of Chile, not a single person ever had filed an income tax return.

In a classic case, a man purchased a valuable business property in Santiago, the capital, for $300,000 in cash. The transaction brought him to the attention of authorities, who found he never had paid taxes. Asked about it, the man protested, "Why, I've never earned enough money to pay taxes."

Furthermore, those who dodged the tax colectors usualy managed to avoid paying a penalty. The law assessed penalties, fines, and interest for overdue taxes—but every 2 years Chile's congress passed a law "forgiving" them.

To us, revolutionizing this taxless paradise may not sound very neighborly, but it is actually (according to the tax men) being done for our benefit. Under President Kennedy's Alliance for Progress program for Latin America, the United States agrees to give aid to those countries which show willingness to help themselves.

But Uncle Sam sees no reason to shell out U.S. taxpayers' money when Latin America's homegrown taxpayers go scot free. Accordingly, to qualify for funds, a nation must first institute tax reforms. Chile is the first to do so. Actually, Uncle Sam would like to see the Chileans go even further. Eighty percent of tax money here comes from sales taxes and import duties—levies which fall hardest on people least able to pay. The United States would like to see income tax rates changed to squeeze more out of upper-bracket incomes. Chile's Congress is now debating such a step. Meanwhile, the problem is to collect the maximum under existing laws.

Says Norman D. Nowak, the thickset, energetic New Yorker who heads the nine-man advisory group in Santiago: "The present system would not seem so inequitable if it were being properly enforced. The income tax schedule is not really so much below ours. But collections have not been made, good administration has not been followed. It may be that sound administration is as important as new law."

When Nowak first came here in 1961—at the personal request of Eduardo Urzua Merino, the Chilean Director of Internal Revenue, whom he had once shepherded around the Manhattan IRS office—administration of the tax laws was anything but good.

Taxes were being withheld from the wages of factory workers; other Chileans were filing regular returns, but few of the returns were being audited. Collectors, inspectors, and clerks were untrained.

Underpaid agents held second jobs—sometimes for the very persons whose taxes they were supposed to check during the day. Most complicated of all, no one had ever written down all the Chilean tax rules, procedures, and regulations in one place. Most agents carried them around in their heads.

Nowak started off with a drastic program. Aided by a revolving staff of American specialists plus 85 full-time Chilean instructors, he set up a training program, wangled a 50-percent pay boost, had the offices redecorated and refurnished, put a crash crew to work drawing up a Chilean tax code.

More important, he showed the average Chilean taxpayer that the agents meant business. He handpicked 50 men for an intelligence division, trained them in such things as how to eavesdrop, shadow a suspect, use a hidden mike. Then—after passing the word that informers would be rewarded—he turned them loose on tax frauds.

BATHING SUIT FRAUD

Result: The golden age of Chilean tax dodging came to an abrupt halt. The fraud team suddenly pounced on the office of a bathing suit manufacturer and confiscated its records. Then they charged that the firm had falsified invoices, made up phony purchase orders and doctored accounts to make their profits look small. They also made certain that the case—first of its kind on the continent—got wide publicity when it went to court.

The Chief of the Division, Jorge Varela, then let the word out that his office was investigating 40 or 50 more cases. He also said auditing would be increased fivefold—and that, in the U.S. tradition, the agents would concentrate on returns from the higher income brackets.

As a result of all this, there is today a new attitude about taxpaying in Chile—and it's one that most Americans would recognize. Reluctantly, many taxpayers are beginning to file returns for the first time—and honest ones at that. Among the 2,800 agents, there is a new zeal and a new esprit de corps. Nowak's job isn't over, but he is looking forward to going home.

"All we wanted to do was make them independent," he says—"set up a professional service and enable them to get the absolute most they were entitled to. That's what we're getting in Chile. Soon it'll be just as tough on tax cheats as the States."

Mr. GARY. I wanted to say that a good many newspaper articles have been placed in the record on the other side, and I would like to see a few on this side.

CHILEAN BUDGET DEFICITS

Mr. PASSMAN. This article deals with Chile.

Last year they showed in million dollar equivalent, $569 million, and with a deficit of $97 million. Last year in putting in a conservative estimate you said on the million dollar equivalent, domestic revenues would be $773 million, and then instead of getting $773 million, the hearings this year indicate they got only $569 million, a disappointingly low amount compared to your estimate.

If you projected this to 1962, even with the AID program going, the deficit of this country jumped up to $174 million. I am not going to delay the gentleman's examination, but let us be careful about how we envision the success of this thing.

Thank you for yielding.

Mr. GARY. Mr. Chairman, I have no objection to your putting anything in the record. I have been very patiently sitting here for months.

Mr. PASSMAN. I am putting in the record the factual statistics.

Mr. GARY. I have no objection to that, but you have put a great many newspaper articles in the record.

Mr. PASSMAN. I want, if possible, to keep the record straight.

Mr. GARY. I have no objection in the world to any rebuttal you desire to insert.

DIFFERENTIATION IN SUPPORTING ASSISTANCE AND DEVELOPMENT LOAN CRITERIA

Mr. Moscoso, in making loans to help countries with balance-of-payments difficulties, you sometimes use supporting assistance funds primarily for stabilization purposes. You sometimes use development loans primarily for development purposes?

Mr. MOSCOSO. That is right.

Mr. GARY. Under the Marshall plan, these two categories went together. What accounts for the variations?

How do you decide whether to apply supporting assistance or development loan funds in a given situation?

Mr. MOSCOSO. It is a question of criteria, Mr. Congressman.

In the case of some of the countries, there is not sufficient developmental justification for the particular assistance we may be giving in their balance-of-payments problem, and it is primarily and preponderantly a question of trying to prevent a deterioration of the political situation to the point where we may have great difficulties in that country.

However, wherever there is the potential of the developmental program, we do then give them the assistance out of development loan funds.

In other words, it is a question of whether or not they meet development criteria, whether we give them the assistance out of the development lending funds or out of the supporting assistance funds.

Mr. PASSMAN. My reasons had nothing to do with the insertions. I just wanted to read this into the record.

Mr. GARY. That is all I asked for.

Mr. MOSCOSO said it is a statement from somebody of the situation in Chile, and I just wanted it to be put in the record. I do not know what is in the article. I have not had an opportunity to read it.

Mr. PASSMAN. I wanted to show what is in that statement does not compare with the statistics on which they have justified their requests for money. That is all I wanted to show.

U.S. ACTION WHEN ALLIANCE CRITERIA ARE NOT MET

Mr. GARY. Mr. MOSCOSO, the Latin Americans may be behind us in economic development, but they are not newcomers to politics. If we expect them to comply with Alliance aid criteria, we have to indicate to them that we mean business. What have we done when our standards have not been met?

Mr. MOSCOSO. We have in many instances, or in several instances, at least, when conditions have not been met, suspended the disbursements on the loans which have been made. We also have instances in which loans which they needed quite badly had not been made available at the time because they did not conform to our criteria.

Mr. GARY. Can you give us some instances of that kind?

Mr. MOSCOSO. Yes. One instance is Ecuador, where just a few months ago we suspended disbursement on a loan because they had not complied with the conditions we imposed on them of approving a tax reform bill promulgating the regulations in connection with the bill, and of initiating other administrative reforms of that kind.

In the case of Guatemala, a number of months ago, where a request very urgently was made for support, budget support, we insisted they take the necessary measures to correct the situation with their own resources.

They managed to find the resources, and the loan was not used.

The most drastic case is the case of Haiti where we completely suspended the airport loan of $2.8 million because these people were not complying with the conditions that were imposed. I could continue mentioning cases of this type.

EFFORTS TO IMPROVE LATIN AMERICAN PUBLIC ADMINISTRATION

Mr. GARY. Essential to the success of the Alliance is the ability of the Latin American countries to execute programs, once they are adopted. What kind of an effort are these countries conducting to improve their administration and their capacity to implement development programs?

Mr. MOSCOSO. One of the more important items of administration has been planning and, as the members of the committee have seen, we have a very intensive program to get the Latin American countries to do their planning.

There are also a great number of programs for the betterment of the administrative capability of the Latin American countries. In many instances, this is done through university contracts, either in the country itself or we do it through participant training by bringing the trainees here to the United States.

I have here a statement on public administration.

We have a program in the Dominican Republic, a very strong program, on public administration. There has been established a Public Administration Reform Commission. The University of Michigan has a contract which will soon be in operation setting up a program of surveys to support their statistical work. We have a program in Peru where the Institute of Public Administration of New York has begun an advisory service to Peru under an AID contract.

We have an intraagency contract with the Internal Revenue Service for providing tax administration advice to quite a number of countries.

In many ways, we have assisted the Latin American countries in bettering their administrative capability.

In Argentina, Columbia University and the University of Buenos Aires have a combined program of training professors in business administration and in Bolivia we have a customs——

Mr. GARY. Where are the professors from?

Mr. MOSCOSO. Columbia University, teaching the teachers. That is to get leverage and a multiplier effect.

In Bolivia, the United Kingdom has been assisting with customs experts in order to assist them in the control of contraband, which is one of the ways in which there is a lot of leakage of revenue to the Government.

In Brazil, we have a University of Southern California contract to assist in public administration, and the University of Bahia and Michigan State also have been doing effective work with the School of Business Administration on some of their problems.

In Chile, we have a tax modernization program, which I just mentioned to you and showed you that piece in the paper about, and then we have a University of Chicago and Catholic University program in economics.

By the way, that one is almost finished.

In Colombia, we have a program with the school of administration of finance and this is being carried out through the services of the Syracuse University.

In Costa Rica, we have a public administration adviser and some short-term contractors who are also assisting the Costa Ricans in bettering their public administration.

If the Congressman wants, I could go on for the rest of the other countries, but I would like to mention just one more.

In the case of Guatemala, we have an inservice training center and we are training about 1,000 employees annually.

We are also helping set up a civil service system in Guatemala.

Mr. GARY. It is your intention to continue to push that program?

Mr. MOSCOSO. That is right.

It is basic. An underdeveloped country has an underdeveloped government and unless we have capably run governments, it is going to be difficult to accomplish the program.

LAND AND AGRARIAN REFORM PROGRAMS IN LATIN AMERICA

Mr. GARY. One of the worst impediments to social as well as economic progress in Latin America is that in so many cases, the man who ought to be the backbone of the social complex and of the private enterprise system, the individual farmer, does not even own his own land.

You mentioned some cases of initiation of major land reform programs.

Specifically, what have been the results of these programs?

Mr. MOSCOSO. The major programs that have been started since the Alliance are those in Colombia and the Dominican Republic. Venezuela has a strong program but this was started a few months prior to the establishment of the Alliance.

We are going to bring for the record, at the request of the chairman, the exact number of farms that have been set up, the number of acres involved, et cetera.

You will notice in the case of land reform, we have not had as much land distribution as you would expect; but we have had an awful lot of agrarian reform in the sense that we are trying to better their agricultural capabilities.

We are not thinking of agrarian reform exclusively in the breaking up of the big estates. That is not the whole answer. That is desirable and that will have to be done, but many other things will have to be done, particularly bettering agricultural instruction in the universities, setting up extension services, setting up agricultural experiment stations, setting up and supervising agricultural credit systems. A number of those have been set up. Those are some of the things we have had more success with up to now, but in many instances the countries are addressing themselves to their agrarian reform problems. In the case of quite a number of them, this is a 10-year problem—so far as the political implications are concerned—more than a betterment of their agricultural capabilities.

In every one of the instances, what we are trying to do is to increase the agricultural capacity of the country.

BILATERAL VERSUS MULTILATERAL AID FOR LATIN AMERICA

Mr. GARY. There has been a great deal of discussion of the relative merits of bilateral and multilateral aid. I know that the United States has supported both methods.

In which direction should we be heading in Latin America?

Mr. Moscoso. I think a very good case can be made for enlargement of the multilateral type of lending, particularly the kind in which we are retaining a great degree of authority over the utilization of funds, and in which the Latin Americans participate as advisers as to ways and means in which these funds should be used.

For instance, one of the reasons why I was so insistent and vehement, almost, in connection with the Social Progress Trust Fund, is that that is one of the instances where we are applying the multilateral approach to development in Latin America.

I believe that this can be refined even further to a point where many of the reforms and measurement of performance, with regard to these reforms, will be done by the Latin Americans themselves. I think that we already have made a start toward that when the Inter-American Economic and Social Council met in Mexico in October of last year.

It was a very interesting meeting in which Latin Americans, as far as I know, for the first time started to point the finger at each other in the sense they had not performed. That is, the sense that they had not done as well as they should do.

Mr. GARY. Does the program you are presenting reflect this judgment?

Mr. Moscoso. Well, you have seen my insistence that the Social Progress Trust Fund be considered favorably by the members of the committee.

INCREASED USE OF U.S. PRIVATE GROUPS AND ORGANIZATIONS TO SUPPORT THE ALLIANCE

Mr. GARY. The United States could save a great deal of AID money if you would persuade private groups, cooperatives, labor unions, business groups, and the like, to involve themselves actively in the Alliance and make it a true people-to-people program.

You mentioned only a few examples of such activity.

Are you really getting such cooperative action?

Mr. Moscoso. Yes, sir.

We have very strong programs both of cooperative development and also of labor union types, to increase the capability of democratic labor unions in having a greater participation in the economic development of the country. I think I explained last year that we have a very good arrangement with the business community, the American business community, the AFL–CIO in jointly financing and supervising operation of the American Institute for Free Labor Development.

Every 90 days a new batch of young labor leaders is trained under the auspices of this institute.

The institute, by the way, not only does the training of these labor leaders, but they also have a social services division which undertakes to assist the labor unions in Latin America in preparing requests for assistance on projects of a social nature, primarily housing.

Mr. GARY. Business groups and labor groups are cooperating, working together, in that enterprise?

Mr. Moscoso. Yes, sir.

The institute is jointly financed by business, labor, and government. It is a very interesting tripartite operation.

Mr. GARY. In what particular countries is that working?

Mr. MOSCOSO. As a matter of fact, the main center for training is here in Washington but we have established regional training centers in several Latin American countries.

We now have training centers in Ecuador, Chile, and Honduras.

Mr. GARY. What is the budget of that operation?

Mr. MOSCOSO. I am sorry, but we have the figure for our participation but do not have the exact figure for business participation. That is, the business group participation. It is $800,000 for our part and it is about $500,000 on the part of the business group. I will be glad to put the exact figure in the record.

Mr. GARY. Please put the amounts supplied by us, amounts supplied by the business groups, and any amount supplied by labor and any others that contributed.

Mr. MOSCOSO. In the case of the labor group, the amount is a little less. But they are also participating with all personnel and with the presentation of the whole program and the supervision of the whole program.

(The information supplied follows:)

PARTICIPATION IN AMERICAN INSTITUTE FOR FREE LABOR DEVELOPMENT

From the inception of the American Institute for Free Labor Development program (March 1962) through June 30, 1963, the labor and business contributions (as reported by AIFLD) to AIFLD funding were:

Labor	$222,900
Foundations	77,600
Corporations (including Latin American associations)	135,750
Total, business and labor	436,250

AID programed a total of $1,060,000 in fiscal year 1963 for all AIFLD activities.

The education side of the AIFLD program, to which labor and business contribute, provides the most accurate reflection of the comparative participation by the various groups. It is here that AID gave $442,000, and labor and business combined gave $436,250.

Of the AID contribution through regional projects, $580,000 was for the AIFLD Social Projects Division, which provides technical assistance for unions to establish housing organizations, credit unions, and similar activities, to provide the institutions and mechanisms for social progress. The nature of the work of the social projects division is such that the funding of this part of the AIFLD program is not put on a contributing basis.

Business and labor contributed to the AIFLD program far in excess of the dollar figures they reported. Labor leaders and businessmen provided substantial amounts of training time and facilities for the AIFLD's Latin American trainees, without regard to cost.

Since the AIFLD has had a year in which to demonstrate its capabilities, it is anticipated that the business and labor groups will be increasing their contributions, and that the AID participation required will not be as great. By the end of calendar year 1963, labor and business are expected to have contributed $250,000 each this year. For fiscal year 1964, AID has programed $850,000.

Mr. GARY. That is all, Mr. Chairman.

CONTRIBUTIONS TO SOCIAL PROGRESS TRUST FUND

Mr. PASSMAN. We think of a multilateral program as a program where more than two put money into it; is that correct?

Mr. MOSCOSO. It all depends on the program.

Mr. PASSMAN. So far as the Social Progress Trust Fund is concerned, there have been no other contributions of any kind, shape, form, or fashion made into this Fund by other countries?

Mr. MOSCOSO. No, sir.

CHILEAN TAX MEASURES

Mr. PASSMAN. What is the publication, Parade?

Mr. MOSCOSO. It is one of the inserts in the Washington Post and other newspapers.

Mr. ROONEY. It is an insert in many newspapers.

Mr. MOSCOSO. It is syndicated by some group in New York.

Mr. FORD. A national weekly magazine to which the Washington Post subscribes and sends to its own subscribers.

Mr. PASSMAN. Parade indicated in that article that in Chile in the past it has been the practice that when people would become delinquent in their taxes and roll up substantial funds owing to the Government, they would pass legislation forgiving them for the obligation. Did you read that statement?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. There has actually been no law passed in Chile recently assessing new taxes or increasing taxes. They are merely debating the possibility of having a tax increase.

All we are doing presently is trying to help them enforce the present laws and get more revenue in, is that correct? Helping them do a better job of administering laws presently on the books?

Mr. MOSCOSO. May I answer?

Mr. PASSMAN. Certainly.

Mr. MOSCOSO. We are helping them to increase their tax revenues under their present laws.

Mr. PASSMAN. Is that not what I said?

Mr. MOSCOSO. In bettering their administrative capabilities. That is what this article is about. The Chileans are considering a new tax revenue measure, and it has been approved by the lower House. It is now before the Senate.

Mr. PASSMAN. There is no such thing as a lower House in this country. However, I do not know about Chile.

For any new tax laws, they are now debating the issue in the Chilean Senate?

Mr. MOSCOSO. The House of Representatives approved the measure, and it is now before the Senate.

Mr. PASSMAN. Is that the same law they were debating in one body when we passed this law in 1961, continued to debate it last year, and now they are debating it this year?

Mr. MOSCOSO. I was not here in 1961.

Mr. PASSMAN. They have two legislative bodies?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. It is now being debated in the Senate?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. In Chile we had hoped for, and we predicted, in 1961 that the revenue from the Chilean people would be $773 million; is that correct? That is the dollar equivalent.

Mr. STERNFELD. Yes, sir.

Mr. PASSMAN. If we go to the 1964 justifications, it indicates the actual collections were $569 million; is that correct?

Mr. MOSCOSO. That is right.

Mr. STERNFELD. Could I indicate that here again the difference is on conversion of the exchange rate, what was done in the 1964 book was to convert all 3 years at the current exchange rate, which is 1.4, to make all 3 years comparable.

Mr. PASSMAN. Next year it could reverse and be the opposite?

Mr. STERNFELD. At that time the conversion rate was current at that time.

Mr. PASSMAN. Chile has had a tremendous amount of inflation.

Mr. STERNFELD. We have had inflation.

Mr. PASSMAN. On page 53 it says it is also converted to the 3 years.

Mr. STERNFELD. At a lower rate.

Mr. PASSMAN. Gentlemen, what are we going to consider if we do not use your statistics? When converted for 3 years, you use dollar equivalents, you project what it will be, you use the same formula. When you come down this year, instead of the estimate being what you thought—I imagine these were conservative—it is substantially lower. What we are trying to do is establish the facts so we can actually move in and help you with this program. You used the same conversion on both 3-year periods and so stated, did you not?

Mr. STERNFELD. We used a conversion factor.

Mr. PASSMAN. Nevertheless, instead of the revenue being $773 million it was $569 million.

Mr. STERNFELD. Twelve percent increase in revenue for 1961 over 1960.

Mr. PASSMAN. We are talking about these two figures, the only thing you can compare, because next year you will say it is either an estimate or——

Mr. STERNFELD. No, sir. What I am comparing is 1960 with 1961. You have a 12-percent increase in revenue, $506 to $569 million.

Mr. PASSMAN. I take your projection of last year when you told us what you expected based upon this Alliance for Progress program. You said Chile would get $773 million, but in reality it was only $569 million. I am trying to help you make your own case. If you stop being suspicious about what I am trying to do, you may get some help.

Mr. FORD. Will the chairman yield?

Mr. PASSMAN. Certainly.

Mr. FORD. I cannot agree with what I thought was your point because you had the increase in 1961 to $569 million over 1960 of $506 million. Certainly, the Alliance for Progress was not in effect at that time.

Mr. MOSCOSO. No.

Mr. FORD. Any progress made there was made regardless of the Alliance for Progress.

Mr. MOSCOSO. What I am trying to say and what Mr. Sternfeld is trying to say is the Latin Americans are making efforts aside from the Alliance, although not enough. We are trying to help them to increase their capability, but they are making efforts in collecting more taxes.

Mr. FORD. Just so we have the record clear that the Alliance for Progress was not responsible for this increase because it was not in being.

Mr. MOSCOSO. There are so many other factors. For instance, the price of copper goes down 1 cent in Chile, which may mean $100 million. I do not know if it is 1 cent, but something like this can signify as much reduction in revenue as that. Obviously, it cannot be that one single thing that will do it.

Mr. ROONEY. We have also miscalculated revenues in this country; have we not?

Mr. PASSMAN. Yes, we have.

Mr. FORD. I cannot understand the rationale of the figures you submitted last year on total domestic revenues and what you are submitting this year. I do not think you have satisfactorily answered the questions that the chairman raised.

Mr. MOSCOSO. Just to answer the question specifically in connection with Chile. There is an international agreement with Chile. A certain amount of surplus on current account of the national budget is required, or else loans are not disbursed. In other words, they have to have that amount of tax money on hand or else reduce their expenses, which is very difficult, as you know in Congress, or else we do not disburse.

Mr. FORD. We would do better if we had the cooperation from the Executive.

Mr. MOSCOSO. So that is the way we are trying to get them to do better in connection with tax collections and with changing their revenue laws.

Mr. FORD. Put this in the record some place. The chairman asked two, three, four, or five times why there is this apparent discrepancy.

Mr. MOSCOSO. That is right.

Mr. FORD. Maybe it is inflation. If it is——

Mr. MOSCOSO. It may be inflation. In some instances it is a dropoff of the basic commodity from which they get the bulk of taxes, for instance, as happened in Venezuela 2 years ago. It can be a reduction in the price of coffee, as happened in Brazil and Colombia 2 years ago and up to today.

Mr. PASSMAN. If it is inflation, then you would get more dollars in, would you not, ordinarily, more millions if the dollar is inflated?

Mr. MOSCOSO. More of the local currency.

ARGENTINA'S DOMESTIC REVENUES

Mr. PASSMAN. Consider Argentina. You told us last year you expected domestic revenues to be $1,753 million.

Mr. STERNFELD. 84 pesos per dollar.

Mr. PASSMAN. You used the million-dollar equivalent last year. You told us that your estimate was then $1,753 million. Just tell us whether or not that is correct.

Mr. STERNFELD. That is in the book.

Mr. PASSMAN. You did put it in the book and I am reading from the book.

Mr. STERNFELD. Correct.

Mr. PASSMAN. When we look at it this year, we find out, regardless of what brought the situation about, it indicates $880 million.

Mr. MOSCOSO. Right; revenues will change.

Mr. PASSMAN. It is just a question that you cannot make 2 and 3 add up to 9, regardless of how much you argue. There is a lot to be done.

Mr. MOSCOSO. Yes.

Mr. PASSMAN. You come in with your optimism that these figures are going to be accomplished. Then when you deal with realities a year later, you are off a hundred percent in many instances. Why do you not let us work with you and use your own statistics, and if you will do that, together we might help solve this problem.

Mr. MOSCOSO. All right.

Mr. PASSMAN. Mr. Montoya?

LOAN OPERATIONS OF INTER-AMERICAN DEVELOPMENT BANK

Mr. MONTOYA. Mr. Moscoso, how many "windows" do you have in the Inter-American Bank?

Mr. MOSCOSO. Three.

Mr. MONTOYA. Will you name them and then describe their operation and our part in each window.

Mr. MOSCOSO. The social progress trust fund is one of the windows. You have heard that described this morning. We are the sole providers to that fund. The amount you also know.

The ordinary capital window, $813 million. Then the fund for special operation, which is $146 million.

Mr. MONTOYA. That is the grant fund?

Mr. MOSCOSO. No; that is for lending, the fund for special operation is for lending on softer terms and special projects. We participate in two-thirds there of the fund for special operations and Latin Americans one-third. In the case of the regular capital fund, the one I mentioned with $813 million, there we participate with 41.82 percent.

Mr. MONTOYA. The loans have to be approved on the basis of the contribution; each country has a vote representing its contribution into the fund?

Mr. MOSCOSO. That is right, except in the case of the social progress trust fund, the fund for special operations, a two-thirds vote is required. We have a veto because we have 41 percent.

Mr. MONTOYA. As to the social progress trust fund, do we have complete dominion over the disbursement of this particular fund?

Mr. MOSCOSO. Yes; in the sense that if we do not go along, a project cannot be approved.

Mr. MONTOYA. Who actually receives the application under this fund and who actually approves it?

Mr. MOSCOSO. The applications are received by the Bank officials.

Mr. MONTOYA. Mr. Herrera is President of the Bank?

Mr. MOSCOSO. That is right. Depending on the application, they go to a loan committee.

Mr. MONTOYA. Just as in a regular bank?
Mr. MOSCOSO. That is right.

CONDITIONS PRECEDENT TO IDB LENDING

Mr. MONTOYA. The loans in the three windows are processed or are supposed to be processed in conformity with the original understanding that all these countries had with respect to the establishment of the Inter-American Bank; is that correct?

Mr. MOSCOSO. Yes; there is a well worked out, detailed criterion for lending.

Mr. MONTOYA. You, of course, understand that when the Bank was established, the Congress was led to believe that pursuant to the original international conferences, no loans would be made to any country unless that particular country had initiated the type of reforms contemplated in the original trust agreement drafts which were presented to the Congress?

Mr. MOSCOSO. Mr. Congressman, that is not the understanding that I had. If these countries had been capable of making these reforms, they probably would not need any help from us. One of the reasons why we are trying to assist these countries or we want to assist these countries is precisely because they need assistance in getting these reforms made.

Mr. MONTOYA. This is the point I want to make, and I want to call this to your attention. Mr. Dillon, who came before our committee to justify U.S. participation in the Inter-American Bank, assured us, and we in turn assured the House, that these funds on a loan basis would not be made and these loans would not be disbursed unless and until these countries initiated tax reforms and agrarian reforms and further that the loans would be made for purposes designed to help the people in the hinterlands of the country rather than loans being made direct to governments for disbursements at the discretion of the government. That is your understanding of the program, is it not?

Mr. MOSCOSO. No, sir.

Mr. MONTOYA. What is your understanding?

Mr. MONOCOSO. As I understand the program, the loans are to be made in accordance with, first, the requirements of the county, the disposition of the country to undertake these reforms, but I have never understood that it was necessary to terminate the reforms and then, after they are finished, to come to the Bank and to get loans approved. I thought this was an operation in which the country, as they showed their disposition and went along and took the many steps that had to be taken in order to get reforms made——

Mr. MONTOYA. Would you refresh your memory by reading the testimony of Mr. Dillon when he testified originally before this committee?

Mr. MOSCOSO. I will, Mr. Congressman.

Mr. MONTOYA. In the draft of the trust agreement, which is attached hereto, there is mention made about the different obligations which must be satisfied as a condition precedent to disbursement of the funds because these funds were placed in trust with the Bank and certain conditions were to be fulfilled preliminary to their disbursement. Those are the conditions which I mentioned, the most prominent of which are agrarian reform and fiscal or tax reform.

I notice the listing here of the particular loans which you have made through the Bank, starting on page 99. I notice that you have made quite a few loans to private and perhaps government-organized corporations in the different countries. Also that disbursements have been made under these loan agreements.

PUBLICITY FOR U.S. PARTICIPATION IN SPTF

What measures are being undertaken either by our Government or by the Inter-American Bank to apprise the recipients of these moneys at the ultimate level that our country is participating to the extent that it is in furnishing these moneys for these purposes?

Mr. Moscoso. In the majority of the cases the projects bear a sign outside of the projects, if it is a housing development or a water project, indicating that these funds were made available by the United States through the Inter-American Development Bank.

We have actual photographs, Mr. Congressman, which I would be happy to bring next time, showing these several signs that are put up in front of every project.

Mr. MONTOYA. Also publicity when the projects are initiated?

Mr. Moscoso. Yes, I will bring the photographs and also press releases announcing loans in which mention is made of the fact that these funds are being made available from the Social Progress Trust Fund.

Mr. MONTOYA. Is there a good and adequate dissemination of news reflecting our participation in these projects?

Mr. Moscoso. I wish it were better.

Mr. MONTOYA. Or is it just the original announcement and then hoping that the sign in front will convey the idea?

Mr. Moscoso. We try to do a job through the U.S. Information Agency.

Mr. MONTOYA. I am not satisfied with what the U.S. Information Agency has been doing.

Another thing that I would like to call your attention to is this: Is it possible that on every loan agreement entered, say with the ultimate borrower, that some kind of literature can be devised whereby that borrower knows just exactly what contribution the United States has made into that loan? Have you ever thought about this?

Mr. Moscoso. I believe that in the loan document there is some mention of this. I would like to defer to my colleague here, the U.S. Director for the Inter-American Bank, because he perhaps knows of a clause in the loan agreement.

Mr. KILLEFER. It is more difficult in that the Social Progress Trust Fund loans are made normally only to governments and to government agencies. The kind of thing you are thinking of, I think, has been done successfully by the Eximbank by having letters go out to the ultimate supplier so that they know where the money is originally coming from. This may be a very good idea that the Bank could pick up itself without relying on USIS and do it through our own public information service.

Mr. MONTOYA. What I am afraid of in connection with all our disbursements in Latin America, is that the people do not know when they get the benefits of it that we, the American people, are providing

these things. I think that is a very important part in trying to build up the good will we are trying to build with our tax dollars.

Mr. KILLEFER. I agree.

Mr. MOSCOSO. I agree.

TAX AND AGRARIAN REFORM AS PREREQUISITES TO ASSISTANCE

Mr. MONTOYA. I beg to differ with you, Mr. Moscoso, that there was no intent to impose a condition precedent with respect to tax reform and agrarian reform before any disbursements were made under the program of the Inter-American Development Bank. So going upon that premise—until you have indicated to me that Mr. Dillon testified otherwise, and I will certainly look up the record again—what particular reforms were initiated by the recipient countries listed here under the loan agreement section—namely, Colombia, Venezuela, Brazil, Chile, Uruguay, Paraguay, Guatemala, Peru, Argentina, Mexico, Nicaragua, and El Salvador—that is about all I can see here.

Mr. MOSCOSO. Let us start with El Salvador.

Mr. MONTOYA. As far as Mexico is concerned, I am satisfied that Mexico has about the most advanced agrarian reform and fiscal structure among the Latin American nations. I know they are trying to bring their collection system up to a par with what we have here in the United States. But let us go into the other countries just briefly and please state what particular steps have they taken to satisfy the original purposes of this trust agreement, namely, tax reform and agrarian reform.

Mr. MOSCOSO. There is a very heavy tome here, but I will use the summary extracted from this tome.

Mr. MONTOYA. In order to save time, would you list these countries represented by these loan agreements, one by one, and state in concise and brief language what particular laws have been passed to insure the launching of agrarian reform and tax reform, and when you come to tax reform, specify whether there has been an increase in the tax structure because of these new tax laws which have been passed.

Mr. MOSCOSO. We will do that.

Mr. MONTOYA. And indicate what that might represent in increased revenue with respect to each country.

Mr. PASSMAN. Will the gentleman yield?

Mr. MONTOYA. Yes.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. PASSMAN. May we supplement that information with the chairman of the Foreign Affairs Committee's assurances to the Congress about how this program would be handled and also insert that statement?

(The information follows:)

[From the Congressional Record, Aug. 31, 1961, p. 17360]

Mr. MORGAN. Any requests submitted to the next Congress would be based on a carefully worked out program and would only be for such amounts as may be fully justified.

* * * * * * *

Both the authorizing committees and the appropriation committees will have a look at the program next year, and, as I just said, every project must be justified.

* * * * * * *

These programs of social development have not yet been worked out. Before the United States appropriates funds to assist in these programs, our representatives have told the Latin American governments that it will be necessary to have specific programs worked out and justified in detail, and, even more important, that these programs will have to be accompanied by basic legislation and institutional reforms in such matters as tax structure, land tenure, and legal procedure in order that new facilities provided under these programs may produce the benefits which are intended.

* * * * * * *

I think we have a responsibility. I can assure the gentlemen that next year, if the Democrats are in the majority and I head the Committee on Foreign Affairs, a detailed program for Latin America will have to be justified.

* * * * * * *

It is an overall long-range program. I can assure the gentleman that the $500 million will not be spent for several years. As I said previously, every dollar will have to be justified.

SUMMARY OF LAND AND TAX REFORMS

Mr. Moscoso. Answering your question, on page 96——

Mr. Montoya. I have looked at that information. That is too general.

In fact, it is more general than a five-star general because you have listed under Chile various tax reforms. That does not mean anything to me. I indicated a while ago I wanted the particular tax reform legislation which has been passed, not what is pending, and I wanted the projection of additional revenue which would be the result of the tax reform.

Mr. Moscoso. If Mr. Rooney will be kind enough to lend Congressman Montoya the book he is reading, let's open it to page 174 to see if this is given in sufficient detail here.

Mr. Rooney. I was just reading the one on Chile. There seems to be quite a lot of detail on it.

Mr. Moscoso. This is the case of Chile.

Mr. Montoya. I know it, Mr. Moscoso. I want it in the record so the Members on the floor can read it. That is why I wanted it pinpointed so that it would reflect a country-by-country basis.

Mr. Moscoso. All right, sir. We will do that.

(The information supplied follows:)

SUMMARY OF LAND REFORM LEGISLATION IN LATIN AMERICA

(In general, all of the laws cited below are intended to foster equitable land distribution through procedures which avoid excessive fractioning of holdings, to encourage settlement in unpopulated arable areas, and to provide credit and technical assistance to small- and medium-size agricultural holdings. All laws in which expropriation is a feature, provide for indemnization.)

A. Pre-Alliance for Progress

1. Argentina: Decree law No. 2964/58 of 1958: Authorized expropriation of lands which were not rationally exploited.

2. Bolivia: Decree law No. 3464 of 1953: Expropriates uncultivated land and holdings of uneconomically exploited latifundios.

3. Mexico: Series of numerous laws and executive actions especially since 1924 which expropriate and distribute lands, guarantee rights of ejidos (traditional community Indian holdings), extend credit, and technical assistance, etc.

4. Venezuela: Decree No. 371 of 1958: Provides for distribution of public lands, and those private holdings which do not meet various productivity standards. Also, colonization, agricultural credit, and technical assistance.

B. Post Alliance

1. Colombia: Law No. 135 of 1961: Purpose to prevent the inequitable concentration of rural lands or its uneconomic fractioning, to stimulate exploitation of

uncultivated holdings, increase agricultural production, and the standards of living of rural population. Expropriates uncultivated or underutilized lands, particularly holdings in excess of 2,000 hectares. Emphasizes distribution to family units.

2. Costa Rica: Decree No. 2825 of 1961: Intended to clear titles, and to give assistance to small- or medium-size rural holdings, discourage "minifundios" and encourage the formation of cooperatives. The law contemplates the expropriation of inefficiently exploited or excessively large latifundios. A progressive tax on uncultivated land was also enacted in 1961 (law 2825).

3. Chile: Law No. 15020 of 1962: Purpose to increase productivity and to conserve natural resources. Provides for expropriation of abandoned or underutilized holdings, the rationalizing of "minifundio" holdings, colonization, and the extension of credit and assistance.

4. Dominican Republic: Law No. 5879 of 1962: Objectives to distribute large private and public holdings, promote efficient land use while discouraging fractioning, and to raise the rural standard of living. Encourages formation of cooperatives, technical assistance and credit programs, rural population, and land census.

5. Guatemala: Law No. 1551 of 1962: Purpose to establish mechanism for planning, developing, and implementing programs leading to efficient cultivation of uncultivated or underutilized lands. Provides for the distribution of public holdings or expropriated or voluntarily donated private holdings.

6. Honduras: Decree No. 2 of 1962: Purpose to change the structure of the agricultural sector by eliminating latifundios and minifundios. Provides for distribution of public lands and expropriated private holdings.

7. Nicaragua: Decree of April 3, 1963: Provides for expropriation of latifundios, system of distribution, technical assistance, housing, and credit. Also progressively taxes uncultivated large holdings.

8. Panama: Law 37 of 1962: Purpose to abolish monopolization of uncultivated idle lands for speculative purposes, and to insure equitable distribution and rational utilization. Will distribute public lands as well as expropriated private holdings. A law enacted December 31, 1961, imposes a progressive property tax on landholdings.

9. Paraguay: Laws 622 and 662 of 1961: Purpose of laws to legitimize title for numerous squatters' holdings on public or private lands.

10. Peru: Decree law 14575 of 1963: Creates a National Office of Agrarian Reform and Promotion which assumes all functions of preexisting land reform organs. Law states land reform is highest priority, and contemplates vigorous effort. President of Republic active member of the board of directors of the new office. Some 200,000 acres were expropriated with the consent of the owners, and upon promise of due compensation, in August 1963.

Estimated revenue increases, 1962 over 1961 attributable to selected tax reforms in selected countries[1]

	Millions of U.S. dollars (estimated)
Argentina: Tax penalty amnesty, increased taxpayer registration, administrative reorganization	200.0
Bolivia: Improved customs and income tax administration	8.5
Brazil: Income tax administrative reform	10.0
Chile: Improved sales and income tax administration	25.0
Costa Rica: Improved administration, consumption taxes and tax on profits of central bank	8.0
Dominican Republic: First effects of new income tax, elimination of special exemptions to Trujillo interests	13.0
El Salvador: Amended income tax	3.0
Honduras: Improved customs, income, and sales tax administration	2.0
Mexico: Amended income tax and administrative reforms	65.0
Nicaragua: New taxes and amendments	1.5
Panama: New taxes and administrative measures	6.0
Uruguay: Improved administration and new income tax	8.0
Venezuela: Improved administration, income tax rate increases and withholding	100.0
Total	450.0

[1] Estimates of revenue increases are not available for every country or for all individual measures in most countries.

Tax Laws Passed by Countries Receiving Aid

The following legislative summary is based upon information available August 1, 1963. Where available, revenue estimates are included. Where basic administrative reforms have been undertaken, these are noted also.

ARGENTINA

A. Legislation

1. Decree 9744 of 1960: Legislative grant of increased autonomy to National Tax Agency. Authorizes, and provides statutory basis for subsequent administrative reorganization and reform.
2. Decree 6723 of 1960: Approves new text to income tax law. Technical improvements.
3. Decree 6393 of 1960: Approves new text to capital gains provision. Technical improvements.
4. Decree 6872 of 1960: Provides regulations to Decree 6393 of 1960.
5. Decree 6394 of 1960: Approves new text for excess profits tax. Technical improvements.
6. Decree 9878 of 1960: Provides regulations for Decree 6394 of 1960.
7. Decree 9749 of 1960: Approves new text for the substitute gift tax. Technical improvement.
8. Decree 6392 of 1960: Approves new text for the sales tax. Technical improvements.
9. Decree 9879 of 1960: Provides regulations for the sales tax.
10. Decree 4780 of 1961: Provides new text for stamp tax. Technical improvements.
11. Decree 5806 of 1961: Regulations to Decree 4780 of 1961.
12. Decree 4595 of 1961: Approves new text for gift tax.
13. Decree 4778 of 1961: Provides new regulations for the income tax.
14. Decree 15798 of 1961: Provides increased penalties for evasion and changes collections procedures in income, sales, and stamp taxes.
15. Decree 6480 of 1962: Requires a declaration of capital. Initiates a tax on extraordinary increases in wealth, with rates from 5 to 10 percent. Initiates tax penalty amnesty (which resulted in some $160 million in additional collections).
16. Decree 11452 of 1962: Amends the income, sales, and capital gains tax. Imposes for period 1962–64 a 20 percent surcharge on the income tax. Introduces a tax on the sale of securities at 0.5 percent first year and 1 percent in subsequent years. Income tax for dividends and distributed profits subjected to withholding. Sales tax rates increased from 0.8 to 10 percent for most goods, and to 13 percent for luxuries. Reduced for essential goods to 3 percent or 1.25 percent. Many new items brought into tax base.

"Economic recuperation" taxes for 1962–64 introduced including: 5 percent surcharge on selected imports; 5 percent tax on production of cereals, oil seeds, wool, certain cattle; and additional 5 percent sales tax on various lubricants; an additional 50 percent tax on sales or transfers of automobiles; and M$N5000 tax on passports.

New provisions imposing a 10 percent tax on capital gains from land development.

17. Decree 7344 of 1962: Revises various incentive laws. Eliminates some unproven incentives and provides special inventives for agriculture and cattle.
18. Decrees 6790 and 6966 of 1962: Exempts potatoes and seed potatoes from import duties.
19. Decree 13110 of 1962: New tariff for consular fees promulgated.
20. Decree 134231 of 1962: Extends import surcharges for luxuries.
21. Decree —— of 1963: Temporary tax of US$5 per ton of wheat adopted.
22. Decree —— of 1963: Surcharges of from 100 to 400 on excessive imports of automotive industry enacted.
23. Decree —— of 1963: Temporary tax of M$N1 per liter on gasoline adopted.
24. Decree 2227 of 1963: Revises tax on tires and changes base from weight to ad valorem.
25. Decree —— of 1963: Requires taxpayers provide certificate of compliance with income tax before engaging in various business or personal transactions; e.g. obtaining bank credit, transferring title to automobile, etc.

B. Administration

Decree 9744 of 1960: Provided statutory basis for far-reaching reform of the National Tax Administration. Organization has been decentralized along lines

similar to U.S. Internal Revenue Service. Large increase in tax rolls, particularly as a result of drive based upon:

Decree 6480 of 1962: Tax penalty temporary amnesty for delinquent taxpayers.

BOLIVIA

A. Legislation

1. Decree 5508 of 1960: Amends the complementary income tax. Adjusts rates and exemptions.

2. Law of December 31, 1960: New investment law providing tax incentives to new investments.

3. Law of July 1961: New customs code based upon Brussels Convention customs nomenclature. Coupled with improved administration resulted in 35 percent increase in collections (about $8.5 million increase in 1962 over 1959 figure).

4. Supreme Decree 6252 of 1962: Establishes a Commission to study administrative reforms.

5. Supreme Decree 6250: Exempts profits from global complementary tax.

B. Administration

1. Decree 6252 of 1962: Results of this and prior administrative efforts appear to be urban property tax collections up 200 percent for first 5 months of 1963 compared to same period 1962. Expected 10- to 15-percent general rise in collections 1963 as result of installation of data processing equipment sales and income taxes. Also, new customs facilities under construction together with reorganization of procedures. Anticipated substantial resulting revenue increases.

BRAZIL

1. Law No. 3807 of 1960: Levies a 5-percent social security tax on excess profits.

2. Law No. 3850 of 1960: Excess profits tax and extra 3-percent tax on business profits extended 5 years.

3. Decree —— of December 20, 1961: First reductions in import duties for Latin American free trade area agreement promulgated.

4. Law No. 3995 of 1961: Supplemented by Decree 1166 of June 8, 1962. This law is intended to encourage economic development in northeast Brazil through granting exemptions to new industries in the region.

5. Law No. 4154 of 1962: Raises rates of the complementary progressive income tax, broadens the use of withholding, raises taxes on bearer share income, and increases certain consumption tax rates. Also, this law provides authority for a reorganization of the entire tax system.

It is estimated that the law will increase revenues by approximately Cr$120 billion (or US$200 million) in 1963.

CHILE

A. Legislation

1. Decree 190 of 1960: Organic law for the reorganization of tax administration.

2. Decrees 14171 of 1960, Decrees 14597, 14603, 14634, 14636, 14688 of 1961, and Supreme Decree 14458: All amend the income tax, by making technical improvements adjusting exemption levels, small rate changes, etc.

3. Decree 4216 of 1962: Increases surcharges on transportation taxes.

4. Decree —— of November 16, 1962: Amends land tax law. Provides new assessment basis and procedures. Initiates far-reaching land tax program with completion date 1964. Estimated 1963 revenues 16 million escudos.

5. Decree —— of 1963: Additional taxes on automotive manufacturers in free zone increased up to maximum of 100 percent.

6. July–August 1963: Approval in House Chamber and now pending passage are enactment of basically amended income, inheritance and stamp taxes.

B. Administration

1. Decree 190 of 1960: Provided basis for reorganizaton of national tax agency. To date complete reorganization, establishment of training school and strengthened audit, collection and investigation functions. Overall proficiency of organization dramatically improved as reflected in considerably increased collections estimated in 1962 at 30 million escudos.

2. Decree —— of November 16, 1962: Provides basis for national land cadaster and assessment program. Mapping, assessment and administrative organization programs now well underway with target completion date in 1964.

3. Establishment in 1963 of working group to plan and execute modernization and reorganization of customs agency.

COLOMBIA

A. Legislation

1. Decree 1691 of 1960: Tax incentives are granted to basic industries.

2. Law No. 81 of 1960: Consolidated and rationalized into comprehensive code numerous and scattered income, excess profits, and wealth tax provisions. Modified rate structure, strengthened taxes, and made numerous technical improvements.

3. Decrees 439, 1651, 138 of 1961: Issue regulations for the income tax.

4. 146 of 1961: Reduces export taxes largely to adjust for falling coffee prices.

5. Decree 1393 of 1961: Issues regulations to tax incentives provisions for basic industries.

6. Decree 1394 of 1961: Issues regulations for income tax exemptions for selected exports.

7. Decree 0437 of 1961: Imposes special 6-percent surcharge on corporate income tax for housing.

8. Decree of February 1963: Increases selected excises on beer, cigarettes, etc.

9. Decree of March 1963: Exempts selected raw materials for domestic export industry from import duties.

10. July 1963: Executive requests extraordinary legislative authority to—

(*a*) Modify and strengthen real property taxes,

(*b*) Levy a 20-percent surcharge on the income tax,

(*c*) Introduce a general sales tax, and

(*d*) Thoroughly reorganize the tax administration.

B. Administration

1. Law 81 of 1960: Various organizational reforms in 1960 to adapt administration to new law. Continuing efforts, including gradual installation of electronic data processing equipment, to improve collections and audits. In June–July 1963 request for comprehensive AID tax administration assistance program on basis of IRS survey of preceding months.

COSTA RICA

1. Law 3020 of 1962: State banks with the exception of the central bank are subjected to income tax.

2. Law 3063 of 1962: Several provisions of the income tax law are rationalized, including advancing the payment date and requiring anticipated payments on estimated income.

3. Decree of 1963: Withholding provisions of income tax regulations are rationalized.

4. Law 3026 of 1962: Land tax law is amended requiring the filing of a sworn statement of landholdings and values thereof.

5. Law 3042 of 1962: Tax on uncultivated land was amended.

6. Decree 3 of 1960: Regulations for tax incentives law were enacted.

7. Decree 2 of 1961: Regulations for tax incentives law were amended.

8. Law 3048 of 1962: Tax incentives law was amended.

9. Law 2973 of 1961: Tax on land area and location was enacted with maximum rates of 100 colones per hectare for rural and 5 colones per meter for urban land.

10. Law 2825 of 1961: Tax on uncultivated land with progressive rates from 0.25 percent on first 250 hectares to 2.5 percent to excess over 5,000 hectares was enacted. Purpose of law to stimulate more intensive land use.

11. 2837 of 1961: Inheritance and gift tax rates for Costa Rica University increased.

12. Law 2890 of 1961: Tax incentive law for cement industries amended.

13. Law 2808 of 1961: Capitation taxes on foreigners residing in the country were increased.

14. Law 2802 of 1961: A 10-percent exchange surcharge was fixed for local currency acquired by foreign banana companies for their local operations.

15. Law 2981 of 1961: An additional 0.05 colón consumption tax per bottle of beer was enacted.

16. Law 3021 of 1962: All consumption taxes on beer were consolidated with a rate of 0.55 colón per bottle.

17. Law 2547 of 1960: Consumption tax on cigarettes was increased to 0.20 colón, 0.26 colón, 0.43 colón and 0.25 colón per package.

DOMINICAN REPUBLIC

A. Legislation

1. In second half of 1961 subsequent to termination of Trujillo dictatorship numerous onerous or unfair tax laws were abolished, resulting in a $34 million decline in revenues in 1962.

2. Decree 5911 of 1962: Effective July 1, 1963, and amended by Decree 5990 of 1962 and Decree 6173 of 1963, introduced a new income tax which has yielded $12.1 million in the first 5 months of 1963. Estimated yield $30 million.

3. Decree of May 1962: Taxes of 10 percent on all travel tickets and 1 percent on all imports were introduced. Gasoline tax increased. Estimated yield of these taxes $1.9 million.

4. Decree 5961 of May 15, 1962: Imposes taxes on imported and domestically produced cigarettes.

5. Law No. 23 of May 10, 1963: Introduced new sugar and molasses taxes. Estimated combined revenues $24 million.

6. Law No. 32 of June 5, 1963: Increased consumption taxes on various imports ranging from 5- to 60-percent ad valorem.

B. Administration

The rapidly brightening revenue picture in 1963 attributable in large part to successful administrative reorganization during fiscal year 1962 and first half 1963.

HONDURAS

A. Legislation

1. Law of June 6, 1963: Provides a 20-percent surcharge on income tax for all incomes in excess of $10,000, effective July 1, 1963. Estimated revenue increase 1963 $600,000.

B. Administration

1962: Establishment of Office of Special Audits and Collections Control. General tightening of administration has resulted in 1962 revenue increases of 25 percent income tax; 7 percent sales tax and 30 percent export tax.

ECUADOR

A. Legislation

1. Decree law of November 14, 1961: Modifies basic customs law by introducing Brussels Convention nomenclature.

2. Decree law of 1961: Consolidates taxes on tobacco products.

3. Decree law of December 15, 1961: Enacts a new inheritance tax with increased rates and improved enforcement procedures.

4. Decree law 31 of 1962: Grants incentives to banana exports by exempting profits on exports in excess of 1961 average.

5. Decree of July 18, 1962: Creates Commission on Administrative and Fiscal Reforms.

6. Decree law 39 of 1962: Enacts a new income tax with rates from 20 to 40 percent on corporate income. Schedular personal income tax rates from 6 to 23 percent and progressive global rates from 10 to 43 percent.

7. Decree law 47 of 1962: A new tax incentive law for industry enacted.

8. Budget law of 1962: Introduces new taxes on imports, corporate paid in capital, a professional license tax, and a tax on notorizations.

B. Administration

1. August 1963: In conjunction with AID assistance ambitious tax administration reform in planning stages.

EL SALVADOR

A. Legislation

1. Decree No. 154, June 1961: Introduced a tax on the export of shrimp. Estimated revenues $500,000.

2. Decree No. 300, September 1961: Raised personal exemptions for children dependents and rates for higher bracket taxpayers. Revised and increased

corporate rates and rationalized the personal and business income taxes in a number of important respects. Estimated that these reforms—specifically intended to comply with Alliance for Progress criteria—increased revenues of income tax by 30 percent in 1962.

3. Decree 433, December 6, 1961: Reduced the excise on sugar but broadened the base. Estimated increase in revenues attributable to change, $400,000.

4. June 1963: A number of new measures increasing rates under the excise, import, and consumption taxes (wheat, tobacco, beer, radios, TV, etc.). Estimated revenue increases 1963, $4 to $5 million.

GUATEMALA

1. Decree law 1559 of 1963: Introduced the first personal income tax in Guatemalan history. No firm estimates of revenue yield.

2. Decree law 60 of 1963: Introduced an export tax on cotton, now Guatemala's second most important export. Estimated revenues $750,000. Also introduced an export tax on essential oils (citronella and lemon grass). Estimated revenues $100,000. Amended real estate taxes by increasing valuations, across the board by 300 percent. Estimated revenues $600,000. Increased stamp and stamped paper taxes by doubling the value of stamps which must be affixed to bills and receipts. Estimated revenues $5,500,000.

3. Decree law 58 of 1963: Introduced a new tax of 5 cents per gallon on gasoline.

MEXICO

1. Decrees of 1961: Structure of customs taxes amended. Tax on cigarettes increased. Tax on automobile ownership enacted. New surcharges on imports of nonessential goods enacted.

2. Decree of December 28, 1961: Amended income tax law by: Introducing of withholding on salaries, simplifying accounting for small enterprises, establishing capital gains tax for real property transfers, introducing new higher tax rates for income from real property leases. Introduces a complementary progressive personal income tax for higher bracket incomes. Estimated yield $40 million.

3. Decree of January 2, 1963: Introduces a 1-percent payroll and self-employment tax earmarked for educational expenditures.

NICARAGUA

1. Decree 551 and decree 5 of 1960: Enacts consumption tax of 39 percent on domestically manufactured cigarettes.

2. Decree 483 of 1960: Enacts consumption tax on soft drinks.

3. Decree 496 of 1960: Enacts tax on insurance premiums.

4. Decree 550 of 1960: Imposes 10-percent tax on lottery winnings in excess of C$5,000.

5. Decree 552 of 1960: Increases taxes on automotive vehicles.

6. Decree 494 of 1960: Authorizes executive to promulgate general sales tax.

7. Decree 541 of 1961: Enacts export tax of C$0.0125 per kilo on cattle.

8. Decree 567 of 1961: Increases rates for alcoholic beverage production taxes. Increased again in decree 641 of 1961. Regulations decree No. 11 of 1961.

9. Decree 568 of 1961: Imposes US$25 registration tax for foreign pharmaceutical houses.

10. Decree 559 of 1961: Increases business license taxes. Base broadened by decree 597 of 1961.

11. Decree 557 of 1961: Enacts tax on fishing activities.

12. Decree 647 of 1962: Enacts tax of 10 percent on wholesale price of sugar for domestic consumption.

13. Decree 29 or 1962: Enacts consumption tax of C$0.60 per pound on detergents.

14. Decree 722 of 1962: Amends stamp taxes by simplifying tariff. Amended decree 741 of 1962.

15. Decree 703 of 1962: Enacts consumption tax on locally produced cement.

16. Decree 713 of 1962: Strengthens taxes on real property, personal property, and gifts of real property. Intended to strengthen direct taxes. Revenue increase in 1962, estimated 26.8 percent of direct taxes.

17. Decree 725 of 1962: Enacts new inheritance tax effective October 1, 1962.

18. Decree 711 of 1962: Enacts 1 percent tax on movable assets, as amended, decree 761 of 1962.

19. Decree 712 of 1962: Enacts 1 percent tax on immovable assets, as amended, decree 763 of 1962.

20. Decree 726 of 1962: Income tax law amended and progressive rates increased. Decree repealed by decree 762 of 1962.

21. Decree of March 7, 1963: Introduces new customs duties and consumer taxes effective April 1963. Estimated revenue increase $1.1 million.

PERU

1. Supreme decree 8 of 1960: Income tax withholding put into effect with promulgation of regulations.

2. Law 13311 of 1960: Enacts pay-as-you-go for self-employed as amended law 13513 of 1961.

3. Supreme decree 2 of 1960: Requires subsidiaries and branches of foreign mining companies to pay tax in their national currencies.

4. Law 13512 of 1961: Establishes 30 percent rate for bearer shares.

5. Law 13526 of 1961: Establishes increased rate on stamp tax on sales.

6. Law 13528 of 1961; Subjects income of real estate holding companies to income tax.

7. Law 13527 of 1961: Imposes a special 10-percent tax on corporate capitalized profits.

8. Law 13825 of 1962: Subjects profits of shipbuilding industries to withholding.

9. Law 13784 of 1962: Establishes special tax regime for petroleum companies.

10. Law 14181 of 1962: Provides tax amnesty for tax delinquents who pay arrears. Amnesty extended, law 14246 of 1962.

11. Law 14186 of 1962: Increases penalties for tax evasion.

12. Law 14235 of 1962: Provides for installation of automatic data-processing procedures in the tax administration.

13. Law 14262 of 1962: Increases income tax rates for income from commercial and industrial activity.

14. Law 14265 of 1962: Imposes a tax on anchovies.

15. Law 14341 of 1962: Increases stamp tax on sales to 4 percent.

16. Law 14414 of 1963: Repeals tax on anchovies and imposes new tax on fish flour.

17. Law 14439 of 1963: Several taxes amended. Stamp tax reduced from 4 to 3.5 percent. Capitalized profits subject to 10 percent. Income on domestic credit operations by foreign companies subject to 16-percent tax. Dividends from registered shares subject to bearer share rates if paid to national holding companies.

PANAMA

A. Legislative

1. Law 110 of 1960: Private houses not exceeding B/5,000 exempted from the real property tax. New rates for this tax established.

2. Law 111 of 1960: Rates doubled for stamped paper and stamp tax tariff amended.

3. Law 112 of 1960: Income tax rates increased. Various administrative measures introduced. Estimated revenues $2 million.

4. Law 63 of 1961: Interest included as a deductible expense in calculation of taxable income. Also exempts newly constructed buildings from the real property tax.

5. Law 65 of 1961: Definition of various infractions constituting tax evasion provided. Stamp tax tariffs amended.

6. Law 8 of 1961: Provides 10-percent discount for prompt payment of real property tax.

7. Law 81 of 1961: Amends stamp tax tariff, increases tax on beer, alcoholic beverages, and liquor.

8. Law 92 of 1961: Income tax surcharges on income from capital increased from 20 to 40 percent. Also a surcharge of 10 percent added to income tax on earned income.

9. Law of December 31, 1961: Inclusion of interest and dividends in personal income tax base. Five-percent withholding on dividends and interest. Establishes a "Land Control Ownership" tax with graduated rates increasing depending upon size of holding.

10. Law 3 of 1962: Amends evaluation rules for inheritance and gift taxes, and stamp tax tariffs. Strengthens income tax penalties.

11. Law 5 of 1962: Empowers land tax Cadastral Commission to impose fines.

B. Administration

June 1961: Internal Revenue Service incorporated into the career civil service.
February 1962: Tax audit staff doubled in size and procedures improved.
March 1962: National Cadaster initiated.
June 1963: Government requests AID–IRS assistance in audit procedures.

URUGUAY

1. Law 13032 of 1961: Enacts country's first income tax. Amends sales tax. Imposes 25-percent tax on sales of automobiles (luxury). Enacts new progressive inheritance and gift taxes. Taxes transfers of real property. Imposes annual tax on corporate capital. Subjects large real estate holdings to progressive tax based on value. Amends and increases rates on tobacco tax.
2. Law 12804 of 1962: Makes technical amendments and revisions of law 13032 of 1961.
3. Decree of July 27, 1962: Imposes additional surcharges on imports of autos.
4. Law of March 1963: Tax penalty amnesty for payment of taxes in arrears.
5. Decree of April 14, 1963: Reduces import surcharges to 20 percent with exception of luxury imports taxed at 60, 100, 150, and 200 percent rates.
6. Decree of May 24, 1963: Increases taxes on leather, oilseeds, and meats.

PARAGUAY

A. Legislation

1. Decree No. 236, January 11, 1960: Raised upper bracket income tax rates.
2. Decree No. 349, March 29, 1963: Modifies the income tax by: broadening the corporate tax base to include salaries of directors (there is no personal income tax), raising presumptions of profits equal to 8 percent of value on occasional exports, 6 percent on construction activities, and 8 percent on imports for agents of foreign companies.

B. Administration

1962: Adoption of improved customs procedures and controls resulting in substantially increased collections (average monthly increase was 35 percent). Other administrative tightening up credited with raising collections of other taxes by 22 percent. Combination of increased rates and administration credited with 20 to 25 percent rise in income tax in 1962.

VENEZUELA

A. Legislation

1. Law of February 13, 1961: Increases income tax rates; introduces withholding on interests and royalties to nonresidents and mining and mineral companies.
2. Law of June 29, 1961: "Law of Urgent Economic Measures" raised income tax rates, while authorizing Executive to promulgate further increases. Extended pay as you go to commercial and industrial enterprises.
3. Decree 581 of 1961: Increased inheritance and gift tax rates.

B. Administration

Administrative improvement in the income tax is credited with increasing 30 percent in personal income tax revenues in 1962.

IDB OBLIGATIONS AND DISBURSEMENT

Mr. MONTOYA. Mr. Moscoso, it was indicated a few minutes ago that only $55 million had been disbursed under these loan agreements; is that correct?

Mr. MOSCOSO. That is correct.

Mr. MONTOYA. And is that $55 million representative of all the disbursements, all the loan disbursements made by the Inter-American Bank?

Mr. MOSCOSO. No. That is from the Social Progress Trust Fund.

Mr. MONTOYA. That is only the Social Progress Trust Fund?

Mr. MOSCOSO. That is right.

Mr. MONTOYA. What is the balance of the present funding in that fund?

Mr. MOSCOSO. $37 million is not obligated.

Mr. MONTOYA. And the fact that $55 million has been disbursed does not necessarily mean that loan commitments and agreements have not been entered into which might require almost immediate and continuous disbursement; is that right?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Would the gentleman yield?

Mr. MONTOYA. Yes.

Mr. PASSMAN. We have no legal commitment to obligate one dime beyond that amount.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. So you have incurred no legal obligation for a dime beyond the amount that is presently on hand; is that correct?

Mr. MOSCOSO. Yes; that is correct.

Mr. MONTOYA. So, in effect, you have unobligated $37 million?

Mr. MOSCOSO. We have unobligated $37 million.

Mr. MONTOYA. How much do you have obligated then?

Mr. MOSCOSO. The balance—$348 million.

Mr. MONTOYA. You have a total funding of $394 million?

Mr. MOSCOSO. That is right.

Mr. MONTOYA. Of which $357 million has been obligated?

Mr. MOSCOSO. That is right.

Mr. MONTOYA. Of which sum only $55 million has been disbursed?

Mr. MOSCOSO. That is right.

Mr. MONTOYA. That is what I wanted to get clear.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. MONTOYA. It was indicated here, previously, that by December 31, 1963, it is anticipated that there shall be a total disbursement, including the $55 million to date, of $100 million?

Mr. MOSCOSO. That is right. At least $100 million. That is right.

Mr. MONTOYA. That is all.

Mr. PASSMAN. Mr. Rhodes?

TYPES OF LOANS AND GRANTS MADE

Mr. RHODES. Mr. Chairman. Mr. Moscoso, in going through the list of loans made on pages 99 through 106 of your presentation book, I find that most of the loans fall in these categories: One, housing, urban; two, housing, rural; three, various types of loans to farmers; four, community sanitation facilities; and five, water development. I think those would be the main categories in which loans have been made.

Mr. MOSCOSO. That is right.

Mr. RHODES. These categories are loans made by the Social Progress Trust Fund. Tell me what other types of loans or grants are made by the whole Alliance for Progress. In other words, I am trying to paint, with a broad brush, a mosaic of where the Social Progress Trust Fund fits into the Alliance for Progress.

Mr. MOSCOSO. As you know, the Alliance for Progress comprises the operations of many agencies; let's take the Export-Import Bank.

Mr. RHODES. I do not think you understand me. What I am trying to do is functionalize the Alliance for Progress. What other types of activities do you get into with the rest of the Alliance for Progress?

Mr. MOSCOSO. Transportation, including road construction, airport and port development, industrial lending for industrial purposes such as funding of private investment banks, funding of supervised agricultural credit agencies, higher education, and other agricultural improvements; education, especially university training. We participate in power and irrigation, labor training, public safety, and public administration improvement. That about covers it.

Mr. RHODES. Do you have a table to break down the requested appropriation along the lines that I have mentioned?

Mr. STERNFELD. On a functional basis; yes, sir.

Mr. RHODES. I would like the table to show not only the amount to be obligated, by function, but also whether it is by grant or loan.

Mr. STERNFELD. Yes, sir. We have that, too.

Mr. RHODES. If that could be submitted for the record.

Mr. STERNFELD. We will submit it.

(The information follows:)

AID assistance to Latin America, estimated by fields of activity

[Development grants and loans in millions of dollars]

	Fiscal year 1963		Fiscal year 1964	
	Loans	Grants	Loans	Grants
Agriculture	71	19.0	145–170	16
Industry and mining	48	5.0	120–150	6
Transportation	71	9.0	140–165	4
Labor		4.0		2
Health and sanitation	15	18.0	15–20	10
Education	8	24.0	70–75	27
Public administration	4	8.0	8	8
Public safety		5.0		5
Housing and community and urban development	88	3.0	75–85	2
Power and communication	17		20–40	
Technical support		[1] 21.5		[1] 20
General and miscellaneous	[2] 21	5.0	9	5
Total	343	121.5	602–722	105

[1] Includes nonregional technical support activities.
[2] Includes $20 million of the program assistance loan to Colombia for which field of activity not yet available.

ASSISTANCE TO PRIVATE SECTOR

Mr. RHODES. How much of the funds requested for obligation in fiscal year 1964 will go into the private sector and how much in the public sector?

Mr. MOSCOSO. An increasing amount will go into the private sector. In most instances, where a loan appears to have been made to a Government agency, like, let's say the Government of Columbia or the Government of Mexico to take two instances, you will find that the ultimate users of these funds are private individuals. In the case of Mexico, a $20 million loan was made to the Nacional Financiera. Most of the commercial banks of Mexico participate in this system of supervised agricultural credit. They make loans directly to small farmers. When you look at the records, you will notice a government-to-government loan here, but the ultimate user is a private individual—in this case farmers. In the case of Columbia, we made a $30 million loan to the Government and the Bank of the Republic administers it through the private banking system. In this

instance the money goes for loans for small and medium-sized industries in Colombia. This would appear in the statistics as a government-to-government operation, and it is a loan which will ultimately be utilized by private individuals.

Mr. RHODES. Do you have any studies which would indicate either the amounts or percentages which would be either (1) private; (2) public; (3) quasi-private, or (4) quasi-public?

Mr. MOSCOSO. We have those figures.

Mr. STERNFELD. We do not have them here.

Mr. MOSCOSO. We will be glad to supply them.

(The information supplied follows:)

FISCAL YEAR 1964 LENDING PROGRAM

The fiscal year 1964 proposed development lending program can be divided among (1) basically public projects (roads, education, airports, utilities, power, resource studies, irrigation, etc.); (2) intermediate institutions, public or quasi-public in nature, which reach immediately the private farmer, small businessman, and homeowner (industrial banks, agricultural credit banks, savings and loan and other housing banks, cooperative credit organizations); and (3) private enterprises. The rough percentages follow:

	Percent
(1) Public	50
(2) Intermediate	38
(3) Private	12

SPTF LOANS TO GOVERNMENTS AND GOVERNMENT AGENCIES

Mr. RHODES. I note on page 102 that on March 22, 1962, the Social Progress Trust Fund made a loan to the Government of Argentina for the purpose of advanced education, teaching and research equipment for eight national universities.

Mr. MOSCOSO. Yes.

Mr. RHODES. I call attention to this only because it appears to be the only Government loan made by the Social Progress Trust Fund. Why was this one loan made and what is the policy of the Social Progress Trust Fund in that regard?

Mr. MOSCOSO. Mr. Congressman, many of these entities that you see here, like on page 102, Banco Obrero, is a housing agency of the Government of Venezuela. The Institute of El Salvador is the housing agency of the Government of El Salvador, et cetera. In other words, these are public corporations of the respective governments.

Mr. RHODES. I understand that, but in this instance you did not make it to a public corporation or to a private corporation. You made it to the Government. This is the only instance I see in which that was done.

Mr. MOSCOSO. Because these are national universities.

Mr. RHODES. I see. Is this completely for equipment?

Mr. MOSCOSO. Equipment, yes; research and teaching equipment.

Mr. RHODES. And it is in the amount of $10 million.

Mr. STERNFELD. Of which the Social Trust Fund is only putting in $5 million.

Mr. RHODES. That is right.

The Social Progress Trust Fund I note on page 98 has loaned a total of $320,562,000 and that the total equivalent cost of all these is $780 million.

Mr. MOSCOSO. What page is that?

Mr. RHODES. Page 98.

Mr. KILLEFER. That is as of the end of the year.

Mr. RHODES. That is as of December 31, 1962.

Mr. MOSCOSO. That is right, sir.

Mr. RHODES. Can you bring this figure up to date and furnish it for the record?

Mr. MOSCOSO. We are already furnishing an up-to-date list.

LOCAL CONTRIBUTIONS TO PROJECTS FINANCED BY SPTF

Mr. RHODES. Is it possible to have an analysis of the type of contributions which were made by either the local governments or by the corporations?

Mr. MOSCOSO. Yes.

Mr. RHODES. In other words, as to whether it was made in services or land or currency, and what kind of currency?

Mr. MOSCOSO. In the case of the Social Progress Trust Fund?

Mr. RHODES. Yes.

Mr. MOSCOSO. On page 99 you will see percentage of total cost provided by local resources.

Mr. RHODES. I see that, but I was wondering——

Mr. MOSCOSO. Right next to it, participation of local resources. It does not give it. You are right. We will have to furnish that.

Mr. STERNFELD. It gives some.

Mr. MOSCOSO. We will bring this up to date.

Mr. RHODES. I would appreciate it.

(The information supplied follows:)

Local contribution to housing projects financed with SPTF loans (June 19, 1961, to June 30, 1963)

Date authorized	Borrower	Total cost of project	Percent of total cost provided by SPTF	Participation of local resources	Percent
Aug. 3, 1961	Instituto de Vivienda y Urbanismo de Panamá; Guarantor, Government of Panamá.	$10,444,917	73.0	From IVU's resources, in balboas	11.0
				Purchasers savings, in balboas	6.0

That is all, Mr. Chairman.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

MONDAY, AUGUST 5, 1963.

Mr. PASSMAN. The committee will come to order.

Mr. GARY. Before we get started, may I ask one or two questions on a subject we were discussing when we adjourned at the last meeting?

Mr. PASSMAN. Yes.

ESTIMATED REVENUE OF ARGENTINA

Mr. GARY. Mr. Moscosco, when we last met, we were discussing some figures with reference to the Argentine and Chile on their estimated revenue and the actual income. For what years were those figures?

Mr. Moscoso. If I recall the problem, Mr. Congressman, the figures were for 1961 revenue, calendar year 1961. These estimates come to us around the beginning of the following calendar year. We got the 1961 figures around February of 1962, in order to prepare the presentation book. These figures are, quite frankly, estimates that the countries make.

In the case of Argentina specifically, the fact of the matter is that, in view of the oncoming presidential elections in Argentina, I can well imagine that probably President Frondizi or his ministers were optimistic for obvious political reasons in the preparation of these estimates.

Unfortunately, those are the estimates with which we have to work. On top of that, of course, is the fact that statistics in Latin America, generally speaking, are not exactly as good as we all would like to see them.

The point I would like to make in connection with Argentina is that there was a very substantial or real shortfall of about 28 percent from the previous year's estimate.

Mr. GARY. How do the actual collections for that year compare with the actual collections of the previous year?

Mr. Moscoso. To start with, in 1960 the collections were $641 million. In 1961 they were $880 million. Then the estimate for 1962 is $1,292 million. You should bear in mind that the proportion of the domestic revenue as a percentage of GNP is a very important figure in this, because it shows the effect of the country in trying to increase its tax base.

In 1960, this was 9.9 percent. In 1961, it was 11.4 percent. In 1962, it was 14.8 percent.

Mr. GARY. Of the national product?

Mr. Moscoso. Of the national product. So, you see, there has been a small increase in the tax collection as a percentage of the GNP.

Another figure we are now looking very closely into is the percentage change in revenues, and then the percentage change in the cost of living, because that gives you a better indication of the true increase. If your percentage increase in revenue is greater than the percentage increase in the cost of living, then you have really gotten an absolute increase in revenue.

In 1961, the percentage increase in revenue was 36.4 percent, and the percentage change in the cost of living was 13.6. You can see there was an increase. In 1962, it is estimated that the percentage change in revenue is 46.8, and the percentage change in the cost of living is 27.8 percent. Again, there has been this increase in revenue which is larger than the change in the cost of living.

This is not the case in all countries.

CHILE'S REVENUES

Mr. GARY. How about Chile? We were discussing specifically, when we recessed, Argentina and Chile. Can you give us similar figures for Chile?

Mr. MOSCOSO. Yes, sir. In 1960, the dollar equivalent of domestic revenue was $506 million, and in 1961, $569 million. The estimate for 1962 is $657 million.

The domestic revenue as a percentage of the gross national product did not go up as high as it did in Argentina. It went up from 15.3 to 16.2 in 1961, and then in 1962, to 16.8.

Mr. GARY. When did they have the earthquake down there?

Mr. MOSCOSO. 1960.

Mr. GARY. Would that have affected their increase in revenue?

Mr. MOSCOSO. It could have. It is said that the rehabilitation work apparently accelerated some of the economic activities of the country, and apparently it was not felt as much.

The percentage change in revenues in 1961 was 12.4 percent, and the percentage change in the cost of living was 7.7 percent. So, there was really an actual effective increase in revenue. In 1962, it is estimated that the percentage increase in revenue will be 15.4 percent, and the percentage change in the cost of living, 10.7 percent. So, there was an actual increase in revenue.

Again I want to repeat, however, Mr. Chairman and Congressmen, this is not the situation in every country. In some countries they have not done so well. As a matter of fact, in some countries there has been an actual reduction.

What we are trying to do right now is to get the countries to focus on how to increase their tax income in order to finance their programs.

NEED FOR EQUITABLE TAX LAWS

Mr. GARY. What I want to see is more equitable tax laws in those countries so these people who have been exploiting the others and getting rich off the country and not contributing anything to its development, will make their proper contribution to the development of the country. I am not one of those who want to level fortunes, but I do want to see the people who are able to pay do their part to provide the government that the people need.

We are told they need a great deal in certain countries of Latin America in the way of education, housing, and things of that kind. Certainly, unless the people who can afford to contribute those funds in Latin America do so, I personally am not willing to require the taxpayers of the United States to do it. That is the way I feel about it, and I just wanted to get that information in the record.

Mr. PASSMAN. Thank you, Mr. Gary.

REVENUE ESTIMATES

The distinguished gentleman from Virginia has always cooperated in every way possible to work out a reasonable and sensible program.

As the distinguished gentleman pointed out, since we do have to take the information which you give us by which to mark our bill and make our recommendations, it is only natural that we sit here with the justifications of last year, along with the justifications for this year, and compare one with the other. If we look at the 1963 hearings, we note that you estimated for fiscal year 1961 in Argentina, domestic revenues would be $1,753 million. But when we get down to the realities, we find that the actual collections were only $880 million, which is about 50 percent of the original estimate.

Both of the figures are based on dollar equivalents. We do not know where to discount when we see an estimate falling off 50 percent.

TAX LAWS IN LATIN AMERICA

Here is an article from this morning's paper, by Dan Kurzman. I read from it:

For it is one thing to pass enlightened income tax laws, and quite another to enforce them. Income tax revenue * * *.

In some cases, no doubt, governments have enacted attractive tax laws merely as window dressing—to offer the appearance of satisfying Alliance requirements in order to qualify for economic aid.

The justifications indicate that this kind of thing is what is happening.

Now let us go a bit further:

But whatever the intentions of most ruling groups, they are inevitably influenced by the fact that enforcement would hit them hardest, because these groups usually consist of economically powerful figures.

Tax officials, being very poorly paid, often make deals with taxpayers * * *.

Poor pay and the lack of modern civil service systems have resulted in a low level of professional competence among tax agents * * *.

Tax offices lack organization, usually separating collection responsibility from other aspects of tax administration.

The taxpayer sees little good yielded in his contribution * * *.

Would you not agree with me, sir——

Mr. Moscoso. I do agree with you.

VALUE OF U.S. DOLLAR

Mr. PASSMAN. Let us stop kidding ourselves. We are in serious trouble in this country.

Constantine Brown has written an article entitled, "The Trouble With the U.S. Dollar," and I quote from it:

Lack of belt tightening by Government and sagging citizen confidence cited.

The question of the vitality of the dollars in contrast with the strong European currencies backed by substantial quantities of gold—kept at their disposal in America—has been worrying Europe's bankers for a long time. They have wholeheartedly cooperated in the past with Washington in pegging the dollar at its present unrealistic value. But they have not failed to warn our Government that nothing short of a drastic fiscal policy can revitalize our dollar.

Privately they did not mince words. "Drastic measures" would consist of a substantial curtailment of America's expenditures at home and abroad with the view of eventually achieving either a balanced budget or at least one which shows a definite tendency toward balance. The national budget tends to mount stratospherically and so does the national debt.

It may be strange for the average American to hear that these nations which have achieved their present unbelievable prosperity and financial stability, thanks to the American bonanza, are now wondering why the U.S. Government still insists on spending billions on foreign aid. The explanation that it is needed to the tune of $4 billion a year in order to prevent the "further advance of communism," especially in the underdeveloped nations of Asia and Africa, is ridiculed in Western European financial circles.

* * * * * * *

By and large, the American investor would do much better either purchasing American stocks and bonds or enjoying a 3½- or 4-percent yield from U.S. building associations. Also, he can withdraw his deposits at a moment's notice.

Why then, it is asked here, do so many Americans prefer to submit themselves to banking regulations far more stringent than at home? Why do so many Americans prefer a lower income from their investments? The inevitable answer is lack of confidence in the fiscal probity of the Government; fear that someday, somehow, their investments at home might become jeopardized by some strange measures suggested by the financial whiz kids in Washington.

A leading Swiss banker regarding the gold outflow has pointed out that while some 5 years ago only Americans of substantial wealth brought part of their capital to Switzerland, there are now tens of thousands of accounts opened in Geneva and Basel from "little capitalists." That is, those who possess only small surplus sums between $10,000 and $50,000. They seem quite satisfied with the 1½-percent yield and neither do they object to the ban on withdrawals without 9 months' notice.

(Off the record.)

Mr. PASSMAN. I will also put something in the record from page 12 of U.S. News & World Report, August 12, 1963, "Washington Whispers":

Hints are heard that the Russians will soon be looking for a big loan from the United States to help them out of their troubles.

(Off the record.)

AID GIVEN BY NON-COMMUNIST COUNTRIES

Mr. PASSMAN. Here is another item. This is from a press release:

Twelve non-Communist countries paid out $8.4 billion in long-term aid to developing nations in 1963, the Organization of Economic Cooperation and Development stated last night.

Is that our organization of which Mr. Rubin is director?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Of course, we gave more than all of them, and the rest of them, no doubt, are hard loans with a high rate of interest.

Mr. MOSCOSO. May I comment on that?

Mr. PASSMAN. Surely.

Mr. MOSCOSO. I understand in the case of France, they do give more aid than we do on a per capita basis, and most of their aid is grants instead of loans.

Mr. PASSMAN. It is to their present and/or former colonies and possessions, where they have profitable trade agreements. That fact has been stated for the record.

FREE WORLD SHIPPING TO CUBA

I read another news report:

Allied ships to Cuba outnumber those of Russia.

Allied ships sailing to Cuba outnumber Russian freights in Cuban trade, according to Representative Paul Rogers, Democrat, of Florida. He told the House yesterday that 44 allied ships went to Cuba in May, compared to 38

Russian vessels. Tentative June figures show 39 allied and 31 Russian, and incomplete July reports show 16 free world vessels and 14 Soviet freights, he said.

I think the distinguished gentleman from Arizona has asked for some specific information on this matter. You might take that item and make a check on those figures.

Mr. MOSCOSO. I think we have here the gentleman, Mr. Cottrell, who has the information.

Mr. RHODES. The information I have requested is being prepared. It came from Department of Commerce Circular No. 12, listing the various ships.

(Information supplied follows:)

FREE WORLD SHIPPING TO CUBA

The table below shows arrivals of free world and Soviet bloc ships in Cuba during the first half of 1963. Cuban-flag vessels are not included in either category. Although the number of free world ship arrivals exceeded the number of Soviet bloc ships in April and in June, most of the free world ships were performing under contracts of charter entered into before the enactment of section 107 of the fiscal year 1963 Appropriations Act, and arrived in ballast to pick up sugar or molasses. All of the Soviet bloc ships shown in the table carried cargoes to Cuba. There were thus fewer free world ships than Soviet bloc ships which carried cargoes to Cuba. In addition, free world ship arrivals during the first 6 months of 1963 decreased approximately 70 percent compared to the same period in 1962. Since 1959, Cuban imports from the free world have declined more than 75 percent.

Ship arrivals in Cuba during first half of 1963

	January	February	March	April	May	June
Soviet bloc ships	41	38	35	34	47	34
Free world ships	12	19	28	37	44	[--------]
In ballast	0	3	10	23	26	[--------]
With cargoes	12	16	18	14	18	[--------]

U.S. LOAN TO RUSSIA

Mr. GARY. I do not believe any responsible person in the United States is going to advocate a loan to Russia. I cannot imagine it. If they do, they have to come before the Congress, and I, for one, and I am certain about 534 other people in the Congress, will be against it. It will never be granted.

Mr. PASSMAN. I always identify these articles when they go in the record.

Mr. ROONEY. Why do you not follow this up with a question, "Is this true?" and give them a chance to answer.

Mr. PASSMAN. Have you read this article?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. Take it with you downtown, please, and get us a brief report concerning it.

Mr. SCHEINMAN. We shall be happy to go to the Secretary of State on this matter, to obtain information on this for the committee. May I say one other thing, Mr. Chairman?

EUROPEAN ASSISTANCE TO LATIN AMERICA

It is interesting that you referred to the assistance by the European countries previously. The information we have put together indicates that with respect to Latin America, countries such as Belgium, Canada, Germany, Italy, Japan, United Kingdom, and France have all been providing economic assistance to Latin America, and yet there are no colonies to which they have been providing.

Mr. PASSMAN. You will have a chance later to answer every one of those questions, country by country.

EXPENSES OF IDB MEETING

I have never observed, I think, more squandering of the taxpayers' money than I did in checking an expense account of the Board of Governors of the Inter-American Bank. They gave us the list last year, and I think it was a week's meeting in Rio. Here were some of the items: Travel of directors, $93,698; local services, $19,638; printing, $6,859; transportation of records, documents, and equipment, $2,644; rental of interpretation and other equipment, $1,560; representation allowance, generally understood to be whisky, and so forth $17,745; contingencies, $2,214. For this one meeting, when they had not yet received a nickel back in interest, the cost was $143,358.

Has the 1962 annual meeting been held?

Mr. MOSCOSO. The 1962 meeting was held in Buenos Aires in April.

Mr. PASSMAN. Do you have a breakdown of the expenses of the 1962 meeting?

Mr. MOSCOSO. No; but I can get it for you.

I have the actual expenses here, Mr. Chairman. The total was $207,000.

Mr. PASSMAN. Will you itemize it?

Travel of directors, how much?

Mr. MOSCOSO. $133,220.

Mr. PASSMAN. Local services?

Mr. MOSCOSO. $27,685.

Mr. PASSMAN. Printing?

Mr. MOSCOSO. $6,711.

Mr. PASSMAN. Transportation of records, documents, and equipment?

Mr. MOSCOSO. $8,263.

Mr. PASSMAN. Rental of interpretation and other equipment?

Mr. MOSCOSO. $6,960.

Mr. PASSMAN. Representation?

Mr. MOSCOSO. $10,899.

Mr. PASSMAN. Sundry expenses?

Mr. MOSCOSO. $13,764.

Mr. PASSMAN. Contingencies?

Mr. MOSCOSO. None. This is the actual expenses.

Mr. PASSMAN. You have contingencies in this budget.

Mr. MOSCOSO. Yes. That was an estimate. The total is $207,501.

Mr. PASSMAN. How about sundry expenses?

Mr. MOSCOSO. We have the alternate U.S. Director of the Bank here.

Mr. PASSMAN. Let him tell us what it is. What was the amount of sundry expenses?

Mr. MOSCOSO. $13,764.

Mr. PASSMAN. That means the cost was about $64,000 more than the meeting the previous year.

How about the costs of the meeting for calendar 1963?

Mr. MOSCOSO. We have the estimate.

Mr. PASSMAN. What is the estimate?

Mr. ROSENSON. We do not have the actual yet.

Mr. PASSMAN. It was held in April of this year?

Mr. ROSENSON. Yes. I meant to say I do not have them with me. We have them.

Mr. PASSMAN. What is the estimate?

Mr. MOSCOSO. I have it here, sir. $112,000 for travel.

Mr. PASSMAN. Give us the total.

Mr. MOSCOSO. $222,000 total.

Mr. PASSMAN. So, it is going up every year, is it not? Bring us a breakdown, if you will. We want a list of the sundry expenses for all 3 years, because that item could cover a multitude of things. I do not see how you could spend that much money for such a meeting, but they say these things are the tools of the trade.

DIVERSION OF BARTER GRAIN TO AUSTRIA

Gentlemen, I am getting a lot of letters wanting to know about the disappearance of a certain amount of feed grain that was intended for Austria. I suppose you people are receiving inquiries, too. It is not a matter that this committee should go into, other than we asked for information, and it was forthcoming, with an attachment. It would appear several Austrian importers have been arrested. I do not know whether they have been tried.

Since this is a Department of State release from the Agency for International Development, I shall insert it in the record. Will you identify this release as being your publication?

Mr. SCHEINMAN. Yes, sir. We provided that for the information of yourself and the committee. We thank you for inserting it, sir. If you or the gentleman from Florida wish any other information on the subject, we will be happy to provide it.

The interesting thing about that transaction was that the United States received payment in full.

Mr. PASSMAN. I want to put your complete answer in the record. I think it is only fair to you that it should go in the record because the United States, according to this statement, has not been a loser on this deal.

(The press release referred to follows:)

DEPARTMENT OF STATE, AGENCY FOR INTERNATIONAL DEVELOPMENT—DIVERSION OF BARTER GRAIN TO UNAUTHORIZED SOURCES FROM AUSTRIA

In January 1962, an audit survey by FAS of barter grains shipped to Austria under title 3, Public Law 480, uncovered a discrepancy between the amount shipped from the United States and the amount received in Austria. Informal inquiries, both here and in Austria, substantiated the data which showed far less grain imported under the barter program than had been shipped from the United States.

A joint investigation was launched by the Offices of Inspector General in both State and Agriculture.

This investigation, conducted with the cooperation of the Austrian economic police and West German agricultural officials, has established that:

1. During fiscal years 1960 and 1961, the United States exported a total of 732,766 metric tons of barter feed grains (largely corn and barley) to Austria.

2. Austria imported 279,456 metric tons of these barter feed grains during this period.

3. Some 453,310 metric tons of barter feed grains were either diverted to other countries or entered Austria under other designation than barter feed grains.

4. Earlier this year, the Austrian authorities, acting on evidence developed in the cooperative investigation, arrested a number of Austrian importers. The charges fell into two categories: Either the firm had imported U.S. barter grain under false papers as grain from other countries in order to obtain higher prices, or they had diverted the grain to West Germany.

(*a*) One Austrian firm admitted they had acted as a dummy for a West German firm in order to obtain the grain under barter arrangements for subsequent sale in West Germany. Thus far these firms have admitted diverting 193,280 tons of the barter grain shipped during 1961 and 1962. Examination of records is going forward to establish whether the balance, some 260,000 tons, also was diverted in this manner by the same firms or by others.

(*b*) No evidence has been uncovered to indicate the diverted barter feed grains wound up in East bloc countries.

(*c*) There is no evidence at this time to indicate collusive action on the part of U.S. export firms.

5. During fiscal year 1963, some 200,000 tons of barter feed grains were shipped to Austria. Although there is no evidence currently that this grain also has been diverted, an investigation is being conducted to establish its final destination.

6. All the barter feed grain was exchanged for strategic materials. A review of the records in the General Services Administration has established that the total quantity of stratgeic materials for the bartered grain has been received as agreed in the contracts.

Once the investigation had clearly established that barter grain was being diverted, the U.S. Department of Agriculture suspended all barter contract shipments to Austria pending the resolution of this case. In addition, a review of all barter agreements has been launched, and procedural changes have been made in barter contract agreements to require importers to supply the USDA with copies of official import certificates from the receiving country.

FREE WORLD SHIPPING TO CUBA

Mr. GARY. Do I understand you also asked for a statement on this Rogers statement to go in the record?

Mr. PASSMAN. Such a statement was volunteered.

Mr. SCHEINMAN. Certainly, sir.

Mr. PASSMAN. What I asked for was verification of the number of ships, Russian and allied.

Mr. GARY. That is what I want. I want to see that in the record. I want the actual facts.

Mr. PASSMAN. Did I not request that information?

Mr. GARY. I am not disputing Mr. Rogers' figures, but I would like to see what figures they have on it.

Mr. PASSMAN. Did I request such information or not?

Mr. SCHEINMAN. I do not remember, Mr. Chairman.

Mr. PASSMAN. I think I asked you to give the committee a report as to the accuracy of the figures.

Mr. SCHEINMAN. With the committee's permission, may we also provide for your information a discussion of the nature of the shipping which is being discussed?

Mr. PASSMAN. You have full material on that matter coming to Mr. Rhodes. We are going to involve ourselves at this time only with the accuracy of the numbers of Russian ships and allied ships.

(Off the record.)

Mr. PASSMAN. As I say, gentlemen, it is serious business.

RESTRICTIONS ON U.S. ASSISTANCE TO THE ALLIANCE FOR PROGRESS

Will you comment concerning the desire of the Latin American countries for less strings on Alliance for Progress funds?

Mr. MOSCOSO. I would comment, Mr. Chairman, that it would be a natural desire on the part of anyone who is trying to get loans to see that the conditions are as lenient as possible, and against that vice you counterpose the virtue of not giving. That is what we continuously do in our negotiations.

Mr. PASSMAN. What is the administration's view on this matter?

Mr. MOSCOSO. There are very substantial strings, Mr. Chairman. To give you an instance, the ——— case is a good one in point, where we have established that in order for us to disburse on our loan to ——— they must show on a quarterly basis—and we have to look into the books to see that their figures are correct—a current account surplus on Government revenues, to be sure that the funds are going to be available to finance the proportion of the cost of development that they have indicated they would have available. We go through this exercise every quarter, checking on the amounts they have agreed to. Through the last quarter, they estimated 155 million———

Mr. PASSMAN. Do you mean their income?

Mr. MOSCOSO. That is right.

ASSISTANCE TO ARGENTINA

Mr. PASSMAN. How much money did you give Argentina in 1963?

Mr. MOSCOSO. Grant or loans?

Mr. PASSMAN. Total, but keep the Export-Import Bank out at this point. The rest of it is a giveaway, including Public Law 480, of course.

Mr. MOSCOSO. From all sources?

Mr. PASSMAN. Yes, sir; with the exception of the Export-Import Bank.

Mr. MOSCOSO. You want all of the assistance up to now, or in the year 1963?

Mr. PASSMAN. Give it to us up to now, total.

Mr. MOSCOSO. $703.9 million.

Mr. PASSMAN. How much was the aid for fiscal 1963?

Mr. MOSCOSO. For fiscal 1963, this has the Export-Import Bank component. Let me take it out. One hundred and eight million dollars.

Mr. PASSMAN. You asked for $103.8 million, but you gave them $108 million. It just shows you, even if the actual collections are only 50 percent of the estimates, it does not mean we make any downward adjustment in the foreign aid.

Mr. MOSCOSO. The $108 million includes $30 million from the Social Progress Trust Funds.

Mr. PASSMAN. It is still American money, is it not?

Mr. Moscoso. Yes, sir, but it was not included in the estimate that we gave you last year.

Mr. PASSMAN. This thing is scattered everywhere.

PENDING LOAN APPLICATIONS FROM LATIN AMERICA

Could you insert for the record a list of loan applications pending for Latin America as of July 1, 1963?

Mr. Moscoso. We have it, Mr. Chairman, and will be glad to put it in the record.

(The information requested may be found in the appendix, p. 2728.)

ALLIANCE FOR PROGRESS OBLIGATIONS AND UNOBLIGATED BALANCES, 1963

Mr. PASSMAN. How much money did you obligate for development credits in fiscal year 1963 for the Alliance for Progress applications?

Mr. Moscoso. $333 million.

Mr. PASSMAN. We have established that the total amount on hand is close to $2 billion for all phases of Latin American aid. How much did you have on June 30 unobligated from previous years, the Alliance for Progress devlopment credits?

Mr. Moscoso. $90,850,000, total.

Mr. PASSMAN. Unobligated as of June 30, 1963?

Mr. Moscoso. That's right.

Mr. PASSMAN. How much have you disbursed out of the total funds through June 30, fiscal year 1963?

Mr. Moscoso. $166,046,000. That is fiscal year 1963.

Mr. PASSMAN. That is when you received your first appropriation for the Alliance of Progress?

Mr. Moscoso. That's right.

Mr. PASSMAN. What was that total?

Mr. Moscoso. $166,046,000.

Mr. PASSMAN. That is the total, is that correct?

Mr. Moscoso. That's right.

Mr. PASSMAN. Is that the total grants and credits?

Mr. Moscoso. This is the credits.

Mr. PASSMAN. How about the outright grants?

Mr. Moscoso. $85,632,000.

Mr. PASSMAN. Then the total amount unliquidated, undisbursed in the Alliance for Progress at June 30?

Mr. Moscoso. $498,814,000. That is the credits part of it; $119,-789,000 in grants.

Mr. PASSMAN. How could you ever get about $800 million out of $525 million?

Mr. Moscoso. This includes loans which were made before the Alliance for Progress.

Mr. PASSMAN. I asked specifically about the Alliance for Progress. Now let us go back and do it all over again.

Mr. Moscoso. We have the obligations, but we don't have the expenditures made against those specific funds that were appropriated for the Alliance for Progress.

Mr. PASSMAN. You have a lot of books downtown. The comptroller is present. Can you help us out of this, Mr. Tennant? How much did you have allocated to the Alliance for Progress Fund last year? Was it $525 million?

Mr. TENNANT. We had appropriated development loans, $425 million. There was a transfer out of that—do you want the total obligated against that?

Mr. PASSMAN. We want the total amount appropriated to the Alliance for Progress during fiscal year 1963.

Mr. TENNANT. If we include loans, grants——

Mr. PASSMAN. Alliance for Progress, regardless of what it is for.

Mr. TENNANT. There was some supporting assistance money; there was some carryover——

Mr. PASSMAN. We do not care what it is for. The Alliance for Progress came in under an entirely new caption, a new name, last year; did it not?

Mr. TENNANT. If you are just talking about those two items, sir, it is $420,665,000.

Mr. PASSMAN. Is that the amount that you asked for last year?

Mr. MOSCOSO. We asked for $600 million, but we got $525 million.

Mr. PASSMAN. You asked for $600 million?

Mr. MOSCOSO. That's right.

Mr. PASSMAN. You received $525 million?

Mr. MOSCOSO. $525 million. $425 million for credits and $100——

Mr. PASSMAN. You asked for $600 million and received $525 million? What amount do you have unobligated as of June 30 for the Alliance for Progress?

Mr. MOSCOSO. $95 million.

Mr. PASSMAN. You got $75 million less than you requested?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. You had $95 million unobligated as of June 30.

How much have you disbursed out of your fiscal year 1963 allocation?

Mr. MOSCOSO. We will be glad to supply it for the record, Mr. Chairman.

Mr. PASSMAN. Have you disbursed any money out of your fiscal year 1963 allocations?

Mr. MOSCOSO. We have, but we haven't the figure here.

Mr. PASSMAN. Would you call downtown and get that information?

This $95 million that is unobligated, we would like to have that item broken down showing what would be for development credits and outright grants.

(The information requested follows:)

Fiscal year 1963 disbursements against fiscal year 1963 funds for the Alliance for Progress were:

Loans	$53, 514, 264
Grants	30, 588, 024
Total	84, 102, 288

The unobligated balance as of June 30, 1963, for the Alliance for Progress was:

Loans	$90, 815, 000
Grants	4, 245, 398
Total	95, 060, 398

Mr. PASSMAN. Even after cutting the request last year, we still left you very, very much overfunded, and that fact is holding true in practically every account we examine this year.

Do not forget those expense accounts. We want to know a little bit more about sundry expenses.

Mr. MOSCOSO. Yes, sir.

Mr. FORD. Mr. Chairman, could I take a minute or two to follow up on the line of questioning you were just pursuing about the Alliance for Progress?

Mr. PASSMAN. Certainly.

FISCAL YEAR 1963 BUDGET REQUEST COMPARED WITH ACTUAL LOAN OBLIGATIONS

Mr. FORD. Turn to page 11, if you would, please, Mr. Secretary, in the grey book. Under the "Alliance for Progress," the loan request this year for fiscal year 1963, is how much? How much are you asking for?

Mr. MOSCOSO. $550 million is a new appropriation and $52 million is from last year's unobligated funds.

Mr. FORD. You are asking for the reappropriation of $50 million?

Mr. MOSCOSO. A total of $602 million.

Mr. PASSMAN. It is $52 million in reappropriations.

Mr. MOSCOSO. That's right; carryover.

Mr. FORD. Let's go back to 1963. In 1963, what was the amount you requested in new obligational authority in this category?

Mr. MOSCOSO. We requested $500 million.

Mr. PASSMAN. It was $600 million.

Mr. MOSCOSO. $600 million, but $100 million was grants.

Mr. FORD. I am only asking for those figures under the column there, "Alliance for Progress—Loans." What did you request?

Mr. MOSCOSO. $500 million.

Mr. FORD. That was at the time of the authorization?

Mr. MOSCOSO. At the time of the authorization.

Mr. FORD. What did the authorizing committee give you?

Mr. MOSCOSO. They authorized $500 million.

Mr. FORD. What was appropriated?

Mr. MOSCOSO. $425 million.

Mr. FORD. Did you get any reappropriation of fiscal year 1963?

Mr. MOSCOSO. No.

Mr. FORD. So you had $425 million made available in new obligational authority in fiscal year 1963?

Mr. MOSCOSO. That's right.

Mr. FORD. What did you actually obligate in fiscal year 1963?

Mr. MOSCOSO. $333 million.

Mr. FORD. We are limiting it to this account. What was the figure again?

Mr. MOSCOSO. $333.8 million.

Mr. FORD. And you have unobligated how much?

Mr. MOSCOSO. $90.85 million.

Mr. FORD. Whatever the accurate figure is, put it in the record.

Mr. MOSCOSO. It is $90.815 million.

Mr. FORD. You ended up carrying out a program of $333.8 million, against an initial request of $500 million?

Mr. MOSCOSO. That's right.

Mr. FORD. You were cut in the appropriation by $75 million. Even with that reduction, you didn't reach the figure that was actually

made available. Now, how valid was your request last year, and how much validity is there to your request this year? If you go on the basis of last year's record, we ought to reduce this program substantially.

Mr. Moscoso. The validity of the request depends on the assessment we made at that time of what the political situation was going to be which was going to permit us to make all of the loans that we estimated we could make. Unfortunately man proposes and God disposes. In the case of Brazil, for instance, we were not able to reach the stage of political stability and particularly financial stability which would permit all of the lending that we estimated could be fruitfully made in Brazil in order to assist them in their economic development.

Mr. FORD. Don't get me wrong. I don't want you to make these loans unless they are valid. But I am interested in why we should have any more faith this year than last?

FACTORS INVOLVED IN PROGRAM LEVELS

Mr. Moscoso. Mr. Congressman, I am presenting the best possible estimate that I can make to you. There are so many factors involved. On the other hand, I would hate to be unable to take the opportunity of assisting a country in its development program if and when it reached a point of stabilization and the degree of political maturity which would permit us then to make the necessary loans.

Another thing that has happened, Mr. Congressman, is that we have held back in some of our loans because the reforms have not been made. I think it would have been somewhat more difficult to attain some of those reforms if the funds had not been available. I must say, we did not get the reforms in every instance, but if the reforms had been made, we should have had the money available in order to make the funds available to these countries.

Mr. FORD. You barely executed three-fifths of the program you said you were going to execute.

Mr. Moscoso. That's right, sir.

Mr. FORD. It would be about 60 percent.

Mr. Moscoso. A little bit more than 60 percent, but in the commencement of a program of this kind, you must agree with me that you take some time to gain a certain degree of momentum. Another thing is that there was a certain amount of incredulousness on the part of the Latin American countries as to whether or not these funds were going to be available, and therefore not sufficient planning on project development had gone on.

Mr. FORD. Do you think you represented a good program last year?

Mr. Moscoso. I think we did.

Mr. FORD. You had the right criteria?

Mr. Moscoso. Yes. We perhaps were a little tougher—obviously tougher than the Latin Americans would want it.

Mr. FORD. Not tougher than the Americans wanted you to be.

Mr. Moscoso. I think we could have gotten support of American opinion on it that we were holding the Latin Americans——

Mr. FORD. You are not going to change your forecast for fiscal year 1963, not a bit.

Mr. Moscoso. It is hard for me, as a beginner, to understand that if we exercise the utmost degree of proper prudency and perhaps go over on the side of being a little conservative in applying those criteria, that we shouldn't be trusted in doing the same thing in the next year. I would much rather come here and say to the chairman and to the members of the committee, "We haven't been able to obligate these funds because these people have not performed and because they don't merit it, than to reach a point in which a country gets some political and economic stability and we are able to help them and then we must say, "Well, we can't do anything because we don't have the funds."

DEVELOPMENT LENDING PROGRAM TO BRAZIL TIED TO PERFORMANCE

May I add one item here, Mr. Chairman and Mr. Congressman? We have estimated that we could fruitfully lend in Brazil this coming year, if we get the funds, from $——— to $———. In other words, Brazil with all of the funds it will get from other sources, and this kind of development lending, would be able to reach a point of growth which could be called halfway satisfactory. Now, if Brazil does not perform, we may probably wind up this year not with the $———, but with an amount not too far away from the $37 million of development lending we did this past year.

Mr. Ford. From what I read in the papers over this past weekend, the likelihood is that you are not going to go through with this plan. Certainly there is no evidence or there is barely evidence that they are going to carry through with the program that was worked out for fiscal responsibility.

Mr. Moscoso. I am very happy that the item in the newspapers appeared, even though it isn't exactly correct, because there is no other information to the effect that some of the things they indicate would be done and that we hoped would be done are being done and further self-help is planned. The new Minister of Finance, Mr. Carvalho Pinto, is just as good an administrator and just as good a fiscal man as Mr. Dantas. Therefore, if we did not have the funds ready to be able to do the development at the appropriate time in the case of Brazil we would be losing a very fine opportunity: first, to get Brazil moving on a real development program; and, secondly, to assure ourselves of Brazil's remaining a close friend and ally of the United States, and not having some disruptive forces take over in that country.

You are all aware of the difficulties that the political picture of Brazil is beset with. And you are also aware of the fact that substantial subversion can very easily gain a foothold there. I don't know whether you saw the television program last night on the North East situation, but it is really explosive. I think we have to be ready to deal with situations like that at the appropriate time, but I think that this record, in fiscal year 1963, should assure you that we are going to be prudent in this lending and we are not going to put our money into Brazil unless it is going to do Brazil and ourselves some good.

Mr. Ford. I agree that you are—your actions of the past year would indicate prudence, but I am sure there have been pressures on you because of the availability of this obligational authority which

might have clouded your judgment, and I don't want you to be put to that kind of temptation.

Mr. MOSCOSO. I can resist that temptation anytime.

PYRAMIDING OF UNLIQUIDATED FUNDS

Mr. PASSMAN. There has been a tendency in recent years to pyramid unobligated funds, and Latin America would go something like this: June 30, 1962, you had unliquidated, $503 million. That was the estimate you gave us last year. Now, if we move to fiscal year 1963, 1 year later, you had unliquidated $1,148,466,000.

Mr. FORD. These are unexpended funds?

Mr. PASSMAN. Yes. Now, if we take the aggregate, all totals—let me be fair, there is one small item included in the grand total of local currencies contributed to, I think, the Inter-American Bank—here is what we run into: We are dealing with Latin America. In fiscal year 1963, as of June 30, 1962, the grand total unliquidated was $1,378,250,000, but on June 30, 1963, that figure had gone up to $2,063,266,000. So if you will take the unliquidated money under this one year and the other, and then take the total amount, it looks to me as if you are pyramiding funds.

ROCAP FISCAL YEAR 1963 OBLIGATIONS COMPARED WITH REQUEST

At page 12 of the justifications, you indicated you programed $6,100,000 for development grants and $4 million in development credits to the regional office of Central American and Panama, ROCAP, in fiscal year 1963. How much did you request of Congress, and justify for this purpose last year?

Mr. MOSCOSO. $4.5 million in grants, sir.

Mr. PASSMAN. But you obligated $10.1 million, did you not?

Mr. MOSCOSO. Yes, but you will recall——

Mr. PASSMAN. Did you obligate $10.1 million?

Mr. MOSCOSO. $6.1 million we obligated.

Mr. PASSMAN. Is that the sum in credits?

Mr. MOSCOSO. No, this is grants, Mr. Chairman.

Mr. PASSMAN. What was the total?

Mr. MOSCOSO. We obligated $6.1 in grants and $4 million in credits.

Mr. PASSMAN. That is $10,100,000. What was the total amount you requested in fiscal year 1963?

Mr. MOSCOSO. We requested $4.5 million in grants——

Mr. PASSMAN. The total, please?

Mr. MOSCOSO. This was worked out in a footnote which says "Development lending contemplated: Projects will be considered." We had an asterisk to indicate——

Mr. PASSMAN. You obligated more than you justified to the committee. We recognize this is an illustrative program. You have the right to do it. We are just showing what the facts are.

How much assistance have the European nations extended on a grant and loan basis to Latin America since the Act of Bogotá. Do you have the total?

Mr. Moscoso. Yes, sir.

Mr. PASSMAN. How much, please, sir?

Mr. Moscoso. For 1960——

Mr. PASSMAN. The total, please?

Mr. Moscoso. $139——

Mr. PASSMAN. Will you give us the total?

Mr. Moscoso. $139.9 million.

For 1961 and 1962; $219.2 million and $285.7 million, respectively.

Mr. PASSMAN. I will ask the question again: Will you give the total since the enactment of the Act of Bogotá?

Mr. Moscoso. We will try to get it for the record, but I doubt if we can get it, Mr. Chairman——

Mr. PASSMAN. If those figures you just gave us are accurate, all you have to do is start adding.

Mr. Moscoso. We can do it very quickly; $645 million.

Mr. PASSMAN. What are the terms on these loans?

Mr. Moscoso. We have the information on some of the loans.

Mr. PASSMAN. Mr. Comptroller, can you get us a recapitulation sheet on these loans, by country, the amount and the terms and interest?

Mr. Moscoso. We can give it to you.

Mr. PASSMAN. Do you have it available, now?

Canada has 7- to 14-year loans at 6 percent. You have another one, 15 years, 6-percent interest. This is worldwide you are giving us here. You have Belgium. This is total to Algeria by France—this won't get the job done.

This is to India.

Mr. Moscoso. May we verify the accuracy of the information, sir?

Mr. PASSMAN. They are your figures.

Mr. Moscoso. I have the Latin America figures here.

This is assistance to Latin America by Development Assistance Committee (DAC) countries.

Mr. PASSMAN. This does not give us the information.

Can you, Mr. Comptroller, give us a spread on the consortium, or the equivalent, the same as you have on India, Pakistan, and the others? Is it available for Latin America?

Mr. TENNANT. This is on the basis of——

Mr. PASSMAN. You were giving us worldwide figures before, were you not?

Mr. Moscoso. You will note on the first page it is Latin America. There are some interest rates.

Mr. PASSMAN. Let us just take up the first one on here, if we may. Then, if you will, try to give us as comprehensive a sheet as you can.

Let us take France. On March 28, France to Mexico, $150 million credit, primarily for the petrochemical industry.

On March 28, 1960, it was announced France agreed to provide Mexico a $150 million credit as follows:

Fifty million dollars for use outside France.

Thirty million dollars for government-to-government loans at 3 percent.

Twenty million dollars in supply credits; and $100 million for use only in France in the form of export credit guarantees.

Credit for 12 years at market rates of interest.

The French-Mengan Commission will soon begin a series of meetings to determine the projects to be supported.

This is nothing unusual, at all. You know that European nations have been making these kinds of loans. This should not be used to try to justify what we are doing.

Mr. Moscoso. There is $15 million——

Mr. PASSMAN. It is at 3 percent, but there is $30 million for government-to-government loans; $20 million will be spent outside France $100 million in the form of export credit guarantees only in France. There is no concession there.

Mr. Moscoso. We do not include that figure on the first page.

Mr. PASSMAN. I do not know what you include. You have given us this information as something official.

We made Mexico one credit signed June 30, 1963: $20 million dollars, 40 years, no interest, three-quarters of 1 percent service charge.

Mr. Moscoso. This was for the——

Mr. PASSMAN. It does not make any difference what it is for. I am contrasting the difference between the way wealthy France is doing business and the way our Government is doing business.

Mr. Moscoso. We have made innumerable loans, much more than France has, on those supplier credit terms.

Mr. PASSMAN. Data on assistance by countries other than the United States is quite limited.

The countries frequently conflict in their information. They indicate lending commitments showing 1- to 5-year loans.

If this information is not reliable, should it go in the record?

M. Moscoso. That is the best we have.

Mr. PASSMAN. But it is limited, and incomplete?

Mr. Moscoso. That's right.

Mr. PASSMAN. Thank you.

Mr. Moscoso. I suggest it is important for what purpose a loan is made. If you are making a loan for machinery and equipment for an industrial purpose, the payout period is a very short one, whereas when you are dealing with such a thing as an agricultural credit——

Mr. PASSMAN. That is about the only kind France and Germany are making. We are in with the giveaway part and they are in with the good loans.

Mr. Moscoso. They are starting to make some soft loans. I think that a 3-percent loan is coming close to——

Mr. PASSMAN. We hope it materializes. It has not done so yet. It would be the exception if it does.

(Information subsequently supplied follows:)

TERMS OF DAC COUNTRY ASSISTANCE TO LATIN AMERICA

Official assistance disbursements to Latin America by DAC countries other than the United States amounted to more than $270 million in calendar year 1962. Nearly 50 percent of this amount represented grant disbursements. Information on these loans is incomplete. Some of the loans were for 1–5 years made at interest rates as high as 7½ percent. Others have maturities of up to 15 years at interest rates of from 4 to 6 percent. In a few cases, loans were made at 3-percent interest with a maturity of 25 years.

In 1961 the Federal Republic of Germany made a 10-year loan at $2 million to the Bolivian nationalized mines (COMIBOL) at 4-percent interest with 3 years grace. This loan was part of the first phase of the "Triangular Operation" of the United States, the Federal Republic of Germany, and the Inter-American Development Bank to put the operation of the mines on a profitable basis. It is anticipated that the terms of the German loan of $4.6 million made in 1963 as part of the second phase of the "Triangular Operation" will be the same as those for the second-phase IDB loan—15 years, 3 years grace, and 4-percent interest.

On March 28, 1963, it was officially announced that France had agreed to provide Mexico with a $150 million credit as follows: (1) $50 million for use outside France—$30 million for a government-to-government loan at 3-percent interest and $20 million in suppliers credits; and (2) $100 million for use only in France in the form of export credit guarantees—credit for 12 years at market rate of interest. It is expected that the majority of credits will go to PEMEX in support of the petrochemical industry.

AMERICAN UNIVERSITIES IN LATIN AMERICAN TECHNICAL ASSISTANCE PROGRAM

Mr. PASSMAN. What are the names of the 24 major universities, and what is the amount of the contract for each, which are providing technical assistance under the grant program in this area, Mr. Administrator?

Mr. Moscoso. The universities that are assisting us in Latin America and the universities that they are in turn assisting——

Mr. PASSMAN. If you will just answer my question, that is all I want.

Mr. Moscoso. Columbia University, University of Chicago, Stanford, Penn. State, Texas A. & M., Cal. Tech, Bucknell, Southern California, Michigan State, California, University of Michigan, Purdue, University of Wisconsin, Ohio State.

Chicago has two contracts.

Colorado State, Louisiana State.

Mr. PASSMAN. I asked for information on 24 of them. Put the remainder in the record, please.

Give us the amount of each contract. Can you do that?

Mr. Moscoso. I can give this for the record, Mr. Chairman. This has the amounts of the contract and all the information.

Mr. PASSMAN. All we want is the tabulation.

(The information supplied follows:)

UNIVERSITY CONTRACTS IN LATIN AMERICA

The listing of university contracts which follows includes those in operation as of July 31, 1963.

Current university contracts

	Obligation	Period	Activity
Argentina:			
Columbia University	364,000	November 1960 to September 1963.	Business administration.
University of Chicago	446,000	July 1962 to March 1965	Economics.
Bucknell University	220,000	July 1963 to June 1965	Engineering.
Brazil:			
Southern California	1,663,000	November 1959 to May 1965	Public administration.
Michigan State	1,278,000	November 1954 to September 1964.	Business administration.
Do	1,522,000	June 1953 to August 1964	Do.
University of California	445,000	February 1962 to January 1965.	Community development.
University of Michigan	477,000	December 1962 to December 1964.	Engineering.
Do	233,000	May 1958 to August 1963	Do.
Michigan State	535,000	August 1960 to July 1964	Education.
Purdue	2,003,000	July 1958 to June 1965	Agriculture.
Chile:			
University of Chicago	801,000	March 1956 to June 1964	Economics.
University of Pittsburgh	699,000	July 1959 to July 1964	Engineering.
Cornell University	313,000	October 1959 to June 1964	Industrial relations.
Colombia:			
Syracuse University	206,000	February 1962 to December 1964.	Business administration.
University of Minnesota	281,000	June 1963 to July 1966	Economics.
Tulane University	409,000	December 1955 to September 1963.	Medicine.
Catholic University of America.	105,000	August 1962 to August 1965	Nursing.
Costa Rica: Louisiana State University.	295,000	do	Medicine.
Dominican Republic: University of Michigan.	325,000	June 1963 to November 1965	Economics.
Ecuador:			
University of Houston	728,000	September 1960 to April 1965	Engineering, science, economics.
University of Pittsburgh	1,071,000	February 1963 to December 1965.	Reorganization and improvement of a major part of central university.
St. Louis University	398,000	do	Education—science and mathematics.
Guatemala: Michigan State	610,000	May 1962 to June 1965	Education.
Panama: University of Tennessee.	1,256,000	September 1955 to July 1965	Public administration, agriculture, engineering.
Paraguay: University of Buffalo.	592,000	November 1956 to March 1965.	Medicine and nursing.
Peru:			
North Carolina State	1,666,000	January 1961 to June 1965	Agriculture.
Iowa State	790,000	October 1962 to August 1965	Do.
Stanford University	549,000	May 1962 to July 1966	Business administration.
Stanford Research Institute.	854,000	May 1963 to December 1965	Industrial development in southern Peru.
Teachers College of Columbia University.	1,187,000	April 1963 to March 1966	Overall educational reform (country wide).
Uruguay: Iowa State	1,055,000	November 1962 to September 1965.	Agriculture.
Latin American regional:			
University of Puerto Rico	275,000	August 1962 to August 1965	Public administration training.
Do	863,000	June 1954 to June 1965	Medical training.
Massachusetts Institute of Technology.	500,000	May 1963 to May 1965	Engineering and education.
Harvard University	207,000	June 1963 to June 1965	Business leadership training (Central America).
Johns Hopkins University	53,000	December 1962 to December 1964.	Public health.
Monterrey Institute of Technology.	634,000	July 1959 to June 1964	Multidisciplinary training.
Geneseo, N.Y.	232,000	July 1959 to June 1964	Educational training.
Pennsylvania State	374,000	September 1962 to September 1964.	Do.
Akron University	90,000	October 1962 to September 1964.	Do.

CONTINUANCE OF AID PROGRAMS AFTER OVERTHROW OF GOVERNMENT

The purpose of the program is to bring stability, help the individual as well as the governments. How many countries have had political upheaval since the Act of Bogotá, in Latin America; assassinated leaders or overthrown governments?

Mr. Moscoso. Argentina, Peru, Ecuador, Guatemala.

Mr. PASSMAN. Are they just playing in the Dominican Republic?

Mr. Moscoso. The Dominican Republic. That's right. This was after the Act of Bogotá.

Mr. PASSMAN. How many of these countries have we discontinued aid to since Bogotá?

Do you have an AID program in each of these countries?

Mr. Moscoso. In each one of these countries we have an AID program.

Mr. PASSMAN. Presently going on?

Mr. Moscoso. Presently going; yes, sir.

In the case of Argentina, Peru, and Ecuador, the amount of lending has been minimal.

Mr. PASSMAN. You still have an AID program going, and you are receiving applications from them presently for fiscal year 1964, are you not?

Mr. Moscoso. That's right.

Mr. PASSMAN. Overthrowing a government and killing a president does not stop the aid program. It may suspend it for a few hours.

Mr. Moscoso. The amount of lending is substantially less than we had programed in most of these countries, and in the case of Peru, for instance, we did not make any loans.

Mr. PASSSMAN. The AID programs are going and you have applications pending for the program in fiscal year 1963?

Mr. Moscoso. Yes, sir.

Mr. PASSMAN. How do you reconcile the last paragraph on page 16, which justifies a request for funds, with the President's reduction of the estimate by $50 million? I stated earlier the Congress reduced the appropriation last year by $1,032,400,000. We were subjected to much criticism. Yet you finished the year with $515 million unobligated, including the revolving fund, and I suppose there is about $100 million there.

On page 16 it says:

> It is vital that funds in the amount requested be made available.

And yet in this one category, there has been a $50 million reduction.

ESTIMATED FISCAL YEAR 1964 CASH TRANSACTIONS FOR LATIN AMERICA

Page 31 of the project book indicates you are requesting $11 million for cash transactions in your area.

What countries are programed to receive this type of financial aid?

Mr. Moscoso. Of the $11 million $——— is for Bolivia and $——— for the Dominican Republic.

Mr. PASSMAN. That money is actually budgetary support, is it not?

Mr. Moscoso. Yes, sir.

PROPOSED PROGRAM FOR BOLIVIA

Mr. PASSMAN. You figure from $——— to $——— in the development credit category in Bolivia. On top of that amount, you want budgetary support. With all the aid we put into Bolivia their budget deficit for fiscal year 1962 dropped $1.1 million.

I believe the Export-Import Bank said that they would not consider Bolivia a good credit risk, based upon their record with Bolivia. We are pouring it in through this disguised grant business. It could go up to $———.

Mr. MOSCOSO. I think in the case of the Export-Import Bank, the chances of a change in policy toward Bolivia is very good.

Mr. PASSMAN. I hope the Export-Import Bank does not get to the point that it is as liberal in this operation as the others.

Mr. MOSCOSO. In the case of the World Bank they are at the moment considering favorably a major undertaking in Bolivia.

PROPOSED PROGRAM FOR DOMINICAN REPUBLIC

Mr. PASSMAN. Let us consider the Dominican Republic. They have a favorable trade balance of $35 million. Their gold reserves are climbing. Ours are still declining. Yet we are giving them budgetary support.

Mr. MOSCOSO. The picture for the next year in the case of the Dominican Republic does not look so good.

Mr. PASSMAN. Did I state that correctly—they have a favorable trade balance and their gold reserves are increasing?

Anyway, are you going to have another look at the situation to see if they need budgetary support?

Mr. MOSCOSO. We will look at it. We believe that the sugar picture is going to change considerably the picture in the Dominican Republic in the next year.

NUMBER OF TECHNICIANS PROPOSED FOR LATIN AMERICA

Mr. PASSMAN. Page 31 of the justifications indicates you propose a drop of 162 in the number of U.S. technicians as compared to your 1962 program. However, I note that your contract technicians are increasing from 167 in fiscal year 1962 to 592 in fiscal year 1964. Since we have had testimony from other area directors who have stated the contract technicians usually are more expensive than U.S. technicians, will you explain why you are increasing the number?

Mr. MOSCOSO. I do not exactly agree that the contract technicians necessarily have to be more expensive than the direct-hire technicians, particularly when you look at it over a period of time.

One of the advantages of the contract technicians——

Mr. PASSMAN. Off the record.

(Off the record.)

Mr. PASSMAN. Thank you.

Page 12 of the justifications indicates that your fiscal year 1963 development credit program was estimated to be $400 million. However, page 33 of the project book indicates that through February 28 you had approved only $208.7 million in development credit projects. Is that correct?

Mr. Moscoso. That is right.

Mr. PASSMAN. Would you furnish for the record a list of the development credits that you have made since February 28 through June 30, 1963, by country, including the purpose of the credit and credit terms?

Mr. Moscoso. We will do that.

(The information follows:)

AID development loans to Latin America (Feb. 28–June 30, 1963)

Country	Amount authorized, millions	Purpose	Terms		
			Interest rate, percent	Duration, years	Grace period, years
Argentina	$3.0	Feasibility studies	¾	40	10

[1] Amortization shall be at the reduced rate of $16,000 per annum during a period of not to exceed 10 years from date of first disbursement.
[2] Amortization shall be at the reduced rate of $1,000 per annum during the 5-year period following the date of first disbursement and $9,000 per annum during the next 5 years.
[3] Amortization shall be at the reduced rate of 1 percent of the principal per annum during a period of not to exceed 10 years after date of first disbursement.

Mr. PASSMAN. Gentlemen, before we get into the country-by-country justifications, beginning with Argentina, do you have any more general questions?

Mr. GARY. I think it has been covered very, very fully.

IMPROVEMENTS IN LATIN AMERICA RESULTING FROM THE ALLIANCE

Mr. NATCHER. Mr. Ambassador, generally speaking, is there improvement in Latin America as a result of this program?

Mr. MOSCOSO. I think that we are starting to notice some improvement, Mr. Congressman. In the past year, two countries have gotten back to a representative form of government, a constitutional form of government—Argentina and Peru. Even in those countries where a military junta has taken over, like in the case of Guatamala and Ecuador, we have been assured that elections will be held shortly.

I believe that politically there has been a substantial betterment. The Alliance for Progress is beginning to take hold in the minds of most of the Latin American people. We have evidence from polls which are taken periodically by private firms. It is extremely interesting to notice how more people are understanding what the Alliance is all about, that it is not a U.S. aid program, that it is a multilateral effort in which the countries themselves have to provide the bulk of the effort. There is more dialog taking place in the public press about the Alliance. Elections are being run on the basis of backing or not backing the Alliance. In the recent election in Peru, the three candidates were in favor of the Alliance for Progress. I believe that undoubtedly it is an indication of some progress being made.

Of course, against that we have to weigh the fact that the Latin American countries are still primarily single commodity export countries. In some instances, they may export two commodities, or three at the most, and that is a great weakness in their economic armor.

The whole Alliance program revolves around the central fact we should assist the Latin Americans in redressing that situation, for many reasons, some of long standing and others because they are some of our best trading partners, and it behooves us to assist them in every possible way in redressing this weakness in their economies.

SELF-EXAMINATION OF WEAKNESSES BY LATIN AMERICANS

In the case of the group as a whole, we recently had meetings of three of the six committees of the Inter-American Economic and Social Council—and the three other committees will be meeting shortly—in San Jose, Costa Rica, to review past performance, and it is extremely enlightening to see the zeal of criticism of the countries with regard to their performance. They ask how many have done their homework insofar as tax reforms are concerned and land reform. They are particularly critical with regard to land reforms. Unfortunately, the other day I only had the Spanish versions. I wish we had the English versions so we could spell out some of the specific criticisms they make of each other with regard to tax and land reforms.

These committees examine the record and admit in many instances some of these programs have only been in operation for a very few months and have not had a chance really to get going and it takes quite a while for legislation to be approved and for legislation, after approval, to be implemented.

BUDGETARY SUPPORT TO LATIN AMERICAN COUNTRIES

Mr. GARY. I have here a release dated Tuesday, July 2, 1963, which says "Honduras Receives Budget Support Loan."

It seems a $2 million aid loan is being used chiefly to assist the Honduras Government in expanding educational services and for promoting agricultural and industrial development.

Now, can you tell me how many Latin American countries are receiving budget support loans?

Mr. MOSCOSO. As I mentioned, the Dominican Republic, Haiti, Ecuador, and Honduras are those receiving this type of support.

HONDURAS

In the case of Honduras that you mentioned, it is interesting to note the following:

We actually got the Hondurans to do something with regard to agrarian reform and their fiscal situation by telling them that unless they increased taxes it would be impossible for us to consider helping them.

Their agrarian reform law did not provide for judicial review and this would have made it impossible for some U.S. private firms to continue investments there.

As the chairman pointed out the other day, there is no use substituting Government money when private money is available to do the developmental job, and we wanted them to amend their law in order to make it possible to achieve judicial review so that private companies would feel secure in making the investment there. The investment would be from $20 to $40 million, which in a small country like Honduras will have quite an impact on their economy. They did

approve an amendment to the agrarian act to provide for judicial review. They approved an income tax reform which in a period of 3 or 4 years will supply them with funds pretty much equal to those we made available to them for budget support.

Mr. GARY. Do I understand when you say "budget support loan," you mean it is to help them take care of those particular items in their budget?

Mr. MOSCOSO. In their budget.

Mr. GARY. We are not trying to help these countries balance their budget?

Mr. MOSCOSO. We are helping them to take care of these particular items.

Mr. GARY. I cannot understand how we would go into any country trying to help them balance their budget when we have only balanced ours six times in the last 25 years.

How many countries do you say we are in like that?

Mr. MOSCOSO. Four countries.

Mr. GARY. In each case, was the budget support loan for a particular item in their budget?

Mr. MOSCOSO. For specific items—specific projects.

Mr. GARY. In their budget?

Mr. MOSCOSO. Except in the case of Bolivia and Ecuador, which are cases where we simply assist them in supporting their budget.

Mr. GARY. Why do we do that?

BOLIVIA

Mr. MOSCOSO. As you know, Mr. Chairman, this is a very old situation that we are dealing with in the case of Bolivia. These people had a revolution in the year 1952. Back in 1953 or so we agreed to assist these people with the problems they had. Their problems were brought about by the nationalization of their mines, by the very drastic agrarian reform they instituted. The people whose properties were nationalized were, as we would describe it today, oligarchs who paid no attention to the economic and social development of their country, who lived primarily in Europe out of the earnings of these miners, who had no feeling of social responsibility toward their workers. When the Bolivians took the properties away from them we agreed, back in 1952, to assist the Bolivians in rehabilitating their economy. This has been a long-drawn-out process.

I am not saying all of the things that have been done in the past years have been wise. I do not think all the things we are doing today are wise, but we are making a brave attempt to try to help the Bolivians "pull themselves up by their bootstraps" and get themselves on a self-supporting basis.

Mr. GARY. I suggest when you begin to help other nations balance their budget, we take a look at our own budget before we grant the loans.

Mr. PASSMAN. Bolivia is a country where we tried to create a show window about 11 years ago, to show what the aid could do? Was it not intended to be sort of a show window?

Mr. MOSCOSO. I am afraid I was not around.

Mr. PASSMAN. Let us get someone who can answer that question.

Is that your understanding, this was a show window of what the aid program could do?

Mr. STERNFELD. Yes, sir. It was felt the Government of Bolivia had just undergone a social revolution, and had had these major upheavals and it was an attempt to show that the actions the Government of Bolivia undertook could be successful.

Mr. PASSMAN. It was to be a show window to show what sufficient aid could do if properly utilized by a country?

Mr. STERNFELD. Correct.

Mr. PASSMAN. Our progress so far has been just about nil, or zero, has it not?

Mr. STERNFELD. No, sir. It has not been nil.

Mr. PASSMAN. The more aid you give them, the larger their deficit. They have gone from 1959, $15.6 million to $31 million in 1961, and it is $29.9 million in 1962, and we do not have the 1963 estimate. It certainly looks as if there has been very little progress made.

BUDGETARY SUPPORT AS CONTRIBUTING TO BALANCED BUDGETS

We have a deficit in our own budget and have had for practically the past 32 years with the exception of 5, and the more money that comes into the budget, regardless of the purpose, the smaller the deficit; do you agree to that?

Mr. STERNFELD. Yes.

Mr. PASSMAN. So it does not make any difference what you give a country budget more money for, it could be for firecrackers, it simply means the deficit would be greater without the budget grant or credit?

Mr. MOSCOSO. Or they would not undertake——

Mr. PASSMAN. If they have programs they are going to carry out, the more money we can put directly into their budget, regardless of the purpose, it should lower their budget deficit, would it not?

Mr. MOSCOSO. The effective result will be that.

Mr. PASSMAN. So it could just as easily be a contribution toward helping them balance their budget, could it not?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. We are helping people balance their budgets, and in about five instances around the world we have succeeded in making contributions and they have wound up with a balanced budget, putting our budget more out of balance.

Mr. MOSCOSO. We have wound up with a nation still democratic and still on our side.

PUBLIC INFORMATION ON ALLIANCE PROGRAM

Mr. PASSMAN. Would you consider that enlightened individuals are running the governments in Latin America, and that they are knowledgeable, sufficiently educated in the field of government so they recognize what we are trying to do?

Mr. MOSCOSO. In some instances, yes; in others, no.

Mr. PASSMAN. Thank you.

In those instances where they do know, do they realize the importance of making known to the people in the country what we are trying to do with this aid program, and what they are trying to do?

Mr. Moscoso. Even when they recognize it, sometimes they decide for political reasons they may not want to be associated too much with the fact the United States is giving them assistance.

Mr. Passman. We recognize that as being the situation. Are we now making available a substantial amount of funds to create a propaganda program in their countries, to familiarize them with the fact we are doing these things?

Mr. Moscoso. We are helping the countries to set up these committees——

Mr. Passman. We are putting out information as to what we hope to do and are doing. Would this activity fall in the category of propaganda?

Mr. Moscoso. Yes, sir.

Mr. Passman. I think the ambassador to the OAS, Mr. Morrison, went to the President last year and the President made them a special grant for this propaganda.

Mr. Moscoso. Yes.

Mr. Passman. Is it not disappointing to you to recognize that the leaders, the elected officials, are reluctant to acknowledge to the people where this aid was coming from? How do they feel about this program of information we are starting?

Mr. Moscoso. This informational program is undertaken by a multilateral agency, the Organization of American States.

Mr. Passman. Are we financing this program?

Mr. Moscoso. Partly so.

Mr. Passman. How much are the other countries financing?

Mr. Moscoso. Each one of the countries sets up the alliance committees and the countries themselves, or the members of the committees, are supposed to mobilize some of the local funds in order to participate in the program. We try to get them to match the funds that are made available.

Mr. Passman. Some of the leaders are without adequate knowledge, others have the knowledge to run the governments and get this information to the people but are reluctant to do so for political reasons. Are they willing to associate themselves with this program if we are willing to give the money out?

Mr. Moscoso. Most of these committees are citizens' committees.

Mr. Passman. Not working through the Government?

Mr. Moscoso. Not working through the Government.

Mr. Passman. Has any program of this nature ever succeeded until the elected officials make themselves a party to it?

Mr. Moscoso. The program will not succeed if the public officials do not back the program, but they do back the program.

What has happened is, they have not provided sufficient information to the public with regard to the program. I remember reading during Marshall plan days it was necessary to run a program costing close to $20 million for informational purposes in Europe at that time to let the Europeans know what we were doing.

Mr. Passman. You said earlier that some of the leaders in the country are without sufficient knowledge as to how to run their governments. Then you said that where they had knowledgeable people, they were reluctant to associate themselves with this plan for political reasons. They did not want the people to know where the aid was coming from and in what amounts.

How could a program such as this succeed if the leaders would not cooperate in letting the people know where the aid was coming from?

Mr. MOSCOSO. I agree. The program has to be supported locally.

Mr. PASSMAN. I am talking about the heads of governments.

You have agreed that until such time as the heads of the governments are willing to come forth and endorse the program, it cannot succeed.

Mr. MOSCOSO. Unfortunately, in many instances, where the heads of the governments or some of the members of the government may not be as desirous as we to publicize the program, we may still be in great need of pushing for the success.

SOCIAL PROGRESS FUNDS FOR PUBLICITY PURPOSES

Mr. PASSMAN. Could you tell us how much the President allocated to Ambassador Morrison for this propaganda program last year?

Mr. MOSCOSO. The grant was made in the amount of $1.6 million.

Mr. PASSMAN. Could you give us the total from other sources—you have press releases, mailings, radio, television. Could you at this point in the record sum up the total additional money that we are spending in Latin America on these propaganda programs from all sources for fiscal year 1963 and what you plan to spend in 1964?

Mr. MOSCOSO. I will be glad to.

(NOTE: See additional testimony on pp. 2111 and 2555.)

Mr. GARY. Cover the whole thing.

Mr. MOSCOSCO. This is all used in Latin America.

Mr. PASSMAN. We are talking about Latin America.

Mr. Rooney?

Mr. ROONEY. While we are at this point, Mr. Ambassador, out of what appropriation was that $1.6 million used, and in what year—was that 1962?

Mr. MOSCOSCO. This grant was made out of the social progress moneys.

Mr. ROONEY. In what fiscal year?

Mr. MOSCOSCO. This was made available to the Pan-American Union out of the Inter-American program for social progress; $100 million was made available to us, together with the $400 million for the social progress trust fund and $100 million for the Chilean reconstruction. This grant was made on December 4, 1962.

Mr. ROONEY. Was any part of that $1.6 million justified before appropriation committees of either the House or Senate at the time?

Mr. MOSCOSO. No, it was not.

Mr. ROONEY. This was something developed after the Congress went along and appropriated the huge sum of money that was thought up by Ambassador Morrison and others?

Mr. MOSCOSO. This was after the appropriation had been made.

INFORMATION PROGRAMS FINANCED FROM OTHER SOURCES

Mr. ROONEY. And at a time when we were spending many, many millions of dollars of the American taxpayers' money for the Voice of America and an information program in every country in the Alliance for Progress program; is that right?

Mr. MOSCOSO. That is right.

Mr. ROONEY. How much, if anything, is in this budget now before this committee for this same purpose?

Mr. MOSCOSO. There is not any.

Mr. ROONEY. Where will they get the money to carry on?

Mr. MOSCOSO. We are hopeful we will be able to get the Latin American countries and the committees that have been set up of distinguished citizens——

Mr. ROONEY. Will there be any American taxpayers' money used in competition with the U.S. Information Agency in the area of the Alliance for Progress?

Mr. MOSCOSO. It is not contemplated this coming year funds will be used in that way.

Mr. ROONEY. What assurance have we that there will not be funds used for this purpose and that the same thing will not happen again that happened with regard to the $1.6 million?

Mr. MOSCOSO. The only assurance I could give you this would not happen would be my own personal assurance. As long as I am there, we are not going to undertake another program like this.

Mr. ROONEY. You probably would have given us that assurance last year had you been asked the question. You were not then asked the question because it never dawned upon anyone that this program was going to be embarked on; is that a fair statement?

Mr. MOSCOSO. At that time it was not.

Mr. ROONEY. It was not what—contemplated?

Mr. MOSCOSO. Contemplated.

Mr. ROONEY. And in a number of these countries in the Alliance for Progress area, you already have information officers and setups with staffs financed by the United Nations; is that a fact?

Mr. MOSCOSO. I do not know of that.

Mr. ROONEY. You know there is a United Nations Information Office in Buenos Aires, do you not?

Mr. MOSCOSO. I am now advised there are those offices in certain countries.

Mr. ROONEY. Of course there are, and the American taxpayers pay what—the lion's share of the cost of those information offices?

Mr. MOSCOSO. The U.N. offices?

Mr. ROONEY. Yes.

Mr. MOSCOSO. I suppose that is part of their participation.

Mr. ROONEY. That is a fair statement?

Mr. GARY. Were any of these funds spent through the regular U.S. information program?

Mr. MOSCOSO. No. This was all spent through the Pan-American Union.

Mr. GARY. This is supplemental and in addition to the amount that we are spending for U.S. information programs, the Voice of America and other programs?

Mr. MOSCOSO. That is right.

Mr. ROONEY. The facts in regard to this were developed in the course of the hearings before the State-Justice Appropriations subcommitte when Ambassador Morrison volunteered from the back row that the activities of Director Murrow and the Information Agency and the Voice of America were not worth a damn in this area, and as a result of that, they obtained this $1.6 million. Am I recounting historical facts, Mr. Ambassador?

Mr. Moscoso. Yes.

Mr. ROONEY. A fair statement, yes? And then Ambassador Morrison had his hide tanned a bit for making such statements before that subcommittee, did he not?

Mr. Moscoso. I suppose so.

Mr. ROONEY. And the Secretary of State was called upon to sign a letter, Mr. Cottrell, was he not, saying in effect that Ambassador Morrison did not know what he was talking about?

Mr. COTTRELL. I am not aware of the letter.

Mr. ROONEY. Will you please produce the letter tomorrow morning? There certainly was such a letter written. Let me ask Mr. Cottrell a question or two.

RESIGNATION OF AMBASSADOR TO PANAMA

In the press of the last few days we read of the recent resignation of our Ambassador to Panama, Mr. Farland. Some of the accounts say he made some wild statements on the basis of his becoming a candidate for the Governor of a certain State. I think this committee ought to know the facts behind his resignation and exactly what he had to say in regard thereto.

In these newspaper accounts there were some vague generalities with regard to his dissatisfaction with the handling of the Alliance for Progress program. Is that so?

Mr. COTTRELL. Correct.

Mr. ROONEY. What are the facts in that regard?

Mr. COTTRELL. We checked through our records to find out where there were any glaring defects in the aid program, and the only facts we could ascertain on the record, the usual interested Ambassador interested in getting an aid program done effectively and on time without some of the legal restrictions on processing aid.

Mr. ROONEY. Are you saying that this Ambassador, like so many ambassadors, became so imbued with the interests of the people in the country to which he was accredited that he felt that we were not spending enough of the American taxpayers' money on their projects?

Mr. COTTRELL. No, not that.

I think the legal restrictions on processing aid loans sometimes leads to delays in getting the thing through. I think ambassadors are interested in furthering the aid program and sometimes have reservations about these legal restrictions.

This is all I could ascertain when I asked this question myself.

Mr. ROONEY. Have you had any differences with him, Mr. Ambassador.

Mr. Moscoso. With Ambassador Farland—yes, we have had a discussion with the Ambassador in connection with a road in Panama.

The Ambassador felt that section 611 was too restrictive, that this was a minor road which in his State would probably be built by having someone take a bulldozer and scrape off the topsoil and bring in some crushed stone and tamp it down and get a roadbed. We told him we were not in a position to deviate from the statutory requirements of section 611.

Mr. ROONEY. The requirement being that feasibility be proven first?

Mr. MOSCOSO. Yes, and estimates of costs and so forth be made. That is the difference I have had with him.

Mr. ROONEY. And the only difference?

Mr. MOSCOSO. That is right.

Mr. FORD. How long a road is this? What kind of a road? From where to where?

Mr. MOSCOSO. One of the problems we had with the road was precisely knowing how long the road is going to be. The terrain is pretty well unknown. It has not been surveyed, or anything like that.

I tried to be as practical as I could about this road. I said, "Look, this may sound very simple, but supposing you took that bulldozer and started to take the jungle away and all of a sudden the bulldozer sinks in muck because the subsoil is no good. Then you will have to start some other way around to get away from the mudhole, or maybe the muck will be rather extensive, and you will have to go around it in a very long way, or you may have to put in piling, and then you will be faced with perhaps some money already spent and no way of getting across this muck except by an expensive way."

I said, "Much as it hurts me to spend that amount of money on a feasibility study—$200,000—I still think this ought to be done."

His primary desire was to get the thing done quickly. Sometimes you can get these things done quickly and repent thereafter.

Mr. RHODES. That is not the reason he resigned; because of the road?

Mr. MOSCOSO. No.

Mr. ROONEY. Maybe he is planning to run for Governor of some State and wanted to go out with a flourish.

Mr. RHODES. What State?

Mr. ROONEY. West Virginia.

Mr. RHODES. What party is he?

Mr. COTTRELL. A Republican.

Mr. RHODES. We wish him well.

EXPROPRIATIONS OF U.S. PROPERTY IN LATIN AMERICA

Mr. Ambassador, would you furnish us a list, or a table similar to the ones you furnished last year as to expropriations in your area?

Mr. MOSCOSO. Yes, sir.

Mr. RHODES. You furnished for the record last year a list of the countries in which expropriations had occurred and the actions which had been taken and I think that should be brought up to date.

Mr. MOSCOSO. We will.

(The information supplied follows:)

EXPROPRIATION IN LATIN AMERICA

There have been no new expropriations in Latin America of property belonging to U.S. nationals since the hearings of last year.

On July 31, 1962, the Acting Governor of the State of Espirito Santo issued a decree expropriating the properties of AMFORP in Vietoria, Espirito Santo. This action was taken without the approval of the Federal Government, which is required by Brazilian law. The company instituted legal measures to have the action nullified and the Federal Government, in an effort to be helpful in the case, had the action transferred to the Federal courts. On April 29, 1963, the company's properties were returned to them following a favorable decision by the Federal Supreme Court.

In the case of the I.T. & T. expropriation of 1962, on February 1, 1963, I.T. & T. issued a press release stating the company had reached a satisfactory interim arrangement for payment of its expropriated properties in the State of Rio Grande do Sul, Brazil.

Mr. RHODES. Do you have any new cases of expropriation which are important enough to mention at this time?

Mr. MOSCOSO. We do not have any.

Mr. RHODES. No new ones?

Mr. MOSCOSO. That is right.

Mr. RHODES. Your policy with regard to expropriation is the same as it was last year?

Mr. MOSCOSO. It is statutory. It is a statutory policy.

Mr. RHODES. Last year as I recall, you expressed personal agreement with the policy and that you intended to pursue it vigorously.

Mr. MOSCOSO. That is right, and it has been pursued.

RELATIONSHIP OF OAS TO THE ALLIANCE FOR PROGRESS

Mr. RHODES. What primarily is the OAS's function in the Alliance for Progress? What does it do?

Mr. MOSCOSO. In the first place, the Alliance for Progress starts within the framework of the OAS. The Charter of Punta del Este was approved by one of the organs of the OAS, the Economic and Social Council. You can say it is within this framework of the OAS that the Alliance for Progress was born.

The OAS also is the mother agency of the wise men who, as a group, review the national development plans and make recommendations with respect to them.

Mr. RHODES. Do the nine wise men function with relation to the Social Progress Trust Fund, or in another area of action?

Mr. MOSCOSO. The nine wise men could have some effect on the Social Progress Trust Fund, because if, in examining one of the country plans, they should find there are certain projects of a social nature to which attention should be devoted, they might make a recommendation to the effect that the country should try to obtain economic assistance to advance those social programs which they are behind. And perhaps some of the funds used might be Social Progress Trust Fund funds.

Mr. RHODES. I have heard so much about the nine wise men in a general way. Would it be possible to either tell now, or for the record, a general description of who they are, what they are, what they do, and where they fit into this whole picture.

Mr. MOSCOSO. We will furnish for the record that information.

Mr. RHODES. When you furnish that, will you furnish the names of the individuals?

Mr. MOSCOSO. The names of the individuals and their background.

Mr. RHODES. And everything else in addition to what they do.

Mr. MOSCOSO. I will.

(The information supplied follows:)

THE PANEL OF NINE OF THE OAS

The Panel of Nine Experts, working in cooperation with the OAS Secretary General and the Inter-American Economic and Social Council, was established in the Charter of Punta del Este to provide assistance in the formulation of development programs and to facilitate implementation of the Charter.

The panel has responsibility for establishing guidelines, procedures, and criteria for the presentation and evaluation of national development programs. Panel members have met with Latin American officials to discuss problems of promoting the Alliance, and have visited countries to observe the preparation of development programs. Reports have been published of the panel's recommendations on various general aspects of the Alliance.

Ad hoc committees, composed of three panel members and three others selected on an ad hoc basis, evaluate individual country development programs and prepare reports with recommendations to the governments of the countries concerned. The panel members are designated by agreement between the interested government and the Secretary General of the OAS.

The panel is composed of the following nine experts:

Hernando Agudelo Villa (Colombian).—Lawyer and economist, attended the University of Antioquia. Was a representative in the Colombian Legislature. Minister of Finance of Colombia under President Lleras Camargo (1958–61). Represented Columbia, Chile, and Venezuela as an Executive Director of the Inter-American Development Bank.

Ernesto Malaccorto (Argentine).—Economist, specializing in taxation and agricultural economics, attended the Faculty of Economics of the University of Buenos Aires. Under Secretary of Finance of Argentina (1942–43). Established and was first director of Argentina's income tax. Financial consultant to the U.N. (1952–55). Minister of Agriculture in Argentina under Frondizi. Was a consultant and director of the Central Bank of Argentina.

Manuel Noriega Morales (Guatemalan).—Economist, specializing in money and banking and public administration. Attended the Faculty of Economics of the University of San Carlos in Guatemala, and Harvard University. Minister of Economy and Labor of Guatemala (1945–46; 1950–51). Organizer and first president of the Bank of Guatemala, organizer and first vice president of the Guatemalan Social Security Institute. Member of the Directing Council of the Institute of Industrial Development (1947–54). Director of the Central American Institute of Research and Industrial Technology (1952–60). Was Director of Technical Assistance for the IDB.

Felipe Pazos (Cuban).—Lawyer and economist, attended University of Havana and Columbia University. Commercial counselor of the Cuban Embassy in Washington (1942–46). Director of Division of Latin American Affairs and Subdirector of Economic Studies of the IMF (1946–49), president of the National Bank of Cuba (1949–52, 1959), and was director of research of the Center for Latin American Monetary Studies (CEMLA) in Mexico. Was an economic counselor for the Puerto Rican Government Development Bank.

Harvey Perloff (United States).—Specialist in economic planning and development, graduate of the University of Pennsylvania, London School of Economics, and Harvard University (Ph. D.). Consultant to the government of Puerto Rico (1946–47, 1950–51), professor of social science (1947–55) and head of the school of planning (1951–55) at the University of Chicago. Consultant, Tennessee Valley Authority (1953–54). Director, program of regional studies, Resources for the Future, Inc. (1955–61). Author of several books on economics and planning.

Paul Rosenstein-Rodan (British).—Economist, attended and was assistant professor (1925) at the University of Vienna. At the University of London: Special lecturer in the department of political economy (1931–36), professor of the University College (1936–47), and director of the department of political economy (1939–47). Assistant director of the economics department and director of the board of advisers of the IBRD (1947–53). Director of economics at the Massachusetts Institute of Technology and director of projects on the economic and political development of Italy and India at MIT's Center for International Studies.

Raul Saez (Chilean).—Coordinator of the Panel—Engineer, specializing in problems of energy,, industrialization, and business administration. Attended the Liceo Janson de Sailly, Paris, and the University of Chile, where he was later a professor. Was director of the department of civil engineering and technical manager of the Chilean National Electric Co. (ENDESA), director of the department of studies and planning of the Chilean Development Corp. (CORFO), and engineer with the Compania de Acero (Steel) del Pacifico, and director of Industria Azucarera S.A. (sugar). Was general manager of ENDESA, in charge of Chile's electrification program before joining the Panel.

Jorge Grieve (Peruvian).—Civil engineer, graduated with honors in 1938 from the University of Chile's engineering school. Professor of machine design and technology at the National University of Engineering of Lima (1946–62), and dean of that university's faculty of mechanics and electricity (1955–60). Minister of Development and Public Works (1960–62). Was president of the Peruvian Electrical Engineering Association and the Peruvian Society of Engineers. Chief engineer, Enrique Ferreyros y Cia (1952–60). Adviser to Central Reserve Bank of Peru (1944–54). Member of the Peruvian delegations to the Bogotá and Punta del Este Conferences.

Romulo Almeida (Brazilian).—Economist, degree in law. Was director of the statistical department and member of the Council of Government of the Territory of Acre, organized economic department of the National Confederation of Manufacturers. Economic Adviser to the President of Brazil (1951–54), president and first organizer of the Banco do Nordeste do Brasil, Representative in the Federal Chamber (1955–59), Secretary of Treasury (1955–57) and of Development (1957–61) in the State of Bahia, while also member of the Council of SUDENE. Organized and was president of the Bahia State Planning Board, and of the economic institute of the university. Had been appointed in 1961 to a 3-year term as executive secretary of the Latin American Free Trade Association, which he left to join the Panel.

LOCAL CURRENCIES GENERATED

Mr. RHODES. Do we generate any counterpart funds in this area?

Mr. MOSCOSO. We do.

Mr. RHODES. Under Public Law 480, or otherwise?

Mr. MOSCOSO. Under Public Law 480, particularly in Brazil and in Bolivia under the grant supporting assistance program.

Mr. SCHEINMAN. Were you referring to U.S.-owned currencies, or currencies owned by the aid recipient country? The term "counterpart" generally refers to currencies owned by the aid recipient country and used after agreement with the United States. They are not generated by Public Law 480.

Mr. RHODES. I had in mind the latter category, the recipient owned. The recipient-owned currencies. That was my first question.

As I understand it now, that was answered by the Ambassador.

Let's go to the other type of generated foreign currency, the American-owned type, which is available for our use without reference to any other country.

Do we have any of that type of currency generated?

Mr. MOSCOSO. Public Law 480 funds.

Mr. PASSMAN. At this point, would you furnish a table showing the balance of this type of funds in your area?

Mr. MOSCOSO. Yes. We will give it for the record.

(The information supplied follows:)

Local currency holdings in Latin America acquired without payment of dollars, as of Dec. 31, 1962

[In thousands of dollar equivalents]

Country	U.S.-owned [1]				Country-owned counterpart funds [4]	Grand total
	Transferred to AID accounts [2]	State Department account	Treasury accounts [3]	Total

[1] U.S.-owned currencies consist mostly of generations from Public Law 480 sales agreements and a small part of counterpart fu nds deposited for U.S. uses.
[2] Includes $7,691 thousand equivalent in trust funds held for the payment of foreign government obligations.
[3] Not yet sold or transferred without payment of dollars by Treasury.
[4] Includes sales proceeds under title II of Public Law 480.
[5] Balance of currencies deposited to a U.S. account by the participating country to pay the local expenses of agreed projects. This account has been fully expended as of Jan. 31, 1963.

COMMUNIST BLOC AID TO LATIN AMERICA

Mr. RHODES. Mr. Ambassador, are there any countries in your area, other than Cuba, which receive aid from the Communist bloc?

Mr. MOSCOSO. In 1962 bloc credits were offered to Bolivia, $1.6 million, and Brazil, $70 million.

Mr. RHODES. What nation, or nations, in the Communist bloc furnished aid to Bolivia?

Mr. MOSCOSO. In the case of Bolivia, Czechoslovakia, in the case of Brazil, it was primarily Poland.

Mr. RHODES. What does Bolivian aid consist of?

Mr. MOSCOSO. I do not recall, but this is probably machinery or trucks. I think there were some Czechoslovakian trucks, which I understand, by the way, have given the Czechoslovakian industry a bad name around Bolivia because the trucks are not made to operate at those heights. The quality of the material is very poor and they break down continuously, and they have become the butt of a lot of jokes.

Mr. RHODES. I see no reason why we should change that situation. What about the Brazilian aid?

Mr. MOSCOSO. That was to have been primarily oil.

Mr. RHODES. Do you know on what terms this aid is given? Is it grant aid or long-term loans?

Mr. MOSCOSO. This is primarily barter for coffee and perhaps some cocoa and sugar.

Mr. RHODES. How can you call that aid?

Can you give the terms on which the deal is made? I doubt if this is aid.

Mr. MOSCOSO. There must be some credit involved.

(The following information was subsequently supplied:)

BLOC AID TO LATIN AMERICA (OTHER THAN TO CUBA)

BRAZIL

Although agreements for medium-term credit with Czechoslovakia, Poland, Rumania, and Hungary had been negotiated in 1961, Brazil has not implemented these credits.

A $70 million credit agreement was signed with Poland on December 1, 1962. Of this total, $26 million were for an electric powerplant (terms of 7 years at 3 percent), $7.5 million for steel rails, and $36.5 million for a long shopping list which included an aluminum refinery and helicopters. However, Brazil has made no move to use these credits.

Brazil has no agreement with the U.S.S.R. for medium- or long-term credit, but it has a new trade agreement with the U.S.S.R. signed on April 20, 1963. The most important feature is that dealing with Soviet petroleum shipments over the next 3 years in exchange for Brazilian coffee, cotton, and rice.

BOLIVIA

In June 1962 a contract was signed with Czechoslovakia for the construction of an antimony smelter. However, the Bolivians asked for reconsideration of the contract in order to obtain greater concessions from the Czechs. As a result, a new contract was negotiated in March 1963, providing for a loan of US $1.6 million extending for 10½ years at 5 percent interest. In June 1963, this contract was modified to make available US $850,000 of additional credit to the Bolivians. Also at this time, the Czechs stated that the loan would be repayable in proceeds from production. No final action has occurred as the Czech representatives have returned to Prague for the time being.

JUSTIFICATION OF SOCIAL PROGRESS TRUST FUND

Mr. RHODES. I think it would be well for the record if you could furnish a statement concerning the Social Progress Trust Fund as to what it does and what it is intended to do, with particular reference as to why it is operated by the Inter-American Development Bank.

Would you make a statement now as to why we thought originally it was a good idea for the Bank to operate it and your feelings as to the wisdom of continuing it that way?

Mr. MOSCOSO. I remember reading Secretary Dillon's statements to that effect back in 1961. It was pretty clear what Mr. Dillon had in mind was to give the Latin Americans a feeling of participation and an active interest in the development of social progress projects which the Act of Bogotá indicated had been neglected.

I believe that was the general rationale for multilateral operation of that particular fund.

Mr. RHODES. Are those reasons as valid today as they were when they were uttered by Mr. Dillon?

Mr. MOSCOSO. Just as valid.

We would like to get the Latin Americans more and more involved. We do have a veto power, which we have managed not to exercise by giving them good advice as to the projects they should undertake.

Mr. RHODES. We have not exercised our veto?

Mr. MOSCOSO. We have not had to because we have been able to persuade them not to take actions that would require our veto.

(Information subsequently supplied, follows:)

SOCIAL PROGRESS TRUST FUND

The Social Progress Trust Fund is a vital element of U.S. participation in the Alliance for Progress. The Inter-American Development Bank is the administrator of the Fund under an agreement dated June 19, 1961, between the Government of the United States and the Bank (TIAS 4763). The Trust Fund originated at a meeting of special committee convoked by the Organization of American States, in the city of Bogotá, Colombia, in September 1960, to study the formulation of new measures for inter-American economic cooperation. At this meeting, the U.S. Government, based on the authorization received from the Congress in the act for the Inter-American Program for Social Progress (Public Law 86-735), declared its purpose to establish a Special Inter-American Fund for Social Development, and proposed that the Inter-American Development Bank be the primary mechanism for its administration.

Thereafter, these measures, which were designed to bring about a radical change in inter-American economic policy, as well as in the social policies of the Latin American countries, received more definitive orientaton through the Alliance for Progress formulated by President Kennedy. On March 13, 1961, in his White House speech, President Kennedy emphasized that social progress and economic development are complementary objectives, and that this social progress program is an effort to create a social framework within which all the people, including the least privileged classes of society, could share in the benefits of prosperity and look with hope to the future. The program took on new significance as the Alliance for Progress moved forward. It supported the faith that land reform, tax reform, better housing, and community facilities—all could be achieved within a cooperative, democratic framework, without violence.

On May 27, 1961, Congress, pursuant to the authorization of Public Law 86-735, appropriated, as part of the Alliance for Progress program, $500 million (Public Law 87-41), to create the Special Inter-American Fund for Social Development. Of this amount, $6 million was assigned to the Organization of American States for collaboration with the member countries in preparing national development plans; $100 million to the International Cooperation Administration (now Agency for International Development) for assistance in the fields of education, public health, and other technical assistance; and $394 million to the Social Progress Trust Fund to be administered by the Inter-American Development Bank to provide financial and technical assistance in the fields of land settlement and improved land use, housing for low-income groups, water supply and sanitation, and higher education and advanced training.

The decision of the United States to use the multilateral approach in attacking the problems of social development in Latin America had ample precedent in U.S. policy. The adherence of the United States to the Bretton Woods institutions (World Bank and International Monetary Fund), the use of intergovernmental committees in the Marshall plan, the creation of the International Development Association and of the Inter-American Development Bank itself are evidence of a deep conviction, born out of experience, of the value of the multilateral approach as an instrument of U.S. policy. The fact that the United States was willing to help Latin Americans at the grassroots level through Latin American multilateral organizations brought an enthusiastic response throughout the hemisphere—except from Fidel Castro, who derided the Alliance and the Trust Fund and questioned the U.S. detremination to aid Latin American development.

In administering the Trust Fund the Bank has relied on its basic organization and staff, supplemented only by such special personnel as are required by the additional responsibilities involved. The processing of loan applications for financing from the Trust Fund has been governed by the same careful criteria as are applied to the ordinary operations of the Bank.

The Social Progress Trust Fund has proved to be a well-suited instrument for achieving the goals of the Alliance. Although funded by the United States, it is administered by an international institution in which all Alliance countries are represented. Its loans are made on the basis of a two-thirds vote of the Board of Executive Directors. The United States has 41 percent of the voting strength.

The Inter-American Development Bank has been diligent and responsible in emphasizing self-help measures consistent with the goals of the Alliance. This multilateral influence for reform, combined with the willingness to say no to projects of low priority, has given an impetus to sound planning and project preparation in the countries of Latin America.

Between the signing of the Trust Fund agreement in June 1961 and July 1963, 64 loans had been made from the Social Progress Trust Fund for a total of $347.9 million on projects having a total cost equivalent to $876.7 million.

The local share of these projects was 52.4 percent, the Social Progress Trust Fund share was 39.7 prcent, and that of other external sources was 7.9 percent. In addition, the host countries were often allocating additional resources to similar projects.

Nearly 45 percent of the lending, or $156.7 million, has gone to low-cost housing; 32 percent to waterworks and sanitary facilities ($111.5 million), 19 percent to land settlement and improved land use ($66.6 million) and 4 percent to advanced education ($13.1 million). These projects are important in economic terms but their primary significance is social. They directly benefit low income groups. Through the administration of this program by the IDB, the influence and prestige of the inter-American system is brought to full support of needed reforms and wider opportunity for the underprivileged.

In compliance with the terms of its trust and in accordance with what it conceives to be the spirit of the Alliance for Progress, the Bank has adopted certain guiding principles for its administration of the resources of the Trust Fund.

1. Since a major purpose of the Fund is to stimulate the Latin American countries to mobilize their own resources for social development, each borrowing entity is required to contribute from domestic sources an appropriate share of the total cost of the project. The definition of "appropriate share" in each case will depend on such factors as the capacity of the country concerned to undertake additional fiscal commitments, and the scale of its existing efforts in the field of social investment. On the average, local sources supply about 53 percent of the cost of the projects assisted by the Trust Fund.

2. The Bank requires that the final beneficiaries of the projects pay for benefits received and do not obtain them gratis. Thus, for example, when the Bank makes a loan to an autonomous agency for a water system, it insists on a rate schedule which will produce sufficient revenue to cover operating and maintenance expenses and, wherever possible, amortization of the loan and reserves for future expansion. Similarly, persons acquiring houses (or apartments) are required to pay for them, though of course, on long repayment terms. The purposes of the Bank in requiring adequate user charges are first, to prevent the wasteful use of resources and, secondly, to avoid the need for continuing subsidies on the part of the local government.

3. The Bank encourages private ownership. Thus it requires that housing units be sold to the occupants; it has not made loans for rental housing. Similarly, when loans are made for land settlement projects the Bank requires that titles be delivered to the new settlers within a stated period of time. This policy is based on the assumption that secure ownership not only makes for greater social stability but encourages the improvement and proper maintenance of property.

4. Wherever feasible, the Bank uses the Trust Fund to strengthen the cooperative movement and free trade unions. Assistance to such organizations has been incorporated in loans for housing and rural credit in Peru, Chile, Argentina, and El Salvador, among others. The Bank has also stimulated, by loans and/or technical assistance, the formation of savings and loan systems in several countries.

5. The Bank encourages its member countries to plan their social development expenditures. The social needs of Latin America are so enormous that the Bank has been flooded with applications for all sorts of projects, not only from national entities but also from State and local agencies. The Bank has had to make it clear to the national authorities that in view of the very limited resources at the disposal of the Trust Fund, assistance would be given only to projects with the highest priority.

6. Of central importance to the success of any program assisted by the Trust Fund is the competence of the executing agency in the borrowing country. Many of the agencies which the Bank has had to deal were found to be in financial difficulties, inadequately organized, or overburdened with a variety of unrelated

responsibilities. Wherever such conditions are encountered, reorganization of the agency to the satisfaction of the Bank is made a precondition of any disbursement. The Bank is generally prepared to provide technical assistance in the adoption of the necessary corrective measures.

The need for social progress and social reforms is vital in the evolution of Latin America, and if the forward movement already achieved is to be maintained and increased, the Trust Fund must be replenished. In considering whether the administration of the Trust Fund should continue to be vested in the Inter-American Bank, the following additional points appear relevant:

1. The placing of these funds with the Inter-American Bank, with their use subject to the analysis, judgment, and administration of an inter-American body—but with an effective veto by the United States—represents a basic policy decision of both Republican and Democratic administrations as to the most effective way of obtaining practical results in the field of social change and reform, without incurring the individual misunderstandings, sometimes serious, resulting from direct bilateral negotiations between the United States and individual Latin American countries.

2. The administration of the Social Progress Trust Fund by the Inter-American Bank in the past 2 years has been enthusiastically supported in Latin America and the United States as both efficient and effective, and as one of the best examples of joint Latin American-United States cooperation in the development field. For example, the administration's request for additional Social Progress Trust Funds to be administered by the Inter-American Development Bank is one of the few foreign aid requests to be supported in its totality by the U.S. Chamber of Commerce.

3. Any significant reversal of the present policy by the United States would be widely interpreted both in Latin America and the United States as failure to support a program and institution which have been integral parts of the Alliance for Progress, and would have serious repercussions on United States-Latin American relationships.

SOCIAL DEVELOPMENT PROJECTS NOT UNDER SPTF

Mr. RHODES. Do we do anything in the way of projects within the Alliance for Progress which could be called social development other than through the Social Progress Trust Fund?

Mr. MOSCOSO. Yes, we do.

Of course the definition of social and economic is so fine sometimes we cannot draw the line very accurately.

We do have educational projects which can be social or economic. We also give substantial amounts of technical assistance in our grant programs which in many instances are of a social nature.

Mr. RHODES. I do not think it would be too difficult to establish a line of demarcation between your social progress projects and your economic projects.

I should think that a social progress project would be something which is desirable politically, but yet is not necessary to the furthering of the economy whereas the other type of project would be something which you do primarily to put the economy in a position for development.

Mr. MOSCOSO. Well, the truth is, most of the social projects on a long-run basis will eventually be justified from an economic standpoint.

For instance, if the health of the people in a country is better because we eliminate malaria, the man-hours lost would be important if these people had jobs. At the moment a substantial number are not able to get jobs, therefore the economic impact is not as great. Hopefully, when the economies of these countries develop, if the people are healthy, and if they have eliminated some of these endemic dis-

eases, then they will be able to get more productivity out of their labor.

DIFFERENCE BETWEEN SPTF PROJECTS AND ALLIANCE FOR PROGRESS PROJECTS

Mr. RHODES. How do you go about deciding whether a project in any country is to be done under the Social Progress Trust Fund, or whether it is to be done under the Alliance for Progress?

Mr. MOSCOSO. Under the Trust Fund, those projects are pretty well defined in the trust fund agreement. It was agreed the funds would be devoted primarily to housing and water, potable water, and sewerage; agrarian reform and settlement, particularly insofar as facilitating the reform is concerned; and special training and higher education. Where AID has done anything in those fields which approximates what the Social Progress Trust Fund is supposed to do, it has been because the IDB funds are not available, or else because a certain country had already used too much proportionately of the Social Progress Trust Fund. Nevertheless, they still needed more funds for that particular type of activity in that particular field.

TECHNICAL ASSISTANCE UNDER SPTF

Mr. RHODES. Now, the Social Progress Trust Fund also has provision for grants for technical assistance in a certain amount?

Mr. MOSCOSO. They have a small amount for technical assistance.

Mr. RHODES. Has that amount been exhausted?

Mr. MOSCOSO. Yes, on the projects done so far.

Mr. RHODES. Will you furnish for the record a statement of the condition of the Social Progress Trust Fund as it pertains to the technical assistance grant?

Mr. MOSCOSO. We will.

They usually tie it to the loan. They made a loan for housing, and then usually a small amount of money was made available to bring technicians in.

(The information supplied follows:)

TECHNICAL ASSISTANCE GRANTS UNDER THE SOCIAL PROGRESS TRUST FUND

The trust fund agreement between the United States and the Inter-American Development Bank provides that the Bank may utilize the resources of the fund to extend technical assistance (hereafter called TA) "on a loan, grant, or reimbursable basis * * *" (sec. 4.03). No specific limitation is placed on the amount of TA that can thus be provided.

The amount of TA grants extended by the Bank is determined by a budget fixed annually by the management and approved by the Board of Directors. Since the inception of the fund the amounts made available for TA grants were as follows:

Calendar year 1961	$1,110,500
Calendar year 1962	1,047,000
Calendar year 1963 (up to June 30)	435,000
Total	2,592,500

In the same 2½-year period, the total amount of TA extended on a reimbursable basis was $2,340,000.

Approximately one-half of all TA grants and the preponderant share of reimbursable TA have been directly related to projects financed by loans from the trust fund. In such cases the TA has been extended for such purposes as assuring adequate expert guidance, assistance in the reorganization of borrowing agencies, training local personnel to carry on projects after their completion and, in general, helping to assure that any preconditions for disbursements or for the successful execution of the projects concerned are fulfilled.

Examples of TA grants not directly related to trust fund loans are: (1) for the study and distribution of information on methods on improving tax collection in Latin America (jointly with Harvard University and the Economic Commission of Latin America); (2) preparation of an agrarian reform law for Honduras; (3) assistance in financing training courses in agrarian reform (in cooperation with the Organization of America States and FAO); (4) training of technicians to supervise aided self-help housing (at Inter-American Housing Center, Bogotá, Colombia).

Mr. RHODES. You do not set up a savings and loan system under the Social Progress Trust Fund?

Mr. MOSCOSO. We usually do it ourselves. There have been other types of technical assistance, primarily in the case of water and sewerage development authorities, helping them set up the water and sewerage authorities. They have given them technical assistance in housing in the kind of loans they have made for housing.

Mr. PASSMAN. I thought it was a part of the social progress program to set up these savings banks, building and loan associations.

Mr. MOSCOSO. The housing co-op.

Mr. PASSMAN. You do set them up. You set up the savings associations and building and loan associations. Many of these people go in and say, "I would rather wait until I can get the money from you rather than to move into one of these public housing projects."

Am I making a statement of fact?

Mr. MOSCOSO. You are right.

FISCAL YEAR 1964 REQUEST FOR ALLIANCE DEVELOPMENT GRANTS

Mr. FORD. Mr. Ambassador, let's turn to page 11 of the justification book.

How much was originally requested for fiscal year 1964 by the President in the grant category?

Mr. MOSCOSO. $100 million.

Mr. FORD. How much do we now have before us as a recommendation?

Mr. MOSCOSO. The same amount.

Mr. FORD. Are you requesting reappropriation of anything?

Mr. MOSCOSO. We anticipate deobligation of $2 million, and we are asking for authority to utilize these funds again.

Mr. STERNFELD. If you add the $93,823,000——

Mr. MOSCOSO. Plus $11.2 million——

Mr. FORD. Where do I see the $11.2 million on this chart?

Mr. MOSCOSO. It is the double star down on the bottom of the page.

Mr. FORD. So it is a total of 11——

Mr. MOSCOSO. It amounts to $105 million.

FISCAL YEAR 1963 DEVELOPMENT GRANT REQUEST AND OBLIGATIONS

Mr. FORD. Last year when you were here in this category, what did you request?

Mr. Moscoso. We requested $100 million for the same category plus carryover.

Mr. Ford. Was there a deobligation and a reappropriation?

Mr. Moscoso. We had unobligated, $32 million.

Mr. Ford. You requested that that be reappropriated? Was it reappropriated?

Mr. Moscoso. This was no-year money.

Mr. Ford. So, it was carried over?

Mr. Moscoso. It was carried over into fiscal 1963.

Mr. Ford. What did you execute in fiscal 1963? How much did you obligate?

Mr. Moscoso. Of the grant moneys?

Mr. Ford. We are talking about the grant moneys.

Mr. Moscoso. $121.5 million.

Mr. Ford. What did you have unobligated at the end of fiscal 1963?

Mr. Moscoso. A million and a half dollars.

Mr. Ford. What happened between the $121.5 million you obligated and the $1.5 million which is unobligated?

LOANS MADE FROM GRANT FUNDS

Mr. Moscoso. $9 million of these funds were made available in the form of loans instead of grants.

Mr. Ford. Do you have that authority?

Mr. Moscoso. Yes, we do have.

Mr. Ford. Were those loans justified at the time of the hearings?

Mr. Moscoso. No, we did not justify them. They were included in the 1962 hearing. They were justified insofar as making them is concerned. We felt it was a desirable thing.

For instance, a loan was made to Jamaica for housing. Jamaica is not a member of the Inter-American Development Bank. The funds we had which we thought we should use for this were the IAPSP funds, on a loan basis instead of a grant basis, because it was to be a social progress activity.

Mr. Ford. Would you put in the record the loans that were made and the countries to which the loans were made? Do you have that information here?

Mr. Moscoso. Yes, sir, we have it.

Jamaica, low-cost housing, $2,800,000. Jamaica, water supply, $2,200,000. Honduras, small water supply system, $1,050,000. Honduras, aided self-help schools, $600,000. Guatemala, school, $700,000. Ecuador, administrative and fiscal reforms, $1,600,000. This is a rather unique case. These funds are to be used in technical assistance and are made available to us on the basis of a loan.

Mr. Ford. Does that come to $9 million?

Mr. Moscoso. $9,490,000.

Mr. Ford. In your program you have before us today, do you anticiapte making similar loans?

Mr. Moscoso. We are not anticipating now making any loans. However, Mr. Congressman, in some instances if we can get the countries to accept as loans, funds which otherwise would be granted, I think it would be desirable thing if we did that.

Mr. FORD. Are the ones you made in fiscal 1963 repayable in dollars or in local currency?

Mr. MOSCOSO. They are repayable in dollars—U.S. currency.

SUPPORTING ASSISTANCE

Mr. FORD. Let us turn to the next column, "Supporting assistance." How much are you asking for supporting assistance?

Mr. MOSCOSO. $17.7 million.

Mr. FORD. This is for fiscal 1964?

Mr. MOSCOSO. That is right.

Mr. FORD. What did you ask for in fiscal 1963?

Mr. MOSCOSO. $15 million.

Mr. FORD. What was made available by the Congress?

Mr. MOSCOSO. This comes out of the worldwide supporting assistance funds.

Mr. FORD. Were those worldwide funds reduced last year by the Congress?

Mr. TENNANT. The appropriation was $395 million. Our authorization request was $481.5 million. The authorization act was $415 million.

Mr. FORD. A total reduction of $86.5 million between the authorization request and the appropriation.

Mr. TENNANT. That is correct, sir.

Mr. FORD. In this area of the world for fiscal 1963, you justified $15 million.

Mr. MOSCOSO. $15 million.

Mr. FORD. What was made available to you?

CONTINGENCY FUNDS USED FOR SUPPORTING ASSISTANCE IN FISCAL YEAR 1963

Mr. MOSCOSO. Including contingency fund uses, $104 million.

Mr. FORD. You mean you justified to us $15 million and you had in total for supporting assistance in fiscal 1963, how much?

Mr. MOSCOSO. $10,458,000.

Mr. FORD. How much of that came out of the contingency fund?

Mr. CONTE. While he is looking for that, will you yield for a moment, Mr. Ford?

Why the $89 million increase over what you justified? Was there a disaster?

Mr. MOSCOSO. We had the emergency problems in Brazil, the Dominican Republic, Argentina, Ecuador—we already had justified Ecuador—Honduras and Trinidad.

Mr. CONTE. Can you explain the emergency problems?

Mr. MOSCOSO. We discussed just a while ago the Honduras case, project assistance in maintaining the school program. In the case of Argentina, $20 million was made available in order to participate in a package loan which was made by the Treasury Department, the IMF, and ourselves, in order to assist in their balance-of-payments problem up to the election and the day on which the new administration would take over in October, in the hope that the stabilization of the currency would take place. By the way, that has happened. Their

currency has been stabilized pretty well. The development program would then be initiated.

Mr. CONTE. What is the rest?

Mr. MOSCOSO. In the case of Brazil, the $25.5 million was part of AID's participation in the package that was made available, $84 million, at the initiation of the agreement, based on Brazil's previous performance. As you know, Brazil had already performed a certain number of things which they had agreed to, and in view of that, these funds were made available to Brazil. The package was a joint one of the Export-Import Bank, AID, and U.S. Treasury, in support of their stabilization program.

Mr. CONTE. Every one of these so far has been a budgetary support item.

Mr. MOSCOSO. Balance of payments, primarily.

Mr. CONTE. It was a contribution to their budgets.

Mr. MOSCOSO. In the case of each of these countries, the primary need was basically balance of payments, except in the case of Honduras.

Mr. CONTE. Were any of them caused by an act of God—a hurricane, tornado, or any natural disaster?

Mr. MOSCOSO. The fact that the Argentines lost a President obviously was something no one could anticipate.

(Off the record.)

Mr. MOSCOSO. Some small amounts of money were used from the contingency fund in the October Cuban crisis. Quite a number of the countries asked us to give them some assistance in the way of small arms, ammunition, and so forth, because they expected internal difficulty.

Mr. FORD. Really, then, in fiscal 1963, you asked for $15 million, and you ended up in the supporting assistance program with $104 million. It is accurate to say you got your $15 million out of the supporting assistance worldwide fund?

Mr. MOSCOSO. Yes, sir.

Mr. FORD. Is that factual?

Mr. MOSCOSO. That is a fact.

Mr. FORD. You did not get any more, you did not get any less?

Mr. TENNANT. We got a little more: $81.7 million was programed out of the contingency. There is a slight slippage in the program figures. The balance would be out of supporting assistance.

SUPPORTING ASSISTANCE FOR BRAZIL

Mr. FORD. I am looking at this list of contingency fund obligations in fiscal 1963. There is one here, May 2, to Brazil, for $25,500,000. Is that the one you were mentioning earlier?

Mr. MOSCOSO. That is right.

Mr. FORD. That was a gratuity based on past performance, is that right?

Mr. MOSCOSO. That is right, and on the expectation that there would be a stabilization program.

Mr. FORD. But now, at least, the prospect of stabilization has not materialized.

Mr. MOSCOSO. They have done certain of the things, but not sufficient yet to warrant that we go ahead with the rest of the package.

BALANCE-OF-PAYMENTS LOAN TO ARGENTINA

Mr. FORD. On June 12, to Argentina, $20 million. What was the justification of that?

Mr. MOSCOSO. That was a balance-of-payments loan in which we participated with the Export-Import Bank, Treasury, and IMF.

Mr. FORD. This is budgetary support?

Mr. MOSCOSO. No. This is balance of payments.

Mr. FORD. Was this a loan or a grant?

Mr. MOSCOSO. This is a loan.

Mr. FORD. To be repaid in dollars or in foreign currency?

Mr. MOSCOSO. Repayable in dollars, 3½ percent, 15 years.

DIFFERENCE BETWEEN BALANCE-OF-PAYMENT SUPPORT AND BUDGETARY SUPPORT

Mr. CONTE. I asked you if those were all budgetary support items, and you said, no, balance of payments. What is the difference?

Mr. MOSCOSO. The necessity for the loan was obviously a need for assisting them in their balance-of-payments problem.

Mr. CONTE. But there is no difference. You are splitting hairs.

Mr. PASSMAN. It goes into the budget, does it not?

Mr. CONTE. Let us try to clarify it. We give that $25 million loan to Brazil, and does that not go into the Brazilian treasury?

Mr. MOSCOSO. Yes.

Mr. CONTE. It is a budgetary item.

(Off the record.)

Mr. MOSCOSO. When we begin the loan, as we did in the case of Ecuador, specifically for budgetary support, we consider that to be a budgetary support loan. On the other hand, it does have an effect on the balance of payments. The balance-of-payments loan may or may not have an effect on the budget. We try to tie the funds generated, the local currency generated, to projects when we make a balance-of-payments loan.

(Off the record.)

Mr. SCHEINMAN. If you are focusing your attention on the foreign exchange requirements of the country, you are talking about balance-of-payments support. If you are focusing your attention on the domestic local currency necessary related to the budget and your interest is in generating local currency, or if you are making a cash grant, just turning the money over, as we have done in one or two cases around the world——

Mr. CONTE. It is only because you call it that.

Mr. SCHEINMAN. I think we establish that the balance of payments in effect can relieve the budget requirements.

Mr. PASSMAN. It is a contribution, is it not, to the Government, to the budget? Even though it is for specific commodities, it still goes to the budget, does it not?

Mr. SCHEINMAN. It does not go to the budget, sir. It may relieve the requirements of the country for certain kinds of revenue.

Mr. PASSMAN. I think Mr. Conte had it pretty well sized up when he said you are splitting hairs. We have crossed this bridge over and back for days in previous testimony.

TERMS OF BALANCE-OF-PAYMENTS LOAN TO ARGENTINA

Mr. FORD. To return to the Argentine loan of June 12, 1963, for $20 million, it is to be repaid in hard dollars. What are the terms?

Mr. MOSCOSO. 3½ percent, 15 years, U.S. currency.

Mr. FORD. When this money is returned to the U.S. Treasury, where does it go?

Mr. MOSCOSO. It goes back to the Treasury.

Mr. FORD. It does not go into your Development Loan Fund?

Mr. MOSCOSO. No; it does not go into the Development Loan Fund.

Mr. FORD. Let us verify this. You can verify it for the record.

Mr. MOSCOSO. I think the repayment of a supporting assistance loan goes back to the Treasury and not the Development Loan Fund.

Mr. TENNANT. That is correct.

EXECUTIVE BRANCH POSITION ON SECTION 107 OF APPROPRIATION ACT

Mr. FORD. Mr. Moscoso, in the committee print for the foreign aid and related agencies appropriation bill for fiscal year 1964, there is a copy of section 107 (a) and (b) of the fiscal 1963 act, and in the committee print there is the recommendation that section 107 (a) and (b) be not included in the appropriation bill for fiscal 1964.

Is this the official position of the Department of State?

Mr. COTTRELL. I do not know.

Mr. FORD. Are you familiar with section 107 (a) and (b)?

Mr. COTTRELL. Yes; I am familiar with those sections, but I am not aware of the background of the recommendation that it not be included in the legislation for 1964.

Mr. FORD. This is the subcommittee print, which I presume is submitted by the Bureau of the Budget on behalf of the executive branch of the Government. Is this correct?

Mr. TENNANT. That is correct.

Mr. SCHEINMAN. Yes.

Mr. FORD. In other words, this document is the official recommendation of the executive branch of the Government. Is that correct?

Mr. COTTRELL. Yes.

Mr. FORD. It does indicate here that section 107 (a) and (b) of the fiscal 1963 appropriation bill be deleted, not reenacted; is that correct?

Mr. SCHEINMAN. That is correct.

Mr. FORD. What is the justification for that?

Mr. COTTRELL. This I do not know.

Mr. SCHEINMAN. I would like to provide a detailed justification of the executive position for the committee. Just with respect to 107(a), it is in fact, except for a few minor matters, merely a restatement of the Battle Act and its applicability. I believe that is one of the reasons, and that it is not to be deleted in application.

Mr. FORD. Is the executive branch of the Government implementing section 107 (a) and (b)? Did they in fiscal 1963?

Mr. COTTRELL. Yes, we did. There were no violations under either one of the two sections, but we used this section in policing it with respect to shipping to Cuba.

Mr. FORD. Were any foreign aid funds denied any country because of any shipping of such a country used in carrying cargo to Cuba?

Mr. COTTRELL. No, because we found no violations of either section (a) or (b).

(Off the record.)

Mr. FORD. Does the executive branch of the Government approve or disapprove of proposed legislation which would force the discontinuance of aid to a country that trades with Cuba?

Mr. COTTRELL. We are in favor of the legislation as it is on the books. Would you repeat that last phrase?

Mr. FORD. Wait a minute. You are in favor of the legislation which is on the books, but you are not in favor, according to what I have before me, of its being reenacted. Is that correct?

Mr. COTTRELL. I do not know the rationale on this.

Mr. RHODES. Of course, this is the only law that has any bearing on Cuba, because the administration has not seen fit to invoke the Battle Act against Cuba as yet. Is that not right, Mr. Scheinman?

Mr. SCHEINMAN. It has been determined that no event has occurred in which such procedure would be appropriate.

Mr. RHODES. I will accept your nomenclature, but my statement is correct, they have not seen fit to invoke the Battle Act?

Mr. SCHEINMAN. It has not been invoked.

Mr. RHODES. Thank you very much. I always like to deal with lawyers.

Mr. FORD. Do you have a copy of section 107 (a) and (b)?

Mr. COTTRELL. Yes, I have it here.

Mr. FORD. Is the Department of State in favor of the intent of this legislation that was on the statute books in fiscal 1963?

Mr. COTTRELL. Yes.

Mr. FORD. Why are they requesting that it be deleted?

Mr. COTTRELL. This I do not know, again.

Mr. SCHEINMAN. With respect to the application of 107(a), I have already responded. I would like to check before I respond with respect to 107(b), which relates to economic assistance. I am not prepared to answer that question.

Mr. FORD. According to the document we have before us on this side of the table, the executive branch of the Government has recommended the deletion of these provisions.

Mr. SCHEINMAN. That is correct.

Mr. FORD. I do not understand their attitude, either in substance or in form, but this is what the facts are.

That is all, Mr. Chairman.

NOTE: Additional testimony may be found beginning on p. 2320.)

PROBLEMS CONNECTED WITH LAND REFORM

Mr. CONTE. Mr. Ambassador, you were involved in the Bootstrap operation in Puerto Rico, were you not?

Mr. MOSCOSO. Yes, sir.

Mr. CONTE. From all I have read and from every indication, that was a very successful undertaking.

Mr. MOSCOSO. I think it is generally accepted that it was.

Mr. CONTE. The thing I cannot understand when I read about this in periodicals and newspapers, is that the Alliance for Progress has failed miserably in Latin America because of the lack of agrarian reform. Why have you not been able to work with these countries in Latin America to implement some type of agrarian reform?

Mr. Moscoso. In the recent meeting in San José, of the Inter-American Economic and Social Council Committee appointed specifically to review land reform legislation and performance under legislation, the difficulties we have been faced with in Puerto Rico have come out. That is, people tend to generalize about land reform and conceive of it merely as the breaking up of large estates and dividing it up among the landless peasants.

The desirability of something like that being done is quite obvious from the social point of view, but then the realities of economics start to emerge, and you find it is not as easily done as it is said. In the first place, you must be careful of the land-tenure problems and relate them to the type of agriculture with which you are dealing.

In the case of sugar—which is what we have primarily in Puerto Rico and what we are faced with in places like the northeast of Brazil and in other countries of Latin America—sugarcane is an agricultural commodity that requires extensive tracts of land and a very heavy investment in equipment and machinery if you are to be competitive. Unless you have a highly trained farmer group with the capacity to absorb a substantial amount of credit, it is deluding these poor people to think in terms exclusively of breaking up the parcels of land. If a man in northeastern Brazil were given 10 or 15 acres of sugarcane to cultivate, he would not be able to make a living. He probably would be worse off than he is today.

In a case like that, what has to be done is to try to obtain land which is situated as close to a sugar area as possible, which is capable of producing other products, so these people can cultivate for their own consumption or for the market such things as yams, potatoes, beans, rice, corn, et cetera, and allow the larger tracts of land to be operated as large units in order to be competitive.

In the case of coffee, a different type of problem emerges. There, through the development of different varieties of coffee, through the development of dwarf varieties with much larger yields per acre, which will permit all of the family to participate in the collection and cultivation of coffee, you may be able to achieve a decent standard of living for a farm family with maybe 10 or 15 acres of coffee.

So, in each particular case you have to tailor your agrarian reform to the type of cultivation that you are dealing with. We have found that basically the agrarian reform problem involves a lot more than simply land tenure. It involves technology; that is, agricultural research and agricultural extension so people will know how to apply the research. It involves supervised agricultural credit. It means that you must have good farm-to-market roads. You must have a good marketing system, preferably through co-ops, because otherwise the farmers will not be able to get what they should for their crops, because middlemen will intervene, et cetera.

Now, we are trying to attack that problem on all of those fronts and that is why it takes quite a bit of time and that is what this report implies. Some progress has been made, but not as much as we would like, because of the great complexity of the problem.

PRIVATE LAND REFORM PROGRAMS

Mr. CONTE. United Fruit has done a marvelous job there in land reform in Latin America. I saw a television picture where they divided up the land and contracted for the products.

Mr. MOSCOSO. This has taken the wind out of the sails of a lot of Communist propaganda. Now we are having a reaction in some of the countries in Latin America where this contract procedure has been installed. In other words, extremists are going around saying that this contractual system of agricultural development is bad for the workers, et cetera. Obviously, that is not the case. This is a very good way of putting the land in the hands of the worker and then getting a large company like United Fruit or Standard Fruit to guarantee prices and to buy from them the produce they are able to cultivate.

Mr. CONTE. Mr. Ambassador, you are familiar, are you not, with the land reforms of the Catholic Church in Chile?

Mr. MOSCOSO. Yes, sir.

Mr. CONTE. I have an article here from the Register saying this took place over a 2-year period and it is highly successful in land reform.

Mr. MOSCOSO. They are doing very well. The experiment is with a small group. I wish we could get a broader experience before we say that it is as exactly as successful as it has been in the case of the church. Again, this is a case where you have a special group which not only has the incentive of owning their own land, to motivate them, but also the desire to collaborate with an activity of the Catholic Church, of which most of these farmers are members.

We are watching that very closely. We are watching the program the church will initiate, hopefully, soon, in Ecuador. We are happy about the fact that the church has manifested itself in pastoral letters backing land reform in Peru, Paraguay, Brazil, and in Chile.

AGRARIAN REFORM IN CHILE

Mr. CONTE. Has this had any effect on some of the large landowners in Latin America?

Mr. MOSCOSO. It has had. For instance, over the weekend—and I am sure the chairman will say, well, this isn't exactly land reform, all you are getting is a law—but over the weekend, the Chilean Congress approved finally the constitutional amendment which will permit the Government of Chile to make a small downpayment for taking over these large farms and pay the rest over a period of years with long-term bonds.

Now the Constitution of Chile did not permit this to happen. Obviously the agrarian reform law was meaningless until this constitutional amendment was obtained and that was approved by the Chilean Government. Now it has to go through the procedures of final approval by the two Houses of Congress, but the initial approval has been given. So another step in this very tedious and prolonged fight to get agrarian reform in Chile has been taken.

AMERICAN UNIVERSITY CONTRACTS IN LATIN AMERICA

Mr. CONTE. Mr. Ambassador, you mentioned the college program that you had in your Alliance for Progress program in Latin America. I recently read where Columbia University is down there working with the Peruvian Ministry of Education.

Mr. MOSCOSO. That's right.

Mr. CONTE. That this was the first project for Columbia University of this type in Latin America. Could you elaborate on that?

Mr. MOSCOSO. There is a 2-year, $1,187,500 contract to assist the Peruvian Ministry of Education in performing a comprehensive improvement program in education. This is taking the whole field of education, similar to what we have done in the case of Ecuador, with the University of Pittsburgh.

Mr. CONTE. Similar to this?

Mr. MOSCOSO. Similar to this and done before this one.

Mr. CONTE. How are they working out?

Mr. MOSCOSO. In many instances we are just barely starting. In other instances we are starting to get some results.

Mr. CONTE. When you put that in the record, I would appreciate it if you would also put in the dates those contracts were let and when they began actually working.

Mr. MOSCOSO. That will be included.

(The information supplied may be found on p. 2151.)

COMMENTS ON REPORT OF SPECIAL STUDY MISSION TO LATIN AMERICA

Mr. RHODES. Mr. Moscoso, have you yet had an opportunity to comment on the recommendations made in the Special Study Mission to Latin America, made under the chairmanship of the gentleman from Alabama, Mr. Selden?

Mr. MOSCOSO. Yes, sir.

Mr. RHODES. You have commented on his recommendations?

Mr. MOSCOSO. I haven't commented, but we have acted on some of his recommendations.

Mr. RHODES. There are several pages, from 45 through 49 of rather specific recommendations. Could you take each topic and prepare comments for each one so that we can have it for the record? And if you have taken action in response to any of these, we would like to have that, too.

(The information requested follows:)

COMMENTS ON LATIN AMERICAN STUDY MISSION REPORT

The Latin American Bureau was requested to comment on several recommendations of the Selden committee, at pages 45 and 46 of the report of the Special Study Mission to Latin America (Peru, Ecuador, Colombia, Panama, Costa Rica) of the Committee on Foreign Affairs, April 23, 1963, H.R. 223. The committee recommended:

1. "The question of 'bailout' assistance should be carefully reviewed"

The Bureau agrees with the committee's disapproval of bailout assistance which permits Latin American countries to postpone essential self-help and reform efforts to which they have already committed themselves under the Charter of Punta del Este. Hence, it has made every effort in recent months to insure that whatever essential emergency assistance is required be carefully geared to self-help and development efforts of the countries and that such as-

sistance support, rather than substitute for, these essential country efforts. Thus in the case of Argentina, emergency assistance was coordinated with essential country programs. And in the cases, for example, of Ecuador and Brazil, disbursement of assistance designed to relieve temporary emergency pressures was carefully conditioned on and timed with country efforts in such matters as budget discipline and inflation control. The Bureau agrees that, as the Selden committee pointed out, aid should in no case amount to "a reward for fiscal mismanagement."

2. *"In the future, the Executive in its request for grants-in-aid should not imply economic justification when the true basis is political consideration"*

The Bureau agrees that where assistancee is provided for political reasons, it should be justified to the Congress on this basis. However, it must be noted that in many instances the purpose and effect of assistance is mixed. Thus, the best designed forms of assistance for purposes of economic development should have a favorable political impact in the country while, at the same time, assistance geared to political developments, such as elections, ought as well to lay a groundwork for economic development.

3. *"The agencies responsible for the disbursement of Alliance for Progress funds should adhere to strict accounting procedures and exercise keen vigilance over the use of these funds"*

The Bureau is making every effort to improve its accounting procedures and fund control. In this respect, it cooperates fully with the developing programs in this area by the Inspector General's office and the General Accounting Office. Thus, for example, in cases of capital assistance projects no disbursement is made except on the basis of a certification that expenses have been legitimately incurred by the borrower for actual work performed on the project and this certification is performed by a contractor who: (a) has a reputation for firm integrity in the profession; (b) is approved by the agency; (c) is totally independent of the borrower.

4. *"Publicity programs for the Alliance for Progress should place more emphasis on acquainting the Latin American people with their own responsibilities under the Charter of Punta del Este"*

Two years' experience under the Alliance has clearly demonstrated that the ultimate responsibility for its success rests with the people of Latin America, and by the same token, it is essential to create a consensus within Latin America in support of the essential self-help and reform efforts of the Latin American countries set forth in the Charter of Punta del Este. Thus, major efforts have been made to tailor the information service of the United States to this purpose. In addition, however, because of the desirability of having such an information program flow from a source more identified with Latin America, the Organization of American States has instituted a major effort of public information on the Alliance goals, and the United States has supported this by a grant of some $1.6 million. This OAS program concentrates on the self-help and reform principles of the charter, the experience and record of the various Latin American countries in meeting their commitments and the essentiality of self-help and reform to economic and social development.

5. *Greater effort should be made to assure coordination among the various United States and international lending agencies*

Effective coordination of all capital assistance programs is essential to the success of the Alliance, as the committee pointed out. It was recognized some time ago that the efforts toward coordination in the early months of the Alliance were not adequate. For this reason, a small special office has been created in the Department of State, working with not only the U.S. Coordinator of the Alliance for Progress but as well the American Republics Affairs Bureau of the State Department and the Treasury Department, to maintain day-to-day liaison and coordination with the World Bank, the Export-Import Bank and the Inter-American Development Bank. The early results of the work of this new office are encouraging. Coordination of U.S. efforts through the National Advisory Council has also been effective.

6. *"Private enterprise should be encouraged."*

Here, too, the experience of the first 2 years has demonstrated that special efforts must be concentrated in private enterprise. Efforts are being made in two major areas. The Inter-American Economic and Social Council, both

at its plenary meetings and at the meetings of the Special Committee No. 4 on Industralization and Private Enterprise, has urged greater participation of the private sector in country development programs and investment. At the same time, the Bureau has intensified programs in the areas of investment surveys and investment guaranties. In addition to the $260 million of guaranties issued for Latin America through fiscal year 1963, over $2.7 billion in guaranties were pending at the end of June. A special office of private investment is being established in the Latin American Bureau to concentrate exclusively on improving the role of private enterprise in the development effort. A substantial portion of the loans made by AID under the Alliance have gone to intermediate credit institutions which aid the small private homeowner, businessman, and farmer.

In a Vision special report on Latin America, it was said that the "awakening is at hand. Governments * * * have come to the conclusion that public money * * * is nowhere near enough to do the job. Most of it must be done by local entrepreneurs and financiers, men whose collective efforts account for roughly 60 percent of gross annual investment in Brazil and Mexico and 70 percent in Argentina and Colombia."

"The manufacturing industry has set a fast pace," says Vision, "particularly in Mexico, Brazil, and Argentina. In 1961, manufacturing output increased twice as fast as total product. Fastest growing of all are the mechanical industries" (transportation equipment, appliances, spare parts, electrical equipment, etc.), "which registered a cumulative annual gain of 12 percent during 1957–61."

United States and other foreign investment too has been drawn more into the development process. Vision points out that there is a trend away from investment in those industries subject to expropriation and discriminatory taxation (such as mining and utilities) and into manufacturing. "U.S. investments now account for from 20 to 25 percent of total manufacturing output today, and the proportion is rising steadily in many countries." Many U.S. investors, whose activities are not widely publicized, have been expanding Latin American activities, despite apparent political obstacles. West Germany, "Europe's fastest moving contender in the quest for Latin American markets," had direct private investment in Latin America totaling $300 million by the end of last year. EEC and Japanese private enterprise participation is also increasing.

7. "*Encouragement of credit facilities should be given serious consideration in U.S. aid programing*"

Improvement of credit facilities has received increased attention by the Bureau within the last year. Thus, the Bureau has placed special emphasis on the development of industrial and other development banks in the various countries in Latin America and has made a number of loans for this purpose. It recognizes, however, that U.S. aid is obviously inadequate to the total need for development credit in Latin America and as a result has concerned itself with the efforts of the Latin American countries in generation of investment capital. For example, Venezuela has recently announced the formation of a large industrial development bank, to be owned 15 percent by the Government and 85 percent by private companies, and capitalized in the amount of $9 million to make loans and purchase equity securities in new industries essential to Venezuela's development.

Mr. RHODES. That is all, Mr. Chairman.

Mr. PASSMAN. Thank you very much, Mr. Rhodes.

Mr. Administrator, I find that when people are underprivileged, maybe underclothed, underfed, having to exist on a very low standard of living, that many times they are resentful if they have those around them who are living, as we say, "high on the hog." Do you concur that they feel that way?

Mr. MOSCOSO. That's right, sir.

EXPENSES OF IDB MEETINGS

Mr. PASSMAN. How are we able to cover up the types of clambakes you have when this Development Bank meets and maybe will dissi-

pate—even before they collected a dime or received any interest—$18,000 for whisky; the next year, up to $207,000 for their meeting, and then the next year $226,000?

How do the people who are observing these carryings-on and spending this money take it?

Mr. Moscoso. The last one I attended was in Venezuela and President Betancourt, who is well known as a liberal and a man of the people and has the backing of the peasants and of the workers and so forth, attended every session. He was present——

Mr. PASSMAN. I am talking about the people, not the ruling body. How do the people outside, without shoes on their feet and without clothes on their backs, without shelter over their heads, feel when you have a meeting there that lasts a week and you spend $226,000, and doubtlessly $25,000 of it for refreshments?

Mr. Moscoso. Mr. Chairman, in the first place, I must indicate that this is a regular yearly meeting of the Inter-American Development Bank——

Mr. PASSMAN. It started as soon as you created the Alliance for Progress and the Inter-American Development Bank. First they spent $18,900 for a representation allowance before they had disbursed one dime out of the fund; is that not correct?

Mr. Moscoso. Yes, because——

Mr. PASSMAN. And again before they disbursed one dime I think three of these gentlemen made a little trip to Europe—let us say they were gone 3 or 4 weeks—and they spent $12,600. I say that is actually living just a little high, especially when it is coming out of a fund that was created to alleviate poverty.

Mr. Moscoso. If you mean——

Mr. PASSMAN. Yes; I know they got one country to commit themselves to one small loan.

Mr. Moscoso. No; what I mean to say was that nothing was spent from the social progress trust fund for the meeting.

Mr. PASSMAN. It came out of the other fund, in the Inter-American Development Bank and the United States contributed it. It was all intended to help our friends in Latin America. Is that correct?

Mr. Moscoso. That's right, sir.

Mr. PASSMAN. How much do you have in the aid program for representation allowance?

Mr. TENNANT. $184,900.

Mr. PASSMAN. So the amount for this 1-week clambake in Latin America——

Mr. ROONEY. What do they serve? What is the menu? How could it run up this high? Do you have any such information?

Mr. Moscoso. We have a breakdown on it.

Mr. PASSMAN. I am going to get down into it——

Mr. ROONEY. I mean a real breakdown. A real breakdown.

Mr. PASSMAN. We have even asked for sundry items.

Mr. TENNANT. There is $184,900 representation allowance. There is a small item of entertainment, which is $25,000, if I remember correctly.

Mr. ROONEY. $25,000 here in the United States?

Mr. PASSMAN. To entertain dignitaries around the world, it is what amount?

Mr. TENNANT. $184,900.

Mr. PASSMAN. That is representation allowance for all aid programs, worldwide for 1 year? Not the United States?

Mr. TENNANT. Not the United States; that is correct. Overseas.

Mr. PASSMAN. There is one little representation allowance part of this $143,000 expense account that amounted to 10 percent in 1 week. The total amount in the entire aid program for all the world for 1 year. Is that correct.

Mr. FORD. What was that, Mr. Chairman?

Mr. PASSMAN. Your allowance for the first clambake they had in this Inter-American Development Bank outfit was $143,358 for a week. The representation allowance, of what they actually spent, was $17,745. That is almost 10 percent of the total amount of the representation allowance for the entire aid program, worldwide for 1 year, for fiscal year 1963; is that correct?

Mr. TENNANT. That is correct.

Mr. PASSMAN. Now we have another little item, here: "Sundry expense." They are going to itemize that account for us. We complained so much last year about the representation allowance we find that the representation account for fiscal year 1963 drops substantially, but the sundry account went up in about the same proportion. Is that right?

Mr. TENNANT. That is approximately correct, sir.

Mr. PASSMAN. We found the representation account went down, but the sundry account went up about the same amount. We are going to look at that sundry account.

Mr. ROONEY. When you get this information, Mr. Chairman, I wonder if we could have it itemized, showing how many dinners at how much a setting and how many cocktail parties at how much per head?

Mr. PASSMAN. We have been trying to get into this thing. We do want that information.

(The information supplied follows:)

INTER-AMERICAN DEVELOPMENT BANK

Special report of expenses—1961, 1962, 1963 Board of Governors

	Rio de Janeiro 1961 expenses	Buenos Aires 1962 expenses	Caracas 1963 estimated final expenses
1. Travel	$92,698	$133,220	$115,000
2. Representation	17,745	10,899	15,617
3. Local personnel	19,638	27,685	41,586
4. Printing	6,859	6,711	8,099
5. Rental of equipment	1,560	6,960	8,622
6. Hotel deposits			700
7. Contingencies and miscellaneous expenses [1]	4,858	22,026	12,000
Total	143,358	207,501	201,624

[1] See attached schedule:

	Rio de Janeiro 1961 expenses	Buenos Aires 1962 expenses	Caracas 1963 estimated final expenses
Listing of expenses charged to item 7—Contingencies and miscellaneous expenses:			
A. Transportation of records and documents	$2,644	$8,262	$4,200
B. Sundry expenses:			
1. Construction of exhibit		3,647	1,500
2. Other construction		494	
3. Film of meeting and photographs		1,353	2,253
4. Travel of local personnel to Washington, D.C., and return		3,975	
5. Refreshment stand (coffee and cokes)		150	530
6. Local travel		350	185
7. Installation of equipment and signs		1,481	1,000
8. Various other supplies and services		2,314	2,332
9. Travel of Bank Governor for consultation in Washington, D.C.	2,214		
Total, sundry expenses	2,214	13,764	7,800

Mr. PASSMAN. The first country in your area, Mr. Administrator, for which you are requesting $———, is Argentina; is that correct?

Mr. MOSCOSO. That's right, sir.

Mr. PASSMAN. We shall start on that examination tomorrow afternoon beginning our session at 1 o'clock.

TUESDAY, AUGUST 6, 1963.

Mr. PASSMAN. The committee will come to order.

Yesterday we had finished with the general questions and stated that we would begin examining concerning the program for each nation in your area.

ARGENTINA

The first country in the Latin America area is Argentina, for which you are requesting $——— to be obligated in fiscal year 1964.

How much did you request of the Congress for Argentina for fiscal year 1963?

Mr. MOSCOSO. $103,800,000.

Mr. PASSMAN. How much did you obligate?

Mr. MOSCOSO. $78 million.

Mr. PASSMAN. Yesterday you told us, I believe, $108 million.

Mr. MOSCOSO. I am sorry. We had the wrong sheet before us.

Mr. PASSMAN. Please get the right sheet. What amount did you request last year?

Mr. MOSCOSO. That we had correct. It is $103,800,000.

Mr. PASSMAN. What amount did you obligate?

Mr. MOSCOSO. We obligated $78 million.

Mr. PASSMAN. Let us have another look. You have given us three figures now. Yesterday you told us it was $108 million.

Mr. MOSCOSO. Yesterday we added $30 million of the Social Progress Trust Fund, the Inter-American Development Bank figure, which is not included in the request we made last year.

Mr. PASSMAN. You did, however, obligate $108 million to Argentina out of the AID program for fiscal year 1963.

Mr. MOSCOSO. $78 million out of the AID program and $30 million out of the Social Progress Trust Fund.

Mr. PASSMAN. Who puts up the Social Progress Trust Fund?

Mr. MOSCOSO. The United States.

Mr. PASSMAN. The taxpayers?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. It is still aid, is it not? You people come in here with this thing scattered all over the waterfront and it is like pulling a tooth without novocaine to figure out what you have done. Actually you obligated $108 million to Argentina.

Mr. MOSCOSO. That's right.

UNLIQUIDATED BALANCE

Mr. PASSMAN. What sum do you have on hand, unliquidated for Argentina from the 16 spigots of foreign aid?

Mr. MOSCOSO. $81,602,000.

Mr. PASSMAN. Is that all spigots, Public Law 480 and what have you? If you will, put it all together.

Mr. TENNANT. The figure of $81,602,000 includes the mutual security program and Public Law 480. The figure of $81,602,000.

Mr. PASSMAN. Does it include military aid?

Mr. TENNANT. It does include military.

Mr. PASSMAN. $81,602,000?

Mr. TENNANT. That is correct.

Mr. PASSMAN. You really have, based upon your fiscal year 1964 request, more than a year's supply of funds on hand; is that correct?

Mr. TENNANT. That is correct.

TOTAL AID TO ARGENTINA

Mr. PASSMAN. What has been the total amount given to Argentina since the inception of the program?

Mr. MOSCOSO. $703,900,000.

DOMESTIC REVENUES

Mr. PASSMAN. That is a sizable sum. I believe this is the country which in the fiscal 1963 justification you predicted that the total domestic revenues would be $1,537 million. That was an estimate, of

course. The actual collections amounted to only $880 million, so the collections are only about 50 percent of the stated estimate. Then, by the same token, as the aid gets bigger, it would appear that their budget position gets worse, because they had a $141 million deficit in 1960 and in 1961 it went up to $150 million. In 1962 it went up to $500 million. They are copying one thing we do and that is increasing the budget deficit each year.

RENEGOTIATION OF ARGENTINIAN DEBT TO EUROPEAN NATIONS

Page 17 of the justification indicates that Argentina is arranging to reopen debt negotiations with European creditors and that the United States has some interest in this matter in order to avoid the possibility of diversion of U.S. assistance to the payment of Argentina's European obligations. Is that the reason we have an interest?

Mr. Moscoso. Yes.

Mr. PASSMAN. I think the distinguished Secretary of the Treasury, on a direct exchange across the table, said that if we provide credits or dollars to a nation they can use that money to pay for their imports and that leaves to them the dollars they earn to do with whatever they want to do; for example, to buy gold or to speculate.

So if we want to be realistic about this matter, to follow that reasoning, if we are pouring aid into Argentina and they take the aid we have given them to actually pay for their imports—speaking of the Government now—and to finance things they would normally finance themselves, that lets them do what they care to with the revenues from their exports. They can buy gold, for example—I believe it was $116 million in 4 years there. Or else they can take the money and pay debts. As we have no direct control over their internal affairs, there is no way that you can keep them from reshuffling their budget so as to, if not directly, take aid dollars and pay European debts.

Mr. Moscoso. That could happen, Mr. Chairman——

BALANCE-OF-PAYMENTS SUPPORT

Mr. PASSMAN. As you do not have any internal control over their affairs and if the pressures become great enough from the European creditors, in all probability it would happen. How much budgetary support have we given Argentina in this program; that is, what we call cash payments?

Mr. Moscoso. For budgetary support we have not given them any.

Mr. PASSMAN. Let us get it for balance-of-payments purposes, for export commodities, or for cash support. It is all the same thing under different names. It can be used for the same purpose.

Tell us the total amount.

Mr. Moscoso. We have given them for balance-of-payments purposes, $24,750,000 in 1959 and $20 million in 1962.

Mr. PASSMAN. What years did you state?

Mr. Moscoso. 1959.

Mr. PASSMAN. 1959 calendar year?

Mr. Moscoso. March 1959.

Mr. PASSMAN. That was to help their balance-of-payments situation?

Mr. Moscoso. Balance of payments; yes, sir.

Mr. PASSMAN. That year we had a deficit in our U.S. balance of payments of $3,700 million.

What was the next year?

Mr. MOSCOSO. The next year is 1962.

Mr. PASSMAN. What did you give in 1962?

Mr. MOSCOSO. $20 million.

Mr. PASSMAN. That year we had a balance-of-payments deficit of $2,200 million, and it would have been close to $5 billion in all probability if we had not done a lot of outside maneuvering.

Mr. MOSCOSO. Excuse me, Mr. Chairman. There is also a loan made in June 1963, also for $20 million, for balance of payments.

Mr. PASSMAN. In 1963—calendar year?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. It is now estimated that we are going to run a balance-of-payments deficit of around $4 billion this year.

Mr. MOSCOSO. In the case of Argentina they had a very substantial trade deficit with us. A very substantial one.

Mr. PASSMAN. You know, Mr. Administrator, we have tried to influence those people not to take dollar credits they had in the United States—they had dollar credits earning a nice rate of interest—and use them otherwise, but like most of the nations they seem to be losing faith in our ability to manage successfully our monetary situation.

EXPANSION OF SPECIFIC RISK GUARANTEE AGREEMENT

On page 19 of the justifications it is indicated that you were seeking to conclude and expand a specific risk agreement with Argentina. Has this agreement been signed?

Mr. MOSCOSO. It has been signed.

CATEGORIES OF FISCAL YEAR 1964 PROPOSED DEVELOPMENT LENDING

Mr. PASSMAN. Page 19 of the justifications indicates, by categories, the purposes for which you propose to approve development credits. On what basis have you been able to allocate, specifically, your proposed development credit program, by categories?

Mr. MOSCOSO. This has been based on the country program submitted by our mission. This is the best estimate of our technicians and the Embassy, working with Argentine Government officials as to their credit requirements.

Mr. PASSMAN. I thought the governments themselves were supposed to submit these applications and not the country team. Are we actually in there running their business?

Mr. MOSCOSO. The countries present the applications, but we, in turn, have to assist——

Mr. PASSMAN. To whom do they present the applications?

Mr. MOSCOSO. They present the applications to the AID mission.

Mr. PASSMAN. We were told last year you did not even let the countries know we planned a program until you got the money.

Mr. MOSCOSO. We don't discuss our specific programs.

Mr. PASSMAN. How can you work up a program without letting the government in on it? You work them up and then you let the government know what you worked up?

Mr. Moscoso. We work on sectoral programs to develop the information in order to be able to have an idea of what may be possible.

Mr. PASSMAN. Do you meet with the people prior to the time you get the money?

Mr. Moscoso. We do not meet.

Mr. PASSMAN. The AID mission knows the projects and about the level?

Mr. Moscoso. More or less the projects which may be presented.

Mr. PASSMAN. Did I make a statement of fact, that you work it up and then when you get the money, you discuss the plan with the country?

Mr. Moscoso. No, sir, we don't.

Mr. PASSMAN. That is, I think, what you said.

Mr. Moscoso. The country comes to us with a request for credit.

Mr. PASSMAN. You said you did not let the people in the country know anything about it until you got the money.

Mr. Moscoso. That's right. They don't know what level we are——

Mr. PASSMAN. And they do not know what projects or programs are being considered?

Mr. Moscoso. No.

Mr. PASSMAN. You said it again.

I just wanted to confirm it twice, instead of one time.

LIVESTOCK IMPROVEMENT PROJECT

How much did you request and justify for the livestock improvement project, at page 37, last year?

Mr. Moscoso. $1 million.

Mr. PASSMAN. That is the sum you requested last year?

Mr. STERNFELD. At page 47 of last year's book.

Mr. PASSMAN. How much did you obligate to the project in fiscal year 1963?

Mr. Moscoso. $1 million.

NORTHERN REGIONAL DEVELOPMENT PROJECT

Mr. PASSMAN. I notice that you are proposing to initiate a new project which is entitled "Regional Development," at a cost of $200,000. Is that correct?

Mr. Moscoso. That is correct, "Northern Regional Development."

Mr. PASSMAN. What is the cost to complete this project?

Mr. Moscoso. The total cost is $200,000 for 1964.

Mr. PASSMAN. What is the total estimated cost to bring this project to completion?

INCREASED COST OF LIVESTOCK IMPROVEMENT PROJECT

While you are trying to find it, tell me if I am correct about this: On this livestock improvement project, 501–AA–13–AA–6, we look in your 1961 project book, and the progress report, U.S. participation, fiscal year 1961, and you stated that you would need $60,000 for fiscal year 1962 and that you would need $40,000 for fiscal year 1963, making an amount of $100,000 and that this would phase out the project.

However, instead of phasing it out on those two figures, you now ask for $1 million for fiscal year 1964.

Mr. Moscoso. Mr. Chairman, I am sorry, but I am not able to follow you, because I don't have the same figures here.

Mr. TENNANT. You are reading from the fiscal year 1962 presentation book, sir?

Mr. PASSMAN. That is correct.

Mr. TENNANT. Mr. Moscoso has only the fiscal year 1963 presentation book, and the 1964.

Mr. PASSMAN. Let me say again that you wanted $60,000 for fiscal year 1962, $40,000 for fiscal year 1963, and that would phase the project out. Instead, however, of phasing it out with a total of $100,000, you have phased it up to an additional $1 million.

Mr. Moscoso. I can see where that could happen, Mr. Chairman——

Mr. PASSMAN. It has happened. You increased it 900 percent, on a project you were going to phase out. You phased it up instead of phasing it down.

How much are you requesting for fiscal year 1964?

Mr. Moscoso. $475,000.

Mr. PASSMAN. How much do you have on hand, unliquidated?

Mr. Moscoso. $760,000.

Mr. PASSMAN. The amount on hand is 700 percent of the amount that you originally said would phase out the project.

Why did this thing catch fire and skyrocket on us?

Mr. Moscoso. It became evident, Mr. Chairman, this was going to require more funds and time than originally estimated——

Mr. PASSMAN. Ten times more, I believe. In 1963 you allocated 10 times the amount of funds you had allocated in the 2 previous fiscal years, 1961 and 1962. It simply means that in all probability they did not know what they were doing to start with.

Is raising livestock a new enterprise in Argentina?

Mr. Moscoso. No. It is one of the——

Mr. PASSMAN. We bring some of their experts to this country to help us, do we not?

Mr. Moscoso. We are sending them experts.

Mr. PASSMAN. They are sending people to help us, and they are quite successful in that field, are they not?

Mr. Moscoso. I think they have shown a need for assistance.

Mr. PASSMAN. That is one of their specialities, beef and livestock production is it not in Argentina?

Mr. Moscoso. That's right. Sugar is the principal industry in Cuba and Hawaii is a much more efficient producer than Cuba.

Mr. PASSMAN. At page 386 of your justifications, the right-hand side, paragraph 2:

> The original estimate for 3 years * * *—

let us get down to the end. You said:

> is estimated on the following basis: fiscal year 1962, $60,000; fiscal year 1963, $40,000.

It says here that a partial implementation will probably require U.S. participation until the end of fiscal year 1963. Then we used the two figures of 1962 and 1963 for a total of $100,000 and then you jump it up to $1 million. Now you have $760,000 on hand and you

are asking for $475,000. The most permanent thing in the AID Agency is a temporary project.

Mr. Moscoso. I am sorry, I was not at that time in the Agency, Mr. Chairman, and I had nothing to do——

Mr. PASSMAN. It is still not too late to deobligate that money and withdraw this request. If they meant what they said in the prior year justification——

Mr. Moscoso. I can see, Mr. Chairman, in the commencement of a program, a person, no matter how well qualified, without full knowledge of the country, long-term needs, may not be aware of the total of the effort required.

Mr. PASSMAN. Why do you want to start a project then and come before the committee and say, "This is it. Give us $60,000 this year, $40,000 next year, and we will wash it out."

But then you come in and ask for a 1,000-percent increase in funds.

This is a blank check, and we have no control over it. You get the money and you do whatever you please with it. You have that right under the law and if you want to triple a project you have a right to do that. If you want to continue it indefinitely you have a right to do that. We have no way to stop it.

To completion, what will be the cost?

Mr. Moscoso. We are trying to get the information for you so we can give it to you this same afternoon.

Mr. PASSMAN. Thank you, sir.

Mr. Moscoso. I grant you, Mr. Chairman, that it is a pretty difficult thing to do, except in the case of certain projects.

Mr. PASSMAN. We have two standards, one for America and one for foreign nations. This is no indictment of you, sir, but the law gives you that exception. This double standard has gotten us so fouled up that it does not seem we will ever be able to straighten it out. You have a dual standard, one for America and one for foreign projects.

NORTHERN REGIONAL DEVELOPMENT PROJECT

Now, on this $200,000, did you ever find that information for us?

Mr. Moscoso. We don't have the information, Mr. Chairman.

Mr. PASSMAN. How do you expect us to recommend the money?

Mr. Moscoso. We can get it for the record, Mr. Chairman.

Mr. PASSMAN. Some of you are bound to have this information. You are starting a new project to be known as the Northern Regional Development at an intial cost of $200,000. Now, what is the Northern Regional Development Association?

Mr. Moscoso. This is a project to increase agricultural exports and production, which is the primary goal of the Argentinian program. This, region, which is relatively underdeveloped, offers the best chance for a rapid increase in production.

Mr. PASSMAN. If we switched sides at this table, could I talk you into giving me one dollar and a half for a new project which could wind up being 25 times that much?

Mr. Moscoso. I think so. If you asked me, yes.

Mr. PASSMAN. You would not do it on the basis of the information in this book, would you?

Mr. Moscoso. In the first place, I would say, knowing you, that the information that was presented here had been looked into, corroborated, and checked and you were asking me for the smallest possible amount to get the job done.

Mr. PASSMAN. If you ever get on this side of the table, do not give me money on that basis.

You are going to have to find out what it is going to cost us.

CIVIL AVIATION PROJECT

Why do you need $40,000 for contract services for the civil aviation project, at page 39?

Mr. Moscoso. By the way, Mr. Chairman, I think in the case of this project—I am sorry, sir.

Mr. PASSMAN. This is the third one on which you have no information. Do you want to pass this one up?

Mr. Moscoso. Yes.

(The information supplied later follows:)

CIVIL AVIATION

Argentina has presented several proposals for airport construction and navigational and electronic equipment loans. However, there appears to be several overlapping and conflicting aspects in some of these proposals. A private consulting organization will be engaged to render an independent study of existing and proposed airport facilities throughout Argentina to assist the Government of Argentina in rationalizing its civil aviation program. This survey will cost $40,000.

Mr. PASSMAN. What will it cost to complete this project, projecting it through fiscal year 1966?

Mr. Moscoso. We can give you those figures for the record. We are trying to get them for you on the phone, but we will be happy to give them for the record, Mr. Chairman.

Mr. PASSMAN. This is the third one in a row that you do not have any information on.

UNIVERSITY CONTRACTS FOR ASSISTANCE TO HIGHER EDUCATION—ARGENTINA

What new university contracts do you plan to initiate in fiscal year 1964 under the assistance to higher education project, on page 40?

LABOR-MANAGEMENT RELATIONS INSTITUTE PROJECT

Mr. Moscoso. We are considering Wayne State University and the University of Michigan for establishing a labor-management relations institution in Santa Fe.

Mr. PASSMAN. What will they do?

Mr. Moscoso. Primarily to develop a labor-management program which will permit better working relationships.

To provide instruction in modern techniques of labor relations, about which unfortunately the average Argentinian has very little knowledge. This has resulted in innumerable unnecessary strikes and has created difficulties for some of the American companies there, as well as retarding Argentina's development.

Mr. PASSMAN. Can you tell us whether this project is presently in effect?

Mr. MOSCOSO. Yes, it is.

Mr. PASSMAN. How much do you have on hand, unliquidated, to the credit of the project?

Mr. MOSCOSO. $630,000.

Mr. PASSMAN. Does this cover all of Argentina?

Mr. MOSCOSO. The operation is primarily in Sante Fe, but it is for all of Argentina.

Mr. PASSMAN. Will you project the cost of this item to completion?

Mr. MOSCOSO. We don't have it with us.

(The information requested follows:)

ASSISTANCE TO HIGHER EDUCATION IN ARGENTINA

The estimated cost to completion of this project is $3.6 million.

COMMITMENTS FOR CENTRAL HOUSING BANK

Mr. PASSMAN. Page 44 indicates that you have committed $12,500,000 as of July 31, 1962, for the Central Housing Bank. In view of the fact that the Government of Argentina has to take legal and organizational steps to set up savings and loan systems, why do you commit any funds for this credit until these steps have been effected? You cannot enter into a contract. You cannot disburse a nickel of this money, can you?

Mr. MOSCOSO. We signed this contract on June 3, 1963.

Mr. PASSMAN. When did you publish these justifications?

Mr. TENNANT. In February or March.

Mr. PASSMAN. In anticipation you would get this contract?

Mr. MOSCOSO. Yes; that the contract would be signed.

Mr. PASSMAN. You are always trying to get the cart ahead of the horse. You do not wait until you have something of reality. You just project that you are going to get these things and come in and ask for money.

Mr. MOSCOSO. The loan application was approved July 31, 1962.

Mr. PASSMAN. Was that almost a year prior to the time you had legislation?

Mr. MOSCOSO. No; to the signing of the application.

Mr. PASSMAN. All right, sir, what is wrong with my statement? It is either correct or it is not correct; that you approved a $12,500,000 loan 11 months in advance of the signing of the contract—the legislation that made it possible—did you not?

Mr. MOSCOSO. Not the legislation.

Mr. PASSMAN. The Government of Argentina has to take legal commitments and organizational steps to set up a savings and loan system in Argentina, but you approved a $12.5 million loan 11 months prior to the agreement, which was in June of 1963.

Mr. SCHEINMAN. Mr. Chairman, the sheets which are contained in that book with respect to development loans are not specific requests for funds this year. They indicate in this particular case a reservation of development loan funds.

Mr. PASSMAN. Did you obligate the funds last year?

LOAN RESERVATIONS AND OBLIGATIONS

Mr. TENNANT. Technically the funds were obligated. This amount was included in the figure we gave you for obligations and reservations; the figures we give you generally at the end of the year.

Mr. PASSMAN. With reference to the $515 million, did you have the $12.5 million in that account, or in another category? You had $515 million unobligated as of June 30, 1963.

Mr. TENNANT. It was not in that unobligated figure that you are referring to, sir.

Mr. PASSMAN. The figure you gave us on unobligated funds was $515 million-plus, including the revolving fund. Is that figure correct?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. Technically you say this money was not obligated. How much of this kind of thing do we have that could be added to the $515 million?

Mr. TENNANT. With respect to the Argentine loan of $12.5 million in the presentation book, it was "reserved" when the book went to press. However, it was obligated before June 30, 1963.

Coming back to what Mr. Scheinman was saying on loans—this will take me a minute to say.

Mr. PASSMAN. Credits?

Mr. TENNANT. Under the development loan program as stated in the act.

When the loan is approved, we put it in an obligated or reserve status. We treat the terms synonomous. Any time I give you an obligated figure, it includes those loan reservations.

In this case that loan was not in the unobligated——

COMMITMENT IN ADVANCE OF LEGISLATIVE ACTION

Mr. PASSMAN. So far as the Congress is concerned, and the American taxpayers, you had actually obligated $12,500,000 for the purpose indicated in the books, prior to the time the Argentine Government had enacted legislation and set up the organization to create these building and loan associations?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Now, elaborate all you want to.

Mr. MOSCOSO. The elaboration is as follows: We made a condition precedent to any disbursement that the Government of Argentina take all of these legal and organizational steps which would set up the savings and loan system.

Mr. ANDREWS. Did they do that?

Mr. MOSCOSO. They have, yes.

Mr. PASSMAN. Gentleman, do you think possibly that is one reason we have created a monstrosity, an uncontrolled and uncontrollable program? You were so anxious to get these funds in some kind of an obligation status that you obligated $12.5 million for the purpose indicated here prior to the time the Government of Argentina had enacted legislation and set up an organization for this purpose. Is that not actually getting off to too fast a start? What harm would have been done if we had waited until they had passed legislation making

it possible to do these things? Would they not have had a little more respect for us? You could not obligate $12.5 million for an Argentine savings and loan system without those people knowing about it. Should we not tighten up on some of these things?

Mr. SCHEINMAN. Mr. Chairman, in my legal experience I have found many banking institutions make loans with conditions requiring a reorganization of companies——

Mr. PASSMAN. No law in Argentina would permit them to do that and it required an act of the Argentine Legislature before they could form this system. You would not think of doing such a thing in this country, but here you are obligating $12.5 million when you actually did not know whether or not the Argentine Government would ever pass the appropriate legislation.

Let them pass the laws first. These people know you have set the money aside before they passed the law.

Mr. MOSCOSO. The loan was made to the Central Housing Bank, which has existed in Argentina for some time but it does not operate a savings and loan system. We wanted to help the Argentinians to create such a system.

Mr. PASSMAN. Why did you not wait until they enacted the legislation and then made the obligation? You have said it required an act of the Legislature of Argentina.

How many hundreds of millions of dollars around the world do we have that we call obligated when it is not obligated but carried as an obligation waiting for some legislature to act or for some assurance of government that they will implement the program by passing legislation?

You get into a lot of complications on a program of this type. I would think it would require some very astute legal opinions to keep these entanglements straight. Would you agree to that statement?

Mr. MOSCOSO. That is correct.

GENERAL COUNSEL OF AID

Mr. PASSMAN. Who is the General Counsel of AID?

Mr. MOSCOSO. John Wilkins.

Mr. PASSMAN. Is he any kin to Roy Wilkins, the president of NAACP?

Mr. SCHEINMAN. I do not know. We will be happy to check it for you. Mr. Wilkins just received an award.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. SCHEINMAN. On the record, Mr. Wilkins just received an award as one of the outstanding public servants of the United States.

Mr. PASSMAN. Who gave that award to him?

Mr. SCHEINMAN. The President of the United States.

It was the Arthur Flemming Award.

Mr. PASSMAN. I am sure he is a competent attorney. I asked if it would not require some exceptional legal talent to keep these entanglements straight and you said it would, and I asked who your General Counsel is and you said John Wilkins, and he is the brother of the president of the NAACP, is he not?

Mr. ANDREWS. What is the basis of the award?

Mr. TENNANT. I believe the award was given by the Civil Service Commission and the Junior Chamber of Commerce of the District of Columbia. It is called the Arthur S. Flemming Award and honors the 10 outstanding young civil service people under age 40.

Mr. Wilkins was Mr. Rubin's assistant.

Mr. PASSMAN. Anyway, it takes a person with considerable legal knowledge to pass on these complicated contracts?

Mr. SCHEINMAN. It is a very difficult job.

Mr. PASSMAN. And I asked what the name of your General Counsel is and you said John Wilkins. I believe he is a graduate of Harvard. And I asked if he is related to Roy Wilkins, the president of NAACP.

Mr. MOSCOSO. I said I did not know.

Mr. PASSMAN. I believe he is the brother of Roy Wilkins, the president of NAACP.

Mr. SCHEINMAN. We will be happy to check that.

(Information subsequently supplied follows:)

Mr. John R. Wilkins, General Counsel, Agency for International Development, is not related to Mr. Roy Wilkins, executive secretary, NAACP.

PROJECT COMPLETION COSTS

Mr. MOSCOSO. Mr. Chairman, I have the figures on the cost of these two projects.

Mr. PASSMAN. There were three of them.

Mr. MOSCOSO. The livestock improvement project is estimated to cost $4,087,000 from its beginning to completion.

Mr. PASSMAN. The original estimate of the cost was $565,000 and in 1961 you indicated it would need an additional $100,000. Now you tell us it will cost $4,087,000. I believe that is a 700 percent increase over the original estimate.

Mr. MOSCOSO. The second project, the northern regional development project, is estimated to cost $1,160,000 to completion in 1968.

And the third project, civil aviation, it is estimated will have cost $1,616,000 from its beginning in 1958 to completion in 1966.

ORGANIZATION OF STAFF OF GENERAL COUNSEL'S OFFICE

Mr. ANDREWS. What is the size of your legal staff? In addition to the General Counsel, how many assistants are there?

Mr. SCHEINMAN. The General Counsel's Office of the Agency is organized with a central staff and then two or three attorneys are assigned to each of the four regions to assist the Assistant Administrator, such as Mr. Moscoso, in the particular problems relating to their area. I will be glad to provide the details.

Mr. ANDREWS. I would like to know the total number of lawyers.

Mr. SCHEINMAN. In legal positions?

Mr. ANDREWS. In legal positions.

Mr. SCHEINMAN. Many of us, like myself, are not in legal positions.

Mr. ANDREWS. Are you not in the General Counsel's Office?

Mr. SCHEINMAN. No; the Legislation Presentation Office is a part of the Program Coordination Staff of the Agency.

Mr. ANDREWS. I would like to know the number of attorneys doing legal work in your agency.

Mr. PASSMAN. If you will, supply a statement as to the total personnel under the General Counsel and then their positions, by category. Give us their civil service ratings and their salaries.

Mr. RHODES. And their names, of course.

Mr. PASSMAN. That will not be a difficult job, will it?

Mr. SCHEINMAN. No, sir.

Mr. PASSMAN. Give us the names of all personnel under the General Counsel, their position, their grade, and their salary, and on a separate page indicate those in the regional offices.

Mr. SCHEINMAN. We will be glad to supply that.

(The information supplied follows:)

ROAD PROGRAM

Mr. PASSMAN. Page 45 indicates that you are committed to $30,500,000 as a credit for the road program in Argentina on the same soft terms. Page 45 also indicates that additional financing for the same road is being done under the World Bank credit approved in June of 1961.

Why do they need to get a line of credit approved at both levels, the World Bank as well as the AID program?

Mr. Moscoso. This is a major program of the Argentine Government for which they have sought major external assistance. Eventually it is estimated it will cost close to $690 million. The $30.5 million is AID's participation with IBRD in the construction of a part of this program.

Mr. PASSMAN. What are the terms of the World Bank loan?

Mr. Moscoso. The World Bank is providing for this particular project $35 million.

Mr. PASSMAN. At what rate of interest?

Mr. Moscoso. The World Bank is 5½ percent. That is the usual rate.

Mr. PASSMAN. And what are the terms?

Mr. Moscoso. The general terms.

As long as 25 years.

Mr. PASSMAN. What are the terms on this loan?

Mr. Moscoso. We do not have it, Mr. Chairman.

Mr. PASSMAN. But it is at 5½ percent interest?

Mr. Moscoso. That is the usual rate.

Mr. PASSMAN. And the general terms are 40 years, no interest, and a 10-year grace period under the AID program?

Mr. Moscoso. That is right.

Mr. ANDREWS. Mr. Ambassador, I notice you have a 10-year road program which is estimated to involve a total expenditure of $690 million?

Mr. Moscoso. That is right.

Mr. ANDREWS. How much of that amount do you anticipate AID will furnish under these soft-term loans?

Mr. Moscoso. We have not made an estimate of our further participation in this program.

Mr. ANDREWS. You will have to participate, will you not, in the future if the program is to be completed?

Mr. Moscoso. If the program is fully developed and if they meet our criteria, yes, we may participate. Argentina will provide $160 million of financing for projects included in this program. In other words, they are also providing substantial sums in participation.

Mr. ANDREWS. But this $690 million figure I mentioned is being considered by AID and the World Bank?

Mr. Moscoso. This is a total for the 10-year Argentine program. We are not committing ourselves to this 10-year program.

Mr. ANDREWS. Could Argentina support a $690 million road program over a 10-year period without U.S. assistance?

Mr. Moscoso. If they got all the foreign exchange assistance they needed from the World Bank, they would not need it, but I doubt they can get it.

Mr. ANDREWS. If they are to spend $690 million in the next 10 years on roads in this program you outline on page 45, they will have to look to AID and the World Bank for financing?

Mr. Moscoso. The World Bank and/or AID.

FINANCING OF 10-YEAR ROAD PROGRAM

Mr. ANDREWS. And we are told this program will last 10 more years; therefore we can look forward to financing most if not all of the $690 million road program over the next 10 years?

Mr. Moscoso. No, sir. I have said repeatedly we are the lenders of last resort. It will have to be proven they cannot get the financing from some other sources.

Mr. ANDREWS. At the moment they are getting $30.5 million from AID and $35 million from the World Bank so at present it is almost 50–50?

Mr. Moscoso. But they are putting in $160 million in that program.

Mr. PASSMAN. Who is putting in $160 million?

Mr. Moscoso. Argentina.

Mr. ANDREWS. But as I understand it, it is a $690 million program contemplated over the next 10 years, $30.5 million of which is put up by AID and $35 million by the World Bank?

Mr. MOSCOSO. That is part of the $690 million, as is the Argentine's current input.

Mr. ANDREWS. All right.

Mr. PASSMAN. Where is this road to be built, in what country?

Mr. MOSCOSO. In Argentina.

Mr. PASSMAN. Out of a $690 million program you had to say Argentina will provide the equivalent of $160 million for financing other road projects, including the 10-year highway program. It could mean labor or crushed rock or anything?

Mr. MOSCOSO. That is right; they can contribute such things to this program.

Mr. PASSMAN. But they are the recipients of the aid and all they have to do is knock the rocks down and they might not be contributing anything but rocks and labor. Does it deal with this specific road project?

Mr. MOSCOSO. That is right. But it does deal with this project.

The $690 million, Mr. Chairman, includes not only the World Bank and any other participation but also Argentine participation.

Mr. PASSMAN. But they are the recipients. They are doing something for themselves.

Mr. MOSCOSO. Yes.

Mr. PASSMAN. They are the beneficiaries of what they do for themselves out of their own economy. In 1961, when the World Bank approved this $35 million loan at 5½ percent did they think Argentina could carry on its own road program?

Mr. MOSCOSO. I beg your pardon?

Mr. PASSMAN. In 1961 the World Bank felt they could afford to approve this high interest rate loan and this loan would enable Argentina to carry on their $690 million road project?

Mr. MOSCOSO. Part of it.

Mr. PASSMAN. You did not have any Alliance for Progress then?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. So when the World Bank approved the loan in 1961 it was based on the fact that Argentina had a strong enough economy so they could carry out this road project?

Mr. MOSCOSO. Yes; this part.

Mr. PASSMAN. But when you got the Alliance for Progress they had to go in for one of these long-term grant credits?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. You answered my question in the affirmative that the World Bank evaluated the financial condition of Argentina and said, in effect, "With this you will be able to carry out the road program."

Mr. MOSCOSO. Since then there has been a deterioration.

Mr. PASSMAN. How do you know they will not deteriorate more? There are peaks and valleys in the economy of this and other countries. This is one case where the World Bank had evaluated the project and thought with this loan they could build the road, and then when they had an economic decline, they came to us for American dollars to bail them out. The economy of Argentina must have been reasonably good in 1961 when the World Bank approved this loan.

Mr. MOSCOSO. May I comment, Mr. Chairman?

Mr. PASSMAN. Certainly.

Mr. MOSCOSO. On the fact that if you add up our aid, the World Bank's participation, and the Argentine Government's participation in this program you will see that we are participating in about 15 percent of the cost of the present program. I do not think that is a very large proportion.

Mr. PASSMAN. You did not have any Alliance for Progress when the World Bank went in and said, "This is what you need to carry out the project." But at a later date they had a slump in their economy and required aid.

Mr. RHODES?

Mr. RHODES. Thank you, Mr. Chairman.

RESCHEDULING OF DEBT REPAYMENTS TO EUROPEAN CREDITORS

Mr. MOSCOSO, on page 17 of your justifications, toward the bottom of the page in the left-hand column are these words:

> Argentina is arranging to reopen debt negotiation with European creditors. The United States will press the Europeans to provide significant debt rescheduling relief to Argentina and to view these debt payments in the context of the total Argentina balance-of-payments problem, in order to avoid the possibility of diversion of U.S. assistance to the payment of European obligations.

What is the status of that?

Mr. MOSCOSO. The Europeans have rescheduled the debts. All the renegotiations of the debts were finished on July 15, just a few days ago.

Mr. RHODES. What effect will that have on the Argentine balance-of-payments situation?

Mr. MOSCOSO. This will take care of it until October. This was also handled through the good offices of the International Monetary Fund.

Mr. RHODES. What European nations are involved in this?

Mr. MOSCOSO. Germany, England, Italy, and France.

Mr. RHODES. No Communist bloc nation?

Mr. MOSCOSO. No.

TRADE WITH COMMUNIST BLOC COUNTRIES

Mr. RHODES. What is the status of the balance of payments between Argentina and the Communist bloc nations?

Mr. MOSCOSO. Argentina exported to the bloc in 1961 $56.9 million and imported $47.7 million.

Mr. RHODES. Is that the last year you have?

Mr. MOSCOSO. We have 6 months of 1962.

Mr. RHODES. Very well.

Mr. MOSCOSO. The exports were $34.3 million and the imports for those 6 months were $10.5 million.

Mr. RHODES. What products are mainly exported from Argentina to the Communist bloc?

Mr. MOSCOSO. I do not have the information but I presume it is wheat.

Mr. RHODES. Will you provide it for the record?

Mr. MOSCOSO. We will provide it for the record.

[1] Imports, if any, from Albania, North Korea, North Vietnam, Outer Mongolia, and Cuba, are not reported in the source.
[2] Less than one-half the unit.
[3] Less than $500.
(—) Indicates none.

NOTE.—Commodities are listed as far as possible in the order of the United Nations Standard International Trade Classification, Revised. Imports are for consumption and are valued c.i.f. Dollar values are reported in the source. Total imports of Argentina for 1961 were valued at $1,459,900,000, of which 3.3 percent was imported from the Sino-Soviet bloc.

Source: Unpublished official trade data.

DECLINE OF GROSS NATIONAL PRODUCT

Mr. RHODES. On page 18 of your justifications you have a table which sets forth the gross national product for various years, and I note in 1959, the average gross national product was 503, in 1960 it was 517, in 1961 it was 536, and in 1962 it fell to 496. What happened in 1962 to cause this sudden decline in the average gross national product?

Mr. MOSCOSO. They had major political difficulties, including the elimination of the elected President from the Presidency and the fall of several Cabinets in succession, with a consequent deterioration and reduction in export volumes. As a result of the economic difficulties quite a few industries closed down and unemployment increased. That, I think, is the major causative factor of this reduction.

Mr. RHODES. I think that is all, Mr. Chairman.

Mr. ANDREWS. Mr. Chairman, I have a question.

Mr. PASSMAN. I yield to Mr. Andrews.

LOAN FOR HIGHWAY IMPROVEMENT PROJECT

Mr. ANDREWS. On page 46 you describe a highway loan for the purpose of improving routes 18 and 126. The amount of the loan is $6 million.

Mr. MOSCOSO. Yes, sir.

Mr. ANDREWS. For a period of 20 years at 3½ percent interest. Is that correct?

Mr. MOSCOSO. Yes, sir.

Mr. ANDREWS. You state on page 46, and I quote:

> Disbursements have lagged. Construction work lagged during the first several months, partly due to failure to receive equipment on time and partly due to the general political and economic conditions. When work fell more than 15 percent behind, the Argentines were told that no disbursements could be made until work was brought up to schedule. AID is now making disbursements on that basis.

Is their production on that basis now?

Mr. MOSCOSO. No.

Mr. ANDREWS. Why is construction work lagging?

Mr. MOSCOSO. For a number of reasons. One of the reasons is the fact there were so many cabinet changes brought about by the fall of the Frondizi government and his imprisonment, and for days on end it was not known who the ministers of government were.

Mr. ANDREWS. You know of no opposition to the road?

Mr. MOSCOSO. It is not a question of opposition to the road. It is a question of the inability of the government to function normally because of political instability.

Mr. ANDREWS. We undertook a road program in Afghanistan and moved the materials for the construction of the road to the border of Afghanistan in Pakistan and the Afghanistan Government refused to open the border and take the material inside the country and the material is still in Pakistan under 24-hour guard, if I recall that situation correctly.

Mr. MOSCOSO. We have no such situation here, Mr. Andrews.

Mr. ANDREWS. There is no opposition to the road program?

Mr. MOSCOSO. No, sir. It is just the political difficulties Argentina has suffered and which, hopefully, will be terminated as soon as the legally elected government takes over in October.

Mr. ANDREWS. That is all, Mr. Chairman.

DECLINE OF U.S. GOLD HOLDINGS

Mr. PASSMAN. On December 31, 1952, we had gold holdings amounting to $23.252 billion.

Gold holdings of all other free nations of the world on December 31, 1952, were $13.028 billion.

On December 31, 1962, the other countries, which 10 years previously owned $13.028 billion of gold, had increased their holdings to $24.658 billion. Uncle Sam, who owned $23.252 billion on December 31, 1952, 10 years later had lost gold to the point that he owned only $16.057 billion.

Not only did the other free nations purchase $7.95 billion of our gold, but they also purchased newly mined gold from elsewhere, which increased their holdings by $11.630 billion, bringing their total holdings on December 31, 1962, to $24.658 billion.

On December 31, 1952, we expressed some alarm over "free world" foreign-held short-term dollar credits amounting to $10,546,100,000. However, "free world" foreigners now have short-term dollar credits for which they could demand gold totaling $24.984 billion, as of last December 31. What do we have to pay them with? About $3 billion. And if we give them the $12 billion required to support our own monetary system we would still be short about $10 billion in gold to meet the claims.

Beginning with 1950 and continuing through 1962, 13 years, our international balance-of-payments position, the net deficit was $24.290 billion, and we had only one credit in the 13 years.

I do not care what Mr. Bell or anybody else says, the foreign aid program has been largely responsible for getting us into this position.

But this year, we will probably have the largest balance-of-payments deficit in the history of America, and you cannot change the situation substantially unless you drastically reduce this giveaway program.

Mr. SCHEINMAN. Mr. Chairman, I think it would be helpful to the committee, in view of your presentation, if the chairman would agree to permit us to supply Mr. Bell's letter to the New York Times for insertion in the record.

Mr. PASSMAN. I have Mr. Bell's letter. If Mr. Bell wants to dispute the figures I have placed in the record, let him come down and dispute them. My statement was factual.

(Discussion off the record.)

BRAZIL

Mr. PASSMAN. The next country in this area is Brazil. For fiscal 1964 the estimate is $———.

How much do you have unliquidated to the credit of Brazil as of June 30 out of the 16 spigots?

Mr. TENNANT. Our estimates were based on a larger program than actually occurred.

Mr. PASSMAN. For the fiscal 1964 program the estimate is $———. What was the total amount of funds on hand as of June 30, unliquidated, to the credit of Brazil out of the 16 spigots?

Mr. MOSCOSO. $171,481,000.

Mr. PASSMAN. Is that from all spigots?

Mr. MOSCOSO. Including Public Law 480, yes.

Mr. PASSMAN. Including military too?

Mr. TENNANT. Yes.

TOTAL AID SINCE INCEPTION OF AID PROGRAM

Mr. PASSMAN. What has been the total amount of aid to Brazil since the inception of the program?

Mr. MOSCOSO. Including the military, $2,123,100,000.

Mr. PASSMAN. What amount did you actually obligate to Brazil through all spigots in fiscal 1963?

Mr. MOSCOSO. From AID, $86,800,000.

Mr. PASSMAN. Is that the amount from all spigots?

Mr. TENNANT. $168.1 million would include AID, Social Progress, and Eximbank.

Mr. PASSMAN. Is not the Social Progress Trust Fund just as much AID as anything else?

Mr. TENNANT. Yes.

Mr. PASSMAN. It is another AID spigot, is it not?

Mr. TENNANT. Yes. The problem is, we were going to give you comparable figures.

Mr. PASSMAN. Is the $——— for fiscal 1964 above that figure? Is not the Social Progress program foreign aid just as much as the Alliance for Progress?

Mr. MOSCOSO. Except that the agency that handles that spigot is not AID.

Mr. PASSMAN. Again, what is the total?

Mr. STERNFELD. Do you wish to include the Export-Import Bank?

Mr. PASSMAN. No. We agreed earlier we would show the Export-Import Bank separately.

Mr. MOSCOSO. $168.1 million for fiscal year 1963.

Mr. PASSMAN. That is the amount you had in fiscal 1963?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Was that your largest aid program in Brazil since the inception of the program?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. It was the largest total?

Mr. TENNANT. The Export-Import Bank is on that sheet, Mr. Chairman.

Mr. PASSMAN. Would this $168 million be the largest aid program for Brazil, if you exclude the Export-Import Bank?

Mr. STERNFELD. 1962 would be larger.

Mr. MOSCOSO. If we exclude the Export-Import Bank, 1962 would be the largest?

Mr. PASSMAN. And 1963 was the next largest?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. On page 25 it is indicated that in 1960 Brazil had a balance-of-payments deficit of $374 million.

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Then in 1961, with the aid program increasing, the deficit increased to $736 million; and in 1962, when you had the largest program, the deficit went up to $1.196 billion. Is that right?

Mr. MOSCOSO. That is right.

As you know, there was a very substantial drop in the price of coffee which had an effect on that.

Mr. PASSMAN. Was that the first time the price of coffee had dropped in Brazil?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. I note, on page 25, that U.S. aid is to be used in removing obstacles to Brazilian development. What are these obstacles, sir?

Mr. MOSCOSO. One of the principal obstacles to Brazilian development now is the lack of currency stability, inflationary changes.

Mr. PASSMAN. Who created that situation?

Mr. MOSCOSO. That situation has been created partly through fiscal problems, but partly through the fact the principal product of Brazil, coffee, has dropped substantially in price.

Mr. PASSMAN. We agreed that kind of situation has gone on for many years and probably will go on in the future.

Mr. MOSCOSO. I think in these short-term situations it is rather expected that a friendly nation will help a friend and ally.

Mr. PASSMAN. Page 25 indicates that our aid is to help alleviate the Brazilian balance-of-payments problem. Is that right?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. I read in the paper an article which indicated our balance-of-payments deficit is now estimated to be in the $400 million bracket for the second quarter of 1963, and if that be true we will have the largest balance-of-payments deficit this year that we have had since we have been running this deficit for 13 years continuously.

However, now we are taking our money and giving it to Brazil to alleviate their balance-of-payments situation.

Mr. MOSCOSO. We are giving them commodities, we are giving them machinery and equipment which they have bought here——

Mr. PASSMAN. It takes appropriated dollars to get these things, does it not, Mr. Moscoso?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. How much budgetary support have we given to Brazil, or balance-of-payments support, take it either way because it is the same thing. Give it to us beginning with 1960.

Mr. MOSCOSO. We do not have 1960. In 1961, $50 million.

Mr. PASSMAN. This is for budgetary support?

Mr. MOSCOSO. Balance of payments.

Mr. PASSMAN. That year we had a deficit of $2.4 billion, which is a substantial deficit, in the U.S. Treasury.

What about 1962, how much balance-of-payments help did you give them?

Mr. MOSCOSO. $24.5 million.

Mr. PASSMAN. That year we had a balance-of-payments deficit of $2.2 billion.

How about 1963?

Mr. MOSCOSO. $20 million.

Mr. PASSMAN. I think in 1963 our balance-of-payments deficit was over $2 billion.

Mr. MOSCOSO. I beg your pardon, in 1963 it was $25.5 million.

Mr. PASSMAN. Does it make sense for us to have a serious balance-of-payments deficit ourselves and still help other countries by making ours worse?

Mr. MOSCOSO. Yes, sir, it does.

Mr. PASSMAN. It does to you. It does not to me.

Is Brazil delinquent on any loan repayments to the United States?

Mr. MOSCOSO. We have no information of any delinquent loans.

FISCAL YEAR 1963 ESTIMATE FOR DEVELOPMENT LOANS

Mr. PASSMAN. What was the amount of your estimate for development credits for this country last year?

Mr. MOSCOSO. $24 million.

WORLD BANK POLICY TOWARD BRAZIL

Mr. PASSMAN. What is the present policy of the World Bank toward Brazil?

Mr. MOSCOSO. As of this moment the World Bank is not making loans to Brazil but it has sent a mission there with a view to seeing if it can reestablish the operations there.

Mr. PASSMAN. The World Bank does not look upon Brazil as a good credit risk—and it is not making any loans to Brazil?

Mr. MOSCOSO. It is not making any loans at this moment.

Mr. PASSMAN. And they do not consider them a good credit risk at this time?

Mr. MOSCOSO. I presume that is correct.

Mr. PASSMAN. You people put this in the gray matter and I do not know why. But it says that by request, the World Bank will look over the situation?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. The financial condition in Brazil has not improved in recent weeks and months, has it, Mr. Administrator?

Mr. MOSCOSO. I would say it is stagnant as of this moment, Mr. Chairman.

Mr. PASSMAN. If the World Bank is what I think it is, they will turn them down again.

Are you disbursing any recent credits to Brazil?

Mr. MOSCOSO. Yes, sir.

PROJECTS NOT PRESENTED TO COMMITTEE IN FISCAL YEAR 1963

Mr. PASSMAN. The project book seems to include at least 20 projects that you initiated in fiscal 1963 at a cost of $14,318,000. How many of these projects did you justify last year and in what amounts?

Mr. MOSCOSO. I assume, Mr. Chairman, you are right. I do not have it added up here.

Mr. PASSMAN. Let the Controller add it up.

Mr. MOSCOSO. These new projects were not contained in the congressional presentation book for 1963.

ESTIMATED PROJECT COMPLETION COSTS

Mr. PASSMAN. Would you project the cost to completion of all of these 20 projects, Mr. Controller?

Mr. TENNANT. I am sorry, I do not have that information. I yield to Mr. Passett.

(NOTE.—See additional testimony beginning on p. 2220.)

Mr. PASSMAN. Project each of the figures and give us the total on these 20 new projects for which you did not request funds but which you started anyway.

AGRICULTURAL EDUCATION PROJECT

Why do you need $977,000 for contract services for the agricultural education project, on page 77?

Mr. MOSCOSO. This is for University of Purdue contract. This is the cost of the 1-year contract at the University of Purdue.

Mr. PASSMAN. You have a 2-year supply of funds on hand at this time do you not? You have not liquidated $1,910,000.

Mr. MOSCOSO. This is a 2-year contract but we replenish the expenditures——

Mr. PASSMAN. In effect, you will have a 3-year supply of funds with this money, will you not?

Mr. MOSCOSO. No; because we will be spending——

Mr. PASSMAN. If things worked out as they should have worked out, if you had gotten your authorization, we might have been through, you would have started in the new fiscal year, if you got what you asked for, with a 2-year supply of money in the pipeline and one new year's supply of money on July 1, which would give you the equivalent of 3 years in the pipeline, would it not, including the new year's appropriation?

Mr. MOSCOSO. The carryover of the unliquidated funds will be required to finance the 2-year contract.

Mr. PASSMAN. It cost you $977,000 per year. Had this bill moved out on time and started a new fiscal year on July 1, with your carryover and your new request you would have had over 3 years' supply of money on hand, would you not?

Take $1,910,000 and $977,000. Divide that total by three.

Mr. MOSCOSO. That is about it; yes.

Mr. PASSMAN. Is that correct?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Thank you, gentlemen. You have about a 3-year supply of money, if you make it retroactive.

I notice at the bottom of page 77 that it started without justification in the amount of $2,144,000. Now it appears there are 25 Peace Corps men to serve as resident instructors in the agricultural school.

They just cannot keep these people from duplicating what others are doing.

LIVESTOCK PLANNING PROJECT

With an unexpended balance of more than $2 million under the livestock planning project, shown on page 78, why do you need an additional $1,733,000, Mr. Administrator?

Mr. MOSCOSO. These funds will be needed to finance the contracts, one for a fertilizer feasibility study——

Mr. PASSMAN. You are spending that kind of money for a feasibility study?

Mr. MOSCOSO. Many other things—designs for vaccine plants, seeding laboratories, processing facilities, and other related, marketing-related industries.

Mr. PASSMAN. Get over to page 78. To me this is big money.

This is another project you started and you funded an amount of $3,433,000. You did not justify this project to Congress, did you?

Mr. MOSCOSO. It was not justified. It was justified under the food and agriculture section of our Brazilian presentation last year.

Mr. PASSMAN. You say it was not justified, then you say it was justified somewhere else. Let us pin it down.

Mr. STERNFELD. If you look at page 78, where the numbers are 5–12–AF–13, those three numbers show it was justified under those three headings in the 1963 book.

Mr. PASSMAN. On page 78, 1963 obligations, zero. Unliquidated funds, zero. It is a new project.

Where is the unobligated money from previous years, if these were merged?

(Discussion held off the record.)

Mr. STERNFELD. They were new projects in 1963.

Mr. PASSMAN. You did not justify them and they were new projects in fiscal 1963.

CONSOLIDATION OF PREVIOUSLY JUSTIFIED PROJECTS

Mr. MOSCOSO. As I understand it, these were justified as separate projects in 1963.

Mr. PASSMAN. I want to say again that you did not justify these projects under this caption.

Mr. STERNFELD. Mr. Chairman, you are perfectly correct. It was not justified under that caption.

It was justified under general captions called food and agriculture, agricultural advisory services——

Mr. PASSMAN. Give us the page numbers.

Mr. STERNFELD. Page 106 of last year's submission. What happened here was the combined agricultural advisory services on page 106, the project on page 107, agricultural cooperative service——

Mr. PASSMAN. You are dealing wth different numbers altogether.

Mr. STERNFELD. That is correct.

Mr. PASSMAN. You say you have consolidated the projects. Yet you go to the numbers and they are not the same numbers you are giving us.

Mr. STERNFELD. You are correct, they are not the same numbers. What we did was this: We recognized the agricultural program. We did not continue the agricultural advisory services or the agricultural cooperative service or the research development project.

We combined that into this project called livestock planning, production and marketing, which has a different coding system for the numbers.

Mr. PASSMAN. And not a number you have given us corresponds with the number on this page. Is that correct?

Mr. STERNFELD. That is correct.

Mr. PASSMAN. If you take these projects you referred to the amount would be only $2,700,000 and you obligated $2,033,000. Is that correct?

Mr. STERNFELD. That is correct.

Mr. PASSMAN. So there is no corresponding number on previous years for what you have on page 78. You have no corresponding numbers on deobligated projects listed on page 78?

Mr. STERNFELD. That is correct.

Mr. PASSMAN. Would the committee have any way of evaluating this item other than to say it is a new project?

Mr. STERNFELD. No, sir.

Mr. PASSMAN. Thank you. If we did, we should go back to the other projects which you may have plowed in somewhere else, under this new name, the total of the projects you indicated is not listed but which amounts to $2,700,000. Yet you obligated $2,033,000. You ask for $1,733,000.

Mr. STERNFELD. That is correct.

ESTIMATED PROJECT COMPLETION COST

Mr. PASSMAN. Let us project this item to completion. What does it cost?

Mr. MOSCOSO. $13,565,000.

Mr. PASSMAN. For this one project?

Mr. MOSCOSO. Including everything from inception.

Mr. PASSMAN. All this started without any congressional authorization or justification. The law is on your side, but this is an unbusinesslike way to do business.

CONTRACT SERVICES FOR FEASIBILITY STUDIES

You have contract services, $884,000. Is that item with one university or with several of them? This is all on page 78.

Mr. MOSCOSO. This is for several contracts to finance the feasibility study, the design of the vaccine plant——

Mr. PASSMAN. You are not saying all of this $13 million will be in the field of feasibility studies and investigations?

Mr. MOSCOSO. No, contract services.

Mr. PASSMAN. What will you have in this account other than just issuing checks and people traveling and advising? Is any work going to be done?

Mr. MOSCOSO. Yes, indeed.

Mr. PASSMAN. What kind of work, for instance?

Mr. MOSCOSO. We are going to——

Mr. PASSMAN. Are you going to buy commodities?

Mr. MOSCOSO. Reduce losses in livestock products an estimated 10 to 25 percent of the marketing process; improve the quality of the products, increase the use of fertilizer.

Mr. PASSMAN. We wish you would try to get more information on this item for us and put it in the record, if you can find anything else.

(Additional information supplied follows:)

COST BREAKDOWN: LIVESTOCK PLANNING, PRODUCTION AND MARKETING, PROJECT No. 512-AF-13-AA-6, AF-14-AB-6, AF-13-AC-5

Meat production in Brazil is currently insufficient to provide adequate supplies to the growing population and for exporting. The quality of Brazilian meat is lower than that of Uruguay and Argentina. In order to assist Brazil in improving this situation AID has agreed to carry out a comprehensive livestock planning, production, and marketing project. It began in fiscal year 1963 and is expected to terminate in fiscal year 1970, and has the following specific goals: (1) To double the annual production of meat and other livestock products by 1970 from present 4 billion pounds to 8 billion pounds, (2) to increase meat export revenues to about $250 million per annum by 1970, and (3) to reduce processing and marketing losses from the present 25 to 30 percent to about 10 percent through better grading, inland transport, control of disease, and methods of marketing.

Initially, the project will be carried out by stimulating increased feed and forage production through research on basic production and management problems and by increasing the supply and quality of seeds and fertilizer. Furthermore, steps will be taken to improve credit and marketing facilities, to reduce losses in the value of livestock during the marketing process, improve livestock quality, increase the availability at the farm level of essential farm supplies, expand the availability of agricultural credit, and improve methods to control disease.

In order to begin these tasks, $884,000 have been obligated in fiscal year 1963 to enter into contracts with the U.S. Department of Agriculture, American universities, and private contractors.

One proposed contract with a suitable organization (probably a U.S. land-grant college) will provide the Brazilian Ministry of Agriculture with the following services:

(*a*) Evaluate the present livestock production estimates and forecast service of the Ministry of Agriculture, and assist the Ministry in organizing more effective planning in these fields.

(*b*) Provide on-the-job training to Ministry employees in work methods, processing of data, economic analysis, and preparation of reports that will be of current benefit to Brazilian agriculture generally.

(*c*) Conduct seminars on technical subjects for Ministry employees.

(*d*) Assist in arranging programs to train Ministry employees in the United States or third countries (estimated cost about $180,000).

A second contract will be with a U.S. university, or a regional or national organization of farmer cooperatives for furnishing advisory services to Brazilian agricultural cooperatives. The contractor is expected to evaluate the status of farmer cooperatives in Brazil, their role in the agricultural economy, the conditions under which they operate, and factors bearing on the general effectiveness of co-op operations (credit, production problems, management, marketing, etc.). He also is expected to advise the Ministry of Agriculture regarding research on agricultural cooperative programs and related problems (estimated cost about $374,000).

A proposed third contract will be either with a university or the U.S. Department of Agriculture for the purpose of evaluating the present status of the agricultural marketing systems and organizations in Brazil for the marketing of livestock and livestock products, identifying causes of unduly high marketing costs and losses in terms of produce; deficiencies that can be remedied by adjustments in marketing procedures or by improvements in the marketing infrastructure. The contractor would be expected to develop specific engineering plans, indicating existing facilities that should be expanded or required new installations, including location, capacity, technical characteristics, operational requirements, and needs for training operating personnel (estimated cost about $330,000).

COLONIZATION PROJECT

Why do you need $250,000 for contract services for the colonization project, on page 80?

Incidentally, did all these figures you have been giving us include local currency, too?

Mr. Moscoso. These are dollar costs.

Mr. PASSMAN. The contract we just gave you had local currency, too.

While you are looking up that information, did you ever come up with those figures, Mr. Passett?

COMPLETION COST OF PROJECTS NOT JUSTIFIED IN 1963 PRESENTATION

Mr. PASSETT. Yes, sir. Cost of completion of all those projects which were not justified in the fiscal 1963 presentation is $17,165,000.

In addition the total cost to completion of all the projects in the Northeast which were justified under one heading in the 1963 book will be $25,980,000.

Mr. PASSMAN. So actually again the trend is to take several projects, bring them in under a new heading, and call them one project. Is that correct?

Mr. PASSETT. No, sir; it works just the opposite in the Northeast program.

Mr. PASSMAN. Right here you put about four or five of them together and said this is a new project, but here are other projects of previous years and you gave numbers which could not be identified.

Mr. PASSETT. That was not in the northeast, sir.

Mr. PASSMAN. How about the southwest? How about it, gentlemen? Do you have that information?

COLONIZATION AND RESETTLEMENT PROJECT

Mr. MOSCOSO. The $250,000 for contract services for eight U.S. personnel, contract personnel.

Mr. PASSMAN. To do what?

Mr. MOSCOSO. Two will assist in the development of this colonization and resettlement effort.

Mr. PASSMAN. Specifically what will they do other than cash paychecks? Give us a little detail.

Mr. MOSCOSO. Train Brazilians in managing——

Mr. PASSMAN. Managing what?

Mr. MOSCOSO. The settlement centers. These are settlement centers.

Mr. PASSMAN. Have the settlements been created yet?

Mr. MOSCOSO. They will help in the creation of those settlement centers. These are centers where the——

Mr. PASSMAN. Do you have ICEM active in your area? This is the Intergovernmental Committee on European Migration.

Mr. MOSCOSO. They don't participate in this program. This is a program to resettle the people from the arid northeast to the wetter areas of the Amazon Valley. This is an effort to resolve the problem of subsistence farming.

There is a complete change of the type of soil and new crops will have to be grown by them. There will have to be instruction given to them on the use of seed and fertilizer, how to market their product, et cetera. Also there will be a need for setting up an agricultural credit system, and all the various things that have to be done to settle people

in the new site. I think we have had some experience in this country with that when we had to resettle some of our farmers during the depression.

Mr. PASSMAN. In this $250,000 item, can you tell us what it may cost to complete this project?

Mr. MOSCOSO. $1.6 million.

FISHERIES PROJECT

Mr. PASSMAN. On page 85 you indicate you obligated $325,000 for the fisheries project in fiscal year 1963. What is the unliquidated balance as of June 30?

Mr. MOSCOSO. $235,000.

CONTRACT SERVICES FOR RESOURCES INVENTORY PROJECT

Mr. PASSMAN. Why do you need $1 million for contract services, described on page 88?

Mr. MOSCOSO. Mapping and resource survey contract.

Mr. PASSMAN. That is contract services again?

Mr. MOSCOSO. That is right, contract services.

Mr. PASSMAN. This thing is getting very heavy with contract services. We see contract services so often. That means some kind of a contract given to a trade school, a college, a university, and so on? Is that right?

Mr. MOSCOSO. This is the U.S. Geological Survey.

This is a U.S. agency.

Mr. PASSMAN. How many contract technicians do you have in the $1 million involved here to be paid out?

Mr. MOSCOSO. Eleven U.S. contract technicians, geologists.

Mr. PASSMAN. What types of commodities do you plan to procure at a cost of $200,000 against this appropriation?

Mr. MOSCOSO. This will be primarily laboratory equipment and materials used in mapping and water surveys, soil surveys.

Mr. PASSMAN. Are you also making an allocation of $2.5 million of local currencies to the project?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. That sum would have to be added to the cash part of it to get the total?

Mr. MOSCOSO. That is right, to the local currency.

Mr. PASSMAN. On page 89——

Mr. MOSCOSO. May I suggest, Mr. Chairman, that the Government of Brazil will participate.

Mr. PASSMAN. They are the recipient country. They participate in some manner in all their own programs.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. They did the participating before we got in, did they not? They are the recipients.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Is this unusual, to contribute in their own country?

Mr. MOSCOSO. On the contrary, that is what they should do.

Mr. PASSMAN. I always wonder what you prove when you say you have given these people, say, $2 billion and you say they are doing something themselves, too, maybe contributing $200,000.

ESTABLISHMENT OF INDUSTRIAL DEVELOPMENT BANKS

Would you comment on the statement, carried on page 89, with reference to the $20 million in credits which you propose for fiscal 1964 for the purpose of establishing industrial banks in the northeast area?

Mr. MOSCOSO. The purpose of this project is to create industrial banks in the depressed northeast.

Mr. PASSMAN. What is an industrial bank? Will you describe it?

Mr. MOSCOSO. An industrial development bank. It is a bank which will lend funds to local investors on longer term than the usual commercial terms.

Mr. PASSMAN. Is this teaching them how to establish banks or is this capital?

Mr. MOSCOSO. No; this is not all capital.

Mr. PASSMAN. This $20 million is just a training course?

Mr. MOSCOSO. The grant money is to conduct studies to investigate the economic and technical feasibility for new industries.

Mr. PASSMAN. The $20 million is for that purpose and there is no capital provided. Is that correct?

Mr. MOSCOSO. No capital is provided under the project on page 89.

Mr. PASSMAN. How much will it take to capitalize these banks if you are going to spend $20 million teaching them how to create the banks?

Mr. MOSCOSO. The project as described here is the technical assistance necessary to assist the Brazilians in setting up these industrial development banks in the northeast.

Mr. PASSMAN. But it does not provide the capital?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. This is a lot of money, $20 million.

Mr. MOSCOSO. I am not expressing myself correctly. The amount indicated here of the estimated obligations for 1964, $300,000, is for giving technical assistance to set up the industrial development banks which in turn will be funded with what we estimate will be approximately $20 million in seed capital.

Mr. PASSMAN. Off the record.

(Discussion held off the record.)

LOAN APPLICATIONS FOR INDUSTRIAL BANKS

Mr. PASSMAN. Do you have any loan applications pending for this $20 million?

Mr. MOSCOSO. We have had an application for a program to provide capital for relending to small- and medium-sized industries.

Mr. PASSMAN. When did you get this application?

Mr. MOSCOSO. A Brazilian agency in the northeast.

Mr. PASSMAN. How much money do they want and for what purpose is the application?

Mr. MOSCOSO. $20 million. We have not evaluated that application as yet.

Mr. PASSMAN. When was this application submitted?

Mr. MOSCOSO. We haven't the date.

Mr. PASSMAN. You seem to indicate these people already have been let in on this matter.

Mr. MOSCOSO. They don't even know whether we will approve the application.

Mr. PASSMAN. We want to find out why you are starting the project and why you are getting applications when you told us earlier that you did not let these people in on any projects you plan until you get the money.

Now you have said that you received an application for $20 million for a project when you do not even have the money for it. There is no assurance you will get it.

Mr. MOSCOSO. There is nothing that can prevent a country or one of its agencies from sending us an application even if we have no money.

Mr. PASSMAN. What did you start the project for, then?

It has been testified that these people did not know anything about projects that you planned or projects you had in mind until you got the money.

However, here is a project for which you are asking $20 million for fiscal 1964, and you have a tentative application for the $20 million, so they had to get the information somewhere.

Mr. Ford?

Mr. FORD. How many other projects of a similar nature would you envisage?

Mr. MOSCOSO. In the case of the northeast region?

Mr. FORD. Which would relate to this original $20 million expenditure for training, education and the like?

TECHNICAL ASSISTANCE FOR ESTABLISHMENT OF INDUSTRIAL BANKS

Mr. MOSCOSO. $20 million is not for training. You see, Mr. Ford, there is a confusion here which I have been trying to clarify. The description of this $300,000 project is for technical assistance in helping to set up these industrial banks to develop industry in the northeastern part of Brazil where, as you know, a poor agricultural economy must be developed into a more industrialized economy. We are trying to do it through the private sector. We are helping Brazilians to set up these industrial banks.

Mr. FORD. How many such banks do you envisage?

Mr. MOSCOSO. We are making nine studies. We hope to make nine studies to be used by industrial banks. We don't know how many there will be.

Mr. FORD. I would think you would have some idea how many banks you are talking about.

Mr. MOSCOSO. Two banks.

Mr. FORD. We are spending $20 million to give technical assistance for the future establishment of two banks?

Mr. MOSCOSO. No, sir.

Mr. FORD. How many banks?

Mr. MOSCOSO. Two banks but the amount is $300,000.

Mr. FORD. What will you spend the rest of the $19,700,000 for?

Mr. MOSCOSO. This is for capital, Mr. Congressman, if and when the funds are available and if and when we approve their application.

Mr. FORD. So you will have $19,700,000 available for capital?

Mr. Moscoso. $20 million for capital and $300,000 for technical assistance.

Mr. Ford. You say these are banks in the private sector?

Mr. Moscoso. The banks are not yet set up.

Mr. Ford. With capital supplied by the United States.

Mr. Moscoso. The Brazilians will have to supply a substantial amount of their own capital.

Mr. Ford. What ratio?

Mr. Moscoso. The ratio can be 4 to 1.

Mr. Ford. Do you have any applications for that?

Mr. Moscoso. We have an application from a Brazilian unit.

Mr. Ford. Is this a country or an organization?

Mr. Moscoso. It is a government institution in Brazil. They are the promoters of these banks and they will expect the private sector to participate.

Mr. Passman. To start with, we asked whether there was any capital involved in the $20 million. You assured us three times there was not.

Then we got further into the matter and you said you were mistaken, that you have an application from a branch of the Brazilian Government for the $20 million.

Then the reminder came that you and other witnesses had said you do not even let the recipient countries know a project is planned until you get the money.

Yet you had this project started last year in planning, and these people found out there would be $20 million requested of this Government.

You had said you did not let them know there was even a plan for the project until you got the money.

In this instance you are requesting the money. Yet a branch of the Brazilian Government already has filed tentative application for the $20 million.

OBLIGATION OF FUNDS WITHOUT SPECIFIC REQUEST OF CONGRESS FOR PROJECT APPROVAL

In fiscal year 1963 you started this project. You obligated $320,000. Is that correct?

Mr. Moscoso. That is right.

Mr. Passman. Did you request that money of the Congress last year?

Mr. Moscoso. That was not specifically.

Mr. Passman. You did not request it of the Congress?

Mr. Moscoso. This was part of the——

Mr. Passman. I am talking about specific programs. You did not request $320,000 for the industrial development banks, northeast, last year?

Mr. Moscoso. It was part of the entire northeast program.

Mr. Passman. You did not request $320,000 specifically for this purpose?

Mr. Moscoso. That is right.

Mr. Passman. But you did obligate $320,000 and you disbursed $80,000?

Mr. Moscoso. That is right.

Mr. Passman. For what purpose?

Mr. Moscoso. I imagine the first $80,000 was used in order to start making the studies or seminars described on page 89.

Mr. PASSMAN. You do not know?

Mr. Moscoso. I would have to investigate.

(The information subsequently supplied follows:)

DISBURSEMENTS FOR STUDIES OF INDUSTRIAL DEVELOPMENT BANKS, NORTHEAST DURING FISCAL YEAR 1963

The reported $320,000 obligation which is part of the overall program for the encouragement of industrial development banks, is specifically for funding a contract with the University of California at Los Angeles to undertake feasibility studies for new industries, and to finance seminars and participants. The $80,000 expenditures during fiscal year 1963 enabled a group of professors and graduate students from UCLA to proceed to the State of Ceara (NE) to prepare, in conjunction with professors and students of the University of Ceara, five economic and technical feasibility studies for specific new industries in that State using indigenous raw materials (corn processing, cement, pressed wood, small machinery, and ceramics). The American group has also conducted six seminars at the University of Ceara to discuss improved management practices and industrial engineering techniques and is providing technical assistance to five pilot-industrial plants. It is anticipated that effective progress on the foregoing and other private industrial ventures will necessitate the early establishment of an industrial development bank to provide the necessary resources.

Mr. PASSMAN. This leads to a request for $20 million in the fiscal 1964 program. Is that correct?

Mr. Moscoso. Yes.

Mr. PASSMAN. What is the ultimate cost?

Mr. Moscoso. The ultimate cost of this—you see, Mr. Chairman, where the confusion apparently lies——

Mr. PASSMAN. You started the project without making any specific request. You allocated $320,000 for an industrial development bank up in the northeast. You spent $80,000 and you are uncertain what you spent it for.

You have on hand, unliquidated in that category, $240,000, but you are asking for an additional $300,000, on top of the $240,000, which will give your $540,000 to make feasibility surveys, I would assume.

AMOUNT REQUESTED FOR FUNDING INDUSTRIAL BANK LOAN APPLICATIONS

You are a long way off from needing the $20 million. Yet you indicated you would request the $20 million for capital for the banks through the Government for fiscal 1964.

Mr. Moscoso. We did not request it. The Government of Brazil has made the tentative application. The application has not yet been passed on.

Mr. PASSMAN. $20 million in loans are proposed for fiscal 1964 for the purpose of establishing industrial banks in the northeast area.

Is this something you put in here for Brazil or is that your own request? Did you request it or did Brazil request it? If they requested this money how did they get the books?

Mr. Moscoso. They didn't get this information. We are requesting $20 million——

Mr. PASSMAN. Mr. Administrator, are you requesting an appropriation for $20 million to be used in fiscal 1964 for capital, directly or indirectly, for these banks?

Mr. Moscoso. We hope to be able out of the total appropriation, if the appropriation is made available to us, to consider loan applications which will assist us in funding these banks in the northeast in order to promote——

Mr. Passman. Are you requesting in the total appropriation $20 million to be used for this purpose in fiscal 1964?

Mr. Moscoso. I don't think in the first place the Brazilians know what funds are available or will be made available to us or them in fiscal 1964.

They have made an estimate and we have also made estimates of the amount of industrial credit which will be needed in order to set up these institutions in Brazil which in turn will help to industrialize that part of the country which has been continuously depressed and subject to intense subversive activity.

We asked $300,000 to be added to the funds we got last year in order to terminate a study and the feasibility surveys necessary to assist in setting up these banks.

Mr. Passman. Are you requesting $20 million in the overall request for fiscal 1964 for these projects?

Mr. Moscoso. We are requesting ———.

Mr. Passman. I am talking about these banks. Will you please go to page 89?

Mr. Moscoso. I have it here.

Mr. Scheinman. Mr. Chairman?

Mr. Passman. Wait a minute, please, Mr. Scheinman.

In the overall request to the Congress for the program, worldwide, including Latin America, are you asking the Congress to include in the appropriation $20 million which could be used for the funding of these industrial banks?

Mr. Moscoso. We are asking for a development range between $——— and $——— which, if the funds are appropriated and if these loan proposals which have been sent in to us are acceptable and meet our criteria, will be approved.

Mr. Passman. Mr. Scheinman, getting to you now, in your understanding of this legislation and the total request by the administration for funds to run the worldwide program, including Latin America, do you interpret the justifications as indicating that you hope to get an appropriation in the total amount of $20 million to finance these industrial banks?

Mr. Scheinman. The request for Development Loan funds which is made to this committee is based on——

Mr. Passman. An estimate of $20 million for this purpose?

Mr. Scheinman. Sir, based on prospective applications which the Agency will consider, as does any banking institution.

The operative word is "could be."

Mr. Passman. Is it included in the total amount?

Mr. Scheinman. The 20 could be——

Mr. Passman. The Administrator does not know and you are dodging the question.

Let me ask you, Mr. Sternfeld. Would it be your interpretation that if you get the money request submitted to the Congress this year that in the total there will be $20 million which you could use to finance this bank, or these banks, in the northeast?

Mr. Sternfeld. Yes, we could.

Mr. PASSMAN. You are requesting the money. The money is in here.

Mr. STERNFELD. Yes, sir.

Mr. PASSMAN. I do not know why you want to dodge it.

Is it a coincidence that the Government, or a branch of the Government, an agency of the Government, has an application pending now for the same amount of money that you have listed on page 89?

Mr. STERNFELD. That is part of the basis for the request we make to the Congress.

Mr. PASSMAN. How does the Brazilian Government know you will request $20 million?

Mr. STERNFELD. They don't know.

Mr. PASSMAN. Then answer my question. Is it coincidental that the application for Brazil in the amount of $20 million happened to be the same amount you are requesting in this book?

Mr. STERNFIELD. Sir, we do not request Development Loan funds for specific projects.

Mr. PASSMAN. I am looking at your book.

Mr. STERNFELD. As a matter of fact——

Mr. PASSMAN. You say here that of the overall request made to the Congress, the budget request, there was $20 million in the total which you hoped you would get for this project, industrial development, northeast. Did you answer that question in the affirmative?

Mr. STERNFELD. No, sir.

Mr. PASSMAN. Is it just coincidental that the application from Brazil corresponds with the language and the amount on page 89? Is that a fair question?

Mr. STERNFELD. Yes, sir; it is a fair question.

Mr. PASSMAN. Is it coincidental?

Mr. STERNFELD. If I may answer it more than using just that one word.

We based our calculations on the amount of funds necessary for development lending upon plans of the Brazilians themselves. We knew at the time that this agency in the northeast, Sudene, had in mind and was considering to fit into its total program, and it is developing a total program for the northeast, the requirement of funds for industrial development lending.

With that knowledge we have indicated, as you have well stated, in our presentation that if we get all the funds we have requested, and if the application meets our criteria——

Mr. PASSMAN. If you get all the funds you request, $20 million for this purpose is in those funds?

Mr. STERNFELD. It is included in our estimate of $——— and $———.

Mr. PASSMAN. It is included in the total?

Mr. STERNFELD. That is right.

Mr. PASSMAN. You told us earlier you did not let people in on what you were planning until you got the money.

Mr. STERNFELD. That is correct.

Mr. PASSMAN. Now we learn that the Brazilians planned for this activity and told you the amount and you put their amount in the justifications.

Mr. STERNFELD. They have told us many things, Mr. Chairman.

Mr. PASSMAN. This happened to be one of the things and it just happened the amount they requested and what you put in the budget request happened to be the same?

Mr. MOSCOSO. It so happens that——

Mr. PASSMAN. Page 89 shows that $320,00 was obligated last year for a project you did not justify to the Congress.

You spent $80,000; none of you know what for but you will try to find out.

Yet you are requesting $300,000 to be added to the original $320,000, making $620,000.

On the same page you state:

> Twenty million dollars in loans are proposed for fiscal 1964 for the purpose of establishing industrial banks in the northeast area.

Mr. SCHEINMAN. If the committee is receiving an insert for the record it will indicate over $——— worth of potential development loan applications——

Mr. PASSMAN. You started the project without justifying it. I read into the record what page 89 states.

You obligated $320,000 which you did not justify to the Congress. You spent $80,000, and you do not know what it was for. You will try to find out and tell us.

However, you are asking for $300,000 more to be added to the $240,000 on hand unliquidated, which will give you $540,000 to spend.

On the same page you state:

> Twenty million dollars in loans are proposed for fiscal 1964 for the purpose of establishing industrial banks in the northeast area.

Mr. MOSCOSO. May I reply to you?

Mr. PASSMAN. Surely.

Mr. MOSCOSO. In the first place, we state here what the project comprises. We are going to conduct studies to investigate the economic and technical feasibility for new industries in the northeast.

We will encourage establishment of these industrial development banks and assist in providing them with capital for loans to small- and medium-sized industries.

We will try to assist in improving management practices of Brazilian industrialists.

The fiscal 1964 funds will be used to continue to provide these services which have been provided up to now by U.S. technicians and approximately 15 contract consultants.

Mr. ANDREWS. This project you have been discussing has a number on it shown on page 89.

Mr. MOSCOSO. That is right.

Mr. ANDREWS. 512–AA–92–BE–6.

Mr. MOSCOSO. That is right, sir.

Mr. ANDREWS. As I understand it, in this column on the left-hand side of the page where you request $300,000 for 1964, it would indicate that this project is for the development of industrial bases and increased plant productivity in the northeast?

Mr. MOSCOSO. That is right.

Mr. ANDREWS. It would indicate that for that project you want $300,000 plus $240,000 unliquidated out of the 1963 program.

Mr. MOSCOSO. That is right.

Mr. ANDREWS. But when you read further, this project could——

Mr. MOSCOSO. Result in——

Mr. ANDREWS. Result in a $20 million loan.

Mr. MOSCOSO. That is correct.

Mr. ANDREWS. For banks?

Mr. MOSCOSO. That is correct.

Mr. ANDREWS. If you need $20,050,000 to finance the banks you would have to take it from some place other than this box showing that you are requesting only $540,000. Is that right?

Mr. MOSCOSO. That is right, sir. What we are proposing is that if the Congress agrees to the appropriation which we have requested, and if the applications from Brazil are considered acceptable and meet our criteria, then we will consider funding these banks, which in turn will have to obtain substantial amounts of local capital.

Mr. ANDREWS. We are getting right back to what we have been complaining about. You come up and establish a justification for one project, in this particular case for a survey, in the amount of $300,000, but it turns out to be a $20 million banking project.

Mr. PASSMAN. It was so stated.

Mr. SCHEINMAN. The loan would come from the Development Loan funds.

Mr. ANDREWS. Where will that show up in this book?

Mr. SCHEINMAN. The general range of requests proposed for each of the countries can be found on the front page.

Mr. PASSMAN. This $20 million is included in the total request?

Mr. MOSCOSO. It could be if we approve it.

Mr. ANDREWS. If you were to decide you wanted to put $20 million into Brazil banks you would have to deobligate or cancel out some of these other requests?

Mr. MOSCOSO. If we wanted to do it now?

Mr. ANDREWS. In 1964.

Mr. MOSCOSO. No.

Mr. ANDREWS. What about it, Mr. Tennant?

Mr. TENNANT. That particular book you are looking at has in it the grants, supporting assistance. The Alliance for Progress loans are in the light gray book, page 25.

Mr. ANDREWS. Where would the $20 million show in the gray book?

Mr. MOSCOSO. Third line.

Mr. ANDREWS. What page?

Mr. MOSCOSO. Page 11. There is a range of possible lending which we estimate in Brazil of $——— to $———.

Mr. ANDREWS. I see.

Mr. MOSCOSO. If the Congress in its wisdom appropriates the funds for this program we could consider this application favorably, consider $20 million for funding these banks in Brazil.

Mr. ANDREWS. Could you do it if Congress appropriated $——— which is the lesser figure?

Mr. MOSCOSO. That is the request.

Mr. ANDREWS. The request is from $——— to $———.

Mr. MOSCOSO. We would have to decide if the banks are more necessary in the development of this program than other things.

Mr. ANDREWS. I get right back to my point. This is nothing but a blank check to you. You can shift funds around, leave out project X

and pick up project Y and dispense this money in any way you see fit?

Mr. MOSCOSO. Except following criteria Congress established.

Mr. ANDREWS. What criteria? We merely give you a total amount. We don't say in the bill or the report where it shall be spent.

Mr. MOSCOSO. There has to be acceptable proof of repayment. There has to be a feasibility study made, and an estimate of cost.

Mr. PASSMAN. Do you propose to fund this project in the amount of $20 million out of fiscal 1964 funds if it meets the criteria?

Mr. MOSCOSO. First, if we have the funds and, second, if it meets the criteria. Third, if in the order of priority when we know what funds will be available——

Mr. PASSMAN. Everything is based on getting funds if it meets the criteria?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. You then propose to finance this bank in the amount of $20 million in fiscal 1964, do you not?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. I do not know why you did not answer affirmatively earlier. You say specifically that is what you propose to do.

Could the committee see the application from Brazil for the $20 million?

Mr. MOSCOSO. I haven't it with me.

Mr. PASSMAN. You had it there a moment ago.

Mr. MOSCOSO. Yes, but not the application itself.

Mr. PASSMAN. You have something listed there we may see?

Mr. MOSCOSO. This is a list——

Mr. PASSMAN. May we look at it? I am trying to understand the matter.

Mr. SCHEINMAN. A copy of that was requested as an insert and is being supplied.

Mr. PASSMAN. Let me see it now, if I may.

Mr. ANDREWS. If this application for funds to establish a bank or banks meets the criteria, and you received only a $20 million appropriation, you could still put the $20 million in that bank?

Mr. MOSCOSO. If in the list of all the many things which we feel——

Mr. ANDREWS. The point is that you can finance that bank if you want to and if it meets the criteria.

Mr. MOSCOSO. That is right.

Mr. ANDREWS. Even though you didn't have but $20 million you could put it all in that project if you felt it was a top priority item.

Mr. MOSCOSO. If we don't have the money we couldn't.

Mr. ANDREWS. I am assuming you had $20 million. In other words, you could finance the project if you wanted to, provided it met the criteria.

Mr. MOSCOSO. And provided you had the funds.

Mr. PASSMAN. If you got only $20 million out of the request for $———, if you wanted to could you use that $20 million, under the present language of the law, to finance this bank?

Mr. MOSCOSO. As I understand it we could, yes.

Mr. PASSMAN. Any way you take it, it is the same thing.

Mr. ANDREWS. We give them a blank check and you parcel out the funds according to your best judgment as to what projects should be funded on a priority basis.

Mr. Moscoso. Mr. Congressman, it is pretty much the same way as the Export-Import Bank will have to operate when they come before you and request their funds.

Like any other banking institution we can only give you an illustration of the way we will finance these projects and the kinds of projects.

Mr. PASSMAN. Off the record.

(Discussion held off the record.)

INDUSTRIAL PRODUCTIVITY PROJECT

Mr. PASSMAN. In view of your statement on page 90, in connection with the industrial productivity project, that this activity has not been found adequate to provide meaningful assistance, why are you requesting funds for 1964, then, Mr. Administrator?

Mr. Moscoso. As the only project in the country program providing for direct technical assistance to industry, this activity has not been found adequate to provide meaningful assistance to the most dynamic sector of Brazil's economy. Efficient methods of transfer to Brazil's rapidly developing industrial economy appropriate elements of U.S. industrial, financial, and managerial technology are under review.

Mr. PASSMAN. What is the average annual cost for the service—unless you want to comment on this matter?

Mr. Moscoso. Yes. There appears to be a typographical error here and this activity has been found adequate.

Mr. PASSMAN. Are you reading something that is not in the book?

Mr. Moscoso. I am trying to——

Mr. PASSMAN. Is that correct?

Mr. Moscoso. I am trying to——

Mr. PASSMAN. Did I read it into the record correctly?

Mr. Moscoso. You read it correctly from the book.

COST OF TECHNICIANS FOR ROADS PROJECT

Mr. PASSMAN. What is the average annual cost of the services of the twelve highway experts you propose to employ in fiscal 1964, shown on page 92?

Mr. Moscoso. Might I make a note of this first?

Mr. PASSMAN. Surely.

Mr. Moscoso. This is a 2-year program.

Mr. PASSMAN. What is the annual cost?

Mr. Moscoso. $25,416.

Mr. PASSMAN. Where can we find information, on page 92, which would indicate that that is a 6-month contract a 2-year contract, or a 4-year contract?

Mr. Moscoso. It is not on that page.

Mr. PASSMAN. Is this one of those "take it on faith" items? I believe contract services with Government agencies is on an annual basis?

Mr. TENNANT. As I recall the authority, we are not limited——

Mr. PASSMAN. I did not say limited. It is a practice where you are dealing with other Government agencies.

Mr. TENNANT. At one time.

Mr. PASSMAN. Is it still permissible under the law to have a 1-year contract, one Government agency to another?

Mr. MOSCOSO. It is permissible to have 2-year contracts.

Mr. PASSMAN. Is it being practiced in any instance?

Mr. MOSCOSO. It is.

Mr. PASSMAN. In a majority of instances?

Mr. MOSCOSO. The majority of instances.

Mr. PASSMAN. This agreement could be for 1 year, which would really bring the annual cost up to $51,000; is that correct?

Mr. MOSCOSO. It is a 2-year contract.

Mr. PASSMAN. How do we know it is a 2-year contract and where do you get your information?

Mr. MOSCOSO. I think, Mr. Chairman, that it is a failure in putting it into the——

Mr. PASSMAN. We noted last year that certain technicians cost $64,000 a year each. You do not know whether it is a 1-year or a 2-year contract, definitely, do you?

Mr. MOSCOSO. I do know that no highway experts of the U.S. Bureau of Public Works is going to cost twice the amount that this would indicate.

Mr. PASSMAN. You are positive this is a 2-year contract?

Mr. MOSCOSO. I would have to check.

Mr. PASSMAN. It could be a 1-year contract, then?

Mr. MOSCOSO. It could be.

As I said——

Mr. PASSMAN. Are these funds for continuing the services of these people?

Mr. MOSCOSO. These are new people.

Mr. PASSMAN. The book says "continuing." It might be a new group, but you are employing the same number of people, are you not?

Mr. TENNANT. That is correct.

Mr. PASSMAN. Last year you asked for $590,000 for these 12 people, did you not?

Mr. MOSCOSO. Is that for a 2-year contract?

Mr. STERNFELD. We will have to check to the actual contracts.

(The following information was subsequently supplied:)

AID CONTRACT WITH BUREAU OF PUBLIC ROADS

The contract with the Bureau of Public Roads is for 2 years. Twelve BPR technicians are involved, as part of the total project.

Mr. STERNFELD. We have been informed——

Mr. PASSMAN. You asked for $590,000 last year to fund these 12 technicians for 1 year, did you not?

Mr. STERNFELD. That is correct for the total cost of the project.

Mr. PASSMAN. You ask for $600,000 this year to fund them for either 1 or 2 years, and at this time you do not know; is that right?

Mr. STERNFELD. That's right.

Mr. PASSMAN. Thank you.

WATER SUPPLY AND SEWAGE PROJECT

What is the average annual cost of the three direct hire staff technicians you propose to employ in fiscal year 1964 for the water supply project, listed at page 94?

Mr. MOSCOSO. The division of the $132,000 by three gives you $44,000, which is obviously too high, and I would like permission to look up——

Mr. PASSMAN. It was about $50,000 each last year for the 12 highway technicians, as indicated by your own request and your own number and you are asking $20,000 more for fiscal year 1964 for the same number of people. I am afraid that you are going to find that it is $50,000 each and by the same mathematics, on page 94, you get that average as indicated.

Mr. MOSCOSO. I would like to check it.

Mr. PASSMAN. We wish you would check it.

(Information subsequently supplied follows:)

AVERAGE COST PER TECHNICIAN, WATER SUPPLY AND SEWAGE PROJECT

A technician for this project will cost an estimated $20,000 per year for salary, allowances, travel, and shipment of effects. Therefore, $60,000 was programed for three technicians. The remaining $72,000 was programed to cover short term U.S. Government consultants who will come from the U.S. Public Health Service and other agencies involved in water supply and sewage.

Mr. PASSMAN. Is there any U.S. owned local currency going into this apparently small project, on page 94?

Mr. MOSCOSO. $20 million through fiscal year 1964.

Mr. PASSMAN. Thank you.

Mr. FORD. These are U.S. owned foreign currencies which have been generated by previous programs?

Mr. MOSCOSO. Public Law 480; yes, sir.

Mr. PASSMAN. Generated from American dollars?

Mr. MOSCOSO. American wheat, sir.

Mr. PASSMAN. But it still takes American dollars to generate this currency. I believe you had for that project in fiscal year 1963 $5 million, did you not?

Mr. MOSCOSO. That's right; $5 million in loans.

Mr. PASSMAN. Could you project the cost of this project out to completion, as you are dealing with a $20 million project, dollar and local-owned currency?

Project it to completion, the amount of American-owned currency and dollars.

Mr. PASSETT. We have a dollar figure from its inception to completion of $3,900,000.

Mr. PASSMAN. We are trying to keep this from appearing that you are going to spend local currency in the same proportion. Can you supply that information?

Mr. PASSETT. We will have to supply that for the record.

(The information follows:)

This project, expected to cost $3.9 million by 1970, is to provide expert technical assistance over a period of 9 years to enable Brazil to complete the construction of 1,500 water systems and 1,000 sewer systems serving 40 million people by 1970.

During this 9-year period the United States will also make loans to Brazil amounting to an estimated $50 million for the construction of these 2,500 water and sewer systems. These will not be dollar loans; but will be made from the local currency proceeds derived by selling our surplus agricultural commodities to Brazil.

Mr. PASSMAN. You do have $20 million through fiscal year 1964?

Mr. PASSETT. That is correct.

Mr. PASSMAN. We put up $20 million plus the cash. This is a Brazilian project, is it not, for Brazil, the one we are talking about, on page 94?

It looks as if they have gotten kind of generous with themselves. It says the Government of Brazil has provided direct support to this project in the amount of $125,000, equivalent. Now, that could be in labor, rocks, gravel, or anything, could it not?

Mr. Moscoso. That's right, for the technical assistance project.

Mr. PASSMAN. Do you mean they are putting up $125,000 out of their so-called obligations as compared to ours in the amount of $20.5 million?

Mr. Moscoso. Not exactly——

ECONOMICS EDUCATION PROJECT

Mr. PASSMAN. How firm is your estimate for $420,000 for contract services for the economics education project, on page 100, sir?

Mr. Moscoso. This is an estimate, Mr. Chairman.

Mr. PASSMAN. It is bound to be based upon some feasibility study or some finding.

Go to page 100 and try to find an answer for us.

Mr. Moscoso. There are four U.S. professors for 2 years to assist in the organization and operation.

Mr. PASSMAN. I asked you how firm is the estimate?

Mr. Moscoso. It is an estimate, Mr. Passman; it says "should findings favor the establishment of a national graduate institute of economics." It is not firm. It is an estimate.

PILOT PROJECT FOR TV SCHOOLS

Mr. PASSMAN. I notice, on page 101, you propose to organize 1,000 TV schools during calendar year 1964. Since this is a pilot, experimental program, why do you have to establish 1,000 schools to determine whether they work out satisfactorily?

Mr. Moscoso. This is something which is planned by the Brazilians themselves in the northeast.

Mr. PASSMAN. Are you asking for money to fund a thousand of these things?

Mr. Moscoso. We are asking for funds to assist them with technical aid.

Mr. PASSMAN. In establishing 1,000 TV schools?

Mr. Moscoso. That's right.

Mr. PASSMAN. Who plans these projects, the Americans or the Brazilians?

Mr. Moscoso. It is jointly done by the SUDENE and the northeast mission.

Mr. PASSMAN. First you said we did not let them know what we were planning until you got the money, but you are asking for funds to finance all or part of 1,000 TV schools; is that correct?

Mr. Moscoso. This is a continuing technical assistance project, Mr. Chairman.

Mr. PASSMAN. I imagine it would be quite continuing, but we are trying to find out whether it is a statement of fact that you are asking for money to either fund partially or wholly through a cooperative program, 1,000 TV schools.

Mr. MOSCOSO. We are providing technical assistance to the Brazilians on this, sir.

They, the Brazilians, hope to establish 1,000 TV schools.

Mr. PASSMAN. If it is a pilot project, why do they have to start a thousand of them? If you should start 10 and it did not work, you would not be out too much money. If you start 100, maybe it would not be so bad, but to start 1,000——

Mr. FORD. May I ask a question, Mr. Chairman?

Mr. PASSMAN. Yes.

Mr. FORD. You say a TV school. How do you define one? What is a TV school in this context?

Mr. MOSCOSO. Of this program? It is a school which—instead of having the normal complement of teachers—will have perhaps one teacher who will be the housekeeper and the creator of the necessary discipline. Then from a central television education center, a program will be broadcast covering various fields of education. In this way the Brazilians hope to be able to save substantial amounts of money in the payment of teachers, money which they don't have. They don't have enough trained teachers.

Mr. FORD. Are you talking about the repair of television sets, or are you talking about the running of a television station?

Mr. MOSCOSO. No; the education of the students in primary and secondary subjects, adult education, using television as a means of education. This has been tried in quite a number of countries.

Mr. FORD. This is a school system for the education of people?

Mr. MOSCOSO. That's right.

Mr. FORD. You are going to start a thousand of them?

Mr. MOSCOSO. The Brazilians are doing it. We are just going to give them technical assistance.

Mr. PASSMAN. It is a pilot project.

Mr. FORD. It is a very substantial pilot project.

Mr. MOSCOSO. It is a large country.

Mr. PASSMAN. It may be expanded.

Mr. MOSCOSO. Possibly to 10,000.

I hope they are successful.

Mr. RHODES. Do you intend to buy the television sets?

Mr. MOSCOSO. No, this is a Brazilian project. We are only participating in the technical assistance to help them set this thing up.

Mr. RHODES. How much does the Brazilian Government propose to spend?

Mr. MOSCOSO. $7,890,000.

Mr. RHODES. $7 million in 1 year, or is that the total cost?

Mr. MOSCOSO. For the program as a whole.

Mr. RHODES. How long will the program last?

Mr. MOSCOSO. It is scheduled to end in 1967.

Mr. RHODES. This is the pilot phase?

Mr. MOSCOSO. Yes.

Mr. RHODES. Is there any idea how much the ultimate program might cost?

Mr. MOSCOSO. Do you have that?

Mr. PASSETT. Our total contribution in dollars will be $1,180,000 for technical assistance to the Brazilian project.

Mr. RHODES. That is for the pilot project?

Mr. PASSMAN. We have already obligated $1,335,000, if you include the dollar equivalent in U.S.-owned local currency. Through 1963 and 1964 it would be $1,200,000 in the local currency.

So it would then be $1,470,000.

Mr. RHODES. $1,335,000 through fiscal year 1963 and $345,000 more for fiscal year 1964?

Mr. MOSCOSO. That's right, including local currency.

Mr. RHODES. This is just for the pilot project. Now, my question was, do you have any figures as to any participation that we plan in the ultimate project? Assuming the pilot project is a success and Brazil goes into an expanded project, do we have any plans?

Mr. MOSCOSO. No, sir, we have no plans. This is their project.

I truly think this is a great program, quite frankly.

Mr. RHODES. What part of Brazil is this for?

Mr. MOSCOSO. They want to see if they can collapse the amount of time in order to give a basic education to these children and adults. The training of a teacher requires anywhere from 8 to 10 years. There is such a tremendous number of teachers needed, and having so few teachers at hand, they are really trying to collapse the time element by having one teacher at one central point provide the teaching to all of these children in these television schools.

Mr. RHODES. The only question I asked was what part of Brazil is this?

Mr. MOSCOSO. The northeast.

Mr. RHODES. How many students will be involved in this?

Mr. MOSCOSO. 2,650,000.

Mr. RHODES. This is a pilot project?

Mr. MOSCOSO. No. Ultimately, when the program hopefully is fulfilled. If it is successful, then there will be 18,500 schools and 2,650,000 students.

Mr. RHODES. How many will be in the pilot project?

Mr. MOSCOSO. There are 1,000 schools.

Mr. RHODES. That is how many students? Your arithmetic should not be too difficult. You knew how many schools would be in the ultimate program and how many students. Can't you interpret from that?

Mr. STERNFELD. About 250,000.

Mr. RHODES. This is all in the northeast part?

Mr. MOSCOSO. Yes, 250,000.

ELEMENTARY EDUCATION PROJECT

Mr. PASSMAN. What do you anticipate will be the total cost of the elementary project, on page 102, including both the dollar cost and the U.S.-owned local currency cost by the time this project is completed at the end of fiscal year 1969?

Mr. MOSCOSO. $3 million. This is the dollar cost of the project.

Mr. PASSMAN. I said as plainly as I could, gentlemen, the dollar cost and U.S.-owned currency.

Mr. MOSCOSO. $5 million in grants and $10 million in loans.

Mr. PASSMAN. What is the total?

Mr. MOSCOSO. This will be $30 million in local currency.

Mr. PASSMAN. $30 million, U.S.-owned local currency?

Mr. MOSCOSO. That's right.

Mr. PASSMAN. That is only through 1964?
Mr. MOSCOSO. That's right.
Mr. PASSMAN. Let us project the dollar part of it.
Mr. MOSCOSO. $3 million.
Mr. PASSMAN. So it comes to a $33 million project, does it not?
Mr. MOSCOSO. Yes.
Mr. ANDREWS. $33 million?
Mr. MOSCOSO. Yes.
Mr. ANDREWS. How much of it are we going to pay?
Mr. PASSMAN. $33 million.
Mr. MOSCOSO. This is local currencies.
Mr. ANDREWS. I know; but it is our money.
Mr. PASSMAN. $33 million, Mr. Andrews.
Mr. ANDREWS. Then the program will cost us $33 million over a period of how many years?
Mr. PASSMAN. Through 1964 only.
Mr. MOSCOSO. And the $3 million to 1969. It will be $3 million, in dollars.
Mr. PASSMAN. But the other part of it, local currency, U.S. owned, is only through 1964 projects; is that correct?
Mr. MOSCOSO. That's right.
Mr. ANDREWS. Mr. Chairman, I would like to get on the record at this point the objectives of this activity, which as shown on page 102 include:
(1) Construction and equipment of 1,000 elementary school classrooms. Is that right?
Mr. MOSCOSO. That's right.
Mr. ANDREWS. (2) Teacher training centers. Is that right?
Mr. MOSCOSO. That's right.
Mr. ANDREWS. (3) Eight normal schools and 10 industrial workshops providing training for 3,000 lay teachers and basic training for 100,000 adults.
Mr. MOSCOSO. That's right.

BRAZILIAN GOVERNMENT'S CONTRIBUTION

Mr. Congressman, I would like to point out the fact that over 65 percent of the total estimated costs have already been agreed upon with the Government. That is, the Government of Brazil has already committed as its contribution over 65 percent of the total cost and the agency of the Government is budgeting $29,202,000 in support of this project.
Mr. ANDREWS. But our cost, or the cost to this Government, will be $33 million?
Mr. MOSCOSO. $33 million, yes. They are putting up $29 million.
Mr. PASSMAN. Who puts up $29 million?
Mr. MOSCOSO. The Government of Brazil.
Mr. PASSMAN. For their own projects, as we agreed earlier?
Mr. MOSCOSO. That's right.
Mr. ANDREWS. How you you consider $29 million to be 65 percent of the cost of the project?
Mr. MOSCOSO. Because the states are going to put up money, too. The states comprising the northeastern section. There are nine states in that group and they will also participate.

GEOLOGICAL EDUCATION PROJECT

Mr. PASSMAN. I notice you propose to initiate a new project entitled "Geological Education," on page 107, at a cost of $325,000 in fiscal year 1963. What is your present estimate to complete the project?

Mr. MOSCOSO. $650,000.

Mr. PASSMAN. In what year will you complete it?

Mr. MOSCOSO. This is a 2-year program.

Mr. PASSMAN. With the possibility of a 3-year extension on top of that?

Mr. MOSCOSO. A possibility.

Mr. PASSMAN. The figure you have given here is only for 2 years. It could go two and a half times that, could it not?

Mr. MOSCOSO. Yes.

TERMINATION OF UNIVERSITY CONTRACTS

Mr. PASSMAN. We change the names of projects and change the numbers. Do you know of any university with which we have ever terminated our contracts and let them get back on their own?

What universities did you start with 5 years ago that are not still in the AID program with contracts?

Mr. MOSCOSO. Colombia, South America.

Mr. PASSMAN. I am talking about universities. Do you know of any university we started giving contracts to, we will say 5 years ago, that is not presently in the program with some kind of a contract?

Mr. MOSCOSO. We have a contract for medical education in Colombia, with a university which is not going to be renewed.

Mr. PASSMAN. There is no relationship to what you are saying and my question. Do you know of any American university that started with an AID program, getting contracts——

Mr. MOSCOSO. That is one.

Mr. PASSMAN. Colombia University?

Mr. MOSCOSO. No, it is Tulane.

Mr. PASSMAN. You have no type of contract with Tulane?

Mr. MOSCOSO. Yes, we have one other small one.

Mr. PASSMAN. Do you know of any university in America that started 5 years ago with the AID agency in some type of a contract that is presently without any AID contract?

Mr. MOSCOSO. The university existing without any AID program?

Mr. PASSMAN. That is right. That started 5 years ago.

Mr. MOSCOSO. There are other regions in the agency which may have contracts with this university and I wouldn't know.

Mr. PASSMAN. I imagine that with most of them it is multiplying.

ENGINEERING EDUCATION PROJECT

Why do you need $1,178,000 for contract services for the engineering education project, on page 108?

Mr. MOSCOSO. For contract services, participant training——

Mr. PASSMAN. Thank you.

PUBLIC SAFETY PROJECT

How much did you request and justify before the Congress last year for the public safety project, page 111?

Mr. Moscoso. These funds include a 2-year contract for the University of Michigan. With the Institute of National Aeronautics. Now we are going to expand this to include six Brazilian universities.

Mr. PASSMAN. Are you expanding the University of Michigan contract or what are you expanding?

Mr. Moscoso. Participation of the University of Michigan in this university contract which will eventually include six Brazilian universities.

Mr. PASSMAN. It is further proposed that in 1964 an AID loan of $6 million will be made to the University of Brasilia to develop its libraries and laboratories over the next 8 years with emphasis on science and engineering.

Do the people down in Brazil get hold of the unclassified sections of the AID books?

Mr. Moscoso. They do not.

Mr. PASSMAN. You people say you do not let them in on what programs you plan for them until you get the money. And yet we see where you are projecting these things 6, 8, or 9 years.

How much did you request and justify before the Congress last year for the public safety project found on page 111?

Mr. Moscoso. $960,000.

Mr. PASSMAN. What amount did you obligate to the project?

Mr. Moscoso. $1.1 million.

Mr. PASSMAN. How much did you have unliquidated on June 30?

Mr. Moscoso. $900,000.

Mr. PASSMAN. So actually you have unliquidated $900,000?

Mr. Moscoso. Yes.

Mr. PASSMAN. Do you need $1.1 million?

Mr. Moscoso. This is the estimate that we have made of the funds required for 1964.

Mr. PASSMAN. What type of commodities do you plan to obtain for this project at a cost of $585,000?

Mr. Moscoso. Mostly police equipment.

Mr. PASSMAN. Half a million dollars for police equipment?

Mr. Moscoso. That is right.

Mr. PASSMAN. What type of commodities do you plan to obtain for the community development project, $155,000, on page 114?

Mr. Moscoso. Projectors and audiovisual equipment and materials for the technical training centers.

CONTRACT STUDIES FOR FOOD-FOR-PEACE PROJECT

Mr. PASSMAN. I notice that you are asking for $65,000 for contract studies for the food-for-peace project, on page 116. What are they going to do? What would be a contract study under the food-for-peace project?

Mr. Moscoso. This would include the school lunch program.

Mr. PASSMAN. What is a contract study?

Mr. Moscoso. This is a contract to support the U.S. technicians in feasibility studies to be undertaken for this project.

Mr. PASSMAN. It says on page 116 that additional funds are needed to support four U.S. technicians and to fund contract services for the feasibility and operational study to be undertaken by governmental and private agencies.

What kind of feasibility and operational study projects are these?

Mr. Moscoso. To see how we can expand the school lunch program we have operating in the northeast more efficiently.

Mr. FORD. Who pays for the school lunch program now in effect?

Mr. Moscoso. We pay for a part and Brazil participates.

Mr. FORD. How much of the total do we pay in the present program—10 percent, 50 percent, or what is the percentage?

Mr. Moscoso. It is the major portion that we pay but I do not have the exact proportion.

Mr. FORD. What does it cost us overall? What is the total cost to us overall for that program?

Mr. Moscoso. The estimate of the commodities which will be used is $5 million in 1963 and $6 million in 1964.

Mr. FORD. And that is the major part of the cost of the program?

Mr. Moscoso. That is right.

BRAZILIAN CONTRIBUTION TO EDUCATION PROGRAMS

Mr. ANDREWS. Could you tell me how much is spent in Brazil overall for their education programs including the school lunch program, construction, and so on, and then tell us what percentage of that total amount we are picking up the check for. If you cannot give that figure in a hurry supply it for the record.

Mr. STERNFELD. You want to know the education budget of the Central Government of Brazil?

Mr. ANDREWS. Right.

Mr. STERNFELD. And what we are putting into the field of education compared to what they are doing in the field of education.

Mr. ANDREWS. Yes.

Mr. STERNFELD. Yes, sir; we will supply that.

(The information follows:)

Education in Brazil: Brazilian and United States financing

[In millions of U.S. dollars]

	Federal Government of Brazil [1]	Estimated total Brazilian expenditures on education (Federal and state governments) [2]	U.S.-financed education projects in Brazil
Fiscal year 1962	130	260	3
Fiscal year 1963 (estimated)	150	300	34
Fiscal year 1964 (estimated)	150	300	——
Total	430	[2] 860	——

[1] Based on the budget of the Federal Government of Brazil.
[2] The state governments of Brazil contribute 50 percent of the total education expenditures.

TECHNICAL SUPPORT PROJECTS

Mr. PASSMAN. I note, on pages 121 and 122, that you obligated in fiscal year 1963, $2,450,000 for the technical support projects. How much did you justify for the technical support projects last year?

Mr. MOSCOSO. $1,150,000.

Mr. PASSMAN. Let us see how much in excess of the amount you requested that you obligated.

Mr. MOSCOSO. We obligated $1,335,000.

Mr. PASSMAN. You justified $1,150,000 but you obligated $2,450,000?

Mr. MOSCOSO. $185,000 more.

Mr. PASSMAN. You obligated a little more than double what you justified to the Congress.

Mr. STERNFELD. Mr. Chairman, I think the problem was——

Mr. PASSMAN. Answer my question, please?

Mr. STERNFELD. We justified a northeast development program last year of $6 million. At that point in time we could not submit to the committee the breakout of the $6 million. We called it all Northeast Region Development. When the book was prepared in February 1962 we had not yet worked out the details of the northeast development program.

Mr. PASSMAN. You asked for funds before you formulated a plan or program. Then you threw it into a big pot and later worked out the program?

Mr. STERNFELD. We informed the Congress we wanted to carry out a program in the northeast, but we did not have the details of how we would carry it out.

Mr. PASSMAN. What harm would have been done if you had waited until this year and carried it out in an orderly manner?

Mr. MOSCOSO. I am afraid we could vitiate the effort we are making if we waited until a crisis occurred.

Mr. PASSMAN. Do you realize you are asking for funds this year for 99 nations?

Mr. MOSCOSO. I do not know the number.

Mr. PASSMAN. It would appear the time has come to justify some of these programs, and I hope some day you people will recognize the wisdom of having Congress bring this thing under control. I do not think there is any question about the fact it is now uncontrolled and uncontrollable.

NEW PROJECTS UNDER $100,000

Are there any new projects included in your list of projects under the $100,000 category, on page 123?

Mr. MOSCOSO. There are none new, Mr. Chairman.

URBAN COMMUNITY DEVELOPMENT

Mr. PASSMAN. We shall consider just one, the Urban Community Development, $30,000. Let us see if you can project that cost to completion. Give us the starting date.

Mr. STERNFELD. The project started, Mr. Chairman, in fiscal year 1963.

Mr. PASSMAN. Did you justify it then or is that one of the new starts?

Mr. MOSCOSO. No.

Mr. PASSMAN. You did not justify it. You start it out at $30,000. Now let us project it to completion.

Mr. MOSCOSO. We do not have the figure. We can supply it for the record, Mr. Chairman.

Mr. PASSMAN. Did you start this project out of deobligated funds?

Mr. STERNFELD. No. We started it out of funds that were available. The cost of this project is $105,000, a 4-year project.

Mr. PASSMAN. Is that dollars?

Mr. STERNFELD. Yes.

Mr. PASSMAN. What about the local currency part?

Mr. STERNFELD. This is just the cost involved in a technician for supporting services.

Mr. PASSMAN. A technician?

Mr. STERNFELD. Yes.

Mr. PASSMAN. What is this technician going to do?

Mr. STERNFELD. This is a person on the staff of the U.S. AID mission in Brazil to concern himself with the problems which are created by the urban situation in Brazil to work with the Government organizations in dealing with slum problems.

Mr. PASSMAN. One individual happened to need a job and you assigned him to the Rio area for how long?

Mr. STERNFELD. This is the area in Rio.

Mr. PASSMAN. What is his salary per year?

Mr. STERNFELD. I would assume $18,000, salary including allowances.

Mr. PASSMAN. And he will solve the slum problem in Rio?

Mr. MOSCOSO. He will help them, hopefully.

Mr. PASSMAN. Is this man assigned to this project without assistance from the AID staff?

Mr. MOSCOSO. I am sure he will get substantial assistance from other people. He will not be working in a vacuum.

Mr. PASSMAN. Let us see how this project is progressing. Give us information on this individual and his background.

Mr. MOSCOSO. We will get it for you.

Mr. FORD. Is he an American recruited here and sent there?

Mr. STERNFELD. Yes.

Mr. FORD. How long has he been on the job?

Mr. STERNFELD. Inasmuch as there is only $15,000 for him he probably has not been there the whole year.

Mr. PASSMAN. Supply us the pertinent information.

Mr. STERNFELD. Yes.

(The information follows:)

URBAN COMMUNITY PROJECT AND BIOGRAPHIC INFORMATION ON THE U.S. TECHNICIAN ASSIGNED TO THE PROJECT

The urban community development project in Brazil started in fiscal year 1963 and is presently scheduled to end fiscal year 1967. The total dollar cost of this project to completion is estimated at $105,000. For fiscal year 1963 no separate project funding was required but one technician was assigned to this project. She was Mary C. Jennings. She received an A.B. degree from Marietta College in 1938 and undertook graduate study in social welfare at Fordham University in 1948 and at Catholic University from 1953 to 1955. She has served as a public school teacher, supervisor, and adviser on community relations in the United States. Her latest AID salary was $10,000 per annum. Her work in

Rio de Janeiro consists of training Brazilian social workers and home economists through regular seminars and special courses in sanitation, health education, and home nursing. These trained social workers will provide social services to slum clearance and urban community projects. Latest figure on the cost of the entire effort in fiscal year 1963 is $15,000.

At the present time the position is vacant. The cost of a new employee including allowances, travel, etc., plus some additional local expenses connected with seminars will require $30,000 in fiscal year 1964.

Mr. PASSMAN. Here is just one man assigned to the AID mission and it looks like a pretty big assignment because you had a similar project for which you needed $33 million.

Mr. Rooney?

BRASÍLIA

Mr. ROONEY. Has the AID program over the years contributed anything to the building of that place in the middle of nowhere known as the new capital, to wit, Brasília?

Mr. MOSCOSO. Not since I have been in the program.

Mr. ROONEY. Do you have any people in Brasília? Do you have an office in Brasília?

Mr. MOSCOSO. We have not had anybody in Brasília but we may have to establish an office there because the coordinator of the development programs on the Brazilian part has moved to Brasília and we may have to establish some contacts with him there.

Mr. ROONEY. Did you look at television last night and the film presented by the young man, Brinkley?

Mr. MOSCOSO. Yes, sir.

Mr. ROONEY. According to Brinkley, people only go up to Brasília on Tuesday and leave on Thursday. This reminds me of something they say about another institution in the United States of America. But he showed pictures of them arriving on Tuesday and leaving on Thursday. Our State Department had to put up what they call a staging building, which Mr. Brinkley did not bring to the attention of the viewers of television last night. We have people up there from USIA, and who will USIA propagandize from Tuesday to Thursday, I wonder? Now we find you may open an office up there. Your employees will all be covered with red clay in the first 10 minutes and want to get out of there, I can assure you. Nobody wants to do business in Brazil in any place except Rio.

Mr. FORD. We will provide rest and recreation for them to get out of Brasília.

Mr. ROONEY. I would think it would be rest and recreation for them unless they wanted to swim in the polluted waters at Rio rather than stay in the red clay in Brasília that covers you in 10 minutes.

HOUSING FOR AID PERSONNEL IN BRASÍLIA

Mr. PASSMAN. Did not AID take a substantial amount of money from the President's contingency fund and build housing projects for the AID personnel in Brasília?

Mr. TENNANT. That was about 2 years ago.

Mr. PASSMAN. Did not AID take substantial funds from the President's contingency account and build housing projects for the AID personnel in Brasília?

Mr. TENNANT. I know some of the contingency fund was used for housing, but whether it was in Brasília or Rio, I do not know.

Mr. PASSMAN. It was in Brasília.

Mr. MOSCOSO. That was before my time.

Mr. ROONEY. What was your impression after seeing this Brinkley television film last night?

Mr. MOSCOSO. The impression I got is that there is still a substantial amount of social and political activity to be generated in Brazil, but that it is a country full of energy, growing, and learning, and in many ways it resembles this country in our early days, our frontier days.

Mr. ROONEY. It merely verified my own impressions of when I was there a few years ago: that it is the greatest boondoggle of the century and the greatest waste of people's money ever perpetrated. There is no point to it.

Mr. FORD. You are talking about Brasília?

Mr. ROONEY. Yes.

Mr. PASSMAN. I would like to read this comment from page 7 of the report of fiscal 1962:

> An example of the use of this fund for nonemergency expenditures is the obligation of $446,000 for the purchase of 24 apartments in Brasília, Brazil, for U.S. employees. Pages 962, 963, and 964 of the printed hearings contain a list of projects initiated during 1961 by a very loose interpretation by the administration of the word "essential."

I am speaking about the President's contingency fund.

UNIVERSITY OF BRASILIA

Mr. ROONEY. Mr. Moscoso, a while ago you told us there were no funds in this budget in connection with Brasília. I now find at page 108 of this justification book that you propose in fiscal year 1964 an AID loan to the University of Brasília to develop its library and laboratories over the next 8 years, with emphasis on science and engineering.

Am I correct, and do you wish to change your answer?

Mr. MOSCOSO. No, I want to clarify it. The question was, "Are you proposing people or personnel in Brasília?"

Mr. ROONEY. No; I did not mention the words "people or personnel." You were asked if there were any funds for Brasília, and you said there were none. Now we find you have a proposed substantial loan to the University of Brasília. What is the justification for this loan in view of this Brinkley film last night? Who would go to the University of Brasília?

Mr. MOSCOSO. There are quite a number of people already living there, and it is obviously desirable for the final——

Mr. ROONEY. According to Brinkley, the situation is such that it compares with the situation when I was there, that there was nobody working in Brasília but the construction workers, and they had a honky-tonk town of their own. Are they the people who will go to the University of Brasília?

Mr. MOSCOSO. Obviously, any loans will be studied by us, and we will have to be certain there will be the students necessary to attend the university, and that there will be a continuing need for this institution.

Mr. ROONEY. How far has this project advanced?

Mr. MOSCOSO. It has not advanced.

Mr. ROONEY. It must have advanced to be in this budget.

Mr. MOSCOSO. The Ford Foundation is going down there to study the feasibility of financing activities of this university.

Mr. ROONEY. You mean you do not presently even have a university?

Mr. MOSCOSO. We have not heard from the Ford Foundation.

Mr. ROONEY. Is there presently a university in Brasília?

Mr. MOSCOSO. Yes, there is.

Mr. ROONEY. How many students do they have?

Mr. MOSCOSO. We do not have that, Mr. Rooney.

Mr. ROONEY. How many weeks would it take to find out?

Mr. MOSCOSO. We can find out tonight.

(Information supplied follows:)

UNIVERSITY OF BRASÍLIA

1. Four hundred and thirteen students are presently enrolled in the University of Brasília.

2. The University of Brasília was inaugurated in May 1962.

(Discussion off the record.)

POPULATION OF BRASÍLIA

Mr. PASSMAN. It is rather generally understood, I believe, that the then President, when they built this new capital, just about bankrupted the Brazilian Government with this novel idea of his.

Mr. ANDREWS. What is the population of Brasília?

Mr. MOSCOSO. I don't know.

Mr. ANDREWS. Could you find out and put it in the record?

Mr. MOSCOSO. Yes.

Mr. ANDREWS. I would like to have the figure, excluding the temporary residents there.

Mr. MOSCOSO. Excluding the floating population.

The population of Brasília is about 172,000. This figure includes a substantial number of construction workers, but neither the Brazilian Embassy nor any other source available has been able to determine how many of these workers are (or will be) "permanent" residents and how many are temporary.

UNIVERSITY OF BRASÍLIA

Mr. ANDREWS. When was the University of Brasília established?

Mr. MOSCOSO. I don't have that information.

Mr. ANDREWS. Do any of your staff members know?

Mr. MOSCOSO. We are trying to get the information and we will be able to give you the date and the number of students.

Mr. ANDREWS. Did I understand you to say they are planning an extension of the university?

Mr. MOSCOSO. An extension of the university?

Mr. ANDREWS. Who will finance that?

Mr. MOSCOSO. The Ford Foundation has been making studies to see whether this is desirable.

Mr. ANDREWS. If they conclude it is desirable to expand the physical property of the university who will finance it?

Mr. Moscoso. The Brazilians will have to put up part of the money, and if the program, or if their loan request, meets our criteria and we think it is justified within the country program and the priorities for the country, we may consider that loan.

Mr. Andrews. Then AID is at least considering financing an expansion of the University of Brasília?

Mr. Moscoso. Yes, sir.

Mr. Andrews. In addition to the substantial loan which you say you already have taken under consideration——

Mr. Moscoso. No.

Mr. Andrews. Didn't you tell Mr. Rooney you are planning a substantial AID loan in 1964 for the library?

Mr. Moscoso. That is right. This is the library and the laboratory over the next 8 years.

COST-OF-LIVING INDEX

Mr. Andrews. I notice that the cost of living is increasing very, very rapidly in Brazil.

Mr. Moscoso. That is right.

Mr. Andrews. In 1959 the cost-of-living index compared to 1958 was 147 percent. It was up 47 points over the previous year.

Mr. Moscoso. The final estimate was 52 percent.

Mr. Andrews. Then it jumped to 185 percent in 1960, and in 1961 it was 256 percent. The estimate for 1962 shows 387 percent.

Mr. Moscoso. That is right.

Mr. Andrews. Do you know whether or not our aid has contributed to this phenomenal increase in the cost-of-living index?

Mr. Moscoso. I don't think so. On the contrary, if anything, it has provided some of the important requirements which would have assisted in keeping the cost of living from rising as much as it has.

Mr. Andrews. It could not have risen much more, could it?

Mr. Moscoso. It could have gone a little higher. It has grown faster in some other countries, like Bolivia.

Mr. Andrews. To what do you attribute this tremendous increase in the cost of living index?

Mr. Moscoso. Primarily to the budgetary deficits.

Mr. Andrews. They are spending more than they are taking in?

Mr. Moscoso. They have printed money in order to cover budgetary deficits, due primarily to the fact that they have railroads which create substantial deficits every year, that some of the government-owned public utilities have not charged rates to recover their costs, and these funds have had to come out of the budget.

Mr. Andrews. In other words, the country has been spending more than they have taken in?

Mr. Moscoso. That is right.

Mr. Andrews. Just like our Government. We have been spending more money than we take in.

Mr. Moscoso. That is right.

Mr. Andrews. We have had a deficit for 26 years out of the last 30, I believe.

Mr. Moscoso. That is right.

Mr. Andrews. Who owns the railroads?

Mr. Moscoso. The Government of Brazil.

EXPROPRIATION OF AMERICAN-OWNED PROPERTIES

Mr. ANDREWS. Has the Government expropriated some U.S. companies' property in Brazil in the last few years?

Mr. MOSCOSO. They have.

Mr. ANDREWS. What effort is being made to collect from the Government the value of the properties seized by the Brazilian Government?

Mr. MOSCOSO. Very strenuous efforts are being made. As a matter of fact, a satisfactory agreement was reached between the International Telephone & Telegraph Co. with regard to the expropriation of the telephone companies. With American & Foreign Power, apparently satisfactory negotiations are taking place.

I know the concern of the Congress—and I can assure you it is also our concern—that the American companies be adequately compensated for the assets which have been taken from them.

Mr. ANDREWS. What companies have lost property down there through expropriation and have not been compensated for it?

Mr. MOSCOSO. So far as I know they have been compensated.

Mr. ANDREWS. All the companies which lost property?

Mr. MOSCOSO. That is right, except for those where the settlement is pending. That involves the two I just mentioned.

Mr. ANDREWS. Do you know the other companies?

Mr. MOSCOSO. I know of no others where settlement has not been made effective.

BRASÍLIA

Mr. ANDREWS. Have you been to Brasília lately?

Mr. MOSCOSO. I was there a little over a year ago.

Mr. ANDREWS. What was your impression of the city and its future possibility?

Mr. MOSCOSO. I think, Mr. Congressman, that the big mistake in connection with Brasília was trying to build it that fast. However, I really think there is need for decentralizing population away from the shoreline of Brazil.

As you know, most of the population of the country, most of the 75 million, are concentrated in a very thin coastal strip not more than 50 or 100 miles deep. As a way of projecting and attracting the attention of the Brazilians to the fact they have a tremendous amount of country which can be developed Mr. Kubitschek tried to construct this capital following the dictum of the constitution which states that a capital should be built——

Mr. ANDREWS. Do you know whether our Government encouraged the development of Brasília as a capital?

Mr. MOSCOSO. I don't know.

U.S. EXPENDITURES IN BRASÍLIA

Mr. ANDREWS. Could you tell us how much money our Government has put into the development of all projects in Brasília—State Department, AID, all branches of the Federal Government?

Mr. MOSCOSO. I don't know. I shall be happy to find out and submit it for the record.

(The information requested follows:)

U.S. GOVERNMENT EXPENDITURES IN BRASÍLIA

The sum of $1,721,914 has been spent for the purchase of land, apartments, and construction of an interim office building. The following is a breakdown of expenditures:

	State	AID
Interim Office Bldg	$694,499	
38 apartments in the Larangeiras Bldg	627,001	
12 apartments in the Gavea Bldg		$142,790
12 apartments in the Tijuca Bldg		212,756
Land	44,868	

In 1957 the Export-Import Bank authorized a $10 million credit to Brazil to be used for the purchase of equipment for the construction of Brasília.

An additional amount of $599,700 has been expended for the public safety program in Brasília during the fiscal years 1961 through 1963.

Mr. PASSMAN. In what year did Brazil make restitution to the telephone company for the expropriation of property?

Mr. MOSCOSO. I don't know whether or not restitution has yet been made.

Mr. PASSMAN. In what year did they reach an agreement on the dollar figure?

Mr. MOSCOSO. 1963.

FISCAL YEAR 1963 AID PROGRAM

Mr. PASSMAN. How much AID did we give Brazil in 1963, total?

Mr. MOSCOSO. $86.8 million.

Mr. PASSMAN. Give us the same figure that you did earlier.

Mr. MOSCOSO. Including everything it is $168.1 million.

Mr. PASSMAN. Was that about the largest AID year in the history of the program for Brazil?

Mr. MOSCOSO. It was next to the largest.

Mr. PASSMAN. The year 1962 was the largest. That is when they were negotiating a settlement. They finally reached a settlement during the year in which we had the largest AID program in Brazil.

TOTAL AID TO BRAZIL

What has been the total amount of aid to Brazil?

Mr. TENNANT. $2 billion.

EXPROPRIATION OF AMERICAN-OWNED PROPERTY

Mr. SCHEINMAN. Section 620(g) of the Foreign Assistance Act of 1961 specifically declares that no monetary assistance shall be made available under the act to any government, et cetera, which will be used to compensate owners for expropriated or nationalized property.

Mr. PASSMAN. Thank you, Mr. Scheinman.

If you give Brazil $163 million, they are not going to say specifically that they will take some of this money and pay I.T. & T., but would you not think it might be an incentive?

Mr. SCHEINMAN. Yes, sir. I can assure you we take the statute very seriously, sir.

Mr. PASSMAN. I know that you do, but you are not supervising the internal affairs of Brazil.

Mr. FLYNT. In addition to the International Telephone & Telegraph Co. and the American & Foreign Power Co., what other American companies have suffered expropriation of property by the Government of Brazil?

Mr. MOSCOSO. I do not have information on others but we are looking into the record and we have promised one of the Congressmen a list of all the expropriations which have taken place.

(Information supplied follows:)

EXPROPRIATIONS OF AMERICAN PROPERTY BY THE GOVERNMENT OF BRAZIL

With the exception of I.T. & T. and the expropriation of AMFORP in 1959, there have been no expropriations of property belonging to U.S. nationals by the Government of Brazil since World War II.

Mr. FLYNT. A great many other American companies have holdings in Brazil at the present time?

Mr. MOSCOSO. That is right.

Mr. FLYNT. In 1963 the total contribution under AID, Public Law 480, and other programs was in excess of $160 million?

Mr. MOSCOSO. That is right.

Mr. FLYNT. In 1962 the figure was even higher. Is that correct?

Mr. MOSCOSO. That is correct.

Mr. FLYNT. Over a period of the life of this program in excess of $2 billion has been used in the development of Brazil and the Brazilian economy?

Mr. MOSCOSO. That is right, and over $700 million has been paid back with $200 million on top of that for interest.

Mr. FLYNT. And additional investments have been made by U.S. companies in Brazil and in the economy of Brazil?

Mr. MOSCOSO. That is right.

Mr. FLYNT. Do you anticipate within the next 3 years any further expropriation of American properties located in Brazil?

Mr. MOSCOSO. I couldn't do that, sir. I wouldn't know.

Mr. FLYNT. If you can judge the future by what has taken place in the past, is not the amount of expropriation almost in direct ratio to the amount of aid we give to that country?

Mr. MOSCOSO. No, I don't think there is a direct relation between the amount of aid and the value of the properties which have been expropriated.

I think the question of the expropriation is perhaps a function of the political situation more than anything else.

The Brazilians are undergoing a period of extreme nationalism and nationalism can be destructive. In this case they have harmed themselves. They have harmed themselves by cutting down one spigot, which the chairman does not refer to, but which I consider more important than anything we can do insofar as this Government is concerned, and that is private investment.

Mr. FLYNT. It is true, is it not, that a Latin American country; namely Cuba, located between here and Brazil, has seized and expropriated every single item of American property located in that country?

Mr. MOSCOSO. Approximately $1 billion worth, yes.

Mr. FLYNT. I believe that includes the new building constructed to house the American Embassy?

Mr. MOSCOSO. That is right, sir.

Mr. FLYNT. To your knowledge is that the first time in the history of this country that a building housing the U.S. Embassy has ever been seized by a foreign country?

Mr. MOSCOSO. I would defer to my colleague here.

Mr. COTTRELL. I believe that is so.

Mr. ROONEY. That was widely stated in the press?

Mr. COTTRELL. I believe that is so.

Mr. FLYNT. If there are further——

Mr. ROONEY. Would you please ask him if these people were kicking about the telephone service in Brazil?

Mr. FLYNT. I will come back to that.

If there are further expropriations of American-owned properties by the Brazilian Government, would you classify this AID program to Brazil as a success or failure?

Mr. MOSCOSO. I would say there would not be any AID program if they do not compensate these companies.

STAGING BUILDING IN BRASÍLIA

Mr. FLYNT. What was the purpose of building the staging building in Brasília?

Mr. MOSCOSO. Perhaps Mr. Cottrell can answer that.

Mr. COTTRELL. I don't. I think Congressman Rooney knows more about this than anybody else.

Mr. FLYNT. I inquired the purpose of the staging building in Brasília.

Mr. ROONEY. I don't want to become the witness.

Mr. FLYNT. Can you supply that information for the record?

Mr. MOSCOSO. Yes, sir.

(The information requested follows:)

PURPOSE OF CONSTRUCTING THE STAGING BUILDING IN BRASÍLIA

The decision to move the capital of Brazil from Rio de Janeiro to Brasília was made in 1955 with actual construction beginning in 1957. On April 21, 1960, the new capital was formally inaugurated. Although all Federal Government offices and personnel have not yet transferred to Brasília, the President of Brazil maintains his official residence there; the Congress meets there; Cabinet ministers work and meet there and much of Brazil's official business is conducted in the new capital.

Therefore in order for our Ambassador and the Embassy staff to carry out their responsibility in keeping the Department of State, the Executive, and our Congress informed of political and economic developments in Brazil, it is essential that an adequate staff be maintained in Brasília.

The staging building was constructed to house personnel and provide office space until such time as permanent office and housing accommodations are completed.

Upon completion of permanent buildings the staging building will be converted to apartments or offices, depending on the needs of the U.S. Government at the time.

Mr. FLYNT. That particular item never was justified before this committee, is that correct?

Mr. ROONEY. It was not in this bill.

Mr. FLYNT. It is being used.

Mr. ROONEY. This is part of the "Foreign buildings office" appropriations of the State Department, Mr. Flynt.

Mr. FLYNT. Did any branch of the Government ever justify to the Appropriations Committee the $600,000 expenditure for the staging building in Brasília?

Mr. MOSCOSO. I wouldn't know. This is really a State Department appropriation. I wouldn't have that information.

Mr. FORD. Off the record.

(Discussion held off the record.)

Mr. FLYNT. How much has been spent out of the appropriations provided by this committee in the city of Brasìlia?

Mr. MOSCOSO. I said a moment ago I would supply that information for the record.

Mr. FORD. The years and the other items.

Mr. FLYNT. I have no further questions.

EXPORT-IMPORT BANK LOANS

Mr. PASSMAN. To keep the record straight, we agreed earlier, and I know you didn't do it intentionally because we reached an agreement, that if we included the hard Export-Import Bank loans that it would certainly reflect credit to this program to which the program is not entitled.

We said we would state the amount we gave away. When you include the Export-Import loans you are going back to the inception of the Export-Import loans.

We know that these countries, unless they are in an extremely difficult position, repay the Export-Import loans, but we wouldn't want to leave the record sticking out and showing that we gave them $2 billion and they have already repaid $700 million.

The $700 million basically is Export-Import loans. Is that right?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Is the majority of the $1,300 million a complete giveaway? Wasn't it grants and all types of aid?

Mr. MOSCOSO. No.

Mr. PASSMAN. How much of that sum represented Export-Import Bank loans?

Mr. MOSCOSO. As I understand it, Export-Import Bank has loaned $1,170 million.

Mr. PASSMAN. How much did they repay?

Mr. MOSCOSO. $723 million through the Export-Import Bank.

Mr. PASSMAN. That is the figure you used, the amount repaid. That is through the Export-Import Bank.

Mr. Rhodes?

UTILITY LOAN TO BRAZILIAN STATE OF MINAS GERAIS

Mr. RHODES. Under date of August 2 there was a release from the Alliance for Progress concerning aid to a Brazilian State, Minas Gerais.

Mr. MOSCOSO. That is right.

Mr. RHODES. This concerns a utility company which is to receive a loan of $5.3 million. Is its name CEMIG?

Mr. MOSCOSO. That is right.

Mr. RHODES. Is this a privately owned company?

Mr. MOSCOSO. A public corporation where the Government owns part and there is some private money.

Mr. RHODES. Has it always been a privately owned corporation?

Mr. MOSCOSO. A mixed company.

Mr. RHODES. This does not consist of expropriated property?

Mr. MOSCOSO. No, sir.

COMPENSATION FOR EXPROPRIATED PROPERTY

Mr. ROONEY. Is it improper for a sovereign nation to expropriate property as long as there is a fair and agreed upon compensation for the utility that it takes over?

Mr. MOSCOSO. No, it is a generally accepted international practice.

Mr. ROONEY. It is a generally accepted procedure. The point is whether they have made proper compensation upon taking it over.

Mr. MOSCOSO. That is right.

Mr. ROONEY. In the case of Brazil the figure agreed upon has been satisfactory, I am told, insofar as the I.T. & T. Co. is concerned?

Mr. MOSCOSO. That is right.

Mr. ROONEY Thank you, Mr. Rhodes.

Mr. RHODES. There have been expropriations of American & Foreign Power Co. properties, also.

Mr. MOSCOSO. Not precisely expropriation, but the same effect.

Mr. RHODES. All the properties in Brazil, or do they still have some?

Mr. MOSCOSO. I think this includes most properties.

Mr. RHODES. And there have been negotiations?

Mr. MOSCOSO. That is right.

Mr. RHODES. What is the status of the negotiations?

Mr. MOSCOSO. Apparently the negotiations reached a satisfactory point. Then came a change in ministers and they have had to continue negotiating with the new Minister of Finance.

One of the things that the Minister of Finance thinks should be done is that at least an appraisal should be made of the properties.

In the meantime the American & Foreign Power considers that in accordance with the initial negotiation with the original Ambassador the properties have been transferred to the Government of Brazil and they are running the properties for the Government of Brazil and they will be compensated for the operating expenses.

Mr. RHODES. The value of those properties must be pretty well known?

Mr. MOSCOSO. The value of the properties apparently has been questioned because there was no evaluation made by the people whom the new Minister of Finance would consider acceptable for the purpose of Brazilian law.

Mr. RHODES. In Brazil does not the government of either the State or the nation set rates for power?

Mr. MOSCOSO. Yes.

Mr. RHODES. As they do here in the United States?

Mr. MOSCOSO. There is a sort of public service commission which sets the rates.

Mr. RHODES. I would assume rates were set in accordance with the various criteria which we use here, including the value of the property and the expenses involved in the production of the power, and all the other criteria.

Why would anybody worry at this late date about establishing a value? This should have been done many times.

Mr. MOSCOSO. Apparently for ratemaking they use one base. In the case of acquisition of property they seem to believe it should be on another base. In other words, it should be reproduction cost, or original cost less depreciation, and I suppose that is what they are now negotiating, what should be basis for the evaluation.

Mr. RHODES. What part does the U.S. Government take in these negotiations?

Mr. MOSCOSO. We have been pressing very hard to get these settled as quickly as possible. I think we have communications from both American & Foreign Power and I.T. & T. thanking the Department for the active participation.

Mr. RHODES. I hope this will continue. It is a very silly thing for the United States to continue aiding a country which expropriates property without making a fair and prompt settlement.

I have no doubt about the legality of expropriation as long as fair and prompt settlement is made. Without that, there has been an unfriendly act committed and I don't believe in helping people who commit unfriendly acts on the international scene.

I certainly hope that not only the State Department but the AID Agency, as well, will press just as hard as necessary to settle all these matters promptly and fairly.

Mr. MOSCOSO. We keep on top of that continuously, sir.

AMOUNT OF SETTLEMENT IN I.T. & T. EXPROPRIATION

Mr. PASSMAN. Would you know the amount of the telephone company's settlement on their properties with Brazil?

Mr. MOSCOSO. I haven't the information with me.

Mr. PASSMAN. Have you any idea as to the total amount?

Mr. MOSCOSO. No.

Mr. PASSMAN. Can you get that information for us?

Mr. MOSCOSO. We shall try to get it for you.

Mr. PASSMAN. The amount that Brazil agreed to pay I.T. & T. for their property.

Mr. MOSCOSO. All right, sir.

I.T. & T. SETTLEMENT

On February 1, 1963, I.T. & T. issued a press release stating the company had reached a satisfactory interim arrangement for payment of its expropriated properties in the State of Rio Grande do Sul, Brazil.

The arrangement involved a loan from the Bank of Brazil in the amount of $7.3 million, pending the conclusion of the expropriation lawsuit or an agreement between the State of Rio Grande do Sul and the company. Under the terms of the loan the maturity dates of the amounts owed by the company were to be postponed automatically until the company receives such indemnity as is

due to it. The agreement further provides that $3,650,000 is to be repatriated and an equal amount is to be reinvested in Brazil.

Mr. PASSMAN. Mr. Ford?

AMOUNT REQUESTED AND OBLIGATED IN FISCAL YEAR 1963 FOR BRAZIL

Mr. FORD. What did you request or what did you justify last year at the time you were before the committee for Brazil? What was the amount of the grant request?

Mr. MOSCOSO. $24 million for grants, and the loan was between $140 million and $160 million.

Mr. FORD. So your total was a maximum of $190 million, or a minimum of $164 million?

Mr. MOSCOSO. $184 million or a minimum of $164 million.

Mr. FORD. What did you execute in fiscal 1963?

Mr. MOSCOSO. A total of——

Mr. FORD. First the grants.

Mr. MOSCOSO. $23.9 million, and in loans $37.4 million. There was supporting assistance loan as well, which is a total of $86.8 million.

Mr. FORD. In the figures you gave originally for the request did you include the supporting assistance amount?

Mr. MOSCOSO. No.

Mr. FORD. You did not?

Mr. MOSCOSO. No.

Mr. FORD. Why not?

Mr. MOSCOSO. It was not in the estimate at that time.

Mr. FORD. Then what was the total amount of the program which you executed including supporting assistance?

Mr. MOSCOSO. $86.8 million.

Mr. FORD. That includes grants, supporting assistance, and loans?

Mr. MOSCOSO. That is correct.

Mr. FORD. Which is substantially less than what you justified?

Mr. MOSCOSO. That is right.

Mr. FORD. What caused the difference? Was it Brazil's attitude, failure to match up or meet the criteria you established, or was it the fact that Congress gave you less money than you requested?

Mr. MOSCOSO. Failure to meet the criteria.

Mr. FORD. It had nothing to do with availability of funds from the United States?

Mr. MOSCOSO. No, sir.

Mr. FORD. It was purely and simply the failure of Brazil to meet the criteria you or AID established?

Mr. MOSCOSO. That is right.

Mr. FORD. I commend you for that attitude.

FISCAL YEAR 1964 FUND REQUEST

How much are you asking in fiscal 1964?

Mr. MOSCOSO. In loans ——— and $20 million in grants.

Mr. FORD. Are you asking for any money for supporting assistance?

Mr. MOSCOSO. No.

Mr. FORD. Do you have any reason for speculating you will have a demand for supporting assistance?

Mr. MOSCOSO. We do not contemplate it.

Mr. FORD. Do you expect to maintain the same criteria in fiscal year 1964 that you maintained so well in fiscal year 1963, as far as Brazil is concerned?

Mr. MOSCOSO. Yes.

Mr. FORD. You are not going to moderate or modify your attitude. You want results or you are not going to loan the money or grant the money?

Mr. MOSCOSO. That is right.

Mr. FORD. That is all, Mr. Chairman.

Mr. PASSMAN. Are the reasons the same things Secretary Dillon refers to as development credits and that you and I agreed are the soft-term loans, 40 years, three-quarters of 1 percent?

Mr. MOSCOSO. That's right.

BOLIVIA

Mr. PASSMAN. The next country in this area is Bolivia, for which the fiscal year 1964 estimate is $———; is that correct, sir?

Mr. MOSCOSO. That's right.

Mr. PASSMAN. How much do you have to the credit of Bolivia, unliquidated, as of June 30, 1963?

Mr. MOSCOSO. $55,912,000.

Mr. PASSMAN. Is that total from all 16 of these foreign aid spigots?

Mr. TENNANT. It includes Public Law, 480, military and economic.

TOTAL AID TO BOLIVIA

Mr. PASSMAN. What has been the total amount of aid to Bolivia since the inception of the foreign aid program?

Mr. MOSCOSO. $328,200,000.

Mr. PASSMAN. From all spigots?

Mr. MOSCOSO. That's right.

Mr. PASSMAN. Does this include the Export-Import Bank?

Mr. MOSCOSO. It does include Export-Import Bank.

Mr. PASSMAN. How much is Export-Import Bank?

Mr. MOSCOSO. Export-Import was $26.4 million. Therefore, the total is $301,800,000.

Mr. PASSMAN. The free part is $301,800,000?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. How much aid has the United States given to Bolivia since the revolution in 1952?

Do you have that information, gentlemen?

Mr. MOSCOSO. We will calculate it. We are doing it right now.

Two hundred ninety-seven million seven hundred thousand dollars.

Mr. PASSMAN. Is this a country we wanted to establish as a kind of a showcase as to what could be done with sufficient outside finances?

Mr. MOSCOSO. I hope I haven't used the word "showcase" in my testimony.

Mr. PASSMAN. I will accept that as being my definition of it.

This is the country where we wanted to set an example of what could be done with aid money? Is that a fair statement?

Mr. MOSCOSO. No. I think that what we are trying to do in Bolivia is to assist a small country which has undertaken a series of reforms——

Mr. PASSMAN. Was this not a country in which we were going to go all out to show what could be done?

Mr. STERNFELD. This was done by people who were in charge of the Latin American program prior to Mr. Moscoso's time in office. He is not aware of it, but I am.

Mr. PASSMAN. This was a kind of showcase, to show what could be done with the proper aid; is that right?

Mr. STERNFELD. The administration, during the Eisenhower administration, was quite concerned with making Bolivia an example of the ability of a country to have a social revolution—which is what this country had—and continue to exist and not go Communist.

SUCCESS OF AID PROGRAM

Mr. PASSMAN. It has cost us approximately $300 million. Has this program been as successful as we had hoped?

Mr. MOSCOSO. No, it hasn't been as successful as we had hoped.

Mr. PASSMAN. Has it been a failure?

Mr. MOSCOSO. I wouldn't call it a failure, no.

Mr. PASSMAN. Almost a failure?

Mr. MOSCOSO. No.

Mr. PASSMAN. Bordering on failure?

Mr. MOSCOSO. I think that we are now for the first time really embarking on a developmental program in Bolivia.

Mr. PASSMAN. But so far you could not say this program has been a success, even though it was an all-out effort?

Mr. MOSCOSO. Of course not.

Mr. FORD. Let me ask this question: Do you think there is a chance it is going to be successful?

Mr. MOSCOSO. I think it has a very good chance of becoming a success from the developmental point of view. I will say up until now it has proven itself from a political point of view. It has maintained a status as a democracy and has not gone Communist. I think the chances at one time were very great that Bolivia would go Communist.

MINERS STRIKE IN BOLIVIA

Mr. PASSMAN. Do you not imagine the Communists would give it back as soon as they took it when they find out what they are up against? How about the striking miners up in Bolivia right now?

Mr. MOSCOSO. They are out on strike and this is testing——

Mr. PASSMAN. It has been almost continuous since we started this aid program?

Mr. MOSCOSO. That's right, it is one of the problems we are facing.

Mr. PASSMAN. The fact is that there has been very little progress made. We are getting by presently on faith that something can be developed in the future.

Mr. MOSCOSO. The cold fact is that these miners are Communist-led and the Government of Bolivia is making a strenuous effort to cope with that situation and as of now it is facing the problem head on.

Mr. PASSMAN. This is the idea we have been dealing with—this is

the same trouble Bolivia has had ever since we went into their program. It has just been repeating itself?

Mr. Moscoso. I think that at this time the situation is probably——

Mr. Passman. Is the situation really worse than it was?

Mr. Moscoso. Well, the Government of Bolivia I believe is really making the kind of an effort that has to be made in order to deal with the situation.

Mr. Passman. These people are again out on strike, closing down the mines?

Mr. Moscoso. Yes, sir.

Mr. Passman. Is that the kind of thing that has kept this country almost in a condition of poverty for years?

Mr. Moscoso. No, there are other reasons for that.

Mr. Passman. Is that the main reason?

Mr. Moscoso. Well, no. If you look back at the tremendous amount of wealth that was taken out of that country by the tin barons and never reinvested in the country, I would say that is one of the reasons.

Mr. Passman. As Mr. Sternfeld says, this was supposed to be the showcase, to show what could be done with aid. What is the population of Bolivia?

Mr. Moscoso. Four million.

Mr. Passman. We have put in $300 million and actually we do not have anything to show for it other than we just hope they may be embarking now upon a program that might be more successful.

STABILITY OF BOLIVIAN GOVERNMENT

Mr. Moscoso. Well, there is a democratic government.

Mr. Ford. When did that government take over? How long has it been in existence?

Mr. Moscoso. In 1952. They had elections again in 1956. Then again the President elected in 1952 was reelected in 1960 and will continue until 1964.

Mr. Passman. Was there a government that came into being in 1952?

Mr. Moscoso. Yes, sir.

Mr. Passman. And we have contributed to the 4 million people $300 million?

Mr. Moscoso. That's right.

Mr. Passman. How do we know actually how the present elected officials feel about us, with this tremendous amount of aid going in, unless we sort of discuss their future without any aid commitments attached to it?

We are going to have to deal with this thing realistically.

Mr. Moscoso. With the assistance of this committee and your assistance, Mr. Chairman, we hope to be able to develop a truly developmental program.

Mr. Passman. Giving $300 million to a little country this size, and taking what happened last week, would certainly indicate that the success they have had, the progress they have had, has been to the extent of getting 300 million American dollars. Now, if we deal

with the situation on that basis, maybe these people who are out on strike will someday come to their senses. I think we have to deal with this program realistically and I do not see any reason whatsoever to be very encouraged over Bolivia.

I am afraid there is not much in the showcase to show for the $300 million, other than we have a government in power that is on speaking terms with us.

Mr. FORD. Would the chairman yield?

Mr. PASSMAN. Yes; I yield.

BUDGETARY SUPPORT

Mr. FORD. How much of that $300 million has gone for direct budgetary support?

Mr. STERNFELD. It got to $22.8 million per year.

Mr. PASSMAN. What was the aggregate sum since 1952?

Mr. FORD. Give us a ball park figure.

Mr. STERNFELD. About $56 million.

DOMESTIC REVENUES

Mr. PASSMAN. Does our aid exceed the amount of money they collected for their budget? What are the domestic revenues accruing to the credit of Bolivia?

Mr. MOSCOSO. $40 million a year.

Mr. PASSMAN. Let us start in 1960. It was only $26 million, total domestic revenue.

How much aid did we give that year?

Mr. MOSCOSO. $24.3 million.

Mr. PASSMAN. How much was the budgetary support?

Mr. MOSCOSO. $16.7 million.

Mr. PASSMAN. Is that sum included in this $26 million?

Mr. MOSCOSO. No.

Mr. PASSMAN. Let us go to calendar year 1961. The revenues amounted to $34 million. How much aid did we give them that year?

Mr. MOSCOSO. $21.7 million.

Mr. TENNANT. The total aid including military in 1961 was $30 million.

Mr. PASSMAN. How about budgetary support in 1962?

Mr. MOSCOSO. $19 million.

Mr. PASSMAN. Which is 50 percent of their total domestic revenues?

Mr. MOSCOSO. That's right.

Mr. RHODES. This is really a great example of the failure of socialism. This is a socialist state.

Mr. MOSCOSO. As a matter of fact, Mr. Congressman, that is one of the lessons we are trying to pin down. One of the things we are working with the Bolivians is to regenerate some vitality in the private sector in Bolivia. Just recently we approved a loan for one of these industrial banks, Mr. Chairman, that you were speaking of in the case of northeast Brazil, in which we are trying to generate economic activity in the private sector by providing the private sector with development funds for industrial development.

WELFARE PROGRAM

Mr. PASSMAN. Do they have a welfare program in Bolivia similar to the welfare program in this country?

Mr. MOSCOSO. As a matter of fact, one of the problems with Bolivia is that they have a welfare program approved since the date of the revolution, way beyond the capacity of the economy to support it.

Mr. PASSMAN. When the miners go out on strike, are they eligible for the welfare benefits?

Mr. MOSCOSO. No. As a matter of fact, this is precisely what the miners are protesting about, because they have been cut off all the various benefits that they wanted to have.

Mr. PASSMAN. This is just an example of failure, so far as giving away our wealth is concerned, hoping we can create something satisfactory.

AID TO STATE-OWNED INDUSTRIES

Mr. RHODES. How much have we given in grants and in loans to the State-owned industries, the tin mines, and the railroads and all? You can furnish that for the record.

Mr. MOSCOSO. We can get you the information on that. For all the public corporations owned by the Government of Bolivia?

Mr. RHODES. That's right.

(The information requested is as follows:)

TOTAL ASSISTANCE TO STATE-OWNED INDUSTRIES IN BOLIVIA BY AID AND PREDECESSOR AGENCIES SINCE 1952

The following assistance by type of funds is in the form of loans to the State-owned industries except as indicated:

[In millions of dollars]

	U.S. dollars	U.S.-owned local currency	Bolivian-owned counterpart [1]
Nationalized mines (COMIBOL)	11.4	5.2	7.2
National oil company (YPFB):			
For spare parts and oil equipment			12.7
For aviation gasoline (not produced in Bolivia)			1.8
National airlines (LAB)		.2	
Railroads	[2] 1.5		1.0

[1] Bolivian-owned counterpart generated from U.S. supporting assistance grants and repayable by recipient industries to the counterpart fund.
[2] Supporting assistance grant.

EFFECT OF CESSATION OF AID TO BOLIVIA

Mr. PASSMAN. Could this be an example where possibly aid is doing more harm than good? These people have to live. They have a socialistic government there and if you cut off this aid, those people would have to work or starve, would they not?

Mr. MOSCOSO. It is not a question of working, Mr. Chairman. I think what might happen is that we might have a government which no longer receives any support from us, trying to get support from almost anyone.

Mr. PASSMAN. Why do you not try to let them get it?

We shall now adjourn, gentlemen, until tomorrow afternoon.

WEDNESDAY, AUGUST 7, 1963.

Mr. PASSMAN. The committee will come to order.

GOLD BACKING OF U.S. DOLLAR

I shall read from an article captioned "Study Urged on Ending Gold Backing of Notes":

Senator Javits, Republican, of New York, is urging the Joint Senate-House Economic Committee to hold hearings on a proposal to remove the 25-percent gold reserve requirement for Federal Reserve notes * * *.

Federal Reserve notes are currency making up the bulk of the paper money in circulation. About $12 billion of the $15.6 billion in U.S. monetary gold is earmarked as backing for the notes under the 25 percent gold reserve requirement.

The remainder of the article will be inserted in the record.

(The article follows:)

STUDY URGED ON ENDING GOLD BACKING OF NOTES

Senator Javits, Republican, of New York, is urging the Joint Senate-House Economic Committee to hold hearings on a proposal to remove the 25-percent gold reserve requirement for Federal Reserve notes.

In a letter to Senator Douglas, Democrat, of Illinois, the committee chairman, Senator Javits said some economists have advanced the proposal as one method of dealing with the balance-of-payments crisis.

Senator Javits, the ranking Republican on the committee, said an exploration of the views of Government, academic, and banking witnesses "would go a long way toward alleviating unjustified fears that might arise should the United States ever find it desirable or necessary to take the actions."

Federal Reserve notes are currency, making up the bulk of the paper money in circulation. About $12 billion of the $15.6 billion in U.S. monetary gold is earmarked as backing for the notes under the 25-percent gold reserve requirement.

The remainder of the gold is called the "free reserve." Foreign holders of dollars credits who demand gold are paid from the free reserve. Because more dollars have for years been going out of the country than have been coming back, the free reserve has been dwindling.

Senator Javits said it is argued by some economists that ending the 25-percent gold requirement would make clear to the world that "the entire U.S. gold supply—not simply the dwindling 'free' reserve—stands behind our foreign dollar liabilities; and that there is much opinion among bankers, economists, and Government officials that the gold reserve requirement is an anachronism and should have been abandoned long ago."

He wrote Senator Douglas:

"While removal of the requirement would probably have no adverse domestic economic consequences, there is some question about the effect such a move might have on confidence in the dollar abroad.

"A considerable body of opinion holds that the requirement should not be lifted until substantial progress toward balance-of-payments equilibrium is achieved. Others believe that to wait until action becomes urgently necessary would be particularly damaging to confidence. The issue, therefore, seems to become one of determining the proper time of such action."

Mr. PASSMAN. Other nations have tried such a procedure and later they had to repudiate their public debts and issue new currency. I hope that we do not proceed with any such idea of withdrawing the gold support from our currency.

SURFEIT OF FUNDS HELD BY WORLD BANK

This is an article about the World Bank:

Pity the World Bank. It currently is suffering from a problem most of us have never had to worry about: more money than it can easily spend * * *.

Shortage of skills: The high amount available for lending and the decline in loans clearly indicates the Bank's view that the obstacle to development in many countries is not lack of money but a shortage of trained persons capable of planning and carrying out industrial development projects.

I have always argued that if we cut this foreign aid bill down to about $1 billion and used only the best trained personnel possible to obtain, we could go into these countries and start possibly 10 percent of the number of projects you now have, and we could make this thing work and people would really appreciate it.

I shall insert the remainder of this article in the record.

(The article referred to follows:)

BANK NOW SURFEITED ON MONEY

(By Michael Churchill, staff reporter)

Pity the World Bank. It currently is suffering from a problem most of us have never had to worry about: more money than it can easily spend.

Although it has been busily lending $2 million every day to underdeveloped countries, the Bank has more than $1.6 billion on its hands. It would take the Bank 3 years to distribute this amount at its current pace.

One obvious solution would be for the Bank to lend more of it faster. This is something the developing countries have been urging the conservatively run Bank to do for years.

But instead of going up, the amount of loans made in the year ending June 30 sharply declined to less than half that of the preceding year. This drop was more apparent than real, since many of the loans were made just before or after the year, but there was no flood of new loans.

SHORTAGE OF SKILLS

The high amount available for lending and the decline in loans clearly indicates the Bank's view that the obstacle to development in many countries is not lack of money but a shortage of trained persons capable of planning and carrying out industrial development projects.

Officials of the Bank indicated last week that they foresaw no liberalization of the lending policy. Loans, they sternly insisted, depend on the ability of countries to recommend sufficiently qualified projects and on their capability of repaying—not on how much money the Bank has.

Nevertheless, the Bank has become sensitive about the pile-up of money in its vaults. To keep it from getting even greater, the Bank's new president, George D. Woods, has stopped floating bonds to bring in more money.

Woods' predecessor, Eugene Black, used to float bonds to acquire new funds even when the Bank didn't need the money. Under Black the Bank borrowed six or seven times a year.

STAY IN MARKETS

The reason, according to a Bank official, was that Black was especially eager to establish the Bank as a familiar figure in the money markets of the world and to maintain its perstige as a borrower. Bank officials say he was not particularly disturbed by the big pile-up of cash.

Woods, on the other hand, has not floated a loan since he came into office in January. Present thinking at the Bank is that the amount of money should be reduced to $1 billion. This would take care of disbursements of loans to countries and repayments of the Bank's own borrowings for about 1 year. The present figure would finance 1½ to 2 years' operations.

Despite this change in policy, officials were able to reduce the cash by only about $1.6 million—to $1.617 billion—in the year ending last June. This was partly because of unexpectedly high sales of loans to private banks, borrowings earlier in the year, and repayments of money by its borrowers. But it also was partly due to the record profits of the Bank on its transactions, which hit $82 million.

It isn't easy to stop making money once you start.

RUMORS OF RUSSIAN REQUEST FOR U.S. LOAN

Mr. SCHEINMAN. Mr. Chairman?

Mr PASSMAN. Yes, sir?

Mr. SCHEINMAN. While we are covering a few matters, a few days ago you read in the record a small article appearing in the U.S. News & World Report, "Washington Whispers Hints Are Heard That the Russians Will Soon Be Looking—"

Mr. PASSMAN. I recall the article.

Mr. SCHEINMAN. As I said then, we would, for the benefit of yourself and the committee, check this matter. We have contacted the White House and I am prepared to say——

Mr. PASSMAN. What did the White House say?

Mr. SCHEINMAN. On behalf of the administration, they have said they heard no such whispers.

Mr. PASSMAN. I am glad, then, we brought the matter to the White House's attention.

We shall take a brief recess in order to respond to a rollcall on the House floor.

(Thereupon, a brief recess was taken.)

U.S. AID OBJECTIVES IN TURKEY

Mr. PASSMAN. The committee will come to order.

This document came to me in the mail this morning and it says, "U.S. aid objectives for Turkey."

Have you ever seen one of those things?

Mr. TENNANT. I have never seen one, no, sir.

Mr. PASSMAN. You have an increase in agricultural production programs going to 1975, according to this.

I notice also we have programs for increased school capacity and school enrollment in primary schools, going to 80 percent, of the eligible population, and that goes to 1973.

You have manufacturing output to provide training for 600 managers per year, and that goes to 1972.

Then there is one of them on increased school capacity for 1970, and so forth.

Mr. TENNANT. I am not familiar with this document but I will be glad to refer it to Mr. Gaud who is responsible for our program in Turkey and we will give you our comments.

Mr. PASSMAN. I would like to know if we are planning these programs that far in advance.

(The following information was subsequently supplied:)

COMMENTS ON AID OBJECTIVES IN TURKEY

This document, which was prepared by USAID/Turkey, states development objectives for Turkey that the United States is helping to achieve through its development grant and loan programs. The planning dates used, running through 1975, are not intended to imply that the United States will provide aid to Turkey through that period. The document gives target dates by which it is hoped that Turkey will attain certain goals.

U.S. EXPENDITURES AND RECEIPTS

Mr. PASSMAN. I note that net deposits for the first 30 days of fiscal year 1964 to the U.S. Treasury amounted to $5,628 million and total withdrawals amounted to $10,736 million; so we are breaking more records every day.

I yield to Mr. Natcher.

PROPOSED ASSISTANCE TO UNIVERSITY OF BRASÍLIA

Mr. NATCHER. Is there any money in the request for fiscal year 1964 for use at Brasília?

Mr. MOSCOSO. We are contemplating the possibility of receiving an application for a loan to assist the University of Brasília.

Mr. NATCHER. Is this particular university located near or in the——

Mr. MOSCOSO. It is in the city.

Mr. NATCHER. It is in the capital city?

Mr. MOSCOSO. In the capital city, yes.

Mr. NATCHER. Can you tell me how many buildings have not been completed or whether construction has completely stopped in the capital city? Can you give us any idea as to the number of large buildings?

Mr. MOSCOSO. No, sir.

Mr. NATCHER. You know there are a number where the construction work has stopped?

Mr. MOSCOSO. That is right.

Mr. NATCHER. Do you have any knowledge of whether they are having extreme difficulties in maintaining the city from the standpoint of having its people stay there for any period of time?

Mr. MOSCOSO. That is right.

Mr. NATCHER. As far as this particular bill is concerned the only money is a loan to be applied to the university which would be located within the city?

Mr. MOSCOSO. If we should make the loan. I do not think the application has been made yet, and if the application should meet the criteria, and if it should be one of the priority items, we think we ought to make this loan.

Mr. NATCHER. Can you tell me how many Federal cities there are in the world? We have Washington, D.C., and Brasília. How many more do we have?

Mr. COTTRELL. There are Federal districts in many countries; Vietnam, for instance.

Mr. NATCHER. Where the capitol is located in a territory that is under the control of the government in its entirety?

Mr. COTTRELL. Yes.

Mr. NATCHER. There are a number?

Mr. COTTRELL. There are a number of them. I could not give you the number offhand. Mexico.

Mr. NATCHER. I did not know they had that many. There are a number of them?

Mr. MOSCOSO. There are a number of them.

Mr. NATCHER. With your permission, Mr. Chairman, I would like a list placed in the record at this point.

Mr. PASSMAN. Yes, of course.

(The information supplied follows:)

NATIONS' CAPITALS LOCATED IN FEDERAL DISTRICTS

Thirteen countries, Federal districts:
Washington, D.C.
Mexico City
Managua, Nicaragua
Santo Domingo, Dominican Republic
Lagos, Nigeria
Léopoldville, Congo
Islāmābād, Pakistan
Canberra, Australia
Buenos Aires, Argentina
Brasíla, Brazil
Bogotá, Colombia
Asunción, Paraguay
Caracas, Venezuela

Mr. PASSMAN. We are talking about this loan for Brasíla and are we talking about this credit for 40 years, with no interest, and a 10-year grace period?

Mr. MOSCOSO. Yes, sir.

CRITERIA FOR AID LOAN

Mr. PASSMAN. You mentioned something about an AID program meeting the criteria. Does this mean the country or the applicant is so weak that they or he cannot qualify for any type of bankable loan before actually qualifying for an AID loan?

Mr. MOSCOSO. In every loan paper we submit to the loan committee, we must certify that these funds are not available from any other banking institution.

Mr. PASSMAN. Including the World Bank or any of them?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. The applicant must be so weak he would not qualify for a regular bankable loan?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Thank you for your factual answer.

BOLIVIA

U.S. ASSISTANCE TO STATE-OWNED INDUSTRIES

Back to Bolivia. I note, at the top of page 22 of the justifications, the following statement:

AID will continue its efforts to rationalize the operations of the state-owned industries in Bolivia.

Practically all industries in Bolivia are state-owned and state-controlled, are they not?

Mr. MOSCOSO. Pardon me? What page number?

Mr. PASSMAN. Page 22 of the justifications.

What do you mean by "rationalize the operation of state-owned industries of Bolivia"?

Mr. MOSCOSO. The private sector in Bolivia has been effective. This was due to a policy of special exchange for their imports which was established a number of years ago. When this subsidy was eliminated in 1957, the productivity of these industries declined substantially

and they began to operate in the red. The Government forbade the dimissal of excess employees. Also, workers have demanded increases in wages over a period of time and a number of these industries have not been able to meet these wage demands. There have been strikes and labor-management problems and in many instances some of the industries have gone under because they have not been able to rationalize their operations.

Mr. PASSMAN. I believe your statement here says AID will continue its efforts to rationalize operations of the state-owned industries in Bolivia.

Mr. MOSCOSO. This has happened in the public sector, too.

Mr. PASSMAN. Practically everything in Bolivia is in the public sector, is it not?

This is considered one of the more socialistic forms of government in the world, is it not?

Mr. MOSCOSO. Yes, it is.

Mr. PASSMAN. Thank you.

SLOW ECONOMIC PROGRESS

Page 22 also indicates that Bolivia has made "marked progress" during the past 2 years. However, I note further that—

> the situation in Bolivia from the U.S. point of view remains very tenuous and unstable and that Bolivia continues to be dependent upon the U.S. balance-of-payments support and International Monetary Fund drawings.

If these statements are true, as your justifications indicate, I would not say that Bolivia has made marked economic self-help progress. Furthermore, our exchange of yesterday indicated there had been no improvement. The situation seems to be stagnated.

Mr. MOSCOSO. I would say in comparison with the situation prior to the last 2 or 3 years, there has been a slight improvement.

Mr. PASSMAN. Not marked, but slight, if anything?

Mr. MOSCOSO. That is right. The improvement has not been uniform. As I said yesterday, there has been a very substantial improvement in the political capabilities of the government.

Mr. PASSMAN. The political capabilities may have improved but there is no particular desire to put those capabilities to work?

Mr. MOSCOSO. Yes, sir; they have.

I wish to give to the chairman this article which I think is quite meaningful. This was written by Nathan Miller, who I do not know, but he is the Baltimore Sun's reporter in Latin America. He has written it from La Paz.

Mr. PASSMAN. I am going to read this report carefully. However, I am interested now in whether or not we are going to be able to reduce substantially this pouring out of American wealth into this seemingly bottomless pit there. That is the main point for consideration.

Mr. MOSCOSO. That is right, but I believe Bolivia does not fall into this category.

Mr. PASSMAN. You could have a 5-ton truck but if you are not going to use it, it would not mean a thing in the world. You could say that this truck has a capacity to do these things but we are not going to use the capacity.

LABOR DIFFICULTIES

Mr. Moscoso. They are using it in this particular case. For the first time they are facing up to the labor difficulty instigated primarily by Communist labor groups.

Mr. PASSMAN. You had a mighty big strike since this report was written and the workers are idle now?

Mr. Moscoso. In two of COMIBOL's main lines; yes. In COMIBOL's other mines; no.

May I quote from the article?

The paragraph I marked states that for the first time the Government stood fast against excessive labor demands and for the first time the rank and file of union members did not bend to intemperate Communist leadership.

Mr. PASSMAN. Are they back at work?

Mr. Moscoso. The Government has not given in to their demands. They are back at work in many of the mines, but not in the two major ones most fully under Communist leadership.

Mr. PASSMAN. Neither have they given in to the Government's demands.

We have to be factual about this. Are they not out on strike presently?

Mr. Moscoso. Yes, in two of the major mines.

Mr. PASSMAN. It is a stalemate. They are daring each other?

Mr. Moscoso. I would not call it a stalemate because it has not lasted long enough.

Mr. PASSMAN. What if we suspended aid until they got this matter settled?

Mr. Moscoso. We did not suspend aid.

Mr. PASSMAN. Could you expedite the settlement if we suspended aid?

Mr. Moscoso. I do not see that that would——

Mr. PASSMAN. You have given 4 million people $300 million since 1952 and they have been continuously in and out, have they not?

Mr. Moscoso. How do you make someone out on strike work?

Mr. PASSMAN. If they get hungry they might work.

COMMUNIST INFLUENCE IN BOLIVIAN LABOR ORGANIZATIONS

Mr. Moscoso. Should the rest of the 4 million people suffer for the Communist-led strike?

Mr. PASSMAN. Are they, in reality, Communists, or just a bunch of stubborn people who are demanding unreasonable things from the Government?

Mr. Moscoso. The Baltimore Sun and this reporter call them Communists, Mr. Chairman, as you can see.

My political colleague can say whether these assessments of these miners are that they are Communist led.

In this case I am sure that the assessment that has been made by several agencies of the U.S. Government is that they are Communists.

Mr. PASSMAN. I hope that the Government holds out against their demands.

Mr. COTTRELL. That is exactly what the Government intends to do at this time.

Mr. PASSMAN. They have tolerated this kind of thing off and on for 10 or 12 years, but you think this time the Government is going to hold out?

Mr. MOSCOSO. That is right.

ENGINEERING FEASIBILITY STUDY PROJECT

Mr. PASSMAN. I note, on page 51, that you want $200,000 for fiscal year 1964 for an engineering feasibility study project. This sum would be consolidated with funds provided by Germany and the Inter-American Development Bank and will finance the contract with German consultant engineering firms; is that correct?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Why are you contracting with a German firm under this program?

Mr. MOSCOSO. They are participating in the cost of the project, No. 1; No. 2, they are also participating in one-third of the cost of the mining industry rehabilitation program.

Mr. PASSMAN. On a loan basis?

Mr. MOSCOSO. Yes. However, the consultant engineering project is a grant project.

Mr. PASSMAN. How much?

Mr. MOSCOSO. I am sorry. Did you say Germans or we?

Mr. PASSMAN. Germans.

Mr. MOSCOSO. This is a grant on the part of the Germans.

Mr. PASSMAN. Are they going to supply the machinery?

Mr. MOSCOSO. $400,000.

Mr. PASSMAN. Are they going to furnish the machinery that goes into the mines?

Mr. MOSCOSO. This is a feasibility study. They are furnishing the equipment and machinery as a part of their contribution to the triangular (IDB, AID, Germany) rehabilitation program.

Mr. PASSMAN. The Germans are doing so?

Mr. MOSCOSO. Yes, sir; and so are we.

Mr. PASSMAN. In subsequent years, replacements and so on, would have to be German make; is that correct?

Mr. MOSCOSO. In the case of American equipment, it would have to be American equipment.

We encouraged the Europeans to participate in the economic programs in Latin America and they should have a chance of some of that aid being made available for some of their equipment, just like we do.

OCCUPATIONAL HEALTH PROGRAM PROJECT

Mr. PASSMAN. Did you justify the $260,000 which you obligated in fiscal 1963 for the occupational health program, mentioned on page 55?

Mr. MOSCOSO. We did not justify that, Mr. Chairman.

Mr. PASSMAN. You did not justify that item?

Mr. MOSCOSO. No, sir.

AID-PEACE CORPS PROJECT COORDINATION

Mr. PASSMAN. Is the Peace Corps in on this project?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. Gentlemen, I want to be just as fair as I can about this. I suppose that 50 times through these hearings we have run into the Peace Corps getting into these aid programs where you already have AID technicians. Could you keep out of duplication of effort under such conditions?

Mr. MOSCOSO. We try strenuously to avoid duplication. It works because the technical level of the Peace Corps is a lower one.

Mr. PASSMAN. At a lower level?

Mr. MOSCOSO. Lower level of technical competence than the AID technicians.

Mr. PASSMAN. That is what I have been contending all along.

How many Peace Corpsmen are going to be in this health program?

Mr. MOSCOSO. I do not have the figure.

Mr. PASSMAN. You do not know how many but they will be in there?

Mr. MOSCOSO. There will be some, yes.

Mr. PASSMAN. I just do not know why we should be giving technical aid from three or four different spigots for the same activity.

U.S. CONTRIBUTIONS TO ILO, PAHO, AND UNICEF

Does the United States contribute to UNICEF, the International Labor Organization, and the Pan-American Health Organization?

Mr. MOSCOSO. They contribute, yes, sir.

Mr. PASSMAN. Supply the amount for the record, please.

Mr. MOSCOSO. Yes, sir.

(The requested information follows:)

U.S. CONTRIBUTIONS TO ILO, PAHO, AND UNICEF

The United States contributes to the regular assessed budgets of the International Labor Organization and the Pan-American Health Organization and makes voluntary contributions to the United Nations Children's Fund and the malaria eradication and the community water supply programs of the Pan-American Health Organization. The U.S. contributions to these organizations for 1962, 1963, and 1964 are:

	Fiscal year 1962	Fiscal year 1963	Fiscal year 1964 (estimated)
ILO [1]	$2,449,000	$2,772,000	$3,502,000
PAHO: [1]			
(a) Regular budget [1]	3,102,000	3,392,000	3,887,000
(b) Malaria eradication program	2,000,000	2,000,000	2,000,000
(c) Community water supply program	300,000	300,000	300,000
UNICEF	12,000,000	12,000,000	12,000,000

[1] Appropriation by Department of State: Contributions to international organizations.

COORDINATION OF U.S. ASSISTANCE WITH MULTILATERAL AGENCIES

Mr. PASSMAN. I believe that UNICEF, the Pan American Health Organization and the International Labor Organization are likewise in on this same project the Peace Corps is in on?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Is there any penalty if they get to fighting among themselves as to who is going to carry the project through to conclusion?

Mr. MOSCOSO. The missions have been especially instructed to coordinate their efforts with all of these other agencies.

Mr. PASSMAN. Is there internal friction about who is going to be in charge?

Mr. MOSCOSO. Like all human endeavors there will be occasional failings of that kind, but we try to keep them to a minimum.

Mr. PASSMAN. You have four or five different agencies and people on this same project. You have the AID people, UNICEF, the International Labor Organization, the Pan American Health Organization, and now you have the Peace Corps coming in?

Mr. MOSCOSO. They are all providing——

Mr. PASSMAN. What is the total cost of this project?

We are still talking about the project you did not justify to the Congress last year; is that correct?

Mr. MOSCOSO. That is correct.

Mr. PASSMAN. Now you have five organizations in on it. What is the cost to completion?

Mr. STERNFELD. The cost to completion to the AID portion of the project would be $580,000.

Mr. PASSMAN. How about the Peace Corps, do you have their part of it?

Mr. STERNFELD. No.

Mr. PASSMAN. How about the other three organizations?

Mr. MOSCOSO. No, we do not have that.

Mr. PASSMAN. Thank you.

CIVIC ACTION PROJECT

What type of operation and construction do you propose to finance at a cost of $380,000? I refer to the civic action project, found on page 58.

Mr. MOSCOSO. These are for the construction of feeder roads.

Just to give you the background, one of the problems in Bolivia is that the country has very few roads in its rich agricultural areas. It has relatively good land in certain parts of the country and a very poor agricultural area on the altiplano where most of the people congregate. The Army of Bolivia under this civic action project is helping to construct feeder roads and helping to maintain those roads in the northern area of the country, and in Tarija, which is one of the tropical areas where you get some better agricultural land.

Mr. PASSMAN. I know what feeder roads are but it would appear to me that there is some conflict between what we see on page 58 and what we were told earlier.

This project utilizes two operational ECU battalions and there are an additional two units currently being formed to maintain and build feeder roads "at a very low unit cost" in remote areas of Bolivia, you state.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. When we speak of civic action projects, are we talking about the military?

Mr. MOSCOSO. Military groups, that is right.

Mr. PASSMAN. Did they testify earlier this year that they were not creating these civic action battalions?

Mr. MOSCOSO. I was not present during their testimony.

Mr. PASSMAN. Specifically for such purposes?

Mr. MOSCOSO. I was not present to hear their testimony.

SELF-HELP COMMUNITY WATER SUPPLY PROJECT

Mr. PASSMAN. Did you justify last year the $240,000 you allocated to the self-help community water supply project, on page 60?

Mr. SCHEINMAN. Mr. Chairman, I would be happy to check that matter with the Department of Defense.

Mr. PASSMAN. Do that, please, if you will.

Mr. SCHEINMAN. I believe that there are expenses in the military assistance portion that relate, as has been testified, to the equipment which is provided to support military units rather than the AID funding which goes to the consumables related to the specific project.

Mr. PASSMAN. I think they told us they were not formulating battalions for civic action programs. That is what the program is?

Mr. SCHEINMAN. I understand the question.

Mr. RHODES. Mr. Chairman?

That is absolutely correct. They did tell us they were not forming such battalions.

Mr. SCHEINMAN. Specifically for that purpose, that is correct.

Mr. PASSMAN. Did you justify the $240,000 allocated to the "Self-help community water supply project," shown on page 60?

Mr. MOSCOSO. It was not justified, sir.

(Additional information supplied follows:)

As indicated by previous defense witnesses, military assistance funds are not utilized to develop units intended solely for use in civic action projects. Military assistance does provide equipment and training to units, especially engineer units, which in addition to their military missions carry out training by doing useful work aimed at accelerating economic development in their countries. Costs associated with particular civic action projects, such as the costs of construction materials, are, as a general rule, provided under the economic aid program or by the government concerned.

EDUCATION ASSISTANCE PROJECT

Mr. PASSMAN. When did you allocate funds to build 200 schools under the "Educational assistance project," shown on page 61?

Mr. MOSCOSO. That was built out of fiscal year 1962, $200,000, and fiscal year 1963 funds, Mr. Chairman, allocated for school building. Fifty have been built and 50 are nearing completion. Construction has just begun on 100 more.

Mr. PASSMAN. Have you allocated funds for the 200 schools?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. You propose to build another 50 out of what appropriation?

Mr. MOSCOSO. Moneys have been allocated for 200 so we still have 50 more left to make a grand total of 250 which will complete the program.

Mr. PASSMAN. You have a remarkable record indicated here on page 61.

You obligated $1,149,000 last year and you wound up with $1,210,000 unliquidated.

Mr. TENNANT. There are 2 years involved.

Mr. PASSMAN. You still could not have $1,210,000 left out of $1,149,000.

Mr. TENNANT. There was some unliquidated from prior years.

Mr. MOSCOSO. From previous years, sir.

Mr. PASSMAN. Is it not a fact that this demonstrates that AID has had so much more money than they could prudently obligate they adopted a policy of obligating it anyway? Here you have funded under "Educational assistance project 511–N–69–AJ" funds that will not be expended for several years hence. You built 50 schools but you obligated in 1962 $2,178,000. You had unliquidated $1,136,000 and in fiscal 1963, you had obligated $1,149,000. You have on hand $1,210,000; is that correct?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. Even so, from 1948 to 1963, inclusive, you have only been able to spend a certain amount and you started the project in 1948.

You have spent, since you started the project in 1948—that would be 15 years—$2,117,000, and you had on hand, unexpended, $1,210,000, which is more than one-third of the total amount, and yet you are asking for an additional $500,000.

Mr. MOSCOSO. The building of the school is only one of several activities, Mr. Chairman. You will see we also have a textbook program——

Mr. PASSMAN. It does not alter the fact that if you have the same level of expenditures in fiscal year 1964 and in subsequent years as you have had in the preceding 15 years, you have a seven-and-a-half-year supply of money without the $500,000.

Mr. MOSCOSO. We spent $1,075,000.

Mr. PASSMAN. You spent $2,117,000 since the inception of the project in 1948.

Mr. MOSCOSO. That's right, and in 1963 we spent $1,075,000. We have stepped up the project. In earlier years this was a small technical aid project.

Mr. PASSMAN. I am putting it all together and taking the aggregate. You have been funding on this project since 1948.

Mr. MOSCOSO. That's right.

Mr. PASSMAN. You have funded a total of $3,327,000.

Mr. MOSCOSO. That's right.

Mr. PASSMAN. But you have withdrawn only $2,117,000, which leaves $1,210,00 unexpended.

Mr. MOSCOSO. We spent, last year, $1,075,000.

Mr. PASSMAN. How about the money you asked for in previous years that you did not spend? You said you built only 50 schools.

Mr. MOSCOSO. Completed 50. Fifty more are nearing completion, and construction has just begun on 100 more.

We have completed 50 and allocated the funds for 200 schools from fiscal years 1962 and 1963 funds.

Mr. PASSMAN. You have actually liquidated sufficient funds for only 50 schools.

Mr. MOSCOSO. Fifty more are near completion. They may be finished by now.

Mr. PASSMAN. Let us project this item to completion date. What is the total cost going to be?

Mr. MOSCOSO. $4,488,000.

Mr. PASSMAN. Is that from the inception of the project?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. When did you expect——

Mr. MOSCOSO. 1967.

Mr. PASSMAN. It will require 4 years for you to spend the remainder of $1,160,000, according to your figure. You are going to spend $4,487,000 and you have allocated $3,327,000, so you will need $1,160,000 over the next 4 years?

Mr. MOSCOSO. That's right.

Mr. PASSSMAN. In fact, you do not need any more money for fiscal year 1964?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. How much are you going to spend in fiscal year 1964?

If you need only $1,160,000 to finish this project in 4 years, we want to know at what rate of expenditure you are going to continue it.

Mr. MOSCOSO. As you can see, Mr. Chairman, we have accelerated the project and we spent $1,075,000——

Mr. PASSMAN. We have already figured that out, and you have agreed to the correctness of it. I want to know if you need only $1,160,000 to complete the project——

Mr. MOSCOSO. We will have expenditures, again, of over $1 million a year.

Mr. PASSMAN. Then you do not actually need the $500,000. If the Congress should not appropriate a dime, and you meet this program according to schedule—$1 million a year—when you come back in next year, you are still going to have $210,000 unexpended. Is that correct?

Mr. STERNFELD. That is correct, but you will still have to obligate some additional funds——

Mr. PASSMAN. Not necessarily.

You let the committee and the Congress decide whether you are going to be permitted to continue funding these programs years in advance of completion date.

GOVERNMENT MANAGEMENT ASSISTANCE PROJECT

What type commodities do you intend to supply at a cost of $310,000, on page 63, under the Government management assistance?

Mr. MOSCOSO. This is going to be equipment for the customs police, the postal system, and some IBM equipment for the tax program, firearms, vehicles——

Mr. PASSMAN. Also bookkeeping machines?

Mr. MOSCOSO. We will have IBM equipment, for the tax program.

COMIBOL REHABILITATION LOAN

Mr. PASSMAN. On page 68, you have a project in connection with the COMIBOL rehabilitation project. Its success will be determined during 1963, you state. You approve $5 million. How much money has been spent?

Mr. MOSCOSO. $140,000.

Mr. PASSMAN. It says here:

It is anticipated during 1963 the success of reducing costs and the will of the authorities to take the actions needed for internal reform will be tested. In March 1961, AID made available $3.5 million to the Bolivian Mining Corp. as part of the triangular operation for financing rehabilitation of nationalized mines. Similar amounts of funds were also made available by the Inter-American Development Bank, the German Government, and the IDB with joint financing, and also providing services of a team of management consultants.

After all of that aid, and after approving this loan of $5 million, we come down here and you say, in substance, that during 1963 you will determine whether or not it is a successful operation.

Why did you not determine whether it was a good project before you got this country committed to such a loan?

I quote:

It is anticipated that during 1963 the success of reducing costs and the will of the authorities to take the actions needed for internal reform will be tested, and the outcome of the program may well be determined.

Should such a determination not be made before you make the loan?

Mr. Moscoso. It always is, and we didn't approve this loan until it had been justified in a very complete loan application. We are talking here about the reality of a very difficult situation for the security of the United States and not what someone put on a piece of paper.

Mr. PASSMAN. The trouble is, Mr. Director, we have already approved the loan. You have approved in here $3.5 million, and you have made disbursements of $140,000. We cannot do anything about it. The looseness of it is there.

Mr. Moscoso. There is a lot of equipment that has to be bought. As a matter of fact, it normally takes 8 months to get a piece of equipment to final destination in Bolivia.

Mr. PASSMAN. You do not know whether it is going to be successful. You say you are not going to determine whether it will be successful until sometime in 1963.

Mr. Moscoso. That's right.

Mr. PASSMAN. I regret that you are going to dump $5 million into a seemingly bottomless pit.

Mr. Moscoso. It isn't going to be a bottomless pit, Mr. Chairman.

Mr. PASSMAN. It is either a success or it is not; is that right?

Mr. Moscoso. That's right.

Mr. PASSMAN. So far it is not a success?

Mr. Moscoso. If the attempt to rehabilitate the mines in Bolivia, after it has been given a reasonable length of time, doesn't work out, we just simply will not be able to——

Mr. PASSMAN. Does "rehabilitate," in this case, mean bringing about some coordination between the Government and the laboring people?

Mr. Moscoso. No. Rehabilitation means that, plus a number of other things.

The main part is bringing back into the mines equipment and machinery that had not been replaced by the mining barons who for years exploited these mines.

Mr. PASSMAN. And the laborers would not let them put in modern machinery, would they?

Mr. MOSCOSO. In some instances, Mr. Chairman, we have pretty much the same problem we are facing with the railroads here in the United States.

Mr. MILLER. With respect to the presentation—the presentation of materials themselves—we try to give as accurate, unbiased, and unprejudiced and critical account of the projects that we have——

Mr. PASSMAN. Thank you, Mr. Miller.

Mr. Montoya?

EMERGENCY PUBLIC WORKS PROGRAM

Mr. MONTOYA. Mr. Moscoso, going to page 65, I notice that you have a $3 million project which is divided into small subprojects, and the goal of the project is to provide employment for people in Bolivia. Is that the main purpose?

Mr. MOSCOSO. Yes. And to gain time so that the development program which we are now undertaking has a chance to get off the ground. Also, to permit the rehabilitation of the mines and to provide work for the surplus workers who are now there and who, unless you can find work for them to do outside the mines, will cause serious problems.

Mr. MONTOYA. The project has no direct relationship to the rehabilitation of the mines, does it?

Mr. MOSCOSO. Yes.

Mr. MONTOYA. In what respect?

Mr. MOSCOSO. It is hoped that quite a number of the people who will be displaced from the mines during the rehabilitation program will directly or indirectly find employment in some of these public works.

Mr. MONTOYA. And this is an outright grant to the Government of Bolivia for this purpose?

Mr. MOSCOSO. That's right.

Mr. MONTOYA. You are not requesting funds for this project this year?

Mr. MOSCOSO. We are not.

Mr. MONTOYA. Has it served its purpose, already?

Mr. MOSCOSO. Yes, sir.

Mr. MONTOYA. Do you expect to reactivate the project later on?

Mr. MOSCOSO. It is serving its purpose.

Mr. MONTOYA. Have you terminated the funding of this program?

Mr. MOSCOSO. That's right; we are not requesting new funds.

Mr. MONTOYA. What have you accomplished?

Mr. MOSCOSO. You can see all of the projects that are built or are being built at this time.

Mr. MONTOYA. Was this project justified before this committee?

Mr. MOSCOSO. No; it was not. This is part of the budget support that we provided in fiscal year 1962 money.

ASSISTANCE FINANCED FROM SUPPORTING ASSISTANCE FUNDS

Mr. MONTOYA. What other similar expenditures did you indulge in financed by the supporting assistance appropriation?

Mr. MOSCOSO. Is this 1963?

In 1963, $9.9 million was given to Bolivia in supporting assistance.

Mr. MONTOYA. For what purposes was that money used?

Mr. MOSCOSO. $7.5 million was given for general budget support; $2.3 million was given for industrial commodity imports.

Mr. MONTOYA. Is that mining equipment?

Mr. MOSCOSO. Primarily generators, wool, and gasoline.

U.S. ASSISTANCE TO BOLIVIAN MINE REHABILITATION

Mr. MONTOYA. Have you extended any loans to Bolivia to rehabilitate its mines?

Mr. MOSCOSO. Yes, sir; we have.

Mr. MONTOYA. What is the extent of those loans?

Mr. MOSCOSO. We made a loan of $3.5 million.

Mr. MONTOYA. Is that repayable in local currency or in dollars?

Mr. MOSCOSO. In dollars, at 4-percent interest, 10 years. This was done out of fiscal year 1961 supporting assistance and then in 1963 we made them a development loan of $5 million in participation with the German Government and the Inter-American Development Bank as part of the triangular operations.

Mr. MONTOYA. How is that repayable?

Mr. MOSCOSO. This is a two-step loan with COMIBOL repaying the Government of Bolivia within 10 years in local currency at 4-percent interest, and the Government of Bolivia repaying AID at three-quarters of 1 percent over 40 years.

Mr. MONTOYA. Is that development loan funds?

Mr. MOSCOSO. Yes.

Mr. MONTOYA. That is a 10-year grace period?

Mr. MOSCOSO. That's right.

Mr. MONTOYA. And three-quarters of 1 percent service charge for the remainder?

Mr. MOSCOSO. That's right.

GERMAN AND INTER-AMERICAN DEVELOPMENT BANK PARTICIPATION IN BOLIVIA MINE REHABILITATION

Mr. MONTOYA. What was the amount of participation by the German Government?

Mr. MOSCOSO. The German Government participated with $6.6 million, $2 million first phase and $4.6 million second phase; and the Inter-American Development Bank with $9.3 million, $4.5 million first phase and $4.8 million second phase.

Mr. MONTOYA. What were the terms of repayment under that participation, or should I say those participations, by the Inter-American Development Bank and the——

Mr. ROSENSON. I can give it to you for the Inter-American Development Bank.

Mr. MONTOYA. What is it?

Mr. ROSENSON. That loan was made in July 1961 and was repayable in 14 semiannual payments, beginning March 1, 1965, and repayable in dollars. The loan of $4.8 million was made February 14, 1963, repayable in 15 semiannual payments, beginning April 1, 1966, and repayable half in dollars and half in local currency.

Mr. MONTOYA. At what rate of interest?

Mr. ROSENSON. The rate of interest was 4 percent.

Mr. MONTOYA. Give me the data on the German loan, now.

Mr. MOSCOSO. We don't have it, but we will give it for the record.

(The information requested is as follows:)

TERMS OF REPAYMENT ON GERMAN LOAN FOR COMIBOL REHABILITATION (TRIPARTITE PROGRAM)

During phase I of Operation Triangular the terms of the German $2 million loan were the same as those of the first phase loans made by IDB and AID, namely a 10-year loan, at 4 percent, with a 3-year grace period, repayable in hard currency. It is anticipated that the terms of the second phase German loan for $4.6 million which is currently being negotiated will be the same as the terms for the second phase IDB loan.

FEASIBILITY STUDIES

Mr. MONTOYA. Going back to page 53 and page 52, with regard to the project listed on those pages, is it your intention as a result of anything done under these projects to project into your feasibility findings the need for DLF financing to carry out the objectives that might be delineated in your studies?

Mr. MOSCOSO. Not necessarily loan financing or any other financing.

Mr. MONTOYA. That is one of the purposes of this study, to determine how much money is needed and what it is needed for?

Mr. MOSCOSO. That's right.

BOLIVIAN ECONOMIC SITUATION

Mr. MONTOYA. Before you initiated these projects, did you evaluate the almost admitted possibility that Bolivia cannot participate in any financing in carrying out the objectives that might be recommended?

Mr. MOSCOSO. In quite a number of these projects, Mr. Congressman, you will see that the Bolivian Government, out of budgeted funds, does participate to the extent that it can.

Mr. MONTOYA. I am noticing here that the total revenues for Bolivia for the year 1962, which is the last year, were $39.4 million and that they had a deficit of $29.9 million and that for this same year, which would be fiscal year 1963, we gave to Bolivia in loans, supporting assistance, and development grants the total sum of $30.6 million, which was over and above its deficit and very, very close to its total domestic revenues.

Mr. MOSCOSO. That's right.

Mr. MONTOYA. That picture has existed for quite a few years, has it not?

Mr. MOSCOSO. That's right.

Mr. MONTOYA. I know since I have been on the committee we have been led to believe that these expenditures are necessary to uplift the Bolivian economy and up to this time that goal has not been realized.

Mr. MOSCOSO. Have I done that, Mr. Congressman?

Mr. MONTOYA. No, you haven't, Mr. Moscoso, but what is the present hope?

Mr. MOSCOSO. I believe that we are now on the verge of finding out exactly what our prognosis should be for this development program that we are vigorously trying to push forward. This is truly a development program for Bolivia. We have identified the primary needs of sectors of the Bolivian economy. This economy has to become diversified, and we have to rehabilitate the mining industry.

Why the mining industry? For the simple reason that that is where Bolivia gets 90 percent of its foreign exchange and for the simple reason that that is where the Government of Bolivia gets a substantial amount of its revenue. We are strenuously trying to develop the road system so there can be colonization schemes developed similar to the one working so effectively in the Santa Cruz area. If we can do that, Bolivia can become self-supporting in agriculture and at least at a bare minimum, people will be able to subsist.

Mr. MONTOYA. What is the total area of Bolivia?

Mr. MOSCOSO. It has 4 million people and——

Mr. MONTOYA. 1,000 square miles?

Mr. MOSCOSO. The total area is——

Mr. MONTOYA. 1,000 square miles?

Mr. MOSCOSO. 424,000 square miles.

ROAD PROJECTS

We are helping them build a number of roads to try to create a communications and transportation network. I did not mean to imply that we are going to build roads to connect all of the points in Bolivia. We are building roads from the area where the population has concentrated to rich agricultural areas which can support major colonization programs.

Mr. MONTOYA. What are they contributing to these road projects?

Mr. MOSCOSO. In the case of the feeder roads, the Government of Bolivia will provide $525,000 of counterpart funds and $390,000 of central budget funds in support of this project.

Mr. MONTOYA. And what are we contributing?

Mr. MOSCOSO. $480,000 in fiscal year 1964.

Mr. MONTOYA. Is this a fiscal year 1964 figure for both?

Mr. MOSCOSO. For both.

Mr. MONTOYA. You mentioned $525,000 in counterpart funds. That is also our money, isn't it?

Mr. MOSCOSO. Yes, originally loaned or granted by us—it is owned by them. It is the supporting assistance money that I mentioned to you.

Mr. MONTOYA. What do you mean, it is owned by them?

Mr. STERNFELD. Mr. Congressman, supporting assistance funds are provided to the Government of Bolivia as a cash grant for their budget operations. When we provide them the cash for the commodities, under the supporting assistance chapter of the act, the currencies which are generated as a result of this aid become country-owned currency—as opposed to Public Law 480, where we sell them wheat and the other commodities. Those Public Law 480 currencies are recorded in our books as U.S.-owned currencies. That is the difference.

Mr. MONTOYA. I never heard of a country owning its own counterpart funds.

Mr. STERNFELD. We have a veto right on the use of the funds but they are deposited to their account.

Mr. MONTOYA. Is that a misnomer, that the country owns its own counterpart funds?

Mr. STERNFELD. No; this is correct. It is legally theirs, but they cannot use the counterpart funds without our approval.

Mr. MONTOYA. Is that all we have by way of road projects, just this particular one?

Mr. MOSCOSO. No. We have approved recently a loan for the building of an access road and the improvement of two other access roads to a colonization area.

Mr. MONTOYA. How much money does that involve?

Mr. MOSCOSO. The total cost of the entire colonization effort is $21,450,000, including Bolivian and external inputs. The AID portion is $7,200,000 for the roads.

Mr. MONTOYA. How is the other to be contributed?

Mr. MOSCOSO. The remaining external share is primarily to be financed by the Social Progress Trust Fund and the Fund for Special Operations of the IDB.

Mr. MONTOYA. To what extent?

Mr. MOSCOSO. $9,100,000 total.

Mr. MONTOYA. What bank is that?

Mr. MOSCOSO. The Inter-American Development Bank.

Mr. MONTOYA. What is the rate of interest, and is it repayable in dollars or in local currency?

Mr. ROSENSON. For the Social Progress Trust Fund loan it is 1.25 percent interest in local currency plus a service charge of three-quarters of 1 percent in dollars, and it is repayable in their currency or at the borrower's option in dollars. For the Special Operations loan, the interest rate is 4 percent and the loan is repayable in local currency.

TOTAL AID TO BOLIVIA

Mr. MONTOYA. What is the amount of aid we have extended to Bolivia since the inception of the program?

Mr. MOSCOSO. Including everything, $328,200,000.

Mr. MONTOYA. How much of that is represented in loans?

Mr. MOSCOSO. $91.5 million is loans.

Mr. MONTOYA. Would you divide these loans into hard currency and soft currency loans? Or are they all soft currency payments?

Mr. MOSCOSO. There is a $26.4 million item which is Export-Import Bank, and that is a hard loan.

Mr. MONTOYA. What has been the dollar repayment experience?

Mr. MOSCOSO. $21.5 million has been repaid.

Mr. MONTOYA. There is $26 million outstanding, or the balance?

Mr. MOSCOSO. No; the total was $26.4 million.

Mr. MONTOYA. Out of the balance of $91.5 million which no doubt is on a loan basis, requiring local currency repayment, what has been the repayment?

Mr. MOSCOSO. $30,997. That is on principal, and $43,909 interest.

Mr. MONTOYA. We haven't been repaid too much, have we?

Mr. MOSCOSO. No, sir.

Mr. MONTOYA. Are they delinquent?

Mr. MOSCOSO. No; these are recent loans.

Mr. PASSMAN. Has this matter something to do with the $300 million we broke away from the Export-Import Bank yesterday, because $300 million was the giveaway part of it?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. That fact accounts for the small amount of return, because in this you are dealing with the aid part and not Export-Import Bank?

Mr. MOSCOSO. That's right.

Mr. MONTOYA. This is strictly local currency repayment?

Mr. MOSCOSO. That's right.

(NOTE.—The answer was subsequently changed to "No.")

LEVEL OF AID TO BOLIVIA

Mr. MONTOYA. Is there any hope that you are going to reduce the aid and loans to Bolivia below the figure that you have been hovering around for the last 3 fiscal years?

Mr. MOSCOSO. No, sir.

Mr. MONTOYA. Is it your intention to increase it?

Mr. MOSCOSO. Has our estimate increased?

Mr. MONTOYA. It is increasing this year over and above last year and the year before?

Mr. MOSCOSO. That's right. It is increasing, because we are now getting the projects ready for the financing.

POLITICAL SITUATION IN BOLIVIA

Mr. MONTOYA. What is the political situation in Bolivia now?

Mr. COTTRELL. I would say they have reached a confrontation between the Government and the miners. The prime political problem today is we have a government in Bolivia that is willing to face the miners and their demands that have been unreasonable to date. They are Communist led. The Government is being firm. They are insisting on the rehabilitation of the mines and they are in this confrontation at the present time.

Mr. MONTOYA. Do the Communists now control the mines?

Mr. COTTRELL. A Communist-led miners union.

Mr. MONTOYA. And that has been the case for some time?

Mr. COTTRELL. That is true.

Mr. MONTOYA. What is the present picture along those lines, other than the confrontation by the Government.

Mr. COTTRELL. It looks as though the Government is making their point stick. We hope they will.

Mr. MONTOYA. But the Communists still control the unions?

Mr. COTTRELL. That's right, and it is a question of whether the unions are going to be submissive to the orders of the Comibol, which is the Government mining company. If the Government is successful, it means they will be able to improve conditions in the mines and break the leadership of the Communists over the unions and the situation will be vastly improved over the present and past situation.

Mr. MONTOYA. Is this the first time they have ever had this kind of confrontation?

Mr. COTTRELL. A strong enough government to do it; yes. In the past the Government has been responsive, very responsive to the demands of the miners, which as I have said, have been strongly influenced and led by the Communists.

Mr. MONTOYA. When was the last pay raise the miners received?

Mr. COTTRELL. I don't know.

Mr. MONTOYA. They are constantly demanding a pay raise, is that right?

Mr. COTTRELL. They are demanding that the management of the mines be in their hands and not in the hands of the Government-owned company. This means a wide variety of working conditions that the Government does not control.

Mr. MONTOYA. Are the mines now under the control of the Government?

Mr. COTTRELL. No; the mines are in the hands of the unions and the Government is insisting that this triangular arrangement be put into effect so the mines can then become operable on an efficient basis.

Mr. MONTOYA. Who owns the mines?

Mr. COTTRELL. They were nationalized in 1952.

Mr. MONTOYA. Why do the miners still control or dominate the operation of the mines?

Mr. COTTRELL. Basically because of Communist agitation.

Mr. MONTOYA. Do they have a contract with the Government? What kind of concession makes this situation possible?

Mr. COTTRELL. Actually, the first and prime reason is the physical presence of the miner in the mines. On occasion the Government has sent troops down to enforce one or another of their demands. They have had skirmishes and the Government has backed off, generally.

Mr. MONTOYA. Do the union people handle the administrative affairs of the mine?

Mr. COTTRELL. Yes; to a large extent.

Mr. MONTOYA. And just report to the Government the physicial results they attain?

Mr. COTTRELL. Exactly.

U.S. SUPPORT OF BOLIVIA'S MINE REHABILITATION EFFORTS

Mr. MONTOYA. And we are actually investing U.S. dollars in those mine operations, are we not?

Mr. COTTRELL. Indirectly. We are supporting the Government, which is attempting to correct this situation. I say indirectly, because our support to the Bolivian Government and through their National Mining Co. probably does——

Mr. MONTOYA. Are we engaged in multilateral arrangements whereby we and the German Government and others——

Mr. MOSCOSO. Yes; we are, Mr. Congressman.

Mr. MONTOYA (continuing). Are going in there and reequipping the mines——

Mr. COTTRELL. Attempting to reequip them under certain conditions.

Mr. MONTOYA. How can we help to manage it if the mines are under the almost complete domination of the labor unions?

Mr. MOSCOSO. Those are demands we are making now, and that is one of the reasons for the strike. Comibol which is the Bolivan National Mining Corp., that manages the mines, and the advisory group set up by the Inter-American Bank, have demanded that the workers allow management to manage; that they allow the management to move equipment from one mine to another; allow equipment to be replaced; not permit union meetings during working hours, etc.

Mr. MONTOYA. Have union meetings during working hours stopped?

Mr. MOSCOSO. The work in two of the major mines has stopped because they went on strike when the Government said they were going to enforce the regulations.

Mr. MONTOYA. How much have we agreed to put into those mines?

Mr. MOSCOSO. As I said a moment ago, we have put in $8.5 million we loaned them, together with the German Government $6.6 million, and the Inter-American Bank $9.3 million.

Mr. MONTOYA. So a total of $8.5 million is our commitment in those mines up to the present time?

Mr. MOSCOSO. That's right.

Mr. MONTOYA. What is the overall figure projected into the future?

Mr. MOSCOSO. It is a $37 million total, where we will participate about a third, the German Government about a third, and the Inter-American Development Bank about a third.

Mr. MONTOYA. Is it safe to say in round figures the overall investment we will make in those mines will be approximately $15 million?

Mr. MOSCOSO. About; that is correct.

Mr. MONTOYA. And we are doing that in spite of the fact that the Communists now dominate the operation of the mines?

Mr. MOSCOSO. The Communist stranglehold over these mines should be broken. We hope that this program is successful; and part of the program is to get the miners to obey management.

BOLIVIAN GOVERNMENT EFFORTS TO CONTROL NATIONALIZED MINES

Mr. MONTOYA. In the absence of the Government just taking the mines over, how can we accomplish that purpose?

Mr. MOSCOSCO. Well, Mr. Congressman, there is a very interesting article that I showed the rest of the members of the committee that has just come in from——

Mr. MONTOYA. But, Mr. Moscoso, we have not been told here that the Government has taken any positive steps other than confrontation. to take over the mines.

Mr. Moscoso, what steps are they taking?

Mr. MOSCOSO. They have agreed they will not accept the miners' demands that they continue to be allowed to veto management decisions.

When I say "management" I mean COMIBOL.

Mr. MONTOYA. Does COMIBOL have any Communists within its membership?

Mr. MOSCOSO. Not that I know of.

Mr. MONTOYA. This is an agency of the Government?

Mr. MOSCOSO. Yes.

COMMUNIST INFLUENCE IN BOLIVIA

Mr. MONTOYA. What is the Communist situation in the rest of the country.

Mr. COTTRELL. The Communists are organized among the campesinos, among the laborers, certain student groups and certain intellectuals of the country. Their strength is strongest among the mining element.

Mr. MONTOYA. What is the Communist situation at the university?

Mr. COTTRELL. Also in the university the intellectual student groups.

Mr. MONTOYA. Do the Communists dominate the internal government of the university?

Mr. COTTRELL. No, I wouldn't say so.

Mr. MONTOYA. Have they any key posts?

Mr. COTTRELL. ———.

STUDENT INFLUENCE OVER UNIVERSITY POLICY IN LATIN AMERICA

Mr. MONTOYA. Why do these students have so much power in the universities of Latin America?

Mr. COTTRELL. Students all over Latin America take a much keener interest in politics than they do in the United States. I think it is mainly due to the fact that politics is such a serious business that parties who succeed each other manage to remove the elements of the other party from government, from privileges. In fact, it is a way of life for them so at an early age, they are very keenly aware of what changes in politics can make with respect to their own welfare. That means you have students of high school age actively engaged in politics, where up here our young people don't become really actively engaged in politics or become as serious about it until a later age.

Mr. MONTOYA. What I am trying to elicit from you: What distinguishes the power of the student in Latin America in trying to dictate the policy at the university, from the American student where he has no voice in the policy of the university?

Mr. MOSCOSO. This goes back to even before the Middle Ages. This goes back to the University of Bologna and the way the universities were born in Europe. The universities were born as a result of a group of relatively wealthy youngsters who wanted to be educated and who paid the professors for educating them. Therefore, they dictated the time, the materials they were going to be taught and the kind of profession, et cetera, and that student relationship was maintained throughout Europe until it was finally broken in some of the universities in Europe. But it came almost undiluted into Latin America. Then a so-called reform movement, which took place in the University of Cordova in Argentina, early in this past century, gave the students a preponderant voice in the appointment of the faculty and in the appointment of the rector of the school.

Mr. MONTOYA. Do they have a right to vote on the faculty?

Mr. MOSCOSO. Yes; and to vote on the rector of the university.

Furthermore, they have achieved a situation of almost complete autonomy insofar as the area, or campus of the school is concerned. For instance, in Venezuela, the Central University of Caracas is surrounded by a high wire fence and no uniformed public official may enter that compound without the previous consent of the university officials.

Mr. MONTOYA. That is true in the other universities, is it not?

Mr. MOSCOSO. It is true in many other universities in Latin America.

Mr. MONTOYA. Has anything been done to try to change that setup?

Mr. MOSCOSO. Yes.

Mr. MONTOYA. The great danger has been that the Communists have made agents within those university compounds agitating the students

and handling political affairs on behalf of the Communist Party. Isn't that the core of most of our trouble?

MEASURES TO COUNTERACT COMMUNIST INFLUENCE IN LATIN AMERICAN UNIVERSITIES

Mr. Moscoso. One of the strong programs we are sponsoring is one for strengthening the universities of Latin America. Already, out of 200, more or less, so-called first-class universities in Latin America, we have contracts in 57 of them, with U.S. universities providing stronger faculties, assistance in their laboratories, and their curriculum; exchange students and so forth.

The idea is to see if we can expose these youngsters to some ideas more similar to the ones we have here, and also to give them different motivations from those they have today.

I must say the situation of the universities in Latin America emanates from the weakness of the economy. Government is the biggest thing in most of the countries of Latin America. Therefore, these youngsters start to work at their professions rather early in life and they found and recognized in politics a means of achieving success and prominence quicker than in any other way, because they feel that the private section, that is, business, commerce, et cetera, does not provide an easy way for them to achieve any kind of success.

Now, that is partly true because in many of these societies in Latin America there is a rigidity which is nothing compared to anything we know here in the United States.

Mr. MONTOYA. Aren't we extending quite a few grants to the different universities in Latin America?

Mr. MOSCOSO. Yes.

Mr. MONTOYA. Are we making any conditions about trying to remove this autonomy so that the universities can be more responsive to the government?

Mr. MOSCOSO. We are doing it in a very indirect fashion. You are dealing with a centuries-old tradition, and you are dealing with situations where even people who have been victims of this kind of autonomy are reluctant to do anything about it when they achieve high places.

Mr. MONTOYA. What is being done besides getting some of our professors into these universities?

Mr. MOSCOSO. That is all we are doing. In some cases we are trying to help staff the faculties. We are trying to help every one of the colleges in the Central University of Ecuador.

Mr. MONTOYA. The real trouble is that the Communist Party International has been subsidizing quite a few students within these universities.

Mr. MOSCOSO. Students in quotes. Some of them have lost their hair.

Mr. MONTOYA. They are just enrolled for the mission?

Mr. MOSCOSO. That's right.

Mr. MONTOYA. They agitate all the year round, and they lead these students to vote the directors of their student bodies whom they can use as they would want to, is that correct?

Mr. MOSCOSO. That's right.

Mr. MONTOYA. What are we doing specifically in that direction to counter the Communist effort? Do we have any of our own people subsidized?

Mr. MOSCOSO. Several things, sir, are happening. In the first place, CU, one of the divisions of the Department of State has a very strong student exchange program. I remember in the case of the Central University of Venezuela, a group of youngsters from the United States—not more than a handful of them, six or seven, did more to counter Communist propaganda than anything I have seen done by any agency of the Government. The Peace Corps is doing a tremendous amount of that type of work, at this moment, too.

Mr. PASSMAN. In the colleges?

Mr. MOSCOSO. Most of the times they do it outside of the colleges, but they project the image of the U.S. youngster motivated differently than the others—not as much interested in politics as doing something for the welfare of his fellow human beings. Interested in doing something constructive. Interested in demonstrating that things can be done in the country to better the lives of the people, rather than demonstrating in the streets.

Mr. MONTOYA. That is all, Mr. Chairman.

PERSONAL WEALTH OF EXILED LATIN-AMERICAN POLITICAL LEADERS

Mr. PASSMAN. Incidentally, politics is quite a profitable vocation in Latin America, is it not?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. There has been no Latin American known to go into exile poor, has there?

Mr. COTTRELL. A number of Cubans.

Mr. PASSMAN. You know the people I am talking about. I am talking about the top echelon people in government.

We have known many of them who went into exile worth many millions of dollars; is that not correct?

Mr. MOSCOSO. That is correct.

Mr. PASSMAN. It is a very profitable business for many of the people in government. They are not unmindful of the situation we tolerate of the rather common practice of skimming off the top. We hope that this program will possibly make the penalty in South America for skimming off the top, the same as the law is in this country.

Mr. MOSCOSO. That is one of the prime objectives of the Alliance.

Mr. PASSMAN. We certainly hope that it works out.

The Comibol rehabilitation project, in reality, is a subsidiary of the Bolivian Government?

Mr. MOSCOSO. That's right.

Mr. PASSMAN. We have given the Government about $300 million in the grant-aid or soft-loan side since 1952. This sum would be a part of the total?

Mr. MOSCOSO. That's right.

Mr. PASSMAN. Mr. Rhodes?

U.S. COMMITMENTS IN BOLIVIA INVOLVING LOCAL CURRENCY

Mr. RHODES. Do we generate any local currencies by our activities in Bolivia?

Mr. MOSCOSO. Yes, we do.

Mr. RHODES. What is the status of the various amounts involving local currency—Bolivian—will you put that in the record?

Mr. MOSCOSO. Yes.

Mr. RHODES. Will you also put in a statement on the terms under which those currencies can be used?

Mr. MOSCOSO. Yes.

(The information requested is as follows:)

STATUS OF COMMITMENTS INVOLVING LOCAL CURRENCIES—STATEMENT ON THE TERMS UNDER WHICH THOSE CURRENCIES CAN BE USED

The terms, conditions, and uses of the U.S.-generated local currency are spelled out in the separate project agreements drafted by U.S. AID/Bolivia for each grant or loan project. These agreements written in both Spanish and English are signed by the Mission Director for AID and the Minister of Economy for Bolivia. The agreements indicate the background reasons for instituting the project or program, the purpose of the project, its work plan, its financial plan, and various standard provisions, including one that the Bolivian Government agrees to give full publicity to the Bolivian people that the project is an evidence of the friendship of the people of the United States under the Alliance for Progress.

Local currency loans made under the project agreement mechanism are mostly short-term loans—from 2 months to 5 years. The interest rates of the loans vary from 1 percent for cooperatives, etc., to 12 percent for loans to profitmaking concerns. Most loans fall into the 4 to 8 percent interest rate range. All of the local currency loans are at lower rates than loans for comparable ventures 10 to 30 percent financed by Bolivia's commercial banks. These loans have tended, in a small way, to reduce the extremely high interest rates prevailing in the domestic market in Bolivia.

Status of all U.S. generated local currency

[In millions]

	Total, all accounts	U.S. owned	Bolivian owned counterpart
A. Amounts obligated and released (fiscal year 1954 to 1963, inclusive)	$92.5	$17.0	$75.5
Completed activities as of June 30, 1963	27.6	6.0	21.6
All-year obligations on on-going projects and programs:			
Grant projects	38.6	4.3	34.3
Local currency loan projects	26.3	6.7	19.6
B. Unobligated local currency available as of June 30, 1963	1.7	.5	1.2
C. Comparison of amounts obligated and released for budgetary support and for development projects (fiscal years 1954 to 1963, inclusive):			
Budgetary support	46.0		
Development projects	46.5		
Total	92.5		

[In millions]

	U.S. owned local currency	Bolivian owned counterpart
D. Sector breakdown of all-year obligations on on-going local currency projects:		
Agriculture:		
Grants	0.6	2.5
Loans (6 to 10 percent)	1.1	2.0
Mining:		
Grant projects	.2	1.0
Loans—COMIBOL (1 to 4 percent)	5.2	7.2
Transportation:		
Grants		1.0
Loans (4 percent)	.1	1.6
Industry:		
Grants	.1	
Loans (4 to 12 percent)	.4	5.8
Health and education grants	1.2	3.0
Public administration and public safety grants	.2	.8
Budgetary support (1961-63):		
Grants	1.1	20.0
Loans (4 percent)		3.0
Colonization of new land grants	.4	2.0
Miscellany grants	.4	2.0
Public works grants		2.0

QUESTION OF AIDING SOCIALIST FORM OF GOVERNMENT

Mr. RHODES. We should let a lot of this socialist economy fall of its own weight.

Mr. MOSCOSO. I tried to find out how much this whole incident in Cuba cost us, that surveillance in the month of October and extending about 6 weeks. Over and above the actual cost of running the ships and planes and so forth, over and above that, I think it cost $———. This was just a question of a few days. You can well imagine what kind of a situation we would have in a case of a continental nation like Bolivia. You have heard from Mr. Cottrell the tremendous pressure which has been brought to bear by the Communists in this particular country. The Communists might not be interested, as the chairman indicates. However, the way they are fighting would indicate to the contrary. It is very much in the interests of the United States and to its security that we spend this money.

Mr. RHODES. Well, I would certainly agree with you that Bolivia should not become a Communist nation. However, I am not convinced that this is the only way or even the best way to insure that this does not occur. It seems to me you are perpetuating a situation in Bolivia which can never be a viable one.

ASSISTANCE TO BOLIVIA'S PRIVATE SECTOR

Mr. MOSCOSO. We are very much trying to make it a viable one. Yesterday I started to mention one of the efforts we are making in developing the private sector of the economy. That sector has had its back against the wall and we are trying to rehabilitate it.

Mr. RHODES. As I recall, you said that you had started a bank there for small business loans. What else——

Mr. MOSCOSO. A rehabilitation program.

Mr. RHODES. What else have you done in the private sector?

Mr. MOSCOSO. We have been devoting substantial sums of the local currencies available to us, in supervised industrial and agricultural credit programs.

Mr. RHODES. Has Bolivia ever expropriated any American property?

Mr. COTTRELL. Yes, the mines were partly American owned, in the early days. I think it was 1952, when the mines were nationalized. There were heavy U.S. interests in those mines as well as other foreign interests.

Mr. RHODES. Was a prompt and equitable settlement made?

Mr. COTTRELL. Not prompt. At that time they worked out a settlement which meant repayment over a period of years from the product of the mines, but it was considered satisfactory, after negotiations.

Mr. RHODES. Do you know whether the terms are being maintained?

Mr. COTTRELL. No; I don't.

Mr. MOSCOSO. I understand that they have been maintained.

Another thing I would like to mention is the fact that we are also making a strenuous effort to get to the small- and medium-sized farmer with supervised agricultural credit, so they also will be able to survive.

U.S. ASSISTANCE TO EDUCATION

Mr. RHODES. Are we interested in education in Bolivia?

Mr. MOSCOSO. We have a program in education that was mentioned a while ago. We are assisting them in building schools and in preparing textbooks. On page 61, Mr. Rhodes, that is shown. We are training rural teachers. We are printing textbooks and we are helping them build rural self-help schools.

SETTLEMENT OF EXPROPRIATION CASES IN BRAZIL

Mr. RHODES. This has to do with Brazil, but since we mentioned it yesterday, might I mention it now:

This is an article which was in the Washington Post of the 7th of August, which I guess is today, isn't it?

Mr. MOSCOSO. Yes.

"Brazil Hints Backout on Buying Firm." It has to do with the purchase by the Brazilian Government of the assets of the American & Foreign Power Co.

The indication is, since the Brazilian Cabinet was reshuffled in June that—

the new Government has not yet made good on its downpayment. In fact, it has asked to reschedule the downpayment deadline to October and to hold up the signing of a final contract until the Government completes an inventory of the properties.

Now, I mention this because, as I say, we mentioned it yesterday and I assume it would still be your intention, Mr. Moscoso, to do everything possible to bring about a settlement.

Mr. Moscoso. You asked me about the situation, and I promised to give you the information. This is the I.T. & T., and the other is the situation with American & Foreign Power.

Mr. Rhodes. Could we put that in the record?

Mr. Passman. Yes, certainly.

(The documents referred to follow:)

I.T. & T. Settlement

On February 1, 1963, I.T. & T. issued a press release stating the company had reached a satisfactory interim arrangement for payment of its expropriated properties in the State of Rio Grande do Sul, Brazil.

The arrangement involved a loan from the Bank of Brazil in the amount of $7.3 million, pending the conclusion of the expropriation lawsuit or an agreement between the State of Rio Grande do Sul and the company. Under the terms of the loan the maturity dates of the amounts owed by the company were to be postponed automatically until the company receives such indemnity as is due to it. The agreement further provides that $3,650,000 is to repatriated and an equal amount is to be reinvested in Brazil.

American & Foreign Power Settlement

On April 22, 1963, the American & Foreign Power Co. (Amforp) reached an understanding with the Brazilian Government on the terms to be incorporated in a subsequent contract, pursuant to which the Amforp systems interest as of December 31, 1962, in all its utility subsidiaries in Brazil will be purchased by the Brazilian Government or one of its agencies for a price of $135 million.

Under the proposed contract, Amforp will receive a downpayment of $10 million in New York. The balance of the purchase price, amounting to $125 million, will be payable in New York in U.S. dollar notes to be issued by or guaranteed by the Brazilian Government and maturing serially over a 22-year period beginning in 1966. The contract will provide that 75 percent of the total price is to be reinvested in nonutility enterprises in Brazil.

Amforp also will be paid $7.7 million for all interest, dividends, and current items owed to the company by the Brazilian subsidiaries as of December 31, 1962. Of this amount, 10 percent will be paid in cash in New York at the time of signing the contract, with the balance to be evidenced by 6-percent dollar notes maturing semiannually over a 15-year period beginning in 1963.

Mr. Rhodes. That is all, Mr. Chairman.

Mr. Passman. Mr. Ford?

FISCAL YEAR 1963 REQUEST AND PROGRAM LEVEL FOR BOLIVIA

Mr. Ford. What did you justify for Bolivia as the proposed program for fiscal 1963, Mr. Ambassador?

Mr. Moscoso. The program last year was $10 million, of which $6 million was grants and $4 million was supporting assistance. Then we indicated that development lending was contemplated and that the project applications would be considered.

Mr. Ford. Did you have any proposed figure for loans under the Alliance for Progress?

Mr. Moscoso. No, sir; we did not.

Mr. Ford. You did not include that in any of your funding programs?

Mr. Moscoso. Yes, we did, but we did not say what the amounts would be because we did not know at that time.

Mr. Ford. What did you execute in fiscal 1963?

Mr. Moscoso. $29.6 million.

Mr. Ford. Total?

Mr. Moscoso. Yes, $29.6 million.

Mr. Ford. Broken down by the following: How much in supporting assistance?

Mr. Moscoso. Supporting assistance, $9.9 million.

Mr. Ford. Grants?

Mr. Moscoso. $7.5 million.

Mr. Ford. Loans?

Mr. Moscoso. $12.2 million.

Mr. Ford. A total of $29.6 million.

Mr. Moscoso. Yes.

Mr. Ford. Or an increase of how much?

Mr. Moscoso. $19.6 million.

Mr. Ford. You had a $5.5 million increase in supporting assistance?

Mr. Moscoso. $5.9 million.

Mr. Ford. That is correct, $5.9 million. You had a $1.5 million increase in grants?

Mr. Moscoso. That is right.

Mr. Ford. And a $12.2 million increase in loans?

Mr. Moscoso. This is what the development lending figure emerged at.

Mr. Ford. How much did you tell us you were going to use in Bolivia in fiscal 1963 in Public Law 480?

Mr. Moscoso. We do not have that here.

Mr. Ford. How much did you execute in fiscal 1963?

Mr. Sternfeld. Including all titles, $21.4 million.

Mr. Ford. Did you actually execute more Public Law 480 in fiscal 1963 than you think you contemplated?

Mr. Sternfeld. No, sir. We have been trying for many years to push up the Public Law 480 program because there is a very heavy use of local currencies in that country. I think you can see from page 25 of the book the major increase which has taken place in the Public Law 480 program.

Mr. Ford. In the supporting assistance area, what was the request by the administration?

Mr. Tennant. $481.5 million.

Mr. Ford. What did you finally get in the appropriation?

Mr. Tennant. $395 million.

Mr. Ford. You had an $86 million reduction in supporting assistance?

Mr. TENNANT. That is correct.

Mr. FORD. In Bolivia, you actually made available $5.9 million more than you justified in supporting assistance?

Mr. TENNANT. That is correct.

Mr. FORD. In the case of grants, what was the Executive request for grants, worldwide?

Mr. TENNANT. The request for Latin America was $100 million plus the carryover.

Mr. FORD. $132 million was made available?

Mr. TENNANT. That is correct.

Mr. FORD. So, you got all you asked for plus the unobligated balance, and in the case of Bolivia, in grants you made available $1.5 million more than you justified?

Mr. TENNANT. That is correct.

FISCAL YEAR 1964 PROGRAM FOR BOLIVIA

Mr. FORD. What are you requesting for fiscal 1964 for Bolivia?

Mr. MOSCOSO. A range of from $——— to $——— of which $——— to $——— would be development lending. As you can see, we now have a better idea of what possible lending we may be able to do—$5.5 million in grants, and $——— in supporting assistance. We are trying to reduce the supporting assistance sector and go into loans.

Mr. FORD. Will any programs be carried out if the Bolivian Government does not stand up and seek to remedy its local problems?

Mr. MOSCOSO. They must help themselves. As a matter of fact, we would consider that a violation of our agreement with them under the COMIBOL financing if they do not. We are endeavoring to get the Inter-American Bank to do the same thing. Even the World Bank at this time is contemplating a project to be financed in Bolivia, the first one they would ever do in Bolivia.

Mr. FORD. We are about 6 weeks into fiscal year 1964. Have you made any loans under the Alliance for Progress program, have you made any grants, have you made any supporting assistance agreements with Bolivia, since the beginning of the current fiscal year?

Mr. MOSCOSO. We are continuing at the same rate. We have continuing authority.

Mr. STERNFELD. We have not started any new grant projects in Bolivia itself. We got a request from the Ambassador and mission director last week asking whether they could undertake a private factory rehabilitation program. Individual private enterprise is just stuck. This could be a counterbalance, hopefully, to the strike taking place in the mines. We gave them that authority.

Mr. FORD. You are continuing the program in fiscal 1964 which had previously been started at the same level?

Mr. MOSCOSO. That is correct.

Mr. FORD. But have you begun any new programs since this recent crisis arose?

Mr. MOSCOSO. No, not since the crisis arose. Prior to the crisis we did make loans.

Mr. FORD. In fiscal 1964? How much?

Mr. Moscoso. For the Industrial Development Bank, the private development bank that I mentioned yesterday, I think, $2.4 million.

Mr. Ford. When was that made?

Mr. Moscoso. This was approved on July 10, but it has not been signed yet. We have not negotiated it.

Mr. Sternfeld. This is from no-year funds available in our carry-over.

Mr. Ford. In other words, in fiscal 1964 you have made a loan agreement?

Mr. Sternfled. A loan approval.

Mr. Ford. For how much money?

Mr. Sternfeld. $2.4 million.

Mr. Ford. This was July 10, 1963?

Mr. Sternfeld. That is correct.

Mr. Ford. That is in fiscal 1964.

Mr. Sternfeld. But we have not yet negotiated this loan with the Government of Bolivia. We have reserved funds for that particular project. The AID Administrator authorized this.

Mr. Ford. Do you intend to proceed with negotiations if this current crisis is not resolved favorably?

Mr. Moscoso. We have told the President that the whole economy of Bolivia collapses unless this operation is gotten going. He realizes the whole future of his country rides with this operation.

Mr. Ford. When do you think this crisis will be resolved?

Mr. Moscoso. We think the miners will not be able to hold out more than a month at the most. They are not getting any food. They are not being paid.

Mr. Ford. That is all.

OBLIGATIONS AND RESERVATIONS OF FUNDS

Mr. Passman. So often you have reserved funds and carry them as obligated in anticipation that you may negotiate a loan contract. You may recall that yesterday, Mr. Controller, I asked for a list of the type of reservations, or obligations, you had in that category.

Mr. Tennant. Yes, sir.

Mr. Passman. We agreed this was technically unobligated money, but it was carried in an obligational status. Is that correct?

Mr. Tennant. Yes. We are heading our column——

Mr. Passman. You said that technically they are not obligated funds, but yet the committee would have no way of knowing the facts of the matter, because the funds are carried as a commitment, in obligational status.

We want to know the total amount, worldwide, of the commitments which have been made that may or may not develop into a loan agreement. We are certainly doing business in a rather uncertain area with the American taxpayers' money when we wind up with a tremendous amount of money that we cannot call really an obligation, but it is reserved just in the event that we may inter into these credit agreements. When are you going to have that information available?

Mr. TENNANT. I am sure we can——

Mr. PASSMAN. This so-called loan referred to a little while ago falls in that same category, does it not?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. I believe you said the AID Director approved it. Has this kind of thing ever happened in the past?

Mr. TENNANT. Yes, sir; ever since it—that is, the development loan program—got started.

Mr. PASSMAN. Forgive me for not knowing about it. This thing is so loose it is pitiful.

Mr. TENNANT. I think we should say one or two words about this point. In most cases when these loans are approved, the country is notified, and then the details are negotiated to a final agreement.

Mr. PASSMAN. Here you are carrying money in reserve. It was noted yesterday that a $10 million item was committed for which you may never actually enter into a loan agreement whereby you will use it. Is that correct?

Mr. TENNANT. You said "may." I guess that is true. However, it is a commitment we plan to carry out.

Mr. PASSMAN. The whole program is going to fall in on you, gentlemen, if you do not start operating on a little sounder basis. We are going to pursue this until you finally give us a list of the amount of money that you carry as obligated. You said yesterday, technically unobligated; but since it is not in the list of unobligated funds, then it has to be in the obligated portion. It may well be that you gentlemen do not need a nickel this year in this foreign aid program because you have pyramided the unliquidated balances until now the total is about $7,200 million, and it keeps going up and up every year.

(Information subsequently supplied follows:)

Near East/south Asia				387,725		33,000	33,000
Far East				58,800			
Grand total ($688,825,000)			105,300	538,825	11,700	33,000	44,700

[1] Of 85 approved loans unsigned as of June 30, 1963, 1 was authorized in fiscal year 1960; 2 were authorized in fiscal year 1961; 3 were authorized in fiscal year 1962; 79 were authorized in fiscal year 1963 (24 from July 1, 1962, to Apr. 30, 1963; 11 in May; 44 in June).

NOTE.—In July 1963, 5 of the new development loans and 6 of the Alliance for Progress loans were signed.

Are you familiar with this ROCAP program?

Mr. Moscoso. Yes, sir.

Mr. PASSMAN. Is it a regional program or funds reserved for the program, or requested for the program, so you can supplement the projects which are listed under the country heading?

Mr. Moscoso. No. The funds for ROCAP are funds which are devoted to projects of a regional nature.

Mr. PASSMAN. Is the amount of money you have in ROCAP to be spent in the 21 Latin American countries where you have a program?

Mr. Moscoso. No. It will be spent in the five Central American countries plus Panama to support economic integration.

Certain of the projects may have an impact on two countries, three countries, or all of the six countries in Central America and Panama.

Mr. PASSMAN. The money will be spent in Latin America.

Or all of the six countries in Central America and Panama.

Is Central America part of Latin America?

Mr. Moscoso. A very defined region of Latin America; yes, sir.

Mr. PASSMAN. The money will be spent in your region?

Mr. Moscoso. Yes.

Mr. PASSMAN. And your region is Latin America?

Mr. Moscoso. That is right.

Mr. PASSMAN. You do have a regional office for Central America and Panama. Instead of this being a regional program as your counterparts in the other regions, covering any or all countries in the region, this will be limited entirely to Central America plus Panama?

Mr. Moscoso. That is right.

Mr. PASSMAN. Is this the only regional program you have in your area?

Mr. Moscoso. We have one for the whole region.

Mr. PASSMAN. In these Central American countries, do you have an aid program other than what they get out of ROCAP?

Mr. Moscoso. Yes.

Mr. PASSMAN. So, what they get out of ROCAP is a supplement to the projects listed by country in Central America?

Mr. Moscoso. That is right.

Mr. PASSMAN. On page 91, you run into another Latin American regional program, do you not?

Mr. Moscoso. That is right.

Mr. PASSMAN. This is for all of Latin America, is it not?

Mr. Moscoso. This is for all of them.

Mr. PASSMAN. So, whatever they get out of the regional account would be a supplement to what you have justified by country programs?

Mr. Moscoso. This will be used for the entire Latin American region.

Mr. PASSMAN. Whatever British Honduras, for instance, gets out of this regional program will be in addition to what you have listed for British Honduras by individual projects?

Mr. MOSCOSO. They will not get anything out of this.

Mr. PASSMAN. I believe that is the only country in your region which is not getting something, is it not?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. That is strike one. It takes three strikes to count a man out.

Mr. FORD. They are still up to bat, Mr. Chairman.

Mr. PASSMAN. How about Argentina? You have so many projects listed for Argentina I shall not count them, but whatever they get out of this region will be money in addition to the individual contracts under the individual country listing?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Does that fact mean this is in reality a disguised contingency fund?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. Why did you not take the same projects you have under regional accounts and put them under the country programs?

Mr. MOSCOSO. Because these are programs which impinge on each one of the several countries. It is a better way to finance them and to control them if they are controlled centrally.

Mr. PASSMAN. If this is something like the Social Progress Fund?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. All the countries get some of the money, do they not?

Mr. MOSCOSO. But the Social Progress Trust Fund is a completely different operation from this.

Mr. PASSMAN. If you have a country in Central America with 50 projects listed under the country programs, this country then would also be eligible for certain finances out of each of the two regional programs; is that correct?

Mr. MOSCOSO. Yes, that is right.

Mr. PASSMAN. Has ROCAP been in effect since the inception of the aid program in Latin America?

Mr. MOSCOSO. No.

Mr. PASSMAN. When was this plan dreamed up?

Mr. MOSCOSO. Our regional office for Central American Economic Integration has been in existence since July 1, 1962, I believe.

Mr. PASSMAN. Let us see if you cannot take another year off that.

Mr. MOSCOSO. I am sorry. I am looking at the wrong page now.

Mr. PASSMAN. When did this plan come into being?

Mr. MOSCOSO. This came into being last year.

Mr. PASSMAN. This is a regional program in addition to a regional program. That makes two regional programs for certain countries.

Mr. MOSCOSO. Perhaps this should be called a subregional program. The entire region, Latin American region——

Mr. PASSMAN. I am willing to say a partial regional program. This was created last year?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Who conceived this plan?

Mr. MOSCOSO. We did, in AID.

Mr. PASSMAN. Are you asking for $——— for a new program for Latin America under ROCAP?

Mr. MOSCOSO. No. The program for economic integration is not new. We started last year, Mr. Chairman.

Mr. PASSMAN. When did you justify this ROCAP program to the Congress last year?

Mr. MOSCOSO. We justified it——

Mr. PASSMAN. I am talking about ROCAP.

Mr. MOSCOSO. This is page 11 of last year's presentation book—Central American region, $4.5 million. I recall mentioning this to you.

Mr. PASSMAN. Did you have any such project listed for Latin America last year?

Mr. MOSCOSO. Pardon me, sir?

Mr. PASSMAN. You do not have any such project listed for last year that we can find.

Mr. MOSCOSO. Under the heading "Central American Region."

Mr. PASSMAN. We asked you about ROCAP.

Mr. MOSCOSO. That became the nomenclature or the monicker of it.

Mr. PASSMAN. How much did you request for the Central American region last year?

Mr. MOSCOSO. $4.5 million.

Mr. PASSMAN. But then you changed the name of it to ROCAP, and did you obligate $10 million?

Mr. MOSCOSO. Some of this was lending.

Mr. PASSMAN. I do not care what it was. We are trying to establish the amount.

You asked for $4.5 million for the Central American Region last year. You changed the name to ROCAP. Did you obligate $10 million?

Mr. MOSCOSO. No.

Mr. PASSMAN. Did you obligate $10 million to this outfit?

Mr. TENNANT. We estimated $10 million, but actually obligated $8.6 million.

Mr. PASSMAN. But you asked for $4.5 million.

Mr. TENNANT. That is correct.

Mr. PASSMAN. You asked for that amount, and then estimated $10 million but obligated $8.6 million?

For this new program you are asking for $——— for fiscal 1964. Is that correct?

Mr. TENNANT. Yes, sir.

Mr. Chairman, the $8.6 million that I gave you included $2.9 million from the Social Progress Fund. On a comparable basis to the $4.5 million, we obligated $5.7 million.

Mr. PASSMAN. But you took the money away from the Social Progress trust fund and put it into this new program, did you not? Are you not asking for money for the Social Progress Fund for fiscal 1964, that the fund be replenished?

Mr. TENNANT. Yes.

Mr. PASSMAN. If you had not transferred out of the Social Progress Trust Fund the $2.9 million to make this $10.1 million as you indicate here, later down to $8.6 million, you would have requested less money for Social Progress. So, it is just about the same thing, is it not?

Mr. TENNANT. I would not exactly put it that way, no.

Mr. PASSMAN. You mean if you had not transferred money out of the Social Progress account to this fund, you would still have asked the same amount for Social Progress? You have less money in Social Progress by the fact that you transferred out to this new program, do you not?

Mr. TENNANT. No money was actually transferred out of the Social Progress Trust Fund.

Mr. PASSMAN. You just allocated out of it to this account?

Mr. TENNANT. The Inter-American Bank made a loan in this area from the Social Progress Trust Fund.

Mr. STERNFELD. For the national universities of Central America.

Mr. PASSMAN. Let us back up and start all over again and just see if any of us understand this matter. One of you said that you transferred out, or allocated out, or spent out, or promised out, or planned out, or programed out, of the Social Progress Trust Fund $2.9 million to ROCAP, did you not?

Mr. TENNANT. I do not think it was put that way, sir.

Mr. PASSMAN. Put it your way. Where did you get the $8.6 million for ROCAP?

Mr. TENNANT. The Inter-American Bank made a loan of $2.9 million for the national universities of Central America.

Mr. PASSMAN. Where did they get their money, out of foreign aid?

Mr. TENNANT. Out of the Trust Fund.

Mr. PASSMAN. Are you asking for money for the Social Progress Trust Fund in fiscal 1964?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. Then if you had not made this allocation, loan grant, gift, or whatever you call it, you would have requested less money for the Social Progress Fund in fiscal 1964, would you not?

Mr. MOSCOSO. If the Social Progress Fund had not made any loans, then you would not ask for any.

Mr. PASSMAN. You mentioned some other organization for $4.5 million last year, but what gets me, Mr. Moscoso, for the same outfit you are requesting $——— in fiscal 1964.

Mr. MOSCOSO. If the chairman would only give me 1½ minutes——

Mr. PASSMAN. I will give you plenty of time when we get the record made as to what you people are doing.

You have one regional project for all of Latin America. Then you pop up here all at once with a project about twice that size just for Central America plus Panama. You go from $4.5 million in fiscal 1963 under one name, to $——— the following year under another name. Whatever you give this area out of this ROCAP, $——— will be in addition to the program that you have listed under that particular country, will it not?

Mr. MOSCOSO. May I have my time?

Mr. PASSMAN. If you will tell me whether that is true or not. Whatever projects you have, the money you get out of this account to be spent in these countries will be in addition to the amount listed on the tabs and projects that you have here on an illustrative basis?

Mr. MOSCOSO. For the time being and for the transitional period, you are correct.

OBJECTIVE OF ROCAP PROGRAM

Now let me tell you the objective of this, Mr. Chairman. I am almost sure I can convince you that what we are trying to do——

Mr. PASSMAN. Do not bet money on it, but go ahead.

Mr. MOSCOSO (continuing). You would not only approve but want us to do it. What we are trying to do here, among the objectives, is to concentrate into one single operation the operations which are now distributed in these several country missions. We may not be able to do it overnight. We may not be able to do it in 1 year or 2 years. But we will be accomplishing two things at the same time.

Mr. PASSMAN. But it is a new project, and it will be a trial run on a new system; is that correct?

Mr. MOSCOSO. I described what we were trying to do last year. We had three pages on it. I described it in testimony. I told you about the Central American Economic Community——

Mr. PASSMAN. You changed the name of the organization and doubled the amount of money that you allocated. You asked for $4.5 million, and you wind up allocating $8.6 million.

Mr. MOSCOSO. If we put the words "region" forward instead of backward. We called it Central American region. We call it now regional office for Central America (ROCAP). If that is——

Mr. PASSMAN. It is in addition to all the other projects. If this plan works out, then you are going to eliminate the other system?

Mr. MOSCOSO. That is what we hope to be able to do, by assisting economic integration in Central America.

Mr. MINSHALL. Mr. Ambassador, would what you said indicate that you plan to authorize and appropriate on a regional basis rather than on a country-by-country basis? Is that your plan?

Mr. MOSCOSO. There are several objectives.

Mr. MINSHALL. What is the main objective?

Mr. MOSCOSO. The main objective is to achieve the economic integration of Central America. This is something that historically has been attempted and has not been achieved in Latin America. This time, the necessary institutions are being set up, and the necessary treaties and protocols have been signed. Already a great degree of economic integration is taking place.

Obviously, when these economies are integrated fully, there will not be any reason whatsoever for having five or six missions in those places, and then we can concentrate our operations in one.

Mr. MINSHALL. How many people are presently employed by the new organization called ROCAP?

Mr. MOSCOSO. We have 20 people now.

Mr. MINSHALL. What is your target? Do you plan to push that up substantially in the next few years?

PLANNED PHASING DOWN OF INDIVIDUAL COUNTRY MISSIONS IN ROCAP COUNTRIES

Mr. MOSCOSO. We plan to phase in and phase out. In other words, as more and more of the responsibilities for the region are picked up by ROCAP, fewer of the activities will be performed by the other country missions. This will be performed over a period of time, because the integration will be accomplished over a period of time.

Mr. MINSHALL. Over what period of time? How long will this take?

Mr. MOSCOSO. Economic integration is supposed to be almost fully effective in 1966.

Mr. MINSHALL. In other words, you will not have any AID offices in any of these countries, and it will all be centralized?

Mr. MOSCOSO. I am not saying we will not have it at that moment. I am saying we will try not to have it at that time.

Mr. MINSHALL. How many people are presently employed in all of these countries? You have 20 in ROCAP, and how many in all the other countries?

Mr. PASSMAN. Do you not have the total somewhere?

Mr. MOSCOSO. 233.

Mr. MINSHALL. This makes a total of 255 people.

Mr. MOSCOSO. That is right. We hope to be able to concentrate them in one regional mission when the economic integration is achieved.

Mr. MINSHALL. Where are these people from in ROCAP? Were they absorbed——

Mr. MOSCOSO. They are helping to achieve the integration of these countries. They are helping to achieve the necessary capabilities for economic integration. They are assisting in the creation of institutions for integration.

Mr. MINSHALL. As you look down the road, you plan to absorb the people who are working in these other countries into this central organization?

Mr. MOSCOSO. We hope we will be able to achieve substantial economies. Why should we have six educational advisers when this becomes one single thing?

Mr. MINSHALL. I hope you are right.

Mr. PASSMAN. You are asking here for $28,500,000 under these 20 people. How many personnel did you have last year? Let us see how much you cut it by this approach.

Incidentally, your counterparts said this was a supplement to the country programs as listed by country.

Mr. COTTRELL. Which areas?

Mr. PASSMAN. Just check the record. You will find it.

Mr. MOSCOSO. 245.

Mr. PASSMAN. Does that figure include ROCAP?

Mr. MOSCOSO. ROCAP was not in existence at that time.

Mr. STERNFELD. The figures we gave you were as of May 25, 1962, and May 25, 1963.

FISCAL YEAR 1963 ROCAP PROGRAM LEVEL

Mr. PASSMAN. Last year under your divider sheet, you had an agency set up, "Central American integration." On page 171, it said: "Central American economic integration," which would have been CAEI, C-A-E-I; is that right?

Mr. MOSCOSO. That is correct.

Mr. PASSMAN. You envisioned a program total of $4.5 million?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. You wound up with a program of $8.6 million obligated?

Mr. Moscoso. $5.7 million. The other——

Mr. PASSMAN. Is that the total amount? Where did you get the $8.6 million figure?

Mr. Moscoso. We added to that the loan made by the Inter-American Development Bank.

Mr. PASSMAN. But they made the loan to ROCAP?

Mr. Moscoso. That is right.

Mr. STERNFELD. No.

Mr. PASSMAN. He says they did and you say they did not.

Mr. STERNFELD. They did not make it to ROCAP; they made it to Central American educational institutions.

Mr. PASSMAN. You asked for $4.5 million. Later you said $8.6 million, and now you say $5.7 million.

Mr. Moscoso. $8.6 million is what the region received——

It so happens that the Central American universities received a $2.9 million loan from the Social Progress Trust Fund.

Mr. PASSMAN. At least, this is a brandnew project cooked up in 1963, and by the time you moved out of fiscal 1963 into fiscal 1964, you changed the name of it to ROCAP?

Mr. Moscoso. That is the name of our regional office dealing with the Central American economic integration.

Mr. PASSMAN. Instead of asking for $4.5 million, you are asking for $———?

Mr. Moscoso. That is right.

Mr. PASSMAN. This plan is intended to reduce the personnel ultimately, is it not?

Mr. Moscoso. Yes, sir.

Mr. PASSMAN. Last year you had 245 people with this new program to reduce personnel: it has been increased from 245 to 255 people.

Mr. Moscoso. There has been an increase, that is right.

Mr. PASSMAN. So, it is working out differently than you anticipated. Your dreams are that later you will be able to reduce the personnel; is that right?

Mr. Moscoso. That is right. You said "ultimately," and I agree.

Mr. PASSMAN. But it is increasing now.

Mr. Moscoso. Just by the nature of the operation, is has to, but only temporarily.

Mr. PASSMAN. Will you tell us the total amount you are requesting in your area, exclusive of the $———? You have an increase in personnel. Let us see if you have an increase in the dollar request.

Mr. Moscoso. $———.

Mr. PASSMAN. Is that the sum from all the spigots? You have over a billion dollars in this thing for Latin America, have you not?

Mr. Moscoso. It ranges from $——— to $———.

REQUESTS AND PROGRAM LEVELS FOR CENTRAL AMERICAN COUNTRIES

Mr. PASSMAN. Let us take all spigots of foreign aid for Latin America. Then we shall deal next with your overall region, and then from the overall region we shall come down to the Central American region. Or, if you want to deal with it in reverse, we shall take it your way.

How much did you request for Central America last year, in the area where you have this new regional program?

Mr. Moscoso. We requested $4.5 million. You say the region?

Mr. PASSMAN. Central America.

Mr. Moscoso. For the countries of Central America?

Mr. PASSMAN. Yes. You "reduced" the personnel from 245 "down" to 255. Let us see if you "reduced" the money request the same way. You do not reduce by going up.

Mr. Moscoso. Sometimes you do. You have to spend money to make money.

Mr. Moscoso. $20.8 million.

Mr. PASSMAN. You had $20.8 million?

Mr. Moscoso. In grants.

Mr. PASSMAN. We want the total amount, gentlemen.

Mr. Moscoso. $20.8 million is grants for the countries of Central America.

Mr. PASSMAN. How much are you requesting in the same category for fiscal 1964?

Mr. Moscoso. $23.3 million.

Mr. PASSMAN. Let us put the two figures together and see how well this region is working out. Put down $——— and put under it the figure they just gave you, $23 million. That is what you are requesting for fiscal 1964. What total did you have for fiscal 1963?

Mr. Moscoso. We requested for fiscal 1963, $20.8 million for the countries of Central America.

Mr. PASSMAN. In 1963, you had 245 personnel, total?

Mr. Moscoso. That is right.

Mr. PASSMAN. In 1964, you are going to have 255 personnel?

Mr. Moscoso. That is right.

Mr. PASSMAN. In 1963, you had $20.8 million for Central America?

Mr. Moscoso. That is right.

Mr. PASSMAN. In fiscal 1964, you are asking for $——— when you pick up this regional amount, putting the two together. The personnel is going up and the money has doubled. If you pick up the $——— under this new outfit, ROCAP, and take what you have programed by country, that is $———. Last year you requested $20.8 million.

Mr. TENNANT. The only point I think I should make, Mr. Chairman, is that the Development Loan category was starred as countries eligible for development lending on the receipt of loan applications in last year's book.

Mr. Moscoso. You are dealing with noncomparable figures. To get the $——— you cited, you have added the figure for ROCAP, the $——— which includes loans to the total fiscal year 1964 request for grants for ROCAP and the individual countries. Therefore, the ROCAP grant figure is double counted.

Mr. PASSMAN. If you leave it out, it has more than doubled.

Presently, not only are you increasing personnel, but you are increasing the dollar request. Is that correct?

Mr. Moscoso. Yes, that is right.

ROCAP PROJECTS

Mr. PASSMAN. The project book indicates that you initiated 11 projects plus the technical support project under this heading,

ROCAP, in fiscal 1963. How many of these projects were specifically justified to the Congress, and in what amounts?

Mr. STERNFELD. Our records show only one project was not justified before the Congress. The other projects were justified.

Mr. PASSMAN. State specifically, please, the 11 projects and the manner in which you justified them.

(Off the record.)

Mr. PASSMAN. Could you give us the total cost at completion of the 11 projects?

Mr. STERNFELD. $10,815,000.

Mr. PASSMAN. Does that figure represent the cost of the 11 projects you had in the program for fiscal 1963?

Mr. STERNFELD. That represents the——

Mr. PASSMAN. The amount from start to completion?

Mr. STERNFELD. That is correct. It also includes the one project which we did not justify.

Mr. PASSMAN. What was the cost of that one project?

Mr. STERNFELD. The total cost of that project was $4,200,000.

Mr. PASSMAN. You requested money for 10 projects, and one project you did not request money for. All 11 projects would be $10,853,000, and the one project that you did not request money for is almost half of the total, or $4,200,000. What project is this?

Mr. STERNFELD. That is the mobile rural health program.

Mr. PASSMAN. Is that the one which includes the Peace Corps outfit, where you have them pulling in for several different accounts?

In project after project all over the world, we find that the Peace Corps is now getting into the AID agency, right into the same type of project. Earlier this afternoon we heard, I think, that they were in five different agencies.

Under ROCAP, the Central American area, rural mobile health is costing $4,200,000, which you did not justify, and the regular team of U.S. technicians is being supplemented by the Peace Corps volunteers.

JUSTIFICATION FOR DEVELOPMENT LOANS TO ROCAP

On what basis are you estimating the requirement for $20 million for development credits to this organization?

Mr. MOSCOSO. The estimates are based on our best estimates of the support that the Central American Bank for Economic Integration will require in order to help finance regional programs important to economic integration.

Mr. PASSMAN. How much have you allocated for this purpose out of the fiscal year 1963 funds or out of prior year funds, in total? Are you talking about the soft type of loan that we identified earlier? Give us the total. If it is Export-Import Bank, say so. If it is anything else, give us the total.

GRANTS TO CENTRAL AMERICAN BANK FOR ECONOMIC INTEGRATION

Also, could you tell us whether or not you justified the $3 million grant to this organization?

Mr. STERNFELD. It came out of fiscal 1961 money. I do not think I could tell you.

Mr. PASSMAN. A grant out of 1961 money for an organization that you did not create until 1963?

Mr. STERNFELD. This is the Central American Bank for Economic Integration, a bank run by the Central American——

Mr. PASSMAN. You set up the bank in 1961, but you never did justify to Congress the funds for it, did you?

Mr. STERNFELD. I was not here, sir.

Mr. PASSMAN. Did you justify the funds?

Mr. TENNANT. The $2 million grant was not included in the fiscal year 1961 congressional presentation.

Mr. PASSMAN. This is just another spigot. If we had not gotten into this matter, we would have flipped through these country programs, and even they amounted to more than the total you had in the previous year.

Now you are making——

LOAN TO CABEI

Mr. MOSCOSO. This was a $5 million, 4-percent loan, 15 years.

Mr. PASSMAN. Who is loaning what to whom?

Mr. MOSCOSO. To the Central American Bank for Economic Integration. DLF made the loan in fiscal 1961.

Mr. PASSMAN. The Central American area and the Central American Bank are two different projects?

Mr. MOSCOSO. The Bank has been established by the governments of the Central American area to assist economic integration.

Mr. FORD. Will the chairman yield there?

How much has been disbursed on this loan which was, I gather, obligated in fiscal 1962?

Mr. MOSCOSO. Nothing has been disbursed on it.

Mr. FORD. This was money appropriated in fiscal 1961?

Mr. MOSCOSO. That is right.

Mr. FORD. It was obligated in fiscal 1962?

Mr. MOSCOSO. The loan was authorized on June 28, 1961; therefore that was fiscal year 1961. The loan agreement was signed on August 16, 1962.

Mr. FORD. In other words, the authority to withdraw that was consummated in fiscal 1962?

Mr. MOSCOSO. August 16, 1962, was in fiscal year 1963.

Mr. FORD. The obligation was made in August of 1962 which was in the second month of fiscal 1963?

Mr. MOSCOSO. Yes, sir; that is, the loan agreement was signed in fiscal year 1963.

Mr. FORD. No money has been withdrawn, no expenditure has been made against an obligation?

Mr. MOSCOSO. That is right.

Mr. FORD. Why is that?

Mr. MOSCOSO. One of the problems we are having is that the Central American common market people agreed in a treaty to give special treatment to certain industries which were set up in the region and which would have integration effects. In other words, one industry located in Guatemala which would, in effect, take care of all of the other markets in Central American countries.

When the protocols which would implement that particular treaty agreement were approved, they seemed to imply that some of these industries were going to get a monopoly position for an undetermined number of years. We have protested that. We have not allowed disbursements until such time as this is clarified.

Mr. FORD. I am not urging you to make the disbursement, but what is the expectation for the implementation of this project?

Mr. MOSCOSO. A similar problem arose in which the Inter-American Development Bank is involved. A group has been appointed which will report on how to deal with the situation making a recommendation to the Central American Bank for Economic Integration as to the way the fund should be handled to avoid the creation of industrial monopolies in these countries.

CAPITAL FUNDING OF CABEI

Mr. PASSMAN. You have a new organization within the AID program, ROCAP, for the Central American area. We helped create and furnish the capital for the Central American Bank for Economic Integration?

Mr. MOSCOSO. Yes, sir; for the Central American Bank for Economic Integration. We participate together with the Central American governments.

Mr. PASSMAN. You also have funds out of the Inter-American Development Bank, do you not?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. To the Central American Bank for Economic Integration?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. We are still dealing with AID funds, but two banks

CABEI REPAYMENTS INTO REVOLVING FUNDS OF AID AND IDB

When the Central American Bank for Economic Integration repays its loan to the Inter-American Development Bank, does that money go back into the revolving fund of the Bank?

Mr. MOSCOSO. No.

Mr. PASSMAN. Where does it go, then? Does it not go back into the revolving fund of the Inter-American Development Bank, and not to the U.S. Treasury?

Mr. MOSCOSO. That is right; because it is a loan that was made from the Fund for Special Operations, of the IDB.

Mr. PASSMAN. Then on the amount from the DLF, when that is paid back, that goes back into the revolving fund of the DLF account, does it not?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Regardless of how many different banks, and any exchanges between the banks, it does not go back presently into the U.S. Treasury to pay our bills here or to reduce the public debt?

Mr. MOSCOSO. No.

Mr. PASSMAN. Now, you are asking for $——— as a development credit to this area for fiscal year 1964?

Mr. MOSCOSO. That is right, $———.

Mr. PASSMAN. How much of this money will be paid to the Bank and how much will be disbursed to individuals, companies, and projects in the country? How much of the $——— will be in development credits to the organization? How much of it will be to the Bank and how much to the organization to redistribute?

Mr. MOSCOSO. The bulk of these funds will go to——

Mr. PASSMAN. We want to know the amounts.

We want to know how much will go to the Bank and how much will be disbursed to individuals or to companies.

Mr. MOSCOSO. I do not know yet.

I think the bulk of it will go to the Bank and some of it will go to CSUCA, which is the Superior Council of Central American Universities, because we are interested in building up the capabilities of those universities.

Mr. PASSMAN. Under normal conditions, normal operations, your Social Progress Fund, your Alliance for Progress Fund, and all of these things could actually operate under one account and you could have different allocations for different purposes, could you not?

Mr. MOSCOSO. Technically, yes; but politically, no.

Mr. PASSMAN. If you could not consolidate all of the different accounts you have—Social Progress Trust Fund, Alliance for Progress, the DLF and all this—could it not, in effect, be brought in under one fund and you would have different categories, and could you not do a better job if you brought these things back under one heading? After all, when you create these different agencies within agencies, the amount of the requests go up and up.

Your amount, even though you thought it would go down, is up for fiscal 1964, is it not?

Mr. MOSCOSO. Ultimately it will be down.

Mr. PASSMAN. How do we know that it will? We have been hearing that type of claim for many years.

We worked this program down one time to the point that we were appropriating as low as $2.7 billion in round figures, and then it started going up again.

I do not believe that you people could bring it under control if you tried. I think it would take an act of Congress to consolidate all of these different spigots. With reference to this $———, you just said you did not know where it is going to go until you get it. You think, you said, it may go certain places, but you do not know how much is going to go into this bank or any other project.

Mr. MOSCOSO. It all depends on whether the applications for the Bank are acceptable and meet the criteria.

Mr. PASSMAN. You are asking the Congress to provide money for projects before they have been established as feasible and desirable.

Mr. MOSCOSO. But, Mr. Chairman——

Mr. PASSMAN. If you cannot tell us where the $——— is going to go, I do not think I should pursue asking these questions. You do not presently know, do you?

Mr. Moscoso. I doubt if anyone who is buying shares of stock in a bank that is going to be created can reasonably ask the people who are going to put the bank together where they are going to spend the money.

Mr. PASSMAN. You people have not really pinpointed, I believe, the cost of one single project since you have been coming before this committee.

Mr. Moscoso. It is a different activity.

CENTRAL AMERICAN REGIONAL HOME LOAN BANK

Mr. PASSMAN. On page 133, on this same ROCAP, there is the Central American Regional Home Loan Bank, and you plan to establish that bank out of fiscal year 1964 funds. For how much do you plan to capitalize the bank?

Mr. Moscoso. This is going to be handled as a division of the Central American Bank for Economic Integration. It will not be a separate operation.

Mr. PASSMAN. Can you get us some information on this operation?

Mr. Moscoso. Yes, we will be very happy to provide it.

(The requested information follows:)

CENTRAL AMERICAN HOME LOAN DEPARTMENT

Home mortgage institutions of various types exist in the Central American countries. However, savings themselves are insufficient to provide capital in sufficient volume. A source of secondary financing is needed. This project provides for the creation, within the Central American Bank for Economic Integration, of a Central American Home Loan Department to act as a source of secondary financing for the home mortgage institutions in the member countries of the Central American Common Market through the purchase of participation in home mortgages issued by private institutions.

The home loan department will eventually be a self-capitalizing institution which will provide a source of financing for middle income housing. This will help make it possible for the public housing agencies of the various Central American Governments to discontinue using public funds for middle income housing. This project would be a first major step toward achieving this goal.

Individual mortgage issuing institutions would be provided considerably more funds to finance home construction, which will have significance beyond the number of homes produced. The increased funds flowing through these institutions would result in greater competition among the institutions and consequently more liberal financing policies and would also create a demand for construction materials and construction.

The effective demand to be met by this project and in the future by CABEI and other institutions to be strengthened by this project is considerable; 17,000 homes a year for 20 years is a conservative estimate.

In general, there are four types of institutions in Central America making home loans. They are: (1) Banks, public and private; (2) mutual or stock savings and loan associations, and cooperatives; (3) private savings and loan companies which are also in the business of developing land and constructing houses; and (4) government housing agencies. The home loan department of CABEI would be designed to assist only those institutions in the first two categories. Government housing institutes would not be eligible for assistance from CABEI in this program because the program is designed specifically to relieve these housing institutes of the problem of meeting demand for home financing which could be done on a commercial basis. In order to encourage the creation of new savings and loan institutions as well as to provide incentives for existing financial institutions which are totally or primarily in the field of home mortgage financing, CABEI would give preferential treatment to such institutions.

Tentatively, the following principles are being considered:

(1) The home loan department would be a source of secondary financing, only. Its resources will eventually be a combination of loans, investment guaranties and sale of participation certificates.

(2) It should assist that lower and middle income group which does not require any form of subsidy.

(3) Some equity in the form of prior savings, downpayment, or land ownership should be involved in the original home financing.

(4) Issuing institutions would be required to retain some financial interest in the mortgages.

(5) Mortgages in which the home loan department participates would be required to meet certain legal, financial, liveability, and property standards.

Initially, AID would make a loan to CABEI. Once the home loan department is well established, it is intended that CABEI issue its own participation certificates against its portfolio, possibly guaranteed under AID's investment guaranty program. Even in the absence of such sales by CABEI, the proposed loan would still leave CABEI with earned capital at the end of the loan period.

AID supervision of the project during the initial 2 years would be exercised through a U.S. expert in home mortgage financing, who would serve as an adviser to the head of the CABEI home loan department and the periodic supervisory services of Jack D. Gordon, president of the Washington Federal Savings and Loan Association of Miami Beach, Fla., who has been serving as an AID consultant in the development of the home loan department, its policies, procedures and standards.

This project would, finally, stimulate considerably the now depressed construction industry in the region. Central America produces cement, wood, and reinforcing steel, the principal materials employed in home construction, and many of these industries are now operating well below capacity. It is estimated that the increased level of construction and building materials production induced by this project would be maintained by future investment in housing and other construction projects.

Mr. PASSMAN. Gentlemen, we shall recess until tomorrow afternoon at 1 o'clock.

THURSDAY, AUGUST 8, 1963.

Mr. PASSMAN. The committee will come to order.

BRITISH HONDURAS

Yesterday we turned the pages in the book and picked, I suppose, the only country or territory in Latin America with the exception of Cuba where we do not have an aid program. That is British Honduras, which I believe is a possession of Great Britain. We have in the past had an aid program for Honduras, have we not?

Mr. MOSCOSO. Yes, we have.

Mr. PASSMAN. What amount do you have on hand unliquidated to the credit of British Honduras as of June 30?

Mr. TENNANT. $121,000, sir.

Mr. PASSMAN. That money will be disbursed, will it not? Does that figure include Public Law 480 aid?

Mr. TENNANT. That includes economic, military aid and Public Law 480.

Mr. PASSMAN. So you do have a small continuing program in British Honduras out of allocations from previous years?

Mr. TENNANT. I wouldn't call it a continuing program. This covers liquidation of obligations that occurred in previous years.

Mr. PASSMAN. By "continuing," I mean you will make disbursements out of allocations from previous years.

Mr. TENNANT. That is correct, sir.

Mr. PASSMAN. Thank you.

U.S. AID TO RUMANIA

To switch briefly to a different area, what has been the total amount of aid we have given to Rumania in previous years?

Mr. Moscoso. Rumania?

Mr. PASSMAN. Yes, since the end of World War II, or since the beginning of the foreign aid program as we know it today?

Mr. TENNANT. Mr. Chairman, our statistical book does not have Rumania in it. I would have to check to see whether there was any or not. I do not know whether we did or did not.

Mr. PASSMAN. We wish you would check your records. See if we have had a program in Rumania since the end of World War II: if so, how much?

Mr. TENNANT. Yes, sir. I will do that.

(The following statement was subsequently supplied:)

A check of the records shows that no aid has been supplied to Rumania.

Mr. SCHEINMAN. Mr. Chairman, are you referring to any particular kind of assistance?

Mr. PASSMAN. Any of the 16 spigots. Milk tastes the same from a black cow as it does a white.

Are any of you people familiar with an aid plan that is reported to be in the tentative stage for Rumania?

Mr. SCHEINMAN. No, sir. I am not personally familiar with the reference which you are making.

Mr. PASSMAN. I asked a question.

Will you ascertain whether or not there is any tentative aid plan for Rumania, from whatever source it might be? Could you get that information and let us have it tomorrow and if the answer is no, determine if they can delegate to you the authority to assure the committee that you do not have an aid program for Rumania or that you do not contemplate starting one?

Mr. SCHEINMAN. Yes, sir.

LAO REQUEST FOR TRANSIT OF COMMUNIST IMPORTS THROUGH THAILAND

Mr. PASSMAN. I am going to insert in the record a letter and newspaper clipping I received via airmail from Bangkok, Thailand. I believe the United States pays all the foreign exchange requirements for imports to Laos. Now, it would appear that Laos is getting permission, or it is under consideration, to be able to bring Communist-purchased goods through Thailand into Laos. If they are buying goods from Communist China and paying for it with American money, even if this is done indirectly we want to try to pin down the facts. In that connection, therefore, I shall place in the record at this point the letter and the newspaper article clipped from the Bangkok Post, volume 19, No. 179, Saturday, August 3, 1963, price 2 baht.

(The letter and newspaper clipping follow:)

BANGKOK, THAILAND, *August 5, 1963.*

Congressman OTTO E. PASSMAN,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN PASSMAN: Many Americans living abroad admire you for your courageous stand against the wildness of some of the American aid programs abroad. Like you, we are not opposed to American aid in principle but only to the excesses and the stupidities which frequently characterize the program.

Perhaps the attached newspaper clipping will aid you in your current fight for getting some sense into the program.

Isn't it almost inconceivable that the Government of Laos would ask the Government of Thailand to allow goods from Red China to pass over its soil? Thailand is a stanch ally of the United States, a member of SEATO and it is illegal for goods from Communist countries to come here.

Furthermore, it is well known that the United States pays all the foreign exchange requirements for imports to Laos. If the Lao want to have goods from Red countries pass over Thai soil that are brought in by the commercial import program, it means that U.S. taxpayer's money is being used to buy goods from Red countries. Is this what our tax money is to be used for? Do Americans pay taxes to support the damned Commies by letting the Lao use our money to buy goods from them? If so, then indeed, the American foreign aid program has really gone off the track.

Please look into this. You will also find in the enclosed clipping a note that the Lao now want to buy much more rice than they need from Thailand, because Thailand, as part of its aid program, has reduced the price below the world market price level. Undoubtedly, this extra rice will be shipped to Red countries, in return for Red goods coming to Laos. What a travesty.

And, oh yes, where is our brave "General" Kong Le who was supposed to be making such a firm stand against the Reds in Laos? He has taken leave from the war that American taxpayers are paying for * * * and gone off to Moscow for treatment of his ailing sinus condition.

[From the Bangkok Post, Aug. 3, 1963]

LAOS TO THAI: "LET GOODS OF REDS TRANSIT"

REQUEST STUDIED—ALSO WHY "SO MUCH RICE" NOW REQUIRED

The Thai Government is studying a request of the Lao Government for facilities for transit through this country of goods from Communist countries designated for the neighboring country, it was revealed today.

Informed sources told the Post that the request was contained in a recent letter from Prince Souvanna Phouma, Prime Minister of Laos, to Prime Minister Sarit Thanarat.

The note was handed to Marshal Sarit by Lao Ambassador Nou Ing Ratanavong.

It was explained by Thai officials that at present Thailand grants transit facilities for goods consigned to Laos but the question of goods of Communist origin has not been broached until now.

Prince Souvanna Phouma made the request in connection with Thailand's economic assistance for Laos.

The officials said the matter is receiving careful consideration by the Thai Government, which has to make certain that while it aids Laos it does not bring about a danger or threat to itself.

A possible solution, it was suggested, is that the Thai Government may permit passage of Communist goods but may want to keep a check on the types and quantities of goods—the types in order to insure their necessity to the economy of Laos, and the quantities to insure that there is no surplus which may be smuggled back into Thailand for sale here.

This Lao request is combined with the request, reported about earlier, for sale of glutinous rice to Laos without collecting any premium.

The rice request is also under detailed study. Some officials are wondering why Laos requires "so much rice." They pointed out that Laos used to purchase 15,000 to 20,000 bags of rice per year. This year, after reduction of premiums

from 800 to 100 baht per ton, Thailand has sent to Laos a total of already 40,000 bags.

The Lao Premier also asked that the rice be sold at prices prevailing last June, when the 40,000 bags were sold. Officials noted that rice prices have already risen, in a seasonal trend, since then.

(NOTE.—AID's comments on above article follow:)

The article in the Bangkok Post, cited in the letter from an American resident, is incorrect in its statement that the Government of Laos has asked the Government of Thailand to permit transit of goods of Communist origin across Thailand to Laos. The letter writer's observations on this point are, therefore, without foundation.

The United States is not financing transactions of any sort by Laos with the Communist bloc.

The letter draws a false conclusion from the fact that Laos has increased imports of glutinous rice from Thailand. The increased requirement results from the large-scale displacement of Lao farmers by the civil war and the prolonged delay in achieving unification and peace. As a consequence, normal planting has been impossible in many areas, and more than 100,000 refugees must be fed. There is no evidence of reexport of Lao rice to Communist countries.

SOURCES OF ASSISTANCE TO LATIN AMERICA

Mr. Administrator, would you cite a list of all U.S. agencies and spigots of those agencies or funds that provide the financing for the Latin American aid program? I could start out and you could possibly supplement the listing if I should miss some of them.

Under AID, you have the Alliance for Progress, the Social Progress Trust Fund, the Development Loan Fund. Is the DLF eligible?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. They are eligible for development loan funds. That is No. 3. Now you have——

Mr. SCHEINMAN. Off the record, Mr. Chairman.

(Discussion off the record.)

Mr. PASSMAN. You could channel freely from the DLF into Latin America, could you not?

Mr. SCHEINMAN. There is a restriction on transfer.

Mr. PASSMAN. We are trying to establish the different spigots from which you draw funds that make it more complicated to administer the program.

You have the Alliance for Progress, you have your loans and grants under AID, you have the Development Loan Fund, you have the Public Law 480, you have the Inter-American Development Bank, you have the International Development Association, you have the World Bank, you have the Central American Bank. You have development grants, which includes a combination of grant aid and technical assistance.

Is Latin America also eligible for supporting assistance?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. All right, supporting assistance.

Then you have the U.N. programs under several different names. Then you have UNICEF.

Would you help fill in on the others?

Mr. MOSCOSO. Yes, sir; if there are any others.

Mr. SCHEINMAN. At this time, sir?

Mr. PASSMAN. Yes. We want to get them in the record.

Mr. MOSCOSO. Peace Corps, Export-Import Bank.

Mr. PASSMAN. I am talking about giveaway programs, but put in Export-Import Bank. We included IDA, did we not?

Mr. Moscoso. Yes, sir; we also got the World Bank. That is why I mentioned Export-Import Bank.

Mr. PASSMAN. I forgot to put the President's contingency fund in there.

You can accomplish just about the same kind of things out of every one of those funds.

You have military assistance. We forgot that one. And you do get some civic action projects even out of the military aid.

Mr. MONTOYA. You forgot one, Mr. Chairman, the local currency repayment fund.

Mr. PASSMAN. Yes. You can plow that currency back into the program, can you not?

Mr. Moscoso. That is right.

Mr. STERNFELD. No, we cannot reuse local currency repayments of the DLF.

Mr. PASSMAN. The currency goes back in so that you can use it. Turn through these pages here. We shall see where you asked for $200,000 cash and you got $5 million in local currency that I do not recall you asking the Congress to appropriate.

Mr. TENNANT. Local currency is either the counterpart or U.S.-owned growing out of Public Law 480 transactions.

Mr. PASSMAN. You have three or four different sources of local currency.

Mr. TENNANT. There are several accounts.

Mr. PASSMAN. Do you see how confused you have got the program? It is uncontrolled and, in its present form and scope uncontrollable.

I hope that some day, if the program is to be continued, we will have a package of foreign aid and place a limitation on the part that could be grants and the part that could be the disguised grants. Then you could administer the program with some degree of prudence and effectiveness.

Please help us establish the other spigots that we did not get in, if we missed any. We have a record full but I should think possibly there might be others.

URUGUAYAN TAX STRUCTURE

Do you have a program for Uruguay?

Mr. Moscoso. Yes, sir.

Mr. PASSMAN. "Retirement at 50 With Full Pay—Uruguay Has No Income Tax Bite." This is a newspaper report from the capital of Uruguay, dated August 7, 1963, and it is by Harold Y. Jones, of the Copley News Service.

(The article follows:)

RETIREMENT AT 50 WITH FULL PAY—URUGUAY HAS NO INCOME TAX BITE

(By Harold Y. Jones, Copley News Service)

MONTEVIDEO, URUGUAY, August 7.—Ever dream of a place where you pay no income tax and can retire at the frisky age of 50 at full pay? There is such a place—Uruguay, the peaceful little country of 3 million sandwiched between 2 giant neighbors, Argentine and Brazil.

Uruguay has something that amounts to an income tax law but it has so many exemptions that only a man who makes 20 times the national average salary of 1,200 pesos (about $70) a month pays anything. There are few men in Uruguay who earn that much ($1,400).

The Uruguayan Government thus has to look elsewhere for the tax revenue it needs to support its massive welfare state activities.

Who pays? It's the men who produce the country's wool, meat, and other related products sold abroad.

Sales of these products bring in 90 percent of Uruguay's export earnings, which range between $125 and $175 million a year. The Government takes about 25 percent of export revenue.

It also imposes equally sizable duties on the more than $200 million Uruguayans spend each year bringing in luxury and manufactured goods not produced in their own country.

These taxes on agricultural goods going out and manufactured goods coming in have created a flourishing smuggling industry in Uruguay.

Some cattlemen and sheep ranchers sneak their herds and flocks into Brazil, shear and slaughter them, and then send the meat and wool to world markets through Montevideo as "in transit" products to avoid paying export taxes to their own government.

Smugglers bearing cars, refrigerators and hundreds of other items cross the border from Brazil. Economists here figure that the total loss to the Uruguayan treasury is about $30 million a year.

Because of this and because of less wool available for export last year's tax take was down and the national budget ran a deficit of about 600 million pesos (then the equivalent of $55 million).

"We're looking for new things to tax," said a Government accountant. "We've got to have more money to keep the Government payroll current."

Mr. PASSMAN. Let me note that, say, $1,400 there might buy as much as $2,200 would purchase here.

Mr. MOSCOSO. May I comment on this?

Mr. PASSMAN. Yes, sir.

Mr. MOSCOSO. The first sentence in the presentation book indicates that the United States looks to Uruguay to make fundamental changes in its economic and social welfare policies.

Mr. PASSMAN. We have been seeking those kinds of changes for many years with very little success.

Mr. RHODES. You had those words classified in the book. Are you going to classify them out of the record? I just happened to be looking at them. They are in the gray area.

Mr. MOSCOSO. Mr. Congressman, I suppose after due consideration, et cetera, it may be necessary to classify them, but quite frankly, I have been telling that to my Uruguayan friends to their face for quite a while.

Mr. PASSMAN. Let me say, Mr. MOSCOSO, that I generally admire you for your sincerity and forthrightness.

ALLIED SHIPPING TO CUBA

Mr. RHODES. Mr. Chairman, I asked some days ago for the Department to give me an explanation of Circular No. 12 of the Department of Commerce in which were listed various foreign ships which had carried cargoes to Cuba. I asked for an explanation of this in light of section 107 (a) and (b) of the Mutual Security Appropriation Act of 1963.

I have here an unclassified report of the reason that the administration gives for not having stopped military and economic assistance to the countries whose ships had gone into Cuba carrying cargoes or in a posture to carry cargoes. I have this report here, Mr. Chairman, and after I make a few comments on it, I would like to have it inserted in the record.

Mr. PASSMAN. The information will, as requested, be inserted in the record.

Cuba Shipping: Section 107 of the Foreign Aid and Related Agencies' Appropriation Act, 1963

This memorandum sets forth a legal analysis of the applicability of section 107 of the Foreign Aid and Related Agencies' Appropriation Act, 1963 (Appropriation Act), to the voyages to Cuba undertaken by aid recipient country ships listed in the Maritime Administration Report No. 12.

Section 107

"(a) No assistance shall be furnished to any country which sells, furnishes, or permits any ships under its registry to carry to Cuba, so long as it is governed by the Castro regime, under the Foreign Assistance Act of 1961, as amended, any arms, ammunition, implements of war, atomic energy materials, or any articles, materials, or supplies, such as petroleum, transportation materials of strategic value, and items of primary strategic significance used in the production of arms, ammunition, and implements of war, contained on the list maintained by the Administrator pursuant to title I of the Mutual Defense Assistance Control Act of 1951, as amended.

"(b) No economic assistance shall be furnished to any country which sells, furnishes, or permits any ships under its registry to carry items of economic assistance to Cuba so long as it is governed by the Castro regime, under the Foreign Assistance Act of 1961, as amended, unless the President determines that the withholding of such assistance would be contrary to the national interest and reports such determination to the Foreign Relations and Appropriations Committees of the Senate and the Foreign Affairs and Appropriations Committees of the House of Representatives. Reports made pursuant to this subsection shall be published in the Federal Register within 7 days of submission to the committees and shall contain a statement by the President of the reasons for such determination."

General conclusion

All voyages to Cuba by aid recipient country ships listed in the Department of Commerce Maritime Administration Report No. 12 have been analyzed and fall into several categories. The applicability of section 107 to each of these categories is discussed below. On the basis of an analysis of the various categories listed below it is the opinion of the Office of the General Counsel of the Agency for International Development and of the Office of the Legal Adviser of the Department of State that no action to terminate aid or to waive application of section 107 is legally required at this time.

Discussion of categories

Arrived in ballast.—With regard to those vessels which sailed to Cuba in ballast it is clear that no violation of section 107 has occurred, since they could not have possibly carried proscribed items.

Free world.—There is no evidence or reason to believe that any free-world country has sold or furnished to Cuba items proscribed by section 107. Therefore, it can legally be concluded that in the absence of evidence of transshipment any voyages between such countries and Cuba did not involve the carriage of items proscribed by section 107, so long as no call was made at a Communist bloc port. There is no evidence of such transshipment.

No Battle Act.—This category relates solely to vessels flying the flag of countries which receive military assistance only. In the case of such countries only subsection (a) of section 107 is applicable, and that subsection is violated only if ships of such countries carry Battle Act, title I items to Cuba. On this latter point subsection (a) describes the articles proscribed by that subsection as follows: "arms, ammunition, implements of war, atomic energy materials, or any articles, materials, or supplies, such as petroleum, transportation materials of strategic value, and items of primary strategic significance used in the production of arms, ammunition, and implements of war contained on the list maintained by the administrator pursuant to title I of the [Battle Act]."

The phrase "contained on the list maintained by the Administrator pursuant to title I of the [Battle Act]" qualifies all of the descriptive words appearing before that phrase. Moreover, the reference to petroleum is not to petroleum per se, but to petroleum which is an article used in the production of arms, ammunition and implements of war and which is contained in the Battle Act title I list. Crude oil is not such an item. This interpretation of section 107(a) is further sustained by the fact that the descriptive words used in section 107(a) are taken directly from title I of the Battle Act. Section 103(a) provides in pertinent part as follows:

"The Administrator is hereby authorized and directed to determine within 30 days after enactment of this act * * * which items are, for the purpose of this act, arms, ammunition, and implements of war, atomic energy materials, petroleum, transportation materials of strategic value, and those items of primary strategic significance used in the production of arms, ammunition, and implements of war which should be embargoed to effectuate the purposes of this act."

Where Congress in one statute uses certain descriptive words and then repeats these words in a subsequent statute at the same time referring to the first, it must be assumed that the words of the subsequent statute were intended to relate to the same things as the first statute. Thus, where there is now no evidence that voyages by ships of countries receiving only military assistance carried Battle Act items, section 107 is not legally applicable.

Prior charter.—Certain voyages between bloc ports and Cuba were undertaken by aid recipient country ships in fulfillment of charter arrangements with the bloc entered into prior to the effective date of the appropriation act.

A factor, if not the determining factor, in deciding whether a country permitted a voyage is whether the country took any steps to prevent the voyage. Whether any particular preventive action is sufficient to excuse the country from responsibility under section 107 for the voyage, must be judged by the likelihood that such action will succeed. A country cannot be excused merely because it took token steps which could not reasonably be expected to prevent a voyage. Thus, the sole question in the prior charter cases is whether section 107 required the country to force termination of these contracts as the minimal preventive action sufficient to excuse the country from responsibility.

It is the opinion of counsel that section 107 does not require an aid recipient to force shipowners to terminate prior contracts in order to demonstrate that the country did not "permit" the voyage.

Charter parties are binding contractual obligations. There is little likelihood that shipowners would be relieved of liability to shippers, under force majeure for breach of these charters had they been forced by the aid recipient governments to do so. Such action by recipient governments, therefore, could in most cases have exposed shipowners to substantial liabilities, in some instances running into millions of dollars. In view of this fact, section 107 must be interpreted in accordance with the basic principle of fairness which runs throughout U.S. law, that people should not be penalized for entering into contracts which fail to meet a legal standard if the contract is made before the legal standard is promulgated. Nothing in section 107—such as provision for indemnification of shipowners—indicates that Congress intended to depart from this basic principle, and require aid recipient governments to take actions exposing their shipowners to substantial liabilities. No such intent, of course, can be attributed to general statements of the congressional desire to terminate aid recipient country shipping to Cuba.

At sea.—Under both paragraphs (a) and (b) of section 107 a violation occurs only if the aid recipient country involved permits its ships to carry cargoes to Cuba. An aid recipient country can be held to have permitted a voyage only if it was in a position to do something about preventing the voyage at the time the appropriation act imposed such a responsibility upon it and it failed to take such preventive action. However, if, at that time, the only preventive measure available to the country was to force return of a ship already at sea, the legal opinion is that the aid recipient country could not be held to have permitted the voyage by its failure to take such action. It would be unreasonable to construe the appropriation act as imposing upon aid recipient countries the burden of forcing return of ships on the high seas.

Under investigation.—Certain voyages are still being investigated for either charter or cargo information or both. Since it is presumed for the reasons indicated in the third paragraph on page 5 that some part of each cargo moving to Cuba from a bloc country includes items of economic assistance, no further cargo information is being sought in the case of vessels of countries which are subject to section 107(b). In these cases section 107(b) is applicable unless excluded on other grounds, chiefly the existence of a prior contract. However, it is the view of counsel that no action would be proper under section 107 until the necessary contract information is developed. A substantial number of voyages to Cuba by aid recipient country ships were in fulfillment of charters made before the effective date of the appropriation act. The contract date is important in determining whether the aid recipient government permitted the voyages. The governments involved have exhibited a generally cooperative attitude on this issue. These considerations make it most inappropriate and certainly not legally

necessary to conclude that these cases involved violations of section 107 before the necessary charter information is obtained.

In the case of countries receiving only military assistance, further investigation to determine whether any title I Battle Act items were carried is indicated in some cases although there is now no evidence that any such items were, in fact, carried on these voyages. As a legal matter, therefore, the question is whether because these ships all sailed from Communist bloc ports they must be presumed to have carried title I Battle Act items. It is the view of counsel that no such presumption is proper and that only at such time as there is concrete evidence that Battle Act items were carried are these voyages of any concern under section 107. Neither the statute on its face nor the legislative history thereof nor the facts of the case require such a presumption.

Greek ships which are under charter signed after appropriation act, but prior to Greek decree.—Three Greek ships sailed from bloc ports to Cuba under contracts entered into after the effective date of the appropriation act and before issuance of the royal Greek decree, described below. It is the view of counsel that while these vessels must be considered to have carried items of economic assistance the evidence is insufficient to hold that the Greek Government permitted the voyages.

In addition to aid for specific projects, training and other forms of technical assistance, bloc countries are extending substantial trade credits to Cuba. These credits are believed to be on sufficiently concessional terms to constitute economic assistance. Since it is not possible to identify particular cargoes with these bloc credits, all or some part of every cargo from the bloc not otherwise excluded must be attributed to this assistance effort. Under this reasoning, the three Greek ships in question carried items of economic assistance to Cuba.

The Greek Government at the time of these voyages had a general policy against its ships sailing to Cuba. This policy was evidenced by the Greek Government's generally cooperative attitude subsequently verified by its issuance of the royal decree barring Greek ships from trade with Cuba. There is now no evidence that the Greek Government knew of the voyages and of the fact they carried proscribed cargoes. Indeed for the Greek Government to possess such knowledge would mean that the Greek Government, at the time of the voyages, had reached the same conclusions as this Government regarding the nature of the bloc-Cuba aid relationships. This is most unlikely since the conclusions of this Government were based upon its own intelligence information. Accordingly, in the absence of any evidence that the Greek Government specifically acquiesced in these voyages with knowledge that they carried proscribed cargoes (i.e., permitted the voyages), the United States Government must conclude that the Greek Government is following its stated policy.

In addition to these facts, it can be concluded that a government does not permit voyages to Cuba if upon request of the U.S. Government it takes reasonable action to prevent such voyages. Such is the case with Greece. Within 6 months of the effective date of the appropriation act it issued a comprehensive decree which covers all Greek shipping which might be subject to section 107. The 6-month lapse is certainly a reasonable period for such action. Thus, it can be concluded legally that Greece should not be treated as having violated section 107 in respect of these voyages.

Mr. RHODES. The comments are these: The administration, in this report, discusses the various categories of ships which had gone into Cuba and offers an explanation of why each category was not deemed to be in violation of the prohibitions of sections 107 (a) and (b).

I have very little comment to make on each voyage. I have no reason to believe that the voyages were not carried out exactly as it is represented that they were. I do have some argument, however, about the application of the law under which the various assumptions are made. Also, I have some argument as to whether or not the administration could not have included under each category of excuse the number of ships of each nation which were involved. They have not seen fit to do that and it is my hope that they will in the future liberalize their rules of classification to allow at least the numbers of ships under each category to be included in the record.

In the construction of the law, the Battle Act is referred to quite freely, and I see no reason to believe that it should not be referred to

rather freely because much of the language of sections 107(a) and 107(b) is taken from the Battle Act. I am also informed from the Department that the enforcement of section 107(a) is under the same section of the Department of State which enforces the Battle Act. Therefore, the use of the Battle Act as an analogy I think is well taken. However, in the interpretation of the law I have exception to the manner in which the administration has interpreted the word "petroleum" and the context in which it is used. For instance, in the act the language is as follows:

> No assistance shall be furnished to any country which sells, furnishes, or permits any ships under its registry to carry to Cuba so long as it is governed by the Castro regime, under the Forign Assistance Act of 1961, as amended, any arms, ammunition, implements of war, atomic energy materials, or any articles, materials, or supplies such as petroleum, transportation materials of strategic value, and items of primary strategic significance used in the production of arms, ammunition, and implements of war contained on the list maintained by the Administrator pursuant to title I of the Mutual Defense Assistance Control Act of 1951, as amended.

Now, the administration has interpreted the prohibition against petroleum being transported into Cuba in this manner, and I quote:

> Moreover, the reference to petroleum is not to petroleum, per se, but to petroleum which is an article used in the production of arms, ammunition, and implements of war, and which is contained in the Battle Act, title I list. Crude oil is not such an item.

I think this puts a very strained interpretation on the law. It really says that you have to prove that petroleum is to be used in the production of arms, ammunition, and implements of war, or it is not prohibited. In other words, if certain crude oil is to be refined for gasoline, then in order to keep that crude oil out you would have to prove that the gasoline was going to be used to manufacture arms or ammunition or as an implement of war. Obviously, this cannot be done.

I am satisfied that when the Congress passed section 107(a) it referred to all petroleum, whether the petroleum be crude or refined, and without regard to its use. There is no doubt but what the refineries of Cuba are now being operated on oil which is being brought into that country, much of it from countries which are in the free world or transported in bottoms which are supplied by countries which are in the free world. It seems to me, Mr. Chairman, that this is wrong.

I would strongly urge that the administration look again not only at the interpretation of the word "petroleum" as it appears in these acts, but also in the advisability of applying the Battle Act in its total force to Cuba.

Mr. PASSMAN. I want to say that I fully concur with the views expressed by the gentleman from Arizona. We hope that before we finish the hearings that we shall have additional comment from the executive branch dealing with the Battle Act and why it is not being applied with relation to Cuba.

STATE DEPARTMENT'S POSITION ON SECTIONS 107 (A) AND (B) OF APPROPRIATION ACT

Mr. COTTRELL. I might say in response to a question put to me by Mr. Ford the other day as to why the subcommittee print of foreign aid and related agencies appropriation bill 1964 suggested the elimination of sections 107 (a) and (b), I can reply to Mr. Ford that this

print was made up in December of last year and at that time we did not have experience in applying 107 (a) and (b). I can inform him that the State Department has found these two clauses quite useful in our bilateral discussions with certain countries who have been engaged in shipping to Cuba and that the Department has no objection to their inclusion in the 1964 bill. I might also say that since this print was made up I believe another amended print has been submitted and we will supply it to you if you wish.

APPLICATION OF SECTION 107 TO CUBAN CRUDE PETROLEUM IMPORTS

Mr. FORD. Would the administration oppose changes in section 107 (a) and (b) to tighten up the Battle Act to prevent what is transpiring now in reference to petroleum?

Mr. COTTRELL. I think this would be a matter of study. I understand Mr. Rhodes' point but the interpretation of this is a function of the administrator of the Battle Act of conferring with various authorities so I would not be in a position today to express an opinion.

Mr. RHODES. Would the gentleman yield?

Mr. FORD. Surely.

Mr. RHODES. Mr. Secretary, I do not want to take issue with you on something which is your own business, but I do not think Congress necessarily delegated this authority to administer sections 107(a) and (b) to the administrator of the Battle Act. It was to the President of the United States and if he in turn delegated it to the administrator of the Battle Act this is his business. However, the administration is responsible to the Congress for this, and since the administration of the Battle Act is under the State Department, I should think that the Secretary of State would be responsible under the President.

Mr. SCHEINMAN. That is correct, sir. I might point out, Mr. Rhodes, that you have to keep in mind that since we agree 107(a) states the provisions of the Battle Act and the application of the Battle Act provisions will govern the application of 107(a) that the term "petroleum" is part of a list of items described as of strategic importance to the manufacturer of arms and ammunition and it is through the exercise of the determination and analysis that it was felt that petroleum crude oil rather than other types of petroleum which you will find on the Battle Act list is of such a general kind of commodity that it was deemed not appropriate to include that on the list.

Mr. RHODES. May I address myself to that? Of course the point I was trying to make is a point which I am sure must go back to legislative history not only of section 107(a) but to the history of the Battle Act, too.

Mr. SCHEINMAN. That is correct.

Mr. RHODES. This is what I would like to have the administration do. It seems to me they should try to determine what the Congress meant when it passed both acts. The mere fact that the Battle Act may have been interpreted as it is now interpreted over a period of years to me doesn't change the original legislative intent. If the intent was as I think it was, then petroleum should be petroleum and not have a strained definition placed on it in the interpretation of these acts. I would like to have a review made of our whole posture.

Mr. SCHEINMAN. We do. The subject we are discussing relates to the application of the Battle Act.

Mr. RHODES. Yes. I was not the author of 107(a), but certainly I think all lawyers would have to agree that when Congress uses exactly the same language in a statute which had been used in a previous statute that the two just have to be somewhat related.

Mr. SCHEINMAN. Thank you, sir.

Mr. COTTRELL. Your concern is not mitigated by the fact that petroleum is freely available from Soviet bloc sources?

Mr. RHODES. No. Soviet bloc sources may be somewhat strained in bringing in petroleum—their sources not only of oil but of tankers. It seems to me that very definitely we should require that if Cuba is to have oil, that she get it from Soviet bloc sources.

Mr. SCHEINMAN. One other matter, sir. I want to say again that any other information that any members of the committee would wish, including your reference to quantifying the shipping, we would be happy to take under consideration and do our best to supply it on an unclassified basis.

I would like, however, to check my recollection. I do believe that Cuba was placed on the list of countries in connection with the Battle Act itself. You made some passing reference to the fact that Cuba was not listed as a country.

I believe the administration did place Cuba on the list of countries with respect to the application of the Battle Act.

Mr. RHODES. I will swear you and Mr. Miller told me it had not, Mr. Scheinman, so I would suggest that you check both of our memories and see which is correct.

Mr. SCHEINMAN. Yes.

PURPOSE OF ROCAP

Mr. PASSMAN. On yesterday we were able to develop that the purpose of the regional programs was, for one major objective, to reduce personnel and also to make for a more manageable program. But we found that instead of creating an organization capable of administering this vast program more effectively on a regional basis, rather than a country basis, there had been an increase in the personnel, overall, and that instead of really being an organizational proposition it was one involving many millions of dollars of supplemental aid to the programs in the countries, in that you are requesting $———— for the regional setup, which was organized only last year.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Is it the purpose of organizing a regional setup so that they may assume the responsibilities presently discharged by the mission groups in the several countries?

Mr. MOSCOSO. The purpose of the regional office is twofold. One is to work with Central American regional organizations to accelerate the economic integration of this region, which is comprised of six small countries which by themselves will not be able to achieve viable economies. What they have not been able to achieve separately they hope

to achieve as one single economic unit. This has been attempted before and it has failed in the course of the last hundred or so years. They are now approaching it in a different manner. They are trying to achieve economic integration first before they touch the political part. They are creating the necessary institutions. They are planning those which will be required a little later. For instance, they have already achieved the creation of a financial clearinghouse. They are now studying the possibility of a unification of currencies.

They have created a supreme court, which is only advisory but which they hope eventually may become the supreme court of the Central American area. They have created a Secretariat for Economic Integration. They have created a joint planning commission. They have created a development bank, the Central American Bank for Economic Integration (CABEI), for the purposes of accelerating the integration movement and they have also created an organization of Central American university rectors in order to try to achieve a degree of regional specialization in their higher education efforts.

REGIONAL PROGRAMS PLUS COUNTRY PROGRAMS

Mr. PASSMAN. This plan is supplementing the country programs in this limited region?

Mr. MOSCOSO. You could call it that, Mr. Chairman. But it is really——

Mr. PASSMAN. In the Central American countries you have AID missions, do you not?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Presently carrying out AID programs?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. You are not canceling out any of these AID programs, are you?

Mr. MOSCOSO. No, not at the moment.

Mr. PASSMAN. You are not discharging any of the AID missions in those countries?

Mr. MOSCOSO. Not now, but with the achievement of various steps of integration——

Mr. PASSMAN. Nevertheless, you are starting a very expensive program which is a supplement to the present programs in the countries under the AID missions; is that correct?

Mr. MOSCOSO. To accelerate the integration——

Mr. PASSMAN. Please tell us.

Mr. MOSCOSO. That is the purpose.

Mr. PASSMAN. You are putting in more money from the regional plan than you would normally spend from a country-level allocation?

Mr. MOSCOSO. This is to do the kind of things which would be extremely difficult to do from a country basis.

Mr. PASSMAN. We have had an aid program going for 17 years. But here, you come in with a brand new scheme. There was a very small item requested last year. It was under a different name. You changed the name and allocated more money than you had justified for a differently designated item. This year you are asking for about five or six times the amount you asked for last year under a different name. Will the country programs as we know them in the books continue?

Mr. Moscoso. They will be changed and reduced as economic integration gains momentum. At the moment we are not.

Mr. PASSMAN. Let us talk about the present. You are continuing the present programs on an expanded basis in Latin America?

Mr. Moscoso. The country programs plus the regional integration programs.

Mr. PASSMAN. The country programs themselves are up over last year?

Mr. Moscoso. Some of them are up, yes.

Mr. PASSMAN. So this regional sum is in addition to what is in the country programs?

Mr. Moscoso. That is right.

Mr. PASSMAN. It appears to be just another way of getting money, increasing the overall amount, creating a new spigot that makes it more difficult for the committee and the Congress to understand the operations.

Mr. Moscoso. No. We are creating——

Mr. PASSMAN. You stated yesterday the purpose was to save money.

Mr. Moscoso. We are creating a recipient, not a new spigot.

Mr. PASSMAN. That is exactly what you are doing. You are fair enough to say it.

Mr. Moscoso. That is right; in order to close the other six spigots.

Mr. PASSMAN. You are increasing every program in every country in this area. Then, in addition to that fact you have two regional funds.

You have the Latin America-wide regional fund that you get money out of to add to the country programs, do you not?

Mr. Moscoso. That is right, sir.

Mr. PASSMAN. In this area you also have a special regional program into which you dip again and get money to supplement the regular programs?

Mr. Moscoso. Hopefully, inside of the time that these countries have agreed that they will integrate the economies we will have an economy of close to 12 million people.

Mr. PASSMAN. You have a country-by-country program. Now you come along and you create regional programs from which you supplement what they would get out of the regular allocation to the country.

Now you come along for a certain area and create another regional plan, which means these countries are getting the regular allocation out of AID, they are drawing out of the area-wide regional program, and also this special regional program.

Mr. Moscoso. We are hoping quite a number of the projects——

REGIONAL DEVELOPMENT PLANNING PROJECT—ROCAP

Mr. PASSMAN. Under the regional development planning project, on page 129, do you propose to hire Latin American personnel rather than U.S. personnel to develop these regional economic development plan?

Mr. Moscoso. Yes, sir; we do, but we will also permit the hiring of U.S. specialists.

Mr. PASSMAN. Are you finally going to get this thing completely out from under the supervision of Americans?

Mr. Moscoso. Not necessarily.

Mr. PASSMAN. I can see the trend. This Social Progress Trust Fund is one. To what extent are you going to turn this over to the——

Mr. Moscoso. I hope the Latin Americans will continue to develop their countries, to participate in the process.

Mr. PASSMAN. When we spend American dollars, I prefer to keep the supervision of this spending under American personnel.

IMPROVEMENT OF STATISTICS AND CENSUS PROJECT—ROCAP

Last year, when you were initiating the census project, described on page 130 of this year's project book, it appeared that the project was to process, analyze, and to publish data already collected and to be collected in the near future.

However, the project description this year appears to include funds to finance approximately 50 percent of the cost of the census programs to be undertaken. We cannot reconcile what you said last year and what you say in this year's book.

Mr. Moscoso. We explained this project last year. We mentioned cost of training participants and contract service consisting of reimbursement of the Bureau of the Census for technical services.

Mr. PASSMAN. You said last year this project was to deal with data already collected.

Mr. Moscoso. On what page of last year's book?

Mr. PASSMAN. Page 469.

This year it says the project is proposed to assist the countries in the completion of basic census population, housing, agriculture.

We wish you would check the two statements.

(Information subsequently supplied follows:)

The census project (596–H–78–AA), which appeared on page 469 of the 1963 Congressional Presentation, concerned the processing, analysis, and publication of data already collected and "to be collected."

In project 596–AA–78–AD–5, "Improvement of Statistics and Census," of the fiscal year 1964 presentation, greater emphasis is placed upon assistance to the Central American countries in the taking of regular censuses of population, housing, agriculture, and industry.

IMPROVEMENT OF ADMINISTRATIVE PRACTICES PROJECT—ROCAP

Mr. PASSMAN. On page 131, in connection with the administrative practice project, it is stated that a portion of the contract service estimate of $600,000 will be used to assist in establishing a regional Institution of Administrative Sciences. What is the estimated cost of this proposed institute and how do you propose to finance it?

Mr. Moscoso. Until termination, sir?

Mr. PASSMAN. Yes.

Mr. Moscoso. It is estimated at $1,690,000.

This is the whole project, sir.

Mr. PASSMAN. Let us see if we cannot break it out and know what you are going to do.

Mr. Moscoso. A regional institution for public administration training and tax administration, building onto some existing organizations and institutions.

Mr. PASSMAN. You are going to create an institute; is that correct?

Mr. Moscoso. We do not have the total figure of setting up this regional institute to completion.

Mr. STERNFELD. Sir, there is a survey going on at the moment to determine the total cost of establishing this regional Institute of Administrative Sciences. It is estimated that $400,000 of that $600,000 contract services would be required for the first year cost in working with this Institute of Administrative Sciences.

Mr. PASSMAN. For what purposes will the $960,000 be used?

Mr. STERNFELD. The $960,000 includes expenses connected with participants, for training purposes, technicians, as the book says, "4 U.S. advisers in public administration, including training, customs, and tax fields, and 25 participants." There are some commodities contained here for the school that would be set up. I know from personal knowledge that the survey is still going on in Costa Rica and Guatemala.

Mr. PASSMAN. What is the total amount you will need to supplement the previous allocation?

Mr. STERNFELD. The total cost of this project to completion is currently estimated at $1,690,000.

Mr. PASSMAN. Do you actually believe we can successfully develop and administer the thousands of projects you have planned in this aid program? I thought we agreed last year that it would be much better to have a few projects, and plan and execute them well.

CADASTRAL SURVEY PROJECT

What was the unliquidated balance as of June 30 for the cadastral survey project, on page 132?

Mr. MOSCOSO. $400,000.

Mr. PASSMAN. That is the estimate?

Mr. MOSCOSO. Yes; we do not have the actual.

Mr. STERNFELD. Our best figures are the estimates——

Mr. PASSMAN. Heretofore you have usually been able to give us the figures on these items.

Mr. STERNFELD. $400,000.

Mr. TENNANT. These figures in the book, sir, are the estimates we made as of the time we put the books together.

Mr. PASSMAN. Can you not now start giving us actual figures? Today is August 8.

Mr. TENNANT. Reports come in from the field approximately a month after the end of the year. I am not sure whether this mission's reports are in or not.

Mr. PASSMAN. Can you project the cost to completion, then, and give us that figure?

Mr. MOSCOSO. $2,721,000.

Mr. RHODES. Is that our part?

Mr. MOSCOSO. Yes, sir.

FUND RESERVATIONS FOR LOANS APPROVED BUT NOT SIGNED

Mr. PASSMAN. We made an observation yesterday that you had unobligated funds of $515 million. You have much more money unobligated but technically it is obligated. I asked the specific question: Did you include these figures in the unobligated amount?

We want a list of those questionable technically unobligated amounts which are carried as obligations.

Mr. TENNANT. I do have the total of them, sir.

Mr. PASSMAN. You have two unobligated funds, one for $515 million, and another that is technically unobligated but, figuratively speaking, it is obligated. Do you have those items?

Mr. TENNANT. The total of loan agreements——

Mr. PASSMAN. That questionable zone.

Mr. TENNANT (continuing). That have been approved but not signed, $688,825,000.

Mr. PASSMAN. Does that figure include the $515 million?

Mr. TENNANT. No; it is in addition to that.

Mr. PASSMAN. These are obligations you are carrying which under normal conditions would be unobligated funds, but you carry them as obligated, although you are yet to have a contract signed; is that correct?

Mr. TENNANT. I think our problem reverts to the term "obligation." These are reservations.

Mr. PASSMAN. In military aid you have the reservation category.

Mr. TENNANT. We have had this before.

Mr. PASSMAN. How much is this amount?

Mr. TENNANT. $688,825,000.

Mr. PASSMAN. Unobligated but technically obligated, waiting for the contracts to be approved and signed?

Mr. TENNANT. Waiting for agreements to be signed.

Mr. PASSMAN. You do not even have an agreement.

Mr. MOSCOSO. This is worldwide.

Mr. PASSMAN. That gives you over a billion dollars of unobligated funds.

(NOTE.—See previous testimony beginning on p. 2291.)

AID TO INDIVIDUAL COUNTRIES FROM REGIONAL FUNDS

In previous questions about the unliquidated balances to the credit of these countries, in giving us the specific amount did you include this part of Latin America where you have two regional funds?

Let us say you have "Randolphville," with $150 million unliquidated to its credit. Did you include that amount in the two regionals accounts?

Mr. TENNANT. No, sir. ROCAP and the regional account are indicated individually and not as part of any country.

Mr. PASSMAN. To actually ascertain the amount of funds that ultimately would be disbursed in the country, you would have to go back and pick up the amount that they would have in, we shall say, if it is Guatemala, the amount they would have in the entire Latin American region. You would add that sum. Then you would have to pick up what you have in ROCAP and add that amount to get the total.

Mr. TENNANT. Technically that is correct; however, the total figures for all countries we have provided included these two items.

Mr. PASSMAN. I am asking about Guatemala, for example.

Mr. TENNANT. Your statement is correct for the individual country.

Mr. PASSMAN. You have to add the two. Would you also have to add the interregional sum?

Mr. TENNANT. The interregional?

Mr. PASSMAN. Yes.

Mr. TENNANT. Yes.

Mr. PASSMAN. I always thought we were accomplishing something when we pointed out the amount of funds you had unliquidated to the credit of these countries, and here are three accounts we left out.

How much trouble would it be to break out of these three different regionals—interregional, Latin American region, Central American region, or ROCAP—and show what they would get? Could it be done?

Mr. TENNANT. It would be very impractical, sir.

I think the illustration I would give is the people who are running the Central American regional office, or ROCAP, service six countries. It would be difficult to say how much time they devote to any one country.

Mr. PASSMAN. I am not talking about the time. I am talking about the money.

Mr. TENNANT. The money is used to pay their salaries. You would have to prorate that.

Mr. PASSMAN. You are talking about $————. You only have 20 people in this ROCAP.

Mr. TENNANT. That is one illustration. Another illustration is when money is loaned to the Bank, I gather the Bank is——

Mr. STERNFELD. We can break the Bank out.

Mr. TENNANT. It is distributing money across the board to these countries.

INABILITY TO DETERMINE TOTAL FUNDS PROGRAMED FOR ANY ONE COUNTRY

Mr. PASSMAN. If a Member walks up to me on the floor and says, "Passman, tell us how much is in this bill for Guatemala," it is impossible for me to tell him, is it not? I cannot tell him what is in this bill for Guatemala because all I can do is say that according to these pages, under the country they get this much. But it is impossible for me to tell him what is in this bill for Guatemala until I know how much they are going to get out of the interregional account, the Latin American region and the Central American region, plus the social progress trust fund; is that correct?

Mr. TENNANT. The social progress fund is in the figures we gave you yesterday.

Mr. PASSMAN. How about the other three?

Mr. TENNANT. The other three——

Mr. PASSMAN. Are not included. I could not actually give a Member an intelligent and accurate answer until I know how much the country is going to get from the other three funds; is that correct?

Mr. TENNANT. I think that is correct.

It is true in any operation where you have across-the-board expenses; if you prorate them, you have to use some optional approach.

Mr. PASSMAN. We are talking about $———— for these Central American countries. You cannot tell us that when you are dealing with 20 personnel there that you are going to pay them $————. These people are allocating these funds to projects in those areas.

Mr. TENNANT. Some of these projects cannot be broken country by country.

Mr. PASSMAN. Some of them can.

Mr. TENNANT. Yes.

Mr. PASSMAN. Nevertheless, as it stands now, we could not tell the full committee or the House, in response to a direct question, how much money you have in this bill for any one country on the face of the earth, even under your illustrative justifications. We would not be able to tell them the total country sum without knowing what they were going to get out of the various special accounts.

You have a program for which even the Controller could not tell you how much is in the bill for any one country. It is impossible to do so, because you do not know how much each country will get out of the region. That fact is undetermined at this point, is it not?

Mr. MOSCOSO. For the grant funds, I think——

Mr. PASSMAN. Why single out one category? Let us think of it as aid, leaving out the Export-Import Bank.

We are not going to request this information this year. It would be too much trouble to ask you this year to break it out. But we are going to request it next year. That will give you a year to work on it, so you can tell us that this is the amount of money in the interregion that will go to countries X, Y, Z; this amount of money out of the Latin American region will go to certain countries in Latin America; this is the amount in ROCAP, in the other regional account in Latin America.

Mr. MOSCOSO. It will be a very difficult job.

Mr. PASSMAN. We are going to try to find out how much is in this bill for these countries.

Mr. MOSCOSO. Suppose we eliminated ROCAP. You still have the same problem.

TOTAL UNEXPENDED BALANCES, FOREIGN AID PROGRAM

Mr. PASSMAN. We have three forms of aid accounts now. You are getting a new recap sheet. Recent history shows an alltime high of unliquidated funds at more than $7 billion. Has this figure gone up?

Mr. TENNANT. It is in the magnitude of $7 billion. The Treasury has just released some yearend figures. We are reconciling those.

Mr. PASSMAN. Do you have an idea as to the total amount at this time?

Mr. TENNANT. I would say in the magnitude of $7 billion. I think the figure I gave you the other day was just over $7 billion.

Mr. PASSMAN. About $7.2 or $7.3 billion. Will it go up much more than that total?

Mr. TENNANT. It will come down a little. The preliminary figure was taken from cable information.

Mr. PASSMAN. You have three categories in that unliquidated amount. You have the actual unobligated balance; you have another $600 million that is technically unobligated but, figuratively speaking, it is obligated, and you carry it as a reservation, and you have the amount that is firmly obligated; is that correct?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. I am getting up a recap sheet, showing the amount in each category.

Mr. TENNANT. You said "unliquidated." You meant "unexpended."

Mr. PASSMAN. Yes, unexpended. You say "unliquidated." I pick that stuff up using your terminology, not mine. Is that not your terminology, "unliquidated?"

Mr. TENNANT. When we are talking about an individual project, we use the term "unliquidated." It represents the obligations not yet paid off. On the total program we generally use the term "unexpended" which includes unliquidated plus unobligated.

Mr. PASSMAN. If you have $7,400 million on hand unexpended and/or unliquidated and/or pulled out of the Treasury, that is in three categories.

You have the purely unobligated part, which is $515 million, including the revolving fund. You have account No. 2, which is technically unobligated, but figuratively it is obligated because it is in a reservation category awaiting approval and signing of the contract; is that right?

Mr. TENNANT. I believe so.

Mr. PASSMAN. That is more than $600 million?

Mr. TENNANT. $688 million.

Mr. PASSMAN. You take away from the $7.2 billion the $688 million that is technically unobligated and the $515 million that is actually unobligated, and then that would leave you whatever figure it is of firm obligations at this time. They are firm now but subject to subsequent deobligations?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. Thank you.

RESERVATION OF FUNDS FOR LOANS AND REGULAR OBLIGATIONS

Mr. TENNANT. I wanted to say a word. When you left for the floor, we were in the middle of this discussion and I used some terms that probably confused the issue.

Ever since the Development Loan program was started back in the old Development Loan Corporation days, the figures provided the committee—and which we have been providing ever since—have included loan approvals. The executive branch has used the terms "obligations" and "commitments" more or less interchangeably. The figures have generally included in commitments the loan approvals that have been authorized but not yet executed as loan agreements.

Have always included, I guess I should say, loan transactions that have been approved and authorized by the Administrator and which have been committed to the country but the details of the loan agreement have not been negotiated.

Mr. PASSMAN. And a contract has not even been signed?

Mr. TENNANT. Loan agreement not signed.

Whether we use the term "reservation" or "commitment" is not too material, but I guess the columns have been headed "Commitments and obligations," and the other column has been headed "Unobligated and unreserved."

Mr. PASSMAN. On this caption I do not see where you have "Unreserved."

Mr. TENNANT. In the overall tables we provided last week.

Mr. PASSMAN. We run into projects that you have had obligated for years but for which you have not yet signed the contracts; is that right?

Mr. TENNANT. You run into some.

Mr. PASSMAN. These items have been carried in an obligated status for years, yet the contracts are still unsigned.

In this gray area of $688 million, will you indicate the year and date that you charged it to the appropriation, speaking of the technically unobligated money that is figuratively obligated?

Mr. TENNANT. We will give you date and year the various commitments were made to the countries.

Mr. PASSMAN. We want the date you marked it up on your books.

Mr. TENNANT. That is the date it is marked up.

Mr. FORD. Is this like that case yesterday of the Bank where you had signed an agreement but you were still in the process of negotiation and you had obligated, reserved, whichever term you wish to use, $20 million? Is that the kind of case the chairman is speaking of?

Mr. MOSCOSO. No signing yet. The way the Chairman is discussing this with the Controller, as I understand it, is after a loan application has gone through the process of analysis, and so forth, and is finally approved and authorized by the Administrator, between that time and the time that the loan documents are finally signed, the Controller says these funds are to be reserved. That is right. You cannot touch them for all intents and purposes, you had made a commitment to make these funds available. You presume since these people made application in good faith, they are going to sign a contract with you.

Mr. PASSMAN. You have funds that you have been carrying for years, obligated; whereas, in reality it is not an obligation. We are looking at one here, for example, that goes back to July 1962. We are appropriating funds for 1964. You have no contract signed yet, and this is 2 years old.

It would appear to me that you should not be carrying funds in an obligated status for 2, 3, 4 years, setting the money up that far in advance of getting the contract signed. It would be better, it seems to me, to deobligate the funds and say, "this matter did not go through but we are going to negotiate another loan, there is something wrong."

Here is another one, which I turn to offhand. You approved this one July 31, 1962. That is 13 months ago. You have not gotten the contract signed yet. This one item of $12,500,000.

Anyway, you are going to give us a list covering these data?

Mr. TENNANT. Yes, sir.

(NOTE.—See p. 2293).

HIGHER EDUCATION PROJECT—ROCAP

Mr. PASSMAN. How do you propose to spend the $1,650,000 for contract services, on page 136?

Mr. MOSCOSO. For the establishment, with the cooperation of the Council of Central American Universities, of regional centers in the field of economic development and public service improvement. We are going to give assistance to the universities in terms of fellowships and getting them faculty, research grants, teaching materials, books. We are also setting aside some funds for the assistance to outstanding students who plan to follow careers in economic development and public service through programs of scholarships and internships and research grants.

Mr. PASSMAN. What amount did you request for this program for fiscal 1963?

Mr. MOSCOSO. $435,000.

Mr. PASSMAN. You asked for $435,000 last year?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. But you obligated $1,533,000?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Which is over 300 percent more than you justified. You spent only $333,000, which was actually $102,000 less than the amount you justified.

If you had not increased the obligations you would have had an unliquidated balance of $102,000, but you obligated $1,533,000.

Mr. STERNFELD. This involves universities, and the universities require a 2-year contract.

Mr. PASSMAN. Did you know that fact last year when you told us you wanted only $435,000 for this project?

Mr. STERNFELD. We did not expect——

Mr. PASSMAN. Why did you ask for anything until you knew what you needed? We are running into this kind of situation every hour of the day. Here you asked for $435,000, Congress appropriated it, and you spent $333,000. Had you lived up to what you justified, you would still have had $102,000 unliquidated; but, rather, you obligated $1,533,000 and you have $1,200,000 unliquidated.

In addition to that money you are asking for $2,712,000 for fiscal 1964.

Project the cost of this project to conclusion.

Mr. STERNFELD. In the way of grants——

Mr. PASSMAN. Give us the total.

Mr. STERNFELD. $4 million. We do not expect to go beyond these major amounts of funds, beyond fiscal year 1964.

From 1964 through 1968 we expect to be dealing with only technician costs. If there are any other funds involved in higher education in Central America, which we have not done on a grant basis, it would be on a loan basis.

Mr. PASSMAN. What kind of loan? Is it one of those disguised grant things, 40 years, 10-year grace period?

Mr. STERNFELD. It would probably be a 40-year loan; yes, sir.

Mr. PASSMAN. Give us the total cost.

Mr. STERNFELD. We do not have an estimate.

Mr. PASSMAN. What if you finish the project in the manner that you started it? You asked for $435,000, but you allocated $1,533,000. Then you are asking for an additional $2,712,000. You have missed your estimate here by 300 percent. If you miss the total cost by the same figure, you are running into a very expensive project, are you not? Would this $4 million be in addition to the $4 million you are asking?

Mr. STERNFELD. Yes, sir; $4 million is in addition to the $4 million we are asking here.

Mr. PASSMAN. That brings the cost up to $8 million?

Mr. STERNFELD. $8 million.

Mr. PASSMAN. You see how easy it is to "poop off" $4 million?

Mr. STERNFELD. Yes.

Mr. PASSMAN. Thank you.

Here is a $435,000 new project that jumped to $8 million.

You justified only $435,000. You did not justify $1,533,000, did you?

Mr. STERNFELD. No, sir.

Mr. PASSMAN. Thank you.

INABILITY TO DETERMINE TOTAL FUNDS PROGRAMED FOR ANY ONE COUNTRY

We are dealing in this program with a situation that I did not fully know about until today. There is not a member of the committee, or House, or those at the witness table who can tell you how much you have in this program for any country.

In Central America you have the country program and they allocate funds to each project in the various countries. Then these countries are eligible to draw money out of the interregional account. They are eligible to draw more money out of the Latin American regional account. Certain of the countries are eligible to draw money out of the ROCAP regional account. So as to be able to know what aid goes into a country, you would have to be able to analyze and state the amounts a given country could get out of these three regional accounts.

If you can, gentlemen, please try in the future in your justifications to indicate about what the countries will get out of the regional accounts. If you cannot do it by project, then we hope you can do it by an estimate of what the countries will get out of the three regional accounts.

CADASTRAL SURVEY PROJECT

Mr. RHODES. I want to mention the project on page 132, the cadastral survey. I want to just make the remark that I think it is wonderful to have all the land in Central America surveyed. All of Arizona has not been surveyed yet. In fact, all of Nevada has not been surveyed nor all of New Mexico, or Utah. Alaska is only about 20 or 25 percent surveyed. So after you get through down there, perhaps you will have some people well enough trained so we can use them to complete the job of cadastral survey in the United States.

COSTA RICA

Mr. PASSMAN. You are requesting for Costa Rica in fiscal year 1964 how much, from all spigots?

Mr. MOSCOSO. $2 million. We have development lending contemplated.

Mr. PASSMAN. How much is that amount?

Mr. MOSCOSO. We do not know how much it will be.

Mr. PASSMAN. In all the examination we have had, the figures you have given us do not include development credits?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Thank you.

Mr. MOSCOSO. Wherever we have an estimate, we have given it to you.

Mr. PASSMAN. What is the estimate of the DLF for Costa Rica?

Mr. MOSCOSO. We do not have it. Wherever it is available, we have given it to you.

Mr. PASSMAN. There is a lot on the outside that you may fund that is not in here?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Yet there are no justifications.

Mr. MOSCOSO. It is included in the programed loans which are listed on page 11.

Mr. PASSMAN. You have no specific country programs yet, but there may be some; is that right?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. What has been the amount of money to Costa Rica since the inception of the program?

Mr. MOSCOSO. $104.8 million. This includes the Eximbank.

Mr. PASSMAN. How much for the Export-Import Bank?

Mr. MOSCOSO. $25.5 million.

Mr. PASSMAN. What has been the net amount of aid?

Mr. MOSCOSO. $79.3 million.

Mr. PASSMAN. In the estimate for Costa Rica for fiscal year 1964 of $2 million, that figure does not include what they could, or may, get out of ROCAP, this regional account?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. It does not include, either, what they may get out of the inter-American region, does it?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Also, it does not include what they could get out of the interregional account; is that correct?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. It does not include what they may get out of the Development Loan Fund?

Mr. MOSCOSO. Or the Eximbank.

This is our estimate of the development grant program.

Mr. PASSMAN. You just answered they are eligible for substantial funds out of all the others. So what does this $2 million figure mean?

Mr. MOSCOSO. It is the development grant program for Costa Rica.

Mr. PASSMAN. This is strictly grant?

Mr. MOSCOSO. Right.

Mr. PASSMAN. This is the outright grant, and does not pick up the disguised grant part.

TAX STRUCTURE

Is this one of the countries that does not have an income tax?

Mr. MOSCOSO. They have an income tax.

Central Government revenues and autonomous agency incomes together total 18 percent of gross national product.

Mr. PASSMAN. Earlier in the hearings it was agreed that some of these Latin American countries would pass legislation forgiving taxpayers their unpaid taxes. Is that quite the practice in Latin America, or is it the exception?

Mr. MOSCOSO. I say that would be the exception.

Mr. PASSMAN. What is the highest income tax bracket for the individual?

Mr. MOSCOSO. I do not have that.

Mr. PASSMAN. When we were there, some years ago, I believe we were told that they had no income tax law at all in that country.

Mr. MOSCOSO. Costa Rica?

Mr. PASSMAN. Yes.

Mr. MOSCOSO. They have an income tax law. On November 14, 1962, they amended thet income tax law, so obviously they had an income tax law.

Mr. PASSMAN. Try to inform us as to Costa Rica's income tax laws, please.

(The information supplied follows:)

COSTA RICA'S INCOME TAX

An income tax was established in Costa Rica by law No. 837 of December 20, 1946, with subsequent amendments, the last being in November 1962. The highest bracket in the income tax law applies to income over 500,000 colones ($75,188 equivalent). This is taxed at a rate of 30 percent.

GOVERNMENT REVENUES

There is some question about how much they pay. In your books here we notice you do not give any information on the Central Government finances as to domestic revenues, and you had no estimate last year.

Mr. MOSCOSO. On the index page you will see that tax revenues and Government income in Costa Rica are already 18 percent of the GNP.

Mr. PASSMAN. I am talking about where you show their tax collections. You have it on most of the countries, but you do not have it on Costa Rica.

Mr. MOSCOSO. It is right here in the percentage.

Mr. PASSMAN. Look on page 64 of last year's books. Central Government finances, fiscal year, December 31, and the same information is lacking in fiscal year 1964.

Mr. MOSCOSO. The Agency did not put it in this year for the smaller countries with smaller programs.

Mr. PASSMAN. Does that indicate they no longer collect any taxes?

Mr. MOSCOSO. I do not think so.

Mr. PASSMAN. You do not give a bit of information at all there. You have no income tax information on this sheet; is that correct?

Mr. STERNFELD. That is correct.

FISCAL YEAR 1963 DEVELOPMENT LOANS

Mr. PASSMAN. Would you comment concerning your classified statement on the divider sheet which indicates that you made a commitment of $10 million in development credits in fiscal year 1963?

At the time of the commitment, how many loan applications did you have on hand?

We are in Costa Rica where you said they would get $2 million. Now we are going into a $10 million item. Have we actually made this commitment?

Mr. MOSCOSO. We have made it.

Mr. PASSMAN. Did you fund this out of 1963 funds?

Mr. MOSCOSO. Yes. Supervised agricultural credit, $5 million; slum clearance and housing, $2 million; Cachi hydroelectric project, $1.5 million, and participation with the World Bank in highway construction, $2.1 million.

Mr. PASSMAN. What is the population of that country?

Mr. MOSCOSO. 1.3 million.

FISCAL SITUATION

Mr. PASSMAN. They collected, you indicate, $5.6 million in income taxes in 1961.

Mr. STERNFELD. Not enough.

Mr. PASSMAN. Certainly it is not enough, and it will never be enough as long as we give them our taxpayers' money.

Mr. MINSHALL. What is the internal fiscal situation in Costa Rica?

You said the fiscal problem was of such magnitude that the United States found it necessary to give assurances and subsequently the $10 million in development loans.

Can you give us more detail on this?

Mr. MOSCOSO. During the electoral period——

Mr. MINSHALL. Why is it so bad?

Mr. MOSCOSO. Fiscal difficulties arose in the changeover between one administration and another. There was also a decline in economic activity. This is not much different from the problems facing us in some of the other countries in Latin America.

Mr. MINSHALL. I am talking about Costa Rica now. They are economically well off, are they not?

Mr. MOSCOSO. No. They depend on coffee, and the price of coffee has gone down considerably over the last 3 or 4 years.

Mr. MINSHALL. What have they done with the $100 million-plus we have given them through this aid program? Is that going down the drain, too?

Mr. MOSCOSO. No. Programs have been presented here and moneys have been used according to those programs. Highways have been built. Hydroelectric dams have been built.

Mr. MINSHALL. Is it lax bookkeeping and accounting and administration?

Mr. MOSCOSO. These countries are underdeveloped, and usually an underdeveloped country is not able to create the capabilities to administer their fiscal resources adequately.

One of the purposes of this program is to correct that situation by working with them and providing technical advice.

Mr. MINSHALL. What did they do with this $10 million?

Mr. MOSCOSO. The $10 million?

Mr. MINSHALL. Yes.

Mr. MOSCOSO. They are building the things I just mentioned.

Mr. MINSHALL. Give them again, will you please?

Mr. MOSCOSO. Supervised agricultural credit, Slum clearance, Cachi hydroelectric project and participation in a World Bank highway construction program.

Mr. MINSHALL. How will this remedy their internal sloppiness in management?

Mr. MOSCOSO. We have a grant program which includes funds for assisting them in bettering their public administration capabilities.

Mr. PASSMAN. They went all these years without any tax program.

Mr. MINSHALL. There is no need for them to have a tax program. They get the money from us.

Mr. PASSMAN. It looks as if they pay about $4.30 per capita income tax, and we pay about $555 per capita income tax.

We are giving those people a lot of money.

FISCAL YEAR 1963 PROGRAM LEVEL

What is the total amount that we obligated to Costa Rica last year, from all spigots?

Mr. MOSCOSO. $13 million.

Mr. PASSMAN. With reference to this $10 million credit last year, could this commitment be considered budgetary support?

Mr. MOSCOSO. Which commitment, the $10 million?

Mr. PASSMAN. Any part of it, or all of it.

Mr. MOSCOSO. We gave Costa Rica this series of development loans.

Mr. PASSMAN. It is budget support?

Mr. MOSCOSO. That is right, since in a way, quite a bit of aid does assist the budget.

Mr. PASSMAN. It all assists the budget?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. There is such a thing as direct budgetary support, and that is about what this is, is it not?

Mr. MOSCOSO. In this case we tied it to specific projects. The $5 million agricultural credit loan is going for subloans to farmers.

Mr. PASSMAN. Did you make the commitment first, then, later develop the projects?

Mr. MOSCOSO. No. These projects had been developed.

Mr. PASSMAN. How could you develop projects dealing strictly in round figures?

Mr. MOSCOSO. They had a number of projects.

Mr. PASSMAN. We agree that this is budgetary support?

Mr. MOSCOSO. That is partially correct.

Mr. PASSMAN. We agree they should increase their taxes?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. You agree they are intelligent people?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Yet the American taxpayer has to carry this kind of load.

How much money did we disburse to Costa Rica last year, or obligate?

Mr. TENNANT. $13 million.

Mr. PASSMAN. You have not suspended any part of it, have you?

Mr. TENNANT. No, sir.

Mr. PASSMAN. The program is going along?

Mr. MOSCOSO. That is right.

FISCAL YEAR 1964 PROPOSED PROGRAM

Mr. RHODES. On page 31 of their presentation, they say they will advise the Government of Costa Rica that no further budget support loans will be made to cover deficits.

Mr. MOSCOSO. That is right.

Mr. RHODES. It says "will." When are you going to do it?

Mr. MOSCOSO. We have already done this at the same time we arranged for this year's program.

Mr. RHODES. In your presentation, you do not have any loans for 1964. All you have is Alliance for Progress grants. Are you assuming the Government of Costa Rica is not going to do what you are asking?

Mr. MOSCOSO. We assume they will do what is necessary.

Mr. RHODES. You do not have any proposed programs for 1964?

Mr. MOSCOSO. If you will take a look at page 11, there is a footnote, development lending contemplated. Projects will be considered.

Mr. RHODES. You are not in a postion right now to advise us as to what the projects might be?

Mr. MOSCOSO. No, sir. If we were, we would put the figure in.

Mr. RHODES. Of what magnitude in dollars will they be?

Mr. MOSCOSO. I could not tell you, Mr. Rhodes.

SELF-HELP MEASURES BY COSTA RICA

Mr. STERNFELD. We are concerned about the fiscal situation in Costa Rica. We are getting together with the Inter-American Development Bank and the World Bank. We worked out a procedure whereby we will go together—the Inter-American Bank, the World Bank, and the U.S. Government—to indicate to the Government of Costa Rica our concern, and that it has to take a series of specific steps to improve its income. If not, they are going to find it difficult to get any assistance from the United States or the IDB or the World Bank because they will be unable to pay their share of the costs of new projects. An analysis of their fiscal situation shows that they have not taken, as the chairman pointed out, all the adequate steps on their revenue side.

The proof of the pudding will be in what they actually do.

At the particular time this book was published, we did not have any specific applications from this Government. We now know of a number of projects that they are interested in getting financing from the IDB, the World Bank, and ourselves, so we have told them they are going to have to take many actions on their own before their applications get acted upon.

FISCAL INFORMATION ON CENTRAL AMERICAN COUNTRIES

Mr. RHODES. You do not have anything in this book about the fiscal situation in Costa Rica. This is most unusual. I think the presentation for practically every other country has the amount of the budget, the amount of the domestic revenues, and the amount of the governmental deficit, if any, and there usually is. In the Costa Rica presentation, you do not have a thing.

Mr. MOSCOSO. The same thing happens in the case of El Salvador. This apparently was left out in the case of Guatamala also.

Mr. RHODES. Will you furnish those for the record?

Mr. STERNFELD. We will.

(The information supplied follows:)

Central Government finances: [1] *Costa Rica*

[Dollars in millions—6.65 colones=$1]

	1960	1961	1962 (estimated)
Total revenues, domestic [1]	72.0	71.3	82.1

Deficit or surplus, before foreign aid	−9.8	−22.8	−17.5

[1] Fiscal year ending June 30.

COMPARISON OF UNITED STATES AND COSTA RICAN LITERACY RATES

Mr. PASSMAN. What is the literacy rate in the United States?

Mr. MOSCOSO. About 90 percent.

Mr. PASSMAN. What is the literacy rate in Costa Rica?

Mr. MOSCOSO. 88 percent.

Mr. PASSMAN. It is about on a par with America?

Mr. MOSCOSO. Yes.

COSTA RICA'S GOLD AND FOREIGN EXCHANGE POSITION

Mr. ANDREWS. Mr. Ambassador, how do you account for the gold and foreign exchange holdings going up from $12 million in 1961 to an estimated $19 million in November 1962?

Mr. MOSCOSO. It has gone up to the level it was before, Mr. Andrews, but currently it has again dropped.

Mr. ANDREWS. Here is a country where you have a high rate of literacy?

Mr. Moscoso. These people have spent considerable amounts of money in educating their people. If they educate their people, it is bad; if they do not, it is bad. I think it is good they spend money on education.

Mr. Andrews. I am delighted to see a rate of 88 percent. I wish it were 100 percent.

Mr. Passman. They have educated them to survive without paying income taxes.

Mr. Andrews. I am concerned——

Mr. Moscoso. May I give you the latest figure?

The International Monetary Fund reports that in February of this year the gold and foreign exchange reserves of the Central Bank were $11.17 million.

Mr. Andrews. How do you account for it going down?

Mr. Moscoso. This is one of the difficulties we have been trying to help them with. They have not taken care of their fiscal matters adequately.

Mr. Andrews. I hate to think we are taxing our people to death in this country and helping these countries down there who do not make any effort to collect taxes from their people.

NEED FOR ASSISTANCE TO SUPPORT DEMOCRATIC GOVERNMENT

Mr. Ford. Supposing nothing was made available in aid to a country like Costa Rica? What, in your opinion, would be the impact?

Mr. Moscoso. I think as a result of our not assisting the country, the chances are that extremist elements in the population would try to bring down the Government.

Mr. Ford. Is there that element in Costa Rica?

Mr. Moscoso. There is. The Communist Party is active in Costa Rica in spite of the fact it is a good democracy.

Mr. Ford. Have they had a history of revolution and counterrevolution?

Mr. Moscoso. They have had a history of great stability. They do not even have an army. They have a small national police. With a situation that might occur if we did not help them, it might be relatively easy for subversive elements to get hold of the Government. It was tried at one time. Fortunately, they had a good democratic leader who took up arms and defended the country.

Mr. Ford. Do they have a truly representative government, free elections?

Mr. Moscoso. They do have. It is one of the best democracies in Latin America.

Mr. Passman. You have an aid program planned for 99 nations, I believe, for fiscal year 1964. What you said about Costa Rica would also apply to most of the other 98 nations around the world, would it not?

Mr. Moscoso. In the sense they are underdeveloped; yes.

Mr. Passman. It says here that Costa Rica is "one of the few traditional democracies of Latin America and has been relatively free from internal strife."

Mr. Moscoso. That is right.

Mr. PASSMAN. Now you tell us that if we did not give them the aid—$2 million plus $10 million, plus all the other spigots—there might be an internal uprising?

Mr. MOSCOSO. It might happen.

Mr. PASSMAN. What you are actually saying, it seems to me, is that we are getting ourselves so committed to practically every nation on the face of the earth, trying to shore up weak governments and to finance projects that they refuse to tax their people to finance, and the minute we might find it necessary to discontinue this aid, there would be an uprising within the country.

REASON FOR COSTA RICAN FISCAL DIFFICULTIES

Mr. MOSCOSO. May I explain that Costa Rica is suffering from a very simple fact. I understood you read the Commerce Advisory Committee report (COMAP). You will find there has been a very great drop in the price of the one product these people produce.

Mr. PASSMAN. That kind of thing has happened in my congressional district, with respect to the cotton crop, which is our major source of income.

What you are describing has been happening for a long time. They have their peaks and valleys in these nations, and that kind of situation has been going on for many years. Would you agree to that statement?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Did you not say that these people spent money educating themselves?

Mr. MOSCOSO. Yes.

RELATION OF EDUCATIONAL ASSISTANCE TO FISCAL DIFFICULTIES

Mr. PASSMAN. We find on page 144 of the project book that you propose to spend $502,000 for education of these people who have a literacy rate of 88 percent, which is almost on a par with ours.

Mr. MOSCOSO. Let's analyze this.

I think we have to look at the details of this. This is vocational education.

It is in order to assist these people out of this single product economy.

Mr. PASSMAN. You are director of this region. Why do you let people saddle you with all these projects when you said these people were not paying enough income tax, that they are not taxing to the extent they could and should? You cannot say they are an illiterate people because the record is just the opposite.

If they are not willing to take hold of this situation and tax their people on a par with what they can afford to pay, if they are not willing to do that in order to have these projects, then so far as I am concerned, I would not give them a dime.

Mr. MOSCOSO. Mr. Chairman, in spite of your many years on this committee, and in spite of the fact I have only been here about 2 years, I have said what you have said directly to the Latin Americans more times than you have said it.

Mr. PASSMAN. But what do you do? You say, "You have heard me lecture, but here is your check." They do not revise their laws. They get the next check and the next check and the next check.

The chairman of the Committee on Foreign Affairs gave assurance that no money would be asked for this purpose until reforms had been initiated and brought into being. This is an example, and it spreads like wildfire, that we are disbursing the money about as fast as we can allocate it. They have not created these reforms, and they apparently do not intend to do so.

I hope you make this program work. But you cannot bring these people around to their senses to do what they should do for themselves as long as you keep allocating and disbursing money by the billions of dollars.

Mr. Moscoso. May I say, there is some progress.

We have six principal tax measures which have been approved.

Mr. PASSMAN. Chances are you give them more money than their total revenue. I note from the record: Performance of major taxes, income, $5.6 million; sales, excise, and production, $5.4 million. That is about $4.28 per person. Import-export, $27.4 million; property and transfer, $3.2 million. That is an ad valorem tax on property, is it not?

Mr. Moscoso. That is right.

Did you see the per capita income? Three hundred and forty-four dollars per year.

Mr. PASSMAN. Why do you not relate this to some of the countries with $70?

Mr. Moscoso. I said 18 percent of the gross national product in Government revenues.

Mr. PASSMAN. You have already said they are not taxing themselves sufficiently. Do not take both sides of it. Let us see what they do.

EDUCATIONAL PROJECTS

What is the anticipated cost to construct and complete the Rural Education Center which you propose to develop under the agricultural development project?

Mr. Moscoso. We do not have the estimate.

Mr. PASSMAN. Why do you need $55,000 for contract service under the Ministry of Education project, on page 149?

Mr. STERNFELD. This is for short-term specialists to help the Minister of Education in developing his program. They would be on a contract basis.

Mr. PASSMAN. Do we not have some States in the Union with a literacy lower than it is in Costa Rica?

Mr. STERNFELD. Yes, sir.

Mr. PASSMAN. Why do you need $56,000 for contract services for the University of Costa Rica development project, on page 150?

Mr. STERNFELD. This will be a contract with an American university to help the Elementary Education Department of the University of Costa Rica.

Mr. PASSMAN. This is the same country that has a literacy rate of 88 percent, which is higher than the literacy rate for some of the States in the United States?

Mr. STERNFELD. Yes.

Mr. PASSMAN. Project the cost of this project to completion.

Mr. STERNFELD. The total cost of this project is estimated at $827,000. That includes since the beginning of the project.

Mr. PASSMAN. Why are you increasing the cost of the technical support program by 100 percent?

Mr. STERNFELD. We are expecting in Costa Rica to increase the participant training program which will require additional help, additional technicians to work on the training program involving over 100 participants.

NATIONAL PLANNING PROJECT

Mr. PASSMAN. I note that you are requesting $115,000 to initiate a new project entitled "National planning." What is the estimated cost to complete this project?

Mr. STERNFELD. $615,000.

Mr. PASSMAN. Do you recognize that we do not have a legal obligation to appropriate another dime of foreign aid in any way, shape, form, or fashion beyond June 30 of 1963? We have discharged every legal obligation of the U.S. Government through June 30; is that correct?

Mr. SCHEINMAN. That is correct, subject to a continuing resolution.

Mr. PASSMAN. If we did not appropriate another dime for foreign aid, we would have lived up to the legal commitments we have made?

Mr. SCHEINMAN. Subsequent to qualifications.

Mr. PASSMAN. A lot of people do not understand that fact.

Here we are, however, going into nations as far ahead as 1975, and you give them one slice of it. It is only natural they would expect that every year until the project is completed they would get another slice of the money. Is that not true?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. You people tell us you never know what projects you are going to plan until you get the money. You have said you would give them a slice of the funds, which obligates us morally to see the project through to conclusion.

Should these organizations fail to provide the necessary assistance, you state, additional requests may be levied upon AID.

What does that statement mean?

Mr. MOSCOSO. It is contemplated some assistance in the public administration program——

Mr. PASSMAN. Does it simply mean that if they do not put up some part of it, we go down into our right pocket and take out the difference?

Mr. MOSCOSO. "May be levied."

Mr. PASSMAN. That is a warrant for payment out of the Treasury. That opens the door.

AGRICULTURAL PRODUCTION

Mr. NATCHER. According to the justifications, two-thirds of the people in Costa Rica are engaged in agriculture.

Mr. MOSCOSO. That is right.

Mr. NATCHER. Is this a country that produces wheat and the different feed grains?

Mr. MOSCOSO. No; they sometimes have to import wheat and feed grains.

Mr. NATCHER. Why is it that feed grain is not produced?

Mr. Moscoso. Climatic conditions. This is a tropical country. They cannot produce the different types of feed grains we have in this country. They can produce a certain amount of corn, but wheat is very difficult to grow in a climate like this. They do produce coffee which we do not produce, and for the same reason we cannot produce coffee, they cannot produce wheat.

PROPOSED FISCAL YEAR 1964 PROGRAM

Mr. ANDREWS. You state in the book that the aid in the fiscal year 1964 proposed program for Costa Rica totals $2 million in grants. In addition, development loans will be considered as appropriate.

Mr. Moscoso. That is right.

Mr. ANDREWS. Have you discussed any of those proposed loans with our chairman, or with the committee?

Mr. Moscoso. We discussed the possibility of a private development bank being set up in Costa Rica.

Mr. ANDREWS. How much would that cost us?

Mr. Moscoso. It will be about $———.

Mr. ANDREWS. Just how far have you gone in your discussions with reference to that proposed bank?

Mr. Moscoso. We are still discussing with the Costa Ricans the desirability of permitting a privately-owned bank to operate there.

As you know, sometime last week I explained to you that Costa Rica nationalized its banking system back in 1948. A number of Costa Ricans, in order to stimulate a stronger private sector, are proposing a private development bank. This, I think, would be one of the ways of correcting current economic conditions in Costa Rica.

Mr. ANDREWS. You are in the process of discussing it with the Costa Rican people?

Mr. Moscoso. That is right.

Mr. ANDREWS. A proposed loan for $——— for a bank in 1964?

Mr. Moscoso. We are not even at that stage.

I discussed with the Foreign Minister of Costa Rica last Friday the desirability of obtaining their endorsement of the idea so that that charter of the bank could be approved.

Mr. ANDREWS. But you could make that loan in fiscal year 1964?

Mr. Moscoso. We could; yes.

Mr. ANDREWS. Will that be one of the 40-year, three-quarter-percent loans?

Mr. Moscoso. Yes, sir.

Mr. ANDREWS. So-called grants?

Mr. Moscoso. We will lend it to the bank and they in turn can pay the Government and the Government can pay us.

Mr. ANDREWS. What other development loans are you considering for Costa Rica in 1964?

Mr. Moscoso. We believe the bank might be one of those, and possibly some other projects.

Mr. ANDREWS. What figure do you have in mind for this project?

Mr. Moscoso. $———.

Mr. ANDREWS. Would that be a loan?

Mr. Moscoso. Yes.

Mr. ANDREWS. Forty years, three-quarters of 1 percent?

Mr. MOSCOSO. Yes.

Mr. ANDREWS. What else?

Mr. MOSCOSO. That is all at the moment.

Mr. ANDREWS. At the moment. That is a good answer. Thank you, sir.

METROPOLITAN WATER SUPPLY PROJECT AT SAN JOSE

Mr. RHODES. Mr. Moscoso, the loan on page 156 for the Metropolitan Water Supply at San Jose was approved on June 12, 1961, signed December 22, 1961, and there have been no disbursements. What is the holdup? From the description it sounds as if San Jose is badly in need of water, but apparently they are not going ahead as rapidly as the description would indicate they should?

Mr. MOSCOSO. This is a loan that was originally initiated by the Eximbank in which we are participating. The Eximbank approved the selection by the Costa Rican Government of an engineering firm to do the detailed engineering, plans and specifications. The firm went broke.

Mr. FORD. That was good selection?

Mr. MOSCOSO. It was also poor approval. The Bank approved the selection. They had to renegotiate. All of that time was wasted. They had to start all over again.

I agree, this is something that is unusual.

Mr. RHODES. It seems like this is something the people could understand—a water supply.

Mr. MOSCOSO. Yes.

Mr. RHODES. If they are going to do anything, I would agree with them on doing something like this.

Mr. MOSCOSO. May I ask a question?

I am interested. Do you think it is a worthwhile attempt to try to get a private industrial development bank set up in a little country that is too dependent on one single agricultural product?

Mr. RHODES. Mr. Moscoso, why do you and I not talk about that later? There is no reason for me to testify here. You are the administrator of the program, not I.

WATER AND SEWERAGE PROJECT, PERU

Mr. PASSMAN. Let us discuss the water and sewerage project in Peru.

You allocated funds in February of 1962, in the amount of $8.6 million. This water contract has never been signed so there could not have been any disbursements. What you are referring to there you will find similarly all through the book.

Mr. MOSCOSO. May I suggest after the military takeover in Peru, we cut off aid, as you will recall.

Mr. PASSMAN. Have you deobligated the $8.6 million, Mr. Controller, in Peru?

Mr. TENNANT. No, sir.

Mr. PASSMAN. You did not cut off then? You held it up temporarily?

Mr. MOSCOSO. We held it up temporarily.

SAN JOSE WATER SUPPLY PROJECT

Mr. MINSHALL. It is my understanding that one of the best natural resources of Costa Rica is the water supply. Why would it be so expensive to get a water supply into Metropolitan San Jose?

Mr. MOSCOSO. Water by itself is no problem. You have to have the capability of distributing and collecting.

Mr. MINSHALL. Is this to replace their entire water system?

Mr. MOSCOSO. No. It is an expansion, and a replacement in some of the areas where it has to be replaced. The city has expanded considerably.

Mr. MINSHALL. I wonder if you could supply for the record a little more detail why they have not gone ahead with this, and what they plan to do without taking the time now.

Mr. MOSCOSO. We will be happy to do that.

(The information supplied follows:)

METROPOLITAN WATER SUPPLY PROJECT—COSTA RICA

Development Loan Fund loan 203 for local currency costs for the metropolitan water supply project of Costa Rica was signed December 22, 1961. A companion Export-Import Bank loan of $4,500,000 was authorized for U.S. dollar costs of materials, equipment, and U.S. engineering services. A requirement of the Export-Import Bank loan is that the engineering work be completed before construction is started.

The National Water and Sewerage Authority (SNAA) of the Government of Costa Rica chose the U.S. firm Meissner Engineers of Chicago for the overall project. This company, however, went bankrupt in March 1963, and it was necessary for SNAA to chose another engineering firm. Gannett, Fleming Corddry & Carpenter was approved in April 1963 by the Export-Import Bank.

Gannett, Fleming Corddry & Carpenter reported that as of July 26, 1963, the engineering work on final design plans was 75 percent complete.

It is estimated that bids for construction can be let in April 1964.

RELATION OF NATIONAL PLANNING PROJECT TO TAX COLLECTIONS IN COSTA RICA

Mr. RHODES. Mr. Moscoso, your project on page 154 is headed "National Planning," $115,000. Will this have anything to do with more efficient collection of taxes?

Mr. MOSCOSO. Yes. This is one of the problems in Costa Rica.

Mr. ANDREWS. Have we not sent some tax experts to some of the Latin American countries to teach how to collect taxes?

Mr. MOSCOSO. Unfortunately, not yet in Costa Rica.

Mr. ANDREWS. What kind of reputation does a man acquire who goes to Latin America to teach and advocate the collection of taxes?

Mr. MOSCOSO. I can show you some of the editorials addressed to me.

Mr. ANDREWS. Favorable or unfavorable?

Mr. MOSCOSO. Very unfavorable.

Mr. ANDREWS. They do not believe in taxes?

Mr. MOSCOSO. I doubt if you can find any place on earth where people enjoy the payment of taxes. This is something that has to be—you have to educate the people to their responsibilities. Even in Europe we still find some of the countries where the tradition of participating in the support of the government has not been sufficiently developed.

Mr. ANDREWS. Do you know of any place in the world where taxes are collected as they are in the United States?

Mr. MOSCOSO. In England and in the Scandinavian countries, I understand the collection of taxes is pretty high.

Mr. FORD. No questions.

Mr. MINSHALL. No questions.

Mr. PASSMAN. I believe Costa Rica is one of our gold-purchasing countries. It would appear that in 1961, with that little $5 million tax collection, they bought $2 million worth of our gold. In 1962 they bought $500,000 of our gold. That is not a lot, but putting it on a per capita basis, it perhaps exceeds some of the other countries.

Mr. MOSCOSO. Forty cents per capita.

Mr. PASSMAN. They pay only $4.30 per capita in income taxes.

TAXES IN COSTA RICA

Mr. ANDREWS. What is the per capita income tax payment?

Mr. PASSMAN. $4.30 against about $555 in the United States.

Mr. ANDREWS. That is not as much as we gave them last year. Our aid figure is $10 per head.

Mr. MOSCOSO. We are dealing with one of the bad traditions in a number of Latin American countries where most of the taxation is indirect instead of direct.

If you figure out the indirect taxes, it is substantially more than $4.30.

Mr. PASSMAN. I think the total tax collections were almost as much as our aid.

Mr. ANDREWS. According to your figure there, the per capita income tax collection was $4.30.

Mr. MOSCOSO. Yes. That is bad, I agree.

Mr. ANDREWS. If you took the aid we gave them last year, $13 million, and spread that out among the 1.3 million people, each would get $10 apiece.

So we are giving them more than twice what they are paying in income taxes.

Mr. MOSCOSO. That has not been disbursed, and when it is disbursed it will be over a period of years. So you would have to spread that amount over whatever time it takes to finish disbursements.

Mr. ANDREWS. The book shows $13 million in 1963.

TOTAL AID TO COSTA RICA

Mr. PASSMAN. And you are pouring more money in all the time. What has been the total amount of aid to Costa Rica?

Mr. TENNANT. Including Eximbank or excluding?

Mr. PASSMAN. Leave it out, and then add it on.

Mr. TENNANT. $79.3 million, excluding the Eximbank loans.

Mr. PASSMAN. That is a sizable figure.

Mr. TENNANT. The Export-Import Bank loans total $25.5 million. The total aid through fiscal year 1963 would therefore be $104.8 million.

Mr. PASSMAN. The $79.3 million is the giveaway part of it.

Thank you.

21-178—63—pt. 4——77

EL SALVADOR

The next country is El Salvador, for which the 1964 estimate is $———; is that correct?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. That sum does not include any money they may get out of the ROCAP, or the Central American regional account; does it?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. It does not include any money they may get out of the Latin American regional account; does it?

Mr. MOSCOSO. This is going to come from the Latin American region.

Mr. PASSMAN. It does not include any money they may get from the interregional fund?

Mr. MOSCOSO. No.

Mr. PASSMAN. It does not include any of the IDA, or Inter-America Development Bank, or the U.N., or anything else?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. It does not include anything you may have in here under the development credit program?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. In other instances, you say it does not include the DLF. In this instance it does?

Mr. MOSCOSO. In El Salvador, it does.

Mr. PASSMAN. What is the amount of unliquidated funds to the credit of El Salvador, all spigots?

Mr. MOSCOSO. $15,221,000.

Mr. PASSMAN. What has been the total we have given to El Salvador since the inception of this program?

Mr. MOSCOSO. $55.1 million.

This excludes the Eximbank.

Mr. PASSMAN. What is the population of El Salvador?

Mr. MOSCOSO. 2.6 million.

Mr. PASSMAN. What is the literacy rate there?

Mr. MOSCOSO. Forty-eight percent.

Mr. PASSMAN. How much did you request last year for the development grant program for El Salvador?

Mr. MOSCOSO. $2 million.

Mr. PASSMAN. How much more did you obligate to El Salvador?

Mr. MOSCOSO. $3 million.

Mr. PASSMAN. So this is another instance where you requested one figure and obligated 50 percent over that amount?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. In Costa Rica, where there is a literacy rate of 88 percent, you have $405,000 in the general education category. You get into El Salvador with a literacy rate of 48 percent literacy and with a larger population than Costa Rica, and you allocate in the field of general education $434,000.

Mr. MOSCOSO. We loaned them $2.4 million for school construction. We made them a loan because they are in better economic condition and better fiscal condition.

Mr. PASSMAN. Is that a 5-year loan?

Mr. MOSCOSO. Forty-year.

Mr. PASSMAN. One of those disguised grants, no interest, 10-year grace period?

Mr. MOSCOSO. One of those soft loans.

PROPOSED FISCAL YEAR 1964 DEVELOPMENT LENDING

Mr. PASSMAN. What type of development credits do you propose to spend for the development bank and financial institutions in this country in the amount of $———?

Mr. MOSCOSO. We have already made the loan.

Mr. PASSMAN. This is something you proposed for 1964. You have already done it, and you are now letting us in on it?

Mr. MOSCOSO. I thought you were talking about an agricultural loan.

Mr. PASSMAN. Is there another $——— loan you do not list here?

What type of development credits do you propose to extend to the development bank?

Mr. MOSCOSO. Similar to the one we are planning to lend the funds to in Costa Rica.

Mr. PASSMAN. What do you plan to lend them in Costa Rica?

Mr. MOSCOSO. $——— is the contemplated loan.

Mr. PASSMAN. You are asking for $———?

Mr. MOSCOSO. Yes. We have supervised agricultural credit, $———.

Mr. PASSMAN. How many banks do you propose to establish in fiscal year 1964?

Mr. MOSCOSO. In what country?

Mr. PASSMAN. El Salvador.

Mr. MOSCOSO. We are planning to help establish a private development bank, and an agency for supervised agricultural credit for relending to small farmers.

Mr. PASSMAN. You are talking now about one country?

Mr. MOSCOSO. That is right.

DEVELOPMENT BANKS PROPOSED TO BE ESTABLISHED IN LATIN AMERICA

Mr. PASSMAN. How many in all of Latin America?

Mr. MOSCOSO. I would have to get that for the record, Mr. Chairman.

(The information follows:)

ESTABLISHMENT OF DEVELOPMENT BANKS IN LATIN AMERICA DURING FISCAL YEAR 1964

It is anticipated that 13 applications will be received for loans to assist in establishing new development banks in the following fields: Agriculture, 5; housing, 1; industry, 7.

INCREASED AGRICULTURAL PRODUCTION PROJECT

Mr. PASSMAN. How much has been obligated to date on this increased agricultural production project, on page 161?

Mr. MOSCOSO. $370,000.

Mr. PASSMAN. I am talking about the project on page 161. Could you tell us the total amount of money that you have obligated to the project from its inception?

Mr. STERNFELD. The book is in error showing actual through June 30, 1962, as $363,000. It should have shown $2,363,000. Therefore, you would have to add $2,363,000 plus $370,000 for a total of $2,733,000 as the amount that has been obligated to date in the food and agricultural field to increase agricultural production.

Mr. PASSMAN. When did you discover that error?

Mr. STERNFELD. I discovered it in preparing to come up to this committee, sir, because we wrote this into the book.

Mr. PASSMAN. What was the figure through June 30, 1962?

Mr. STERNFELD. As I indicated it should have shown $2,363,000 instead of $363,000.

Mr. PASSMAN. You showed you had obligated $363,000 but the figure is actually $2,363,000?

Mr. STERNFELD. That is correct.

Mr. PASSMAN. You dropped off a couple of million dollars at the end.

Mr. STERNFELD. That is an important figure.

Mr. PASSMAN. What will this project cost to completion?

Mr. STERNFELD. $5,233,000.

Mr. PASSMAN. The project is going to be completed in 1968?

Mr. STERNFELD. That is correct.

Mr. PASSMAN. You have no legal obligation to go beyond June 30, 1963?

Mr. STERNFELD. That is right.

Mr. PASSMAN. You spent $2,363,000. You showed, however, that you spent only $363,000. You corrected the error. If you stopped it all at once would it please or displease them?

Mr. STERNFELD. The agricultural production in a country like——

Mr. PASSMAN. I am talking about the people.

Mr. STERNFELD. Of El Salvador?

Mr. PASSMAN. You feel we have a moral commitment here; is that correct?

Mr. MOSCOSO. Did we make them feel——

Mr. PASSMAN. Do we have a moral commitment?

Mr. MOSCOSO. I would not think so.

Mr. PASSMAN. Thank you. That is the best answer we have had during these hearings. A lot of people think just the opposite.

I wonder if in the future you could change your format to show the estimated total cost of project? We have run into some that were $200,000. The projection is $8 million. We have run into $363,000, and you correct it to $2,363,000. It goes to 1968. The total cost is how much?

Mr. STERNFELD. $5,233,000.

Mr. PASSMAN. Can you change your format in the future so that you will show estimated cost of project?

Mr. TENNANT. Total inception through completion?

Mr. PASSMAN. Yes.

Mr. TENNANT. We would be glad to change it for you.

Mr. FORD. Would you yield?

Mr. PASSMAN. Yes; but if you will, Mr. Controller, if you have changed the title or the number of the project, so indicate.

I yield to Mr. Ford.

Mr. FORD. One of our colleagues has asked if I would ask this question in all seriousness.

If some mythical country were carrying on the same aid program to help underline needy countries of the world would the United States qualify after considering, (1) our total debt; (2) our trade deficit; (3) our gold situation, amount on hand and obligations of the gold fund; (4) annual deficits; (5) unemployment?

Mr. RHODES. Would you add a sixth, the tax level, the level of taxation of the citizens.

Mr. MINSHALL. You could add need for housing, need for water supply, and all these things.

Mr. PASSMAN. You want to know whether or not we would be eligible immediately for aid if we submitted such statistics?

Mr. ANDREWS. With a high priority.

Mr. PASSMAN. A very high priority. Would you agree, gentlemen?

Mr. MOSCOSO. No. I would say you have to take the most important one of all which you have not mentioned, Mr. Ford.

Mr. FORD. What is that?

Mr. MOSCOSO. Net income per capita.

Mr. FORD. Is that the most important one? Is that the true criteria by which you judge these problems?

Mr. MOSCOSO. I would think it would be impossible to judge the effect of any one of these others without taking into consideration the fact that you had a net income per capita, that you had a capital base which would be able to support a high level economy.

Mr. FORD. That is a very interesting comment because are there not some countries where we do make aid and assistance available that have a very high per capita income? I am thinking of the Middle East.

Mr. MOSCOSO. Not in Latin America. I do not know about them.

Mr. FORD. Isn't that true, in some of the Middle Eastern countries there is a very high per capita income?

Mr. PASSMAN. You have to relate per capita income to something, do you not, when you talk about it, say to the gross national product?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. In some countries you can buy more with $5 than you can buy in this country for $100? What you can buy with what you earn has to be considered.

Mr. MOSCOSO. In a wealthy country, Mr. Chairman.

Mr. PASSMAN. You know what I am talking about. It is not necessarily what the income is; it is what it will buy.

Mr. FORD. It is the quantity not the quality of the dollar is what you are saying.

Mr. PASSMAN. That is right.

Could you select out of the hundred countries we are giving aid to about 30 that we could go to on a reverse basis and see if they would not be willing to give us a little aid until we can get out of this jam we are in on our annual budget deficit, on our balance of payments, on our gold outflow, and our ever-increasing public debt?

Mr. RHODES. Mr. Chairman, aren't we really getting some aid now? Don't we have some countries in Europe that are buying our bonds and making some credit available to us?

Mr. PASSMAN. We are borrowing dollars from them. They have dollars in excess of their needs.

TEACHER TRAINING AND PLANNING PROJECT IN EL SALVADOR

How much did you request and justify last year for the teacher training project, on page 164?

Mr. MOSCOSO. $400,000.

Mr. PASSMAN. Last year you said you wanted $400,000 for this project, on page 164, did you not?

Mr. MOSCOSO. We obligated——

Mr. PASSMAN. You obligated $835,000, did you not?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. And you had unliquidated funds amounting to $500,000?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Had you actually only obligated what you said that you needed you still would have had $65,000 unexpended, but instead you more than doubled the amount and you wind up with $500,000 unliquidated, and you are asking for $355,000 for fiscal year 1964. Now project the cost, if you will, to completion.

Mr. STERNFELD. $2,800,000.

CIVIC ACTION PROJECT

Mr. PASSMAN. Did you justify last year the $100,000 that you obligated to the civic action project, on page 166?

Mr. STERNFELD. No, we did not.

Mr. PASSMAN. You obligated $100,000. You spent $5,000. You have $95,000 on hand unliquidated and you ask for an additional $100,000.

Project this cost to the end, if you will.

Mr. STERNFELD. $300,000.

Mr. PASSMAN. Mr. Minshall?

CLASSIFICATION OF INFORMATION

Mr. MINSHALL. I have one question, Mr. Moscoso. On page 33 of the justifications, I come back to a question I have asked periodically. Why all the classification on page 33 for El Salvador? You have practically three-fourths of the first column in the gray area marked confidential.

Mr. MOSCOSO. Mr. Congressman, I frankly do not do this classification but as I read these books I am inclined to agree with you. There seems to be overclassification. Maybe there is something that I do not know about.

Mr. MINSHALL. If you don't know about it, I do not know who does. Somebody is on the payroll that does not need to be there.

Mr. MOSCOSO. There are political nuances that sometimes we are not aware of and I suppose this is that kind of information.

Mr. MINSHALL. Does Rusk or a committee decide this, or is it a girl behind a desk?

Mr. SCHEINMAN. We have discussed the subject earlier and we have given it considerable thought. What you have to do is look at the specifics that you are referring to because there are various possibilities. One, of course, is that we have made an error and that the particular reference should not be classified or could not or did not have to be classified. Other possibilities are that at the time these books are presented, and you will remember it was several months since these things were put together, circumstances at that time insisted on a classification because of the nature of the U.S. relationships with the country.

Mr. MINSHALL. Maybe it is to protect the American public from finding out how ridiculous some of these aid programs are.

Mr. SCHEINMAN. In my experience that has never been the case.

Mr. MINSHALL. I think we should let the people know some of the silly things we are doing. They would rise up in arms. They are pretty fed up now with the little they have found out.

Mr. SCHEINMAN. It is also true that some of the material which is classified here should be classified and is presented in this form to give the committee the broadest possible information.

Mr. MINSHALL. You agree some of this, in your opinion, or most of this is overclassified?

Mr. MOSCOSO. Certain things, quite frankly, as I notice, do not seem to require it.

Mr. MINSHALL. That is all.

Thank you very much, Mr. Chairman.

Mr. FORD. Would you yield?

Mr. PASSMAN. Yes.

FISCAL YEAR 1963 REQUEST COMPARED WITH FISCAL YEAR 1963 PROGRAM LEVELS

Mr. FORD. What did you ask for last year for El Salvador?

Mr. MOSCOSO. Last year we asked $2 million for development grants, and we indicated that development lending was contemplated.

Mr. FORD. But no specific program was laid out?

Mr. MOSCOSO. No.

Mr. FORD. You actually executed in fiscal year 1963, $2.9 million for grants?

Mr. MOSCOSO. $3 million.

Mr. FORD. $3 million?

Mr. MOSCOSO. Yes.

Mr. FORD. $1 million more than you asked for?

Mr. MOSCOSO. That is right.

Mr. FORD. How much did you execute in loans?

Mr. MOSCOSO. $16.6 million.

Mr. FORD. And you did not specifically ask for anything in the development loans?

Mr. MOSCOSO. No. We mentioned that there would be development loans coming in from El Salvador, but we did not know what the amounts would be.

Mr. FORD. In the several instances where I have asked questions of this same nature, it seems to me that I have found that in most cases the obligations have been larger than what you justify, despite the fact

that the Congress did not make reductions in the various appropriation accounts.

I am wondering where the pinch came. Did it come in areas other than Latin America?

Mr. MOSCOSO. No. In the case of development grants there were no reductions that I remember.

Mr. FORD. Not in development grant, that is right. As I remember, you received $100 million, which is what you asked for, and you had $32 million, which was a reappropriation.

Mr. STERNFELD. That is the reason for your finding increases in what we are telling you was justified, because we only justified the appropriation request of $100 million. We did not come back and justify the $32 million of no-year money which we are doing this year. We are justifying not only the new money to be appropriated but also the money that will be made available, reappropriated or on a deobligation basis.

Mr. FORD. What I said may not be applicable to the grants but I think it would be appropriate as far as development loans are concerned.

Mr. MOSCOSO. Except there were a number of countries where we did not do any development lending this year.

Mr. FORD. I apparently have not run into those instances as yet.

Mr. MOSCOSO. Peru.

Mr. FORD The ones which I have examined the reverse has been true—Brazil.

Mr. STERNFELD. Brazil was much lower than what we had justified. I think you commented upon that.

Mr. MOSCOSO. In Peru we did not make any loans.

Mr. STERNFELD. In Paraguay we did not make any loans.

COMPARISON OF ESTIMATED LOAN PROGRAM WITH ACTUAL OBLIGATIONS, FISCAL YEAR 1963

Mr. FORD. Will you prepare a list for the benefit of the committee showing in the development loan category what countries and to what extent we either did more or less than what you justified. Submit that for the record.

Mr. TENNANT. There is a listing that appears in the other book that is not in front of you, the dark book, on page 185, which is our section 634(d) report. It shows the differences between what we presented and what we implemented on a basis of the presentation book estimates. I am referring to the other classified book that Mr. Merrill has picked up. However, in terms of the insert you requested, we will up-date the presentation estimates to show preliminary obligation figures for fiscal year 1963. We will be glad to provide that, sir.

(The information supplied follows:)

Comparison of fiscal year 1963 loan programs for Latin America as presented to Congress in the fiscal year 1963 presentation with the fiscal year 1963 loan obligations/authorizations (preliminary)

[In thousands of dollars]

Country	Proposed program	Preliminary obligations/authorizations
Argentina		76,400
Bolivia	(1)	18,300
Brazil		37,400
Chile		35,000
Colombia		87,200
Costa Rica	(1)	10,600
Dominican Republic	(1)	2,100
Ecuador	(1)	6,300
El Salvador	(1)	16,600
Guatemala	(1)	700
Honduras	(1)	1,650
Jamaica	(1)	5,000
Mexico	(1)	
Nicaragua	(1)	1,000
Panama	(1)	6,000
Peru	(1)	
Uruguay	(1)	6,000
Venezuela	(1)	30,000
Central American Bank for Economic Integration	(1)	2,500
ROCAP (regional office, Central America and Panama)	(1)	
Expenses of Inspector General	(2)	85
Total	510,400	342,835
Funded from:		
Alliance for Progress loans	500,400	333,885
Inter-American social and economic program	10,000	8,950

[1] Development lending was contemplated, but no amount was indicated in presentation to Congress.
[2] In the presentation to Congress, it was proposed that $150,000 of Inspector General expenses be funded from the Alliance for Progress, which it was contemplated would include both loans and grants in a single fund.

Mr. FORD. That is all.

Mr. PASSMAN. The people who are justifying this program are the people who are actually administering the program; is that correct?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. Thank you.

GUATEMALA

The next country in your area is Guatemala, for which the fiscal year 1964 estimate is $4,500,000; is that correct?

Mr. MOSCOSO. That is right; $4.5 million.

Mr. PASSMAN. Does that sum include all spigots?

Mr. MOSCOSO. This does not include development lending which is contemplated. It does not include any other source except AID.

Mr. PASSMAN. This is just the grant part of it? Is that right?

Mr. MOSCOSO. $4.5 million; that is right.

Mr. PASSMAN. This is just grant-aid spigot. Then you get into all the others.

What is the grand total of the estimate for Guatemala, from all spigots?

(Discussion off the record.)

Mr. STERNFELD. $———.

Mr. PASSMAN. That figure does not include the Development Loan Fund?

Mr. MOSCOSO. No.

Mr. PASSMAN. When we get into the Development Loan Fund we are talking about the 40-year, no interest, 10-year grace period credits, with three-quarters of 1 percent service charge, which we usually refer to as a soft loan?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Could you anticipate what that amount may be?

Mr. MOSCOSO. Between $——— and $———.

Mr. PASSMAN. Let us put down the middle figure, $———. How much is that total?

Mr. TENNANT. $———.

Mr. PASSMAN. Running through these books we would have said $4,500,000 for Guatemala.

Mr. MINSHALL. What is this for, Mr. Chairman?

Mr. PASSMAN. Fiscal year 1964. That is what the books show. When you put in the other spigots, how much is the total?

Mr. TENNANT. $———.

Mr. PASSMAN. We still do not have all that they are eligible for, what they may get out of the interregional fund. You do not have that down, do you?

Mr. TENNANT. No, sir.

Mr. PASSMAN. They are eligible, are they not?

Mr. TENNANT. Yes.

Mr. PASSMAN. You do not have what they may get out of the Latin American region, do you?

Mr. TENNANT. No, sir.

Mr. PASSMAN. They are eligible, are they not?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. You do not have what they may get out of the ROCAP fund, do you?

Mr. TENNANT. No, sir.

Mr. PASSMAN. They are eligible, are they not?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. You do not have what they may get out of the Social Progress Fund, do you?

Mr. TENNANT. No, sir.

Mr. PASSMAN. They are eligible, are they not?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. You do not have what they may get out of the Inter-American Development Bank, do you?

Mr. TENNANT. No, sir.

Mr. PASSMAN. They are eligible, are they not?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. You do not have what they may get out of IDA, do you?

Mr. MOSCOSO. No.

Mr. PASSMAN. They are eligible, are they not?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. There are about nine others. This indicates how fictitious these justifications are.

Mr. MOSCOSO. I hope it was not expected that we would justify World Bank lending.

Mr. PASSMAN. I did not bring in World Bank. I brought in these giveaway programs. I did not bring in Export-Import Bank. I brought in the giveaway part.

I did not get into those spigots where they may get a little something back. I stayed in the giveaway field. Did I add military aid?

Mr. MINSHALL. No; you did not.

POLITICAL SITUATION IN GUATEMALA

Mr. PASSMAN. What type of government is in control of Guatemala at this time?

Mr. MOSCOSO. A military government.

Mr. COTTRELL. The present government took over in Guatemala on March 31, 1963.

Mr. PASSMAN. Did we suspend the aid program when they took over?

Mr. COTTRELL. No.

Mr. MOSCOSO. It was not suspended.

Mr. PASSMAN. I thought that was one of the criteria.

Mr. MOSCOSO. I would have to answer that off the record.

Mr. PASSMAN. It will not be necessary. This is no exception.

We did not suspend aid.

Page 35 of the justifications indicates your aid program is based in part on projects "aimed at the problems of political and social unrest particularly as they might affect the 1963 elections." However, since the military dictatorship now in power has cancelled the elections, how much of your proposed 1964 program are you canceling? Give us an estimate.

Mr. MOSCOSO. I do not think this in any way changes the situation.

Mr. PASSMAN. Your book said so, particularly as they might affect the 1963 elections. The military took over and canceled the elections.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. We are going to go right along with the same aid program.

Mr. MOSCOSO. Conditions persist.

Mr. PASSMAN. Your projects were based upon the fact that they were going to have elections.

Mr. MOSCOSO. There will be elections.

Mr. PASSMAN. I imagine there will. But the elections you predicated the funds upon have been canceled; is that not right?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Thank you.

Mr. MINSHALL. Will the chairman yield?

Mr. PASSMAN. Surely.

Mr. MINSHALL. When do they plan to have elections?

Mr. MOSCOSO. They were planning to have their elections September or October this year.

Mr. MINSHALL. Is that still a firm date?

Mr. MOSCOSO. No.

Mr. MINSHALL. They are canceled, postponed indefinitely; is that correct?

Mr. Moscoso. We have an idea they will be held within the next year or two.

Mr. Minshall. Next year or two?

Mr. Moscoso. Yes.

Probably it will be sooner than that.

Mr. Minshall. If they do have an election, this fellow Arevalo will come into the act. He is a strong contender?

Mr. Cottrell. He was in the last presidential election. He is no longer considered a political contender.

Mr. Minshall. He was considered a good political possibility only a short time ago, before this uprising.

Mr. Cottrell. That is right.

Mr. Minshall. What changed the situation? If there ever was a Communist, it is Arevalo.

Mr. Cottrell. I can answer his question.

Off the record.

(Discussion off the record.)

Mr. Minshall. On the record. We can sanitize it later.

Mr. Cottrell. Well, I can say that at the present time Mr. Arevalo is not in Guatemala.

Mr. Minshall. He was in Mexico?

Mr. Cottrell. He was in Mexico. He had a certain following before this coup occurred. I cannot predict, of course, if elections are held in the future, that Arevalo will not come back and run; but the events that have occurred since this time have led political observers to believe his following is not as strong as it was in Guatemala.

Mr. Minshall. What is classified about what you just told me?

Mr. Cottrell. I am not giving you now in open hearing——

Mr. Minshall. What did you plan to give? What have you left out?

Mr. Cottrell. If we may go off the record, I will tell you.

Mr. Minshall. We can sanitize it. You can red line this all you want.

Mr. Passman. Off the record.

(Discussion off the record.)

Mr. Passman. You come along with something here where we know a friendly government has been overthrown, and we have to go off the record. You testify any way you want to, but I think we ought to have it on the record so other Members may have the opportunity of reading it. You make that decision.

Mr. Cottrell. All right; certainly. What was your question, again?

Mr. Minshall. Off the record.

(Discussion off the record.)

Mr. Cottrell. I repeat again that prior to the coup, when it was anticipated they would have elections in Guatemala, Mr. Arevalo, who has a following in Guatemala, was considered a very serious candidate. Events transpiring since that time, including Mr. Arevalo's departure

from Guatemala and his stay in Mexico, are regarded by people in Guatemala and other places to have reduced his political appeal.

He may return at such time as elections are held in Guatemala. I would not deny he might even be a candidate. But this is the present status of Mr. Arevalo.

Mr. MINSHALL. I still do not know what is classified about that.

Mr. COTTRELL. Nothing.

Mr. MINSHALL. Is there something you were going to tell me that was classified?

Mr. COTTRELL. No; I am not attempting to withhold anything from you. There is a natural disinclination on the part of the State Department to discuss individuals, particularly political individuals, in a public hearing. Perhaps I am too sensitive, but you will have to lay it to my inexperience in appearing before congressional committees.

Mr. MINSHALL. These are things you read about in the New York Times magazine section, the Cleveland Plain Dealer, the Cleveland Press, and the Chicago Tribune every day.

Mr. COTTRELL. It is different when an official of the State Department makes the statement on a public record.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. PASSMAN. Was the Ydigoras government considered a friendly government to the United States?

Mr. COTTRELL. Not unfriendly.

Mr. PASSMAN. Did we accept the Ydigoras government of Guatemala as a friendly government to the United States in what we were trying to do in Latin America?

Mr. COTTRELL. I would agree.

Mr. PASSMAN. You had a military dictatorship, and it was anti-Communist, I believe; is that correct?

Mr. COTTRELL. Correct.

Mr. PASSMAN. Now you come along, and they overthrow this friendly government and a bunch of rebels take over. We are continuing the same level of aid to this government as we had for the friendly government.

Mr. COTTRELL. I think the reason was the present Government feared that Mr. Arevalo and leftists would win in an election and take over.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. PASSMAN. Around the world friendly governments are overthrown one night, and we continue the aid to the new government the following day.

We just give them money on a basis of hope, it seems.

Is it not true that five or six governments have been overthrown in Guatemala since 1950?

Mr. MOSCOSO. I do not know exactly how many, but there have been several.

Mr. PASSMAN. Do you remember one of the friendly commanders in chief of the Guatemalan Army who was shot all to pieces and the Government overthrown? I happened to be a personal friend of his. I was down there one time as his guest. The first thing I knew, he was dead.

It just looks as if we are going to continue spending the American taxpapers' dollars based upon hope, and that we will recognize any government that gets into power, I do not know where this aid program will eventually lead us.

We are trying to make money serve every purpose. I am afraid this policy is wrecking our country and our economy, building up a public debt that I do not know what we are going to do with.

PROPOSED NEW GRANT PROJECTS FOR GUATEMALA

I note that you propose to initiate five new projects in fiscal 1964 in this country at a cost of $1,446,000. What is your estimated cost to complete these five projects?

Put the information in the record, please, by project.

(The information supplied follows:)

New grant projects in Guatemala, fiscal year 1964

[In thousands]

Project	Estimated obligations, fiscal year 1964	Cost to completion
Development of agricultural institutions	$545	$2,400
Improvement of communications facilities	150	150
Development of education policies and priorities	248	250
Public finance and planning	295	800
Long-range industrial and commercial agricultural credit institutions	203	410
Total	1,446	4,010

IMPROVEMENT OF SAN CARLOS UNIVERSITY

Mr. PASSMAN. Did you justify the $35,000 which you obligated for the San Carlos University project, on page 179?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. You did not justify this project but you obligated $35,000. Now you are asking for $1,120,000 for fiscal 1964.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Project the cost, if you will, to the date of completion.

Mr. MOSCOSO. $4,200,000.

Mr. PASSMAN. You start with $35,000 and wind up with $4,200,000.

Mr. MOSCOSO. I think that we discussed this role of the university in Latin American politics and the fact that in many of them you find the headquarters of some of the subversive movements. It was also, I believe, the consensus that something ought to be done about this.

Mr. PASSMAN. The same people who are running the show now in the universities are still going to run it, and you will give them more money to run it with.

POLITICAL SITUATION AND CONTINUANCE OF U.S. AID

How far are you going to carry these programs in Guatemala if these people do not call free elections?

Mr. MOSCOSO. They have not said they were not going to hold elections. They have said they will hold elections.

Mr. PASSMAN. Have they said that they would?

Mr. MOSCOSO. Yes; the time has not been fixed. I suppose there will have to be an evaluation made by our Ambassador there.

Mr. PASSMAN. Who is he?

Mr. MOSCOSO. He is a career man.

Mr. PASSMAN. We have had this kind of situation in Guatemala ever since I have been in the Congress, and that has been for 17 years.

Mr. MOSCOSO. I think the Secretary will agree with me that this Government has shown complete friendliness with the United States.

Mr. PASSMAN. The incumbent Government is friendly to us?

Mr. MOSCOSO. This present Government.

Mr. PASSMAN. Would you expect them to indicate anything else than friendliness with all these tens of millions of dollars we give them? Why not suspend aid and see how friendly they will be. Who would not be friendly?

Mr. MOSCOSO. Friendly and anti-Communist.

Mr. PASSMAN. There was a friendly and anti-Communist Government, duly elected, in power, was there not?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. These people came in and threw them out and said they were taking over?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. You say they are a friendly Government.

Mr. MOSCOSO. The reason for the takeover is rather well known in the press, Mr. Chairman. The reason is that the friendly Government that was in power apparently was not willing to prevent Mr. Arevalo from running in the elections. This group of military, in order to avoid a Communist-dominated Government in Guatemala, decided to take over the Government.

Mr. PASSMAN. That was an assumption, of course. Anyway, they overthrew a friendly elected Government.

Mr. Minshall?

SAN CARLOS UNIVERSITY PROJECT

Mr. MINSHALL. Mr. Moscoso, would you go into a little more detail about this university program where we are spending some $4 million?

Mr. MOSCOSO. We spent only $20,000.

Mr. MINSHALL. $20,000?

Mr. MOSCOSO. Yes.

Mr. MINSHALL. Is that all you put in the university program, $20,000?

Mr. MOSCOSO. No; we are requesting funds for the program which will eventually cost $4,200,000, but for this fiscal year we are asking $1,120,000.

Mr. MINSHALL. That is the figure I want. How are you planning on using these funds and why?

Mr. MOSCOSO. Equipment, books, scholarships, and also for university contract, U.S. university contract, which will help the San Carlos University.

Mr. MINSHALL. What is the present student population of the university?

Mr. MOSCOSO. I cannot give you that.

Mr. MINSHALL. Do you plan to increase it substantially?

Mr. MOSCOSO. I think that the project contemplates a betterment of the quality of university training. There might be some increase but it would be not more than——

Mr. MINSHALL. The reason I ask is I heard that the reason you are increasing this university program is to take a lot of these teenagers, who have been causing so much trouble, off the street and put them in school. This is the program?

Mr. MOSCOSO. This is not the purpose.

Mr. MINSHALL. Have you ever heard anything like that?

Mr. MOSCOSO. I have heard it said about our universities in the United States.

Mr. MINSHALL. I am talking about the universities specifically in Guatemala.

Mr. MOSCOSO. No. We have had in the case of the University of San Carlos a rather unique opportunity.

Mr. MINSHALL. Would you supply for the record the student population and what the immediate plans are of increasing it and how much it is costing per student, et cetera?

Mr. MOSCOSO. Yes, sir; we can get that.

Mr. MINSHALL. I would like to compare it with the cost of universities in this country.

Mr. MOSCOSO. It is low.

(The information supplied follows:)

SAN CARLOS UNIVERSITY (PROJECT 520-AC-66-AA-6)

Student population.—5,777, enrollment for 1963.

Plans for increasing enrollment.—Enrollment has increased at the rate of about 200 students per year based on the past 3-year average (5,229 in 1960 to 5,777 in 1963). However, the project is not designed primarily to increase enrollment, but to better existing methods.

Cost per student.—The University of San Carlos budget for 1963 totals $2,538,323. With an enrollment of 5,777, the average cost per student amounts to $439.39.

U.S. project assistance in the amount of $1,120,000 budgeted for fiscal year 1964 is programed as follows:

(*a*) U.S. technical assistance: $20,000 for 1 year.

(*b*) Contract services: $500,000 for contracting with a U.S. university or institution for a 2-year period, or annual rate of $250,000.

(*c*) Commodities: $300,000 for the acquisition of books and other technical reference materials (of permanent or long-range benefit to the university).

(*d*) Local expenses: $300,000 to provide for 400 scholarships over a two-school year period.

The average project costs per student amounts to $193.89 for the amount to be obligated in fiscal year 1964 for both short- and long-range benefits to the university.

HONDURAS

Mr. PASSMAN. The next country is Honduras. Your request is for $2,500,000. Let us put all segments together. It is too bad we did not start this practice 75 countries ago.

Mr. MOSCOSO. $———, but the lending part is an approximation, $———.

Mr. PASSMAN. According to the books, you wanted $2,500,000 for Honduras; is that correct?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. And for all these years we have been examining on this figure, but when you pull the other spigots in, you bring this for Honduras alone from $2,500,000 up to the figure you just gave.

Mr. TENNANT. $———.

Mr. STERNFELD. You have already examined on the military, $——.

Mr. PASSMAN. That figure does not include all of those other things that we established on Costa Rica. They would be added, too?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. They are also eligible for money out of ROCAP?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. They are eligible for money out of the Latin American region?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. They are eligible for money from the interregional account?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. They are eligible for money out of IDA?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. They are eligible for money out of the Inter-American Development Bank?

Mr. MOSCOSO. That is hard money.

Mr. PASSMAN. They are eligible for money, are they not?

Mr. MOSCOSO. Yes. You said you did not want to include that.

Mr. PASSMAN. All that we give them is money. They are eligible also for money out of the Social Progress Trust Fund?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. They are eligible for money out of funds of the United Nations?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. They are eligible for funds out of the contingency account?

Mr. MOSCOSO. That is right.

Mr. MINSHALL. This all comes out of one pocket, the pocket of the taxpayer.

Mr. PASSMAN. They are eligible for Public Law 480 aid?

Mr. MOSCOSO. Yes; it is already there.

Mr. PASSMAN. They are eligible for all the things I have just enumerated in addition to the $——— we have picked up from $2.5 million; is that right?

Mr. TENNANT. Yes, sir.

RURAL DEVELOPMENT PROJECT

Mr. PASSMAN. I note that you propose to initiate rural development project on page 194 at a cost of $305,000. Will you project the cost to completion?

Mr. MOSCOSO. $1,500,000.

TEACHER TRAINING PROJECT

Mr. PASSMAN. What is the cost to complete the teacher training project, on page 198, for which you are requesting $150,000 to initiate the project in 1964?

Mr. Moscoso. $500,000, cost to completion.

PUBLIC ADMINISTRATION PROJECT

Mr. PASSMAN. It would appear that you are expanding the public administration project, on page 200, a projected estimate of $400,000 for fiscal 1964. I hope that is a typographical error.

Mr. Moscoso. It is correct.

TAX LAWS

Mr. PASSMAN. Did the revised income tax laws pass the 1963 Congress in Honduras?

Mr. Moscoso. The first income tax law was passed in March 1955 and was effective retroactively to January 1, 1955.

Mr. PASSMAN. I asked you if the revised income tax law has been presented to the 1963 Congress and if it passed.

Mr. Moscoso. Yes; it was approved in June 1963.

Mr. PASSMAN. Could you get us a copy of that law?

Mr. Moscoso. We can.

(The information follows:)

REVISED HONDURAN INCOME TAX LAW

Informal translation of Honduran Income Tax Surcharge as published in the official register of the country, La Gaceta, No. 18,007, Tegucigalpa, Honduras, June 25, 1963.

DECREE NUMBER 122

The National Congress Decrees:

ARTICLE 1.—There is created a tax called the Complementary Income Tax which is equal to twenty percent (20%) of the income tax which is levied against natural and legal persons, including those who enjoy concessions from the state, and whose annual net taxable income is 20,000 lempiras[1] or more, in accordance with the established regulations of the Income Tax Law.

ARTICLE 2.—The Directorate General of Direct Taxation will be responsible for calculating and controlling taxation which is established by this decree in all matters related to the application and requirements of this decree.

ARTICLE 3.—Once the income tax and this complementary tax have been determined, the Directorate General of Direct Taxation will collect them both in a single schedule but will indicate in that schedule which portions are attributable to the basic tax and which to the complementary tax.

ARTICLE 4.—The Complementary Income Tax will be paid, together with the ordinary income tax, at the Central Bank of Honduras or the Ministry of Finance, whichever the Directorate General of Direct Taxation may indicate.

Payments on the Complementary Income Tax, as well as payments on the ordinary income tax which may be made after the closing dates and times which have been established for such payments, will be subject, each one of these taxes, to a surcharge of ten percent (10%); and if the payment should be effected through special process, then the said surcharge will be twenty percent (20%) also for each one of the types of taxes.

---

[1] One lempira equals 50¢ US$.

Mr. PASSMAN. Is there any indication of whether it will increase revenue?

Mr. MOSCOSO. Yes, it will increase revenues.

(The information follows:)

Personal and corporate tax rates by income brackets under the Honduras income tax law

Amount of income (U.S. dollars): [1]	Tax rate (percent)
Up to 2,500	3
2,500.01 to 5,000	4
5,000.01 to 10,000	6
10,000.01 to 25,000	8
25,000.01 to 50,000	10
50,000.01 to 100,000	15
100,000.01 to 250,000	20
250,000.01 to 500,000	25
Over 500,000	30

[1] Converted at 2 lempiras=$1.

Mr. PASSMAN. Is this one of the countries in which a big shot might build up a tax liability and then they possibly introduce a bill in the legislature forgiving him and letting him start all over again?

Mr. MOSCOSO. I do not recall that happening there.

As a matter of fact, this country's first income tax law was in 1955.

Mr. PASSMAN. Could you tell us what they collected through income taxes in 1962?

Mr. MOSCOSO. In 1962, income tax collected amounted to $4.6 million.

Mr. PASSMAN. The revised income tax law has been presented in the 1963 Congress?

Mr. MOSCOSO. It has been approved in Honduras.

It was approved June 25, 1963.

Mr. PASSMAN. The Internal Revenue Office was established in 1963. It does not say anything about a law. It says an "attempt to improve administration of existing revenue laws."

We are talking about income tax now?

Mr. MOSCOSO. Yes. A revised income tax law was scheduled and approved. We even have an estimate——

Mr. PASSMAN. If you want to put the information in the record, all right.

Mr. MOSCOSO. This is an estimate of the Government of Honduras:

(The information supplied follows:)

ESTIMATED INCREASED REVENUE FROM THE REVISED HONDURAN INCOME TAX LAW

The 20-percent surcharge on taxes levied on incomes which exceed $10,000 is expected to produce $600,000 annually. Law became effective July 1, 1963.

Mr. PASSMAN. Are not most of these things in here the estimates of those countries?

Mr. MOSCOSO. Some are. Some we work out ourselves.

Mr. PASSMAN. Which estimates are usually the highest?

Mr. MOSCOSO. It all depends.

Mr. PASSMAN. You are fair.

Mr. MINSHALL. No questions.

NICARAGUA

Mr. PASSMAN. The next country is Nicaragua, and the estimate for 1964 is $2 million.

Put all the spigots together.

Mr. MOSCOSO. It is $———.

Mr. PASSMAN. According to the book it is $2 million, but the actual is $———. That does not include the 12 or 15 other spigots from which they are eligible, such as the ROCAP for Central America? They are eligible for funds from that account?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Also from the Latin American region and the interregional account, and from the Social Progress Fund?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. The President's contingency fund, and all of the accounts under the U.N.?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Also, the Inter-American Development Bank, the International Development Association.

Last year you requested $298,000 to finance 72 participants during the year. How many participants did you program and what was the cost during fiscal year 1963?

But, first, we asked you the other day to give us a list of the number of acres that had been distributed. Did you ever get that information up for us?

Mr. PASSETT. It is being typed.

It turned out to be quite a complicated list.

Mr. PASSMAN. I imagine it did.

Mr. MOSCOSO. Last year we proposed 72 participants and we actually had 90.

Mr. PASSMAN. That is running true to form.

From what source did you get the money to increase the participants?

Mr. MOSCOSO. We had a lower cost per participant.

Mr. PASSMAN. Is that running true of your entire area?

Mr. MOSCOSO. No. In this particular case it is.

RURAL COOPERATIVE DEVELOPMENT PROJECT

Mr. PASSMAN. Did you request and justify the $38,000 you obligated for the rural cooperative development project, on page 207?

Mr. MOSCOSO. We did not.

Mr. PASSMAN. You did not request any funds for this project; did you?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. But you obligated $38,000; is that correct?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. What is the estimated cost to complete the project?

Mr. MOSCOSO. $1.3 million.

Mr. PASSMAN. This one started at $38,000, which you did not justify, and it is going to cost $1.3 million.

ELEMENTARY EDUCATION PROJECT

Why do you need $113,000 for commodities, and $138,000 for local expenses for the elementary educational project, on page 210?

Mr. STERNFELD. $113,000 is for commodities for material to be used by the teachers.

Mr. PASSMAN. What kind of materials?

Mr. STERNFELD. Books, visual aids to improve the curriculums—training materials.

Mr. PASSMAN. For what purposes is the $138,000?

Mr. STERNFELD. The local expense of $138,000 is for costs associated with these teacher-training centers, the four teacher-training centers.

NATIONAL PLANNING OFFICE PROJECT

Mr. PASSMAN. Are you setting up one of these national planning projects in this country?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. In fiscal 1963, you obligated $85,000 and you only spent $25,000 of that amount?

Mr. STERNFELD. That is right.

Mr. PASSMAN. You carried over $60,000, yet you are asking for $300,000 more.

Mr. STERNFELD. Right.

Mr. PASSMAN. Can you give us your estimated cost on that project?

Mr. MOSCOSO. $———

Mr. PASSMAN. I wish we had the thought years ago to ask you people to put that stuff on these pages. I bet we have obligated $250 billion if we had any way of knowing, according to the interpretation of the recipient nations. We do not have a single legal commitment for another dime in foreign aid after June 30, do we?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. If we stopped right now and did not give them another dime, we have no legal obligations outstanding?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Thank you.

If you made a list of every project we have allocated funds to and projected the costs to completion it is possible they have not yet manufactured an adding machine that would give you that total.

POLITICAL SITUATION IN NICARAGUA

Mr. MINSHALL. I have a question as to the general political climate of Nicaragua.

Mr. COTTRELL. President Schick won the election.

Mr. MINSHALL. Who is he?

Mr. COTTRELL. He has a good reputation. He is an educator. He is a prominent Nicaraguan who campaigned very vigorously throughout the country and won in a free election.

Mr. MINSHALL. Is he pro-American?

Mr. COTTRELL. Yes, he is.

Mr. MINSHALL. Who did he defeat?

Mr. MOSCOSO. And he is poor.

Mr. MINSHALL. And he is poor, you say. Who financed his campaign?

Mr. MOSCOSO. Probably the party that he belongs to.

Mr. PASSMAN. He just went into office, did he not?

Mr. MOSCOSO. He just went in. He is one of the people in Latin America that has generally been conceded to be personally very correct.

Mr. MINSHALL. Who did he defeat?

Mr. MOSCOSO. I cannot remember his name.

Mr. MINSHALL. Who was the incumbent? What happened to him? Did he get shot?

Mr. MOSCOSO. The incumbent was Luis Somoza.

Mr. MINSHALL. Where is he now?

Mr. MOSCOSO. He was up here a few weeks ago. I suppose he is back in Nicaragua again.

Mr. COTTRELL. Retired to private business.

Mr. MINSHALL. What happened to him?

Mr. COTTRELL. He voluntarily retired. He made an attempt to democratize the country.

Mr. MINSHALL. You have a little doubt about whether he is going to be the successor. You say while the new President Schick has been associated with and sponsored by the Somoza brothers, ———

Mr. MOSCOSO. That is right.

Mr. MINSHALL. Say that again slow.

Mr. MOSCOSO. ———

Mr. MINSHALL. Are the Somoza brothers going to run the country?

Mr. MOSCOSO. Mr. Schick, I believe, is going to make an attempt to run it democratically.

Mr. MINSHALL. Which team are you rooting for, the Somoza team or the Schick team?

Mr. MOSCOSO. I do not think anyone should have any doubt. I am rooting for Mr. Schick and a more democratic government.

Mr. MINSHALL. The Somozas were not so democratic?

Mr. MOSCOSO. In my estimation.

Mr. MINSHALL. The President-elect was sponsored by Mr. Somoza?

Mr. MOSCOSO. Yes. I think that is one of the reasons to lead us to believe he may be able to be allowed to run the country. As part of the effort that the outgoing President, Luis Somoza, initiated in order to democratize the country, he allowed more freedom of the press, and hopefully he will allow Mr. Schick to run the country without intervention on his part.

Mr. MINSHALL. If he does not, how does it look?

Mr. MOSCOSO. It would be very bad for democracy, I would say.

Mr. MINSHALL. Very bad for our aid program in Nicaragua?

Mr. MOSCOSO. Yes; it would be.

Mr. PASSMAN. This is the country in which the older Somoza was assassinated?

Mr. MOSCOSO. Correct.

Mr. PASSMAN. I visited that country in 1949. I was his guest. We drove down to his oceanfront retreat. I suppose you have been there. We spent the day.

(Off the record.)

PANAMA

Mr. PASSMAN. The next country in this area is Panama.

The fiscal year 1963 estimate is the misleading estimate of $———.

Now, let's put all these pieces together and get the total.

Mr. TENNANT. I want to say one thing in putting these figures together. Certain of the figures we are using in this composition are classified.

Mr. PASSMAN. If you put them together, they are not classified.

Mr. TENNANT. I think they could be.

I think the countries could easily determine components.

Mr. MOSCOSO. ———.

Mr. PASSMAN. Does that figure include all the other spigots?

Mr. TENNANT. Yes, sir. This $——— includes loans, grants——

Mr. PASSMAN. In this one instance you had development credits included?

Mr. TENNANT. Yes, sir.

Mr. MOSCOSO. This is the low range.

Mr. PASSMAN. Are they eligible for all these other types of aid we have indicated for other countries?

Mr. MOSCOSO. No.

Mr. PASSMAN. What is the answer?

Mr. MOSCOSO. There is one they are not members of, the Central American Bank for Economic Integration.

Mr. PASSMAN. Let us add that one to these others.

Mr. MOSCOSO. We are not holding anything back.

Mr. MINSHALL. I think you are going to have to have an appendix.

Mr. PASSMAN. The project book indicates you plan to have six contract technicians on duty at the end of fiscal year 1964.

Mr. MINSHALL. That is right.

Mr. PASSMAN. This is so, although you are not requesting any supporting assistance funds for Panama, is that correct?

Mr. MOSCOSO. That is correct.

Mr. STERNFELD. This is for the projects inaugurated in 1962 with supporting assistance funds under the $9.9 million supporting assistance grant made to the Republic of Panama in order to protect our investment. We feel we should continue some of these contract technicians.

Mr. PASSMAN. Did you obligate out of 1962 funds technicians for 1964?

Mr. STERNFELD. No, sir. These are contract employees. These are not U.S. direct hire technicians. We had 2-year contracts that were obligated back there.

Mr. PASSMAN. If I asked you 150 more questions on Panama we would get about the same type of answers we have received on the other countries so far, would we not?

Mr. MOSCOSO. I would not know what the questions are.

Mr. PASSMAN. If I asked about the same questions on the projects, would we get about the same kind of answers, is that right?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Thank you.

RURAL ROAD DEVELOPMENT

Mr. MINSHALL. I note in Panama, in your description, that Panama lacks personnel adequately trained in road construction. This seems to be a common complaint in all these countries, they do not have adequate roads, or adequately trained personnel to construct or repair the roads.

Mr. Moscoso. Generally speaking, that is the case.

Mr. MINSHALL. How much are we putting in the road construction program and in training people?

Mr. Moscoso. We are asking for $260,000.

Mr. MINSHALL. Will this complete the road training program and the road building program? Looking down the road, how much longer?

Mr. Moscoso. Two more years.

Mr. MINSHALL. How much more money?

Mr. Moscoso. The total for the whole program would be $2.7 million—from the initiation to the completion.

Mr. MINSHALL. How many miles of road have they built?

Mr. Moscoso. Up to now, 110 miles of new road.

Mr. MINSHALL. How much in total will they have?

Mr. Moscoso. I do not have the figure. I assume at the rate they have been building, about 30 miles per year, so they will do about 170 miles.

Mr. MINSHALL. Thank you, Mr. Chairman. That is all I have.

TOTAL UNEXPENDED BALANCE, FOREIGN ASSISTANCE PROGRAM

Mr. PASSMAN. Mr. Comptroller General, I am asking you to please prepare a sheet giving the amount of funds carried over. I always like to use verified figures.

We want this information in the three categories, the total amount. Military, annual; the total amount of unexpended funds, broken down into five categories; unobligated, whatever the figure is, and so forth.

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. Also, reservations, firm obligations, and then the total.

The only message I want to get over is to inform the membership of the amount of money you have on hand undisbursed in the pipeline.

We know the pipeline is up every year and the program is broader.

(The information supplied follows:)

Foreign assistance program (mutual security)—Preliminary June 30, 1963, unexpended balances

[In thousands of dollars]

	Unobligated/unreserved balance	Unliquidated obligations/commitments	Total
Economic assistance:			
Budgeted programs:			
Development loans	92,479	2,170,047	2,262,526
Development grants:			
General authorization	46,620	353,987	400,607
Special foreign currency programs	100	2,780	2,880
Surveys of investment opportunities	1,197	303	1,500
Alliance for Progress:			
Loans	90,815	280,371	371,186
Grants	4,245	56,192	60,437
Inter-American program for social progress	6,121	47,227	53,348
Social Progress Trust Fund		335,000	335,000
International organizations	431	133,985	134,416
Supporting assistance	7,382	358,139	365,521

Total unexpended balances, military assistance	2,288.5	71.1		2,359.6
Total, economic and military assistance	3,600.7	3,111.0	273.2	6,984.9

[1] Reserved to fund loan applications which have been reviewed and formally approved by the AID Administrator. Negotiations in process with the cooperating countries to work out final terms and conditions of loan agreements which will be executed upon completion of detailed negotiations.

Foreign assistance activities—Preliminary June 30, 1963, unexpended balances

[In thousands of dollars]

	Amount
Foreign aid (mutual security):	
Military assistance	$2,359,600
Economic assistance	[1] 4,625,279
Total, mutual security	6,984,879
Other foreign aid:	
Peace Corps	[2] 34,104
Ryukyu Islands	3,836
Cuban refugees	[3] 1,818
Migrants and refugees	[4] 8,969
Inter-American Development Bank	[5] 200,000
International Development Association	([6])
Total, other foreign aid	248,727
Grand total	7,233,606

[1] Includes revolving funds for investment guarantees, excess property, and borrowing authority, ECA.

[2] Excludes any unliquidated balances of prior year funds in contingency funds and administrative expenses, AID accounts from which this program was financed prior to fiscal year 1962.

[3] Excludes $13,800,000 reserved as result of cessation of flights from Cuba. Excludes unliqudated obligations for Cuban refugee program in prior year contingency fund account from which this program was financed until fiscal year 1963.

[4] Excludes unliquidated obligations in prior year contingency fund account from which this program was financed until fiscal year 1963.

[5] This balance on the U.S. Treasury accounts represents callable capital stock as explained on p. 83 of the appendix to the Budget of the United States. The Bank reports $517,402,000 of unexpended balances of funds from all sources. U.S. subscriptions become merged with resources provided to the Bank and disbursements cannot be identified as being applicable to specific authorizations of member nations. However, of this balance, $441,928,000 is in U.S. dollars, not all of which was derived from U.S. contributions.

[6] As of June 30, 1963, the unexpended balance for the U.S. Treasury accounts was zero. The Association reports $696,962,000 of unexpended balances of funds from all sources. U.S. subscriptions become merged with resources provided to the Association and disbursements cannot be identified as being applicable to specific authorizations of member nations.

Mr. PASSMAN. The committee will stand adjourned until 1 o'clock tomorrow afternoon.

FRIDAY, AUGUST 9, 1963.

COST OF A $1 MILLION DEVELOPMENT LOAN

Mr. PASSMAN. The committee will come to order.

I want to say that this hypothetical estimate on a credit by the U.S. Government of $1 million made in 1963 for 40 years with a 10-year grace period, at three-fourths of 1 percent annual service charge, submitted as an insert for page 6531 of the transcript, is goat stew. When we are paying 3½- to 4-percent interest to borrow money, and will doubtless continue to be paying at that interest rate, or more, then showing that we would have a net profit at the end of 40 years by collecting three-fourths of 1 percent service charge—well, if that is not goat stew, I have never tasted it.

I am going to keep this copy, but we hope you will submit an accurate answer to a legitimate question, which was asked by Mr. Rhodes.

Mr. SCHEINMAN. We will be happy to reexamine the statistics.

Mr. PASSMAN. We wish you would do more than reexamine the statistics. We want you to give us correct information.

I am going to request now that you submit a tabulation showing how much interest we would have to pay at 3½ percent to borrow

this million dollars for 40 years, taking into account the schedule of repayments on the credit we have extended. Then we want to subtract from that figure the amount we shall receive at three-fourths of 1 percent, the annual service charge. Then we want to show what the net loss will be to the U.S. Government on the operation, if we get all back that will be due, in accordance with the schedule.

The former AID Administrator, Mr. Hamilton, said about this thing, which we call development credits, was more than half grant to begin with, when you figure in the cost of the money.

I do not know who prepared this estimate, but, quite frankly, besides being ridiculous, it is amusing. If it were not really amusing, I would call it an affront to the committee.

Can you get that information up for us accurately?

Mr. TENNANT. I will compute the interest——

Mr. PASSMAN. We can borrow money at 3½ percent and lend it at three-fourths of 1 percent and end up with a net profit after 40 years, if we can make that kind of formula work, believe me, we have really staggered upon something to hang onto.

Mr. TENNANT. I believe that computation is based on the theory that not all loan funds used in the foreign aid program are borrowed by the U.S. Treasury.

Mr. PASSMAN. This tabulation is a fantastic piece of work.

Mr. TENNANT. We will compute it in the way you ask.

Mr. PASSMAN. Let us put the information in there accurately.

(The information supplied follows:)

HYPOTHETICAL COST OF $1 DEVELOPMENT LOAN (TERMS: 40 YEARS, 10 YEARS' GRACE, 0.75 PERCENT INTEREST)

The computation below is based upon the following assumptions:

All of the $1 million is borrowed at 3½ percent.

Rate of loan disbursement: $300,000 in first year; $500,000 in two installments, second year; and $200,000 in two installments, third year.

Treasury rate of 3½ percent paid on same basis; i.e., Treasury borrowings on same dates as Development Loan disbursements.

Principal repaid in equal semiannual installments after 10-year grace period.

Interest paid semiannually.

Debt incurred by Treasury borrowing reduced at same time development loan repayments are made.

	Interest cost at 3.5 percent	Interest earned at 0.75 percent
1st 3 years	$62,125	$13,313
Next 7 years of grace period	245,000	52,500
Final 30 years	525,000	112,500
Total	832,125	178,313

NOTE.—Interest cost over interest income: $653,812.

Executive branch note

The above computation of $653,812 does not represent the true cost of lending $1 million under the foreign assistance program. Foreign assistance expenditures are covered by current appropriations and funded from general revenues on the same basis as other executive programs. U.S. Treasury borrowing is for general fiscal purposes and cannot be attributed to any particular part of the Federal budget, including foreign assistance, but should be attributed proportionately to all Government expenditures.

The President's 1964 administrative budget envisioned a deficit of 12 percent to be financed by borrowing. If a proportionate share of the hypothetical $1 million loan resulted in an increase in the national debt, the interest income over interest cost, calculated as above, would be $99,855 over the life of the loan of 40 years, or an average of approximately $2,500 per year.

SHIPMENTS OF METRECAL AND SALAD DRESSING

Mr. PASSMAN. I read now from a newspaper article:

Faceless bureaucrats in the Agency for International Development, the fancy-titled Foreign Aid Administration, not so long ago shipped crates of Metrecal to dieting Far East natives.

And now several million pounds of salad dressing are waiting to be sent to gourmets of the Arab world. More than 2,350,000 pounds of soybean salad dressing will be shipped to Lebanon, the United Arab Republic, and Jordan late this month.

If you can, please find out whether this Metrecal is just a one-shipment deal or whether we are going to continue it.

U.S. TAXES

We were talking yesterday about the tax receipts in Costa Rica. I think the Costa Ricans are paying about $4.28 a year per capita. We computed this on $100 million total. I read in yesterday's paper that our treasury's tax take was $105 billion, 900,000 for fiscal 1963.

We shall put this news item in the record.

(The newspaper clipping follows:)

[From the Evening Star, Washington, D.C., Aug. 8, 1963]

YEAR'S TAX TAKE IS $105.9 BILLION

(By the Associated Press)

American taxpayers helped the Internal Revenue Service celebrate its 100th birthday anniversary by pouring a record tax take—$105.9 billion—into Federal coffers in the fiscal year which ended June 30.

The treasury bonanza included a new high for individual income and employment taxes, $67.9 billion, and a $6.5 billion increase over fiscal 1962, when receipts totaled $99.4 billion.

In surpassing the $100 billion mark for the first time, the Revenue Service noted that in its first year of operation 100 years ago the total take was $41 million.

AID TO RUMANIA

Mr. SCHEINMAN. Mr. Chairman, there is one open item from yesterday I would like to respond to this afternoon, if I may.

Mr. PASSMAN. Yes.

Mr. SCHEINMAN. You asked yesterday that I obtain information about an alleged foreign-aid program to Rumania.

Mr. PASSMAN. Yes.

Mr. SCHEINMAN. I am advised that there have been no discussions about foreign assistance to Rumania; that there have been no plans developed for a foreign-aid program to Rumania, and that there is no present prospect or intention to provide foreign assistance to Rumania.

Mr. PASSMAN. Does your response apply also to Public Law 480 aid?

Mr. SCHEINMAN. To foreign assistance, sir.

Mr. PASSMAN. To all foreign assistance, every category, every spigot?

Mr. SCHEINMAN. That is correct.

Mr. PASSMAN. There has been no discussion and no plan?

Mr. SCHEINMAN. That is correct.

Mr. PASSMAN. Have you discussed this matter with Secretary Rusk and Secretary McNamara?

Mr. SCHEINMAN. I discussed it with the officials of the executive branch who I believe are appropriate, sir.

Mr. PASSMAN. It is not secret as to what level you discussed this matter, is it?

Mr. SCHEINMAN. No; I discussed it with the Acting Administrator of the Agency for International Development, Mr. Coffin.

I have discussed it also with members of the State Department, including the Assistant Secretary of State.

Mr. PASSMAN. What is the name of the Assistant Secretary?

Mr. SCHEINMAN. Mr. Tyler.

Mr. PASSMAN. I hope you can go a bit further, because I think this discussion, if it was held, might have taken place at a much higher level.

Mr. SCHEINMAN. I have also discussed it with a Vice President of the Export-Import Bank.

SHIPMENT OF METRECAL AND SALAD DRESSING

Mr. TENNANT. On the Metrecal item and the salad dressing shipment you mentioned, we will check into those and see what the situation is. The last time we found that some Metrecal was financed from AID funds, we did recover the amounts from the cooperating country.

Mr. PASSMAN. You recovered the amount?

Mr. TENNANT. Yes, sir.

The way this operates is that the authorizations are issued in three-digit codes established by the Commerce Department. Sometimes a commercial importer buys items under that code which we would not honor.

In such cases, we recover an equivalent amount of funds from the aid-receiving country.

Mr. PASSMAN. I thought it was well to mention the matter, anyway, because there is no use to be shipping millions of dollars worth of foods that people are not going to use.

UNEXPENDED AND UNOBLIGATED BALANCES

You have given us a chart here which shows a total of other foreign aid, $7,233,606,000. What do you mean by "total other foreign aid?"

Mr. TENNANT. Mr. Chairman, one of the two sheets you have is the detail of the mutual security program. Then we take the total of the mutual security program and add to it other foreign aid items which you requested such as Peace Corps, refugee programs, Ryukus, and so forth.

Mr. PASSMAN. How does this figure compare with last year? You gave me a chart the other day that I have been using.

Mr. TENNANT. Those figures, sir, as you notice, were marked "preliminary." You pressed me for an early submission of figures before the Treasury figures came through to us.

Mr. PASSMAN. You gave me this tabulation the 1st of August, did you not?

Mr. TENNANT. Yes, sir; but——

Mr. PASSMAN. You had already been 1 month out of the end of the fiscal year.

Mr. TENNANT. There are two points I would like to bring up, Mr. Chairman. One is that while the Treasury gives us preliminary figures in this period, they do not give us final figures until the first part of September. During the present time, also, we are involved in a section 1311 audit, which is normal in most Government agencies, so any figures we give you at this time are preliminary, subject to these reconciliations.

Mr. PASSMAN. What have we been using in prior years? I want to be accurate.

Mr. TENNANT. The comparable figures——

Mr. PASSMAN. Last year.

Mr. TENNANT. To the $7.2 billion figure that you just read——

Mr. PASSMAN. Is comparable to this one. The one I gave you in my format to work by.

Mr. TENNANT. That figure last year was $6.8 billion.

Mr. PASSMAN. What did I use on my figures?

Mr. TENNANT. $6,889,186,000.

Mr. PASSMAN. What was the final figure for last year? These checks had not been drawn on the Treasury, had they?

Mr. TENNANT. The final figure for last year, the end of fiscal year 1962, was $6,870,200,000. That is the unexpended balance for the mutual security program on June 30, 1962.

Mr. PASSMAN. If I use the figures you gave me the other day, that are in the worksheet now, I am going to use the $7.263 billion, against the $7.233 billion, and omit the "other foreign aid." Does this chart take care of all of it, including Chapter II: Inter-American Bank, and all that?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. This is $248 million.

Mr. TENNANT. The figures we gave you today are the best preliminary figures at this time.

Mr. PASSMAN. Final as of this time?

Mr. TENNANT. Final as of today. Let me put it this way: Until we have final runs from the Treasury, we cannot give accurate final figures.

Mr. PASSMAN. I shall use then the figures you gave me the other day, and indicate the date the information was submitted. Had the disbursements then been made from the Treasury?

Mr. TENNANT. Yes; the disbursements had been made, sir.

The disbursements were made, but had not yet been reported.

Mr. PASSMAN. Do you assign these people cash in the field?

Mr. TENNANT. There are U.S. disbursement officers in the field, employees of the State Department, who effect oversea payments for AID.

Mr. PASSMAN. They have advance funds. How do you enter those accounts on statements downtown so as to draw a trial balance for June 30?

Mr. TENNANT. That is our problem. Until we get all the reports in, we cannot line the figures up properly. On the preliminary reports

we gave to you, we had not yet had all posts reporting. All of them have reported now. However, we have the problem of detailed reconciliation between the Agency's account and the Treasury account. The Treasury will not give us final figures until the first part of September.

Mr. PASSMAN. The Treasury statement shows a trial balance, and here is your balance sheet as of June 30, 1963. Do you understand?

Mr. TENNANT. Yes.

Mr. PASSMAN. They say we close the year with a deficit of $6.2 billion. At some subsequent date, we shall say 30 or 60 days later, you find that the field has disbursed certain funds. Out of what funds do they disburse this money? Is it an advance item charged on the Treasury statement, or does the Treasury reimbursement increase the expenditure during the new fiscal year?

Mr. TENNANT. No. As I understand the Treasury routine—and I am not an expert on Treasury accounting—the figures they put out early in July are preliminary figures.

Preliminary figures, as of June 30, are often released in July or August. Treasury has the same problem with all these reports coming in from, I suppose some 100 or 150 disbursement officers in the field. These disbursing officers have what is comparable to a checking account. Until the U.S. Treasury in Washington gets all this information in, they cannot provide final June figures.

However, any disbursements where the check is dated in June will be recorded in the final June 30 disbursement figures.

Mr. PASSMAN. They have already made an official closing and declared the deficit to be $6.2 billion, have they not? You do not keep a set of books open indefinitely after the closing period.

Mr. TENNANT. I am not an expert on how Treasury reports its Government deficit figure.

Mr. PASSMAN. There is a certain day on which they say, "This is it, and anything that comes in subsequent to this date will have to go in the next fiscal year."

Mr. TENNANT. That may be true, sir.

Mr. PASSMAN. I think that is.

Is the $515 million in purely unobligated funds holding firm?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. Is the $688 million of technically unobligated funds, but which are in a reserve status, holding firm?

Mr. TENNANT. Yes, sir. I have provided a listing of those commitments to the committee, as requested.

Mr. PASSMAN. So, we now have three categories here: Completely unobligated, technically unobligated and carried in the reservation category, and then the actual. As you gave us yesterday, it is $515 million completely unobligated, and $688 million technically unobligated but in a reservation category—is that figure holding firm?

Mr. TENNANT. That figure is holding firm.

Mr. GARY. Is that in addition to the $500-and-some million?

Mr. PASSMAN. Yes, sir. There are three figures.

Mr. TENNANT. The $688 million that we were discussing yesterday represents approved loans on which commitments have been made to cooperating countries, but on which the negotiations are currently in process and the final loan agreement has not yet been executed. We

are working with the cooperating countries, working out the details of each loan arrangement, repayment schedule, and so forth. This takes some time. It does not reach the technical section 1311 obligational status until sometime after initial loan approval and commitment and notice to the cooperating country.

Mr. PASSMAN. Have I described it correctly, using the $7.2 billion as the estimate I read into the record yesterday? That would be made up of three parts. One would be the totally unencumbered, or unobligated funds, of $515 million; $688 million of it would fall into the category you just described, technically unobligated but in a reservation category. The commitment has been made and the money is in reservation status pending final signing of the contract. When you subtract the $688 million and the $515 million, the remainder is operating out of firm, going contracts. Is that correct?

Mr. TENNANT. That is correct. As you know, Mr. Chairman, these figures you are talking about have always been included in the pipeline figures that you use.

RESERVATION OF LOAN FUNDS

The technique we are using on the loan program, it is my understanding, is the same technique as has been used by the development loan program since its inception, and also is used by the Export-Import Bank in their operations.

Mr. PASSMAN. But this is the first time we have ever referred to anything in economic aid as a reservation. Under the law, in military aid programs you have a right to reserve funds.

Mr. TENNANT. I know I used the term "reservation." Whether we refer to it as a reservation or commitment, is a fine point. We are reserving funds to finance the loan commitments.

Mr. GARY. They are funds committed to a certain country for certain projects?

Mr. TENNANT. Yes. Notices of the loan approval have been given to the countries and negotiations are in process toward consummating a formal loan agreement.

Mr. PASSMAN. You mean they are conditionally committed. Is that not right?

Mr. TENNANT. I know the specific loan agreement that you were talking about the other day had conditions precedent in it.

Mr. PASSMAN. It is conditionally committed pending signing of the contract?

Mr. TENNANT. Yes.

Mr. PASSMAN. We have many contracts going back to 1961, many more in 1962, some of which have been out 16 or 17 months, for which you have carried the funds as obligated and the contracts are yet to be signed. Is that a statement of fact?

Mr. TENNANT. There are some transactions like this, except I would refer to these as loan agreements rather than contracts.

Mr. PASSMAN. Am I making a statement of fact that we have some loan agreements, or commitments, that have been outstanding, some since 1961, many since 1962, that still are not yet signed?

Mr. TENNANT. That is correct.

Mr. SCHEINMAN. Mr. Chairman——

Mr. PASSMAN. If I may continue, please——

Mr. TENNANT. There are some of those, sir.

Mr. PASSMAN. You also have some that go back to 1960, at least one, which you carry as obligated without signed contracts, do you not?

Mr. TENNANT. There was one transaction in fiscal year 1960.

Mr. PASSMAN. How many in 1961?

Mr. TENNANT. Two transactions.

Mr. PASSMAN. How many in fiscal 1962?

Mr. TENNANT. In 1962, there are two transactions, and in 1963, there are 79 transactions.

Mr. PASSMAN. We are talking about the fiscal years. How many did you have in 1962 that we call fiscal 1963, fiscal 1963 but signed in calendar 1962, from July 1 to December 31?

Mr. TENNANT. July 1 to December 31?

The details are listed in that particular sheet. I have not recapped them in that specific 6-month category.

Mr. PASSMAN. We ran into one yesterday, $8.5 million. You went back, I think, to February 1962, and you still have to get the contract signed.

Mr. TENNANT. Yes; that is right.

Mr. PASSMAN. So, it is a question of haste, as far as I am concerned, in getting these funds behind an obligation, because any time you have something that is firm, you do not have to wait 2 or 3 years finally to get the contract signed.

Mr. TENNANT. I would not characterize it as haste, Mr. Chairman.

Mr. PASSMAN. I think this statement explains it. I am looking at one of many of them that you have down here on June 29, just before the fiscal year closed, another on June 28. While I get into another country, maybe Mr. Gary would like to look at the number of contracts you put in behind an obligation, or reservation, status just before the curtain dropped.

Mr. TENNANT. Mr. Chairman, this is a no-year account, and whether they are obligated on June 29 or July 1, really makes no difference, because the account does not lapse at the end of the fiscal year.

Mr. PASSMAN. Yes, but it gets into the obligated status. That practice accounts, no doubt, for a lot of the funds being deobligated. If you had left this in normal status, the chances are you would have had in excess of a billion dollars of purely unobligated funds. When you look at all these contracts you enter into on the last day of the fiscal year, and then some 16 or 17 months later you still have not gotten the agreements signed, it appears that you are operating in haste.

CHILE

The next country is Chile, for which the fiscal year 1964 estimate is $———; is that correct?

Mr. MOSCOSO. That is correct.

Mr. PASSMAN. Does that figure include all spigots, or is it merely the grant part?

Mr. MOSCOSO. This is the grant and loan estimate.

Mr. PASSMAN. Let us put all parts of the aid together, Mr. Controller.

Mr. MOSCOSO. $———.

Mr. PASSMAN. Is that the amount from all spigots that we were talking about yesterday?

Mr. TENNANT. Yes, sir; that is all spigots.

Mr. PASSMAN. Instead of $———, it is what?

Mr. TENNANT. $———.

Mr. PASSMAN. That figure does not include what they may get out of the Latin American regional account, does it?

Mr. MOSCOSO. No, it does not.

Mr. PASSMAN. They are also eligible for funds out of the interregional account, are they not?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. They are also eligible for funds out of the social progress trust fund?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. They are also eligible for money out of the contingency fund, are they not?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. They are also eligible for funds out of supporting assistance?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. They are also eligible for funds under the U.N. programs, are they not?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. If you will add all the other spigots, let the record show that we know, even when we go from $——— to $———, that is still incomplete, because you have these fabulous amounts in your regional accounts that will be disbursed somewhere.

They are also eligible for the Inter-American Development Bank, are they not?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. They are also eligible for the International Development Association?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. That is enough. Thank you.

CUMULATIVE AID TO CHILE

Could you tell us the total amount of assistance that we have given to Chile since the inception of the program?

Mr. MOSCOSO. Excluding the Export-Import Bank, it is $498,500,000.

UNEXPENDED BALANCE

Mr. PASSMAN. Can you tell us the total amount that you have to the credit of Chile undisbursed as of June 30, 1963?

Mr. MOSCOSO. $107,770,000 estimated.

Mr. PASSMAN. You have over a year's pipeline for Chile if you did not get any additional appropriation, based upon the annual expenditure?

Mr. MOSCOSO. Yes, sir, that is correct.

Mr. PASSMAN. Going over these preliminary figures that you have given to us, the amount on hand unliquidated, if you are to reduce the preliminary estimates that would likewise reduce some of these other figures. So, you are doing business on an estimate for the previous year's expenditures, and not actual figures?

Mr. TENNANT. That is correct, sir.

CHILE'S INTERNATIONAL TRADE BALANCE

Mr. PASSMAN. The divider sheet indicates Chile's international trade balance experienced a significant turn from minus $85 million in calendar year 1961 to a plus of $60 milion in 1962. Is that correct?

Mr. MOSCOSO. Yes.

Mr. PASMAN. Have you any information as to the actual trade balance for calendar 1963, thus far?

Mr. MOSCOSO. No, sir; we do not have it here. We would be glad to supply it for the record.

Mr. PASSMAN. All right, sir.

(The information requested follows:)

Chile's trade balance 1st quarter calendar year 1963

[In millions of dollars]

1st quarter calendar year 1963:	
Imports	84.4
Exports	78.7
Trade balance	−5.7

However, the balance-of-payments situation during calendar year 1963 has been as follows:

[In millions of dollars]

	Calendar year 1963, 1st quarter	Estimate for calendar year 1963
Merchandise and services	−5.7	−77.0
Private autonomous capital	−1.2	14.6
Official autonomous capital	13.0	80.1
Short-term capital, errors, and omissions, etc	−7.4	
Balance	−1.3	+17.7

STATUS OF EARTHQUAKE LOAN AND TREASURY STANDBY CREDIT

Mr. PASSMAN. Several months ago, the committee and the Congress approved an appropriation of $100 million in the form of a loan to Chile to assist in that country's earthquake reconstruction program. What is the status of that loan?

Mr. MOSCOSO. The loan has been disbursed.

Mr. PASSMAN. In its entirety?

Mr. MOSCOSO. All the funds have been spent. But there are $18 million in funds on which the bills are being processed for reimbursement.

Mr. PASSMAN. They also had a Treasury credit, as I recall. Did they ever utilize that Treasury credit?

Mr. STERNFELD. No, sir; they did not. You asked that question earlier, and we checked with the Treasury Department.

Mr. PASSMAN. They did not utilize that Treasury credit?

Mr. STERNFELD. No, sir.

Mr. PASSMAN. For how much was the Treasury credit?

Mr. STERNFELD. There was a standby agreement, I think, for $15 million.

Mr. PASSMAN. Is that credit still active?

Mr. STERNFELD. No, sir. It has been terminated.

U.S. AID OBJECTIVES

Mr. PASSMAN. Page 45 of the justifications indicates that [off the record].

Would you comment on that statement?

Mr. MOSCOSO. We are very much interested in assisting the Chileans in the implementation of their 10-year program. In order to do that, we want to be sure that their budget and their plans are in complete coordination. We want to be sure that the Chileans will have the local resources necessary to finance their participation in the plan.

BUDGET DEFICITS

Mr. PASSMAN. Could you tell us the total amount of aid to Chile in fiscal year 1960?

Mr. MOSCOSO. $46.6 million, including the military.

Mr. PASSMAN. They had a Treasury deficit that year of $94 million.

Could you tell us the amount of aid in 1961?

Mr. MOSCOSO. In 1961, it was $128.7 million, including the military assistance.

Mr. PASSMAN. The deficit went up to $97 million that year.

Could you tell us the amount of aid in 1962?

Mr. MOSCOSO. In 1962, it was $244.6 million.

Mr. PASSMAN. The Treasury deficit jumped up to $174 million that year.

DOMESTIC REVENUES AND CONVERSION INTO U.S. DOLLARS

Last year, you indicated that the domestic revenues, actual, for 1960, would be $674 million. The total, however, was only $506 million. Evidently they did not do much tax raising.

For 1961, you estimated the revenues in dollar equivalent would be $773 million. The total was only $569 million, still an indication of no increase in tax collections.

For 1962, your own figures, dollar equivalent, you estimated $890 million. The total was only $657 million.

These statistics just do not hold very firm, do they?

Mr. MOSCOSO. May I have Mr. Sternfeld explain this, Mr. Chairman?

Mr. STERNFELD. When last year's book was put together, for the estimate of 1961 revenues, as you indicated, we said $773 million. At that point in time, we used an exchange rate of 1.05. That produces, in millions of escudos, 811.7 escudos. In the book this year, to show comparability against 1962, we converted escudos at the rate of 1.4—the rate in 1962, not 1961. But if you were to compare the escudos, if you multiplied 569 times 1.4 escudos, you would get 796.6 compared to the earlier estimate of 811.7.

Mr. PASSMAN. Every one of them is off. In every country we go into, these statistics show that the people are not increasing their taxes, and you change the exchange rate. Did I read the figures correctly for the 3 years that I compared?

Mr. STERNFELD. Yes, sir, that is correct.

Mr. PASSMAN. How about you giving your "escudo" arrangement on 1960, then? They were off there.

Mr. STERNFELD. For 1960, the calculation in the fiscal year 1964 presentation was converted at the rate of 1.4 escudos.

Mr. PASSMAN. How about the next year? How did you "escudo" that into a deficit?

Mr. STERNFELD. What do you mean?

Mr. PASSMAN. 1961. I used 3 years.

Mr. STERNFELD. That is correct. If I may explain, we are trying to show each year's book at the comparable rate, but our conversions are done at the same rate so this will not be askew. We did this in last year's book, and we have done it in this year's book.

Mr. PASSMAN. In practically every country on which we examine, you are off, say, about 2 to 1. We examined on one country where the actual revenue was about 50 percent of the estimate.

Mr. STERNFELD. That is correct.

Mr. PASSMAN. It does not appear to me that they are increasing their taxes or they would not have this kind of situation.

Mr. STERNFELD. Mr. Chairman, the actual facts show for this 1 year, 1961, that our estimate was too high last year; that there was a shortfall of 15 million escudos in comparison. We are not trying to hide the fact that that estimate was too high.

Mr. PASSMAN. But you have to take into account that in both instances you are dealing with dollar equivalents. You state this year this is the dollar equivalent. The next year this is the dollar equivalent. If you are going to take the difference in the exchange rate, you would also have to take the difference in the U.S. dollar exchange rate and its purchasing power.

I would rather take the dollar equivalent one year and compare it with the dollar equivalent the second year.

RELATION OF GOVERNMENT REVENUES TO COST OF LIVING CHANGE

Mr. MOSCOSO. I think, Mr. Chairman, perhaps the best way of comparing this is to take the percentage change in revenues and then the percentage change in the cost of living. It indicates——

Mr. PASSMAN. Of course, you would have to apply that same kind of formula to the dollar, too.

Mr. MOSCOSO. Yes.

In this case, the percentage change in revenues was 12.4 percent, but the percentage change in the cost of living was only 7.7.

Mr. PASSMAN. That fact means, it seems to me, they should have reduced their treasury deficit. As we increase our aid, then, of course, it looks as if their budget deficit should decrease.

INCREASE IN CAPITAL OUTLAYS

Mr. MOSCOSO. They increased their capital outlays, Mr. Chairman. They increased them from $137 to $146 million.

Mr. PASSMAN. Am I looking at the records correctly, that the bigger the aid program, as it is stepped up in those 3 years substantially, their deficit went up just about in proportion?

Mr. MOSCOSO. Mr. Chairman, we make a commitment today, and the effect will not be immediately discernible in the income of that country. It will come somewhat later. We are giving you the actual figures as they have been occurring.

On the divider sheet, you will see there has been an increase in capital outlay, since 1962, from $146 to $183 million.

ABILITY OF CHILEANS TO HANDLE OWN AFFAIRS

Mr. PASSMAN. Earlier this week, we were discussing the Latin American countries, and we agreed that some of them did not have the leadership or the ability at the top echelon to handle these programs. Then we moved into the nations where they had the know-how and the ability, and they were not particularly anxious for their people to know it was American aid.

What category do these people fall in? Do they possess the know-how?

Mr. MOSCOSO. Yes, sir, I think they have the know-how. They have a very difficult situation arising from many years of distortion in their economy. They started to be primarily a metal producing country, having two or three minerals which provide them with most of their foreign exchange and most of their employment—saltpeter or nitrates and copper.

They are now diversifying their economy. They find that port developments which were very useful in the shipping out of their nitrates and copper, are not very useful in shipping out diversified industrial products like some of the steels that they are now making in the southern part of Chile.

So, they have had to make considerable changes in the distribution of their products and in their railroads, roads, and so forth. So, they are undergoing a very difficult period right now. But intellectually, I think they are one of the superior people. They are well educated. I think if we give them the help that I hope we will give them, they will be able to help us, and they are already helping us in certain ways.

Mr. PASSMAN. In what ways?

Mr. MOSCOSO. For instance, let us say they are helping their Latin American colleagues. The President of the Inter-American Development Bank is a very distinguished Chilean.

Mr. PASSMAN. Is he the one who went to Paris and spent about $12,690 in a month?

Mr. MOSCOSO. He also sold some $25 million worth of bonds over there, Mr. Chairman.

Mr. PASSMAN. He could have sold that many downtown and would not have had to spend nearly $13,000. Did you ever look at that expense account?

Mr. MOSCOSO. Yes, I did, Mr. Chairman, but I do not think that reduces the intellectual capacity of the country.

Mr. PASSMAN. No. It appears to me he is plenty smart.

Mr. MINSHALL. Mr. Moscoso, you told the chairman a moment ago that you thought the Chilean people were able to make their own decisions and handle their own affairs. However, right in your own statement you say in the gray area, ———.

Mr. MOSCOSO. That is right.

Mr. MINSHALL. In other words, you imply they cannot make the proper decisions.

Mr. MOSCOSO. If you will give me an opportunity, I will explain that the latent capacity of a person is not utilizable unless you can give him the necessary skills, and even if you might be born with a very high IQ, unless you get the necessary training and the necessary experience——

Mr. MINSHALL. They do not amongst themselves have the necessary desicion making ability today?

Mr. MOSCOSO. I said they needed our assistance in order to be able to develop that capability.

Mr. MINSHALL. They do not have it today?

Mr. MOSCOSO. They have the potential capability.

Mr. MINSHALL. They do not have it until it is developed; is that it?

Mr. MOSCOSO. They have the potential capability.

Mr. PASSMAN. If we should actually try to develop any justification for these aid programs based just upon common sense and our own predicament, we could not do it, could we? We know we are having to borrow this money. Our annual budget deficit has become an accepted practice now. Nobody ever talks about balancing the budget, and the public debt is going up.

I noticed in this morning's paper that our exports are off 5 percent. Did you see that item?

Mr. MOSCOSO. Yes. That is a very short-term operation.

Mr. PASSMAN. We know that our exports are falling. We know we are losing our markets.

Talking about the upset and the change in the economy on account of this, that happens in every nation on the face of the earth every year. There are always some changes. This is as old as the country. How old is this country?

Mr. MOSCOSO. This country achieved its independence at the time the other Latin American countries did.

Mr. PASSMAN. About how old is the country?

Mr. MOSCOSO. For about 150 or 160 years, it has been an independent nation.

Mr. PASSMAN. How about the literacy rate in this country?

Mr. MOSCOSO. It is 80 percent.

Mr. PASSMAN. Up to within about 10 percent of ours?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. What is the population?

Mr. MOSCOSO. 7.9 million.

INCOME TAX

Mr. PASSMAN. How much income tax did they collect from the people last year?

Mr. MOSCOSO. Income taxes last year, $135.8 million.

Mr. PASSMAN. How much is that per capita? That is better than some of the other countries. Is this direct income tax?

Mr. MOSCOSO. Yes; direct income tax. That is about $17 per capita.

Mr. PASSMAN. There is a $17 per capita tax. Their literacy rate is 80 percent. We have a literacy rate of 90 percent in this country, and I believe our capita income tax payment is about $555.

Did they ever pass the income tax law that they have been debating down there for years?

Mr. MOSCOSO. It is still being debated, but they did approve a constitutional amendment which will permit now the land reform program to move faster.

Mr. PASSMAN. Passing laws and putting them into effect are two different matters; are they not?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. They are still debating that income tax problem?

Mr. MOSCOSO. We also have been debating ours, Mr. Chairman, for 3 years.

Mr. PASSMAN. We have passed more laws since they started that debate. I suppose there have been five or six of them. We extended the law this year, I think on just about 3 days' notice, on the excise tax.

We were told several years ago that Chile was getting ready to increase the income tax. How much longer are they going to debate the issue?

Mr. MOSCOSO. I hope it is not as long as we have been debating ours.

Mr. PASSMAN. We have been debating this political tax bill, I believe, since about February. They have been debating theirs about 4 years.

Mr. MOSCOSO. I mean——

Mr. PASSMAN. Let us get right down to facts.

You know and I know for several years before this committee the witnesses have said that Chile was considering increasing the income tax. The following year they said the same thing. The following year, the same thing. Last year they were on the verge of enacting the law. This year, you say they are still debating it.

What tax have we been debating here for 4 years? I think we have passed four tax laws.

Mr. MOSCOSO. I was here last year and told you that these people were debating their income tax bill, and I am sorry to say it has not been approved yet.

Mr. PASSMAN. What is holding it up, Mr. Moscoso?

Mr. MOSCOSO. I can assure you it is not lack of effort.

Mr. PASSMAN. We all represent the American taxpayers. We are extracting taxes to the point that it is almost impossible for people to continue with the burden at this rate. But undoubtedly you will recommend pouring tens of millions of dollars more into this country. Have you any idea when they will enact this tax law?

Mr. MOSCOSO. I think it probably will be enacted before the end of the calendar year.

Mr. PASSMAN. Upon what factors do you base that prediction?

Mr. MOSCOSO. The fact that it has already been approved in the house and now it is in the senate.

Mr. PASSMAN. Did we not discuss some other Latin American country that approved the bill in the house and now it has gone to the senate? I wish you would get us a report on this, because personally——

Mr. Moscoso. I will be happy to give you that, Mr. Chairman.

Mr. PASSMAN. Please do that, and give us a general idea whether they are just going to keep on debating this matter for years while we continue pouring our money into the country.

(Information subsequently supplied follows:)

CHILEAN TAX REFORM BILL

Chile has had some form of income taxation since the 19th century. The first general income tax law was enacted on January 2, 1924.

Prior to 1924, however, government expenditures were financed largely through the customs house. During the period 1924–32, a system of internal taxes was established, which from 1932 to 1937 was amended, revised and supplemented. It was during this latter 5-year period that the general outline of the present system was established. With the beginning of serious inflation in 1939 many complexities were added to the system through the proliferation of numerous surcharges, additional and transitory taxes. This trend towards complexity became increasingly accelerated after 1948 as continued severe inflation created the need for more piecemeal legislation intended to maintain the level of real revenues. These revenue problems reached their most acute phase in 1952, but since then, the system has been relatively sensitive to price changes. Fewer changes and less tinkering with the system have been needed. However, it has become evident, particularly with mounting taxpayer resistance that the system which developed is unsatisfactory. Its makeshift growth is reflected in problems of undue complexity, unfairness in burden distributions, and various economically questionable features.

Recognizing the need for really effective tax reform legislation, President Alessandri, in his message to the Chilean Congress on May 21, 1961, said that the Government of Chile had "* * * set as a goal for 1961 and 1962 the study, approval, and implementation of projects to introduce necessary changes * * * in tax legislation in order to satisfy economic development demands."

The strategy of reform which was developed in Chile had two prongs. Initial emphasis was given to the administrative side, so as to prepare the implementational machinery necessary for substantive change. An organic administrative reform bill was enacted in December 1962. On the substantive side, a reform bill submitted by President Alessandri to Congress in September 1962 passed the Chamber of Deputies in 1963. Final revision, and Senate passage of this bill, which includes comprehensive reform of the income and inheritance taxes are expected imminently. Although enactment of this comprehensive legislation has not moved as quickly as expected, the administrative reforms have proceeded energetically. On the basis of the organic law, the National Tax Service has been completely reorganized; collection, audit and investigation functions measurably strengthened; personnel and taxpayer training programs successfully conducted; operational manuals written and distributed; and the general level of administration dramatically improved. For the first time in Chilean history, criminal prosecutions have been initiated against a number of tax evaders.

Finally, and on the basis of a law adopted in November 1962, an extensive property tax program has been launched. A countrywide mapping and reassessment program is slated for completion in 1964. This program is intended to add many parcels to the tax rolls and to update present unrealistically low assessments. Individual reassessment of every separate property is in process, with scheduled completion by end of 1964.

CONDITIONS ON U.S. AID TO CHILE

Mr. Moscoso. Mr. Chairman, we have made our aid—the loan program particularly—conditional on their maintaining a level of taxation and having a surplus.

Mr. PASSMAN. Their having a surplus?

Mr. Moscoso. Yes, having a current account surplus so they can invest——

Mr. PASSMAN. A budget surplus?

Mr. Moscoso. A budget surplus in their operating expenses which they can invest in development projects.

Mr. PASSMAN. We are telling them, "Do as I say, not as I do." If ever a country has made a mess of its own budgetary matters, we have done so. I wonder if they ever throw that fact back at you? I think we have had maybe five small surpluses during the past 32 years. If you average it out for 30 years, our budget deficit has been $9 billion per year for those three decades.

LEVEL OF FISCAL YEAR 1963 AID

You are still disbursing money there, are you not?

Mr. Moscoso. Yes, sir.

Mr. PASSMAN. How much did you disburse last year?

Mr. Moscoso. $41 million.

Mr. PASSMAN. I mean, rather, the total amount that you obligated.

Mr. Moscoso. From AID——

Mr. PASSMAN. From all segments.

Mr. Moscoso. Social Progress Fund——

Mr. PASSMAN. All of it, in total.

Mr. Moscoso. The total, $88.5 million.

(Off the record.)

Mr. Moscoso. Just the economic and military was $97.5 million.

Mr. PASSMAN. You have Public Law 480 and all the others.

Mr. TENNANT. Including Public Law 480, $97.5 million is the total.

Mr. STERNFELD. Including the military. Eighty-eight and one-half million dollars does not include the military.

Mr. ANDREWS. He has testified that the per capita income payment down there was $17.

Mr. Moscoso. This is the income tax only.

Mr. ANDREWS. I figured out a few minutes ago that, based on the total amount of $97.5 million, and with a population of 7.9 million, our aid to them averages $11.10 per capita, as against their per capita income tax of $17. If you remember, yesterday we had another country down there, Costa Rica, whose income tax collections averaged $4.30 or $4.28 per capita, and our aid benefit to them was $10 per capita.

Mr. PASSMAN. Would it not follow, then, Mr. Moscoso, that our aid amounts to about 70 percent of their total income tax collections?

Mr. Moscoso. More or less. There are other taxes, of course, which they pay.

Mr. PASSMAN. In that connection, there is no country on the face of the earth with as many buried taxes as we have in the United States. All that is worked into the cost of what the consumer purchases, and then on top of those taxes we have the income tax. That is the source of revenue that we depend pretty much upon to run our Federal Government, is it not—the excise taxes and income tax?

Mr. Moscoso. That is right.

Mr. PASSMAN. Last year you justified a $3.3 million development grant loan for Chile. What was the amount of your development grant program there for fiscal year 1963?

Mr. Moscoso. $6.3 million.

Mr. PASSMAN. You asked last year for $3.3 million. Your book shows $4.9 million. You wound up with $6.3 million. You do it just about the way you want to.

I have stated those figures correctly, have I not?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. I notice, on page 237 of the project book, that you allocated $6,000 worth of commodities under "Supporting assistance in 1963." Does this country get supporting assistance?

Mr. MOSCOSO. Yes, sir. You willl find quite a number of these in the book. They are small amounts which pertain to various types of assistance that we gave to a number of countries at the time of the Cuban——

Mr. PASSMAN. I know, but are they eligible for supporting assistance?

Mr. MOSCOSO. Yes; they are.

MODERNIZATION OF INTERNAL TAX ADMINISTRATION

Mr. PASSMAN. Local expense under modernization of internal tax administration is shown on page 239. They are still debating the tax law.

Mr. MOSCOSO. We are assisting them in the administrative province of tax collection. We have a very good and strong program there which seems to indicate that we are having some success in bettering their tax collection.

Mr. PASSMAN. Is this one of the countries where when the big shots build up tax liabilities, they pass legislation forgiving them all and starting over again?

Mr. MOSCOSO. That has happened.

That is why we are trying to help them to do a better job.

Mr. PASSMAN. I expect they could teach us a lot of things. That is a clever trick.

MODERNIZATION OF COMPTROLLER GENERAL'S OFFICE

How much did you request and justify last year for the modernization of the Comptroller General's Office, project 241?

Mr. TENNANT. $150,000.

Mr. PASSMAN. What is the average annual salary cost of the four public administration specialists you propose to contract for under this project?

Mr. STERNFELD. $35,000.

Mr. PASSMAN. $35,000 per person per year?

Mr. STERNFELD. Including the overhead charges of the firm; yes, sir.

Mr. PASSMAN. Is this one of the countries in which public officials can retire at full pay at age 50?

Mr. MOSCOSO. I don't recall but it may be one of the countries.

Mr. PASSMAN. It may be.

Mr. MOSCOSO. But I am not sure, Mr. Chairman.

Mr. PASSMAN. You reach the ripe old age of 50 and retire at full pay.

Find out about this country specifically, will you?

Mr. MOSCOSO. Yes, sir.

(Information supplied follows:)

RETIREMENT OF PUBLIC OFFICIALS

A civil servant can retire at age 50 at full annual pay computed at the average pay of the last 3 years of service if he has contributed 30 years to the social security system or has had 35 years of public service.

RURAL EXTENSION PROJECT

Mr. PASSMAN. How much did you justify last year for the rural extension project, shown on page 243?

Mr. MOSCOSO. $345,000.

Mr. PASSMAN. You asked for $345,000 and you obligated $607,000. Is that right?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Are you charged with the responsibility of getting this figure in the book far enough above what you actually requested so as to equal the amount that the budget requests?

Do you agree, Mr. Moscoso, that unless you did obligate according to what we run into in almost 100 countries, you never would be able to obligate the amount of the appropriation? We never have actually gone through the books and added up all of these justifications, so we go through the books and we find that almost without exception you obligate far in excess of what, sometimes three times as much, you justified.

Why did you have to do this?

Mr. MOSCOSO. Mr. Chairman, we did not obligate beyond the total appropriation which was given.

Mr. PASSMAN. What amount did you request?

Mr. MOSCOSO. We requested $345,000.

Mr. PASSMAN. And you obligated $607,000?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. You did not obligate beyond the appropriation?

Mr. MOSCOSO. I am referring to the total program.

Mr. PASSMAN. Somewhere along the way you must have done so, because you said yesterday none of us ever knew what the total amount of these estimates would be unless they are added up.

I think we ran into one project for which you allocated $17,000 and before we are through it will be an $18 million project.

I think the best suggestion we ever made for the format is that you should show completion costs.

Let us ask for the completion costs on this one and see what we are getting into.

Mr. MOSCOSO. $1,579,000.

Mr. PASSMAN. And it started off in 1962 with $348,000?

Mr. MOSCOSO. This is one of the most important programs that we have in Chile.

Mr. PASSMAN. We have not run into one yet that was not important when we get into it.

Mr. MOSCOSO. Chile was a net exporter of food, Mr. Chairman, at one time.

Mr. PASSMAN. Are not all of these items important, in your opinion?

Mr. MOSCOSO. Some more than others. I believe this is one of the most important ones in Chile.

Mr. PASSMAN. What is this project intended to accomplish?

Mr. MOSCOSO. We are planning to increase the agricultural sector in Chile at least 5.5 percent per year.

We are trying to bring Chile back again to the position of being a net exporter—at least not a net importer—so as to reduce drain on the amount of money that Chile requires from external sources.

Mr. PASSMAN. Do they have an agricultural price support system there?

Mr. MOSCOSO. In certain instances. We are trying to help them correct some of the deficiencies of the system.

Mr. PASSMAN. If you happen to work it out let our Agricultural Committees of the House and Senate know about it. They are trying to work ours out, too.

Mr. MOSCOSO. This is a smaller country and a smaller problem.

Mr. PASSMAN. But you know we have our agricultural program in just about as big a mess as it can be gotten into; do you not?

Mr. MOSCOSO. I don't know about that.

Mr. PASSMAN. I will say that my statement is quite close to actual fact. If there ever has been a government program that is more messed up than our agricultural program in America, I do not know what it is, except, of course, this foreign-aid program.

Mr. ANDREWS. I'll bet they will make more friends teaching them how to farm than teaching them how to collect taxes.

SCHOLARSHIP PROGRAM

Mr. PASSMAN. I note that you obligated $25,000 to initiate the scholarship program in fiscal 1963.

Mr. MOSCOSO. We obligated $25,000; yes, sir.

Mr. PASSMAN. That obligation leads into an application for $4 million in development credits; does it not?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Let us project the cost to complete this project.

Mr. MOSCOSO. $125,000 to completion.

Mr. PASSMAN. I refer to this $4 million. It leads into what amount?

Mr. MOSCOSO. This may be perhaps closer to $2 million than $4 million. This has not as yet been fixed.

Mr. PASSMAN. You estimate it at $4 million and you ask for that amount, yet you say it may be $2 million.

Mr. MOSCOSO. We are trying to help Chile create an institution similar to a very successful one which is set up in Colombia, which has permitted the Government to furnish scholarships to the best students of the country and in that way increase their skills and capabilities.

In the case of Colombia, this institution has been able to do the job of providing scholarships without any additional assistance from us. In other words, we are creating an institution——

Mr. PASSMAN. You are now getting ready to give them $4 million. It could be $6 million or it might be $2 million?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. The program is so unfirm you do not know whether it will cost $4, $6, or $2 million dollars, but you ask for $4 million.

Mr. MOSCOSO. It is one of those applications which is within that range we have asked for.

Mr. PASSMAN. Do you have an application pending?

Mr. MOSCOSO. No.

Mr. PASSMAN. How did you arrive at $4 million?

Mr. MOSCOSO. This is the estimate that our mission gave us at the time we were preparing the book but we learned later it may be possible——

Mr. PASSMAN. How did they know Chile would apply for a credit from us?

Mr. MOSCOSO. This is something which has been discussed with the Ministry of Education.

Mr. PASSMAN. We were told earlier that you do not discuss these propositions with the country until you get the money; that they did not know what we planned until the money was appropriated.

Time after time, however, we have found out that the country knew as much about it as we did.

We ran into one instance where the application pending was the exact amount you had in the book.

I am sure they know what we are doing.

PROJECT FOR OFFICE OF ENGINEERING SERVICES

Did you request and justify the $135,000 that you obligated for the Office of Engineering Service projects, on page 249?

Mr. STERNFELD. There is a different title——

Mr. PASSMAN. First, did you justify it?

Mr. STERNFELD. We justified $125,000 under a different title, sir, in last year's book.

Mr. PASSMAN. Under what title?

Mr. STERNFELD. "Physical planning improvement."

Mr. PASSMAN. What was the project number?

Mr. STERNFELD. 513R-70-RA.

Mr. PASSMAN. Now you change it. It is a different project number altogether. You are dealing with a different project.

Mr. STERNFELD. That is right.

Mr. PASSMAN. Look it up and let us get the matter straight.

(Discussion held off the record.)

Mr. PASSMAN. Last year you had an improvement program. Has that project been canceled?

Mr. STERNFELD. That project becomes project called——

Mr. PASSMAN. Has that project been canceled? Physical planning improvement would certaintly be different from Office of Engineering Services.

Mr. STERNFELD. That is right.

Mr. PASSMAN. What happened to the physical planning improvement?

Mr. STERNFELD. That was not carried out.

Mr. PASSMAN. Was the project canceled?

Mr. STERNFELD. That project was incorporated in the project called Office of Engineering Services.

Mr. PASSMAN. Is the Office of Engineering Services one which has a physical planning improvement program in its setup?

Mr. STERNFELD. They have engineers in that Office who work with the Government of Chile to help them develop projects which will improve the physical infrastructure of Chile.

Mr. PASSMAN. Was that project in reality canceled and what we are talking about now is a new project?

Mr. STERNFELD. No, sir. The project which was described under "Physical planning improvement" called for seven U.S. staff members at a cost of $110,000.

What happened here was that it was carried out in fiscal year 1963 at the cost of $110,000, under the heading "Office of Engineering Services."

The cost of the participants, which were higher than originally estimated by $10,000——

Mr. PASSMAN. Let us get this record straight.

You canceled that project, physical planning improvement. It was completely erased.

Then you created a new project, Office of Engineering Services, under a new number altogether. Now you are asking for $150,000 for five technicians for fiscal 1964. Is that correct?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. I realize you can do anything you want to with the account, but if you would stick a little closer to some of these things it would make more sense, so far as I am concerned.

BREAKDOWN OF LOCAL EXPENSES, TECHNICAL SUPPORT PROJECT

Would you give us a breakdown and the amount of each item under local expenses, the estimates of $270,000, page 250?

Mr. STERNFELD. We will have to supply that.

(The information requested follows:)

Technical support project—Local expenses

Local expenses included in technical support project for fiscal year 1964:

65 local employees salary costs	$165,000
Office rent and maintenance	30,000
Garage and warehouse rent	5,000
Printing, binding, and others	5,000
Participant language training expenses	23,000
Operating expenses	32,000
Communications	10,000
Total	270,000

ASSISTANCE TO INDUSTRIAL DEVELOPMENT BANK

Mr. PASSMAN. Is there any new project proposed on page 251?

Mr. MOSCOSO. The Industrial Development Bank.

Mr. PASSMAN. This is where we get into a lot of trouble. You stick one of these green sheets in here. Years ago, until we finally pinned it down, you had projects listed. You took deobligated funds, started hundreds of projects, allocated a little money and then switched them to category "C," for "continuing," but in reality they were new projects.

Now you come up with the divider sheet. Unless we ask the questions the next year you say, "It was on the green sheet."

Why not set up a page on this book, and the Comptroller agrees with me—

Mr. SCHEINMAN. We have already agreed with you.

Mr. TENNANT. You requested that and we agreed that we would effect the change next fiscal year.

Mr. PASSMAN. We now request it again, in case you might forget it.

Mr. MOSCOSO. I think it is a good idea.

Mr. PASSMAN. Let us see where this will lead us. You have one here for $66,000, "Industrial Development Bank, AD92AA5, $66,000."

Mr. MOSCOSO. This may result, Mr. Chairman, if what we believe is necessary is also found to be necessary by the Government of Chile, that we will assist a group of private entrepreneurs who will have obtained a charter from the Chilean Government to get up a private industrial bank.

Mr. PASSMAN. This program could lead into tens of millions of dollars of extra money requested?

Mr. MOSCOSO. We are trying to help the private sector of Chile to obtain the necessary funds in order to have them participate more actively in the investment activities and in the increasing of the gross national product of the country.

Mr. PASSMAN. Has the Government stifled the private sector of the Chilean economy?

Mr. MOSCOSO. No; more than that, sir. It is tradition. It is perhaps more the European tradition than anything else. They have not yet become aware of the many things which I think has made the United States great.

One of them is freedom of enterprise, no monopolies.

Mr. PASSMAN. Has that kind of thing not been a fact from time immemorial all over the world?

Mr. MOSCOSO. And in many instances we are very much involved in putting out fires because we have not put in enough of an effort——

Mr. PASSMAN. Do you realize that the request before this committee is one which would furnish funds for 95 nations of the world plus 4 territories?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. We get the same type of story on just about every nation.

Let us project this $66,000. It could lead to requests for many millions of dollars?

Mr. MOSCOSO. It could lead to a request for a loan; yes.

Mr. PASSMAN. A loan could be $1. I want to know if we are thinking in terms of a few hundred or are we thinking of something here—this brand new $66,000—that could lead to requests for millions of dollars?

Mr. MOSCOSO. If the bank which the private sector proposes in Chile is going to——

Mr. PASSMAN. I refer to this one project, Mr. Moscoso.

Mr. MOSCOSO. That is what I am trying to describe.

As I say, if the bank were set up by the Chileans and it was an institution which could make a very decided contribution to the development requirements of Chile, it could mobilize substantial amounts of private capital. If it could assist us later on, so that we in the United States and other countries would not have to give as much public assistance to Chile, I think we would be justified in giving it strong support. It may be $6 million, it may be $5 million, it may be $10 million.

Mr. PASSMAN. Do you think $10 million would be the maximum?

Mr. MOSCOSO. I can't tell, Mr. Chairman.

Mr. PASSMAN. You are dealing within a sphere of uncertainty. You do not know what it will cost.

Mr. MOSCOSO. No, it depends——

Mr. PASSMAN. You went from $6 million to $10 million.

Mr. MOSCOSO. It depends on the equity participation of the Chileans.

Mr. PASSMAN. You are getting into something and you do not know the cost.

Mr. MOSCOSO. It will be proportionate to the equity participation.

Mr. PASSMAN. That still does not answer the question. You do not know what it might cost.

Mr. MOSCOSO. I cannot tell.

I can say that it would be within the magnitudes we can reasonably consider within our program. That is, for Chile and the entire program.

Mr. PASSMAN. Ten miles on the way to the moon is part of the way, is it not?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. That is about the type of answer you have given us, I am willing to accept any figure you give us or I am willing to accept a statement that you do not know the cost.

Mr. MOSCOSO. I do not know at the moment.

U.S. ASSISTANCE TO CHILEAN SAVINGS AND LOAN SYSTEM

Mr. PASSMAN. You have another item here, the savings and loan system, ZW83AD6. You want $2,000.

Mr. STERNFELD. The Chileans are advancing in the savings and loan system.

They are setting up very good savings and loan systems. There are 22 associations presently set up.

Mr. MOSCOSO. $2,000 is for a short-term consultant to come down and help them with some of the problems——

Mr. PASSMAN. You said they had a fine savings and loan system there. Is it countrywide?

Mr. STERNFELD. Yes.

Mr. PASSMAN. How many associations do they have set up?

Mr. STERNFELD. Twenty-two associations.

Mr. PASSMAN. Now you are going to take $2,000 and redo their system for them?

Mr. STERNFELD. No, sir.

Mr. PASSMAN. How long will you employ this consultant?

Mr. STERNFELD. I cannot tell you the time period.

Mr. PASSMAN. Does this amount include expenses, representation, salary, and everything?

Mr. STERNFELD. This would be at the rate of $75 a day, sir.

Mr. PASSMAN. Including expenses?

Mr. STERNFELD. That is the rate it takes for us to get a person who has experience in the United States of heading a savings and loan association to go down and——

Mr. PASSMAN. You say there is a very successful savings and loan system in Chile. The associations are scattered all over the country. They are operating well.

Let us arrive at about how long the consultant will be there.

Mr. MOSCOSO. The most he can be there would be 15 or 16 days.

Mr. PASSMAN. You have to take out airplane fare?

Mr. MOSCOSO. That is right, this will include the airplane ticket.

Mr. PASSMAN. Let us try to figure this out.

Mr. MOSCOSO. It would not be for more than 10 days.

Mr. PASSMAN. I cannot see much good you will do with this man in Chile for 10 days.

Mr. MOSCOSO. Mr. Harriman was less than 10 days in Moscow and he got the test ban treaty.

Mr. PASSMAN. We want to know what this consultant will do during the 10 days and we are entitled to know.

Mr. MOSCOSO. I am sure he will be working during that time. I will provide the details for the record.

(Information supplied follows:)

SAVINGS AND LOAN PROJECT

A U.S. consultant will be required for a 10-day trip to Chile to conduct one or two seminar-type meetings of assembled managers of the 22 Chilean savings and loan associations to discuss problems such as: Improvement of administrative efficiency, including speedup of loan application approvals; stimulation of a secondary mortgage market for mortgages purchased by the Caja Central; an appropriate balance of liberal lending practices and maintenance of adequate protection to depositors and lending institutions; and explain the U.S. and other applicable approaches to their problems. It is essential that a U.S. specialist maintain a working relationship, if only on a periodic basis, with the Chilean savings and loan system to insure that the system's objectives are maintained and that the system adheres to the standards necessary to achieve long-term success.

Mr. PASSMAN. You will have to make up your mind as what you will use the man for before you send him.

Mr. STERNFELD. That is right. We have found through experience that through the year there are problems which come up in the running of these savings and loan institutions——

Mr. PASSMAN. Have you had a man there before?

Mr. STERNFELD. Yes.

Mr. PASSMAN. Under what project?

Mr. STERNFELD. Under a project called savings and loan.

Mr. PASSMAN. Let us get the number and find out why you create a new project for $2,000 to send a man down for 10 days.

Mr. STERNFELD. The project was called improvement of the administration of the housing corporation.

Mr. PASSMAN. What is the project number?

Mr. STERNFELD. 513Q70QC.

Mr. PASSMAN. It does not look as though there is much, if any, relationship between this project and this proposed new project.

Mr. STERNFELD. This was in the housing field.

Mr. PASSMAN. I am trying to get into the savings and loan system. You stated that the experience indicated it had been successful.

Mr. STERNFELD. Yes, sir.

Mr. PASSMAN. We want cited the savings and loan system to which you have sent consultants.

Mr. STERNFELD. Consultant in the field for savings and loan?

Mr. PASSMAN. That is what you said. This other was requested to direct the housing advisers.

A housing adviser is something different from a consultant in savings and loan associations, and this was for direct hire technicians.

Mr. STERNFELD. Yes, sir.

Mr. PASSMAN. Would a housing adviser qualify as a consultant to a savings and loan system?

Mr. STERNFELD. The people who are doing housing work really cannot do a good job unless they know something about savings and loan.

Mr. PASSMAN. It looks to me like a waste of money for you to send a man down into a country such as this, already with a successful savings and loan system, 22 associations in operation, for 10 days at $75 a day, or approximately that.

Can you tell us who this man is?

Mr. STERNFELD. No, sir. It could be the president of the savings and loan association in Florida.

It is called the Washington Federal Savings and Loan Association of Miami.

Mr. PASSMAN. Where have you sent that man previously?

Mr. STERNFELD. We have sent him to Costa Rica to help——

Mr. PASSMAN. When was that trip?

Mr. STERNFELD. We sent him——

Mr. MOSCOSO. We have sent him to several countries on several occasions.

Mr. PASSMAN. Are these 22 building and loan associations scattered all over Chile?

Mr. STERNFELD. Yes.

Mr. PASSMAN. What is this man going to do?

Mr. STERNFELD. With the experience that this man has in this field of savings and loan institutions he could give them the advice to overcome the obstacles that might take place in their operations during the year.

Mr. PASSMAN. And do all that in 10 days?

Mr. STERNFELD. He is a very skilled man.

Mr. PASSMAN. He must be extremely skilled. You have other projects not nearly so important as this one on which you send the consultants out for 2 years.

Mr. STERNFELD. That is right.

Mr. PASSMAN. This man can do in 10 days what the others require 2 years to do?

Mr. STERNFELD. This would be a spot job he would be called upon to do.

Mr. PASSMAN. This is a new project, though. Can you project this one?

Mr. STERNFELD. No, sir, I cannot.

Mr. PASSMAN. Is it a new project?

Mr. STERNFELD. Yes, under a new title.

Mr. PASSMAN. You said it was the only new project. Then we ran into this little $2,000 item here, and that is also a new project; is it not?

Mr. STERNFELD. Yes, sir.

Mr. PASSMAN. Are there others?

Mr. STERNFELD. The other projects on the page are shown with funds allocated in fiscal 1963 for these other projects.

Mr. PASSMAN. How many people do you have in your region including all types of personnel? There are more than 60,000 in AID, if you include the participants. Is that the figure we established earlier?

Mr. TENNANT. We had an insert. It is slightly over 60,000 including participants, military and——

Mr. PASSMAN. Do you have 15,000 in your region, Mr. Moscoso?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. Do you delegate some of the authority to the personnel?

Mr. MOSCOSO. I delegate.

Mr. PASSMAN. Can you tell us that this $2,000 will be the end of this project?

Mr. MOSCOSO. In this case institutions have been set up. There are difficulties in organizing mortgage collections, and in the implementation of a new system.

This is new in the case of Chile.

Mr. PASSMAN. Is this man also a housing expert?

Mr. STERNFELD. He knows a good deal about housing.

Mr. PASSMAN. Do you know him personally?

Mr. STERNFELD. I have not met him, sir.

Mr. PASSMAN. How do you know about his qualifications.

Mr. STERNFELD. By reputation, sir.

Mr. PASSMAN. He knows his housing and he is a building and loan expert. What else?

Mr. MOSCOSO. A banker.

Mr. PASSMAN. Anything else?

Mr. MOSCOSO. That is all.

CONCEPCIÓN AIRPORT CONSTRUCTION

Mr. PASSMAN. What are the technical problems which have been holding up disbursement of the airport construction program, described on page 254? I notice that the credit was signed on June 21, 1961, and no disbursements have been made as yet.

We are running into many contracts worldwide for which the contracts have been signed, but there have been no disbursements.

We want to discuss this project on page 254.

Mr. MOSCOSO. All right, the airport.

Mr. PASSMAN. We are looking at "Airport Construction, 513A010." This credit agreement was signed June 21, 1961, more than 2 years ago.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. There has not been a dime disbursed on the account.

Mr. MOSCOSO. Bids are being entertained at this moment.

They are examining them. The award is expected on September 3.

Mr. PASSMAN. This means that you have signed a contract agreement approximately 2 years and 3 months in advance of even awarding the contract.

In other cases you say you have obligated the funds a year or 2 years in advance of even signing the contract. Do you get my point?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. You have some instances where you have obligated the money and it is being carried as obligated for 1 or 2 years and there has been no contract signed.

We find other instances where you have a contract signed, the obligation has been outstanding more than 2 years, and you still have not received a bid as to what it will cost.

Mr. MOSCOSO. Mr. Chairman, I don't know the exact——

Mr. PASSMAN. Am I stating the facts correctly?

Mr. MOSCOSO. Yes, but I mean to say there are problems in site acquisitions, problems in finishing plans and specifications, and any one of these several contingencies might have delayed this.

Mr. PASSMAN. We were told these things were firmed up before they ever enterd into a contract.

Mr. MOSCOSO. I didn't say they acquired the land or finished final plans and spcifications.

Mr. PASSMAN. I repeat, along the way they tell us these things have been firmed up at the time they sign a contract on the credit agreement.

Mr. MOSCOSO. A feasibility study usually has been finished.

Mr. PASSMAN. If you had waited 2 years in this instance you still would have had plenty of time if you got the money in this fiscal year, in 1964.

Mr. MOSCOSO. Unless there was an assurance that they would get the construction money the Government of Chile perhaps would not have gone out to buy the land for the airport.

Mr. PASSMAN. Have they bought the land?

Mr. MOSCOSO. Yes, because they are going to start construction.

Mr. PASSMAN. What will be the situation if you find it takes three times this much money to complete the project?

Mr. MOSCOSO. We have a feasibility study which says——

Mr. PASSMAN. What does the study indicate?

Mr. MOSCOSO. With this amount of money and with whatever the Chilean Government was going to put up——

Mr. PASSMAN. How much were they going to put up?

Mr. MOSCOSO. Land acquisition costs alone will be $400,000 and that will be put up by them.

Mr. ANDREWS. What is the date of the feasibility study?

Mr. MOSCOSO. I don't have it here.

Mr. ANDREWS. That would be very important. If it was made 2 years ago, then the cost of the airfield now would probably be considerably higher. This yellow sheet shows that the cost-of-living index is rising very rapidly there.

Mr. MOSCOSO. That is right.

Mr. ANDREWS. From 139 in 1959 to 155 in 1960, and 167 in 1961. It is an esimated 185 for 1962.

Mr. MOSCOSO. Feasibility studies normally show the costs expressed in dollars. What would happen is that more escudos would have to be generated to pay for it.

Mr. ANDREWS. In other words, if it costs more we will have to put up more money?

Mr. MOSCOSO. No. If it costs more on account of the escudos depreciation the dollars would buy more escudos.

Mr. PASSMAN. The dollar will not buy as much today as it would a few years ago. You had to have a feasibility study a year or 2 years in advance of entering into a signed contract. Is that right?

Mr. MOSCOSO. There is usually——

Mr. PASSMAN. Is that correct?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. You are dealing with something which is several years old.

Mr. MOSCOSO. I doubt the estimate is more than a year or 2 years old, Mr. Chairman.

Mr. PASSMAN. You just said the feasibility study may precede the contract by 2 years and the money has been obligated for 2 years. That amounts to 4 years.

Mr. STERNFELD. Feasibility studies would have had to be made before April of 1961.

Mr. PASSMAN. It might be as much as 2 years before signing the credit agreement?

Mr. STERNFELD. That is right.

Mr. PASSMAN. Let us add the 2 years that this has been obligated. That would make 4 years, would it not?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. In cases such as this is it not much better to have it brought up to date before you come before the committee, rather than to use an estimate that is 4 years old?

Mr. STERNFELD. Sir, bids are being let.

Mr. PASSMAN. You are still operating with an estimate that is 4 years old.

Mr. STERNFELD. The bids will show whether the estimate is sound.

Mr. PASSMAN. What will you do if you get bids for $7 million?

Mr. MOSCOSO. If the Government of Chile will increase its participation proportionately——

Mr. PASSMAN. Why did you not let them build it 4 years ago and save money, without any money of ours?

Mr. MOSCOSO. They didn't have funds then.

Mr. PASSMAN. Neither did we. We borrow the money.

Mr. ANDREWS. One further question on the airfield. You made a commitment to participate financially in the construction of that airfield?

Mr. MOSCOSO. Yes, sir.

Mr. ANDREWS. That commitment was made several years ago?

Mr. MOSCOSO. Signed June 21 but we approved it April 17, 1961.

Mr. ANDREWS. Two years ago last April?

Mr. MOSCOSO. That is right.

Mr. ANDREWS. If the ultimate cost of constructing that field is considerably higher than it was at the time the first estimate was made, we will naturally put up more money than the book shows?

Mr. MOSCOSO. Not necessarily. We would have to reexamine the situation and see if it is warranted that we spend more money and the Government of Chile would have to participate——

Mr. ANDREWS. You mean before they start construction?

Mr. MOSCOSO. That is right.

Mr. ANDREWS. Because you could find yourself 50 or 60 or 75 percent completed. If you did not put up money I have an idea nobody else will put it up.

Mr. MOSCOSO. We will do that before construction. When the bids come in we will know whether we can build it for this amount.

Mr. ANDREWS. Let me suggest this: If the bids are out of line with your first estimate, just forget it.

Mr. MOSCOSO. Even if the airport is required and they have no money to build it or have only part of the money to build it?

Mr. ANDREWS. That would by my advice, unless they put up the difference between the original estimate and——

Mr. MOSCOSO. That is one of the things that would enter the negotiations.

Mr. PASSMAN. If you are pouring into Chile through other spigots $100 million do you not think they might maneuver around to the point they could finance the airfield anyway, out of our money?

Mr. MOSCOSO. That might be possible.

AIRPORT DESIGN AND CONSTRUCTION PROJECTS

Mr. PASSMAN. Do you have three of these airport projects?

Mr. MOSCOSO. Two.

Mr. PASSMAN. There is airport design up here, $300,000.

Then you have airport construction, another $10,500,000.

Then there is $3,200,000.

Mr. MOSCOSO. Airport design was for these two airports. I'm sorry; we have three. The design is for the third airport.

Mr. PASSMAN. Here is one for which you obligated funds back on June 29, 1960. This was just as the curtain was dropping at the end of the fiscal year.

Then you signed a contract on December 7, 1960, and you disbursed $7,000 out of $10,500,000.

That gives an idea as to how phony these accounts can be when you actually examine them.

There is for this one the same feasibility study requirement time, 2 years. You have had it tied up approximately 3 years, and that is a total of 5 years.

Mr. MOSCOSO. Apparently there was some difficulty with the supervisory engineer and the contractor for this job.

I haven't the details but I shall supply them.

Mr. PASSMAN. If we insert information on all these subprojects it would take a truck to move the volumes out to the floor.

Put in what you can, however.

(Information supplied follows:)

PUDAHUEL AIRPORT LOAN

There were several causes of delays on the Pudahuel Airport project.

The Ministry of Public Works had not acquired the necessary land for the complete airport. Powerlines had to be relocated as well as roads and irrigation ditches, all of which required right-of-way decrees.

The irrigation season caused delays because there is a strict Chilean law which states that there is to be no interference with irrigation canals during the irrigation season.

The governing conditions and regulations were found to be somewhat discriminatory against the U.S. firm's participation as construction contractor. This required negotiation to have these conditions amended. Certain clauses in the administrative bases for construction contracts also had to be amended in order to meet the conditions of the loan. For example, they included an escalation clause which adversely affected the project in that the U.S. Government believed that such escalation costs should be for the account of the Government of Chile and not require a renegotation of the loan for a higher amount at

a later date. Amendment of these administrative bases requires a Chilean Presidential decree which takes time.

Mr. Moscoso. I agree with you that these things should be expedited.

Mr. PASSMAN. I would much prefer to say, "Keep money on hand unobligated" than for you to rush in on the last day of the fiscal year and throw behind a screen perhaps hundreds of millions of dollars when obligations are not firm and at subsequent dates the money might have to be deobligated.

I know you yourself have some misgivings about whether or not this money will ever be used as planned. The matter is now 5 years old.

Mr. Moscoso. They will have to do it, as a matter of fact, because this is the main airport of the whole country.

Mr. PASSMAN. Then let them do it.

On the next to the last day of the fiscal year we run into items of $10 million, $4 million, $7 million, $9 million, and so on, all over the world thrown in, and these sums add up to $688 million, the Comptroller tells us, and it is all in the shady area.

I do not mean ink shady, either. It is stuck behind a curtain and we cannot touch it.

Anyway, see what you can do.

Mr. Moscoso. This was in 1960.

Mr. PASSMAN. You have already stated that the feasibility study is about 2 years old before you ever get to signing a contract. You have money obligated going back to 1961 for which you do not even have the contract signed yet.

You may have had this stuff stuck away 2 years on an old feasibility study before you got the contract signed and that was almost 3 years ago.

Mr. Moscoso. I built three airports in Puerto Rico and I can tell you that with the rapid advance of technology in the aviation field a considerable amount of time has to be devoted——

Mr. MINSHALL. Considerable what?

Mr. Moscoso. You need considerable time.

Mr. PASSMAN. These things are supposed to be planned. I know planning takes considerable time, but this is supposed to have been firmed up before you signed a contract.

Mr. Moscoso. I don't have the details.

Mr. PASSMAN. You keep this money tied up for years.

Do you agree that we have a right to wonder what is behind such actions?

Mr. Moscoso. Of course.

Mr. PASSMAN. You said you built three airports in Puerto Rico.

Mr. Moscoso. These are owned by a public organization called the Puerto Rico Ports Authority.

I was head of the organization then.

Mr. PASSMAN. You did not build the airports out of your own capital?

Mr. Moscoso. No. There was no personal money in them.

The organization I headed built them.

Mr. PASSMAN. A corporation?

Mr. Moscoso. A public corporation.

Mr. PASSMAN. Did Uncle Sam have anything to do with these projects?

Mr. MOSCOSO. Oh, yes.

Mr. PASSMAN. You were the administrator of spending U.S. taxpayers' dollars in constructing three airports. Is that the way it was?

Mr. MOSCOSO. We spent our money, too. We put up 50 percent of the cost and all the land acquisition costs.

Mr. PASSMAN. Does Puerto Rico pay an income tax?

Mr. MOSCOSO. Yes; they do.

Mr. PASSMAN. They get back every nickel they pay?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. I am for them, but in reality you were spending Uncle Sam's money building airports in Puerto Rico.

Mr. MOSCOSO. Will you exchange seven seats in the Congress for the taxpayments?

Mr. PASSMAN. You were spending U.S. tax dollars. They may have been handled as carelessly as these aid dollars are, I do not know.

Mr. MOSCOSO. No.

Mr. PASSMAN. Why do you not give the same type of management here, then?

On Saturday, June 29, 1963, really the last workday of the week, just before Sunday, June 30——

Mr. ANDREWS. And the last workday of the year.

Mr. PASSMAN. That is right. On the last workday of the fiscal year they authorized $158,975,000, and it is carried as an obligation. My guess would be that possibly 75 percent of that money someday will be deobligated. Let us hope so.

DEVELOPMENT PROGRAM LOAN

How will the development program credit of $35 million, discussed on page 257, generate local currencies?

Mr. MOSCOSO. This is providing for the acquisition of U.S. goods.

Mr. PASSMAN. This is budgetary support, is it not, for $35 million?

Mr. MOSCOSO. It will go to help finance the development plan of Chile, a 10-year development cost. We are financing dollar costs of essential imports from the United States.

Mr. PASSMAN. That is a direct Government transaction, is it not?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. It is budgetary support, is it not?

Mr. MOSCOSO. To increase the investment required by the Chilean program.

Mr. PASSMAN. Is it not budgetary support, as we understand that term?

Mr. MOSCOSO. That is right.

May I point out that this is for the capital budget of Chile?

Mr. PASSMAN. I understand what it is, budgetary support. The money goes into the budget.

Mr. MOSCOSO. It is not to pay employees but to build things and develop the economy.

Mr. PASSMAN. You know that, even if you have a deficit in the budget, you always have to pay employees.

Mr. MOSCOSO. I know.

Mr. PASSMAN. If you go in there with this money to do something else, it amounts to the same thing. You can pay employees out of this and buy what you want out of the other.

Mr. Moscoso. That is right.

Mr. PASSMAN. When it is in there it is all mixed up. It goes through the budget.

Mr. Moscoso. But there are certain physical things that will be built as a result of this effort.

CONDITIONS ON AID TO CHILE

Not only that but we have tied this to a surplus in their own budget current account which has to be invested together with our funds.

Mr. PASSMAN. You will not disburse this money unless there is a budget surplus?

Mr. Moscoso. That is what our commitment says. They have to have 155 million escudos budget surplus or we will not pay.

Mr. PASSMAN. They could accomplish their part in 30 seconds. They could call their banker and say, "Credit our account with this sum and we will be able to draw off this amount when you do."

Mr. Moscoso. They could do that and then that will cancel the IMF standby. The whole thing will fall through.

Mr. PASSMAN. Let us see what the surplus is running for Chile.

CHILEAN BUDGET DEFICITS

In 1960 they had a deficit in the budget of $94 million. We stepped up foreign aid.

In 1961 they had a $97 million deficit and we stepped up foreign aid again.

In 1962 they had a $174 million defiicit.

Did we give Chile any money at all in 1960, 1961, and 1962?

Mr. Moscoso. Yes, deficits in their total budget.

Mr. PASSMAN. Let us see how much, total.

Mr. STERNFELD. For all 3 years?

Mr. PASSMAN. Give the total by the year.

Mr. TENNANT. For fiscal year 1960, including MSP, economic and military, plus Public Law 480 and Export-Import Bank, $46.6 million.

Mr. PASSMAN. Next year?

Mr. TENNANT. $128.7.

Mr. PASSMAN. Next?

Mr. TENNANT. $244.6 million.

Mr. PASSMAN. As the aid increases the deficit increases. We have an agreement with them that they cannot get the money unless they have a surplus.

Mr. TENNANT. These figures include military-economic, Public Law 480, and Export-Import Bank.

Mr. PASSMAN. You know what an about-face is?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. They will certainly have to take an about-face if they come up with a surplus in their budget; will they not?

Mr. STERNFELD. No, sir.

Mr. PASSMAN. You took the aid program up to a quarter billion dollars and that is the year they had the biggest deficit.

Mr. STERNFELD. The budget is divided into two parts. One is the operating budget and the other is the capital budget.

Mr. PASSMAN. They amount to the same thing.

Mr. STERNFELD. What we have been talking about is the surplus in the operating expenses so that the Government could devote more funds to the capital expenditures.

Mr. PASSMAN. They have a deficit in their total budget?

Mr. STERNFELD. That is correct.

Mr. PASSMAN. And they will have a deficit in 1963 and 1964; will they not?

Mr. STERNFELD. That is correct. They will have a deficit if they have an effective development program.

Mr. PASSMAN. This is just about as though I have $2.94 in one bank and am ovedrawn in another bank.

Mr. Minshall?

OPERATING BUDGET SURPLUS AS CONDITION TO U.S. AID

Mr. MINSHALL. I have several questions, Mr. Chairman.

On page 45 I read to you about your apprehensive attitude toward the Chilean situation. I believe you consider it a ——— because on page 46 you say that ———.

Mr. Moscoso. That is right.

Mr. MINSHALL. What is your time limit on this? Suppose they fail to perform satisfactorily at 9 o'clock tomorrow morning, how much will you cut down your aid?

Mr. Moscoso. We will stop disbursement on this loan if they do not produce the surplus I was talking about a moment ago. Every quarter we check that.

Mr. MINSHALL. What is your prognosis? Do you think they will make it?

Mr. Moscoso. Yes. They have made it up to now. Just a few days ago Secretary Martin saw the Ambassador to Chile and he said they would make it.

AIRPORT CONSTRUCTION

Mr. MINSHALL. Getting back to the airports, when do you plan to start construction?

Mr. Moscoso. In September we hope to start construction in Concepción, and in Pudahuel I understand they have started.

Mr. MINSHALL. How long do you think it will take to construct them?

Mr. Moscoso. It will take, I think, about 1½ or 2 years.

Mr. PASSMAN. You have had some of these funds 3 years and have not disbursed them. Dulles International Airport was started and completed within about 3 years; was it not?

Mr. Moscoso. For the record I will send you a memorandum, Mr. Chairman.

(Information supplied follows:)

JOHN FOSTER DULLES INTERNATIONAL AIRPORT[1]

This 10,000-acre project in Chantilly, Va., 27 miles from Washington, took longer to build and cost more to complete than had been anticipated.

It was back before World War II that the need for an international airport, and a second airport, was recognized in Washington. In 1950, Congress approved the proposal.

[1] Source: Fortune magazine, March 1962.

After a false start—the purchase of property at Burke, Va., which was not eventually used for the airport—the airport was begun in 1958. At that time, it was to open early in 1961, but actually opened in November 1962.

Costs rose faster than the time necessary to build the mammoth facility. For example, these are the estimates and the dates they were made:

	Millions		Millions
1956	$50	1961	$105
1959	85	1962	[1] 108

[1] Latest estimate provided by FAA.

Mr. PASSMAN. You referred to Dulles. That is a mammoth airport.

Mr. MOSCOSO. Site acquisition started 12 years ago, I believe.

Mr. PASSMAN. You have been talking about Dulles, and there was no appropriation at first but from the time they got the money it went very fast.

Excuse me. Go ahead, please, Mr. Minshall.

Mr. MINSHALL. I have nothing else, Mr. Chairman.

CHILE'S DEVELOPMENT PLAN AND FUTURE U.S. AID

Mr. ANDREWS. How far in the future have you projected programs for Chile? Have you thought about anything 5 or 8 or 10 years from now?

Mr. MOSCOSO. Chile has a development plan. It is a 10-year development plan.

Mr. ANDREWS. When did the 10 years start?

Mr. MOSCOSO. In 1962.

Mr. ANDREWS. So you have 8 years to go?

Mr. MOSCOSO. Yes, sir.

Mr. ANDREWS. Are you thinking about projects contained in the 10-year plan, which may be 8 years in the future?

Mr. MOSCOSO. We are asking the Chileans to think about it.

Mr. ANDREWS. You are interested in it?

Mr. MOSCOSO. We are interested that they do the right kind of feasibility work, that they do the right kind of engineering, and that the other things they do will increase their ability to achieve a self-sustaining growth.

Mr. ANDREWS. But you are planning to help them for 8 more years?

Mr. MOSCOSO. Not necessarily. The financing might be done by the Inter-American Development Bank or the Export-Import Bank. The Export-Import Bank is participating with us.

OBLIGATIONS AT END OF FISCAL YEAR

Mr. PASSMAN. I believe that on Friday, June 28, the next to the last workday in the fiscal year, they obligated $126 million, did they not?

Mr. TENNANT. I believe that is correct. You said obligated, did you?

Mr. PASSMAN. And on Saturday, June 29, the last workday, they obligated $158,975,000.

That is $126 million on June 28, and $158,975,000 on Saturday, June 29, or a total of $284,975,000 in those 2 days.

What you actually do, you move this money out of an unobligated status over into a reservation or obligated status, do you not?

Mr. TENNANT. I would describe it somewhat differently.

Mr. PASSMAN. Here is $515 million completely unencumbered on June 30, which, with the exception of the no-year funds, would lapse if you did not obligate it. You had $515 million completely unencumbered on June 30, is that right?

Mr. TENNANT. That is correct. It includes the military and economic programs.

Mr. PASSMAN. If you had left it just as we appropriated it, that would have moved the unobligated funds up to $1,099 million would it not?

Mr. TENNANT. Approximately.

Mr. PASSMAN. So far as the committee and the Congress are concerned, we have to refer to that $688 million as being obligated because it is not carried on hand in a completely unobligated status. Is that right?

Mr. TENNANT. This is correct, sir.

Mr. PASSMAN. We can call it an authorization, or anything we want to, but so far as Congress is concerned we come to completely unencumbered, unobligated funds that move into the technically unobligated but figuratively obligated status, reducing the unobligated funds?

Mr. SCHEINMAN. Mr. Chairman, by breaking it out you have reduced the figure you refer to as the pipepline.

Mr. PASSMAN. What you have on hand intact that you have a right to obligate or disburse out of is the pipeline, is it not?

Mr. TENNANT. That is correct.

Mr. SCHEINMAN. What I meant was the $688 million was not in addition to the unexpended balance referred to.

Mr. PASSMAN. I have never said that it was. I say it is in three parts, the part that is unobligated, the part that is not technically obligated but is figuratively obligated, and the part that is obligated for firm projects.

Mr. SCHEINMAN. I might also say that in fact there is no advantage to the Agency of obligating no-year funds at any particular point of time.

Mr. TENNANT. Mr. Chairman, while the funds do move in the categories you have expressed, it is based on the action of the Administrator and the Development Loan Committee who approve each loan. That action is the basis of the recordings on the Agency accounts.

Mr. PASSMAN. You are not disbursing but you are pulling funds out of the clean, clear category of so much on hand unencumbered, and nobody understands it better than you do. You have three categories. You do not disagree with that fact?

Mr. TENNANT. No, sir.

Mr. PASSMAN. Are you willing to say the total of unobligated funds amounts to $1,099 million? I yield to you to make that statement.

Mr. TENNANT. I cannot make that statement.

Mr. PASSMAN. You want to keep it in the gray zone?

Mr. TENNANT. If you want to put it that way.

Mr. PASSMAN. Thank you.

ASSISTANCE TO AIRPORT CONSTRUCTION AND FACILITIES IN CHILE

Mr. MINSHALL. I would like the total amount of dollars we are putting in airport construction and related facilities in Chile. How much is in all three airports?

Mr. MOSCOSO. For the two that are designed the mounts are $10.5 million and $3.2 million, that is $13.7 million, and $300,000 for airport design, or $14 million.

Mr. MINSHALL. For how many airports?

Mr. MOSCOSO. For two.

Mr. MINSHALL. What is it for the third?

Mr. MOSCOSO. We do not have that.

Mr. MINSHALL. I notice in the blue book, at page 254, you have an emergency airport for Santiago. Why do you need an emergency airport?

Mr. MOSCOSO. The Concepción Airport would provide an alternate in emergencies.

Mr. MINSHALL. Why do you need an alternate? What is the need for that?

Mr. MOSCOSO. This is a dual role that an airport plays. For example, Dulles is an airport for the District of Columbia but there is also Friendship. In bad weather when you cannot use Dulles you use Friendship. You try to have an alternate in case of bad weather.

Mr. MINSHALL. Why could not the others be used for that?

Mr. MOSCOSO. The other will be a jet airport.

Mr. MINSHALL. Will not the others be jet airports, too?

Mr. MOSCOSO. Yes.

Mr. MINSHALL. Why do you need a third one?

Mr. MOSCOSO. We are talking about the Concepción Airport. That is the alternate.

Mr. MINSHALL. You are not very clear. You have in your blue book on page 252 that there will be new airports in Chile at Pudahuel, Santiago, at Concepción and at Balmaceda.

Mr. MOSCOSO. Yes.

Mr. MINSHALL. How far apart are Concepción and Santiago?

Mr. MOSCOSO. About 325 miles.

Mr. MINSHALL. We do not have an emergency airport at Toledo.

Mr. MOSCOSO. This will be an airport for the Concepción area and also will help handle Santiago aircraft if there should be a closing down of that airport.

Mr. MINSHALL. Are weather conditions such that one could be closed down because of bad weather and the weather would be clear at the other?

Mr. MOSCOSO. It could happen. For instance, Dulles may be closed and Friendship open and the distance there is a little less than 35 miles.

Mr. MINSHALL. How much is this so-called emergency airport going to cost?

Mr. MOSCOSO. This is not an emergency airport. It is an airport for the city of Concepción, a rapidly growing industrial area, but it will have a dual purpose because it will not only serve as an airport for Concepción but will provide emergency landing facilities.

Mr. MINSHALL. I wish you would put in the record some part of your feasibility report when they justify that rather than call it an emergency airport.

Mr. MOSCOSO. We will be glad to.

Mr. MINSHALL. It seems to me that the aid program is getting to be pretty fancy when they finance emergency airports.

Mr. MOSCOSO. It happens it will also serve as an emergency airport, but it is primarily to serve the city of Concepción, which is the most rapidly growing industrial area in the country.

Mr. MINSHALL. Why do you not just build it there, then, to serve both cities?

Mr. MOSCOSO. I will be glad to supply information on that for the record.

(The information follows:)

CONCEPCIÓN AIRPORT

Concepción, 325 miles south of Santiago, has a population of approximately 150,000 and is one of the fastest growing cities in Chile. It is the location of Chile's only steel mill, Huachipato; Chile's largest coal mines, Lota and Schwager; the largest textile mills, Tome; and glass, paper, and pulp plants. The area is making a strong bid for first place in Chile's industrial development. The Concepción Airport is considered necessary not only to provide essential air facilities for this important seacoast industrial area, but also as a satisfactory alternate for the Santiago Airport which is approximately 1,800 feet higher and 325 miles to the north. Alternate airports for Santiago now are Lima, Peru; Buenos Aires, Argentina (both seacoast); and La Paz, Bolivia, weather permitting.

Mr. MINSHALL. Does Chile have any jet airports today?

Mr. MOSCOSO. They have expanded the present airport at Santiago at the expense of some great hazards to the population.

Mr. MINSHALL. This other airport at Santiago is a brand new one?

Mr. MOSCOSO. Yes. They will have to abandon the old one.

Mr. MINSHALL. What is wrong with it?

Mr. MOSCOSO. It is right in the middle of the city.

Mr. MINSHALL. So is Washington National Airport.

Mr. MOSCOSO. That is why they do not bring jets here.

Mr. MINSHALL. They can?

Mr. MOSCOSO. They can, but they do not do it.

Mr. ANDREWS. What is the minimum length runway a jet can land on safely?

Mr. MOSCOSO. It depends on the temperature and the altitude. In Bolivia the air is so rare and it is so cold you do not have to have as long a runway. In other words, if it were warm the runway would probably have to be 1,000 or more feet longer than it will be and it will be 13,000 to 14,000 feet.

Mr. ANDREWS. Is that about the average?

Mr. MOSCOSO. The average in the United States is about 7,900 or 8,000 feet. If it is in the South they have to build them longer.

Mr. ANDREWS. What is the length at Dulles?

Mr. MOSCOSO. At Dulles it is probably 12,000 feet. It once took me 1 full year to find out from FAA what the length of the jet runway should be at San Juan and this was because one frame builder would give a length and FAA would give another length. In view of the cost per foot it is important to get the correct number of feet.

COLOMBIA

Mr. PASSMAN. Do you have a program for Colombia in fiscal 1964?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. What amount are you asking for Colombia for 1964?

Mr. MOSCOSO. $———.

Grants and loans.

Mr. PASSMAN. When you talk about loans you are talking about credits?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. What is the total?

Mr. MOSCOSO. $———

Mr. PASSMAN. That is the total not counting the Export-Import Bank?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. The book shows $——— and when you put all the spigots together it is $———.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Would Colombia be eligible for Latin America regional funds.

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Would they also be eligible for interregional funds?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Are they eligible for supporting assistance?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Are they eligible for the President's Contingency Fund?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Are they eligible for the Social Progress Trust Fund?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Are they eligible for the many funds in the United Nations?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Are they eligible for Inter-American Development Bank funds?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Are they eligible for funds from the International Development Association?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. There are some 12 other funds. Will you put them all in the record?

Mr. MOSCOSO. Yes.

(The information supplied follows:)

FUNDS FOR WHICH COLOMBIA IS ELIGIBLE

In addition to the sources listed above, Colombia is eligible for funds from the various organs of the United Nations including ECOSOC, ILO, UNTA, etc., the Export-Import Bank, International Bank for Reconstruction and Development, and the International Finance Corporation.

AID LEVELS AND BUDGET DEFICITS

Mr. PASSMAN. What is the total amount that you have given this country since the inception of the program?

Mr. MOSCOSO. $374.8 million excluding the Export-Import Bank.

Mr. PASSMAN. How much did you give to this country, in total, in fiscal 1960?

Mr. MOSCOSO. $27.3 million. That includes economic and military.

Mr. PASSMAN. What amount did you give them in 1961?

Mr. MOSCOSO. $103.3 million.

Mr. PASSMAN. That sum apparently enabled them to move their deficit up to $90 million from $10 million.

What amount did you give them in 1962?

Mr. MOSCOSO. $81.8 million.

Mr. PASSMAN. That sum enabled them to move their deficit up to $135 million.

FISCAL YEAR 1963 PROGRAM LEVELS

In fiscal 1963 what amount did they get?

Mr. MOSCOSO. They got $93.7 million from AID and $8.5 million from the Social Progress Trust Fund.

Mr. PASSMAN. What is the total?

Mr. MOSCOSO. $102.2 million.

Mr. PASSMAN. What total did you ask for last year?

Mr. MOSCOSO. We asked for $4 million in——

Mr. PASSMAN. The total, please?

Mr. MOSCOSO. We asked for $44 to $64 million.

Mr. PASSMAN. They got how much?

Mr. MOSCOSO. $93.7 million.

Mr. PASSMAN. Is this more than double the request?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. Double $44 million is $88 million?

Mr. MOSCOSO. Yes, but if you take the higher range, $64 million——

Mr. PASSMAN. You said the lower range was $44 million and you gave them $93 million out of this one spigot. All the spigots was how much?

Mr. MOSCOSO. Excluding the Export-Import Bank and the military——

Mr. PASSMAN. Leave the military in. What is the total?

Mr. MOSCOSO. $136.7 million.

Mr. PASSMAN. So that is double the double?

Mr. MOSCOSO. That includes the Export-Import Bank.

Mr. PASSMAN. Excluding the Export-Import Bank?

Mr. MOSCOSO. $133.3 million.

Mr. PASSMAN. That is double the high range, even?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. In the future we intend to put these sums together. What you ask for on this page was big enough, but when we put it all together it is tripled.

Mr. MINSHALL. Did you include the Peace Corps?

Mr. MOSCOSO. Yes.

Mr. MINSHALL. What about food for peace?

Mr. MOSCOSO. Yes, that was included.

Mr. PASSMAN. You will put all the other spigots in the record, will you not?

Mr. MOSCOSO. Yes; the international agencies, excluding the International Bank for Reconstruction and Development, and the International Finance Corporation, amounted to $21 million in fiscal year 1963.

Mr. MINSHALL. Do you happen to know offhand how much Colombia is getting for the Peace Corps?

Mr. MOSCOSO. Yes. They are getting $2.8 million.

Mr. MINSHALL. What are they doing over there, do you know?

Mr. MOSCOSO. Primarily working in the rural areas helping to build schools and train teachers and helping agricultural extension, et cetera.

Mr. MINSHALL. How many Peace Corps volunteers are there?

Mr. MOSCOSO. I do not have that figure.

Mr. ANDREWS. They did not receive $2.8 million from the Peace Corps?

Mr. MOSCOSO. That is the amount of money paid out by the Peace Corps to maintain the Peace Corps men there.

Mr. ANDREWS. All they get are the services and equipment?

Mr. MOSCOSO. Yes. They do not get any money.

BUDGETARY SUPPORT

Mr. PASSMAN. Is it not true we have had direct budgetary support to Colombia in the last 3 years?

Mr. MOSCOSO. We have helped them finance their budget.

Mr. PASSMAN. We have given them budgetary support?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. And with the large sums plus the budgetary support instead of their budget situation getting better it is getting worse. They had a $10 million deficit when we started and they went to $90 million and then to $135 million. What is the estimated deficit for 1963, do you know?

Mr. STERNFELD. We do not have it.

Mr. PASSMAN. Which indicates they are not supplementing their budget with tax collections. Despite the budgetary support we have given them, their deficit continues to increase.

CONSORTIUM FOR COLOMBIA

Page 49 of the justifications indicates a consortium is being arranged to provide external support for Colombia in the amount of $220 million annually for the next 4 years and the United States is expected to contribute $———.

I hope I have read that item incorrectly.

Mr. MOSCOSO. That is correct.

Mr. PASSMAN. For the consortium arrangements, the other members usually make good hard loans, but not Uncle Sam.

Why is the U.S. contribution such a high proportion of the total for the consortium?

Mr. MOSCOSO. It is about ——— the external requirements.

Mr. PASSMAN. Yes, but we are only one nation.

Mr. Moscoso. The rest of it is supposed to be contributed by the international lending agencies and other nations.

Mr. PASSMAN. In reality the U.S. contribution may be 90 percent because they will get much of the balance from organizations to which we make large contributions.

Mr. Moscoso. There will be a substantial contribution from European countries.

Mr. PASSMAN. But they are dipping into organizations to which we make substantial contributions.

Mr. Moscoso. I do not have the figures here.

Mr. PASSMAN. It looks like the United States will put up 50 percent of the consortium's total but you dip into other organizations for which we are putting up 40 or 50 percent, so that, in fact, we are contributing most of it.

Mr. Moscoso. The bulk will come from the World Bank, Mr. Chairman.

Mr. PASSMAN. Did you say the World Bank?

Mr. Moscoso. IBRD, which is the World Bank.

Mr. PASSMAN. There might be some coming out of the Social Progress Trust Fund?

Mr. Moscoso. Yes.

Mr. PASSMAN. We might be putting up 80 percent?

Mr. Moscoso. No.

TAX MEASURES

Mr. PASSMAN. What is the status of the tax measures that are being considered by a special session of the Colombian Congress? In 1962 the tax measures were being considered by the Colombian Congress. Now we are in 1963. Go to your book, on page 50, and tell us how they are getting along with this debate.

Mr. Moscoso. The tax measures in question are now being considered. They are still considering it.

Mr. ANDREWS. How long have they been considering the tax measures?

Mr. Moscoso. Since January 1963.

Mr. ANDREWS. What tax changes have occurred in Colombia since the Bogotá Conference? When was that conference held?

Mr. PASSMAN. In 1960.

Mr. ANDREWS. That is 3 years. I would like to know what tax reform legislation has passed and how much tax collections have increased.

Mr. Moscoso. Law 81 of 1960 consolidating tax provisions, modifying the tax structure, and making technical improvements. Then in 1961 regulations were issued for the income tax.

Mr. PASSMAN. The internal revenue of the country in 1961 was $330 million and in 1962 it was $330 million. It did not increase one dime 1962 over 1961. What is the situation for 1963?

Mr. STERNFELD. I am sorry, we do not have that.

Mr. PASSMAN. The tax collections in the 2 years after Bogotá were not increased but they are now debating a tax bill?

Mr. Moscoso. That is right.

Mr. PASSMAN. And this is an AID estimate. I do not say you would purposely inflate it, but the actual may be below that sum. I imagine you will protect your interest.

Mr. MOSCOSO. Our interest, Mr. Chairman, is your interest.

Mr. SCHEINMAN. We have done everything we can to provide information for the benefit of the committee and we have taken your suggestions for improvement very seriously.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. ANDREWS. May I ask one other question about these taxes?

According to your best information, Mr. Ambassador, and the information contained in this book, no more taxes are being collected now than at the time of the Bogotá treaty. Is that correct?

Mr. MOSCOSO. That is correct, Mr. Andrews, but may I remind you of one thing?

Mr. ANDREWS. Yes.

Mr. MOSCOSO. You must remember that the principal product of this country is coffee and we have been drinking some cheaper coffee for some time compared to the price we had to pay before. If the price had remained at the level it was before, all of us probably would have contributed to the wealth of Colombia to the point it would not be necessary to give them as much aid.

Mr. ANDREWS. If you get into the real of "ifs," if our production of steel could go from 55 percent to 100 percent we would have less unemployment in this country.

Mr. MOSCOSO. That is right, but we have other things.

Mr. ANDREWS. We do not have time this afternoon to listen to all the things that could have happened "if" other things had happened.

At the Bogotá Conference did they not set down as a condition precedent that before money went from the United States that those countries, including Colombia, would increase taxes and do something in the field of land reform?

Mr. MOSCOSO. Yes.

LAND REFORMS

Mr. ANDREWS. What has Colombia done in the field of land reform since this conference?

Mr. MOSCOSO. Colombia is moving ahead with a land reform program. They have been debating the tax reform bill since January of this year and we hope it is approved.

Mr. ANDREWS. They have had trouble with the Government. The Government that existed at the time of the Bogotá Conference toppled?

Mr. MOSCOSO. No, it did not topple. There was a democratic election held and a peaceful change, but the new Government is of a different party and this bill is being debated in the Congress.

CONDITIONS PRECEDENT TO U.S. AID

Mr. ANDREWS. But we have gotten no further than the debate stage in an effort for Colombia to meet the condition precedent to our assisting them?

Mr. MOSCOSO. I do not recall my saying this was a condition precedent.

Mr. ANDREWS. I am telling you what they told us.

Mr. PASSMAN. We read it in the record time and time again. The Foreign Affairs Committee chairman said: "We will not ask for any money to be appropriated until they have passed these reform measures."

They were maybe beginning to tighten up but when we started disbursing this money it became clear they made up their mind that they did not have to pass these laws in order to get this money. If you tell people, "You will have to do this in order to get the money," and you start giving them money before they do it, it stands to reason it will be more difficult for you to withhold money in the future.

You do not disagree with my observation, do you?

Mr. MOSCOSO. There is an old Spanish saying that a musician you have already paid does not play as well.

Mr. ANDREWS. That is a good expression.

Mr. PASSMAN. Now they are debating tax measures but they are not passing them. Why do you not wait until they pass them and implement them before giving them this money?

Mr. MOSCOSO. I think, Mr. Chairman, we do not differ on the objectives. I am just as anxious as you are to see these people pay more taxes. The difference is how you are going to get it. I think the business of raising taxes anywhere in the world, including in the United States, is a difficult job.

Mr. ANDREWS. And unpopular, too.

Mr. MOSCOSO. Very unpopular.

Mr. ANDREWS. But no government can help itself unless it levies and collects taxes.

Mr. MOSCOSO. But this is a very stable society. You probably saw in the paper this morning where the former dictator, Pinilla, is trying to overthrow the regime of President Valencia, and one argument he is using is that he is making some of the wealthy people worry that they will have to pay more taxes.

Mr. PASSMAN. We have agreed that some of these countries accumulate a bunch of tax claims and then pass legislation forgiving them.

Mr. ANDREWS. Mr. Ambassador, Mr. Minshall touched on this question with reference to Chile. You have it blacked out on page 46, which means it is classified, but I do not know why it should be. It says that ———.

Mr. MOSCOSO. Yes.

Mr. ANDREWS. That is in reference to Chile. Do you not have a statement similar to that in the book with reference to Colombia?

Mr. MOSCOSO. I hope next year we will.

Mr. ANDREWS. I understood your statement a moment ago to be that Colombia had not done any of these things required at the Bogotá Conference?

Mr. MOSCOSO. I did not say that.

Mr. ANDREWS. Except debate in Congress. They have introduced a bill and are debating it.

Mr. MOSCOSO. And they have approved an agrarian reform program.

Mr. PASSMAN. We have asked for a list.

Mr. MINSHALL. Off the record.

(Discussion off the record.)

U.S. ASSISTANCE TO TAX ADMINISTRATION

Mr. MINSHALL. What are you specifically doing to help them collect taxes in Colombia?

Mr. MOSCOSO. We have a tax administration program to provide advisory services and to train the employees.

Mr. MINSHALL. How many people are involved in this program?

Mr. MOSCOSO. We have one technician and we will have an Internal Revenue Service group going in.

Mr. MINSHALL. How big a group?

Mr. MOSCOSO. I do not know how many people.

Mr. MINSHALL. Are you doing the same thing in Chile?

Mr. MOSCOSO. Yes.

Mr. MINSHALL. How long have you been doing it in Chile?

Mr. MOSCOSO. Two years.

Mr. MINSHALL. Do you have any results from that?

Mr. MOSCOSO. Oh, yes.

Mr. MINSHALL. The chairman brought out you had not increased the internal revenue. I believe it was $330 million and had not changed.

Mr. MOSCOSO. In the case of Chile it has increased.

Mr. MINSHALL. I am talking about Colombia.

Mr. MOSCOSO. You are right. I hope next year this will change.

COLOMBIAN TAX BILL

Mr. STERNFELD. Mr. Minshall, the bill before their Congress calls for the reestablishment of a national gasoline tax, it calls for the establishment of a supplementary income tax on excess expenditures applicable to Colombian nationals, resident aliens with rates from 5 to 25 percent, and it has a tax stamp for individual traveling abroad on income and property declarations.

Mr. MINSHALL. That is fine, but what are they doing about the bill? Are they filibustering?

Mr. MOSCOSO. This is a democracy and they are debating it.

Mr. MINSHALL. What are the changes for its passage?

Mr. MOSCOSO. The chances are very good that they will take action and if not we will have something in here like we have on Chile.

Mr. PASSMAN. It has been established that in Chile they are increasing the deficit every year and you are pouring money into Chile by the tens of millions of dollars, are you not?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. They are making the conversation and we are giving the money.

Mr. MOSCOSO. In Chile they have approved in one house a tax bill.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

NEED FOR SELF-HELP EFFORTS IN LATIN AMERICA

Mr. PASSMAN. There has been very little improvement made in Latin America. We know this program so far is a failure and until we recognize it as a failure because they are not doing their part, this thing will never succeed. Nobody, I believe, wants to see this phase

of the program succeed more than I do. However, these people are holding back because they know they do not have to do these things in order to get our money. So far as I am concerned, I will do everything I can to try to convince them that they have misjudged the mood of the Congress and of the American people.

Mr. Moscoso. In many instances, Mr. Chairman, the argument that is used by those who do not like us is that all we are doing is redressing something that has been done by the exploiters that have taken the oil or other natural resources out. I wish it were as simple as that.

Mr. PASSMAN. These people know there never has been a country on the face of the earth as generous as the United States is. They can look on the record and see that we have given billions of dollars of the wealth of America to other nations. Yet the nations to which we have given the most aid appear to be the weakest. Your predecessor, the present Ambassador to Spain, pointed to Cuba and the sugar subsidy. It was the highest subsidized nation on the face of the earth, and look where they are. And look at Laos, as another example.

Mr. Moscoso. In spite of the fact we have been generous you will recall that just a few years ago the Vice President of the United States suffered a great amount of indignity in Latin America because of great animosity against the United States.

Mr. PASSMAN. And this animosity appears to be just as great today, notwithstanding all the aid we have given.

Mr. Moscoso. I am going to quote something, Mr. Chairman, which is very true. This is from the person we quote the most in the English language.

To the noble mind, rich gifts wax poor when givers prove unkind.

Sometimes, Mr. Chairman, the style is more important than the amount we give.

Mr. PASSMAN. If they are not willing to help themselves, I think we ought to come home.

Mr. Moscoso. I agree with you on that. They have to help themselves. Otherwise, we should not help them.

Mr. PASSMAN. They are not doing much of it.

Mr. Moscoso. They are doing some, but not as much as we would like them to do.

Mr. PASSMAN. Very little, comparatively.

Mr. Moscoso. But it is moving ahead, Mr. Chairman.

Mr. PASSMAN. Do you agree that what they are doing is very little compared to what we expected and what they promised?

Mr. Moscoso. It is very little compared to what you might have expected, but knowing these people a little bit better than you, Mr. Chairman, I say this is about as fast as you are going to get them to move as of this moment. I think they are moving much faster.

Mr. PASSMAN. Nations have become prosperous for literally thousands of years based upon trade. Is that right?

Mr. Moscoso. That is right.

Mr. PASSMAN. Giving away your wealth, hoping to cure the ills of all the other peoples of the world, is a brandnew concept in foreign policy as we think of time; is it not?

Mr. Moscoso. Yes; helping the less developed countries.

Mr. PASSMAN. It is a concept that is not working successfully.

As far as I am concerned, this program will fall of its own weight if we do not tighten it up.

COST OF DEVELOPMENT LENDING

I think Mr. Scheinman's example today as to how we could borrow money at 3½ percent and lend it at three-fourths of 1 percent and in 40 years wind up with a profit, is the best example I ever heard of, of how the aid program operates.

Mr. SCHEINMAN. Certain assumptions are made.

Mr. PASSMAN. I imagine so, because you have to borrow at 3½ percent, lend it for 40 years, at three-fourths of 1 percent, and when you finally collect it back you wind up with a profit, according to your reasoning.

(Off the record.)

Mr. PASSMAN. We know we are borrowing the money at 3½ percent. We are lending it at three-fourths of 1 percent. At the end of 40 years we show a profit, you state, of $17,033. If that is the formula you people are using and the basis for the justifications you have worked up to get this money, we had better adjourn this thing and go on out to St. Elizabeths as a body.

Mr. ANDREWS. I think by any table or machine you use to calculate it, the interest on a million dollars at 3½ percent would be $35,000 a year. Forty times that is $1,400,000. By any machine or any formula that you use to figure three-fourths of 1 percent interest on a million dollars for a year, it is $7,500. You multiply that by 40, and you come up with $300,000. That is the interest for 40 years at three-fourths of 1 percent on a million dollars.

Mr. SCHEINMAN. There are a couple of matters involved in this.

Mr. ANDREWS. There are bound to be a lot of matters. If you subtract the $300,000 from the $1,400,000, you still come out $1,100,000 behind the game.

Mr. SCHEINMAN. There are a couple of matters involved in the calculation. Not all of the money in the U.S. Treasury is borrowed.

Mr. MINSHALL. A lot of it is.

Mr. PASSMAN. Everything you give away is borrowed.

Mr. ANDREWS. Every time you have a deficit—and we have had 26 in the last 31 years—it is borrowed money.

Mr. SCHEINMAN. They took the proportion of the million dollars which was borrowed and the proportion which was paid in as taxes, and that affects the computation. In addition, sir, the amortization of the loan and the payback of the principal affects the calculation.

Any million dollars which the U.S. Government uses—you cannot identify whether that particular million dollars was borrowed or paid in taxes.

Mr. PASSMAN. This is the last obligation we incurred, the give-away program.

We are spending $100 billion a year. We are paying interest on more than $300 billion.

I do not know what you were trying to prove.

Mr. SCHEINMAN. We have agreed to submit an insert based on your hypothetical suggestion.

Mr. TENNANT. You asked us to compute on the basis of 3½ percent.

Mr. PASSMAN. Please do so.

FISCAL YEAR 1963 DEVELOPMENT GRANT PROGRAM FOR COLOMBIA

Page 259 of the project book indicates that you have executed a development grant program of $5.962 million. How much did you justify for the development grant program last year?

Mr. MOSCOSO. $4 million.

Mr. PASSMAN. You justified $4 million, but you executed a program of $5.962 million. That is almost a 50-percent increase.

Mr. STERNFELD. Sir, the program was executed at $6.3 million.

Mr. PASSMAN. Page 259 indicates you executed a development grant program of $5.962 million. You asked for $4 million.

That is almost a 50-percent increase.

What did you finally do?

Mr. MOSCOSO. $6.3 million.

Mr. PASSMAN. That is more than 50 percent over what you requested.

Are you familiar with the antideficiency law?

Mr. MOSCOSO. Yes; it is a different operation.

Mr. PASSMAN. You bet it is a different operation.

FISCAL YEAR 1963 SUPPORTING ASSISTANCE

Why did you program $175,000 for commodities under the supporting assistance appropriation for this country in 1963?

Mr. MOSCOSO. The same explanation pertains here, Mr. Chairman, that I mentioned in the case of Chile. During the Cuban crisis in October, urgent emergency requests were made for antiriot equipment, and so forth, and we provided it to them.

NATIONAL PLANNING-AGRICULTURE PROJECT

Mr. PASSMAN. Did you request and justify the $75,000 that you obligated for the National Planning-Agriculture project, on page 264?

Mr. STERNFELD. At page 155 of last year's book.

CUBAN COMMUNIST EFFORTS IN LATIN AMERICA

Mr. MINSHALL. Mr. Moscoso, you mentioned Cuba a minute ago. How much has the influence of Cuba under the Communist regime been felt since last October throughout Latin America?

Mr. MOSCOSO. The Cuban expert is sitting to my right, here.

Mr. MINSHALL. Would you answer that?

Mr. COTTRELL. I think the most serious impact of Cuba involves the people they have trained in Cuba and sent to all Latin American countries, adding to the present Communist apparatus in those countries.

Mr. MINSHALL. It is no doubt they are using it as a base for communism, for the training of saboteurs in large volume.

Mr. COTTRELL. That is quite right.

Mr. MINSHALL. What countries are feeling the most impact of this?

Mr. COTTRELL. The Cubans have indicated Venezuela and Guatemala are their two priority pojects. They are working on others, probably less in Mexico and Brazil than in most.

Mr. MINSHALL. How about Central America?

Mr. COTTRELL. Guatemala.

Mr. MINSHALL. What are they doing in Guatemala?

Mr. COTTRELL. There are guerrilla bands up in the hills. So far, the Government has been able to control them.

Mr. MINSHALL. What are they doing?

Mr. COTTRELL. The guerrilla bands?

Mr. MINSHALL. Yes.

Mr. COTTRELL. They are organizing to try eventually to overthrow the Guatemalan Government, as do all guerrilla bands. They have not been causing much damage to date.

Mr. MINSHALL. But they have shown a tremendous increase—is that a fair adjective to use—or a very marked increase?

Mr. COTTRELL. I would say very marked since last October. That is a good way to describe it.

Mr. MINSHALL. They are using it not only for radio propaganda, but printed material as well.

Mr. COTTRELL. They are sending propaganda all over the hemisphere and are sending men. We haven't any evidence they are exporting arms yet. We have evidence that they are delivering cash to various organizations.

Mr. MINSHALL. Have you any evidence of their influence in Haiti?

Mr. COTTRELL. No. The evidence that the Cubans are active in very slim. I believe the reason is that they know we are extremely touchy about Haiti, and it might cause a reaction on our part. So far, up to recent days, Castro has trimmed his policy so he would not exacerbate the situation.

Mr. MINSHALL. How much has it increased the cost of our aid program in these countries to try to overcome this influence of Cuba?

Mr. COTTRELL. I do not think you could measure it very accurately.

Mr. MINSHALL. It has increased the cost, has it not? You have had to redouble your efforts in some quarters.

Mr. COTTRELL. I am not aware of any specific loans that have been given in Latin America that directly related to stopping the Cuban influence.

Mr. MINSHALL. I do not refer to that, but I mean you have had to increase your effort.

Mr. MOSCOSO. It is partly as a result of the desire to see there is no further increase in the influence of Castro communism in the whole region.

Mr. MINSHALL. I hope you can leave most of this in the record.

Mr. COTTRELL. This is quite all right.

U.S. ASSISTANCE TO PLANNING IN AGRICULTURAL SECTOR—COLOMBIA

Mr. PASSMAN. You did not identify this project in 1963. Go to your page again.

Mr. STERNFELD. The project on page 155.

Mr. PASSMAN. Page 155 shows a project, 514-A-19-AG, "Agriculture Management and Planning," begun in fiscal 1953. On this project in 1963, obligation, zero; unliquidated, zero. It is a brandnew project with a brandnew obligation.

Mr. STERNFELD. The project took a different shape from the project justified before the committee on page 155.

Mr. PASSMAN. But you have a different project number, a different name for the project, and you do not show that you had any prior obligations or liquidations, do you?

Mr. STERNFELD. That is right.

Mr. PASSMAN. We are running into this kind of thing all along the way.

Tell us how much has been spent on the old project, and what you did with the amount of money that you had on hand unliquidated when you came before the committee last year, if this is the same project.

Mr. STERNFELD. Sir, the reason for the difference—I will admit it is not a good reason—is that the preparation of this page would have been much more accurate if they had merged the project called Agricultural Management and Planning, begun in 1953, with this project called National Planning—Agriculture. The objective was the same. The change that took place was in a shift from direct hire U.S. technicians to operating on the basis of a contract, working with the same objective of trying to improve the agricultural planning in the country of Colombia.

The project sheet, Mr. Chairman, you are right, does not give you the total picture——

Mr. PASSMAN. It is a new project, new name, new number, new amount. You do not even show that you ever had a prior year contract, and instead of obligating——

Mr. STERNFELD. Sir, I admit we did that.

Mr. PASSMAN. But the book is so loaded with this kind of stuff. Twenty men put together, spending full time at the job, could never tear apart what you people have mixed up here. You change the name, change the numbers, and show there never has been an expenditure.

Tell us how much you spent on the old project before it was concluded, or whether it was canceled and how much you deobligated on the old project.

Mr. STERNFELD. According to the information I have in front of me here, the old project, we obligated $706,000.

Mr. PASSMAN. How much did you have unliquidated?

Mr. STERNFELD. The book which I have in front of me says at June 30, 1962, $10,000 was unliquidated.

Mr. PASSMAN. He is pointing out a different figure there. How much is it not?

Mr. STERNFELD. At June 30, 1962, the actual unexpended balance turned out to be $18,000.

Mr. PASSMAN. $18,000, not $10,000. What did you do with that money?

Mr. STERNFELD. I would have to check the record to see whether that has been completely liquidated.

Mr. PASSMAN. If not, it should be on this page.

Mr. STERNFELD. That is correct.

Mr. PASSMAN. You have these kitties buried all through this aid program. I wish that Congress would help you bring it under control.

Find out the facts and give us something on this item, please.

(Information supplied follows:)

AGRICULTURAL MANAGEMENT AND PLANNING PROJECT

The unliquidated amount for the "Agricultural management and planning" project was $18,000 on June 30, 1962. Of this amount, $11,000 was expended in fiscal year 1963: $9,500 for technician salaries and $1,500 for participant training costs, and the cost of converting this project to contract status. The remaining $7,000 was deobligated.

FINANCIAL DEVELOPMENT PROJECT

Mr. PASSMAN. Did you justify the $75,000 that you obligated last year for the "Financial development" project, on page 266?

Incidentally, on this new project, indicate what it will cost to complete the thing.

Mr. STERNFELD. $356,000.

Mr. PASSMAN. So, it is a million dollars if you combine them.

Did you justify last year the project on page 266?

Mr. STERNFELD. No, sir.

Mr. PASSMAN. You did not justify it.

Project the cost of this one to conclusion.

Mr. MOSCOSO. $1,058,000.

EDUCATION PROJECTS

Mr. PASSMAN. I note that you plan to initiate the secondary educational project in 1964 at a cost of $153,000. What will that project cost to completion?

Mr. MOSCOSO. $253,000.

Mr. PASSMAN. With an unexpended balance of $1,600,000 in the "Primary education" project, on page 270, why are you requesting additional funds in the amount of $264,000 for fiscal 1964?

Mr. MOSCOSO. This is the secondary education program.

Mr. PASSMAN. Gentlemen, you have on hand and have been carrying over since 1952, $1,600,000; have you not?

Mr. MOSCOSO. This is a contruction program.

Mr. PASSMAN. When did the project start?

Mr. STERNFELD. 1958.

Mr. PASSMAN. How much have you expended on the project from the inception of it, going into its seventh year?

Mr. STERNFELD. $2,720,000.

Mr. PASSMAN. What will it cost to complete it?

Mr. STERNFELD. Since the inception of the program, $5,920,000.

PUBLIC SAFETY PROJECT

Mr. PASSMAN. Did you justify last year the $440,000 that you obligated for the "Public safety" project, on page 271?

Mr. STERNFELD. No, we did not.

Mr. PASSMAN. What will it cost to complete this project which you started but did not justify?

Mr. MOSCOSO. The cost of the project to completion, $1,600,000.

Mr. PASSMAN. Did you justify last year the $206,000——

Mr. MOSCOSO. Mr. Chairman——

CIVIC ACTION PROJECTS

Mr. PASSMAN. Did you justify last year the $206,000 that you obligated to the "Civic action-well drilling program," on page 273?

Mr. MOSCOSO. No, sir; this was not justified.

Mr. PASSMAN. What will that project cost to complete?

Mr. MOSCOSO. $326,000.

Mr. MINSHALL. Why did you not justify it a year ago?

Mr. STERNFELD. The civic action program, Mr. Minshall, was initiated after the justifications were submitted to the Congress. A joint DOD and AID team went down to Colombia, where there have been great difficulties with the banditry problem.

Mr. MOSCOSO. One of the great problems in Colombia is that in spite of the democratic position, there are bandits, which is the only description one can give it, because these are people who not only steal but also kill.

Mr. PASSMAN. They have been there for hundreds of years, have they not?

Mr. MOSCOSO. We are helping the Colombian Government to eliminate it.

Mr. PASSMAN. It is nothing new, is it? It has been going on.

You did not justify the project, but this is not the exception. This is the rule. You have the law on your side. It is that broad.

Mr. MOSCOSO. You are entering a stage in Colombia where you want to maintain as much tranquillity as possible so you can do the developmental job. One of the main sources of instability in that country, which is pretty stable otherwise, has been these outcroppings of violence in the remoter parts of the country.

Mr. PASSMAN. How is a well-drilling project related to bandits?

Mr. MINSHALL. Is it to water the bandits?

Mr. MOSCOSO. No. It is to provide water to the population so they will not join the bandits.

Mr. PASSMAN. That conclusion seems to be pretty farfetched. You did not justify it, anyway.

Did you justify the $216,000 obligation in fiscal 1963?

Mr. MOSCOSO. This was not justified. This is civic action, too, and civic action was not justified.

Mr. PASSMAN. That was not justified, either.

Did you justify the $400,000 that you obligated last year for the civic action program?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. Why do you need $700,000 for the Tolima Highway project, on page 275, which is an increase of approximately 75 percent for 1964?

Mr. MOSCOSO. This provides the necesary goods for the completion of the 42-mile segment of the highway between Palmira and Tolima. This includes gasoline, cement——

TAX ADMINISTRATION PROJECT

Mr. PASSMAN. Did you justify the $150,000 that you obligated last year to the tax administration project, on page 276?

Mr. MOSCOSO. No, it was not justified.

Mr. PASSMAN. Can you project the cost of this thing?

Mr. MOSCOSO. The cost to completion, $1,500,000.

TECHNICAL SUPPORT COSTS

Mr. PASSMAN. I note that you obligated $400,000 in 1963 for the technical support project, on page 277. Did you justify that one?

Mr. MOSCOSO. We justified $191,000.

Mr. PASSMAN. You justified less than half of it?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Project the cost of that project to completion, if you will.

(The information supplied follows:)

TECHNICAL SUPPORT COSTS

Technical support costs are continuing costs until it is decided to close out the mission. At this time no date has been established.

Mr. MINSHALL. Why did you not justify all of these? For the same reason you gave me in response to my earlier query? Because of the bandits?

Mr. MOSCOSO. No.

Mr. MINSHALL. Why did you not justify this one?

Mr. MOSCOSO. What I mentioned had not been justified was civic action programs which were started.

Mr. MINSHALL. The rest of them you just used the law?

Mr. MOSCOSO. I suppose this was used as an increment in the whole program. The Alliance for Progress is a new program.

Mr. MINSHALL. I understand this.

Mr. MOSCOSO. And this is the technical support component of the increments of the program.

Mr. PASSMAN. When you started this program years ago, would you not have been happier if we had said we are going to appropriate sufficient money to do this, but you will have to justify it and we will appropriate the funds, and you would then go do your project?

Mr. MOSCOSO. Perhaps if it had been done right when it was started——

Mr. PASSMAN. It would not have been messed up like this.

Mr. MOSCOSO. We never gave enough, and we gave it so reluctantly it did not do the good.

Mr. PASSMAN. We did not give enough?

Mr. MOSCOSO. Yes, sir.

ILLUSTRATIVE NATURE OF AID REQUEST

Mr. PASSMAN. We have given over $100 billion since the end of World War II; about $124 billion, if you include the interest on the money we borrowed to give away.

These programs are illustrative; is that correct?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. You can justify them but substitute a different set of programs altogether?

Mr. MOSCOSO. That is correct.

Mr. PASSMAN. You could, under the law, ignore every program, everything that you have justified in the book, and spend the money and obligate it for different purposes; could you not?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. You could justify a highway in Argentina and build a brick building in Algeria and be within the law; could you not?

Mr. MOSCOSO. That is right, but not with Alliance for Progress loan funds.

Mr. PASSMAN. Under the development credits, known as development loans, you do not know what projects, what countries, or for what purposes the funds will be used, until you get the money; do you?

Mr. MOSCOSO. That is right.

NEW PROJECTS PROPOSED FOR FISCAL YEAR 1964

Mr. PASSMAN. Do you have any new projects on page 278, proposed for initiation in fiscal 1964?

Mr. STERNFELD. Higher education, under education——

Mr. PASSMAN. That is a new project?

Mr. MOSCOSO. Higher education, $97,000.

Mr. PASSMAN. Any others?

Mr. STERNFELD. Civic action is new, $48,000.

Mr. PASSMAN. Higher education—what is the figure?

Mr. STERNFELD. $97,000.

Mr. PASSMAN. The cost to completion is what we want.

Mr. STERNFELD. I don't have the figure here.

Mr. PASSMAN. It could be many millions of dollars?

Mr. STERNFELD. I don't think it would be.

Mr. PASSMAN. You are starting something here. Higher education could shoot the moon; could it not?

Mr. STERNFELD. Not in the way of development grants, Mr. Chairman.

Mr. PASSMAN. How much do you have in this bill for that category under "Development grants?"

Mr. STERNFELD. Under "Higher education?"

Mr. PASSMAN. In the total. You can spend it for anything you want.

Mr. STERNFELD. Our request for Latin America is $100 million of new development grant funds.

Mr. PASSMAN. Can you give us any idea of what you are getting us into with this project?

Mr. MOSCOSO. This is going to be used to give planning assistance to the universities——

Mr. PASSMAN. Higher education. What will be the cost?

You think it would phase out at about $400,000?

Mr. STERNFELD. That is right.

Mr. PASSMAN. How about civil action? To what spending point will you take that one?

Mr. STERNFELD. I don't have it, sir.

Mr. PASSMAN. This is communication network. That could get to building a complete telephone and wireless system; could it not?

Can you get us an estimate from downtown and give it to us?

Mr. STERNFELD. Yes, sir.

(The information requested follows:)

CIVIC ACTION—COMMUNICATIONS NETWORK

The total cost to complete this project will be $48,000. These funds will purchase receiver-transmitter sets, antennas, and spare parts sets. These are required to supplement the operatoin of two MAP-provided point-to-point communications networks. The first network, in the Llanos region which covers most of the eastern two-thirds of the country, will serve 11 communities with a population of 240,000. The second network will be in the Amazonas area and will serve 11 communities with a population of 140,000.

The networks will provide communications between these areas and the major cities of the country, thereby assisting in the maintenance of internal security.

Mr. MINSHALL. What kind of communications network is this?

Mr. MOSCOSO. This is in order to get relief quickly to these areas where these bandits strike upon a village.

Mr. MINSHALL. Are these field phones?

Mr. MOSCOSO. Yes.

Mr. MINSHALL. You can buy an awful lot of field phones for $48,000.

Mr. MOSCOSO. It is a big country.

Mr. MINSHALL. It is a lot of field phones.

You can buy these second-hand from the Army-Navy store.

Mr. PASSMAN. That may not be it.

Mr. MINSHALL. They are perhaps not good enough.

Mr. MOSCOSO. We will check it, sir.

DEVELOPMENT PROGRAM LOAN FOR COLOMBIA

Mr. PASSMAN. I note, on page 280, the development program credit in the amount of $60 million which is going to generate Colombian pesos.

Is this a matter of budgetary support?

Mr. MOSCOSO. It is not, sir. This will be used to provide the essential imports into Colombia and the pesos generated will be used for labor union housing cooperatives, $10 million——

Mr. PASSMAN. Does this money go into the budget of the country? Is this government credit?

Mr. MOSCOSO. The bulk of it will go into a private investment fund.

Mr. PASSMAN. Will it go into the Treasury and then out?

Mr. MOSCOSO. Private investment fund which will be handled by the commercial banks of Colombia.

Mr. PASSMAN. It will have nothing to do with their budget?

Mr. MOSCOSO. The $30 million will not.

Mr. PASSMAN. With reference to the $60 million, please.

Mr. MOSCOSO. Well, there will be $20 million going to the capital projects which are in the Colombian development budget.

Mr. PASSMAN. The budgetary support part will be $20 million?

Mr. MOSCOSO. That is right.

Mr. PASSMAN Am I correct there?

Mr. MOSCOSO. As part of their development program.

Mr. PASSMAN. I know, but everything goes into something. We are trying to be factual.

The $20 million will be budgetary support, and out of the budget they could spend it for designated projects. Is that right?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Have we not established there is budgetary support?

Mr. STERNFELD. Budgetary support of a development type——

Mr. PASSMAN. I want to be sure we understand this is budgetary support money being paid into the budget.

They will do something with the money. They will be public works projects?

Mr. MOSCOSO. Public works.

(The following additional information was supplied later:)

U.S. CONTROL OVER THE USE OF LOANS MADE TO SUPPORT THE COLOMBIAN DEVELOPMENT PLAN

A $60 million loan was made in December 1962, to assist the Colombian Government in carrying out its long-term economic development plan. This loan was made for the following purposes:

	Million
Loan to the Bank of the Republic to create a private investment fund for relending to private business firms	$30
Loan to labor unions which will provide 50 percent matching funds from their own resources and construct housing units to be sold to their members	10
Support of the Colombian development budget	20

The Bank of the Republic has established an account into which are deposited the peso equivalents of the dollars disbursed under this loan.

The United States controls the uses to which these funds are applied (1) by requiring specific agreements with the country as to the projects to be financed before withdrawals from the peso account are authorized, and (2) by auditing the expenditure of these funds to insure compliance with existing agreements.

The agreement between the USAID and the Government of Colombia provides that the $20 million loan supporting the Colombian development budget will be allocated as follows:

Purpose	*Millions*
Ministry of Finance—Primarily for geographic surveys	$1.42
Ministry of Agriculture—To support specific agricultural research projects and the Agrarian Reform Institute	5.47
Ministry of Education—Construction of primary schools	3.12
Ministry of Public Works—Road construction	9.77
Ministry of Communications—Purchase and adaptation of telegraphic equipment	.22

Mr. Minshall?

CIVIC ACTION PROGRAM

Mr. MINSHALL. Why this emphasis on civic action?

Mr. MOSCOSO. Because there are a considerable number of bandit groups and because it has been found that some of these bandit groups have been infiltrated by Castro Communists.

Mr. MINSHALL. Don't you contemplate——

Mr. MOSCOSO. The civic action program is designed primarily to utilize the military more as a civilian police force.

Mr. MINSHALL. That is what they do in all of these Latin American countries. You have one in Guatemala, for example?

Mr. MOSCOSO. That is right. We give them more utilization.

Mr. MINSHALL. This is primarily because of the Castro influence?

Mr. MOSCOSO. And also to give——

Mr. MINSHALL. Is it primarily because of that?

Mr. MOSCOSO. Yes, but also as a means of utilizing this manpower in the development projects of the country and in the development program of the country.

Mr. MINSHALL. Perhaps if we got rid of Castro we can cut down considerably on the Alliance for Progress program.

Mr. MOSCOSO. I am afraid Castro is not the cause of this.

Mr. MINSHALL. What is the cause?

Mr. MOSCOSO. Proverty, misery, and——

Mr. MINSHALL. You said a moment ago that because of the Castro influence you had to start these civil action programs.

Mr. MOSCOSO. That is one of the reasons.

Mr. MINSHALL. Were it not for Castro we would not have need for these programs?

Mr. MOSCOSO. We still would.

Mr. MINSHALL. Not to such a degree?

Mr. MOSCOSO. Perhaps not to such a degree but you still want to do it because you want to bring up the military in Latin America to the level of democratic comportment such as we have in the United States.

Mr. MINSHALL. You think every country should have a good standing army whether or not they need it?

Mr. MOSCOSO. No.

Mr. MINSHALL. What did you just say?

Mr. MOSCOSO. Every country should have a standing army?

Mr. MINSHALL. Yes.

Mr. MOSCOSO. I didn't say they should have a standing army.

Mr. MINSHALL. What do you mean by military? I am not trying to put words in your mouth. What did you mean?

Mr. MOSCOSO. By what, sir.

Mr. MINSHALL. By saying we should have a strong military.

Mr. MOSCOSO. Strongly democratic military.

Mr. MINSHALL. What do you mean by that?

Mr. MOSCOSO. That they should comport themselves——

Mr. MINSHALL. What does military mean if it does not mean army and armed forces?

Mr. MOSCOSO. Let us start all over again, Mr. Minshall. The purpose of a civic action program is multiple. One is to instill a better appreciation of the problems and the democratic way of solving problems in these countries, to get the military to participate actively in the solution of those problems.

This we did right here in the United States many years ago when the——

Mr. MINSHALL. CCC?

Mr. MOSCOSO. That is right, with the Army Engineers. You utilize well-trained people, better trained than the average person in some of these underdeveloped countries.

It is also a form of creating a better image of the military in the minds of some of the citizens of these countries who feel that the military have been their oppressors. That may have been so many years ago and it is still so, but not in most of the countries, and in order to allow the military to do the useful work they can do in preserving the peace and stability of a country we are helping them to design these civic action programs.

In the case of Castro communism, in some countries, we have had to intensify these programs for the additional purpose of getting the army out into the countryside to assist——

Mr. MINSHALL. The Castro influence is especially strong in Colombia?

Mr. MOSCOSO. No; but it is in Venezuela and Guatemala.

DOMINICAN REPUBLIC

Mr. PASSMAN. The next country is the Dominican Republic. In fiscal 1964 the estimate is $———.

Can you give us the amount from all spigots?

Mr. MOSCOSO. $——— for all spigots.

Mr. PASSMAN. I am looking at the block figures. You say the Alliance for Progress grant and "Supporting assistance" is $———. You do not mention other figures.

Mr. MOSCOSO. On page 11 you will see——

Mr. PASSMAN. I refer to this page. Am I correct? You show $———?

Mr. MOSCOSO. Yes, and a footnote.

Mr. PASSMAN. How much will it be?

Mr. MOSCOSO. $———.

Mr. PASSMAN. How much have we given this country since the inception of the program?

Mr. MOSCOSO. $90.5 million.

Mr. PASSMAN. Over what period have we given this $90.5 million?

Mr. MOSCOSO. Since 1946.

Mr. TENNANT. Since fiscal 1963.

Mr. PASSMAN. How much?

Mr. MOSCOSO. $90.5 million.

Mr. PASSMAN. Does that go through the Trujillo regime and the present regime?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. Did we give aid every year under the Trujillo regime?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Then when they killed Trujillo we started giving it to his successor?

Mr. MOSCOSO. Yes.

Mr. STERNFELD. We stopped aid and then again aid——

Mr. PASSMAN. You had to find out to whom to make checks payable?

Mr. MOSCOSO. That is something that I——

Mr. PASSMAN. Is that a fair enough description of the situation?

Mr. MOSCOSO. I think the less said about the Dominican Republic and the lack of intervention in the past, the better. One of the problems is precisely that.

Mr. PASSMAN. How much aid have we given this present regime? Please put the figure in the record.

(The information requested follows:)

U.S. GOVERNMENT AID TO THE DOMINICAN REPUBLIC SINCE THE INAUGURATION OF PRESIDENT BOSCH

AID ASSISTANCE

AID assistance to the Dominican Republic since the inauguration of President Juan Bosch totals $25,200,000.

In fiscal year 1963, $3,644,000 was obligated for the grant technical assistance program. Approximately $2,500,000 of that amount was obligated after the inauguration of President Bosch. In addition, the grant of $22,750,000 was signed with the Bosch government.

Total, AID assistance	$25,200,000
Other U.S. Government assistance:	
A. Food for Peace (Public Law 480):	
1. Title III (approximate value foods shipped last quarter fiscal year 1963	2,382,000
2. Title II (feed grains for small farmers for hog and poultry production)	345,000
3. Title IV (sale of 10,000 metric tons of corn)	785,000
Total, Public Law 480	3,512,000
B. Military assistance, total	700,000
Grand total	29,412,000

SUPPORTING ASSISTANCE

Mr. PASSMAN. In view of the fact that the Dominican Republic's gold and foreign exchange earnings are increasing, and that it has a favorable trade balance, why are we programing $——— in supporting assistance as a cash transaction for budgetary support?

Mr. MOSCOSO. The $——— supporting assistance is to assist the Dominican Republic in diversifying their agricultural economy from sugar——

Mr. PASSMAN. The book says "cash transaction." That is direct budgetary support.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. The money goes into their budget?

Mr. MOSCOSO. Yes, to be used for agricultural diversification.

Mr. PASSMAN. Did you justify the $23 million for supporting assistance that you allocated in 1963 to this country?

Mr. MOSCOSO. No, sir.

USE OF CONTINGENCY FUNDS FOR SUGAR SETTLEMENT

Mr. PASSMAN. Did we give them some kind of money other than a sugar settlement while the claim was pending in court? Was there not a suit pending in court which had not been settled?

Mr. MOSCOSO. There is still a private suit pending in the courts.

Mr. PASSMAN. Does it represent the amount we have already given them?

Mr. MOSCOSO. That is not right. The suit formerly presented by the Government of the Dominican Republic has been withdrawn. The suit still pending is that of the South Puerto Rico Sugar Co.

Mr. PASSMAN. You testified to the correctness of it, that the suit (off the record).

We agreed last year there should be a congressional authorization before we gave them this money. That would be the normal procedure.

Mr. MOSCOSO. Yes.

Mr. PASSMAN. You recall the discussions last year about the desirability for an authorization?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. You did not wait for congressional authorization but made the grant of $23,925,000 out of the supporting assistance fund; is that correct?

Mr. TENNANT. It was funded from the contingency account for supporting assistance purposes.

Mr. PASSMAN. So, instead of getting an authorization through the Congress, which would have been normal, you made an allocation out of the Contingency Fund?

Mr. MOSCOSO. No.

Mr. PASSMAN. I refer to the suggested authorization.

Mr. MOSCOSO. We made an authorization out of supporting assistance——

Mr. PASSMAN. I refer to a congressional authorization to establish this as a bona fide claim against the United States. Instead of waiting for the Congress to approve an authorization, and the Congress to work its will, you made a grant out of the President's Contingency Fund in the amount of $23,750,000.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. This is given to them and there is no going back on this, is there? This is closed business?

Mr. MOSCOSO. Mr. Chairman, I am afraid I will have to ask your permission to state some of the background of this.

Mr. PASSMAN. Is this closed business with them, that we have given them this out of the grant category?

Mr. MOSCOSO. Closed in what sense?

Mr. PASSMAN. That we have settled the claim, whether we thought it was valid or not.

Mr. MOSCOSO. The Government has withdrawn their claim in court.

Mr. PASSMAN. You have not answered my question.

Mr. MOSCOSO. You asked if they had——

Mr. PASSMAN. Last year we discussed the desirability of having a congressional authorization on this matter, which would have been normal procedure. This would have established it as a Government liability because of the sugar quota.

Prior to the consideration by the Congress of an authorization for this purpose, you gave them $23,750,000 in grants out of the President's Contingency Fund?

Mr. MOSCOSO. At the time that this was done Congress was not in session. This was——

Mr. PASSMAN. We discussed this last year. Let us start all over.

Mr. MOSCOSO. At the time the grant was made the Congress was not in session.

Mr. PASSMAN. Please explain this claim.

Mr. MOSCOSO. This is a claim that the people of the Dominican Republic felt they had because a special import excise was imposed on all of the "Cuban windfall" sugar which came into the United States from the Dominican Republic from October 1960 through March 1961.

Mr. PASSMAN. Under Trujillo.

Mr. MOSCOSO. Yes, the tax was applied during the time that Trujillo was still alive.

Mr. PASSMAN. He was carrying on a dictatorship there of which we did not approve.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Instead of giving them the subsidy, the same amount per pound as we were giving some others, we penalized the Dominican Republic?

Mr. Moscoso. We penalized Trujillo's regime.

Mr. PASSMAN. That was our ruling, "You are a dictator and you are not entitled to this and therefore we will not give you the subsidy." Is that correct?

Mr. Moscoso. Yes.

Mr. PASSMAN. At a subsequent date, when the dictator was killed, and his brothers maybe took hundreds of millions of dollars out of the country, the new regime came in. It was felt we had some moral obligation to reimburse them for the penalty we had assessed against the Trujillo regime, and it was an amount of approximately $23,750,000?

Mr. Moscoso. That is right.

Mr. PASSMAN. We agreed that the normal procedure for such a situation as this would be to introduce legislation in the Congress establishing a valid claim.

Mr. Moscoso. But the——

Mr. PASSMAN. Mr. Moscoso, the Congress is not in session all the time.

We agreed there should be legislation introduced in the Congress to establish a valid claim and give Congress a right to say yes or no. Is that right?

Mr. Moscoso. We were not dealing with normal conditions, Mr. Chairman.

Mr. PASSMAN. Is it not true that we discussed this matter?

Mr. Moscoso. That is right.

Mr. PASSMAN. We thought we should go through a legislative process?

Mr. Moscoso. Yes.

Mr. PASSMAN. But the Dominican Republic decided they would go into court and get a decision. Is that right?

Mr. Moscoso. Yes.

Mr. PASSMAN. Congress adjourned and went home. Instead of waiting for the Congress to reconvene, or instead of waiting for the court to hand down a decision, you gave them a $23,750,000 grant. We had given the money already and therefore they withdrew the suit and the resolution in the Congress died.

Have I stated the facts?

Mr. Moscoso. You have not said everything.

Mr. PASSMAN. Have I stated the things that we discussed and the procedure by which we gave them the money? They withdrew the suit, the resolution died, and we gave them $23,750,000 out of the President's Contingency Fund and it has been settled. Is that right?

Mr. Moscoso. An election was taking place in December——

Mr. PASSMAN. I want to know whether what I cited is accurate.

No resolution was enacted by Congress as discussed between the two of us?

Mr. Moscoso. It was not enacted.

Mr. PASSMAN. You did make the grant, and there was no congressional authorization?

Mr. Moscoso. That is right.

In the first place, we have, as you stated, a case in which a whole people, not just a regime, felt that they were being made to suffer for the sins of a dictatorship.

Mr. PASSMAN. I did not say such as that.

Mr. Moscoso. That is what I said.

I am saying that that is what the people of the Dominican Republic felt. They felt they were being chastized for something which was done by a dictatorship which we had in part supported, and that it was not fair that after this man had been killed, and there was no reason for further chastisement, because the reason for it disappeared, that they should continue to be penalized for not having been paid for the sugar.

Mr. PASSMAN. Beginning from the time the new regime went in I would go with you. I refer, however, up to the time Trujillo was assassinated.

Mr. Moscoso. Elections were scheduled for December in the Dominican Republic and the fact this money had been withheld from the Dominican Republic——

Mr. PASSMAN. Under Trujillo?

Mr. Moscoso. The tax was applied during Trujillo's regime, yes. But the Dominicans did not quarrel when we retained the money as a chastisement against Trujillo. It was when Trujillo died that this penalty, according to their way of thinking, was not justified and they sought to recoup the lost funds.

Mr. PASSMAN. But a lot occurred prior to the election of the new regime?

Mr. Moscoso. That is right.

Mr. PASSMAN. Was the assassinated dictator's brother running the country?

Mr. Moscoso. No, we had a junta running it for a year.

Mr. PASSMAN. Was this with the concurrance of the dictator's son?

Mr. Moscoso. No, the junta took over in January 1962. The dictator's son left the country.

Mr. MINSHALL. I am not clear why it was so urgent, while we were not in session, to pay the money pronto.

Mr. Moscoso. (Off the record.)

Mr. PASSMAN. They are not asking us to reimburse them for the hundreds of millions Trujillo stole and shipped out of the country, are they?

Mr. Moscoso. No.

Mr. PASSMAN. But it would seem to be just as sensible if they should do so.

The Trujillo dictatorship just about stripped everything out of the Treasury of the Dominican Republic?

Mr. Moscoso. Yes, they did.

Mr. PASSMAN. And if we had paid this money before the change in government they would have taken that, too.

Could you tell us if any part of the $23,750,000 we gave them as a grant accrued after the new government of Bosch was inaugurated?

Mr. Moscoso. No.

Mr. PASSMAN. Then I was right from the beginning, except I was limiting it to the old man and his son.

Mr. STERNFELD. Do you mean if the funds were given to them?

Mr. PASSMAN. No. Did we continue to assess the penalty after the new regime?

Mr. Moscoso. That is what I understood you to say. No, we did not.

Mr. PASSMAN. Then we are both right.

PERSONNEL STRENGTH—U.S. MISSION TO DOMINICAN REPUBLIC

How many technicians did you have on board on June 30, 1963?

Mr. MOSCOSO. 35.

Mr. PASSMAN. How many did you justify last year?

Mr. MOSCOSO. We justified four.

Mr. PASSMAN. That is running about true to form. That is about a 700-percent increase.

Mr. MINSHALL. Would it be appropriate to ask why the increase?

Mr. MOSCOSO. We did not know what the program was going to be, Mr. Minshall. We just started the program.

Mr. PASSMAN. This is as loose as it can be.

Mr. STERNFELD. We had four people at that time.

Mr. MOSCOSO. We did not know what the program was going to be. When the book was prepared, the country had just become free.

Mr. MINSHALL. What about next year? Do you know what the program will be next year?

Mr. MOSCOSO. Yes, we have a better idea now.

Mr. MINSHALL. You think it will stay at 35?

Mr. MOSCOSO. We hope so, yes.

Mr. PASSMAN. If you should go to 140 you still would be within the law?

Mr. MOSCOSO. Yes.

PARTICIPANT TRAINING PROGRAM

Mr. PASSMAN. You had $450,000 to finance a participant program of 150. However, you allocated $745,000 to the participant program to finance 422 participants. Is that correct?

Mr. MOSCOSO. 422 participants. Yes, that is correct.

PROJECTS INITIATED IN FISCAL YEAR 1963

Mr. PASSMAN. The project book indicates you initiated seven projects in 1963. Would you prepare a table showing the names of the projects, the amount allocated in 1963, the estimate for fiscal 1964, the cost to complete each project, and then give the grand total?

Mr. MOSCOSO. Yes.

(The information follows:)

Projects initiated in 1963, continuing into fiscal year 1964 and later years

Project title	Obligations, fiscal year 1963	Estimated obligations, fiscal year 1964	Estimated cost to completion
Vocational education	228,000	200,000	988,000
Adult education	41,000	140,000	491,000
Establishment of agricultural institutions	253,000	545,000	2,263,000
Government planning and administrative reform	477,000	414,000	1,791,000
Public safety	265,000	220,000	965,000
Manpower development and labor administration	60,000	160,000	530,000
Private enterprise development	7,000	131,000	383,000
Total	1,331,000	1,810,000	7,411,000

Mr. PASSMAN. Do you have, on page 294, any new projects proposed for initiation?

Mr. STERNFELD. These are all projects which have been initiated in 1963.

COST OF PROJECTS TO COMPLETION

Mr. PASSMAN. Will you add the projects on page 294 and project all of that information?

Mr. STERNFELD. Yes.

(The information requested follows:)

Cost to completion of projects under $100,000, fiscal year 1964

Project title	Obligations, fiscal year 1963	Estimated obligations, fiscal year 1964	Estimated cost to completion
Resource conservation and development	131,000	40,000	365,000
Livestock development	43,000	60,000	208,000
Education planning and administration	40,000	80,000	295,000
Total	214,000	180,000	868,000

Mr. PASSMAN. Thank you, gentlemen. We shall adjourn until 1 p.m. Monday.

MONDAY, AUGUST 12, 1963.

UNEXPENDED BALANCES

Mr. PASSMAN. The committee will come to order.

Ordinarily during the course of the year, near the beginning of a new fiscal year, we ask the Controller to give us a list showing the amount of funds on hand at a given period and getting an estimate as closely as possible as to what sums will be unexpended as of June 30. The first such estimate came out on July 25. A later set of figures was submitted on August 8. It is my understanding that there will be another one submitted in September for the final closing; is that correct?

Mr. TENNANT. That is correct, sir.

Mr. PASSMAN. Realizing in each case that these are estimates, and the figures could be up or down, but as I had previously broken the figures apart on the first statement, which was preliminary for June 30, submitted on July 25, that statement is being issued with the indication it is a preliminary tabulation, and that subsequent statements may indicate a smaller amount of unexpended funds in the pipeline.

On Friday I asked the Controller if the unobligated funds in the amount of $515 million, purely unobligated funds, would remain approximately the same. He said they would, and that the technically unobligated funds, but figuratively obligated, in the amount of $688 million, which was for reservations made and being carried as an obligation, as the committee thinks of obligations pending the signing of contracts, would not substantially change.

GENERAL MOTORS CURTAILING OPERATIONS IN INDIA

It is my understanding that General Motors started operations out in India in 1924, and along the way India demanded excess taxes, gross discrimination against them, to the point that they were forced to greatly curtail their operations in India, even closing up some of their plants. My informant on this matter has indicated to me that India is about the only country on the face of the earth that General Motors ever seriously curtailed operations, or practically pulled out of, on account of rank discrimination against foreign investment.

I wish that you would ascertain whether or not India is actually discriminating against foreign capital, especially General Motors, in a manner such as I have indicated.

CHILEAN EXCHANGE RATE

"Best buys for your dollar. Escudos in Chile."

This article is from the Chicago Daily News foreign service.

What exchange rate did you use the other day when we were discussing the escudo?

Mr. STERNFELD. 1.4.

Mr. PASSMAN. This article was in yesterday's paper. When we were trying to establish the inaccuracy of the estimates—and certainly we understand when you make an estimate it could be up or down—we had quite an exchange on the escudo. We were dealing with dollar equivalents in both instances. Did you happen to see this item?

Mr. MOSCOSO. The official market rate now is 1.845 and the free market rate is a little less than that now. It is about 3.02.

Mr. PASSMAN. You show 1.4 here.

Mr. MOSCOSO Yes, sir; that was the average rate in 1962.

Mr. PASSMAN. What is the real rate?

Mr. MOSCOSO. As of June the official market rate was 1.845.

Mr. PASSMAN. Are we giving any aid that generates escudos? If so, at what rate do we deal on?

Mr. MOSCOSO. The official rate.

Mr. PASSMAN. Are we dealing on a rate of 1.4, whereas the real rate is 3.3?

Mr. MOSCOSO. We are getting the highest official rate, the highest rate legal in the country, 1.845.

Mr. PASSMAN. Of course we were getting the highest official rate in Laos, too. We accepted that squeeze until it almost choked us to death.

This is for Sunday, April 11, 1963, the Washington Post: "Best buy for your dollars is in escudos in Chile."

Mr. CONTE. Is that in the open market?

Mr. MOSCOSO. Free market.

Mr. PASSMAN. The free market rate is 3.3. We deal on a rate of about 1.4. We are getting the same type of treatment in Chile that we got in Laos.

Mr. STERNFELD. In 1962 the official rate fluctuated from 1.05 to 1.660, the last quarter.

Mr. PASSMAN. You can peg that rate at any exchange you want to, and we can support it on that basis, but the facts are this is just about

the prevailing dollar exchange rate by which you can buy and sell in Chile, is it not, 3.3?

Mr. STERNFELD. I presume the reporter has the accurate data there.

Mr. PASSMAN. You know what happened out in Laos. We got hooked in on one of those deals out there, supporting the kip at about three times its real value.

If we are supporting the escudo at about three times its actual going value of what they buy and sell for down there, then we want to know the facts. Will you find out for us?

Mr. MOSCOSO. Yes, we will.

Mr. PASSMAN. Do you realize that if this is the going rate, whether it is black market, gray market, or green market, by which you can buy goods and sell goods then this is certainly an expensive arrangement, is it not?

Mr. MOSCOSO. Yes, it would be.

Mr. STERNFELD. We will get this.

(Information supplied follows:)

CHILEAN EXCHANGE RATE, THE OFFICIAL RATE AND THE MARKET RATE

According to the U.S. AID mission in Chile the latest "market rate" for the escudo is 3. This is confirmed by the First National City Bank in New York and the published quotation in the New York Times. The market rate is currently down from the high of 3.9 reached in April–May.

AID loans for imports from the United States currently provide that these commodities generate sales proceeds (which become part of Chile-owned currencies) at the official rate because this is the effective rate at which the central bank sells the foreign exchange to importers for commodity imports. We have been informed by our mission that transactions at this rate average $35 million per month as compared to transactions of $400,000 to not over $1 million per month at the "market rate."

If AID required deposits of local currency at the higher market rate at this time the central bank would have to create additional local currency to the extent of the difference from the official bankers rate. This would be an inflationary creation of money undermining the basic approach with which AID joins the Government of Chile, the IMF and Treasury to contain inflation and promote financial stabilization. Of course AID constantly reviews the size of the "brokers market" and is ready to adjust this approach as the situation demands.

Mr. PASSMAN. Thank you.

And any other similar instances that you can think of.

AMOUNT OF AID TO NIGERIA

How much aid are we giving to Nigeria in 1964?

Mr. TENNANT. It is in a range for 1964. This is the classified category. The bottom range is $1,035,000.

The top range is $———.

Mr. PASSMAN. That is the one-spigot deal, is it not?

Mr. TENNANT. I am sorry. I read the wrong line. The correct range is from $——— to $———.

Mr. PASSMAN. That is a big difference.

COMMUNIST INFLUENCE IN VENEZUELAN SCHOOLS

I am going to give this item to the distinguished Administrator—"Caracas Schools Red-Infiltrated."

(The clipping follows:)

DEMOCRACY THREATENED: CARACAS SCHOOLS RED INFILTRATED

(By Louis R. Stein)

CARACAS, VENEZUELA.—Communist terrorism is a lesser threat to democracy in Venezuela than Red infiltration of the public school system.

"Since the Communists began their declared war of sabotage on American industry and against their own government," a foreign businessman explained, "insurance companies here have paid out around $4.5 million in claims.

"Yet many of us Americans are less concerned by the attacks than we are of tolerance of Communists in the university."

As this businessman and others have given the matter much thought explain it, sabotage only destroys what is present, the physical target of the saboteur.

SOW SEEDS

But Communist indoctrination of high school and college students sows noxious seeds that will plague this oil-rich South American nation of 8 million persons for generations to come.

Communist terrorism is costing Venezuela. Heavy insurance company payments on policies that include coverage of vandalism and sabotage losses have moved insurers to ask the Government for permission to delete such coverage from future policies. The insurance companies would prefer to write separate insurance for acts of sabotage and collect additional premiums from the American companies that have suffered most from destructive attacks.

What worries most Americans and some Venezuelans are the Marxist-Leninist influences on the country's students.

President Romulo Betancourt recognizes that the school system has been heavily infiltrated by Communists. Since he started his crackdown several years ago, some 1,600 Communist high school teachers have been fired from public secondary schools. Yet little has been done to clean them out of Caracas ultramodern, 240-year-old Central University.

An estimated 60 percent of the university's 5,000 registered students are Communists, according to some observers. Virtually all students are exposed to the Reds for whom the university campus is a safe haven from arrest by police.

HEADS REDS

Not all Central University teachers are Communists. A number of American businessmen here teach at the university in their spare time. But a prime example of an influential, tolerated Communist is D. F. Maza Zavala, who heads the list of Reds at the university's school of economics.

Maza Zavala is also editor of the anti-American newspaper El Venezolano. El Venezolano appears to be financed by Cuban Communist funds. It carries virtually no advertising and it mouths the Communist Party line wrapped in extreme nationalism.

Maza Zavala has obtained Iron Curtain graduate scholarships for several outstanding students of economics and has installed them as university professors on their return from Russia.

Mr. PASSMAN. Does that seem to be the trend?

Mr. MOSCOSO. I think that has been reversed, particularly in the secondary schools but it is one of the very frightening things, I agree.

COMMODITY PROCUREMENT FROM AID FUNDS

Mr. PASSMAN. Using whatever pipeline figure you had for June 30, based upon the estimate that you furnished to us on July 25, the amount that you had withdrawn out of the pipeline at that date, can you tell us the total amount of that money which went for commodities for exports overseas, goods and commodities?

Mr. TENNANT. Mr. Chairman, the figures that we pulled together for you early in July were taken from cable reports. The cable reports

only had a one-line figure for expenditures. The breakout of those expenditures is virtually impossible before we get into final figures. The detail documents go through a computer process. There are various mechanical runs which have to be processed.

It would take some time to break it out.

Mr. PASSMAN. If you would, take what you have posted as of June 30, according to your July 25 estimate, so that we may know what part of the $3.5 billion that you drew out of the pipeline last year represented American commodities exported, goods that went out of the country.

Mr. TENNANT. I understand your question, sir, but to get the specifics on source of expenditures would require detailed reports out of the military and the economic which I do not have at the moment. They have not been produced as yet.

Mr. PASSMAN. Out of three and a half billion dollars—I do not know how accurate these figures are, but I do not think we are too far-off—about $1 billion, I believe, represents actual commodities. Then you have $2,500 million which furnishes a monthly pay check to about 62,000 military personnel and civilians in the mutual security part of AID, foreign nationals and participants. Now if we have built this thing into something that is a fancy payroll of $2,500 million annually, a monthly payroll to 62,000 individuals, participants, nationals or American citizens, plus airplane tickets, plus tips, plus hotels abroad, plus representation allowance—if that is what we have gotten into we want the record to show it. We are not going to ask you to break it apart, travel, tips, representation, and food, but we do want to subtract commodities from the total in order to know whether or not this is possibly a payroll bonanza, and so forth.

Mr. TENNANT. I believe I gave you an insert on that type of categorization for some prior years.

Mr. PASSMAN. Please make another check on the matter. I want to give you the benefit of the doubt, because I used the figure of $1 billion for commodities. I am afraid it is not going to sound very favorable for the program if we say the actual aid is $1 billion, the rest is to furnish a paycheck to 62,000 Americans, foreign nationals, or participants, including hotels, rooming, et cetera, abroad. Just have a check on these figures and let us know.

Mr. TENNANT. I will check on it, sir.

(NOTE.—Additional information may be found beginning on p. 2625.)

USE OF DEOBLIGATED FUNDS

Mr. PASSMAN. You have certain funds that during the year the Agency deobligates. Do you have the total amount for Latin America that you deobligated in fiscal year 1963?

Mr. MOSCOSO. Yes, sir; we have.

Mr. TENNANT. As of April 30, 1963, the most recent figure I have with me, sir, the total deobligations in the annual accounts for Latin America, at that time, was $10,728,000, consisting of——

Mr. PASSMAN. That is the latest date you have?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. How about the comparable worldwide figure?

Mr. TENNANT. Worldwide on that date was $51,966,000.

Mr. PASSMAN. That is not for military aid, just economic?

Mr. TENNANT. Yes. That is supporting assistance and development grants.

Mr. PASSMAN. That is just the economic part of it?

Mr. TENNANT. That is right.

Mr. PASSMAN. You can take deobligated funds and start new projects and allocate money to them, can you not?

Mr. TENNANT. Within the terms of the legislation.

Mr. PASSMAN. We understand there is legislation. We have already agreed it is a blank check. You can do whatever you want to. You can take these deobligated funds and start new projects or allocate money to old projects. These are completely loose funds are they not?

Mr. TENNANT. If approved——

Mr. PASSMAN. Can you do either or both?

Mr. TENNANT. Yes, if approved by the committee.

Mr. PASSMAN. Did the Attorney General rule it was unconstitutional for the committee to exert such authority?

Mr. TENNANT. Yes, sir.

The Administrator as I understand it——

Mr. PASSMAN. He said he would do this whether or not——

Mr. TENNANT. My understanding is he made a commitment to you——

Mr. PASSMAN. That is right. The Attorney General ruled this kind of authority on the part of the committee is unconstitutional.

Mr. CONTE. Mr. Chairman, the law was unconstitutional or the procedure?

Mr. PASSMAN. That it was unconstitutional for the committee to exact of the Executive a requirement to report to the committee before they reobligated the funds.

Mr. CONTE. The law said that.

Mr. PASSMAN. That was an act of Congress.

But the Attorney General said it was unconstitutional. It is not a question of whether you obligate funds out of deobligated funds or whether you obligate from elsewhere. We are interested in seeing that the money is prudently spent. We established several years ago, several times, that you took deobligated funds and started many new projects, so we had language in the bill to the effect that you could not so use deobligated funds. Do you remember that situation?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. Then we turned you loose for a year. The committee felt that you made a worse mess of it than you had in previous years so we tightened it up again.

By compromise we agreed that we would not put the language back as such but you would have to give the committee notice before you could obligate deobligated funds.

Again, we were interested in saving money so I had certain correspondence in this connection with the AID Administrator.

Mr. SCHEINMAN. The legislation states that the purpose must relate to a project previously justified to the Congress. That was the restriction——

Mr. PASSMAN. Was that restriction what the Attorney General said was unconstitutional?

Mr. SCHEINMAN. No, sir.

Mr. PASSMAN. I am going to read my letter to the Administrator and his letter to Chairman Cannon.

This letter is dated March 26, 1963:

Hon. DAVID E. BELL,
Administrator, Agency for International Development,
Washington, D.C.

DEAR MR. BELL: This will acknowledge your letter of March 22, 1963, with reference to the reobligation of deobligated funds from prior years, appropriations as set forth in your letter of January 31 to Chairman Clarence Cannon for which I thank you very kindly. I hasten to confess that your letter to me leaves me confused. The purpose of my telephone call to you was to be reassuring to the Agency that the committee desired to cooperate and be as reasonable as possible because this is your first year to handle this complex program, but I should like to explain my position by borrowing a bit of slang from an old saying, "It would appear that you are trying to put the monkey on my back rather than giving me an opportunity to cooperate in a most understanding way." Please note the following, which is an excerpt from your letter of March 22:

"As indicated on the telephone, we are quite prepared to follow this method of disposing of the matter if you prefer it. I wish to again state, however, as I did in your conversation, that we are also quite prepared to proceed in accordance with the arrangement discussed at the subcommittee meeting on March 20; that is, to withdraw both the January and March letters, submit more information on all proposed uses of deobligated funds and to be prepared to justify the proposed actions of a subcommittee on April 8, which would be followed by speedy decision by the subcommittee and the full committee." I say place the monkey on my back because you indicated I preferred to serve my purpose, not your purpose or our mutual purpose. As far as I am concerned it was to be a mutual understanding and not something I preferred. Furthermore, I am equally as confused by the fact that your letter indicates that you have deleted certain projects and you did not mention the amount of money that you would reobligate. Undoubtedly you understand this would create confusion. Therefore, the matter is back in your hands. If you are willing for there to be an understanding based upon the fact that this Agency is new with you, please supplement your letter of January 31 to Chairman Cannon by stating what portion of the $8,621,000 deobligated you will reobligate and what part you will not reobligate.

I must admit that I am somewhat sensitive about this foreign-aid matter because it has been almost a career with me to try to understand this worldwide spending program since I have been a Member of Congress. If I may have your cooperation I will proceed to discuss with the members of the subcommittee and later the full committee the two letters as we discussed them over the telephone, but unless you can indicate what amount of the $8,621,000 you will reobligate and the amount you will not obligate before June 30, then I will have to proceed with the hearings, especially if you are going to indicate you are doing this to please me and that it is not a mutual agreement for better understanding. Awaiting your immediate reply and with best wishes,

Sincerely yours,

OTTO E. PASSMAN,
Chairman, Subcommitte on Foreign Operations,
Committee on Appropriations.

This is Mr. Bell's letter to Chairman Cannon, dated March 27:

DEPARTMENT OF STATE,
AGENCY FOR INTERNATIONAL DEVELOPMENT,
OFFICE OF THE ADMINISTRATOR,
Washington, March 27, 1963.

Hon. CLARENCE CANNON,
Chairman, Committee on Appropriations,
House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: Since submitting to you my letter of January 31, subsequently augmented by my letter of March 19, subsequent events have altered the necessity for the use of deobligated funds with respect to certain of the projects listed on the attachement to my January letter. I now find that, taking account of the relative urgency of the different projects we are carrying forward,

and in the interest of the minimum use of obligational authority both newly appropriated by the Congress and deobligated from prior year funds, it will be preferable for us to withdraw our proposal to apply deobligated funds to three of the projects on the list attached to our January letter:

Yemen: Technical support, project No. Z-99-ZA.

Laos: Rural medical and health program, project No. P-99-AA.

Indonesia, Reequipment of MOBRIG, project No. S-71-AB.

Furthermore, current requirements for the use of deobligated funds for certain of the other projects have been reduced.

Accordingly, I should like by this letter to amend the list attached to my January letter by striking from it the three projects listed above, and by reducing the proposed use of deobligated funds for certain of the remaining projects. You will note that the result of these changes is to reduce our proposed use of deobligated funds from $8,621,000, to $4,916,000. We will not reobligate in the remainder of this fiscal year $3,711,000 of the $8,621,000 of deobligated funds which we had previously expected to obligate.

Sincerely yours,

DAVID E. BELL.

At a subsequent date they obligated $3,711,000, or about that much, out of another fund. Then when I called their hand, they said, "You misunderstood. We meant we would not obligate it out of deobligated funds."

Mr. SCHEINMAN. Mr. Chairman, with respect to the statement of Mr. Bell's, that $3.7 million of deobligated funds would not be reobligated, I understand that that is actually the fact and that that $3.7 million of deobligations has not been reobligated.

Mr. PASSMAN. Did you obligate out of another fund about the same amount for one of the same projects?

Mr. SCHEINMAN. Well——

Mr. PASSMAN. Please answer my question.

Mr. SCHEINMAN. It is not the same amount.

Mr. PASSMAN. Did you take a project for which Mr. Bell said he would not reobligate funds and obligate a similar amount out of another fund?

Mr. SCHEINMAN. Yes, sir.

Mr. PASSMAN. Thank you.

Mr. SCHEINMAN. I would like to point something out.

Mr. PASSMAN. My point is that we had an understanding with Mr. Bell as far as I am concerned.

You did take money out of another fund and obligate to this project for which Mr. Bell said he would not use the money out of the deobligated funds, did you not?

Mr. SCHEINMAN. Yes, sir.

Mr. PASSMAN. Thank you.

Mr. SCHEINMAN. May I say another word if you would permit me?

Mr. PASSMAN. Yes.

Mr. SCHEINMAN. Using NOA does make a difference because Mr. Bell agrees with the chairman that the whole intent of this exercise was to use funds in a most prudent manner. By using NOA, rather than deobligation, sir, you reduce the total amount of money that is used in the program.

Mr. PASSMAN. You do what?

Mr. SCHEINMAN. You reduce the total amount of money used in the program.

Mr. PASSMAN. If you take it out of a fund where the money would lapse——

Mr. SCHEINMAN. Yes——

Mr. PASSMAN. If you take this money out of the contingency fund you wind up in the contingency fund—is that where it came from—with $117 million unobligated——

Mr. SCHEINMAN. Well——

Mr. PASSMAN. If you wind up in the contingency fund at the end of the year with $117 million unobligated if you had not obligated funds for this project out of the contingency fund, then you would have had that much more on hand unobligated, would you not?

Mr. SCHEINMAN. In the contingency fund?

Mr. PASSMAN. Would you not have had that much more on hand?

Mr. SCHEINMAN. In the contingency fund, sir.

Mr. PASSMAN. Am I correct?

Mr. SCHEINMAN. These funds were not taken from the contingency fund.

Mr. PASSMAN. They were taken from the contingency fund.

Mr. SCHEINMAN. There was a preprograming of NOA which reduces the amount of money.

Mr. PASSMAN. I am going to establish that the money was taken from the contingency fund.

Mr. SCHEINMAN. I am sure, Mr. Bell can explain it to the committee. If you use NOA funds programed for another purpose——

Mr. PASSMAN. Mr. Bell told us he was going to obligate $4,910,000, that he did not plan to reobligate the $3,711,000.

This letter would lead you to believe that the taxpayers were saving $3,711,000.

Mr. SCHEINMAN. That is correct, sir.

I believe that is the case.

FUNDING OF MOBILE BRIGADE PROJECT IN INDONESIA

Mr. PASSMAN. Did you obligate funds out of the contingency fund for the same project out in Indonesia?

Mr. SCHEINMAN. I do not believe——

Mr. PASSMAN. Did you?

Mr. SCHEINMAN. I do not believe funds used for that project for the purpose for which it was proposed to use deobligated funds came from the contingency fund.

Mr. PASSMAN. Let us see where the money came from.

Mr. ANDREWS. Where did the money come from?

Mr. SCHEINMAN. I understand it was a reprograming of NOA supporting assistance.

Mr. ANDREWS. It is a spigot the chairman referred to.

Mr. SCHEINMAN. You reduce the program you would have expended the money for; therefore, the $3.7 million is actually saved. If you use deobligations you could have your NOA money and the other.

Mr. PASSMAN. You have this police brigade in Indonesia, do you not?

Mr. TENNANT. As I recall, the mobile brigade in Indonesia, consisted of two segments.

Mr. PASSMAN. Did you take any money out of the President's contingency fund and obligate it to the mobile brigade in Indonesia subsequent to March?

Mr. SCHEINMAN. Yes.

Mr. PASSMAN. Subsequent to March?

Mr. TENNANT. I believe it was subsequent to March.

Mr. PASSMAN. How much was involved?

Mr. TENNANT. There were two elements, one out of the contingency and one out of supporting assistance.

Mr. PASSMAN. Let us get the amounts, if you will. Was it $2.7 million in one instance?

Mr. TENNANT. $2.7 million sounds right.

Mr. PASSMAN. And the other instance?

Mr. TENNANT. Around $2.5 million?

Mr. PASSMAN. What is the total amount?

Mr. TENNANT. $4.8 million for the two segments.

Mr. PASSMAN. Figure again and see if you are right there.

Mr. TENNANT. $2.7 million and $2.1 million totals $4.8 million.

Mr. PASSMAN. Subsequent to the time that Mr. Bell discussed deobligated and reobligated funds for the motor brigade—I believe that is the name of it in Indonesia—mobile brigade—you did obligate funds, one segment out of the President's contingency account, one out of supporting assistance, for both segments of this project; is that correct?

Mr. SCHEINMAN. That is correct.

Mr. TENNANT. I am not sure both were after March 25. I just do not remember the testimony in that detail.

Mr. PASSMAN. It is important that you find out if you can.

Mr. TENNANT. Mr. Chairman, I think on a more basic point, I would like to say that I am quite sure that Mr. Bell had no intention of misleading the chairman or the committee and that he would be glad to write you a memorandum explaining his interpretation of that memorandum.

Mr. SCHEINMAN. In fact, sir, the procedure that was followed did reduce the total amount of money which was spent insofar as the American taxpayer is concerned.

Mr. PASSMAN. The record, I think, speaks for itself. We are going to establish from previous testimony in the hearings, and what the Controller just said about both segments, that did take new money, either out of the President's contingency or supporting assistance, or out of both of them, for this project.

ECUADOR

The next country in this area is Ecuador, for which the fiscal year 1964 estimate is $———. This is the one spigot, is it not, or is this the total?

Mr. MOSCOSO. This is AID, loans and grants.

Mr. PASSMAN. If you will, let us put all segments together.

Mr. MOSCOSO. We have the figure here: $———.

Mr. PASSMAN. The book shows $——— but that is only a partial amount. When you add the other spigots it is how much?

Mr. MOSCOSO. Including the military, Public Law 480, titles III and IV, $———.

Mr. PASSMAN. You have all of the other sources, such as the Latin American area, the regional account, the interregional account, and Ecuador is eligible for money out of those accounts?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. As well as the Social Progress account?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. And the Inter-American Development Bank?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. Also the International Development Association?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. And all of the funds in the U.N.?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Mr. Controller, the many other spigots that might be appicable, would you just list them in the record at this point?

Mr. TENNANT. Yes, sir.

(The information follows:)

SOURCES OF ECONOMIC DEVELOPMENT ASSISTANCE

Ecuador is eligible for funds from the following sources: IBRD, IDB, U.N. funds (including UNTA, ECOSOC, ILO, etc.), IFC, IDA, SPTF, development grants, development loans, supporting assistance, contingency funds, regional funds, interregional funds, Peace Corps, Food for Peace, Eximbank.

Mr. PASSMAN. What sum do you have to the credit of Ecuador unliquidated as of June 30?

Mr. MOSCOSO. $32,302.000.

Mr. PASSMAN. What has been the total aid to Ecuador since the inception of the program?

Mr. MOSCOSO. Excluding Export-Import Bank, $162,300,000.

CHANGES OF GOVERNMENT AND U.S. AID

Mr. PASSMAN. Have you had any change in government in this country recently?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. Did you suspend aid or did the aid program continue?

Mr. MOSCOSO. It was suspended for a brief period of time, until the new government was recognized by the U.S. Government on July 31.

Mr. PASSMAN. We accepted the prior government as a friendly government?

Mr. MOSCOSO. Yes; and the present government also.

Mr. PASSMAN. Was this just a friendly changeover election?

Mr. MOSCOSO. No. This was a difficult internal situation which was widely publicized.

Mr. PASSMAN. That is really a quick way to get new officials in.

We do not advocate that type of procedure; do we?

Mr. COTTRELL. No. U.S. policy is to favor the democratic regimes. It believes the aspirations of people can be satisfied through democratic regimes. And when military governments take over, we press them for restoration of the democratic regimes at the earliest possible moment.

Mr. PASSMAN. There have been 18 or 20 chiefs of state assassinated since we started this aid program.

Mr. COTTRELL. It is one of the difficult problems we have to deal with.

Mr. PASSMAN. There have been a lot of governments overthrown since we filled the till with something to rattle. The outsiders want to be the insiders.

I hope our policy in the future would be that we are not quite so willing to start the aid program back the following day.

Mr. COTTRELL. One of the purposes of our aid program is to create stability which will reduce the frequency of this kind of takeover.

ECONOMIC SITUATION

Mr. PASSMAN. On page 57 of the justifications you say "current situation," and I quote:

> Ecuador's ability to improve social and economic conditions under the Alliance is weakened by (*a*) traditional regional autonomy and geographic separation; (*b*) chaotic public administration, ———; (*c*) fiscal mismanagement—nearly two-thirds of the tax revenues of the country go to over 750 autonomous agencies and the military, both essentially outside the control of the Central Government budget. Government investment activities are small and scattered. There is no development plan. Central Government budget deficits have been substantial since 1960. They were covered by U.S. budget support loans of $8 and $7 million respectively in fiscal years 1962 and 1963. A $12 to $15 million deficit is forecast for calendar year 1963. Income distribution is so unequal that less than 10 percent of the population receives 90 percent of the recorded income. Wages are low. The Government's inability to meet commitments for contributions to local costs of projects and the lack of implementation know-how have prevented the initiation of new capital development projects and caused delays in the expenditure of funds already in the pipeline.

That makes me wonder why we are giving aid to Ecuador

That kind of comment makes me wonder why we are giving aid to Ecuador, regardless of whether a duly elected person, or a military junta, is in power.

Mr. MOSCOSO. One of the purposes of the program is to see if these conditions can be remedied. I must say that one of the reasons for the takover was the public administration situation.

Mr. PASSMAN. Why did you not wait until reforms had been brought about? You supported the old Government.

Mr. MOSCOSO. In the case of the older Government, we were trying to see if those situations could be remedied. When we did support them, we made that support conditioned upon their compliance with certain reforms they agreed to make.

Mr. PASSMAN. Under the old Government, you had a more expensive program than you have now.

Mr. MOSCOSO. Yes; it was $18.1 million in fiscal year 1963.

Mr. PASSMAN. What do we really mean? What are we trying to do?

Mr. MOSCOSO. I must say all indications seem to be that this present Government is going to address itself to these changes, hopefully with better luck than the previous administration.

Mr. PASSMAN. They have been making that kind of statement for 17 years, since we started these programs. But we support any government that comes in. If it gets worse, we still support them. It does not appear there is very much progress being made.

TOTAL AID TO ECUADOR

Mr. MINSHALL. Mr. Moscoso, how many years, and how much in total have we put in our foreign aid program in Ecuador today?

Mr. MOSCOSO. $160.3 million, excluding the Export-Import Bank.

Mr. MINSHALL. When did that start?

Mr. MOSCOSO. 1946.

Mr. MINSHALL. We have sown very richly and reaped very poorly.

Mr. MOSCOSO. There has been——

Mr. MINSHALL. 160 million bucks down the drain; it is just that simple.

Mr. MOSCOSO. I would not say that.

Mr. MINSHALL. Where did it go? What do we have to show for it?

Mr. MOSCOSO. I think there have been some improvements.

Mr. MINSHALL. Even with the new administration since 1961, you say on the cover sheet for Ecuador:

(Off the record.)

Mr. MINSHALL. What has he accomplished?

Mr. MOSCOSO. He was not elected President.

Mr. MINSHALL. He is there in charge. Are you not dealing with him?

Mr. MOSCOSO. No, sir.

Mr. MINSHALL. Who are you dealing with?

Mr. MOSCOSO. A military junta headed by Colonel Castro.

Mr. MINSHALL. What progress are you making with them?

Mr. MOSCOSO. Much better progress than we ever made with Arosemena.

Mr. MINSHALL. You would not want to leave the impression we have $160 million worth of value for the money we have invested, would you?

Mr. MOSCOSO. No, sir.

Mr. MINSHALL. How much do you think we have gotten for $160 million?

Mr. MOSCOSO. It is a very difficult thing to calculate; how many people have not died because of that assistance, how many people have learned how to read and write, how many more bushels of wheat and corn has been produced.

Mr. MINSHALL. The fact remains you have not gotten anywhere.

Mr. MOSCOSO. What we had before is not the type of program we have today. We have a truly developmental program today. I hope some day whoever sits in front of the committee will be able to spell out exactly what the results have been of the input of money in each of the countries—what have been the actual results. It is going to be extremely difficult, however, to attribute all that to our aid program because the countries themselves are putting in money.

Mr. MINSHALL. How hopeful are you that you can come back with a substantially better report?

Mr. MOSCOSO. If I were not hopeful, I would not be here.

Mr. MINSHALL. I hope you are here so we can quote you.

BUDGET AND FISCAL PROCESSES

Mr. ANDREWS. Mr. Ambassador, on page 57, discussing fiscal management, you state:

> Nearly two-thirds of the tax revenue of the country goes to over 750 autonomous agencies and the military.

Mr. MOSCOSO. That is right.

Mr. ANDREWS (continuing):

Both essentially outside the control of the Central Government budget.

Do you mean these are nonessential expenses?

Mr. MOSCOSO. No; they are essential, Mr. Congressman.

The trouble is in Ecuador, for a diversity of reasons, they have operated many Government programs utilizing the public corporation device, and there is a proliferation of public corporations which get their funds directly from some tax which is imposed and collected specifically for that particular corporation.

The funds, therefore, do not go through the central budgetary procedure. As you can see, this makes for a very cumbersome and a very difficult program to control.

One of the first things that Mr. Cardenas, the new Development Minister, is addressing himself to is to correct that situation.

Mr. ANDREWS. Do you see any hope?

Mr. MOSCOSO. I do.

CIVIC ACTION PROGRAMS

Mr. ANDREWS. On the next page you state that one of our aims down there is ———.

(Off the record.)

Mr. MOSCOSO. That is right.

Mr. ANDREWS. ———.

(Off the record.)

Would you explain that?

Mr. MOSCOSO. Yes, sir. A number of the projects you will see when we go into the details of the program are precisely designed to do such a thing. We have civic action roads and housing, and so forth.

Mr. ANDREWS. It seems as if we are constructing roads in every country, not only in your area, but all other areas.

Mr. MOSCOSO. We have a strong civic action program, $560,000.

CHANGES OF GOVERNMENT

Mr. PASSMAN. When did the new government take over in Ecuador?

Mr. MOSCOSO. The new government took over on July 11.

Mr. PASSMAN. When did the Arosemena government go into power?

Mr. MOSCOSO. Around November 1961.

Mr. PASSMAN. How many governments have you had there in the past 3 years?

Mr. MOSCOSO. Three governments.

The Velasco government, the Arosemena government and the military junta.

BUDGETARY SUPPORT AND PURCHASE OF GOLD

Mr. PASSMAN. I notice that in the fourth quarter of 1962, either October, November, or December, Ecuador purchased $3.2 million of our gold.

I am sure there is going to be a good reason for it, but I just wondered if this matter had been brought to your attention.

Mr. MOSCOSO. We do not have it here.

(Information supplied later follows:)

ECUADOR GOLD PURCHASE

The gold was purchased in accordance with previous agreements between Ecuador and the IMF. As explained below, there was no change in Ecuador's reserves as a result of this transaction.

In April 1961, Ecuador purchased with sucres $5 million from the IMF for balance-of-payments purposes. Under the Fund's automatic repurchase procedure, Ecuador was required to repurchase with dollars the $5 million worth of sucres in the spring of 1962. Ecuador made this repurchase. Later in the year the IMF required Ecuador to substitute gold for $3.2 million of the $5 million previously paid to the Fund. To make this substitution, Ecuador purchased the gold from the U.S. Treasury with dollars, turned the gold over to the IMF and received the equivalent amount in dollars from the IMF.

Mr. PASSMAN. I assure you this is the U.S. Treasury statement. You recognize it as such?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. This is Ecuador, $3.2 million.

How much aid did we give them in fiscal year 1963, the same year they got $3.2 million worth of our gold?

Mr. MOSCOSO. $36.3 million.

Mr. PASSMAN. I believe maybe they could spare $3.2 million for our gold.

Mr. MOSCOSO. That was not disbursements.

Mr. PASSMAN. If you give a government money to pay for the same items they would pay for out of their treasury, that releases money to them to do with whatever they please, whether it is buying gold or just matching their friends for it.

I note that this country received $7.3 million for supporting assistance in fiscal year 1963, of which $7 million was in the form of cash transactions.

Was that $7 million for budgetary support?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. That is the year they bought this $3.2 million of our gold?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. The last half of calendar 1962 was the first half of fiscal year 1963. Is that correct?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. They bought $3.2 million worth of U.S. gold in the last quarter of calendar 1962, which was in the first half of fiscal year 1963.

Mr. STERNFELD. That is correct.

Mr. PASSMAN. How much did you justify for the supporting assistance program for Ecuador last year?

Mr. MOSCOSO. It was not justified.

Mr. PASSMAN. Again, a blank check.

Mr. ANDREWS. Before you get away from that gold question, could we have a little more explanation of what happened?

Did I understand that we gave them $7 million in budgetary assistance?

Mr. PASSMAN. A cash transaction.

Mr. ANDREWS. Just how was that handled?

Mr. MOSCOSO. You mean the gold transaction?

Mr. ANDREWS. Yes.

Mr. MOSCOSO. I do not know about that.

Mr. ANDREWS. We did give them cash?

Mr. MOSCOSO. We made the funds available under certain conditions, that they would approve amendments to their income tax law and provide for other administrative reforms. Until those reforms were made, we did not make the money available. As a matter of fact, we held back on the second piece of it and did not make it available until they had performed.

Mr. PASSMAN. This goes into their treasury, does it not?

Mr. MOSCOSO. We are still holding back about $2 million.

Mr. PASSMAN. That is in some $30 million of unliquidated funds. You always have unliquidated funds out of a current year's allocation.

Mr. MOSCOSO. This was——

Mr. PASSMAN. How much have you disbursed on this allocation? You only made it in fiscal year 1963.

Mr. MOSCOSO. $5 million.

Mr. PASSMAN. You did not justify it, did you?

Mr. MOSCOSO. No, sir; it came from the Contingency Fund.

Mr. PASSMAN. When did you credit the funds to Ecuador?

Mr. MOSCOSO. This was signed in September 1962.

Mr. PASSMAN. That is just about the same month——

Mr. MOSCOSO. They received the first amount on November of 1962, the $3 million.

Mr. PASSMAN. That is the same quarter in which they purchased $3.2 million of our gold, is it not?

Mr. MOSCOSO. Yes, sir.

Mr. ANDREWS. Does anyone have the date on which they purchased the gold and the date on which they were given that money in cash?

CHANGES IN ECUADORAN GOLD HOLDINGS

Mr. STERNFELD. The information we have is that the Government of Ecuador had $20 million worth of gold in the first quarter of 1961. In the fourth quarter of 1962, when the chairman indicates they purchased the gold from us, they still only had $19.2 million in gold. That is the level they have maintained all through 1962 until February of 1963 they had $19 million in gold, and the latest report that the International Monetary Fund put out shows in June they still only had $19 million in gold.

Mr. PASSMAN. They did not sell any of that gold to us?

Mr. STERNFELD. They did not.

Mr. PASSMAN. I think, Mr. Administrator, you might want to check into the situation. The chances are it is sort of a surprise to review the treasury statement which shows that at the same time we were giving them a cash transaction, they pulled out money and bought our gold.

Mr. MOSCOSO. Do you know what date that purchase was made?

Mr. PASSMAN. At about the time they got your check they bought the gold. It was in the fourth quarter. It could have been October, November, or December.

Mr. MOSCOSO. That was about the time——

Mr. PASSMAN. We were giving the money.

Mr. MOSCOSO. No.

Mr. PASSMAN. You do not really give money, of course. It is a credit at the U.S. Treasury from which they can debit, credit, open accounts, or transfer over. Also, of course, this gold does not really leave the country. It moves from one vault to another.

Mr. MOSCOSO. I know you know that very well.

Mr. PASSMAN. All this is bookkeeping. It is ledger transactions. This day you have this, tomorrow that. You do not send them money, but it has the same effect.

Mr. ANDREWS. I understand the Ambassador's testimony to be that during the fourth quarter of calendar 1962 we gave them $3 million.

Mr. MOSCOSO. We advanced $3 million.

Mr. ANDREWS. And they bought during that same quarter——

Mr. MOSCOSO. Not in cash. We made a letter of credit——

Mr. ANDREWS. It is the same thing.

Mr. MOSCOSO. Goods went down there in the same amount.

Mr. PASSMAN. It is the same thing. You credit to them downtown.

Mr. MOSCOSO. Right.

Mr. ANDREWS. They could have bought gold or anything they wanted with it.

Mr. PASSMAN. If you make a cash transaction to the budget of a country, it goes in with their other total assets accruing to their budget, whether it is a letter of credit, or whether it is actually a check coming in. It accrues to the budget.

Mr. MOSCOSO. You are right.

Mr. PASSMAN. So, when they are ready to buy gold, if you have put in sufficient money to meet their commodity request, then that releases to them the money they collect in taxes or from other sources to buy our gold, or do with as they want to; is that correct?

Mr. MOSCOSO. That is correct.

Mr. SCHEINMAN. I think the committee made it clear for the record.

Mr. PASSMAN. Let the record show that I thank Mr. Scheinman.

AGRICULTURE DEVELOPMENT PROJECT

In connection with the agricultural development project, on page 299, I note that the major portion of the unliquidated fund as of June 30, in the amount of $250,000, is for approximately 21 participants. Why is the cost for participant training so high in Ecuador?

Mr. STERNFELD. This is not only the cost connected with the cost of participants. The cost of the participants is around $5,000 each. There are other expenses in the pipeline associated with the commodities and local expenses.

Mr. PASSMAN. You said:

> The major portion of the pipeline estimated for June will consist of funds obligated but not expended for approximately 21 participants who will terminate their training in fiscal year 1964.

Mr. STERNFELD. It is $110,000.

Mr. PASSMAN. That is not the major portion of the $250,000.

Mr. STERNFELD. $130,000 would have been the major portion, therefore it is a slight exaggeration if we said "major portion."

Mr. PASSMAN. Do you want the record to show that exaggeration?

Mr. STERNFELD. It is that way and I do not see why it should not be said.

TEACHER TRAINING AND MATERIALS PRODUCTION PROJECT

Mr. PASSMAN. I note that you obligated $410,000 to the teacher training and materials production project, on page 303. How much did you justify for this project last year, and what sum did you request?

Mr. STERNFELD. A project last year——

Mr. PASSMAN. Please answer my question.

I note that you obligated $410,000 to the teacher training and materials production project, on page 303. How much did you request and justify for the project last year?

Mr. STERNFELD. That project had $600,000 last year.

Mr. PASSMAN. Under what heading?

Mr. STERNFELD. Page 199, heading, "School construction, teacher training, and literacy education."

Mr. PASSMAN. That is a lot of difference?

Mr. STERNFELD. Yes, sir.

Mr. PASSMAN. Let us see if you requested any money for this project as such.

Mr. STERNFELD. It has the same number.

Mr. PASSMAN. But for a different purpose. It was $800,000 last year, "School construction, teacher training, and literacy education."

Here it is teacher training and materials production.

Last year, how much did you have for construction?

Mr. STERNFELD. We did not go ahead with the construction element of that.

Mr. PASSMAN. How much was that?

Mr. STERNFELD. I do not have the figures here.

Mr. PASSMAN. Go up to the top of the page there and see if you do not find it under "Other costs."

Mr. STERNFELD. That would be right.

Mr. PASSMAN. Subtract $380,000 from $600,000. What does that leave?

Mr. STERNFELD. $220,000.

Mr. PASSMAN. But you obligated $410,000, did you not?

Mr. STERNFELD. That was the estimate.

FORDWARD FUNDING OF UNIVERSITY PROJECTS

Mr. PASSMAN. I note that you have $1.5 million unexpended as of June 30 under the "Assistance to universities project," on page 304.

In view of the fact that you have this very large unexpended balance, why do you need an additional $950,000 for fiscal year 1964, especially since the contracts were signed in February of the 1963 calendar year?

Mr. STERNFELD. Our calculations, by the three main contracts here, show that $1,735,000 is necessary to continue to fund these university projects on a 2-year basis.

Mr. PASSMAN. I shall read from page 304 of the justifications:

Need for additional funds. Agreements obligating $1.5 million to assist Central and Catholic Universities of Quito were signed in May 1962, but expendi-

tures did not commence until after the University of Pittsburgh contract of $1.1 million, and the St. Louis University's contract of $400,000 were signed in February of 1963. Present funding will finance these contracts for 2 years.

Mr. STERNFELD. Yes, sir.

Mr. PASSMAN. You are actually going to have 4 years' funds on hand, are you not, under this arrangement?

Mr. STERNFELD. No. Under this arrangement, we will be spending moneys in 1964.

Mr. PASSMAN. And 1965?

Mr. STERNFELD. That is correct, but in order to fund these contracts through——

Mr. PASSMAN. You are requesting money for fiscal years 1966 and 1967?

Mr. STERNFELD. It is a forward funding of 2 years.

Mr. PASSMAN. You have money for 1964 and 1965 and you are asking money for 1966 and 1967. Is it that simple?

Mr. STERNFELD. We are asking for funds that will carry us partially through some of these contracts until December 31, 1965.

Mr. PASSMAN. That is fiscal year 1966?

Mr. STERNFELD. That is right, 2 years forward funding.

Mr. PASSMAN. Do you mean forward funding from previous forward funding? You have money from 1963, 1964, 1965, and 1966 under this, do you not?

Mr. STERNFELD. Sir?

Mr. PASSMAN. Present funding will finance these contracts for 2 years; is that correct?

Mr. STERNFELD. That is correct.

Mr. PASSMAN. This would mean fiscal years 1964 and 1965. The contracts were signed in February of 1963. You are moving into fiscal year 1964 to spend your money; is that right?

Mr. STERNFELD. That is right.

Mr. PASSMAN. That is, fiscal year 1964 and 1965?

Mr. STERNFELD. That is right.

Mr. PASSMAN. So what you are asking for here could go into fiscal years 1966 and 1967, could it not?

Mr. STERNFIELD. Moneys could go into as late as December 31, 1965.

Mr. PASSMAN. Do you mean you are going to spend more money in 6 months, almost, than you spent in two and a half years previously?

Mr. STERNFELD. No.

Mr. PASSMAN. How much is this project costing per year?

Mr. STERNFELD. It cost $750,000.

Mr. PASSMAN. You are funded for fiscal years 1964 and 1965?

Mr. STERNFELD. Yes.

Mr. PASSMAN. That gives you $700,000 at this inflated estimate, which would take you all the way through 1966. Then, it appears, you would have $250,000, to go over into fiscal year 1967; is that correct?

Mr. STERNFELD. We would expect to——

Mr. PASSMAN. With your own words, $250,000 would lapse over into 1967?

Mr. STERNFELD. If we were to maintain the rate of fiscal year 1963, $750,000.

Mr. PASSMAN. You have already said you have money. You say present funding will finance these contracts for 2 years. You signed the contracts in February. You said that you had funds available for fiscal years 1964 and 1965.

You have $1.5 million on hand unexpended. You say you are spending $750,000 a year.

Mr. STERNFELD. $750,000 is the figure.

Mr. PASSMAN. Your additional request for $950,000 will fund you for all of fiscal year 1966, will it not, on that basis?

Mr. STERNFELD. It will.

That is the case if you would maintain——

Mr. PASSMAN. $750,000 a year is what you said previously. On that basis, you would have $200,000 to apply to fiscal year 1967, would you not?

Mr. STERNFELD. That is correct.

Mr. MINSHALL. You made your point.

Mr. PASSMAN. I had to roll them five times.

Mr. STERNFELD. I would be glad to provide you the cost of each of the contracts.

Mr. PASSMAN. Your record says you have funding for 2 years and that breaks out at an average of $750,000 a year. You are asking for $950,000. This money on hand takes you through fiscal years 1964 and 1965. Then you would have money for 1966 with $200,000 lapping over into 1967.

Mr. STERNFELD. That is assuming——

Mr. PASSMAN. That you spent what the book says, $750,000 a year.

Mr. STERNFELD. That is, the needs are not such as to——

Mr. PASSMAN. Do you want to contradict what you have said?

Mr. STERNFELD. On the basis of calculating $750,000 a year, you are right.

Mr. PASSMAN. You have on hand, unliquidated, $1.5 million. Your book says it is good for 2 years; does it not?

Mr. STERNFELD. That is correct.

Mr. PASSMAN. On that basis you would need $750,000 per year, but you are asking for $950,000, which would fund you through a part of fiscal year 1967 on the basis of $750,000 a year.

Mr. STERNFELD. If you did not expand the contract——

Mr. PASSMAN. Who said you are going to expand it? You say you have a 2 years' supply of money. You do not say anything about expanding the contract.

How much did you justify for this project last year?

Mr. STERNFELD. $300,000.

Mr. PASSMAN. You justified $300,000, but you obligated $530,000?

Mr. STERNFELD. Right.

ECONOMIC AND SOCIAL DEVELOPMENT PLANNING PROJECT

Mr. PASSMAN. Why do you need $180,000 for contract service for the economic and social development planning project, on page 307?

Mr. MOSCOSO. This is to lend support to the planning board of Ecuador.

Mr. PASSMAN. What kind of planning board?

Mr. MOSCOSO. This is the Ecuador National Planning Board.

Mr. PASSMAN. What do they plan?

Mr. MOSCOSO. They are planning the economic and social development of the country.

HOUSING DEVELOPMENT PROJECT

Mr. PASSMAN. How much money are you requesting under the housing development project, on page 308, to finance two long-term U.S. technicians?

Mr. STERNFELD. $50,000.

Mr. MOSCOSO. We are asking for $92,000, which will finance two long-term and eight short-term technicians.

Mr. PASSMAN. You have $92,000 for U.S. technicians. Why would you need these short-term technicians?

Mr. STERNFELD. The need for short-term technicians is that they are specialists.

Mr. MOSCOSO. Specialists in their particular field.

Mr. PASSMAN. In what field or fields?

Mr. MOSCOSO. Loan procedures, city planning, and setting up and management of mutual savings banks.

Mr. PASSMAN. You have housing development, same project and same page, and you have $92,000 planned for U.S. technicians. Why are you asking $51,000 for contract services?

Mr. MOSCOSO. The U.S. technicians are going to assist in the development of the savings and loan asociations.

Mr. PASSMAN. In what activities will the other people assist?

Mr. MOSCOSO. In city planning and the loan procedures, and in the management of the mutual savings banks. One is for setting them up, the other is to show them how to run them.

Mr. PASSMAN. Should you not teach them something about running these banks before you set them up?

Mr. MOSCOSO. You try to do both things simultaneously.

Mr. PASSMAN. Where do these people get their training before they go out into the field?

Mr. MOSCOSO. In the case of the savings and loan specialists these are usually people who have had experience in savings and loan associations.

Mr. PASSMAN. Have they been fired and need another job?

Mr. MOSCOSO. Not exactly.

Mr. PASSMAN. Do you have to hire them away from building and loan associations?

Mr. MOSCOSO. Quite a few are supplied to us by the building and loan associations themselves.

HOUSING TECHNICIANS

Mr. PASSMAN. Give us the names of these people, where you recruited them. the building and loan associations they worked with, and in what capacities.

Mr. MOSCOSO. I will be glad to do that.

Mr. STERNFELD. This is proposed for 1964. It has not been done yet.

Mr. PASSMAN. How much did you obligate in fiscal 1963?

Mr. MOSCOSO. $128,000.

Mr. PASSMAN. You asked for $4,000?

Mr. STERNFELD. That is right.

Mr. PASSMAN. How much did you obligate for contract services?

Mr. STERNFELD. $4,000.

Mr. PASSMAN. How about the U.S. technicians, how much?

Mr. STERNFELD. $93,000.

Mr. PASSMAN. How many do you have on board?

Mr. STERNFELD. We would have to check that.

Mr. PASSMAN. Can you tell us on this project the names of these individuals and give us brief biographies?

Mr. STERNFELD. Of the direct-hire technicians and contract technicians on this project in fiscal year 1963?

Mr. PASSMAN. Yes.

Mr. STERNFELD. Right.

(The information supplied, follows:)

HOUSING TECHNICIANS, ECUADOR

DIRECT HIRE

Basine, Joseph B., housing adviser

Born 1904. Northwestern University, B.S. 1928; New York University, J.D. 1936; assistant credit manager, 1936–39; office credit manager, 1939–42; department stores; Office of Price Administration, 1942–46; owner, export service 1946–48; real estate developer, 1948–61.

Jordan, George R., housing adviser, construction

Born 1906. Northwestern University, 1926–27; Massachusetts Institute of Technology, 1928–31; various engineering jobs, 1928–34; self-employed, 1934–36, 1937–38, 1947–48; engineer, Department of Agriculture, 1936–37; engineering inspector, Department of the Interior, 1939; supervisor, training program, 1940–41; assistant job superintendent, National Capital Housing Authority, 1941–46; president, construction company, 1948–54; 1954 to present, engineer and housing adviser, AID—Trinidad, Ghana, Korea, Ecuador.

Zenger, Carl R., housing adviser, aided self-help

Born 1924. University of California, 1945; University of Oregon, bachelor of architect, 1951; USMC, 1942–45, 1950–51, overseas; structural engineer, timber company, 1951–52; architect draftsman, engineering company, 1953–54; private architect, 1954–57; since joining AID in 1957 has served as housing adviser (aided self-help) in Nicaragua and Ecuador. Received Commendable Service Award, 1960.

Easson, George B., housing adviser, finance

Born 1913. Mortgage service adviser, Williamsburgh Savings Bank, New York, 1933–59 (retired); town assessor, 1960–62; 1962 to present, AID.

CONSULTANT

Davila, Horace E., organization and management, savings and loan associations

Assistant manager, theater, 1937–43; U.S. Army, 1943–45; Manager, FHA Loan Department, Banco de Santurce, Santurce, P.R., 1946–48; examiner, Reconstruction Finance Corp., San Juan, P.R., 1948; president, 1st Federal Savings & Loan Association of Puerto Rico, Santurce, P.R., 1948 to present.

Donahue, Frances M., establishment of mortgage deposit insurance fund

University of Washington, B.A., 1930; bank teller, 1930–36; real estate and insurance company 1936 and 1944; assistant secretary-treasurer, Olympia Federal Savings & Loan Association, Olympia, Wash., 1936–44; executive secretary, Capital Savings & Loan Association, Olympia, Wash., 1944–51; senior vice president, Federal Home Loan Bank of San Francisco, 1951–53; president, Citizens Federal Savings & Loan Association, San Francisco, Calif., 1953 to present.

CONTRACT TECHNICIANS

Bermudez, Juan J., investment specialist

Born 1928. University of Puerto Rico, B.B.A., 1949; assistant vice president and loan officer, savings and loan association, 1949 to present. Short-term savings and loan adviser, Ecuador—AID, 1963.

Martorell, Carlos S., loan officer

Born 1936. The Citadel, B.A., 1958; supervisor, bank, 1958–60; loan officer, savings and loan association, 1960 to present. Short-term savings and loan adviser, Ecuador, AID, 1963.

PERSONNEL AND PARTICIPANT TRAINEES CONCERNED WITH FOREIGN AID PROGRAM

Mr. PASSMAN. I am using the figure of 62,000 for personnel in the AID program, including the participants. How many are there, actually?

Mr. TENNANT. The total amount of personnel, plus participants and including the equivalent of administrative support costs, 64,536. This includes——

Mr. MINSHALL. From what spigot is this?

Mr. PASSMAN. It is all the personnel employed by the AID program, whether it be in military or AID or foreign nationals, or participants or contract services—it would mean university people.

Mr. MINSHALL. This is still one spigot?

Mr. PASSMAN. This is all of AID. The total number of personnel who get a paycheck from Uncle Sam, in one category or another.

Mr. MINSHALL. Does this include the Peace Corps?

Mr. PASSMAN. No.

Mr. MINSHALL. This is one spigot then.

Mr. ANDREWS. What is the total number?

Mr. PASSMAN. Approximately 64,500.

Mr. TENNANT. We provided an insert.

Mr ANDREWS. 64,000 is the right figure?

Mr. PASSMAN. It is 64,536.

Mr. ANDREWS. I remember that 3 years ago it was about 45,000.

Mr. SCHEINMAN. It is still approximately that, without including participants, which are not employees of the agencies.

Mr. PASSMAN. They get money.

Mr SCHEINMAN. Being brought over for training. They are not employees of the agency.

Mr. ANDREWS. What we had in mind is the total number of people being paid to carry on this work.

Mr. SCHEINMAN. About 42,500.

Mr PASSMAN. How many participants are in the program, Mr. Controller?

Mr. TENNANT. Participants were included in the figure I gave you.

Mr. PASSMAN. All under this bill?

Mr. TENNANT. Some 22,827 participants under military and economic programs

Mr. PASSMAN. This leaves 42,500 paid employees of one type or another, either foreign nationals or Americans, including contract services?

Mr. TENNANT. This also includes locals, foreign nationals paid from cooperative country trust funds.

Mr. PASSMAN. They are being paid, are they not?

Mr. TENNANT. Yes, sir.

COST OF PARTICIPANTS

Mr. PASSMAN. What is the total cost for the 22,000 participants?

I believe they get a check for board, room, for pocket money, travel, health, medical care.

Mr. TENNANT. Part of these participants are in the military program and——

Mr. PASSMAN. How about AID?

Mr. TENNANT. In 1963, our estimates were $34 million for the total cost of the participants.

Mr. PASSMAN. How much is that per participant?

Mr. TENNANT. For fiscal year 1963 there were 8,092 participants programed for $34 million for an average cost per participant of $4,220.

Mr. PASSMAN. These are foreign students, or people we bring in. Do they get a regular allowance for their room and board, spending money, and so forth?

Mr. TENNANT. They get a per diem allowance for that type of expenditure.

Mr. PASSMAN. Would it include such things as medical care, meals and lodging, and a little spending money?

Mr. TENNANT. I do not think we take care of medical care, or spending money. The per diem is for food and lodging.

Mr. PASSMAN. The average grade in civil service is between a 4 and a 5, would you say? Take all from top to bottom. We are trying to help you make a good record.

Mr. TENNANT. I would concede that, subject to check.

Mr. PASSMAN. This means the participants are getting more than the employees in the first two brackets of grade 4 of the Federal Government. In fact, they are getting more than all brackets in grade 4.

Mr. TENNANT. These figures I have given you include the cost of travel.

Mr. PASSMAN. We want to show what the participants are costing. They are traveling at our expense. They are eating at our expense. They get spending money and they get lodging, and the average cost per participant is above the salaries of all three brackets in GS–4.

CREDIT UNIONS AND COOPERATIVE DEVELOPMENT PROJECT, ECUADOR

Did you justify the $169,000 last year that you obligated for the credit union project, on page 309?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. Could you tell us what it will cost to complete this project?

Mr. MOSCOSO. $1,346,000.

Mr. PASSMAN. That is a lot of money not to be justified, at least on an illustrative basis.

You do have to delegate a lot of your authority to subordinates?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. In your area, if we were to split it up, I do not know whether we could say you have a total of 16,000 employees, or only

8,000, and you have to delegate authority, I recognize, and I am sincere when I say that I know you personally cannot keep up with all this. It is so complex you just would not have that much time. So you have to leave it up to your subordinates.

It would appear to me that maybe you should lay the law down. Unless there is some really special reason for an exception, not as many projects in the future should be started as in the past without at least an illustrative program being justified to Congress.

CIVIC ACTION PROJECT

On what day in June 1962 did you obligate the $560,000 for the civic action project, on page 310?

Mr. Moscoso. We do not have it. We will have to supply it for the record.

Mr. PASSMAN. It is on page 310. You obligated the money in June and on June 30 you had the same amount in the unliquidated column. You did not spend a dime. It that correct?

Mr. STERNFELD. That is correct.

BUDGET SUPPORT LOAN

Mr. PASSMAN. What is the present status of the budget support credit, on page 313, and the industrial credit, on page 318?

Mr. Moscoso. We disbursed the first part of the budget support loan.

Mr. PASSMAN. Is this the one you suspended?

Mr. Moscoso. Yes, until they complied.

Mr. PASSMAN. How much do you have on hand undisbursed?

Mr. Moscoso. $2 million.

Mr. PASSMAN. Do you propose to deobligate that money?

Mr. Moscoso. No, sir. They have met all the conditions and we expect to disburse the final $2 million.

Mr. PASSMAN. "The country team continues pressing for compliance," it says here.

Would that statement mean you want them to comply so you can spend the money?

Mr. Moscoso. The last paragraph says:

> The Government of Ecuador met two of the three conditions and received a second disbursement on May 3, 1963. The final condition, the issuance of a fiscal year code, was fulfilled prior to June 30 and AID is now arranging for payment.

Mr. PASSMAN. This says, "The country team continues pressing for compliance." Has the compliance come about since the printing of this book?

Mr. Moscoso. It was written in February.

INDUSTRIAL CREDIT LOAN

Mr. PASSMAN. Here is one here, an industrial credit item, which is truly in the status of unobligated funds, but carried as obligated funds for reasons that they need new money for the future. Date approved, February 1, 1962; date signed, July 29, 1962.

Now, more than a year later you have a $5 million credit on hand. It is one of the 40 years, no interest, 10-year grace period type of credit arrangements. What is the status of this item?

Mr. Moscoso. The conditions were met in May of this year, Mr. Chairman, and applications are now being processed for $600,000 in subloans under the industrial credit loan.

Mr. PASSMAN. What kind of conditions were you asking them to meet?

OPERATIONS UNDER CONTINUING RESOLUTION

While you are looking up that information, may I ask you, under your continuing resolution that the Congress passes each year pending the new appropriation, you spend, or can obligate funds in accordance to the amount appropriated in the previous year, or the amount of expenditures—which one?

Mr. TENNANT. I believe the resolution refers to the rate of obligations in the previous year or the budget estimate, whichever is lower. I would have to check the language.

Mr. PASSMAN. Please do so.

Mr. TENNANT. Our continuing resolution has different language at different times.

Mr. PASSMAN. I am just trying to understand.

If you show in one preliminary report that you spend $3.5 billion out of pipeline and if that holds good at a subsequent date, then you abide by the continuing resolution and you can obligate at that level, but if at a subsequent date you find your withdrawals from the pipeline jumped up to $3.8 billion, then could you obligate out of the continuing resolution up to that amount, $3.8 billion?

Mr. TENNANT. The continuing resolution is based on the rate of obligations rather than the withdrawals from the pipeline, sir.

Mr. PASSMAN. The rate of obligations?

Mr. TENNANT. Yes.

Mr. PASSMAN. So, if you had available last year $3.9 billion, and you obligated $3.5 billion, then your continuing resolution would be based upon $3.5 billion, but if you obligated $3.7 billion, then your continuing resolution would be based upon $3.7 billion, would it not?

Mr. TENNANT. I believe that is correct, sir; I would like to check the specific language of the resolution.

Mr. PASSMAN. Do check the language, sir. It makes a lot of difference.

INDUSTRIAL CREDIT LOAN

Did you ever find the answer to the question about the industrial credit?

Mr. Moscoso. I have every loan paper except that. I will be happy to supply that for the record. They have complied.

(Information subsequently supplied follows:)

INDUSTRIAL CREDIT LOAN—CONDITIONS PRECEDENT

In addition to the usual conditions precedent to disbursement under AID loans, such as a legal opinion from the Attorney General of Ecuador and a letter of information concerning the status, operations, affiliations, assets, and policies of the borrower, the National Securities Commission was required to:

1. Establish a separate department with adequate professional and clerical staff to carry out the AID financed program.

2. Hire two experts approved by AID; one to act as loan administrator, the other as full-time engineering consultant. These experts are charged with reviewing the engineering, economic, and financial data supporting industrial

credit applications, and determining the feasibilty and soundess of the projects submitted for financing.

3. Submit a list for approval by AID of the types and products of industrial enterprises to be financed under the loan.

Mr. PASSMAN. Are you personally familiar with that situation, or have you been notified they have completed?

Mr. MOSCOSO. They complied, and the conditions were met in May of this year, 3 months ago. I was notified.

Mr. PASSMAN. Who notifies you when they meet the conditions?

Mr. MOSCOSO. In the process, every month, I have a meeting with Mr. Sternfeld and Mr. Glaesaner, who is the head of our loan division, and we go over all of these pending loans to see which loans conditions have been met. When we find some of these loans have been too tardy in meeting conditions, we send wires to our missions that deobligation should be made if the conditions are not met promptly.

DEOBLIGATION FROM ECONOMIC FUNDS

Mr. PASSMAN. Earlier you mentioned about the worldwide deobligated funds out of the economic part of the nonmilitary program. This total was $51,966,000. That represents about 12 percent of the total appropriation, does it not?

Mr. TENNANT. Approximately; yes, sir. That was April 30.

Mr. PASSMAN. Whatever is obligated or deobligated in subsequent months applies to that figure, does it not?

Mr. TENNANT. It would be added to this.

Mr. PASSMAN. Thank you.

Mr. Natcher?

TAX REFORMS IN ECUADOR

Mr. NATCHER. I notice from the justifications that four-tenths of 1 percent of all landowners control almost half of the arable land and that agricultural wages are incredibly low with some laborers not receiving even the 15 cents a day minimum required by law.

Mr. Ambassador, what are you doing now from the standpoint of those who own the majority of the land in this particular country applying taxes and attempting to get them to pay their share of the cost of maintaining their government?

Mr. MOSCOSO. We have pressed quite hard for tax reforms and although some results have been attained not all of those we would like to see have been achieved.

In November 1961, they approved a law modifying the basic customs law. On December 15, 1961, they enacted a new inheritance tax with increased rates and improved enforcement procedures.

In 1962, decree law No. 32 was approved regarding banana exports. It is desirable and this gives incentives to increase the export of bananas.

On July 18, 1962, there was a law which created a commission for administrative and fiscal reforms to revise the entire income tax legislation.

In August 1962, decree law No. 39 enacted a new income tax with rates from 20 to 40 percent on corporate income; flat rates according to source of income range from 26 to 33 percent, with progressive rates on total income from 10 percent to 43 percent. That is the law to

which we tied the disbursements of the supporting assistance loan. We delayed disbursing until they issued the regulations to implement the law.

Then decree law No. 47 enacted a new tax incentive for industry and the budget law introduced new taxes on imports and corporate pay, and a professional license tax.

This is still not enough and the new government recognizes as much.

Mr. NATCHER. That is all, Mr. Chairman.

Mr. PASSMAN. Is this one of the countries in which they build up a lot of tax liabilities and then pass legislation for starting all over again?

Mr. MOSCOSO. I do not know, Mr. Chairman. I do not think so. I think the country you have in mind is Chile.

Mr. PASSMAN. Would you find out, please?

Mr. MOSCOSO. We will be glad to find out.

(Information supplied follows:)

TAX PENALTY AMNESTIES IN LATIN AMERICA

No case is known where any country in Latin America has provided forgiveness to delinquent taxpayers of past taxes due. However, tax penalty amnesties are common, and on occasion discounts are provided for advance payments of taxes. Amnesties are intended to elicit voluntary declaration and payment of past taxes. Ordinarily, the amnesty legislation provides that if delinquent taxpayers identify themselves and declare their past taxes within a specified period of time, penalties for late payment or failure to file a declaration will be wholly or partially waived. Ordinarily, these penalties are substantially increased for those taxpayers who fail to voluntarily avail themselves of the amnesty. The most recent instance of a tax amnesty coupled with increased penalties subsequent to the forgiveness period was in 1962, in Argentina. Through this device the tax administration identified some 450,000 taxpayers who had previously evaded the tax rolls or collections.

Mr. PASSMAN. What is the maximum penalty for not paying taxes in this country?

Mr. MOSCOSO. We will be glad to find that out.

Mr. PASSMAN. You do not have that information?

Mr. MOSCOSO. We do not have it now.

(The requested information follows:)

TAX PENALTIES IN ECUADOR

Under the provisions of the income tax law the penalties are as follows:

1. Delinquency: 5 to 70 percent.
2. Failure to file return:
   A. Taxable returns, 2 percent monthly up to 50 percent.
   B. Nontaxable returns, $5 to $100.
3. Fraud: 50 to 100 percent of tax. In aggravated cases the penalties may be increased to 250 percent.

Mr. PASSMAN. Mr. Andrews?

REFORMS IN ECUADOR

Mr. ANDREWS. Mr. Ambassador, you say the very complexity of the problem and the ——— represent serious hindering factors to meaningful reforms.

Mr. MOSCOSO. That is right, sir.

Mr. ANDREWS. I imagine that is an understatement of conditions?

Mr. MOSCOSO. It is probably not at this time.

Mr. ANDREWS. It is not?

Mr. MOSCOSO. No; for the simple reason that the new military group which has come in seems to be reform minded. They are youthful-thinking people and they recognize that if Ecuador is going to live up to its responsibilities, it is going to have to do much better insofar as taxes and reforms are concerned, particularly land reforms.

Mr. ANDREWS. What do you base your hope on for change?

Mr. MOSCOSO. On the men I know in that group, particularly Mr. Cardenas whom I have known for quite a number of years and who is a very able, sincere, and honest official.

Mr. ANDREWS. The confidence that you have is the fact they will pass these reform laws?

Mr. MOSCOSO. It seems to me, Mr. Andrews, that perhaps the mere fact that it is a military government might make it a little easier for some of these reforms to be approved.

Mr. ANDREWS. Present day conditions have existed since the dawn of history in that country?

Mr. MOSCOSO. I hate to say this, but as you are well aware, a democratic constitutionally elected government should be willing and able to do these things but they have not shown ability to do enough up to now.

Mr. ANDREWS. I said, present day conditions have eixsted since there has been a country there, have they not? There have not been many changes, have there?

Mr. MOSCOSO. There have been some changes but I would say not enough.

Mr. ANDREWS. I think you are very optimistic if you think you are going to cure those problems that have existed through the years in a period of a short time.

What is your best guess as to when the reforms you think they need will be achieved?

Mr. MOSCOSO. Within the next 18 months to 2 years, I think they will be able to do so. They are already studying a new electoral law and I am quite sure that they will want to have these reforms underway before the new elections are held.

LAND REFORMS

Mr. ANDREWS. You state four-tenths of 1 percent of all landowners control almost half of the arable land and agricultural wages?

Mr. MOSCOSO. It is incredible, Mr. Andrews; very bad.

Mr. ANDREWS. I hope your faith in the future is justified.

Mr. MOSCOSO. By the way, they have done some, but not enough, distribution of land. Twenty-three thousand acres were distributed betwen 1961 and 1963, but I am the first one to admit this is not enough.

PUBLIC ADMINISTRATION REFORM

Mr. ANDREWS. You state further that Government investment activities are small and scattered. There is no development plan?

Mr. MOSCOSO. This is because of the situation I mentioned earlier in which most of the investment is done by these autonomous agencies, over which the Government has little or no control. One of the things

they are trying to do in this administrative reform is to put the bulk of these operations under regular agencies of Government.

Mr. ANDREWS. Just what kind of operations are they? Describe one for us.

Mr. Moscoso. They have a public corporation to handle water and sewage, for such and such a city. That public corporation handles its own funds and if they do not receive adequate revenue from rates they will get a tax allocation which does not have to be reviewed by the parliament. They get a special fund automatically and, of course, that does not permit the Government to decide whether or not they should either be getting better rates so they could become self-supporting or operate more efficiently so they can meet their expenses with the revenue they now have.

Mr. ANDREWS. That is an open invitation for fraud and crookedness, is it not?

Mr. Moscoso. Right.

AGRICULTURAL DEVELOPMENT AND LAND REFORM

Mr. ANDREWS. Just what have you done to help the low-income laborer who receives 15 cents a day minimum wage which is required by law? What projects have you undertaken and developed that help him?

Mr. Moscoso. We have an agricultural development project in which technical assistance to the agricultural sector is being given.

Mr. ANDREWS. If the land is in the hands of four-tenths of 1 percent of the population, how are you helping that little fellow?

Mr. Moscoso. We are trying to help the fellow who already has some land, the little fellow, to at least better his income from this land. I agree with you that until such time as there is a major land reform, it is going to be difficult to increase the income of most of these people.

There is also a program for colonization of unused land. Some of these lands are Government owned and some are owned by private individuals. There is a pretty substantial colonization program, in which we and the Inter-American Development Bank are participating.

Mr. ANDREWS. How is the title transferred from a private owner, or from the Government, to a little farmer under that program?

Mr. Moscoso. We will be glad to provide that for the record.

(The information follows:)

TRANSFER OF TITLES UNDER THE COLONIZATION PROGRAM

From the Government

A provisional title is granted to the farmer with the condition that he—

1. Cultivate at least one-fourth of his lot for 5 years;
2. Dedicate himself immediately and permanently to the maintenance and improvement of his lot;
3. Meet his amortization payments;
4. Receive prior approval of the National Colonization Institute before he rents any part of the lot or puts animals on the lot; and
5. Take care of and maintain works of a cooperative nature.

From private owners

The terms of the sale are worked out between the vendor and the farmer. However, the National Colonization Institute assists in facilitating the transfer of title and provides technical assistance.

Mr. ANDREWS. I am interested in your efforts to help the little man down there. I do not like to hear that we give the Government money, and then shortly thereafter the Government buys gold from us.

Mr. MOSCOSO. I made a note about that gold purchase.

Mr. ANDREWS. You are not helping that man down at the bottom of the ladder when things like that occur.

VOCATIONAL EDUCATION AND HOUSING

Mr. MOSCOSO. We are also giving assistance in vocational education. This ought to help substantially.

Mr. ANDREWS. What do you teach them to do in these programs?

Mr. MOSCOSO. Develop new skills. There are evening shop courses for some trained men and there are some courses in auto maintenance, metal trades, and things of that kind.

Mr. ANDREWS. Is there a market for those laborers once they are trained?

Mr. MOSCOSO. Yes; definitely.

Mr. ANDREWS. What are the wages?

Mr. MOSCOSO. The wages are unconscionably low.

Mr. ANDREWS. For trained mechanics?

Mr. MOSCOSO. Yes; but much better than the wages of rural workers.

Mr. ANDREWS. You say the minimum wage for an agricultural worker is 15 cents a day and some are not getting that?

Mr. MOSCOSO. Right. I do not know what the going rate will be for mechanics but it will be maybe $1.50 a day. Those are the kinds of situations we are combating with this program. We also have housing, of course. I grant you that the people who need these houses are in an extremely low-income category, while the people who can afford them are not the very lowest on the income scale.

INCOME LEVELS

Mr. ANDREWS. In this country, do you have, as you have in many countries, two classes, the very rich and the very poor?

Mr. MOSCOSO. We have the very rich, which is a very small thin crust, a very large group of people who are very poor, and a very, very small middle class.

Mr. ANDREWS. How about the middle income group?

Mr. MOSCOSO. A very small group.

Mr. ANDREWS. I wish you would put the figures on that in the record.

Mr. MOSCOSO. I could give you an estimate for the record on the middle class.

Mr. ANDREWS. Very few of them?

Mr. MOSOCO. Very few; I would estimate it at less than 8 percent.

Mr. ANDREWS. You either have the very rich or the very poor?

Mr. MOSCOSO. That is right. We are generalizing, Mr. Andrews, of course.

Mr. ANDREWS. I understand.

Mr. MOSCOSO. There are certain countries, for instance, Mexico——

Mr. ANDREWS. I am talking about Ecuador now.

Mr. MOSCOSO. In the case of Ecuador, that is the situation. They also have about 50 percent of their population outside the money

economy. These are Indians who do not even know Spanish but who talk the Indian language.

Mr. ANDREWS. How do they live?

Mr. MOSCOSO. Subsistence.

Mr. ANDREWS. Live on the land?

Mr. MOSCOSO. Live on the land, and they grow enough food to feed themselves and to exchange with their neighbors who will probably grow some wool or other things they do not have. They weave their own cloth, et cetera.

Integrating these people into the economy is one of the great problems these countries are facing.

Mr. ANDREWS. Will those Indians own their land?

Mr. MOSCOSO. In some cases, yes; very small pieces of land. The minifundia can be just about as bad as the latifundia.

CREATION OF MIDDLE CLASS

Mr. ANDREWS. Is your ultimate purpose in this program to try to bring the low-income group up to a middle class?

Mr. MOSCOSO. Create a middle class. That is the problem of the whole Alliance, and that is the whole purpose of Alliance.

Mr. ANDREWS. This is one of the worst countries you are working on?

Mr. MOSCOSO. I think you are right in that.

Mr. ANDREWS. How long do you think it will take to accomplish your mission?

Mr. MOSCOSO. The minimum, I believe, will be well over 10 years to accomplish a meaningful change in the situation.

ACCOMPLISHMENT OF AID PROGRAM

Mr. ANDREWS. I believe you stated you have already spent $162 million there. Was that the figure?

Mr. MOSCOSO. Yes, obligated. Unfortunately, Mr. Andrews, most of that was spent on isolated assistance programs which were not related to a total development effort.

Mr. ANDREWS. You do not have much to show for it either?

Mr. MOSCOSO. That is what we are trying to do now, have a comprehensive program addressed to raising the standard of living of the people. All of the projects have to converge upon that particular objective.

Mr. ANDREWS. You do not have too much to show for the $162 million?

Mr. MOSCOSO. We have something to show, Mr. Andrews, but quite frankly not as much——

Mr. ANDREWS. What, for instance?

Mr. MOSCOSO. —as all of would like. Undoubtedly, people are a little healthier because we have had a malaria program for quite a little while.

Mr. ANDREWS. How much did that cost?

Mr. MOSCOSO. Cost to completion?

Mr. ANDREWS. To date?

Mr. MOSCOSO. 1962, $1.160.000; and obligations in 1963, $445,000. We have $250,000 unliquidated.

Mr. ANDREWS. That is the smallest program from a dollar standpoint of any you have, and you have done more good with it; is that right?

Mr. MOSCOSO. It would be very difficult to say that.

Mr. ANDREWS. I understood you to say that.

Mr. MOSCOSO. I think it has done some good.

Mr. ANDREWS. I asked you to put your finger on something you did down there that resulted in a good for the people and that was the first thing you mentioned. We find it cost less than any other program.

Mr. MOSCOSO. The Agricultural Servicio has probably done some good.

Mr. ANDREWS. You still have——

Mr. MOSCOSO. If you take a look at the agricultural production index, you will see that in 1959 it went from 132 to 148 in 1962.

Mr. ANDREWS. You still have four-tenths of 1 percent of the people owning the land though?

Mr. MOSCOSO. That is right.

Mr. MINSHALL. Would the gentleman yield?

Mr. ANDREWS. Yes.

Mr. MINSHALL. With your agricultural program and your malaria program, you have less than 3 or 4 percent of the entire program in Ecuador; do you not?

What happened to the rest? What have you done with the other 95 percent?

Mr. MOSCOSO. There is a substantial amount of Public Law 480 funds. We have spent about $22 million in Eximbank. There has been a substantial amount of road construction; these are roads there, and you can see them.

Mr. MINSHALL. How much have you spent on the roads?

Mr. MOSCOSO. I do not have that broken down by categories. Authorized for 274 miles of the Ecuadorian national highway system has been $12.6 million.

Mr. MINSHALL. There is still a lot of this money we spent in Ecuador you have left unaccounted for, and you freely admit that most of it has gone down the drain?

Mr. MOSCOSO. I would not say gone down the drain. I would say it is not visible.

Mr. MINSHALL. In the rathole?

Mr. MOSCOSO. No; if you educate a person it will probably be difficult to see the visibility of that education until you run a survey or a census. What would have to be done would be to take the number of literates over the years and see how the number has increased.

Mr. MINSHALL. Let us see how it has gone.

Mr. MOSCOSO. We will have to supply that for the record.

Mr. MINSHALL. Thank you, Mr. Andrews.

(The requested information follows:)

LITERACY RATE IN ECUADOR

Literacy rates in Ecuador:
1942: 10 years of age and above, 48 percent.
1962: 10 years of age and above, 60 percent.

Mr. ANDREWS. You have a pretty good literacy rate, which is nearly 60 percent?

Mr. Moscoso. That is right.

This 60 percent, Mr. Andrews, as you know, is for literates among the group that you can census. It is probably the urban people who are part of the moneyed economy.

BUDGETARY SUPPORT

Mr. ANDREWS. How much money have you given the Ecuadoran Government since the inception of this program?

Mr. MOSCOSO. Last year, $8 million; and this year we gave them $7 million. The $8 million was disbursed and we have not disbursed more than $5 million of the $7 million.

Mr. ANDREWS. I want to go back for a period of 10 years and find out how much cash you have given them.

Mr. MOSCOSO. We have authorized $8 million and $7 million.

Mr. ANDREWS. No more than that?

Mr. MOSCOSO. That is right; the last 2 years only.

Mr. PASSMAN. Would the gentleman yield?

Mr. ANDREWS. Yes.

Mr. PASSMAN. What has been the total amount of aid to Ecuador?

Mr. TENNANT. $160 million, including the Export-Import Bank, mutual security, and Public Law 480, through fiscal year 1963.

Mr. ANDREWS. I would like to know if, in the last 2 years, you have given them $15 million in cash?

Mr. MOSCOSO. Right. $15 million authorized.

Mr. ANDREWS. Have somebody check and insert in the record the total amount of cash out of the $162 million that has been given to the Ecuadoran Government.

Mr. TENNANT. Yes, sir.

(The information follows:)

BUDGETARY SUPPORT

Of the $162 million aid authorized for Ecuador to date, only $15 million, in the two loans discussed above, was in the form of budgetary support to the Government of Ecuador.

Mr. ANDREWS. I am impressed by what you said, that in your opinion—I took it to be your opinion—that the greatest good we have gotten out of this program came out of the malaria control project.

ASSISTANCE TO ROAD CONSTRUCTION

Mr. MOSCOSO. No, no. I would say, Mr. Andrews, that there is also quite a bit of good out of the educational efforts we have been conducting there. There still remains quite a bit of roadbuilding to be done, to create a national highway network.

Mr. ANDREWS. Is this the country where they built a road that led to nowhere, or to a mountain and came to a dead end?

Mr. MOSCOSO. No.

Mr. PASSMAN. That was Peru. They just went into a mountain.

Mr. ANDREWS. Dead end?

Mr. PASSMAN. Yes.

Mr. ANDREWS. What type of roads are you building there, Mr. Ambassador?

Mr. MOSCOSO. These are primarily roads in which we are participating with the World Bank. This is a joint effort with the World Bank and ourselves.

Mr. ANDREWS. Are they hard-surfaced roads?

Mr. MOSCOSO. Yes, surfaced roads.

Mr. ANDREWS. How many miles did we build?

You may supply that for the record.

Mr. MOSCOSO. Yes, sir.

Mr. ANDREWS. The number of miles under construction.

Mr. MOSCOSO. Yes.

Mr. ANDREWS. And the number you plan for construction in the future.

Mr. MOSCOSO. Right.

Mr. ANDREWS. Tell us briefly where these roads lead and where they come from.

Mr. MOSCOSO. Yes.

Mr. ANDREWS. Do they connect cities?

Mr. MOSCOSO. Yes; from city to city. One of them is from Quito to Quevedo and the other one is from Macara, a border town, to Loja.

Mr. ANDREWS. Are they built under contract?

Mr. MOSCOSO. Yes.

Mr. ANDREWS. American contractors?

Mr. MOSCOSO. I could not tell you, I regret.

Mr. ANDREWS. Supply that for the record, also.

Mr. MOSCOSO. Yes, sir.

Mr. ANDREWS. How much does it cost per mile to build those hard-surfaced roads?

Mr. MOSCOSO. I would have to supply that for the record.

(The information supplied follows:)

ROAD PROJECTS IN ECUADOR

Purpose

The road building program in Ecuador is designed to facilitate the economic development of those areas of the country which are now inaccessible. These roads become the focal point of settlement and cultivation of new lands, and also promote trade and commerce between these areas and urban centers of Ecuador.

Contractors

Bidding on all roads financed by AID in Ecuador has been open to American bidders. Morrison-Knudsen, an American firm, built one sector of the Quito-Quevedo Road. It is intended to make bid sectors of any future roads, financed by AID of a size attractive to American contractors. All of the road construction was supervised by American consulting engineers, TAMS American Corp., and Rader & Associates.

A breakdown of the AID roadbuilding projects in Ecuador

Loan number	Year of loan agreement	From—to (geographic)	(In millions of dollars)				Number of miles	Cost/mile [1]	Percent completed
			AID	IBRD/IDA	IDB	GOE			
1. DLF 44	March 1959	Loja to Macara	$4.7			$1.1	122	[2] $36,000	71
2. (a) DLF 102	November 1959	Quito to Quevedo	5.3	$11.0		5.4			
(b) AID 016	Not yet signed	Duran to Cochancay	2.7	[3] 3.4		[3] 3.0	335	[4] 92,000	76
		Bahia to Santo Domingo							
3. Proposed	([5])	Santo Domingo to Esmeraldes					110	[——]	([5])
		Quevedo to Duran					125	[——]	([5])
		M. J. Calle to Machala	[——]	[——]	[——]	[——]	80	[——]	([5])
		Cojabamba to Chicales					90	[——]	([5])
		Maintenance	[——]	[——]		[——]			

[1] Variation of cost is caused by variations in terrain and by status of construction when financing commenced.
[2] This road will be constructed for a lower expenditure than originally estimated and a small surplus is expected.
[3] Not yet available
[4] Exchange rate has changed from 15.15 to 18.18/dollar since commencement of construction, and this cost computed at average of 16.66.
[5] Not available.

NOTE.—Materials in brackets confidential.

Mr. ANDREWS. That is all, Mr. Chairman.

ECUADORAN GOLD PURCHASES

Mr. PASSMAN. Mr. Administrator, we do not have any control over the purely internal affairs of the budgets of the aid-recipient governments with respect to their own tax collections that go into the budget, do we? I am talking about revenues they collect themselves from their people, such as tobacco tax, liquor tax, and income tax.

Mr. MOSCOSO. In some countries we are making it one of the conditions of our loans that the country must have a certain current account surplus and devote it to development projects.

Mr. PASSMAN. Secretary Dillon has stated categorically that we do not have any control over the internal affairs of nations budgets?

You may have all types of stipulations but you and I know that no government has the right to go directly into the office, to go to the books of another government and talk to the controller and say, "You collect this from your people in the way of this type of tax and you can spend it here or you cannot spend it here."

Mr. MOSCOSO. The International Monetary Fund does precisely that.

Mr. PASSMAN. They may accept a certified audit but I want to refer again to Secretary Dillon's statement on that matter.

Also, I want to say again that when we give nations money, credit them to buy commodities or other things they would otherwise spend their own money for, that releases to them their money to do with as they please, and that fact has been well established.

The same country we have been discussing bought $3.2 million worth of our gold. We do not know for what purpose they bought it or to whom they sold it, but we know they bought it. They did not sell it back to us and our gold account has been reduced by just that amount.

Mr. PASSMAN. Mr. Conte?

AGRARIAN REFORM

Mr. CONTE. Mr. Ambassador, continuing with what Mr. Andrews was asking you about in regard to reform, have they done anything whatsoever constructive that you can mention here today in regard to agrarian or land reform, anything at all?

Mr. MOSCOSO. They have distributed approximately 23,000 acres of private land.

Mr. CONTE. Out of how many?

Mr. MOSCOSO. I do not have the figure.

Mr. CONTE. What kind of land was it, fertile land?

Mr. MOSCOSO. About 1 percent of the total was agricultural land.

Mr. CONTE. That amounts to 1 percent?

Mr. MOSCOSO. Less than 1 percent of the total land.

Mr. CONTE. Less than 1 percent?

Mr. MOSCOSO. Yes, sir.

Mr. CONTE. That is not very much?

Mr. MOSCOSO. No.

Mr. CONTE. If we do not get them to move pretty soon on land reform, we might as well get out of there? That is the key?

Mr. Moscoso. We have the promise of the new government that that is one of the things they are going to address themselves to right away. The Inter-American Development Bank is helping them to organize their agrarian reform agency and hopefully they will do a little better. I think legislation is going to be required.

Mr. CONTE. I think so, too.

Do you think they will go before the legislature this year?

Mr. Moscoso. We have the promise of the Minister of Development that this is one of the things they are going to press for. Since this is a government run by a military junta and since the junta is committed to undertake these reforms, I hope they can be accelerated.

Mr. CONTE. I feel very strongly that unless they move here, we might as well get out of there.

USE OF DEOBLIGATED ECONOMIC AID FUNDS

Mr. Controller, I want to straighten out in my mind a question the chairman asked with regard to the deobligation. This is a little bit confusing to me.

Under the original program before all of this transmittal of letters and all, what was their request to deobligate? How much?

Mr. TENNANT. Prior to the exchange of correspondence?

Mr. CONTE. Prior to the exchange of correspondence.

Go ahead.

Mr. TENNANT. We had requested legislation to permit us to deobligate as in fiscal year 1962, but the Congress passed fiscal year 1963 legislation limiting the use of deobligated funds to projects presented to the Congress. In January Mr. Bell sent some correspondence to the committee. In that correspondence and a subsequent request he included proposals to reobligate in the magnitude of $40 million. I do not have my copies of that correspondence here today.

Mr. CONTE. It is around that.

Mr. TENNANT. Then there was a committee hearing followed by some further correspondence.

The first proposal was $8 million. Yes, the January 31 letter was around $8 or $9 million.

Mr. CONTE. $4,910,000 is now planned to be obligated leaving unobligated $3,711,000 of the $8,621,000 of deobligated funds which you had originally intended to reobligate?

Mr. TENNANT. That is right.

Mr. Bell indicated he would effect some savings against that first listing of January 31 and estimated those savings would be $3,711,000.

FUNDING OF INDONESIAN MOBILE BRIGADE PROJECT

In Indonesia, there was considerable discussion in the hearings on the major item in question. Mr. Janow explained in detail how the transactions occurred with respect to this item. Part of the transaction was funded out of the contingency fund, but as I understood Mr. Janow, that was not the transactions described in the January 31 letter.

There was another transaction funded under supporting assistance rather than deobligations. This was the transaction described in the letters.

Mr. SCHEINMAN. Mr. Conte, the list presented to the chairman in January listed a number of projects.

Mr. CONTE. I remember that

REOBLIGATION OF DEOBLIGATED FUNDS

Mr. Rhodes had that letter in the hearing and that was when we requested there be a hearing. We wanted to find out just what was going to be deobligated and reobligated.

We did not want to buy anything in the dark.

Mr. SCHEINMAN. My recollection is——

Mr. CONTE. Now, I want to know whether this money was deobligated and whether any of this money was reobligated?

Mr. TENNANT. Yes, sir.

Mr. CONTE. How much?

Mr. TENNANT. Total reobligations were $31 million. I think we had originally requested about $40 million in reobligations. We reobligated $31 million or a savings of about $9 million. These figures are rounded estimates which show the approximate size of the activity.

Mr. CONTE. You did not use $9 million at all?

Did it lapse?

Mr. TENNANT. It is in the unobligated balance as of June 30, 1963. Yes, it will lapse, sir, unless you reappropriate some portion of the unobligated balances. If one takes into account total deobligations, considerably more will lapse in addition to the $9 million we have been talking about.

Mr. PASSMAN. Is $20,966,000 the figure?

Mr. TENNANT. From the April figures. It will be higher than that for June.

PROPOSED USE OF DEOBLIGATED FUNDS DURING FISCAL YEAR 1964

Mr. CONTE. What is the policy of the Department as of today? Are they going to come up here when they want to deobligate and reobligate under that old law or are they going to follow the ruling of the Attorney General that this law is unconstitutional? Is someone going to test that law?

Mr. TENNANT. On the question of law, that was in existence for fiscal year 1963——

Mr. CONTE. It is still in existence.

Mr. TENNANT. It is in the fiscal year 1963 Appropriation Act.

Mr. CONTE. Right.

Mr. TENNANT. We have proposed different language in the Appropriation Act for fiscal year 1964.

Mr. CONTE. Right.

Mr. TENNANT. With respect to the 1963 item, as I understood Mr. Bell's correspondence, he indicated he was perfectly willing to come up and describe every use and he would not invoke the "unconstitutional" issue.

Mr. CONTE. In other words, he would seek the permission of the committee before he deobligated and reobligated?

Mr. TENNANT. Before he reobligated, that is correct.

For fiscal year 1964, we suggested somewhat different language. In effect, our proposal suggests that any deobligation would be used

in the same manner as new money. As you will see in the light-gray book, we have taken into consideration estimated deobligations in computing our request for new appropriations.

Mr. PASSMAN. Would that be without justification to Congress?

Mr. TENNANT. We would only use it for the project——

Mr. PASSMAN. Would it be without justification to Congress?

Mr. TENNANT. They would be justified, sir, in our normal manner.

Mr. PASSMAN. These are illustrative programs and estimates only?

Mr. TENNANT. These books are our best estimates at the time we come to you, sir.

Mr. CONTE. In other words, it could be——

Mr. TENNANT. It would be either justified——

Mr. CONTE. Assuming that for Ecuador you had a highway project and if you deobligated money from some other account, you could reobligate it for this highway project under the assumption you had justified the project to this committee?

Mr. SCHEINMAN. On the assumption we had reduced our request for NOA by the estimate which we have prepared for fiscal year 1964 deobligations.

For the first time this year our request for funds has taken into account the estimated deobligations for 1964 and our 1964 program has been reduced when we come to the Congress by an estimate. If you add up all of the projects justified to the committee, it is substantially in excess of the request for appropriations which we are making to the Congress.

Mr. CONTE. Where does it show that you reduced your program?

Mr. TENNANT. In the light-gray book.

Mr. SCHEINMAN. We have reduced our appropriation request.

Mr. CONTE. That is what I am saying.

Mr. PASSMAN. If you had not had money to reobligate, you would have had to ask for more money; is that what you mean? Is that correct?

Mr. STERNFELD. Yes, sir.

Mr. TENNANT. Here in the light-gray book we have come to a total program for 1964 and shown the resources we need to meet that program. The resources are made up of estimated recoveries in 1964, carryover of prior year obligations, if allowed by the committee, estimated receipts, in the Development Loan and Alliance for Progress loan accounts, and new obligational authority. In effect, we are treating the deobligations the same way the military has treated recoupments in the last few years; that is, as a resource which we estimate will accrue during the budgetary year.

Mr. SCHEINMAN. Therefore, inherent in our presentation to the committee in the justification of these projects is a justification of the use of 1964 deobligations, as well as new obligational authority.

Mr. CONTE. Thank you.

ILLUSTRATIVE NATURE OF PROGRAMS PRESENTED TO CONGRESS

Mr. PASSMAN. Under the present legislation you have an illustrative program.

These are illustrative projects, are they not?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. You could legally vacate every project in this book and substitute different projects, could you not?

Mr. TENNANT. I think that——

Mr. PASSMAN. Is that correct?

Mr. MOSCOSO. That is what I understand.

Mr. PASSMAN. It is correct?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. On your development credits, or so-called development loan account, you do not know to what countries or what projects you are going to allocate the funds until you get the money, do you?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. If you plan a highway project in Venezuela you could legally take that money and build a brick office building elsewhere, could you not?

Mr. MOSCOSO. Insofar as we are concerned——

Mr. PASSMAN. I am speaking of worldwide. You are asking for deobligated funds to be put back into the regular account, are you not, in your new legislation?

Mr. TENNANT. Yes, sir; in the comparable account.

Mr. PASSMAN. If you can spend it anywhere you want to out of your regular appropriation, then you could spend the deobligated funds anywhere you want without any justification to the Congress?

Mr. TENNANT. That is the extreme.

Mr. PASSMAN. I know; but legally you have that right, do you not?

Mr. MOSCOSO. I understand we do have the right.

USE OF DEOBLIGATED FUNDS

Mr. PASSMAN. Some of us are seriously apprehensive about the wisdom of a program in Indonesia. We realize Mr. Bell has several pages listing the deobligated funds which he was going to spend. Do you remember that matter?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. There was one project in particular that did not set very well with the committee and that was the Mobile Brigade in Indonesia. Rather than cause Mr. Bell a lot of trouble, since he was new in the AID—but now, for clarification: In prior years, or for many years under the AID program, you could take deobligated funds and do whatever you wanted to with the money, start new projects or anything, could you not?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. One year Congress tightened up that law and said you could not spend the deobligated funds to start new projects. Is that correct?

Mr. TENNANT. You eliminated the authority completely.

Mr. PASSMAN. It was only by compromise last year that the authority was restored but it was clearly understood that before the agency could reobligate these deobligated funds they would notify the Committees on Appropriations, House and Senate; is that correct?

Mr. TENNANT. That is correct.

ATTORNEY GENERAL'S RULING

Mr. PASSMAN. Subsequent to that time, the Attorney General of the United States ruled that such a requirement was unconstitutional, did he not?

Mr. SCHEINMAN. He ruled the constitutionality referred to the provision that no objection is entered by the committee——

Mr. PASSMAN. What is the difference? The executive had to report to Congress under this arrangement, and the Attorney General said such a requirement was unconstitutional; is that right?

Mr. SCHEINMAN. As to the legislative proviso that the committees would have the ability to veto.

Mr. PASSMAN. That was the part which was unconstitutional, then, according to the Attorney General, that Congress could not veto the executive reobligating these funds; is that right?

Mr. SCHEINMAN. That is right; not merely the reporting requirement.

Mr. PASSMAN. It amounts, however, to the same thing.

What would be the use of reporting if Congress did not have the right to veto, unless we had a lot of extra time?

Mr. SCHEINMAN. The Congress requires——

Mr. PASSMAN. At a subsequent date the Attorney General's ruling was accepted, but the Agency agreed that, in a spirit of cooperation, it would report to the Congress and discuss these things. So far, am I correct?

Mr. SCHEINMAN. Yes, sir.

FUNDING OF INDONESIAN PROJECT

Mr. PASSMAN. Then we decided we wanted to let Mr. Bell do whatever he wished with the deobligated funds, with the specific exception of this $8,621,000.

It was my assumption, referring to Mr. Bell's correspondence, that when he said that of the $8,621,000 the agency planned to reobligate $4,910,000 and did not plan to reobligate $3,711,000 of the $8,621,000 in deobligated funds which he had originally intended to reobligate. The Mobile Brigade in Indonesia was one of these projects which was especially discussed.

Subsequent to all of this, Mr. Bell did, or the AID Agency did, obligate funds to both sections of the Mobile Brigade in Indonesia out of the President's contingency fund and/or new obligational authority of the supporting assistance account; is that correct?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. We want you to give the committee a list of all of the funds you obligated out of the contingency fund and out of supporting assistance to the Mobile Brigade, as well as the dates.

There would not be any use for this letter from Mr. Bell in which he said, in effect, "We are going to obligate this and release this," if then he is going to turn around and obligate money for the same project, or projects, out of some other funds.

Mr. SCHEINMAN. Sir, you will find that Mr. Bell referred in his letter to the minimum use of obligational authority.

Mr. PASSMAN. Minimum use is not even mentioned in his letter, either to Chairman Cannon or to me.

Mr. SCHEINMAN. I have read it.

Mr. PASSMAN. If you read the letter, what you said is not even in this letter, is it?

Mr. SCHEINMAN. In correspondence with you——

Mr. PASSMAN. I am talking specifically about this letter.

I shall make available to you, if you wish to receive it, a copy of all of this correspondence. I am always willing to try to reconcile these things, but I think cooperation must work both ways.

Mr. RHODES. Mr. Chairman, would you yield?

Mr. PASSMAN. Yes.

JUSTIFICATION OF FUTURE USE OF DEOBLIGATED FUNDS

Mr. RHODES. I think it should be said that in the future if the committee is to be advised on reobligation and deobligation of funds, there should be more than just a letter. There should be at least an illustrative presentation of the new purpose to be served, similar to the type of information presented in the hearings we have on regular appropriations.

This is just one member of the committee speaking but it seems to me this would have avoided a lot of this misunderstanding.

Mr. SCHEINMAN. I think it is extremely unfortunate that this whole situation occurred.

Mr. PASSMAN. I agree wholeheartedly with the gentleman, that a presentation should be made to the committee. So many of these projects go into the millions of dollars and there has been no illustrative presentation at all before the committee. Is that true?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. We have discussed many of them today and I think you should have some type of illustrative program if you are going to start any program that you have never discussed with the committee, or with the Congress, on an illustrative basis, whether out of deobligated funds or any other funds.

It appears to me that you would wish to discuss such matters with Congress.

Mr. TENNANT. I believe we might say, with respect to the misunderstanding, that apparently occurred with respect to the use of deobligations, Mr. Bell did indicate he was willing to have a hearing on every transaction.

I think if he thought the committee did not want to put money in this particular project, he would not have done so. I gather there has been some misunderstanding and we would be glad to——

Mr. PASSMAN. If you read this letter you would gain the impression that the Agency was going to save this much money, but then if you turned around and used the funds to do the same thing out of some other appropriation, then there was no real purpose that I can ascertain of ever getting into this matter at all.

Mr. TENNANT. I was not here during that hearing, nor was I a party to the conversations.

Mr. RHODES. Mr. Chairman?

Mr. PASSMAN. Yes.

Mr. RHODES. It seems to me there would be a good purpose served if we could get the relationship as to the project which you present

on a little different basis than just an illustrative basis. That is, it should have more sanctity, maybe better understanding. It should be similar to a letter of intent, at least. Maybe then we would get away from the use of this word "illustrative."

Mr. SCHEINMAN. The word "illustrative" is the chairman's word insofar as the Agency is concerned.

The purpose as was described here——

Mr. PASSMAN. The chairman has been mentioned so will you yield?

Mr. RHODES. Yes.

Mr. PASSMAN. The Agency's people have been using the word "illustrative" long before you ever became associated with the program Mr. Scheinman. I did not create it. I had to back and retwist my tongue in order to say the word, in fact.

Mr. SCHEINMAN. I retract it. What I meant was the word "illustrative" means our best estimate at the present time.

Mr. PASSMAN. Do not blame me for the use of the word.

Mr. SCHEINMAN. It means the best estimate at the present time of what we are planning to do.

Mr. PASSMAN. Do not try to rewrite the language of the Agency unless you have the right to change what they have said in the past as to what they tell you is illustrative.

"We may or may not spend it for this purpose," they say, "but this time, in all probability, we shall, but we might not."

Mr. TENNANT. That is correct.

Mr. PASSMAN. Thank you.

Mr. RHODES. This would also entail the necessity for keeping us even more completely informed as to changes in plans, I should think. This should be done.

Mr. SCHEINMAN. I think that personally——

Mr. PASSMAN. Would the gentleman agree that if we ever do away with the double standard for money for this program and put it upon the same basis, or justification, as we do with American projects, it would be a better program?

Mr. RHODES. Absolutely.

Mr. PASSMAN. There is a double standard. The agencies justify money for American projects but not for foreign projects.

Mr. SCHEINMAN. Any expression of view with respect to our relationship and information we provide, not just for the committee in formal hearings but throughout the year would receive very serious consideration.

Mr. RHODES. That is the reason I wanted it in the record.

Mr. PASSMAN. Would it not be a good idea if the gentleman from Arizona would include in his request, if it is a request, for them to give consideration that no project be started if they do not have an illustrative presentation, with the hope that they might work to end that project, once started, if they did not have positive justification for it?

Mr. RHODES. That would certainly be a very fine goal toward which to work, Mr. Chairman.

Mr. TENNANT. One point that possibily should be mentioned:

The development loan category is not presented in the books on a project-by-project basis. It is on a banking basis.

Mr. PASSMAN. I am talking now about all of this fuzzy mess in the field of all of these accounts. I am not too sure, either that the same kind of thing should not apply to development credits.

I do not understand why the Congress should not require the Agency to come in with a set of plans.

For example, to say, "We want so much for this nation and here is what we are going to do with it."

PRESENTATION OF DEVELOPMENT LOAN REQUEST

Mr. RHODES. As a matter of fact, Mr. Chairman, I am very much displeased with the presentation of the development credit projects, or lack of projects. It seems to me there ought to be a better way of doing it than the way you have been doing it.

We do not have a really good idea of what you are going to do in the way of development loans when we appropriate the money.

Mr. PASSMAN. These people have answered specifically, time and time and time again, that they do not know what countries will get the money or for what projects the money will be used. I do not not know how a check could be any blanker than this one is.

Mr. RHODES. That is right.

This is the point I am trying to make.

There has to be a better way of doing this than the way we are doing it. If we put all of our minds to work on this, maybe we will be able to find a solution.

Mr. TENNANT. We will bring this exchange to Mr. Bell's attention.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. RHODES. Thank you.

Mr. PASSMAN. Mr. Minshall?

ASSISTANCE TO AIRPORTS IN LATIN AMERICA

Mr. MINSHALL. Mr. Director, the other day you placed much emphasis on the need for airports in several of these countries. You discussed the airports proposed and under construction in Colombia.

Mr. MOSCOSO. Chile.

Mr. MINSHALL. One of which was an emergency field not 75 miles from one of the others in operation?

Mr. MOSCOSO. This is not an emergency field.

Mr. MINSHALL. Your report said it was an emergency field.

Mr. MOSCOSO. It is serving as an emergency field just like Dulles is as an emergency field for Friendship.

This is the airport for the city of Concepción, the fastest growing industrial area in Chile, and it will also serve as an alternate airport.

Mr. MINSHALL. Be that as it may, do you consider airports essential in this part of the world? What are you doing in the way of airports in Ecuador?

Mr. MOSCOSO. We have no airport——

Mr. MINSHALL. Why not?

Mr. MOSCOSO. No requests have been made while I have been in the Agency.

AERIAL PHOTOGRAMMETRIC MAPPING PROJECT

Mr. MINSHALL. How about this photogrammetric program you have going there that the Air Force did not finish?

Mr. MOSCOSO. This is for surveying, mapping.

Mr. MINSHALL. How far along is that program?

Mr. MOSCOSO. I understand it was having some work done by the Air Force. The Air Force is doing some photogrammetric work there and in the meantime the equipment for the rest of the program has been ordered and is starting to come in.

Mr. MINSHALL. What is the purpose of this whole program? A lot of this is mapping of completely unsettled areas where you are going to move everybody out and relocate them?

Mr. MOSCOSO. This program will provide base maps for use in the construction of roads in some of these unsettled areas.

ASSISTANCE TO ECUADORIAN ROAD PROGRAM

Mr. MINSHALL. Tell us something about the road program in Ecuador. What is the basis of the need for this? When did you start the roads? Give us some background. How many miles have been constructed and what kind of roads are they?

What will be the traffic load on them when you do complete them? Would it be a truck a day or two trucks a day, or what will it be?

Mr. MOSCOSO. This road program is part of a joint well-backed program of highways.

Mr. MINSHALL. How much have you put into the program? How much has been programed and how many miles of road are constructed? How many miles are to be constructed? Give us the general picture.

Mr. MOSCOSO. The entire program, from inception in 1957 to completion, will cost AID, IBRD, IDB, and the Government of Ecuador approximately $90 million.

Mr. MINSHALL. If you cannot find it right now, get some basic background on this and supply it for the record, will you please?

Mr. MOSCOSO. Yes, sir. This is a program which has been prepared by the World Bank and in which we are participating.

(Note: Information supplied may be found on p. 2469.)

Mr. MINSHALL. Where do the roads go from and to where?

How many miles are constructed? Is this through jungles, mountains or what?

Mr. MOSCOSO. Loan No. 44 is for a highway which will connect the town of Loja to the town of Macara, and it is a 128-mile segment of the Pan American Highway.

Mr. MINSHALL. That is the one you describe on table, page 314.

Mr. MOSCOSO. That is right. There is another section of another road which is from Quito, the capital city, to Quevedo.

Mr. MINSHALL. This is 128 miles of road. How many other miles have you constructed?

Mr. MOSCOSO. We are supplying this for the record for Mr. Andrews. We will be glad to do the same for you.

Mr. MINSHALL. Don't do it twice. I did not know he had asked the question.

I want it clear what I do want. I want the total dollars you are putting in this, total mileage, cost per miles, where the roads are going, et cetera. I want the detail.

Mr. MOSCOSO. We will have everything in there.

Mr. MINSHALL. I also will give you a little longer range project, to do this for all of the countries in your area on the roads. I would like airports as well.

Mr. MOSCOSO. Roads and airports.

Mr. MINSHALL. Airports, transportation facilities.

Mr. MOSCOSO. All of those in all of that detail?

Mr. MINSHALL. If it is not too much trouble. If not, do it in outline form.

Mr. MOSCOSO. It will consist of a lot of pages, but we will be glad to supply it.

Mr. MINSHALL. Mr. Merrill has suggested do it just for one country and submit the rest for the committee use.

Mr. MOSCOSO. All right.

EFFORTS TO SPREAD COMMUNISM FROM CUBA

Mr. MINSHALL. Mr. Secretary, when we were meeting last week, I think it was last Friday, the subject of Cuba came up and in response to some questioning you stated very clearly that there was no doubt about the fact that Cuba was being used as a base for the exportation of communism and subversion and propaganda of all types, especially as related to the countries of Venezuela and Colombia and Guatemala.

Mr. COTTRELL. I think I said Venezuela and Guatemala were two of the prime targets.

Mr. MINSHALL. Yes. Is that situation in Cuba going to improve or is it deteriorating?

Mr. COTTRELL. Their efforts will probably increase. They have stated very recently, both Castro and Guevara, that they intend to encourage the revolutionary elements in every Latin American country.

Mr. MINSHALL. What are we going to do to stop this?

Mr. COTTRELL. We have done several things. Several months ago we met with the ministers of government of the Central American countries and Panama to work out ways and means of impeding their progress in Central America. We have worked bilaterally with the other countries of South America.

Mr. MINSHALL. We are swatting flies when we do that. Why don't we go after the source?

Mr. COTTRELL. The effort we are making is to impress upon each one of these countries the danger to its existence by the machinations of the Cubans and the local Communist Parties. The internal security of each of these countries, of course, depends on their efforts with our help.

Mr. MINSHALL. I am glad you brought that out because this morning on a TV show, on channel 4——

Mr. RHODES. "Today."

Mr. MINSHALL. The "Today" program, they had a guest on the program. He was one of some 50 correspondents who recently visited Cuba, wining and dining them for a few weeks. This was a colored chap, by the name of Lumack, or something like that. He seemed

knowledgeable on the subject. He categorically stated that the present measures we are using against Cuba are in fact totally ineffective. He further stated to sit back and think there is going to be an uprising or rebellion to throw Castro out from inside Cuba is a lot of poppycock. I could not agree with him more.

Mr. COTTRELL. We have judged in our military planning it would take substantial military casualties if we mounted an invasion of Cuba this time.

Mr. MINSHALL. I beg to disagree on that. At the time of the October crisis I had the pleasure of serving on the Defense Appropriations Subcommittee and the top people from Secretary McNamara on down testified in top secret briefings.

(Discussion off the record.)

Mr. MINSHALL. That is all I have, Mr. Chairman.

Mr. PASSMAN. It is a serious matter.

CHILEAN EXCHANGE RATE

The official exchange rate of the escudo in Chile to the dollar is 1.4?

Mr. MOSCOSO. As of now it is 1.82.

Mr. PASSMAN. The book says 1.4.

Mr. MOSCOSO. Yes.

Mr. STERNFELD. It has changed to 1.8 now.

Mr. PASSMAN. If I owned, or should acquire, escudos at the going exchange rate of 3.3, could I get them exchanged at a rate of 1.8?

Mr. MOSCOSO. Those escudos are mostly, or rather the dollars——

Mr. PASSMAN. The question is, If I might wind up with a million dollars in escudos, or if I wind up with a million escudos and I want to exchange them for dollars could I get them exchanged at the 1.8-to-1 escudo?

Mr. MOSCOSO. You would have to have a license.

Mr. PASSMAN. A license to convert from escudos to dollars?

Mr. MOSCOSO. Because in order to get the official rate it has to be for imports acceptable to the Government of Chile.

Mr. PASSMAN. What if I wind up with a million escudos and say I want to exchange them for dollars?

Mr. MOSCOSO. There is a free market and that can be done only for capital purposes as I understand it.

Mr. PASSMAN. When are we going to have a reevaluation of this exchange rate? You know what happened along the same lines in Laos. Are we going to get an up-to-date report?

Mr. MOSCOSO. Yes. We are going to give you one, Mr. Chairman.

HAITI

Mr. PASSMAN. In the justifications you are requesting $—— in supporting assistance for Haiti, are you not?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. Is that sum holding firm?

Mr. MOSCOSO. No.

Mr. PASSMAN. You have no request for Haiti at this time?

Mr. MOSCOSO. These are continuing projects, that primarily pertain to——

Mr. PASSMAN. Then you do have a project continuing in Haiti and you are going to ask for $——— in supporting assistance?

Mr. MOSCOSO. It it malaria eradication.

Mr. PASSMAN. I am talking about the amount of money that you are requesting.

Mr. MOSCOSO. It will probably be less than $———.

Mr. PASSMAN. Presently you are requesting $——— for Haiti.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. So far as you know that figure will remain relatively firm?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. If you plan any reductions, how much will they be?

Mr. MOSCOSO. There would be about $160,000 or $170,000 reduction.

Mr. PASSMAN. Why would you ask for $——— if you knew before you finished the hearings you were going to actually reduce it to $———?

Mr. MOSCOSO. When this was published Mr. Chairman, back in February, the mission was still operating. Now we have closed it down, as you recall in the announcement made on August 2.

Mr. MINSHALL. Mr. Chairman—as to the mission being removed from Haiti, why did that cut down on the amount of money you plan to spend?

Mr. MOSCOSO. We are only going to have four technicians to handle the malaria program. The reason why we are continuing it is twofold.

Mr. MINSHALL. What did the mission do that took so much more?

Mr. MOSCOSO. We had at that time the possibility of construction of an airport.

Mr. MINSHALL. That was $2.7 million.

Mr. MOSCOSO. It has been deobligated. It was $2.8 million.

Mr. MINSHALL. It is out the window now or have you suspended it?

Mr. MOSCOSO. We have ordered deobligation of the $2.8 million for the airport.

Mr. MINSHALL. When did you do this?

Mr. MOSCOSO. A week or so ago.

Mr. MINSHALL. You have ——— left in your proposed program now?

Mr. MOSCOSO. That is right. I think there will be less than that.

Mr. MINSHALL. How much have you cut it down aside from the airport?

Mr. MOSCOSO. It will be about $160,000 less.

Mr. MINSHALL. Thank you.

Mr. PASSMAN. On page 161 of the justifications is the following statement:

(Off the record.)

Mr. MOSCOSO. That is right, sir

Mr. PASSMAN. Are you working up a ———?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. What does the ——— look like?

Mr. MOSCOSO. This is a ———, Mr. Chairman.

Mr. PASSMAN. If you are working up a ——— you are doing business with dollars; are you not?

Mr. MOSCOSO. (Off the record.)

Mr. PASSMAN. It takes dollars to do the job?

Mr. Moscoso. That is correct.

Mr. PASSMAN. You are working up a ———. Can you envision what this ——— may cost in fiscal year 1964?

Mr. Moscoso. (Off the record.)

ECONOMIC SITUATION IN HAITI

Mr. PASSMAN. But the country is presently in a lot of turmoil with a lot of unemployment. Their wealth, such as it is, is being dissipated?

Mr. Moscoso. There is so little wealth there.

(Discussion off the record.)

Mr. PASSMAN. What amount do you have unliquidated to the credit of Haiti?

Mr. Moscoso. $4,472,000.

Mr. PASSMAN. And what has been the total amount of aid to this little country?

Mr. Moscoso. $80.8 million, since 1946.

Mr. PASSMAN. And they are in worse shape now than ever; are they not actually?

Mr. Moscoso. Politically; yes.

Mr. PASSMAN. You said there is but little wealth in the country. Economically are they not about in the worst shape they have ever been?

Off the record.

(Discussion off the record.)

Mr. PASSMAN. What are some of the improvements, if any, from the time we started this $80 million aid program in 1946?

Mr. Moscoso. There have been some successes. For instance, Haiti has been made self-sufficient in rice. There is also a small winter vegetable industry.

Mr. PASSMAN. Do we take any of that credit?

Mr. Moscoso. Pardon?

Mr. PASSMAN. Are we entitled to any of that credit?

Mr. Moscoso. We assisted in creating that situation. There has been vaccination for yaws.

Mr. PASSMAN. Give us the cost of those three programs.

Mr. Moscoso. The aid program has just barely kept even with the deterioration——

Mr. PASSMAN. That is what the record said, and that is what I am saying—$80 million and the situation is just about as when we started?

Mr. Moscoso. With some improvements.

Mr. PASSMAN. As you just read here it is just about keeping even, is it not?

Mr. Moscoso. Just enough to balance.

Mr. MINSHALL. I visited Haiti last fall and saw at first hand the conditions that exist and if there is any evidence that any of our money has helped it is certainly a well kept secret.

I was there 2 or 3 years prior to that. It looked the same last fall, if not worse. Have you been there lately?

Mr. Moscoso. I wasn't there last year. I was there almost every year before that.

Mr. PASSMAN. Are you not afraid that all over the world, in subsequent years as we go into these countries, that maybe you will find

the value has been just about nil, that they made just about as much progress without the aid, that they become complacent and are to a substantial degree substituting our wealth for their own initiative and effort?

Mr. Moscoso. You know we had——

Mr. PASSMAN. What is the population of Haiti?

Mr. Moscoso. About 4.3 million.

MEXICO

Mr. PASSMAN. The next country in this area is Mexico, for which the fiscal year 1964 estimate is $———; is that correct?

Mr. Moscoso. Yes, sir.

Mr. PASSMAN. An increase of approximately ——— percent.

Mr. Moscoso. That is right.

Mr. PASSMAN. ——— percent above the 1963 program; is that correct?

Mr. Moscoso. That is right.

Mr. PASSMAN. Thank you, sir.

(Short recess taken.)

Mr. PASSMAN. Of this ——— percent increase for Mexico, what is the amount you have on hand?

Mr. Moscoso. It is a larger increase. We obligated only $400,000.

Mr. PASSMAN. You are requesting $——— for Mexico, an increase of ——— percent above the 1963 program. So you say it is ——— percent.

Mr. Moscoso. If you add the social progress trust fund——

Mr. PASSMAN. Let us take the comparable figure.

Mr. Moscoso. $400,000.

Mr. PASSMAN. That would be possibly ——— percent increase?

Mr. Moscoso. That is right.

Mr. PASSMAN. What has been the total aid to Mexico since the inception of the program?

Mr. Moscoso. $199.7 million.

Mr. PASSMAN. How much do you have on hand unliquidated to the credit of Mexico?

Mr. Moscoso. $28,841,000.

Mr. PASSMAN. I note, on page 63, that the development credit estimate for Mexico is $———. Would that be in addition to the $——— million?

Mr. Moscoso. No. This is part of it.

Mr. PASSMAN. Page 65 indicates that development credits for fiscal year 1964 will initially be confined to a range of $15 to $20 million; is that correct?

Mr. Moscoso. Yes.

Mr. PASSMAN. In view of that fact, why are you requesting $———?

Mr. Moscoso. Because of the Government response——

Mr. PASSMAN. Because of what?

Mr. Moscoso. If they prepare a good program for the creation of these financial institutions we mention, and fully utilize the agricultural credits, and provide for a vast nationwide savings and loan system, we will consider additional lending for Mexico.

Mr. PASSMAN. Mexico is one of the most prosperous countries of Latin America, is it not?

Mr. Moscoso. It is one of those growing. They still have a per capital GNP of $317.

Mr. PASSMAN. It depends on what you can buy with the money.

What is the literacy rate in Mexico?

Mr. Moscoso. Fifty-six percent.

For the rural masses in Mexico, 20 million of the 37 million population has an income of $100 or less a year.

Mr. PASSMAN. I used to get a big bowl of red beans and rice for a nickel. However, I do not say they have a standard to be satisfied with.

Is this vastly increased and an indirect sort of payoff to Mexico to get them to go along with us?

Mr. Moscoso. No, sir.

Mr. PASSMAN. Why such a greatly stepped-up program? This program will be about ——— of the total program they have had for a period of 17 years. This is the largest increase of any aid program.

Mr. Moscoso. If the chairman will look at the 1962 program, you will see it is not so large. In other words, in 1962 we had $20.7 million, and now we are suggesting $———.

Mr. PASSMAN. Is that not when the President went there, in the last days of June, and you obligated a large amount? That was only $20 million.

Mr. Moscoso. President Kennedy went down there.

Mr. PASSMAN. Anyway, you requested only $20 million that year?

Mr. Moscoso. This is an opportunity, Mr. Chairman, first, to establish some very necessary institutions in Mexico; second, give them a further push into the hopeful plateau of self-sustaining growth. We are deriving from Mexico, already, certain technical assistance for certain of the Latin American countries. and we hope to put them on a self-sustaining growth basis which will not require any aid.

Mr. PASSMAN. Do we not have similar plans for the 100 nations in the program for fiscal year 1964?

Mr. Moscoso. Yes. We hope to accomplish this a little faster in Mexico.

Mr. PASSMAN. It is the same kind of hope we entertain for practically every nation on the face of the earth?

Mr. Moscoso. Yes.

Mr. PASSMAN. In 1959 how much aid did we have for Mexico?

Mr. Moscoso. $2.3 million.

Mr. PASSMAN. How much was it in 1958?

Mr. Moscoso. $19.3 million.

PURCHASE OF GOLD BY MEXICO

Mr. PASSMAN. Mexico bought $30 million of our gold in 1959.

What kind of an aid program did you have in Mexico in 1960?

Mr. Moscoso. We had $4.5 million.

Mr. PASSMAN. That year they bought $20 million of our gold.

What amount of aid did you have for Mexico in 1961?

Mr. Moscoso. We had $4.7 million.

Mr. PASSMAN. From 1959 through 1963, what was the total amount of our aid to Mexico? We want all spigots, excluding the Export-Import Bank.

Mr. Moscoso. $72 million.

Mr. PASSMAN. During that same time Mexico bought $50 million of our gold. There is no record I have that they have sold any of it back to us.

SOURCES OF ASSISTANCE AVAILABLE TO MEXICO

When we get over to the Export-Import Bank, I think that from 1946 to 1962, inclusive, they made total loans of $591 million; is that correct?

Mr. Moscoso. That is right.

And they have paid back $243 million.

Mr. PASSMAN. In addition, they are eligible for all these other spigots of foreign aid?

Mr. Moscoso. That is right.

Mr. PASSMAN. To name a few, they are eligible to get funds out of the Latin American region, the interregional account, the International Development Association, the Inter-American Development Bank, the Social Progress Trust Fund, all the U.N. agencies, and Public Law 480.

All the other spigots, would you list them, Mr. Controller?

Mr. TENNANT. Yes.

Mr. PASSMAN. I think Mexico is eligible for aid from all the 16 spigots.

(The information supplied follows:)

SOURCES OF ECONOMIC DEVELOPMENT ASSISTANCE

Mexico is eligible for funds from the following sources: IBRD, IDB, U.N. Funds (including UNTA, ECOSOC, ILO, etc.), IFC, IDA, SPTF, development grants, development loans, supporting assistance, contingency funds, regional funds, interregional funds, Peace Corps, food for peace, Exinbank.

Mr. Moscoso. They are still getting $200 million of outside assistance less than the plan requires in order to push them over the top.

U.S. PUBLIC DEBT AND INFLATION

Mr. PASSMAN. Certainly you know that we are falling far short for our plan in the United States, too. The annual budget deficit of the United States has averaged $9 billion a year for the past 30 years. We are now operating in reality with a public debt of $1,200,508 million, if we take the $305 billion in borrowed money and add to that amount the obligations through the 108 statutes that call for the payout of money for previously rendered services. From the year we adopted the Constitution in 1789, 174 years ago, every time we have collected a dollar in Federal revenue, and we have collected $1,200,508 million, we have created an obligation of $1.81.

So the fact that Mexico does not have all the money it needs for some plan is not something for us to get excited about.

We do not have all the money we need for our plan for fiscal year 1964 if we get into what we think we may get into and follow the recommendations from downtown. In the budget estimate, we are going to fall short about $10.5 billion on our plan next year.

So do not let it worry you unduly simply because Mexico does not have all the money they want for fiscal year 1964.

Mr. Moscoso. What worries me is they have a per capita income of $317.

Mr. PASSMAN. What can you buy with that income? In this country, at the consumer level, if you take the 1940 dollar, it will only buy 44 cents worth of our 1963 production of goods and services, which means that had a Congressman, for example, been getting $10,000 in 1940, he could have bought more goods and services then than $22,500 will buy in 1963.

Mr. ROONEY. I will not agree with that.

When I first came here at $10,000 a year, it cost me $3,000 or $4,000 a year of my savings in order to barely live.

Mr. PASSMAN. As far as the record is concerned, the 1940 dollar is now worth only 44 cents, at the consumer level. It has lost 56 cents in purchasing power since 1940.

I do not know whether $371 per capita would be the equivalent of $1,200 a year in America, or $1,800, but you do have to relate it to something. The value of the income depends upon what one can buy with it.

EXIMBANK LENDING TO MEXICO

You do not have any projection on what the Export-Import Bank may make available to Mexico in fiscal year 1964?

Mr. Moscoso. No. They have been averaging about $60 to $75 million annually. These are not development loans. These are primarily balance-of-payments standbys.

Mr. PASSMAN. They are still eligible to be financed by the Export-Import Bank for their imports from America?

Mr. Moscoso. Yes, sir.

Mr. PASSMAN. They have borrowed through the Export-Import Bank since 1946, $591 million.

Now you are starting a fantastically high aid program for Mexico.

DEVELOPMENT LENDING

I note, on page 63, that you anticipate making $——— worth of development credits available to Mexico during 1963; is that correct?

Mr. Moscoso. That is right, but negotiations were not completed.

Mr. PASSMAN. How can we reconcile this tremendous increase for 1964 with the experience you have had in Mexico?

Mr. Moscoso. I think they have met the criteria of self-help pretty well, Mr. Chairman.

Mr. PASSMAN. Mexico has quarreled with us about a lot of our programs for Latin America, have they not?

Mr. Moscoso. Insofar as economic aid is concerned?

Mr. PASSMAN. I am speaking overall. Is that right?

Mr. Moscoso. Yes.

TECHNICAL SUPPORT PROJECT

Mr. PASSMAN. Why do you need $300,000 for the technical support project for a country which has no development grant or supporting assistance projects to administer?

Mr. Moscoso. We have a number of technicians who are completing the phaseout of the technical assistance projects, and several to back-

stop the loan program, Public Law 480 program and third country training in Mexico.

Mr. PASSMAN. You obligated only $275,000 in fiscal year 1963; is that correct?

Mr. MOSCOSO. That is correct.

Mr. PASSMAN. And you had on hand unexpended $75,000. Now, if it is a phaseout program, why would you need $300,000 extra in this field?

Mr. MOSCOSO. We hope this will eventually drop further. We need personnel to see that the end use of those loans we have made is adequate.

Mr. PASSMAN. Do you have that kind of program in every country?

Mr. MOSCOSO. In those countries where we have loans, we want someone there to take a look at them.

Mr. PASSMAN. Do you have them in every country where you have this type of foreign aid program going?

Mr. STERNFELD. If we have loans, we would have some people.

Mr. PASSMAN. You are increasing the amount. I thought you said it was phasing out.

Mr. MOSCOSO The technical assistance program is phasing out.

Mr. PASSMAN. The estimate last year was $105,000. Am I making a statement of fact?

Mr. MOSCOSO. Yes. That was the figure for technical support rather than for the technical assistance program.

Mr. PASSMAN. Do you think you have about the same percentage of inflation in the program this year as you had last year?

Mr. MOSCOSO. No.

Mr. PASSMAN. According to the examination so far on Latin America, you have had quite a bit of inflation.

In the gray-matter area of your books for a country we were recently discussing, your firm plans actually were only for from $15 million to $20 million; is that correct?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. The figure you are estimating could be three or four times that much?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. This is a 400-percent inflation, using the low range; is that correct?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. In how many countries in your area do you have participants financed under the technical support project?

Mr. STERNFELD. We would have to check.

Mr. PASSMAN. Is that practice the exception rather than the rule?

Mr. STERNFELD. Yes, because we have only this one project, in Mexico.

Mr. PASSMAN. That is the exception rather than the rule?

Mr. STERNFELD. That is correct.

Mr. PASSMAN. Are you going to spread that, or try to contain it? It makes it difficult to understand when you switch these things into a program different from those we have been examining.

Why do you need $73,000 for contract services in fiscal year 1964?

Mr. MOSCOSO. These are short-term technicians.

Mr. PASSMAN. For what period of time?

Mr. MOSCOSO. I do not know exactly how long they will be in, but I doubt if it is more than 3 to 6 months.

SUPERVISED AGRICULTURAL CREDIT LOAN

Mr. PASSMAN. I note that the supervised agricultural credit of $20 million which was signed on June 30, 1962, showed no disbursements whatsoever as of the time of the printing of the project book; is that correct?

Mr. MOSCOSO. That is what it says here, but there have been disbursements.

Mr. PASSMAN. The justifications here indicate there have been no disbursements on this credit.

Mr. MOSCOSO. In February, that is correct.

Mr. PASSMAN. How much have you disbursed against this credit?

Mr. MOSCOSO. $2 million.

Mr. PASSMAN. So there is $18 million of this credit on hand undisbursed.

Could this be one of those projects that was perhaps approved on June 20, and the contract was signed on June 30, the last day of the fiscal year?

Mr. MOSCOSO. No, sir. These are no-year funds. The dates are right.

Mr. PASSMAN. All I mentioned were the dates.

Mr. MOSCOSO. You said, "Was it the end of the fiscal year?"

Mr. PASSMAN. Unless they have changed the signs this morning, it is still the end of the fiscal year. You still agree with me?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Thank you.

AMISTAD DAM

Mr. ROONEY. Are there any funds included in this budget by way of grant or loans in connection with the construction, or pending construction of Amistad Dam across the Rio Grande River between the United States and Mexico?

Mr. MOSCOSO. No; there are not.

Mr. ROONEY. No connection there at all?

Mr. MOSCOSO. None.

Mr. ROONEY. The Mexicans are proposing, are they not, to stand almost 50 percent of the cost of the dam and powerplant?

Mr. MOSCOSO. I do not know of that project.

Mr. ROONEY. You are not familiar with that?

Mr. MOSCOSO. I am not familiar with that project.

Mr. ROONEY. Very well.

PARAGUAY

Mr. PASSMAN. I believe you are requesting $3.1 million for Paraguay for fiscal year 1964?

Mr. MOSCOW. That is right.

Mr. PASSMAN. Let us put together all the other spigots and see how far we go.

Mr. MOSCOSO. $———.

Mr. PASSMAN. The book shows $3.1 million, but when we get the other spigots it comes up to what total?

Mr. MOSCOSO. $———.

Mr. TENNANT. That includes the military.

Mr. PASSMAN. It does not include the Export-Import Bank?

Mr. MOSCOSO. No, sir.

SOURCES OF AID AVAILABLE TO PARAGUAY

Mr. PASSMAN. Are they eligible for funds out of the interregional account?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Are they eligible for funds out of the Latin American regional account?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Are they eligible for funds out of the Social Progress Trust Fund account?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. Are they eligible for money out of the Inter-American Development Bank?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. Are they eligible for money out of the International Development Association?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. Are they eligible for money out of Public Law 480?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. Out of all the other organizations?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. Will you insert in the record, Mr. Controller, the remaining 16 spigots?

Mr. TENNANT. Yes, sir.

(The requested information follows:)

SOURCES OF ECONOMIC DEVELOPMENT ASSISTANCE

Paraguay is eligible for funds from the following sources: IBRD, IDB, U.N. funds (including UNTA, ECOSOC, ILO, etc.), IFC, IDA, SPTF, development grants, development loans, supporting assistance, contingency funds, regional funds, interregional funds, Peace Corps, food for peace, Export-Import Bank.

TOTAL AID TO PARAGUAY

Mr. PASSMAN. How much have we given Paraguay since the inception of the program?

Mr. MOSCOSO. $59.4 million.

Mr. PASSMAN. What sum do you have on hand unliquidated to the credit of this country?

Mr. MOSCOSO. $9,865,000.

Mr. PASSMAN. You have three times as much on hand as the book shows you need, but ——— the amount when we put the few spigots together you just mentioned? This is just about a year's pipeline?

Mr. MOSCOSO. Yes; there is $2.9 million Social Progress Trust Fund and Public Law 480 is——

Mr. PASSMAN. In addition to the figure stated?

Mr. MOSCOSO. No; included in the $9.8 million.

The figure for economic aid would be $5,978,000.

Mr. PASSMAN. Mr. Administrator, would you comment concerning your statement, on page 67 of the justifications, that you will be using the modest grant aid program to ——— ?

Mr. MOSCOSO. That has already happened, Mr. Chairman, I am happy to say. For the first time in many years——

Mr. PASSMAN. You paid them for doing it and they are staying put?

Mr. MOSCOSO. No.

Mr. PASSMAN. Is that not what the book says?

Mr. MOSCOSO. It is an educational job the Ambassador has been working on for quite a while and he has started to get some results now.

Mr. PASSMAN. This book says that the grant aid program is to——

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. Was what you asked them to do something that was wrong or right?

Mr. MOSCOSO. I think this is right.

Mr. PASSMAN. Why do you have to give them money for doing it? Why do we not get all of our programs together and admit that our money is intended to get them to do what is right, in the first place?

Mr. MOSCOSO. I think this is classified.

Mr. PASSMAN. How many millions have you given to Paraguay since the inception of the program?

Mr. TENNANT. $59.4 million.

Mr. PASSMAN. What is the population of the country?

Mr. MOSCOSO. 1.9 million.

NATIONAL UNIVERSITY PROJECT

Mr. PASSMAN. How many participants do you plan to train at a cost of $189,000 under the national university project, shown on page 333?

Mr. STERNFELD. Forty-five participants.

Mr. PASSMAN. At a cost of $189,000?

Mr. STERNFELD. That is right.

Mr. PASSMAN. What type of assistance has UNICEF given to the medical school and the national university?

Mr. STERNFELD. UNICEF does provide——

Mr. MOSCOSO. Teaching aids and other items of that kind.

Mr. STERNFELD. Some commodity assistance for children relief.

ASSISTANCE TO POLITICAL FREEDOM IN LATIN AMERICA

Mr. PASSMAN. Earlier this afternoon we were discussing a program for one country and I believe it is stated about this way: The grant aid program was used to influence the government to permit significant freedom of action to political parties in opposition to the regime; is that correct?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. What we are advocating is something that is good and right, is it not?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. Do we have to make a gift to them in order to get them to do what is right?

Mr. MOSCOSO. No, sir. It is not a question of a gift.

We do not hand the government officials a gift so that they will——

Mr. PASSMAN. Let the officials take care of themselves. Here we are in many parts of the world giving special grants to people in order to get them to do what they are supposed to do, and these grants are in addition to regular planned programs.

(Off the record.)

Mr. ROONEY. Mr. Chairman?

None of this discussion in the last couple of minutes has to do with Paraguay, has it?

Mr. STERNFELD. That is right, sir.

Mr. PASSMAN. Thank you.

RURAL EDUCATION DEVELOPMENT PROJECT IN PARAGUAY

The estimate of $900,000 for the "rural education development projects" will complete the funding for this project; is that correct?

Mr. STERNFELD. That is correct.

Mr. MOSCOSO. That is right.

AGRICULTURAL DEVELOPMENT AND PRODUCTIVITY

Mr. PASSMAN. I note under the "Agricultural development and productivity project," on page 335, that you are requesting $30,000 for contract service to provide a contract adviser for the organization of farmer cooperatives.

Mr. MOSCOSO. That is right, organized rural production and marketing cooperatives.

Mr. PASSMAN. Do you not have funds requested in the interregional account for the same purpose?

Mr. STERNFELD. We have funds to help the establishment of cooperatives in Latin America; yes, sir.

Mr. PASSMAN. We are not in disagreement on this and we have established for the record that these figures in this book, in most instances, represent about one-third of the total amount of funds these people get.

We find you can get funds from about seven different sources to do the same kind of thing under any technical aid program, for instance.

TECHNICAL SUPPORT PROJECT

I note that under "Technical support project," on page 342, you are requesting an increase of $19,000 in fiscal year 1964, up to a total of $269,000 which you state represents the increased funding requirement resulting mainly from the absorption of a communications media project.

Will you comment on why the "Technical support project" has to finance this activity and when the other one will be absorbed?

Mr. STERNFELD. We are attempting to phase out the communications media project. This is to provide posters and other slides and items which will be useful in the implementation of the program. We have incorporated it in here to phase it out.

Mr. PASSMAN. It looks as if we are about to establish a $3.5 billion foreign-aid program with only about $1 billion in commodities.

The other $2.5 billion, it appears, is spent to pay for 64,500 personnel of all categories, including participants, involved in AID and that figure includes, of course, the cost of these people's food, travel, representation, entertainment, hotel bills, houses abroad, and so forth.

When we speak in terms of commodities exported through foreign

aid, do you take into account all of these small items? Is your record good enough to pick up under "Technical aid projects," for example. where you have hand tools or insecticides or various other small commodities?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. When we finally put together commodities, these items are included?

Mr. TENNANT. Yes, sir.

TELECOMMUNICATIONS LOAN

Mr. PASSMAN. Here is a DLF project, No. 91, "Telecommunications," approved June 24, 1959. The contract was signed May 26, 1961, and now it is going on 3 years and you have not disbursed even a dollar on this account. Can you tell us why this is so?

Mr. MOSCOSO. Yes, sir. The bids are coming in at the end of this week, August 15.

Mr. PASSMAN. This is going into the fourth year or into the fifth year, is it not? There have been no disbursements?

Mr. STERNFELD. $36,000.

Mr. PASSMAN. You have been carrying this in an obligational status for all of those years. Can you tell us whether or not, at this time, this afternoon, there has been any disbursement made against this account?

Mr. MOSCOSO. There have been some disbursements made, $36,000.

Mr. PASSMAN. When were the disbursements made?

Mr. MOSCOSO. After the date on which it was——

Mr. PASSMAN. It does not show a dime of disbursements here.

Mr. MOSCOSO. After the date in which the book was printed.

Mr. PASSMAN. $36,000 of $1 million for what purposes?

Mr. MOSCOSO. For the consulting engineers. There has been a lot of difficulty with the consulting engineers on this project.

Mr. PASSMAN. Why would not something like this just be deobligated and then you would start over?

Mr. MOSCOSO. If the bids are coming in on the 15th——

Mr. PASSMAN. What do you mean, "bids"?

Mr. MOSCOSO. Opening bids. We had difficulty with RCA and I.T. & T. and had to reject the bids because they did not meet the specifications. We had to go out for bids and if these bids are not acceptable, we will deobligate.

PERU

Mr. PASSMAN. The next country in this area is Peru for which you are requesting for fiscal year 1964, $———.

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. Will you add to that sum all of the other figures, excluding the Export-Import Bank?

Mr. MOSCOSO. $———, including the military and Public Law 480.

Mr. PASSMAN. It would appear that there has been an increase in the program shown in the project book. It looks as if you have an increase of exactly ——— for the same purposes.

When we squeeze the other spigots, we get how much?

Mr. MOSCOSO. $———.

Mr. PASSMAN. Which is $——— more than shown in the book and that does not include Export-Import Bank, does it?

Mr. MOSCOSO. No, sir.

SOURCES OF AID AVAILABLE

Mr. PASSMAN. It does not include what Peru would be eligible for out of the interregional account?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. It does not include what they would be eligible for out of the Latin American regional account?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. Neither does it include what they would be eligible for out of the Inter-American Development Bank?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. From the Social Progress Trust Fund?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. Nor the International Developmental Association?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. Or any of the funds in the United Nations organizations?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. Would you put the other part of the 16 spigots in the record and give us a grand total, Mr. Controller?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. Thank you.

(The requested information follows:)

SOURCES OF ECONOMIC DEVELOPMENT ASSISTANCE

Peru is eligible for funds from the following sources: IBRD, IDB, U.N. funds (including UNTA, ECOSOC, ILO, etc.), IFC, IDA, SPTF, development grants, development loans, supporting assistance, contingency funds, regional funds, interregional funds, Peace Corps, food for peace, Eximbank.

Mr. PASSMAN. It certainly makes a lot of difference when you pick up all of these pages and put them together.

What amount do you have on hand unliquidated to the credit of Peru?

Mr. MOSCOSO. $62,318,000.

Mr. PASSMAN. How much did you have for Peru in fiscal year 1960?

Mr. MOSCOSO. $18.3 million.

GOLD PURCHASES

Mr. PASSMAN. I notice in the last quarter of that same year, 1960, they made a gold purchase of $15 million from the United States.

What was the amount of the aid program for Peru in 1959?

Mr. MOSCOSO. $55.2 million.

Mr. PASSMAN. They bought only $5 million of our gold that year.

How much aid did you have for Peru in fiscal year 1962?

Mr. MOSCOSO. $74.8 million.

Mr. PASSMAN. That year Peru only purchased $600,000 of our gold, but during the years the aid program was highest, beginning with calendar 1960, Peru purchased $20.6 million of our gold.

I note in your statement, on page 70 of the justifications, that unused economic assistance obligations in Peru are "excessive." Is that a typographical error?

Mr. MOSCOSO. No, sir.

POPULATION AND LITERACY RATE

Mr. PASSMAN. What is the population of Peru?

Mr. MOSCOSO. 11.6 million.

Mr. PASSMAN. What is the literacy rate?

Mr. MOSCOSO. Fifty percent.

I think this is an overstatement, quite frankly.

It is closer probably to 35 or 40.

This includes the Indian population.

Mr. PASSMAN. Check that information, please, and if it is actually different than indicated, supply it for the record.

(Information supplied follows:)

PERU LITERACY RATE ESTIMATION

The published literacy rate of 50 percent for Peru is based upon the 1940 population census. Other sources give varying estimates. At best all estimates are inflated because of the difficulty of taking an accurate census of the Indian and rural population.

GOLD AND FOREIGN EXCHANGE RESERVES

I think maybe we would like to show that Peru, since we really got the aid program going good, had $71 million in gold and foreign exchange in 1960 and it increased to $89 million, and in 1961 it went up to $129 million.

Mr. MOSCOSO. That is a mistake.

Mr. PASSMAN. In 1962, it went up to $140 million.

Mr. MOSCOSO. I am sorry, Mr. Chairman. That is a typographical error.

Mr. PASSMAN. All of them?

Mr. MOSCOSO. The last two, 1961 and 1962, at least are typographical errors.

We have the International Monetary Fund report here.

Mr. PASSMAN. You have so many records and reports and one says one thing and one another.

I do know I can take the U.S. Treasury statement where the amount of gold is shown that these countries are buying from us.

Mr. MOSCOSO. The end of the year figure for 1961 was $102 million and in 1962, $103 million, which represents about 2.5 months of imports.

Mr. PASSMAN. It has gone from $71 million in 1959 to $103 million in 1962?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. During the time our aid program appeared to be the heaviest, this country purchased $20.6 million of our gold?

Mr. MOSCOSO. Disbursements were very minor.

Mr. PASSMAN. I am talking about the gold they bought during those years.

I do not know when they draw it out but I know when you put it in.

What has been the total amount of aid from all spigots to Peru?

Mr. MOSCOSO. $287.7 million since 1946.

Mr. PASSMAN. I note under the basic agricultural institutional development project that you have $1 million in unliquidated obligations as of June 30, which is primarily for the funding of the University of North Carolina contract signed in August 1962; is that correct?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. In reality, you do not need $740,000 extra, do you?

Mr. MOSCOSO. Yes, sir; we do.

Mr. PASSMAN. Earlier today you heard the exchange to the effect that you are funding projects for which you have 2 years of money already on hand, such as this university project partially through 1967.

Will you tell us why, with this money on hand, you have made no disbursements and why you need additional money?

Mr. MOSCOSO. This is needed for additional contract operation in fiscal year 1964.

Mr. PASSMAN. You are not spending what you presently have to the credit of the University of North Carolina.

Mr. MOSCOSO. We spent close to $1 million in fiscal 1963.

We had $655,000 obligated and unliquidated $134,100 which gives us a total of about $1 million, so about $1 million was spent.

Mr. PASSMAN. You have all of the money that you obligated in 1963 with $345,000 of the money you obligated in 1962; is that a fair statement?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Thank you.

Mr. MOSCOSO. May I do it the other way?

Mr. PASSMAN. Have I made a statement of fact that you have all of the funds you obligated in 1963 and $345,000 of the funds you obligated in 1962; you estimate $1 million on hand unliquidated on June 30, 1963; is that correct?

Mr. MOSCOSO. What you have is——

Mr. PASSMAN. Have I stated it correctly?

Mr. MOSCOSO. $341,000 plus $655,000, plus $996,000 spent——

Mr. PASSMAN. You have not confirmed it either way.

Am I making a statement of fact, that on June 30, 1963, you had all of the funds that you obligated in fiscal 1963 on hand, plus $345,000 of the funds you programed in 1962; is that correct, Mr. Controller?

Mr. TENNANT. I do not believe that is correct.

Mr. PASSMAN. Do you have on hand $1 million unliquidated?

Mr. TENNANT. I think the question——

Mr. PASSMAN. You have on hand $1 million unliquidated to this contract as of June 30, 1963?

Mr. TENNANT. That is correct.

Mr. PASSMAN. How much did you obligate to the project in fiscal year 1963?

Mr. MOSCOSO. $655,000.

Mr. PASSMAN. Thank you.

I think the record will make the case.

Mr. TENNANT. I think the issue is which transactions were obligated in which year.

Mr. PASSMAN. You have only one contract, Mr. Controller, and that is shown on page 347, the "Basic Agricultural Institution Development Contract," and I gave you the number of the project.

Is this not the one to the University of North Carolina?

Mr. Moscoso. Mr. Chairman, I am a novice at this, but may I try it this way?

We are actually disbursing about $1 million for this contract and if we obligated $825,000 and add to that the million dollars we have unliquidated, we will have $1,825,000 for 2 years which is forward funding which is the usual thing in university contracts.

Mr. PASSMAN. Earlier, you said you had on hand for certain contracts funds for 2 years, based upon an expenditure of $750,000 annually, and then you are asking for $950,000, which would fund the contract for 1966, with $200,000 lapping over into 1967.

What is the total cost of this project if the project is carried to completion?

Mr. MOSCOSO. $4,732,000.

Mr. PASSMAN. Is all of this to go to the University of North Carolina?

Mr. MOSCOSO. No; not necessarily.

Mr. PASSMAN. Do you know?

Mr. MOSCOSO. You have technicians, participants, and other commodities.

Mr. PASSMAN. Give us something for the record as to how you are going to bring the commodities down, and so on.

Mr. STERNFELD. Until completion?

Mr. PASSMAN. Yes; break it out.

Mr. STERNFELD. Yes, sir.

(The information requested follows:)

COST TO COMPLETION OF BASIC AGRICULTURE INSTITUTIONAL DEVELOPMENT PROJECT

AID's basic agriculture institutional development program (527–AB–11–AB–2) began in 1962 and is scheduled for completion in 1967. It is estimated that a total of $4.7 million will be required, broken down as follows:

University of North Carolina contract	$4,100,000
Commodities (vehicles, medicines, feeding and mixing equipment, animals, scientific apparatus, fertilizers, etc.)	457,000
U.S. technicians (1 per year at $20,000)	100,000
Participants (average of 20 per year for a 5-year period, total of 100)	75,000
Total	4,732,000

Mr. PASSMAN. How many breeding animals and what type of feeding equipment do you plan to procure at a cost of $50,000?

Mr. MOSCOSO. We do not have that detail, Mr. Chairman.

Mr. PASSMAN. You do not have that detail here?

Mr. MOSCOSO. We have it in the mission.

Mr. PASSMAN. Put it in the record, please.

(The information follows:)

BASIC AGRICULTURE INSTITUTIONAL DEVELOPMENT PROJECT—COSTS

Under AID's basic agriculture institutional development program in fiscal year 1964, $50,000 has been proposed in commodities. The following is an estimate of the breakdown including transportation:

5 bulls	$5,000
50 heifers	30,000
Medicines (vaccines, etc.)	5,000
Feeding and mixing equipment	10,000

PROGRESS IN MAKING LAND AND TAX REFORMS

Mr. PASSMAN. I note that you are programing $480,000 for the agrarian reform project, shown on page 350.

I am wondering why, in view of your statement on page 72 of the justifications, the Government has been reluctant to take effective steps on essential land and tax reforms. You indicate no effective action has been taken yet on those matters. Am I making a statement of fact?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. I am reading from your book.

Mr. MOSCOSO. It is from the book, it is correct.

Mr. PASSMAN. Does the doctor confirm what I said as being the fact?

Mr. STERNFELD. As of February 1963.

Mr. PASSMAN. We are examining on your justifications, as you have presented them to this subcommittee.

Mr. STERNFELD. That is right. The situation has changed since then, sir.

(Additional information supplied follows:)

LAND AND TAX REFORMS PROGRESS SINCE MARCH 1963 IN PERU

Since March of 1963 the Government of Peru has begun to implement the recommendations of the U.S. Internal Revenue team on tax administration reform. Peruvian funds have been provided to establish an intelligence division within the tax superintendency, an inservice training school within the tax division, and to codify the tax laws. During the month of August, the Caja de Depositos y Consignaciones, a private Peruvian company that had been collecting the Government taxes, was replaced by a Government agency.

Also since March of 1963 the agrarian reform program in Peru has been stepped up. The Institute for Agrarian Reform has been given the necessary authority to begin observations in colonization projects and land tenure reform, and a very high level organization, presided over by the President of the Republic, the National Office of Agrarian Reform and Promotion, has been created. Some 350 titles have been handed over to farmers in La Convencion Valley, with active preparations being made to hand over more titles. A total of 200,000 acres in the Departments of Pasco and Junin have been expropriated, with the consent of the owners, and compensation promised, for distribution to the local farmers. The new Government in Peru has promised full support to agrarian reform with compensation to the owners as provided for by the Peruvian Constitution.

Mr. PASSMAN. This is a country of which you said earlier that you had "excessive" unused economic assistance obligations.

Mr. STERNFELD. That is right.

Mr. PASSMAN. What progress has been made since the printing of this book?

Mr. MOSCOSO. Quite a number of things—constitutional government has been elected and has taken over.

Mr. PASSMAN. A new government has been elected and taken over?

Had we been supporting the other regime with a full-fledged aid program?

Mr. MOSCOSO. No, sir. Last year we did no lending in Peru.

Mr. PASSMAN. You had an aid program in Peru last year.

Mr. MOSCOSO. Yes, a continuation of what we were doing.

Mr. PASSMAN. You still disbursed funds out of these accounts to Peru last year, did you not?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. How much had we given Peru through December 31, 1962?

Mr. TENNANT. I do not have it immediately, sir.

Mr. PASSMAN. Give it to us through 1962.

Mr. TENNANT. Through 1962, $476.4 million.

That includes the Export-Import Bank.

Mr. PASSMAN. Take the Bank's loans out.

Mr. TENNANT. Approximately $260 million, excluding the Bank.

Mr. PASSMAN. Now we are into the new regime and they have a new government. They have a new set of officials. What else is good about it that has happened since February?

Mr. MOSCOSO. Before the elections were held the military junta that was in power set up an agrarian reform program.

Mr. PASSMAN. They got it on the statute books?

Mr. MOSCOSO. Yes.

They did not implement it. We hope the new government will implement it.

Mr. PASSMAN. They have not done so yet. So far we are dealing with paper.

Are there any tax reforms? Do they have legislation pending?

Mr. MOSCOSO. This is a wire that arrived this morning from Lima, and it says that "Daily newspapers announced promulgation of the supreme decree of August 9 which will lead to expropriation of 78,417 hectares.

Mr. PASSMAN. How much is that?

Mr. MOSCOSO. That is close to—about 200,000 acres.

Mr. PASSMAN. That is about the size of some of the big ranches in this country, is it not?

Mr. MOSCOSO. Yes, but this is a small country.

Mr. PASSMAN. I know, but you are not talking about a lot of land there.

Mr. MOSCOSO. This is the beginning.

Mr. PASSMAN. How about the tax reforms?

Mr. MOSCOSO. Agrarian Reform Institute charged with responsibility carrying out expropriation——

Mr. PASSMAN. From whom did they expropriate the land?

Mr. MOSCOSO. Several owners.

(Additional information supplied follows:)

LAND EXPROPRIATION IN PERU

The Government of Peru has recently expropriated 200,000 acres of cultivated and pasture land in the Departments of Pasco and Junin as part of its land reform program. An average of 12 percent was taken from a number of haciendas, with prior consent of the owners, one of which is the U.S.-owned Cerro de Pasco Corp.

As required by Peruvian law, the Peruvian Government has promised prompt and just compensation for the expropriated lands.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. PASSMAN. How about the tax measures? Do they have any legislation pending to increase taxes?

Mr. MOSCOSO. There are 17 different laws approved changing the tax structure of Peru since 1960.

BUDGETARY SUPPORT

Mr. PASSMAN. What has been the amount of our cash transactions to Peru since 1960 from AID?

Mr. STERNFELD. Are you talking about cash transactions?

Mr. PASSMAN. What we refer to as budgetary support. We want to find out if this gets in the budget and they take it as a domestic revenue.

Do you want to supply the information for the record?

Mr. STERNFELD. I think that would be best.

(The information follows:)

BUDGETARY SUPPORT TO PERU, 1960–63

Budgetary support loans made to the Government of Peru between the years 1960 to 1963 have amounted to $1.2 million. In September 1961 a dollar repayable loan of $6 million was made to the Government of Peru for roadbuilding and self-help projects to relieve excessive unemployment in the Department of Puno, defined as an emergency area by the U.N. In September 1962, $4.8 million of this loan was withdrawn and deobligated.

DOMESTIC REVENUE

Mr. PASSMAN. Let us look at total domestic revenue. In 1960 it was $309 million.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. That year they had a budget surplus of $4 million?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. In 1961 domestic revenues were $396 million, with a budget surplus of $11 million.

Now they picked up the old American way in 1962. Domestic revenues were $405 million but they went into a budget deficit of $13 million; is that right?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. You are up 1962 over 1961 by $9 million.

Mr. MOSCOSO. But 1961 over 1960 was close to $90 million.

Mr. PASSMAN. 1961 over 1960 was $87 million; is that right?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. How much was our aid during those 3 years?

Mr. MOSCOSO. Disbursed?

Mr. PASSMAN. Let us go by what you credit to the nation.

Mr. TENNANT. $148 million.

Mr. MOSCOSO. $148 million.

Mr. PASSMAN. I think that is good enough for the record.

PUBLIC SAFETY PROJECT

I note your statement, on page 359, in connection with the public safety project, that the internal security threat will undoubtedly expand during the period of uncertainty surrounding elections this year; is that correct?

Mr. MOSCOSO. That is what the book says.

Mr. PASSMAN. In view of the fact that the President has assumed his office without any violence, is this $250,000 for riot control equipment necessary?

Mr. COTTRELL. I would say yes, because not only had they envisaged seeing the election through without disturbance, but there is a con-

tinuing, again, Communist element in Peru that needs of internal security still exist. I think in general these public safety programs are money very well spent.

HOUSING AND URBAN DEVELOPMENT PROJECT

Mr. PASSMAN. Would you comment concerning your request for $40,000 to assist in the promotion and service campaign under the housing and urban devlopment project?

Mr. MOSCOSO. There are no details on that. I will be very happy to get the detail and give it to you.

(Information supplied follows:)

PROMOTION AND SERVICE CAMPAIGN

Under AID's housing and urban development project (527–AD–89–AC–2), $40,000 has been proposed for local expenses. These funds are to be used to allow the Peruvian Credit Union Federation expand its advisory services to its member associations, engage in an informational and promotion campaign, and hire additional administrative personnel for better service and efficiency.

The primary function of AID's housing and urban development project (527–AD–89–AC–2) is mobilizing domestic savings for economic development by instilling the habit of saving in the Peruvian public. For this reason $40,000 has been requested for local expenses which will be used to assist the Peruvian Credit Union Federation expand its advisory, informational and promotional services to its member associations. Assistance of this type will help them increase their membership and capitalization.

TECHNICAL SUPPORT PROJECT

Mr. PASSMAN. How much did you request last year for the technical support project?

Mr. STERNFELD. $251,000.

Mr. PASSMAN. What sum did you obligate?

Mr. MOSCOSO. $515,000.

Mr. PASSMAN. That is no different than a lot of the others. And all along the way we find that the obligation not infrequently has been three or four times the amount of the last year's request. Yet the Congress cut the aid bill last year $1,032,400,000 under the budget request.

SAVINGS AND LOAN ASSOCIATION PROJECT

I note, on page 366, that you are having some trouble, or maybe a lot of trouble, trying to disburse $1 million which you programed as a credit to the savings and loan association in July 1960; is that correct?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. When do you expect to deobligate this item?

Mr. MOSCOSO. As soon as we are advised whether or not the Central Home Loan Bank is going to assume the maintenance of value.

Mr. PASSMAN. That is 1960, 1961, 1962, 1963, going into 1964, fiscal years.

Mr. MOSCOSO. We are deobligating the whole loan.

Mr. PASSMAN. I hope you find a lot more when you run through the books that you can deobligate, and I hope that some day the

Agency will stop obligating almost billions of dollars on such projects.

We established only a few days ago that wholly unobligated funds were $515 million; technically unobligated, an additional $688 million, which goes over into the gray matter as a reservation pending signing of the contract. Is my statement correct?

Mr. TENNANT. Yes, sir.

Mr. MOSCOSO. I think this will be found to be less and less.

Mr. PASSMAN. That item would not be in the $51 million that you deobligated through April, would it?

Mr. TENNANT. This transaction, no, sir.

Mr. PASSMAN. When you add to the $51 million of deobligated funds for the first 10 months of this year, would this be in that total?

Mr. TENNANT. This is after June 30, sir, in the no-year loan account.

Mr. PASSMAN. So we can look forward to some more usable funds in this deobligation category in fiscal year 1964?

Mr. TENNANT. Yes. We plan to take them into consideration in the same way we presented this year's budget.

Mr. PASSMAN. Your argument is if you did not have these funds you would have to ask for more money. Is that not what you are saying?

Mr. TENNANT. Yes.

Mr. PASSMAN. Thank you.

DEOBLIGATION OF FUNDS UNDER PUNO WORK RELIEF LOAN

What are the terms of the Puno work relief loan which you approved February 8, 1962? If I recall correctly this loan was made out of the contingency fund?

Mr. TENNANT. That is right. This loan has been deobligated.

Mr. PASSMAN. Is a contingency account intended to take care of emergencies when something unexpected comes up, and you move in then and make an obligation? That is the purpose I think.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Here is one in 1962, "Puno Work Relief" for $6 million, and you have deobligated how much?

Mr. MOSCOSO. We have deobligated $4,800,000.

Mr. PASSMAN. Was that deobligation in fiscal year 1963 or fiscal year 1964?

Mr. MOSCOSO. We deobligated $4 million in January 1963, and more recently we deobligated $800,000 more.

Mr. PASSMAN. That latter figure lacks a little of being a million. We will have, it appears, a lot of usable money out of these 1964 deobligated funds. This was out of the contingency fund?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. We shall now adjourn until tomorrow afternoon at 1 o'clock.

TUESDAY, AUGUST 13, 1963.

RELEASE OF DOLLARS IN RECIPIENT COUNTIES AS RESULT OF FOREIGN AID PROGRAM

I shall refer now to page 1201, part 3, the hearings of this subcommittee for fiscal year 1963. This is a colloquy between the distinguished Secretary of the Treasury, the Honorable Douglas Dillon, and myself.

(The information above referred to is as follows:)

USE OF DOLLARS IN FOREIGN AID PROGRAM

Mr. PASSMAN. If we credit dollars to nations around the world through the foreign aid program, either through the grant program or this so-called loan, to which you referred as development credits, and not loans—and I have gotten a lot of mileage out of that—if they utilized that dollar credit requisition their needs, then that releases the dollars which they earn from their exports to do with as they please?

Secretary DILLON. It could unless there is some specific arrangement to be sure that this credit is used for something over and above what they would not have otherwise done.

Mr. PASSMAN. You would not count their dollars and have an internal audit of their situation before you decide on giving a foreign aid grant or loan?

Secretary DILLON. No; but we are trying, as far as our interest in the foreign aid program is concerned, to help balance the payments. We are pushing very hard to try and minimize the dollar drain. It is not easy, but we are trying to devise new and surer ways all the time to reduce that dollar drain.

Mr. PASSMAN. I understand that all nations, even the new ones, earn some dollars from their exports. If we are giving to those nations through grants, or these so-called 40- or 50-year credits with no interest, at least that would make available to them dollar credits by which they could requisition what they need from our country?

Secretary DILLON. Yes. All I was saying was this: If you have a project to build a utility plant, an electric powerplant, unless you provided dollar aid for this specific project, the other dollars they earn from their exports, and so forth, would not be adequate to pay for this project, so they would not be able to do it all.

Mr. PASSMAN. I refer to their needing 1,000 trucks, for example.

Secretary DILLON. That is different.

Mr. PASSMAN. They normally would use their dollar earnings to buy trucks. If we credit them, and they buy the trucks with that credit, that releases their earned dollars to use as they see fit?

Secretary DILLON. That is right, and that is why we try to avoid that type of thing.

Mr. PASSMAN. That was my understanding, and you testified the same as you just did a year or two ago.

Secretary DILLON. I don't remember what I testified then.

Mr. PASSMAN. I argued all along that if you give these nations the dollars to buy what they normally buy with dollars they earn, it releases their dollars to do with whatever they please. We are certainly in accord there, are we not?

Secretary DILLON. I would say so.

SUNDRY EXPENSES OF MEETING OF INTER-AMERICAN DEVELOPMENT BANK

Mr. PASSMAN. We have asked the Controller for a report on the sundry items that substituted for the whisky allowance on the expense accounts under the Inter-American Development Bank annual meeting fund. Have you made this information available?

Mr. TENNANT. I believe we gave you an insert on that, sir.

We have that information here, Mr. Chairman. I think it was provided as an insert, but we can work from this copy.

(NOTE.—See page 2187 for information provided.)

Mr. PASSMAN. We want a copy of it now, please.

You have sundry expense, total. Where do we have a breakout of that information?

Mr. STERNFELD. That is a breakout of the sundry expense.

Mr. PASSMAN. "Construction of exhibit." What is that category?

Mr. MOSCOSO. This is a series of panels that were prepared showing what projects had been financed by what funds in what countries.

Mr. PASSMAN. Film of meeting and photographs, $2,253. There must have been a lot of filming and photographs taken.

Mr. ROSENSON. What they did was take a film of the meeting and photograph the various sessions for their permanent record.

Mr. PASSMAN. Is the local travel for taxicabs to and from night-clubs, or something of that nature?

Mr. ROSENSON. Nothing like that, sir. It is——

Mr. PASSMAN. What is it, then?

Mr. ROSENSON. It is an item of $185 for just what it says, local travel.

Mr. PASSMAN. What type of local travel?

Mr. ROSENSON. There may be many incidental types of local travel where the staff may need to acquire certain facilities or certain materials for the purpose of the meeting. It would be minor items like that, sir.

Mr. PASSMAN. "Installation of equipment and signs, $1,000." Of what does that item consist?

Mr. ROSENSON. They are signs such as "Offices," "Registration"——

Mr. PASSMAN. This was just a 1-week affair?

Mr. ROSENSON. Yes, sir.

Mr. PASSMAN. Was this program scattered all over the town or was it in one building?

Mr. ROSENSON. The meeting was in one building.

Mr. PASSMAN. This installation of equipment and signs was for that building; is that correct?

Mr. ROSENSON. That is correct.

Mr. PASSMAN. "Various other supplies and services, $2,332." What is that item?

Mr. ROSENSON. I asked for a breakdown of that, and they said that would be in about 30 different vouchers. That can be supplied if the committee so desires.

Mr. PASSMAN. This could be for a lot of different things, could it not? But it follows, nevertheless, that the expenses for this 1-week meeting in 1961 amounted to $143,358; in 1962, $207,501; in 1963, $201,624, and that is an estimate.

Mr. ROSENSON. That, sir, is practically final——

Mr. PASSMAN. Is it up or down from this figure?

Mr. ROSENSON. This is the estimated actual figure.

Mr. PASSMAN. This statement was made up several days ago; is that correct?

Mr. ROSENSON. Yes, sir.

Mr. PASSMAN. That is over a half million spending out of this progress trust fund, or, that is, the Inter-American Development Bank, for these three meetings down in Latin America, is that correct?

Mr. MOSCOSO. This is not social progress trust fund money, Mr. Chairman. It is Inter-American Development Bank, and it is the regular——

Mr. PASSMAN. It is the regular operation of the Inter-American Development Bank of which the social progress trust fund is one of the windows, is it not?

Mr. MOSCOSO. But the social progress trust fund——

Mr. PASSMAN. Is it one of the windows in this bank?

Mr. MOSCOSO. But it does not contribute to these expenses.

Mr. PASSMAN. From what source does this money come?

Mr. MOSCOSO. From the profits of the Bank—from the profits the Bank makes from its investments.

Mr. PASSMAN. They had one meeting before they had disbursed a dime out of either one of those funds. This came out of the capital, this first meeting in 1961, did it not, because you had not made any loans and no interest had accrued?

Mr. ROSENSON. Yes, sir.

Mr. RHODES. I am not too sure of that. You know they got a capital contribution from the U.S. Government long before they needed it, and reinvested it in Government bonds. You will remember they made about $2.5 million interest off the Government bonds they had for the first year. Do you remember that?

Mr. PASSMAN. I know that is true, but I think possibly that money went into another fund, but I am not certain.

Mr. RHODES. It may have. I don't know. It all came from Uncle Sam's taxpayers.

Mr. PASSMAN. Before they made any money whatsoever from any of the loans, the purpose for which the appropriations were made, they spent $145,000; is that correct?

Mr. ROSENSON. That would be the expenses of that meeting.

Mr. PASSMAN. Before they made any loans or made any profit from making the loans to the countries, for which purpose the fund was intended?

Mr. ROSENSON. I am not sure of the date.

Mr. PASSMAN. 1961 was the year you got the appropriation. And I think you testified that there had not been any liquidations. It is certainly getting off to a pretty fast start when they start utilizing their capital funds for these parties, or meetings.

UNOBLIGATED AND UNRESERVED FUNDS FOR LATIN AMERICA

Mr. PASSMAN. I shall read from the 1963 report of the House Foreign Affairs Committee, which accompanied the bill for Foreign Assistance:

> The committee has taken this action because it is dissatisfied with the rate of progress in implementing the development program for Latin America and believes that the Executive requested more funds than can be effectively utilized.

How much did you have in the clear, unobligated funds, in fiscal year 1963?

Mr. TENNANT. Military and economic——

Mr. PASSMAN. Alliance for Progress.

Mr. STERNFELD. $95 million, sir.

COMMITMENTS NOT FINALIZED INTO LOAN AGREEMENTS

Mr. PASSMAN. How much did you have technically unobligated, but over in the shaded area that figuratively we accepted as an obligation, because you had approved it, waiting for contracts to be signed? Do you have that information?

Mr. TENNANT. I believe I have that in the figures I gave you.

Mr. PASSMAN. Could you insert the information in the record?

Mr. TENNANT. Surely.

(The information supplied follows:)

DEVELOPMENT LOANS, LATIN AMERICA

Approved commitments not yet finalized into loan agreements as of June 30, 1963

Alliance for Progress account	$105,300,000
DLF corporate account, Latin America	11,700,000
Total	117,000,000

URUGUAY

Mr. PASSMAN. You are requesting for fiscal year 1964 the sum of $1,500,000 for Uruguay; is that correct?

Mr. MOSCOSO. That is correct.

Mr. PASSMAN. Let us put together the other spigots as rapidly as we can.

Mr. MOSCOSO. Also we will do some development lending.

Mr. PASSMAN. Let us put it all together, as you have done in previous days.

Mr. MOSCOSO. $——— from all spigots.

Mr. PASSMAN. Not including Export-Import Bank?

Mr. MOSCOSO. Not including Export-Import Bank and not including the Development Lending——

SOURCES OF AID FUNDS AVAILABLE TO URUGUAY

Mr. PASSMAN. This country is eligible for funds out of the Latin American regional account; is it not?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. Is Uruguay eligible for funds out of the interregional——

Mr. MOSCOSO. That's right.

Mr. PASSMAN. Out of the International Development Association?

Mr. MOSCOSO. That's right.

Mr. PASSMAN. The Inter-American Development Bank?

Mr. MOSCOSO. That's right.

Mr. PASSMAN. The social progress trust fund?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. Are they eligible for funds out of all the international accounts in the United Nations?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Will you insert in the record the remainder of the 16 spigots, Mr. Controller, and then get the grand total? If you can, furnish an estimate as to how much they get, because you have a lot of money in those regional accounts.

(The information supplied follows:)

SOURCES OF ECONOMIC DEVELOPMENT ASSISTANCE

Uruguay is eligible for funds from the following sources: IBRD, IDB, U.N. funds (including UNTA, ECOSOC, ILO, etc.), IFC, IDA, SPTF, development grants, development loans, supporting assistance, contingency funds, regional funds, interregional funds, Peace Corps, food for peace, Eximbank.

UNLIQUIDATED FUNDS

Mr. PASSMAN. Could you tell us the amount of money that you have on hand unliquidated to the credit of Uruguay as of June 30?

Mr. MOSCOSO. $11,424,000, including the military.

TOTAL AID TO URUGUAY

Mr. PASSMAN. What does the total amount to in this country since the inception of the program?

Mr. MOSCOSO. $101,200,000.

Mr. PASSMAN. Excluding the Export-Import Bank?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. What is the population of this country?

Mr. MOSCOSO. The population is 2.9 million.

GOLD PURCHASES

Mr. PASSMAN. Did you have a foreign aid program for Uruguay in 1960?

Mr. MOSCOSO. $24.8 million.

Mr. PASSMAN. Did they get any cash at all that year, budgetary support?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. Any grants that year?

Mr. MOSCOSO. There was some technical cooperation.

Mr. PASSMAN. How much was that account, please?

Mr. MOSCOSO. $100,000.

Mr. PASSMAN. What was the total amount that year?

Mr. MOSCOSO. $24.8 million, including the military and Public Law 480.

Mr. PASSMAN. In that year they purchased $3,800,000 of our gold.

Mr. MOSCOSO. Yes.

OBLIGATIONS, FISCAL YEAR 1963

Mr. PASSMAN. What amount did you request for this country last year?

Mr. MOSCOSO. We requested $1.5 million. Also we indicated development lending was anticipated.

Mr. PASSMAN. What sum did you obligate to the country, total?

Mr. MOSCOSO. We obligated $7.9 million.

TRADE WITH COMMUNIST BLOC

Mr. PASSMAN. Would you comment concerning your statement on the divider sheet that the (off the record).

Mr. MOSCOSO. I would have to have my political colleague speak to that.

Mr. COTTRELL. I want to know if this is an accurate statement. Would you read the statement again, Mr. Chairman?

Mr. PASSMAN. Would you comment on your statement on the divider sheet that—I will quote it verbatim—the last paragraph, beginning with (off the record).

Mr. COTTRELL. The latter part of it seems to be an economic question, but it strikes me that high Uruguayan costs would mean that in world markets the terms offered by the Soviet bloc might be attractive.

Mr. PASSMAN. So Uruguay, which has been a recipient of a very generous amount of our aid, $101 million, is now trading very freely with Russia, on account of this advantage they receive?

Mr. COTTRELL. They are trading. I don't know the extent of their trade.

Mr. PASSMAN. Our resources and wealth will never hold out to enable us to shut off all trade and substitute dollars in place of it for what Russian and the bloc may sell; is that correct?

Mr. MOSCOSO. We are not attempting to do that, Mr. Chairman.

Mr. PASSMAN. I do not know.

You made a statement here and you put it in the gray area. I would not know why, if it is a fact, you should have it classified? The membership is entitled to this information.

JUSTIFICATION OF AID TO URUGUAY

In view of your statement on page 75 of the justification, where you say (off the record).

Why are you programing any assistance to this country with such conditions existing?

Mr. MOSCOSO. To make it possible for the Uruguayan Government to undertake some of the structural reforms that they have not undertaken——

Mr. PASSMAN. What is the population of Uruguay?

Mr. MOSCOSO. 2.9 million.

Mr. PASSMAN. Would you not say that $101,200,000 is a lot of money already?

Mr. MOSCOSO. Of that, most has been in Public Law 480.

Mr. PASSMAN. That is for something to eat, is it not, and something they would have to spend their earnings to buy if we did not give it to them under this program?

Mr. MOSCOSO. These are loans.

Mr. PASSMAN. They are soft-currency loans, are they not?

Mr. MOSCOSO. That's right.

Mr. PASSMAN. It is in the area of soft loans, and you have to be very liberal to call them loans in reality.

Mr. MOSCOSO. Title I.

Mr. PASSMAN. How much is the unliquidated actual loan commitments of the international organizations for which they would be called upon to repay in dollars? Do you have that information? Why did they put it in the justification books if they could not give the answer?

Mr. STERNFELD. We have in our books on page 77 the size of the commitments from the international agencies. We do not have here the actual amount——

Mr. PASSMAN. It is a large amount of unliquidated funds. We had a very substantial fund going in, and we do not have very much to show for it here, do we?

Mr. STERNFELD. We put in Public Law 480 and the food has gone into the country and has been consumed.

INCOME TAXES

Mr. PASSMAN. Do they have an income tax in Uruguay?

Mr. MOSCOSO. Yes; they have an income tax.

Mr. PASSMAN. When did they pass the law?

Mr. MOSCOSO. It was effective July 1, 1961.

Mr. PASSMAN. What has been the amount of the income tax collections for the first year?

Mr. MOSCOSO. We don't have it, Mr. Chairman.

Mr. PASSMAN. The law may be on the statute books, but you do not know whether it has been made effective, do you?

Mr. MOSCOSO. All I have here is information that according to the preliminary estimates, total collections under the regular budget were 36 percent higher in 1962 than in 1961.

Mr. PASSMAN. So if there was $1 in 1960 there would be $1.36 in 1961?

Mr. MOSCOSO. That's right.

Mr. PASSMAN. Get the information for us, if you can.

Mr. MOSCOSO. I will locate it for the record, Mr. Chairman.

NOTE: Information supplied may be found on p. 2520.)

EMERGENCY ASSISTANCE

Mr. PASSMAN. I note, on page 76 of the justifications, that Uruguay received $10 million in management assistance pursuant to the Punta del Este Charter. Will you comment on this type of assistance?

Mr. MOSCOSO. That was a commitment for emergency assistance. They didn't receive it, but a commitment was made for assisting their development projects——

Mr. PASSMAN. Soft loans as we think of them?

Mr. MOSCOSO. Credits.

Mr. PASSMAN. Is that sum included in the $101 million?

Mr. STERNFELD. Yes, $6 million, but they have not received the balance of the $10 million request, Mr. Chairman.

Mr. PASSMAN. Is it to their credit?

Mr. STERNFELD. The commitment was made to them subject to the approval of the individual projects. As the statement on page 76 indicates, the only project that has currently been approved—and this is a project that was given priority—is the $6 million housing loan.

Mr. PASSMAN. Is the balance still committed to Uruguay?

Mr. STERNFELD. It is committed to them subject to their coming up with acceptable projects.

Mr. PASSMAN. Is it in an obligational status?

Mr. STERNFELD. No, sir.

Mr. PASSMAN. Is the money committed to them?

Mr. STERNFELD. It is committed subject to the availability of funds and the availability of specific projects.

Mr. PASSMAN. In what year did you make the commitment?

Mr. MOSCOSO. Mr. Dillon made this condition—August 1961.

Mr. PASSMAN. Was that action taken after Bogotá?

Mr. STERNFELD. It was 1961, after Bogotá.

TOTAL AID GIVEN SINCE AUGUST 1961

Mr. PASSMAN. Tell us what we have given to this country, total aid, since that date, excluding the Export-Import Bank.

Mr. MOSCOSO. $10.7 million. This excludes military and Public Law 480, which is the bulk of it.

Mr. PASSMAN. That is not Export-Import Bank?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. You made a $10 million commitment for something we will not go too far into, but they did not meet what you people regarded as the criteria by which the agreement was made, but we did during that same period give them $10.7 million, excluding the Export-Import Bank, from all the spigots?

Mr. STERNFELD. We gave them military assistance and Public Law 480.

We gave them one loan of $6 million.

Mr. PASSMAN. That is the soft loan?

Mr. STERNFELD. The soft credit.

Mr. PASSMAN. You say that we made a commitment of $10 million. They did not meet the requirements so we did not make the money available, and you did not disburse it; is that correct?

Mr. MOSCOSO. They met the requirements when they presented a $6 million housing loan. They met the criteria and we made the loan.

Mr. PASSMAN. You just told us you had not disbursed this money.

Mr. STERNFELD. I said we had not given them the full $10 million.

Mr. PASSMAN. I then asked you, I think, how much of the $10 million have you obligated to the country.

Mr. MOSCOSO. $6 million.

Mr. PASSMAN. That sum is included in the $11,442,000 of unliquidated funds?

Mr. STERNFELD. That is correct.

Mr. MOSCOSO. That's right.

CROP PRODUCTION AND FORAGE PROJECT

Mr. PASSMAN. Did you justify last year the $133,000 that you obligated to the crop production project at page 376?

Mr. MOSCOSO. This was not justified.

Mr. PASSMAN. Therefore, you did not spend the $10,000—you carried over $125,000, but yet you are asking for $210,000 for fiscal year 1964; is that correct?

Mr. MOSCOSO. We are asking for $210,000 for 1964.

Mr. PASSMAN. Now will you tell us what this project will cost to completion?

Mr. MOSCOSO. $343,000.

Mr. STERNFELD. It will be completed in 1964.

Mr. PASSMAN. Your book says 1966.

Mr. MOSCOSO. That is correct, but the 1964 funds were to forward finance a 3-year contract. The need for additional funds is not anticipated.

Mr. PASSMAN. That is just another one of the thousands of irregularities we run into.

FARM MECHANIZATION PROJECT

Did you justify the $1,129,000 last year that you obligated to the farm mechanization project, at page 377?

Mr. MOSCOSO. This was not justified; no, Mr. Chairman.

Mr. PASSMAN. How much did you spend out of the $1,129,000 that you obligated that you did not request of the Congress?

Mr. MOSCOSO. $140,000.

Mr. PASSMAN. You obligated $1,129,000 and you want another $41,000 for fiscal year 1964.

Mr. MOSCOSO. This project will cost $1,270,000 and funding should be completed next year.

Mr. TENNANT. $140,000 was the amount spent.

PROJECT COORDINATOR FROM IOWA STATE UNIVERSITY

Mr. PASSMAN. What is the cost of your major contract with Iowa State University to provide a coordinator for all Iowa State experts assigned to Uruguay?

Mr. STERNFELD. Sir, the Iowa State contract covers three projects. It covers the projects "Professional training of agricultural specialists," "Crop production and forage," and "Farm mechanization and pilot production centers"——

Mr. PASSMAN. Please answer my question. I refer to page 377 of your justifications.

Mr. STERNFELD. The coordinator is included at page 375——

Mr. PASSMAN. What is the cost to provide this coordinator?

Mr. STERNFELD. I am sorry, we do not have the information on the cost of the individual coordinator.

(Information supplied subsequently, follows:)

COST OF COORDINATOR FOR FARM MECHANIZATION AND PILOT PROJECTION CENTERS PROJECT

The cost of the coordinator—base pay plus overhead—is $24,350 under the Iowa State University contract.

Mr. PASSMAN. When you do not have the answer we could save a lot of time if you would tell us so.

Mr. STERNFELD. I thought you asked for the cost of the total project.

AGRICULTURAL COOPERATIVE PROJECT

Mr. PASSMAN. Did you justify last year the $25,000 which you have obligated for the agricultural cooperatives project, at page 378?

Mr. MOSCOSO. No, sir; it was not justified.

Mr. PASSMAN. That is standard.

Tell us what it will cost to complete this project that started without your justifying it to Congress.

Mr. MOSCOSO. $175,000.

Mr. STERNFELD. The funding for this project should also be completed in 1964.

Mr. PASSMAN. Has the survey report been received by AID and if so, what is the conclusion as to the feasibility of the proposed project?

Mr. MOSCOSO. What page? No; this has not been received yet.

Mr. PASSMAN. How could you arrive at this $150,000 estimate?

Mr. STERNFELD. This is based on our experience in carrying out cooperative projects.

Mr. PASSMAN. It is purely a guess?

Mr. STERNFELD. It is an estimated obligation for fiscal year 1964 as indicated by the heading, sir.

Mr. PASSMAN. Is it in such projects as this one that you find the funds you can deobligate?

NEED FOR AGRICULTURAL ASSISTANCE

Mr. STERNFELD. No, sir; you will see all these that are not justified are in the agricultural field. We sent a new mission director down to Uruguay late last fiscal year—late fiscal year 1962. He examined the situation in Uruguay and came to the conclusion that unless we did something in the field of agriculture we would not be meeting the basic problems that exist in Uruguay.

Mr. PASSMAN. That was last year?

Mr. STERNFELD. This is for fiscal year 1963.

Mr. PASSMAN. You found that out $101 million late, did you not, in the general generosity area, because you have been giving them aid since 1946 and after you came before the Congress, you obligated $25,000 and got a man started on the project?

Mr. MOSCOSO. Mr. Chairman, I think we should be aware of the fact that the great bulk of the assistance to Uruguay has been in the form of Public Law 480.

Mr. PASSMAN. What does Public Law 480 provide, food?

Mr. MOSCOSO. It provides food; yes, sir.

Mr. PASSMAN. They eat there, the same as we do here?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. What difference does it make? It is $101 million.

TYPE AND AMOUNT OF AID GIVEN URUGUAY SINCE INCEPTION OF PROGRAM

Now let us break it out, if we can, all spigots for this aid. Start with Public Law 480.

Mr. TENNANT. Through fiscal year 1962——

Mr. PASSMAN. The same period that covers the $101 million that you gave us.

Mr. TENNANT. Public Law 480 was roughly $38 million.

Mr. PASSMAN. You said it was mainly Public Law 480, and out of $101 million, only $38 million was Public Law 480.

Mr. TENNANT. $38 million.

Mr. PASSMAN. $63 million was in other types of aid. Public Law 480 was not the majority of it. Put it in the record please.

(The information requested follows:)

Accumulative U.S. assistance to Uruguay, fiscal year 1946 to fiscal year 1963 (excluding Export-Import Bank)

	Millions of dollars
Development grants	4
Development loans	15
Social progress trust fund	10
Food for peace (Public Law 480)	38
Other economic	4
Military	30
Total	101

INSTITUTIONAL DEVELOPMENT PROJECT

Mr. PASSMAN. What is the estimated cost to complete the institution development project, at page 379, by the end of fiscal year 1966? There is a note that in 1962 obligations amounted to $3,000; in fiscal year 1963 it jumped to $46,000, and you propose to obligate $228,000 in fiscal year 1964.

Mr. Moscoso. The cost at completion of that project is $677,000.

Mr. PASSMAN. And it started off at $3,000?

Mr. Moscoso. That's right.

Mr. Chairman, in a project like this you begin by studying the problem and then gradually develop the solution to it.

Mr. PASSMAN. We just established that the project was starting in the field of agriculture, after $101 million had been credited to the country. Then you start off one technician at $25,000, and then you jump this thing up to where it is going to cost $175,000. And incidentally, this is for contract services.

How firm is the requirement for $200,000? I notice your statement, on page 379, to the effect that "if" sufficient acceptance can be gained within the national universities, AID will sign a contract with a U.S. university. Does this simply mean you are trying to get the universities to accept your aid? What success have you had with them?

Mr. Moscoso. This is one of the problems we find prevailing in Latin America——

Mr. PASSMAN. Why do you not leave them alone if you have to go in on bent knees to get them to take your aid?

Mr. Moscoso. I believe we agreed there was a need for U.S. involvement.

Mr. PASSMAN. And we said we were trying to do the same kind of thing in 100 nations of the world.

Have you had any success in getting the university to agree to accept this aid that we are offering?

Mr. Moscoso. Not yet. However, this project was requested by the leadership of the university, and the delay is caused by the lack of final approval by all elements of the university that are necessary to clear the project agreement.

Mr. PASSMAN. Thank you.

SECTOR AND FEASIBILITY STUDIES

Did you justify the $155,000 last year that you obligated for these sector and feasibility studies, the project at page 380?

Mr. MOSCOSO. That was not justified.

Mr. PASSMAN. What will it cost to complete the project?

Mr. MOSCOSO. $355,000.

Mr. PASSMAN. Could you give us an idea as to the collection of colleges or universities that you have this contract with, or the proposed contract?

Mr. MOSCOSO. No.

Mr. PASSMAN. You spent $75,000 on this item. You obligated $155,000 that you did not justify. You spent $75,000 of it, and now you want to supplement it with $200,000, for a total of $355,000. Just tell us for what you spent $75,000?

Mr. MOSCOSO. We don't have the information here, Mr. Chairman.

Mr. PASSMAN. Could you have one of your assistants get this information?

Mr. MOSCOSO. We will do that.

(The information requested follows:)

SECTOR AND FEASIBILITY STUDIES PROJECT

Our latest records show that in fiscal year 1963 the actual amount was $10,000 for contract advisors—two in transportation planning and one in electric power planning.

MANPOWER UTILIZATION PROJECT

Mr. PASSMAN. Did you justify the $10,000 last year for the manpower utilization project, found on page 381?

Mr. MOSCOSO. We did not justify it.

Mr. PASSMAN. You obligated and spent the money. For what purpose did you spend the $10,000?

Mr. MOSCOSO. This was just used for the bringing in of our expert in management to assist the Uruguayans in developing a program.

Mr. PASSMAN. For how long did you employ him?

Mr. MOSCOSO. We would have to check to see how long he was there.

(Information supplied later follows:)

MANPOWER UTILIZATION PROJECT

Our latest records show that in fiscal year 1963 this project amounted to only $2,000 for the training of a Uruguayan in a labor training course. The departure of the management consultant scheduled for fiscal year 1963 was delayed until fiscal year 1964 so that he could also assist in the organization and operation of a 3-day seminar in addition to providing advisory services to the Uruguayan Institute of Business Management (IDDE). The total cost of the management consultant is estimated to be about $2,800 for approximately 18 days including transportation and other expenses.

Mr. PASSMAN. The $10,000 would have to cover transportation and all other expenses, would it not?

Mr. MOSCOSO. Yes; that's right.

Mr. PASSMAN. You did not justify the project. You obligated $10,000 and you are asking for $140,000. What will it cost to complete the project?

Mr. STERNFELD. $455,000.

Mr. PASSMAN. Thank you.

PUBLIC SAFETY PROJECT

Are there any new illustrative projects in the program for Uruguay?

Mr. STERNFELD. Public safety.

Mr. MOSCOSO. Food and agriculture.

Mr. PASSMAN. Food and agriculture is new. Food and agriculture was not justified. Tell us about the new projects on this page.

Mr. STERNFELD. The only new project is public safety.

Mr. PASSMAN. What is the cost, please?

Mr. MOSCOSO. $100,000 to completion.

Mr. PASSMAN. When will it be completed?

Mr. STERNFELD. 1965.

FUTURE FORMAT OF JUSTIFICATION MATERIAL

Mr. PASSMAN. Have you given any further thought to the committee's suggestion that in subsequent years you have a page on every project?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. Had you given other consideration to the advisability of having on every page a place where you can show the projected cost at completion?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Such a procedure would give us a much better picture.

Mr. TENNANT. We have agreed to do that.

Mr. PASSMAN. We are glad to know that you have so agreed.

Mr. MOSCOSO. We have agreed to do it.

Mr. PASSMAN. Mr. Natcher?

STABILIZATION PROGRAM IN URUGUAY

Mr. NATCHER. I note in the justification the statement to the effect that with the support of the International Monetary Fund a substantial stabilization program was established in 1959.

Mr. MOSCOSO. That's right.

Mr. NATCHER. Do you consider this program effective and one that has produced benefits?

Mr. MOSCOSO. The stabilization program?

Mr. NATCHER. Yes.

Mr. MOSCOSO. I would say up to now it has prevented further inflation.

Mr. NATCHER. You say "prevented further inflation."

I want to direct your attention now, to the divider sheet, here, beginning with the 1959 period. The cost-of-living index shows that in 1959 it was 140. For 1960, it was 194. For 1961 it was 237, and estimated for 1962 at 261.

Now, based on your answer that you made to my last question, give me some reason for this cost-of-living index increase, if it is not affected considerably by the stabilization program and the AID program that was inaugurated in Uruguay.

Mr. MOSCOSO. It hasn't worked as well as it should have. As a matter of fact, the IMF and the Government of Uruguay are now negotiating a new IMF agreement at this moment, because this didn't work as well as it should have.

Mr. NATCHER. Is this the history of this type of program in other Latin American countries? I have in mind the cost-of-living index increase. Does it automatically show the cost-of-living index going up as soon as the stabilization program is placed into effect?

Mr. MOSCOSO. Sometimes it does happen right at the beginning, but usually there is a tapering off and then the internal crisis is stabilized.

Mr. NATCHER. You don't have a tapering off here in Uruguay; it is a tapering up.

Mr. MOSCOSO. In this case it does not work that way. In many other countries that is the way it happens.

Mr. STERNFELD. Mr. Natcher, the purpose of the IMF stabilization agreement is just to hold this cost of living from going up. They put an actual ceiling on the issuance of credit. Now some countries don't live up to the agreements.

Mr. NATCHER. It was initiated in this particular country here in 1959.

Mr. STERNFELD. I would like to check the record, but I think Uruguay went off the agreement with the IMF in late 1960.

Mr. NATCHER. Now are you sure about that?

Mr. MOSCOSO. We are going to check the record on that.

Mr. STERNFELD. I will check the exact date, because there has been a whole series of problems in the last 6 months, to get a new agreement renegotiated between the IMF and Uruguay in order, again, to set a specific ceiling on the amount of credit that can be issued in the Uruguayan economy. So I presume that they would not be negotiating a new agreement unless the old agreement had lapsed, but I would have to check specifically to see the date of the lapse of the old agreement.

Mr. NATCHER. Do you agree with me that when you try to show the benefits and justify a stabilization program such as this particular program in Uruguay that you would have difficulty with cost-of-living index figures as shown in your justification?

Mr. MOSCOSO. In this particular case, yes, Mr. Natcher; but as we said before, this particular agreement probably didn't last long enough and was not complied with by Uruguay and that is the reason why a new agreement is now being negotiated.

Mr. NATCHER. Mr. Chairman, with your permission at this point in the record I would like for them to file a short statement showing any change in the agreement or any deviation from the program that was worked out in 1959.

Mr. MOSCOSO. We will, Mr. Chairman.

Mr. PASSMAN. Please do so.

(The information above referred to is as follows:)

URUGUAY'S STABILIZATION AGREEMENT WITH IMF

In December 1959 the Government of Uruguay began a stabilization program. A stabilization agreement with the International Monetary Fund was signed in June 1961, providing for drawings by Uruguay up to $30 million, under specified conditions. No drawings were made under that agreement, which lapsed June 6, 1962; but a new agreement involving the same amount was executed in October 1962, and at that time there was a drawdown of $15 million. Around the end of 1962, however, Uruguay had exceeded limitations imposed by the IMF on public and private credit. This violation of the stabilization agreement made Uruguay ineligible to draw the remaining $15 million. The Government of Uruquay and IMF are now exploring possibilities for negotiation of a new stabilization agreement.

POLITICAL SITUATION IN URUGUAY

Mr. GARY. What is the political situation in Uruguay?

Mr. COTTRELL. It is run by a national council of government, Mr. Gary, composed of nine members with a rotating presidency. The majority party has the power to elect four of the members they are allotted under the council. Three more members are automatically assigned by the opposition to the council, and one of the four of the majority party leaders, president in rotation. The present president is now a man by the name of Fernandez Crespo. At the present time, there is a split in the majority party. It is a stable government and has been stable for some years. It is based, I think, on the relative prosperity of Uruguay as compared to some of the countries such as Bolivia and others who are one-crop countries, so to speak, who have suffered from violent price fluctuations in their main product.

Mr. GARY. What is the attitude toward the United States?

Mr. COTTRELL. It is usually friendly and cooperative. I can't remember too many instances where, on a critical issue, Uruguay has caused us difficulty.

Mr. CONTE. Will the gentleman yield there?

Mr. GARY. Yes.

Mr. CONTE. Isn't Uruguay one of the few countries in Latin America that hasn't broken relationships with Cuba?

Mr. COTTRELL. That is true, and it does have relations with the Soviet Union.

Mr. PASSMAN. Is it also one of the countries that has substantial trade going on with the Soviet bloc?

Mr. COTTRELL. It is trading with the Soviet bloc.

Mr. PASSMAN. Are they not presently trading substantially with the Soviet bloc?

Mr. COTTRELL. The books show——

Mr. PASSMAN. The books indicate they consider that they have an advantage in trading with the Soviet bloc. Even though $101 million has been received by Uruguay they are still enjoying their trade relationships with the Soviet bloc.

Mr. Andrews?

ECONOMIC SITUATION

Mr. ANDREWS. Mr. Ambassador, what do you mean by the statement: "The economy has not progressed since international commodity prices fell at the end of the Korean war"?

Mr. MOSCOSO. The price levels have gone down considerably since the Korean war and they have suffered from the deterioration of the terms of trade. The things that they buy: equipment, machinery, and so forth have been going up at a faster pace than the things they sell.

Mr. ANDREWS. Why have the prices of the commodities that they sell gone down so?

Mr. MOSCOSO. They have not gone down, but they have not increased relative to the increased price of imports. In general, the prices of the things they buy, not only in Uruguay but generally in Latin America, have gone up about 26 percent, and the things they sell have gone up only 5 or 6 percent. This is due primarily to the fact that it is a very united and undiversified economy, depending primarily on wool exports.

Mr. ANDREWS. Do they not produce a lot of vicuna?

Mr. MOSCOSO. No, sir, not there; wool.

URUGUAY'S GOLD AND FOREIGN EXCHANGE POSITION

Mr. ANDREWS. Their gold and foreign exchange seem to be going up rather rapidly.

Mr. MOSCOSO. Right now, it is $194 million, Mr. Andrews, as of April 1963.

Mr. ANDREWS. The book shows $212 million.

Mr. MOSCOSO. This book, as you know, is prepared many months ahead. That is the 1962 figure. The 1963 latest figure is $194 million as of April 1963.

Mr. ANDREWS. Do you have any record of their having purchased any of our gold in the last 12 months?

Mr. MOSCOSO. No, we do not have it.

Mr. PASSMAN. The last purchase was made in 1960, according to this, $3,800,000.

Mr. ANDREWS. That is when the book shows the cost of living started up rapidly.

Mr. MOSCOSO. The sharpest increase was in 1959.

Mr. ANDREWS. Could there be any connection between their purchasing gold and the cost of living advancing?

Mr. STERNFELD. The purchase of gold would be a technique of trying to mop up some of that inflation and to increase their reserves.

Mr. MOSCOSO. Increase their reserves and take some of the paper currency out of circulation.

Going back to what Mr. Natcher was mentioning a while ago, in most of these stabilization programs which involve devaluation, you usually suffer a substantial increase in the things that you import, which pushes up your cost of living for a short while. If the government can hold the lid down on cost increases and labor demands, then you have a stabilization program that works. If they do not do it, then it does not work.

LITERACY RATE AND EDUCATION

Mr. ANDREWS. I notice they have a very high literacy rate in Uruguay.

Mr. MOSCOSO. Very high, 88 percent.

Mr. PASSMAN. Is that why they will not accept our project at that college?

Mr. MOSCOSO. No, Mr. Chairman. Here is a case where a well-organized student minority may stall a project desired by the university faculty.

Mr. PASSMAN. They have an 88-percent literacy rate, which is just about on a par with the United States, fairly close to it. We are trying to get them to accept our aid contract at this college, and so far you have not had any luck.

Mr. MOSCOSO. I do not think there is exactly a relationship between people knowing how to read and write and——

Mr. PASSMAN. But their literacy rate is high, and they have a university there which we are trying to get to accept an aid contract, and they have not agreed to accept it, have they?

Mr. MOSCOSO. That is right; but as I indicated, pressure groups often prevent projects desired by universities.

Mr. PASSMAN. Thank you.

BUILDING PROGRESS THROUGH MIDDLE CLASSES

Mr. ANDREWS. Mr. Ambassador, you have been telling us that your hope in this area is to build up a middle class of people.

Mr. MOSCOSO. That is right. I see your point, Mr. Andrews. This is a case of a stagnant middle class.

Mr. ANDREWS. I am going to read to you from your book.

Mr. MOSCOSO. I know it says there is a stagnant middle class that has not moved forward.

Mr. ANDREWS. You say: (Off the record).

This is a country which enjoys today the same thing that you have in mind for the other countries.

Mr. MOSCOSO. With a difference.

Mr. ANDREWS. You say that the trouble in the country today is (off the record).

Mr. MOSCOSO. That is right.

Mr. ANDREWS. I would like your comment on that.

Mr. MOSCOSO. Mr. Andrews, the difference is between the Uruguayan attitude toward change, which is typically European, by the way, and the attitude that you normally find in the United States with respect to change. This is really a middle-class country, but we are in favor of changes and we do everything possible to prevent the stifling of changes. We have the Federal Trade Commission, we have the Sherman Antitrust Act, and so forth. We do have a social security system, but it is not an excessive one, as in some of these countries. Some of the countries have suffered from an overdose of security, from an overdose of social welfare, from an overdose of monopoly thinking.

One of the things we are trying to do is to change their attitudes toward competition, toward private enterprise, toward the kind of freedom that has made this country great.

Mr. ANDREWS. How long have you had this big group of middle-class, middle-income people?

Mr. MOSCOSO. I would say this has been the case in the last 20 or 25 years.

INCOME TAXES

Mr. ANDREWS. Do they collect income taxes in Uruguay?

Mr. MOSCOSO. They approved an income tax law which was effective in July 1961.

Mr. PASSMAN. Is there any indications yet that there has been any tax collection? If so, how much?

Mr. MOSCOSO. We are going to get that for the record.

Mr. PASSMAN. Presently, you do not know whether or not they have complied or, if so, how much has been collected?

Mr. MOSCOSO. We will give that for the record.

(The information follows:)

URUGUAY INCOME TAX AND IMPROVEMENTS IN GOVERNMENT SERVICES

Uruguay's first personal income tax law was enacted November 30, 1960, but repealed in 1961 before becoming effective. A new law, effective January 1, 1962, was enacted December 7, 1961. Collections calendar year 1962 are being

made in 1963, and only a rough estimate of total collections can be made at this time. It is estimated that collections from the personal income tax in 1963 will total between 10 and 20 million pesos (equivalent to $606,061 and $1,212,121 at rate pesos 16.50 to $1).

Some improvements in services of the Government of Uruguay in 1961 and thereafter are: (1) Initiated in 1961 a national housing program, with emphasis on meeting a deficit of 60,000 units of low- and medium-cost housing construction. (2) Put into operation a national plan for pasture improvement in order to increase livestock production and exports. (3) Initiated action to provide water supply service to all communities with more than 150 inhabitants, thus including badly needed water services for rural communities. (4) Organized a commission for national development planning (CIDE), which completed in June 1963 a four-volume diagnosis of the national economy.

Mr. PASSMAN. My statement is correct, is it not, that so far you do not know whether they are complying, whether or not they have collected any income taxes?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Thank you.

Mr. ANDREWS. Did they have any form of income tax prior to 1961?

Mr. MOSCOSO. I do not know, Mr. Andrews. I think that was their first personal income tax law.

Mr. ANDREWS. Did that come about because of our suggestion?

Mr. MOSCOSO. I think that came about from the Act of Bogotá, which was primarily our effort, that is right.

Mr. ANDREWS. That is where the aid program for Latin America first got off the ground.

Mr. MOSCOSO. That is right.

Mr. ANDREWS. What has been the attitude of this big group of well-educated middle-class people toward income taxes?

Mr. MOSCOSO. I really do not know that anyone joyously embraces income tax.

Mr. ANDREWS. That is a fine statement. That is one of your best statements.

Mr. MOSCOSO. I think an educational job has to be performed. It has already been taken on, obviously, when they approved the first personal income tax which was effective July 1, 1961. In a way, this comes about from the commitments which were taken at Punta del Este and the Act of Bogotá, that more attention would be paid to the requirements of the lower income groups in these countries, and the only way to do it was by diversifying the economy and having the Government provide the services that are required by that low-income group.

Mr. ANDREWS. Have Government services improved since they started collecting income taxes in 1961?

Mr. MOSCOSO. I could not tell you, Mr. Andrews, quite frankly. If you want me to, I will put a statement in the record containing the information that the chairman asked, about how much they have collected and how the services have improved.

Mr. ANDREWS. I think that would be very enlightening.

Mr. PASSMAN. You were supposed to call Latin America last night to get some information we requested.

Mr. MOSCOSO. Mr. Sternfeld has that information whenever you want it, Mr. Chairman.

Mr. PASSMAN. I wish you would not cause us to have to ask you three times for it if you have it.

LANDHOLDINGS

Mr. ANDREWS. What about the landholdings in this country, Mr. Ambassador?

Mr. MOSCOSO. Land reform is not really the kind of political problem that you find in some places or the social necessity that you find in others.

Mr. ANDREWS. You do not have big holders?

Mr. MOSCOSO. Yes; but the size of the country is relative to the size of the population. They have 72,000 square miles and 2,900,000 people. The land is pretty good agricultural land. A good percentage of it is good agricultural land. So, there has not been that tremendous pressure. If anything, there is need for more growth in order to bring into production some of the lands which are not being used now. So, there is no great pressure of population on the land.

Mr. ANDREWS. I would say, from looking over your data, that it is a right progressive country.

Mr. MOSCOSO. It is a progressive country, but still not sufficiently mobile. There has not been sufficient dynamism in the economy.

Mr. ANDREWS. Political or economic?

Mr. MOSCOSO. Both. I think one thing has reflected on the other.

POLITICAL SITUATION IN URUGUAY

Mr. ANDREWS. You may not want to put this on the record, but do you have much confidence in the present Government?

Mr. MOSCOSO. We have no reason not to have. They have had a very stable system, as Mr. Cottrell has mentioned. I think these changes will come about peacefully in due course.

Mr. ANDREWS. This statement in the shaded section says (off the record).

Mr. MOSCOSO. That is why we are trying——

Mr. ANDREWS. (Off the record.)

Mr. MOSCOSO. One of the cherished rights they have in Uruguay is freedom of the press and of association, and therefore, the Communist Party operates legally and the country becomes a battleground for ideological discussion.

They are rather proud of that. They feel that is one of their basic freedoms, and they would like to protect it. Of course, subversives, who are not exactly unmindful of these opportunities, try to create problems. That is one of the reasons we are strenuously trying to get the university over there to accept some assistance from U.S. universities.

PROGRAM LEVEL

Mr. ANDREWS. I judge from the relatively small program you have planned for next year in Uruguay and the conditions which exist there, you do not plan to stay there with your program too long.

Mr. MOSCOSO. No, sir, we do not.

Mr. PASSMAN. The program is not small. These books list only one part of it. What sum are you asking for Uruguay, according to the book we are reading here today?

Mr. ANDREWS. My book shows $1,500,000.

Mr. PASSMAN. Your book shows $1,500,000. Will you put in the other spigots, excluding Export-Import Bank?

Mr. MOSCOSO. (Off the record.)

Mr. PASSMAN. You have $11 million on hand unexpended; $101 million has been the total of the aid. We are looking at only one little spigot in these books.

Mr. MOSCOSO. But the bulk of the assistance we have been giving to Uruguay has been from Public Law 480.

Mr. PASSMAN. $38 million is not the bulk. It is only $38 million out of $101 million. Is that correct?

Mr. MOSCOSO. What I mean by "bulk" is that out of the various sectors, this is the largest one.

Mr. PASSMAN. Am I correct that it is $38 million out of the $101 million?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Thank you.

Mr. MOSCOSO. 38 percent.

Mr. PASSMAN. It is about 36¾ percent.

Mr. Rhodes?

URUGUAYAN ECONOMIC STRUCTURE

Mr. RHODES. This country appears to be very well endowed with natural resources, with apparently intelligent people, but a sort of welfare state. Is that not about what we have here?

Mr. MOSCOSO. A misunderstood version of a welfare state.

Mr. RHODES. I do not know what you mean by "misunderstood version."

Do they not have welfare activities which exceed the ability of the economy to support?

Mr. MOSCOSO. That is right. That is one of the basic problems.

Mr. ANDREWS. Many States in the United State have that same problem.

Mr. RHODES. Does your State have that problem?

Mr. ANDREWS. Yes.

(Off the record.)

Mr. RHODES. I think your comment about some of our States being in about the same situation was certainly well made. I know some of the States are in a situation in which they have welfare programs beyond the power of their economy to support.

I take it, however, we are doing what we can to get Uruguay to do as we say, not as we do.

Mr. MOSCOSO. We are trying to help.

Mr. RHODES. The program which we have, I notice, is completely grants. It appears to be mainly for agricultural cooperatives and institutional planning, sort of tidying up the economy? Is that about it?

Mr. MOSCOSO. We are trying, first, to get them to do a little more planning than they have done up to now, and develop the necessary statistics and know where they are headed.

One of the great difficulties in Uruguay is that very little is known about the economy. Their statistics are incredibly behind the times. I believe they have not had a census for about 40 or 50 years. That is the kind of thing in which we are trying to help them.

The second thing we are trying to do is to have them focus their attention on the very poor productivity of their agricultural sector, which is by far the most important sector of the economy.

Mr. RHODES. Are the Uruguayans mainly members of the white race?

Mr. MOSCOSO. Yes; by far.

Mr. RHODES. Do they have other races represented in the population?

Mr. MONOSCO. If they have, they are so minor that it does not show in the statistics.

Mr. RHODES. What is the lineage of these people?

Mr. MOSCOSO. Spanish and Italian.

Mr. RHODES. The southern part of Europe.

Mr. MOSCOSO. That is right.

Mr. RHODES. Do they have a rather highly developed tourist trade?

Mr. MOSCOSO. Yes; they do have. They have a tourist trade primarily with Argentina and some with Brazil.

Mr. RHODES. Punta del Este is a beautiful place, I understand; a good place to have conventions.

Mr. MOSCOSO. Yes.

Mr. RHODES. I guess that is all, Mr. Chairman.

Mr. PASSMAN. Mr. Conte?

INVESTMENT GUARANTEE AGREEMENT

Mr. CONTE. Mr. Ambassador, has the Congress in Uruguay voted for the investment guarantee agreement as yet? I know it was before the Congress.

Mr. MOSCOSO. It had not been ratified as of June 19, 1963.

Mr. CONTE. Is the Congress sitting now?

Mr. MOSCOSO. I do not know.

Mr. COTTRELL. Yes, it is.

Mr. CONTE. Will you check and see whether it has been ratified as of this date? You would have to go back to June.

Mr. MOSCOSO. We can find out.

Mr. MILLER. Mr. Conte, as of July 26, 1963, it had not been ratified, according to my understanding. We will check to see whether or not it has been since then.

(Information supplied follows:)

STATUS OF INVESTMENT GUARANTEE AGREEMENT WITH URUGUAY

As of August 16, 1963, Uruguay had not yet ratified the investment guarantee agreement.

URUGUAY'S SUPPORT OF THE UNITED STATES

Mr. CONTE. Recently they had a vote in the Organization of American States to investigate communism in Latin America, and Brazil voted against that and several countries abstained. Did Uruguay abstain?

Mr. MOSCOSO. Mr. Cottrell can answer that.

Mr. COTTRELL. I believe they did, but I can check it.

(Information supplied follows:)

URUGUAY'S SUPPORT OF THE UNITED STATES

Despite the fact that Uruguay has continued to maintain diplomatic relations with the Castro government, it has been very friendly toward the United States and has supported the United States on numerous occasions:

Uruguay was the host to the eighth meeting in January 1962 of consultation of Ministers of Foreign Affairs serving as the organ of consultation in the application of the Inter-American Treaty of Reciprocal Assistance. Uruguay was one of the legal majority of 14 which approved all resolutions on Cuba at that meeting. Uruguay's vote was the decisive 14th vote in the Council of the OAS on the resolution to call that meeting at Punta del Este on the Cuban problem.

Uruguay was the host to the special meeting of the Inter-American Economic and Social Council at Punta del Este in August 1961 which established the Alliance for Progress.

A. URUGUAY'S VOTING RECORD IN THE UNITED NATIONS

An analysis of important rollcall votes in the 17th U.N. General Assembly shows that on 21 votes where the United States and U.S.S.R. differed Uruguay's vote coincided with the United States in 13 instances, with the U.S.S.R. in 3 instances, with neither in 2, and Uruguay was absent during the remaining 3. In six of these votes involving clearly "East-West" issues Uruguay voted solidly with the United States.

In 10 rollcall votes at the Fourth Special Session of the U.N. General Assembly in May and June of this year, on the financial situation of the United Nations, the Uruguayan vote coincided with the United States vote and differed from the U.S.S.R. vote in all 10 instances.

B. URUGUAY'S POSITION ON IMPORTANT ISSUES IN THE ORGANIZATION OF AMERICAN STATES

1. Uruguay not only supported the convocation of the eighth meeting of Foreign Ministers to take up the Cuban problem but was host to the meeting which was held in Punta del Este in January 1962.

2. At the Punta del Este meeting, Uruguay voted in favor of all the resolutions including No. 1 which condemned the Communist offensive in America, No. 2 which calls for special vigilance against subversion and established the Special Consultative Committee on Security, No. 6 excluding the Castro government from participation in the inter-American system, and No. 8 which established an arms embargo.

3. Uruguay voted in favor of the resolution of October 23, 1962, of the Council of the OAS acting under the Rio Treaty calling for the withdrawal of Soviet offensive missiles and recommending all measures including use of armed force to prevent further shipments and to prevent those in Cuba from threatening the peace.

4. Uruguay voted in favor of the resolution of the COAS–OC of November 5, 1962, concerning the establishment of combined command arrangements for the naval quarantine of Cuba.

5. Uruguay voted for the approval of the statutes of the Special Consultative Committee on Security in the COAS on April 23, 1963.

6. Uruguay proposed candidates for election to the Special Consultative Committee on Security and one of it nationals is now serving as a member.

7. Uruguay voted in favor of the COAS resolution of July 3, 1963, in effect endorsed the so-called Lavalle Committee report and urging all governments to carry out its extensive recommendations for the control of Cuban-Communist subversive activities in the hemisphere.

Mr. CONTE. Your statement was that they were very friendly toward us and have gone along with us in all these votes, and yet in everything I have mentioned so far, they have been against us. I want the record to show I am not satisfied with Uruguay. Here is a sophisticated society, compared to the rest of Latin America, and they have been sitting on their hands and have not been moving at all. They

should move if they are to stay in this program, and move in the right direction.

I have no further questions.

POSSIBILITY OF INTERNAL UPRISING IN CUBA

Mr. MINSHALL. Before we turn to the next country, I wonder if I might ask the Secretary a question about Cuba.

Mr. PASSMAN. Yes, indeed.

Mr. MINSHALL. I noticed in this morning's Washington Post, August 13, the main article in the left-hand column on the front page, entitled "U.S. Builds Up Underground's Support in Cuba." It goes on to say we are building up a concentration of supplies and people who are going to invade Cuba.

I wonder if you would care to comment on this article. Did you read it?

Mr. COTTRELL. That an invasion was now what?

Mr. MINSHALL. The subtitle of this paragraph in the middle of the article, in bold print, is "Underground Operations." Then I quote exactly:

> With invasion now virtually out of the question, U.S. energies are being channeled entirely into underground operations, which, it is hoped, will eventually spark the ouster of Communist Premier Fidel Castro—

and so forth.

In view of the statement I made yesterday in which I quoted the gentleman who was on the "Today" program, a newspaper correspondent who had just left there, who said any idea of an internal uprising to overthrow Fidel Castro was ridiculous, I wonder if you could care to comment on this article.

Mr. COTTRELL. My comment on this article is that it was written by a reporter who was speculating on the subject.

Mr. MINSHALL. The reporter was Dan Kurzman. He might be speculating, but the State Department has been known to drop a few seeds once in a while.

Mr. COTTRELL. True. What would you like to know about the article?

Mr. MINSHALL. I would like your comment on it.

Mr. COTTRELL. I think you asked me why we did not go to the root of the problem, which would mean——

Mr. MINSHALL. That is right, but I am asking you this question today.

Mr. COTTRELL. —why we did not go to the root of the problem and eliminate the entire focal point of this infection, rather than meeting it on the fringes of Latin America.

Mr. MINSHALL. You say he is speculating in this article. Do you think this article has any basis in fact?

Mr. COTTRELL. I cannot confirm on the record that operations may or may not be going on with respect to underground operations in Cuba.

Mr. MINSHALL. Do you think there is any chance of our having an internal uprising in Cuba?

Mr. COTTRELL. (Off the record.)

Mr. MINSHALL. Of the states in your region, Mr. Secretary, how many still recognize the Castro regime, and how many are still dealing with it to any degree?

Mr. COTTRELL. Five still recognize Castro.

Mr. MINSHALL. Out of how many?

Mr. COTTRELL. Five out of twenty.

Mr. MINSHALL. For the record, what are they, please?

Mr. COTTRELL. These are Brazil, Bolivia, Uruguay, Chile, and Mexico.

Mr. MINSHALL. They are still carrying on commerce with Cuba and are still getting our foreign aid money?

Mr. COTTRELL. Right.

Mr. MINSHALL. That is all I have.

Mr. PASSMAN. Here are five countries in your area, 25 percent of them, still doing business with Cuba. These five nations have substantial foreign aid programs. Will you name the nations still doing business with Cuba?

Mr. COTTRELL. Brazil, Mexico, Bolivia, Chile, and Uruguay. This does not involve substantial trade, Mr. Chairman. These are diplomatic establishments.

Mr. PASSMAN. And trade, too. Uruguay, which we are presently discussing, has substantial trade, I believe, with the Soviet bloc.

Mr. COTTRELL. I said not substantial. I would be glad to supply for the record facts concerning the trade between those five countries and Cuba, which I think would be very helpful.

Mr. PASSMAN. Would you put in the record at this point the amount of aid that you have for these five countries which are still recognizing and doing business with Castro, the amount of aid you propose for fiscal 1964, the total amount that you have unliquidated to the credit of these five countries, and the total amount of aid that we have given to these five countries since the inception of the aid program, excluding the Export-Import Bank?

(The information supplied follows:)

Total U.S. economic and military assistance to Latin American countries recognizing Cuba (excluding Export-Import Bank loans)

[In millions of dollars]

	Amount unliquidated as of June 30, 1963	Obligations and loan authorizations		
		Accumulative, fiscal years 1946–63	Fiscal year 1963	Fiscal year 1964
Bolivia	56	308	72	(1)
Brazil	172	946	168	(1)
Chile	108	498	82	(1)
Mexico	29	200	24	(1)
Uruguay	11	101	19	(1)

[1] Classified.

Mr. PASSMAN. I thought you answered a question earlier that Uruguay had usually supported and voted with us in the United Nations and on other issues. It seems, however, that it has been just the opposite on some of the really important issues. They have been against us on several of those, have they not?

Mr. COTTRELL. I think Mr. Conte pointed out one instance.

Mr. PASSMAN. I think he pointed out three instances. Did you not, Mr. Conte?

Mr. CONTE. They have not broken relationships with Cuba. That is one. Another, they have abstained in the vote on investigation of Communist infiltration of Latin America. Third, they have not approved the investment guarantee agreement.

Mr. PASSMAN. That is three, and they are three of the most important issues that you could think of pertaining to the security of this country and this program.

MILITARY ASSISTANCE TO LATIN AMERICAN COUNTRIES RECOGNIZING CUBA

Mr. CONTE. This intrigues me in regard to not breaking relationships with Cuba. We have a military assistance program with Uruguay, have we not?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. Do we have a military aid program with the other four countries that still recognize Cuba?

Mr. COTTRELL. Yes, we have.

Mr. CONTE. This could be a very serious situation.

Mr. PASSMAN. Is that not a kind of dangerous situation?

Mr. COTTRELL. I did not say it was too dangerous.

Mr. PASSMAN. I said it was dangerous. You said we have a military program with them.

Mr. COTTRELL. Yes, I did.

Mr. PASSMAN. The fact of the business, you have a military program, I believe, with 70 nations for fiscal 1964. Is that correct, Mr. Miller?

Mr. MILLER. Your figures are usually correct, Mr. Chairman.

Mr. PASSMAN. Either 70 or 71.

Mr. MILLER. Seventy or seventy-one.

Mr. CONTE. If this is classified, then let us get 1963, which would not be classified, would it? Let us get the fiscal 1963 figures for military assistance to these five countries which have not broken relationships with Cuba, because this could be a very dangerous situation. We could be giving them military assistance and, in turn, they could be shipping it into Cuba.

Mr. PASSMAN. Let us make it cumulative and get it all.

Mr. COTTRELL. This is very farfetched, Mr. Conte.

Mr. MINSHALL. Not only the dollar amount but, if possible, I think we ought to put in exactly what kind of military equipment and gear we have been giving them.

(Off the record.)

(The information supplied follows:)

MILITARY ASSISTANCE FOR LATIN AMERICAN COUNTRIES WHICH RECOGNIZED CUBA AND CONTROL ON USE OF MATERIAL PROVIDED

Any country receiving U.S. assistance which permits shipment of military equipment to Cuba is subject under the Battle Act to termination of all military, economic, technical, and financial assistance from the United States. Prior to designation of Cuba as subject to the Battle Act, a similar restriction, under foreign aid appropriations legislation, was applied to any country which sold arms, ammunition, or implements of war or furnished military or economic aid to the Castro regime.

A worldwide system of reporting and control has been instituted to carry out these restrictions. Information developed by these reports and controls shows that no free-world country is furnishing military items or other assistance to Cuba. (This control operates within framework MAP requirement that recipients obtain prior U.S. consent for transfer MAP materiel.)

Total estimated deliveries/expenditures for the Latin American countries which recognized Cuba, Bolivia, Brazil, Chile, Mexico, and Uruguay, under the military assistance program from inception in each country through June 30, 1963, and key-end items delivered for the preiod from grant and direct distribution of excess stocks, are as follows:

Estimated deliveries/expenditures

[Amounts in thousands of dollars]

BOLIVIA

	Fiscal year 1963	Fiscal year 1958–63
Grant	1,566	4,539
Excess stocks (value at acquisition cost)	850	989
Credit assistance under 508 FAA	(1)	(1)
Direct sales under 507 FAA	(1)	(1)

Key end items, fiscal year 1958–63:	*Quantities each*	Key end items, fiscal year 1958–63—Con.	*Quantities each*
C–47 aircraft	(1)	Mortar, 60 mm	(1)

[1] Classified.

Mr. RHODES. Why do you say that is farfetched, Mr. Cottrell?

Mr. COTTRELL. Because I do not believe it is conceivable that Uruguay, Chile, Mexico, or Bolivia would be shipping to Cuba arms supplied by us. This is my judgment.

Mr. ANDREWS. You have no way in the world of knowing, have you, Mr. Secretary? We have no embargo.

Mr. COTTRELL. This is a matter of my judgment.

Mr. ANDREWS. They can put this down in the hold of a ship going into Cuba.

Mr. COTTRELL. It is physically possible. In my judgment, it is farfetched. Russia supplies all the arms Cuba needs.

Mr. MINSHALL. The State Department never thought they would put missiles in Cuba.

Mr. COTTRELL. It was not the Chileans or Uruguayans or Mexicans that did that.

Mr. PASSMAN. I am not implying that it was, but they could come nearer getting them in from there than from any other source.

Mr. COTTRELL. Geographically.

(Off the record.)

Mr. MILLER. With respect to your question about observation, or one of the other members' question about observation of the articles, section 506 of the statute requires that they agree with respect to defense articles to permit continuous observation and review by and furnish necessary information to the representatives of the U.S. Government with respect to the use of such articles, and there are military missions in the Latin American countries which do observe these articles and comply with the statute.

POSSIBILITY OF ARMS SHIPMENT TO CUBA FROM LATIN AMERICAN COUNTRIES

Mr. PASSMAN. Are more ships from our so-called allies putting into Cuba than from Communist nations?

Mr. RHODES. I do not know about that.

Mr. PASSMAN. An article in the paper indicated that more allied ships actually unload in Cuba than from other countries. It looks as if it is our so-called friends who are taking advantage of us in this respect.

Mr. MILLER. Mr. Chairman, with respect to that question, section 107(a) of the appropriations act, as you know, prohibits the sending of Battle Act items, which would include defense articles under the military assistance program. We have no information to indicate that any country receiving aid has either sent a Battle Act item to Cuba or permitted ships of its registry, as far as countries within Latin America are concerned, to transport Battle Act items.

(Off the record.)

Mr. CONTE. Maybe we could say it is farfetched in regard to some of these countries sending large items of military arms to Cuba, but I do not think it would be very farfetched for these countries to send spare parts to Cuba. They have a lot of our equipment there that we gave to them before we broke relationships. The equipment has broken down right now, and is at a standstill. Maybe their conscience would not bother them too much to send spare parts to keep the equipment in operation.

Mr. MINSHALL. I know for a fact they are very short. In this program I referred to yesterday, they showed them making crankshafts and brake drums. They are in a crash program to catch up to keep the equipment we gave them operating.

You say it is doubtful. I think it is more logical than not that they are sending spare parts to Cuba.

Mr. COTTRELL. I said doubtful about arms. In fact, there essentially would be no reason for these countries to supply arms to Cuba.

The Russians will supply any arms they want. They have a blank check from the U.S.S.R.

I agree it would be tempting to black market operators in spare parts, and you probably could find a few firms——

RELATIONS OF LATIN AMERICAN COUNTRIES WITH CUBA

Mr. PASSMAN. These people are on a friendly basis with Cuba. They recognize them diplomatically. They abstain from voting or vote with them, and they are carrying on commerce with them. We are giving these nations military equipment. It could be that at some future date there might be a little firmer understanding between Castro and the leaders of these five nations, when the chips are down.

Mr. MOSCOSO. I think, Mr, Chairman, we have to refer back to the second Punta del Este Conference, where it was unanimously agreed that these nations understood that Cuba was under Communist domination.

Mr. PASSMAN. They still recognize them. They still are doing business with them. They still have commerce going on. They still exchange ambassadors.

(Off the record.)

RUSSIANS IN CUBA

Mr. MINSHALL. I should like to ask one further question of the Secretary. How much have the Russians built up their military in Cuba since last October?

Mr. COTTRELL. This is the numbers game again, and I hesitate to get into it, because you know the reason this numbers game exists is because nobody knows exactly how many Russians have gone in and how many have come out.

Mr. MINSHALL. You have been watching the ship movements, certainly. I hope you have. If not, I do not have complete confidence in our U–2 flights, either. They can move a lot of stuff in at night that we do not know about.

Mr. COTTRELL. Our general information indicates the Russians are in there for three different reasons. One, the troops that have been at four separate camps that serve no obvious purpose except perhaps to put down a revolt of the Cubans if it ever came about. Those apparently are thinning out.

The second group——

Mr. MINSHALL. How is that?

Mr. COTTRELL. Apparently thinning out in numbers. The original numbers are not there. I will not get into the numbers game with you on this. I am just telling you generally what our impression is, for whatever it is worth.

The second group of Russians in there are technicians on special sophisticated equipment. They are attempting to train the Cubans and turn over this sophisticated equipment to them. Some of it is quite elaborate, and it may take them some months or years, perhaps——

Mr. MINSHALL. What type of equipment are you referring to?

Mr. COTTRELL. I am talking about the SAM, surface-to-air missile sites, Mig-21's, and this type of thing. Apparently they are turning many of these things over to the Cubans as fast as they can train them.

A third type of technician in there is assisting in the changeover from the Western-based economy to a Russian-based economy in the economic field. There apparently are more Soviet bloc people, actually, than Russians in there now—Czechs, Rumanians, Bulgarians, and others.

Mr. MINSHALL. I gather from what you said, Mr. Secretary, the military threat as far as the Russian soldiers and equipment that they have in Cuba today, is not so paramount as using it as a base for the exportation of communism and subversion.

Mr. COTTRELL. I am more concerned with that point than any other; yes.

Mr. Chairman, if you will allow me equal time, I would like to add to that.

Mr. PASSMAN. Go right ahead.

LATIN AMERICAN REPRESENTATION IN CUBA

Mr. COTTRELL. I would like to mention on that other point, representation in Cuba, that we have been progressivly attempting to reduce the political links Cuba has with the Western World. They are now down to five Latin American missions in Cuba. We are not pretending that these five should not be eliminated also.

Mr. PASSMAN. Did we not——

Mr. COTTRELL. We did not buy off the others.

Mr. PASSMAN. Why continue those five in the foreign aid program if they cannot eliminate their trade with Cuba?

Mr. COTTRELL. In my opinion, all the Cuban missions in Latin American countries are focal points for infection of every one of these countries, and it does not help at all to have these Cuban missions in Latin America. I want to make clear that the administration is aware of this danger.

Mr. CONTE. This is important, I believe, Mr. Chairman.

PUBLIC LAW 480 ASSISTANCE TO LATIN AMERICAN NATIONS RECOGNIZING CUBA

How much Public Law 480 do we give to Uruguay?

Mr. TENNANT. About $38 million of Public Law 480 through fiscal year 1962.

Mr. CONTE. Could you supply for the record the Public Law 480 program for the other four countries that have not broken relationships with Cuba? This is another important facet. They have a food problem in Cuba today which is extreme. We could be sending wheat, corn, farina, and any of our surplus products to these countries, and they, in turn, could be selling them to the Cubans.

(The information supplied follows:)

Public Law 480 program to Latin American countries recognizing Cuba, 1954–63

[In millions of dollars]

Country:	Total
Bolivia	$52.5
Brazil	390.0
Chile	131.9
Mexico	46.2
Uruguay	37.8
Grand total	658.4
Sales of surplus commodities for dollars or local currencies	344.2
Voluntary relief agencies	144.9
Surplus commodities granted for disaster relief and economic development purposes	169.3

Mr. COTTRELL. No. Again, according to our information, this is not being done. There is very little trade between Cuba and any of the other Latin American countries.

Mr. PASSMAN. Would you say we do not believe it is being done? We have been fooled too often and gotten into too much trouble, even in Cuba, by the assumption that something was not being done. We do not believe it is being done. Would that be fair?

Mr. COTTRELL. No. I cannot quote the statistics, but I can get them for you, which I am sure will prove this point.

Mr. RHODES. May I ask another question about this? Mr. Cottrell, the country of Uruguay is an agricultural nation. What are they doing with $38 million worth of Public Law 480 products?

Mr. COTTRELL. They are importing edible oils and wheat.

Mr. RHODES. Do they not grow wheat in Uruguay?

Mr. COTTRELL. Some, but insufficient quantities.

Mr. RHODES. What are their agricultural products?

Mr. COTTRELL. Their normal source of supply of wheat is Argentina.

Mr. STERNFELD. Their export products are primarily meat and wool.

Mr. RHODES. So, they do not grow a lot of grain.

OIL SHIPMENTS INTO CUBA

May I ask Mr. Miller to play a little Battle Act game with me. We have been discussing the application of the Battle Act and whether or not it should have been invoked from time to time. It strikes me that there is one statistic which we do not have which I think maybe we should have. This is the amount of oil which has been shipped into Cuba in total since the enactment of the Mutual Security Assistance Appropriation Act for 1963. Let us have the total, and then let us have the amount of oil which has been shipped in, in free world bottoms, and the country supplying the bottoms.

Mr. COTTRELL. From what date, Mr. Rhodes?

Mr. RHODES. From the date of the enactment of the Mutual Security Appropriation Act of 1963, in October 1962.

Mr. MILLER. I believe we can give you a fairly precise estimate on that.

Mr. RHODES. If you can, put it in the clear. If not, provide it for our information.

Mr. MILLER. I would like to make one point to be very clear here, Mr. Chairman. We have no information whatsoever from intelligence sources or from any other source, that indicates any country in Latin America has shipped any arms or ammuntion or implements of war or given any economic assistance to Cuba within the last year.

Mr. RHODES. Of course, I hate to say this, Mr. Miller, but our Government did not think there were any missiles in Cuba, either, until we woke up one day and there they were. Until we can improve our techniques of determining what is happening as far as Cuba is concerned, you will not be very persuasive.

Mr. MINSHALL. I would like to say Roger Hilsman was the most surprised member of this group. He was then Chief of State Department Intelligence.

Mr. PASSMAN. I hope to see the final report you give to Mr. Rhodes on the number of ships going into Cuba.

Mr. RHODES. That is already in the record.

Mr. PASSMAN. Can it all be put in the record?

Mr. RHODES. I could not put it all in the record as to number of ships. It is still classified.

Mr. MILLER. We are working on that particular problem.

(The information will be supplied the committee.)

Mr. PASSMAN. I think I read in an article, or else in a statement from the Commerce Department, that there are actually more ships from friendly nations unloading in Cuba than ships from the other countries.

(Off the record.)

RATE OF EXCHANGE IN CHILE

Mr. PASSMAN. We were talking about escudos a day or two ago. At what rate are we supporting the escudo in Chile?

Mr. MOSCOSO. We are not supporting them.

Mr. STERNFELD. You mean what figure do we have in the book on the escudo?

Mr. PASSMAN. I mean, of course, the official rate of exchange for them, as shown in the book.

Mr. MOSCOSO. 1.4.

Mr. PASSMAN. Is that the rate upon which our aid is converted for the return payments?

Mr. MOSCOSO. No, sir; 1.847.

Mr. PASSMAN. So, you show in the book 1.4. It will be converted at 1.8, but the brokerage rate is 3 and the black market rate is 3.34.

Mr. MOSCOSO. The brokers' rate, Mr. Chairman, is a very, very thin market, $400,000 to $1 million per month.

Mr. PASSMAN. I do not care if it is as thin as cigarette paper. This information is what you gave to me, and I just want you either to say this is correct or tear it up. We asked you for positive information. You handed me something that is supposed to be positive.

You gave me this paper, showing the brokers' rate at 3, did you not?

Mr. STERNFELD. That is correct.

Mr. PASSMAN. Then the commercial bank rate is at 1.847.

Mr. STERNFELD. That is right.

Mr. PASSMAN. The book rate which you show here is converted at 1.4, and we are exchanging on the basis of 1.8.

Mr. STERNFELD. 1.847.

Mr. PASSMAN. Have I read those items correctly?

Mr. STERNFELD. That is correct.

Mr. MOSCOSO. That is correct.

MIDDLE CLASS IN LATIN AMERICA

Mr. STERNFELD. I have a very simple statement to make to explain the number——

Mr. PASSMAN. Look at the divider sheet, page 75. I believe that primarily we are trying to build up a large middle class in all these countries, are we not?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. On this sheet you have:

The crux of Uruguay's problem (off the record).

Why did you want to classify a statement of that type?

Mr. COTTRELL. This is not particularly a happy kind of statement to be read by our Uruguayan friends.

Mr. PASSMAN. Are they well fed?

Mr. COTTRELL. I suppose they are.

Mr. PASSMAN. Are they well educated?

Mr. COTTRELL. Yes. The statement under discussion is an unhappy choice of words.

Mr. PASSMAN. You people call that comment confidential, do you not, in your book?

Should I not be permitted to state publicly that Uruguay has a well-educated, well-fed middle class of people?

Mr. COTTRELL. There is a sentence that precedes that which is not appropriate for an open record.

Mr. PASSMAN. Did I read the comment correctly?

Mr. COTTRELL. You did.

Mr. PASSMAN. Do you want to declassify the latter part of the statement?

Mr. COTTRELL. The words are not something we would like the Uruguayans to read.

Mr. PASSMAN. You do have a program in Mexico this year?

Mr. COTTRELL. Yes.

Mr. PASSMAN. Previously we were discussing a country that had a well-educated and well-fed, middle-class people. Would I be violating the security of the United States by leaving that observation in the record?

Mr. COTTRELL. It would be inaccurate with respect to Mexico, because many are hungry.

Mr. PASSMAN. In Venezuela, Mexico, and 100 other nations, we have a program. We were discussing a nation which has a well-educated, well-fed, middle-class of people.

Mr. COTTRELL. Perhaps I am too sensitive.

CLASSIFICATION OF INFORMATION

Mr. PASSMAN. You run into a nation that is getting along all right, and you do not want the American taxpayer, as I interpret it, to know anything about it. Only in those cases where it looks as if they are in poverty do you put it all in there. But when we come to a nation

that has an 88 percent literacy rate, a middle class of people that is well educated and well fed, and you have a big aid program for them, you do not want the facts to show in the record.

Mr. MILLER. Mr. Chairman, with respect to the classification and the assessments we make, we try to make them as carefully and complete an assessment as is possible.

In this context, I think it would be a violation of the security of the United States.

Mr. MINSHALL. I have gone through the justifications on numerous occasions, and the directors of all these regions say they cannot understand why there is so much classification in them, and then you come out and make a statement like that. It is ridiculous.

Mr. PASSMAN. It is the most overclassified piece of monkey business ever presented to any committee of the Congress.

Mr. COTTRELL. I think it only fair to say you probably should be directing your wrath at me.

Mr. PASSMAN. I did not direct wrath at anybody. I am just trying to see if we can get something in the record which shows that some people somewhere are getting along pretty well.

Mr. COTTRELL. Just on the point of who is responsible for the gray, I think I should take more of the responsibility for State because these books are made up by AID, and our people look them over and look for sensitive areas and put them in the gray.

Mr. PASSMAN. If there is valid reason why a statement that people are well educated and well fed, and that they maintain a substantial trade relationship with the Russian bloc nations, should be classified, then I am not able to comprehend that reason.

PER CAPITA INCOME IN URUGUAY

Mr. ANDREWS. What is the per capita income of the 2.9 million people in Uruguay?

Mr. MOSCOSO. $450 per year.

Mr. ANDREWS. That is the per capita income?

Mr. MOSCOSO. Yes, sir. That is the best estimate we have.

VENEZUELA

Mr. PASSMAN. You are requesting $1,700,000 for Venezuela, according to the first page in the book.

Will you put all the spigots together and tell us the total amount, excluding the Export-Import Bank?

Mr. MOSCOSO. Including Public Law 480 and military assistance——

Mr. PASSMAN. All spigots, excluding Export-Import Bank.

Mr. MOSCOSO. $———.

Mr. PASSMAN. Your book shows $1.7 million, but in reality it is $———.

Are they eligible for aid from all the 16 spigots?

Mr. MOSCOSO. Yes, except ROCAP.

Mr. PASSMAN. Ordinarily we would examine on $1.7 million, as we look at the book, but when we put the grants and soft loan parts into it, it comes to $——— and, in addition, they are eligible for all the other accounts.

Mr. TENNANT. Those figures show on the next page.

Mr. PASSMAN. We have always examined from this page. We want the information so it can be projected. You could at least give one total figure like $———, and then give the detail. You know as well as I do, no person can go through all these books and pick up all these figures.

Could you tell us the amount you have unliquidated to the credit of this country as of June 30?

Mr. TENNANT. $48.963 million.

Mr. PASSMAN. Does that include all spigots?

Mr. TENNANT. Mutual security, military, and economic.

Mr. PASSMAN. It does not include what they can get out of all these other funds, the Inter-American Development Bank, IDA, and so forth?

Mr. TENNANT. No, sir.

Mr. PASSMAN. What has been the total amount of our aid to Venezuela since the inception of the program?

Mr. MOSCOSO. $188.5 million, excluding the Export-Import Bank.

COSTS OF PARTICIPANT TRAINING

Mr. PASSMAN. I note that in fiscal 1963 you programed 305 participants at $504,000. For fiscal 1964 you reduced the number of participants to 234 but the cost goes up to $587,000.

Mr. MOSCOSO. They will be under training for a longer period of time, Mr. Chairman.

Mr. PASSMAN. They will be employed at their posts or under training?

Mr. MOSCOSO. In training.

Mr. PASSMAN. You had $504,000 last year for participants?

Mr. MOSCOSO. Yes.

RURAL IMPROVEMENT PROJECT

Mr. PASSMAN. How much did you request for the rural improvement project, shown on page 387?

Mr. MOSCOSO. $261,000.

Mr. PASSMAN. How much did you obligate?

Mr. MOSCOSO. $441,000.

Mr. PASSMAN. Project the cost to completion, please.

Mr. MOSCOSO. $1,175,000.

MANPOWER TRAINING PROJECT

Mr. PASSMAN. How many participants do you plan to finance under the manpower training project, shown on page 388, Mr. Moscoso?

Mr. MOSCOSO. Seventy-one.

PUBLIC SAFETY PROJECT

Mr. PASSMAN. I note that you obligated $1,339,000 in fiscal 1963 for the public safety project, on page 390. Is that correct?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. How much did you request for this project last year?

Mr. MOSCOSO. $88,000.

Mr. PASSMAN. You requested $88,000 but you obligated $1,339,000?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Project the cost to completion.

Mr. MOSCOSO. $2,021,000.

Mr. PASSMAN. Mr. Rhodes?

POPULATION GROWTH

Mr. RHODES. The per capita GNP is going up slowly although it rose 4.2 percent in toto. Is this country having a birth rate explosion?

Mr. MOSCOSO. Yes, a 3.4 percent annual population growth.

Mr. RHODES. Is this birth rate explosion confined mainly to the cities or is this happening all over the country?

Mr. MOSCOSO. The cities get the natural increase plus the inflow of people from the countryside. Venezuela has one of the highest rates of urban growth of any country in Latin America; 70 percent of the people live in urban areas.

Mr. STERNFELD. Over half of that population is under the age of 18.

Mr. RHODES. They have a tremendous education problem, then?

Mr. MOSCOSO. They do have.

TYPE OF PROJECTS EMPHASIZED

Mr. RHODES. Mainly what does our AID go to?

Mr. MOSCOSO. Directed at the priority areas of education, agricultural development, and public administration. Public safety has now become an important concern of ours for obvious reasons. Headlines in the papers indicate why.

Mr. RHODES. You refer to the blowing up of the oil pipelines and the other acts of sabotage by Communists, Castroites, and so on?

Mr. MOSCOSO. That is right, continued harassment of U.S. investments.

USE OF LAND FOR AGRICULTURE

Mr. RHODES. Is there a lot of arable but unused land?

Mr. MOSCOSO. There is a lot of land available, but it is not very good. The part that could be used is subject to flooding, particularly in the Llanos during the rainy season which begins with the winter.

Most of the area south of the Orinoco is completely flooded.

Mr. RHODES. Is this a self-suporting country so far as foodstuffs are concerned?

Mr. MOSCOSO. It is not, but I think very soon they will be self-supporting in the sense they will be exporting some foods and importing others.

There are certain foods they cannot grow for themselves.

PUBLIC LAW 480 ASSISTANCE

Mr. RHODES. Is there a Public Law 480 program for Venezuela?

Mr. MOSCOSO. That is right.

Mr. RHODES. What is its magnitude?

Mr. MOSCOSO. Title 4, dollar sales. This is $11.4 million.

Mr. RHODES. Was that the figure for the last fiscal year?

Mr. STERNFELD. Yes, this is the figure for the sales agreement in force.

Mr. RHODES. Fiscal 1963?

Mr. STERNFELD. Yes, we project ——— for 1964.

Mr. RHODES. Actual $11 million for 1963 and projected at $——— for 1964?

Mr. MOSCOSO. Yes.

Mr. STERNFELD. We will check that. Our books show an estimated $11 million for 1963. Actual was $11.4 million in 1962.

(Information supplied follows:)

PUBLIC LAW 480 IN VENEZUELA

A title IV sales agreement for about $11 million was signed in fiscal year 1962 that was in effect during fiscal year 1963 and is valid for the first half of fiscal year 1964. However, by June 30, 1963, Venezuela had not made any purchases under this agreement.

The title III program in Venezuela was about one-half million in fiscal year 1962 and $2 million in fiscal year 1963. This program has been very successful in supporting the efforts of private groups which conduct active programs of self-help and cooperation in rural and urban slums. AID is assisting the expansion of these self-help programs.

DEVELOPMENT OF INDUSTRY

Mr. RHODES. The manufacturing index seems to be going up rather astronomically.

Mr. MOSCOSO. That is right.

Mr. RHODES. Is this the main thrust of the effort of the Venezuelans at the present time so far as economic development is concerned?

Mr. MOSCOSO. Yes; they started a strong program of stimulating local enterprise and they have been able to develop industry substantially.

UNEMPLOYMENT AND INCOME GROUPS

Mr. RHODES. There is a lot of unemployment, however, is there not?

Mr. MOSCOSO. There is a high unemployment rate. The reason is that even though petroleum represents very great investments, close to $2 billion, still it employs very few people—about 25,000 to 30,000 people at the most.

Mr. RHODES. Here again you have a very rich group and a very poor group.

Mr. MOSCOSO. That is right.

Mr. RHODES. Is there any type of middle class developing at all?

Mr. MOSCOSO. There is a small middle class developing, emerging as a result of the industrial development program. They do have a strong agrarian reform program. They also have done a very substantial job in trying to better their tax collections and improve their tax laws.

Mr. RHODES. The main effort so far as industrial development, is in the private sector?

Mr. MOSCOSO. That is right. It used to be in the public sector with the dictatorship.

Mr. RHODES. That is strange.

Mr. Moscoso. The dictatorship established a petroleum-chemical operation and a large steel mill. The steel mill, however, now is being managed by Koppers of Pittsburgh.

Mr. RHODES. That is all.

Mr. PASSMAN. Thank you, Mr. Rhodes.

VENEZUELAN TRADE BALANCES

I notice that Venezuela is the third largest oil producer in the world and it is rich in natural resources.

Mr. Moscoso. That is right.

Mr. PASSMAN. I also notice that a favorable trade balance was shown in 1959, the figure being $792 million.

Mr. Moscoso. That is right.

Mr. PASSMAN. In 1962 this favorable balance of trade went up to $1,255 million; is that correct?

Mr. Moscoso. That is right.

Mr. PASSMAN. That is fantastic for a nation of that size.

Mr. Moscoso. Yes, sir.

Mr. PASSMAN. And here we are experiencing an alarming balance-of-payment deficit, and if we take out the things we apply through our foreign aid in the total as an export there is a question of whether we have a minus rather than a plus trade balance.

The favorable trade balance has gone up to $1,255 million and we are still giving them aid?

Mr. Moscoso. To be fair, you also would have to indicate how much of this is profit going to American companies.

Mr. PASSMAN. About the trade balance, where do you have notes in here to indicate that much of this is profit going to American firms?

Mr. Moscoso. I am sorry. If it is not in there——

Mr. PASSMAN. What are we to go by? We find something favorable, and immediately it is offset.

If we find a country that is well fed and well educated the information is confidential.

Will you try to get some information on this for us, please?

Mr. Moscoso. Certainly.

Mr. PASSMAN. Thank you.

(Information supplied follows:)

Profits of U.S. oil companies remitted from Venezuela

The "IMF Balance of Payments Yearbook" issued in November 1962 provides the most accurate figures presently available. Statistics for 1962 have not yet been published. "Investment income" of oil companies is given as a single figure including both United States and other non-Venezuelan companies, but the Minister of Finance of Venezuela estimates that U.S. companies account for about 75 percent of these figures, so that the following estimate may be made:

[In millions of dollars]

Year:	*Profits remitted to United States*
1959	320
1960	310
1961	365
1962	[1] 400

[1] Because of increased production, preliminary estimates indicate that it will be at least $400,000,000.

PURPOSE OF CONTRACT SERVICES

I notice on page 387 with regard to Venezuela, contract services—that means with a university, college, or trade school?

Mr. STERNFELD. Yes, sir; or a private firm.

Mr. PASSMAN. Contract services are required for local clerical personnel and for local transportation and travel of U.S. technicians.

Would you give us a little bit of explanation?

Mr. STERNFELD. That is an error, Mr. Chairman.

The error is that we do not provide local clerical personnel under contract services.

Mr. PASSMAN. What do you provide this for, then?

Mr. STERNFELD. Short-term technicians to help in the rural improvement project.

Mr. PASSMAN. How did this statement get in here—funds proposed for contract services for local clerical personnel and for local transportation and travel of U.S. technicians?

Mr. STERNFELD. A human error.

Mr. PASSMAN. How did you find out about the error?

Mr. STERNFELD. I read this in preparation for the committee examination and I had the same question.

Mr. PASSMAN. I had already passed this but thank you for thinking you would mention it.

Mr. Conte?

PETROLEUM INVESTMENT

Mr. CONTE. In your justification you show that the petroleum investment in Venezuela amounts to $2.4 billion and it amounts to 90 percent of the country's export trade in 1961. Is that correct?

Mr. MOSCOSO. That is $2.4 billion of petroleum products which made up 90 percent of 1961 exports.

Mr. CONTE. Therefore this is a very, very important item, a very important economic item to this country, is it not?

Mr. MOSCOSO. That is right.

Mr. CONTE. I am glad to hear that, Mr. Secretary, because I am just wondering why this administration persists in carrying out a foolish order that the past administration put in with regard to the mandatory restriction on crude and residual oil to this country under the guise of national security which is as phony as the day is long.

Mr. MOSCOSO. I wondered about that.

Mr. CONTE. Thank you. I have no further questions.

Mr. PASSMAN. Mr. Minshall?

HOUSING PROGRAM

Mr. MINSHALL. Mr. Director, I understand you have a substantial housing program in Venezuela. I would like to know how much you have already done in this regard and projecting it out how many units do you plan to construct and what will be the total cost?

Mr. MOSCOSO. There is a $30 million loan not only for housing, but also for community facilities and slum clearance. The Government of Venezuela will match that amount.

Mr. MINSHALL. How many units will that build?

Mr. MOSCOSO. About 20,000 housing units.

Mr. MINSHALL. That doesn't even scratch the surface, does it?

Mr. MOSCOSO. That is right.

Mr. MINSHALL. According to your book you estimate the shortage as 800,000. This will build 20,000 units. According to that you have a billion dollar program going if you do the job right.

Mr. MOSCOSO. We have already stated to the Venezuelan Government that they will have to finance this under hard terms.

Mr. MINSHALL. Do you call hard terms three-quarters of 1 percent?

Mr. MOSCOSO. I say that for future AID housing projects they will have to finance this under hard terms.

Mr. MINSHALL. What do you call hard terms?

Mr. MOSCOSO. Probably it will be between 3½ and 4 percent, and 20 to 25 years.

Mr. MINSHALL. Projecting that out, how does this come out? This takes care of 20,000 units.

Mr. MOSCOSO. That is right.

Mr. MINSHALL. You are still shy 780,000 units. Is that right?

Mr. MOSCOSO. We are not projecting it out, Mr. Minshall.

Mr. MINSHALL. Why do you get into it this far, then?

Mr. MOSCOSO. Because we set up the system this way. It is a very good system.

Mr. MINSHALL. Who will take care of the other 780,000 units?

Mr. MOSCOSO. Venezuela, the international lending agencies——

Mr. MINSHALL. No more help from us?

Mr. MOSCOSO. Perhaps we might give them loans but they will be on harder terms.

Mr. MINSHALL. That is all I have, Mr. Chairman.

Mr. PASSMAN. Thank you very much, sir.

Mr. ANDREWS. Who will determine the occupants for those 20,000 units?

Mr. MOSCOSO. This will be handled through the borrower, an organization called the Foundation for Community Development and Municipal Improvement.

Mr. ANDREWS. Will the tenants pay rent?

Mr. MOSCOSO. Yes; some. There will be more purchases. I will get you the information on how many will be rented and how many sold.

(The information supplied follows:)

VENEZUELA HOUSING LOAN

It is intended that all the housing units will eventually be sold to low-income occupants. In a small percentage of cases, perhaps 10 percent, houses will be temporarily rented with a portion of the rent applied to the eventual purchase price of the house.

Mr. MINSHALL. What does this come out as the cost per unit, Mr. Moscoso?

Mr. MOSCOSO. This will come out to around $4,000; $3,000 to $4,000.

Mr. MINSHALL. Pretty fancy establishment, is it not?

Mr. MOSCOSO. For a house?

Mr. MINSHALL. Remember the situation. These people are coming from shanty towns. You can build a pretty good shelter for $4,000.

Mr. MOSCOSO. The average family income of the tenants will be around $1,500.

Mr. MINSHALL. Describe these units. How many bedrooms? They are completely equipped with kitchen and all?

Mr. MOSCOSO. Very simple, plain, reinforced concrete construction, three- and four-story walkups. They will have an average of two bedrooms, dining room-living room combined and kitchen and bath.

Mr. MINSHALL. They are quite large units, then?

Mr. MOSCOSO. They are not large, not in relation to the population and to the number of people per family.

Mr. MINSHALL. How many will move into each of these units?

Mr. MOSCOSO. An average of 5.4 people.

Mr. ROSENSON. The average cost of the housing to be financed by the Inter-American Development Bank in the rural areas will run considerably less than the figure mentioned. It will run from $1,200 to $1,500. I have seen some of those houses.

Mr. MINSHALL. Two-bedroom units?

Mr. ROSENSON. That is right. They do a considerable part of the work themselves.

Mr. MOSCOSO. That would be the self-help housing projects which the Social Progress Trust Fund assists.

Mr. MINSHALL. How long will it take to complete these 20,000 units?

Mr. MOSCOSO. If the Government of Venezuela decides to continue the program it will take as long as it will take to meet that backlog of housing.

Mr. MINSHALL. Months, weeks, years?

Mr. MOSCOSO. About 20 years.

Mr. MINSHALL. Twenty years to build 20,000 units?

Mr. MOSCOSO. No.

Mr. MINSHALL. I don't follow you.

Mr. MOSCOSO. To build the necessary housing to meet the deficit. This project will take 2 to 3 years.

Mr. MINSHALL. They plan to give housing for all these 800,000 people?

Mr. MOSCOSO. I think the Venezuelan Government hopes to be able to do the complete job.

BRITISH GUIANA

Mr. PASSMAN. The next estimate is for $1,500,000 for British Guiana. This is a British territory?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Do you have to get Britain's permission before you can start an aid program in one of its territories?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. Do you have much difficulty in getting Great Britain to agree to let us give aid to their territories and possessions?

Mr. MOSCOSO. I have had nothing to do with it but I understand there has been no difficulty.

Mr. PASSMAN. How much aid have we given this British territory since the inception of the program?

Mr. MOSCOSO. $4.9 million.

Mr. PASSMAN. What amount do you have to the credit of this British territory as of June 30?

Mr. MOSCOSO. $1.672 million.

Mr. PASSMAN. How firm is our fiscal 1964 program for this British territory which seems to be on the verge of going Communist?

Mr. MOSCOSO. Our estimate is pretty firm.

Mr. PASSMAN. If you cannot pull them back will you continue the program, anyway?

Mr. MOSCOSO. [Off the record.]

Mr. PASSMAN. I notice your statement that there has been no secret of Mr. Jagan's admiration for the Communist world. Is that right?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. That statement is not classified?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. I believe Cuba became an important buyer from British Guiana since Jagan's rise to power?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Why do we program any aid to countries trading with Cuba and who are at the point of going Communist, and especially if they are British possessions to start with?

Mr. MOSCOSO. We are trying to do several things there. We are trying to prevent them from going to the other side.

(Off the record.)

Mr. ROONEY. Four, are you not also trying to keep up the backs of the British so that they retain their interest in the country and not write it off?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. I note that your objective is to [off the record].

Is that correct?

Mr. MOSCOSO. Yes.

SOURCES OF AID AVAILABLE TO BRITISH GUIANA

Mr. PASSMAN. What do you have for them in all spigots for fiscal 1964?

Mr. MOSCOSO. That is all we have.

Mr. PASSMAN. They have no Public Law 480? Are they eligible for these other spigots we discussed earlier?

Mr. MOSCOSO. They are not members of any of these other groups, IDA, Inter-American Development Bank, nor the United Nations.

Mr. PASSMAN. They are eligible for assistance from IDA, I am sure.

Mr. MOSCOSO. As part of the British Empire they would be eligible.

Mr. PASSMAN. Would that fact not make them eligible for assistance from some of the others, any of these programs that the others——

Mr. MOSCOSO. They are not members of the Inter-American Development Bank.

Mr. PASSMAN. When you move out of Latin America would they not be eligible for aid out of the U.S. projects?

Mr. MOSCOSO. As part of the British Empire, yes.

Mr. PASSMAN. Will you comment relative to your statement on page 81 [off the record].

Mr. COTTRELL. This is to prevent another Cuba in that area, Mr. Chairman.

Mr. PASSMAN. We did not prevent the existing Cuba with billions of dollars. The Ambassador who represented this area at one time said Cuba, per capita, was the most American-subsidized country on the face of the earth.

Mr. MOSCOSO. If the reforms——

Mr. PASSMAN. They had the largest per capita American subsidy of any nation on the face of the earth, and yet we lost them.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. At least it indicates money alone will not do the job.

Mr. MOSCOSO. Reforms.

Mr. PASSMAN. You cannot say that giving money will stop them from going Communist.

Mr. MOSCOSO. Reforms and money.

CONTRACT TECHNICIANS

Mr. PASSMAN. Page 397 of the project book indicates you had 12 contract technicians on board as of June 30, 1963.

How many such personnel did you request in 1963?

Mr. MOSCOSO. None.

Mr. PASSMAN. How much did you obligate for this project in which you had not even an illustrative justification?

Mr. STERNFELD. Mr. Chairman, I cannot identify that as one specific project.

Mr. PASSMAN. Can you give us an idea?

Mr. STERNFELD. It is not contained in one specific project. These 12 contract technicians were on duty as of——

Mr. PASSMAN. You cannot give the total.

Mr. STERNFELD. They were on duty as of the close of the year spread among the projects we have here.

Mr. PASSMAN. You requested no funds but you obligated how much?

Mr. STERNFELD. We requested $209,000 for contractual services.

Mr. PASSMAN. You did not request funds for the project on page 397 for 12——

Mr. STERNFELD. That is the total program.

Mr. PASSMAN. You did not request any funds for this program? I refer to the technicians.

Mr. STERNFELD. That is correct.

Mr. PASSMAN. Can you tell us what it will cost to carry this project through to conclusion?

Mr. STERNFELD. What I can say is this: We justified $209,000 for contractual services and obligated $919,000.

Mr. PASSMAN. You were asked earlier how much you justified and you said none. Now you say you obligated how much?

Mr. STERNFELD. $919,000 for contractual services. Last year we indicated we would obligate $209,000.

Mr. PASSMAN. You obligated about triple what you indicated?

Mr. STERNFELD. Within the identical total of $1½ million.

Mr. PASSMAN. Do you have a Public Law 480 program for British Guiana?

Mr. STERNFELD. No, sir, other than a small title III program.

Mr. PASSMAN. Do you contemplate having one?

Mr. MOSCOSO. We don't have one except a title III program of less than $100,000.

Mr. PASSMAN. Mr. Rhodes?

Mr. RHODES. It seems to me that this is a country we should stay out of. I don't often make this statement. I made it once before in another area.

I see no reason for the United States to have any kind of a program whatsoever in a British possession with the Prime Minister an avowed Communist who is an enemy to our way of life and who would destroy us whenever he could.

Our presence can only be interpreted by the people who might otherwise be opposed to him as being in support of him and his government.

As one member of the committee I am definitely out of sympathy with any program whatsoever in this country.

Mr. COTTRELL. There are elements in that country that are anti-Communist.

We think it is important to put in a small program.

Mr. RHODES. You and I are in fundamental disagreement. I agree with the idea that we certainly should do all we can to bolster anti-Communist feeling, but this is not the way to do it.

Mr. COTTRELL. These projects are directed to the interior at very low level operations where you may find people who would support you.

Mr. RHODES. There are better ways. If we can't find a better way to do it than putting in an aid program, then we have wasted a lot of money in my opinion.

Mr. PASSMAN. I certainly concur in the views of the gentleman.

When we get into 104, or more, of the nations of the world, and in fiscal 1964 you are in 100, it looks as though our resources will run out before our objectives are reached, if they ever can be reached.

Mr. COTTRELL. Among the 100 nations, this one is in our backyard and it is pretty close.

Mr. MOSCOSO. We are trying to——

Mr. PASSMAN. Good luck to you.

Mr. MOSCOSO. I hope it will be good luck for all of us.

Mr. ROONEY. In view of the fact this country is in our backyard, is the purpose of expending any part of these funds to help Jagan and his party or what he represents in this country?

Mr. MOSCOSO. No. We are favorable to the democratic——

Mr. ROONEY. This is a country which has an unusually high literacy rate. Is that true?

Mr. MOSCOSO. That is right; 80 percent is the rate.

Mr. ROONEY. What we do there might very well become better known to the people of the country than if we were to spend a similar sum in a country such as Brazil?

Mr. MOSCOSO. It becomes quite well known what we are trying to do, and it is also known that we disapprove of the Jagan regime.

Mr. COTTRELL. There is a large opposition party.

Mr. RHODES. I don't know how naive we can get.

When you go into a country with a Communist government, the people of the country are naturally going to think that we are there in support of the government. We are working against our own best interests.

If I have anything to do with it, I will put a limitation on the bill or anything else that is necessary to keep us out of this country.

EFFECT OF LITERACY RATE ON ACKNOWLEDGMENT OF ASSISTANCE

Mr. PASSMAN. Earlier in the hearings, witnesses have said that some of the recipient countries, with people who were relatively well educated were reluctant to let their people know where the aid came from.

What is the situation in British Guiana, a British territory with a high literacy rate?

Mr. MOSCOSO. This is a country with a very strong and articulate opposition, an opposition that is just a hair's breadth away from gaining control of the Government, and that opposition has seen to it that we are mentioned as a friend of the Guianese people, of not being in any way in favor of the Jagan government, and Mr. Jagan also has seen to it that his own people recognize our point of view.

Mr. PASSMAN. Did I describe our exchange in the hearings correctly?

Mr. MOSCOSO. In many countries——

Mr. PASSMAN. Did we not have a direct exchange that some of the countries with the education and know-how were reluctant to let the people know this was American aid?

Mr. MOSCOSO. In some of them, yes.

Mr. PASSMAN. I thought that is what you said.

The better educated they are the more effort they use to keep the facts of our aid away from the people, according to the exchange we had earlier.

SINO-SOVIET AID TO BRITISH GUIANA

Mr. RHODES. Mr. Chairman, on the 12th of August, in the Washington Post, there was a column written by Rowland Evans and Robert Novak about British Guiana. The tone is quite critical of the State Department and the way we are handling ourselves in British Guiana.

Let me ask this question: Off the record.

(Discussion held off the record.)

Mr. RHODES. It stated in the column I just mentioned that the Russians are pouring money in to help the Jagan government and to bolster him.

Yet in your book here on page 82, where you have a spot for Sino-Soviet bloc assistance it is shown blank. Is the column wrong?

Mr. COTTRELL. (Off the record.)

Mr. RHODES. In instances where there has been aid from Cuba to any of these countries, do you include that under the general heading "Sino-Soviet bloc assistance?"

Mr. COTTRELL. This is the only example I know of.

Mr. MILLER. I don't believe statistics on that.

Mr. RHODES. In other words, it is all covert aid.

If you did know of any aid would it be properly included under the Sino-Soviet bloc?

Mr. MOSCOSO. It would have to be, yes.

Mr. RHODES. That is all.

LEVEL OF U.S. ASSISTANCE

Mr. PASSMAN. You did "beef up" the program beginning with the year that Jagan went in, did you not?

Mr. MOSCOSO. In an effort to get the people on our side.

Mr. PASSMAN. I knew it was an effort for something, but I did make a statement of fact—that year you "beefed up" the program? Is it going up substantially now?

Mr. STERNFELD. Staying the same.

Mr. PASSMAN. You went from a program of $400,000 to $200,000, $100,000, $200,000, but in 1960 you went up to $400,000, in 1961 it was $800,000, and in 1962 it was $1,500,000, and you propose $1,500,000 for fiscal 1963.

Mr. MOSCOSO. The same level as 1962.

Mr. PASSMAN. We did step up the aid program substantially when Jagan took over?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Mr. Minshall?

Mr. MINSHALL. I have no questions except I want to make the record clear that I concur in my colleague's views on British Guiana. It is ridiculous we should be pouring any funds into this country.

I will join Mr. Rhodes in any effort he makes to keep funds out of the program for British Guiana.

Mr. PASSMAN. I concur in the gentleman's views.

BRITISH HONDURAS

Next is British Honduras, another British possession.

You do not actually have a program for fiscal year 1964 but you indicate that you may have a Public Law 480 program to continue to demonstrate U.S. interest in the British possessions. Is that right?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. That is the same excuse you gave on the other. Do you have the same type of situation here?

Mr. MOSCOSO. We assist with some of our surplus.

Mr. PASSMAN. Would we be selling for cash?

Mr. MOSCOSO. This is title III. This would be community relief.

Mr. PASSMAN. I thought so.

Off the record.

(Discussion held off the record.)

Mr. PASSMAN. What do you propose to put in there in fiscal 1964?

Mr. COTTRELL. No aid program is contemplated for British Honduras in fiscal year 1964, with the exception of the title III surplus commodities program.

Mr. PASSMAN. You have been sitting here through these hearings and observing the perhaps hundreds of cases since the beginning where you started fantastically high programs which had not even been presented to Congress on an illustrative justification?

At least here you indicate that you might start a program.

Mr. COTTRELL. I may say here that we might, but I say we have made no decision to aid——

Mr. PASSMAN. You indicate that you might start one.

Mr. COTTRELL. This is indicated in the record, that is right.

Mr. PASSMAN. Do you agree with that statement, Mr. Administrator?

Mr. MOSCOSO. Public Law 480; yes.

Mr. PASSMAN. In many other instances you have started high-priced programs when you gave no such indication.

Mr. MOSCOSO. We already have a title III program here.

Mr. PASSMAN. Can you tell us how much you had for fiscal 1963, then?

Mr. STERNFELD. For fiscal 1963 we had $200,000.

Mr. PASSMAN. What has been the total amount of aid to this British possession of Honduras?

Mr. MOSCOSO. $2.9 million.

Mr. PASSMAN. Did you have to get the British Government's permission before you started this aid program?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Do you know whether or not you had any difficulty in obtaining that permission?

Mr. MOSCOSO. We did not.

JAMAICA

Mr. PASSMAN. Next is the area of Jamaica. Is that an independent nation now?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. You are requesting $700,000 for fiscal 1964?

Mr. MOSCOSO. Plus the ——

Mr. PASSMAN. Add the other spigots for the total.

Mr. MOSCOSO. $———.

Mr. PASSMAN. The record shows $700,000, but when you put together all the spigots you have $———.

Mr. MOSCOSO. That is right.

SOURCES OF AID AVAILABLE TO JAMAICA

Mr. PASSMAN. Is Jamaica eligible for all these other various aids set up in these special kitties, such as the interregional account, Latin American region, and so on?

Mr. MOSCOSO. They are not eligible for the Social Progress Trust Fund, the Inter-American Development Bank——

Mr. PASSMAN. Are they eligible for the interregional fund?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. The Latin American regional account?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. International Development Association?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. For all the funds in the United Nations?

Mr. MOSCOSO. They have become members of the United Nations; yes, sir.

Mr. PASSMAN. Will you figure out how much they can get out of the remainder of the 16 spigots?

Mr. TENNANT. The amounts?

Mr. PASSMAN. Indicate the other spigots.

(Information supplied follows:)

SOURCES OF ECONOMIC DEVELOPMENT ASSISTANCE

Jamaica is eligible for funds from the following sources: IBRD, U.N. funds (including UNTA, ECOSOC, ILO, etc.), IFC, IDA, development grants, development loans, supporting assistance, contingency funds, regional funds, interregional funds, Peace Corps, food for peace, Eximbank.

Mr. PASSMAN. What has been the total of aid to Jamaica since the inception of the program?

Mr. MOSCOSO. $16.8 million.

Mr. PASSMAN. What sum do you have on hand unliquidated?

Mr. MOSCOSO. $5.42 million.

Mr. PASSMAN. You have a substantial pipeline there. I note your classified statement, on page 83, that [off the record].

Maybe that is why you are classifying it.

I note also your classified statement, on page 83, that [off the record].

Would you comment on that statement, in view of the fact you have a development grant project which is estimated at $100,000 proposed for fiscal 1964 and you have also approved a credit of $2,200,000 in fiscal year 1962?

Mr. MOSCOSO. We are trying to get the Jamaican Government to go on the private money market to do their financing.

Mr. PASSMAN. You already have an approved credit for this project.

Mr. MOSCOSO. For the future.

Mr. PASSMAN. You will disburse this money for this project?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Why would you classify that fact?

(Off the record.)

Mr. MOSCOSO. We are dicussing finances.

Mr. PASSMAN. They do not know that you have obligated $2.2 million to this project?

Mr. MOSCOSO. Yes; they do.

Mr. PASSMAN. You have approved a credit of $2,200,000, almost 1 year ago, from which there have been almost no disbursements.

Is it for the community water supply project?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Why would you classify the fact?

(Off the record.)

Mr. MOSCOSO. This is the first phase of the program. This is a program designed to improve 60 water systems by 1967.

Mr. PASSMAN. Do they know you have approved this credit to them?

Mr. MOSCOSO. Surely. It was signed.

Mr. PASSMAN. You will disburse these funds on this project——

Mr. MOSCOSO. As soon as bids are opened and approved.

Mr. PASSMAN. When you approved it over a year ago, June of 1962, and that is just before we pull the curtain down for the fiscal year——

Mr. MOSCOSO. No; this is no-year money.

Mr. PASSMAN. You approved it on June 29.

Mr. MOSCOSO. You also said this is the end of the year.

Mr. PASSMAN. One day before the end of the fiscal year.

Incidentally, this date was a Saturday, I believe.

You signed a contract the 31st of August.

Mr. MOSCOSO. This is no-year money.

Mr. PASSMAN. No disbursements have been made out of this credit and you have not received bids on this to know what it will cost?

Mr. MOSCOSO. Bids were received; they were too high and were rejected.

The project is being announced for bids again.

Mr. PASSMAN. [Off the record.]

PROJECT ASSISTANCE TO JAMAICA

You have included $75,000 for feasibility studies under the technical support project, on page 408, have you not?

Mr. MOSCOSO. $75,000; yes, sir.

Mr. PASSMAN. Have you any new projects included on page 409?

Mr. MOSCOSO. These are old projects.

SURINAM

Mr. PASSMAN. I believe for the Dutch Colony, Surinam, there is proposed some type of a high priority development program for 1964. Is that correct?

Mr. MOSCOSO. There is no program of development grant but we contemplate the possibility of making them a loan.

Mr. PASSMAN. This would be one of those soft credits?

Mr. MOSCOSO. We have not received any project yet.

Mr. PASSMAN. Have you gotten the permission of the Dutch Government—this is the Netherlands?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Do you have their permission to go in there?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Did you have difficulty getting them to agree to have us spend money in their possession?

Mr. MOSCOSO. No, sir.

Mr. PASSMAN. Have you given any aid since you got their permission to go in?

Mr. MOSCOSO. Yes. We have given them $3,700,000.

Mr. PASSMAN. Have you anything on hand unliquidated to their credit?

Mr. MOSCOSO. $418,000.

Mr. MINSHALL. Off the record.

(Discussion held off the record.)

Mr. MINSHALL. I have no questions.

TRINIDAD AND TOBAGO

Mr. PASSMAN. The next estimate is $5,700,000 for Trinidad and Tobago. Is this estimate for one or two nations?

Mr. MOSCOSO. This is one country which has that joint name.

Mr. PASSMAN. It has its independence?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. Would you give us the amount from all spigots? We deal here with $5,700,000 for Trinidad and Tobago.

Mr. MOSCOSO. $———.

Mr. PASSMAN. Are they eligible for all these other spigots of aid?

Mr. MOSCOSO. Except for the Inter-American Development Bank and ROCAP.

Mr. PASSMAN. This estimate, you indicate, is the result of the Hamilton-Williams agreement of November 1962 which undertakes to provide $10 million in fiscal 1963, $5 million in each of the 4 succeeding fiscal years. Is that correct?

Mr. MOSCOSO. In payment for the base, yes.

Mr. PASSMAN. We have no legal commitment to furnish this money out of AID beyond June 30?

Mr. MOSCOSO. Subject to congressional appropriation.

Mr. PASSMAN. There is no legal obligation as such?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. We will have discharged every legal obligation we have all over the face of the earth as of June 30. Is that right?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. Thank you. What is our responsibility to backstop the $30 million of supporting assistance, technical assistance? Should this not be a responsibility of Great Britain?

Mr. MOSCOSO. This is a base used by the U.S. forces and still is being used by the U.S. Navy.

GENERAL AND MISCELLANEOUS PROJECT

Mr. PASSMAN. I note that you have $11,500,000 in unliquidated obligations as of June 30, 1963, under the general and miscellaneous project on page 415.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. You are requesting an additional $5 million in fiscal 1964?

Mr. MOSCOSO. That is correct.

Mr. PASSMAN. Have you any new projects proposed in the list shown on page 417?

Mr. MOSCOSO. No; there are no new projects. We are now phasing out this mission in Trinidad.

LATIN AMERICAN REGIONAL PROGRAM

Mr. PASSMAN. We proceed next to a program which is a supplement to all the other projects. I refer here to the Latin American regional program for which the fiscal 1964 estimate is $13,723,000. Is that right?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Let us add to that amount all the other spigots and regions.

Mr. MOSCOSO. $14,200,000.

Mr. PASSMAN. Is that all of it?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. This regional program is a supplement to the country programs that we have been discussing; is that correct?

Mr. MOSCOSO. That is correct.

Mr. PASSMAN. What sum did you have in the Latin American regional program, unliquidated as of June 30?

Mr. MOSCOSO. $10,629,000.

Mr. PASSMAN. What part of this is unobligated?

Mr. TENNANT. That is unliquidated obligations, sir.

Mr. PASSMAN. What do you have unobligated from funds you requested last year, if any?

Mr. TENNANT. None.

FISCAL YEAR 1963 REQUEST AND PROGRAM LEVEL

Mr. PASSMAN. I note, on page 419, that your 1963 program was $18,783,000; is that correct?

Mr. MOSCOSO. That is correct.

Mr. PASSMAN. How much did you request and justify to the committee and the Congress last year?

Mr. MOSCOSO. $8 million.

Mr. PASSMAN. But you obligated $18,783,000?

Mr. MOSCOSO. The exact figure is $17,987,000.

Mr. PASSMAN. You actually obligated more than twice as much as you justified to Congress?

Mr. MOSCOSO. That's right.

Mr. PASSMAN. Was that action brought about by the fact that you recognized you were going to have nearly $1,100 million of unobligated funds and you had to get some of it in the gray area?

Mr. MOSCOSO. No, sir.

UNOBLIGATED BALANCES OF AID-PROGRAM FUNDS

Mr. PASSMAN. You have $515 million of purely unobligated funds, including the revolving fund?

Mr. TENNANT. That is correct, sir.

Mr. PASSMAN. And you have $688 million technically unobligated, but figuratively obligated, because it is held over in a reservation status waiting for the contracts to be signed; is that correct?

Mr. TENNANT. That represents commitments——

Mr. PASSMAN. This is in a reservation category, pending the signing of the contracts?

Mr. TENNANT. That is right.

Mr. PASSMAN. I have stated it correctly, have I not, that you have $515 million, including the revolving fund, completely unobligated, and you have $688 million over in the reservation category—commitments made by AID pending final signing of the contracts?

Mr. TENNANT. Yes, sir; that is correct.

Mr. PASSMAN. Thank you.

How much of this total would fall in that gray area?

Mr. MOSCOSO. None.

Mr. PASSMAN. But you did obligate more than double the amount that you justified?

Mr. MOSCOSO. We did.

Mr. PASSMAN. And you had on hand what amount as of June 30?

Mr. MOSCOSO. $10,629,000.

FISCAL YEAR 1963 NEW PROJECTS BEGUN UNDER INTERREGIONAL PROGRAM

Mr. PASSMAN. Would you indicate the number of new projects you started in fiscal year 1963 for which you did not request any funds from the Congress?

Mr. MOSCOSO. We will be glad to supply it.

Mr. PASSMAN. You have some of that information, do you not?

Mr. STERNFELD. Yes, sir.

Mr. PASSMAN. All right, let us have some of it, please.

Mr. MOSCOSO. Sixteen projects.

Mr. PASSMAN. Could you tell us the amount of money you obligated for the 16 projects you started for which you did not request funds?

Mr. MOSCOSO. $6,830,000.

Mr. PASSMAN. What will be the cost of completion of these 16 projects that you started out of funds you did not request the Congress to provide?

Mr. MOSCOSO. $10,855,000.

Mr. PASSMAN. Thank you.

ASSISTANCE TO PROJECT HOPE

Mr. PASSMAN. How much has Project Hope received in the form of assistance?

Mr. STERNFELD. Mr. Chairman, in the Latin America area we have only supplied in the fiscal year——

Mr. PASSMAN. I am talking about the total out of this region.

Mr. STERNFELD. We supplied $1,040,000. Project Hope has received grant aid in the past, not from Latin American regional funds.

Mr. PASSMAN. It must have come out of the contingency fund. Give us the worldwide cost, Mr. Controller.

Mr. TENNANT. I have a 1962 figure and a 1963 figure but you said a cumulative figure.

Project Hope

[In thousands of dollars]

Source of funds	*Cumulative obligations to June 30, 1963*
Asian Economic Development fund (fiscal year 1960)	2,333
Special assistance (fiscal year 1961)	291
Contingency fund (fiscal year 1961)	[1] 1,260
Supporting assistance (fiscal 1962)	979
Alliance for Progress grants (fiscal year 1963)	1,040
Total	5,903

[1] Of this amount, $1,000,000 is on a loan basis, of which $30,000 has been repaid.

SPECIAL INFORMATION GRANT TO PAN AMERICAN UNION

Mr. PASSMAN. What was the amount of the special information grant to the Pan American Union?

Mr. MOSCOSO. $1,600,000.

Mr. PASSMAN. Could you give us an idea of what that money was used for?

Mr. MOSCOSO. This has been used to develop an information program in the various nations of Latin America.

Mr. PASSMAN. Was that a program to familiarize the nations with the fact that they had an aid program, explaining it, and so on?

Mr. MOSCOSO. This is primarily a project to utilize the Latin Americans, themselves——

Mr. PASSMAN. To use the Latins to familiarize the Latins with the fact that there is an aid program?

Mr. Moscoso. That's right, and with the participation of funds by the Latins themselves.

Mr. PASSMAN. How much did you request for this project last year?

Mr. Moscoso. We didn't——

Mr. PASSMAN. You did not request any money?

Mr. Moscoso. We didn't.

U.S. INFORMATION ACTIVITY IN LATIN AMERICA

Mr. PASSMAN. Do you have any other type of U.S. agency operating in that area which might, with a fixed plan, impart this knowledge to the Latins?

Mr. Moscoso. Yes, sir.

Mr. PASSMAN. Would you name the agency for us?

Mr. Moscoso. A U.S. agency?

Mr. PASSMAN. Yes.

Mr. Moscoso. The USIA.

Mr. PASSMAN. Specifically what is their assignment in Latin America?

Mr. Moscoso. As I understand it, specifically, it is to provide information to Latin American nations with regard to the policies of the United States.

Mr. PASSMAN. Would the aid program be included?

Mr. Moscoso. Yes; it would.

Mr. PASSMAN. Is any other agency of the United States imparting that kind of information to the Latins?

Mr. Moscoso. I know of no other; no.

Mr. PASSMAN. Does the State Department have any type of educational program?

Mr. Moscoso. The cultural exchange program.

Mr. PASSMAN. How about the embassy offices?

Mr. Moscoso. The embassy offices might provide some information.

Mr. COTTRELL. The USIA section of embassies is charged with that responsibility, Mr. Chairman.

Mr. PASSMAN. You requested no money for this item last year?

Mr. Moscoso. No; we did not.

Mr. PASSMAN. Did you coordinate this program with USIA?

Mr. Moscoso. Yes; USIA is a member of the coordinating team, Mr. Chairman.

Mr. PASSMAN. They were familiar with this special grant and its purpose?

Mr. Moscoso. And they are participating in the way it is handled.

Mr. PASSMAN. Did you discuss this project with them before it was made final, and you had the cooperation of USIA in this new program?

Mr. Moscoso. We obtained their participation after we had initiated the——

Mr. PASSMAN. You got their permission and asked them to participate after you had initiated the project?

Mr. MOSCOSO. Yes. They participated in the discussions with other U.S. agencies—Treasury, AID, State—and the OAS when the idea of OAS activities under resolution E was first talked about.

Mr. ROONEY. Do you want him to tell you about the United Nations information activities and the Armed Forces radio network?

Mr. PASSMAN. Please do.

Mr. MOSCOSO. The United Nations——

Mr. PASSMAN. And the Armed Forces radio network.

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. There are six or seven different types of informational services available to familiarize our friends of Latin America with this aid program; is that correct?

Mr. MOSCOSO. To inform them of their responsibilities under the charter of Punta del Este.

EXPENDITURES UNDER SPECIAL INFORMATION PROGRAM

Mr. PASSMAN. How much did they liquidate out of this $1,600,000?

Mr. MOSCOSO. As of May 24, $609,000.

Mr. PASSMAN. How much are you requesting for fiscal year 1964 for this same project?

Mr. MOSCOSO. We are not requesting.

We hope that the Latin American countries will be able to finance this program.

Mr. PASSMAN. From what fund was this money obtained?

Mr. MOSCOSO. This is from the bilateral "Inter-American program for social progress" appropriation.

Mr. PASSMAN. How much had you disbursed out of this $1,600,000 at June 30, 1963?

Mr. MOSCOSO. $609,000.

Mr. PASSMAN. To what nations did you disburse the money?

Mr. STERNFELD. We can't identify them.

Mr. PASSMAN. You said it was for the Latins themselves. You programed $1,600,000 and you do not know to what nations you programed it?

Mr. STERNFELD. We can supply that.

Mr. MOSCOSO. We can supply the detail on that.

Mr. PASSMAN. Do you not have the information on this project now?

Mr. STERNFELD. We can supply that. We can call down and get the information.

Mr. PASSMAN. Submit it for the record.

(The information follows:)

OAS INFORMATION PROGRAM

The $1.6 million public information grant is being used for the following purposes:

(*a*) Funding of a headquarters staff responsible for planning and formulating activities as well as producing and distributing materials for use in all Alliance countries. Guidance and control of the information personnel attached to the national Pan American Union (PAU) offices is exercised from this office. The national offices, in turn, feed ideas and material into the national committees, under whose aegis national programs for the Alliance are carried out. This activity serves all countries jointly		$700,000
(*b*) Information materials and activities budgeted by the headquarters staff also serve the total area		240,000
(*c*) Funds directly applicable to the individual countries total $500,000. They are used to provide for the strengthening of staff and related expenses of the national committees and contributions to the joint operating funds. This contribution will amount to $7,000 each for Argentina, Brazil, Chile, Colombia, Ecuador, Mexico, Peru, and Venezuela; and $4,000 each for Bolivia, Costa Rica, El Salvador, Guatemala, Haiti, Honduras, Nicaragua, Panama, Paraguay, the Dominican Republic, and Uruguay.		
The following indicates the latest budgeted amounts:		
Estimated expenditures by countries (in U.S. dollars):[1]		
Argentina	33,000	
Bolivia	26,000	
Brazil	33,000	
Chile	33,000	
Colombia	33,000	
Costa Rica	26,000	
Dominican Republic	26,000	
Ecuador	33,000	
El Salvador	26,000	
Guatemala	26,000	
Haiti	26,000	
Honduras	26,000	
Mexico	33,000	
Nicaragua	26,000	
Panama	26,000	
Paraguay	26,000	
Peru	33,000	
Uruguay	26,000	
Venezuela	33,000	
		500,000
(*d*) Finally, general administrative costs account for the remaining amount		160,000
Total		1,600,000

[1] These amounts are scheduled to cover the incountry expenses from roughly July 1, 1962, through February of 1964.

APPENDIX I

Status of OAS-PAU budget by object class as of May 24, 1963

[In U.S. dollars]

	Object class	Budget	Outstanding subobligations
01	Salaries and personal service contracts	919,033.71	383,000
02	Per diem	43,359.45	1,500
03	Travel	55,979.14	13,300
04	Reproduction and contractual printing	17,530.41	4,000
05	Supplies and services	9,689.39	5,500
06	Communications	14,986.99	2,500
07	Equipment	72,556.34	27,000
08	Rental of office space	77,989.39	64,000
09	All other (not otherwise classified)[1]	387,975.18	220,600
	Grand total	1,600,000.00	721,400

[1] This figure includes $100,000 direct grants to each of the national committees to be used in engendering further local contributions; it also includes $228,000 for information materials to be originated in the Washington office, including printed matter, radio tapes, motion pictures, etc.

Mr. PASSMAN. I yield to Mr. Rooney.

PREVIOUS TESTIMONY ON SPECIAL INFORMATION PROGRAM

Mr. ROONEY. Mr. Moscoso, I should like to call your attention to testimony at page 978 of the appropriations hearings on the Department of State which were held exactly 5 months ago, to the day.

Mr. ROONEY. In connection with the money appropriated by the Congress last year for the Alliance for Progress, did they not transfer $6 million of that money to the Organization of American States?

Mr. MORRISON. That is Ambassador Morrison——

Mr. ROONEY. Did they or did they not?

Mr. MORRISON. They did. Of course that was spent the first year of the Alliance.

Mr. ROONEY. And did not AID give OAS a grant of $1,650,000 for an information program?

Mr. MORRISON. That is what I am trying to explain.

Mr. ROONEY. Explain? You have not even mentioned it. What you said—Is what you said preliminary?

Mr. MORRISON. No, sir. You asked what part of the additional cost goes to public information.

Mr. ROONEY. I did not think you had a dime until I read a press release of AID that said "AID granted $1,650,000 for an information program on behalf of the Alliance for Progress." It is dated back on December 6, 1962.

Mr. MORRISON. We had to submit a budget and the budget got approved about 2 weeks ago. I was trying to answer your question of this $1,650,000 you asked, what part goes to public information.

Mr. ROONEY. You said $75,000.

Mr. MORRISON. That is only part——

Mr. ROONEY. Why should you have any money in view of the fact you got $1.6 million from AID?

Mr. MORRISON. This information program involves three parts. First, the strengthening of the Pan American offices in each country. That is the only thing that comes out of the amounts we were talking about. I had not gotten into the grants, but I was trying to answer specifically about the increase from 1963 to 1964.

During this very time we are expanding the national offices of the Pan American Union in each country and giving them a public relations director and a secretary on a full-time basis. With the $1.6 million we provide a permanent, full-time staff for the 19 national commissions, plus a clearinghouse in the Pan American Union office in Washington, plus a program in each country.

Mr. ROONEY. Will this include radio?

Mr. MORRISON. It will include radio.

Mr. ROONEY. Television?

Mr. MORRISON. Television, newspaper ads, et cetera.

Mr. ROONEY. This is one of the most serious indictments of the U.S. Information Agency I have heard in a long time. What you have been saying backs up what I found in Poland last December. Our Polish program does not get to the Polish people. It gets only to a few long-hair, hard-core Communists in Warsaw and everybody knows it except the birds at the Polish desk of the Voice of America.

Mr. MORRISON. That is exactly what I am trying to say.

Mr. ROONEY. Then the VOA is no good.

Mr. MORRISON. I am not saying they are not good. I am saying VOA is not the way to sell the Alliance.

Mr. ROONEY. This is another aspect to this. VOA does not rate in the lineup of stations people in Latin America listen to.

Mr. MORRISON. I am not here to criticize anybody.

Mr. ROONEY. However you sure have done a splendid job of it.

Mr. MORRISON. It is not a program from which they get their news. The things I refer to would be said by a leader in Uruguay. But I want to explain the $1.6 million which is the result of a longtime effort on my part to get some funds. I had to start with nothing. I had a big job to do and had to start with nothing, except what we had already, and getting the interest of those in the Latin American field.

Mr. ROONEY. Mr. Ambassador, we will take very serious note of what you have said today.

Now, I have only read part of this testimony, Mr. Ambassador, and this testimony taken 5 months ago to the day—to wit, March 13, 1963—convinced the subcommittee handling funds for the U.S. Information Agency program that they had entirely too much money, and acted accordingly.

That is all, Mr. Chairman.

Mr. PASSMAN. Thank you very much, Mr. Rooney.

REDUCTION OF USIA FUNDS FOR LATIN AMERICAN OPERATIONS

Mr. MOSCOSO. Mr. Chairman, Mr. Rooney says that the U.S. Information Agency is going to get less money to do this propaganda job in Latin America, and quite frankly, I am very much concerned about that. I think that this vehicle of the OAS organization assisting in the propaganda effort of the Alliance is a very desirable one, and is one way of getting the information to the people, utilizing the people of the country themselves, which is something that we do not have available in other areas where we are trying to operate.

Mr. ROONEY. Now, Mr. Moscoso, you and I have been pretty much in agreement all along, but on this one I am in complete disagreement with you. I think that we have enough money spent for an effective public relations or public information program in Latin America and everywhere else in the world. If they will only do a proper job, with the money that they have, we wouldn't be discussing this here now. There was no reason at all to set up another information service among this Organization of American States, without even notifying either body, either the House or the Senate, of the Congress of the United States. I don't see that you are on good grounds here at all.

Mr. MOSCOSO. Well, don't you think it is a desirable thing to have nationals of these countries themselves do the propaganda job? You know that is where the Communists have the advantage over us.

Mr. ROONEY. They should be doing it on their own and they should be doing it not with American taxpayers' money, but with their own

money in a spirit of gratefulness for the beneficence of the American taxpayers.

Mr. MOSCOSO. We hope to be able to get them to support this program on their own, Mr. Rooney, but as no doubt you know, this is an educational job. I don't know whether we can do it right away.

SCOPE OF INFORMATION PROGRAMS IN LATIN AMERICA

Mr. ROONEY. Now, in addition to radio, Mr. Ambassador, you have binational centers and information libraries throughout all these countries in this area; do you not?

Mr. MOSCOSO. In some countries we have binational centers.

Mr. PASSMAN. And you have in addition to radio and television, films and motion pictures throughout these countries; is that correct?

Mr. MOSCOSO. Yes, sir.

Mr. ROONEY. And you teach engineering in all these countries. Now, don't you think this is going about far enough, instead of using more of the American taxpayers' money to set up a separate information program?

Mr. MOSCOSO. This is a program sponsored and made available through the nationals, themselves. In other words, the United States gets the benefit of this program, without——

Mr. ROONEY. I can't agree with you on this subject. I have done my best, and I have listened to you carefully all through your presentation, and I found myself in sympathy with your position in most instances. However, in this one we are as far apart as the North and South Poles.

Mr. MOSCOSO. I shall try to convince Mr. Rooney at another occasion.

Mr. ROONEY. I am sure you won't be able to, but you'll have the chance to try.

Mr. PASSMAN. Thank you, Mr. Rooney.

Mr. Administrator, I am certainly inclined to agree that the recipients of our generosity should know about it, but we received testimony in prior years—and I can assure you it is in the record—that we were not interested in these people knowing where the aid came from, so long as it led to helping the people. Are you familiar with that old philosophy?

Mr. ROONEY. I never heard of that philosophy.

Mr. PASSMAN. It is in the record. I can assure you of that fact.

So I am glad that today we want people to know where the aid is coming from. Of course, it was also said in prior years that we are not competing with Russia, and that we would never permit ourselves to be blackmailed into giving aid. It mattered not what the others were giving, we were told, we would not be blackmailed into giving aid by any threats that Russia might give the aid if we did not do so. That testimony, too, is in the record. So I repeat, I am glad we are now taking a different position, as you indicate today.

CHILD FEEDING PROGRAM

At page 424 you have a new project, child feeding, do you not?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. You obligated $1,500,000 last year. How much did you disburse?

Mr. MOSCOSO. $200,000.

(The following information was subsequently supplied:)

CHILD FEEDING PROGRAM OBLIGATIONS

Total fiscal year 1963 obligations for the child feeding program were $390,000. Orders were placed on May 24 and 29 with the General Services Administration (GSA) through the Government (Surplus) Property Resources Division for a total of $378,000.

Latest available records indicate that only $60,000 was disbursed for this project in fiscal year 1963.

Mr. PASSMAN. You have on hand $1.3 million, and you ask for $1.5 million, which would give you $2,800,000 to be disbursed in subsequent years?

Mr. MOSCOSO. That's right.

Mr. PASSMAN. Could you project the cost to complete this program?

Mr. MOSCOSO. This is $3 million.

Mr. PASSMAN. How much did you request for this program in fiscal year 1963?

Mr. MOSCOSO. This was not justified, Mr. Chairman.

Mr. PASSMAN. This is another one of those programs for which you did not request anything, but you have obligated $1,500,000.

The Congress cut the bill last year $1,032,400,000 below the budget estimate, yet around the world we find these fantastically high programs started that had not even been justified on an illustrative basis.

I know you have contract services. With whom are these?

Mr. STERNFELD. These are the contracts for the preparation of the text materials to be used in the school-lunch programs, Mr. Chairman.

Mr. PASSMAN. Text materials?

Mr. STERNFELD. Yes.

Teaching people how to mix milk, to develop menus for the school-lunch program—there are textbooks being prepared in Spanish for the child-feeding program by people here in the United States who have been dealing with this in our schools.

Mr. PASSMAN. How much of this item is actually in food itself; or, rather, in commodities?

Mr. STERNFELD. $1,200,000 is in commodities, but that does not include the food, itself. That includes stoves, cooking utensils, cubes, storage facilities——

Mr. PASSMAN. What they are getting here is a lot of conversation and a lot of paperwork and a lot of textbooks and some stoves and trucks? There's no food, itself, in this child-feeding program, in the $3 million.

Mr. STERNFELD. That is correct; no food, but——

Mr. PASSMAN. This is a child-feeding program, but there is no food in the child-feeding program.

Mr. STERNFELD. But the title III, Public Law 480, program is providing the food for the child feeding.

AGGREGATE PUBLIC LAW 480 ASSISTANCE TO LATIN AMERICA

Mr. PASSMAN. That program goes into probably hundreds of millions of dollars, does it not?

Mr. STERNFELD. I am sorry, I don't know the total of the title III program.

Mr. PASSMAN. Does it sound reasonable that in Latin America there are perhaps hundreds of millions of dollars in Public Law 480 aid going in?

Mr. STERNFELD. That does not sound reasonable.

Mr. PASSMAN. You had one little country for $38 million. The total wold be over $200 million, would it not?

Mr. STERNFELD. I think there was $150 million in 1963.

Mr. PASSMAN. I am talking about the aggregate amount.

Mr. STERNFELD. $156.5——

Mr. PASSMAN. The aggregate of Public Law 480 aid since the inception of the program.

Mr. STERNFELD. You are talking about all titles?

Mr. PASSMAN. The aggregate of all Public Law 480 aid all food programs.

Mr. STERNFELD. $156.5 million in 1961.

Mr. PASSMAN. I am talking about since the inception of the program.

Mr. STERNFELD. Since the inception of the program, $956 million.

Mr. PASSMAN. That is almost a billion dollars. How long has this program been going on?

Mr. MOSCOSCO. Since 1954.

CHILD FEEDING PROGRAM

Mr. PASSMAN. We give away about $1 billion worth of food to Latin America. Then you stick in the region $1.5 million that you did not justify to Congress, even on an illustrative basis, and you label it, or caption it, "child feeding," which certainly would draw the sympathetic understanding of people who would let it go at that, but there is not a cup of milk in this entire project. It is a lot of trucks and stoves and textbooks.

After you have disbursed maybe $800 million in food, then you are going to spend, here, money that you did not justify, up to $3 million, to teach them how to use the food in the future. Why do you not get some type of label other than one might attract sympathy? This is called "child feeding," but there is not an ounce of food in the $3 million.

Mr. MOSCOSO. It is supplied from another source.

Mr. PASSMAN. Why did you not say so? Why did you not say here, "Equipment in connection with the school lunch program"?

All this is a supplement to what you are getting out of the country programs. Do you have any of this kind of equipment, ranges, or anything, out of the country programs?

Incidentally, have you checked with the surplus property program to see if any of this equipment may be available?

Mr. STERNFELD. This material is being ordered through the General Services Administration, sir, and they check on availability. The procurement of this material is being done by the people in AID who are responsible for procurement of the excess property.

Mr. PASSMAN. In how many countries are you going to put this "child feeding" program which winds up to be ranges, textbooks, spoons, and trucks?

Mr. STERNFELD. By the end of the fiscal year, we would expect to cover almost all of the countries in Latin America, sir.

Mr. PASSMAN. But this is a one-time proposition. You are starting it in 1963 and closing it in 1964? Is that what you said?

Mr. STERNFELD. That is what we are planning.

Mr. PASSMAN. How did they manage to utilize the nearly billion dollars, let us say $800 million, worth of food that we gave them from 1948 through 1962?

Mr. MOSCOSO. We have not given them that. There is some confusion. There is some $600-odd million of that.

Mr. PASSMAN. Maybe you got local currency. One of these disguised things.

You pop up with a new project that you had not thought of for 17 years of the program, and all at once, in this regional program, we see "child feeding," $3 million, and we find that somebody is going to sell some ranges and some textbooks. But you have not had this kind of project since the inception of the program until now, have you?

Mr. STERNFELD. We expect to raise the level of the program from reaching 3,800,000 children eventually to get to 12 million to 14 million children.

Mr. PASSMAN. But you did not think of this program until we had given them, placed in their possession nearly a billion dollars worth of surplus commodities.

Mr. STERNFELD. That did not go for a child-feeding program.

Mr. PASSMAN. You do not think children got any of those commodities?

Mr. STERNFELD. If their parents purchased some of the wheat or cotton or butter in the market.

Mr. PASSMAN. You did not justify this project to Congress last year.

Mr. STERNFELD. That is correct.

Mr. PASSMAN. You have had these hot lunch programs and children's programs going on in Latin America for several years under Public Law 480, have you not?

Mr. STERNFELD. That is correct.

Mr. PASSMAN. Thank you.

SUCCESS OF CHILD FEEDING PROGRAM

Mr. MILLER. Mr. Chairman, I think this program has been quite successful in Latin America.

Mr. PASSMAN. You did not even request any funds last year, but then you obligated $1,500,000 and you spent only $200,000, and it is a success.

I am not talking about the food not being a success. I am talking about this particular project, which you have not even really started yet. You have disbursed only $200,000 out of $3 million.

Could you tell us, please, when you obligated the $1,500,000 that you did not request of the Congress last year?

Mr. STERNFELD. I do not have the information, sir.

Mr. PASSMAN. How about the Controller?

Mr. TENNANT. I do not have that information, sir.

Mr. MOSCOSO. We will furnish it for the record.

(The information subsequently supplied, follows:)

CHILD FEEDING PROGRAM: DATE OF OBLIGATIONS

Obligations for the child feeding program were for $390,000. On May 24 and May 29 orders were placed with the GSA for the bulk of these funds, totaling $378,000.

Mr. ROONEY. Since you are talking about this program, it might be well if we inquired, for the purpose of the record, as to exactly how the program works.

Mr. PASSMAN. Put it in the record. Also, I want the record to show I am not objecting to a school lunch program for children.

Mr. ROONEY. I take it that this program does not contribute the entire lunch. It is supplementation of a lunch program, is it not?

Mr. MOSCOSO. That is right. It is a supplementary meal.

Mr. ROONEY. Tell us what you contribute to the meal, whether it is by way of flour——

Mr. PASSMAN. Not through this program, Mr. Rooney. We are dealing with a different program altogether.

Mr. ROONEY. You said something about school lunch programs.

I am asking that the record show exactly how they use this money in connection with the program in these countries in the Alliance for Progress.

Mr. MOSCOSO. We will be happy to supply that.

Mr. ROONEY. That is a fair inquiry, is it not?

Mr. PASSMAN. Yes.

Mr. ROONEY. Someone might think, from reading this record, that we are going down there and cooking up lunches for these youngsters, and I am sure that is not the program at all. We are supplementing a lunch by way of certain surplus commodities that we have.

Mr. MOSCOSO. That is correct.

Mr. PASSMAN. Not with this $3 million.

Mr. ROONEY. Is that the reason you need the trucks and other equipment?

Mr. MOSCOSO. That is right, sir, to expand the program.

Mr. PASSMAN. You have had almost a billion dollar food program for Latin America under all phases of Public Law 480 aid, and the law that preceded Public Law 480. I endorse it and I support the school lunch program.

But, after it has been in effect for years, we find out today that you opened up another spigot and stated that you obligated $1,500,000 for a new regional program for which you did not request funds or justify funds last year. Am I correct?

Mr. MOSCOSO. Up to now, you are.

Mr. ROONEY. You have already said that. That becomes apparent from the record.

All I ask is that the record disclose exactly what this money is to be used for.

Mr. MOSCOSO. We will give the detail for the record.

Mr. PASSMAN. Of this program for which you had not requested funds of the Congress, which you had not justified even on an illustrative basis, you obligated $1,500,000. You do not know what date you obligated it. You do know that you disbursed only $200,000 of the money. You do not know when you disbursed that amount, but

you do state that you opened up the program in 1963 and plan to close it in fiscal 1964. Is that correct?

Mr. MOSCOSO. That is correct.

Mr. PASSMAN. Put all the information you want in the record on the school lunch program. I agree with Mr. Rooney it is a good program, but I am now dealing specifically with this project in the region.

Mr. ROONEY. Let us find out exactly what it is, and then we can determine whether it is good or bad.

Mr. PASSMAN. They said they did not know when they obligated the money or when they spent it.

Did you not tell us earlier you did not know these facts?

Mr. MOSCOSO. The date.

Mr. PASSMAN. You do not know the date you obligated or spent the money or for what purpose the $200,000 was for. I asked that question.

Mr. MOSCOSO. The $200,000 we are spending for the program was probably spent for the very commodities that we are mentioning here.

Mr. PASSMAN. But you do not know specifically, do you?

Mr. STERNFELD. We would have to check?

Mr. PASSMAN. I wish you would do that and find out what date you obligated the $1,500,000 that you did not request of the Congress for a new program in the regional part of the overall program, and what you obligated the $200,000 for, and in the event you are going to open this part of the program in 1963 and close it in 1964, what you will be able to accomplish out of this amount of money when you relate it to approximately $1 billion in commodities previously provided under different spigots of foreign aid.

Mr. STERNFELD. Mr. Chairman, this program is not related to the billion dollars worth of Public Law 480. If you wish, we can try to relate it to what we have put into school lunches and the child-feeding program.

Mr. PASSMAN. We want you to relate it to the school lunch programs.

Mr. STERNFELD. That is not a billion dollars in previous years.

Mr. PASSMAN. You yourself established that $900-and-some-odd million, or thereabout, had gone into Latin America through the Public Law 480 program. What has gone into the school lunch program? But you agreed to insert the information in the record, did you not?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. If you had had the information——

Mr. ROONEY. You might permit him to answer. I am becoming very much interested in it. I would like to hear it.

Mr. PASSMAN. I asked, and he said he did not have the information. They said they would insert the information in the record.

Mr. MOSCOSO. We will insert it.

(The information supplied follows:)

NATURE OF THE CHILD FEEDING PROJECT

Under the terms of title II and title III of Public Law 480, child-feeding programs have been carried out in Latin America for a number of years. Some programs are carried out under the sponsorship of a U.S. registered voluntary relief agency such as CARE, Catholic Relief Services, Church World Service, etc., while

some are conducted on a government-to-government basis. The majority of children are reached through programs carried out in schools, but many other children are reached in maternal and child-health programs (where distribution is made at health centers), through service to children's institutions (such as orphanages), etc.

The usual procedure is for the United States to provide supplementary foods from surplus stocks and to transport it to the port of entry into the cooperating country. The cooperating country always admits the food duty free and usually pays for the costs of offloading, handling, warehousing, internal transportation, food processing, and distribution. Mothers' groups, and other volunteer groups sometimes help to prepare the food. To the degree possible, the responsibility and the costs of running child-feeding programs are shifted more and more to the host country.

In Alliance for Progress countries, the total number of school-age children being reached was as follows:

	Millions
Fiscal year 1960	2.5
Fiscal year 1961	2.8
Fiscal year 1962	3.9

In fiscal year 1963, a decision was made to initiate a special effort to rapidly increase the number of Latin American children receiving a supplementary ration of U.S. food for peace commodities from 3.9 million to 12 or 13 million. Thus it was necessary to reach the children who were most remote from the major population areas. These are the children in greatest need; but they are also the most difficult to reach.

It is estimated that it would require $1,500,000 a year for 2 years in order to reach this target. The funds would provide trucks to transport the food to these remote areas; stoves, pots, and pans to prepare the food; cups, plates, and spoons to be used by the children; as well as for the preparation, printing, and distribution of educational and training materials.

Wherever possible, U.S. Government owned excess property is utilized. All of the trucks being provided for the program are being procured from this source—which costs about 15 percent of the open market acquisition price.

It is estimated that the number of children being reached is rapidly increasing. A regional workshop has been held for supervisors from all over Latin America, and workshops are beginning to be held in the individual countries. Three manuals, eight booklets, and seven posters on the use of foods and operation of child-feeding programs have been prepared and are being distributed throughout Latin America. Sponsors have been encouraged to undertake new or expanded programs on the understanding that help will be forthcoming in the form of equipment. This expansion could not have taken place and a continuing expansion could not occur without the provision of such help, which is being provided on a one-time basis.

Some of the pertinent cost figures may be of interest:

(*a*) The full market value of supplementary food rations for 9 million children for 1 year is $24.39 million; the cost of ocean transportation is $4.17 million. Therefore, the cost to the United States of providing supplementary feeding to Latin American children is about 1 cent a day per child. The dollar equivalent contributions of the Latin American countries totaled $13,211,000 in the past school year. This figure does not include salaries of administrators, teachers, food handlers and distributors or the value of work contributed by parents and other local voluntary workers.

(*b*) The cost to the project for procuring, rehabilitating, and shipping the first 66 vehicles is approximately $59,400. If these same vehicles were to be procured on the open market the cost of procurement and shipment would be over $330,000.

OAS TECHNICAL COOPERATION PROJECT

Mr. PASSMAN. I note from your statement, on page 429, in connection with the OAS technical cooperation project, that AID has been contributing funds on a ratio of 70 percent United States to 30 percent member countries, and that you propose gradually to lower your contribution as other countries contribute more. Is that correct?

Mr. MOSCOSO. That is correct.

Mr. PASSMAN. What countries are contributing the 30 percent as against our 70? You may give us the number now and put the names in the record.

Mr. MOSCOSO. Argentina——

Mr. PASSMAN. Just give us the number and put the names in the record, please.

Mr. MOSCOSO. Nineteen.

(The information requested follows:)

Contributions supporting OAS program of technical cooperation, program year 1963

[U.S. dollars]

Country	Pledge	Percent	Country	Pledge	Percent
Argentina	35,000.00	1.04	Honduras	5,000.00	0.10
Bolivia	(1)		Mexico	29,450.00	.90
Brazil	540,540.56	16.19	Nicaragua	(1)	
Colombia	153,847.50	4.61	Panama	6,000.00	.20
Costa Rica	6,750.37	.20	Paraguay	5,000.00	.10
Cuba	(1)		Peru	28,000.00	.80
Chile	272,270.00	8.15	United States [2]	2,200,000.00	65.90
Dominican Republic	7,000.00	.20	Uruguay	(1)	
Ecuador	4,500.00	.10	Venezuela	30,000.00	1.00
El Salvador	6,722.00	.20			
Guatemala	7,000.00	.20	Total	3,337,080.43	100.00
Haiti	(1)				

[1] These countries had not pledged their contributions for the 1963 program as of Aug. 19, 1963.
[2] The total U.S. obligation in fiscal year 1963 was $2,500,000, which included $300,000 for the calendar year 1962 contribution.

Mr. PASSMAN. Putting it on a percentage basis, if we break it out at an average, it means 19 nations are putting up 1½ percent each, and we are putting up 70 percent. Am I applying accurate arithmetic there?

Mr. ROONEY. No.

Mr. PASSMAN. If there are 19 nations putting up 30 percent and we are putting up 70 percent, what would be the average percentage of each nation? Let us so how far off I am?

Mr. MOSCOSO. Yes, that is about right.

Mr. PASSMAN. Mr. Rooney said no.

Mr. ROONEY. 1½ percent to the 70 percent, that would be the 19th part of 70 percent.

Mr. PASSMAN. What do you get, Mr. Director?

Mr. TENNANT. I did not compute it.

Mr. PASSMAN. I stated that 19 countries are putting up 30 percent of the total money, whereas we are putting up 70 percent. On a percentage basis, how much would that be per country, on the basis of 19 countries, ours being 70 percent of the total? Make it $100. We are putting up $70, and 19 countries are putting up $30. What percentage would that be for each country on that basis? About 1½ percent?

Mr. TENNANT. On an average, yes.

Mr. ROONEY. And what would be the percentage of the share in each of those countries?

Mr. MOSCOSO. You would have have to divide that.

Mr. PASSMAN. This is a regional account. It goes into a pot.

Mr. MOSCOSO. That is right.

Mr. PASSMAN. This is for the 19 Latin American countries?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. What we get is the satisfaction of knowing that we are generous, helping a friend. Is that right?

Mr. MOSCOSO. That is right.

Mr. STERNFELD. Mr. Chairman, I would like to volunteer some information to correct the page here. Page 429 shows actual through June 30, 1962. The figure should have read $14,300,000, and not the figure included in there. That is the project we have just been discussing.

Page 429, OAS technical cooperation. Under the estimated fiscal year 1963, the obligated figure should be shown as $2,500,000.

Mr. PASSMAN. How much are you requesting?

Mr. STERNFELD. We are requesting $2,300,000.

Mr. PASSMAN. How much did you request?

Mr. STERNFELD. Did we request last year?

Less than $2 million.

Mr. PASSMAN. "Less" could be anything down to six bits.

Mr. STERNFELD. I know we increased our amount, because other countries came in, and we maintained our percentage.

On this program, we requested $1,700,000.

Mr. PASSMAN. Could you project the cost of this thing to completion, since that figure has gone up? You had just a dash in this book; is that right?

Mr. STERNFELD. That is right.

Mr. PASSMAN. Let us go back and pick up this other figure.

Mr. STERNFELD. $29,100,000.

That is from the inception of the program in 1951.

Mr. PASSMAN. Thank you.

OAS–OECD TRAINING FREE WORLD FELLOWSHIPS

In connection with the OAS–OECD training free world fellowships, page 436, I am wondering whether this is the same project for which last year you indicated you had obligated $1,500,000 in fiscal 1962, and now you are requesting $300,000 for fiscal 1964?

Mr. STERNFELD. That is correct.

Mr. PASSMAN. What happened to the $1,500,000 of 1962 obligations?

Mr. STERNFELD. $1.5 million was not obligated.

Mr. MOSCOSO. We obligated $610,000.

Mr. ROONEY. That was in 1963?

Mr. STERNFELD. It is on page 494. This is an estimate of the obligations that we made in 1962, and that amount was never obligated, sir.

AMERICAN INSTITUTE FOR FREE LABOR DEVELOPMENT

Mr. PASSMAN. In July of last year, I believe, you were justifying this figure.

Did you justify the $1,118,000 that you obligated for the American Institute for Free Labor Development project, on page 431?

Mr. STERNFELD. It was not in our presentation book, but in the testimony——

Mr. PASSMAN. Did you justify this project last year?

Mr. STERNFELD. Yes, we discussed this project with the committee on pages 162 and 163 of the hearings.

Mr. PASSMAN. How much did you justify?

Mr. STERNFELD. $250,000.

Mr. PASSMAN. How much did you obligate?

Mr. MOSCOSO. $1,118,000.

Mr. PASSMAN. What amount are you requesting for fiscal 1964?

Mr. MOSCOSO. $850,000.

Mr. PASSMAN. Project the cost of this project to completion, if you can.

Mr. MOSCOSO. $5 million.

Mr. PASSMAN. A rounded out, even figure of $5 million.

Thank you.

INTER-AMERICAN POLICE ACADEMY

I note that you obligated $475,000 in fiscal 1963 for the Inter-American Police Academy, although your justifications were for only $300,000, and that you estimate in fiscal 1964, $525,000. Is that correct?

Mr. MOSCOSO. That is correct.

Mr. PASSMAN. You did obligate more than you requested?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. What is the cost to complete this project by the end of 1969?

Mr. MOSCOSO. $4 million.

FORMAT OF JUSTIFICATION MATERIAL

Mr. PASSMAN. With reference to the proposed new format that we have agreed would be good, you are going to have it flash in your eyes the minute you turn the pages. You will start off by obligating—you have some projects as low as $2,000, but when you look up in the right-hand corner—it would cost too much to put it in red, would it not?

Mr. MOSCOSO. I think it would still be a good idea.

Mr. PASSMAN. It would cost too much to have a double run and get red up there?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. That would certainly call it to a person's attention. Have you your own machines down there?

Mr. MILLER. For printing this?

Mr. PASSMAN. Yes.

Mr. MILLER. For the project book.

Mr. PASSMAN. Do you have a two-color deal?

Mr. TENNANT. These project data sheets are typewritten on a paper mat and then duplicated and assembled by a contractor printer.

Mr. MILLER. We will be glad to get an estimate of the cost and see whether it is too much or not.

Mr. PASSMAN. Find out what it will be; and while you are doing it, find out what it cost to put all this "gray stuff," where you classify information in there, will you?

Mr. MILLER. We certainly will, sir.

Mr. PASSMAN. You know what I mean by the "gray stuff?"

Mr. MILLER. Yes, sir.

(Information supplied follows:)

ESTIMATE OF ADDITIONAL COST FOR PRINTING IN TWO COLORS

Based on the number of project sheets included in volumes III and IV and using the same process, it is estimated that it would have cost between $1,600 and $1,700 additional to print the data in two colors.

The gray shading in volumes I and II involves a total cost of about $5 for the material which, at the time of final review, is applied to the copy by AID personnel prior to printing. There is no additional printing cost involved.

LATIN AMERICAN POLICE ACADEMY PROJECTS

Mr. PASSMAN. How does this project differ from the proposed police academy that AID is planning to initiate here in the Washington area?

Mr. MOSCOSO. This is for Latin America in Panama.

Mr. PASSMAN. How does the project differ from the proposed police academy the Agency is planning to initiate in the Washington area in fiscal year 1964?

Mr. STERNFELD. (Off the record.)

That does not mean the Latin Americans are going to be trained in Spanish in the proposed academy.

Mr. PASSMAN. I asked you a simple question, how does this project differ from the proposed police academy that AID is planning to initiate in the Washington area?

Mr. SCHEINMAN. The only portion of the police academy testimony which was classified related to the background of the development of the plans for the academy. The fact of the Agency's proposal and the training programs which would be conducted in the Washington academy, were not classified.

Mr. PASSMAN. The gentleman from New York may review the record and the previous testimony of the previous witnesses with respect to the previously discussed academy?

Mr. SCHEINMAN. Yes.

Mr. MOSCOSO. I do not know the details of the academy.

Mr. PASSMAN. Will you please fill the administrator in on it?

Mr. SCHEINMAN. Yes.

My recollection is that at the time we discussed the Washington academy with the committee, the witness indicated that the academy in Latin America would provide training in the Spanish language.

Mr. MOSCOSO. This will be Spanish speaking.

Mr. PASSMAN. Please tell that man who came up here, he did not know what he was talking about; that security is not involved and his testimony was not classified; that he was mistaken.

REGIONAL BOOK PROGRAMS

How much did you request and justify last year for the regional book programs project, on page 435?

Mr. MOSCOSO. It had a different title last year.

Mr. PASSMAN. What was the title last year?

Mr. MOSCOSO. Regional technical aids center.

Mr. PASSMAN. What was the amount?

Mr. MOSCOSO. Regional technical aid center, $1 million.

Mr. PASSMAN. Again, what is the name of the thing this year?

Mr. MOSCOSO. The name is regional books program, but we mention the fact that this includes the regional technical aids center.

Mr. PASSMAN. You started this in 1957?

Mr. STERNFELD. Here again, sir——

Mr. PASSMAN. You started this program in 1957?

Mr. STERNFELD. That is correct.

Mr. PASSMAN. Did you phase it out under one name and open it up under another name?

Mr. STERNFELD. No, sir.

Mr. PASSMAN. Did you change the name of the program?

Mr. STERNFELD. As you will note, we said that this program began in 1957. Again, I must indicate the book is in error in terms of the actual obligations to June 30, 1962, and the figure should read "$1,167,000."

Mr. STEED. Instead of what amount?

Mr. STERNFELD. $160,000.

Mr. PASSMAN. How much money did you request for the project under the old name that is applicable to the project under the new name?

Mr. STERNFELD. $1 million.

Mr. MOSCOSO. $1 million.

Mr. PASSMAN. How much did you obligate?

Mr. MOSCOSO. $1,100,000.

Mr. PASSMAN. Now project the estimated cost to the end.

Mr. STERNFELD. $5 million.

SEMINARS AND WORKSHOPS PROJECT

Mr. PASSMAN. How many seminars and workshops did you hold during fiscal 1963 at a cost of $250,000?

Mr. STERNFELD. We haven't the information here.

Mr. PASSMAN. Can you tell us how much just one of these seminars cost?

Mr. STERNFELD. We have the figures on the workshop here and we will have to supply——

Mr. PASSMAN. Would one of those workshops deal with the role of a woman in the economic development of Latin American agriculture?

Mr. STERNFELD. That is included.

Mr. PASSMAN. You are the people who administer this program?

Mr. STERNFELD. Yes, sir.

Mr. MOSCOSO. We haven't our files here, Mr. Chairman.

Mr. PASSMAN. Thank you.

Mr. CONTE. Do you have a workshop on electronics, data processing?

Mr. WEISSMAN. Census data.

Mr. PASSMAN. You will submit the information on the seminar and workshop?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. And a breakdown of costs?

Mr. STERNFELD. By project and by workshop.

Mr. PASSMAN. Give us the detail.

Mr. WEISSMAN. $57,710 for the data processing workshop.

Mr. CONTE. You did have it, then.

Mr. WEISSMAN. Bureau of Census, U.S. Department of Commerce.

Mr. PASSMAN. Will you put the other detail in the record?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. The number of seminars and workshops and the cost of each one.

Mr. MOSCOSO. That is right.

(The information requested follows:)

SEMINARS AND WORKSHOPS

Seminars and workshops for which fiscal year 1963 funds were obligated

Johns Hopkins University School of Medicine $53,100

A 2-month seminar, held in the spring of 1963, was attended by 12 key health ministry officials of 10 Latin American countries and 5 other oversea officials. Emphasis was placed on the country's educational facilities, organization, health facilities, and supplies. Through the "case method" an analysis of community needs, health demands, and health resources was made. Johns Hopkins staff is currently undertaking followup of the participants in their respective countries to assist them in analyzing and developing their health programs.

Audiovisual communications workshop 6,500

Fiscal year 1963 funds provided for the report and evaluation of a 4-month audiovisual workshop for 45 participants from 15 countries. The funds also provided for the transport of workshop supplies and materials.

This course, held February 5–June 5, 1962, at the University of Costa Rica in San Jose, trained key educational personnel from the Ministries of Education, Agriculture, Health, and Public Safety in techniques required to plan, produce, use, and evaluate audiovisual communication materials. It is intended that they, in turn, produce and teach the production and use of these materials in their respective fields. The training already had indicated its "multiplier" effect in that almost all of the participants have introduced training courses in their respective organizations to improve the teaching methods of technicians on their staffs.

National Rural Electric Cooperatives Association 10,000

The NRECA conducted in Washington a 6-day management institute in June 1963 for 12 Latin American leaders of rural electric cooperatives, emphasizing management functions, planning principles, and techniques. The management institute was a part of a total NRECA training program based at the University of Wisconsin. In addition, the NRECA is auditing the training given to oversea participants by several electric cooperatives, and is responsible for publication in Spanish of training manuals.

Training aids to expand agriculture credit, cooperatives, and related technical skills 53,700

The expansion of agriculture credit facilities and cooperative organizations is a major goal in most Latin American countries. In the past 18 months over 400 new credit unions have been organized in Latin American countries, resulting in an urgent need for trained personnel to administer them. 2 regional seminars were held; 1 dealing with agriculture credit and cooperatives met in Buenos Aires June 11–22, 1962, and was attended by 145 participants from 14 countries; a 2d seminar held in Rio de Janeiro, Brazil, May 27–June 9, 1962, dealt with marketing, storage, and processing of agricultural products and was attended by 52 participants from 14 countries.

These funds ($53,700) were used to translate, publish, and distribute reports of the seminars in English, Spanish, and Portuguese; and, for the production of a 16-millimeter film to be used in training activities in Latin America conducted by the Credit Union National Association of the United States

Seminars and workshops for which fiscal year 1963 funds were obligated—Continued

Role of women in urban development	$30,000
42 women leaders from 8 Latin American countries attended a 2-week workshop in Bogotá, Colombia, on this subject. This conference stimulated the organization of volunteer groups at the neighborhood level in concrete activities to promote improved health, housing, and school conditions in their areas. The workshop and AID's support of it received widespread publicity in the Latin American press.	
Funds for the workshop covered travel and per diem for all participants and workshop leaders; consultant fees for 2 U.S. experts; and general administrative costs.	
Bureau of the Census, U.S. Department of Commerce	53,710
A worshop on "Data Processing of Economic Censuses" was held in Costa Rica Feb. 11–Apr. 5, 1963. 26 technicians from 14 Latin American countries participated. The 2-month course provided the participants with improved and uniform techniques and methodology for the conduct of the censuses. These participants will have a major voice in economic census programs on which the Latin countries will spend about $10,000,000 for which they already have considerable responsibility.	
Total fiscal year 1963 obligations	207,010

TAX ADVISORY SERVICE PROJECT

Mr. PASSMAN. I note that you obligated $135,000 for fiscal 1963 for the tax advisory service project, on page 440, which appears to be the pay, per diem, and travel for the Internal Revenue Service employees. Is that correct?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Is this a supplement to the individual agents which AID sends to the individual countries?

Mr. MOSCOSO. This is the training program and not the cost of those people.

Mr. PASSMAN. We have gone through all of these countries and you have agents who go directly into the countries to train these people.

Mr. MOSCOSO. That is right. This is the training.

Mr. PASSMAN. Is this the cost of training agents you send into the country?

Mr. MOSCOSO. That is right.

Mr. FLYNT. What is the purpose of conducting the tax advisory service as set down on page 440?

Mr. MOSCOSO. The idea is to train more internal revenue agents and officers who will be utilized in Latin America.

We have created a reserve. We don't know exactly when they will be needed. We are training them so we can make them immediately available and already trained so we will not lose any time.

Mr. FLYNT. Those are U.S. Internal Revenue agents?

Mr. MOSCOSO. Yes. The Treasury Department established this reserve of people especially trained to be sent down immediately.

Mr. FLYNT. For what purpose would we have Internal Revenue agents operating in South America?

Mr. Moscoso. To lend the Latin American governments and their finance ministries assistance to improve administration and collection.

Mr. FLYNT. Is that not a function of the individual Latin American country rather than a function of the U.S. Government?

Mr. Moscoso. This is technical assistance. We don't collect taxes but teach them how to collect taxes.

Mr. FLYNT. Have they asked for this service?

Mr. Moscoso. Yes, very definitely.

Mr. FLYNT. When and by whom?

Mr. Moscoso. We shall supply that for the record. I was personally present one day when the president of a country requested this and we agreed to supply this service.

Dominican Republic	Consultation concerning initiation of training program for tax personnel.	December 1962	Do.
Panama Costa Rica Guatemala El Salvador	Technical advice and assistance in improving real property tax administration.	1963–64	AID regional tax adviser.

Mr. PASSMAN. It is most impressive, is it not, when one of these people makes a request?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. With that kind of approach it does not take long to get an AID commitment, does it?

Mr. MOSCOSO. It doesn't take long for us to supply the service.

Mr. ROONEY. Do they ever volunteer to pay the transportation and keep of these Government employees, for instance, those from the Internal Revenue Bureau?

Mr. MOSCOSO. It may have happened and I don't know.

Mr. ROONEY. You perhaps would have a heart attack if you ever heard of that happening, would you not?

Mr. MOSCOSO. Not exactly.

Mr. ROONEY. You must be in very good health.

Mr. CONTE. I think the Ambassador may be able to straighten out the record. You said you had money here to train the agent to go down there to train agents to South America.

Mr. MOSCOSO. That is right.

Mr. CONTE. This agent already is trained?

Mr. MOSCOSO. That is right, but this is language capability and the fiscal systems of Latin American countries.

Mr. CONTE. Internal Revenue has some 60,000 agents of all kinds and types in the U.S. Government. Among that 60,000 there must be some who speak Spanish.

Mr. MOSCOSO. There perhaps are some, yes, but they do not know the tax system of these countries. This is highly specialized training they go through.

Mr. CONTE. All right.

Mr. MOSCOSO. Sometimes the Spanish-speaking agent may not be available.

Mr. CONTE. I just point that out. For I believe that amongst the 60,000 agents there must be a handful of Spanish-speaking agents in the U.S. Service, and also they are so keen and adapted in accounting procedure and law that it would not take them very long to pick up the tax system of that country on the airplane on the way down there.

Mr. MOSCOSO. No.

Mr. CONTE. Listen, from the testimony presented here there are not too many paying taxes down there so there can't be too many tax laws.

Mr. PASSMAN. What will it cost to complete this project?

Mr. MOSCOSO. $1,250,000.

Mr. PASSMAN. From start to finish?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. What is the number of U.S. agents involved?

Mr. MOSCOSO. There will be 25 in 1963.

Mr. PASSMAN. For all Latin America?

Mr. MOSCOSO. No. There also will be some State and local tax experts.

Mr. STERNFELD. We haven't the total figures here to completion.

Mr. PASSMAN. Can you get the information for us?

Mr. STERNFELD. Yes, sir.

Mr. PASSMAN. Put it in the record.

Have you an arrangement with the Internal Revenue Service to train internal revenue agents for Latin American countries?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Do you remiburse the Bureau of Internal Revenue?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. For their costs?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. Can you give us an idea as to the amount of money you have reimbursed the Internal Revenue Service for services provided?

Mr. MOSCOSO. Yes, sir.

Mr. PASSMAN. And whether or not it includes travel and all other expenses.

Off the record.

(Discussion held off the record.)

Mr. MOSCOSO. That is right.

Mr. ROONEY. If we have the total cost to the taxpayer for the salary, transportation, per diem, and all related costs it will give the complete picture. Then give an indication of the amount reimbursed to the Bureau of Internal Revenue for the salaries and whatever else is included.

Mr. MOSCOSO. We shall supply that.

(The information supplied follows:)

REIMBURSEMENTS TO INTERNAL REVENUE SERVICE FOR TAX ADMINISTRATION ASSISTANCE

In accordance with previous AID–IRS agreements, AID has reimbursed IRS for the salaries of agents temporarily assigned to Latin American missions as tax administration consultants or advisers. These reimbursements are as follows:

IRS salary costs:	
Fiscal year 1962	$10,783
Fiscal year 1963	37,050

Other costs, such as travel and per diem, were directly funded by AID as follows:

	Fiscal year 1962	Fiscal year 1963
Travel	$4,000	$4,500
Per diem	4,320	10,260
Other related	400	450
Total AID direct funded costs	8,720	15,210

On May 28, 1963, an interagency agreement was signed which provided that IRS would henceforth fund all the costs (salary, per diem, travel, and other) of tax administration assistance to Latin American countries subject to reimbursement by AID.

Mr. PASSMAN. I serve on the subcommittee with my distinguished colleague, Mr. Conte, which handles the money bill for the Internal Revenue Service.

I recall no discussion during our hearings where they specifically requested money for this purpose or whether they indicated they received such reimbursement.

The staff assistant to that subcommittee also is here and he does not remember anything of that nature.

Mr. ROONEY. That would be right in the committee print for Treasury and Post Office appropriations.

Mr. PASSMAN. There is nothing in there for this purpose so far as I know.

PROJECT FOR STRENGTHENING LOCAL GOVERNMENT

Would you comment briefly on your proposal for the new project entitled "Strengthening Local Government," for which you request $320,000 in 1964?

Mr. MOSCOSO. We are attempting to assist the Latin American governments in solving some of the problems of the local communities, particularly the municipal governments.

In Latin America we have a phenomenon which is almost unique there, and that is that there is a macrocephalic growth of the societies, usually one big city dominating the whole economy, and we are trying to develop the smaller cities and trying to give them the technical assistance which will permit them to solve some of the problems.

Mr. PASSMAN. We are dealing with a regional program which is a supplement to the country programs through which you fund project by project.

This is a side kitty from which you can draw additional personnel and supplementary funds to the country program?

Mr. MOSCOSO. Yes; because it is easier to do it this way.

Mr. FLYNT. Let us go off the record.

(Discussion held off the record.)

Mr. PASSMAN. Will you give us the cost of completion of this project?

Mr. MOSCOSO. $700,000.

INTER-AMERICAN COOPERATIVE FINANCIAL PROJECT

Mr. PASSMAN. You have an inter-American cooperative financial project, shown on page 442, for which you are requesting $250,000 for fiscal 1964; is that correct?

Mr. MOSCOSO. It was not possible to complete——

Mr. PASSMAN. I asked if you were requesting $250,000.

Mr. MOSCOSO. We are.

Mr. PASSMAN. Did you request any funds for this project last year?

Mr. MOSCOSO. No.

Mr. PASSMAN. You did not justify this project; you did not request funds for it.

How much did you obligate for the project last year?

Mr. MOSCOSO. Nothing.

Mr. PASSMAN. These books are really fouled up.

Mr. STERNFELD. This was an estimate made in February.

Mr. PASSMAN. You put on the books in February that you obligated $300,000.

Mr. STERNFELD. Estimated.

Mr. PASSMAN. You have not brought up new books, have you?

Mr. STERNFELD. No, sir.

Mr. PASSMAN. You show you liquidated $100,000. What kind of a guessing game are you people running?

We find out now you obligated nothing and you did not disburse anything.

Mr. MOSCOSO. That is right.

Mr. MILLER. Mr. Chairman, we prepare these books in about February of the year. It is our understanding that this presentation will be made as quickly as possible, so we try to give the best estimates we can at that time.

Mr. PASSMAN. A lot of this stuff is just as phony as a $3 bill.

You say that you have a fine project here. You give it a nice, fancy name. You show when it was started. You say you obligated $300,000 and you spent $100,000, and you had unliquidated $200,000.

Now you say you did not have any such project—you obligated nothing, carried over nothing, and so on.

It leads me to think this thing is a guessing game from April to September.

However, I have reviewed it correctly so far as the information is concerned?

Mr. STERNFELD. That is right.

Mr. PASSMAN. It is running true to form.

What is the amount of the proposed AID credit to provide capital to this fund?

Mr. MOSCOSO. Nothing has been provided for this organization.

(Discussion held off the record.)

Mr. FLYNT. Before you leave page 442, in light of the colloquy that just took place, would we be correct in striking under "Estimated obligations, fiscal year 1963," the figure 300?

Mr. MOSCOSO. Yes.

Mr. FLYNT. And in the next column would we be justified in striking the figure of 200?

Mr. MOSCOSO. Yes.

Mr. ROONEY. Mr. Flynt, I think the purpose of the chairman in making his inquiry is this:

When these figures were set up at the beginning or the middle of fiscal year 1963, you expected at that time to obligate $300,000?

Mr. MOSCOSO. That is right.

Mr. ROONEY. And you would have paid off $100,000 of the $300,000?

Mr. MOSCOSO. That is right.

Mr. ROONEY. But in running your program you did not get to the point of doing either of these things?

Mr. MOSCOSO. That is right.

Mr. ROONEY. But, as the chairman says, why did you not volunteer this fact rather than require the question to be asked?

For one, as I sit here and look at this page, this is a program in existence. Nobody says anything. If the question were not asked by the chairman, we would all be deluded, if that is the proper word, into thinking that this is a going program when it yet has not even been started.

Is that your point, Mr. Chairman?

Mr. PASSMAN. It is.

Off the record.

(Discussion held off the record.)

Mr. ROONEY. Has as yet a contract been entered into with the Fund for International Cooperative Development?

Mr. MOSCOSO. No; there has not.

Mr. ROONEY. Again if we were to read page 442, we would be lulled into assuming that such a contract was already in existence. Is that a fair statement?

Mr. MOSCOSO. Yes.

Mr. STERNFELD. Part of the problem here is that we are in a position of having more up-to-date knowledge on these regional projects because they are operated out of Washington rather than these other projects which are obligated in the field, reports on the specific individual projects item by item are not contained as——

OUTDATED INFORMATION ON PROJECT DATA SHEETS

Mr. RHODES. How many more of these projects do you have which are in a similar position?

Mr. STERNFELD. I have tried to indicate as each project came along, where there was later information.

Mr. RHODES. But we don't get to considering every one of them individually.

Mr. PASSMAN. We spot check only.

Mr. RHODES. We spot check. It seems we should have some sort of information for the record as to which of the projects are different from the manner in which they are presented in this book.

Mr. PASSMAN. Is it not also true that we have run across scores of projects for which you did not request funds and you did not justify the projects to Congress, but you did obligate the funds?

Mr. MOSCOSO. Yes.

Mr. PASSMAN. In some instances you did make some disbursements from the funds?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. So that was a guessing game just like this, except that on some of those projects you disbursed funds but on some you did not. Is that a statement of fact?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Thank you.

Mr. Moscoso. I wanted to say that Mr. Merrill usually indicates those projects in which there has been such a discrepancy.

Mr. PASSMAN. We work this thing together, and a lot of this is just spot checking. Many times we flip over these pages and run into these projects as we go along.

We could not possibly go over 2,900 individual projects, or 2,400 projects and subprojects, in 100 nations, could we?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. We just spotcheck it. I would almost bet you that we could flip to almost any page in the book and there would be an irregularity.

Mr. RHODES. I am serious about this. It seems to me all the pages that are in this book, worldwide, at the end of the fiscal year should be reviewed by the agencies. In your area you should review it, and all the other regions should.

Before we mark up this bill we should have a full set of these pages which are up to date.

Mr. MOSCOSO. We have been trying to bring the regional projects up to date in this review.

AID PROGRAM JUSTIFICATION PROCEDURE

Mr. PASSMAN. All of these projects are illustrative?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. You can throw away every one and substitute new projects?

Mr. MOSCOSO. That is right.

Mr. PASSMAN. Even under the development credit program, you do not know what conutry or what projects will get what money until you get the money?

Mr. MOSCOSO. That is right.

Mr. RHODES. Most of these pages represent projects which are projects which were started previously. These are not illustrative but they are in being.

Where they are in being we should have accurate figures as to the amount of money which was actually obligated as of the end of the last fiscal year.

Mr. PASSMAN. I agree with the gentleman, but I wanted to say that if we ever establish the same type of standards for projects in the 100 nations to which we are giving aid in fiscal year 1964 that we have for projects in America, and you would justify these projects as such and then come get your money, we would not have all this confusion, would we?

Mr. MOSCOSO. I will accept that if you also can have a congressional delegation here from each of these countries.

Mr. PASSMAN. Do you mean we have waited all these years to start such a program and if you do not do it tomorrow the world will come to an end?

Wouldn't it be a better program if you came up here with specific data and justified the program, established the need for the money, and then get the money and carry out the program intelligently?

You don't disagree with that philosophy?

Mr. RHODES. I agree with it absolutely.

Mr. PASSMAN. If you do not do something of that nature this program will fall flat on its face.

Off the record.

(Discussion held off the record.)

TECHNICAL CONSULTANTS AND MISCELLANEOUS SUPPORT PROJECT

Mr. PASSMAN. I notice that you are requesting $130,000 for technical consultants and miscellaneous support projects, on page 444. You requested of the Congress and justified $130,000. Is that correct?

Mr. STERNFELD. $130,000.

Mr. PASSMAN. How much did you obligate to these projects?

Mr. MOSCOSO. $309,000.

Mr. PASSMAN. How much will it cost to finish this item?

Mr. MOSCOSO. $2 million.

I am not surprised about this, Mr. Chairman. We are starting a new program with a new approach in Latin America. This is not the old technical assistance program——

Mr. PASSMAN. You have thousands of projects in Latin America. This is just one.

AID BASIC RESOURCES CENTER PROJECT

Mr. PASSMAN. I notice, on page 445, that you obligated $20,000 in fiscal year 1963 to the basic resources center project. How much did you justify for this project last year?

Mr. MOSCOSO. It is not justified.

Mr. STERNFELD. And, sir, the actual——

Mr. PASSMAN. You did not justify anything, but you obligated $20,000?

Mr. STERNFELD. We obligated $5,000, sir.

Mr. PASSMAN. How much are you requesting for fiscal year 1964?

Mr. MOSCOSO. $350,000.

Mr. PASSMAN. You save $15,000, but you are offsetting it by asking $350,000. How much is the cost of this one at completion?

Mr. MOSCOSO. $750,000.

Mr. PASSMAN. From $5,000 to $750,000. And these figures are just about as reliable as a lot of the others we have gone over in the past.

Are there any new projects proposed for initiation in fiscal year 1964, on page 447?

Mr. MOSCOSO. No, sir.

LANGUAGE CHANGES

Mr. PASSMAN. Without objection, we shall insert in the record at this point the proposed language submitted by AID.

Mr. ROONEY. These are the proposed language changes are they, Mr. Chairman?

Mr. PASSMAN. Yes, sir.

(The information referred to is as follows:)

Foreign Assistance Appropriation Language for Fiscal Year 1964

PROPOSED LANGUAGE

[Deletions indicated by black brackets, new language by italic]

Item No.

TITLE I—FOREIGN [AID (MUTUAL SECURITY)] *ASSISTANCE* FUNDS APPROPRIATED TO THE PRESIDENT

1 For expenses necessary to enable the President to carry out the provisions of the Foreign Assistance Act of 1961, as amended, to remain available until June 30, [1963] *1964*, unless otherwise specified herein, as follows:

2 Development grants: For expenses authorized by section 212, [$225,000,000] *$257,000,000, to remain available until expended.*

3 *American schools and hospitals abroad: For expenses authorized by section 214(c), $20,000,000, to remain available until expended.*

3A American *schools and* hospitals abroad (special foreign currency program): For [assistance] *expenses* authorized by section 214[(b)] (d) [for hospital construction, $2,800,000], *$4,690,000*, to be used to purchase foreign currencies which the Treasury Department determines to be excess to the normal requirements of the United States.

4 [Investment guaranties: For expenses authorized by section 222(f), $30,000,000, to remain available until expended.]

EXPLANATION OF LANGUAGE

Item No.

The language which is proposed provides for appropriations to carry out the provisions of the Foreign Assistance Act of 1961, as amended (hereinafter referred to as the "FAA"). Most of these appropriations are requested pursuant to authorizations to be inserted in that act by the proposed Foreign Assistance Act of 1963 now pending before the Congress (hereinafter referred to as the "authorization bill"). Some are requested pursuant to continuing authorizations now contained in the FAA. In addition, there is set out below an explanation of the reasons for each of the proposed additions to, and changes in, the provisions of the Foreign Aid and Related Agencies Appropriation Act, 1963.

1 This language states that the requested appropriations are for purposes of carrying out the provisions of the FAA. The language specifies that these appropriations are to remain available until June 30, 1964, unless otherwise specified.

2 This language appropriates funds for development grants, and provides that such funds shall remain available until expended.

3 This language appropriates funds for American schools and hospitals abroad as authorized by the new section 214(c) proposed to be added to the FAA by the authorization bill.

3A This language provides a special appropriation for the purchase of excess foreign currencies as authorized by the new section 214(d) proposed to be added to the FAA by the authorization bill; $790,000 of this appropriation will be for the American University in Cairo and $3,900,000 for the children's hospital in Krakow, Poland.

4 This appropriation is omitted as unnecessary at this time. Under the proposed amendments to the investment guaranty provisions of the FAA contained in the authorization bill, existing reserves will be available to pay claims on a first-

FOREIGN ASSISTANCE APPROPRIATION LANGUAGE FOR FISCAL YEAR 1964—Continued

Item No.	PROPOSED LANGUAGE	Item No.	EXPLANATION OF LANGUAGE
			come-first-served basis. Since it is anticipated that existing reserves will be adequate to meet all claims likely to arise during fiscal year 1964, no new appropriation for this purpose is requested.
5	International organizations and programs: For expenses authorized by section 302, [$148,900,000:] *$136,050,000.* [*Provided*, That no part of any other appropriation contained in this Act, except funds appropriated under this Act for the contingency fund (not to exceed $10,000,000), may be used to augment funds or programs contained in this paragraph and no funds shall be transferred from funds appropriated under any other paragraph of title I of this Act to the contingency fund for the purpose of augmenting funds or programs contained in this paragraph.]	5	This language appropriates funds for voluntary contributions to international organizations and programs. The language omits a proviso prohibiting transfers from other appropriations under the FAA and limiting to $10 million the use of the contingency fund for voluntary contributions to international organizations and programs. The proviso is omitted because programs of international organizations are as subject to unanticipated, priority requirements as other programs. This appropriation does not preclude limited use of other appropriations for multilateral programs, but relates to contributions to the United Nations, its specialized agencies, and contributions to other worldwide agencies and programs.
6	Supporting assistance: For expenses authorized by section 402, [$395,000,000] *$435,000,000.*	6	This language appropriates funds for supporting assistance.
7	Contingency fund: For expenses authorized by section 451(a), [$250,000,000] *$300,000,000.*	7	This language appropriates funds for the contingency fund.
8	Alliance for Progress [, development loans: For assistance authorized by section 252, $425,000,000, to remain available until expended. Alliance for Progress, development grants: For expenses authorized by section 252, $100,000,000]: *For assistance authorized by section 252, including not to exceed $100,000,000 for grants, $650,000,000, to remain available until expended.*	8	This language appropriates funds for the Alliance for Progress and provides that such funds shall remain available until expended. It provides that not more than $100 million of the amount appropriated may be made available on a grant basis. The appropriation would be authorized under section 252 of the FAA as that section is proposed to be amended by the authorization bill. The amendment would add an authorization for an appropriation beginning with fiscal year 1964 of any unappropriated balances of funds authorized to be appropriated in any of the fiscal years 1963 through 1966.

9 *Inter-American social and economic cooperation program: For expenses authorized by section 2 of the Act of September 8, 1960 (70 Stat 870), as amended, $200,000,000 to remain available until expended.*

9 This language appropriates funds as authorized by an amendment proposed to be made by the authorization bill to Public Law 86–735 (an act to provide for assistance in the development of Latin America and in the reconstruction of Chile). The language also provides that the funds will remain available until expended.

Of the funds made available, $195.5 million will be used for the Social Program Trust Fund administered by the Inter-American Development Bank, and the balance will be used for various activities of the Organization of American States relating to the economic development of Latin America.

10 Development loans. For expenses authorized by section 202 (a), [$975,000,000] *$1,060,000,000*, to remain available until expended.

10 This language appropriates funds for development loans, and provides that such funds shall remain available until expended.

11 Administrative expenses: For expenses authorized by section 637 (a), [$49,500,000] *$57,250,000.*

11 This language appropriates funds for the administrative expenses of the Agency for International Development, which administers nonmilitary assistance under the FAA and carries out related functions under such laws as the Latin American Development Act (Public Law 86–735) and Public Law 480.

12 Administrative and other expenses: For expenses authorized by section 637(b) of the Foreign Assistance Act of 1961, as amended, and by section 305 of the Mutual Defense Assistance Control Act of 1951, as amended, [$2,700,000] *$3,025,000.*

12 This language appropriates funds for administrative expenses which are incurred for functions of the Department of State under the FAA and unrepealed provisions of the Mutual Security Act (e.g. sec. 408 relating to the North Atlantic Treaty Organization) or for normal functions of the Department of State which relate to such functions, and funds for administrative and other expenses which are incurred for functions of the Department of State under the Battle Act.

FOREIGN ASSISTANCE APPROPRIATION LANGUAGE FOR FISCAL YEAR 1964—Continued

Item No.	PROPOSED LANGUAGE	Item No.	EXPLANATION OF LANGUAGE
13	Military assistance: For expenses authorized by section 504(a) of the Foreign Assistance Act of 1961, as amended, including administrative expenses authorized by section 636(g)(1) of such Act, which shall not exceed [$24,500,000] *$25,000,000* for the current fiscal year, and purchase of passenger motor vehicles for replacement only for use outside the United States, [$1,325,000,000: *Provided*, That none of the funds contained in this paragraph shall be available for the purchase of new automotive vehicles outside of the United States] *$1,405,000,000*.	13	This language appropriates funds for military assistance as authorized by the amendment proposed to section 504(a) of the FAA by the authorization bill. In addition, the language provides that not to exceed $25 million of the amount appropriated may be used for administrative expenses of carrying out military assistance programs administered by the Department of Defense. It also authorizes the purchase of passenger motor vehicles, for replacement only, for use outside the United States. Finally it deletes the proviso prohibiting use of military assistance appropriations for the purchase of new automotive vehicles outside of the United States on the grounds that this proviso is generally duplicative of existing limitations in the FAA section 604(a) and in executive branch policy as stated in the President's memorandum to the Secretary of State of October 18, 1961 (26 F.R. 10543) as amended. Moreover, the proviso does not permit the flexibility necessary to make occasional exceptions to the general requirement when it may be in the national interest to do so.
14	Unobligated balances as of June 30, [1962] *1963*, of funds heretofore made available under the authority of the Foreign Assistance Act of 1961, as amended, are, except *for funds made available under authority of section 451(a) of said Act or* as otherwise provided by law, hereby continued available for the fiscal year [1963] *1964* for the same general purposes for which appropriated and amounts certified pursuant to section 1311 of the Supplemental Appropriation Act, 1955, as having been obligated against appropriations heretofore made under the authority of the Mutual Security Act of 1954, as amended, and the Foreign Assistance Act of 1961, as amended, for the same general purpose as any of the subparagraphs under "Economic Assistance", are hereby continued available for the same period as the respective appropriations in such subparagraphs for the same general purpose [: *Provided*, That such purpose relates to a project	14	This provision continues available in fiscal year 1964 for the same general purposes, balances of funds, except contingency funds, previously made available under authority of the FAA which are unobligated as of June 30, 1963. In addition, the language provides for the reobligation of obligated balances of economic assistance funds heretofore made available under the Mutual Security Act of 1954, as amended, and the FAA which are deobligated in fiscal year 1964. Under the language funds may only be reobligated for the same period as the respective new appropriations for the same general purpose. That part of the proviso which limits reobligation of such balances to projects previously justified to the Congress is deleted. This limitation is unnecessary because unlike prior years, the executive branch's request for new obligational authority in fiscal year 1964 takes into account estimated recoveries (deobligations) in

previously justified to Congress and the Committees on Appropriations of the House of Representatives and the Senate are notified prior to the reobligation of funds for such projects and no objection is entered by either Committee within 60 days of such notification].

GENERAL PROVISIONS

15 [SEC. 101. None of the funds herein appropriated (other than funds appropriated under the authorization for "International organizations and programs") shall be used to finance the construction of any new flood control, reclamation, or other water or related land resources project or program which has not met the standards and criteria used in determining the feasibility of flood control, reclamation and other water and related land resource programs and projects proposed for construction within the United States of America as per memorandum of the President dated May 15, 1962.]

16 [SEC. 102. Obligations made from funds herein appropriated for engineering and architectural fees and services to any individual or group of engineering and architectural firms on any one project in excess of $25,000 shall be reported to the Committees on Appropriations of the Senate and House of Representatives at least twice annually.]

17 [SEC. 103. Except for the appropriations entitled "Contingency fund" and "Development loans", not more than 20 per centum of any appropriation item made available by this title shall be obligated and/or reserved during the last month of availability.]

18 [SEC. 104. None of the funds herein appropriated nor any of the counterpart funds generated as a result of assistance hereunder or any prior Act shall be used to pay pensions, annuities, retirement pay or adjusted service compensation for any persons heretofore or hereafter serving in the armed forces of any recipient country.]

that year and has been reduced accordingly. Also deleted is the remainder of the proviso which stipulates that no funds shall be reobligated until the Committees on Appropriations have been notified and neither committee enters an objection within 60 days of notification. This requirement has raised serious constitutional questions and has created a situation making efficient management of the funds difficult.

15 Section 101 is omitted because section 611(b) of the FAA, which is a permanent provision of law, is substantially the same.

16 Section 102 is omitted because it is not clear that the reports required by this section have been of sufficient interest or use to the Congress to justify the administrative cost involved in their preparation.

17 Section 103 is omitted because it is not believed that this provision, which for the bulk of the funds shortens by an additional month the already too brief 8- or 9-month period which the executive branch traditionally has for programing and obligating funds, promotes effective or sound administration.

18 Section 104 is omitted because the executive branch has never made such a use of funds and does not intend to do so.

FOREIGN ASSISTANCE APPROPRIATION LANGUAGE FOR FISCAL YEAR 1964—Continued

Item No.	PROPOSED LANGUAGE	Item No.	EXPLANATION OF LANGUAGE
19	[SEC. 105. The Congress hereby reiterates its opposition to the seating in the United Nations of the Communist China regime as the representative of China, and it is hereby declared to be the continuing sense of the Congress that the Communist regime in China has not demonstrated its willingness to fulfill the obligations contained in the Charter of the United Nations and should not be recognized to represent China in the United Nations. In the event of the seating of representatives of the Chinese Communist regime in the Security Council or General Assembly of the United Nations, the President is requested to inform the Congress insofar as is compatible with the requirements of national security, of the implications of this action upon the foreign policy of the United States and our foreign relationships, including that created by membership in the United Nations, together with any recommendations which he may have with respect to the matter.]	19	Section 105 is omitted because it is not related to the foreign assistance program.
20	[SEC. 106. It is the sense of Congress that any attempt by foreign nations to create distinctions because of their race or religion among American citizens in the granting of personal or commercial access or any other rights otherwise available to United States citizens generally is repugnant to our principles; and in all negotiations between the United States and any foreign state arising as a result of funds appropriated under this title these principles shall be applied as the President may determine.]	20	Section 106 is omitted since the substance of this provision is already contained in section 102 of the FAA.

21 SEC. [107]*101.* (a) No assistance shall be furnished to any country which sells, furnishes, or permits any ships under its registry to carry to Cuba, so long as it is governed by the Castro regime, under the Foreign Assistance Act of 1961, as amended, any arms, ammunition, implements of war, atomic energy materials, or any articles, materials, or supplies, such as petroleum, transportation materials of strategic value, and items of primary strategic significance used in the production of arms, ammunition, and implements of war, contained on the list maintained by the Administrator pursuant to title I of the Mutual Defense Assistance Control Act of 1951, as amended.

(b) No economic assistance shall be furnished to any country which sells, furnishes, or permits any ships under its registry to carry items of economic assistance to Cuba so long as it is governed by the Castro regime, under the Foreign Assistance Act of 1961, as amended, unless the President determines that the withholding of such assistance would be contrary to the national interest and reports such determination to the Foreign Relations and Appropriations Committees of the Senate and the Foreign Affairs and Appropriations Committees of the House of Representatives. Reports made pursuant to this subsection shall be published in the Federal Register within seven days of submission to the committees and shall contain a statement by the President of the reasons for such determinations.

21 The executive branch does not object to the enactment of this provision.

Item No.	PROPOSED LANGUAGE	Item No.	EXPLANATION OF LANGUAGE
22	[SEC. 108. Any obligation made from funds provided in this title for procurement outside the United States of any commodity in bulk and in excess of $100,000 shall be reported to the Committees on Appropriations of the Senate and House of Representatives at least twice annually: *Provided*, That each such report shall state the reasons for which the President determined, pursuant to criteria set forth in section 604(a) of the Foreign Assistance Act of 1961, as amended, that foreign procurement will not adversely affect the economy of the United States.]	22	Section 108 is omitted for several reasons. First the President's balance-of-payments message, actions by the Secretary of Defense, and recent policy determinations issued by the Administrator of AID emphasize the administration's determination to reduce offshore procurement with foreign assistance funds to a minimum. Over 80 percent of all procurement in fiscal year 1964 with foreign assistance funds will be from the United States. Second, reports of economic assistance grant obligations for procurement outside the United States will not provide the Congress with any meaningful information. Almost all grant funds are obligated on a basis permitting procurement in the United States and in underdeveloped countries. Thus, all obligations must be reported. However, since few of the commodities required can be obtained in the underdeveloped countries, more than two-thirds of these funds are actually used for procurement in the United States. Third, obligations of economic assistance loan funds almost always tie procurement to the United States. Even where an exception is allowed, reporting the obligation will not disclose to the Congress the actual source of the procurement, for funds obligated on a basis permitting offshore procurement may nevertheless be used for procurement in the United States. Fourth, the provision mistakes the determination required by section 604(a) which is that any permitted foreign procurement will not result in any adverse affects on the U.S. economy which outweigh the economic and other advantages of such procurement. The executive branch would not object to this provision if the word "obligation" were changed to "expenditure", and the proviso were corrected to accurately restate section 604(a). These changes would render the reports meaningful to Congress.

23 [SEC. 109. (a) No assistance shall be furnished to any nation, whose government is based upon that theory of government known as communism under the Foreign Assistance Act of 1961, as amended, for any arms, ammunition, implements of war, atomic energy materials, or any articles, materials, or supplies, such as petroleum, transportation materials of strategic value, and items of primary strategic significance used in the production of arms, ammunition, and implements of war, contained on the list maintained by the Administrator pursuant to title I of the Mutual Defense Assistance Control Act of 1951, as amended.

[(b) No economic assistance shall be furnished to any nation whose government is based upon that theory of government known as communism under the Foreign Assistance Act of 1961, as amended (except section 214(b)), unless the President determines that the withholding of such assistance would be contrary to the national interest and reports such determination to the Foreign Affairs and Appropriations Committees of the House of Representatives and Foreign Relations and Appropriations Committees of the Senate. Reports made pursuant to this subsection shall be published in the Federal Register within seven days of submission to the committees and shall contain a statement by the President of the reasons for such determination.]

23 Section 109 is omitted because it duplicates section 620 (f) of the FAA and does not add to the restrictions contained in that section.

24 [SEC. 110. None of the funds appropriated or made available pursuant to this Act for carrying out the Foreign Assistance Act of 1961, as amended, may be used for making payments on any contract for procurement to which the United States is a party entered into after the date of enactment of this Act which does not contain a provision authorizing the termination of such contract for the convenience of the United States.]

24 Section 110 is omitted as unnecessary in view of executive branch policies and regulations.

FOREIGN ASSISTANCE APPROPRIATION LANGUAGE FOR FISCAL YEAR 1964—Continued

Item No.	PROPOSED LANGUAGE	Item No.	EXPLANATION OF LANGUAGE
25	[SEC. 111. None of the funds appropriated or made available under this Act for carrying out the Foreign Assistance Act of 1961, as amended, may be used to make payments with respect to any contract for the performance of services outside the United States by United States citizens where such citizens have not been investigated for loyalty and security in the same manner and to the same extent as would apply if they were regularly employed by the United States.]	25	Section 111 is omitted because those employees or contractors for whom security clearance is important as a consequence of the sensitivity of their positions would be given security clearances as a routine matter of administration in any event, so that the provision is not necessary. Also there have been cases, such as American-sponsored schools abroad, where a U.S. security clearance requirement applied to the faculty of the school would defeat the objectives of assistance by giving the impression that the faculty is controlled by the U.S. Government.
26	[SEC. 112. None of the funds appropriated or made available under this Act for carrying out the Foreign Assistance Act of 1961, as amended, may be used to make payments with respect to any capital project financed by loans or grants from the United States where the United States has not directly approved the terms of the contracts and the firms to provide engineering, procurement, and construction services on such project.]	26	Section 112 is omitted as unnecessary in view of preexisting executive branch policies and because it appears to be inappropriate to establish details of contractual policy in an appropriation act.
27	[SEC. 113. Of the funds appropriated or made available pursuant to this Act not more than $6,000,000 may be used during the fiscal year ending June 30, 1963, in carrying out section 241 of the Foreign Assistance Act of 1961, as amended.]	27	Section 113 is omitted because it would arbitrarily prohibit carrying out programs vital to the increased effectiveness of the foreign aid program. In addition, the section curtails programs without saving any money because it is only a ceiling on the exercise of a diversionary authority.
28	[SEC. 114. None of the funds appropriated or made available pursuant to this Act for carrying out the Foreign Assistance Act of 1961, as amended, may be used to pay in whole or in part any assessments, arrearages, or dues of any member of the United Nations.]	28	Section 114 is omitted as unnecessary because payment of another country's U.N. assessments, arrearages, or dues would not ordinarily be a proper purpose under the FAA and the United States would not pay assessed contributions of other members of the U.N. in any event.
29	SEC. [115] *102*. Foreign currencies not to exceed $200,000, made available for loans pursuant to section 104(e) of the Agricultural Trade Development and Assistance Act of 1954, as amended, shall be available during the current fiscal year for expenses incurred incident to such loans.	29	This language appropriates local currencies, not to exceed $200,000, available for so-called Cooley loans under section 104(e) of the Agricultural Trade Development and Assistance Act of 1954 (Public Law 480) for expenses of administration of such loans.

30 SEC. *103. United States dollars directly paid to the United States under the Agreement Between the United States of America and Japan Regarding the Settlement of Postwar Economic Assistance to Japan are hereby appropriated, as authorized by section 618 of the Foreign Assistance Act of 1961, as amended, for the same general purposes as are set forth in any of the subparagraphs under "Economic Assistance" in this Act except the subparagraph entitled "Administrative Expenses", to the extent such dollars are available: Provided, that the total amount so appropriated for each such general purpose shall not be increased by the provisions of this section.*

31 [SEC. 601. No part of any appropriation contained in this Act shall be used for publicity or propaganda purposes within the United States not heretofore authorized by the Congress.]

32 [SEC. 602. None of the funds herein appropriated shall be used for expenses of the Inspector General, Foreign Assistance, after the expiration of the thirty-five day period which begins on the date the General Accounting Office or any committee of the Congress, or any duly authorized subcommittee thereof, charged with considering foreign assistance legislation, appropriations, or expenditures, has delivered to the Office of the Inspector General, Foreign Assistance, a written request that it be furnished any document, paper, communication, audit, review, finding, recommendation, report, or other material in the custody or control of the Inspector General, Foreign Assistance, relating to any review, inspection, or audit arranged for, directed, or conducted by him, unless and until there has been furnished to the General Accounting Office or to such committee or subcommittee, as the case may be, (A) the document, paper, communication, audit, review, finding, recommendation, report, or other material so requested or (B) a certification by the President, personally, that he has forbidden the furnishing thereof pursuant to such request and his reason for so doing.]

30 This language appropriates for purposes of part I of the FAA (economic assistance) the dollar receipts directly accruing to the United States under the recent Agreement Between the United States of America and Japan Regarding the Settlement of Postwar Economic Assistance. The language provides that the total amount appropriated in the appropriation act under the heading "Economic Assistance" will not be increased by this appropriation. Thus the effect of the provision is simply to permit the use of these Japanese settlement payments to the Treasury as a source of funds, to the extent available, for foreign economic assistance purposes without augmenting appropriations. This provision is authorized by section 618 of the FAA.

31 Section 601 is omitted because it does not clearly differentiate between improper activities and legitimate efforts to inform the American public in the national interest. The provision has inhibited the executive branch from taking actions to better inform the American people which, though legally permissible, were deemed inadvisable because of the lack of clarity in the language.

32 Section 602 is omitted as it duplicates section 624(e)(7) of the FAA which is a permanent provision.

Mr. PASSMAN. We want you to find out for us, Mr. Tennant, at what date does AID start posting your fiscal year 1964 withdrawals and list them on the U.S. Treasury statement. The Treasury statement hits my desk every morning and I do not know whether, by your accounting over there, that we are getting a double entry because you have substantial withdrawals. You have a substantial increase from the U.S. Treasury to the credit of foreign aid this year, over and above last year.

The statement you submitted to me on July 19 is a preliminary statement, and at that time you gave me your best estimates; is that correct?

Mr. TENNANT. They were the best estimates based on preliminary information——

Mr. PASSMAN. Will you please call us and inform us as to what date the U.S. Treasury starts posting withdrawals from the new fiscal year, because it comes on the first day. You get your Treasury statement and you will find by the fifth day of July you had substantial withdrawals from the U.S. Treasury. Is that not correct?

Mr. TENNANT. Yes, sir. The checks that are issued and dated in July are charged to the new year transactions.

Mr. PASSMAN. Then what I said is correct?

Mr. TENNANT. I take no issue with what you said, sir.

Mr. PASSMAN. I wanted to be accurate.

If you obligated last year, we shall say, $3,500 million, then we come into the new fiscal year and the Congress has not passed your money bill, you operate on a continuing resolution, do you not?

Mr. TENNANT. That is correct, sir.

Mr. PASSMAN. And if you obligate $3,750 million, you can withdraw on your continuing resolution, on the basis of having obligated $3,750 million. And if you obligated only $3,480 million, on a continuing resolution would you not withdraw one-twelfth of that amount each month?

Mr. TENNANT. We obligate at that rate, that is correct.

Mr. PASSMAN. If you do not get an authorization bill enacted until October, and you come along and get an appropriation bill in November or December, and you have operated 5 months of the fiscal year at this withdrawal rate, there might be arguments against cutting the bill too low, because you have used up 5 months of the 12 months of your fiscal year. Am I stating this matter correctly?

Mr. TENNANT. Yes, sir. The——

Mr. PASSMAN. Then, on the lower appropriation, would you be handicapped in the last 7 months?

Mr. TENNANT. Well——

Mr. PASSMAN. Say that you operate at a high obligation rate for 6 months, then you wind up and get a lowered appropriation bill, then you say, "Look what you have done to us. Now you are forcing us to operate almost on nothing for the last 7 months, because under this continuing resolution we operated at this level and you give us this level. Look what a mess you have gotten us into." You throw us into a jam in conference and that is why I am particularly anxious this year for this thing to be unmistakably accurate. I have corre-

spondence coming and I would be happy to discuss the matter with you, using any of the three or four sets of figures that I have.

We thank you, gentlemen, very much.

We know you are trying to do a creditable job. It is a complex and difficult program. We are going to cooperate with you in every way that we can. However, there is a lot of money involved between the asking price and the taking price; that is the money that is needed and the amount that you ask for. We are going to do our very best to reconcile those differences.

Mr. Moscoso. On behalf of all my colleagues, I want to thank you and the members of the committee for the patience you have shown in hearing us out. I hope we will have the funds necessary to carry out this program.

Mr. PASSMAN. I hope you have the funds to carry out the necessary program, but not the type of program you envision here in these illustrative programs.

The committee will now adjourn until tomorrow.

MONDAY, AUGUST 19, 1963.

FINANCIAL SUMMARY

WITNESSES

EDWARD F. TENNANT, CONTROLLER, AGENCY FOR INTERNATIONAL DEVELOPMENT, DEPARTMENT OF STATE
LEIGH MILLER, LEGISLATION PRESENTATION COORDINATOR

SUBCOMMITTEE ON BOKARO STEEL MILL

Mr. PASSMAN. The committee will come to order.

Mr. NATCHER. Mr. Chairman, as you know, the panel selected by you to make an investigation into the matter of a steel mill in Bokaro, India, has completed its mission. I want you and the members of the committee to know that it has certainly been a pleasure serving on this panel with our colleague, Mr. Andrews, of Alabama, as the chairman.

I have always considered him one of the able Members of the House, Mr. Chairman, and I want you and the other members of the committee to know that he has certainly conducted this investigation in an excellent manner. I believe that the report that will follow will please the members of the committee.

Thank you, very much.

Mr. PASSMAN. I think this was an exceptionally able panel and that George Andrews presided with dignity and effectiveness. Each member of the panel deserves sincere commendation.

Mr. Conte?

Mr. CONTE. Mr. Chairman, I want to join my colleague, Mr. Natcher, in commending our able chairman, Mr. Andrews, for the job he did. He conducted the hearings with wonderful decorum, and he was fair to all witnesses that appeared before the committee. And when the hearings are printed I am sure that the chairman, members of this

committee, and the Members of Congress will feel that he has performed a great service for the Congress. Regarding the method of examination, I think it was a real, high level legal type cross-examination of the witnesses.

I think it will present you with a good case and I am very grateful.

Mr. PASSMAN. We knew, of course, that the work of the panel was in very good hands.

Mr. Rhodes?

Mr. RHODES. I just want to associate myself with your remarks as to the appointment of this subcommittee. I think it was a very good thing to do. And the reports I have had of the conduct of the hearings indicate that the material which was adduced and the manner in which the hearings were conducted reflect credit on the Congress, the Appropriations Committee, and this subcommittee.

I think all the members, especially the gentleman from Alabama, are to be congratulated.

And I also want to add a word of praise for the ranking minority member, the gentleman from Massachusetts, Mr. Conte. He has been very much interested in this whole Bokaro situation ever since it came up. I am pleased that he was a member, and a very effective member of this subcommittee.

Mr. ANDREWS. Thank you, gentlemen.

Mr. CONTE. Thank you. I appreciate your very kind remarks.

Mr. PASSMAN. With regard to the Bokaro proposal or otherwise, this subcommittee is going to move upon the basis of facts. And when you move on facts you need have but little fear about the outcome.

Mr. MILLER. Mr. Chairman, I might say in this connection that the Executive Branch is very pleased to have as thorough investigation and review of the data as we have had for this program. And should any other information be desirable or necessary for the subcommittee or the group formed within the subcommittee, we should be most happy to supply it.

Mr. PASSMAN. Thank you, Mr. Miller.

OPERATIONS UNDER CONTINUING RESOLUTION

We do not know just when we will formally conclude these hearings. From time to time there will probably be brief hearings, and after we get an authorization bill the committee will wind up its hearings and prepare to mark up and otherwise move through the normal procedures toward finally getting an appropriation bill enacted.

You are presently operating under the authority of a continuing resolution, are you not?

Mr. TENNANT. Yes, sir; we are operating under a continuing resolution, Public Law 88–55, dated June 29, 1963.

SECTIONS OF FOREIGN ASSISTANCE ACT OF 1961, AS AMENDED, BASED ON NO-YEAR AND FISCAL YEAR AUTHORIZATIONS AND APPROPRIATIONS

Mr. PASSMAN. Could you cite the sections of the bill that operate on an annual authorization and an annual appropriation—that is, a 1-year authorization and a 1-year appropriation—and then the sections of the bill where you have no-year funds and no-year authorization, and insert that information in the record?

(The information supplied follows:)

Sections of the Foreign Assistance Act of 1961, as amended, based on no-year and fiscal year authorizations and appropriations

No-year authorization:	
Development loans	Sec. 202(a)
Development grants	Sec. 212 (including American schools and hospitals abroad (special foreign currency program).
	Sec. 214(b).
Investment guarantees	Sec. 222(f).
Investment surveys	Sec. 232.
Alliance for Progress	Sec. 252.
Supporting assistance	Sec. 402.
Military assistance	Sec. 504(a).
No-year appropriation:	
Development loans	Sec. 202(a).
Alliance for Progress loans	Sec. 252.
Investment guarantees	Sec. 222(f).
Fiscal year authorization:	
International organizations	Sec. 302.
Contingency fund	Sec. 451(a).
Administrative expenses	Sec. 637.
Fiscal year appropriation:	
Development grants	Sec. 212(a) (including American schools and hospitals abroad (special foreign currency program).
	Sec. 214(b).
Investment surveys	Sec. 232 (continued available from fiscal year 1962).
Alliance for Progress grants	Sec. 252.
International organizations	Sec. 302.
Supporting assistance	Sec. 402.
Contingency fund	Sec. 451(a).
Military assistance	Sec. 504(a).
Administrative expenses	Sec. 637.

Do you construe the continuing resolution as being broad enough to permit you to obligate or allocate funds out of those funds for which there is no pending authorization?

Mr. TENNANT. Assuming that the authorization existed in the prior year, and an amount is proposed in the budgetary year, we would assume that the continuing resolution does permit financial activity in that category.

STARTING NEW PROJECTS UNDER CONTINUING RESOLUTION

Mr. PASSMAN. What would you do about starting new projects for which you had no funds in the previous year, let us say, start a new project with development grants, or a new project under the President's contingency fund?

Mr. TENNANT. The language of the resolution talks about projects and activities. Our general approach has been to interpret this language fairly generally. We would start, and in fact, from time to time, we have started essential projects, but only where the activity was what we consider a continuing activity, as, for example, in the development loan fund where we consider the total banking operation to be a continuing activity.

Mr. PASSMAN. Even though it would be for an entirely new project that Congress had not appropriated funds for previously?

Mr. MILLER. The language speaks of it as being continuing projects or activities. So that if there has been a continuing activity conducted in the fiscal year 1963——

Mr. PASSMAN. What do you mean by "continuing activity?"

Mr. MILLER. It depends, of course, on the circumstances, Mr. Chairman. It depends upon which category, in effect, we are talking about. Each one of the appropriations categories has a little different analysis that would go with it. For instance, the development fund, as I understand it, historically has been interpreted for each new loan—of course, it could be viewed as a new project, but the continuing resolution has, in fact, sanctioned the continuance of the activity of the loan fund, and since——

Mr. PASSMAN. Are you not actually saying that since the development loan fund is an activity making these credits available to these nations, you could go into a nation where you previously had no development credits out of the development loan fund and make a commitment, or an allocation, upon the basis of the continuing resolution language?

Mr. MILLER. It is my understanding, Mr. Chairman, that in the past under the old Development Loan Fund which started in 1958, and we have since 1961 in the Foreign Assistance Act, treated the development loan activity as one activity in toto.

Mr. PASSMAN. If, we shall say, in "Randolphville" you did not have any type of development credit project in fiscal 1963, this being a continuing activity you could go into "Randolphville" and make a commitment for fiscal 1964 under the authority of the continuing resolution; is that your interpretation?

Mr. MILLER. If it meets the criteria.

Mr. PASSMAN. If it meets the criteria, you could, under the continuing resolution, go into a nation in which the previous year you did not have a development credit transaction?

Mr. MILLER. Yes.

Mr. PASSMAN. Now, on the development grants or supporting assistance would the same situation apply? Would there be the same type of answer? You referred to it as an activity. Could you start a project in "Randolphville," we shall say, for a drainage canal, when in fiscal 1963 and prior years you had not had a drainage canal, if in fiscal 1964 you decided that it was proper to have a drainage canal?

Mr. MILLER. To take both these things you are talking about, supporting assistance and development grants——

USE OF CONTINGENCY FUND UNDER CONTINUING RESOLUTION

Mr. PASSMAN. Also, under the President's contingency fund?

Mr. MILLER. The President's contingency fund, we view, as I understand it, as a continuing activity for the funding of contingencies.

Mr. PASSMAN. Would the same type of answer apply under development?

Mr. MILLER. No, it would not necessarily apply.

Mr. PASSMAN. Could you make any type of commitment under the President's contingency fund until the new authorization is passed?

Mr. MILLER. We could make—if a valid contingency occurred, we could make an allocation from the President's contingency fund.

Mr. PASSMAN. What would be a "valid contingency"?

Mr. MILLER. A disaster of any kind that would occur—anything that would meet the criteria of the contingency fund.

Mr. PASSMAN. Tell us something you could not do out of that fund.

Mr. MILLER. Something that we had previously presented to the Congress as a continuing activity we would not fund under the contingency fund.

Mr. PASSMAN. You say you have a right to vacate every project and substitute new ones, or that you can start projects without any illustrative justifications to the Congress—if you can do that, would you be able to start projects out of the contingency fund or the development grants or the supporting assistance?

Mr. MILLER. If they were contingencies that had occurred and had not been presented to the Congress, and they met the requirements of the contingency fund authorization in the appropriation, we could. But my point was, Mr. Chairman, that a continuing activity would not be funded with contingency funds.

Mr. PASSMAN. It is still a blank check, and you can do whatever you want. If you have a project, we shall say, in Brazil, and that project is a ZA–109–B, and it is for, we shall say, a civilian training center, and the Congress turned it down, but in fiscal 1964 that becomes a Y–203–Z and is known as an educational expansion program, inasmuch as you never justified it to Congress under this designation or number or title, you could allocate funds for it, could you not?

Mr. TENNANT. I think the question here is basically not in the numbering, because the numbering system is merely a means of capturing information for computer purposes, but whether it is or is not the same project. Assuming it was the same project, exactly the same project, and the Congress had turned it down, I don't think we would start it.

Mr. PASSMAN. If I gave the project number and its title, then that was in fiscal 1963. In fiscal 1964, it is a new number and it is a new title, and if you say you have expanded it, that there are more facets to this project than in previous years, then could you obligate money to it from the contingency fund?

Mr. MILLER. If it were a project, Mr. Chairman.

Mr. PASSMAN. That is good enough.

FUNDING OF MEETINGS OF THE INTER-AMERICAN DEVELOPMENT BANK

For the Inter-American Development Bank, last year we examined on an expense account of the previous year. I think the committee brought out what is an alltime record of extravagance for spending abroad, and they told us that the expense money came out of the Bank's window No. 1.

Then we discussed a meeting they had in 1961 down in Rio, which also established something of a record for the amount of expenditures, including representation, for 1 week. Then they met in calendar 1962 and 1963, also with expense accounts.

Did you fund these expense accounts for the Inter-American Development Bank out of the regular operations, or did you fund all three of these expense accounts and the previous one out of the Social Progress Trust Fund?

It was testified two ways, I believe, in the hearings, and we want to straighten it out.

Mr. TENNANT. My understanding was that Mr. Moscoso testified——

Mr. PASSMAN. Take the first expense account where these people went to Europe.

Mr. MILLER. You have lost me, Mr. Chairman.

Mr. TENNANT. I understood the testimony——

Mr. PASSMAN. Out of what account of what bank was the expense money paid for the trip to Europe? It was 1961 and we examined on it last year.

Mr. TENNANT. I understand these were the regular operating funds.

Mr. PASSMAN. All of them?

Mr. TENNANT. All of them.

Mr. PASSMAN. But it was testified, too, that for the first one they paid out of the capital account, as there had been no interest earned.

Mr. TENNANT. I believe Mr. Rhodes pointed out something along that line——

Mr. PASSMAN. All of this expense money came out of the same account?

Mr. TENNANT. Yes, sir.

FUNDING OF MOBILE BRIGADE PROJECT IN INDONESIA

Mr. PASSMAN. Could you tell us how much money you obligated in fiscal 1963 to the reequipment of the Indonesian mobile brigade project, No. S-71-AV?

Mr. TENNANT. This project was testified to by Mr. Janow earlier during the hearings. I had understood that during the fiscal year 1963 we obligated $2.1 million——

Mr. PASSMAN. Is that the same project number?

Mr. TENNANT. Yes, it is for the mobile brigade.

Mr. PASSMAN. You have two phases of that project. This is S-71-AW. When did you obligate that money?

Mr. TENNANT. May 1963.

Mr. PASSMAN. May 1963? That is subsequent to March 27; is it not?

Mr. TENNANT. That is correct. We also obligated at $2.7 million for the contingency account. The first obligation of $2.1 million was from the regular supporting assistance account, for communication equipment, transport, and so forth. The second transaction of $2.7 million of contingency funds was for arms and ammunition. It was also obligated in May 1963.

Mr. PASSMAN. That was done subsequent to March 27?

Mr. TENNANT. That is correct, sir.

USE OF DEOBLIGATED FUNDS

Mr. PASSMAN. I had considerable correspondence with Mr. Bell, and I have here two letters dated March 27, 1961.

I shall read them:

Hon. OTTO E. PASSMAN,
Chairman, Foreign Operations Subcommittee,
House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: Thank you for your letter of March 26. I apologize for not understanding correctly what should be included in the letter to Chair-

man Cannon. Accordingly I enclose a revised letter to Mr. Cannon making it clear that in this fiscal year this Agency now plans to obligate $4,910,000, and does not plan to obligate $3,711,000 of the $8,621,000 of deobligated funds which we had originally intended to reobligate.

I trust this will clarify my intentions satisfactorily. With respect to the other point in your letter, I quite agree that this proposed method of handling the matter is based on our mutual understanding, and is a reasonable way of handling this complex problem. I had not intended to give any other impression.

Sincerely yours,

DAVID E. BELL.

Mr. PASSMAN. The same date, March 27, 1963:

Hon. CLARENCE CANNON,
Chairman, Committee on Appropriations,
House of Representatives, Washington, D.C.

DEAR CHAIRMAN CANNON: Since submitting to you my letter of January 31, subsequently augmented by my letter of March 19, subsequent events have altered the necessity for the use of deobligated funds with respect to certain of the projects listed on the attachment to my January letter. I now find that, taking account of the relative urgency of the different projects we are carrying forward, and in the interest of the minimum use of obligational authority both newly appropriated by the Congress and deobligated from prior year funds, it will be preferable for us to withdraw our proposal to apply deobligated funds to three of the projects on the list attached to our letter.

Yemen: Technical support, project No. Z-99-2A.

Laos: Rural medical and health program, project No. P-99-AA.

Indonesia: Reequipment of Mobric, project No. S-971-AB.

Furthermore, current requirements for the use of deobligated funds for certain of the other projects have been reduced.

Accordingly, I should like by this letter to amend the list attached to my January letter by striking from it the three projects listed above, and by reducing the proposed use of deobligated funds for certain of the remaining projects. You will note that the results of these changes are to reduce our proposed use of deobligated funds from $8,621,000 to $4,910,000. We will not reobligate in the remainder of this fiscal year $3,711,000 of the $8,621,000 of deobligated funds which we had previously expected to obligate.

Sincerely yours,

DAVID E. BELL.

Mr. PASSMAN. Now, just a few days ago, I received another letter from Mr. Bell dated August 15, 1963, addressed to me—and a copy of this letter will be made a part of the record.

(The letter referred to follows:)

DEPARTMENT OF STATE,
AGENCY FOR INTERNATIONAL DEVELOPMENT,
OFFICE OF THE ADMINISTRATOR,
Washington, D.C., August 15, 1963.

Hon. OTTO E. PASSMAN,
Chairman, Subcommittee on Foreign Operations, Committee on Appropriations,
House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: I understand that there has been some discussion during the hearings on the fiscal year 1964 AID appropriation request about our correspondence respecting the use of deobligated funds during fiscal year 1963. I would like to attempt to clarify any possible misunderstanding arising from that exchange of letters.

Our correspondence, including my letters of January 31, 1963, and March 27, 1963, concerned the use of deobligated funds under the limitation contained in the fiscal year 1963 appropriation statute. That provision, as you know, was intended to place a limitation upon the use of deobligated funds but did not modify or limit the use of new obligational authority.

On January 31, 1963, I wrote indicating that we intended to use deobligated funds for certain activities set out in an attachment to that letter. On March 27, I wrote again concerning the use of deobligated funds for those activities. I understand that one sentence in my letter of March 27, has given rise to some question—the second sentence of the letter: "I now find that, taking

account of the relative urgency of the different projects we are carrying forward and in the interest of minimum use of obligational authority both newly appropriated by the Congress and deobligated from prior year funds, it will be preferable for us to withdraw our proposal to apply deobligated funds to three of the projects on the list attached to our January letter * * *."

I regret that this sentence may have caused a misunderstanding. My intent was to indicate that the relatively urgent nature of some of the projects referred to in my January 31 letter might require funding before the discussion on the use of deobligated funds was resolved. The "relative urgency" was caused by the fact that some of those ongoing projects might have to be funded from new obligational authority before such resolution.

I also desired to indicate to the committee that we wished to use the funds appropriated by the Congress and deobligated from prior year as efficiently as possible. My reference to a "minimum use of obligational authority" referred, as you will appreciate, to the fact that any use of new obligational authority for those projects would reduce the amount of new obligational authority available for other program activities. For example, the funding of the MOBRIG project, No. S-71-AB, through use of new obligational authority reduced the amount of supporting assistance funds available for other purposes. Therefore, by the withdrawal of those projects from financing with deobligated funds, our total use of all funds (NOA and deobligations) was reduced. The sentence in question was meant to convey that fact.

Our joint review of this matter resulted in the saving of about $10 million. Such amount is earmarked for return to the Treasury. The use of deobligated funds for the projects listed in my letters of January 31, 1963, and March 19, 1963, was as follows:

Letter of Jan. 31, 1963:	
Initial proposed uses	$8,621,000
Revised uses	4,910,000
Savings	3,711,000
Letter of Mar. 19, 1963:	
Initial proposed uses	32,714,000
Revised uses	26,437,000
Savings	6,277,000
Total savings of deobligated funds	9,988,000

In summary, we reobligated $31,347,000 of deobligated funds for projects listed with my letters of January 31, 1963, and March 19, 1963, respectively, a savings of $9,988,000 from those initial estimates.

We have, I believe, been prudent with respect to the use of all deobligated funds during fiscal year 1963. A total of $51,672,000 in deobligated funds remained unobligated at the end of fiscal year 1963. As you know, these funds will lapse unless they are reappropriated by the Appropriations Committees. We have asked for reappropriation of approximately $38 million, the balance to revert to the Treasury. This policy of requesting reappropriation of unobligated balances allows the Appropriations Committees to review this matter as a part of our presentation and determine whether or not those funds should be so appropriated.

We have requested renewed authority to use deobligated funds because we believe that the request to the Congress for fiscal year 1964 takes into account recoveries from prior year funds in a fiscally responsible fashion.

The fiscal year 1963 appropriation statute limitation expressed the intent of the Congress to limit the use of deobligated funds to activities previously reviewed by the Congress. The fiscal year 1964 appropriation request takes full account of estimated recoveries, which have been considered an integral part of the anticipated financing of our fiscal year 1964 program. Unlike past years, the request for new obligational authority to finance our fiscal year 1964 program has been reduced by the amount of estimated deobligations. Thus, the entire amount of estimated available deobligated funds is applied to the funding of projects being presented to the committee during the present hearings. Because of this change, I believe that the present restriction on the authority to reobligate recoveries from prior year funds should be unnecessary.

I regret that any possible erroneous implication has arisen from my letter of March 27, 1963. I would be happy to provide you any further information on this matter or appear before you and your committee at your convenience.

Sincerely yours,

DAVID E. BELL.

Mr. PASSMAN. I am not now going to take the time to read but one paragraph from this letter:

I regret that this sentence may have caused a misunderstanding. My intent was to indicate the relative urgent nature of the project referred to in my January 31 letter might require funding before the discussion of the deobligated funds; and so on."

I have let the record speak for itself, hoping that in the future these unpleasant misunderstandings will not pop up.

RECONCILIATION OF TREASURY AND AID ACCOUNTS

I can understand how you could well have items coming in from the field that you had to list as an obligation out of unliquidated funds. I cannot understand, however, how you could withdraw the money from the Treasury and lower the total amount of the pipeline subsequent to June 28, fiscal 1963.

Here is a letter that I received from the Treasury Department, dated August 14, 1963, and I shall read it:

I want to confirm your understanding—as expressed in your telephone conversation with Mr. Mosso today—of the cutoff date reporting withdrawals and the daily statement of the U.S. Treasury. The withdrawals shown in the daily statement for any agency include all information received and compiled in the records of the Treasury of the United States as of the date of the report, and the figures published are final so far as the daily statement is concerned. This information posted after June 28, 1963 (the last working day of the fiscal year) will be applicable to fiscal year 1964.

As you probably know, the information shown in the daily statement for any particular withdrawal classification is not comparable, or even reconcilable to, information shown on the monthly statement of receipts and expenditure of the U.S. Government which is the official vehicle for reporting budgetary and other receipts and expenditures. The principal reasons for the differences are, first, in regard to the timing of the transactions, the date of statement (which is akin to a bank statement) includes transactions for which information has been received and cleared, regardless of when the underlying transaction occurred.

Checks issued near the end of the fiscal year 1963 could be received by the Treasury for payment in fiscal 1963 or 1964 and could, therefore, be in fiscal year 1963 or 1964 withdrawals of the daily statement. The monthly statement, on the other hand, reports expenditures on the basis of when the checks were issued. A check issued on June 30, 1963, is reported as a fiscal year 1963 transaction in the monthly statement, and a check issued on July 11, 1963, is reported as a fiscal year 1964 transaction regardless of when the information is received in the Treasury.

It is because of this precise cutoff that the monthly statement for June of each year—which presents full fiscal year figures—is published in July as a "preliminary" report, and is published in November or December in "final" form after all transaction data applicable to the prior fiscal year have been processed. Incidentally, the difference between the preliminary figures monthly statements have never been significantly large.

A second major difference between the data in the two publications is that the daily statement merges administrative budget and trust fund classifications, whereas the monthly statement differentiates sharply between the two categories.

I would be glad to discuss this matter further if you should desire.

Yours very truly,

H. R. GEARHART,
Commissioner of Accounts.

Now, Mr. Controller, your first statement came out—I believe you gave it to me—on July 25, and it indicated a grand total of unliquidated economic and military assistance, which was estimated, as being $7,263,647,000, with $515,585,000 unobligated or unreserved. That statement certainly included investment guarantees—I suppose that is the revolving account.

Subsequently the Controller gave me a statement that showed the amount, grand total, economic and military assistance, and that was given me on August 8, which was 13 days later. This showed the unexpended funds as having been reduced to $6,984,879,000, which to me is a significant reduction, yet the unobligated amount remains at the same figure.

What we are trying to establish now is how the pipeline could be reduced because it would take a voucher, according to my understanding, on the U.S. Treasury for the pipeline to be reduced. I can understand that you can reduce the amount of unobligated funds by putting them over into obligations, but how you get anything out of the Treasury subsequent to June 28 and reduce the amount of pipeline is the thing that is confusing me.

Mr. TENNANT. I would be very glad to explain that, sir.

First of all, on the Treasury statements. I think the one thing brought out in that letter that is very important is that the daily Treasury statement is on the basis of checks redeemed; that is, paid by banks. The monthly statements are on the basis of checks issued. Any statements which we give you are on the basis of checks issued.

Mr. PASSMAN. They post after the checks have been drawn?

Mr. TENNANT. Let me put it this way. When the checks are drawn they post it in a record that eventually appears in the monthly statement.

Mr. PASSMAN. Are you saying that when you have vouchers outstanding that are yet to be redeemed, and as the checks have not been cashed, when we look at the daily Treasury statement they have not been taken into account?

Mr. TENNANT. My understanding of the daily Treasury statement is that checks that have not been redeemed are not taken into account in that statement. However, they are taken into account in other Treasury statements.

Mr. PASSMAN. Where does this apply with regard to the deficit, when the checks has been cashed or when it was issued?

Mr. TENNANT. I think what happens is that various figures from both statements are used in explaining different items at different times.

Mr. PASSMAN. On this daily statement that we get from the Treasury showing withdrawals, they wind up showing their final statement. Let us say that you have $3 billion of outstanding Treasury vouchers that have not yet been cashed. When they establish the deficit, do they include that sum as a part of it, or as the checks have not been cashed, and you go according to withdrawals, would they take those into account in the next fiscal year?

Mr. TENNANT. My understanding—and I must state here that I am not an expert on Treasury procedures—is that there are two types of deficits. One is a cash deficit, and the other is a budgetary deficit. The figures that we are giving you in our Agency statements are

related to checks drawn, and reflect what we consider budgetary accounting.

Mr. PASSMAN. Then on your statement of July 25 you showed $7,263,647,000 on hand with the unobligated funds being $515,585,000, and on your statement of August 8 you reduced the funds on hand to $6,984,879,000. Would this mean additional checks or vouchers had been posted to that account?

Mr. TENNANT. This means that—maybe if I put this in sequence it would be helpful.

Mr. PASSMAN. At this point, I believe I could understand the matter better if you would answer my question. Would that mean new vouchers?

Mr. TENNANT. No.

Mr. PASSMAN. Vouchers that had been posted?

Mr. TENNANT. It would mean that vouchers that had been paid—that is, checks that had been issued on June 30 or prior thereto, on which we did not have reports when I gave you the first report—had come to our attention in the meantime.

Mr. PASSMAN. How did you make such a transaction without reducing the unobligated funds you had on hand by as much an $1? How could you post those checks, reduce the pipelines without reducing the unobligated funds?

Mr. TENNANT. The disbursements that occur affect the unliquidated obligations but do not affect the unobligated transactions.

Mr. PASSMAN. Mr. Gearhart of the Treasury said that the difference between the preliminary and final monthly statement had never been significantly large. Would you not agree, however, that when in 13 days you reduce the unexpended funds from $7,263,648,000 to $6,984,879,000 that would be considered rather large and significant?

Mr. TENNANT. Yes, sir. But the first figures that we gave you—I understood you wanted these figures promptly, and in meeting the targets that I understood that you wanted us to meet—we were unable to wait for detailed Treasury figures. On the first figures we gave you we were unable to reconcile to Treasury figures because we did not have the information yet.

Mr. PASSMAN. When you draw vouchers there is a record made?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. Do you need anything other than an adding machine to know how many vouchers have been drawn?

Mr. TENNANT. Our primary problem is to get in all the reports from overseas and all other agencies. As you noted in the letter you received from the Treasury, they are unable to give final figures on this type of transaction until November or December, I believe they said.

The schedule of closings that Treasury has provided us indicates that we—and I would be glad to put this in the record—the schedule indicates that reconciliations are to take place during August and September for finalization in October.

Mr. PASSMAN. I do not say that you would do it, of course, but it occurs to me that you could reduce this sum to, say, $5 million, that you could do that just by writing vouchers, because you take it out of the pipeline when you draw a voucher?

Mr. TENNANT. Yes, disbursements affect the pipeline. However, after June 30 we were unable to effect any disbursements through Treasury that would affect the fiscal year 1963 figures.

(Discussion off the record.)

DIFFERENCE BETWEEN REPORTS OF PRELIMINARY FIGURES

Mr. PASSMAN. You have copies of your sheet for July 25 and August 8?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. On item 1, "Development loans," that has held just about steady. I think it dropped down by, in round figures, about $23 million?

Mr. TENNANT. That is correct, sir.

Mr. PASSMAN. We get into the "Development grants," the purely giveaway area, and I believe that dropped from $425 million to $400 million? There was an extra $25 million taken out of that fund during the 13 days; is that about correct?

Mr. TENNANT. The point I don't think I have really got across clearly, sir, is that these transactions are items that occurred prior to July 1 which didn't get into the first report, as we had not yet received the information.

Mr. PASSMAN. I am trying to find out why it fell in this particular area, three accounts in 25 days. This is a very substantial reduction in the pipeline.

Mr. TENNANT. On that point, Mr. Chairman, my people who prepared these reports told me that in putting together the calculations, they pulled some boners and made some errors.

Mr. PASSMAN. Does that cover the situation?

Mr. TENNANT. That is not the complete story. There are also the unreported items.

Mr. PASSMAN. You have given one good reason, that it was boners and errors.

Mr. TENNANT. That is one of them. If you asked me, and I could do it, to draw up another set of figures today they probably would be slightly different than the ones I have given you.

Mr. PASSMAN. Would they be up or down?

Mr. TENNANT. I have no idea. The only time I can give you completely accurate figures is after reconciliation with the Treasury which is late in the year.

Mr. PASSMAN. What statement have I used in previous years to get up this recapitaulation sheet, do you recall?

Mr. TENNANT. As I recall, your recapitulation sheets are normally put out in the spring.

Mr. PASSMAN. No, that is not the tabulation to which I refer, I get one out showing the amount of funds unobligated.

Do you remember that every year along about the 1st of July I begin to ask you to get ready to give me a sheet detailing the unliquidated funds?

Could you tell us how much you had on hand last year at the time of, let us say, the second statement that came out in August? We might pin this whole thing down. This is a table that I put out last year.

Mr. TENNANT. I gave you two sets of figures last year.

Mr. PASSMAN. Let us look at this one year.

Mr. TENNANT. Let me explain what happened last year. I gave you a preliminary set. You called me one day and asked me to run another set for you. I ran another preliminary set of figures for you. They were slightly different; that figure here is not final.

Mr. PASSMAN. I know it is not final. Is this the first or second preliminary accounting?

Mr. TENNANT. Second preliminary.

Mr. PASSMAN. I want to be accurate. I am going to be accurate.

This last year was a second set of figures. Now I am going to use the second set of figures this year, your final figures.

If you will do this we can save a lot of time.

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. If you will furnish for the committe a list of postings between July 25 and August 8, what area and the amount, that will settle it. There are only about three major accounts involved.

Mr. TENNANT. For these particular transactions?

Mr. PASSMAN. That is right. You have a substantial difference there.

Mr. TENNANT. The letter you refer to talks about treasury statements. The reason I have a copy of the Treasury letter is that after the last discussion, I called Treasury and said, "Look, the chairman has been asking me a number of questions about Treasury accounting, I have been answering them the best I could. Am I correct or wrong?" They told me generally I was correct and they had already explained this in a letter to the chairman.

I have indicated I am not an expert on Treasury accounting.

Mr. PASSMAN. To me your word is just as good as if you had signed a note. But I realize that you do not run all the agency and there may be errors popping along here and there.

However, if you will, give the committee a list showing the differences between these two statements.

(NOTE.—See p. 2617 for reconciliation statement.)

(Discussion off the record.)

OBLIGATIONS UNDER CONTINUING RESOLUTION

Mr. PASSMAN. It looks as if we are going to go for a long time without an authorization and we cannot appropriate funds until Congress enacts an authorization bill. Let us assume that the Congress, in its wisdom, should make some adjustments in this program, and doubtlessly it will—using this hypothetically, we shall say that maybe the Congress, in its wisdom, should decide that you need $2,400 million for—fiscal 1964—and in fiscal 1963 you had an obligational level of, say, $3,600 million, and you go 6 months on a continuing resolution, at the end of 6 months you would have allocated $1,800 million. Then if the Congress works its wisdom and appropriates, say, $2,400 million, you could say, "I am sorry, the first 6 months we have obligated $1,800 million. That is only going to give us $600 million for the last half. Look what a mess you have got us into." But I could say, "Gentlemen, we were thinking about that matter before you got too far along, and we tried to offer some constructive suggestions."

MONTHLY OBLIGATIONS AND EXPENDITURES

Now, we make this request. Please provide tables showing: Obligations by month, beginning with July 1, covering each of the preceding 5 years; expenditures for the same periods; obligations by month to date in fiscal 1964.

You have these data for 5 preceding years for July and up to August 15, so if you will, give us July this year up to August 15.

(Information supplied follows:)

Statement of obligations/reservations against NOA,[1] July 1, 1958–June 30, 1963, by month and fiscal year

[In millions of dollars]

	Fiscal year 1959			Fiscal year 1960			Fiscal year 1961			Fiscal year 1962			Fiscal year 1963

[1] DLF expenditures for fiscal year 1961 were reported quarterly; therefore, the expenditures in the 3d month of each quarter will be high.

[2] Preliminary figures from preclosing June 1963 reports.

[3] June 30 military figures are not available. Total fiscal year 1963 expenditure figure used is estimate as shown in budget document, with June figure representing amount of expenditures required to reach this estimate.

Mr. TENNANT. Could I raise one question, Mr. Chairman?

Mr. PASSMAN. Surely.

Mr. TENNANT. On your August 15 request, we don't get midmonth reports from the field.

Mr. PASSMAN. All right, give it for July.

Mr. TENNANT. The next would be for August 31.

Mr. PASSMAN. If you want to project it for August, give us an estimate.

Mr. TENNANT. Yes, sir.

(Information supplied follows:)

Mutual security program preliminary and/or estimated obligations and reservations, July 1, 1963, through August 31, 1963

[In millions of dollars]

	July	August	Total
Military	[1] 35	[1] 200	235
Economic	52	[1] 95	147
Total	87	295	382

[1] Estimated.

Mr. PASSMAN. Could you tell us how much you put into the pipeline for fiscal 1963 from all spigots?

Mr. TENNANT. I have one further question on the August 15 request.

Mr. PASSMAN. We have forgotten August 15.

Mr. TENNANT. I know that, insofar as the economic is concerned. But it is my understanding that the military does not have their reports in for July 1963.

Mr. PASSMAN. Do your best, please.

TOTAL FUNDS AVAILABLE AND OBLIGATIONS IN FISCAL YEAR 1963

Could you again furnish for us an excerpt, please, of the amount you put into the pipeline last year?

Can you tell us for fiscal 1963 how much you reduced the new obligational authority? Sometimes you could only obligate 25 percent more maybe than the obligational authority by using the deobligated funds. In economic aid this has been very substantial.

Last year I think you had an appropriation of $3,928,900,000 for fiscal 1964, in new obligational authority. Then the unobligated funds brought the total up to $4,203,513,000, is that correct?

Mr. MILLER. I think $3,928 million is correct.

Mr. PASSMAN. Plus the unobligated funds from previous years, is that correct?

Mr. TENNANT. Yes, sir; approximately $4.3 billion of available funds for 1963, including carryovers.

Mr. PASSMAN. How much did you obligate out of that total amount?

Mr. TENNANT. Against that particular figure, Mr. Chairman, the obligations for fiscal 1963, military and economic, was $3,800 million.

Mr. PASSMAN. How much did you increase the pipeline?

Mr. TENNANT. The pipeline at the end of fiscal 1962 was $6,870,200,000.

Mr. PASSMAN. You gave us last year a figure of $6,698,860,000.

Mr. TENNANT. That is probably correct. It is the difference between the preliminary and the final figures.

Mr. PASSMAN. This was gotten out late in the year. This was after the appropriation was made.

Mr. TENNANT. I know, but the Treasury final figures do not come out until November or December. As a practical matter, to be entirely honest with you Mr. Chairman, the military figures are not as up to date as the economic figures; we are still using the budget estimate.

DIFFERENCES BETWEEN PRELIMINARY FIGURES

Mr. PASSMAN. We have not had such discrepancies since I have been chairman of this subcommittee—the difference between the preliminary figure and the second-stage figure. And this year the second-stage figure came only 13 days later than the first one. The first came July 25 and the next one on August 8.

You are down by almost $300 million in 13 days, from the first preliminary to the second preliminary report. The majority of this falls in three accounts. It is in that good old soft giveaway zone. I wonder if the people did not start disbursing a little faster than you would normally do?

Mr. TENNANT. No; there are no July 1963 disbursements in our report. I will be glad to give you the explanation.

Mr. RHODES. Will you yield, Mr. Chairman?

Mr. PASSMAN. I yield.

Mr. RHODES. Mr. Tennant, as I understand it, the explanation which you have given for this discrepancy that the chairman has pointed out is twofold. One, mistakes and two, checks out.

Mr. TENNANT. These are checks issued which were not reported to us fully. For example, if the mission in Iran made some payments in June and we had not gotten them onto our Washington books at the time we prepared our preliminary report, our expenditure figure would be understated.

Mr. RHODES. How much of the discrepancies are due to the errors and how much are due to the checks?

Mr. TENNANT. I cannot honestly tell you at this point.

Mr. RHODES. It seems to me that is a very large item unless most of it was due to the errors. What is the average of checks out throughout the year? In other words, as I recall it, you said that the agencies have made obligations and written checks which had not been reported. This is covering a period of maybe 13 or 14 days, just after July 1. Now, was the magnitude of these unreported expenditures greater during this period of time than it usually is, or less, or about the same?

Mr. TENNANT. I honestly can't tell you that either, I can say only that anything we produce during the months of July and August is preliminary until we get the Treasury computer runs. They are very difficult to reconcile out with our accounts. As we get these runs, we work in detail with Treasury to be sure we have picked up all of their transactions and vice versa. This year, in an effort to get you quicker figures on disbursements, we attempted a new system. We sent out cables to get disbursement information from the field at an earlier date than heretofore. Apparently this system did not work as well as we had hoped. I just don't know how much of the amount repre-

sents errors and how much represents amounts that were unreported. I won't really know until we get the final Treasury figures.

SYSTEM FOR ISSUANCE OF U.S. TREASURY CHECKS ABROAD

Mr. ANDREWS. Will the gentleman yield?

Mr. RHODES. Yes, sir.

Mr. ANDREWS. How many missions or agencies do you have throughout the world that are authorized to issue Treasury checks?

Mr. TENNANT. Well, in every one—I should say virtually every one—because we don't have disbursing offices in some of the African posts. In most of our posts the State Department's embassy has a U.S. disbursing officer who is an accredited employee of the Treasury Department and State Department. Any time we want to have a disbursement made we send the voucher to him and he disburses the amount. He is empowered to draw checks on the U.S. Treasury.

Mr. PASSMAN. Do they carry blank checks out there with them?

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. Out in the field.

Mr. TENNANT. Yes, sir; the Treasury disbursing office personnel have blank checks for use in accordance with Treasury procedures.

I would say, Mr. Chairman, that I don't believe that any July disbursements are included in any of these figures. July disbursements are shown as the fiscal 1964 transactions.

Mr. PASSMAN. There is a reduction of $300 million. Did you say it was a result of errors and mistakes?

Mr. TENNANT. Yes, and unreported transactions. As an illustration, if a particular post didn't report and they had in fact disbursed $10 million, we would not have picked up that $10 million. That would be one type of problem we run into in the year-end reconciliation process.

Mr. PASSMAN. How long has the policy been in effect that these employees of the Government are given Treasury blank checks that they fill in? Could you tell us the amount of disbursements they are privileged to make without Washington approval?

Mr. TENNANT. This procedure, to my recollection, was in effect when I worked overseas in 1949 and 1950.

Mr. PASSMAN. With the foreign aid program?

Mr. TENNANT. I worked for the State Department at that time, sir.

Mr. PASSMAN. Do you know of any expenditures that these AID people make overseas that could not wait until the voucher is mailed out of Washington? What is the hurry to give Iran or any other country $10 or $15 million, or maybe a $50 million check? Could it not be paid out of Washington and you would have better accounting procedures?

Mr. TENNANT. Well, the system that the Treasury has worked out——

Mr. PASSMAN. Yes, with the consent of the Congress.

Mr. TENNANT. Yes, sir. The Treasury system is used by the foreign aid program, the State Department, the U.S. Information Agency, and many other agencies.

Mr. PASSMAN. But you are dealing with relatively small accounts in those areas, are you not, as compared with the foreign aid area?

Mr. TENNANT. Compared to the foreign aid, I think that is correct, sir.

Mr. PASSMAN. Would there be any great harm done if the Congress should tighten up this procedure and foreign aid checks would be mailed out of Washington, rather than being issued out in the field where it goes into hundreds of millions of dollars in such a brief period? If you were to give Iran $75 million, what harm would be done if you delayed that 1 week until you got the check out of Washington?

Mr. TENNANT. For the most part, these checks are paid to individual vendors and not to the country.

Mr. PASSMAN. But why could the checks not come out of Washington?

Mr. TENNANT. I think the Executive Branch, with the consent of the Congress, has moved more and more toward decentralization over the last 10 or 15 years. This system was established by the Treasury Department and not by the AID agency.

Mr. PASSMAN. You requested legislation?

Mr. TENNANT. We did not request it.

My understanding is that this legislation and program was pressed by the General Accounting Office, the Treasury Department, and the Bureau of the Budget.

Mr. PASSMAN. Do you have any limitation for which they can draw checks, the amount?

Mr. TENNANT. I would have to obtain that from the Treasury and provide that for the record.

Mr. PASSMAN. Would it appear that the sky is the limit if the commitment has been made because in 13 days we have reduced the pipeline by approximately $300 million, using round figures?

Mr. TENNANT. I think there are some rules within the Treasury Department about the size of checks.

Mr. PASSMAN. Would you find out?

Mr. TENNANT. I will be glad to.

(Information supplied follows:)

OVERSEA DISBURSEMENTS BY U.S. DISBURSING OFFICERS STATIONED ABROAD

Each oversea U.S. disbursing officer is furnished a supply of U.S. Treasury checks: i.e., "check stock." These checks are prenumbered and carry the disbursing officer's symbol number. Each disbursing officer is required to sign a receipt for the number of blank checks received and is held accountable for each of the checks for which he has acknowledged receipt. There is strict control on the handling of voided, spoiled, or destroyed checks and unused checks are transferred by an official transfer and receipt form at the time of transfer of accountability to a new disbursing officer. Copies of all checks issued are also provided to the Treasury headquarters in Washington as part of the Treasury Department's comprehensive control procedures governing disbursing officer operations.

Present requirements are that U.S. disbursing officers immediately notify the fiscal Assistant Secretary of the Treasury, Washington, when a Treasury check in the amount of $1 million or more is issued to a payee other than an official or agency of the U.S. Government. This is a notice of issuance of a check and not a request for authority to issue a check in the stated amount since the purpose of this notice is to provide advance information to assure adequate funds are available in the Federal reserve account to cover the check at the time it is presented for payment.

The control to assure that checks are not issued for more than the amount provided in the applicable appropriation is handled through the use of bonded authorized certifying officers. Disbursing officers cannot issue checks unless they have been presented with a properly certified voucher personally certified by a previously designated certifying officer whose signature is on file with the Treas-

ury Department. The authorized certifying officer's certification to the U.S. disbursing officer includes language to the effect that the proposed payment is a valid charge against the cited U.S. Government appropriation and that funds are available under the applicable appropriation.

Mr. PASSMAN. Could you supply us with a list of the names of the AID mission heads and others who have the right to issue vouchers and sign vouchers, the number of AID missions to which you issue blank checks and they have the right to fill them in and sign them?

Mr. TENNANT. No checks are issued to AID missions or to AID employees as such. These are Treasury Department-State Department people. We have no control over the disbursing officer. Whether he wants to issue a check is solely within his province.

Mr. PASSMAN. The Treasury has a system whereby they mail blank checks out and these checks are filled out in the field; is that correct?

Mr. TENNANT. They have a system where the disbursing officers abroad are able to issue checks on their own.

Mr. PASSMAN. Does that mean that the checks are mailed out blank and they are filled in out there?

Mr. TENNANT. They are filled in by the disbursing officer who is stationed abroad.

Mr. PASSMAN. Can you tell us how many AID missions have the right to incur that type of obligation and who signs the checks? Is it the Ambassador?

Mr. TENNANT. No; the disbursing officer is named by the Treasury Department; I believe they are appropriately bonded.

Mr. PASSMAN. Do they work for AID?

Mr. TENNANT. They do not work for the AID Agency.

Mr. PASSMAN. Do they work for the U.S. Treasury?

Mr. TENNANT. My understanding is that they are technically employed by the State Department but have a Treasury responsibility on disbursing functions.

Mr. PASSMAN. I knew that those people had the right to make commitments but this is the first time that I ever knew the Treasury Department sends out blank checks and the AID people can make a recommendation that is an obligation and checks can be drawn.

Mr. TENNANT. I would like to clarify one point.

Mr. PASSMAN. Yes.

Mr. TENNANT. If AID requests disbursement be made, it must be certified by an authorized certifying officer in accordance with legislation which is specific on the point of personal responsibility.

Mr. PASSMAN. I know that, but it is done in the field.

Mr. TENNANT. The certifying officer hands it to the Treasury Department representative.

Mr. PASSMAN. In the field?

Mr. TENNANT. Yes; and he issues the check abroad.

Mr. PASSMAN. Am I making a statement of fact that these checks are sent out to, say, "Randolphville," and they go out unsigned and among the U.S. personnel there, a representative of the State Department technically, bonded under the Treasury Department, cooperating with the AID people, can fill in and sign checks for specific amounts out there?

Mr. TENNANT. That is right. The check is signed by that individual.

Mr. PASSMAN. Signed by that individual in the field?

Mr. TENNANT. That is correct; signed by the disbursing officer who is stationed abroad.

Mr. ANDREWS. Those checks that are written in the field are for personal services or local purchases?

Mr. TENNANT. Personal services, local purchases, travel; yes.

Mr. PASSMAN. Contractors?

Mr. TENNANT. Yes, local purchases could be contractors.

Mr. ANDREWS. For any heavy equipment or for any commodities purchased in this country you would have a different system of payment; would you not?

Mr. TENNANT. That is right. The heavy equipment purchased here is run through a letter of credit arrangement in banks. They are paid in New York, where the banks come to us for reimbursement.

Mr. ANDREWS. The military organization works the same way?

Mr. TENNANT. That is right.

Mr. ANDREWS. And in this country a postmaster writes his own check and writes the checks for all employees in that post office?

Mr. TENNANT. Yes, sir.

Mr. ANDREWS. There was a time when all checks in the field were written and sent from Washington?

Mr. TENNANT. Yes; at one time, that is right, some years ago.

Mr. ANDREWS. I think they concluded the cheaper way to handle the payment would be at the local level?

Mr. TENNANT. Yes; I believe it is all part of that general program of decentralization.

Mr. PASSMAN. I am not opposed to a system of decentralization, but I never knew before that AID could incur obligations and have them paid out in the field with vouchers. All of this comment is brought about by the fact that in 13 days the pipeline in AID dropped by almost $300 million. The main case was made, if I remember correctly, that you are waiting to find out the postings from the field.

Mr. TENNANT. Mr. Chairman, on this question of submitting this type or set of figures I would like to request the committee to wait until we close the books and give you final figures.

Mr. PASSMAN. If that is necessary.

However, I know of no reason why 15 days after the end of the fiscal year that a mission in Lebanon and Jordan could not have into Washington the amount of money which has been paid out.

Mr. FLYNT. Is there a dollar limit on the amount of the checks that can be written in the field?

Mr. TENNANT. We are talking about Treasury Department procedures which don't apply to our employees, they apply to Treasury employees. My understanding is that Treasury has certain rules with respect to the issuance of checks in large amounts. Now, whether they are limitations on the disbursing officer or whether they are merely advices that he has to send to Washington, I don't know. It seemed to me when I worked abroad about 10 or 15 years ago, that the disbursing officer was required to advise Washington any time he was going to issue large amounts.

Mr. FLYNT. Then I take it the answer is "Yes," that there is a dollar limitation.

Mr. TENNANT. I hate to say that conclusively. I would like to check that out for you, sir.

Mr. FLYNT. Realizing that the checks are actually signed by a Treasury official, the requisition for such checks has to come from the AID agency representative in the field; does it not?

Mr. TENNANT. That is right.

Mr. FLYNT. Is there any dollar limitation on the amount of a field requisition for field payment that your agency has set?

Mr. TENNANT. We issue allotments to each mission chief. That is a controlling factor. The allotments are issued by the Washington headquarters. A mission cannot exceed those allotments. Hence, an individual request cannot exceed those allotments. I would also like to point out that the procedure for effecting disbursements—and this procedure applies to every agency both stateside and abroad—is established under the certifying officer's law. It included a requirement that no disbursement can be made unless the voucher is signed by an authorized certifying officer, duly authorized by the Agency, and that designation is made here in Washington. That certifying officer is responsible for each proposed payment he certifies. If anything is wrong with that payment he is personally responsible under the law as the accountable individual. He signs the voucher, hands it to the disbursing officer and the disbursing officer is responsible for issuing the check.

RECONCILIATION OF PRELIMINARY FIGURES

Mr. PASSMAN. I wish to repeat that you are to give us a listing of the $300 million difference in the category of obligated funds for fiscal year 1963 between your statements of July 25 and August 8. Will you also indicate whether or not these transactions were made out of no-year funds or whether they were made out of 1-year funds?

Mr. TENNANT. I will be glad to, sir.

(The information supplied follows:)

RECONCILIATION OF FISCAL YEAR 1963 EXPENDITURE FIGURES (CURRENT FISCAL YEAR AND PRIOR YEAR ACCOUNTS)

EXPLANATION OF DIFFERENCES BETWEEN FIRST PRELIMINARY REPORT OF JULY 25, 1963, AND SECOND PRELIMINARY OF AUGUST 8, 1963

1. The first preliminary report showed that the unliquidated obligations (and hence unexpended) were considerably higher than the unliquidated figures in the second preliminary. This was occasioned by an understatement of expenditures on the first report. A recapitulation of the three most significant differences follows:

Unliquidated obligations

[In thousands]

	First preliminary	Second preliminary	Difference
Development grants	$378,441	$353,987	$24,453
Supporting assistance	559,885	358,139	201,746
Contingency fund	254,902	219,093	35,810
Total understatement of expenditures in first preliminary report			262,009

2. Actually there is a greater difference than 15 days between the two preliminary reports. While the first report was delivered to the committee under the date of July 25, 1963, it included only June 30, 1963, information which we had received in Washington by July 15 from oversea missions, other agencies, and various Washington reporting units. In those instances where we had not received a field report we estimated the expenditures for the fiscal year. After the crash report was drawn off for the committee our year-end closing and

reconciliation processes were resumed. As work proceeded our personnel noted differences between the "preclosing" cable information received from abroad and the formal written reports which were now coming in from the missions. They also noted some errors in the original compilations. As these differences grew in number the staff considered the possibilities of a second preliminary. As soon as key superivsing personnel became aware of the fact that the differences would probably be of fairly large magnitude, they directed the preparation of a second preliminary report, even though they recognized that further changes would subsequently be effected as part of the year-end reconciliation activities which are still in process.

3. A considerable portion of the work that went into preparation of the first preliminary was on an overtime, pressure basis inasmuch as we were attempting to provide to the committee early information as to the magnitude of the unexpended balances. It was therefore necessary to summarize the expenditure information received through mid-July quickly. This year a new system had been installed to expedite handling of this preclosing preliminary year-end data. After disclosure of the differences between the first and second preliminary reports, a summary analysis indicated that the new techniques employed had fallen down, partially due to misinterpretation of instructions and parially due to inadequate control mechanisms which would pinpoint problem areas. This latter point was critical inasmuch as compilations were being completed and released before detailed data on expenditures was available from the Treasury Department. In addition, normal differences existed due to nonreceipt of certain field reports, differences between estimates and actuals, overhead allocation adjustments, and in-transit items.

4. The understatement of expenditures summarized in Item 1 above are accounted for in the following categories:

(*a*) Differences between "preclosing cables" received from oversea missions in early July and the more comprehensive written reports received late in July and early August	—$10, 137, 548
(*b*) Expenditures made from prior year appropriations were inadvertently omitted from the first preliminary. Some personnel misunderstood supervisory instructions and thought that the report was to show only those expenditures which were chargeable to the current year appropriation ledger	266, 938, 046
(*c*) In-transit expenditure items not picked up as to the "target date" did not permit the technical analyses work necessary to identify such items	5, 460, 065
(*d*) Year-end journal voucher adjustments to revise "overhead" allocations. The final adjustment reduced the charges to the "Development grant" appropriation	—251, 087
Total	262, 009, 476

5. In evaluating the events which caused the foregoing differences, it is clear that: (1) the special preliminary reporting procedures, which bypassed our normal internal checks and control processes in order to meet a preliminary figure on a crash basis, failed to provide the accuracy originally planned; (2) that while the special crash reports had some errors, the Agency's basic accounting records were accurate; and (3) the Agency's accounting processes and normal reporting procedures do provide reliable data which are reconciled with the U.S. Treasury accounts as soon as specific information at the appropriation level is received from the U.S. Treasury.

LIMITATIONS ON FOREIGN AID OBLIGATIONS LATE IN FISCAL YEAR

Mr. FLYNT. This prior series of questions brings me to this, first with this observation. That for many years we have been told that there is a practice among Government agencies during the last 30 to 60 days of a fiscal year to determine how much money remains unexpended and unobligated and that it is either openly or tacitly agreed that requisitions will be made during those last few weeks of a fiscal year on the theory that if money is left unexpended and unobligated that there may be a tendency on the part of Congress to reduce the

appropriation for succeeding fiscal years. Does that situation obtain in the Agency for International Development?

Mr. TENNANT. No, sir. As you will probably recall our legislation establishes a limitation on the amount we can obligate in the last month of the year. It is not to exceed 20 percent, as I recall. Therefore, we are bound by statute on that particular point.

DIFFERENCES BETWEEN PRELIMINARY REPORTS

Mr. FLYNT. Further along that same line, does it not occur to you and does it not seem to you, that a difference of $300 million in these two sets of figures is a substantial or perhaps even an excessive difference?

Mr. TENNANT. Yes; it is a substantial difference, Mr. Flynt, but primarily this occurs because of the fact that we are unable to produce complete figures—maybe through a misinterpretation of mine of the chairman's request—within the target date. I thought the chairman wanted these figures as soon as possible. The first runs from the Treasury, as I recall, were not obtained until early August. Therefore, the figures that we had to provide, or which we did provide, were not balanced with the Treasury control figures. When the Treasury talks about no significant differences in their figures, and I don't know how much difference does exist in their figures, they are probably talking about differences between their August runs to the December runs.

Mr. FLYNT. Off the record.

(Discussion off the record.)

AGENCY YEAR-END FISCAL REPORTING SYSTEM

Mr. PASSMAN. When they issue those vouchers, those vouchers are filled in then and a copy of the voucher is retained for posting and it is proper for that item to be posted at the end of the day. Would there be any reason why, say by the fifth day of July each year you could not have a dispatch, or at the latest the 10th day of July each year, showing the number of the voucher, the date and the amount?

Mr. TENNANT. We will be glad to work on this proposed system but I do want to point out——

Mr. ANDREWS. If they cannot get them in in 10 days somebody is dragging his feet out there.

Mr. TENNANT. I agree we could do everything quicker but correspondence from places likes Nepal, Paraguay, and so forth, it is virtually impossible.

Mr. PASSMAN. Are there not other methods of communication?

Mr. TENNANT. We will try to set up a more expeditious routine.

AGENCY PROCEDURE FOR SALARY PAYMENTS IN AID MISSIONS

Mr. ANDREWS. I would like to know the mechanics of salary payments for your technicians or other employees in the field.

Pick out one. India. What is the currency over there?

Mr. TENNANT. Rupees.

Mr. ANDREWS. You have a man detailed over there for 2 years. How often do you pay him?

Mr. TENNANT. He is hired here in Washington. His salary scale, benefits and so forth are set by Washington. They cut an appointment action on him establishing his salary. We pay him every 2 weeks.

Mr. ANDREWS. How is he paid and where is he paid?

Mr. TENNANT. He is paid out of our office in New Delhi through disbursements made by the U.S. disbursing officer working for the State Department in New Delhi.

Mr. ANDREWS. Do they give him a check?

Mr. TENNANT. Under the requirements that exist they are supposed, that is, the State Department and AID requirements, require payment wherever possible in rupees for the amount that he would expend locally and the balance in dollars. They might issue him two checks, a rupee check and a dollar check. Most Americans are paid with checks rather than cash. If an American is paid in dollars he is supposed to buy his local currency from the U.S. Treasury disbursing officer.

Mr. ANDREWS. Let us say he gets a check. What do you do with this check?

Mr. TENNANT. To the extent that he has stateside costs, that is, expenses where he has to pay dollars for things are are necessary for his upkeep——

Mr. ANDREWS. Where, in New Delhi?

Mr. TENNANT. Yes; but he may have to import food or something like that.

Mr. ANDREWS. He is living in a country where the currency is rupees.

Mr. TENNANT. That is correct.

Mr. ANDREWS. He buys his groceries with rupees, he pays his rent and utility bills with rupees.

Mr. TENNANT. Yes. Most of his costs are rupees. Let us say he wants to buy a suit of clothes, and he wants to import it from London or New York. In that case he needs foreign exchange. I would assume that the type of clothes that may be produced in Delhi are not what the average American would buy.

Mr. ANDREWS. We are dealing with a hypothetical case. Would he spend 80 or 70 percent of his salary in rupees? Let us say 60 percent.

Mr. TENNANT. I could not really say without reference to our files.

Mr. ANDREWS. Do we pay him in rupees that we have acquired?

Mr. TENNANT. The Treasury Department representative, if he has rupees that are U.S. owned, he will use those first and not go out and buy any rupees. The Treasury representative under his rules is not supposed to buy any rupees until he uses up the rupees he has in his possession.

Mr. ANDREWS. We have rupees running out of our ears.

Mr. TENNANT. That is right, in Delhi he would not buy any as we have excess foreign currency in India.

USE OF U.S.-OWNED FOREIGN CURRENCIES

Mr. ANDREWS. Let us stick to New Delhi and the technician there who is paid every 2 weeks. Let us say his salary is a thousand dollars a month and he needs $600 in rupees for living expenses and other expenditures that he has in New Delhi. You could give him $400 in cash or a check which he would send back to this country for deposit in

his bank, and another check for $600 in rupees for his living expenses over there?

Mr. TENNANT. Yes, sir.

Mr. ANDREWS. Now, we own the rupees; is that right?

Mr. TENNANT. That is correct.

Mr. ANDREWS. How much of that $1,000 monthly salary would you charge to AID?

Mr. TENNANT. The total $1,000.

Mr. ANDREWS. Where would you get the credit for $600 in rupees that we gave him?

Mr. TENNANT. The $600 worth of rupees that we paid him are charged to the AID appropriations just the same as the dollar charges but the Treasury makes an adjusting entry which takes it out of their local currency holdings. In effect there is an adjustment within the U.S. Treasury. While our account shows a charge of $600 for salaries, the Treasury has not really paid out any dollars, since they have substituted rupees for a dollar payment.

Mr. ANDREWS. Has this question ever been developed by this committee, or before the legislative committee? It appears to me we could keep this foreign aid program moving with the foreign currency that we have accumulated.

Mr. TENNANT. There is a statute, section 1415, which was enacted by the Congress in 1955 or thereabouts in the old mutual security program which said that agencies operating abroad could not use local currencies unless they charged their dollar appropriations an equivalent amount.

Mr. ANDREWS. You are still operating under that statute?

Mr. TENNANT. Yes, sir; that statute is still active in effect.

Mr. ANDREWS. So, then, if you have a billion dollars worth of salaries in this bill and you were able to finance half of it with foreign currency and half of it in U.S. currency, you would charge AID the billion dollars for the salary item, whereas, as a matter of fact, only a half billion dollars is in U.S. dollars.

Mr. TENNANT. Yes; when you take the U.S. Government as a whole. We are charged with the entire billion dollars, but the U.S. Government does not have an outflow of a billion dollars.

Mr. ANDREWS. We are dealing in the field of high finance and I am not an expert in that field.

Mr. TENNANT. There has been a lot of work done by the Treasury Department, the Bureau of the Budget, GAO, and others to maximize the use of local currency along the lines you suggest.

Mr. ANDREWS. Does the Treasury report show it as assets?

Mr. TENNANT. Yes, sir; the local currencies are in the Treasury report as assets. There is a comprehensive report put out. You will recall we had an abbreviated version here one day during the hearings when you were questioning on a prior occasion.

Mr. ANDREWS. I would say this is a pretty good way to sell our foreign currency that we have accumulated.

Mr. TENNANT. We have had extensive discussion on the Senate side with Senator Williams who sponsored amendments which effect certain changes in the Treasury as to the way they keep their records.

Mr. ANDREWS. You have enough Indian Government rupees in the Treasury of the United States to finance at least 50 percent of the cost of the AID program in India, have you not?

Mr. TENNANT. Yes; there is a tremendous amount of local currency in India. These amounts can be used for local costs, which are the salary costs you are talking about, but could not be used for the foreign exchange costs that are used on the program side.

Mr. ANDREWS. I understand that but my hypothetical man is living in New Delhi; he is paid every 2 weeks. Everything he buys in New Delhi has to be paid for in rupees.

Mr. TENNANT. That is right. His housing and so forth.

Mr. ANDREWS. Why do you not work out some plan where you could cut your dollar cost of foreign aid considerably by the use of foreign exchange that we own and have on hand and is of little value to us except to be spent for salaries? Is there any restriction on the part of the Indian Government that prohibits us from paying that man in rupees without taking dollars and converting them into rupees?

Mr. TENNANT. No, this is a U.S. statute imposed by the U.S. Congress that requires that anytime we pay out——

Mr. ANDREWS. The effect of that statute, then, is to prohibit us from using rupees?

Mr. TENNANT. No, we use the rupees to the maximum extent possible. Insofar as our program is concerned, it merely means that our appropriation gets charged with the full cost of this technician, even though part of his cost is met from local currency holdings.

Mr. PASSMAN. You are saying, in effect, that a country issuing its own currency would not provide the foreign exchange they need to buy commodities?

Mr. TENNANT. That is correct. We were at that point discussing, primarily, payments to a technician.

Mr. MILLER. India, Mr. Chairman, with a program of about $450 million in loans for foreign exchange cost and $800 million——

COMPARISON OF FISCAL YEAR 1963 APPROPRIATIONS WITH OBLIGATIONS

Mr. PASSMAN. I believe that the final "Mutual Security" program appropriation last year amounted to $1,032,400,000 less than the budget estimate; is that correct?

Mr. TENNANT. That is correct, sir.

Mr. PASSMAN. Even after that reduction, you still finished the fiscal year not obligating $128,900,000, plus all reappropriated funds; less than the amount appropriated. You obligated a total of $3,800 million, and Congress had appropriated $3,928,900,000.

Mr. TENNANT. Yes, sir. Your figure I did not get; was it $3,928,900,000?

Mr. PASSMAN. That is right.

Despite all the fighting last year and all the hair raising by top echelon people and the claims that Congress was wrecking the program, you still wound up the year with all the deobligated funds, using as such, with all the money reappropriated, plus $128,900,000 of new authorization unused, which means that the Congress appropriated more money than you could possibly use. How could you possibly come within $128,900,000 of obligating the amount of the

new appropriation and still have on hand as of June 30, 1963, under section 1, $368,608,000 of unobligated funds?

Mr. TENNANT. There are several reasons for this, Mr. Chairman.

Mr. PASSMAN. Did the Congress, in effect, in some accounts, appropriate more money than was actually needed?

Mr. MILLER. In the contingency funds——

Mr. PASSMAN. In the contingency fund, did Congress appropriate more money than was actually needed and you are turning back $117 million?

Mr. TENNANT. We are turning back $117 million.

Mr. PASSMAN. If you had gotten more you could have spent that and this, too; is that what you are saying? Or did Congress appropriate more money than you needed?

Mr. MILLER. You gave us more money than we needed.

Mr. PASSMAN. Thank you.

Mr. MILLER. We are pleased that we used the contingency fund so carefully this year.

Mr. PASSMAN. I think you have been more extravagant this year than ever before.

I have cited correctly the amount of unobligated funds in section 1, $368,608,000, when we pick up the others, including the revolving funds, you had on hand $515,585,000; is that correct?

Mr. TENNANT. That is correct. That includes military and economic, investment guarantees and so forth.

UNOBLIGATED BALANCES

Mr. MILLER. Mr. Chairman, if we could go down a few of those——

Mr. PASSMAN. It is not necessary.

Mr. MILLER. The figure of 515 should, I think, be explained.

Mr. PASSMAN. It has been explained, but you may proceed.

Mr. MILLER. The $117 million from the contingency fund is the largest single unobligated balance. That we believe is appropriate.

Mr. PASSMAN. That is your trick fund. It is the one on which you are trying to sell Congress that you are such good operators you are going to turn it back. I think it is the most abused fund that you had last year.

Mr. MILLER. The second major item is development loans which are no-year funds.

Plus the Alliance for Progress.

Those two no-year funds which amount to about $190 million, plus the unobligated balance in the contingency funds, make up by and large the entire amount except for development grants, where there is a $46,200,000 figure. Most of the $46,200,000 in unobligated funds at the end of the year in development grants come from deobligations which were not——

I am sorry; most of the $46,620,000 in development grants are deobligated funds which, in accordance with the discussions and correspondence that you had indicated earlier, we did not reobligate for use during fiscal 1963.

Mr. PASSMAN. These items have previously been discussed in detail.

Mr. TENNANT. We have discussed it from time to time but since we are back to discussing it we want to reiterate it.

Mr. PASSMAN. Yes, but you have those figures in the record.

Mr. TENNANT. Those figures are in the record.

Mr. PASSMAN. Perhaps you may wish to discuss them further, Mr. Controller, with Mr. Miller. You might also wish to discuss the other $688 million of unobligated funds that are technically obligated, placed over in the category of reservations, pending the signing of contracts.

RESERVED FUNDS FOR APPROVED LOANS

Mr. RHODES. Could you describe that $688 million?

Mr. TENNANT. That figure represents loan commitments which have been approved by the Administrator and the Development Loan Committee. After a loan is approved, we earmark the money to cover the pending agreement. We are now in the process of working out details of these loan agreements. When the loan agreements are signed they become legal obligations.

Mr. RHODES. In other words, negotiations are in process?

Mr. TENNANT. Yes.

Mr. PASSMAN. It is carried in a reservation status?

Mr. TENNANT. Yes, sir. We report these figures as commitments under the caption "Obligations/Reservations."

Mr. RHODES. Sort of a shadow area.

Mr. PASSMAN. Is it not also true that there are items for which you reserved money as far back as fiscal year 1962 but the contracts are yet to be signed?

Mr. TENNANT. I think there were one or two transactions in fiscal year 1962.

Mr. PASSMAN. Did you not have a score or more in fiscal year 1963, which are now a year old, or older, that have yet to be signed?

Mr. TENNANT. There are quite a few in 1963. However, these are big, complicated transactions and we want to exercise caution. In working out the details of negotiations we run into technical problems.

Mr. MILLER. We believe it is the fiscally prudent thing. When we have an outstanding obligation we believe we should have the funds on hand to meet that.

Mr. PASSMAN. If you had the money properly obligated to start with, then you would not have all these deobligated funds. I think last year there was in excess of $300 million in deobligated funds in economic and the military programs. The economic aid category alone included about $51 million of deobligated funds, did it not?

Mr. MILLER. My recollection is that it is about $50 million.

Mr. PASSMAN. Is not $51 million net, the latest report?

Mr. TENNANT. That is the carryover from deobligations not reobligated as of June 30, 1963.

Mr. PASSMAN. Yes, and since the start of these hearings you have indicated a lot of other commitments, some of them development loans of prior years that will be deobligated.

Mr. TENNANT. There were some statements by the witness along that line.

Mr. RHODES. Is any of this $688 million represented by loans in process for the Alliance for Progress?

Mr. TENNANT. Yes, the figure includes the Alliance for Progress loans.

AIR TRAVEL BY FOREIGN ASSISTANCE PERSONNEL AND PARTICIPANTS

Mr. PASSMAN. Mr. Tennant, of the 64,500 individuals involved in the aid program, military and economic, including the participants, all of them do some flying, do they not, getting to and from certain places?

Mr. TENNANT. Yes, that is correct. In some cases participants costs are partially borne by the cooperating country.

Mr. PASSMAN. I never know what you people are up to when you say look what the other country is doing. Our aid is a supplement to what they do for themselves, is it not?

Mr. TENNANT. That is correct.

EXPENDITURES FOR COMMODITIES

Mr. PASSMAN. Have you been able yet to arrive at a figure for the cost of the commodities charged to this program for fiscal year 1963?

Mr. TENNANT. Not for fiscal 1963. I provided you an insert for prior years, earlier during these hearings.

Mr. PASSMAN. We want to find out what part of the total is for commodities. We claim that is an export, a commodity you have shipped out. Perhaps only about a billion dollars in commodities is involved in the total of annual expenditures. Is that correct?

Mr. TENNANT. I believe about $863 million in fiscal 1962.

Mr. PASSMAN. What was the other part of it?

Mr. TENNANT. This is out of a total of about $1.8 billion in fiscal year 1962.

Mr. PASSMAN. That is economic aid alone.

Mr. TENNANT. Yes, sir.

Mr. PASSMAN. Do you have comparable figures for the military aid program?

Mr. TENNANT. The military in 1962, out of a total amount of expenditures of $1.4 billion, they show—no, I would have to provide it for the record.

Mr. PASSMAN. Pick some other year on military.

Mr. TENNANT. These figures are broken out between cost of material and construction only.

Mr. PASSMAN. You do not have any information with you?

Mr. TENNANT. No, sir.

Let us see what we can work out.

(Information supplied follows:)

Military assistance program, fiscal year 1963 estimated expenditures

[In thousands of dollars]

1. Commodities	$1,308,876
2. Services:	
(a) Direct compensation and benefits	28,945
(1) Salaries, direct hire	19,349
(2) Other direct compensation	731
(3) Personnel benefits	8,865
(b) Travel and allowances (including foreign trainees)	50,606
(c) Other services	406,573
(1) Construction	52,600
(2) Training [1]	58,002
(3) Supply operations [1]	116,916
(4) Infrastructure	95,000
(5) Balance of other services [1]	84,055
Total	1,795,000

[1] Exclusive of compensation and travel.

Mr. PASSMAN. What, again, is the amount of the commodity component for economic aid?

Mr. TENNANT. That was $863 million out of $1.8 billion.

Mr. PASSMAN. What percentage would that be?

Mr. TENNANT. It is a little less than 50 percent. I guess about 45 percent.

Mr. PASSMAN. About 45 percent commodities, 55 for all other categories.

Those figures cover salaries and expenses for the 64,500 employees and participants as well as contract personnel with universities, colleges, trade schools, and so forth?

Mr. TENNANT. These figures cover the total AID program. The 64,000 figure you used includes military.

BREAKDOWN OF EXPENDITURES UNDER FOREIGN ASSISTANCE

Mr. PASSMAN. Of the $1.8 billion for economic aid, do you have a chart which shows how much of that is for subsistence, how much is for travel?

Mr. TENNANT. Technicians' salaries and international travel is $69 million on this chart for fiscal year 1962.

Mr. PASSMAN. Could you break that item down and show the amount for travel and related expenses?

Mr. TENNANT. I think we will have to provide you that.

Mr. PASSMAN. Here is what we want: One, commodities. Two, direct-hire salaries. Salaries to direct hire. Three, personnel for contract services. Four, travel allowances, food, and related expenses. Give us the commodities first. Then give us the salary of all of them. Then give us the travel, including all related expenses. And the contracts service.

Mr. MILLER. This would add if we put in International Organizations, which is a separate category——

Mr. PASSMAN. You may delete the International Organizations.

Mr. TENNANT. We will work it out, Mr. Chairman. I think the problem here is that some of the detailed runs are not out yet.

(Information supplied follows:)

AGENCY FOR INTERNATIONAL DEVELOPMENT

Preliminary fiscal year 1963 expenditures by cost component

[In thousands of dollars]

	Preliminary fiscal year 1963 expenditures	Estimated breakout by component					
		Commodities	Travel	Contracts	Salaries	International organizations	Other
Commodities	1,160,935	1,160,935					
Participants	23,925		4,785				19,140
Technicians	65,225		8,081		57,144		
Contracts	135,784			135,784			
Cash transactions	270,906						270,906
International organizations	93,492					93,492	
Social progress trust fund	49,000						49,000
Administrative expenses	57,828		3,595		36,766		17,467
Other services:							
Other agencies	26,237						26,237
Projects	63,645						63,645
Development loans	104,696						104,696
Program support	25,658		341		6,344		18,973
Balance of other services	501						501
Total	2,077,832	1,160,935	16,802	135,784	100,254	93,492	570,565

AVERAGE SALARY FOR U.S. AND FOREIGN NATIONAL PERSONNEL PROGRAMS

Mr. PASSMAN. It looks to me as if this thing has gotten down to the point that it may be as low as 40 percent is actually foreign aid in the form of goods. However, the spending has the same effect on our balance-of-payments situation if they are dropping these salaries and expenses abroad.

Now, the salary scale has considerable spread. Could you give us the average annual salary?

Mr. TENNANT. I think I have that here, sir. The fiscal year 1963 average salary for both Washington and overseas personnel is $10,300 per annum.

Mr. PASSMAN. Is that figure for all personnel in AID, both military and civilians?

Mr. TENNANT. That is just AID, not the military. It excludes the military, but all of the AID agency's U.S. national employees.

Mr. PASSMAN. It does not include foreign nationals. Do you have the breakdown for that category of employees?

Mr. TENNANT. Foreign nationals, I think, average about $1,500 per annum.

Mr. PASSMAN. When you give us expenses for these people, are you going to include the expenses of all personnel in this category, economic?

Mr. TENNANT. Economic; yes, sir.

Mr. PASSMAN. Then try, if you can, to give us a comparable sheet on the military program.

Mr. TENNANT. Yes, sir.

(Information supplied follows:)

The estimated average salaries of personnel paid with military assistance funds in fiscal year 1963 were: U.S. civilians, $7,492,000; foreign nationals employed by Department of Defense activities, $1,033,000; and foreign nationals employed by allocation account activities, $1,574,000.

Mr. PASSMAN. The contract personnel is in there because that is included in that 64,500. That figure includes all personnel in AID, participants and AID people, does it not?

EXPENSES FOR PARTICIPANTS

Mr. MILLER. Participants are not in the AID Agency.

Mr. PASSMAN. Participants are part of the program. The total personnel of 64,500 includes the participants.

Mr. TENNANT. I think Mr. Miller is merely pointing out that participants are not employees of the AID Agency.

Mr. PASSMAN. Not as such. But they draw the spending money, they draw expenses, and you are dealing with personnel.

Mr. TENNANT. Participants are people we are trying to train.

Mr. PASSMAN. There are about 18,000 participants?

Mr. TENNANT. Roughly.

Mr. PASSMAN. You have to pay for the airplane tickets to bring them over and take them back?

Mr. TENNANT. That is right.

Mr. PASSMAN. You give them allowances and spending money, do you not?

Mr. TENNANT. We give them per diem for food and lodging.

Mr. PASSMAN. Do they not have a little spending money that is included?

Mr. TENNANT. I think I hedged on the question of spending money in a previous exchange.

Mr. PASSMAN. We do furnish a little spending money. Are you familiar with how much spending money there is for each participant?

Mr. MILLER. Mr. Chairman, they do spend money. The exact nature of the expenditures, I think, Mr. Tennant might speak to that.

Mr. PASSMAN. Please try to give us a breakdown of the $1,500 for the participant and how much spending money, how much for travel, how many room and board?

Mr. MILLER. Well, we will have to provide that.

(Information supplied follows:)

BREAKDOWN OF PARTICIPANT EXPENSES

The total cost of the AID worldwide training program is approximately $44 million per year. This includes the cost of the oversea training staffs, the training staffs in AID/Washington and in each of the participating agencies, travel, tuition, medical expenses, maintenance allowances, and other support costs. The average cost per participant is approximately $3,500 per year. It is not possible to state how much of this is for travel, per diem, tuition, etc., because of the different per diem rates applicable to the various types of training and the various methods of paying for international travel. On international travel, for example, of the 77 countries in which AID has training programs, 20 pay all travel costs for their participants; in 18 countries AID and the cooperating country share the costs of travel; and in 38 countries AID pays travel costs.

The maintenance allowance paid to participants varies according to his geographical location and the type of training he is undertaking. Lower rates are

provided for participants located in academic institutions than for those who are in travel status. In any case, the per diem covers such items as lodging, food, laundry, drycleaning, haircuts, recreation, and similar expenses. It is not intended that the rate provide for more than a modest standard of living.

Mr. PASSMAN. You do not disagree that they have some spending money, do you?

Mr. TENNANT. It is per diem in lieu of lodging and food.

Mr. PASSMAN. It amounts to the same thing. You include something in there so that if a participant needs an aspirin tablet he would have the money to go down and buy it?

Mr. TENNANT. That is true.

Mr. PASSMAN. If he happens to get a hamburger or Coca-Cola on the corner that is in there, too.

Mr. MILLER. The per diem expenditures may be spent by the individual or participants just as they are by Federal employees or anyone else receiving per diem. They may spend it for food and lodging or aspirin tablets.

Mr. PASSMAN. You say they may spend this money as they see fit?

Mr. MILLER. The per diem expenditures they use for their expenses.

Mr. PASSMAN. Food and lodging?

Mr. MILLER. Food and lodging; yes, sir.

Mr. PASSMAN. Nothing but food and lodging?

Mr. MILLER. This is an expenditure that is calculated to provide them a sufficient amount for their food and lodging. And whatever expenditures they have included in the per diem, almost anything.

Mr. PASSMAN. We are trying to find out if it is not a fact that the per diem allowance is liberal enough so that they have some funds for spending money.

Mr. TENNANT. The computation of per diem as I understand it is computed on the principle of food, lodging, and tips incidental thereto.

How the man actually spends the actual cash is beyond the control of the U.S. Government.

Mr. PASSMAN. Tips would be what you might call a little spending money?

Mr. TENNANT. I would say so, sir.

Mr. PASSMAN. Thank you.

DIFFERENCES IN PRELIMINARY FIGURES SUBMITTED

Let us have the list showing the $300 million variation in funds over a 13-day period.

Mr. TENNANT. We will produce it as fast as we can. We will get the military and see what their target is, too.

Mr. PASSMAN. This is dealing primarily with economic aid. We want to see what countries came through so slowly on this $300 million.

Mr. TENNANT. I want to be very clear on the military. The figures shown on those charts are the figures that are in the military presentations. The military indicates that they have no preliminary June 30, 1963, figures ready as yet.

Mr. PASSMAN. But you do have the $300 million difference in the economic aid figures?

Mr. TENNANT. That is in economic entirely. As I have just said, the military figures have not changed from the presentation figures.

Mr. MILLER. They stated they had no later figures.

Mr. PASSMAN. We shall deal with the economic part of it, what nations, the date of the voucher, to whom payable, the name, and the amount, and when you received it in the AID Agency during those 13 days. The rest will be in the error category, which is understandable.

Mr. TENNANT. Mr. Chairman, I would like to point out on these two tables, the July 25 and the August 8 table, the military figures as I look at them are exactly the same.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. TENNANT. The thing I wanted to be sure the committee realized is that later when the military figures change I want to be on notice they probably will change.

Mr. PASSMAN. We shall not blame you if the military aid figure is, say, $200 million more than they have reported.

Mr. TENNANT. Mr. Chairman, as I indicated earlier, in accordance with Government agency regulations, each agency goes through an audit process to review all of the outstanding obligations on June 30. This process occurs during the months of July and August and the final figures on this are required in the Treasury in September. It is conceivable that these audit findings may disqualify some obligations and increase the unobligated.

Mr. PASSMAN. The accurate statements may increase the amount of unobligated funds?

Mr. TENNANT. It may increase or decrease.

Mr. PASSMAN. Do you see some indication the figure would be increased?

Mr. TENNANT. I would think it would increase from the standpoint that auditors in reviewing transactions may disqualify some transactions on the books that don't qualify.

Mr. PASSMAN. Can you give us another statement as of Tuesday, August 20?

Mr. TENNANT. The difficulty of providing you with a revised statement on the unobligated balance is the fact that these audits occur not only here in Washington for Washington transactions but occur in each one of the missions for mission transactions. They are in the middle of these audits at the present time.

Mr. PASSMAN. Are you telling us that there is no way we can anywhere near accurately give the Congress a listing on the amount of funds unexpended?

Mr. TENNANT. Those figures are the best figures we can give you at this time.

Mr. PASSMAN. When is the next time you can give us the figures? You gave us a statement on August 8.

Mr. TENNANT. The next figures we can give you, as I see it, Mr. Chairman, would be around October. My understanding is the Treasury routine requires through the middle of October for the reconciliation process.

Mr. PASSMAN. What date would you have given us if we had said "Mr. Controller, give us a current statement on unobligated funds on everything in the pipeline"?

Mr. TENNANT. The August 8 figures.

Mr. PASSMAN. What is so significant about the August 8 statement?

Mr. TENNANT. Both of those tables are headed as of June 30, 1963.

Mr. PASSMAN. But you have two dates down there, your estimate as of July 25 and the estimate as of August 8.

Mr. TENNANT. Those are the dates the documents were typed.

Mr. PASSMAN. You indicate the next statement could be up, that they may disallow certain charges. Do you have have some indication that will be the fact?

Mr. TENNANT. This is just the normal routine in an audit.

Mr. PASSMAN. You could not give us another estimate until October?

Mr. TENNANT. Those are the only reasonable figures we can give you, sir.

Mr. PASSMAN. When are we going to get a list, Mr. Tennant, showing what countries sent in these reports late, and in what amounts, and for what purposes?

Mr. TENNANT. And what errors occurred?

Mr. PASSMAN. Yes.

Mr. TENNANT. I assume we can get that information in for you in the next 3 or 4 days.

Mr. PASSMAN. Could you give it to us by Thursday morning?

Mr. TENNANT. I think we probably could. I will try to get them to you Thursday morning. I might slip a few hours.

Mr. PASSMAN. I have never yet sent out a statement on the AID program that was not from your figures. I do not intend to do so this time. Certainly we want figures as accurate as it is possible to get them.

INCREASE IN FOREIGN ASSISTANCE PIPELINE

What does your figure show you withdrew from the pipeline in fiscal year 1963?

Mr. TENNANT. Fscal 1963?

Mr. PASSMAN. Yes.

Mr. TENNANT. We had an increase of $114 million for both military and economic.

Mr. PASSMAN. I am talking about the total withdrawals.

Mr. TENNANT. I am sorry, the pipeline increased $114 million——

Mr. PASSMAN. How much did you disburse and what were the expenditures?

Mr. TENNANT. Total expenditures during fiscal year 1963 were $3,857.2 million.

Mr. PASSMAN. Does that figure include this $300 million discrepancy we have been talking about?

Mr. TENNANT. These are based on August 8 figures.

Mr. PASSMAN. Is this an accurate statement? In fiscal 1962 you withdrew $3,198,100,000. In fiscal 1961, you withdrew $3,276,600,000, and in fiscal 1960, you withdrew $3,265,400,000.

Mr. TENNANT. The 1962 figure that you read I believe is a preliminary figure. The 1961 figure you gave me is the final figure. The 1960 figure I don't have with me, sir.

Mr. PASSMAN. You gave me these figures.

Mr. TENNANT. Yes, sir. Any time we can further explain these figures we will be glad to help.

Mr. PASSMAN. I can assure you we will be calling upon you.

You certainly agree there is an increase in the last 3 years over previous years?

Mr. TENNANT. Yes, sir.

Mr. MILLER. I think in the development loan category there was of course a large obligated amount in the early stages which had not been expended because many of these were for long-term projects. Now the expenditure rate in the development lending is increasing over time.

Mr. PASSMAN. But the pipeline still goes up. The pipeline is up again, is it not, about $114 million?

Mr. TENNANT. That is right.

Mr. PASSMAN. It may be up $114 million, depending on whether or not when you have another look at these postings, when you have a final audit, whether or not there has been an error. This is subject to correction, is it not?

Mr. TENNANT. Yes, sir, it is true on the development loan category. the nature of the project, there are capital projects, that the disbursements in the early years, the loans are relatively small and in the latter years they will increase substantially as Mr. Miller has pointed out.

Mr. MILLER. In effect, in the nonloan category, it has been going down somewhat in terms of the pipeline.

Mr. PASSMAN. It would appear to me that a good part of this came out of this regular straight-out give-away fund. Supporting assistance is where you got really a big bite; am I correct?

Mr. TENNANT. I think——

Mr. PASSMAN. Am I right? Supporting assistance is primarily economic, and is where we lost this $200 million. Is that correct?

Mr. TENNANT. Yes, that is right.

Mr. PASSMAN. So you cannot blame that situation on the so-called development loan fund. The big discrepancy is in the old give-away part of the program.

Mr. MILLER. In the non-loan category in 1960 the expenditure rate was——

Mr. PASSMAN. Mr. Miller, all we are trying to do now is find out about the $300 million. We have just put our finger on $200 million of it being in the grant aid part of supporting assistance.

Mr. MILLER. Yes, Mr. Chairman.

Mr. PASSMAN. If you make these obligations you have a right to draw all of the money out of the pipeline. However, I do not think that we are in a position to discuss the matter further until we see that list concerning the difference in figures by $300 million.

Mr. TENNANT. We will send that to you as quickly as possible.

Mr. PASSMAN. I believe that under development grants, the old shared grants part of the program, you pick up $25 million. This so-called loan business is only $5 million. In supporting assistance you pick up $200 million. In the contingency fund, it looks as if you are going to pick up about $35 million. You work in those categories, please.

Mr. TENNANT. We will do that, sir.

Mr. PASSMAN. We are very grateful to you, Mr. Tennant and Mr. Miller, but I believe that you agree that there is cause for confusion and room for improvement with regard to the matters we have discussed.

Mr. MILLER. We will be glad to help you in any way we can.

Thank you again, gentlemen.

This subcommittee will now adjourn, to meet next, subject to call.

WEDNESDAY, AUGUST 14, 1963.

OBLIGATIONS UNDER CONTINUING RESOLUTION, FISCAL YEAR 1964

Mr. PASSMAN. The committee will come to order.

I should like to make one or two brief observations before we hear the outside witnesses.

I spoke with Mr. L. D. Mosso, Division of Central Reports, Bureau of Accounts, U.S. Department of the Treasury, code 184, extension 5506, with respect to Treasury statements.

When the Treasury statement for June 30 is issued, whatever it shows under "withdrawals from the U.S. Treasury" closes that fiscal year so far as applying any withdrawals to this statement. All bills for payment received subsequent to June 30 naturally are dated in July and are included as a part of the new fiscal year's withdrawals and are so listed.

If an agency operating under a continuing resolution has obligated $3,450 million for fiscal year 1963, then the agency would be able to obligate one-twelfth of that amount per month until it receives its new appropriation. If, however, the agency showed total obligations of $3.9 billion for fiscal 1963 it could then obligate one-twelfth of the $3.9 billion per month until it receives the new appropriation. And if an agency operated for a period of 4 to 6 months on a continuing resolution at a very high figure, then at the time of considering the final amount for a full fiscal year it would not have a bona fide claim but yet a very strong argument to persuade the Congress to appropriate maybe more than had been intended because of having permitted the agency to withdraw at a very high rate for approximately one-third, or 40 percent, of the new fiscal year.

On the other hand, there is a question of the Budget permitting obligations to be made retroactive. As there is no statutory cutoff date, there is no absolute administrative cutoff date, it is not difficult to understand how the previous fiscal year would indicate a very high figure for obligations.

Mr. RHODES. Mr. Chairman, will you yield?

Mr. PASSMAN. Yes; I yield.

Mr. RHODES. Just to tie this down as to figures, if I understand the chairman correctly—and I think he is absolutely correct—if an agency was operating on an average obligational authority of $3.6 billion for a fiscal year and assuming the agency operated on a continuing resolution for the next 4 months of the following fiscal year, the agency would be able to obligate on the basis of $300 million a month.

Mr. PASSMAN. That is correct.

Mr. RHODES. Carrying the example further, if at the end of the 4 months the agency had obligated $1.2 billion, and assuming the Congress appropriated for the agency for the next fiscal year only $2.4 billion, then for the last 8 months of the fiscal year the agency would have to obligate $2.4 billion minus $1.2 billion, which would leave $1.2 billion for the balance of the fiscal year.

Mr. PASSMAN. That is absolutely correct. And that is why it is especially important to establish at this time the actual amount of obligations. They have given two or three figures for two or three

different periods. We have requested a letter from the Treasury Department explaining how these matters operate because the Congress may this year, in its wisdom, agree on a lower appropriation. Therefore, if the agency should not get the appropriation until say, November or December, then it is quite obvious the pressure would be great on the Congress to appropriate at the same level that had been obligated and the pressure could be rather difficult to overcome.

Mr. RHODES. In the example I just gave, if this agency received an appropriation for new obligational authority of $2.4 billion, they would only be able to obligate $150 million a month for the rest of the fiscal year whereas they had been operating at a level of $300 million per month.

Mr. PASSMAN. If you get several months into the new fiscal year without the Congress approving an appropriation bill, permitting the agency to operate under a continuing resolution, to say the least it jams up the procedure of operation.

Mr. RHODES. It points up the necessity for quicker action on the program.

Mr. PASSMAN. That is right, and particularly on this program. The others are more or less controlled, but not this one.

Mr. RHODES. That is right.

UNITED NATIONS CHILDREN'S FUND

WEDNESDAY, AUGUST 14, 1963.

WITNESSES

MRS. VIRGINIA M. GRAY, EXECUTIVE SECRETARY, CITIZENS COMMITTEE FOR UNICEF

MRS. MARGARET F. STONE, CHAIRMAN, CITIZENS COMMITTEE FOR UNICEF

Mr. PASSMAN. We are pleased to have with us this morning Mrs. Virginia M. Gray, of the Citizens Committee for UNICEF. It has been our privilege to have Mrs. Gray before this subcommittee every year, I think, for the past 8 years. This will make the ninth year.

Mrs. Gray, I think you are accompanied by Mrs. Stone?

Mrs. GRAY. Yes.

Mr. PASSMAN. Mrs. Stone, are you the chairman of the Citizens Committee for UNICEF?

Mrs. STONE. That is correct.

Mr. PASSMAN. We are happy to have both of you here and shall be glad to hear from you, Mrs. Gray, if you have a statement.

Mrs. GRAY. Thank you very much. It is always a pleasure and a privilege to appear before your subcommittee, and I am especially happy that our chairman, Mrs. Stone, was able to be with us this morning. It is not often she is able to come when these hearings are scheduled.

I would like, with your permission, because I know you like to run on a tight schedule, to file the statement and speak to several points.

Mr. PASSMAN. The procedure you suggest will be quite acceptable, and if the chairman, Mrs. Stone, wishes to make a statement she, too, will have that privilege.

Mrs. GRAY. Thank you.

(The following statement was submitted for the record:)

STATEMENT OF MRS. VIRGINIA M. GRAY, EXECUTIVE SECRETARY, CITIZENS COMMITTEE FOR UNICEF, ON BEHALF OF THE APPROPRIATION FOR THE UNTIED NATIONS CHILDREN'S FUND, AUGUST 14, 1963

The Citizens Committee for UNICEF, an informal clearinghouse of legislative information serving a number of national organizations which support continued participation by the United States in UNICEF, once again presents to this subcommittee a brief usmmary of the views of our organizations. This statement has been authorized by the following national organizations:

American Association of University Women.
American Parents Committee.
American Veterans Committee.
Association for Childhood Education International.
Child Study Association of America.
Child Welfare League of America.
Cooperative League of America.
Friends Committee on National Legislation.
Jewish War Veterans of the U.S.A.
Methodist Church—Women's Division of Christian Service of the Board of Missions.
National Association of Colored Women's Clubs, Inc.
National Association of Social Workers, Inc.
National Congress of Colored Parents and Teachers.
National Council of Jewish Women.
National Jewish Welfare Board.
Unitarian Women, Alliance of.
United Church Women.
Women's International League for Peace and Freedom.
YWCA, National Board.

First Things First—The Value of a Focus on Children

This year when the entire foreign aid program of the United States has been undergoing a most searching review, our organizations believe that it is more important than ever to call the attention of the Congress to the wholehearted approval which the vast majority of the American public gives to UNICEF. This endorsement is much more than a sentimental response to the appeal of a suffering child. It is rather the commonsense recognition that an investment in children is an investment in the future of civilization. The world simply cannot afford to neglect its most valuable resource, its leaders of the future.

We have known for a number of years that over two-thirds of the world's children live in the so-called underdeveloped countries but, as census taking has become more than mere estimates for some of these areas, it has been learned that about 75 percent of the world's child population lives in low-income countries. In some developing countries children under 15 account for 40 percent of the population in contrast to 25 to 30 percent in the more economically advanced areas of the world.

UNICEF has an immense psychological advantage. It focuses the attention of country ministries on the importance of improving the welfare of their own children. UNICEF provides much more than the supplies and equipment (the antibiotics, bicycles, jeeps, maternal and child health clinics, and other commodities); it also serves as a catalyst in offering the know-how, the guidance in planning programs to fit the modest or the ambitious undertakings of a country eager to help its own children. UNICEF also encourages, by scholarships and stipends, the training of nurses, teachers, sanitarians, and other technicians without whom the long-range objectives of these programs would never be realized. These local people must be trained in order to be able to carry their new knowledge to the remote, isolated regions where their help is needed most.

Aid to children is a prerequisite to economic development

A country's economic development depends on its people in the long run, even more than on its natural resources or its industrial capacity. Unless much more is done to improve the health and develop the skills of the oncoming generation in the developing countries, a great deal of money spent on ambitious projects of economic development will not be productive. While focusing on children, UNICEF recognizes that many of the child's needs are inseparable from those of his family and his community. Control of infectious diseases such as malaria

and trachoma, for example, or the education of mothers in the simple rules of sanitation or the provision of a pure water supply, all can lift the level of the whole community to make the environment a safer place for a child to grow up. Thus the type of program on which UNICEF continues to concentrate is the essential foundation on which other programs of economic and social development must necessarily build.

UNICEF help is self-help

UNICEF not only encourages, it requires any country wishing to obtain the benefits of UNICEF aid to demonstrate a willingness and ability to contribute to the aid of its own children. To quality for international aid in any area of UNICEF concern (except emergencies), the country seeking aid must be ready to allocate from its own resources an amount at least equal to the external help it is seeking. On the average over recent years the assisted countries have been providing about $2.50 for every $1 of UNICEF aid. For 1962 such internal matching with respect to moneys allocated amounted to $2.70 per UNICEF dollar. Under such a system of self-help, made possible by these limited international funds, there are no political objectives of the kind that are often inherent in aid which is otherwise extended. Countries that help themselves gain strength, pride, and true independence of external domination.

U.S. contribution was 11.2 percent of total governmental contributions in 1962

With the proposed contribution by the U.S. Government of $12 million for fiscal 1964, the fifth year for this same amount, the matching percentage (based on the understanding between the Congress and the administration) is limited to 40 percent of total Government contributions for this year. It should be pointed out in this connection that a much more realistic ratio would be one including all funds devoted to UNICEF work; i.e., including the internal matching provided by the aided countries themselves. On this basis the U.S. contribution amounts to only 11.2 percent. When it is further realized that these same aided countries contribute, in addition to the required matching funds for work within their own borders, a donation to UNICEF's central account, the significance of their participation becomes all the greater.

Increasing contributions of countries other than the United States

A total of 105 governments contributed to UNICEF in 1962 (see list attached) compared with 60 in 1954. Seven countries (Ivory Coast, Kenya, Togo, Kuwait, Congo (Léopoldville), Cyprus, and Saudi Arabia) gave for the first time. Since 1954 the amount given by governments other than the United States has more than doubled.

To the suggestion being heard with increasing frequency that the time has come for other industrialized countries of the world to take up a larger share of the costs of foreign aid, UNICEF can illustrate that this trend is already occurring in its program financing. In 1962 substantial increases were reported from Sweden, Canada, Austria, Czechoslovakia, Denmark, Norway, Greece, and Spain, among others. The fact that 33 countries last year paid their pledges to UNICEF in U.S. dollars should also allay the fears of some that this program causes further strain on the U.S. balance of payments.

Urgent needs of children still unmet

We have tried to place the role and the accomplishments of UNICEF in the broad perspective of its service to children and to the ever-continuing struggle to make this world a better place for future generations. The needs of children go far beyond the scope of the modest efforts that UNICEF itself can make or could be expected to meet even with many times the present budget. We know, however, that requests for aid totaling $51 million have already reached UNICEF in 1963. Too large a number of these requests will have to be denied because sufficient funds are not available at this time. In spite of its magnificent achievements, the funds with which UNICEF operates are modest indeed when compared with the overall aid program before this committee.

With this fact in mind, I should like to conclude this presentation with the hope that, while our organizations support the State Department's request for $12 million for fiscal 1964, we shoud like to suggest that the U.S. Government raise its sights for 1965 and request a substantial increase in the U.S. contribution next year When that happens the organizations for which I am authorized to speak will be ready and eager to urge the members of this committee to vote approval of such an increase. We are most grateful for your consistent support of UNICEF in the past and are counting on your continued approval. We know that you share our concern for all children upon whom the future depends.

Thank you.

SCHEDULE C

United Nations Children's Fund—Contributions from governments to the central account (including contributions receivable) during the year ended Dec. 31, 1962

Governments	Currency paid or pledged	U.S. dollar equivalent
Afghanistan	U.S. dollars (receivable)	10,000.00
Argentina	Pesos (receivable)	45,454.55
Australia	Pounds	537,600.00
Austria	Schillings	57,918.79
Belgium	Francs (receivable)	160,000.00
Brazil	Cruzeiros	232,878.77
Do	Cruzeiros (receivable)	54,495.91
Total, Brazil		287,374.68
British Caribbean territories:		
Antigua	Pounds sterling	116.67
Grenada	U.S. dollars	1,166.67
St. Lucia	U.S. dollars	1,744.16
British Honduras	Guatemalan quetzales	348.50
Brunei	Pounds sterling (receivable)	3,266.67
Bulgaria	Leva	4,273.50
Burma	Pounds sterling (receivable)	56,000.00
Byelorussian Soviet Socialist Republic	Rubles	62,500.00
Cambodia	U.S. dollars	3,000.00
Cameroon	Francs (CFA)	8,163.26
Canada	U.S. dollars (receivable)	742,552.62
Central African Republic	Francs (CFA) (receivable)	3,810.86
Ceylon	Pounds sterling	14,725.52
Chile	U.S. dollars (receivable)	80,000.00
China	N.T. dollars (receivable)	10,000.00
Do	U.S. dollars (receivable)	5,000.00
Total, China		15,000.00
Colombia	U.S. dollars (receivable)	150,000.00
Congo (Brazzaville)	Francs (CFA)	7,734.49
Congo (Léopoldville)	U.S. dollars	11,996.00
Do	U.S. dollars (receivable)	5,004.00
Total, Congo (Léopoldville)		17,000.00
Costa Rica	U.S. dollars (receivable)	30,000.00
Cuba	Contribution in kind (sugar)	70,000.00
Cyprus	U.S. dollars	1,000.00
Czechoslovakia	Koruny	52,083.33
Dahomey	Francs (CFA)	5,000.00
Denmark	Kroner	173,760.00
Dominican Republic	U.S. dollars (receivable)	20,000.00
Ecuador	U.S. dollars	4,322.84
Do	U.S. dollars (receivable)	5,677.16
Total, Ecuador		10,000.00
El Salvador	Guatemalan quetzales (receivable)	20,000.00
Ethiopia	Dollars	18,000.00
Federal Republic of Germany	Marks	1,375,000.00
Federation of Malaya	Pounds sterling	24,500.00
Finland	Markkaas	50,937.50
France	Francs	1,022,448.98
Do	Francs (receivable)	86,734.70
Total, France		1,109,183.68
Gabon	Francs (CFA)	10,204.08
Gambia	Pounds sterling	560.00
Ghana	Pounds sterling (receivable)	16,800.00
Greece	U.S. dollars	57,000.00
Guatemala	Quetzales (receivable)	30,000.00
Holy See	U.S. dollars	1,000.00
Hong Kong	Pounds sterling	3,500.00
Hungary	Forints (receivable)	12,875.54
Iceland	Krónur	10,651.16
India	Rupees	504,000.00
Do	Pounds sterling	125,781.25
Total India		629,781.25
Indonesia	U.S. dollars (receivable)	100,000.00
Iran	U.S. dollars	270,300.00
Iraq	U.S. dollars (receivable)	41,942.50

United Nations Children's Fund—Contributions from governments to the central account (including contributions receivable) during the year ended Dec. 31, 1962—Con.

Governments	Currency paid or pledged	U.S. dollar equivalent

Total		23,586,902.70

[1] The statement made by the representative of Italy at the session of the UNICEF Executive Board in September 1959, concerning the prospect that Italy would increase its contribution from $96,000 to $288,000, subject to Parliamentary approval, has been implemented by Parliamentary action to the effect that the contribution has been increased from $96,000 to $192,000 beginning with 1962. Thus actual payments made by Italy in respect of contributions for 1959, 1960, and 1961 were $96,000 for each of these years.

Mrs. Gray. The first thing I would like to mention is point to the fact this year we have 19 national organizations that have joined together in supporting the statement that the Citizens Committee for UNICEF is authorized to make. Of course the National Congress for Parents and Teachers statement is always made separately, but this is the largest group that has ever joined the statement of the Citizens Committee for UNICEF and we are happy to have them with us.

The main things I wanted to say this morning center around some of the suggestions that came out of the Clay report, and I think it is rather helpful to have them pointed up in relation to the Children's Fund.

I was very much impressed when I heard General Clay testify before the House Foreign Affairs Committee in the open session, which was the one I could attend, that the recommendations he made in general were things for increasing the amount of self-help which the countries are able to devote to their projects. The thought came to me over and over that the things that the Clay Committee was recommending are the things the Children's Fund has been doing from the beginning. It is really dependent on self-help, for the countries that ask for aid do not receive any aid until they demonstrate their ability and willingness to help their own children. I think this is the reason for the success of the Children's Fund. I do not wish to make comparisons, but I wish others would follow the example of the Children's Fund.

Another point I think was of great importance in General Clay's report was his suggestion that there should be a considerable amount of aid from the industrialized countries of the world, that they should increase their help. With that in mind, I thought we should call attention to the fact that a total of 105 governments contributed to UNICEF in 1962, and I have attached to the statement a list of all the countries that contributed to the central account. This does not include the countries that contribute administrative costs for regional offices and it does not include what is termed reimbursable procurement. It includes only the earmarked contributions to UNICEF's central account.

Mr. Passman. This is developing into quite a large organization, is it not?

Mrs. Gray. It is certainly gaining support all around the world. There are seven new countries that contributed for the first time in 1962.

Mr. Passman. Many of the countries get more out than they put in, do they not?

Mrs. Gray. In one sense, but in every case they match the amount put in in addition to the amount they put in the central account.

Mr. Passman. If they did not get more than they put in there would not be any use for such an organization, would there?

Mrs. Gray. I can only agree with you to a certain extent. I think there would be need for it because the international organization is the catalyst, it sends them know-how and focuses the attention of the country on the need to help the children, to educate the children, and that you can have no promising improvement unless you educate your people.

To continue on the increasing contributions from the industrialized countries, in 1962 there were substantial increases from Sweden, Canada, Austria, Czechoslovakia, Denmark, Norway, Greece, and Spain.

And I happen to know that Japan, which has been making such rapid improvement, is increasing its contribution in the year ahead.

I think this is an important factor for the American people to understand, that it is not just the U.S. Government helping the children of the world but all the other countries are contributing. And last year 33 countries made their contributions to UNICEF in U.S. dollars, which shows that this program is not causing a strain on the U.S. balance of payments.

I would like to discuss a little bit this whole question of matching because while I know the gentlemen of this committee understand it very well, I think there is much misunderstanding among some of the Members of Congress and among the general public on how the matching is done.

In that connection, first of all, I would like to ask if you would be interested, Mr. Chairman, in inserting in the record this table that shows there were 37 governments last year which contributed to UNICEF in excess of their assessed ratio as assessed by the United Nations.

Mr. PASSMAN. The tabulation will be inserted in the record at this point.

(The statement follows:)

Comparison of government contributions to UNICEF for 1962 with U.N. assessment rates for 1962

[There were 37 governments which contributed proportionately as much or more in relation to total government contributions to UNICEF for 1962 than they were assessed by the United Nations for its regular 1962 budget. Of these, 27 governments contributed proportionately at least ¼ more to UNICEF than they were required to pay to the United Nations; they are listed below. Of these, in turn, 20 governments contributed proportionately at least ½ more to UNICEF than they were required to pay to the United Nations; they are marked by an asterisk next to their names]

Country	United Nations assessment rate	Add ¼ to U.N. rate	Percent of total contributions to UNICEF (in relation to $23.6 million)
Australia	1.66	2.08	2.28
Burma*	.07	.09	.24
Chile	.26	.33	.34
Colombia*	.26	.33	.64
Costa Rica*	.04	.05	.13
Cuba	.22	.28	.30
Denmark	.58	.73	.74
Dominican Republic*	.05	.06	.08
El Salvador*	.04	.05	.08
Ethiopia*	.05	.06	.08
Guatemala*	.05	.06	.13
Iceland	.04	.05	.05
India	2.03	2.54	2.67
Iran*	.20	.25	1.14
Iraq*	.09	.11	.18
Mexico*	.74	.93	2.12
New Zealand*	.41	.51	.89
Norway	.45	.56	.58
Peru*	.10	.13	.38
Philippines*	.40	.50	.87
Sweden*	1.30	1.63	2.12
Switzerland*	.95	1.19	1.48
Thailand*	.16	.20	.59
Turkey*	.40	.50	.82
United Arab Republic*	.25	.31	.40
United States*	32.02	40.03	[1] 50.85
Yugoslavia*	.38	.48	.85

[1] In addition to government contributions to the Central Account, some governments have made cash contributions in implementation of UNICEF-aided projects, as well as contributions toward the local administrative costs of UNICEF field offices; these were not taken into account when the above list was prepared, but should be included in figuring the U.S. matching percentage which is limited to 42 percent in 1963 and is proposed to be 40 percent in 1964.

NOTE.—In the case of Switzerland, the rate used is the one recommended by the Committee on Contributions for contributions by this Government to activities of the United Nations in which it participates.

Mrs. GRAY. They contributed as much as 50 percent more than they would have had to contribute in this connection if they were paying on the basis of their assessment.

This leads into the problem that has come up, I understand, that several Members of Congress have proposed a limitation to limit all U.S. contributions to one-third of other governments' contributions that would apply to all international organizations. Our organization, of course, hopes that this will be defeated if it is brought up.

I would like to make another point in regard to that matter. I think it is not realistic to relate the percentage in something like the Children's Fund merely to the central account of UNICEF. I think if we want to be realistic and measure what the other countries are contributing, the U.S. contribution amounts to only 11.2 percent of total government contributions.

Mr. PASSMAN. I have never been able to comprehend the reasoning in support of such a formula. Our contribution is high. When you speak of nations matching funds, they are matching for their own use. The Congress has been very liberal to UNICEF.

Mrs. GRAY. You certainly have.

Mr. PASSMAN. We have recommended all the funds you have requested. But you come in with more suggestions that could mean more contributions in the future. You say other countries are increasing their contributions, yet you suggest that we increase our contribution. With the tremendous improvement you are showing I would not want the United States—especially in view of the fact that we are having to borrow the money—to increase its contribution.

Mrs. GRAY. This is in terms of proportions in many cases.

Mr. ROONEY. Off the record.

(Discussion off the record.)

Mr. PASSMAN. Thank you very much, Mrs. Gray. We want you to know that you are always welcome to come before this subcommittee.

Mrs. GRAY. Thank you very much.

Mr. PASSMAN. We shall be pleased to hear from Mrs. Stone.

STATEMENT OF MRS. MARGARET STONE

Mrs. STONE. Thank you, Mr. Chairman.

I just wanted to say one thing on the point you raised about countries getting more out of it than they put in.

I think both the countries that give to the central fund and the countries that receive aid get about the same out of it in different ways. I think the people tend to forget that UNICEF is purely a supply organization. We send them supplies only. The supplies come from the United States and we buy these tractors and DDT and everything from the United States, which helps our businessmen tremendously. So we get a good deal out of it as well as giving our money.

Mr. PASSMAN. Thank you very much.

Mr. GARY. Let me ask one question: Does that $23,586,000 include the amounts that the recipients put up in addition?

Mrs. GRAY. No, it does not, not at all. This is only the contributions to what UNICEF sets up as its central account. There are other accounts which they label trust accounts which are contributions that

are not for internal matching but for aid. For example, the Asian regional office is located in Bangkok. The Thai Government contributes for the administrative costs of that office. That is a contribution to UNICEF's central program but it is not, because of the bookkeeping arrangements, since it is a specific earmarked fund, it is not contributed to their central account. I think that causes confusion.

Mr. GARY. Could you give us the amounts that the individual recipient countries that receive aid put up to match these funds?

Mrs. GRAY. Within their own countries?

Mr. GARY. Yes.

Mrs. GRAY. I do not have that here. I will see if I can get it. That would be a very long table.

Mr. GARY. I do not mean a table. I mean the total.

Mrs. GRAY. The total? It averages out to $2.70 per UNICEF dollar.

Mr. RHODES. If the gentleman will yield, the lady has said the U.S. contribution is 11 percent of the total.

Mr. GARY. Thank you. That is the information that I wanted.

Mrs. GRAY. That is on the basis of the contributions of the matching funds from the other countries.

Mr. PASSMAN. But we are not one of the recipients.

Mrs. GRAY. No. We have never asked to be.

Mr. PASSMAN. I do not think it makes a valid point when you say certain people do something for themselves. What we are doing is supplementing what they are doing for themselves, but we are putting up $12 million of the $23 million. Is that correct?

Mrs. GRAY. That is true for 1962 except for the administrative and reimbursable procurement which runs to almost $4 million in addition.

Mr. PASSMAN. Thank you.

I am correct in saying that some countries do something for themselves and this is a supplement to that effort?

Mrs. GRAY. Yes.

ACTIVITIES IN CUBA

Mr. RHODES. Do you know what activities UNICEF has in Cuba?

Mrs. GRAY. I do indeed because this is one of the things I looked into. I thought Congress would be interested in this.

There was only one project authorized in Cuba in 1960. A limited amount of money was given to it and then the Cuban Government decided they wanted to change the arrangements and the funds have never been given. They were approved in February of 1960, which is really before all the trouble had happened. That was a $132,000 allocation that was approved at that time, and only $87,000 was spent and there were no further purchase orders issued by UNICEF and no indication they will show up because Cuba is not meeting the standards of UNICEF in this program.

Mr. RHODES. The dollars were not turned over to Cuba, they were purchase orders?

Mrs. GRAY. Yes, but to make it measurable we state it in dollars.

Mr. RHODES. But the dollars were not turned over in a bank account or otherwise?

Mrs. GRAY. No.

Mr. PASSMAN. I hope this subcommittee will recommend the full amount for UNICEF. But there is one thing I have always had a

quarrel with and that is for someone to try to make their point sound better by indicating what others are doing for various groups; that is, what they are doing for themselves. In foreign aid we are giving $10 billion a year, counting the interest on the borrowed money.

Mrs. GRAY. May I say to the gentleman when he said he did not think this table makes a very good case, I considered this before I asked to have it included and I think it makes an impressive case to show what some of these countries just emerging from a primitive life are contributing. I think it is impressive.

Mr. PASSMAN. The table is impressive but some of the countries are getting along better than you seem to think.

Thank you.

Mrs. GRAY. Thank you very much.

UNITED NATIONS CHILDREN'S FUND

WITNESSES

MRS. ROBERTA C. COX, MEMBER, WASHINGTON COMMITTEE ON LEGISLATION, NATIONAL CONGRESS OF PARENTS & TEACHERS

MRS. BARBARA D. McGARRY, MEMBER, WASHINGTON COMMITTEE ON LEGISLATION, NATIONAL CONGRESS OF PARENTS & TEACHERS

Mr. PASSMAN. We shall be happy to hear at this time from Mrs. Cox, representing the National Congress of Parents & Teachers.

Mrs. COX. I am Roberta C. Cox, a member of the Washington Committee on Legislation of the National Congress of Parents & Teachers, and Mrs. Barbara D. McGarry, who is also a member of our Washington committee, is with me.

Mr. PASSMAN. We are pleased to have you with us, Mrs. Cox. You may proceed with your statement.

Mrs. COX. Before I read this statement I would like to make this one point. The reason the National Congress of Parents & Teachers does not join in the statement made by the Citizens Committee for UNICEF is that we feel so strongly about UNICEF we want to make a separate statement for the National Congress of Parents & Teachers. It is a priority item in our legislative program and so we do feel very strongly about it.

I am submitting this statement for Mrs. Fred L. Bull, national chairman of legislation of the National Congress of Parents & Teachers, to urge you to appropriate $12 million as the U.S. Government's contribution to UNICEF, the United Nations Children's Fund, for fiscal 1964.

Since 1897 the National Congress of Parents & Teachers has worked consistently to promote the welfare of children. This organization is aware of the fact that as the world grows smaller the problems of children across the world have as vital an effect on our own children as the problems of the children across the city, or on the next farm, or even next door. Concern for children is much more than a pretty sentiment. It is our considered opinion that investments in the welfare of children pay off as the soundest investments that can be made.

The National Congress of Parents & Teachers has been proud to support UNICEF since it was organized in December 1946 to help meet the emergency needs of children in the aftermath of the war in

Europe. The National Congress of Parents & Teachers has been proud to support its growth from an emergency operation to a permanent organization dedicated to the welfare of children around the world. We feel especially close to UNICEF both because of its dedication to the welfare of children, and because one of our own American citizens, Maurice Pate, has been its Executive Director from the beginning. Mr. Pate, as you know, was a successful investment banker who retired to invest his life in the future of the world—its children.

Through UNICEF mankind wages peace, focusing assaults on our common, vicious enemies: hunger, disease, poverty, superstition, and ignorance. Through cooperation with other United Nations agencies (such as FAO, WHO, the Bureau of Social Affairs, etc.) phenomenal victories have been won against malaria, against tuberculosis, against leprosy, against yaws, against trachoma. Significant inroads have been made against superstition. Malnutrition and hunger are being combated through the development of nutritional resources. Sound practices in maternal and child welfare have been established in many places.

UNICEF aid is of far-reaching significance for it is based on the sound idea of helping people help themselves by the establishment of permanent improvements which they will themselves maintain. As you know, to qualify for UNICEF aid the country making the request must contribute from its own resources an amount equal to the UNICEF aid. Last year, 1962, the average contribution per country aided was $2.70 for every dollar of UNICEF money spent.

Every child comes helpless into the world. Months of complete helplessness are followed by long years of growth during which his potential for work and for assuming responsibility develop along with social and mental capabilities. Children are at the complete mercy of their environment to an extent unknown to any other animal on earth. The declaration of the rights of the child puts it succinctly: "* * * mankind owes to the child the best it has to give."

We hear a great deal of talk these days about security, and we pour out billions in the name of security without batting an eye. Just where does our deepest security lie? Is not our most real security rooted in the development of succeeding generations of human beings growing to maturity with healthy minds in healthy bodies? We read the predicted statistics of possible atomic war and our blood is chilled, yet the pernicious enemies of childhood—enemies which we have the know-how to conquer had we the heart and the will for it—are constantly killing and maiming millions with as indiscriminate a ruthlessness as the bomb itself.

It is actually inconceivable that sane adults would tolerate any thought of withdrawing 1 penny of financial support from UNICEF's effectively administered programs aimed at affording protection for the world's children and at the same time stimulating the down-to-earth approach of helping people help themselves. UNICEF is, as you know, financed entirely by voluntary contributions. Our Government's contribution is in part a measure of its continuing dedication to the proposition that every human being is of significant worth.

Let me assure you that the National Congress of Parents & Teachers, with its more than 12 million memberships, supports as a priority item on its legislative program U.S. support of UNICEF. The National Congress of Parents & Teachers urges you to contribute $12

million as the U.S. Government's contribution to the United Nations Children's Fund. This is the same amount that we have contributed for the past 4 years.

Thank you.

Mr. PASSMAN. Thank you very much, Mrs. Cox. You always make a very fine statement and I know I speak for the entire subcommittee when we thank you for appearing and supporting this program.

I want to say with respect to the leprosarium in Louisiana, one of the most dedicated and understanding Members of Congress, John Fogarty, who is chairman of the Appropriations Subcommittee that handles funds for the Department of Health, Education, and Welfare, sent, by my invitation, a committee to Carville, La., to meet with the director and to meet with these wonderful people who had the misfortune of contracting Hansen's disease. Not only has there been great improvement as a whole at this Public Health Service hospital, but they have built individual brick cottages for the older patients so that the married couples there may have cottages, and it is now literally a new world for those people.

Mrs. McGarry, do you wish to make a statement?

Mrs. MCGARRY. No, thank you.

FOREIGN AID PROGRAM, 1964

WITNESSES

GUSTAVE BURMEISTER, ASSISTANT LEGISLATIVE DIRECTOR, AMERICAN FARM BUREAU

J. B. THAYN, ASSISTANT LEGISLATIVE DIRECTOR, AMERICAN FARM BUREAU FEDERATION

Mr. PASSMAN. We welcome to this session Mr. Burmeister and Mr. Thayn, representing the American Farm Bureau Federation.

Incidentally, gentlemen, I am a life member of the Louisiana Farm Bureau Federation.

Mr. BURMEISTER. We are pleased to know that.

Mr. PASSMAN. We recently lost one of America's great Farm Bureau leaders when Larry Lovell, the Louisiana LFBF president, was called to the great beyond.

Mr. BURMEISTER. We certainly did.

Mr. PASSMAN. We shall be pleased to hear your statement.

Mr. BURMEISTER. We appreciate the opportunity to present the views of the American Farm Bureau Federation with respect to appropriations for fiscal 1964 foreign aid programs. The new obligational authority requested in the budget message totaled $4,945 million, but the President's April 2, 1963, message reduced this amount to $4,525 million. The Foreign Affairs Committee further reduced the total to $4,087 million. This amount compares with $3.9 billion appropriated for each of the last 2 fiscal years.

Farm Bureau is a free, independent, voluntary organization of over 1,600,000 farm and ranch families located in some 2,700 counties and 49 States and Puerto Rico. We do not have an organization in Alaska. Because of the large sums involved in foreign aid programs and the influence they have on our international balance of payments, the Federal budget deficits, the national debt, and taxes, Farm Bureau

members are much concerned. Through a program of policy development at county, State, and national levels, they have given thorough consideration to this problem and have concluded in part as follows:

The United States stands as an example of the progress possible in a free society. However, we should make clear that it is not our policy to attempt "to buy the right decisions."

* * * * * * *

The United States does not have an inexhaustible supply of funds. The funds must be invested, not merely spent, so as to achieve peace and raise the standard of living in these countries.

* * * * * * *

Requests for funds should be justified, nation by nation, and presented to Congress for approval. Congress should authorize appropriations on an annual basis only after careful review and reevaluation of the progress of the plans.

It is interesting to note that the Clay Report on Foreign Aid includes much the same philosophy as indicated in our policies for 1963. We are pleased that the Clay Committee report supports many of the principles in our policies and we hope that the Congress will be able to consider the specific problems in detail and country by country. It has been and still is Farm Bureau's policy that future commitments should be predicated upon:

(1) A well-defined program whose specific aim is to provide technical information and retraining at a level which is consistent with each nation's current stage of development.

(2) The granting of loans on the basis of sound commercial standards when there is reasonable expectation of repayment.

(3) Continued military assistance where this is determined to be essential to nations directly threatened by Communist military aggression which they have demonstrated a will to resist.

(4) An overall plan designed to make clear the source of aid and the economic system that made it possible.

The time has come to reexamine our policies and plans for assistance to foreign countries. We need to look closely at the needs of each country and what it can do for itself as well as what assistance the United States can afford. This is true for both military and economic assistance. Many countries that have been receiving aid have achieved such a level of economic development that they can now proceed without external help except for occasional hard loans from private and international lending agencies. There are other countries which, because of their relationships, should receive most of their aid from former mother countries. We should not move into new areas, but concentrate on fewer countries and areas where our assistance will be effective and our interests will be advanced.

Farm Bureau believes that the most important considerations fall into two categories:

1. The need to reduce U.S. Government expenditures looking toward a balanced budget, a tax cut, and a solution to our balance-of-payment problem.

2. Reexamination of each country's position with a view to determining its needs and ability to absorb aid under a longtime plan of economic development.

It is generally recognized that a substantial tax cut is needed in order to provide a climate for a satisfactory economic growth in the

United States. A tax cut without a sharp reduction in Government spending would not achieve this objective but start a new spiral of inflation. We testified recently on this subject before the House Ways and Means Committee and proposed that the administration's request for new obligational authority be reduced by $13.6 billion, before any consideration is given to a tax cut. Of this proposed reduction, $2 billion is possible in the foreign aid program as originally budgeted by the administration, or $1.6 billion below the reduced request.

As pointed out in our policies outlined above, the United States does not have unlimited funds—in fact, the economic position of our country is such that we need to exercise the utmost care in spending and in making future commitments. We cannot continue to have huge budget deficits and expect to maintain a sound dollar. The International Monetary Fund and the United States have consistently told other countries to get their house in order, if they expect to receive monetary assistance. Our persistent balance-of-payment deficit and losses of gold have caused great concern and, worst of all, the situation is not showing any signs of improvement. Despite optimistic forecasts a year ago, the payment deficit totaled $2.2 billion in 1962, compared with $2.4 billion in 1961. Since 1950 the payment deficit has amounted to about $25 billion. We cannot continue to spend more abroad than we take in.

As the Clay report points out, there is a need to reexamine the aid program country by country, and to discontinue contributions to those countries which have made sufficient progress to be able to go forward on their own resources with occasional hard loans from the private sector, the Eximbank, or some of the international lending institutions. Many of these countries have been receiving U.S. aid for at least a decade. It should be clear now that most of these countries are not going to become fully developed in a decade or two, but will have to be satisfied with a slower advancement until a sizable proportion of their citizens develops the capability and a desire to acquire technical skills sufficient to enable them to operate a developed economy. We need to make every dollar of our aid contribution count and spend it only where there is reasonable expectation that it will achieve some worthwhile results.

The United States should not attempt to expand aid plans for most countries in Africa. Practically all of these countries have relationships and understandings with their respective former mother countries in Western Europe. In nearly every case, there is already a going aid program in progress and the assistance should be the responsibility of our allies in Western Europe. The United States gave practically no assistance to these countries before they gained their independence, and there appears to be little justification for us to assume the full responsibility now. It would appear that much of the Near East could also be assisted by the developed nations of Western Europe. We must make it plain that we expect Western Europe to assume its share of the burden and responsibility.

Thus the United States should concentrate on a few countries in the Far East, South Asia, and Latin America. The 95 countries and areas now receiving U.S. aid could be greatly reduced over the next few years. An effective job done in fewer countries would achieve much

more for our people than the "shotgun" approach which we have been following in recent years.

There needs to be a new philosophy developed with respect to foreign aid. We need to let the underdeveloped countries know that we are moving toward a decreasing trend in aid contributions, that their development depends largely on their own efforts, and that progress in development is a long, slow process. The best assurance that can be given the less-developed countries is an economically strong and growing America.

We need to fit the money to the plans rather than the plans to the money.

MILITARY ASSISTANCE

One of the major categories of grant aid is military assistance provided largely for those countries on the periphery of the Communist bloc. Summary data for this program are as follows:

[In millions]

	Fiscal 1962	Fiscal 1963	Administration proposal, fiscal 1964
Authorized	$1,700	$1,700	$1,405
Appropriated (adjusted)	1,577	1,325	1,405
Unexpended balance	2,598	2,785	2,360
Estimated expenditure	1,390	1,750	1,450

The Foreign Affairs Committee authorized $1,225 million.

An analysis of the expenditures and carryovers, both reserved and unreserved, indicates to us that this request can be reduced materially. We agree with the Clay report that spending for foreign military assistance can be reduced to around $1 billion annually over the next 3 years. With this in mind, we recommend that $900 million be appropriated for fiscal 1964. Such an appropriation, along with the estimated carryover into fiscal 1964 of $2.4 billion, will provide sufficient funds for estimated expenditures. It is recognized that a large portion of the expenditures in any given year is for military supplies ordered on the basis of funds reserved from appropriations made in previous years. A decrease of about $150 million per year in the expenditure rate from that proposed will result in expenditures of $1 billion in fiscal 1966. A number of countries which have been receiving military aid grants should be able to carry on without any further assistance from the United States. It is estimated that about 75 percent of the military assistance is in countries on the periphery of the Community bloc. It is proposed that future programs be limited to these areas.

DEVELOPMENT LOANS

The Foreign Assistance Act of 1961, as amended, included an authorization for development loans of $1.2 billion for fiscal 1962 and $1.5 billion per year for the fiscal years, 1963 through 1966. For fiscal 1964, the administration estimates that $1,060 million will be

needed—almost $500 million less than was authorized in advance last year, but $85 million more than was appropriated for fiscal 1963.

[In millions]

	Fiscal 1962	Fiscal 1963	Administration proposal, fiscal 1964
Authorized	$1,200	$1,500	$1,500
Appropriated (adjusted)	923	975	1,060
Unexpended balance	----------	912	1,663
Estimated expenditure	10	224	296

This loan program replaced the Development Loan Fund which was established in 1958. The Development Corporation was abolished and its functions were transferred to AID in November 1961. There was an unexpected balance in the liquidation account of nearly $1.5 billion at the beginning of fiscal 1962, but it is estimated that this amount will be reduced to $693 million by the beginning of fiscal 1964, and to $276 million by the beginning of fiscal 1965.

Approximately $190 million of the 1962 appropriation for development loans were immediately transferred to the Alliance for Progress loan account, and only $10.5 million were actually disbursed or expended in fiscal 1962. In fiscal 1963, planned expenditures amount to only $224 million, so that there is about $1,663 million expected to be carried into fiscal 1964. While it is recognized that funds must be obligated as soon as discussions about a loan begin, and sometimes these discussions and negotiations continue over a long period, it does not appear to us that another large appropriation for this category is needed in fiscal 1964. It is our view that $700 million, together with the carryover, will provide ample funds for the coming year.

A change in policy needs to be implemented looking toward concentration of development assistance in fewer countries and shifting much of the burden of loans to other countries and lending organizations. Planned expenditures in fiscal 1964 amount to $296 million. We believe that they could and should be limited to not more than $600 million annually during the next 2 or 3 years.

Commercial banks, the Eximbank, and the International Bank for Reconstruction and Development can take care of all hard loans, and the International Development Association is available for soft loans. In addition, the Inter-American Development Bank has been set up to take care of most of Latin American requirements. Another source of soft loans is the foreign currencies generated by title I of Public Law 480 sales of agricultural products which result in nearly $1 billion annually in loans of local currencies back to the receiving countries for economic development. The International Monetary Fund is available for balance-of-payment loans. All of these sources together

provide huge sums for loans to meet almost any requirement of the underdeveloped countries. (See table below.)

International Monetary Fund quotas and bank subscriptions

[In millions]

	IMF	IBRD	IFC	IDA
Total	$15,057	$20,485	$96.5	$916
United States paid in	4,125	635	35.2	197
United States pledged but not paid	2,000	5,715		123

We recently testified before the House Banking and Currency Committee in favor of an extension of the life of the Eximbank and an increase in its lending authority to $9 billion. Farm Bureau has consistently supported expanded lending authority for sound lending institutions with the view that loans from them to underdeveloped countries would gradually reduce the requirement for direct aid from the United States. It is our belief that loans rather than grants not only provide the economic assistance needed by these countries, but also develop a certain business discipline required to become successful developing nations.

ALLIANCE FOR PROGRESS

The first authorization for the Alliance for Progress was enacted in fiscal 1963 but other funds were transferred for grants and loans in fiscal 1962. Summary data are as follows:

[In millions]

	Fiscal 1962	Fiscal 1963	Administration proposal, fiscal 1964
Authorized		$600	$800
Appropriated (adjusted)	$190	515	850
Unexpended balance	600	635	870
Estimated expenditure	155	280	401

Funds for the Alliance for Progress are authorized under four categories as follows:

(1) Economic grants up to $100 million annually;

(2) Development loans, not less than $500 million annually;

(3) Special Progress Trust Fund, $394 million establish in 1961 and available until expended; and

(4) Inter-American Development Bank, for which the U.S. contribution to date totals $450 million in the form of paid-in shares of capital stock, $150 million; Fund for Special Operations, $100 million; and an appropriated reserve for callable stock of $200 million.

For Foreign Assistance Act of 1961, as amended, authorized $600 million annually for the Alliance for Progress for the fiscal years 1963 through 1966 with the stipulation that not less than $500 million annually shall be available, subject to appropriations, for development loans. A total of $190 million was transferred to the Alliance for Progress loan account in fiscal 1962 from funds appropriated for development loans. From the appropriation of $600 million in 1961

for Latin American development and Chilean reconstruction assistance program, a total of $206 million was established as an economic grant account, and $394 million was transferred to the Inter-American Development Bank as a Social Progress Trust Fund.

For fiscal 1963 there was appropriated (adjusted) $90 million for economic grants and $425 million for development loans in Latin America. Expenditures in fiscal 1962 and 1963 in all three categories have been relatively small as it has taken time to develop programs, and large sums are expected to be carried over into fiscal 1964. The administration has requested $850 million for fiscal 1964, including $100 million for economic grants, $200 million for Social Progress Trust Fund, and $550 million for development loans. The Foreign Affairs Committee authorized the $200 million increase for the Social Progress Trust Fund. We do not believe that the amounts requested are justified in view of the large carryover and the slow progress made to date. We believe that these programs should be reviewed carefully and that the amounts indicated below will be ample for fiscal 1964:

(1) Economic grants, $50 million;
(2) Social Progress Trust Fund, $100 million; and
(3) Development loans, $400 million.

These amounts will provide for the planned expenditures in each category in fiscal 1964 and an ample carryover for planning and organization of programs at a pace consonant with realities. A total approximating $1 billion (in the three funds) will be carried over for this purpose.

Another administration request is for $50 million to be paid into the Special Operations Fund of the Inter-American Development Bank. To date $100 million has been paid into this Fund by the United States, and the requested fund would raise the total contributed to the Bank or set aside for this purpose to $500 million. There seems to be quite a proliferation of funds, which raises questions as to their justification and results in much confusion as to their uses. If this additional $50 million is authorized and appropriated, the United States will have contributed $300 million as paid-in funds, a callable capital stock reservation of $200 million, and the Social Progress Trust Fund (operated by the Bank) of $394 million plus whatever is authorized and appropriated for this purpose for fiscal 1964. If the various administration requests are enacted the total of U.S. funds available to the Bank would be $1,094 million. Our recommendation would hold this figure to $994 million.

ECONOMIC GRANTS OTHER THAN ALLIANCE FOR PROGRESS

The administration has requested new obligational authority under four general categories of economic grants for areas outside Latin America, and for administrative expenses as indicated below:

[In millions]

	Fiscal 1962	Fiscal 1963	Administration proposal, fiscal 1964
Authorized	$1,357	$1,222	$1,210
Appropriated (adjusted)	1,220	1,084	1,210
Unexpended balance	1,294	1,176	1,059
Estimated expenditure	1,336	1,200	1,204

The total requested for these purposes is $1,120 million or $126 million more than was appropriated for these purposes for fiscal 1963. This increase is requested even though it is expected that $1,059 million will be carried over into fiscal 1964 and that estimated expenditures will total $1,204 million. The Foreign Affairs Committee authorized $1,002 million, or a reduction of $208 million, from the requested amount. We recommend that the total appropriation for these categories be reduced to $777 million. Expenditures under these categories can be reduced over the next few years, and a start can and should be made in fiscal 1964. We suggest that the estimated carryover and our proposed appropriation will provide sufficient funds for expenditures of about $1,000 million in fiscal 1964. These programs should be reduced during the next few years to about one-half their level during recent years or about $600 million annually. It is our view that this can be accomplished as countries now receiving this type of aid reach such levels of economic progress that any further need for outside aid can be met through loans from international lending institutions. Also, the United States should not expand this kind of aid to any new countries.

The major part of the grant program falls into three categories: development grants, supporting assistance, and the contingency fund. It is evident that from the way in which funds appropriated for these categories have been shifted from one category to another, consideration should be given to combining the three into one. The requests for fiscal 1964 total $1,014 million, and projected expenditures total $978 million. The Foreign Affairs Committee authorized $809 million. It is believed that, with an estimated carryover from fiscal 1963 in these three funds totaling $973 million, a new appropriation of $600 million will be ample to meet all foreseeable requirements. In fact, our recommended reduction would still permit all estimated expenditures for fiscal 1964 to be made. The net result would be a reduction in the projected carryover into fiscal 1965 from $1,009 million to $595 million. This would be in line with our proposal to change the trend from an expanding to a decreasing expenditure for these purposes over the next few years.

It is intended that development grants be used primarily for technical assistance, demonstration, and training to provide the underdeveloped countries the know-how with which to increase their standard of living. In many countries this program has been in progress for more than a decade, and undoubtedly much has been achieved. For these reasons we believe that the United States can now reduce its contribution and limit its activities to fewer countries which demonstrate a desire for such assistance and which provide the economic and political climate requisite for progress.

Supporting assistance is another form of development grant made to bolster the economy and political situation of countries which are receiving military assistance. Here again, many countries have advanced to the point where they should be able to make progress without this assistance. Any outside help required could now be obtained through loans from international lending institutions, and by encouraging private investment.

We strongly recommend that the programing of grant aid be made on the basis of a sound plan for each country and that funds be

provided only to fit the plan. If this were done, there would be little need for a large contingency fund. We believe that this fund is just another category set up for the purpose of obtaining additional funds from Congress. If an emergency or unforeseen requirement should develop during the year, Congress could pass a supplemental or deficiency appropriation as it does in so many cases for domestic programs. The complete elimination of the contingency fund together with the reductions in the authorizations of the other two categories recommended by the Foreign Affairs Committee would bring the total to $609 million or close to our recommended figure for the three combined.

The request also includes funds to be contributed by the United States to international organizations for various and sundry purposes. In fiscal 1963 relatively small amounts were distributed to 12 different organizations and projects. The administration has requested a total of $136 million for fiscal 1964 and has estimated expenditures at $127 million. It is our belief that $120 million together with the carryover will provide ample funds to meet all U.S. commitments to these organizations in fiscal 1964. It should be noted that the carryover into 1964 is estimated at $74 million. These expenditures are in addition to about $85 million contributed by the United States as its annual share of general expenses of international organizations.

On July 6, 1961, Farm Bureau testified before the House Committee on Foreign Affairs in regard to the Foreign Assistance Act of 1961. In the course of this testimony, we made the following statement (pp. 1423–1424, official hearings before the Committee on Foreign Affairs, Mutual Security Act of 1961, pts. I–III):

> On May 24 the United Nations Special Fund approved a $1,157,000 grant to assist the Cuban Government in agricultural research. We are opposed to using U.S. money for the purpose of assisting Castro in his efforts to collectivize Cuban agriculture. We do not believe Congress should again authorize U.S. participation in the U.N. Special Fund. We recommend that sections 301 (a) and (b) of H.R. 7372 be amended so as to specifically prohibit such participation.

Despite protests and representations of the United States, the director of the U.N. Special Fund has made it clear in recent months that this contribution to the Castro efforts in Cuba will be made.

This committee is familiar with the massive expropriation of property which the Castro government has perpetrated. Of course, Cuban agriculture has suffered grievously from such policies. Cattle herds have been decimated—even sugar production has declined drastically.

It is a fact that the owners of most of the property expropriated have never received real recompense of any kind. Many of these owners were American institutions and American citizens. It is a matter of law that foreign aid should not be extended to countries which expropriate without proper recompense. Yet, it is apparently the intention of our Government to again contribute 40 percent of the program financing for the U.N. Special Fund.

For administrative expenses of AID and the services of the State Department directly connected with foreign assistance, the request is for $60.2 million. We recommend $57 million for this purpose in fiscal 1964, or about the same as was available in fiscal 1963.

CONCLUSION

In conclusion, we recommend that the requested amount for the foreign assistance program be reduced from $4,525 to $2,927 million. We believe that a country-by-country analysis of the military and economic programs will show that the United States can curtail its activities and contributions and that both the United States and the free world will benefit. This may appear to be a sharp reduction, and in the case of new appropriations it is. However, the decrease in actual expenditures would be slight in fiscal 1964. It will take several years to bring annual expenditures into line with the program level which we have proposed. We firmly believe that a change in direction is needed and that a start must be made this year.

Foreign aid: Summary—Administration estimates

[In millions of dollars]

	Fiscal 1962	Fiscal 1963	Fiscal 1964	Recommended by AFBF, fiscal 1964
Unexpended balances:				
Military aid	2,598	2,785	2,360	2,360
Development loans [1]	1,471	2,019	2,359	2,359
Alliance for Progress	600	635	870	870
Other grants	1,294	1,176	1,060	1,060
Total	5,963	6,615	6,649	6,649
New obligational authority:				
Military aid	1,577	1,325	1,405	900
Development loans	[2] 923	975	1,060	700
Alliance for Progress	[2] 190	515	850	550
Other grants	1,220	1,084	1,210	777
Total	[3] 3,910	[4] 3,899	4,525	2,927
Total available:				
Military aid	4,175	4,110	3,765	3,260
Development loans [1]	2,394	2,994	3,419	3,059
Alliance for Progress	790	1,150	1,720	1,420
Other grants	2,514	2,260	2,270	1,837
Total	9,873	10,514	11,174	9,576
Estimated expenditures:				
Military aid	1,390	1,750	1,450	1,300
Development loans [1]	[5] 375	635	716	716
Alliance for Progress	155	280	401	401
Other grants	1,338	1,200	1,204	1,000
Total	3,258	3,865	3,771	3,417
Balance, end of year:				
Military aid	2,785	2,360	2,315	1,960
Development loans [1]	2,019	2,359	2,703	2,343
Alliance for Progress	635	870	1,319	1,019
Other grants	1,176	1,060	1,066	837
Total	6,615	6,649	7,403	6,159

[1] Development loans and Development Loan Fund liquidation account.
[2] For fiscal 1962, $1,112.5 million was appropriated for development loans, but $189.6 million was transferred to Alliance for Progress loans.
[3] Does not include $5 million for advance acquisition of property.
[4] Does not include $30 million appropriated for investment guarantee fund.
[5] Includes $27.8 million of Development Loan Fund liquidation account carryover transferred to investment guarantee fund.

Mr. BURMEISTER. Thank you, Mr. Chairman.

Mr. PASSMAN. Thank you very much, Mr. Burmeister.

I think you have made a very fine statement. There is one thing, however, I hope that in the future you will see fit to delete and that is

the recommendation of a supplemental, or deficiency, appropriation. I think that practice is responsible for at least $10 billion of our public debt. If this Agency should ever get started off on supplemental appropriations, then I do not know how far afield it would go.

Mr. BURMEISTER. May I say, sir, we did not intend to actually recommend. We said if you got into an awful position they could get some more.

Mr. PASSMAN. Thank you again, sir.

WEDNESDAY, AUGUST 14, 1963.

1964 FOREIGN ASSISTANCE PROGRAM

WITNESSES

JOHN TEETER, VICE PRESIDENT, PFIZER CO.
JAY H. CERF, MANAGER, FOREIGN-COMMERCE FOREIGN POLICY DEPARTMENT, CHAMBER OF COMMERCE OF THE UNITED STATES
JOHN C. L. DONALDSON, ASSISTANT MANAGER, FOREIGN COMMERCE-FOREIGN POLICY DEPARTMENT, CHAMBER OF COMMERCE OF THE UNITED STATES

Mr. PASSMAN. Mr. Teeter, I expect that most of us are members of the chambers of commerce back in our respective States. I know that I am in Louisiana.

Do you have a prepared statement, sir?

Mr. TEETER. Yes, I do. If you like I can proceed and read this.

Mr. PASSMAN. We shall welcome your comment, Mr. Teeter.

Mr. TEETER. I am John O. Teeter, vice president of Pfizer International, New York City. My testimony on H.R. 7885 represents the views of the Chamber of Commerce of the United States. I serve on the chamber's foreign policy committee, its joint subcommittee on foreign aid, and its newly created advisory committee on foreign aid.

My purpose in appearing before you today is to recommend an appropriation of not more than $3,612,250,000 in new funds for the fiscal 1964 foreign assistance program.

I want to emphasize that the chamber fully supports foreign assistance programs as a means of strengthening the free world. An effective U.S. foreign aid program is essential to our national security and our foreign policy objectives. Properly conceived and carried out, foreign aid should, can, and does promote the American system; provide a counterforce to international communism; promote responsible local foreign development, and protect our increasingly important oversea markets and sources of supply, as well as our military security.

Foreign aid aims at fostering the national interest in several ways. It is designed to provide military protection at less cost than the United States could undertake alone. Longer range, in addition to furthering political freedom abroad, it is intended to help develop strong free world markets in the less developed areas—markets whose strength and growth can expand and strengthen the U.S. domestic economy. In addition, foreign aid is an expression of deep American moral and spiritual instincts.

The chamber has made numerous substantive recommendations for improving the foreign assistance program to the House Foreign Affairs and Senate Foreign Relations Committees. These recommendations have been translated into specific proposed amendments to the Foreign Assistance Act of 1963. These recommendations are designed to improve aid methods, to promote provisions for stricter AID accountability, and to provide for greater private enterprise participation. Seven of the chamber's proposed amendments have been adopted by the House Foreign Affairs Committee and are included in the new foreign aid bill, H.R. 7885. The essence of another was written into the committee's majority report.

The chamber regards the authorization proposed in H.R. 7885 as a ceiling, and recommends that the total requests of $4,087,075,000 be reduced by $484,825,000, to $3,612,250,000. An appropriation of that size should provide adequate funds to allow greater efficiency and economy of operations as outlined by Secretary Rusk on July 16 in his appearance before the Senate Appropriations Committee, and at the same time fully support U.S. foreign policy objectives.

We urge both specific reductions in the administration's revised requests and specific support for a number of development programs. In reaching these recommendations, numerous chamber committees, the board of directors, and staff have reviewed the past performance of our foreign aid operations and have examined carefully all unclassified data on the program for the current fiscal year.

The three major objectives of our foreign assistance recommendations are:

1. Curtailment of specific appropriations pending more demonstrable moves toward long-range economic development programs.

2. A return of foreign aid programs to the sound principles of long-range economic development laid out in the 1961 Act for International Development.

3. The development of means for a vastly stepped-up inflow of private capital, know-how, and initiative.

We call the committee's attention to the comparative budget analysis attached to this statement which shows the chamber's recommendation for each major budget item in the foreign assistance program.

Our recommended cuts are as follows:

DEVELOPMENT LOANS

We recommend that $900 million in new funds be provided for the Development Loan Fund. The administration is requesting $1,060 million for this category.

The chamber supports the Fund as an instrument to (1) foster an eventual shift from purely government-to-government dealings in the economic development of less-developed countries to greater private investment of acpital, know-how and initiative; (2) provide a basis for long-range planning essential to the efficient conduct of U.S. assistance to other countries; and (3) contribute to basic economic growth and stability within the less-developed countries.

Development loans as originally authorized by Congress are highly desirable for long-range plans and programs to build up the economic resources which are prerequisite to development—factories, power

dams, mines, farms, roads, and ports. These loans also finance the teaching of necessary operating skills. However, money from the Fund has been used to pay off unsound national debts, to prop up shaky currencies, and to bail out governments in balance-of-payments or political crises. The chamber has proposed substantive amendments and appropriation controls to reestablish the original objectives of the Fund.

DEVELOPMENT GRANTS

We recommend an appropriation of $200 million for development grants. This is a reduction of $57 million from the administration's request. We are encouraged to see language in H.R. 7885 emphasizing the shift from grants to loans and utilization of the services of U.S. technicians associated with private firms in contracting foreign assistance programs.

ALLIANCE FOR PROGRESS

We recommend an appropriation of $400 million for the Alliance. A cut of $250 million from the administration's request will still provide adequate funds for Alliance activities functioning under the present program.

This recommended reduction does not imply lack of chamber support for the Alliance of Progress. On the contrary, we endorse the objectives of the Alliance and believe that the program could prove to be an outstanding contribution to the development of regional cooperation among free nations.

More money alone will not solve the problems of the Alliance, which is still not adequately organized to meet its goals. Programs of the Alliance need to be reexamined and made more consistent with what is possible to accomplish.

The chamber supports the House Foreign Affairs Committee's recommendation for a consolidation of international programs to coordinate hemispheric aid, trade, and financial policies.

Latin American nations should participate more actively in alliance programs and be encouraged to create a much more favorable atmosphere for private business investment and enterprise. We note with interest the recently proposed establishment of an inter-American development committee to encourage increased Latin American participation in alliance programs.

SUPPORTING ASSISTANCE

We recommend an appropriation not to exceed $300 million for activities of supporting assistance. This would be $80 million below the amount recommended in H.R. 7885 and $135 million below the administration request. As military assistance is cut back, supporting assistance can be reduced for such things as supplies and wages for personnel.

MILITARY ASSISTANCE

We recommend an appropriation not to exceed $1.2 billion in new funds for military assistance. This recommended reduction represents a cut of $205 million from the administration's revised request. This program already is being cut back in Western Europe and in

other areas, but can be accelerated to provide considerable additional savings. Our recommended reduction of $205 million is based on unclassified information giving breakdowns of appropriations by areas. For example, savings can be made from among the spending requests for $671 million in the Far East and Asia, $77 million in Latin America, $442 million in the Near East and south Asia, and particularly from the ever-increasing, $196 million fund for "non-regional" programs.

Further savings can be made by ending the practice of propping up the showcase military forces of some countries.

Other industrialized nations, increasing in wealth, should help bear more of the cost of this military assistance.

Additional savings could be achieved by an increase in operational efficiency if Congress included the military costs of the program in the budget of the Department of Defense.

CONTINGENCY FUND

The chamber recommends an appropriation of $200 million for the President's contingency fund. The initial administration request for fiscal 1964 of $400 million was scaled down twice, in $100 million increments, to the present $200 million figure in H.R. 7885, which the chamber originally recommended on March 15. To decrease the likelihood of events being unduly classified as emergencies, specific congressional authority should be required for new expenditures.

ADMINISTRATIVE EXPENSES—AID

We recommend an appropriation of $50 million in new funds for AID administrative expenses. The administration request of $57.25 million seems more than ample in the light of recent State Department pronouncements verifying its efforts toward greater efficiency and economy of operations. Our proposed increase of $500,000 over appropriations of $49.5 million in fiscal year 1963 can be justified by the need for more talented and experienced personnel.

ADMINISTRATIVE EXPENSES—STATE DEPARTMENT

We recommend an appropriation of $2.7 million for State Department administrative expenses relating to foreign aid. This recommendation would hold funds at last year's level of expenditures in view of no apparent justification for the requested increase of $325,000.

SUMMARY OF RECOMMENDED REDUCTIONS

It should be noted that of our recommended $484,825,000 reduction in the House Foreign Affairs Committee figure of $4,087,075,000, we suggest paring more than one-half from military aid and supporting assistance. Though most of the remainder would be withheld from the Alliance for Progress, the chamber supports the full original authorization for the Inter-American Development Bank and its Social Progress Trust Fund.

The programs for which we recommend full budgetary support are:

SOCIAL PROGRESS TRUST FUND

The chamber supports the full $200 million request for the Inter-American Development Bank's Social Progress Trust Fund.

This fund benefits the people of Latin America and is one of the real successes of the Alliance for Progress program. Its money is used for loans for low-cost housing, potable water and sanitation, and agricultural and technical aid so essential to raise living standards in Latin America. Each loan is matched by local financing. The loans are used to establish private credit institutions and other private enterprise.

The chamber also supports the administration's request for a $50 million regular subscription to the Inter-American Development Bank.

INTERNATIONAL ORGANIZATIONS AND PROGRAMS

We support the $136,050,000 revised request for international organizations and programs on two counts. First, the chamber believes multilateral foreign aid, to which other industrialized nations contribute through international lending institutions, should be encouraged and emphasized as a practical alternative to U.S. financing alone. Second, the 13 programs financed under this account represent current commitments which the U.S. Government is obligated to fulfill.

AMERICAN SCHOOLS AND HOSPITALS ABROAD

The chamber supports the full revised request of $20 million for American schools and hospitals abroad as necessary to provide U.S. citizens serving overseas with nedeed educational and health facilities, and—to the extent American hospital care is provided local foreign nationals—as worthy humanitarian projects which benefit the U.S. image abroad.

HOSPITALS ABROAD (LOCAL CURRENCY)

The chamber supports the full request for $2 million for the American-sponsored children's hospital in Poland.

SURVEYS OF INVESTMENT OPPORTUNITIES

The chamber endorses the administration's original request (later dropped) for $1.5 million to help finance feasibility surveys of potential areas for U.S. private investment in the underdeveloped countries as vital to much-needed private business participation in the foreign assistance program. We believe this request on behalf of promoting private participation in oversea development should not have been dropped.

SUBSCRIPTION TO INTERNATIONAL DEVELOPMENT ASSOCIATION

The chamber supports the administration's entire request of $61.7 million to cover its regular subscription to this international lending institution which specializes in local currency loans to nations in need of basic development.

TWO ACHIEVEMENTS REVIEWED

Most analyses of U.S. foreign assistance tend to point out the shortcomings of the aid program, relegating little more than passing notice to its achievements. Two notable recent achievements are:

(1) In support of accomplishing foreign assistance goals, the Development Assistance Committee of the Organization for Economic Cooperation and Development reported last month that member countries are "softening" the terms of their aid credits—liberalizing interest rates and repayment conditions.

(2) The required purchase of U.S. goods under the economic assistance program—now running 87 percent—has contributed to the recent 8-percent increase in the second quarter of U.S. exports over 1962 figures. Although this rise comes in the face of a slowdown in the rate of increase in industrial production abroad, it indicates an improved competitive position for U.S. products.

The U.S. business community has a direct interest and stake in the accomplishment of U.S. foreign assistance goals. Government-to-government aid by itself can neither afford the costs of the program nor accomplish its objectives. An increasing share of the task must be undertaken by the private sector. Recently, the vice president of the Inter-American Development Bank noted significantly that continued economic and social progress in Latin America requires a greater surge of private investment. He pointed out that an analysis of U.S. and European attitudes toward foreign aid indicates it is quite unlikely Government outlays to Latin America will be increased from present levels. This informed observation could also apply to other parts of the free world.

Comparison of budget requests and recommendations for the foreign aid program

[In thousands of dollars]

Activity	Chamber recommendation, fiscal year 1964	H.R. 7885 authorization, fiscal year 1964	Revised administration request, fiscal year 1964	Congressional appropriation, fiscal year 1963	Chamber recommendation, fiscal year 1963	Administration request, fiscal year 1963
Development loans	900,000	1,060,000	[1] 1,060,000	975,000	900,000	1,250,000
Development grants	200,000	217,000	[1] 257,000	225,000	235,000	335,000

Supporting assistance	300,000	380,000	435,000	395,000	400,000	481,500
Contingency fund	200,000	200,000	300,000	250,000	200,000	400,000
Military assistance	1,200,000	1,225,000	[1] 1,405,000	1,325,000	1,350,000	1,500,000
Administrative expenses—AID	50,000	54,000	57,250	49,500	50,000	55,000
Administrative expenses—State	2,700	3,025	3,025	2,700	3,000	3,100
Hospitals abroad (local currency)	2,000	2,000	2,000	2,800		2,800
Total, foreign aid program	3,612,250	4,087,075	[1] 4,525,325	3,928,900	3,790,400	4,961,300

[1] Additional reductions in these activities subsequently suggested by General Clay would further lower total by $200,000,000 to $500,000,000.

Mr. TEETER. I think, having read your article of last month which appeared in the New York Times, we start out perhaps on a different premise, our stating we are very much in favor and support the aid program.

Mr. PASSMAN. I observe that you do.

Mr. TEETER. Somehow or the other we are striving to meet halfway to greatly improve this program.

Mr. PASSMAN. You state that you have examined carefully all unclassified data on the program for the ensuing fiscal year. I want to commend you for your statement based upon the unclassified information. If you had had access to the classified information, you would have, I believe, cut your recommendation even further.

I wonder if in making these recommendations, you took into account the fact that we actually have a public debt that exceeds by $24 billion the combined public debts of all the other nations of the world? Also, it looks as if it is impossible for the administration to bring our balance-of-payments situation under control.

You mention about the more liberal terms of some of the other members of the several consortia. However, I wonder if you realize that when they give a grace period they are drawing a very high rate of interest on the money during the grace period. People who have a good investment would prefer to have it outstanding rather than have the loan repaid. Some of these countries that have agreed to give a grace period of 3 to 5 years are drawing these high rates of interest on that money during the grace period.

Are you aware of that fact?

Mr. TEETER. Yes.

Mr. PASSMAN. I do not believe there have been but two countries perhaps which have made reductions in their loan rates.

Usually, for example, Great Britain charges the regular rate, plus a penalty of one-quarter of 1 percent.

You mention the military program. I think I can say that most of the people who have studied this problem most carefully believe the military aid would be costing probably twice as much as it is if you left the decision entirely up to the Defense Department.

For all practical purposes, the military aid program is in the defense budget. All we do is made a recommendation. The Defense Department procures, and out of that reservation AID reimburses the Defense Department for their purchases.

However, how would you ever know what you had in here for foreign aid if you actually buried the MAP request in the defense budget? You could never find it.

Do you not realize sir, that foreign aid is now costing our country in excess of $10 billion annually including the interest on the borrowed money? If you take all spigots of foreign aid, and there are 16 of them, under 8 different statutes, and including the interest on the money we borrow to give away, it is costing in excess of $10 billion annually.

What amount did you recommend last year for this program?

Mr. TEETER. Our recommendation last year was $3,790,400,000. The request was $4.9 billion.

Mr. PASSMAN. Congress reduced the appropriation by $1,032,400,000. Yet when we pulled up at the end of fiscal year 1963, AID had on hand unobligated $1,203 million.

On June 30, the Agency had $515 million on hand completely unencumbered and unobligated, including the revolving funds. They had an additional $688 million technically unobligated. It was an amount that the Agency had made commitments on. They put it in a reservation category pending the signing of the contracts.

If you look at the amount of withdrawals from the pipeline for the past 4 years, it has averaged $3.2 billion annually.

What has happened actually is that the Agency is pyramiding funds. The Agency is putting more into pipeline than it is drawing out, consequently AID is having larger and larger unexpended balances.

Mr. RHODES. In your statement several times you mention you favor a figure "not more than." Would you care to clarify why you use those words? You did it several times.

Mr. TEETER. I can explain that in this manner.

Again, based on the unclassified information we received, we studied this problem very carefully and made cuts as deeply as we felt we could go with proper reasoning behind them. There may be other information that would lead to the thought these cuts could go deeper than the $3.6 million. If we were to receive information and recommendations along these lines, the chamber groups would look at these very, very carefully and study them and hopefully we would go into a further reduction to go below the $3.6 million figure.

Mr. RHODES. The figures you use are a ceiling and not a floor?

Mr. TEETER. That is right. It is a ceiling. There has been too much fat in this program very obviously.

Mr. RHODES. I join with the chairman in deploring the size of the program you approve. I really do not feel you are doing the business community any great service by making a statement like this. The members of this subcommittee are undoubtedly likely to cut below this. You have not strengthened our hand.

Yours is an organization of the conservative type. Yet you approve a program greatly in excess of the probable appropriations that will be recommended by the subcommittee. This will cause some doubts as to the validity of our cuts. Yet I am sure we have studied this program much more thoroughly than you have.

Mr. PASSMAN. Does the gentleman realize that in this program for fiscal year 1964 there is a request for funds for about 100 nations?

Mr. TEETER. Yes.

Mr. PASSMAN. There is nothing like this program's budget request in any other branch of Government. The presentation is for money based upon illustrative justifications—they list projects. We may or may not fund these projects. They have the right to substitute new projects for them. The Congress appropriates funds for, say, Argentina. They could use those funds in Algeria or some other nation.

In the development credit program, they do not know what country will get the funds, or what projects until they get the funds.

This appropriation is practically a complete blank check.

They have the right to deobligate funds, use the money for some other project, or substitute one project for one they initiated. They can start new projects during the year without any justifications.

Last year in the aid program they started projects that cost $35 million without even an illustrative justification to the Congress.

The ultimate cost will be $88 million just on the projects they started without any illustrative justification simply because they had funds in excess of their needs.

As far as I am personally concerned, I think the amount you recommend is far in excess of what they could possibly use in any prudent manner whatsoever.

Mr. ROONEY. I have just one question. Having looked at this requested amount that the administration so carefully prepared, can tell us how much of this requested amount would mean business for members of your organization?

Mr. TEETER. Do you mean the U.S. Chamber of Commerce?

Mr. ROONEY. Yes.

Mr. TEETER. As we have pointed out, the 87-percent figure is money which would be expended in the United States.

Mr. ROONEY. Eighty-seven percent?

Mr. TEETER. Eighty-seven percent is the figure we have been working with.

Mr. ROONEY. Of that 87 percent, how much would go to member firms of your organization?

Mr. TEETER. I do not think I could honestly answer that question.

Mr. ROONEY. Where did you get the figure 87 percent? The aid agency uses the figure 80 percent?

Mr. DONALDSON. The 87 percent is the current rate of new contracts being signed. The 80-percent figure is the current level; including commitments that were made before the loans were tied even tighter than they are now. Their overall goal is to raise it to a level of 90 to 95 percent.

Mr. PASSMAN. When we make allocations to these 100 countries and they requisition their needs, when the ships pull away from the docks of the ports of this country loaded with our generosity, you know of course that the invoices are sent down to the U.S. Treasury to be paid for out of the taxpayers' till, and not out of earnings of the recipient countries from their exports.

Mr. TEETER. I know that is a fact.

Mr. PASSMAN. There are only three things the other countries can do with the dollars we credit to them—requisition something they need from this country, or buy our gold with their earnings when we ship to them what they would normally buy with their earnings, or else they will buy our securities. It all ultimately has an effect on the public debt, or an effect on the balance of payments or gold reserves. Those three matters are closely related.

Mr. TEETER. I agree with a great deal of what you say.

Mr. PASSMAN. Will you agree that every nation on the face of the earth, regardless of how small or new, earns certain sums of money from their exports?

Mr. TEETER. That is true.

Mr. PASSMAN. Normally that money enters into the channels of commerce. We would sell something, if not directly, at least in-

directly. But when we credit these free dollars by which they requisition their needs, or much of their needs, this then releases to them their earned dollars to do with whatever they please—to buy gold, securities, or to speculate. You do not quarrel with that fact; do you?

Mr. TEETER. I am afraid that is true.

Mr. PASSMAN. If this were the way to create prosperity, I would quickly advocate we triple the aid program and, therefore, triple the prosperity.

Mr. TEETER. The point I would like to make is, we are endeavoring to build greater markets abroad for American industry. I think it is important that the development take place in these countries so a better climate will be set for American business to do business abroad.

Mr. PASSMAN. When we build up a $554 billion gross national product, and we did so last year, if we should go back and pick up the 1940 price tags and fit them to 1962 production, would we not in reality have had a $263 billion gross national product?

Mr. TEETER. I imagine so.

Mr. PASSMAN. Furthermore on this $554 billion figure, do we not have stuck in there along the way $137 billion of taxes which we must draw off in order to keep these generous programs going on a local level, State level, and Federal level, and by that procedure, we have gone a long way toward pricing ourselves out of the world market, and largely so through out generosity.

I believe we are about 40 percent out of the world market in agricultural commodities; are we not?

Mr. TEETER. I am not sure of the figures.

Mr. PASSMAN. Every bale of cotton we sell, for instance, we subsidize by approximately 20 percent in order to meet world prices.

Thank you, sir, for being with us. And our very best wishes.

WEDNESDAY, AUGUST 14, 1963.

FOREIGN ASSISTANCE PROGRAM

WITNESSES

WALTER HARNISCHFEGER, HONORARY CHAIRMAN OF THE CITIZENS FOREIGN AID COMMITTEE

ELGIN GROSECLOSE, RESEARCH CONSULTANT, CITIZENS FOREIGN AID COMMITTEE

GEN. BONNER FELLERS, NATIONAL CHAIRMAN, CITIZENS FOREIGN AID COMMITTEE

LEWIS LLOYD, ECONOMIC ADVISER FOR DOW CHEMICAL CO.

T. COLEMAN ANDREWS, BUSINESS EXECUTIVE, RICHMOND, VA.

Mr. PASSMAN. The committee will come to order.

We have some more of our distinguished fellow Americans before the subcommittee at this time.

We are glad to have you with us, gentlemen.

I believe that the first witness of this group to testify will be the Honorable Walter Harnischfeger, honorary chairman of the Citizens Foreign Aid Committee.

The committee will be pleased to hear from you at this time, sir.

Mr. HARNISCHFEGER. I appreciate this opportunity for my limited appearance.

I would like to suggest one thing if you find time. In my major memorandum, I have quoted from a statement of the American Bankers Association, and they have indicated how serious this balance of payment and flight of gold is.

I would like to suggest in your spare time—I know you have a lot of it—you sort of review those facts, because, after all, if there is anyone that should know something about fundamentals, and particularly the integrity of the dollar, it is the American Bankers Association.

Mr. Chairman and members of the committee, my name is Walter Harnischfeger. I am chairman of the board, Harnischfeger Corp., a heavy industry in Milwaukee. I am also honorary chairman of the Citizens Foreign Aid Committee. Today marks my 11th appearance before the congressional committees which act on foreign aid. I thank you for the opportunity again to appear.

Since my last appearance before the House Appropriations Subcommittee on Foreign Operations, I have again been in Europe. And I have visited a certain number of Latin American countries and attended a number of additional international conferences. I also appeared before the Clay committee where I emphasized the many deficiencies of our foreign giveaway program.

In fiscal 1964 we face a planned deficit of $10 billion. In addition, we contemplate a tax reduction to stimulate the economy. In the light of this situation, our Government must tighten its belt, just as we must do in business to restore a balanced budget. This reduction in spending is necessary to maintain confidence in the integrity of the dollar. And the dollar is the keystone to sound economy throughout the free world.

LATIN AMERICA

Our lavish giveaway program is undermining private capital and private investments in underdeveloped countries. In Latin America, our lavish aid program has resulted in a substantial flight of private capital. In certain cases, foreign bureaucrats are using our foreign aid to buy out their interests in a private venture, and are then sending their capital to Switzerland as a haven against internal devaluation.

In developing any so-called underdeveloped area, the first fundamental is to insist upon the proper business climate. Our State Department policy toward Cuba has more than offset the millions that we are pouring into Latin America. Latin America can best attain a sound economic growth by our resolving the Cuban situation. This would prevent teams of Cuban-trained Latin Communists from infiltrating the various countries where we are pouring in our billions. In Cuba, the Commies are indoctrinating hundreds of thousands of youths, from the age of 8 to 12, on philosophy of hate, destruction, and chaos. Unless we take action, in about 10 years these youngsters will be infiltrating Latin America, fomenting chaos and class war. It is difficult to conceive why the administration and State Department do not recognize the seriousness of this situation. When you have a bush fire, you extinguish it before it becomes a forest fire.

In Brazil, our $2 billion aid has not brought about stability nor has it stopped the expansion of communism. Over a billion of Brazilian capital has been spent in building Brasilia. These funds should have been used to expand the productive area of Brazil and to develop its resources.

Just recently, Brazil has made a $600 million trade agreement with Russia. Brazil will send the Soviets coffee, cocoa, and cotton. The Soviets will send Brazil wheat, oil, and machinery. In the light of the aid we extend to Brazil, why should not Brazil trade her coffee for our wheat? Since there is a shortage of wheat in Russia, the question arises, Where will Russia find wheat for export? Possibly the answer lies in the fact that we have been sending our wheat in British bottoms to Poland, a Communist satellite.

In Bolivia, we are spending several hundred million dollars after the Communists have taken over and nationalized the tin, lead, and zinc mines. Bolivia's production and efficiency have been declining every year, entailing greater deficiencies which we, in turn, finance.

CLAY COMMITTEE REPORT

We do not quarrel with many of the Clay committee findings and conclusions. A number of foreign aid deficiencies reported by the Clay committee have been repeatedly singled out by our committee in presentations before the congressional committees which act on foreign aid. However, in the light of our unbalanced budget, balance-of-payments deficits, flight of gold, and the undermining of business by our giveaway program, we believe the Clay report does not go far enough and is unrealistic. I am listing some of these deficiencies and commenting on them. The Clay report—too much, for too many, too soon.

> * * * we are trying to do too much for too many too soon, that we are overextended in resources and undercompensated in results, and that no end of foreign aid is either in sight or in mind.

Comment: There are some 12,817 foreign aid officials around the world who are busy thinking up schemes to socialize the world. Unless they are brought home promptly and systematically, no end is in sight for the giveaway program.

The Clay report—increased concern.

> There has been increasing concern as well over the contribution of foreign aid to the persistent deficits in our international balance of payments—12 in the last 13 years. These deficits have produced a sustained decline in our gold stock and a marked increase in foreign-owned dollar balances, with a resulting loss in our international liquidity.

Comment: While the Clay committee invites attention to our balance-ofpayments deficits and the resultant flight of gold, it offers no satisfactory remedy other than mentioning that increased aid expenditure in the United States has mitigated the harmful effect of unfavorable balances of payments. The Clay report then proceeds to endorse the overall aid program.

Since foreign aid started, we have had an unfavorable balance of payments each year—except in 1957, the year of the Suez crisis. As a consequence, our gold reserve has dropped from $24.5 to $15.6 billion. Meanwhile, foreign held short-term dollar credits total $25.3 billion redeemable in gold.

Unfortunately, the position of our gold reserve grows more vulnerable as foreigners amass dollar credits as the result of our Government having spent overseas annually more than $6 billion. This $6 billion foreign expenditure is largely due to the foreign aid program plus the $3 billion which is spent by and for our oversea forces.

Foreign governments hunger for gold to harden their currencies. This hunger will cease only when our dollar is once more as good as gold. The dollar cannot again be so considered until we put our economy in order. To put our economy in order, so that foreigners will not be tempted to buy our gold, we must stop deficit spending at home and return to a favorable balance of international payments. This can only be effected by deep cuts in Government spending both at home and abroad.

THE CLAY REPORT—FREE ENTERPRISE

We believe the United States should not aid a foreign government in projects establishing government-owned industrial and commercial enterprise which compete with existing private endeavors.

Comment: The Citizens Foreign Aid Committee endorses, wholeheartedly, this principle. Despits its soundness, however, aid in the past and at present has been principally from our Government to recipient governments. This procedure is especially pronounced in Latin America.

In his book "South Wind Red," former Under Secretary of Commerce Philip A. Ray has analyzed the Alliance for Progress. His findings include:

(1) Marxist fashion, the United States is imposing on the Latins—

more government-to-government aid, government intervention, government planning, government ownership—policies that can do nothing except push Latin America faster down the road to communism * * * no significant attempt is being made to enlarge private capital flow to Latin America.

Thus, the U.S. Government policy precludes our taking full advantage of the person-to-person free enterprise system which reflects the true genius of our people.

(2) The Soviet system even more drastically handicaps its own foreign aid efforts. No Soviet person can enter into business relationship with any foreigner—

either as a partner, employee, coowner, seller, buyer, principal, or agent * * *. None can emigrate, take a job, nor export anything from Russia, nor buy a single article from anyone unless the Russian Government so elects. Yet Red influence in Latin America gains while ours wanes.

(3) Mr. Ray suggests how our Government could reverse this socialistic trend:

Allow fast IRS tax writeoffs for venture capital.
Underwrite private loans for sound developments.
Guarantee private insurance for political and expropriations risks.
Warn Latin governments against expropriations.
Urge profit-sharing measures for Latin Americans.
Withdraw as free enterprise succeeds.

(4) Mr. Ray estimates a $2 billion private capital investment would create 500,000 jobs for Latin Americans. Despite Mr. Ray's sound analysis and recommendations, the Alliance for Progress is failing to attract substantial private investment.

THE CLAY REPORT—SELF-HELP

"The United States should be increasingly more specific on the self-help and reforms its seeks and do so on a country-by-country basis. At the top of such a list are the goals of monetary stability, sound financial and social budgeting, reductions, and eventual elimination of subsidies to government enterprises, tax systems, and administration which contemplate raising local revenue levels, stimulating private local and foreign investment, and distributing the tax burden more fairly * * *.

Comment: Despite this sound advice for recipient countries, the Clay report recommends continuation of the aid program with a slight reduction. The reduction, however, is insufficient to alleviate our unfavorable balance of payments and return our own Government to a sound economic program.

There are enormous aid funds available without any aid appropriation for fiscal 1964. According to Senator Harry F. Byrd: "The balances (unexpended) totaling $21.3 billion in all foreign aid accounts together with new budget requests totaling $5.4 billion would make up this tremendous sum of $26.7 billion available for foreign aid in the coming year * * *." These funds should once more be thoroughly rescreened and funds earmarked for unsound projects should be cancelled out. The most effective and least objectionable organization, from the standpoint of the United States, whose loans are substantially self-liquidating is the Export-Import Bank. They now find themselves without sufficient funds. Instead of voting more billions through backdoor Treasury financing, such appropriations as are required to meet commitments should be rescreened and diverted to the Export-Import Bank.

The Export-Import Bank has really done the most outstanding job in connection with underwriting American enterprises and, of course, they have no more funds. We, as a committee, are against the backdoor spending, but we do believe they should appropriate these unused balances and divert them to the Export-Import Bank.

It is incomprehensible to me how the Clay Committee can recommend continuation of the present aid program in the light of the $21.3 billion already available, of our debt, unfavorable balance of payments, flight of gold, widespread failure of the aid program, and the imminent overall threat to our economy.

Suppose that foreigners call our gold and the dollar is discredited globally, which is a distinct possibility. Would the Clay Committee then recommend continuance of the aid program? Had it not better be drastically cut now so as to insure a favorable balance of payments and thereby arrest the flight of gold?

THE CLAY REPORT—IDA INCREASES RECOMMENDED

* * * we would point out that the International Development Association (IDA), an affiliate of the International Bank for Reconstruction and Development, is a readymade instrument to accomplish these purposes (increased loans).

Comment: While I am thoroughly familiar with the background of IDA, the policy of lending hard money for soft implicates us in the political orbit of many countries. In addition, despite its cautious and conversative management, the World Bank, because of our aid program, also finds itself involved in the economy of soft currency countries. These involvements should be avoided. Furthermore, while I heartily endorse the recommendations of the Clay Committee that aid

should not be given to compete with private investments, the facts remain that our entire fundamental philosophy of aid and the Alliance for Progress has brought about and will continue to bring about a flight of private capital unless the fundamentals are very severely tightened.

THE CLAY REPORT—U.S. SECURITY VIA AID

U.S. security interests will require maintaining our military assistance program for some years to come * * *.

Comment: It is abundantly clear that the NATO surface forces of 22 divisions in Europe and other troops about the Soviet frontier can offer only token resistance to the huge Red army. If Russia has aggressive intent, therefore, it is our strategic striking power rather than the vastly outnumbered free world surface forces deployed globally which deters attack. Moreover, it is clear even to the layman that the free world forces about the Soviet frontier can offer no security to the United States. Our country is vulnerable only to attack from the sky. Our surface forces cannot influence such attacks emanating from inside Russia.

THE CLAY REPORT—PRINCIPAL AID BURDEN SHOULDERED BY UNITED STATES

We are convinced that the burden of sustaining foreign assistance to the less-developed countries is falling unfairly upon the United States and that the industrialized countries can and should do more than they are now doing. The present inequity is even more apparent when one adds defense expenditures to economic assistance to detremine the national shares in the total expense of protecting and advancing the free world's well-being. This matter is of even greater concern when one considers the negative U.S. balance of payments.

Comment: From the start, in early 1959, the Citizens Foreign Aid Committee has repeatedly invited the attention of the Congress that American taxpayers were shouldering the major portion of the aid burden. To this in 1959 the Department of State took violent exception.

Foreign military assistance has cost American taxpayers more than $40 billion. In NATO, the United States is shouldering a disproportionate share in defense costs. In 1962 U.S. military expenditures were $51 billion; all other NATO powers spent $19 billion. Moreover, our 6th Fleet in the Mediterranean, our six divisions in West Germany with tactical air support, lift more than a $12 billion defense burden annually from Europeans and shift it to American taxpayers. In addition, the United States provides strategic nuclear striking power for the entire free world and we alone challenge Russia in space.

Today, in contrast to the early years of the aid programs, the executive branch of the Government is frank to say that we are carrying an unfair burden and is urging foreign countries to carry their fair share of the load. But as in 1959, the prosperous industrial countries continue to drag their feet when it comes to foreign aid.

The following tabulation indicates the proportion that the various nations of the free world are spending on defense. This data was recently reported in a responsible financial service.[1]

[1] Monthly analysis, Dec. 20, 1963, Lionel D. Edie & Co., 530 Fifth Ave., New York.

One. We spend more of our actual resources on defense than the rest of the free world combined.

Two. We spend more of our gross national product on defense than any other country in the free world.

Three. Our proportionate costs for defense are 150 percent greater than Western Germany and Italy, 100 percent more than that of Canada, and between 50 and 60 percent more than that of France or the United Kingdom.

Four. If we were to reduce our defense burden to the level nearest ours (the United Kingdom) we would release $15 billion in taxes for civilian needs and pursuits. If we were to lower our proportion to that of Germany we would release $31 billion to civilian purchasing power. That is the measure of the drain and burden that we are carrying that Europe is not carrying.

Defense spending as a percentage of gross national product

	1957	1958	1959	1960	1961
United States	11.0	11.1	10.6	10.2	10.6
United Kingdom	8.0	7.5	7.3	7.1	7.3
France	7.6	6.7	7.0	6.6	6.5
Germany	2.9	3.1	3.6	3.9	4.0
Italy	(1)	(1)	(1)	(1)	3.8

[1] Not available.

Is defense a stimulant? It has become more and more common to hear that defense spending is a stimulant to the economy * * *.

What utter nonsense. Defense is not a stimulant. It is a cost. It is an irretrievable cost. We get little in the way of economic return from defense spending * * *.

Defense spending is a cost. Now you will say, What would happen if defense were less? We answer that the consumer would have more * * *.

In this debate and discussion about our growth rate, let's not forget that our defense burden is no asset * * *.

If, for example, they (European allies) were to pick up 2 percentage points of our defense costs relative to the GNP, we could grant a tax reduction of $10 billion and cut spending at the same time. That would be a beautiful combination.

AMERICAN BANKERS ASSOCIATION ON THE BALANCE OF PAYMENTS

I quote from a recent statement by the Advisory and International Committee and the Economic Policy Committee of the American Bankers Association on the balance of payments.

The risks inherent in a failure to secure improvement in the balance of payments cannot be overcome by the creation of a supranational credit-creating institution. In fact, impressions that the United States is seeking additional means to finance the existing deficit, rather than concentrating on the elimination of the payments problem, could prove seriously damaging to international confidence in the dollar. We are convinced that present strains on the international payments system have stemmed not from any existing shortage of international liquidity, but rather from balance-of-payments deficits in key-currency countries.

Continuing discussions of means of maintaining an adequate volume of international liquidity over the long run are assuredly in order. The danger today, however, is that the mirage of painless financing of payments deficits through some vaguely outlined type of supranational monetary authority may weaken the will to preserve those fundamental disciplines which protect the orderly growth of the free world economy. Indeed, actions that might be interpreted by creditor countries as efforts on the part of key-currency nations to avoid these disciplines could well lead to a crisis of confidence and to substantial contradictions, rather than increases, in international liquidity. Under certain circumstances, the dangers of undue emphasis on the financing of persistent deficits also can lead to an excessive piling up of debt which must be worked off before overall improvement in the payments position can be realized.

The strengthening of balance-of-payments policies now required must be sufficient to create a clear-cut basis for confidence in the early resumption of progress which can be expected to culminate in the restoration of a sustainable payments position. The adjustment in policies must therefore reflect a realistic appraisal of the areas in which short-term improvement is attainable. With domestic economic expansion producing a rising level of imports, the export surplus is not likely to improve—and may, in fact, deteriorate—in 1963. Moreover, ambiguities in the longer range trade outlook raise questions concerning the wisdom of waiting indefinitely on improvement in the trade surplus as the final solution to payments disequilibrium. If short-term improvement is to be secured, consequently, immediate steps will be required to reduce the gold and dollar drain arising from private capital outflows and from activities of the Federal Government. These steps can and should be taken within the framework of an overall economic program designed to strengthen the performance of the domestic economy, thereby assuring the ultimate restoration of payments equilibrium.

With respect to foreign aid, we are sympathetic to the need for a sustained flow of economic and technical assistance to those developing nations of the world which have demonstrated their ability to use wisely the resources placed at their disposal and to follow domestic economic policies conducive to sustainable growth. In the final analysis, however, it is clear that aid payments cannot bestow benefits if, by virtue of the foreign exchange costs which they impose on the United States, they endanger that international monetary stability on which developing nations are so heavily dependent for their own economic progress.

We would emphasize, particularly, the urgent need for the assumption by our allies of a larger portion of the responsibility for aid to developing nations. It should be noted, too, that the need for aid on the part of developing nations could be substantially reduced by the elimination in many European countries of trade policies which feature sharply discriminatory treatment of manufactured goods from low-wage countries.

Nevertheless, we are convinced that unwillingness to make adjustments ultimately could lead to the impairment of international financial order, thereby completely jeopardizing the economic strength, the political stability, and the mutual defense of the free world. Therefore, we cannot subscribe to the view that the foreign exchange costs of our aid and defense programs are rigid or immutable.

The United States has incurred a deficit in its balance of payments during 12 of the past 13 years. After allowing for the single surplus in 1957, the deficits amounted to $26 billion. The financing of these deficits has resulted in an $8 billion reduction in the Nation's gold stock and an $18 billion increase in foreign-held liquid claims.

Continued erosion of the Nation's international liquidity, coupled with a failure of the payments deficit to show any appreciable decline, has brought greater urgency to the Nation's balance-of-payments problem. As the problem becomes more acute, the task of preserving international confidence in the dollar also threatens to become more difficult. The length of time still available for orderly correction of the payments deficit cannot be forecast. It is clear, however, that deficits of the current magnitude cannot be sustained indefinitely without imposing an unmanageable strain on the dollar and on the international monetary system. If risks of imposing such a strain are to be avoided, restoration of equilibrium in the balance of payments must be elevated to the highest order of priority among the Nation's economic and political objectives.

The foregoing is certainly ample evidence of the seriousness of this entire situation and it is inconceivable to many of us that Congress does not recognize this important and serious situation which is the keystone to sound commerce, employment, and a free society. Unless prompt and constructive action is taken in these matters, the result is bound to be dollar devaluation followed by price controls and wage controls or inflation with all of its serious implications.

A PRACTICAL BUSINESS POINT OF VIEW

American businessmen working with foreign businessmen can develop essential projects to expand the economy and improve the standard of living. To do this the political and economic climate must be favorable. No aid should be extended to governments which expropriate property without prompt, adequate payment. Of great assistance are religious and professional relief organizations like Friends Field Service Committee. They assume social and educational responsibilities.

Communism undoubtedly is one of the great threats in the world today and it is apparent that we cannot buy our way out of communism by a giveaway program. In fact, in many areas, we have done irreparable harm and actually financed communism. Furthermore, if we continue to follow this wasteful program, the Communists will not even have to fight a war in order to attain their end.

We should not be disturbed by the aid being given by the Soviet Union. Its program of foreign aid began in 1954 and by June 30, 1962, had pledged the sum of $5.6 billion in assistance to 25 countries, some in the Communist bloc. In addition, Eastern European satellites pledged $920 million and Communist China $410 million.

In the same period international organizations provided more than $5 billion in aid, by far the largest part—about 80 percent—from the World Bank. The United States supplies 30 to 40 percent of all aid funds spent by international organizations. And U.S. direct aid now totals more than $100 billion.

In the light of the relative progress that the Communists have made in taking over other countries, it should be clear that the dissipating of American resources is not the answer to maintain foreign countries within our orbit.

I believe that all of us recognize that by virtue of science, inventions, and speed of transportation, the world has become smaller. America cannot live in isolation. The evolution of the human race has taken many thousands of years. Our policy of endeavoring to make everyone a Cadillac user in 10 years can lead only to catastrophe. Germany tried to conquer the world twice. Her allies left her at the critical time. A good friend of mine who heads one of the largest basic industries in Germany told Hitler seven times that Germany did not have the industrial potentials to accomplish what he had in mind.

With 6 percent of the world population, we in America are following the same pattern step by step. We also do not have the industrial potentials to dominate the world. Our allies will leave us as they did in Korea. The only practical solution is to keep the home base strong.

CONCLUSIONS

(1) The Alliance for Progress is run to a great extent by inexperienced young people who do not possess the background and years of practical knowledge to build any enterprise much less a country. They dream up new ways to socialize a country.

(2) The Clay Committee has made a great contribution in pointing out weaknesses in the aid program. The value of exposing weaknesses in the aid program is enhanced when one realizes that it is an

administration committee which would not have been formed if the President had had any misgivings that it would support the major portion of the program. It obviously is the administration hope that the Clay recommended cuts will stand and thereby give the administration credit for cuts—but cuts which will not restrict the program. Nevertheless, the fact that it recommended minor cuts in the aid program should be effective in influencing the Congress to cut still deeper.

(3) Excessive taxes and wages are the greatest obstacle to restoring a competitive position for the American manufacturer and exporter. If these were brought into line by a substantial reduction in foreign aid, it would tend to restore sound natural growth and at the same time increase employment within the country.

Moreover, if we stop the giveaway, funds would be available for sound financing of American enterprise abroad. It has been estimated that the termination of foreign handouts would increase our exports by 30 to 40 percent. However, if aid continues, why should foreigners buy products which they can get for nothing? For example, Greece has cautioned her farmers to reduce wheat production because under Public Law 480 we, in effect, give them ample supply of wheat. Our exports, stimulated by aid reduction, would strengthen our economy. It would also bring home dollars.

(4) As a result of 50 years of experience in manufacturing and in serving basic industries, together with knowledge gained by personal contacts and observing the results of our loose spending, I cannot overemphasize the seriousness of our position today. Our present route can lead only to inflation, 5-cent pensions and social upheaval. We went through one depression in the thirties which rocked our country and the civilized world. It could happen again with far greater disastrous results. With the Congress lies the responsibility to correct these conditions. We raise the question: where in our Constitution has the Congress the power to use American taxpayers' funds on an international welfare program that can lead only to bankruptcy and international breakdown?

(5) The Citizens Foreign Aid Committee goes along with Senator Harry F. Byrd's recommendation for a cut of $3.3 billion in new aid requested appropriations. This cut would leave more than $23 billion remaining available to obligate and spend; aid could continue at the present rate for 4 or 5 years. If it is not stopped long before then, I predict the foreign handout program will collapse our economy.

Mr. PASSMAN. Thank you very much.

I want to make an observation off the record.

(Off the record.)

Mr. PASSMAN. The Clay report does not mean a great deal, in my opinion other than some limited recommendations.

I read, however, from page 20 of that Committee's report:

> AID informs us that if our criteria were now in effect, present programs would be reduced by approximately $500 million, and there would be additional reductions in the following years as some of these programs were phased further down or out.

I do not know where they would apply the $500 million, whether they would reduce the President's request by $500 million, or whether they want to reduce the President's revised budget from $4.5 billion to $4 billion, or whether they want to take what the Foreign Affairs

Committee has recommended, $4 billion, and reduce that sum to $3.5 billion.

In this program there are five categories. The budget request is one level, the authorization is another level, the appropriation is another level, the amount of programing is another level, and the amount of withdrawals from the pipeline is another level.

When you get to the lower level, the average withdrawal for the past 4 years, prior to this year, has been around $3.2 billion. If you should apply the $500 million cut to the withdrawal program out of the pipeline, it means the Clay Committee is advocating $2.7 billion. If it is based on the amount that you obligate, put in the pipeline, then of course it would be about $3.2 billion. If it is based upon the appropriation, it would be $3.4 billion. If it is based on the budget request, it would be $4.5 billion. I really do not know what the Clay Committee means by reducing the amount by $500 million.

Mr. HARNISCHFEGER. I would like to emphasize a point. If you could get in your bill a statement that would reduce these 11,000 personnel around the world progressively, one-third every year, that would help. That is one of the seats of all the evils.

I talked to one of our agents from Chile, and I expect we have several hundred people down there dreaming up giveaway programs. They say, we know we are to spend our money in Chile.

Mr. PASSMAN. Your recommendation has much merit.

Our next witness is a former tax collector, generally recognized as one of the greatest tax experts in America, a former U.S. Commissioner of Internal Revenue.

Mr. Andrews, we are very happy to have you before this subcommittee. We shall be pleased to hear you at this time.

STATEMENT OF T. COLEMAN ANDREWS

Mr. ANDREWS. Gentlemen, let me say that naturally it is nice to have you report such a good opinion of me, but I am really not that good.

It is like when my wife says she loves me, and I do not believe it but I am glad to hear it anyway.

I am T. Coleman Andrews, of Richmond, Va.

I was Commissioner of Internal Revenue from early February 1953 to the end of October 1955.

I am presently an executive in the insurance business—both life and casualty. I appear on behalf of Citizens Foreign Aid Committee.

I have appeared previously on behalf of this group before committees of both the House and Senate. There are no new reasons for opposing our Government's foreign aid policy; the old reasons have simply become more compelling. I may not expect, therefore, to say anything to you that you have not already heard. I address you with an increased feeling of urgency, however, because the consequences of our misguided foreign aid policy have multiplied and grown steadily since I was last here. But because there are no new reasons for my opposition I shall be brief.

Originally my opposition to our foreign aid policy was economic. It was clear to me from statements as to our gold position and balance of payments issued by the State Department that a gold crisis was

developing and this was directly attributable to our foreign aid policy. As time went on, I began to perceive that the problem was not only an economic one but also a moral one.

I shall speak first about the economic problem.

Our situation as to gold supply is alarming. The last information I have indicates our total gold stock is only $15.633 billion, whereas our gold obligations and commitments to foreigners amount to $27.350 billion, and that our domestic gold requirements stand at $12.755 billion. For 2 weeks in a row in July our gold reserves dropped $50 million

Considering how twisted our thinking has been as to so many matters in which our self-interest has been involved, I would not venture even a guess as to the direction in which we would move should we become faced with the necessity of choosing between protecting our own currency and honoring our obligations to foreign creditors.

But let us assume that we would in such case take the position that such gold as we have would have to be first used to protect our own currency. That would leave only $2.878 billion for honoring the $27.350 billion of foreign claims on gold, or just a little better than 10 cents on the dollar.

Is there any wonder, gentlemen, that seeing our predicament growing steadily worse, our foreign creditors are becoming seriously concerned? And should we be surprised to hear from friendly Canada the opinion:

> American available gold has shrunk so badly that a concerted rush could develop into a gold crisis, not in months or years, but in days.

Note gentlemen, that this opinion says, "not in months or years, but in days."

And considering the provocations with which we have been taunting France's De Gaulle, should it come as any surprise to us if De Gaulle were to demand specie for the balance of credits that his Government holds, and started a run on Fort Knox? It wouldn't surprise me any, especally in view of the recent revelation that there is presently available to foreign aid authorities more than $23 billion of unexpended funds.

I am not one who feels that there is no place whatsoever for foreign aid.

On the contrary, I feel that constructive foreign aid is necessary.

I do not ask you, therefore, to abolish foreign aid. But I ask, with all the earnestness at my command why, if there is in fact more than $23 billion of unexpended funds available for foreign aid, appropriate any more money for this purpose until this balance is reduced to a reasonable level, especially when every dollar we spend for foreign aid either worsens our gold situation or is inflationary in effect.

Gentlemen, the course that we have been following up to now is the path of disaster.

We must end our headlong plunge toward financial catastrophe some time, and, with more than $23 billion of unspent funds in hand, I know of no better time than now.

It cannot be expected that the patience of our foreign creditors will last forever. The noted economist, Dr. Melchior Palyi, already has reported that even the German Central Bank—the bank of our best friend in Europe—holds that Europe is fed up with supporting the

dollar and that the Governor of the Netherlands Bank feels likewise.

Dr. Palyi further reports that the French Prime Minister has said that the Bank of France no longer considers the dollar convertible.

Now permit me to speak briefly about the moral side of this matter, gentlemen. In one of my appearances against the level of foreign aid and the policy applied in following it—that was about 2 years ago, as I recall it—I pointed out that Washington had constantly denied, until a short time before, that foreign aid was responsible for the drain upon our gold supply, but a British official had charged the contrary, and the State Department—or the Treasury Department, I don't recall which—was forced to agree.

The Government's denial that foreign aid was responsible for the drain on our gold reserve was deception of the rankest sort, gentlemen. In other words, to put it bluntly, our Government had been deceiving us. No official of the Government able to read the Treasury Department's reports on the balance of payments and our gold supply could possibly have failed to see what foreign aid was doing to us. To deny this effect of foreign aid, therefore, was to engage in bald deception, and this, I submit, was unpardonably immoral.

Now comes the President to say on the 22d of last month, according to columnist Ruth Montgomery, in a report published by King Features Syndicate:

> **If France and Germany should present their dollar credits for payment, the United States would be bankrupt.**

Let me interpolate. If only two countries, France and Germany, should present their dollar credits for payment, the United States would be bankrupt. I have not heard that statement denied.

To admit this, and yet demand further appropriations for foreign aid, with more than $23 billion of unspent foreign aid appropriations available, is to compound the immorality of the deception that I have just mentioned.

Should one wonder, therefore, that the charge has recently been made that the real reason for foreign aid is neither military nor charitable, but to implement the grand design; that planners now in the saddle plot global socialism, Atlantic union, world government, disarmament, World Court, international police force, because to finance the grand design foreign aid is imperative. Should we be surprised when the president of the Chamber of Commerce of the United States sugests that "the critical issue of national political morality must be dealt with if we are ever to regain responsible government here in America."

I shall not labor the point, gentlemen, because I think I have demonstrated beyond the possibility of successful challenge that our foreign aid policy has been characterized by extreme irresponsibility and shameful immorality, to say nothing of the outrageous inefficiency in the administration of the policy that has so often been brought to your attention.

But I suggest that there is an even more deplorable aspect of this matter. And this is what I would like to emphasize to you today, gentlemen. I remind you of the horrible atrocities that were committed in Angola in March of 1961:

> **Women violated and hideously murdered.**
>
> **Children hacked to pieces and their remains hung from the branches of trees.**

The bodies of children found with their stomachs cut open and their abdominal cavities stuffed with grass and bits of wood which had been set afire.

A local administrator and his wife tied to boards and sliced methodically into pieces.

All the members of a village slaughtered.

A businessman compelled to watch his wife being raped and then obscenely murdered despite her advanced state of pregnancy and her stomach cut open and the unborn child pulled out and beheaded.

Both the legs and arms of children cut off and a grotesque game of football played with the children's twitching bodies.

Women and girls led away, stripped, raped, and cut open, many of them killed by stuffing large branches of trees into their genital organs.

Children dead from hemorrhages caused by the gouging out of their eyes.

The owner of a local sawmill, together with his wife, two small sons, and several others, tied to planks of wood and then fed into the mill's circular saw.

All of that and more occurred in Angola, gentlemen, as the result of a revolt which our Government not only encouraged but helped finance, and now this very day guerrillas are being trained with our approval, and with our money, for an even bloodier assault.

Gentlemen, the blood of those people is on our hands, on the hands of the American people.

To say that our part in this horrible massacre is immoral is to put it lightly.

There just isn't any word in our language or any other to describe the enormity of our sin.

Our foreign aid and foreign policy are responsible. Without it, it could not have been done.

And then let us remember Katanga, where, in Elisabethville, for example, U.N. troops—

Proceeded to clean up house by house, looting radios, watches, and clothing;

To knock down everyone who got in their way;

To finish off the wounded by disemboweling them with a knife or shooting them through the head;

Raping women, using those who fled as living targets;

Killing children by kicking in their heads;

Wiping out entire families.

Yes, gentlemen, all that was done by troops of the U.N. Troops whom we supported.

Never in the history of the world has there been anything so horrible as these atrocities, which, from what I have read, are an infinitesimal part of the savagery that has been committed in our name and with our support. Who would have ever thought that the United States of America would have been party to such as this?

Truly, gentlemen, we have been made parties to murder, pillage, and rape, the horror of which has never been exceeded at any place or any time in history.

The blood of the unfortunate victims of our misguided foreign policy and foreign aid is on the hands of every one of us and we face a terrible judgment from which I fear that no kind or level of repentance will save us.

It isn't just a matter of morality. It is a matter of savagery. But we can at least show a desire to return to the decency and justice that heretofore has been characteristic of us as a people, and of our Government, by putting an end to the means by which our honor has been betrayed. And right here is where it can be done, gentlemen. You can stop it if you will and if you can. It has been said that the be-

havior of the people's representatives is but a reflection of the behavior of the people. I disagree with that.

This is not true, gentlemen, for the simple reason that the people are not in a position to know what their Representatives learn. And I do not see how any of you gentlemen could possibly have the time to supply all the information that the people ought to have. But the people are learning. The people are learning, for example, that there are large sums of foreign aid funds unexpended. They know the national debt is completely out of hand. They know the unfavorable balance of payments is continuing and will continue to be worse and that our gold stock will be depleted in a very short time. They know the foreign aid program has been shot through with corruption, and they are learning that the financing of Communist expansion by foreign aid is a fact and not a theory. These things they are gradually learning and unless I mistake completely the temper of the people as I observe it, I can assure you that the people are becoming aware of what has been going on and that sooner or later they will, by one means or another, put a stop to what has been happening. Let us hope that their action will be peaceful.

All this business of balance of payments and our gold supply, all of that is tremendously important, but, gentlemen, this is more important because we sit here today responsible for the death, for the torture, and for the brutality of thousands upon thousands of innocent people. It would not have happened if we had not made it possible.

Mr. PASSMAN. Thank you, sir.

On page 5 you state:

Should we be surprised when the president of the Chamber of Commerce of the United States suggests that "the critical issue of national political morality must be dealt with if we are ever to regain responsible government here in America."

Just before you came in, we had before the committee Mr. John Teeter of the Chamber of Commerce of the United States, and he strongly recommended continuation of this foreign aid program on what I regard as a fantastically high level.

Being a businessman and a member of the Chamber of Commerce, I have to recognize in his statement, something of a selfish position, a stand being taken by interests which are profiting from this program.

The chamber's position about foreign aid, it appears to me, is inconsistent with many of their other announced objectives.

Mr. ANDREWS. May I say something?

Mr. PASSMAN. Surely.

Mr. ANDREWS. First of all, let me point out that I did not attempt to justify this statement. I simply asked if you were surprised that these kinds of statements are being made. If I understand correctly, the position taken by the present president of the U.S. Chamber of Commerce, he evidently is far apart from some of the other members of the chamber.

All I can say is if they ask for an extremely high foreign aid program or ask for anything, I say they are wrong.

Mr. PASSMAN. They were asking that Congress appropriate $3,612,250,000.

Mr. ANDREWS. Then I think they do the business people of America, and the people of America generally, a disservice.

Mr. HARNISCHFEGER. I was on many committees of the U.S. Chamber of Commerce for many years, and in the last week I wrote the President on what you are talking about. I said a great many of the people that are supporting the chamber work for the opposite when they ask for a big foreign aid program.

Mr. ANDREWS. I was put on their committee on expenditures and, believe me, there will be no such recommendation coming from that committee without my dissent.

Mr. PASSMAN. On page 5 you also state:

> But I suggest that there is an even more deplorable aspect of this matter. I remind you of the horrible atrocities that were committed in Angola in March of 1961.

We wish you would submit the authority for this statement, sir.

Mr. ROONEY. Off the record.

(Discussion off the record.)

Mr. ANDREWS. I can give you the authority on that. I do not have it here. I think it came out of the paper Ce Soir.

Mr. ROONEY. Off the record.

(Discussion off the record.)

Mr. PASSMAN. If you will please furnish us the background authority for that particular observation.

Mr. ANDREWS. I will be glad to give it to you. I gave it to my secretary yesterday when she typed this.

Mr. PASSMAN. It will be inserted at this point in the record.

(Information supplied follows:)

RICHMOND, VA., *August 15, 1963.*

Hon. OTTO E. PASSMAN,
House of Representatives,
Washington, D.C.

DEAR OTTO: This is in response to your request at the hearing yesterday that I give you the documentation of the atrocities that I cited in my statement to your committee. The Katangan atrocities were reported by a Belgian citizen in the newspaper Le Soir of January 7, 1963. This person had been an eye witness to what he reported and his report was later confirmed by numerous other corroborating reports.

The Angolan atrocities of March 15, 1961, were reported by Portuguese-American Committee on Foreign Affairs, 20 Pemberton Square, Boston, Mass.

It was good to see you again yesterday, and I hope that you are going to be able to reduce the administration's foreign aid request as substantially as you said you hoped.

Cordially,

T. COLEMAN ANDREWS.

Mr. PASSMAN. General Fellers, we shall be pleased to hear from you, sir.

STATEMENT OF BRIG. GEN. BONNER FELLERS

General FELLERS. Mr. Chairman and members of the committee; my name is Bonner Fellers. Today marks my 18th appearance before the congressional committees which act on foreign aid. For this opportunity again to appear I am grateful.

At the risk of appearing presumptuous I wish briefly to sketch my military background. I do this because today many of those shaping defense policy have far less military experience than I and some are wholly without any military experience.

Fifteen years of my service were in foreign lands—Europe, the Middle East, the Philippines, and Japan. In 1936–38 in the Philip-

pines I was a member of General MacArthur's staff and liaison officer between him and President Quezon. From October 1940 through July 1942 I was the U.S. observer of combat with the British in the Libyan Desert campaigns. There I witnessed tank combat, naval and Royal Air Force operations, and antiaircraft defense. I observed combat of British, Free French, Indian, Australian, New Zealand, South African Forces, Italian, and German Forces.

From 1943 until my retirement in 1946 I was on the staff of General MacArthur in the Southwest Pacific and in Japan. Among my assignments were chief of joint planning, combat observer, military secretary to the C. in C. and Secretary General of the Allied Council of Japan.

Since retirement I have written and lectured on national defense.

ECONOMIC AID, MILITARY ASSISTANCE, AND U.S. SECURITY

Over the years, it has become increasingly clear that a majority of Congressmen support foreign aid in the belief that it is essential for our own security. This belief is the most fallacious of all assumptions relating to the foreign aid program.

A major Red military attack against the United States can come only from—

Armed spacecraft.
Bombers and missiles based on Russia and Cuba.
Missiles fired from submarines or surface craft.

Friendly conventional forces along the Sino-Soviet frontier cannot influence these Red attacks from the sky. Our NATO allies have not the power to prevent these attacks. In modern war our homeland itself is in the frontline. And the pretending, in this air and space and nuclear age, that U.S. military aid to Eurasian friends places the U.S. first line of defense thousands of miles from our shores, or that our NATO allies can defend us, is dangerous chicanery.

Only our own defensive measures and strategic striking power can defend the United States against a Red attack. Except for the deterrent power of U.S. striking forces, all Eurasia is vulnerable to Red surface and air attack. Moreover, all the free world is vulnerable to Red attack from the sky. Since friendly Eurasian countries may be blackmailed into denying United States oversea bases, we must be prepared to defend from and to strike principally from North America and from Polaris submarines. There may be no other effective alternative.

COLLECTIVE DEFENSE

The United States cannot buy allies. We have had experience in the effectiveness of the collective defense. It was tried in the Korean war and it utterly failed. In this war, 500,000 South Koreans fought heroically. Our contribution was 450,000 American troops; and we probably paid most of the bills. All other U.N. allies combined contributed a token force of 45,000—a mere 10 percent of the American effort and less than 5 percent of the total forces. Under this collective concept, for the first time in our history, we failed to win a war.

The Soviets need not fear a land invasion by NATO. Even were NATO far stronger than at present, the Soviets with their three

great allies—distance, winter, and manpower—would be able to survive a NATO attack.

Strategic nuclear striking power has given a new meaning to alliances. This threat is so great that the moment hostilities are imminent, the Reds will be compelled to blackmail the NATO powers into neutrality or incinerate them in the initial strike of the war.

Should war come, it is we, not Europe, which will be struck. Our European allies will receive such Soviet punishment as their war effort invites. If they stay out of the way, they will survive. If they attempt to attack the Soviet Union, they will be destroyed.

ROLE OF U.S. FORCES

Today U.S. superior nuclear striking forces are the only effective war deterrent. These striking forces place an umbrella of protection over the entire free world. They are effective because they possess the capability of destroying Communist military might. There are ample recent historical illustrations:

In 1946 after a sharp U.S. note, the Reds vacated Azerbaijan.

Truman doctrine opposed Communists in Greece and Turkey.

The United States fought a war in Korea and kept the war limited.

The United States garrisoned Europe and encircled the U.S.S.R. with bases.

The Reds cut off Berlin supplies; we mounted a massive airlift.

During Red Chinese attack on Quemoy, United States convoyed supplies.

The United States landed troops in Lebanon.

The United States blockaded Cuba while the Reds were arming Castro.

The United States is fighting Communists in southeast Asia.

None of these incidents, each displeasing to the Kremlin, incited Red intervention. The reason is clear. The United States has had overwhelming supremacy in strategic nuclear striking power. Consequently, the Kremlin, despite its dream of world domination, has not dared to challenge our free world support. Conversely however, without our superior nuclear striking power, no strategy—economic, military, political, or psychological—can succeed against the Communists.

MILITARY ASSISTANCE, FISCAL 1964

ASIA

Secretary of Defense McNamara's master argument for $1.4 billion military assistance in fiscal 1964 was that 70 percent of the aid would go to the countries on the periphery of the Sino-Soviet bloc. This proposed allocation reflects the old-fashioned, ineffective concept of Communist containment. Nevertheless, planners may argue that our aid is not for Red containment but rather to meet Communist subversion or guerrilla action. If these border states have the determination, certainly they have the means to handle subversion among their own people. To meet Communist infiltration and guerrilla action is another matter. It is conceivable that the Reds, now and then, may deliberately plan to entice U.S. intervention. From sanctuaries within the Sino-Soviet bloc as much strength can be sent into free countries

along the periphery as the Reds may elect. Thus, the enemy has the option of prolonging or winning these unorthodox wars, just as he chooses. He can easily create a challenge which we, if unlikely to gain a favorable decision, should not accept.

From Okinawa the U.S. Air Force is an effective war deterrent against North Korean aggression. It is therefore safe gradually to withdraw our two divisions stationed in South Korea. This would prevent some $200 million from falling annually into foreign hands.

Nevertheless, our entanglements and commitments in South Korea, Formosa, and South Vietnam cannot now be terminated. South Korea has had more aid than her economy could absorb. The Nationalist Chinese are reported as moving toward self-sufficiency. The war in South Vietnam requires our support. Based on past grants and the present situation, some $500 million may be required for these three Asiatic regions in fiscal 1964.

EUROPE

Prosperous Europe needs no aid. Our Sixth Fleet, troops, and Air Force stationed in Europe, lift a $12 billion annual tax burden from European shoulders and place it on the American taxpayers. Our troops in West Germany are mere token forces should the Reds make a determined effort. Consequently, why not gradually withdraw them, leaving only our battle groups in Berlin as token forces? This would prevent $600 million annually from falling into foreign hands.

Inexperienced military planners of today, who claim that the NATO forces can defend Europe against a surface attack, have forgotten Soviet operations in World War II. Against the Red army Hitler committed 220 divisions, beautifully equipped and sharpened for battle. In this German attack, the Red army absorbed the greatest shock in all history. The Russians suffered 9 million casualities. Despite this unprecendented punishment inflicted on the Russians, by January 1943, the German armies were forced to start their withdrawal. The Red army followup with 502 divisions was savage. In June 1944, 150 Red infantry and 75 armored divisions struck the German Army Group Center; 300,000 German youths were slaughtered. At the same time, south of the Carpathians, 101 Red rifle and 63 tank formations totally destroyed 16 German divisions. East of the Gulf of Riga, 120 Red infantry and 43 tank divisions overran opposition and poured into east Prussia. By January 1945, the vaunted German Eastern Front Army was reduced to 103 infantry and 32½ panzer divisions, wholly shattered and depleted and totally defeated.

Thus it is obvious that our allies, even with U.S. economic aid and military assistance, do not and cannot defend themselves, nor can they materially contribute to the security of the United States. On the other hand it is the United States which has the capability of deterring war and thereby is defending the free world. Surely if the United States extends this protection, our allies should provide the ground forces which they deem necessary and release our oversea garrisons.

AFRICA

These emerging countries would fare far better without military assistance of any kind.

LATIN AMERICA

The military leadership in Latin America is doubtless more friendly to the United States than are the civilian officials. Each of the Latin American states already has sufficient forces and equipment to effect internal security—provided the will to do so is present.

The United States traditionally has defended Latin America against Eastern Hemisphere aggression. In the recent Communist takeover of Cuba we failed. The effect is disastrous throughout the Latin American states. Nevertheless, if the Monroe Doctrine still lives, slight, if any, military assistance is required for Latin America.

IMPACT OF FOREIGN AID ON U.S. ECONOMY

In the early days of foreign aid no claim was made that it would continue beyond the Marshall plan. And while we could ill-afford the cost, aid expenditures appeared to result merely in a long series of deficit Federal budgets.

Today however, while economic aid continues, approximately half our military forces are overseas. Some $3 billion is spent annually by and for these troops. We are now extending military assistance and economic aid when we can no longer afford it. This is what economic aid and military assistance have done to our economy:

(1) Since these aid programs began, our gold reserve has dropped from $24.5 billion to $15.6 billion.

(2) Principally through our aid programs foreigners now hold $25.3 billion in short-term dollar credits redeemable in gold. We have practically no unobligated gold should foreign dollar claims be pressed.

(3) Foreign confidence in the dollar continually worsens.

(4) The only way to restore confidence in the dollar is to stop deficit spending both at home and abroad. This can be accomplished only by drastic reductions in foreign economic aid and military assistance.

THE KREMLIN OBJECTIVE

The ultimate Kremlin objective is world communism. The United States is the only country willing and able to challenge this Red goal.

To achieve world communism the capitalistic system must be collapsed. Our foreign aid spending, our unbalanced budgets at home, our balance-of-payments deficits abroad are most pleasing to the Kremlin.

To achieve world communism the Kremlin must persuade the United States to disarm. In this also we are rapidly accommodating the Kremlin. First, the Kremlin would have us do away with the bomb and the bomber. The proposed nuclear test ban, after the Soviets have made extensive tests in the atmosphere, if adopted means second place for the United States in nuclear weapons. No more intercontinental bombers are being built. The SKYBOLT to modernize the B-52 has been abandoned.

Undeniably, we are pursuing a course in profligate spending and disarmament according to Kremlin desires.

21-178—63—pt. 4——98

RECOMMENDATIONS

The Citizens Foreign Aid Committee recommends:

(1) That military assistance for fiscal 1964 not exceed a total of $500 million.

(2) That deficit financing at home and abroad be terminated at once.

(3) That our strategic nuclear striking forces be maintained overwhelmingly superior to those of the Soviet Union.

Mr. PASSMAN. Thank you, General Fellers.

When two men are in business and always agree, one is unnecessary. Our economy is something we deal with daily, but the military is something you have to be in and actually know what is going on.

Mr. GARY. Mr. Chairman, is it not true that General Lemnitzer, the Supreme Allied Commander, told us the funds they were requesting are absolutely essential for the security of America?

Mr. PASSMAN. I may disagree with the amount, and I think we have the military aid program in too many nations, 70, but I will go along in general with the responsible military authorities on the matter of protecting America.

Mr. GARY. I did not say I agreed as to the amounts but I was asking if that is not the type of testimony we have had before this committee.

Mr. PASSMAN. That is true.

Mr. GARY. The testimony before this committee has not been given by underlings, who do not know anything. General Lemnitzer appeared and testified in person.

Mr. PASSMAN. Secretary McNamara and General Taylor testified also.

Mr. GARY. They all testified before this committee.

Mr. PASSMAN. Dr. Groseclose, may we hear from you, sir?

STATEMENT OF DR. ELGIN GROSECLOSE

Dr. GROSECLOSE. Mr. Chairman and members of the committee, my name is Elgin Groseclose, and I thank you for the privilege of again appearing before you to testify on the foreign aid appropriation bill. I offer first for the record a statement of my qualifications to testify on this legislation. Briefly, I have been concerned about the foreign aid program since I first saw it in operation in Iran in 1951. I have been acquainted with the Middle East for over 40 years, since shortly after World War I, when I taught in a mission school in Iran and did relief work in northwestern Iran and the Soviet Caucasus. During World War II I served as Treasurer General of Iran by appointment of the Iranian Parliament and have visited the Midle East at intervals since then. I am the founder and president of the only American organization for the blind of the Middle East—Welfare of the Blind, Inc.—which presently supports a clinic and workroom for the blind in Teheran and assists the schools for the blind in Bethlehem, Jordan. I am the author of six books dealing with the Middle East scene. I approach the foreign aid program, therefore, as one vitally interested in the welfare of human beings everywhere and in the responsibilities which our Christian faith assigns to the American people in assisting other peoples in their need.

Today, however, the crucial question is what foreign aid is doing to the American people and the U.S. economy. It is axiomatic that the U.S. economy is the keystone of the free world's economy and the U.S. dollar is the key currency of the world. Deeply concerned as we may be to elevate the economies and living standards of the underdeveloped countries, irreparable harm will follow if this is done at the expense of the deterioration of the U.S. economy. The United States is the largest and freest market in the world. Any reduction in the ability of this market to absorb the products of the world means a greater disaster to the underdeveloped world than any cutoff in foreign aid. In short, the greatest economic service we can render the underdeveloped countries is to maintain a strong domestic economy, and the greatest spiritual service we can render those countries is to maintain in this country a spiritual vitality in which integrity is paramount. I will devote, therefore, the time allotted me to a discussion of the impact of foreign aid upon the U.S. economy, and particularly upon increasing debility of the dollar, and our ability to maintain the integrity of the dollar. As qualifications for my remarks, a brief statement regarding my experience with the question may be of some use to the committee in assessing the weight to be accorded my views.

EXPERIENCE IN SOVIET RUSSIA

While doing relief work in the Soviet Caucasus, I had opportunity to observe the consequences of inflation. All economic activity was in paralysis due to a flood of paper money that had reduced the value of the note issue to nearly zero. Bread was almost sold by its weight in paper rubles. Such trade as did exist was sustained by the existence in circulation of a modest amount of Turkish gold lira and other gold coins. Despite the teachings of Marx and the contempt which Lenin is supposed to have expressed for gold—you will recall that he is supposed to have said that they would use it to pave their latrines—it was gold coins and gold coins only that permitted trade to rise above the primitive conditions of barter.

On my return to the United States I became for several years special agent in the U.S. Department of Commerce and the Department's specialist in Far Eastern finance, responsible for keeping the Department advised regarding gold and silver movements, and during this period the Department published my studies, "Currency Systems of the Orient" and "Budgets of Far Eastern Countries." Subsequently I had Wall Street experience with what is now the Morgan Guaranty Trust Co., was the first financial editor of Fortune, and taught at the University of Oklahoma. In 1934, the University of Oklahoma Press published my "Money: The Human Conflict," a survey of monetary experience, a work that was republished in 1961, after revisions to bring the story down to date, under the title "Money and Man."

WORLD WAR II INFLATION

In 1943, while serving as Treasurer-General of Iran, a principal task was that of combating the inflation that was then on the verge of reducing the country to a new anarchy. In the interval between my first and second visits, Iran, following the example of so many under the

tutelage of American money doctors, had abandoned its good silver coinage for a system of managed money and paper currency. Recalling the lessons of my earlier experience, I recommended reopening of the gold market and arranged for the sale of gold by the National Bank. The measure was effective. Gold was allowed to perform its proper function in the economy, inflation was checked, and the policy was adopted throughout the Middle East theater. I learned later that a similar policy had been recommended in the case of China by Dr. Arthur Young, adviser to the Chinese Nationalist Government, but had never been fully implemented.

Since 1944 I have been engaged in economic consultant work with an international clientele, and in 1960 was instrumental, with several like minded persons, in organizing the Institute for Monetary Research, Inc., a nonprofit organization to foster research into monetary phenomena and to promote a wider understanding of monetary behavior through the publication and dissemination of the results of research. In 1962 this institute published a monograph of my authorship entitled "The Decay of Money," a survey of Western currencies, 1912–62.

THE CRITICAL STATUS OF THE DOLLAR

The present critical status of the dollar in the international exchanges need hardly be argued. It has been the subject of extensive hearings and studies by the Joint Economic Committee and by various agencies of the executive branch. Efforts are made to attribute the continuing deficit in the balance of payments to causes other than the foreign aid program. The American businessman is being cudgeled and browbeaten to export more. The claim is also made that American foreign investments are a principal cause of the balance-of-payments deficit. The most popular whipping boy is, of course, the international speculator. The indisputable fact is that the balance-of-payments deficit began coincidentally with the adoption of the foreign aid program and the philosophy that there was a world shortage of dollars; it has continued ever since except for the brief period of the Suez crisis. Moreover, this deficit has been accompanied by a continuing suppuration of gold from the U.S. economy. The obvious cure of this condition is a constriction, if not the complete abandonment of the foreign aid program. So long as we cherish a free economy, the Government cannot compel our merchants to sell more abroad, particularly if foreigners do not wish to buy our products. It cannot impose quotas, tariffs, and other restrictions on imports without abandoning our policy of freer trade with the world and thereby defeat one of the major objectives of the foreign aid program. It cannot impose exchange restrictions without shattering world confidence in the dollar. Government can, however, reduce its foreign aid commitments and can do so with little damage to the recipients. The current indifference of Ceylon to the stoppage of foreign aid, in reprisal for expropriating property of U.S. nationals without compensation, is evidence of the ineffectuality of foreign aid either as a political lever for U.S. foreign policy or as a prop to the economy of the recipient countries.

FOREIGN AID AND THE GOLD DRAIN

The argument is offered that foreign aid is not the cause of the gold drain since theoretically some two-thirds to four-fifths of economic aid supposedly goes abroad in the form of U.S. exports. The simplest calculation discloses, however, that if 80 percent of our $5 billion aid bill is spent in buying U.S. commodities, then 20 percent is not so spent but goes to pile up in foreign balances or to acquire gold in this country. This is precisely what has been happening. We have given foreign aid far in excess of any foreign capacity to absorb and we have financed undertakings that have gone to the benefit of those least in need of it, so that much of these dollar credits have been used to acquire foreign bank balances or gold in Swiss numbered accounts.

Thus, since 1949, the cumulative deficit in the balance of payments is of the order of $25 billion. Foreigners have used more than $8 billion to buy U.S.-held gold, and the balance is held in callable funds—mainly bank deposits in U.S. banks and holdings of U.S. short-term Treasury notes. The total of these liquid items in the hands of foreigners is presently around $25.3 billion against a gold stock of $15,633 million.

FOREIGN AID AND DOMESTIC INFLATION

Most unfortunate, however, is the effect of foreign aid in weakening U.S. economic strength and security by promoting inflation at home. To the degree that foreign aid is provided, as alleged, in the form of goods, it takes goods out of the economy without any corresponding reduction of purchasing power within the economy, thereby creating to that degree an imbalance between purchasing power and goods in the market. (To the extent that foreign aid goes out in gold or dollar claims abroad, it weakens the U.S. dollar and is equally inflationary.) Moreover, by maintaining an artificial purchasing power for the dollar abroad through the process of maintaining external convertibility, by selling gold, while maintaining internal inconvertibility, the dollar becomes increasingly overpriced in international markets and goods priced in such dollars become too high for foreigners to buy. The result is that a competitive advantage is given to foreign-made products, an effect which in turn lessens our capacity to export and our ability to redress the balance of payments.

THE DECAY OF THE DOLLAR

It is clear to all who study the question that the stability of the dollar is currently being maintained by a facade of international agreements that may collapse at any time. Some of these arrangements are discussed in the March issue of the Federal Reserve Bulletin. We have been given the shocking disclosure that the U.S. Treasury, for the first time in history, has been compelled to borrow abroad in sums repayable not in dollars but in various foreign currencies, and that the amount of these borrowings presently totals $654 million. Not in the darkest days of the Civil War did the U.S. Treasury ever undertake to borrow and repay in any money except the U.S. dollar.

Under existing Federal Reserve legislation, $12.3 billion is required to support our internal currency and credit structure. An additional $500 million is required under recent legislation replacing outstanding silver certificates with Federal Reserve notes, making a total reserve requirement of $12.8 billion. The total gold stock is now $15.6 billion, thus leaving "free" reserves of around $2.8 billion. Against this net holding of $2.8 billion, special commitments have been made. There is, first, $800 million gold owing to the International Monetary Fund by reason of a purchase of gold from that Fund in 1958. To this must be added the previously mentioned $654 million foreign currency obligations created by the Treasury. The reciprocal exchange arrangements, or swap agreements, disclosed in the Federal Reserve Bulletin cover a total current commitment in excess of $1 billion, of which, according to the last report, $100 million had been drawn down. Recently the President announced a further gold borrowing from the IMF of $500 million. Thus, of some $2.8 billion so-called free reserves, $2 billion or more are under a special form of hypothecation for foreign obligations. Last year $900 million in gold was taken out of the country. It is obvious that the U.S. currency system trembles on the verge of technical bankruptcy.

END FOREIGN AID

The obvious solution to this problem is to end the foreign aid drain. It is the one major outgo over which the Government exercises exclusive control. To use this remedy the administration does not have to plead with anyone; it does not need new restrictive legislation to hamstring business; it does not need to discourage private investment abroad by the proposed tax on loans; it does not need to restrict foreign travel by American citizens. Reduction of foreign aid, along with stoppage of deficit financing, are the most salutary actions the administration can adopt to promote free world progress and to quiet world anxiety over the dollar.

I would like to address myself to some comments made by the House Committee on Foreign Affairs on this subject. Because of the authority this distinguished body carries before the Congress, this committee has made certain statements or drawn certain conclusions which I believe require some comment from us.

In the first place, it comments on the pipeline and points out in its Report on the Foreign Assistance Act of 1963, dated August 8, 1963, and draws the conclusion that because domestic departments of the Government always have unexpended dollars, there is nothing of concern in the fact the foreign aid program has unexpended dollars.

Now of course the answer to that is, "If our economy is in danger, and the dollar threatened—and there can be no doubt, whatsoever, that foreigners are extremely concerned about the dollar today—then these unexpended dollars are important because they can be spent without control from us and it is important that we cut off any new funds."

Second, ever since the foreign aid program began, the administration, or those in power, have been trying to create influence for it by arguments that will not stand water. The first one was that our foreign friends were spending far more for the common defense than

we were spending. We—the Citizens Foreign Aid Committee—exploded that some years ago, in a document in which we showed that the United States was spending over twice as much in relation to its GNP than the countries of Europe. Since then, the administrations in power have ceased that line of propaganda. Today they are arguing that foreign aid really is subsidizing American business.

Recently, Mr. Bell has made the statement that 90 percent of current aid dollars will be spent for U.S. goods and services.

Mr. ROONEY. Eighty-seven percent, according to the U.S. Chamber of Commerce.

Mr. PASSMAN. I want to say again that, so far as I am personally concerned, this type of claim is misleading—misrepresentation. After all, when these ships pull away from our shores, loaded with our wealth, it is a one-way deal. The manufacturer or jobber or broker sends the invoice down to the U.S. Treasury to be paid for out of the taxpayers' till. Where these recipients used to take money they earned from their exports or other sources, to pay for these goods, now they are getting them free. There is nothing coming back immediately. In some subsequent years, you may get a pittance back.

Mr. GROSECLOSE. I think the figures should be read into the record from their own documents that foreign aid (from p. 5 of their report) constitutes a cash drain of $1 billion. Apart from the goods and services shipped abroad under foreign aid, it represents a cash drain of $1 billion. Last year, foreigners took $900 million in gold from this country. It means they have taken or converted this cash into gold and drawn it out of the country.

Substantiation for that statement can also be found in the Department of Commerce publication, in "Survey of Current Business" for July 1963, page 28, which sets forth our foreign transactions and the balance of payments on goods, services, and unilateral transfers, which supports that statement.

Mr. PASSMAN. Of course, I think the outgo is far in excess of that figure. In addition to the goods and services, when you have a substantial portion of 64,500 people sleeping in hotels, buying meals, renting apartments, flying airlines abroad, those things, too, amount to dollars.

Mr. GROSECLOSE. I do think, also, that some answer should be made to the claim in this report that the main cause of our balance-of-payments deficit is our private foreign investments, which it lists as between $2 and $3 billion. The fact is, as shown by the balance-of-payment studies, that our foreign investments are more than paid for by earnings from these foreign investments, which last year totaled $3.8 billion as against $2.7 billion new investment.

Third, the committee stated that it notes with satisfaction, "that our aid programs have contributed to economic progress in the Near East."

The principal recipient of aid in the Near East has been Turkey, which has received through 1962, the figures you have, of course, but which might be read again, $3,430 million. Two or three years ago we put out a study—the Citizens Foreign Aid Committee—analyzing the economy of Turkey. We pointed out that aid had not improved the Turkish economy, that Turkey was today weaker militarily and economically than before foreign aid began. I was in Turkey in

1923 when the Turks were driving the Greeks into the sea without any foreign aid whatsoever.

I was in Turkey 12 years ago when foreign aid began. I have passed through Turkey briefly since then but I would like to refer to an official statement of equal authority with that of the committee, the Organization for Economic Cooperation and Development, which has just released a study on Turkey. If I may read into the record its conclusions, the report states on page 7:

> Despite a very rapid increase in population, the real gross national product increased more slowly in Turkey than in the rest of Europe. The standard of living showed virtually no improvement between 1953 and 1961, and such limited growth as did take place was only achieved by extending the area under cultivation beyond the economic limits and by piling up foreign debts which today constitute a heavy burden. Too much of the investment carried out during this period was misdirected; and policies concerning pricing, production, credit, foreign trade, and exchange rate gravely distorted the cost and price structure.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. GROSECLOSE. Mr. Chairman, the best way to maintain a strong military in Turkey is to maintain a strong economy in Turkey.

The fact is, under our foreign aid program they have socialized the economy, according to the Middle East and African Reporter.

Mr. PASSMAN. I think, however, it is admirable that those people would be willing to make the sacrifice in their standard of living in order to build and keep a strong military posture.

Mr. GROSECLOSE. Finally, I would like to refer to Yemen on which the House Foreign Affairs Committee comments on the fact that there is no evidence so far of a withdrawal or plan of withdrawal of the Egyptian forces from Yemen. I would like to point out for the record that last year we provided Egypt, in calendar year 1962, with $185 million. If we are interested in peace in Yemen and a peaceable Egypt we are certainly not assisting it by our extravagant foreign aid.

With those comments I will conclude my statement and thank you for the privilege.

Mr. PASSMAN. Thank you very much, Dr. Groseclose.

We also have with us Dr. Lewis E. Lloyd. Dr. Lloyd has been before this subcommittee in the past. We are very happy to have you return, Doctor. We welcome your statement at this time.

Mr. LLOYD. Thank you.

STATEMENT OF MR. LEWIS E. LLOYD

Mr. LLOYD. For the record, I am Lewis E. Lloyd of Midland, Mich., an economist and head of business research for the Dow Chemical Co.

I wanted to comment that I am appearing here today not in my business capacity but rather as a professional economist and a private citizen who is alarmed about our balance-of-payments situation and its implications for the foreign aid program. I have given special attention to the study of monetary and fiscal problems and for this reason the Citizens Foreign Aid Committee asked me to consider appearing before you.

Mr. PASSMAN. Off the record.

(Discussion off the record.)

Mr. PASSMAN. Please proceed.

Mr. LLOYD. There is a lot of concern about this balance-of-payments problem today but it is not generally recognized that this problem is deeply imbedded in the whole fundamentals of economic exchange. You mentioned earlier, Mr. Chairman——

Mr. PASSMAN. A hundred percent responsible and I do not care how they try they cannot disprove it.

Mr. LLOYD. In addition to labor, in a society like ours some laborers produce goods and exchange these for other goods. Since we are so big we cannot do it by barter so we have money to bring about the exchange of goods.

It is important to note that if at any stage the goods are exchanged for money, and that money then is not exchanged for other goods and services, that we get into problems. In fact, there are people who produce goods and services for which there is no market. Conversely, if at any point some individuals get money, let's say like foreign aid, for which there are no goods and services traded, then a different type of imbalance develops which gives us problems also.

In the basic economic exchange between nations we find exactly this same thing, that fundamentally from the standpoint of basic economics it is the exchange of goods and services for goods and services and the money is merely the tool to bring about this exchange.

If by whatever means dollars leave the country and we do not get goods and services for these, we have a balance-of-payments deficit, as you know. I have indicated in the paper for the record what these various ways are.

I do not need to remind this committee through these foreign aids and grants how something like $100 billion have left our shores whereby we gave them money for which only part of it returned for goods and services in this country. If they all returned and bought the products from our industries, then at least we would have the jobs here that that represented, but many of them have not returned.

Mr. PASSMAN. If I may interrupt, please, I wish to note that all nations earn dollars or other convertible currencies from their exports and ordinarily they requisition their needs of our goods and services and they pay their earnings for these goods and services. Under this program, however, the manufacturers receive and fill the orders, but there has been a credit down at the U.S. Treasury by which the Treasury provides the money to pay for the invoices, thereby leaving in their country the convertible currencies or dollars they would normally send over to pay for their imports from us. It has been established that of what we are giving away, if we did not give it away, they would buy a substantial portion of it anyway, and they have the dollars available with which to do so. We do not get anything back for what we are sending out whereas under normal commerce we would bring back dollars or other convertible currencies.

Mr. LLOYD. You are so right, Mr. Chairman. The second chart shows the balance-of-payments imbalance, the negative balance we have had in recent years, as Mr. Harnischfeger mentioned, in 1957 of course the Suez crisis which forced Europe to buy a lot of petroleum from the dollar area. That gave us a slight balance of payments in that year but in general we have had a growing imbalance. That means the dollars left our shores and did not come back to this country. As a matter of fact, the official data on the balance of payments is

misleading in the last couple of years. The dotted line shows that the current imbalance in our economic trade amounted to in those years, roughly about $3.4 and $3.6 billion instead of the $2.4 and $2.2 billion which the official record shows, the difference being that in these years we had prepayment of long-term debt from particularly France and Germany and we have gone out and borrowed money in foreign currencies and last year those two things amounted to about $1.4 billion.

The imbalance in our current situation was much worse than the official data.

As a result of that we have come to the position where since 1948 and 1949 we have lost gold and are now down to $15.6 billion as you know and the dollar credits have increased at the same time. As mentioned earlier this morning the total short-term claims are in excess of $25 billion now but when we take out the short-term claims which we have against them and the monetary fund commitments we get down to in the neighborhood of $20 billion of active net short-term claims against our gold supply.

As a matter of fact, if we look at the consequences of this, the third chart shows the amount of gold we would have left if at any moment in the past dozen or so years we had attempted to pay off our foreign obligations. As a matter of fact, we are now short about $5 billion of being able to meet these foreign short-term claims and in addition our banking law requires a 25-percent reserve, which amounts to about $12,500 million now.

As a consequence of these large foreign claims against our gold supply we now find that our economic destiny is in the hands of foreigners. The dollar even now retains its position as a world currency only because the foreigners have not yet lost confidence in the dollar to the point where they have placed extensive demand for gold. As a result we are no longer free agents with respect to many of our own policies.

For example, monetary policy; interest rates in recent times have been rigged in an attempt to avoid the outflow of capital dollars and the foreigners call for gold.

We find also that even physical policy is somewhat restricted. Tax and budget considerations have to be tempered now by the possible reaction of foreigners.

When the exchange of goods and services between nations fail to balance, one country may be willing to hold the I O U's for another country for a limited period of time. In the end, however, the money commodity gold is the only tangible way that the account can be balanced. Normally foreigners with mounting dollar claims will present these for gold. So long as they trust the United States, however, to be able and willing to meet their future obligations to supply gold on request, they will be willing to hold the dollar claims in lieu of gold.

Mr. PASSMAN. I am tremendously interested in your statement and the information you are presenting.

There is nothing on the face of the earth that is going to take the place of gold as a support for a monetary system.

Mr. LLOYD. That is right.

Mr. PASSMAN. Without exception, when a country has lost its gold support for its currency, then the monetary system has lost its strength and prestige around the world. Is that not the record?

Mr. LLOYD. That is the record. There is no hope that modern economics can change this, or human nature, which is involved here.

As a matter of fact, as I am sure you know, a good monetary commodity has to have certain characteristics, and scarcity is one of them and durability and divisibility and things like that. The reason that gold has the value it has is, it takes human labor and capital to mine and refine it. If it was something anyone could get, it would have no value as a money commodity.

Mr. PASSMAN. As long as our money is supported with gold, then people who come into possession of the dollars accept it in lieu of gold?

Mr. LLOYD. Yes.

Mr. PASSMAN. And the minute they see that the dollar is no longer protected by gold, they want to get it out of their hands?

Mr. LLOYD. That is right.

They have some special incentives not to ask for gold. Much of the dollar claims are held in Treasury notes and bills which pay interest. When the claims are converted to gold, there is a loss of this interest plus a slight charge for safekeeping. Moreover, the industrial nations of Europe who hold the bulk of these dollar claims are well aware that were they to call for large amounts of gold, this would precipitate a liquidity crisis and force us to eliminate most or all of our foreign aid. Since a significant part of our foreign aid dollars still find their way into the industrial economies of Europe and Japan, they are loath to make any move which would force us into cutting our foreign aid.

In the past 3 years, many stopgap defensive actions have been taken to minimize the loss of gold. These actions have bought time and prevented a crisis, but they have not solved the fundamental problem which has steadily worsened.

Some of these actions are restrictions: The amount of goods which a tourist can bring back duty free, special taxation on foreign earnings and on foreign investments, renewed emphasis on "buy American" policy, and direct and indirect export subsidies; we have urged foreigners, particularly the Germans and French, to prepay installments on long-term debt; and finally, our Treasury has been borrowing foreign currencies in an effort to minimize gold loss.

These stopgap actions have bought time, but we have not used the time to solve the fundamental problems which we still have to face. The consequences of continuing on the collision course which we have been pursuing will be disastrous. The $25 billion of short-term claims against our gold has been used to a large extent by foreigners to support their monetary systems as though these dollar claims were, in fact, gold. After all, we have promised to redeem all dollars in gold whenever requested to do so. As a result of this, both we and the foreigners are extending credit against the same gold supply. When the day of reckoning comes, there will not be enough to go around. The $12 billion required for our 25 percent bank reserves and the $25 billion of foreign claims, adds to $37 billion of commitments against our gold reserve which is now down to about $15.6 billion.

This is precisely the sort of condition the world faced at the end of the twenties, because of the tie-in between the central banks in Europe and our banking system and the British, there was international overexpansion of credit for the total gold base.

The negative balance of payments represents dollars which do not come back to the domestic economy to buy the products of our labor. Had these dollars come back, we would have had more jobs in this country. In fact, the balance of payments is the best measure of overall balance between the jobs gained through exports and the jobs lost through imports.

Mr. PASSMAN. We are dealing with a bookkeeping transaction, but it has the same effect as if you actually shipped the dollars over and they came back.

Mr. LLOYD. That is correct.

In the past 5 years there has been an average outflow of about $3.5 billion per year. Had these dollars come back, we would have had about a million and a half more jobs in this country. There are those who are pushing for rapid and drastic further tariff reductions. Since our industries are already, on the average, noncompetitive in world markets, further tariff reduction under present conditions will only worsen the fundamental situation—this is no solution to the balance of payments.

Along with the growing unemployment, we find industrial stagnation. The industrial countries of the free world are growing faster than we are. This will continue until we correct the basic conditions which led to the outflow of dollars.

The final consequences of our unsound international economic policies will be a repudiation of the dollar in world markets. When this happens, it will bring economic depression to the United States and will cost us the loss of our world leadership.

Mr. PASSMAN. It would be a repudiation through circumstances?

Mr. LLOYD. Yes.

The situation is serious; it is growing more serious day by day, and the stakes are so high that we dare no longer postpone attacking the fundamental problem.

George H. Arris states our dilemma in these words:

> If we hit bottom, we have a number of choices. Either we notify the rest of the world that we no longer will pay our international debts in gold. Or we devaluate the dollar. Or we forget the 25-percent reserve requirement, put the dollar on a paper base and go on using up what gold is left to pay international obligations. Whatever the choice, this will be the end of the dollar as an international currency.

FUNDAMENTALS OF THE BALANCE-OF-PAYMENTS PROBLEM

There are two basic reasons for the balance-of-payments problem. The first is this massive giveaway program called foreign aid. The result has been a continuing transfer of dollars out of the country. However sound the program of rehabilitation for Europe and Japan was at the end of the war, we can no longer afford this dollar drain even if the results were good, which they are not.

The second important fundamental factor is the noncompetitiveness of American producers in the current world markets. The fact that we are noncompetitive is clearly evident to any careful student, as indicated in numerous ways.

1. While we have underutilization of both labor and plant in this country—unemployment and overcapacity—in Europe and Japan plants cannot be built fast enough nor enough workers found to meet their demands. Growth rates in Europe have been twice that of ours, and in Japan three times.

2. The character of our trade has changed. As recently as 1950 we imported primarily raw materials, tropical products, and products of low labor content, while we exported primarily finished manufactured goods of high labor content. By the end of the 1950's this had changed. We now export more agricultural products, raw materials, and products of low labor content, and import mostly finished products of high labor content—cameras, typewriters, radios, TV's, watches, automobiles, and scientific instruments, and so forth.

Mr. PASSMAN. Is it a fact that many of the most prosperous nations today are short of labor? In Japan, they have a shortage of over 300,000 people needed to do the work that must be done simply because of their increased markets; is that true?

Mr. LLOYD. You are very right.

Mr. PASSMAN. And many of the European countries need labor simply because of the demand they now have they did not previously?

Mr. LLOYD. That is certainly true. Not more than 3 months ago we set out to build an additional plant in Poland and were denied permission to start because there was not enough construction labor available to meet all their construction requirements.

Mr. PASSMAN. That kind of condition has been brought about principally because they are more competitive on world markets than some of the previous suppliers.

Mr. LLOYD. Clearly, we have a most perceptive chairman who understands the fundamentals of this as few people do.

3. The Department of Commerce data on trade shows a favorable balance, with exports exceeding imports by $3 to $4 billion. Included in the export data, however, are products which we buy with our own dollars and ship overseas. This, of course, is that part of the foreign aid dollar which is spent in the United States.

When we subtract out the shipments to military establishments, the agricultural products under Public Law 480, loans for export, and agricultural products which are subsidized, we find that our export surplus vanishes. Chart 4 shows U.S. imports and our exports adjusted to remove those which are bought with our dollars or subsidized. Moreover, according to the Commerce Department, about $2⅓ billion of the remaining exports are shipped from American companies to oversea subsidiaries. In many cases, of course, these are not competitive shipments either.

CHART 4

And finally, we count our imports on a foreign f.o.b. value, whereas other countries count their foreign trade on a c.i.f. (cost, insurance, and freight included) value. Since our imports arrive on foreign bottoms, we actually pay out dollars for the landed cost. Figure 5 shows the imports adjusted upward by a modest 15 percent to adjust to a landed-cost basis. It is clear, then, that even our trade balance adjusted to a competitive basis is unfavorable.

4. The final evidence of noncompetitiveness is, of course, the continuing and growing negative balance of payments. If we were fully competitive in world markets, the dollars which foreigners obtain by whatever means would be spent in this country for our products and our foreign accounts would show a balance.

Mr. PASSMAN. Would it make any contributions to what you are saying if we indicate that we are about 38 percent, on the average, out of the world market on agricultural commodities?

Furthermore, in many instances you can buy steel in Japan, delivered dockside at U.S. ports, for as much as $32 a ton cheaper than you can buy it out of Pittsburgh. That would include flat steel, nails and staples, and other types in everyday use.

Mr. LLOYD. Yes; that is right.

We became noncompetitive because the exchange rate between the dollar and other currencies has not been adjusted to the changing competitive picture. After the war, Europe and Japan replaced their war-torn and bombed-out plants by modern, new automated ones. They did this largely with our foreign aid dollars and with a great deal of technical assistance from us. Consequently, they have made a

CHART 5

great leap forward in productivity. Their unions did not demand that this productivity increase be matched by wage increases, and thus the products of their factories became more competitive in world markets.

During World War II and in subsequent years, we have poured more than $90 billion of inflationary money into our economy. As a result of this inflation we have more than one worthless, printing press dollar for every good one. After the war when consumer goods became available, there were $2 coming to the marketplace to buy a dollar's worth of goods. Since the market couldn't tell the good dollar from the bad dollar, the price of goods was bid up until a dollar's worth of goods was selling at $2—in fact a little more, because the dollar is now worth only about 46 cents.

The price of labor went up with—in fact a little faster than—the price of goods; and as a result, today American workers and factories are no longer competitive in world markets.

BASIC SOLUTION TO BALANCE-OF-PAYMENTS PROBLEM

We need to take two steps to attack the balance-of-payments problem at its base. First, we must drastically reduce our foreign aid program and the small part of it which might be continued should require that the dollars be spent in the United States. This would at least insure that there were no export of jobs through our foreign aid giveaway program.

We need also to put an end to Federal deficits in order to reassure the foreigners that we have put a stop to monetary inflation in the United States. This will give them confidence that we will be able to avoid devaluing the dollar and lessen their likelihood of calling for gold. It is an absolute certainty that if we continue monetary inflation in this country, sooner or later we shall have to devalue the dollar.

We need also to readjust the exchange rate of the dollar as between the currencies of the major industrial countries of the free world. The present exchange rates of the dollar were set by the Monetary Fund soon after World War II, long before anyone foresaw the rapid improvement in productivity in industrial Europe. The present exchange rate is unrealistic. Studies indicate that the dollar is overpriced by about 25 percent in world markets.

We see the real consequences of this when we turn our attention again to the basic exchange equation:

When foreigners exchange goods and services to us for our dollars, normally they would exchange those dollars for other goods and services from us. It just so happens, however, that one of the goods which we offer the world is gold. Through the process of inflation the prices of our other goods and services have essentially doubled, but the price of gold remains at $35 an ounce as it was fixed in 1934. Thus today gold is the cheapest commodity we offer the world. It is not surprising, therefore, that foreigners who get dollars, prefer to keep part of those dollars to exchange for gold. Of course, as we have seen, they don't actually have to exchange them for gold as long as the world has confidence that we will honor our obligation to furnish gold upon demand. If we do not remove this distortion by an appropriate adjustment in the exchange rate, we will be forced eventually to devalue the dollar.

If the exchange rate were adjusted to be realistic, then our products would become competitive in world markets and we would earn back the dollars which foreigners obtain from us through trade, tourism, capital flow, and gifts.

It is clear that we cannot afford to continue our massive foreign aid program. Our taxpayers already are burdened with a Government debt which is about $100 billion larger than that of all the other countries of the free world together. If we continue our profligate giving, we shall hasten if not actually precipitate a world liquidity crisis. This will have dire consequence both for us and the free world. First of all, it would certainly disrupt the U.S. economy and result in the most severe setback our economy has seen since the 1930's. This would shake the confidence of the rest of the free world in the free enterprise

system. Other peoples would be skeptical of an economic system plagued with such difficult problems.

In the postwar years the dollar has become an important reserve currency. In a sense, we have become the bankers of the world. In the face of this circumstance there will be serious consequences if respect for the dollar is lost. We will lose more than our position as world banker; we will forfeit our leadership, politically, and ideologically as well.

Mr. PASSMAN. Thank you very much, sir.

In how many countries does the Dow Chemical Co. operate?

Mr. LLOYD. We have wholly or partially owned subsidiaries in 15 countries.

Mr. PASSMAN. Dow is one of the largest chemical companies in the world?

Mr. LLOYD. The fourth largest.

Mr. PASSMAN. You are head of the business research section of that company?

Mr. LLOYD. That is right.

Mr. PASSMAN. We want to thank you again, most sincerely, for coming here and giving us this valuable and factual information.

Mr. HARNISCHFEGER. Is it not a fact we do not permit our citizens to buy their own gold, putting the American citizen at a disadvantage to the foreigner?

Mr. LLOYD. The foreigners can take our dollars to a central bank and demand gold for them.

Mr. HARNISCHFEGER. If you want to rectify this position, you have to permit the American to do the same as the foreigner.

Mr. PASSMAN. Thank you again, gentlemen.

REPORT OF NAM'S GOVERNMENT ECONOMY COMMITTEE ON FOREIGN ASSISTANCE

We shall insert in the record, at this point, a report from the National Association of Manufacturers.

(The statements referred to follow:)

EXCERPTS FROM "THE FEDERAL BUDGET FOR 1964"—A REPORT OF NAM'S GOVERNMENT ECONOMY COMMITTEE ON FOREIGN ASSISTANCE

FOREIGN ASSISTANCE

Foreign aid is in two forms: military assistance, and economic and financial programs. The bulk of it is financed and administered through an administrative account called Funds Appropriated to the President:[1]

[1] Grants of commodities for famine relief (between $200 and $300 million are carried in the appropriations of the Department of Agriculture; very small amounts are also carried in the Departments of Commerce and State).

Foreign assistance

[In millions]

Fiscal years	Military	Economic	Total
New obligational authority:			
1962	$1,577	$2,338	$3,915
1963 estimate	1,325	2,604	3,929
1964 estimate	1,480	3,465	4,945
Expenditures:			
1962	1,390	1,836	3,226
1963 estimate	1,750	2,100	3,850
1964 estimate	1,450	2,300	3,750

NOTE.—It should be noted that under the Agency for International Development trust funds, there is an additional $953,000,000 of new obligational authority for foreign assistance, and $574,000,000 of expenditures. This is 30 percent above 1963 spending from these trust funds; and the 1963 expenditures were 20 percent above those for 1962.

Source: The budget, pp. 151–152.

Despite the net drop of $100 million in the $3,750 million 1964 expenditures over those for 1963, the overall picture of foreign assistance is an enlarging one. The more than a billion rise in requested obligational authority will sooner or later lead to increased spending. The surest way to assure a continuing lowering of expenditures is to reduce the level of spending authority.

The level of our foreign commitment should be reduced. There has been continuing and mounting attention in the Congress itself and in the press over recent years on the costliness and questionable effectiveness of the economic aid programs, including the charge of careless decisions and management. And the General Accounting Office has made critical findings in the military assistance programs. Surely at a time when it is apparent to all that our own economic defense needs reinvigoration, when every assist that expenditure control can give tax rate reform should be sought, when our overall international balance of payments continues to drain our gold supply, when confidence in our dollar has a somewhat tenuous place in international financial circles, when minimizing the deficit would help curb the potential inflation in the push of wage and fringe costs—surely at such a time some heed should be paid to criticisms by our own people of these foreign-assistance outlays.

Military assistance

It may appear encouraging to find a $300 million reduction in 1964 expenditures for military assistance, but this is due to the high level of supplies and equipment being delivered in 1963. It will be noted that the requested obligational authority for 1964 is above the 1963 figure, which indicates expansive planning. Furthermore, the budget explains a change of intent which carries implications of more rather than less spending, since the potential for "local development" is limitless:[2]

"Emphasis in military assistance is * * * shifting to the less developed nations, where more attention is being placed on building up units trained and equipped to maintain internal security and to contribute constructively to local development."

This suggests that the nature of the assistance may also be shifting from "military" to "economic"—where the increasingly larger outlays are occurring in the trust as well as the administrative funds.

That there may be room for cost curtailment in the military aspects of the assistance program is indicated by reports of the General Accounting Office. Savings of nearly $50 million were recently possible by a cancellation of requisitions for materials and supplies not required by the recipient country and by a reduction of requirements programed.[3] Furthermore, unclassified parts of the GAO's secret reports indicate such unnecessary and costly factors as "premature delivery of equipment * * * excesses and deficiencies in spare parts stocks of recipient countries * * * ineffective maintenance and use of delivered equipment * * * deficiencies in the U.S. Army management of spare parts for military assistance equipment."[4]

[2] P. 68.
[3] "Report for Improving Government Operations," Comptroller General of the United States, March 1962, p. 99.
[4] Op. cit., pp. 79–81.

GAO reports on this situation portend savings running into several hundred million. It is believed that a determined management effort could achieve a 20-percent, or $290 million, reduction in the 1964 spending for this 60-country program of U.S. military assistance.

Foreign aid and private enterprise

The recent experience of our own country indicates that it is not the expenditure of public funds which bring economic development and growth. It is the investment of private initiative, time, and capital. Throughout our history it has been the private sector which has generated the astonishing performance of the American economy. The most fundamental contribution which this country could make to other countries is a release of the capital investment potential now being held back by the structure of our tax rates on income. Venture capital, placed where both the risk and the profit were greatest, led this country when it was a developing economy to its economic achievements; and the same volatile materialism can benefit the development of today's emerging economies The kind of funds most likely to aid any economy—our own or others—are private, not public investments, voluntary, not involuntary capital creation. With a release of such funds through tax reform, the natural proclivity of venture capital to seek the most profitable level, will make for a kind of American aid that public funds cannot offer.

This in itself is a reason for taking meaningful steps to reduce the level of U.S. Government aid to other governments. There is a need to wean developing economies away from U.S. relief dollars, to encourage those economies to take steps which will entice private investments. The foreign aid program is an impediment to this, since it advances Government enterprise. Giving aid to other governments primarily strengthens their political rather than the economic structures. Thus there is little opportunity and litle incentive for private enterprise to participate in or contribute to long-range economic buildup in developing nations.

On this situation the Wall Street Journal editorializes as follows:[5]

"* * * we get the curious upshot of a supposedly free enterprise nation taking scores of billions of tax dollars from private individuals and businesses and using them to foster statist and socialistic institutions abroad. That policy cannot possibly serve the interests of foreign economic development, of the United States, or of freedom in the world."

The Morgan Guaranty Survey writing, specifically of our billion dollar involvement with the Alliance for Progress, has this to say:[6]

"By default—that is, by failing to insist that a major role be assigned to private enterprise—U.S. leadership in the Alliance has encouraged the strong bias toward Government enterprise * * *

"* * * By not insisting vigorously enough on the place of private capital in the Alliance framework and by not stressing sufficiently the creation of a receptive climate for investment—including foreign investment, toward which nationalism in many Latin American countries is becoming increasingly hostile—the United States has helped obscure the Alliance's basic purpose of calling forth a flow of private funds many times the amount of government-to-government aid."

An official study group emphasizes the same thing. The March 20, 1963, report of the Committee to Strengthen the Security of the Free World, under the chairmanship of Gen. Lucius D. Clay, expressed convictions, with regard to the Alliance for Progress, which had "worldwide appreciation." For example:

"* * * care must be taken even now to assure that U.S. assistance does not exceed amounts that can be usefully absorbed without encouraging even less effort and discipline on the part of government to the south.

"Latin America must be encouraged to see its essential choice between totalitarian, inefficient, state-controlled economies and societies on the one hand and an economically and politically freer system on the other, realizing that a society must begin to accumulate wealth before it can provide an improved standard of living for its members."

If we are to set an example for the so-called developing nations, and aid them with sound advice as well as what material assistance we can afford, we ought to stop helping them start off on the wrong foot. The President's budget says[7]

---

[5] Mar. 15, 1963.
[6] February 1963.
[7] P. 71.

"A continued high level of new obligational authority will be required *to support the worldwide responsibilities of the the United States*" [emphasis added]. It would seem no more the responsibility of American taxpayers to support other economies through grants and loans than it is to support our own economy with public spending and subsidies. And it would seem no more effective in the long run, since reliable economic strength comes from economic self-support. Whatever may be the worldwide responsibilities which we can agree on and afford as a Nation, there will be no disagreement that the first claim on resources must be for the economic strength of our own country. In the priorities which must be set up for that purpose, the support of other economies take a subordinate place.

The bulk of "funds appropriated to the President" is devoted to the foreign assistance programs, and this account will start fiscal 1964 with $8,376 million of unobligated funds. It will end 1964 with these replenished somewhat for a total of $8,404 million. These are unobligated. This suggests first, that nearly $5 billion of requested new obligational authority for 1964 is undoubtedly excessive; second, that a declining level of commitments could be supported without enriching the backlog of obligational authority; and third, that a reduced level will actually contribute to the effectiveness of the program.

For all three reasons, but primarily to make way for more recognition of what private enterprise could do in these countries, to evidence faith that it can and will—with opportunity—contribute to the development of aided countries, Congress should deny $1 billion of the overall spending authority requested, without specific direction as to where the reduction should be applied, and with no effect on the 1964 expenditures necessarily required. The cut would be a token of intent, notice of retrenchments to come, so that other governments would be alerted to seek more development through private enterprise and in turn private enterprise would be encouraged to undertake more.

With regard to the Clay Committee's admonition about providing more aid than could be usefully absorbed, this overall cutback of authority should enforce a certain effectiveness not only in the receiving countries, but in our own aid program. Having to do with less should contribute to the long-term goal—envisioned by the Clay Committee as well as NAM and others—of a capacity to do with less.

Economic assistance

Modifications of the President's proposals for foreign economic aid could be effected among the following administrative accounts, and downward adjustments therein are suggested:

1. Supporting assistance to countries "which need help to maintain economic and political stability * * * and economic independence * * *." Requests for authority have been reduced slightly, and expenditures have been cut by a third since 1962; but this is the result of a transfer of grant projects to development loans. It is suggested that no new obligational authority be provided for 1964, and that expenditures be held to half of the $420 million budgeted.

2. Contingency fund: Expenditures have been running between $250 to $300 million. For 1964, $400 million of new authority is requested, with expected expenditures of $290 million to provide increased "flexibility to the President for meeting unforeseen emergencies and opportunities in foreign affairs. It is suggested that no priority be accorded the unforeseen and that $290 million be saved.

3. Social Progress Trust Fund: This is administered by the Inter-American Development Bank. Expenditures were $10 million in 1962, $45 million in 1963, and are budgeted at $117 million in 1964. To finance this expansion, $200 million of new obligational authority is requested. No priority is here assigned such expansion and it is suggested the 1963 level not be exceeded, thus cutting 1964 expenditures by $72 million.

4. Alliance for Progress: $700 million is requested in new obligational authority for grants and loans for 1964, with $284 million expected to be spent. The overall total of such aid which the President expects to provide for Latin America in 1964 through a number of channels is $1 billion. It is therefore suggested that authorization and expenditure under the grant portion of the alliance be held in abeyance completely for 1964; and that expenditures for loans not exced the $160 million 1963 level, which can be done within existing authority. This would combine into an expenditures saving of $124 million.

5. Development loans via revolving funds for the Near East and south Asia. This item accounts for over $1.2 billion, or nearly a third of the $3.5 billion total of 1964 obligational authority requested for economic aid; but the $297 million

of 1964 expenditures for these loans, although larger than the 1963 expenditure, represent only 13 percent of the total economic aid. The reason for the rise is given as "better planning, programing, and implementing capabilities in developing countries." This, of course, means better arrangements for making use of any forthcoming funds, thus the anticipation is for larger outlays. It is believed that consideration of any priority for mounting aid to these areas may be deferred until our own economic growth rate has recovered enough to justify it. It is suggested that new obligational authority be held to $600 million for 1964 and that spending be held to the 1963 level of $225 million, cutting expenditures by $72 million.

The first four items above involve $1,697 million of obligational authority to carry out authorizing legislation to be proposed. In the framework of today's domestic priorities, the President should refrain from proposing this legislation, and if it is proposed, the Congress should defeat it. This will help establish an atmosphere of retrenchment, and it will not foreclose the expenditures considered in this writing to have a spending priority for 1964.

Summary of foreign aid recommendation

[In millions]

Fiscal 1964	New obligational authority		Expenditures	
	Maximum	Cut	Maximum	Cut
Unallocated cutback		$1,000		
Military assistance	$1,190	290	$1,160	$290
Economic assistance:				
1. Supporting assistance		397	210	210
2. Contingency Fund		400		290
3. Social Progress Trust Fund		200	45	72
4. Alliance for Progress		700	160	124
5. Development loans	600	648	225	72
Total	1,790	3,635	1,800	1,058

The remaining overall totals for both military and economic foreign assistance in the administrative accounts would be as follows: [8]

[In millions]

1964	Budget estimates	Priority maximum
New obligational authority	$4,945	$1,310
Expenditures	3,750	2,692

Aid Program in Nigeria

STATEMENT OF MR. WILLIAM D. LOTSPEICH

Mr. Passman. Mr. William D. Lotspeich, from the Friends Committee on National Legislation, has submitted a statement, which will be made a part of the record at this point.

(The statement follows:)

Statement of William D. Lotspeich in Behalf of the Friends Committee on National Legislation

I am William D. Lotspeich, of Rochester, N.Y., a physician and teacher. My position is professor and chairman of the department of physiology of the University of Rochester School of Medicine and Dentistry. I have recently returned from 4 months in Nigeria where I served as a visiting professor of physiology in the new Medical School of the University of Lagos. This visit, with my family,

[8] And there would still be nearly a billion of new obligational authority and over one-half billion of expenditures for foreign assistance handled through the trust funds. Furthermore, there is the Eximbank's development project loan program involving well over $2 billion currently.

was part of an ongoing informal arrangement between the Universities of Lagos and Rochester whereby we are assisting in a number of ways during these early years of the new medical school's existence in Lagos. Our participation includes teaching, research, curricular planning, procurement of staff, and training of future staff, both in Lagos and Rochester.

I am a member of the Society of Friends and our mission in Nigeria, although not officially under Friends' sponsorship, did reflect a personal Quaker concern.

My statement is submitted on behalf of the Friends Committee on National Legislation, a Quaker organization supported mainly by contributions from Quakers. No single spokesman can speak officially for all members of the Religious Society of Friends, in view of its democratic organization and the cherished right of individual opinion. But there is widespread concern among Friends for the well-being of all mankind.

We support the administration's request for appropriations for U.S. economic aid programs, especially the technical assistance activities which help develop human resources. We support as well contributions to international organizations, particularly the U.N. Technical Assistance and Special Fund, aid to Palestinian refugees and UNCEF. We realize that at times these programs seem unending and unrewarding, but this is only natural, since economic aid and technical assistance are concerned with one of the most challenging of all activities, trying to bring about change, changes in economies, in institutions, and in people.

We oppose appropriations for military aid.

VIGOROUS SUPPORT FOR EXPANDED TECHNICAL ASSISTANCE

The great need for more technical assistance can be documented in many ways. David Bell told the recent Conference on Economic and Social Development that the United States has not been able to complete some projected loans because of a lack of trained leadership in the borrowing nations. His assistant, Leona Baumgartner, reminded the same audience that the single greatest obstacle to development in many countries is the inability of the people to use their own resources. But if I may, I should like to review with you some of my own experiences in Nigeria which have strengthened my belief that the United States must expand technical assistance to the underdeveloped nations in order to create a firm base for development aid.

THE HEALTH SITUATION IN NIGERIA

In the United States, England, and Scandanavian countries there is approximately 1 doctor for each 700 persons . In Nigeria the ratio is near 1 for every 40,000 persons. The current population of Nigeria is now about 40 million, and increasing; so this ratio will become even greater if Nigeria doesn't get more doctors rather quickly. This situation is typical for most of the newly developing countries. The disease and public health pattern is also typical. Some 50 percent of all children die before the age of 5. The complications of childbirth go unattended so maternal mortality is also very great.

The high death rate among the adult population results from infectious diseases we have largely conquered in this country: respiratory infections, malaria, typhoid, and yellow fever to mention a few. In the larger cities there are public health problems resulting from lack of pure water supplies, adequate sewage disposal, and food inspection; crowding and poor sanitation, and lack of mass immunization against smallpox, poliomyelitis, diphtheria, and tetanus cause high morbidity rates. A diet rich in starch and poor in protein combines with chronic infestation of the population with parasites, to weaken a large segment of the population.

The whole constellation of health problems could yield tomorrow to the application of public health measures in common practice here, and the Nigerians are well aware of this and are setting about vigorously to do something about it.

WHAT NIGERIA IS DOING ABOUT HER HEALTH PROBLEMS

The Nigeria Government has decided that the only way to meet the public health problems adequately is for Nigeria to train her own doctors. This decision makes real sense and represents a fine example of the sort of national self-help U.S. AID seeks in selecting countries for assistance. When she became independent in October 1960 Nigeria already had one medical school,

started some 12 years ago during the colonial period as a faculty of the University College of Ibadan. Its students had to take the University of London examinations and the faculty was largely British.

The new University of Lagos now provides the second school of medicine, this one proudly started by the Nigerians themselves in the first 2 years of their independence. This is a very impressive achievement. Ultimately it is their plan to establish at least two more such schools, one in the northern and one in the eastern region. If each of these four schools could ultimately produce 150 to 200 graduates a year, the gap in the doctor-to-population ratio could be significantly reduced and the health of the country commensurately increased.

During my stay in Nigeria, and in my contacts there before and since my visit I have been tremendously impressed with the caliber of the Nigerians leading this effort, and with the students who are participating in it. The decision to start the medical school in Lagos was taken in December 1961. The target date was October 1, 1962, for the opening of the new school with a faculty and an entering class of 28 students. Everyone, including we Americans, who believe it takes 48 hours to do the impossible, told them they couldn't do it. They said they realized that, but they would do it anyhow; and they did. What is more they are proceeding on schedule with the planned expansion from last October's impressive beginning.

WAYS OF STRENGTHENING TECHNICAL ASSISTANCE

Nigerians, and many other so-called underdeveloped peoples, do not need determination or the will to self-help; they need assistance now and in the crucial years ahead in staffing their medical schools until they have trained enough people of their own to take over the job completely. This situation in medical education is typical of the need for technical assistance in other areas such as agriculture, industry, and secondary education. Because this need is so urgent, and because these people look to us so hopefully for help, I want to urge here in the strongest terms an increase in our technical assistance rather than the decrease suggested by the Clay Committee report.

There is the implication in the report that technical assistance should be reduced because of a lack of adequate personnel. I am aware that the Agency for International Development has had difficulty in attracting qualified persons to render this service. But is this because they are not available? I don't believe so.

In my mind the Peace Corps has shown us quite clearly that there is a large reservoir of concerned and exceptionally able people in the country ready to offer themselves in the area of technical assistance if the national commitment and purposes of the program are clear, challenging, and presented to the people with a sense of urgency and excitement. With this in mind there are several things that could be done to strengthen our technical assistance program and make it as effective as the Peace Corps. I would like to present some ideas in this area as recommendations for the serious consideration of this committee:

(1) First we must reestablish confidence in the principle of technical assistance and in the agency that administers foreign aid. Only in this way can it achieve the stability and sense of commitment to pursue its mission with a sense of confidence. In this regard it is good that the U.S. AID program is now under Mr. David Bell's able leadership.

(2) We should reevaluate the effect of the U.S. emphasis on loans on our technical assistance programs. Has the decision to transfer most aid for social construction from the grant program to the loan program slowed down social development in the new nations? Can countries like Nigeria, with a per capita income of less than $100 a year and an illiteracy rate of 80 percent develop at a rapid pace if they have to borrow most of the funds they need to build schools, hospitals, and sewage facilities? Such facilities are essential to the development of human resources, but they constitute an immediate and sometimes heavy drain on limited capital resources.

We of the Friends Committee realize that the emphasis on loans stems in part from a belief that people and countries deal most responsibly with things they have to pay for. But this responsible response is already partially guaranteed by AID's requirement that each country must make a "significant monetary contribution * * * to each project" whether it is financed by grants or loans.

We would hope, therefore, that this committee would reexamine the reasoning which has led the United States to conclude that it is more efficient and effective to help finance social construction through loans, but perfectly acceptable to distribute some $1.5 billion of military aid each year on a largely grant basis.

(3) In addition to entering into technical assistance contracts with nongovernmental bodies, AID might consider offering universities and businesses matching funds, such as those granted universities for building construction, to make it easier for them to free persons for technical assistance work. These might include—

(*a*) Making up the salary differential between the home university and the foreign institution.

(*b*) Helping the home university pay retirement and other faculty benefits while the faculty member is away.

(*c*) Providing money for the university to establish and carry on the considerable administrative work connected with a noncontract arrangement such as that between Lagos and Rochester.

(4) Representatives from U.S. AID should carry on an intensive educational program around the country with students and faculty on college campuses, and with both management and labor in industry. The Peace Corps representatives I have met at our university have been effective ambassadors of that program, and their effectiveness could be duplicated by representatives of U.S. AID.

This is an age of concern for world peace and our fellow men. Not only students, but older persons alike feel the desire to do something constructive about world peace. Many citizens have a skill to share, or are willing to learn one on behalf of this cause. From the experience of the many who have participated in the international work-camp movement, or engaged in a good technical assistance project we know the effect of such experiences on understanding between peoples. Bridges of friendship are built that are stronger than any attempted with propaganda and indoctrination programs.

MILITARY AID HAS NEGATIVE CONSEQUENCES

This is also an age of increasing awareness of the barren futility of the military solution to international affairs. One can make a good case, it seems to me, for the proposition that military assistance may actually stifle the very developments we hope to encourage in a foreign country. The situation in Nigeria is worth a look in this regard. As in other newly independent underdeveloped countries the problem of establishing a stable democracy is a major one in Nigeria today. More autocratic leaders, such as Nkrumah in Ghana, maintain that the problems of development in a new nation are too great to permit the freedom and luxury of democracy. Thus loyal opposition tends to be crushed and the basic democratic freedoms gradually disappear. In Nigeria there is a viable democratic government at present, but the country could easily follow the path of Ghana, Indonesia, or Burma into autocracy if the forces that make for stable democracy are not strengthened in the coming years.

While we were there a number of well-educated Nigerians told us that the greatest hope for a stable democracy lies in the strengthening of education. Only some 20 percent of the population are literate, and secondary education follows an old and partly out of date syllabus with its accent on learning by rote. Many hope for an educational revolution that will not only broaden school coverage, but introduce a more imaginative, creative curriculum. Such schooling will prepare young men and women for lives as effective citizens and provide the trained wisdom required for a democracy in its houses of government. Here is where we need to offer encouragement and active help. To institute a military assistance program in such a country would simply mitigate against these basic needs for education, health, agriculture, and economic development, tend to encourage the military, and more likely reduce rather than strengthen the chances for democracy.

Therefore, we welcome Mennen Williams' statement that the United States does "not anticipate growth in the military assistance program for Africa, and most of all we do not wish to help generate any form of arms race. We would prefer a race in overcoming the economic and social problems that now beset the continent."

FOREIGN AID SHOULD STRENGTHEN BROTHERHOOD OF MAN

Foreign aid that concentrates on mutual technical assistance, the stimulation of self-help, and the opportunity for peoples of different nationalities to work together offers the best hope of strengthening "internationhood," and in this rests the best hope for mutual security. The dignity of man and the uniqueness of each individual are the cornerstones of our democratic form of government. By expressing these in our relations with other countries we work for the true meaning of the brotherhood of man. Our unique purpose as a nation and a people is not expressed by killing guerillas in a rice paddy, or dropping napalm bombs on innocent villagers, but in a personal sharing of the means, both material and spiritual, toward a full realization of the meaning of life. Our technical assistance programs since the end of World War II have been magnificent expression of this national purpose. Please, let's continue them, enlarge them, and improve them.

MORE AID SHOULD BE EXTENDED THROUGH U.N. PROGRAMS

I should like to make an additional plea to this committee and Congress to consider channeling more U.S. development aid and technical assistance through the United Nations. This would strengthen the U.N., make more effective use of the limited number of technicians available to development programs, and be more acceptable to new nations who sometimes resent advice from an individual power.

We realize that some Congressmen are uneasy over the fact that the United States contributes more than one-third of the budgets of some U.N. programs. We believe a higher contribution can be justified on several grounds:

(1) The United States is the richest nation in the world and has a responsibility to share its superior advantages with the less fortunate.

(2) If a U.N. program is constructive, the United States should not handicap it through irritation over the failure of other nations to give it the enthusiastic support it deserves.

(3) Any expenditure that helps raise living standards and increase the education and world view of the developing peoples is of benefit to the United States as well.

We understand that since the end of World War II, the United States has put $600 billion into defense and another $31 billion into military assistance in an effort to buy time to build a peaceful world. It is hard, therefore, to attach a percentage to what the United States can or cannot "afford" to contribute to building such a world.

But according to Prof. P. N. Rosenstein-Rodan of the Massachusetts Institute of Technology, the U.S. share of the total GNP of the richer[1] nations is 54 percent. We should not hesitate, therefore, to give wholehearted and increasing support to U.N. programs.

Mr. PASSMAN. I yield to Mr. Gary.

ARTICLE ON PEACE CORPS

Mr. GARY. Mr. Chairman, I have here a couple of newspaper clippings. A member of one of our leading families in Richmond joined the Peace Corps not long ago and the February 13 paper carried an account of her training for the Peace Corps and then on Wednesday, July 31, the paper carried a letter that she had written from Morocco. She is Miss Martha Horsley, from a very outstanding family in my district. As a matter of fact, she is a close neighbor of mine, and a graduate of Bryn Mawr. I thought it would be interesting to have

[1] Nations with GNP per head above $600.

her experiences in the record. I would like to insert first this newspaper item and then the letter.

(The item and the letter follow:)

RICHMOND MOROCCAN

A Richmond girl arrived in Morocco early this week, one of 50 Peace Corps volunteers who will see service there.

She is Martha Horsley, 21, daughter of Mr. and Mrs. T. Braxton Horsley of 201 Locke Lane.

Mrs. Horsey said her daughter joined the Corps in October, shortly before the Moroccan group left for training at California State Polytechnic College. She is one of 20 volunteers who will teach English in Moroccan schools. Others in the group will serve as surveyers in antierosion projects, and instructors in the expansion of irrigation systems on the edge of the Sahara Desert.

Miss Horsley was graduated from Collegiate School here in 1958 and Bryn Mawr College in 1962.

Mrs. Horsley said her daughter spent 1961 in Paris, living with a French family from Morocco, and has been interested in the north African country since then.

During the training period in California the volunteers studied the history and culture of Morocco, technical skills, American political and social institutions, French, physical fitness and health care.

Miss Horsley found the training "strenuous but worthwhile," her mother said.

She said her daughter's only disappointment was that she had to spend so much time teaching French to the other corpsmen that she had little time to learn Arabic.

"She did learn a little, however," Mrs. Horsley said, "and she wrote us she would give a brief speech of greeting in Arabic when they arrived in Morocco."

[From the Richmond News Leader, July 31, 1963]

RICHMOND GIRL FINDS MOROCCANS HOSPITABLE AND RELAXED ABOUT TIME

(EDITOR'S NOTE.—As one of the first members of the Peace Corps in Morocco, Martha W. Horsley of Richmond has had a variety of experience teaching English since she arrived in the north African country 5 months ago. She has taught advanced English in the port city of Casablanca and beginning English in Lalla Mimorna, a village near Rabat. Miss Horsley, a 25-year-old graduate of Bryn Mawr College, majored in French. She is the daughter of Mr. and Mrs. T. Braxton Horsley of 201 Locke Lane. This is a report of her observations and experience written in Casablanca.)

(By Martha W. Horsley)

Contrary to popular opinion, not everyone in the Peace Corps lives in a mud hut. I am in the semiunusual situation of being stationed in one of the biggest cities in north Africa. (I say "semiunusual" because there are many teachers in the Peace Corps stationed in big cities.)

Moroccans are very proud of Casablanca. It represents a situation which is found in any old country—a community where the modern and the traditional exist side by side. My acquaintances among Moroccans range from very poor to very rich and at each level there are families ranging from the ultramodern to the ultratraditional.

During the regular school term, I live with another girl in a two-room apartment next to the school. This summer I am living in a small village with a Jordanian lady, who is working for the United Nations, and another girl. My main job this summer is to help in community development.

At Casablanca I teach English conversation classes in an all-girl school. The first thing I taught them was that it is bad manners to chew gum in class (this surprised them as they consider it a very modern thing to do). Since then we have discussed everything from Halloween to the racial problem in the South.

For the most part, the girls know only what they have seen in the movies or read in the newspapers—all Americans are rich and dislike Negroes. It is frankly difficult to persuade them that this impression is not true.

Two things that particularly have struck me since I have come to Morocco are the hospitality and the Moroccan concept of time.

Although the hospitality is particularly noticeable in the countryside, the spirit of it has carried over to the big cities. It is a Moroccan tradition and is certainly more than legendary.

I have often been invited for mint tea (the national drink) or couscous (the national dish made from semolina) by people I hardly know. At first, I felt guilty about accepting so many invitations I could never repay, but as it is considered an insult to refuse, I now just accept and have a good time.

The south of Morocco—as the South in the United States—is especially famous for its hospitality.

And there is a very relaxed attitude in Morocco about time. Everything from "I'll see you in 5 minutes" to "I'm going to buy a motorscooter in the fall" is prefixed or suffixed by the word "inshallah," meaning "If God is willing." "Inshallah" is used to excuse any unforeseen occurrence.

Moroccans as Muslims—or as Moroccans—have little faith in the future. This lack of faith affects their life in terms of daily living and in terms of long-range planning.

Moroccans, like many other persons, would like a little more money, but most have no idea of investing or calculating on the future. The future, they believe, is too unpredictable.

Foreign Assistance Program

WITNESS

DR. N. R. DANIELIAN, PRESIDENT, INTERNATIONAL ECONOMIC POLICY ASSOCIATION

Mr. Passman. Mr. Danielian, our distinguished colleague, Mr. Natcher, has told us much about you and I am also personally acquainted with some of your accomplishments. We extend to you a cordial welcome.

Mr. Danielian. I appreciate that very much.

Mr. Natcher. Mr. Chairman, if you would yield to me at this point.

Mr. Passman. Certainly.

Mr. Natcher. I want to join with you, Mr. Chairman, in welcoming Dr. Danielian before our committee at this time and to say to him that it is a pleasure to have him with us.

Thank you, Mr. Chairman.

Mr. Passman. Dr. Danielian, I had the privilege of working with you on what I consider one of the most important projects of the century, the St. Lawrence Seaway.

We shall be pleased to hear from you, sir.

Mr. Danielian. First I want to say on behalf of myself and the whole community of the Great Lakes that we recognized that statesmanship you exercised in supporting the St. Lawrence Seaway at a time when it was not so popular in the South. We shall eternally be grateful to you for that expression of high-minded statesmanship.

I have followed your interest in the foreign aid program for many years but it was not until 1957 that I began taking a direct personal interest in our foreign economic policies because when Sputnik No. 1 went up I came to the conclusion, as expressed then by President Eisenhower as well, that we had reached a state of military stalemate with communism and that therefore economic policies would be the determining factor in our ability to maintain the strength of the United States and so ever since 1957 I have been making detailed studies of our foreign economic policies in the field of foreign aid, foreign trade, as well as our balance-of-payments situation and I come before you with deep conviction that unless we reorientate some of our policies in this field we are gradually going to diminish the strength of the United States.

In the case of military weapons, it is easy to determine whether a missile is going to fly 500 miles or 5,000 miles and you can experiment with it and then you can choose your weapons after such experiments. In the field of economic policy unfortunately it is not possible to have such experimentation and then if you choose the wrong weapons, which we sometimes do, we won't learn of its consequences until several years later when we have in the meantime attenuated our influence and power in the world. If we have reached a state of military stalemate and economic weapons are the important determining factors in this struggle for the survival of Western civilization, then I think we can be sure that the economic weapons, the policies we are adopting, are going to be helpful in securing the survival of our system.

It is with these feelings that we have over the period of the last 6 years developed certain concepts and recommendations which we have made before congressional committees. This is the first time I have had the privilege of being invited to appear before this committee, which has the vital function of determining the amount of money to be devoted to foreign aid.

I have a statement here which I should like to read because we have prepared it with care.

It is a privilege to be invited to appear before this committee which has the vital function of determining the amount of money to be devoted to foreign aid.

Over a period of years, we have made specific recommendations to the House Committee on Foreign Affairs and the Senate Committee on Foreign Relations. Among these the following sugegstions deserve special emphasis:

We have recommended, ever since 1960, that procurement under the foreign aid program be confined to the United States to diminish the impact of this program on the balance-of-payments deficit. We are glad to note that the Congress and the administration have accepted these suggestions.

I might say, at the time that I began making these suggestions it was not very popular with the State Department and various executive agencies. But historical developments show that we have been right and these policies have now been accepted as Government policy.

Two years ago section 604 was amended and this year the House Committee on Foreign Affairs, in its report, recommends the limitation of section 205, which authorizes transfer of 10 percent of these funds to the International Development Association, to conform to the provisions of the Foreign Assistance Act.

Actually, what section 205 does is authorize the transfer of 10 percent of these funds to the International Development Association to be used in accordance with the charter of the International Development Association, and these charter provisions do not permit procurement from any particular source, so funds turned over to the International Development Assocation under present conditions would continue to contribute to the balance-of-payment deficits. We suggested to the committee that that be revised, but the committee instead of revising the legislation in its report has recommended to the administration that in the administration of this program attention be paid to the balance-of-payments impact of this expenditure.

I do not know whether the committee's recommendation has the force of law and modifies the legislation but it seems to me that this committee——

Mr. GARY. Was it in the report of the committee?

Mr. DANIELIAN. It is in the report of the committee instead of changing the legislation.

Mr. GARY. It would not have the effect of law. It should be persuasive but it would not have the effect of law.

Mr. DANIELIAN. This committee might wish to pay attention to that. Any funds that are spent by these international agencies are subject to their charters which do not permit procurement in any particular area.

I have made a study of the impact of these. The World Bank claims that they are making an affirmative positive contribution to the balance-of-payments situation in the United States because more of their funds are spent in the United States than are taken out in dollars, but this is true because the World Bank has been borrowing abroad. Therefore, whatever amount is spent in the United States is a net contribution to us; but if you study their annual expenditures and procurement under their expenditures you will find that procurement in the United States has gone down progressively until now, about 20 cents out of every dollar lent by the World Bank is spent in the United States. Now when the World Bank borrows money abroad, and lends it, then we get 20 cents of that; but if we give a dollar to the World Bank, still 20 cents of that would come to the United States and 80 cents would go to other countries. Even though, cumulatively, the World Bank has made a contribution to our balance-of-payments situation, that is because they have been borrowing abroad and making loans and we are getting some of the procurement; but if we make contributions to these international agencies ourselves, you can expect now, under present competitive conditions, that we are only going to get 20 cents back and the other 80 cents is going to be spent in other countries.

Mr. PASSMAN. What international organizations specifically?

Mr. DANIELIAN. International Development Association, the World Bank.

Mr. PASSMAN. I am thinking about the percentage that we put in.

Mr. DANIELIAN. Inter-American Development Bank—any moneys contributed to the U.N.——

Mr. PASSMAN. All the contributions?

Mr. DANIELIAN. We have no control over procurement policies of these agencies.

Mr. PASSMAN. That is my understanding. The provision is to transfer 10 percent of what funds to——

Mr. DANIELIAN. The foreign aid funds. Section 205 authorizes the President to transfer——

Mr. PASSMAN. As much as 10 percent of the total to the International Development Association.

Mr. DANIELIAN. To be spent according to the charter provisions of the Development Association.

Mr. PASSMAN. The minute such a transfer might be made, then we would lose direct control?

Mr. DANIELIAN. That is right.

Mr. PASSMAN. We have to abide by the policies of the IDA once we have transferred it?

Mr. DANIELIAN. That is right.

Mr. PASSMAN. That provision is in the bill?

Mr. DANIELIAN. Yes.

Mr. NATCHER. It has been for 2 years.

Mr. DANIELIAN. The administration has not used this and they say they do not have present policies to use them but the authorization is there and they can use them.

Mr. PASSMAN. When was this provision put in the bill?

Mr. GARY. It was put in 2 years ago.

Mr. DANIELIAN. Yes.

We have recommended the strengthening of section 620(e) which deals with expropriation, particularly broadening the concept of expropriation to include "creeping" expropriation and "full value" in compensation. We are appreciative of the fact that the House Committee on Foreign Affairs has accepted these recommendations.

We urged that the act require that the President take appropriate steps to discourage nationalization. We are glad that the House Committee on Foreign Affairs has accepted this suggestion in section 601 as an integral part of our foreign policy.

Mr. PASSMAN. Doctor, if you will yield, with reference to "discouraging nationalization," the Bokaro Steel Mill in India would be a socialized, publicly owned operation.

Mr. DANIELIAN. Yes.

Mr. PASSMAN. That certainly would fall in this category of "nationalization," other than the government would not be taking something over that is already in existence?

Mr. DANIELIAN. Yes.

Mr. PASSMAN. They would be building something which would fall into the "nationalized" segment.

Mr. DANIELIAN. I should imagine so. There is a difference between taking what is in existence and nationalizing it or creating a new one.

Mr. PASSMAN. It would be supporting the same kind of policy, a Government-owned and Government-controlled plant.

Mr. DANIELIAN. Yes.

We recommended upgrading the Office of the Assistant Administrator for Private Enterprise, and increasing his responsibilities and authority. AID has agreed to accomplish this administratively, and the House Committee on Foreign Affairs has declared that it will watch these changes closely.

DEVELOPMENT OF PRIVATE ENTERPRISE

We recommended that 50 percent of the funds provided under section 202, the Development Loan Fund, and section 252, the Alliance for Progress funds, be allocated to the development of private enterprise in recipient countries.

Mr. PASSMAN. What do you mean by that statement, Doctor?

Mr. DANIELIAN. We suggest that these funds be allocated either through private banking systems or private development corporations or directly in the financing of enterprises in these countries.

Mr. PASSMAN. To whom would you recommend that the loans be made?

Mr. DANIELIAN. Corporate enterprises of one kind or another.

Mr. PASSMAN. American companies?

Mr. DANIELIAN. It can be local, mixed, it can be American, but it would be productive enterprises and these loans could be made on a commercial basis with interest rates commensurate at least with the cost of money to the Uniteed States.

Mr. PASSMAN. The Export-Import Bank makes industrial loans repayable in 15 or 20 years.

Do you not recommend that firms go in with their own capital, protected by the investment guarantee clause?

Mr. DANIELIAN. We do. Our long-range expectation is that as these investment guarantees are strengthened that the major part of the development program where commercial enterprises are involved will be transferred to the private investment sector.

Mr. GARY. Is this program you suggest already being done by the Inter-American Bank? Aren't we placing money with the Bank which is being loaned to these private enterprises?

Mr. DANIELIAN. In part, but I think you will find that a major effort that has been made in the foreign aid program has been primarily in the utilities and what we call the substructural area and we feel that there has got to be taxpaying industrial enterprises to create wealth, to support these public works programs. Now a major effort has been in the public works field and I think there has got to be a balance between public works and creative investments and so we suggested instead of making balance-of-payments loans out of the Development Loan Fund that at least 50 percent of it should be made available for encouragement of private enterprise.

Mr. PASSMAN. Would you not accomplish practically the same thing by recommending, for example, that the Alliance for Progress be reduced, say, by 50 percent and that the Government increase its investment guarantees so that private enterprise, with the know-how and the capital, would go in, without having to go in with Government money?

Mr. DANIELIAN. I agree with you, Mr. Chairman, and we have had a recommendation on it. The House committee has not accepted it. I will come to it as we proceed. Although the House Committee on Foreign Affairs declined to place percentage limitation on these funds, the policy declarations and self-help requirements added to the act by the committee require the foreign aid agency to proceed in this direction without delay.

We have suggested that aid be terminated at a certain specified date, if recipient countries fail to sign bilateral investment guarantee agreements. The House Committee on Foreign Affairs declined to accept this provision, on the representation of the AID Agency and the Department of State that negotiations are proceeding with a number of countries and they hope to make speedy progress in this direction. The principal countries involved in the Western Hemisphere are Brazil, Chile, Peru, and Mexico.

Mr. PASSMAN. Why should there be opposition to such types of bilateral investment agreements? All you are doing is agreeing with each other you will be honest; is that not correct?

Mr. DANIELIAN. Yes.

Mr. PASSMAN. If a nation will not agree that they shall not expropriate our property or wreck the investment by manipulation of

currency, as far as I am concerned they should not be in the aid program.

Mr. DANIELIAN. The Clay Committee recommended this. At sometime we have to draw the line. This program has been on the books since 1947 or 1948 and countries like Brazil, Chile, Peru, and Mexico have declined to sign them. Yet year after year they are here for public funds but they are not willing to guarantee private investments.

So it seems to me that having had this length of time we ought to draw the line some place and say: "If after a certain date you do not come along, you are just not going to have public funds." We feel strongly that if the Alliance for Progress is to succeed these countries must rely on private investments to a larger extent than at present.

Such investments will not be forthcoming unless appropriate guarantees against expropriation and other political risks are provided. If we don't do this, we may be throwing good money after bad, as all studies—that of the Clay Committee as well as the Grace Committee—prove that reliance must be placed for economic development upon private investments.

U.S. BALANCE-OF-PAYMENTS DEFICIT

The overriding concern of the United States in its economic relationships with other countries must be our balance-of-payments deficits. It is well known that we have been running a deficit since 1950, but this has been aggravated since 1958. In the last 5 years, we have been running deficits at an average of over $3 billion a year, excluding temporary and special payment arrangements. This has resulted in a cumulative deficit of nearly $26 billion, financed partly by the export of gold—over $8 billion, and partly by additions to our current liabilities to other countries. These liabilities now approximate $28 billion. We only have about $4 billion of free gold to satisfy these claims on demand.

I think you will find this situation graphically shown on this chart. We started with about $24 billion in gold in 1950. That has been decimated now down to less than $16 billion. The reserve requirement is a little less than $12 billion. It has to be kept as reserve. We only have about $4 billion in free gold to pay $28 billion in liquid liabilities. This indicates the liquid liabilities, so as the liquid liabilities have been going up the gold supply has been going down.

Our obligations to international agencies are included in this figure.

A good portion of these liabilities are owed to Western Europe—over $12 billion. You will find that most of this liability, a good chunk of it, is held in Europe and they are held in the United Kingdom, Italy, France, Germany, mainly the Common Market countries. They are in the position of really calling these chits if they want to, and embarrassing this country.

This gives the Common Market countries a leverage in economic negotiations with the United States. This means, in effect, that we have lost bargaining power with our allies and perhaps this explains to a large extent the truculence with which they approach trade negotiations with us.

It is absolutely necessary for the United States to bring the balance-of-payments deficits under control. These deficits derive from the foreign aid expenditures and the military commitments, to some extent in Europe, but to a larger extent in the Far East in the containment of Red China. To the extent that the foreign aid appropriations are contributory to our balance-of-payments deficits, we are in the position of assisting underdeveloped countries at the expense of the economic power and bargaining position of our country. We have, in fact, been going into debt, both domestically and internationally, in order to finance foreign aid. The record shows that as late as 1962, $1.1 billion of our balance-of-payments deficit was still due to outpayments of dollars under the foreign aid program.

This was about one-third of our balance-of-payments deficit.

Mr. PASSMAN. Have you included the tremendous amount of money that is spent by a good many of the 64,500 personnel who either travel overseas, live overseas, or have large expenditures overseas? It is not a commodity export out of our country, but it has the same effect. When you release dollars to those people overseas to be spent abroad that is not included in the $1.1 billion, is it?

Mr. DANIELIAN. No.

Mr. PASSMAN. Does it have the same kind of effect on our balance-of-payments situation?

Mr. DANIELIAN. I believe administrative expense would come in another category.

Mr. PASSMAN. It would have the same effect if it is spent by these people overseas, would it not?

Mr. DANIELIAN. Yes, sir.

This result, after almost 3½ years of effort to control the situation, is disappointing. It was in October 1959 when President Eisenhower took the first steps to control the Development Loan Fund expenditures, and to find that we have made such small progress since then is indicative of administrative looseness.

REASONS GIVEN FOR CONTINUATION OF AID PROGRAM

The reasons for the continued outpouring of dollars under the foreing aid program are as follows:

1. Contributions to international agencies, such as the Inter-American Development Bank, the International Development Association, the United Nations, and the World Bank (as in the case of the Indus River project) which, under the charter provisions of these agencies, cannot be required to be spent in the United States. We find it difficult to understand, under these conditions, why we keep adding dollars to the resources of these international institutions without protective safeguards against aggravation of our balance-of-payments deficits. In the Foreign Assistance Act of 1963, section 205 is carried on, allowing transfer of 10 percent of funds to IDA. The House Committee on Foreign Affairs has understood the implications of this and has therefore put a limitation on its use—in its report, not in the legislation. But there is also $200 million allocated to the Inter-American Development Bank for the Latin American Social Progress Fund, which is not subject to the provisions of the Foreign Assistance Act. Only last December, the Bank was allowed to borrow $75 million in the U.S.

money market. And now there is a proposition before the House (H.R. 7406), already approved by the House Committee on Banking and Currency, to authorize the U.S. Governor on the Bank's Board to vote for an increase in its capitalization by $1 billion. This commits the Congress later to appropriate the money. A look at the prospectus shows that about $500 million of this will be U.S.-dollar contributions, and in addition, the 50-percent gold or dollar contributions of other countries will probably come from reserves held in the United States, reserves replenished by foreign aid loans. Next, I predict, there will be proposals to increase the capitalization of the International Development Association. The President, the Secretary of the Treasury, and the Under Secretary of State promised to support such a proposal at the last meeting of the Association in September 1962.

We cannot solve our balance-of-payments problem without tightening the totality of our commitments in this field, and bringing all the loose ends under unified, purposeful control, if we are going to master this nagging payments deficit.

2. Another loophole is permission to spend dollars in underdeveloped countries for local costs of projects, such as labor and materials, on the theory that this will encourage economic development. The limitations on procurement are confined to 19 specified developed countries. The only way the United States can spend dollars on local projects is to buy local currency with dollars, and the dollars end up in the central banks, free to be spent anywhere they wish, through licensing of imports. In effect, therefore, the policy of allowing dollar expenditures on local costs of projects is nothing more than balance-of-payments assistance of dollars which the recipient countries can spend in other parts of the world.

3. Even though we limit procurement under our development loans to the United States, as long as we keep on making balance-of-payments loans to these countries, they are able to transfer to the loan or grants account their usual procurement in the United States, thereby satisfying the requirements of the Foreign Aid Act (and the Export-Import Bank's charter provisions as well when its resources are used for balance-of-payments loans) and then they turn around and spend their own foreign exchange earnings in other countries. Thus, what might have been a dollar sale to them is converted into a grant, and the hard foreign exchange these countries earn is spent in Japan or Western Europe. This is called the principle of substitution.

Mr. PASSMAN. Doctor, with reference to the way we acquire local currencies abroad, in addition to exchanging dollars for those local currencies, in many instances we acquire the local currencies by selling them surplus agricultural commodities, transactions which we refer to as soft loans. In that way we give the commodities. We get the local currency without actually putting up the dollars directly, even though originally it required dollars to purchase the commodities that we sold them and for which we accepted local currency. You accept that, as being a factual outline?

Mr. DANIELIAN. Yes. This is entirely different.

Mr. PASSMAN. I think we should indicate that we do acquire many of the soft currencies through this type of process.

Mr. DANIELIAN. Yes. But this is different. Let's take the Social Progress Fund just as an example. On June 1, 1961, a trust agree-

ment was executed between the President of the United States and the Chairman of the Inter-American Development Bank. That trust agreement provides that the funds, these Social Progress Funds, may be used for expenditures in the United States, or expenditures in the recipient country, or expenditures in any of the other members of the Inter-American Bank, which means that if a project is approved, let's say in Brazil and it has, let's say, 50 percent labor component, and the project cost $1 million; 50 percent of it would be $500,000 labor and materials component. We would make the advance knowing half of it is going to be spent for local materials and labor. Obviously you do not use U.S. dollars to hire local labor. You use cruzeiros. Therefore, what we are making essentially is a balance-of-payments advance to the Brazilian Government, which ends up in the central bank and then they use cruzeiros to employ the local labor.

So these provisions, it seems to me, are just an open seive for dollars to flow out. Consequently, as long as we keep making balance-of-payments loans, even the U.S. procurement requirement of the Foreign Aid Act will fail to control the balance-of-payments deficits of the United States.

To escape the seepage of dollars through this program, we must make sure that the dollars are allocated to specific incremental projects, to be spent for procurement in the United States, over and above their usual historic procurement in this country. We must, I believe, cease to make balance-of-payments loans.

This is particularly applicable to countries like Brazil.

I am glad that the House Committee on Foreign Affairs has taken cognizance of this problem and provided in section 102(d) that the assistance given under chapter II of the Foreign Assistance Act should not be diverted to short-term emergency purposes such as budgetary assistance, balance-of-payments loans, and military expenditures.

I realize that the AID Agency under the able administration of Mr. David Bell is going to have difficulty in effectuating this policy, because the country programs presented to the AID Agency are drafted in a general form with target objectives of economic growth, requiring so much import assistance to be financed by balance-of-payments loans.

Mr. PASSMAN. Will you give us some authority as to Mr. Bell's policy as you have just stated it?

Mr. DANIELIAN. I know Mr. Bell. I have known him for 15 years. I have had many discussions with him on this subject. I think his heart is in the right place. I think he is going to try his best to accomplish these purposes but I do think that he may be handicapped by the established administrative procedures, the pressures of the tremendous bureaucracy that develops these budgets, and also to some extent policy decisions by the State Department.

Mr. PASSMAN. I think Mr. Bell made a statement earlier this year to the effect that we could double our foreign aid and it would not greatly affect our economy. When he came before our subcommittee I asked him if he had made such a statement, and he said he may have made a similar statement.

Mr. DANIELIAN. David Bell is a good friend of mine, Mr. Chairman, and I have discussed these issues with him and from my personal discussions I have gotten the impression that he agrees in philosophy with the major premise of our recommendations.

I am always hopeful that even public officials in important places can, over a period of time, with persistent persuasion, agree with us, perhaps, and I am going to persist in this in as friendly a fashion as I can.

Mr. PASSMAN. Thank you, sir.

Mr. DANIELIAN. To effectuate this new policy in the act, it will be necessary to change the planning and budgeting, as well as administrative procedures, from a concept of increasing the gross national product through import assistance with balance-of-payments loans, to a projected basis, and to make the financing applicable to the individual incremental project.

It is interesting that this is exactly what European countries do in their foreign aid programs, except for Africa.

I was in Europe for 4 weeks, Mr. Chairman. I came back only 2 weeks ago. I have discussed this problem very extensively with representatives in OECD, with representatives in NATO and the European Economic Community, as well as the responsible officials of some of the principal governments in this field.

The Common Market is trying to integrate Africa into its economy through associate memberships, and therefore the Common Market has set up a fund of over $750 million to assist the African countries on a loan and grant basis.

Most of the economic assistance given by Europe to other countries is in the form of hard loans for specific projects. I was told recently by the Administrator of the aid program in Germany that they have resisted successfully the attempts of our American representatives in OECD to persuade them to make soft loans. They believe that economic development takes place best in financing on commercial terms for specific productive projects. This is their policy toward the whole continent of South America. In the case of their participation in joint efforts in the Far East, for instance, in relation to India, their loans are still on commercial terms. You only have to refer to page 20 of House Report 2410, 87th Congress, 2d session, this committee's report of last year, for the evidence of this issue.

Mr. PASSMAN. You know, of course, that those people are making hard loans and when they give a grace period the recipient of these hard loans must pay that same high rate of interest during the grace period?

Mr. DANIELIAN. Yes.

Germany, for instance, has guaranteed about $3.5 billion of private investments in underdeveloped countries. They believe this is more effective foreign aid than soft term loans and grants.

We find ourselves in this curious situation where the hard loans of Europe are being financed by the soft loans of the United States. I think it would not be unfair to conclude that the ability of many of these recipient countries to pay interest and principal on European hard loans depends upon the continuance of soft loans and grants by the United States.

Therefore, while the United States is committed to government-to-government balance-of-payments loans, European countries are busily engaged in expanding the opportunities for their own private enterprise, the security of which depends upon the continuance of U.S. taxpayers contributions.

We have recommended, therefore, that more emphasis be placed upon the private sector of economic development in recipient countris and that more encouragement be given to U.S. private investments in those countries. One hundred dollars or one hundred million dollars of private investments by U.S. citizens in these recipient countries, guaranteed, if necessary, by our Government, will do them just as much good, if not more, than $100 or $100 million contributed on a balance-of-payments basis by the U.S. taxpayer.

I submit also that where we encourage industrial development in these underdeveloped countries, we may find in the future that we are going to need the earning power on such investments to meet our balance-of-payments requirements in the future. One of the great errors we made in our relationship with Western Europe was to put the Marshall plan on a grant basis, instead of taking promisory notes in exchange. If we had those promissory notes today, we would not be in this difficult position with Western Europe in our balance of payments.

I am suggesting we think of this in terms of the new programs that we are undertaking.

We cannot tell what the future holds, but it would be the better part of statesmanship in defense of the U.S. economic position in the future to put economic assistance as much as possible on a businesslike basis with an interest rate at least commensurate to the cost of money to the U.S. taxpayer.

I am recommending these in connection with projects that are income-bearing projects. This program does not exclude the financing of services and utilities.

For this reason, we still recommend very strongly that at least 50 percent of the development loans be put on a businesslike basis to encourage specific industrial development projects through private business in the recipient country. The other 50 percent would still be available to undertake non-revenue-producing substructural public services, such as roads, schools, harbor projects, etc., under public auspices.

RECOMMENDATIONS

I hope this committee will find it possible to accomplish through amendments and its committee report the following objectives:

1. To allocate at least 50 percent of the development loan funds in sections 202 and 252 of the Foreign Assistance Act, to the development of specific projects through private channels, at interest rates commensurate at least with the cost of money to the U.S. taxpayer, to effectuate the policies and conditions prescribed in the Foreign Assistance Act, as recently reported by the House Committee on Foreign Affairs, under sections 102(d), 201(b), 252, and 601, as amended in each instance.

These are the sections that give encouragement to private enterprise, and these are the policies of the U.S. Government.

2. To prohibit the transfer of funds to the International Development Association under section 205, except under special agreements that provide for strict conformity with all the provisions of the Foreign Assistance Act as recommended by the House Committee on Foreign Affairs on page 13 of its report, with particular reference to procurement, section 604, and to expropriation, section 620(e).

3. The $200 million additional provided for the Social Progress Trust Fund, under section 401 of H.R. ——, to be administered by the Inter-American Development Bank, originally appropriated by Public Law 87–41, should also be made subject to a strict conformity to the provisions of the Foreign Assistance Act, by amendments of the trust agreement, dated June 1, 1961.

4. I am sure this committee realizes that the burden on the U.S. taxpayer for this purpose can be diminished only to the extent that ways and means are devised to encourage private investment in recipient countries. Whereas public funds are limited by the ability of the government to tax its citizens, there are large reservoirs of private savings which would be willing to undertake economic development projects anywhere in the world if there are proper safeguards against political risks. I hope the committee can find ways of impressing upon recipient countries that the continuance of aid will depend ultimately on their willingness to create the conditions, including guarantees of investments against expropriation, to open their doors to private investments; and that the American taxpayer will not indefinitely continue subsidizing current consumption beyond their means, as a nonrepayable consumer credit. It is not that the American people are not willing to undertake this humanitarian enterprise—witness the fact that since 1945 we have spent over $100 billion for this purpose. The hard economic and statistical realities make it simply impractical that this country alone, with a contribution of say $2.4 billion a year for economic aid, can accomplish enough to satisfy the rising expectations of one and a half to two billion people in the underdeveloped countries. This must be accomplished through productive enterprise, with the natives of those countries participating fully in this effort. We should certainly help them, but not as a continuing subsidy of current consumption.

5. Finally, I would like to emphasize that our advocacy of private development of industry and widespread private ownership is not a selfish, imperialist concept. It is motivated by a basic conviction that political freedom cannot exist without multiplicity of ownership and employment units within society. When all wealth and industry is controlled by the government (as in Soviet Russia, China, Egypt, and as recently has happened, in Burma), it is not possible to maintain individual freedom where everybody becomes a ward of the government. Nor can we expect the evolution of representative democratic institutions under such circumstances. It is for this reason that we are anxious to get away from government-to-government aid programs, and we suggest emphasis upon the development of multiplicity of private economic institutions. Whereas the U.S. taxpayer cannot undertake, as a practical matter, the uplifting of the standards of living of 1½ to 2 billion people appreciably to satisfy them all, and prevent social unrest and revolutions, we can, if our aid program is judiciously administered, help the development of a middle class, which will give stability to these governments, and provide the leadership for continued economic development. This can best be accomplished by channelizing aid programs through private institutions and encouraging private ownership of industrial enterprises.

Mr. PASSMAN. Thank you very much, sir.

You have made a forceful, factual statement. I disagree with a few of your observations, but that is to be expected. You have certainly set forth a lot of sound logic and facts.

Mr. NATCHER. I want to thank you for your appearance before our committee and I certainly join with my chairman in the statement he has just made concerning your testimony.

Mr. PASSMAN. The committee will now adjourn.

APPENDIX

Foreign Aid and U.S. Balance of Payments

The following information was supplied in response to interrogation on page 887:

AID AND THE U.S. BALANCE OF PAYMENTS

It is sometimes claimed that U.S. foreign assistance is responsible for the balance-of-payments deficit and the gold drain—that it has "undermined" the U.S. dollar. This argument seriously distorts the true situation by singling out one of many factors that contribute to this deficit—and a relatively small and decreasing factor at that; by giving no credit for long-range benefits which will accrue to the U.S. balance of payments from its foreign assistance programs; and by ignoring the significant role economic aid plays in maintaining current U.S. exports at a high level.

A SMALL AND DECLINING ELEMENT

Economic aid is only one of many elements in the balance of payments. In calendar year 1962, for example, payments which contributed to the $2.3 billion deficit included $16 billion for merchandise imports, $2.4 billion for net military expenditures, $3.3 billion of U.S. long- and short-term private investment abroad, $2 billion in tourist expenditures and only $1.1 billion of dollar outflows attributed to "economic aid"—of which the AID portion was $960 million.

AID expenditures entering the balance of payments have declined sharply in recent years and under recently tightened policies they will continue to drop. The pattern from fiscal year 1961, the year prior to organization of AID, to 1965, is as follows:

Total AID offshore expenditures (commodities and services)

	In millions
Fiscal year 1961 (actual)	$1,065
Fiscal year 1962 (actual)	983
Fiscal year 1963 (preliminary)	791
Fiscal year 1964 (estimated)	685
Fiscal year 1965 (estimated)	500

This decline in expenditures entering the balance of payments results from the fact that the newer procurement regulations have taken effect increasingly as commitments made in earlier years have been liquidated. The full effect of these regulations is only now beginning to be felt. Further tightening is being applied to the fiscal year 1964 funds now under consideration by the Congress.

Today, fully 80 percent of AID funds are committed for the export of U.S. goods and services—not dollars. Of the less than 20 percent which will enter the balance of payments, all but a minor fraction will be spent in less-developed—not developed—countries. Procurement is permitted in the emerging areas when it is competitive with U.S. products and to enable these countries to meet a portion of their foreign exchange needs through trade. The Brookings Institution estimates that around 40 percent of the free foreign exchange available to less-developed countries is ultimately spent in the United States. In Latin America, where AID programs have increased most rapidly in recent years, the ratio is 55 percent.

AID AND U.S. EARNINGS

The effect of existing AID procurement policies has been to increase AID-financed exports of commodities and services sharply. In fiscal year 1964 they are estimated at almost $1.6 billion, more than double the 1961 level.

By confining an increasingly larger proportion of its commodity financing to U.S. exports, economic aid contributes to the U.S. merchandise trade surplus. In calendar year 1962, U.S. merchandise exports totaled $20.5 billion and the surplus over imports was $4.3 billion. If the $2.3 billion in commodities financed by "economic aid," as broadly defined (including Public Law 480 surplus agricultural commodities, as well as AID-financed exports), are deducted, the surplus would be reduced to $2 billion. (See chart 1.)

AID AND THE LONG-TERM BALANCE OF PAYMENTS

Looking beyond the immediate balance-of-payments problem, there are positive long-term gains to be won for the United States from the establishment of growing economies abroad—the main purpose of our aid programs.

Prosperous nations buy more than poor ones. U.S. exports to the Marshall plan countries more than doubled from 1953 to 1962. Our exports to Japan more than tripled from 1950 to 1962. But our sales to the less-developed countries rose by only 15 percent during the 1950's. Chart 2 graphically illustrates that developed countries buy more from the United States.

In many of the developing countries—where our aid goes today— AID-financed exports are finding acceptance and becoming familiar to consumers. This should enhance our normal commercial export markets in the future as incomes and international purchasing power rise.

SOME CRITICISMS

1. It is sometimes said that the elimination of economic aid would wipe out the balance-of-payments deficit. While this inference seems warranted by a superficial examination of some summary arrangements of official statistics, it is not justified.

One summary from which such an inference might be drawn appeared recently in the New York Times. It dealt with the 1962 balance of payments as follows:

	In billions [1]
Credits	$7.6
Trade	4.3
Investment income	3.3
Debits	9.9
Military spending	2.4
Economic aid	3.5
Private investment	2.5
Short-term funds	.6
Tourist spending	.9
Deficit	2.3

[1] This summary is one of several contained in official Department of Commerce statistics.

This arrangement of the data seems to suggest that there occurred a $3.5 billion outflow attributable to economic aid. The unwary reader might infer that elimination of economic aid would more than wipe out the deficit.

The $3.5 billion debit for economic aid is derived by deducting $764 million—$617 million in loan repayments and $147 in IDB and IDA disbursement to restricted accounts in the Treasury—from gross economic assistance of $4.3 billion. But as table 2 shows, the latter includes $3.2 billion involving no dollar outflow ($2.3 billion of merchandise exports plus $0.9 billion of services and other items).

The dollar outflow from economic aid did not, therefore, total $3.5 billion in 1962. It was less than $1.1 billion, as indicated in table 1.

Today, as already indicated, the outflow is even smaller. Under present AID policies, for every $1 billion reduction in AID programs, $800 million fewer

U.S. exports would be financed, and balance-of-payments savings would be less than $200 million.

2. It is sometimes charged that foreign aid, whether or not tied to U.S. procurement, has an adverse effect on the U.S. balance of payments because it makes goods and services available that countries might otherwise buy with their own funds. There have been "guesses" that this adverse effect is equivalent to 100 percent, 34 percent, 26 percent, or some other proportion of total economic aid.

The evidence shows, however, that commercial imports from the United States have fluorished and the U.S. share of the local market has improved in countries assisted by our economic aid programs, except when the recipient's normal foreign exchange earnings have dropped sharply.

For example, a recent study of 32 countries outside of Latin America receiving about 80 percent of all AID and Public Law 480 assistance between 1957 and 1962 shows that total imports from the United States rose about four times as fast as total economic aid. In addition, imports from the United States as a percent of total imports by those countries rose from 13.5 to 14.5 percent during the period.

In Latin America, however, commercial imports from the United States decreased, and the U.S. share of the local market dropped. The decrease in commercial imports, in fact, was almost twice as great as the increase in U.S. aid. The decrease occurred because dollar earnings fell for reasons—such as the drop in coffee prices—having nothing to do with the aid program. An the drop in earnings was greater than the increase in aid. The net dollar loss, after deducting offsets of U.S. economic assistance, was about as much as the drop in Latin American imports from the United States.

AID assistance is extended to help countries import more than their own earnings allow. It is intended to add to regular imports, rather than substitute for them. That is why economic aid has shifted from the developed to the less-developed countries—it is the latter whose earnings are now far short of import needs for development and security. And that is why ordinary commerce with assisted countries tends to thrive, as the above evidence shows.

TABLE 1.—*Economic assistance in the U.S. balance of payments, calendar year 1962*

[Millions of dollars]

Derivation of the $3.5 billion economic aid debit:	
Gross economic assistance in balance of payments	$4,281
Less regular transactions:	
(*a*) Scheduled loan repayments	617
(*b*) Changes in associated liabilities (restricted accounts in U.S. Treasury)	147
Total	764
Net regular transactions	3,517

Composition of gross economic assistance:

Program	Total	Transactions involving no immediate dollar outflow from the United States				Dollar flows
		Total	Merchandise exports	Services	Capital transactions	
Foreign Assistance Act	1,925	966	679	282	5	[1] 959
Agricultural programs	1,335	1,322	1,220	102		13
Eximbank	621	621	442	48	131	
Other [2]	400	302	4	123	175	98
Total	4,281	3,211	2,345	555	311	1,070

[1] It is only this amount which has any effect on the U.S. balance of payments.

Loan Applications on Hand from Latin America

The following information was supplied in response to the interrogation on page 2142:

Loan Applications on Hand as of June 30, 1963

The following list of loan applications on hand as of June 30, 1963, totals $395.5 million.

Country and purpose	*Amount (thousands)*
Argentina:	
Irrigation network	$2,500
Modernization of river transport	1,770
School construction	6,558
Deciduous fruit production	698
Bolivia:	
Establishment, expansion and modernization of private industries	2,400
Drilling, exploitation and processing of crude oil	3,000
Construction of a tourist hotel	1,000
Supervised agricultural credit	3,700
Brazil:	
Electric power expansion	11,000
Cast iron pipe production	1,348
Brine industrial program	2,580
Chavantes hydroelectric power	10,000
Funil hydroelectric	2,000
Fortaleza power	2,400
Northeast Development Banks	20,000
Chile:	
Communications facilities	15,400
Development of timber property	3,000
Supervised agricultural credit	1,500
Fishing and canning plant	600
Feasibility studies	3,000
Housing	5,000
Colombia:	
Savings and loan associations	5,000
Health and medical facilities	7,000
Development bank	5,000
Supervised credit to small and medium industry	2,500
Capital for agricultural and small industrial loans	2,000
Expansion of manufacturing facilities	5,000
Medellin sewerage	4,100
Baranquilla airport	6,800
Costa Rica:	
Metropolitan emergency water supply	1,400
Development bank	4,100
Ecuador: IBRD road program	13,500
Guatemala: Salama-Coban highway	6,000
Mexico:	
Housing institution	20,000
School construction	2,000
Agricultural school construction	2,000
Nicaragua: Electric power supply	370
Panama:	
Abbatoir construction	300
Development bank	4,500
Peru:	
Expansion program of university	7,628
National highway development program	40,000
Aided self-help secondary roads	2,200
Construction of Pativilca hydroelectric plant	2,500
Hydroelectric power project Canon del Plato	2,200

Country and purpose	*Amount (thousands)*
Uruguay: Construction of primary classrooms	$5,000
Central America:	
Housing	10,000
Fund for Central American integration	25,000
Program loans under negotiation between United States and recipient countries which cannot be identified by individual country in unclassified form until negotiations are completed	110,000
Total loan application on hand June 30, 1963, in AID Washington headquarters	395,552
