Average GS salary	$6,612	$6,914	$6,973
Average salary of ungraded positions	$4,887	$4,942	$4,958

Mr. THOMAS. Gentlemen, we have with us this morning the National Capital Housing Authority.

It is good to have the opportunity to welcome this distinguished group of gentlemen. We are always delighted to have you.

We have Mr. Walter E. Washington, the Executive Director; Mr. Edward Aronov, Assistant Executive Director; Mr. William R. Simpson, General Counsil; Mr. Harvey V. Everett, Director of Management; Mr. Davenport, Director of Project Development, and Mr. Edwards, the budget officer.

Mr. Shipley will direct the examination and he will go into your needs here.

It is always good to discuss your problems with you. All of you know your subject, you know your lesson, know what your job is all about, and you know your problems. That makes it all the more interesting and worthwhile.

Mr. Shipley, will you proceed?

Mr. SHIPLEY. Thank you, Mr. Chairman.

Do you have a general statement, Mr. Washington, or anything you wish to present first?

GENERAL STATEMENT

Mr. WASHINGTON. Yes, sir. I think the general statement has been submitted here in the material and I need not hold up the committee unduly with that. We have justified $37,000 in our statement on page 2.

Mr. SHIPLEY. It is down $6,000 from last year; that is right.

Mr. WASHINGTON. Yes, sir. This is predicated upon the removal of 23 units in our Hopkins Place project. This project was one of the first reclamations of alleys in the Southeast. This project now is surrounded by approximately 500 new dwellings. Hopkins Place is a project which consists of some dwellings which are as old as 1830, built in the 1830's. A portion of them, however, were built around the early 1930's when we got started with our work.

All of them are regarded as in need of redevelopment and we propose to remove the 23 and, instead, erect 20 units; although very recently the Planning Commission, in looking at the plan, has recommended we take some additional units in that same block to fill out the block. These units are substandard and the idea is to remove those and create about 100 new units.

NUMBER OF UNITS AND APPLICATIONS

Mr. SHIPLEY. Last year you had approximately 30 facilities consisting of 7,917 separate units.

Mr. WASHINGTON. Yes, sir.

Mr. SHIPLEY. At that time I believe you also had around 7,000 applicants for housing?

Mr. WASHINGTON. Yes, sir.

Mr. SHIPLEY. How many units do you have constructed as of today and how many applicants do you have to date?

Mr. WASHINGTON. To date we have 7,819 units under management. We have another 736 units under construction, and 1,718 units and 12 projects in various stages of development.

As of the end of the fiscal year we reported, and the figure now is substantively the same, 6,487 families on our waiting list.

Of that number approximately 65 percent require units of three bedrooms or more. This large family need is one of the critical needs in our city.

Mr. SHIPLEY. We will go into that a little later.

PROGRAM RESERVATIONS

How many units was the District allotted in 1964 out of the 35,000?

Mr. WASHINGTON. I don't know that I can follow that by year. What we received in June of 1963 was a one thousand program reservation, and that is the last reservation we received.

I might say that the reservations, in connection with our local picture, have not moved on an even year-by-year basis. They have been related more to our ability to find sites, and thus we have received program reservations in 1950, 1956, 1961, and 1963.

Mr. SHIPLEY. How many are high rise and how many of these are low rise?

Mr. DAVENPORT. I haven't that exact breakdown.

SITE PROBLEM

Mr. SHIPLEY. Are you not attempting to get away from the high rise construction and get into more low rise?

Mr. WASHINGTON. We are. We hope we can. Our land problem in the District is so severe, principally because of the congressional limitations, really constitutional limitations on the District, and the land costs are coming in at such high prices that I am caught in the middle between a desire to build more low rise to accommodate the waiting list and the relocation activities, and the costs of the sites. We are just about out of vacant land in the city. I think our last figure shows that out of some 39,000 acres there were only 738 acres of vacant land left in the city.

Mr. SHIPLEY. You are saying it does not look as though you will be able to do what you would like to, that is, to stick to the low rise?

Mr. WASHINGTON. I am saying exactly that, sir.

COST OF NCHA AND PRIVATE CONSTRUCTION

Mr. SHIPLEY. How does your cost per unit compare with that of normal housing?

Mr. WASHINGTON. I think the costs are fairly comparable.

Mr. SHIPLEY. Is it not somewhat higher in the overall program?

Mr. WASHINGTON. We thought that to be the case, but a recent check with five projects under FHA and five of ours show a pretty close cost relationship.

For instance, in our private units deemed comparable, FHA's high was $14.10 per square foot and our high was $13.53. That is for project DC–1–36, which included 136 units for the elderly.

FHA's low was $9.11 per square foot and our low was $10.30, so they came out pretty much the same. These are units which NCHA and FHA felt were comparable.

TURNOVER RATE

Mr. SHIPLEY. Is your rate of turnover this year higher than last year? What is the turnover rate?

Mr. WASHINGTON. I think our turnover is a little less than last year.

Mr. SHIPLEY. It was about 12 percent last year, I understand.

Mr. WASHINGTON. It is about 11 to 12 percent this year. It has not varied much. The turnover is in the two-bedroom units which is our heaviest supply. We get very little turnover in the four- and five-bedroom units.

Mr. SHIPLEY. What is the reason for this?

Mr. WASHINGTON. The smaller family compositions are the normal mobile group in the community, privately and publicly, and this is the point at which you have the largest number of units so that your percentage is greater.

Our two-bedroom units comprise 50 percent of our total units. As I indicated, these are small families and there are opportunities elsewhere in our community for the families.

Mr. SHIPLEY. If you have not done so, I think from the interest that I have found here, particularly in the Congress, could you furnish the committee with a breakdown for the record regarding the main reasons for the turnover? Why are they leaving these facilities?

I know you have problems in this area and I would like those reasons spelled out for the record.

Mr. WASHINGTON. Yes, sir; we have a breakdown in the material but we shall supply this for the record as closely as we can.

You realize in some cases families move without giving us the reasons. In most cases, however, we do get the reason, and we shall be glad to supply this for the record.

Mr. SHIPLEY. It is a question always asked and it would help us.

(The information requested follows:)

Tenant reasons for vacating NCHA housing, fiscal year 1963

	Number	Percent of total
Overincome	74	9.3
Lease violation	60	7.5
Nonpayment of rent	181	22.7
Leaving city	48	6.0
Family separated (divorce, etc.)	22	2.8
Illness or death	66	8.3
Space needs	26	3.3
Location of property	9	1.1
Rent too high	11	1.4
Authority regulations	2	.3
Without notice	90	11.3
Moved without stating reason	207	26.0
Total	796	100.0

ELDERLY UNITS

Mr. SHIPLEY. Another question which has been asked is, What percentage of your occupancy is for older folks?

Mr. WASHINGTON. We have a breakdown on page 7 of the material which we furnished which gives a breakdown for the elderly tenants at 10.4, or 772 persons and families. This is shown on page 7.

Mr. SHIPLEY. With regard to this problem of housing the so-called older folks, are the two facilities that you have under construction strictly for this age group and have they been completed?

Mr. WASHINGTON. No, sir; Carroll Apartments is about 75 percent, located across from the Navy Yard, and then Kentucky Courts in Southeast, is about 65-percent complete. They should open sometime during 1964 calendar year.

In both cases these are units which have been designed with special facilities, grab bars, and a number of other features particularly for the elderly. These will be the first two we will have tried in this category.

I might say we had the very fine assistance of the Department of Agriculture's Agricultural Research Service through their demonstration unit in planning the kitchens particularly because this is the point of danger. The stoves and other features in the kitchen were studied, analyzed, and we have come up with some good designs as a result of their recommendations.

They have now printed this for use throughout the country.

WELFARE TENANTS

Mr. SHIPLEY. How many cases do you have where Welfare is picking up the rent? Do you have a breakdown?

Mr. WASHINGTON. Yes, sir; on the same page, page 7 of our material. We have 1,415 families receiving assistance from Public Welfare which comprises 18 percent of our total.

Mr. SHIPLEY. Is that percentage picking up or going down?

Mr. WASHINGTON. That percentage has gone down from last year. It was around 21 or 22 percent. This decrease is in direct relation to the activities of the public welfare agency in seeking out ineligibles.

Mr. SHIPLEY. How many units do you have or are you responsible for under title I and also under title II?

Mr. WASHINGTON. At the present time we have 96 units under title I and 7,825 units under title II.

Mr. SHIPLEY. For the record, give us the percentage of the administrative cost per unit of housing.

Mr. WASHINGTON. Yes, sir.

Mr. SHIPLEY. Do you have that available?

Mr. WASHINGTON. Yes.

Mr. EDWARDS. That is on page 10.

Mr. WASHINGTON. Page 10 is a complete budget breakdown under our title II which is the bulk of the program showing receipts, expenditures, and all of the detail related to the budget.

Mr. SHIPLEY. We shall insert that in the record in a moment.

MANAGEMENT AIDS

You have added certain personnel to increase efficiency of the entire Authority as a whole. Personnel were added to settle problems of delinquency and property damage which is quite serious. How effective have these personnel been in solving the problem? Have you come up with something concrete they have accomplished in this field?

This is a national problem and I would like to know what you have done about it here.

Mr. WASHINGTON. We cannot say at this stage. We have had the new personnel on for only a short period, less than 6 months.

Mr. SHIPLEY. How many people do you have?

Mr. WASHINGTON. There are 10 people assigned, 1 to each area to work in direct contact with the families, organizing, assisting them, and so on. This has been one of the problems in high-rise management. Where you have eight stories of open hallways, elevators exposed, and no guard service you have a real problem.

These employees have worked with the families, organized the families by stairwell and by building. They have helped to avoid outsiders coming in and damaging the facilities, vandalism, and particularly outsiders coming into the hallways and breaking lights, windows, and perpetrating other minor acts of this kind.

At this point we would not want to say too much about the effect of the new management aids because I think it is far too early. We have put them on in lieu of maintenance personnel in the hope we can prevent the problems before they arise. We are watching this experience very closely.

We have personnel, basically younger people who came off the Federal entrance register and we put them through training. We brought in the local universities and others to assist in the training so they could become proficient in working directly with the families.

Mr. SHIPLEY. What kind of training do they receive? What are the qualifications for these people?

Mr. WASHINGTON. I think the Federal entrance examination with its broad coverage of background is principally what we have utilized, and the combinations under that program have varied. Some have been strong in social work, some strong in business administration, and we have taken a variety of backgrounds and studied them to see which combination would come out most successfully.

The inservice training has involved broad exposure to problems of people. Through the social work departments of universities, and through various people in local agencies working with families daily, bringing this experience to bear on the younger employees, we hope this has equipped them with the ability to make a real effort in the area of prevention and motivation.

TENANT INCOMES

I think it is important to point out that in the early days we did not envision the fact that 63.7 percent of our total families would be making $3,000 a year or less. If you recall, the poverty level is at $3,000 presumably. We have 63 percent of the families in our program today that are below the poverty level.

Of the families, 35.4 percent, or 2,094 of them, are receiving less than $2,000. We have 554, and these are principally elderly with small pensions, with $1,000 or less.

PROPERTY DAMAGE AND VANDALISM

Mr. SHIPLEY. What percentage can you give us regarding the property damage? What is the maintenance percentage?

Mr. WASHINGTON. That is difficult to say.

Mr. SHIPLEY. Is it extensive?

Mr. WASHINGTON. I do not think it is extensive. Also, it is spotty in terms of the nature of the buildings.

For instance, where we have the low-rise buildings, and I am sorry we have to get back to that, where you have a low-rise building with a family in residence with a little front and back yard, this is a manageable proportion and it is really open to the eye. You can work with it and you have a minimum amount of vandalism.

However, where you get the larger buildings, five and eight stories high, closed in, hallways exposed, this is not as manageable a proportion and you are subject to many things.

For instance, we opened an eight-story building across from the navy yard. We had children using the elevators. It became an attraction in the community.

We have a hallway there that is 400 feet long. Kids are prone to come in and use it as a natural and attractive play area. This kind of structure lends itself, as open as it is, to kids and others. It is a 24-hour and 12-month facility. It is warm in the winter and cool in the summer. It is the nature of the building which attracts problems and I would suspect the percentage of damage is around 15 percent if I should hazard a guess of damage related to vandalism in such buildings.

RESIDUAL RECEIPTS, RESERVES, AND SUBSIDY

Mr. SHIPLEY. Would you care to discuss with us here the residual receipts and reserves and subsidy?

Mr. WASHINGTON. Mr. Edwards, our budget officer, can give you a clear picture of just what this is.

Mr. SHIPLEY. We shall insert it in the record at this point.

(The information follows:)

Residual receipts, reserves, and subsidy

	Actual				
	1960	1961	1962	1963	1964 (6 months)
Residual receipts	$225,400	$480,640	($183,930)	$67,390	$231,960
Applied to:					
Reserves	6,360	480,640	(183,930)	67,390	231,960
Reduce PHA contribution	219,040				
Reserves:					
Actual accumulated	1,127,490	1,608,130	1,424,200	1,491,590	1,723,550
Maximum permitted	1,127,490	1,654,120	1,816,560	2,061,860	2,205,000
Subsidy:					
Amount available		3,237,281	3,259,623	3,264,887	
Amount used		3,164,546	3,239,013	3,264,887	
Percentage used		98	99	100	

Mr. EDWARDS. This statement we furnished you shows for fiscal years 1960 through 1964, first 6 months. Our residual receipts for each year show a surplus of $225,000, $480,000, a deficit of $183,000, and a surplus of $67,000 for 1963, and $232,000 for the first 6 months of this fiscal year.

The first year, 1960, $6,000 was put in reserve; $219,000 was used to reduce the PHA contribution.

In each of the succeeding years all the residual receipts went into reserves.

In 1960 our actual reserve was the maximum, $1,127,000.

At the end of 1963 our actual reserve was $1,491,000, and our maximum was $2,061,000. We have not achieved the maximum reserve since 1960. We are working on that now in 1964.

ACCELERATED MAINTENANCE PROGRAM

Mr. SHIPLEY. What was the reason for that?

Mr. EDWARDS. A program was instituted right after President Kennedy took office in 1961 for accelerated maintenance. We have been urged—and we did—to accelerate our maintenance. We did so to the extent of over $1 million. We spent more for maintenance that we had been accustomed to and more than we are spending now.

Mr. SHIPLEY. What percentage more?

Mr. EDWARDS. We accelerated it by between one-half million dollars and $1 million.

Mr. SHIPLEY. Up to $1 million?

Mr. EDWARDS. If you add a half million dollars to these reserves we would be at our maximum.

Mr. WASHINGTON. Further on that point, both the Executive Office and the Congress had approved an accelerated public works program as an antirecession measure. We participated in that up to the extent of, as Mr. Edwards points out, over $1 million. These funds were spent to make certain repairs on the older projects, those over 20 and 22 years old. It was used to correct some of the war-caused deficiencies, deficiencies built in during the war when certain materials were not available, plastics and other materials were used.

We had the serious problem of buying some 3,000 refrigerators, largely because the time has come in this city as well as others where you cannot get 50 pounds of ice the way we used to be able to for the old iceboxes such as we provided.

Moreover, we were using coal and a number of our families could not get coal, and the coal was a hazard as well as a maintenance problem because of the creation of dirt. We converted some 1,100 units from coal to automatic gas. This is where some of the funds were utilized.

Mr. THOMAS. Off the record.

(Discussion held off the record.)

REFRIGERATORS PURCHASED UNDER ACCELERATED PUBLIC WORKS PROGRAM

Mr. JONAS. Did I understand you to say you charged the refrigerators to improvements rather than capital?

Mr. EDWARDS. No; they are capital. We capitalize them.

Mr. JONAS. It would not be charged to a maintenance item, would it?

Mr. EDWARDS. Operating improvement.

Mr. JONAS. I thought he was referring to maintenance.

Mr. WASHINGTON. Accelerated maintenance program. This is what he was referring to.

Mr. JONAS. How much do you spend for refrigerators?

Mr. EDWARDS. $300,000.

Mr. JONAS. That would not be an antirecession proposition, would it?

Mr. WASHINGTON. Yes; it was an accelerated purchase.

Mr. JONAS. You mean to take care of General Electric, Westinghouse, and the rest of the manufacturers of refrigerators? I can see why you might need the refrigerators to improve the property but I do not follow you when you say it falls in an accelerated public works program.

Mr. WASHINGTON. That was one of the items that was approved in the list.

Mr. JONAS. Who approved it?

Mr. WASHINGTON. PHA approved it.

Mr. JONAS. As an extraordinary program to accelerate employment?

Mr. EDWARDS. It is an operating improvement.

Mr. WASHINGTON. It was one of the items under the acceleration that we put in.

Mr. JONAS. And you charged it to maintenance?

Mr. WASHINGTON. No, sir.

Mr. OSTERTAG. Capital.

Mr. WASHINGTON. This is a capital charge.

Mr. JONAS. You listed it as a maintenance charge?

Mr. EDWARDS. Refrigerators are operating improvements which are capitalized items. Both extraordinary maintenance and operating improvements were expenditures made in this accelerated maintenance program.

Mr. OSTERTAG. Do other appliances follow the same category?

Mr. EDWARDS. We capitalize equipment.

Mr. OSTERTAG. Other equipment is capital improvements?

Mr. EDWARDS. Maintenance of the equipment is strictly maintenance but the equipment itself is capitalized.

Mr. JONAS. That is what I wanted to explore.

METERING UTILITIES

Mr. SHIPLEY. Are all your individual units metered so far as utilities are concerned? How do you keep people from leaving their lights on all night?

Mr. EVERETT. Those units where we provide a gas furnace and automatic gas heat, they are check metered. We buy gas through a master meter and check it back to the tenants on a predetermined allowance per quarter.

At the end of the quarter if they have used in excess of the amount we allow then we backcharge them on the rate for that excess consumption.

Mr. SHIPLEY. Do you have any trouble collecting it?

Mr. EVERETT. Not at present, no, sir.

FAILURE TO PAY RENT

Mr. SHIPLEY. How about failure to pay rent? Is this up or down from previous years?

Mr. EVERETT. It has slightly increased in the dollar amount. One of the reasons is that the average rent is a little higher than it has been over the past several years, but the actual number of nonpayments has not materially increased. Rent collection is difficult.

Mr. SHIPLEY. I am sure it is.

DEMONSTRATION PROGRAM

Let us discuss page 12. I was particularly interested in what you say here—as of June 30, 1963, there is an example of 7 families out of an anticipated total of 50 families which have moved into large private housing with 4 to 6 bedrooms.

I wish the committee would note this. They rent these from private landlords ranging from $115 a month to $155 monthly. Then you turn around and sublease these for $49 to $84.

Would you describe this program a little bit?

Mr. WASHINGTON. Yes, sir.

Mr. SHIPLEY. This seems rather impossible to me, but go ahead.

Mr. WASHINGTON. This is one of the demonstration programs which has been developed under section 207. We were authorized to lease from private landlords. As of today we have 50 units leased.

Mr. SHIPLEY. Are they all in one area or scattered?

Mr. WASHINGTON. Scattered throughout the city, principally in the area east of Rock Creek Park and principally in conservation areas, the Northwest, Cardozo, and Northeast, centering more in town where rents are at least within the range of this program to finance.

I would say they group 30 of them in an area about a mile radius from the Capitol.

Mr. SHIPLEY. Go ahead, please.

Mr. WASHINGTON. We have 50 families now in. The best we can do now is to present the facts. The experience is not sufficient at this point to make concrete conclusions, for this is a 2-year program. We are in about the fourth or fifth month of it.

The funds for subsidy were made available through the demonstration. The social work assistance was paid for by the Junior League of Washington, the Washington Real Estate Board, and the Inter-Church Committee on Urban Renewal.

The Junior League put up $10,000, the Washington Real Estate Board $1,000, and the Inter-Church Committee on Urban Renewal has committed $2,000. This has enabled us to contract with the Family and Child Services for direct assistance to the families in adjustment.

DEMONSTRATION RENT AND SUBSIDY

At the present time the average rent with the landlord is $138.09.

Utilities paid by NCHA are estimated at $8.90, making a contract rent of $146.99. We can only estimate utilities at this point because we have only a few months of operating experience in this program.

Average rent paid by the tenant is $66.14, leaving an average subsidy of $80.85.

Mr. THOMAS. This program is Dr. Weaver's program. There was a $5 million authorization. Last year we gave them $1,200,000.

You have 50 of these demonstration projects here?

Mr. WASHINGTON. That is right.

AMOUNT ALLOCATED FROM HHFA FOR DEMONSTRATION PROJECTS

Mr. THOMAS. How much money have you allocated on an annual basis for the 50 projects?

Mr. WASHINGTON. $194,000 roughly for the 2-year period.

Mr. THOMAS. How much is that per house per year?

Mr. WASHINGTON. It is 30 months, Mr. Chairman.

Mr. THOMAS. How much is that per house per year? It is about $950 a year subsidy in round figures; it is not?

Mr. WASHINGTON. That is about right.

UTILITY COSTS

Mr. THOMAS. Who pays the utility bills?

Mr. WASHINGTON. The tenant pays a portion and the Housing Authority pays a portion.

Mr. THOMAS. Who picks up the heating check?

Mr. WASHINGTON. The tenant picks up part and we pick up part of it.

Mr. THOMAS. How much does the tenant pick up and how much does Housing pick up?

Mr. WASHINGTON. Mr. Smith, who is the coordinator of that program, can give us this detail.

Mr. SMITH. The tenant pays for the electricity. We pay for the heat and also the gas for cooking.

Mr. THOMAS. How are the buildings heated?

Mr. SMITH. Some by gas, some by oil, and some by coal. Those heated by oil get a discount from GSA.

Mr. THOMAS. A discount from GSA?

Mr. SMITH. Yes.

Mr. THOMAS. You mean GSA buys it wholesale. Who delivers it?

Mr. SMITH. A private contractor. We get it for an average of 10 cents a gallon.

Mr. THOMAS. It was part of GSA's program to help other Government agencies do the procuring? We ran into it in the New York Housing Authority, I believe.

How much does the Housing Authority pick up on the gas bill or the oil bill for heating?

Mr. SMITH. The gas, oil, and coal are all included in the tenant's rent. We collect from them and then pay from these receipts for the utilities.

Mr. THOMAS. What is the average income of the families living in one of these big houses?

Mr. SMITH. Roughly around $4,000.

Mr. THOMAS. Under the formula what is the total rent?

Mr. SMITH. Average rent comes to $66.14 a month.

Mr. THOMAS. Are you still working on the 20-percent formula of income for rent?

Mr. SMITH. Not in this program because of the fact you could go up to the higher rent. If you are paying, say——

Mr. THOMAS. What portion of their income do you charge them in this program?

Mr. SMITH. The same rent schedule usually, around 20 percent.

Mr. THOMAS. If he has $4,000 he is then paying around $70 a month rent; is that right? You gave a figure of $66.

Mr. WASHINGTON. $66.14.

Mr. THOMAS. That is about right.

How about the utility bill? That is as much as the total rent bill, is it not?

Mr. SMITH. We average out to a 12-month period and it levels it off when you consider the summer months.

Mr. THOMAS. The gas companies and oil companies want their bills paid on a monthly basis. In one of those big five-bedroom houses you could not have a heating bill much under $70 or so a month. Who picks up that check and when is it picked up?

Mr. SMITH. You have to pay it as you are billed but in the summertime you would be collecting rent for utilities and paying out nothing for it.

Mr. THOMAS. How much do you collect in the month of August for a gas bill when he has very little gas bill other than for cooking?

Mr. SMITH. The amount he pays in his rent is $9 a month generally, based on our present estimates.

Mr. THOMAS. This is not very helpful. What I want to know is how much money you are geting from Dr. Weaver. I want a breakdown of it.

REHABILITATION OF DWELLINGS

I want to know if the houses have been rehabilitated before they move into them and how much that cost.

In Dr. Weaver's program we developed this and they have spent money remodeling these houses before they turned them over to you.

Mr. SMITH. The owners have and we have records here to show that. They have spent some $3,000 to $4,000 a unit.

Mr. THOMAS. Why don't you put them in the Mayflower Hotel? Won't it be cheaper before you get through?

Mr. SMITH. Some were in horrible shape, sir.

Mr. WASHINGTON. This repair, you realize, was done by the private owner without expense to the Housing Authority at all.

Mr. THOMAS. It may not have been expense to the Housing Authority but it was to the Housing and Home Finance Agency.

Mr. WASHINGTON. No, sir. This is another program. If I might say, Mr. Chairman, this program is simply a lease program where we lease a unit from a private owner after he has put it in shape, or at least put it up to housing code standards.

Mr. THOMAS. Are you sure about that?

Mr. WASHIINGTON. I am positive, Mr. Chairman, that this is the only——

SUBSIDY COST OF DEMONSTRATION PROGRAM

Mr. THOMAS. Let us get back to what it cost in the way of subsidy either in the form of rent, utilities, furniture, or whatnot in one of these houses. What does it figure out on a four-bedroom house?

Mr. WASHINGTON. This is the breakdown on an average. If you want to take one house——

Mr. THOMAS. Average is good enough. You have 50 projects. How many are occupied now?

Mr. WASHINGTON. As of yesterday, all of them. We had one that was waiting on repair and awaiting code inspection.

Mr. THOMAS. How much money did you get from Dr. Weaver?

Mr. WASHINGTON. $194,000.

Mr. THOMAS. For a 30-month period?

Mr. WASHINGTON. Yes.

Mr. THOMAS. Go ahead.

Mr. WASHINGTON. The average rent paid to the landlord is $138.09 which would include water.

UTILITIES COSTS

The average utility, over a 12-month period paid by NCHA, is estimated at $8.90.

The average rent paid in utilities by the tenant is $5.10.

Mr. THOMAS. That is $13 a month for utilities?

Mr. WASHINGTON. Actually $14 for heating and electricity.

Mr. THOMAS. In a four- or five-bedroom house?

Mr. WASHINGTON. Yes.

Mr. THOMAS. You know it is impossible.

Mr. WASHINGTON. That is our experience.

(NOTE.—The agency subsequently supplied the following for the record: In the regular low-rent program, $15.86 for all utilities in 1962 and $17.29 for 1963.)

Mr. THOMAS. It makes no difference what your experience is. Your experience and what goes on is something else. You know it cannot be done.

Mr. OSTERTAG. Is that central heat?

Mr. WASHINGTON. Individual heat.

Mr. OSTERTAG. And you are including heat?

Mr. WASHINGTON. Yes.

Mr. THOMAS. Heat, light, and water.

Mr. WASHINGTON. Water is paid by the owner. These are still in the owner's hand. Water is paid by the owner in most cases.

Mr. THOMAS. Heat and light is paid?

Mr. WASHINGTON. Yes.

Mr. THOMAS. $14 a month.

Mr. WASHINGTON. This is not too far off, Mr. Chairman.

(NOTE.—The agency subsequently indicated that this referred to their title II experience.)

Mr. SHIPLEY. Mr. Chairman, I would like to interrupt, I don't know how in the world this can be true. I lived in a house in Vienna, Va. My heat bill, in a very small house, runs $35 to $38.

Mr. WASHINGTON. How many months, though? Over 12 months?

Mr. SHIPLEY. Yes. My home in Illinois is about similar to what you are using here. We have five bedrooms. My gas bill there runs around $75 a month.

Mr. OSTERTAG. Do you have air conditioning?

Mr. WASHINGTON. No, sir.

Mr. THOMAS. Give us a wrap-up figure.

Mr. WASHINGTON. This is what our experience up to now is showing, Mr. Chairman. You must realize we have not been through an entire winter.

Mr. THOMAS. What is the overall amount of subsidy, heat, light, gas, subsidy of rent, and so on?

Mr. WASHINGTON. Overall amount of subsidy is $80.85 plus the $8.90 representing a combination of rent subsidy and estimated utility costs to the Government.

Mr. OSTERTAG. This is a month?

Mr. WASHINGTON. Yes.

Mr. THOMAS. Do you furnish any furniture or cooking utensils?

Mr. WASHINGTON. No, sir; we do not. Some of the families have needed some furniture and the Salvation Army and other agencies through the work of the social worker has helped.

Mr. THOMAS. In round figures it is around $90 a month subsidy per family. Is that right?

Mr. WASHINGTON. That is about right.

TITLE II SUBSIDY FOR LARGER FAMILIES

Mr. THOMAS. What is it under title II for the large families?

Mr. ARONOV. This is based on various assumptions, but for a four-bedroom unit we would figure an average subsidy of $92.54 and for a five-bedroom unit an average subsidy of $104.07.

Mr. THOMAS. Practically the same.

PURPOSE OF DEMONSTRATION PROGRAM

Why have this experiment? What is the basis of it?

Mr. ARONOV. If I may reply to that to the extent I am able, there are a few things that we believe may be demonstrated with this experiment. No. 1, this is a quick way, a relatively quick way, of obtaining housing for large families.

No. 2, units which previously had been substandard in many cases are going to be repaired by the landlords and put back on the market as standard units.

In fact, we have run into some situations——

Mr. THOMAS. I question that. In the first place, Dr. Weaver has only a 3-year authority. What is the average amount of money that the landlord spends on rehabilitating his house? I still have back in my mind that Weaver picked up some of that.

Mr. WASHINGTON. Not in this program.

Mr. THOMAS. Go ahead. What is the figure? What does the landlord pay?

Mr. ARONOV. It has varied from no more than $100 for the unit up to $4,200.

Mr. THOMAS. What can you do with a five-bedrom house for $100? You can barely wash windows for that.

Mr. ARONOV. It may be that the house at the point the landlord wishes to rent it to us is already meeting code standards and is all right.

Mr. THOMAS. Where are these units located? You have not come up with anything new yet now.

Mr. ARONOV. New?

Mr. THOMAS. Which warrants your experiment. I have not seen anything yet.

Mr. SIMPSON. We have not had to sue anybody for nonpayment of rent as yet.

Mr. THOMAS. Maybe I am wrong. What have you shown now? One, it is a little quicker method.

Mr. ARONOV. That is right.

LOCATION OF DEMONSTRATION UNITS

Mr. THOMAS. Where are you located?

Mr. ARONOV. In the Northwest, Northeast, and Southeast.

Mr. THOMAS. Are these in areas where the residents own their own homes, lease them at a high price, low price?

Mr. ARONOV. These are predominantly conservation neighborhoods.

Mr. THOMAS. What are those?

Mr. ARONOV. Neighborhods that have been declared as conservation areas by the District so that the Department of Licenses and Inspections of the District is scheduled to come into neighborhod and examine each of the dwellings to insure that the dwellings conform with the code.

Mr. THOMAS. What you are saying in understandable language is that it is in a part of town that is rapidly going down and is in a transition period from residential to quasi-business. Is that right?

Mr. ARONOV. It could be put that way.

Mr. THOMAS. Old parts of town?

Mr. ARONOV. Yes, sir; however, if I may I would prefer to put the emphasis the other way and say these are neighborhoods which may be retrieved and can be retrieved if they were to be given an intensive amount of attention and if an agency, for instance like ours, comes in— and this is one of the things we found, sir—if an agency like ours comes in and does a job——

Mr. THOMAS. We have a lot of Government agencies whose specific job it is to go into the housing field on a commercial basis.

Mr. ARONOV. That is right.

Mr. THOMAS. The FHA has a big rehabilitation program. For your information it is not going big. They loan up to $10,000 on the same basis as new construction, 20- and 25-year payments. It is not going very good.

Some of the residential sections throughout many of the major cities in the United States are taking advantage of it.

Anyway, that is their job and not yours.

Go ahead.

JUSTIFICATION OF THE ESTIMATES

Mr. SHIPLEY. The cost of operating 96 units in 1964 under title I was $43,000, or $448 each.

The budget estimate for 73 units to be operated in 1965 is $37,000, or $507 a unit.

I don't know how you can compare that with the justifications you have given us on page 12 with regard to this 50-family example.

Mr. Reporter, please insert pages 2 through 12 as part of the record.

(The pages follow:)

BUDGET ESTIMATE FOR FISCAL YEAR 1965, $37,000

General statement

The National Capital Housing Authority was established in 1934 under the District of Columbia Alley Dwelling Act (48 Stat. 930, amended by Public Law 733, 75th Cong). In accordance with this law the Authority is the local public housing agency in the District of Columbia and has as its objective the assurance of an adequate supply of dwellings for families of low income whose housing needs are not met by private enterprise. The Authority seeks to provide dwellings without profit or loss except for subsidy provided by law to reduce rents below cost levels.

Summary of the two programs

The Authority operates two housing programs, known as title I and title II:

Dwelling units as of June 30, 1963

	Under management	Under construction	Preconstruction	Total
Title I	96			96
Title II	7,825	736	1,422	9,983
Total	7,921	736	1,422	10,079

The title II program is supervised by the Public Housing Administration and the subsidy requirements are included in the consolidated estimates of that agency. However, details of the title II program are furnished in this title I budget estimate for informational purposes.

The title I program now consists of 96 low-rent housing dwellings constructed under the District of Columbia Alley Dwelling Act. After June 30, 1964, we plan to demolish the 23 units known as Hopkins Place SE., and to build 20 units on the same site under our title II development program. Eleven of the units to be demolished are old housing which was rehabilitated in 1934.

Our budget estimate for operation of the remaining 73 units during fiscal year 1965 is $37,000.

Rental receipts from all title I housing are deposited monthly in the Treasury.

In support of our estimate, we offer the following program performance schedule over a 5-year period:

Title I

	1963 actual	1964 estimate	1965 estimate	1966 estimate	1967 estimate
Units	96	96	73	73	73
Receipts	$45,674	$47,000	$39,000	$39,000	$39,000
Obligations	39,861	43,000	37,000	37,000	37,000
Net income	5,813	4,000	2,000	2,000	2,000

Justification

After June 30, 1964, the expiration of the present fiscal year, it is planned to vacate the 23 units known as Hopkins Place SE., demolish them, and rebuild on the site under the title II housing development program.

In the 1965 budget request presented herewith, no funds are sought for the 23 units at Hopkins Place, either for maintenance and operation or for demolition.

Funds requested in the 1965 budget are for maintenance and operation of the remaining 73 units in title I. The amount requested, $37,000, represents a higher percentage of the present budget of $43,000 than the reduction of 23 units would indicate because of salary and wage increases in 1963 and 1964 and the addition of personnel to aid in tenant rehabilitation and property maintenance.

Utility cost increases are due to the fact that utilities are not furnished the old Hopkins Place tenants; whereas utilities are supplied for most of the remaining 73 units.

Ordinary maintenance and operation cost increases are due to wage increases plus increased cost of materials for tenant painting program.

The reorganization of routine administrative and maintenance operations of the Authority has an effect on title I, for title I is charged with its pro rata share of routine Authority costs.

However, title I does not provide for insurance protection, payments in lieu of taxes, or collection losses as does title II. For this reason, title I has a minimum of general expense.

Title I expenditures, fiscal year 1963–65

	1963 actual, 96 units	1964 estimate, 96 units	1965 estimate, 73 units	
			Amount	PUM
Total operating receipts	$45,674	$47,000	$39,000	$44.52

Total	96	450,025

TITLE II

General statement

All activities under title II of the Alley Dwelling Act are conducted under supervision of Public Housing Administration.

As of July 1, 1960, all title II dwelling units under management were placed under one annual contribution contract. Operating costs, debt service, and provisions for operating reserves are met from rental income and Federal contributions.

Development activities are initially financed by loan notes which are subsequently retired with proceeds from bonds sold to private investors. At the end of the development period, debt service on bonds and costs of operation are met from rental receipts and Federal contributions. The contributions permit the Authority to reduce rents from low-income families below cost levels.

The maximum permissible Federal contribution by contract approximates debt service on the development cost of properties. The actual contribution received annually is based upon the difference between rental income and (1) operating costs, (2) debt service, and (3) provision for operating reserves.

Income limits for admission and continued occupancy

Since July 1, 1962, the income limits for admission to and continued occupancy of NCHA low-rent housing have been as follows:

Net family income after exemptions

Number of persons	Admission	Continued occupancy
1	$3,200	$4,000
2	3,500	4,400
3	3,700	4,600
4	3,900	4,900
5	4,100	5,100
6	4,300	5,400
7	4,500	5,600
8	4,700	5,900
9	4,900	6,100
10 or more	5,100	6,400

Annual reexamination of tenant incomes

The Authority's rental program is based upon serving a true cross section of the low-income families in the District of Columbia. To insure that we house only low-income families we reexamine the incomes of all tenants (except those who have been tenants for less than a year) on an annual basis. Presented herewith is the income pattern of our present tenant families, taken from our fiscal year 1963 records:

Income and rental information

Net incomes	Number of families in each income step	Percentage in each income step	Bedrooms						
			0	1	2	3	4	5	6
$1,000 or less	545	7.3	27	30	33	36	39	42	45
$1,001 to $2,000	2,094	28.1	27–37	30–37	33–37	36–37	39	42	45
$2,001 to $3,000	2,106	28.3	37–56	37–56	37–56	37–56	39–56	42–56	45–56
$3,001 to $4,000	1,593	21.4	58–76	58–76	58–76	58–76	58–76	58–76	58–76
$4,001 to $5,000	861	11.7	76	78–86	78–96	78–96	78–96	78–96	78–96
$5,001 to $6,000	164	2.2	76	86	96	98–106	98–114	98–114	98–114
$6,000 or more	80	1.0	76	86	96	96–106	114–116	114–126	114–136
Tenants reexamined	7,443	100.0							

NOTE.—Average rental income for fiscal year 1963 was $54.28 per unit.

Characteristics of tenants in occupancy

	Number of families in each income step	Percentage in each income step
Tenants paying minimum rent	1,525	20.5
Tenants paying maximum rent	184	2.5
Tenants receiving assistance from Public Welfare	1,415	18.0
Elderly tenants	772	10.4

The tabulation on the preceding page shows that 35.4 percent of our tenants have annual incomes under $2,000. The 23 percent shown above paying minimum and maximum rents are exclusive of the 18 percent receiving public assistance and who pay a separate welfare rent.

Welfare rents approximate the economic or cost rent for the dwelling leased. This system avoids payment of subsidy for shelter from two sources for the same tenant.

Graded rents are based upon net family income, except at minimum and maximum levels. No profit is realized on these rents.

Elderly tenants are those families in which either the head of the family or his spouse is at least 62 years of age or totally disabled. Ten percent of our tenants are elderly.

Population statistics

DEMONSTRATION PROJECT

(Section 207 of the Housing Act)

One of the most serious of NCHA's concerns in recent years has been the problem of providing housing for large low-income families. Many of these families have been displaced more than once by code enforcement, highway construction or other governmental action, and the supply of large public housing units has always been limited. The director of the city's landlord and tenant consultant service recently described a composite of the family affected as follows:

"It consists of a father and mother and four to five children living on an income of $67.91 a week. The husband is 31 and has an eighth grade education. He is an unskilled laborer or works in a service industry. His choice of jobs is limited and chance for advancement negligible. His wife is 28 and has finished ninth grade. The family income is so low that the slightest change in living conditions results in a major catastrophe."

In the face of the urgent need of hundreds of similar District families, NCHA has made special efforts to accommodate large displaced families.

On December 20, 1962, NCHA received the first money and authorization to proceed with a demonstration project under section 207 of the housing act. This is a plan for a pilot project to provide an immediate supply of housing for large displaced low-income families by direct rent subsidy payments to private landlords. The project was the result of careful planning by NCHA with the Junior League of Washington, the Washington Board of Realtors, the Washington Real Estate Brokers, the Inter-Church Committee on Urban Renewal and the District Department of Licenses and Inspections.

All of the cooperating groups have made contributions in cash or in service to support the project. The private groups contributed money to employ a social worker and provide social and educational services for the tenants. The Washington Center for Metropolitan Studies has been engaged to develop the research design and assist in preparing a final evaluation of the project.

As of June 30, 1963, the first 7 of an anticipated total of 50 families had moved in. These families contain an average of eight persons. They pay rents depending on their incomes of from $49 to $84 for large private houses with four to six bedrooms. The Authority leases these houses from private landlords at rents ranging from $115 to $155 monthly. It subleases the houses to low-income families using the subsidy from the HHFA demonstration grant to bridge the difference.

DISPLACEMENT AND RELOCATION

The Authority's demonstration program is a pilot effort to provide a supply of emergency housing for large low-income families displaced by public action. The subsidy from an HHFA demonstration grant is used to help low-income families pay the rents charged by private landlords. Using this technique, a supply of large houses which measure up to the standards set by local codes and ordinances can be made immediately available to families with no place to go. Although physical improvements are necessary, we must assure that their price is not too great a burden to the people in their path.

Mr. WASHINGTON. I didn't quite follow the point you made, Mr. Shipley.

Mr. SHIPLEY. I was giving an example of operating 96 units. If you care to discuss it, go ahead.

Mr. EDWARDS. Most of the utilities are furnished in that 73 units.

If you refer to the fact that on a unit basis it is higher, it is. It is higher than the present budget of 96 units for $43,000.

One of the reasons is that the utilities are included in the 73 units.

Mr. SHIPLEY. They are not included——

Mr. EDWARDS. Twenty-three units did not include utilities, only water.

Mr. WASHINGTON. In connection with utilities, out of the nearly 8,000 units, where we provide all the utilities, our figure actually for 1962 is $15.86, which is very close to the figure that is in the demonstration. This is an 8,000-unit experience.

Mr. SHIPLEY. What is the total anticipated program, 10,300 units?

Mr. WASHINGTON. Yes, sir.

Mr. SHIPLEY. I have no further questions.

Mr. Boland?

Mr. BOLAND. I have no questions.

Mr. OSTERTAG. I have no questions.

ADMINISTRATIVE COSTS AND PERSONNEL

Mr. JONAS. I would like to have you comment on this $1,208,000 for administration. Is that not pretty high out of total operating receipts of $5,345,000?

For nontechnical salaries, $794,530; how many people are covered?

Mr. EDWARDS. About 20 people; that is chiefly the development section, most of the technical salaries being in the development section.

Mr. JONAS. This is nontechnical, $794,500. Are those the clerks, stenographers?

Mr. EDWARDS. That is right.

Mr. JONAS. Overhead people, all of the nontechnical people? How many are there?

Mr. EDWARDS. 152 employees in the Authority who are administrative, either technical or nontechnical.

Mr. JONAS. How do you keep them all busy handling the relatively small number of units that you have?

Mr. EDWARDS. There are 238 employees on maintenance.

Mr. JONAS. 152 administrative and overhead?

Mr. EDWARDS. That is right.

Mr. JONAS. What do all those people do? How do you keep them occupied?

Mr. EDWARDS. It contains all the positions down to GS–2.

Mr. JONAS. How many units are you managing in both programs?

Mr. EDWARDS. About 8,000.

Mr. JONAS. That is 8,000 individual units. What is the total number of structures?

Mr. WASHINGTON. Approximately 32 different projects throughout the city with 8,000 dwellings and about 3,000 under construction and in planning. That takes a whole batch of employees in that area alone, that is doing the architectural and development work in the new projects.

A good bit of the overhead, for instance, the site acquisition man, the legal office, and so on——

Mr. JONAS. How many do you have in the legal office?

Mr. WASHINGTON. Just two.

Mr. JONAS. Two lawyers?

Mr. WASHINGTON. Yes.

Mr. JONAS. Stenographers?

Mr. WASHINGTON. Two serving that office. They handle rent collection, acquisition problems, claims, and so on.

Mr. JONAS. Is this statement correct—total operating receipts are $5,345,760?

Mr. WASHINGTON. Yes, sir.

Mr. JONAS. Out of that your administrative expense amounts to $1,208,160?

Mr. WASHINGTON. Yes, sir.

Mr. JONAS. In other words, it is taking more than 20 percent of your total receipts to pay your overhead.

POSITION AS A FEDERAL AGENCY

Mr. WASHINGTON. One of the problems we face here, Mr. Chairman, that no other housing authority faces, is the fact we are also a Federal agency. Every time Congress appropriates for employees, as pay raises come on, we have to absorb this with no other ability to do it than to put it into our overhead.

We maintain extensive employee benefit programs, and some of these factors would not normally be in a city housing authority.

For instance, we maintain the fiscal office which has to follow everything that the Defense Department follows with respect to Federal regulations.

Mr. OSTERTAG. That is costly.

Mr. WASHINGTON. It is costly.

Mr. OSTERTAG. If you were not under the Federal Government would it be cheaper?

Mr. WASHINGTON. We could assume that it might be, but we do get some other things that are not shown in our budget, for instance, the ability to use the Justice Department in our acquisitions. It is sort of offsetting and they do not reflect themselves in the budget. For instance, this is why we can maintain 3,000 units under development and acquire those units without adding to our legal staff because we get the service of Justice in the condemnation actions.

Mr. JONAS. It costs almost as much to run the office as it does to pay the entire utility bill for 8,000 units.

Mr. SHIPLEY. If I may interrupt, I asked them to furnish us a percentage cost on the administrative part per unit. I thought I would like to see that myself.

Mr. WASHINGTON. We would be glad to.

Mr. JONAS. There is one item here I noticed; is this $20,000 for legal expense? Does that include salaries to lawyers or is that outside cost?

Mr. EDWARDS. That is to our present staff.

Mr. JONAS. Why would you separate it if that is salaries for the staff? Why wouldn't that go in——

Mr. EDWARDS. This is a PHA form and the form in which they prescribe salaries.

Mr. JONAS. You do not pay $20,000 to outside lawyers?

Mr. WASHINGTON. We cannot use outside lawyers; again, as a Federal agency this is one of the requirements.

APPLICATIONS AND NEED FOR LOW RENT UNITS

Mr. JONAS. Your table on page 11 shows total applications received during the 12-month period ending June 30, 1963, 10,588, of which 6,945 were on hand at the beginning of the period; 3,643 were added during the period. That is only for one period. Is that about the average rate of new applications?

Mr. WASHINGTON. Yes, sir. I would think this is the approximate number.

Mr. JONAS. You receive about that number every year?

Mr. WASHINGTON. Yes, sir; just about that many.

Mr. JONAS. Do you think that figure represents the total need for low cost housing in the District?

Mr. WASHINGTON. No, sir. I do not. I do not think it represents the need at all. One of the reasons is, as we have indicated here, we have not been able to build, actually put into occupancy, any new housing since the 174 units in 1961 and all that we have for families on the waiting list is the turnover vacancy. This means that families frequently simply withdraw or some do not apply, knowing the situation is so critical. We have tried our best to make some determinations as to how or what percentage this would represent of the total need. It is a very difficult thing. You cannot go to the Census and get anything other than the number of substandard families living in such housing by income category which is not definitive.

Mr. JONAS. You do not have any studies from which you could conclude the number of eligible people in the District for housing under this program, in addition to those who have applied?

Mr. WASHINGTON. Not that I would call definitive, sir.

Mr. JONAS. What would be your horseback opinion?

Mr. WASHINGTON. My horseback opinion would be about 20,000 families.

Mr. JONAS. Would you say it is increasing as the years go by?

Mr. WASHINGTON. Yes, sir, there seems to be no question in our minds about it because in our own housing, as we analyze our families in occupancy, as I pointed out earlier, we now have 63.7 percent of our families making $3,000 or less. This figure is staggering to us.

Mr. JONAS. It is increasing.

Mr. WASHINGTON. It is increasing.

Mr. JONAS. That makes it all the more of a serious problem.

RESIDENCY REQUIREMENTS

How many would you say of that number have resided in the District 5 years or longer?

Mr. WASHINGTON. On our waiting list?

Mr. JONAS. Yes.

Mr. WASHINGTON. I would say we have a resident's requirement and in making a sampling of our waiting list we found that out of the several hundred that we analyzed, the average length of occupancy in the District was about 5 years.

Mr. OSTERTAG. Will the gentleman yield?

Mr. JONAS. Yes.

Mr. OSTERTAG. Does the District of Columbia have a residency law?

Mr. WASHINGTON. Yes; it does. However, it relates to the operation of each department.

Mr. OSTERTAG. A large percentage of the occupants of these homes or apartments have their incomes supplemented by welfare; isn't that true?

Mr. WASHINGTON. We have 18 percent of our families living in our housing who are on welfare, 18 percent.

Mr. OSTERTAG. Entirely on welfare?

Mr. WASHINGTON. Yes, sir.

Mr. OSTERTAG. Suppose they have an income of $1,500 or $2,000 a year, which isn't sufficient to maintain their family, and that is supplemented by welfare income. Are they eligible for that public assistance without establishing legal settlement?

Mr. WASHINGTON. No, sir; not without establishing legal residence under the Welfare Department regulations for at least a year.

Mr. OSTERTAG. What do you do in cases like that? People are here and require housing. What do you do?

Mr. WASHINGTON. We simply do not take the application. This has been, I would say, questioned pro and con. The position of our Board was that, with the number of people that we have on our waiting list, some of them going back as far as 15 years, with families having grown up while they have been waiting, and this relates to the fact that during the war years our preference was given to warworkers; the postwar period it was given to the families displaced by Government action or veterans and we have families that fall in neither of these categories of preference or priority and they just wait. A very distressing bit of publicity came out on a couple of families. They had been on a waiting list for 18 years. They fell in this nonpriority, nonpreference category. The feeling of our Board was that we should favor the people who have been here and not give the same consideration to people who are just coming in. Whether this is appropriate in terms of an overall responsibility of the housing authority in a city today, I am not just sure as I reflect on the possible consequences.

Mr. JONAS. I am inclined to believe it is.

FAMILIES MOVING TO WASHINGTON

I am also interested—and this may not be within the scope of your authority—but if the situation is as critical as you represented it and these statistics would certainly support that view, is any effort being

made or does anyone in the District consider that it would be within the province of the District government or the Housing Authority or anybody else to acquaint people seeking information about moving to the District with the fact that housing is in very critical shortage, and stop so many people coming to Washington. They ought to stay at home if they have a decent place to live.

Mr. WASHINGTON. We believe so, too, if they have a decent place.

Mr. JONAS. I mean is any effort being made anywhere along the line to point out that to newcomers?

Mr. WASHINGTON. Not that I know of.

Mr. JONAS. I guess most of them just move in without asking information in advance.

Mr. WASHINGTON. Well, this is kind of a peculiar thing. Word seems to get out on general conditions.

Mr. JONAS. That everything is lovely here?

Mr. WASHINGTON. No; people are somehow aware of the critical housing situation here and I understand informally that you get far more people bypassing Washington coming from the South than you do stopping off.

Mr. JONAS. Last year how many new families moved into Washington?

Mr. WASHINGTON. I couldn't give you that figure. We do not keep that. The best record of that comes out of the schools. Of course, our census show that the inmigration in Washington, per se, was not too great during the last 3 or 4 years, but this is an illusory picture.

Mr. JONAS. You had an outchange during the year of 7,182 applications. That means they were withdrawn or placed somewhere; is that correct?

Mr. WASHINGTON. Either placed or withdrawn because they didn't keep the applications current.

Mr. JONAS. What do you mean by "referred to management"?

Mr. WASHINGTON. That is what we do in order to avoid vacancy loss. We look at each project and see what its vacancy experience is. Over the years they may have 10 vacancies of certain sizes. What we do is then preassign families on the basis of this experience so they will be right on the spot when the vacancy occurs in contact with the management and readily coordinate their moving plans with the availability of the unit.

Mr. JONAS. I notice, of the total applications that you had on hand at the end of the period mentioned, June 30, 1963, were 10,588 total, 10,467 were nonwhite and 121 white. Would that same percentage hold true with respect to your occupancy?

Mr. WASHINGTON. Just about at this point, about 95 to 96 percent, sir.

Mr. JONAS. I do not have any other questions.

Mr. THOMAS. Thank you, gentlemen.

TUESDAY, FEBRUARY 4, 1964.

Mr. THOMAS. We have with us this morning our distinguished friends from the Renegotiation Board. It is nice to have with us Mr. Hartwig, the Chairman; Mr. Loveless, a member; our very distinguished and loved former colleague, Mr. D'Alesandro, Mr. Burkhalter, Mr. Beaty; and we have the General Counsel, Mr. Fensterstock; Director of Assignments, Mr. Semple; Mr. Haggerty; and of course we are always delighted and honored to have Miss Egbert, the budget analyst.

Mr. Ostertag, will you be good enough to conduct this examination for us?

Mr. OSTERTAG (presiding). Thank you, Mr. Chairman.

Mr. Chairman, I believe you have a statement to present to the committee?

Mr. HARTWIG. Yes, sir.

May I read it?

Mr. OSTERTAG. Yes.

GENERAL STATEMENT

Mr. HARTWIG. I have the honor, once again, to present the budget estimate of the Renegotiation Board. I appear today in support of our appropriation request for the fiscal year ending June 30, 1965.

The Board's appropriation for fiscal 1964 was $2,550,000. For fiscal 1965, the Board requests an appropriation of $2,600,000. The additional $50,000 is due solely to the general pay increases that became effective last month.

This request is in direct keeping with the President's demand for Government-wide economy. Although an increase in workload is indicated for fiscal 1965, the Board intends to do the job without adding to its present staff.

There is ample basis for our anticipated increase in workload. In fiscal 1963 the Board reviewed renegotiable sales, under both prime contracts and subcontracts, in the total amount of $31.2 billion. This is the largest amount reviewed by the Board since it began in 1956 to

submit annual reports to the Congress. In fiscal 1965, the sales to be reviewed will result mainly from increased defense and space expenditures in fiscal years 1963 and 1964. Combined expenditures of the Department of Defense and the National Aeronautics and Space Administration for major procurement, research, development, and testing have maintained a steady upward trend in recent years, as follows:

	Amount (in billions)
1961	$19.7
1962	21.8
1963	24.6
1964 (estimated)	26.7

This trend has had a marked impact upon the Board's constant effort to keep current in its work. To achieve this objective, the Board has consolidated field offices and introduced operating efficiencies.

From its organization under the 1951 act through the end of fiscal 1963, the Board made agreements or orders determining excessive profits in the total amount of $871,635,030 before Federal tax credits. In addition, renegotiation proceedings with assigned contractors during that 12-year period disclosed voluntary refunds and price reductions to the Government amounting to $1,189,054,130. Thus, the purpose of the Renegotiation Act as defined by Congress—the elimination of excessive profits—is accomplished both by Board proceedings and by voluntary actions of contractors. The total amount of such refunds and savings, from the inception of the Board through June 30, 1963, aggregated $2,060,689,160.

During fiscal 1963, the Board made 48 determinations of excessive profits totaling $10,069,536; and as of June 30, 1963, had also made, but had not yet incorporated in agreements or orders, additional refund determinations in the amount of $14,536,129. Also, in fiscal 1963, contractors reported to the Board voluntary refunds and price reductions in the amount of $28,047,146.

Of the 48 determinations of excessive profits made in fiscal 1963, 38 resulted in refund agreements and 10 resulted in the issuance of unilateral orders. Three of these orders were appealed to the Tax Court before June 30, 1963, and five more after that date.

From its inception through June 30, 1963, the Board made 3,608 determinations of excessive profits, and 3,262, or 90.4 percent of such determinations were agreed to by contractors. During the same period, 123 of 346 unilateral orders issued by the Board were appealed to the Tax Court. As of June 30, 1963, the court had disposed of 63 cases, leaving 60 pending on that date. The Board's determinations were upheld in 38 of the 63 cases disposed of by the Tax Court; in 4 cases they were increased, and in 21 they were decreased.

My colleagues and I will be pleased to answer any questions or supply any other information, as the subcommittee may desire.

Mr. OSTERTAG. Thank you very much, Mr. Hartwig. That is a very fine statement.

We understand that your budget estimate for fiscal year 1965 amounts to $2,600,000, which is an increase of $50,000 over fiscal year 1964. That increase is entirely brought about by virtue of the second increment of the Pay Act of 1962; is that correct?

Mr. HARTWIG. Yes, sir.

EXTENSION OF RENEGOTIATION ACT

Mr. OSTERTAG. The Renegotiation Act as presently extended expires on June 30 of this year.

Mr. HARTWIG. The coverage of the act expires on June 30 of this year. The administration has requested a 4-year extension.

Mr. OSTERTAG. A 4-year extension?

Mr. HARTWIG. Yes, sir.

Mr. OSTERTAG. Is that pending at the present time?

Mr. HARTWIG. It is pending at the present time.

Mr. OSTERTAG. And you have no doubt that this legislation will be enacted in time to meet your deadline?

Mr. HARTWIG. I sincerely hope so.

Mr. OSTERTAG. You hope so but have you any reason to believe or feel that there will be any question about it?

Mr. HARTWIG. I have no reason to believe that there will be any question about it. This is the seventh extension of the act that has been requested. Congress has always granted the request.

Mr. JONAS. Mr. Ostertag, before you leave that subject, may I interrupt to ask a question?

Mr. OSTERTAG. Certainly.

RECENT INCREASES DUE TO PAY ACT

Mr. JONAS. I notice in the table, however, that while you have only a slight increase in funds requested over last year, which I applaud, nevertheless you are substantially above 1963. What accounted for the very substantial increase in 1964 over 1963?

Mr. HARTWIG. The increase, 1964 over 1963, was due to the pay raise.

Mr. JONAS. Exclusively?

Mr. HARTWIG. Yes, sir, as a result of the action of Congress. The $2,550,000 which we received for this year was $100,000 more than the preceding budget. That $100,000——

Mr. JONAS. It is a little more than that. It was $2,342,470 in 1963 and jumped up to $2,550,000 in 1964.

Mr. HARTWIG. This is attributable to the pay raise. There were two rounds of pay raises, as you know, sir, and the difference between the 1964 and 1963 budgets was due entirely to these raises. A second increase took effect in January of this year, which will be effective for only half of this fiscal year. The additional $50,000 for 1965 will defray the cost of that second increase for an entire year.

Mr. JONAS. At least it can be said accurately that the downward trend which was manifest in the years 1961–63 has now reversed itself and is going back up. Is that not correct?

Mr. HARTWIG. To the extent that there have been pay increases, there is an upward trend; yes, sir.

Mr. JONAS. You were up to nearly $3 million in 1961 and came down to $2.6 million in 1962 and $2.3 million in 1963.

Mr. HARTWIG. We are still below the 1961 budget. I may point out to you that, although the Board had 271 employees at the end of 1961 we are budgeting now for only 225 positions, despite the fact that the dollars of renegotiable sales have increased and despite the fact that there has been an increase in filings.

Mr. JONAS. I didn't want to pursue it.

Mr. HARTWIG. I am quite proud of the fact that this Board through its reduction in force and consolidation has reduced the organization from 271 to 225. Percentagewise that is quite a reduction.

Mr. EVINS. Will the Chairman yield?

Mr. OSTERTAG. I yield.

Mr. EVINS. This is the one point I noticed about your budget when I examined it earlier. The defense contracts are going up, space contracts are going up, there are more filings and the staff is going down. Does it mean you are giving much less attention to the monumental assignment which the Congress has given you?

Mr. HARTWIG. No, sir; we hope to cooperate with the President's economy and efficiency program.

Mr. EVINS. You are to be commended.

JUSTIFICATION OF THE ESTIMATE

Mr. OSTERTAG. Mr. Reporter, it might be well if we insert in the record at this point pages No. 4 through 12 of the justification.

(The justification pages follow:)

PURPOSE OF APPROPRIATION

The general purpose of the appropriation "Salaries and expenses, Renegotiation Board" is to provide funds for salaries and all other expenses of the Renegotiation Board, created by the Renegotiation Act of 1951 (Public Law 9, 82d Cong., approved Mar. 23, 1951, and as amended Sept. 1, 1954, Aug. 3, 1955, Aug. 1, 1956, Sept. 6, 1958, July 13, 1959, and July 3, 1962), with authority for the determination and elimination of excessive profits realized by contractors and subcontractors in connection with procurement under the national defense and space programs.

OPERATION UNDER THE ACT

The Renegotiation Board reviews the overall profits of a contractor on renegotiable business during his fiscal year. Renegotiation is conducted on the basis of total receipts or accruals from all renegotiable contracts and subcontracts and not on a contract-by-contract basis. By statute a contractor or subcontractor having a total of $1 million or less of receipts or accruals on defense contracts and subcontracts during any fiscal year ending after June 30, 1956, is not subject to renegotiation. A contractor having more than such amount of renegotiable business is subject to renegotiation. In those cases requiring renegotiation proceedings, the Board secures as much information as it deems necessary to determine whether the contractor has made excessive profits. In each case the Board's determination is based on the contractor's efficiency and the application of the other factors set forth in the act, which are: (1) reasonableness of costs and profits; (2) net worth and capital employed; (3) extent of risk assumed; (4) nature and extent of contribution to the defense effort; and (5) character of business.

Estimate of obligations by activity

	1961 actual	1962 actual	1963 actual	1964 estimate	1965 estimate
1. Executive direction	$529,580	$534,814	$536,988	$565,000	$575,000
2. Staff operations	766,112	748,801	808,014	845,000	860,000
3. Renegotiation operations (field)	1,629,515	1,327,583	997,468	1,140,000	1,165,000
Total obligations	[1] 2,925,207	[1] 2,611,198	2,342,470	2,550,000	2,600,000

[1] Salaries were at July 10, 1960, pay rates.

Estimate of average employment by activity

	1961 actual	1962 actual	1963 actual	1964 estimate	1965 estimate
1. Executive direction	51.9	48.1	47.5	46.9	46.6
2. Staff operations	75.6	68.0	72.2	73.9	73 7
3. Renegotiation operations (field)	150.3	118.0	84.2	93.3	93.0
Total average employment	277.8	234.1	203.9	214.1	213.3

ORGANIZATION

The Renegotiation Board is comprised of the headquarters office and two regional boards, with five members on each regional board and a staff of professional accountants, lawyers, and renegotiators.

The headquarters office is responsible for executive direction and administrative supervision of the Board's activities. It receives all financial statements filed by contractors or subcontractors subject to the act, screens such reports to separate those involving obviously nonexcessive profits, and assigns the others to the regional boards for processing.

The statutory board at the headquarters office has delegated authority to its regional boards to complete those assignments in which renegotiable profits before taxes are $800,000 or less (class B). In any such case, if a clearance is issued or a refund agreement is made with the contractor, the action of the regional board is final; if agreement is not reached with the contractor, the regional board issues an order, which is subject to review and final determination by the statutory board. The regional boards also process assignments of greater magnitude (class A), but in such cases their authority is limited to recommending determinations to be made by the statutory board; and if a regional board's recommendation is not acceptable to either the statutory board or the contractor, the case is reassigned from the regional board to the statutory board for further proceedings and completion.

PROGRAM REVIEW

Workload

The Renegotiation Board administers the Renegotiation Act of 1951, as amended and extended through June 30, 1964, and, in addition, has responsibilities in connection with the Renegotiation Acts of 1943 and 1948. The volume of renegotiable sales reviewed by the Board increased from $28.8 billion in fiscal 1960 to $31.2 billion in fiscal 1963.

A contractor having renegotiable business in excess of the statutory minimum during his fiscal year must file a report with the Washington headquarters of the Board. Such reports are required to be filed no later than the first day of the fifth month after the close of each contractor's fiscal year and must include financial statements and such other information as the Board requires. Since there is no penalty for delinquent filings, except in cases of willful failure or refusal, the Board must maintain a constant followup program.

The Board maintains an index of Government prime contractors and their subcontractors. At appropriate periods, principally at the end of the calendar year (70 percent of contractors' fiscal years end with the calendar year), it sends letters of preliminary inquiry apprising contractors of their responsibilities under the statute. For fiscal years ending after June 30, 1956, a contractor may make a filing if his renegotiable receipts or accruals are below the respective statutory minimums but such filing is not required. A considerable number of such contractors elect to file in order to obtain the advantage of a final settlement of their renegotiation status.

A contractor is required by the act to file a report with the Board on or before the first day of the fifth month after the close of his fiscal year, causing a timelag of 4 months. For example, a contractor whose fiscal year ends December 31, 1963, will have until May 1, 1964, to file his report with the Board. The number of filings received and processed in the various Government fiscal years is shown in the following table:

Filings and disposition by Government fiscal years

	Actual				Estimate				
	Fiscal year 1960	Fiscal year 1961	Fiscal year 1962	Fiscal year 1963	Fiscal year 1964	Fiscal year 1965	Fiscal year 1966	Fiscal year 1967	Fiscal year 1968
Floor	13,445	9,344	8,106	6,462	8,000	8,000	8,000	8,000	8,000
Above floor	3,974	3,717	3,862	3,913	4,000	4,000	4,000	4,000	4,000
Total	17,419	13,061	11,968	10,375	12,000	12,000	12,000	12,000	12,000
Screened out	2,977	2,786	3,228	3,517	3,400	3,350	3,350	3,350	3,350
Assigned	1,103	926	386	551	600	650	650	650	650
Backlog	1,359	1,112	739	456	543	543	543	543	543
Total	2,462	2,038	1,125	1,007	1,143	1,193	1,193	1,193	1,193
Completed	1,350	1,299	669	464	600	650	650	650	650
Forwarded to next year	1,112	739	456	543	543	543	543	543	543

Analysis at headquarters.—Contractors having $1 million or less of receipts or accruals from renegotiable business in fiscal years ending after June 30, 1956, are not required to file but may elect to do so. Those contractors having receipts or accruals from renegotiable business in excess of $1 million in any such fiscal year are required to file a financial report. An analysis of all filings is made at headquarters. Filings which indicate renegotiable business above the applicable statutory minimum are examined to determine the acceptability of the contractor's methods of segregation of sales and allocation of costs, and other available information is evaluated to determine whether or not to assign the filing to the field.

In those cases where contractors' reports show losses or clearly indicate non-excessive profits in connection with renegotiable business, action on the case is completed at headquarters. Other cases are assigned to the regional boards for determination. This examination procedure at headquarters lessens the amount of work that would otherwise be assigned to the regional offices, and effects substantial savings in time and expense for both the contractor and the Government. As a result of examining above-the-floor filings during fiscal year 1963, 3,517 cases were completed at the headquarters level by clearance without assignment, and 551 were assigned to the regional boards.

Refund determinations.—In fiscal year 1963, the Board made 48 determinations of excessive profits totaling $10,069,536; and, as of June 30, 1963, the Board had made, but had not yet made final, additional refund determinations in the amount of $14,536,129. From the Board's inception and through June 30, 1963, it made 3,608 determinations of excessive profits totaling $871,635,030. Also, in fiscal year 1963, contractors reported to the Board voluntary refunds and price reductions in the amount of $28,047,146. This brought the total of such refunds and price reductions reported since the inception of the Board to $1,189,054,130. (These voluntary refunds and price reductions are to be distinguished from price reductions made under the terms of price-redeterminable contracts.) The above figures reflect an increase in the aggregate of approximately $23.1 million over the corresponding figures for fiscal year 1962. In tabular form, the monetary results of renegotiation as of June 30, 1963, are presented below:

Monetary results of renegotiation activity

Agreements and orders completed	$871,635,030
Agreements and orders in process	14,536,129
Total agreements and orders	886,171,159
Add: Voluntary refunds and price reductions disclosed in renegotiation proceedings	1,189,054,130
Total	2,075,225,289

It may be observed that the total of refund determinations completed through June 30, 1963, amounted to $871,635,030, while through the same date the Board obligated $40,268,046 for administrative expenses.

APPEALS TO THE TAX COURT OF THE UNITED STATES

In fiscal year 1963, five unilateral orders issued by the Board aggregating $730,000, before State income taxes, were appealed to the Tax Court. Of this number, two were orders issued in fiscal year 1962, and three were orders issued in fiscal year 1963.

Since the inception of the act and through June 30, 1963, 123 of a total of 3,608 determinations of excessive profits have been appealed to the Tax Court.

Mr. OSTERTAG. These cover first of all the purposes of the appropriation, the estimate of obligations by activities and estimate of average employment by activities, program review and filings and disposition by fiscal year.

RELATION OF WORKLOAD TO PERSONNEL AND COSTS

Mr. JONAS. May I point out right there that the table on page 9, Mr. Chairman, shows that your filings and dispositions have been going down since 1960 instead of increasing? They have gone down from 17,419 in 1960 to 10,375 in 1963. So your workload has been going in one direction while your costs have been going in another according to that.

Mr. HARTWIG. May I point out that the figure 17,419 is not significant for present purposes. It includes 13,445 filings below the statutory floor. Those are cases which the Board cannot renegotiate under the statute. They simply involve examination on our part to see whether they actually are under the floor. They do not involve much work. That statistic is not a meaningful one. If you are really looking at the Board's workload you should look at the figures above the floor.

Mr. JONAS. They have gone down, too.

Mr. HARTWIG. 1960, 3,974 filings above the floor and in 1963 the filings were 3,913. My estimate for the current year is that the filings will exceed 4,000 on the basis of our experience during the first 6 months. So they haven't declined. On the contrary, if you use 1961 as a base, they have increased. There has been a steady increase since 1961.

When you look to the other figures below, the "assigned" figures, these relate to the assignments which are sent out to the field for processing by the regional boards. These have declined since 1960 because the Board in 1961 instituted a more effective screening process at headquarters. As a result, only those cases which require thoroughgoing examination have been assigned to the field since that time.

In fact, this is why the Board has been able to do the job despite an increasing volume of work.

Mr. JONAS. Would you comment on that line where it says, "completed"? Does that mean you are completing less work in 1963 than you did in 1960?

Mr. HARTWIG. In 1960 there were cases in the regional boards—loss cases, cases of obviously nonexcessive profits—which under the practice instituted in 1961 would never be assigned to the regional boards. I do not think you can compare the 464 completions in 1963 with the 1,350 in 1960, because in that 1,350 there were many assignments, that I call "junk" involving very little work.

Mr. JONAS. They got into the statistics?

Mr. HARTWIG. That is right.

Mr. JONAS. And the statistics do not exactly support your contention that you are turning out more work with fewer people compared with 1960, does it?

Mr. HARTWIG. We are turning out at least the same volume of work with fewer people. At the end of 1960 the Board had a staff of 284 people.

Mr. OSTERTAG. How about 1961?

Mr. HARTWIG. In 1961, 271 people.

Mr. JONAS. Did we help you to get rid of some of those?

Mr. HARTWIG. No, sir. We instituted this reorganization on our own.

Mr. OSTERTAG. Will you give us a table from 1961, on through?

Mr. HARTWIG. A table of——

Mr. OSTERTAG. Of employment.

Mr. JONAS. You gave us 1960 and 1961. You didn't give us 1962 and 1963; that is, the number of employees.

Mr. HARTWIG. In 1961, I have given you the figure 271.

Mr. OSTERTAG. Let's keep them all together.

Mr. HARTWIG. At the end of 1960, there were 284; 1961, 271; 1962, 193; 1963, 223.

Mr. OSTERTAG. And your estimated end strength is 225 for 1965, and that is your employment strength during fiscal year 1964?

Mr. HARTWIG. Yes, sir; those are the budgeted positions.

Mr. OSTERTAG. Mr. Chairman, I want to develop a clearer picture of the situation as it exists today as compared with the past. Take the Space Agency which has come into being in recent years. That is one of the large agencies, involving an annual budget of $5 to $6 billion, consisting mostly of the procurement, research and development, testing and other items of that kind. Is the responsibility and work of the Renegotiation Board limited primarily to the Defense and Space Agencies?

Mr. HARTWIG. They are the two largest procurement agencies.

AGENCIES SUBJECT TO RENEGOTIATION ACT

Mr. OSTERTAG. In other words, your work and your responsibility applies to several agencies of Government, does it not?

Mr. HARTWIG. Any agency which is named in the act. In addition to the Defense Department, the list names the Departments of the Army, Navy, and Air Force, the Space Agency, the Atomic Energy Commission, General Services Administration, the Federal Maritime Board, and Maritime Administration.

CONTRACTORS SUBJECT TO RENEGOTIATION

Mr. OSTERTAG. If I recall correctly, your work is only applicable to contracts that exceed $1 million?

Mr. HARTWIG. It is applicable only to those contractors whose receipts or accruals under renegotiable contracts exceed $1 million in a fiscal year of a contractor.

Mr. OSTERTAG. In other words, it is an actual expenditure within a fiscal year of a million dollars or more rather than the whole length of a contract over a period of 5 years which might run into a good

many millions of dollars but in a given year it might only involve a million dollars?

Mr. HARTWIG. That is right. A contractor might conceivably have several contracts, each one of which is less than a million dollars, but if the receipts or accruals under all of those contracts exceed $1 million in a particular fiscal year of the contractor then he would be subject to renegotiation. The $1 million floor does not apply to individual contracts. It applies to the receipts and accruals of each defense contractor, under all his contracts.

Mr. OSTERTAG. You are maintaining a level of operation on the basis of previous years; that is, insofar as staff is concerned and so far as your expenses are concerned. Now, in connection with your workload there is every indication that your workload is going to increase. I think you estimate a total filings of about 12,000 in fiscal year 1965, is that correct?

Mr. HARTWIG. 4,000.

Mr. OSTERTAG. 12,000 total.

Mr. HARTWIG. But the 8,000 below the floor don't involve much work. Actually, it is above-the-floor filings that constitute the basic workload.

Mr. OSTERTAG. Give us a picture, first, comparing any estimate that you have for 1965 with the other years; and second, the difference between above and below the floor so that we can see and have for the record some indication of the meaning of this total number of 12,000 as compared with, let us say, 10,375, which was your workload in 1963.

RENEGOTIATION PROCESS

Mr. HARTWIG. Perhaps I might give the committee a short description of the renegotiation process as a background for this.

Renegotiation is conducted with respect to the receipts or accruals of a contractor under all renegotiable contracts and subcontracts in that contractor's fiscal year.

All contractors whose renegotiable sales exceed $1 million in a fiscal year must file a report with the Board. These reports are examined by the Headquarters Board in Washington. If the profits are obviously not excessive, no further action is taken and the contractor is given clearance. All other cases are assigned for further proceedings to one of two regional boards.

The regional board commences renegotiation, obtains such additional information as it needs, meets with the contractor as required, and then determines whether the contractor realized excessive profits and if so, in what amount.

The Board has delegated to the regional boards final authority to make agreements in cases involving renegotiable profits of $800,000 or less. If in any such case the contractor does not accept a determination of excessive profits, he may appeal to the Headquarters Board. In those cases in which the regional boards do not have final authority, all their determinations must be approved by the statutory board.

On any final order of the Board with which the contractor does not agree, the contractor may obtain a redetermination by filing a petition in the Tax Court of the United States.

In the context of this general description of the renegotiation process we estimate that this year, 1964, and again in 1965, 4,000 contractors

will have receipts or accruals under renegotiable contracts in excess of $1 million and therefore will be required to file with the Renegotiation Board.

We estimate that about 8,000 contractors will file with the Board what we call "statements of nonapplicability." In other words, they will tell the Board that they had renegotiable sales of less than $1 million, and therefore may not be renegotiated.

Actually, a contractor who is under the floor is not required to file anything with the Board. He may do so. If he does file a statement of nonapplicability, that puts the Board on notice that the contractor claims that he is under the floor; and the Board has a year to check the validity of the statement. If the Board takes no action within a year, the contractor is for all purposes discharged from any further obligations. You can see then that the cases which require most attention are the 4,000 above the $1 million floor.

We estimate that out of the 4,000, approximately 650 will be assigned to the regional boards in 1965. In other words, we anticipate an increase in the more difficult cases that require time-consuming investigation in the field.

The difference between 600 and 650 assignments to the field may seem to be small, but the difference in workload is considerable when it is understood that an assignment to the field requires 16 months, on the average to process. If the Board is able to screen out the case at headquarters it can be completed in an average of 66 days. So you can see the difference in man-hours between being able to——

Mr. THOMAS. Will the chairman yield just briefly?

Mr. OSTERTAG. I yield.

ASSIGNMENT TO REGIONAL BOARDS

Mr. THOMAS. Your tale is told pretty well on the bottom of page 10, the last sentence [reading]:

> As a result of examining above-the-floor filings during fiscal year 1963, 3,517 cases were completed at the headquarters level by clearance without assignment, and 551 were assigned to the regional boards.

My question is, What was the disposition? What action was taken on the 551? There is really the backbone of your workload. How many were disposed of in the field? The field has unlimited jurisdiction in renegotiable amounts up to $800,000. Above that we understand. How were those 550 cases disposed of? How many of them had to come back to the big Board? What is a "horseback" opinion?

Mr. HARTWIG. The regional boards completed 464 assignments.

Mr. THOMAS. That is 80 percent?

Mr. HARTWIG. There was a slight slippage last year.

Mr. OSTERTAG. That is 464 out of 551.

Mr. HARTWIG. That is right.

Mr. OSTERTAG. You estimate there will be 551 for the next year.

Mr. HARTWIG. Yes; this is where I hope we will increase our efficiency.

Mr. OSTERTAG. You have more pending, though.

Mr. HARTWIG. That is right. We have 500—as a matter of fact——

Mr. OSTERTAG. Your backlog is increasing?

Mr. HARTWIG. In the region.

Mr. JONAS. May I ask a question right there?

Mr. OSTERTAG. Yes.

COMPLETED AND ASSIGNED CASES

Mr. JONAS. Please, Mr. Chairman, go back to this table on page 9 and tell us why your number of completed cases as they relate to those assigned are substantially lower in 1963 than they were in 1962, 1961, and 1960. The field completed more cases in 1960 than were sent out. They ate into the backlog. There is a similar situation in 1961. They ate into the backlog. They completed 1,300 cases—1,299—and you only sent them 926 new ones. In 1962 they completed 669 and only received 386 new ones, but in 1963 you sent them 551 new ones and they only completed 464.

Mr. HARTWIG. Two things happened in that period. First of all we strengthened the screening process so as to stop sending cases unnecessarily to the regional boards. This is evidenced by the figures on the line "assigned." The assignments in 1960 were 1,103; in 1961 this new screening practice came into effect for the last 2 months of that year, so assignments dropped to 926. In 1962 the new practice was effective for a full year, and there were only 386 new assignments to the field. Assignments stepped up in 1963 because——

Mr. JONAS. It went into reverse.

Mr. HARTWIG. We received more profitable cases. You cannot screen out a case unless it involves a loss or obviously nonexcessive profits. We have no control over the number of profit or loss cases filed with the Board. In any event, you can see that by a more efficient screening practice at headquarters we stopped sending out mere paper to the regional boards. At the same time——

Mr. JONAS. I do not see how that follows, when you compare 1962 to 1963. You sent more out than you did in 1962.

Mr. HARTWIG. These were hard cases. This was a realistic workload.

PROFIT TREND

Mr. JONAS. Why would you get more junk cases one year than another year?

Mr. LOVELESS. If I might interrupt a second to take you back a little bit, the general trend of profits through the period 1958–59 fiscal years, for example, was downward and this trend has been reversed in industry, generally, whether in Government- or commercial-type business. This later profit picture has an upward trend and this naturally means more profitable filings received and less loss filings.

Mr. HARTWIG. Let me see if this will help, sir. If you will look at the line "screened out," you will see that in 1960, 2,977 filings were screened out. That was in 1960; whereas in 1963 that number had increased to 3,517. This shows that in 1963 we were clearing more cases at headquarters and not sending them out to the field. This resulted from the new policy which the Board instituted in the latter part of fiscal year 1961. At the same time, we conducted a production drive and reduced our staff. Just bear that in mind. That happened at that time.

Mr. JONAS. You increased it from 1962 to 1963. It went from 193 to 223 people.

Mr. HARTWIG. From 1961 to 1963, that is the period you should look at.

Mr. JONAS. All right. Go ahead.

CASE PROCESSING TIME

Mr. EVINS. I wanted to ask the Chairman about the time of processing cases, from the time they are assigned or the time that they are initially reported. How much time is consumed in the final disposition of the case, assuming it does not go to the Tax Court, but is settled by the Board?

Mr. HARTWIG. Referring to the sentence on page 10, that Mr. Thomas read, the 3,517 cases completed at headquarters in 1963 were completed on an average of 66 days. The 464 that were completed in the field and through the Board required 16 months on the average.

Mr. EVINS. Through the field it is about 16 months and through the Board they average about 66 days.

Mr. HARTWIG. Yes, sir.

Mr. EVINS. How about your annual returns to the Treasury? What is the amount of this?

Mr. OSTERTAG. He gave the figure.

Mr. EVINS. He gave us the total since the Board was created.

Mr. OSTERTAG. Over $1 billion, wasn't it?

Mr. HARTWIG. Yes. I gave you the total since the Board was created and I gave you the figures for the last year, the last fiscal year.

Mr. THOMAS. Anyway, you are showing a profit, are you not?

Mr. HARTWIG. We always have.

CASES TAKEN TO TAX COURT

Mr. OSTERTAG. I believe you did mention in your statement, the number of cases taken to Tax Court. What is the batting average of the Board in connection with Tax Court cases?

Mr. HARTWIG. The Tax Court has disposed of 63 of 123 appeals taken to the court since the Board was instituted. In 38 of the 63 cases the Tax Court upheld the Board's determinations; in 4 cases the Tax Court increased the Board's determinations; and in 21 cases they were decreased.

Mr. SHIPLEY. May I ask a question?

Mr. OSTERTAG. Yes.

Mr. SHIPLEY. How did you come out financially on those cases with respect to what the Board had done for increasing and decreasing?

Mr. HARTWIG. The money involved?

Mr. SHIPLEY. Yes.

Mr. HARTWIG. The total amount of the Board's determinations involved in the 63 cases which the court disposed of was $51,052,427. After the Tax Court had redetermined all 63 cases the total amount as redetermined was $49,057,310.

Mr. THOMAS. That is pretty good.

TYPES OF CONTRACTS REVIEWED

Mr. OSTERTAG. There are various and sundry types of contracts—competitive bidding and negotiated bids, fixed prices, standardization of contracts.

The Secretary of Defense has indicated that they are rapidly moving into a greater degree of competitive bidding. Do you find that the nature of these contracts has brought about this tremendous amount of excess profits?

Mr. HARTWIG. Of course, most of the business that we review involves negotiated contracts. It is very interesting to note that during the 1963 fiscal year, out of the total $31,200 million of sales which the Board reviewed, 35.4 percent involved cost-plus-fixed-fee contracts and less than 18 percent involved so-called incentive-type contracts.

POSITION ON VARIOUS TYPES OF CONTRACTS

Mr. OSTERTAG. What is the view of the Board with regard to incentive-type contracts?

Mr. HARTWIG. The Board has issued a press release in connection with the new incentive program of the Defense Department which I would be happy to read into the record.

Mr. OSTERTAG. What is the general gist of it?

Insert the statement in the record.

(The statement follows:)

[For release on Apr. 17, 1962]

THE RENEGOTIATION BOARD

Washington, D.C.

Release No. 3–62

Recent statements in the public press, said Chairman Lawrence E. Hartwig, of the Renegotiation Board today, suggest the need to state the position of the Board with respect to the intensified efforts of the Department of Defense to cut defense costs by increasing profit opportunities in incentive-type contracts.

The Renegotiation Board has followed with interest the formulation of the Department's incentive program, and recognizes its objectives. The Board understands that the new program represents an expansion and modification of past incentive arrangements. The Board is aware that the Department hopes to achieve its aim of greatly reducing the cost of new weapons, improving their quality and speeding their development, by encouraging and rewarding performance efficiency and by penalizing inefficiency. The Board believes that the Renegotiation Act does not impede the proper accomplishment of these objectives.

Under the Renegotiation Act and regulations, the Renegotiation Board rewards demonstrated efficiency by according it "favorable recognition" in determining whether and the extent to which the contractor's total profits, from all its contracts in a fiscal year, are excessive in the light of the several factors prescribed in the Renegotiation Act. The Board's determination is not earmarked to the profits on any particular contract, or any particular portion of a contract. Bonus profits realized under an incentive-type contract, and the performance facts that gave rise to them, are a part, but only a part, of the total renegotiation case.

The regulations of the Board state that particular attention will be given, under the statutory factor of efficiency, to the nature and objectives of incentive contracts and the extent to which any differences between estimated costs and actual costs are the result of the efficiency of the contractor. The regulations also state that the Board will consider and give due regard to the views of the contracting agencies on such differences and the reasons therefor. It is believed that these and other provisions of the regulations are adequate to enable the Board, as an independent agency, to give fair and proper consideration to performance excellence in the context of the whole case under all the factors prescribed in the renegotiation law.

To help the Board evaluate contract performance, the Department of Defense has advised that it will endeavor to provide the Board with more precise and

discriminating reports than it has heretofore furnished for Board use in renegotiation proceedings with individual contractors. The Board welcomes this cooperation.

Mr. THOMAS. Will you yield?

Mr. OSTERTAG. Yes.

Mr. THOMAS. Two or three years ago we went into this in some detail with the Renegotiation Board. If my memory serves me correctly, the Renegotiation Board was very strong in favor of open, competitive, notorious bidding. They didn't like cost-plus or incentive or anything else. Is that still the attitude of the Board?

Mr. HARTWIG. It is still my attitude that the best way to get the best price is to have effective competition.

Mr. THOMAS. What is the attitude of the Board on negotiated contracts generally, whether it is incentive, cost-plus or what? What is your attitude on negotiated contracts as compared with an open, notorious, competitive bid?

Mr. HARTWIG. I think it is much more difficult to get a good price when you are negotiating, with no price competition, than when you have competition.

Mr. THOMAS. Are the Air Force, the Army, the Navy, and the space agency generating new business?

Mr. HARTWIG. The space agency is becoming a more important factor.

Mr. OSTERTAG. Very few of their contracts are competitive.

Mr. HARTWIG. That is right.

Mr. OSTERTAG. Take, for example, a cost-plus type contract. How could there be excessive profits in a case of that kind?

Mr. HARTWIG. There could be excessive profits if the parties in estimating the fee have miscalculated the estimated cost.

INCENTIVE CONTRACTS

Mr. OSTERTAG. Getting back to my other question, what is the view or attitude of the Board on incentive-type contracts? You say you have a statement but in a few words, what is it?

Mr. HARTWIG. Certainly the Board endorses any effort to lower the cost of defense. Incentive is nothing new to this Board. As a matter of fact, incentive in one sense is the keystone of the renegotiation statute itself. One of the reasons Congress gave this Board broad discretion to renegotiate contractors, taking into account the so-called statutory factors of efficiency, reasonableness of costs, et cetera, was to have a profit limitation act that would not destroy incentive. As I understand it, one objective of the incentive contract program is to reward the efficient producer with more profit than the inefficient producer; and insofar as that is an objective of the program, I see no difference in objectives. Of course, renegotiation looks at the picture differently than the procurement agencies because they are engaged in contract-by-contract procurement and we are engaged in after the fact review of the total profits of a defense contractor in a particular fiscal year.

MONITORING OF CONTRACTS BY ORIGINATING AGENCY

Mr. OSTERTAG. I inquired as to the plans for the future; that is, your act expires this June. The question arises: Why is it not possible to have a greater degree of attention paid by the departments and agencies themselves to these contracts? They all have their legal divisions, they have their contract divisions, and they are familiar with their own contracts. Why wouldn't it be possible for them to monitor their own contracts?

Mr. HARTWIG. Well, I think they do a lot of monitoring now on an individual contract basis. The renegotiation statute requires that profits be reviewed on the basis of a contractor's fiscal year. This is an entirely different way of monitoring profit results.

Mr. THOMAS. Mr. Ostertag, wouldn't that put them in the basis of being judge and jury, though?

Mr. OSTERTAG. I just raised the question.

RESEARCH AND DEVELOPMENT CONTRACTS

Mr. THOMAS. The thing that disturbs me is research and development contracts. There we get into some pretty sizable funds. Why can't they lay down some standards or plans and specification where they can go out on the open market and negotiate a firm contract rather than letting a research and development contract on the basis of incentive or any other type of contract? Can't you just say, "This is a competitive bid"? We know the arguments. The people say to the agency, "We are plowing a virgin field and there is too much guesswork." The contractors would put a scare price on it. Do you buy that argument? Isn't it possible for them to take a research and development project and say, "Sharpen your pencils. Give us a figure. Here is what we want done. Lay it down." Is it possible to do that? What is the Board's experience along that line? You see more contracts than everybody else combined because they all sooner or later have to come to you. What is your judgment on it?

Mr. HARTWIG. First of all, the best incentive contract form which was ever written is the firm fixed price contract.

Mr. THOMAS. That is the way it seems to me.

Mr. HARTWIG. Nobody has been able to improve on the old-fashioned firm fixed price contract.

Mr. THOMAS. Is it possible under a research and development contract when you are dealing with the unknown to come up with a fixed price contract? That is the question.

Mr. HARTWIG. In some instances this might be possible. In others, the costs would be so uncertain that contractors would not assume the risk involved in a firm fixed price contract.

Mr. OSTERTAG. It would seem to me that a fixed price contract would be the type of contract that would lend itself to excess profits.

Mr. HARTWIG. It could. So could any other form of contract.

Mr. LOVELESS. The fixed price contract places a higher risk upon the contractor because he says, "I am going to do it for x dollars, and if his costs exceed that, that is out of his pocket."

REVIEW OF SUBCONTRACTS

Mr. HARTWIG. May I make one further comment with respect to your suggestion about the agency's monitoring contracts? They

couldn't, of course, monitor subcontracts and the Renegotiation Board does.

Mr. OSTERTAG. You mean where they exceed $1 million?

Mr. HARTWIG. Yes. Last year the Board reviewed subcontract sales in the total amount of some $7 billion.

Mr. OSTERTAG. What about the contracts with nonprofit corporations?

Mr. HARTWIG. They are not subject to renegotiation.

Mr. OSTERTAG. Are there any further questions?

(No response.)

Mr. THOMAS. Thank you, gentlemen. Come back to see us. We are always delighted and honored to have you.

WEDNESDAY, FEBRUARY 5, 1964.

Mr. JONAS. The committee will please come to order.

We have with us today the representatives of the Federal Home Loan Bank Board, including the Chairman of the Board, accompanied by other members of the Board, general counsel, and staff members.

Mr. McMurray, do you have a statement you would like to read into the record or discuss?

Mr. MCMURRAY. Yes, sir. I would be pleased to.

Mr. JONAS. If so, proceed.

GENERAL STATEMENT

Mr. MCMURRAY. Mr. Chairman and members of the committee; my associate, Mr. John deLaittre, and I believe Mr. Horne will be with us—he had to go to the morning prayer breakfast. I presume he has been delayed because the President attended it and it is difficult to leave before the President does.

I would like to, before I proceed, introduce the other staff members who are with us. We have Kenneth Scott, our general counsel; Mr. Nathaniel Armistead, Director, Office of Examinations and Supervision; Mr. Lawrence Walters, Director of Examinations; Mr. Victor Ammann, Associate Director, Division of Supervision; Mr. Elmer Frazier, Director of Audits; Thaddeus Corcoran, our budget officer, and Dr. William Husband, Director, Office of the Director of Insurance Corporation.

My associates and I appreciate the opportunity of appearing before you to discuss with you the activities of the savings and loan business

and the 1965 budget requirements of the Federal Home Loan Bank Board, including the Federal Savings and Loan Insurance Corporation.

The budget assumptions anticipate a continuing upward trend in the total assets, mortgage loans, net savings, and reserves for losses of the member associations of the Federal Home Loan Bank System. Growth is expected to continue at a rate greater than that experienced in fiscal 1963.

The agency's 1965 budget estimates, submitted in three parts, as business-type budgets, consist of:

Unit	Positions	Estimate
Board and staff offices	343	$3,890,000
Office of Examinations and Supervision	1,000	13,443,000
Federal Savings and Loan Insurance Corporation	16	225,000
Total	1,359	17,558,000

The estimates are based on the assumption that there will be no basic change in economic conditions during the budget year.

The estimates reflect two positions less than authorized for the current fiscal year, notwithstanding the fact that the estimate for the Board and staff offices includes the new Division of Regulations with seven positions, and the new Organization and Methods Division with two positions, no provision for which was made in the original Board estimates for the current fiscal year.

REORGANIZATION

In its efforts to further increase efficiency and at the same time effect economies where possible in the agency's operations, the Board adopted, and made effective January 1, 1964, recommendations revising the functional and organizational structure of both the Board and staff offices, and the Insurance Corporation; the estimates reflect these actions.

Among other things, the reorganization merges into single units, basically parallel or like functions. These include the merging of the division in the Insurance Corporation handling applications, with the division in the Board also handliing applications, and the merging of the Comptroller's Division of the Insurance Corporation with the Comptroller's Division of the Board. The Operating Analysis Division of the Insurance Corporation was also transferred to the Board for purposes of general program guidance. Increased efficiency is expected to result from these actions and a further reduction in personnel is anticipated after the transition period associated with the reorganization is completed.

GROWTH OF SAVINGS AND LOAN BUSINESS

During fiscal 1963 the savings and loan business continued to expand. All of its activities reached new peaks as reflected in the following statistics:

Membership in the Federal Home Loan Bank System at June 30, 1963, was 4,971, an increase of 105 for the fiscal year. In the same

period, total assets of the membership reached $100.8 billion, a gain of 16.1 percent.

The dollar volume of mortgage loans made by member savings and loan associations in fiscal 1963 aggregated $22.2 billion. This figure broke the alltime record set 1 year ago by $3.3 billion or 17.4 percent.

Of the total amount of loans made, representing 44 percent of the Nation's home-financing activities, 29 percent was for construction, 40 percent for home purchase, and 31 percent for other purposes such as reconditioning, refinancing, etc.

Despite keen competition for the savings dollar, the gross flow of savings into member savings and loan associations during fiscal 1963 aggregated $33.3 billion, an increase of 14.8 percent over fiscal 1962. Withdrawals amounted to $22.4 billion leaving a net inflow of $10.9 billion; this latter figure broke the alltime record set 1 year ago by 25.3 percent.

Earnings, new savings, and reserves for losses in member savings and loan associations in fiscal 1963 also reflected substantial increases over 1962.

FEDERAL HOME LOAN BANKS

The 11 Federal home loan banks reflected increases in every phase of their activities during fiscal 1963. Aggregate assets increased by 27.3 percent reaching $5.4 billion. Capital stock, held by members only, increased by 1.9 percent to $1.1 billion. Total capital increased by 2.8 percent reaching $1.3 billion, and legal reserve increased by 14.6 percent to $72.7 million. Net income of the 11 banks for the fiscal year increased by 7.3 percent reaching $46.5 million. Investments increased by 45.1 percent to $1.9 billion. Loans or advances to members aggregated $4.5 billion, an increase of 25.5 percent over the peak figure established in fiscal 1962. Repayments totaled $4 billion, an increase of 48.7 percent over the previous year. Loans or advances outstanding at June 30, 1963, aggregated $3.3 billion, an increase over fiscal 1962 of 18.2 percent. The Board made 10 offerings to the public of consolidated Federal home loan bank obligations during fiscal 1963 aggregating $2.9 billion, an increase over fiscal 1962 of $536 million or 22.4 percent. The balance outstanding at June 30, 1963, reflected an increase of 54 percent over the balance at June 30, 1962.

FEDERAL SAVINGS AND LOAN INSURANCE CORPORATION

Membership in the Federal Savings and Loan Insurance Corporation reached 4,386 at June 30, 1963, an increase of 119 for the fiscal year. Members' assets during the same period increased by 15.3 percent to $96.2 billion. I might mention here that although insured associations represent only 70 percent of all savings and loan associations, they hold 96 percent of the assets of all savings and loan associations.

Mortgage loans made by the membership in fiscal 1963 aggregated $21.9 billion. This figure broke the alltime record set the previous year by 17.7 percent. Members' reserves for losses increased by 12.3 percent to $6.4 billion; such reserves for losses represent 7.7 percent of total savings accounts.

The assets of the Insurance Corporation increased by 40 percent during fiscal 1963 reaching $934.3 million at June 30, 1963. Its net

income increased by 18.3 percent to $72.3 million at June 30,1963. Its insurance reserves during the same period increased by 41.1 percent to $902.5 million.

The Corporation's potential liability increased by 15.6 percent to $83 billion at June 30, 1963. Insurance losses for the fiscal year aggregated $3.2 million, an increase of 38.1 percent over the total at June 30, 1962.

I thank you, gentlemen, for the opportunity of making this statement; my associates and I shall be glad to answer any questions you may wish to ask.

Mr. JONAS. That is a very clear statement and shows phenomenal growth continuing in the savings and loan industry.

Mr. MCMURRAY. Yes, sir.

INCREASE IN BUDGET ESTIMATES

Mr. JONAS. Right at this point I might add that the justifications show your expenses are increasing at about the same rate.

Mr. MCMURRAY. Well, as a matter of fact, the number of personnel, where we have control, as you will notice, has not increased, and the expenses—what, Mr. Corcoran, is the increase in the dollar amount that we are requesting?

Mr. CORCORAN. Board and staff offices is $1,460,000 and in the Insurance Corporation there is a reduction of $1,090,000.

Mr. MCMURRAY. What is the net?

Mr. CORCORAN. The increase, including the Board and staff offices, and the Insurance Corporation, is $370,000.

Mr. JONAS. That is in the Insurance Corporation?

Mr. CORCORAN. That is both the Insurance Corporation, and the Board and staff offices.

Mr. MCMURRAY. It is a relatively small increase compared with any previous year. In fact, Mr. Congressman, we feel that we have done a very effective job at controlling our expenses and I think by the reorganization we have made our operation highly efficient, and I think that the increases in expenses are those due to the natural increases in salaries and things of that nature.

Mr. JONAS. I was looking at the table on page 2 which shows that you have had substantial increases in 1964 over 1963 and you are asking for a substantial increase in 1965 over 1964. I think the spread over the 3 years is nearly $5 million.

We will get into that a little bit later. You go up from $13.4 million in 1963 to $17.8 million in 1965. Those are your total expenses.

Mr. MCMURRAY. Yes, sir.

Mr. JONAS. While we are talking about that page, I notice your income is up substantially. Have you increased fees or is that because of more participation?

Mr. CORCORAN. Mr. Congressman, that table shows the funds applied and provided. If you will look at page 3 you will find the income increase between 1963 and 1964 and 1964 and 1965 and the net——

Mr. JONAS. The figures are the same on both pages.

Mr. MCMURRAY. Yes. We pay our own expenses.

Mr. JONAS. I understand.

(Discussion off the record.)

Mr. JONAS. What is the experience now with foreclosures in conventional loans? Is that troubling us as much as direct loans and Government-guaranteed loans?

Mr. MCMURRAY. Yes. Well, I have some statistics here. We anticipated you might be interested in this subject.

The foreclosures have increased continuously. Our last report covers the first 9 months of 1963 and there were 73,844 foreclosures, which compared with 64,399 in 1962. That is an increase of 15 percent over last year.

In terms of previous years it has gone up steadily since 1955. In 1955 there were 21,611. In other words, the numbers have increased over three times since 1955. However, the foreclosure rate for conventional loans is clearly smaller than for FHA and VA loans.

Mr. JONAS. What is your personal explanation or feeling as to the cause of this in a period of increasing business activity and prosperity and with all of the new money that is generating in savings accounts, et cetera?

Mr. MCMURRAY. First of all, at this rate, while it is higher, it is not so high that we consider it a terribly serious situation. We are concerned about it because we do not want it to continue, but you take, for example, in 1935, when, with a much lower housing inventory, there were over 177,000 foreclosures, with probably some 35 to 40 percent less houses. The rate is not such that we consider we are in serious condition. However, I would say one of the reasons is we have, relatively speaking, caught up with the demand for housing much more than we had in 1955. As you know, there was a great shortage of housing since World War II and, with this committee's help and the various laws that were passed, we have effectively provided houses for people who needed them.

We were, as you know, in a more or less inflationary situation up until the last few years. Now things are more or less stabilized; it was possible once to live in a house for a few years and then sell it at a profit. This no longer is a certainty. The greater stability in the price of houses results in foreclosures if the economy is even a little weak.

I would say that the rate of increase in foreclosures and properties deeded over has not expanded. The rate of increase has slowed down, which is somewhat encouraging.

I was interested in what was happening in the FHA and VA and I noticed the foreclosure rate on FHA's was 1.03 per hundred, or 10.30 per thousand. Their inventory in 1962 for acquired homes was 39,000 and their sales in 1963 were 50,000.

Mr. THOMAS. What was your inventory for the same period? I say "your inventory," meaning the Federal and State associations.

Mr. MCMURRAY. We do not have those kinds of statistics, Mr. Chairman.

Mr. THOMAS. What do you have?

Mr. MCMURRAY. I can give you some statistics which would indicate what the situation is in savings and loan associations.

SAVINGS AND LOAN PERCENTAGE OF HOUSING MARKET

Mr. THOMAS. What part of the total market is the building and loan association handling now; around 50 percent?

Mr. MCMURRAY. In terms of loans?

Mr. THOMAS. Yes.

Mr. MCMURRAY. I would say we have about 9 million mortgages that are being held by savings and loan associations and what the number foreclosed is——

Mr. THOMAS. Don't we say the building and loan associations have about 50 percent of the business?

Mr. JONAS. His statement shows 44. I thought it used to be up in the 60's a few years ago.

Mr. HUSBAND. No.

RATE OF FORECLOSURES

Mr. MCMURRAY. You have to be careful of these statistics. We use in our statistics the rate per thousand of homes that are foreclosed, and I can give you those statistics. You cannot compare them with these.

Mr. JONAS. What is your rate compared with FHA and VA rate?

Mr. MCMURRAY. The rate is 1.03 per hundred or 10.30 per thousand.

Mr. JONAS. That was FHA, you said?

Mr. MCMURRAY. Yes, sir.

Mr. JONAS. Yours is the same?

Mr. MCMURRAY. No, sir. These are simply—what I am giving you here is the foreclosure rate of the homes that are insured by FHA and when I give you the statistics on the savings and loan foreclosure I will give you rates on all the mortgages held by saving and loan associations and the rate of foreclosure and in our statistics we include some VA and FHA, but the point I am making here is not the statistics, the rate, but rather what I am trying to show is that the sales in terms of those acquired appear pretty good.

For example, they had an inventory in 1962——

Mr. THOMAS. Who is "they" now?

Mr. MCMURRAY. FHA.

Mr. THOMAS. Let's talk about your business. What is your rate?

Mr. MCMURRAY. In all districts—this is the number of foreclosures by Federal saving and loan, and insured savings and loan associations—that is, both State and Federal—and the ratios to the number of mortgage loans outstanding by Federal bank districts. We have it. The total, our rate is 4.92 per 1,000 loans.

Mr. THOMAS. How does that compare with FHA and VA?

Mr. MCMURRAY. The FHA—we have it broken down by FHA, VA, and conventional. The rate for FHA's held by our association is 12.45. The rate for VA's per 1,000 is 7.67, and the rate for conventional is 4.10. The average for all is 4.92. The saving and loan associations do not hold very much FHA's and VA's. That accounts for the relatively high rate of FHA and VA foreclosures but it does not show strongly in the overall average.

Mr. THOMAS. That is about what private industry is doing against Government, I guess.

What is the average loss that you take on one of these properties? What is the FHA loss, about a thousand dollars? We usually figure in round figures about $1,000.

Mr. McMURRAY. I do not know, if we have the statistics but from talking to the people in the industry, for example, in Florida, where they had a lot of foreclosures, they tell me they haven't lost anything on their foreclosures.

Mr. THOMAS. You have a different market there. What about in a State where the market is more stable?

Mr. McMURRAY. I took one of the worst areas. I do not know. John deLaittre had a lot of experience in this area. What would you estimate, John, the loss would be on a foreclosed piece of property? If you are a good lender you should not have a loss because you should not make a loan in excess of what you think the property will sell at a forced sale so that in many cases they make a profit.

Mr. DELAITTRE. I would be unable to estimate, Mr. Chairman, what the loss would be today on some of the foreclosures in some of the States where there are quite a few properties on hand.

I think the estimate we got the other day was that the FHA had about 50,000 properties on hand. What they would lose I couldn't guess. In my own experience with foreclosures, we suffered no losses. In fact, we had some profits.

Mr. JONAS. I read in the paper they turned down an offer of $40 million for their houses in Florida.

Mr. McMURRAY. Yes.

Mr. JONAS. Mr. Brownstein said that was too low. It was about 50-odd percent, I think, according to the press story, of the appraised value.

Mr. DELAITTRE. Of the appraised value, not the amount that they had in it?

Mr. JONAS. I think it was the appraised value. It might have been the amount of the loan.

Mr. THOMAS. In the average foreclosure in the State and Federal institutions, as far as the insurance corporation is concerned, there is no loss?

Mr. McMURRAY. The average foreclosure is 4.92. That is almost five houses in a thousand.

Mr. THOMAS. I mean to the individual savings and loan association. There is no loss to it?

Mr. McMURRAY. What was the question?

Mr. THOMAS. There is no loss to the individual building and loan association?

Mr. McMURRAY. I do not have the statistics but I do not think there are any losses yet.

Mr. THOMAS. That is almost phenomenal, isn't it?

Mr. JONAS. They would not charge it as a loss until they disposed of the property. In many cases I guess they buy the properties in and hold them in inventory.

Mr. McMURRAY. I was surprised, Mr. Chairman, to hear what you said about a $1,000 loss on each foreclosed home. I did not expect the loss on FHA's and VA's would be that high.

Mr. THOMAS. I think that is the figure we used, isn't it? We used a figure of about $1,000 per house.

Mr. HORNE. My guess is that some associations would also lose on individual foreclosed mortgages. I think another point, too, Mr. Chairman, that might be made here, is that under FHA and VA, generally speaking, the downpayment on the part of the purchaser is less than the downpayment of the purchaser of the home under conventional financing.

Mr. THOMAS. That is one of the reasons why your foreclosures are fewer.

Mr. HORNE. That is true.

REGULATIONS ON RESERVES

Mr. THOMAS. Mr. Jonas, during the summer and the fall months we were all besieged with a lot of letters. Maybe the chairman and colleagues on the Board will go into it with you. He was raising the reserve. Get a final picture of what he did about it and why it was necessary and what States was the trouble coming from, if any.

Mr. MCMURRAY. Well, you are referring to our regulation on reserves, are you not, Mr. Chairman?

Mr. THOMAS. Yes. That stems from foreclosures, does it not?

Mr. MCMURRAY. Yes, sir, in part.

I would like to talk to you about this problem, but it might be wiser. if you decide afterward or now to do it off the record, because some of the things I would like to tell you about may not be the kind of things to have in the record.

Mr. THOMAS. Is there any objection?

(Discussion off the record.)

Mr. THOMAS. Tell us what you did. Let this be for the record.

Mr. MCMURRAY. First of all, we put out a regulation on fees and discounts. This regulation requires that any fee in excess of 1 percent on a regular mortgage loan for an existing or a new house, anything in excess of 1 percent has to be amortized over a period of 7 years; on a construction loan, any fee in excess of 2 percent has to be amortized over a period of 7 years.

Now the purpose of this was to prevent associations, which in making loans collected high fees, from bringing them into current income.

By bringing them into current income the associations could afford to pay high dividend rates. Actually, they were paying out dividends which were really being earned in the future; from the standpoint of good accounting practices, they should have amortized the fees.

Good associations do it. Some of the others did not do it. So the regulation has had the effect of reducing the amount of current income and therefore making it more difficult for such associations to pay dividends in excess of their real earnings for that year.

The second regulation we put out—and it is a rather complicated regulation, but as simply as I can explain it—the regulation provides that associations are required to obtain 5 percent reserves in 20 years.

Most associations under this regulation, have to put 6 percent of their increase in risk assets into reserves.

Now we have made some variations. For example, associations which are not 20 years of age only have to meet what we call the bench-

mark requirements, except that if they are over $25 million—is it over $50 million?

Mr. SCOTT. $50 million for the 6 percent.

Mr. MCMURRAY. At $25 million they only have to allocate 5 percent, and if they are over $50 million, 6 percent.

The general effect of this will be to require all associations to maintain their reserves at 5 percent or something above that. The effect of it also is to brake very fast growth, because if you grow very fast you have to put quite a lot of your income into reserves.

For the record I would like, if I may, to put a clear and complete explanation into the record at this point—may I do that?

Mr. THOMAS. Surely.

(The information supplied follows:)

Beginning in 1964, an institution insured by the Federal Savings and Loan Insurance Corporation must meet two different kinds of reserve requirements under the recent amendment to insurance regulation 563.13 (29 F.R. 43).

The first requirement relates to the institution's Federal insurance reserve account and net worth levels. The prior regulation required an insured institution to establish and maintain a Federal insurance reserve account and increase it by at least one-fourth of 1 percent each year, so that after 20 years of insurance the reserve would be at least 5 percent of savings. The new regulation retains this structure and, in addition, requires that the institution's total net worth be equal to at least the corresponding Federal insurance reserve benchmark requirement plus 20 percent of scheduled items. (Scheduled items is a category of the more doubtful assets including delinquent loans and real estate acquired by foreclosure.)

The second requirement deals with regular periodic credits to the Federal insurance reserve account. The size of the required reserve credits depends on the strength of the institution's reserve position. For institutions whose ratio of adjusted net worth (net worth minus 20 percent of scheduled items) to risk assets is better than 12 percent, there is no credit required. For institutions whose reserve position, as defined above, is between 8 and 12 percent, the requirement is to credit 10 percent of net income to Federal insurance reserve account. For institutions with a reserve position below 8 percent, the exact requirement depends upon the institution's size and the length of time insured. In this bracket, the regulation may require an institution to credit as much as the greater of 10 percent of net income or 6 percent of its growth in risk assets (which are, primarily, its mortgage loans).

The basic requirements are reduced in various ways in the first year of the new regulation in order to facilitate the transition from the previous regulation.

Institutions which fail to build up their reserves in accordance with the regulation may not, for a subsequent period, pay dividends in amounts greater than that approved by the Federal Savings and Loan Insurance Corporation.

Mr. MCMURRAY. Then, the results in California, 17 institutions went up to 5 percent in the last quarter of 1963. As a result of these 2 regulations 15 of those 17 institutions have reduced their dividend rate from 5 percent to 4.85 percent, which is the prevailing rate in southern California.

The two associations that did not and could not because they already had advertised their rate and once having advertised their rate, they could not do anything else but maintain it. However, they are not now advertising their rate. So the result of our regulation in California has been very good.

Around the country the rates have pretty much stabilized. In Miami, Fla., the rate went up for a number of associations one-eighth of 1 percent, and most other places around the United States, the rates have either stayed about the same or have gone down a little bit.

This has made it difficult for some associations, and they are writing to Members of Congress criticizing the Board for taking these steps.

But we feel, and the people who we believe are good operators are complimenting us, that we have done the savings and loan industry a real favor but more importantly we feel we have done for the public, whom we serve, only what we are supposed to do under our authority.

Mr. JONAS. That is your primary responsibility and you want to keep that in mind.

Mr. MCMURRAY. Yes, sir.

Mr. JONAS. I have no more general questions.

Mr. THOMAS. Do you have any?

Mr. SHIPLEY. No, sir.

DIVIDEND INCREASES

Mr. JONAS. What are you doing about continued increases in dividends? Are you undertaking to keep in close touch with that situation?

Mr. MCMURRAY. As I explained, the regulation discourages pretty much the increase in dividends but we have no power beyond that to do anything about dividends. There is a bill before the House Banking and Currency Committee which would give us standby authority on dividend ceilings, but that has not been acted on.

Mr. THOMAS. Following out Mr. Jonas' question, a lot of the associations throughout very many States were paying four and four and a half. Has there been a noticeable decrease in the rate of dividends since you tightened your regulations?

Mr. MCMURRAY. No, sir. The only thing that has happened is in California, where the rates from 5 percent have gone down, but what might very well have happened in California if we did not pass these regulations is that the rate of all southern California associations probably would have been at five and quite likely a number of them would have paid five and a quarter and if that happened, you would have had increases all over the country because of competition. For instance, you would probably have four and a half percent in Cleveland and four and a half percent in many places where they were only paying four and a quarter. This would have just aggravated the problem.

Mr. THOMAS. Off the record.

(Discussion off the record.)

Mr. MCMURRAY. Most of the associations in the country I think recognize the importance of maintaining their reserves, et cetera, and I would say 96 percent or something like that, over 95 percent of the associations are sound, well operated, efficient associations, doing a great good for the public.

The only ones we really have trouble with are the small minority that give us the headaches and sometimes cause us to take actions that are not necessary for the large majority of associations. I think we have the support of the good operators in what we are doing and we have the cooperation of the U.S. Savings & Loan League and the National League of Insured Savings Associations. They have cooperated with us and worked with us. There are differences of opinion, to be sure, but they have been cooperating and recognizing our problem.

REASON FOR GROWTH IN SAVINGS AND LOAN ASSOCIATIONS

Mr. THOMAS. This industry has mushroomed fast in the last 10 years. I do not know whether "mushroomed" is the correct word. It has grown very fast. Do you think a little of that growth has been through brokerage money or unsound practices, what ever you want to call it?

Mr. MCMURRAY. The brokerage money accounted for a small part of it, Mr. Chairman. I think, generally speaking, the growth in the savings and loan associations is due to their zeal—they have done a good job of selling thrift to the American public.

They really have done that.

Mr. THOMAS. These associations are not in business for charity and not for their health. They are in there to make a little money and do some good, too. The American system, I imagine, is first in their mind. I note again in your tables your State associations number about, roughly, 2 to 1 over the Federal. The Federal is about 1,957 and the other has a difference of about 2,500. The assets run from which one of your figures you want to use. The Federals, even twice as small, will run $56 billion as against in round figures $51 or $52 billion for the States.

Is your industry on good sound footing now?

Mr. MCMURRAY. Yes, sir.

STATUS OF EXAMINATIONS

Mr. THOMAS. What is your Insurance Corporation doing? We have always insisted that your examination—and that is out from under your Board, we realize that—but we have always thought it should be done once a year. When we first began to look at this matter, your predecessors were 2 years or two and a half years, Mr. Jonas——

Mr. JONAS. Fifteen months, I thought.

Mr. THOMAS. You are sure your States and your Federals are carefully examined once every 12 months now?

Mr. MCMURRAY. As a matter of fact, I have a specific statement on that. In the first half of the fiscal year, examinations were completed—this is a half year—for 2,129 institutions.

Mr. THOMAS. What States are not included in the examination under your system of examiners now?

Mr. MCMURRAY. What States?

Mr. THOMAS. Yes. What about Maryland?

Mr. MCMURRAY. Oh, yes. Any federally insured institution in any State comes under our supervision and examination. Sometimes it is done jointly with the State and sometimes not, but all insured associations are examined annually by our examiners.

Mr. THOMAS. You said insured?

Mr. MCMURRAY. Yes, sir.

ASSOCIATIONS NOT INSURED BY FEDERAL SAVINGS AND LOAN INSURANCE CORPORATION

Mr. THOMAS. That is what I am talking about. What States are out from under your insurance system?

Mr. HORNE. All States are under our insurance system but there are some associations in each State that are State chartered that may not be under our insurance system.

Mr. THOMAS. I know all your Federals are. We are talking about your States.

Mr. MCMURRAY. There are associations in some States that are insured by private insurance companies.

Mr. THOMAS. Which one of those are not under your insurance system and your examination system?

Maryland was not.

Mr. HORNE. Some in Maryland were.

Mr. MCMURRAY. There are a number of State associations in Maryland that are not members of the Federal Savings and Loan Insurance Corporation.

Mr. THOMAS. Why weren't they? Why were some and why were some not?

Mr. MCMURRAY. Some of them, 2 or 3 years ago, operated in such a manner——

Mr. THOMAS. That you would not insure them?

Mr. MCMURRAY (continuing). That the Insurance Corporation would not take them.

Mr. THOMAS. Is that the answer?

Mr. MCMURRAY. Some of them probably never applied because they knew in advance they would not be insured.

Mr. THOMAS. My question is, "What States and what number of State institutions are not covered by your Insurance Corporation?"

Mr. MCMURRAY. Do we have it broken down by States? We have almost 2,000 associations, I think, whose combined assets are less than $5 billion anyway, that are not insured.

Mr. THOMAS. 2,000 out of the 6,400?

Mr. DELAITTRE. There are about 1,300 nonmember State-chartered savings and loan associations having assets of about one and a half billion.

Mr. THOMAS. That are not under insurance?

Mr. HORNE. Not under Federal insurance. Some of them will have a private or State insurance program of some kind.

Mr. THOMAS. I understand those fellows in Maryland had one, too.

Mr. DELAITTRE. I would like to amend that. It is two and a half billion of assets for those 1,300 associations.

Mr. THOMAS. What are you doing to bring those people under it? What can you do if they are chartered, not by the Federal law but by State law, what can you do?

Mr. MCMURRAY. The good associations apply and do get insured. We insure every year a great number of associations that are State-chartered but there are many of these other associations that are

very small institutions. They are the kind that operate maybe 2 nights a week. There are some institutions that might be very good, that just do not want Federal insurance. We can't tell. We don't go out and sell them.

Mr. THOMAS. You do not make any profit from them anyway, with this reserve you have; $850 million ought to be a couple of billion right now.

Mr. MCMURRAY. There are some associations, for example, in Ohio, that have State insurance and in Massachusetts the cooperative banks have a State insurance. There are a number of good associations that just do not want insurance. Then there are some that are not so good that, if they did apply, we would not insure them because their operations are such that they would not meet the conditions of the Federal Savings and Loan Insurance Corporation.

Mr. THOMAS. Do you have any questions?

Mr. SHIPLEY. I would like to ask one off the record.

(Discussion off the record.)

CONSERVATORSHIPS

Mr. THOMAS. How many foreclosures have been created in calendar year 1963 and what is your probable loss, if any?

Mr. MCMURRAY. You mean conservatorships?

Mr. THOMAS. Yes; what number?

Mr. MCMURRAY. We have taken over one Federal and we have issued four notices of termination.

Mr. THOMAS. In what States were they located? Insert the number and States.

Mr. MCMURRAY. All of them are in Illinois.

Mr. THOMAS. Any other States?

Mr. MCMURRAY. No, sir; all the other States are in reasonably good shape, although we have some problems here and there.

(Discussion held off the record.)

FINANCIAL DATA

Mr. THOMAS. This has been a very interesting and helpful discussion. We like talking over your problems with you. We think the Board and its very capable staff do a fine job.

We have watched you grow with great interest in the past 10 or 12 years.

Let us insert the statement of income and expenses.

Also insert 2 and 4, assets and liabilities.

(The pages follow:)

A. Statement of sources and application of funds

	1963 actual	1964 estimate	1965 estimate
FUNDS APPLIED			
To operations:			
Acquisition of assets: furniture, fixtures, and equipment	$110,979	$85,000	$45,500
Expense:			
Administrative expense, excluding depreciation	2,012,679	2,506,500	3,926,000
Nonadministrative expense, excluding depreciation:			
Cost of examining savings and loan associations	10,607,232	11,911,500	12,632,000
Cost of supervising savings and loan associations	561,079	696,500	792,500
Conservatorship, supervisory representative in charge, and other expenses	148,486	200,000	200,000
Credit allowed on prior years' assessments			300,000
Total applied to operations	13,440,455	15,399,500	17,896,000
To financing: increase in Treasury cash	119,413	65,911	28,327
Total funds applied	13,559,868	15,465,411	17,924,327
FUNDS PROVIDED			
By operations:			
Income	13,433,178	15,454,004	17,741,475
Decrease in selected working capital	126,690	11,407	182,852
Total provided by operations	13,559,868	15,465,411	17,924,327
BUDGET EXPENDITURES			
Funds applied to operations	13,440,455	15,399,500	17,896,000
Funds provided by operations	13,559,868	15,465,411	17,924,327
Net budget expenditures	−119,413	−65,911	−28,327
The above are credited (−) to net receipts of fund	−119,413	−65,911	−28,327

B. Statement of income and expense

	1963 actual	1964 estimate	1965 estimate
Income:			
Examining fees and charges	$10,512,023	$11,997,504	$12,795,975
Assessments for services and facilities:			
Federal Savings and Loan Insurance Corporation	1,097,347	1,351,480	2,570,325
Federal home loan banks	1,323,825	1,539,520	1,820,425
Office of Examinations and Supervision	197,412	243,000	291,750
Reimbursements from other accounts	113,496	122,500	63,000
Conservatorship, supervisory representative in charge, and other income	180,973	200,000	200,000
Miscellaneous	8,102		
Total income	13,433,178	15,454,004	17,741,475
Expense:			
Administrative expense:			
Reimbursable expense	101,076	122,500	63,000
Nonreimbursable expense, excluding depreciation	1,911,603	2,384,000	3,863,000
Subtotal	2,012,679	2,506,500	3,926,000
Depreciation on administrative facilities	62,516	46,000	27,000
Total administrative expense	2,075,195	2,552,500	3,953,000
Cost of examining savings and loan associations:			
Reimbursable expense	12,420		
Nonreimbursable expense, excluding depreciation	10,594,812	11,911,500	12,632,000
Subtotal	10,607,232	11,911,500	12,632,000
Depreciation on nonadministrative facilities	38,868	31,500	18,500
Cost of examining savings and loan associations	10,646,100	11,943,000	12,650,500
Cost of supervising savings and loan associations:			
Reimbursable expense			
Nonreimbursable expense, excluding depreciation	561,079	696,500	792,500
Subtotal	561,079	696,500	792,500
Depreciation on nonadministrative facilities	9,595	7,500	
Cost of supervisings savings and loan associations	570,674	704,000	792,500
Conservatorship, supervisory representative in charge, other expense	148,486	200,000	200,000
Total expense	13,440,455	15,399,500	17,596,000
Assessments and fees in excess of expense	−7,277	54,504	145,475
ANALYSIS OF DEFERRED AND UNDISTRIBUTED CREDITS			
Deferred and undistributed credits, beginning of year	423,588	416,311	470,815
Credit allowed Federal home loan banks on prior years' assessments			−300,000
Deferred and undistributed credits, end of year	416,311	470,815	316,290

C. Statement of financial condition

	1962 actual	1963 actual	1964 estimate	1965 estimate
ASSETS				
Cash with Treasury	$641,081	$760,494	$826,405	$854,732
Accounts receivable	2,289,950	1,592,999	1,799,375	1,859,275
Inventory: supplies	15,023	12,575	13,800	13,190
Other: postage meter	3,794	2,423	2,100	2,775
Furniture, fixtures, and equipment	455,799	561,435	646,435	691,435
Less portion charged off as depreciation	455,799	561,435	646,435	691,435
Furniture, fixtures and equipment, net				
Total assets	2,949,848	2,368,491	2,641,680	2,729,972
LIABILITIES				
Current liabilities	2,526,260	1,952,180	2,170,865	2,413,682
Deferred and undistributed credits	423,588	416,311	470,815	316,290
Total liabilities	2,949,848	2,368,491	2,641,680	2,729,972

Mr. THOMAS. You have not gone up on the per diem, Mr. Director, but it shows you are doing more business. It must be in the form of more associations coming in. I imagine this is purely examining fees.

Assessments for services and facilities, and under that you have Federal Savings and Loan Insurance Corporations.

What is this figure of $2.5 million?

Mr. CORCORAN. That is the portion of the Board's expenses that the Insurance Corporation bears.

Mr. THOMAS. You have a total expense this year of $17,596,000, against $15,399,000. You go up a little bit.

In 1963 you show $13.4 million and you go up to $15 million.

Do you ever have a little surplus? How do you always come out on the nose?

Mr. CORCORAN. If you look down below the total expense line, assessments and fees in excess of expense——

Mr. THOMAS. That is some of the finest calculating I have ever seen.

The point is that these are assessments, no appropriated funds. These are all fees.

What consideration are you giving to hiking back that insurance fee? You are on thin ground, are you not?

Mr. MCMURRAY. As a matter of fact, Mr. Chairman, the law that you passed a year and a half ago which authorizes the associations to prepay additional premiums equal to 2 percent of the increase in savings has greatly accelerated the income of the Insurance Corporation.

Mr. THOMAS. It is still less than $900 million.

Mr. MCMURRAY. It is on its way to $1 billion now.

RESERVES OF FEDERAL SAVINGS AND LOAN CORPORATION

Mr. THOMAS. Turn to page 135, gentlemen.

Insert this page.

(The page referred to follows:)

FEDERAL SAVINGS AND LOAN INSURANCE CORPORATION

Reserves.—The following table shows the reserves accumulated by all insured institutions as well as by the Insurance Corporation by fiscal years:

[In millions]

	All insured institutions	FS&LIC	
		Primary	Secondary
At June 30:			
1946	$425	$67.3	
1950	844	88.2	
1955	2,037	170.7	
1960	4,307	354.0	
1961	4,934	410.0	
1962	5,660	471.0	$168.0
1963	6,440	543.3	359.1
1964 [1]	7,320	630.3	577.3
1965 [1]	8,300	730.0	818.6

[1] Estimate.

The reserves and undivided profits of insured institutions aggregated $6.4 billion at June 30, 1963, an increase of 13.8 percent over the figure at June 30, 1962. It is expected to reach $8.3 billion by June 30, 1965, an increase of 28.9 perncent in the 2-year period.

The Corporation's reserve for insurance losses was $902.4 million at June 30, 1963. The basic law required the Corporation to build up a reserve until it was equal to 5 percent of all insured accounts plus all creditor obligations of all insured institutions. The enactment of Public Law 87-210, approved September 8, 1961, revised the reserve requirements. This law, effective January 1, 1962, requires each insured institution to pay to the Corporation annually an additional premium in the nature of a prepayment at a rate equal to 2 percent of the increase in savings for the previous calendar year less an amount equal to any requirement for the purchase of Federal home loan bank stock during such period. The law further requires the Corporation to establish a primary reserve, which shall be the general reserve of the Corporation, and a secondary reserve to which shall be credited the amounts of the prepayments made by the insured institutions.

Mr. THOMAS. You have $6,440 million in reserves in all insured institutions.

Mr. CORCORAN. That is right, sir.

Mr. THOMAS. You have less than $900 million.

Mr. MCMURRAY. That is as of June 1963. It is around $900 million.

Mr. HUSBAND. It will be about $1,225 million by June of 1964.

Mr. THOMAS. When I try to figure out how much money you have and how much insurance you have I am confused. I come up with combined resources, June 30, 1963, $101 billion.

Same page, December 31, 1963, $110 billion.

Page 30, assets, December 31, 1963, $107 billion.

Then going to page 135 under the table for the reserves, June 30, 1963, $8.3 billion.

How can figures vary like that in a period of 6 months?

Mr. CORCORAN. In one case the figures refer to insured institutions and in the other case to bank system membership.

Mr. MCMURRAY. When you talk about the assets of all savings and loan institutions——

Mr. THOMAS. The figure under the reserves, then, excludes those 1,900 where you do not have any insurance?

Mr. CORCORAN. That is right, sir.

BANK SYSTEM MEMBERSHIP

Mr. DELATTRE. There are 6,300 savings and loan associations in the country. Of those, approximately 5,000 are members of the Federal Home Loan Bank System, but only 4,400 of them are insured.

Mr. THOMAS. You mean you let them get into the system without taking the insurance?

Mr. MCMURRAY. They can become members of the bank——

Mr. THOMAS. Is that by law or regulation?

Mr. MCMURRAY. This is permitted by law.

Mr. THOMAS. They can enjoy your assets but do not protect their depositors? They can borrow money from the 11 big banks but when it comes to taking care of the depositors—you know that does not jibe. Why should that be?

Mr. MCMURRAY. Take the cooperative banks in Massachusetts, for example. They have their own insurance. I suppose in recognition of States rights they were allowed to come in on that basis.

Mr. THOMAS. We are not talking about States rights but protection for the depositors.

Mr. MCMURRAY. The home loan bank at the time they were admitted I suppose thought, and so far as I know now, they are in sound condition, and the insurance is sufficiently good that we have no concern about it——

Mr. THOMAS. You should throw out all your insurance for those in sound condition, then, and excuse them.

This is a defect that should be cured.

They can go to the 11 big banks, borrow money from them, and use it in any way you see fit, but when it comes——

Mr. MCMURRAY. You cannot use it any way you see fit.

Mr. JONAS. One problem I see in view of these statistics you have now recited is this: The general public, the man on the street, I would say 999 out of 1,000 think all savings and loans are insured.

Mr. MCMURRAY. That is right.

Mr. THOMAS. That is what the folks in Maryland thought, too.

Mr. MCMURRAY. That is right.

Mr. JONAS. If he is a member of your system you should have him put out a sign saying he is not insured.

Mr. HORNE. If the public had better education on this it would help. If they have Federal insurance the sign is put in the window. If they do not have the sign then you know it is not insured by Federal insurance. It might be insured by private or State but not Federal.

Mr. THOMAS. You show cash with Treasury, $760,000?

Mr. CORCORAN. That is right, sir.

Mr. THOMAS. When did you pay all this back?

Mr. CORCORAN. July of 1951.

Mr. THOMAS. It has been over 10 years ago?

Mr. CORCORAN. That is right, sir.

Mr. THOMAS. This is all good information. Insert pages 5, 6, 7, and 10.

(The pages follow:)

Program highlights

[Dollars in millions]

Federal Home Loan Bank System	1963 actual	1964 estimate	1965 estimate
Members (June 30):			
Number	4,971	5,090	5,225
Assets	$100,800	$117,700	$133,600
Savings (shares)	$86,800	$101,300	$114,900
Mortgage loans	$84,700	$98,700	$112,100
Insured	4,386	4,512	4,645
Regional banks: Advances outstanding	$3,270	$4,500	$4,400

OUTLINE OF FUNCTIONS

The three agencies under the Federal Home Loan Bank Board—the Federal Home Loan Bank System, the system of the Federal savings and loan associations, and the Federal Savings and Loan Insurance Corporation—were created to serve the American public through the media of savings and loan associations, cooperative banks, and other financial institutions engaged in the encouragement of thrift and economical homeownership. They were established by Congress in the 1932–34 depression period, when these savings institutions—basic components of the Nation's financial structure—needed additional supports sponsored by the Federal Government on a permanent basis.

For the protection of the homeseeker and the small saver and investor, the Federal Home Loan Bank Board carries out three primary obligations, through the following activities which it directs or supervises.

Federal Home Loan Bank System

The Federal Home Loan Bank System, through its 11 regional Federal home loan banks, strategically located throughout the country, provides a permanent system of Reserve banks for eligible thrift institutions of the savings and loan type. The Federal home loan banks advance funds to these members institutions to meet withdrawal demands as well as seasonal and expansionary needs for additional home-mortgage funds. Through the use of interbank deposits, the System maintains an adequate flow of home loan funds into every locality. October 15, 1963, marked the 31st anniversary of the opening of the regional banks.

The regional banks, the stock of which is owned by their member institutions, do not deal directly with individuals. The great majority of the members are savings and loan associations, also known sectionally as building and loan associations, cooperative banks, and homestead associations. Included also in the membership of the Federal Home Loan Bank System are 37 mutual savings banks.

The importance of the Federal Home Loan Bank System is indicated by the fact that at June 30, 1963, the combined resources of its member institutions totaled almost $101 billion (the December 31, 1963, figure is estimated at over $110 billion). In fiscal year 1963 its savings and loan members made home loans amounting to over $22.2 billion; for calendar year 1963 the figure is estimated at over $24.9 billion.

Located in most cities, suburban areas, and towns throughout the United States, the System's member institutions serve nearly 44 million people including savers, investors, and home-loan borrowers.

Federal savings and loan associations

The creation of Federal associations was authorized by Congress in 1933 to provide additional local thrift institutions for people to place their savings and/or obtain loans to finance their homes. In their charter and form of organization, Federal associations embody the most modern practices developed by sav-

ings and home-financing institutions during their 132-year history in this country.

All Federal savings and loan associations are required to be members of the Federal Home Loan Bank System and to carry insurance of their savings or share accounts through the Federal Savings and Loan Insurance Corporation.

At June 30, 1963, there were 1,957 privately owned, local, mutual institutions operating under charter, examination, and supervision by the Federal Home Loan Bank Board. Included among these are institutions newly organized by local citizens since 1933 and those already established which elected to transfer from State to Federal charter. Their combined resources at June 30, 1963 were $52.9 billion. Federal savings and loan associations are in operation in every State, in the District of Columbia, and Puerto Rico.

Federal Savings and Loan Insurance Corporation

Created in 1934, the Federal Savings and Loan Insurance Corporation insures, up to 10,000 each, savings or share accounts in approved savings and loan associations and similar institutions. Insurance of savings has been an important factor in stimulating the flow of savings into thrift and home-financing institutions. These savings are used largely for the financing of homes. The number of insured institutions at June 30, 1963, was 4,386; their combined assets were $96.2 billion.

All insured institutions are members of the Federal Home Loan Bank System.

Summary

The budget programs of the Federal Home Loan Bank Board including the Federal Savings and Loan Insurance Corporation are presented as business-type budgets.

The budget estimates for 1965, the revised estimates for the current fiscal year, and actual expenses for fiscal 1963 are summarized in the following two tables:

Comparative summary of positions and man-years

Unit	1963 actual		1964 estimate		1965 estimate	
	Positions	Man-years	Positions	Man-years	Positions	Man-years
Board and staff offices	210	184.8	238	213.4	343	335.0
Federal Savings and Loan Insurance Corporation	116	105.3	126	116.8	16	16.0
Office of Examinations and Supervision	994	903.6	1,000	953.6	1,000	979.1
Total	1,320	1,193.7	1,364	1,283.8	1,359	1,330.1

Comparative summary of expenses

Unit	1963 actual	1964 estimate	1965 estimate
Administrative expenses:			
Board and staff offices	$1,974,119	$2,430,000	$3,890,000
Federal Savings and Loan Insurance Corporation	1,139,796	1,315,000	225,000
Total	3,113,915	3,745,000	4,115,000
Nonadministrative expenses: Office of Examinations and Supervision	11,204,354	12,647,000	13,443,000
Grand total	14,318,269	16,392,000	17,558,000

BOARD AND STAFF OFFICES

Mr. THOMAS. Board and staff offices is shown on page 11.

The table on page 10 is very interesting. You show a reduction in jobs for 1965, 1,359 against 1,364. Your operating costs are up $1 million and $1,200,000. How do you account for that?

Mr. CORCORAN. Mr. Chairman——

Mr. THOMAS. Then you transfer from the Insurance Corporation some 90 to 95 jobs to the Board and you lose 5 in the shuffle but your overall bill still is up. Why is that?

Mr. CORCORAN. The difference between 1964 and 1965 in the Board is for these reasons: The comparison is with the figure for the Board and staff offices as approved for 1964.

Mr. THOMAS. I understand that. I do not find that subtraction, though. You have an addition but I don't find the subtraction. On the other hand the overall figure is up over $1 million.

Mr. CORCORAN. There is $778,000 for positions transferred from the Insurance Corporation.

Mr. THOMAS. I understand that.

Mr. CORCORAN. $158,000 for annualization of new and vacant positions. This fiscal year we could not fill any new positions before the first of January; in 1965 these are filled for the full year.

Mr. THOMAS. How many jobs?

Mr. CORCORAN. Thirty new jobs in the Board and staff offices.

Mr. THOMAS. You show a minus five in the table.

Mr. MCMURRAY. Jobs filled.

Mr. CORCORAN. Between this year and next year.

Mr. THOMAS. Can you operate with the same money you had last year?

Mr. MCMURRAY. No, sir. We have the pay increases.

Mr. THOMAS. That was absorbed last year.

Mr. CORCORAN. The second phase of the pay increase; it started the first of January of this year.

Mr. THOMAS. What does it cost this year?

Mr. CORCORAN. The amount is $44,000.

Mr. THOMAS. You have an increase of $1.3 million here.

Mr. CORCORAN. $1,019,000 in personnel compensation.

SUPERGRADES

Mr. THOMAS. How many supergrades do you have?

The green sheets have been inserted at the proper place. Rather than taking them one at a time, what does it look like overall? How many supergrades do you have? How many 15, 16, and 17 grades do you have?

Mr. CORCORAN. For 1965 we have 30 15's; grade 16 we have 4; grade 17 we have 1, and in grade 18 we have 1.

Mr. THOMAS. That is in the Board?

Mr. CORCORAN. Yes, sir. In Examinations and Supervision we have 19 in grade 15; 1 in grade 16; 2 in grade 17; 1 in grade 18.

Mr. THOMAS. How many 15, 16, 17, and 18?

Mr. CORCORAN. In the Insurance Corporation we have three 15's and one 17.

Mr. THOMAS. And two 16's?

Mr. CORCORAN. No 16's.

PURPOSE OF REORGANIZATION

Mr. THOMAS. What was the object of the reorganization? What does it actually do?

Mr. McMURRAY. What we did was put like functions together. We put the two controllers' offices together, Insurance Corporation and Board controllers. We put the Underwriting Division, and the division doing the same kind of work in the Board, together. We also put the Operating Analysis Division, which was under the Insurance Corporation, back——

Mr. THOMAS. You save only five jobs, though.

Mr. McMURRAY. That is right, but ordinarily you must remember, Mr. Chairman, the assets of the associations which we supervise increased by 15 percent last year and every year previously this Board came in and asked for extra positions, so this is the first time we have not asked that.

Mr. THOMAS. There is an increase of 15 percent. I was looking at that loss in the Insurance Corporation. That is more than 15 percent, too.

Mr. McMURRAY. What was the 15 percent?

Mr. THOMAS. Loss in the Insurance Corporation.

Mr. McMURRAY. That is right.

UNINSURED INSTITUTIONS

Mr. THOMAS. You speak of insurance up to $10,000 each. The Commissioner told us there are about 1,300 which do not have a nickel's worth of insurance so far as the Federal Insurance Corporation is concerned.

Mr. McMURRAY. That is right.

Mr. THOMAS. I imagine they claim they have some of that Maryland insurance?

Mr. McMURRAY. I don't think too many of them make that claim.

Mr. THOMAS. What is the total number of institutions you have, Mr. Director?

Mr. McMURRAY. Insured and not insured?

Mr. THOMAS. Yes.

Mr. McMURRAY. Over 6,300, Mr. Chairman.

Mr. THOMAS. That is more than 1,300 not insured, then.

Mr. McMURRAY. Thirty percent are not insured.

Mr. THOMAS. 1,905 not insured?

Mr. CORCORAN. That is right, sir.

Mr. DELATTRE. Some are insured by State organization, sir. That is so in three States.

BOARD AND STAFF OFFICES

Mr. THOMAS. The 11 banks were created 30 years ago. What are the assets of the 11 big banks?

Mr. CORCORAN. As of June 30, 1963, $5,385 million.

Mr. THOMAS. Let us insert pages 11 and 12 in the record.

(The pages follow:)

BOARD AND STAFF OFFICES

The 1965 estimates of administrative expenses of the board and staff offices, the revised estimates for the current fiscal year, and actual expenses for 1963 are summarized in the following table:

Description	1963 actual	1964 estimate	1965 estimate
Positions	210.0	238.0	343.0
Man-years	184.8	213.4	335.0
Personnel compensation	$1,522,401	$2,630,000	$2,905,000
Personnel benefits	107,498	195,500	217,000
Total personal services and benefits	1,629,899	2,825,500	3,122,000
Contractual services and supplies	379,376	729,800	804,000
Acquisition of capital assets	65,920	46,000	27,000
Total gross expenses	2,075,195	3,601,300	3,953,000
Less reimbursements	101,076	122,500	63,000
Total expenses	1,974,119	3,478,800	3,890,000
Comparability figures—Federal Savings and Loan Insurance Corporation	0	1,048,800	0
Actual, authorization, and estimate	1,974,119	2,430,000	3,890,000

As shown, the Federal Home Loan Bank Board requests authority to expend up to $3,890,000 for administrative expenses of the Board and its staff offices in fiscal 1965.

On a comparable basis, the estimates reflect a decrease of 2 in positions, an increase of 21.2 in man-years, and an increase in funds of $411,200 when compared with the estimated expenses for the current fiscal year; in percentage terms, there is an increase of 6.7 percent in man-years and 11.8 percent in funds.

Of the increase in funds, $275,000 is in personnel compensation, $21,500 in personnel benefits, $74,200 in contractual services and supplies, less $19,000 in acquisition of capital assets, and a decrease of $59,500 in reimbursements.

Personal services and benefits.—The increase in man-years represents delay in filling, in the current fiscal year, some of the positions authorized for the current fiscal year.

All other expenses.—The major portion of the increase of $114,700 in all other expenses is in the items of travel and transportation of persons, $7,000; rent, communications, and utilities, $143,500; printing and reproduction, $15,500; other services, $13,500; supplies and materials, $6,000; reimbursements, $59,500; there is a decrease in services of other agencies of $111,300, and in equipment of $19,000. Review and analyses of all the items included in all other expenses together with justification of the need for the increases will be found beginning on page 84.

Reimbursements.—A table showing reimbursements to the Board for services rendered, for the 3 years included in the budget, will be found on page 94.

Sources of funds

The funds used to pay the administrative expenses of the Board are derived from the following sources:

Source	1963 actual	1964 estimate	1965 estimate
By assessments upon—			
Federal home loan banks	$947,577	$1,166,400	$1,400,400
Federal Savings and Loan Insurance Corporation	829,130	1,020,600	[1] 2,197,850
Office of Examinations and Supervision (FHLBB)	197,412	243,000	291,750
Total funds	1,974,119	2,430,000	3,890,000

[1] Under the old basis—before Board reorganization—the Insurance Corportaion would have paid $2,559,720 composed of $1,161,720 representing assessment of 42 percent of the Board's expenses, and its own administrative expenses of $1,398,000. Under the new basis the Corporation saves $136,870.

Mr. THOMAS. What is the big item of expense in the Board outside of the Examining Division?

Mr. CORCORAN. Rent and utilities in the Board proper.

Mr. THOMAS. How many employees in the Board proper?

Mr. CORCORAN. 238 this year and 343 in 1965.

Mr. THOMAS. 238 against 343?

Mr. CORCORAN. That is right, sir.

ASSETS OF THE FEDERAL HOME LOAN BANKS

Mr. THOMAS. Which is the largest of the 11 banks?

Mr. MCMURRAY. San Francisco.

Mr. THOMAS. Do you have the assets of each of the banks?

Mr. MCMURRAY. Yes, we have the combined assets.

Mr. THOMAS. Is it in the record?

Mr. CORCORAN. No, sir; not separately.

Mr. THOMAS. Put it in the record for the last 5 years.

(The information requested follows:)

Federal home loan banks assets as of Dec. 31, 1959–63

[In millions of dollars]

	1959	1960	1961	1962	1963
Boston	123.4	142.4	188.5	210.2	309.0
New York	284.8	303.9	310.1	341.8	471.9
Pittsburgh	241.8	233.0	287.2	366.5	395.2
Greensboro	425.1	511.2	547.5	649.1	787.5
Cincinnati	225.2	241.9	285.0	340.1	387.9
Indianapolis	176.1	188.4	213.7	228.5	256.4
Chicago	498.7	492.7	516.4	730.8	886.7
Des Moines	203.5	197.0	199.8	295.2	411.5
Little Rock	136.5	135.3	158.8	286.7	389.9
Topeka	99.4	111.1	148.5	244.7	276.8
San Francisco	929.2	834.8	1,210.0	1,525.4	2,324.8
Consolidated	3,342.5	3,315.7	3,988.4	5,203.9	6,874.6

Mr. MCMURRAY. We split the San Francisco Bank into two banks.

Mr. THOMAS. Did you put a branch down in Los Angeles?

Mr. MCMURRAY. We left the San Francisco Bank. There were 13 States belonging to it. We put the new bank at Spokane, Wash.

Mr. THOMAS. I remember that.

Mr. MCMURRAY. San Francisco still will be the biggest bank, nevertheless.

Mr. THOMAS. What are its assets?

Mr. MCMURRAY. We will have that information available; we are to furnish it for the record.

OFFICE OF EXAMINATIONS AND SUPERVISIONS

Mr. THOMAS. Let us insert pages 96, 97, 98, and 100 in the record.

(The pages follow:)

PROGRAM HIGHLIGHTS

The Division of Examinations under the general direction of the Director of the Office conducts regular periodic and special supervisory examinations of all Federal savings and loan associations, of insured State-chartered savings and loan associations, other institutions of the savings and loan type insured by the Federal

Savings and Loan Insurance Corporation, and of noninsured member institutions of the Federal Home Loan Bank System not subject to State supervision. The Division also examines and analyzes the financial condition of institutions which apply for membership in the System, for insurance of accounts, or for conversion from a State to a Federal charter. The institutions examined bear the costs of examination, and the fees charged therefor are calculated to defray all of the operating expenses of the Division.

The Division of Supervision under the general direction of the Director of the Office is responsible for the supervision of institutions insured by the Federal Savings and Loan Insurance Corporation. The purpose of such supervision is to prevent the development and continuance of unsafe and unsound financial practices in these institutions and the correction of such practices where found. In carrying out the supervisory function, the Division reviews and analyzes the examination reports prepared by the Division of Examinations.

The following table reflects the work of the Office:

[Dollars in millions]

Description	1963 actual	1964 estimate	1965 estimate
Examinations completed or to be completed	4,500	4,640	4,674
Average assets of insured institutions (start of year)	$19.5	$21.9	$24.3
Average volume new loans made by insured institutions during year	$5.0	$5.3	$5.4

INTRODUCTION

The budget estimate of the Office for fiscal 1965 totals $13,443,000. The estimate reflects no increase in positions but an increase in man-years of 25.5 and an increase in funds of $796,000 when compared with the estimated expenses for the current fiscal year. In percentage terms there is an increase of 2.7 percent in man-years and 6.3 percent in funds.

Of the increase in funds $623,800 is in personnel compensation, $50,700 is in personnel benefits, $142,000 is in contractual services and supplies; there is a reduction of $20,500 in acquisition of capital assets.

The estimate is based on the assumption that the current rate of growth in the number and size of insured institutions will continue through fiscal 1965; it is also based on the need to maintain examining and supervisory schedules in a current status.

The examining and supervisory programs are designed to protect the financial risk and interests of the Federal Savings and Loan Insurance Corporation, thus carrying out some of the statutory responsibilities vested in the Federal Home Loan Bank Board. Such responsibilities at June 30, 1963, involved 4,386 insured institutions with aggregate assets of $96.2 billion and with reserves and undivided profits of $6.4 billion. The potential liability of the Insurance Corporation at June 30, 1963, was $83.0 billion; it guaranteed financial protection of their savings to more than 33.3 million savers who carried their savings in insured institutions of the savings and loan type.

FUNCTIONS AND RESPONSIBILITIES, OFFICE OF THE DIRECTOR

Under the general direction of the Chairman, Federal Home Loan Bank Board and/or the Federal Home Loan Bank Board, the Office carries out the Board's responsibilities for—

(1) The examination of the financial condition, operations, policies, and practices of all insured Federal or State-chartered savings and loan associations, as well as of uninsured member institutions at the request of a Federal home loan bank, insured institutions for which a conservator has been appointed, and any institution of which the Federal Savings and Loan Insurance Corporation has been appointed receiver; and

(2) The supervision of all Federal savings and loan associations and of all insured State-chartered savings and loan associations for the purpose of assuring compliance with applicable laws and regulations and of preventing the development and continuance of unsafe and unsound financial practices, and to effect correction of such practices when detected.

It formulates and recommends to the Board, and advises the Board regarding new or revised policies and procedures and such amendments of statutes and regulations as are made necessary or desirable by experience, public interest, the welfare of the business, or changing conditions; it carries out the Board's decisions and actions on such matters with and through the staff of the Office, the supervisory agents, and other officers of the Board.

It recommends to the Board that insurance of accounts of an insured institution be terminated or that the institution be ordered to show cause why insurance should not be terminated, whenever it is believed the facts warrant such action.

It recommends to the Board whether institutions found to be impaired or close to impairment, should be liquidated or assisted or made whole by a contribution or purchase of assets and, if the latter, the amount of the contribution or purchase, the terms and conditions, and requirements as to future management and policies.

FUNCTIONS AND RESPONSIBILITIES, DIVISION OF EXAMINATIONS

The Division under the general direction of the Director of the Office conducts regular periodic and special supervisory examinations of all Federal savings and loan associations and those State-chartered savings and loan associations, homestead associations, and cooperative banks, the savings or share accounts of which are insured by the Federal Savings and Loan Insurance Corporation.

Noninsured member institutions of the Federal Home Loan Bank System are examined by the Division if they are not subject to State examination and supervision or have not been examined by the State authorities.

The Division also examines applicant savings and home-financing institutions to determine their eligibility for membership in the Bank System, insurance of savings or share accounts, or conversion from State to Federal charter.

Public Law 895, approved July 3, 1948 (62 Stat. 1239), considers all necessary expenses of the Division of Examinations, in connection with the making of examinations, nonadministrative.

Growth of institutions subject to examination.—The combined assets of insured institutions increased in record volume during fiscal 1963, and reached the approximate total of $96.2 billion on June 30, 1963. The continuing growth in the fiscal years since 1960 is shown below:

[Dollars in billions]

Fiscal year	Assets	Amount and rate of increase					
		Last year		Last 3 years		Last 5 years	
		Amounts	Percent	Amount	Percent	Amount	Percent
1965 [1]	$124.2	$14.4	13.1	$40.8	48.9	$61.0	96.5
1964 [1]	109.8	13.6	14.1	37.3	51.4	54.0	96.8
1963	96.2	12.8	15.3	33.0	52.2	48.6	102.1
1962	83.4	10.9	15.0	27.6	49.5	41.3	98.1
1961	72.5	9.3	14.7	24.9	52.3	35.6	96.5
1960	63.2	7.4	13.2	21.1	50.1	31.6	100.0

[1] Estimated.

The average size of insured institutions as of June 30, 1963, was $21.9 million, an increase of $2.4 million (12.3 percent) during fiscal 1963, and an increase of $9.5 million (76.6 percent) during the past 5 years.

Mr. THOMAS. All of your State-chartered institutions are not enjoying your supervision?

Mr. MCMURRAY. That is right.

Mr. THOMAS. You are sure each of them in the system is examined?

Mr MCMURRAY. Yes, sir; those that are insured.

Mr. THOMAS. Once a year?

Mr. MCMURRAY. Yes, sir.

Mr. THOMAS. Examinations completed or to be completed—what do you mean "or to be completed"?

Mr. CORCORAN. That is for the 3 years, Mr. Chairman. In 1963 they have been completed.

NEW INSURED MEMBERS

Mr. THOMAS. How many associations will be brought into the system, State and Federal?

Mr. MCMURRAY. This year?

Mr. THOMAS. Yes.

Mr. MCMURRAY. About 125.

Mr. THOMAS. It has been averaging between 100 and 115 a year?

Mr. MCMURRAY. That is right.

Mr. THOMAS. Do you see an end to that growth?

Mr. MCMURRAY. I think that increase will continue for some time.

PROCESSING OF APPLICATIONS

Mr. THOMAS. How many applications for insurance do you have pending now, either State or Federal?

Mr. MCMURRAY. We have that information. My recollection is that it runs in the neighborhood of 60 to 80.

Mr. THOMAS. Out of that the past performance has been to grant anywhere from 100 to 115 a year?

Mr. MCMURRAY. That is right.

Mr. THOMAS. What is the length of time required to process one of the applicant's charters?

Mr. MCMURRAY. From the first day the application is made in the local bank——

Mr. THOMAS. What do you mean "made in the local bank"? You mean the people back in the district file it with their local bank?

Mr. MCMURRAY. That is right.

Mr. THOMAS. How long does it take the big bank to do its study and make recommendations?

Mr. MCMURRAY. I would say generally it takes about 30 to 50 days in the district bank.

Then it comes up here and takes about 6 weeks to 2 months generally.

Mr. THOMAS. What part of the time of the staff of the big district banks is consumed in processing new applications?

Mr. MCMURRAY. It would vary with the bank. For example, in the Greensboro Bank, where you have Florida and the Southern States of the east coast, you get many applications for new charters and branches.

On the other hand, in some of the banks, as in Cincinnati, you would not have very much business at all.

Mr. THOMAS. Why is that?

Mr. MCMURRAY. First of all, the area is not a growing area, more of a stable area populationwise.

Secondly, they have a fair number of associations which already exist in those States.

Mr. THOMAS. What time did you say was required? Thirty days in the district banks? How much time at headquarters?

Mr. McMURRAY. It varies with the application. Roughly from 30 to 50 days in the bank, depending on the kind of an application it is, and the problems involved, and probably with an average of 40 to 45 days. Then it comes to us and——

Mr. THOMAS. Does the organization here go over the same detail that the district bank does?

Mr. McMURRAY. We analyze whatever is received. In many cases there is an independent check made in the area of the information received. Then it is given legal clearance.

Mr. THOMAS. What percentage of the applications is it that you disagree with?

Mr. McMURRAY. It is quite frequently that we disagree with the bank. I don't know the percentage. There again some of the banks send in a great number, and where there is a great number I suppose there is more information with which we do not agree.

With the banks that send in very little there is more likely to be agreement.

Mr. THOMAS. The bottom line on page 96 is interesting. "Average volume new loans made." It runs about $5 million a year in new loans. That is a healthy growth rate; is it not?

Mr. McMURRAY. Yes, sir.

Mr. THOMAS. What is the total employment in the Examinations Division now?

Mr. CORCORAN. We show on January 18, 1964, Division of Examinations and Supervision, 911. Examiners were 747.

EXAMINATION WORKLOAD

Mr. THOMAS. Insert page 104 in the record at this point.
(The page follows:)

Examination workload

	Actual, 1963	Estimate, 1964	Estimate, 1965
Federal associations:			
Number of associations	1,922	1,957	1,994
New associations and additional examinations	110	100	63

Personnel required:			
Examining personnel	745	801	801
Less: chief examiners	12	12	12
Field examiners	[1] 733	789	789

[1] Does not include 11 man-years used in "special examinations."

Mr. THOMAS. You show 12 chief examiners here. The total is about 789. Those are the field examiners. The total is about 801; is it not?

Do you have any more than this? Are the chief examiners all the supervision you have?

Mr. MCMURRAY. No, sir.

Mr. THOMAS. This adds up to 801. What is the total? Is it 900? Did you use the figure of 900 last year?

Mr. MCMURRAY. Yes, sir, about 900. The clerical staff and district office staffs run close to 95. These are only the technical groups here.

Mr. THOMAS. They are officed at the 11 big banks?

Mr. MCMURRAY. That is right.

Mr. THOMAS. Let us insert page 112 in the record.

(The page follows:)

Office of Examinations and Supervision

Mr. THOMAS. Next year, why can't you enlarge this table to show assets?

Mr. MCMURRAY. All right.

Mr. THOMAS. No need to have two or three tables. This can give the whole story.

The largest here is in Greensboro, positionwise but not dollarwise.

At San Francisco you have about 180, but you have split this, have you not?

Mr. MCMURRAY. Yes; that is split. Roughly, San Francisco would be about eight times bigger than Spokane.

Mr. THOMAS. You do not increase positions—925 against 925.

Mr. MCMURRAY. That is right.

Mr. THOMAS. Here is a good paragraph on page 127. You are constantly seeking to improve the effectiveness and efficiency of your operations. The next page is important, page 128. Let us insert that.

(Page 128 referred to follows:)

FEDERAL SAVINGS AND LOAN INSURANCE CORPORATION

Some of the functions, duties, and personnel of the Office of the General Manager were transferred to the new Office of the Director, Federal Savings and Loan Insurance Corporation. The functions, duties, and personnel of the Underwriting Division were transferred to the new Application Division of the Board. The functions, duties, and personnel of the Insurance Settlement and Rehabilitation Division were transferred to the new Office of the Director, Federal Savings and Loan Insurance Corporation. The functions, duties, and personnel of the Operating Analysis Division were transferred to the recreated Operating Analysis Division in the Board. The functions, duties, and personnel of the Comptroller's Division were transferred to the Comptroller's Division of the Board.

Mr. THOMAS. We have seen many of these reorganizations. Every time we see a reorganization we look next year for an increase in expense.

Mr. MCMURRAY. You just wait and see.

Mr. JONAS. And we usually find it.

ADMINISTRATIVE EXPENSES

Mr. THOMAS. Let us insert pages 143, 144, and 145 in the record.

(The pages follow:)

FEDERAL SAVINGS AND LOAN INSURANCE CORPORATION

ADMINISTRATIVE EXPENSES

Administrative and other expenses of the Corporation are paid from corporate funds received from insurance premiums, admission fees, and interest on investments.

The continued increase in the growth and level of activity of the savings and loan business reflects itself in the workload. The aggregate assets of insured institutions, the number of applications of all types received, the problems associated with a very fast growing industry, etc., all continue to maintain a high level. Membership increased during fiscal 1963 by 119, reaching 4,386 at June 30, 1963. Membership assets on the same date aggregated $96.2 billion, an increase of $12.8 billion or 15.3 percent in 1 year. They are expected to reach $124.2 billion by June 30, 1965, an increase of $28 billion or 29.1 percent in 2 years. Mortgage loans made by insured institutions in fiscal 1963 aggregated $21.9 billion. This figure broke the record, made 1 year ago, by $3.3 billion or 17.6 percent. Loans are expected to reach $23.8 billion during the current fiscal year and $24.9 billion in 1965. Potential liability increased from $71.8 billion at June 30, 1962, to $83 billion at June 30, 1963, an increase of $11.2 billion or 15.6 percent. This growth is expected to continue, reaching $107.1 billion by June 30, 1965, an increase of $24.1 billion or 29 percent in 2 years.

Due to the availability of the facilities, and the reorganization of the Board, the Corporation functions with a small staff. The estimate provides for an authorization of $225,000. On a comparable basis, it reflects a net decrease in funds of $20,788 when compared with the current fiscal year.

A comparative summary of administrative expenses for the last prior, current, and budget years as well as an analysis of personal services functions, other object classifications by type of object, and including justification of any increase or decrease will be found beginning on page 144.

OFFICE OF THE DIRECTOR

Mr. THOMAS. Insert page 146. This is the Office of the Director and the only positions that remain in the corporation.

(The page follows:)

Office of the Director

	1963 actual	1964 estimate	1965 estimate
Positions			16
Man-years			16
Net salary			$174,500

Under the general direction of the Federal Home Loan Bank Board this Office will review all insurance matters, including insurance settlement and rehabilitation, and advise the Board thereon. It will also develop policy guidelines for use by the Board and staff units in the handling of matters or cases affecting insurance interests.

The Office will be composed of the Insurable Interests Section, and the Insurance Settlement Section.

Insurable interests section.—This section will be responsible for reviewing all applications for insurance, subsequent to initial processing by the Applications Division of the Board and before their submission to the Board; it will also be responsible for reviewing other proposed actions directly affecting the interests of the Corporation and for advising the Board concerning such applications and such other proposed actions.

Insurance Settlement Section.—This Section, when required, will take steps, authorized by law, to prevent default or to restore insured institutions to normal operations. It will supervise the payment of insurance claims; it will develop plans for the settlement of insurance claims and/or the recovery and conversion into cash of assets of institutions in cases where the Corporation is appointed receiver.

Mr. THOMAS. Off the record.

(Discussion held off the record.)

ACQUISITION OF ASSETS

Mr. DELAITTRE. Of the $105 million of mortgages and real estate owned at the end of last year belonging to the Insurance Corporation, approximately $40 million resulted from the Long Beach situation some time ago.

Approximately $2½ million resulted from a situation in Memphis a couple years ago.

The balance of mortgages and real estate is something over $60 million and have come to us during the past year from three associations in Chicago.

Mr. THOMAS. We are not interested in the names.

What Mr. Jonas wants to know is your record of performance. What is your loss, if any?

INSURANCE LOSSES

Mr. JONAS. What is your experience with them? Relate that, then, to the trouble you might have with respect to those the Insurance Corporation might acquire.

Mr. HUSBAND. Of the assets acquired we obtained some $14 million last May 1, and much of the balance was obtained this past October. You do not have sufficient time to evaluate what the performance will be.

Mr. THOMAS. What is your guess? You are able to come to some accurate conclusion by now.

Is it a 15-percent loss, 25 percent, 50 percent?

Mr. HUSBAND. I would estimate the losses for the three Chicago cases will approximate $10 million.

Mr. THOMAS. Out of what?

Mr. HUSBAND. Out of $60 million.

Mr. JONAS. That was a special situation regarding those three. How about the $14 million you took over last May? What is your experience there? Are they making the payments?

Mr. HUSBAND. I included it in the $10 million——

Mr. JONAS. The $14 million?

Mr. HUSBAND. I included that in the $10 million, Congressman.

Mr. THOMAS. Mr. Jonas, you might pursue it a little further. You might see what it was 6, 8, 10, 15 years ago.

Mr. JONAS. Give us a little record.

Mr. HUSBAND. Our losses up to about 2 years ago for the first 28 years of operation amounted to $5,400,000. Our estimated losses as of December 30, 1963, are $16.5 million. Within the last 2 years we have picked up roughly $11 million of losses.

Mr. JONAS. Did you find that those losses were increasing in the periods when we have been in recessions during the last decade?

Mr. HUSBAND. I would put it in reverse. Losses have come during periods of boom. In other words, there is overindulgence rather than underindulgence.

As Chairman McMurray said earlier, you have the wrong people in.

Mr. JONAS. Too liberal with their money?

Mr. HUSBAND. That is right.

Mr. THOMAS. Too anxious to make loans?

Mr. HUSBAND. That is right.

Mr. THOMAS. Competition for loans is great?

Mr. HUSBAND. That is right.

Mr. HORNE. They bargain one against the other and make deals.

Mr. THOMAS. Do you have a law that officers and directors cannot borrow from their own institutions?

Mr. HUSBAND. Yes, sir; but they scratch each other's backs.

Mr. HORNE. They crisscross and get around the law.

ASSOCIATIONS' INVESTMENTS IN NEW QUARTERS

Mr. JONAS. As I drive around the country I see savings and loan associations building magnificent offices. Is that a trend which is general throughout the country? Are some spending too much money on plush quarters?

Mr. MCMURRAY. There have been a great number of nice buildings erected by the associations. They are not allowed under our own regulations to invest in buildings in excess of their reserves and surplus without Board approval. In other words, they are held down to that.

The good associations are rather careful about maintaining what they consider a good ratio in terms of their investment in building quarters compared to their total assets.

The asociations that have built nice quarters find it is quite profitable in terms of attracting savings and attracting business. It is really amazing how much a good building attracts customers.

As soon as you build a new building the savers come in.

Mr. THOMAS. Putting up a good front. It always helps.

REORGANIZATION

Mr. JONAS. I wish you would turn to page 20, Mr. Chairman. This is apropos of your comemnt to Mr. McMurray that these organizations always seem to turn out to cost more money.

Mr. MCMURRAY. Did I say that?

Mr. JONAS. No; you didn't say that.

How can you say that your reorganization will not cost more money? Take the fourth column for 1965, $540,000, when you get the reorganization into effect, and that is more than either one of the previous 2 years, compared with $248,000 in 1964 and $172,000 in 1963. It seems as though when you get the reorganization into effect it will cost $300,000 to $400,000 more.

Mr. MCMURRAY. All I can say to you, Mr. Jonas, is that it would have cost a lot more if we did not reorganize.

As a result of our reorganization we have not increased the number of personnel.

Mr. JONAS. Your answer is that if you had not reorganized the 1965 figure would have been much higher?

Mr. MCMURRAY. Much higher.

Mr. THOMAS. Off the record.

(Discussion held off the record.)

Mr. JONAS. What did you mean when you said the Board made 10 offers to the public?

Mr. MCMURRAY. No, sir. The 11 banks, now 12 banks, issue consolidated obligations, just like Treasury notes. We sell them on the market. The rates on those obligations run from 15 to 30 points above those of the Treasury, and with that money the banks make loans to the associations. That is how they get their money, by going to the market.

PRINTING AND REPRODUCTION

Mr. SHIPLEY. I see under "All other expenses," on page 12, printing and reproduction, $15,500. What did you get in the budget last year, $10,000?

Ten thousand dollars is what you requested last year. I wonder why more than 50-percent increase in printing and reproduction.

Mr. CORCORAN. We got $41,000 against $25,500 for this year.

Mr. SHIPLEY. I understand there is some you have to do, but why the large increases for every agency which comes before us? Some come in with a 50- to 75-percent increase on printing and reproduction. Couldn't you cut that in half?

Mr. CORCORAN. You mean the increase?

Mr. SHIPLEY. Yes.

Mr. MCMURRAY. If you are acquainted with the material we send out, Mr. Shipley, I think you will find it is very valuable for the institutions we serve, the industry, and so on. We are issuing more statistics than heretofore. We have the series on interest rates, the series on foreclosures which is new, and those two alone perhaps account for a good portion of this.

Mr. SHIPLEY. You cut down on printing and reproduction and then cut down on postage and then cut down on man-hours to put this out, and there is a long chain involved.

Mr. CORCORAN. We are now going to print a 32-page Federal Home Loan Bank Board Review. The difference between the 2 years is $17,000. It is costing us $17,000 more in 1965 than in 1964 for this review. Provision is made for approximately 3 months in the current fiscal year and for the full year in 1965.

Mr. MCMURRAY. Most of our material goes to the savings and loan institutions that need this information and to the people in the financial community that make use of it. It is a good investment for these institutions because they ultimately pay for it themselves, through membership in the home loan banks. What we are really doing is servicing them with this kind of material. Most of the material that comes out is very valuable.

The three Board members pride themselves on being concerned about a dollar's value for every dollar spent.

Though in detail I cannot answer your question, all I can say is that of the material that comes across my desk which goes out of our agency, there is nothing, as far as I can see, that we can cut down on; if we cut down it would be a disservice to the associations and the public.

Whether any more economies can be made, I am not sure. Memorandum after memorandum has gone to the directors of our various offices emphasizing the importance of economy. We hope the word is out as to how we feel. If that figure is there and it is not spent——

Mr. SHIPLEY. The only point I make is that every agency comes in every year with a request for twice as much as they had. This is a big item.

Mr. HORNE. This one item——

Mr. THOMAS. Last year we cut it 15 percent, I believe.

Mr. HORNE. This one item accounts for most of this, the Monthly Review.

Mr. SHIPLEY. I am sure it is a good publication. I am saying it is a shame that every agency comes in with a 50-percent increase every year.

PAY ACT COSTS

Mr. THOMAS. The pay increase is how much? I refer to the statutory increase. I don't remember seeing that anywhere.

Mr. CORCORAN. $44,000, the increase in 1965 over 1964 for the Board and staff offices; for 1965 it is approximately $88,000.

ANNUALIZATION COSTS

Mr. THOMAS. Can you give us a rough figure of the annualization bill compared to last year?

Mr. CORCORAN. On a comparable basis, it is $137,000 for 1965; it was $74,000 last year.

Mr. THOMAS. What page is that on?

Mr. CORCORAN. It is in my black book, sir.

Mr. THOMAS. Where is it in our records?

Mr. CORCORAN. It is not. I gave the original of my notes on it to the clerk.

Mr. THOMAS. $137,000 this year and $74,000 last year?

Mr. CORCORAN. Yes, sir. I don't know how many people that covers. We will furnish it for the record.

(The following was supplied for the record:)

Thirty positions will be annualized.

Mr. THOMAS. What is the pay increase?

Mr. CORCORAN. $44,000 for this year in the Board and staff offices, and about $88,000 for fiscal 1965.

Mr. THOMAS. Less than $200,000?

Mr. CORCORAN. $778,000 worth of positions were transferred from the Insurance Corporation to the Board for 1965.

Mr. THOMAS. Thank you, gentlemen. We always like to have you here. You are very knowledgeable and we enjoy having you.

Mr. MCMURRAY. Thank you, Mr. Chairman and gentlemen.

THURSDAY, FEBRUARY 6, 1964.

CIVIL SERVICE COMMISSION

WITNESSES

JOHN W. MACY, JR., CHAIRMAN
L. J. ANDOLSEK, COMMISSIONER
WARREN B. IRONS, EXECUTIVE DIRECTOR
DAVID F. WILLIAMS, DIRECTOR, BUREAU OF MANAGEMENT SERVICES
W. B. UHLENHOP, CHIEF, BUDGET AND FINANCE DIVISION
JAMES A. HAMILL, CHIEF, BUDGET SECTION
N. J. OGANOVIC, DEPUTY EXECUTIVE DIRECTOR
SEYMOUR S. BERLIN, DIRECTOR, BUREAU OF INSPECTIONS
KIMBELL JOHNSON, DIRECTOR, BUREAU OF PERSONNEL INVESTIGATIONS
ANDREW E. RUDDOCK, DIRECTOR, BUREAU OF RETIREMENT AND INSURANCE
O. GLENN STAHL, DIRECTOR, BUREAU OF PROGRAMS AND STANDARDS
MISS EVELYN HARRISON, DEPUTY DIRECTOR, BUREAU OF PROGRAMS AND STANDARDS

Mr. THOMAS. We have with us this morning our friends from the Civil Service Commission. It is always one of the highlights of our year to have the Civil Service Commission with us. We are delighted and honored to have Mr. Macy, the Chairman; Mr. Andolsek, Commissioner, who has been on the Hill here for many years with us; Mr. Irons—have you a vacancy?

Mr. MACY. Commissioner Hampton is the third Commissioner. He is ill today and was unable to be with us. He sends his regrets.

Mr. THOMAS. Give him our best and tell him we miss him.

It is always nice to have our old friends with us, the Executive Director, Mr. Irons; Mr. Williams, Director, Bureau of Management Services; Mr. Uhlenhop, Chief, Budget and Finance Division, and Mr. Hamill, Chief, Budget Section.

We also have Mr. Oganovic, Deputy Executive Director; Mr. Berlin, Director of the Bureau of Inspections; Mr. Johnson, Director, Bureau of Personnel Investigations; Mr. Ruddock, Director, Bureau of Retirement and Insurance.

Also we have Mr. Stahl, Director of the Bureau of Programs and Standards, and Miss Evelyn Harrison. Miss Harrison used to come over about once every other year. Madam Harrison, we respectfully request you come to see us every year.

Mr. Chairman, do you or your colleagues have a general statement?

Mr. MACY. I have a brief 10-minute statement here which I believe will summarize the Commission's position with respect to the estimates for fiscal year 1965.

Mr. Chairman and members of the committee, we are glad to meet with you to discuss the program goals and financial requirements of the Civil Service Commission for fiscal year 1965.

FEDERAL EMPLOYMENT

With respect to employment in the executive branch the President's budget established employment ceilings of 2,512,400 for June 30, 1964, and 2,511,200 for June 30, 1965. In establishing these ceilings President Johnson made it clear that they constituted ceiling figures and not employment goals.

Mr. THOMAS. What is the reduction?

Mr. MACY. 1,200 between the 2 years.

Mr. THOMAS. It is in the fiscal year, is it not?

Mr. MACY. 1,200 in the fiscal year.

Mr. THOMAS. From the beginning of the fiscal year to the end?

Mr. MACY. That is correct. As stated in the budget, the President directed the heads of all departments and agencies to work toward reducing employment below these ceiling figures. For example, in the Commission the approved ceiling as of June 30, 1964, is 4,125. I have directed our employment level to be reduced to 4,079 by that date, which is the approved ceiling figure for June 30, 1965. It is expected that heads of other agencies and departments will take similar action which will result in a decrease in the level of employment in the executive branch.

Mr. JONAS. Do you think that can be accomplished, all of it, through attrition?

Mr. MACY. The great bulk of it can be accomplished through attrition. The only place where I have some reservation about our capability of doing this is with respect to the bases being closed or phased out by the Department of Defense.

However, Secretary McNamara has made it clear that every employee who is involved in one of those base closings will be given an opportunity for employment elsewhere in the Defense Department.

TURNOVER RATE

Mr. JONAS. What is the current turnover rate?

Mr. MACY. The current new hire rate Government-wide on an annual basis is approximately 14.4 percent, which would mean slightly over 1 percent a month.

Mr. THOMAS. Have we not been using the figure of 16 percent?

Mr. MACY. Yes, sir.

Mr. THOMAS. How do you account for the reduction from 16 to 14?

Mr. MACY. There has been a reduction in the amount of turnover attributable to the improved salary scales being offered, and to good management on the part of the departments and agencies.

Mr. THOMAS. The high level of unemployment is not the biggest factor?

Mr. MACY. The availability of skills in the labor market undoubtedly contributes.

Mr. THOMAS. Certainly it is an important factor?

Mr. MACY. In some areas.

Mr. THOMAS. Jobs are hard to come by and the man who has one will hang onto it. Is that right?

Mr. MACY. Also, Mr. Chairman, we have found from past experience that when employment is stable in the Federal Government there is a tendency for those who are in Government jobs to remain on those jobs rather than to leave; whereas when the employment is rising there tends to be a higher turnover.

TRANSFERS DUE TO REDUCTIONS IN FORCE

Mr. BOLAND. What has been the experience of Civil Service where there have been reductions in force? Secretary McNamara has said he will give the opportunity to transfer where there are serious reductions. This transfer of people does not work very well. What percentage is transferred? If you have 500 laid off at a Navy yard or a defense installation, what percentage would transfer to California or some other area?

Mr. MACY. The great effort, Mr. Boland, is to place those who have become surplus within the immediate area in another defense activity.

Mr. BOLAND. This is a lot of nice talk but it really doesn't work that way at all; does it? You say the great effort is to place them in the area. I would like to see some figures sometime as to actually how many are placed. You get mechanics laid off in a Government installation in a particular area; no other Government installation picks them up at all because they are also working on a reduction-in-force program, so this does not work at all. It sounds nice all the time and it is great to see it.

(Discussion held off the record.)

Mr. MACY. Let me assure you we are making every possible effort.

Mr. BOLAND. I know you are making the effort.

Mr. MACY. We cannot guarantee that everybody will get a job. There is not only effort in the Defense Department but there is an interdepartmental effort.

Mr. BOLAND. What do you do with mechanics? You talk about interdepartmental efforts. Civil Service does as good a job as it can do, but actually the job does not really square with the press releases and notices we get as to what actually is done. Where do you put mechanics if you lay them off? You can't put them anywhere.

Mr. MACY. We try to use them in the local area or move them to another location if they are willing to go.

Mr. BOLAND. You don't get a great number of r.i.f.'s in most of the other agencies. Big reductions come in Defense, as we all know.

Mr. MACY. That is correct.

Mr. BOLAND. It is easier to accomplish a transfer in other agencies than with employees in the Department of Defense.

Mr. MACY. You are right. This is a serious problem in Defense. That is why I qualified my response to Mr. Jonas with respect to our ability to actually place these people. However, we are determined as these bases are closed down to bear in mind the human factor involved.

One reason Mr. McNamara has phased them out over a longer period of time is so we can do something about the individual.

Mr. BOLAND. I think it is good judgment and I applaud the Civil Service efforts to place these people. I think it tries and does do a good job, but it is minimal. It has not touched the big reductions in force.

Mr. EVINS. Many are placed in retraining schools to retrain in other skills?

Mr. MACY. In some cases. Of course, we are limited in placing them in other agencies to those jobs where the skills are transferable. Where you have a man doing a specialized mechanical or machinist's job on a particular weapon, it is very difficult to transfer unless there is some kind of retraining, as Mr. Evins says.

Mr. WILLIAMS. During fiscal 1963 more than 35,000 people did transfer from one Government job to another. What we don't know is how many of these were transfers because they were losing their jobs or because of promotional opportunities.

CURRENT FEDERAL EMPLOYMENT

Mr. JONAS. One other figure for comparative purposes.

Where you interrupted your presentation, if you could put in the employment level as of January 1, 1964.

Mr. THOMAS. Yes, let us get those figures.

Mr. MACY. Very well, sir.

(Discussion held off the record.)

Mr. MACY. Sir, the strength report as of December 31, 1963, shows executive branch employment at 2,476,000.

Mr. THOMAS. What is it?

Mr. MACY. 2,476,000.

Mr. THOMAS. Go ahead.

Mr. MACY. This is roughly 40,000 less——

Mr. THOMAS. What was the figure of 12 months ago?

Mr. MACY. Twelve months ago—we have it——

Mr. THOMAS. Wasn't it around 2.5 million?

Mr. MACY. The figure at June 30, 1963, was 2,497,000. The figure at the end of December was——

Mr. THOMAS. Make it round figures. It has been more or less stationary for the last 3 or 4 years at 2.5 million. Is that about accurate?

Mr. MACY. That is about accurate. There was an increase in 1961 and in 1962.

Since 1962 there has been——

Mr. THOMAS. Repeat for the record—what is the aim of this administration, through Mr. McNamara's closing these installations, and so on, and what will that figure be at the end of the present fiscal year?

Mr. MACY. At the end of the present fiscal year the President has set an absolute ceiling of 2,512,000.

Mr. THOMAS. There is no reduction, then.

Mr. MACY. The reason there is no reduction from the current figure is that the ceiling reflects seasonal employment.

Mr. THOMAS. All right; give us the present calendar year.

Mr. MACY. There is no forecast for that particular time.

Mr. THOMAS. Do you see a reduction, gentlemen? Where is the reduction?

Mr. MACY. The increase in the next 6 months is due to seasonal employment that occurs during the spring and summer months. That will bring it up in the neighborhood of this ceiling figure.

Mr. EVINS. A slight reduction in ceiling but not actual jobs.

FEDERAL EMPLOYMENT, 1959–63

Mr. JONAS. To have real comparability you would have to use December 31 and June 30 figures over a period of time because there is fluctuation.

Mr. THOMAS. Mr. Chairman, why not give us a table, say as of January 1, of the last 5 years or some comparable period?

Mr. MACY. I can give you the figures right now for June 30.

Mr. THOMAS. For 5 years?

Mr. MACY. Back to 1957.

Mr. THOMAS. Read it into the record and then put it into the record in the form of a table.

Mr. MACY. The executive branch strength at the end of the fiscal years were as follows:

1957, 2,389,000; 1958, 2,354,000; 1959, 2,354,000; 1960, 2,370,000; 1961, 2,407,000; 1962, 2,484,000; and 1963, 2,497,000.

Then the figure I gave you for December 31, 1963, 6 months after the previous figure, is 2,476,000, which shows a reduction of 21,000 in the 6 months period.

(The information requested follows:)

Executive branch employment, 1959–63

Year	June 30	Dec. 31 [1]
1963	2,497,699	2,476,122
1962	2,484,654	2,474,732
1961	2,407,029	2,419,008
1960	2,370,827	2,345,012
1959	2,355,027	2,352,614

[1] Excluding Post Office Christmas temporary employees.

Mr. THOMAS. What will be the hopes and aspirations for December 31, 1964? What is the target?

Mr. MACY. The target for that date should be——

Mr. THOMAS. Is that a guess figure?

Mr. MACY. A guess figure of about 20,000 less than the present figure.

GENERAL STATEMENT

Mr. THOMAS. Have you finished your statement?

Mr. MACY. May I file my complete statement for the record?

Mr. THOMAS. Yes, we shall insert it in the record.

(Mr. Macy's statement follows:)

STATEMENT BY JOHN W. MACY, JR., CHAIRMAN, U.S. CIVIL SERVICE COMMISSION

Mr. Chairman and members of the committee, we are glad to meet with you to discuss the program goals and financial requirements of the Civil Service Commission for fiscal year 1965.

With respect to employment in the executive branch the President's budget established employment ceilings of 2,512,400 for June 30, 1964, and 2,511,200 for June 30, 1965. In establishing these ceilings President Johnson made it clear that they constituted ceiling figures and not employment goals. As stated in the budget, the President directed the heads of all departments and agencies to work toward reducing employment below these target figures. For example, in the Commission the approved ceiling as of June 30, 1964, is 4,125. I have directed our employment level to be reduced to 4,079 by that date, which is the approved ceiling figure for June 30, 1965. It is expected that heads of other agencies and departments will take similar action which will result in a decrease in the level of employment in the executive branch.

During the past 2 years the Commission has achieved significant reductions in administrative and operating costs. These economies, which I discussed with you last year, made it possible to assume new responsibilities and workloads without increased appropriations and to absorb more than 40 percent of increased pay costs in fiscal year 1963. Although increased workloads in certain areas of the Commission's responsibilities are inevitable and beyond our control, we expect continued improvements and efficiencies to occur; and, in the spirit of President Johnson's desire to reduce Federal employment, we expect the overall employment of the Commission to decline. I want to assure you that the Commission will continue to render essential services to the agencies and the public without impairment and we will continue to seek ways to improve our operations.

I would like to discuss briefly and highlight the principal changes in the various appropriations and funds for which the Civil Service Commission has responsibility.

SALARIES AND EXPENSES APPROPRIATION

For salaries and expenses, the budget request of $22,187,000 represents a net increase of $382,000 over the amount appropriated for fiscal year 1964. At comparable pay scales the total budget request is only $11,000 over the current fiscal year program. A reduction of 36 positions and $230,400 is expected to result from continued improvements in operations and slight reductions in some workload items during 1965.

An increase of $267,000 is requested for expenses other than salaries. This will provide for three items costing $365,000 offset by a reduction in travel requirements of $98,000. The items requested are: (1) The purchase of mechanized filing equipment for the investigative index and security files, $165,000; (2) the purchase of an electronic digital computer, $133,000; and (3) increased cost of telecommunications services to be charged by the General Services Administration, $67,000.

The purchase of the improved filing equipment will eliminate the need for 10 positions at an annual saving of $43,000 in salary costs and this saving has been given effect in this request. The Commission acquired an electronic digital computer in 1962 on a lease with option to purchase. Our experience with this equipment has clearly demonstrated its value to the operations of the Commission on a continuing basis. The optimum time to purchase the equipment, in terms of savings to the Government, is during fiscal year 1965.

INVESTIGATION OF U.S. CITIZENS FOR EMPLOYMENT BY INTERNATIONAL ORGANIZATIONS

This appropriation is used to finance investigations by the Civil Service Commission and the Federal Bureau of Investigation of U.S. citizens seeking employment by international organizations. The Commission and the FBI are merely the service organizations in this regard and have no control over the workloads received.

The budget request for fiscal year 1965 of $634,000 is an increase of $34,000 over the current year. The request is based upon workload estimates furnished by the Department of State and the higher pay scales to be in effect during fiscal year 1965.

The prompt investigation of the requests received in this program is of vital importance.

ANNUITIES UNDER SPECIAL ACTS

Annuities are paid to persons who were employed on the construction of the Panama Canal or to their widows, and benefits are paid to widows of former employees of the Lighthouse Service.

The requirements for this item decrease each year due to drops from the annuity rolls caused by deaths. The budget request of $1,700,000 reflects a decrease of $100,000 and provides for the continuation of annuities authorized.

GOVERNMENT PAYMENT FOR ANNUITANTS, EMPLOYEES HEALTH BENEFITS FUND

This appropriation covers the contribution of the Government toward the cost of health benefits for annuitants participating in this program, and these funds are placed in the employees health benefits fund. The number of annuitants enrolled in this program increases each year resulting in an increase in the Government's contribution required. The enrollment of 116,300 on June 30, 1963, is expected to increase to over 200,000 by 1965.

The Government's share of the cost in 1965 is estimated to be $11,469,000. However, utilization of an expected unobligated balance in the fund of $805,000 brings the appropriation request down to $10,664,000.

An expense limitation of $1,151,000 is requested to provide for the administration of the employee health benefits program in fiscal year 1965.

GOVERNMENT CONTRIBUTIONS, RETIRED EMPLOYEES HEALTH BENEFITS FUND

This appropriation provides the Government's share of the cost of health benefits coverage to those annuitants not eligible to participate in the employees' program. An appropriation of $14,840,000 is requested based on current premium rates and the number of participants.

An expense limitation of $348,000 is requested for administration of the program in fiscal year 1965. As in the past 2 years, the Commission is requesting a dollar limitation to cover administrative expenses of the retired employees health benefits program in lieu of the limitation of 2 percent of the Government's contribution as provided in the basic act. The bill, H.R. 3517, to remove the 2-percent limitation has been approved by the House and is now pending in the Senate.

PAYMENT TO CIVIL SERVICE RETIREMENT AND DISABILITY FUND

Funds in the amount of $65 million are requested under this head to cover the cost of increased benefits in fiscal year 1965 payable under part III of Public Law 87–793. As required by law, estimates of the appropriation necessary to finance the fund on a normal cost plus interest basis are included in the document before you. However, an appropriation request for this amount is not being made.

Bills have been introduced in both the House and Senate to improve the method of financing the civil service retirement system. Hearings were held last summer by the Senate Post Office and Civil Service Committee, and we hope that the Congress will act on this matter during the current session.

LIMITATION ON ADMINISTRATIVE EXPENSES, EMPLOYEES' LIFE INSURANCE FUND

A limitation of $277,000 is requested to provide for administration of the Federal employees group life insurance program. The workload increases slightly each year because of the larger number of insured annuitants participating in the regular program.

This concludes my opening statement, gentlemen. We shall be glad to answer any questions the committee may have.

PAY INCREASE COST IN 1965

Mr. THOMAS. What is the amount of the pay increase in this budget, 2½ percent? It is automatic, statutory.

Mr. MACY. Automatic and for a full year. It is $371,000 above 1964 for the Commission's salaries and expenses appropriation.

Mr. THOMAS. Is it on a 6 months' basis or 12 months?
Mr. MACY. Twelve months in 1965.
Mr. THOMAS. Full annual basis in 1965. What is the total amount?
Mr. MACY. $371,000.
Mr. THOMAS. How much did you absorb of that?
Mr. MACY. We absorbed 40 percent of the increase in 1963. The increase in 1965 is an extension of the salary level——
Mr. THOMAS. How much of the $371,000 did you absorb?
Mr. WILLIAMS. Forty percent required of us in the current fiscal year and——
Mr. THOMAS. That is water over the dam. How much this year?
Mr. WILLIAMS. None.
Mr. THOMAS. That is what I was afraid of.
Mr. WILLIAMS. However, we have offset $230,000 of the $371,000 increase which has occurred by other administrative savings.

FINANCING THE CIVIL SERVICE RETIREMENT FUND

Mr. JONAS. By reason of what you say on page 5 of your statement, will you explain in a little more detail the first paragraph there on page 5? Does this mean you are not asking for any money to continue the program of keeping the civil service retirement fund current?
Mr. MACY. This means we are not asking for any additional money to bolster the fund in view of the bills currently pending to provide for improved financing of the retirement fund.
Mr. JONAS. In the past few years we have been paying in agency by agency enough money to keep the fund from becoming more delinquent or more in the red. You are not asking for money to do that this year?
Mr. MACY. No. The $65 million referred to here is the money necessary to pay for the annuity increase authorized in part 3 of Public Law 87–793.
Mr. JONAS. I understand that.
Mr. MACY. And that is all. We are not requesting additional funds because of the bills that are pending to provide for improved retirement financing over the long-term future. This is embodied in H.R. 6412 and 6366.
Mr. JONAS. If those bills do not become law how much higher will the deficit go this year?
Mr. MACY. If those bills do not become law the increase in the unfunded liability will be about $1,100 million.
Mr. JONAS. Up to what?
Mr. MACY. Which will raise it up to approximately $37 billion.
Mr. THOMAS. Off the record.
(Discussion held off the record.)

SUMMARY OF BUDGET ESTIMATES

Mr. THOMAS. Let us insert page (i) in the record at this point, the cover sheet. It is a good breakdown.

(The page follows:)

JUSTIFICATIONS OF ESTIMATES OF APPROPRIATIONS FOR FISCAL YEAR 1965

The Civil Service Commission submits herewith its estimates of appropriations and fund requirements for fiscal year 1965, together with detailed justifications therefor. A comparative summary of amounts requested for fiscal year 1965 to current year amounts follows:

Appropriation or fund title	Fiscal year 1964	Fiscal year 1965	Changes (+ or −), 1965 estimates over 1964
Salaries and expenses	$21,805,000	$22,187,000	+$382,000
Investigation of U.S. citizens for employment by international organizations	600,000	634,000	+34,000
Annuities under special acts	1,800,000	1,700,000	−100,000
Government payment for annuitants, employees' health benefits fund	9,500,000	10,664,000	+1,164,000
Administrative expenses, employees' health benefits fund (limitation only)	1,125,000	1,151,000	+26,000
Government contributions, retired employees' health benefits fund	14,800,000	14,840,000	+40,000
Administrative expenses, retired employees' health benefits fund (limitation only)	392,000	348,000	−44,000
Payment to civil service retirement and disability fund	62,000,000	65,000,000	+3,000,000
Administrative expenses, employees' life insurance fund (limitation only)	270,000	277,000	+7,000

NUMBER OF EMPLOYEES IN CSC

Mr. THOMAS. How many new jobs do you have? There is no table where you pull it all together jobwise. Do you have one in your private files by activities?

Mr. MACY. Reductions by activities?

Mr. THOMAS. Employment by activities all on one sheet. The information is here but you have to go through every activity and add up all the jobs. Is this $382,000 increase all pay act costs? How many jobs do you have?

Mr. MACY. Actually the amount of money——

Mr. THOMAS. Thirty-six?

Mr. MACY. There is a reduction of 36 positions in the salaries and expenses appropriation request for fiscal year 1965. An increase of $382,000 results when the Commission's 1965 request is compared to the 1964 appropriation covering salaries at the lower pay rates. If 1965 were compared to 1964 adjusted to a comparable basis, the increase is only $11,000. The increase is predominantly in nonsalary items. It provides for the purchase of mechanized filing equipment for the security program and for the purchase of a computer.

Mr. THOMAS. You have purchase of a computer for $133,000 plus rent of $90,000.

Mr. MACY. Also $67,000 for GSA telecommunication.

Mr. THOMAS. That comes under other objects.

Mr. MACY. Yes.

Mr. THOMAS. But so far as jobs are concerned, does the 36 less jobs offset the $371,000 for pay increase? It just about does.

Mr. MACY. It just about does. The total request is $11,000 more at comparable pay levels than the current fiscal year. There is a net reduction of 36 positions and a decrease of $230,400 in personal services, but an increase of $241,400 for other objects. I can give you the reduction by activity.

Mr. THOMAS. Let us insert pages (ii) through (v).

(The pages follow:)

Brief comments regarding each appropriation and fund request follow:

Appropriation: "Salaries and expenses, Civil Service Commission."—The Commission is requesting $22,187,000 for its salaries and expenses appropriation to perform its continuing functions and responsibilities in fiscal year 1965. This request provides for increases of $615,700 for personnel compensation and other objects of expense, which are partially offset by decreases of $233,700, resulting in a net increase of $382,000 over the 1964 appropriation. However, on the basis of pay scales to be effective in fiscal year 1965 under current legislation, the amount requested represents a net increase of only $11,000 above the level authorized for fiscal year 1964.

Appropriation: "Investigation of U.S. citizens for employment by international organizations."—Funds appropriated under this heading provide for investigations by the Federal Bureau of Investigation and the Civil Service Commission of U.S. citizens employed or being considered for employment in international organizations of which the U.S. Government is a member and for review of reports by the International Organizations Employees Loyalty Board of the Commission as directed by Executive Order 10422, as amended.

Workload estimates for fiscal year 1965 are based upon information from the Department of State. The funds requested for fiscal year 1965 ($634,000) reflect increased receipts as well as higher salary rates. The request represents an increase of $34,000 from the appropriation for fiscal year 1964.

Appropriation: "Annuities under special acts."—This appropriation provides for the payment of annuities to former Federal civilian employees under the Panama Canal Construction Annuity Act (48 U.S.C. 1373a) as amended, and to widows of former Federal employees under the Lighthouse Service Widows Benefit Act (33 U.S.C. 771–775).

The request for fiscal year 1965 is for the continuation of annuities authorized in accordance with current legislation. However, since the net number of annuitants is declining the funds required for fiscal year 1965 ($1,700,000) are estimated to be $100,000 less than the fiscal year 1964 appropriation.

Appropriation: "Government payment for annuitants, employees health benefits fund."—The Federal Employees Health Benefits Act (5 U.S.C. 3006) provides that sums authorized to be contributed by the Government with respect to any annuitant (as defined therein) shall be paid from annual appropriations made for such purpose. Based upon the Commission's experience under the Civil Service Retirement Act, projected to include all of the retirement systems affected, the Government's contribution for annuitants, as provided by the act, will total $11,469,000 in fiscal year 1965. However, the Commission estimates that there will be an unobligated balance of $805,000 carried forward from fiscal year 1964 and available for expenditure in fiscal year 1965, resulting in a net appropriation request of $10,664,000.

Expense limitation: "Administrative expenses, employees health benefits fund."—The Federal Employees Health Benefits Act (5 U.S.C. 3006) provides that the employees health benefits fund shall be made available for sums expended by the Commission in administering the provisions of this act within such limitations as may be specified annually by the Congress.

For fiscal year 1965, an expense limitation of $1,151,000 is requested to carry out the Commission's responsibilities for administering the employees health benefits program, an increase of $26,000 from the limitation authorized for 1964.

Appropriation: "Government contributions, retired employees health benefits fund."—The Retired Federal Employees Health Benefits Act (5 U.S.C. 3053) provides that the amounts authorized to be contributed by the Government with respect to retired employees (as defined therein and including survivor annuitants) shall be paid from annual appropriations made for such purpose. Based on experience with those already enrolled and applying this to all retirement systems, it is estimated that the Government's contribution for fiscal year 1965 will amount to $14,853,000. Of this amount, $13,000 will be derived from unobligated balances carried forward from fiscal year 1964, resulting in a net fiscal year 1965 appropriation request of $14,840,000.

Expense limitation: "Administrative expenses, retired employees health benefits fund."—The Retired Federal Employees Health Benefits Act (5 U.S.C. 3053) provides that the retired employees health benefits fund shall be available without fiscal year limitation to pay for administrative expenses incurred by the Commission in an amount not to exceed 2 percent of the Government's contribution. However, the Independent Offices Appropriation Act of 1964 provided a dollar limitation on administrative expenses without regard to the 2-percent limitation as specified in the act.

For fiscal year 1965, the Commission estimates a total need of $348,000 in order to fulfill its responsibilities under this program, a decrease of $44,000 from the 1964 limitation authorized.

Appropriation: "Payment to civil service retirement and disability fund."—Part III of Public Law 87–793, approved October 11, 1962, provides for adjustment of annuities including those already in payment as well as the majority to be awarded in the future, effective January 1, 1963. An appropriation of $62 million has been authorized to provide for these increased benefits in fiscal year 1964. The fiscal year 1965 request ($65 million) is for the same purpose.

Expense limitation: "Limitation on administrative expenses, employees' life insurance fund".—The Federal Employees' Group Life Insurance Act (5 U.S.C. 2091–2103) as amended, provides that the employees' life insurance fund shall be available for any expenses incurred by the Commission in the administration of the act.

For fiscal year 1965, the Commission requests an expense limitation of $277,000, an increase of $7,000 over the 1964 authorized amount, to fulfill its responsibilities of (1) maintaining the regular insurance program and (2) servicing the full membership of the beneficial associations whose insurance agreements have been assumed by the fund.

Full field security investigation program

Pursuant to title 22, U.S.C. 1661, other laws, and Executive orders, the Civil Service Commission conducts full field security investigations for various agencies of the Government. Since this work is done on a reimbursable basis, the Commission is not requesting funds for this purpose. A statement of the status of this program is contained in this document.

Mr. THOMAS. We shall turn now to salaries and expenses. Please insert in the record at this point pages 1, 2, and 3 of the justifications.

(The pages follow:)

For necessary expenses, including services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a); not to exceed $10,000 for medical examinations performed for veterans by private physicians on a fee basis; payment in advance for library membership in societies whose publications are available to members only or to members at a price lower than to the general public; [not to exceed $90,000 for performing the duties imposed upon the Commission by the Act of July 19, 1940 (54 Stat. 767); reimbursement of the General Services Administration for security guard services for protection of confidential files;] and not to exceed $5,000 for actuarial services by contract, without regard to section 3709, Revised Statutes, as amended; [$21,805,000] *$22,187,000: Provided*, That no part of this appropriation shall be available for the Career Executive Board established by Executive Order 10758 of March 4, 1958, as amended.

No part of the appropriations herein made to the Civil Service Commission shall be available for the salaries and expenses of the Legal Examining Unit in the Examining and Personnel Utilization Division of the Commission, established pursuant to Executive Order 9358 of July 1, 1943. (*5 U.S.C. 22–1, 73b–3, 150, 631–642, 645c–645e, 652, 659, 851–869, 901–958, 1010, 1051–1052, 1071–1133, 1151, 1162, 1171–1174, 2001–2007, 2061–2066, 2121–2123, 2251–2268, 2281–2288, 2301–2319; 28 U.S.C. 2671–2680; 39 U.S.C. 3311, 3312, 3315, 3502; 40 U.S.C. 42, 491; 50A U.S.C. 459; 65 Stat. 757; 66 Stat. 122; 68 Stat. 1115; 76 Stat. 858; 70 Stat. 721; Executive Orders 9830, Feb. 24, 1947; 10000, Sept. 16, 1948; 10242, May 8, 1951; 10422, Jan. 9, 1953; 10450, April 27, 1953; 10530, May 10, 1954; 10540, June 29, 1954; 10552, Aug. 10, 1954; 10556, Sept. 1, 1954; 10577, Nov. 22, 1954; 10590, Jan. 18, 1955; 10774, July 25, 1958; 10794, Dec. 10, 1958; 10800, Jan. 15, 1959; 10804, Feb. 12, 1959; 10826, June 25, 1959; 10835, Aug. 21, 1959; 10880, June 7, 1960; 10903, Jan. 9, 1961; 10925, Mar. 6, 1961; 10927, Mar. 18, 1961; 10973, Nov. 3, 1961; 10982, Dec. 25, 1961; 10987, Jan. 17, 1962; 10988, Jan. 17, 1962; 11073, Jan. 2, 1963; 11091, Feb. 26, 1963; 11103, Apr. 10, 1963; Independent Offices Appropriation Act, 1964.*)

No change in appropriation language is requested for fiscal year 1965 other than to indicate the total amount of appropriation requested, and to delete the limitation for performance of the duties imposed upon the Commission by the act of July 19, 1940 (Hatch Act), and the provision for special security guard services. Deletion of the limitation for Hatch Act work will eliminate the need for duplicate record keeping to comply with limitation. Special security guard services for the protection of confidential files are no longer necessary.

Comparative summary by activity

Activity	1964 authorized	1965 estimate	Changes (+ or −) 1965 compared with 1964
1 Recruiting and examining	$5,291,300 (5,405,000)	$5,355,000	−$50,000
2 Investigation of character and fitness for employment	2,728,900 (2,779,500)	2,600,000	−179,500
3 Inspections and classification audits	2,164,900 (2,205,000)	2,205,000	0
4 Administration of the retirement systems	2,651,300 (2,692,400)	2,692,000	−400
5 Developing programs and standards	1,559,300 (1,593,000)	1,593,000	0
6 Appellate functions of the Commission	800,000 (816,000)	816,000	0
7 Career development and training	354,800 (364,000)	364,000	0
8 Executive and administrative services	2,104,500 (2,145,500)	2,145,000	−500
Total personal services	17,655,000 (18,000,400)	17,770,000	−230,400
Other obligations	4,150,000 (4,175,600)	4,417,000	+241,400
Total program or estimate	21,805,000 (22,176,000)	22,187,000	+11,000
Average number of positions:			
Central office	1,486	1,479	−7
Regional offices	927	898	−29
Total	2,413	2,377	−36

NOTE.—Figures in parentheses are adjusted to reflect 1965 pay rates for comparability.

Comparative summary by object classification

	Object class	1964 authorized	1965 estimate	Fiscal year 1965 over (+) or under (−) fiscal year 1964
11	Personnel compensation	$17,655,000 (18,000,400)	$17,770,000	−$230,400
12	Personnel benefits	1,314,200 (1,339,800)	1,321,000	−18,800
21	Travel and transportation of persons	547,800	450,000	−97,800
22	Transportation of things	135,300	135,300	0
23	Rents, communications, and utility services	1,056,500	1,123,500	+67,000
24	Printing and reproduction	490,000	490,000	0
25	Other services	310,000	303,000	−7,000
26	Supplies and materials	225,000	225,000	0
31	Equipment:			
	Furniture and other equipment	71,200	71,200	0
	Mechanized filing equipment	0	165,000	+165,000
	Computer	0	133,000	+133,000
	Total obligations	21,805,000 (22,176,000)	22,187,000	+11,000

NOTE.—Figures in parentheses are adjusted to reflect 1965 pay rates for comparability.

Mr. THOMAS. You have a comparative summary by function on page 4. These are the dollars. You do not have a table giving the average number of positions in the central office; do you? The figure shown on page 2 is minus 7; 1,479 against 1,486.

REGIONAL OFFICES

How many regional offices do you have?

Mr. MACY. Ten regional offices.

Mr. THOMAS. Where are they located?

Mr. MACY. Boston, New York, Philadelphia, Atlanta, Chicago, St. Louis, Dallas, Denver, Seattle, and San Francisco.

CHANGES IN SALARIES AND EXPENSES

The minus 36 at the bottom of the table on page 2 reflects the total reduction for salaries and expenses, 7 of these are in the central office and 29 are in the field offices. The table on page 3 shows a breakdown by object class.

Object 23 shows the increase for GSA costs in telecommunication. In object class 31, $165,000 is for the mechanized filing equipment, and $133,000 is for the computer. These increases in other objects are offset by reductions in personal services.

Mr. THOMAS. That is not complete. You have to add $90,000 more to that, do you not? Rents and utilities are up. This is all interesting information.

Mr. EVINS. I note there is an increase in Investigations of U.S. Citizens for Employment by International Organizations, of about $34,000.

Mr. MACY. That is right.

Mr. EVINS. Are all of these for the U.N.?

Mr. MACY. And other international organizations. This is an estimate based upon the information given to us by the Department of State concerning the number of appointments that those agencies will make of American citizens.

RECRUITING AND EXAMINING

Mr. EVINS. Going to activity 1, "Recruiting and examining," you had a total of 802 persons in this activity in fiscal year 1963. Average positions in fiscal year 1965 will be 754 and you are asking for $5,355,000.

Insert pages 4, 5, 6, 7, 8, and 9 in the record.

GENERAL STATEMENT

The Congress by the Civil Service Act and subsequent legislation has given the Commission the responsibility for developing and operating a merit system for filling the broad range of positions in the competitive service of the Federal Government.

The "Recruiting and examining" activity includes the functions of: (1) Conducting examinations in Commission offices; (2) organizing, training, and supervising boards of examiners in carrying out the examining processes that have been decentralized to boards of examiners; (3) drawing up a recruiting program designed to meet the agencies' personnel needs by planning, preparing, and conducting publicity to aid in attracting high-caliber persons, including superior college graduates, into the Federal service; (4) supplying information in response to inquiries from the general public, Members of Congress, and other interested persons concerning employment and employers in the Federal service; (5) guiding and assisting agencies in the administration of civil service requirements delegated to them in the area of recruiting, examining, and placement services; (6) providing general assistance and employment counseling service to veterans and veterans' organizations in connection with preference rights and benefits prescribed by the Veterans' Preference Act of 1944; and (7) operating the Federal employment statistics program.

The objective of the Commission's recruiting and examining program is to meet the employment needs of the Government with the best qualified citizens obtainable through open competitive examinations. The Commission accomplishes this objective through the examining and recruiting facilities of its own offices in Washington, D.C., and its 10 regional offices, and through boards of civil service examiners located in the various agencies throughout the country. To make the Government's overall recruiting activity effective in attracting the number and quality of persons needed, the Commission also has a major role in working with the agencies to keep the public informed on the kinds and locations of employment opportunities available in the Government and the attractions of work in the Federal service, and in developing and maintaining an effective work force.

Competitive examinations for employment in the Federal service are conducted by the Commission and its boards of examiners under guidelines and criteria established to assure that available manpower is secured effectively and economically when needed. These guidelines provide generally that examinations will be conducted by a Commission office where the positions involved are common to many agencies and where effective public relations or large-scale recruiting needs require this type of examination. Boards of examiners, on the other hand, are generally assigned responsibility for conducting examinations for occupations peculiar to their agencies or where they are the principal users in the labor market area in which they are located.

Fiscal year 1965 program

Funds requested for fiscal year 1965 are slightly less than the level authorized for 1964, at the 1965 pay rates. This request represents a normal Commission examining program that is designed to permit conducting examinations in those areas where there is the greatest need for new hires.

A reduction in total employment and in number of new hires, predicted for fiscal year 1965, is expected to have little effect on the volume of applications received and the examining workload in general. For various reasons, application receipts have been increasing regularly, and such increases are expected to continue. A constantly increasing labor market, yearly increases in high school and college graduates, automation and resultant changes in job requirements, all tend to generate the submission in larger numbers of applications for jobs with the Federal Government.

Federal employment level

Total Federal employment on June 30, 1963, was 2,527,960 of which 2,497,035 represents employment in the executive branch. Employment in the competitive service as of this same date was 2,164,164, between 85 percent and 86 percent of the total Federal figure.

The Commission's budget estimate assumes that during fiscal year 1964 employment will decrease, and that total employment will be generally lower in fiscal year 1964 than in fiscal year 1963. It is expected that employment will approximate 2,500,000 at the end of fiscal year 1964 and will continue at that level during fiscal year 1965.

Hiring needs

New hires in the competitive service result primarily from turnover in the staff engaged on continuing functions of the Government. This turnover is caused by resignations, dismissals, retirements, and deaths. Employees hired as replacements cover a great diversity of occupations and will be located in many thousands of Federal installations throughout the United States and overseas.

It is estimated that the new hire rate for fiscal year 1964 will average 14.4 percent per annum, and drop to 14 percent for fiscal year 1965. Applying these rates to the estimated average employment for the competitive service results in the following new hire estimate.

	Fiscal year 1964	Fiscal year 1965
Average employment in competitive service	2,158,000	2,151,000
Average new hire rate	×14.4	×14.0
Total new hires	311,000	301,000

The distribution of estimated new hires to be made in the Federal service is shown by the following table.

	Fiscal year 1963	Fiscal year 1964	Fiscal year 1965
Noncompetitive reinstatements	60,337	58,300	56,400
New hires made by the Commission and its Boards of Examiners	238,015	233,100	225,600
New hires made directly by agencies	19,627	19,600	19,000
Total new hires	317,979	311,000	301,000

Noncompetitive reinstatements involve former Federal employees who are entitled to reemployment on the basis of previous service.

Investigations

Mr. Evins. You have investigations of character and fitness for employment. This is other than international and for the Government itself?

Mr. MACY. For Federal Government employees, on page 18 of our "Salaries and expenses" appropriation.

Mr. EVINS. You show a reduction of about 30 positions for 1965 for $2,600,000.

Mr. MACY. That is right. The reduction is a reflection of the reduced in-hiring rate in the Federal Government and the completion of the accelerated postmaster examinations that we have had in the past 2 years, and savings due to management efficiencies.

Mr. EVINS. Insert pages 18, 19, 20, 21, and 22 in the record.

(The pages follow:)

GENERAL STATEMENT

Investigative work under Executive Order 10450, as amended (security requirements for Government employment)

Under Executive Order 10450, the Commission is required to conduct investigations and perform other services which will enable agencies to comply with the provisions of the order. In addition, the information resulting from the investigation required under section 3a of the order provides economical and effective means of determining the suitability of applicants for and appointees to Federal positions. These services include the conduct of national agency check and inquiries, limited suitability investigations when a national agency check and inquiry case develops adverse information, and the maintenance of a security investigations index file. In addition, Executive Order 10550, an amendment to Executive Order 10450, requires the Commission to establish a control to insure prompt evaluation by the agencies with respect to full field investigations.

This workload is not controllable, since it is either specifically required by the Executive order or arises as a byproduct. The national agency check and

inquiry cases arise as a result of appointments to positions in the Federal service.

Other personal investigations.—The Commission also conducts personal investigations in several other types of cases as required by title 5, United States Code (preference of veterans in Government employment), section 851, etc., Executive Order 10988, and the Civil Service Rules and Regulations: (1) Appeals from veterans and nonveterans; (2) qualification investigations of applicants for top level positions: (3) candidates for postmaster appointments; and (4) other cases arising from applications and arrest records. The workload in these functions, also, is largely uncontrollable.

Effect of management action taken during fiscal year 1963.—The budget request for this activity continues to decrease. For example: average expenditures during fiscal years 1961 and 1962 (adjusted to 1965 pay rates) were $3,405,000 per year. The 1965 budget request of $2,600,000 is $805,000 lower than this average and reflects the successive decreases in fiscal years 1963 and 1964. To a small extent the reduction has been caused by lower receipts. However, the major reductions have been achieved by design and not by accident. The most notable areas of savings are as follows:

1. Area centers were established for processing N.A.C. & I. cases at 3 central locations rather than at 11 different geographic locations. This produced a saving of around $200,000, and savings would have been greater if workload volume had not decreased.

2. The conversion rate from N.A.C. & I. to personal investigation on suitability grounds has been reduced from the former level of over 3 percent to less than 1 percent. If the 3-percent rate had continued, the 1965 budget request for this function would have been approximately $400,000 greater.

3. Substantial savings have also been achieved in the function "Personally investigated cases resulting from employment applications and arrest records" by a determined effort to be sure that personal investigation is not conducted if the case can be resolved on the basis of records or correspondence.

Reimbursable full field investigations.—The Commission, under existing public laws and Executive orders, conducts full field investigations on a reimbursable basis for all agencies except those which conduct their own by special agreement with the Commission, or by special legislation. A full field investigation consists of inquiries by personal contact concerning the experience, habits, and conduct of an individual to determine his character and reputation, loyalty to the United States, and general fitness for employment in a position of critical importance from the standpoint of the national security. These investigations are clearly distinct from the less extensive national agency check and inquiry investigations of persons appointed to nonsensitive positions. Responsibility for much of the full field investigation work was transferred from the Federal Bureau of Investigation to the Commission in 1952 by title 22, United States Code, section 1661. Since that time the Commission has been made responsible for an increasing number of these investigations, so that at the present time it is the major investigative agency insofar as personal investigations are concerned. No funds are being requested for this work since it is done on a reimbursable basis at the request of the agencies and is financed through a revolving fund.

Inspections

Mr. Evins. Turning to activity 3, this is "Inspections." You have an average position load of 244 in fiscal year 1963 and 1964 against 221 for 1965. Here again you have a reduction. The amount of funds requested is $2,205,000 for 1965.

Place this chart on page 37 and pages 38 and 39 in the record. (The pages follow:)

PERSONNEL REQUIREMENTS

The average number of positions and salary costs for this activity are shown in the following table.

Function	1963 actual		1964 authorized		1965 estimate	
	Average positions	Cost	Average positions	Cost	Average positions	Cost
Inspecting agency personnel operations:						
Central office	81	$782,861 (828,000)	75	$772,800 (786,500)	75	$786,500
Regional offices	163	1,447,289 (1,530,300)	146	1,392,100 (1,418,500)	146	1,418,500
Total, activity 3	244	2,230,150 (2,358,300)	221	2,164,900 (2,205,000)	221	2,205,000

NOTE.—Figures in parentheses are adjusted to reflect 1965 pay rates for comparability.

GENERAL STATEMENT

This activity includes the following principal functions: (1) Inspecting to determine agency compliance with statutory and regulatory provisions (including the Classification Act of 1949, as amended), and ordering corrective action in cases of noncompliance; (2) evaluating agency personnel management in terms of accomplishment of agency mission and adherence to public policy; (3) assisting agencies in improving their personnel management in light of legislative and executive direction and intent, and in conformance with the objective of attaining a wholly effective personnel system throughout the Government; and (4) recommending classification of positions in the three highest grades provided for in the Classification Act of 1949, as amended, and at similar salary levels provided by other legislation, and classifying hearing examiner positions under the provisions of the Administrative Procedure Act.

The Civil Service Commission has been designated by Executive Order 9830 as the central source of leadership and guidance, for personnel management matters in the Federal Government. As new features are added to the Federal personnel program through legislative or executive action, there is an increase in requests, from agencies and individuals, upon Commission offices for technical advice and assistance. The Commission's response to these requests is designed to assure that personnel operations are carried out effectively and efficiently.

Beginning in fiscal year 1962 and continuing through subsequent years, the Commission made important revisions in program emphasis. Inspections are more comprehensive and delve into such areas as manpower utilization, equal employment opportunity, employee conduct and ethics, and employee-management cooperation.

Funds requested for fiscal year 1965 are at the same level as authorized for 1964, but at the 1965 pay rates.

ADMINISTRATION OF THE RETIREMENT SYSTEM

Mr. EVINS. Turn to activity 4, retirement; 427 average positions in 1963 against 418 for 1964 and 1965; again a number of reductions in personnel. There is a funding requirement of $2,692,000, the same as last year on a comparable basis. Insert pages 45, 46, and 47 in the record.

(The pages referred to follow:)

[1] Adjusted to 1965 pay scale for comparability.

PERSONNEL REQUIREMENTS

The average number of positions and salary costs for this activity are shown in the following table.

	1963 actual		1964 authorized		1965 estimate	
	Average positions	Cost	Average positions	Cost	Average positions	Cost
Central office	402	$2,408,454 (2,523,957)	396	$2,433,000 (2,470,400)	396	$2,470,000
Regional offices	25	222,827 (234,143)	22	218,300 (222,000)	22	222,000
Total, activity 4	427	2,631,281 (2,758,100)	418	2,651,300 (2,692,400)	418	2,692,000

GENERAL STATEMENT

This activity provides for the administration of the Civil Service Retirement Act, the Panama Canal Construction Annuity Act, and the Lighthouse Service Widows' Benefit Act. Workloads are not controllable because they result from the exercise of legal rights by employees, retirees, and other beneficiaries under the retirement laws.

The work performed in administering the Civil Service Retirement Act consists largely of (1) adjudicating annuity and death claims; (2) adjudicating refund claims of former employees for the payment of amounts to their credit in the fund; (3) adjudicating claims for deposit covering creditable service for retirement purposes; (4) answering inquiries relative to these matters; (5) maintaining all necessary accounting and control records to properly administer the fiscal activities of the fund (including receipts from employees and Government contributions, payments to annuitants, survivors, and other claimants, and maintaining individual retirement record accounts); and (6) conducting actuarial and statistical studies.

The administration of the Panama Canal Construction Annuity Act and the Lighthouse Service Widows' Benefit Act requires the Commission to adjudicate and pay claims to persons entitled to benefits under these acts.

Total requirements for this activity in fiscal year 1965 are estimated to be at the same level as authorized for fiscal year 1964.

Mr. THOMAS. Is that retirement rate slowing down, Mr. Chairman?

Mr. MACY. It has slowed down slightly in the past 2 years.

Mr. THOMAS. Did that pay increase slow them down somewhat?

Mr. MACY. That may have been one of the factors.

Mr. THOMAS. A few years before the increase everybody was getting out.

Mr. MACY. The reduction is relatively small.

Mr. THOMAS. Off the record.

(Discussion held off the record.)

DEVELOPING PROGRAMS AND STANDARDS

Mr. EVINS. We will return to "Activity 5, developing programs and standards." Funding requirement is the same and personnel was reduced from 168 in 1963 to 160 for 1964 and 1965. Insert pages 56 and 57 in the record.

(The pages referred to follow:)

NOTE.—Figures in parentheses above and in the following text are adjusted to reflect 1965 pay rates for comparability.

GENERAL STATEMENT

The principal functions of this activity are to provide necessary policy development, standard setting, and research services on all elements of the Federal personnel program so that the Civil Service Commission can respond to many varied demands made upon it—demands arising from its statutory responsibilities, from Presidential directives, from court decisions, from legislative proposals, from Federal departments and employee groups, and from other sources. This includes (1) providing leadership and guidance in strengthening Federal personnel programs in order to be responsive to changing conditions and to improve Government-wide personnel practices; (2) maintaining and initiating improvements in the Commission's system for issuing regulations and instructions by which its programs and policies are carried out; (3) establishing and maintaining standards needed to evaluate candidates for positions and to classify positions under the Classification Act; and (4) providing selection methods and tests for measuring the qualifications of individuals and to improve such selection devices.

These are continuing responsibilities which give direction and purpose to improving governmental personnel administration both at home and abroad. The personnel programs, instructions, tests, and standards developed under this activity are for the use and guidance of administrators and personnel officers throughout the entire governmental personnel system.

During fiscal year 1963, additional functions were added under this activity, which also showed an increasingly heavy workload in practically all phases. In spite of this increased workload, operations for 1964 have been programed below the 1963 level. This is consistent with the general reduction in staff in all major activities.

Mr. EVINS. You should pretty much have your standards developed by now.

Mr. MACY. No, indeed, we——

Mr. THOMAS. We will never get those standards set.

Mr. MACY. The conditions continue to change requiring revisions in standards, or new job standards.

APPELLATE FUNCTIONS

Mr. EVINS. Activity 6, "Appellate functions." Personnel is reduced from 96 in 1963 to 85 for 1964 and 1965. Funding requirement for 1965 is $816,000.

Insert pages 71 through 74 in the record.

(The pages referred to follow:)

Appellate functions of the Commission

Functions	1963 actual		1964 authorized		1965 estimate	
	Average positions	Cost	Average positions	Cost	Average positions	Cost
Veteran and nonveteran (part 22B) appeals	40	$360,647 (382,995)	33	$325,300 (331,200)	33	$331,200
Adverse actions (part 22C) appeals	4	33,208 (35,264)	3	24,900 (25,400)	3	25,400
Reduction-in-force appeals	10	93,419 (99,226)	9	86,400 (87,700)	9	87,700

	1964	48	150	150	----	48	494 [1] (505)
	1965	48	155	150	----	53	505

[1] Adjusted to 1965 pay scale for comparability

PERSONNEL REQUIREMENTS

The average number of positions and salary costs for this activity are shown in the following table:

	1963, actual		1964, authorized		1965, estimate	
	Average positions	Cost	Average positions	Cost	Average positions	Cost
Central office	56	$507,424 (538,862)	50	$484,800 (494,500)	50	$494,500
Regional offices	40	346,754 (368,238)	35	315,200 (321,500)	35	321,500
Total, activity 6	96	$854,178 (907,100)	85	800,000 (816,000)	85	816,000

GENERAL STATEMENT

This activity consists of the following appellate functions: (1) Processing appeals submitted in accordance with laws, rules, and regulations administered by the Commission; (2) administering the political activity statutes; and (3) rendering advice on such matters to agencies, individuals, and their representatives. Workloads in this activity are not controllable since they arise from the exercise of appeal rights granted by law or regulations.

As a result of significantly lower than estimated receipts of appeals experienced during 1963, certain organizational changes coupled with a reduction in manpower assigned have been made to effect economies in the appellate functions. These changes are reflected in reduced unit costs estimated in fiscal years 1964 and 1965 from 1963 experience in most types of appeals.

Funds requested for 1965 are at the same level as authorized for 1964.

APPEALS

Mr. EVINS. You are still getting a lot of appeals on cases?

Mr. MACY. Yes, we are. It has not been rising as much in recent years.

Mr. EVINS. How long does it take from the time an employee makes an appeal until he gets a final decision?

Mr. IRONS. It is not quite as simply answered as that because of the various levels of appeal. After he has exhausted his appeals to the agency he is entitled to have an appeal beyond that. Our goal is a 35-day period, and we usually reach it.

He is also entitled to appeal to the Board of Appeals and Review. That time normally will run a little longer because those are the more involved cases.

Mr. BOLAND. Have you broken down the appeals for veterans and nonveterans or have you combined them? I refer to page 72.

Mr. MACY. We have combined them, Mr. Boland. Since July 1, 1962, veterans and nonveterans have been under the same provision. We do have a breakdown, however.

Mr. BOLAND. I was wondering what the workload has meant to the Civil Service Commission with respect to nonveterans.

Mr. MACY. Nonveterans are running about one to every two veterans. In making our estimate for 1965 we are assuming we will process 1,200 veteran appeals and 550 nonveteran appeals.

PLACEMENT MADE BY AGENCIES

Mr. THOMAS. Mr. Chairman, what part of your placements are made now by the agencies themselves? Your new-hire rate will be 14 percent out of the 2.5 million total Federal civilian employment. How many placements do you plan to make this year?

Mr. MACY. About 233,000 new appointments.

Mr. THOMAS. 233,000 new appointments?

Mr. MACY. That is right.

Mr. THOMAS. How many will the agencies themselves make without any direct help from the Civil Service Commission?

The next step is to consolidate three of your bureaus.

Mr. MACY. If that is your intention I have no answer at all.

Mr. THOMAS. Go ahead.

Mr. MACY. The agency direct hires would be 19,000 where there are not——

Mr. THOMAS. That can't be the right answer.

Mr. MACY. No; out of——

Mr. THOMAS. About 190,000, about 75 or 80 percent of the 233,000 would be more like it.

Mr. MACY. Out of the 233,000, boards of civil service examiners would do approximately 197,000, but these are extensions of the Commission within the agency, made up of agency——

Mr. THOMAS. They are not your boards. They are boards belonging to the Post Office Department and other agencies.

Mr. MACY. They belong to the Civil Service Commission, manned by personnel of the agencies they serve.

Mr. THOMAS. Who pays them?

Mr. MACY. Paid out of the appropriation of the agency which employs them.

Mr. THOMAS. Whoever pays them, that is who they belong to.

Mr. MACY. But they operate under rules and standards applied by the Civil Service Commission.

Mr. THOMAS. For all practical purposes they are Post Office or other agency employees. You cannot fire them, can you?

Mr. MACY. We pass on their qualifications as board members.

Mr. THOMAS. I am talking about firing. You don't pay them.

Mr. MACY. We cannot fire them from the Post Office Department or any other department but we can have them moved off the board.

Mr. THOMAS. And you cannot fire them, so they are not your employees.

Mr. MACY. We can move them out of our function. We have authority under the Civil Service Act of 1883 to remove them from the board.

Mr. THOMAS. How many of those 233,000 will they hire, 180,000?

Mr. MACY. The boards of civil service examiners will examine, and from those examinations 197,000 placements will be made. The balance of placements will be from examinations conducted directly by the Civil Service Commission.

Mr. THOMAS. Off the record.

(Discussion held off the record.)

JURISDICTION OVER BOARD MEMBERSHIP

Mr. JONAS. There is one other question I wanted cleared up. I understand these are post office employees and actually the Post Office Department selects the membership of the board; does it not?

Mr. MACY. Agencies nominate their people for the board activities subject to approval by the Civil Service Commission.

Mr. JONAS. Have you ever rejected any of their nominations?

Mr. MACY. We have not only rejected them, but we have asked that changes be made in personnel when they do not appear to be adequately performing the civil service function at a board, or where examinations are not conducted properly or the giving of tests is not adequately monitored.

We audit these boards. Part of the money in activity 1 is for the audit of civil service operations as performed by these boards. We maintain close and continuing supervision of this activity.

Mr. JONAS. By and large the truth of the matter is that the Post Office Department or other agency selects the membership of the boards from among its own personnel; is that right?

Mr. MACY. Agencies select personnel for civil service boards subject to the Commission's approval.

Mr. THOMAS. And pays them?

Mr. JONAS. Yes.

Mr. BOLAND. That is a good question Mr. Jonas asked with respect to supervising these boards. How constant is your contact with them?

Mr. MACY. There is an audit at least annually of the board and members of the Commission's staff make other supervisory visits as required by the size and complexity of the board's activity. We review the appointments made through the examining process that they conduct. If you turn to activity 1, page 4, "Supervising civil service boards of examiners," you will see we have 128 positions and $1,134,000 for supervision of the 800 to 900 boards of examiners located within the departments and agencies, which on delegation from the Commission conduct the Commission's examinations, and so forth.

Mr. BOLAND. You have asked that some of these members be removed and this has been done?

Mr. IRONS. I have personally caused two high level board members to be removed from a board from one of the departments of Government.

Mr. MACY. These were handled personally by the executive director—most problems of this nature are handled by our field personnel operating out of our regional offices.

Mr. WILLIAMS. There were 876 active boards as of June 30, 1963; each is visited an average of 3 to 4 times in a year. That is pretty constant supervision.

Mr. BOLAND. That is very good.

Mr. OSTERTAG. Why is the arrangement the way it is? What justification is there for this? You say you have supervision, they come under you, and yet you do not compensate them and do not appoint them.

Is it your feeling this should be more directly under Civil Service?

Mr. MACY. No; the trend through the years has been to place the examining activity as close to the operations of a particular agency as possible. As Government has enlarged the number of boards has increased.

The feeling is that if it is closely related to the operations the standards and use of the examining process can fit more completely into the needs of that operation but under the supervision of the Civil Service Commission.

The original statute back in 1883 contemplated that the bulk of the examining would be performed by agencies through boards of exam-

iners. At that time the customs service and the postal service were the two principal employers. The first boards were established in the customhouse and the post office in New York for the examination of candidates for positions in those offices.

Mr. OSTERTAG. Does the Civil Service Commission lay down any criteria or requirements under which the board functions?

Mr. MACY. Yes. We lay down the entire requirements. We provide the tests. We establish the procedure through which the tests are rated and the registers constructed. We specify the certification process involved. Those are the requirements against which we conduct the audit.

The honorable chairman is correct in saying they are employees of the department or agency involved, but they very decidedly carry out instructions of the Civil Service Commission. They are supervised by experienced examining people from the civil service regional or central office, and their records are fully audited by the Civil Service Commission.

BOARD MEMBERS REMOVED BY THE COMMISSION

Mr. JONAS. I wish you would put in the record at this point a statement showing how many board members the Civil Service Commission has removed over a period of 12 months, or during 1 fiscal year.

Mr. MACY. We do not have it in the data at hand, but we will supply a statement for the record.

(The information supplied follows:)

Information as to the number of actual removals is not available. It would be small because in nearly all instances when the audit of the board's operations shows them to be deficient, or suffering because of the inability of board members to devote the necessary time to the work, arrangements are usually worked out amicably with the agency for changes or additions in the board membership. The qualifications of persons proposed for membership on the board are reviewed for the work in advance by the Commission's staff. In the case of board chairman an interview is also conducted, and, in the case of executive secretarys a field investigation of his qualifications is also made before his designation to the board is approved.

COMMISSION SUPERVISION OF BOARDS

Mr. JONAS. Also will you tell me the philosophy under which the Civil Service Commission is alleged to be able to do a better job of supervising these boards than the agencies themselves.

Mr. MACY. Under the statute this is a Civil Service function. It would be necessary to amend the statute to have the agency do it for itself.

Mr. JONAS. I didn't mean that. I referred to the audit. What can you accomplish by going around after the fact is accomplished and looking at the records? What does that amount to?

Mr. MACY. We maintain constant supervision of these boards. The staff checks on their work throughout the year through frequent contacts and visits. The annual audit is a cumulation of all these supervisory contacts and amounts to a complete review of the examining operations that are conducted by the board. The alternative to this method of operation would be for the Civil Service Commission to establish many more offices of its own——

Mr. JONAS. The reason I ask these questions is this: I have had a considerable amount of criticism of the operation of several of these boards on the theory that they are subservient to the regional office of the Post Office Department and follow its instructions and directives rather than those of the Civil Service Commission.

Mr. MACY. I would be very much interested in investigating any complaints of that kind because that clearly would be contrary to the required method of operation.

Mr. THOMAS. Mr. Chairman, we have an old rule of law—a servant cannot have two masters. We have learned through long and hard experience that the top master is the paymaster. If the Post Office Department or another agency pays your people you had better take another look at them or you will find they will be working a little more for the Post Office Department than they will be working for you.

Mr. MACY. We feel we are taking a continuing look at them. Where there are violations correction is made. I am interested in hearing these comments about improper operation because I do not believe we have had any recent indication of this from our audits.

Mr. THOMAS. There should not be too much ground for conflict, but if it does come up you might come out the low end of the horn.

POST OFFICE BOARDS

Mr. IRONS. Post office boards are limited to the examinations of clerks and carriers.

Mr. BOLAND. That is right. This is not on promotions.

Mr. JONAS. Does not their jurisdiction cover promotions, too.

Mr. MACY. Promotions are on their own motion, anyway.

Mr. BOLAND. That is why I do not think it is the most important. It is important, of course, because you need correct information to conduct the examinations properly and be sure they are monitored properly. However, in the long run all this board does is to supervise clerk and carrier examinations and nothing else. That is all.

The big problem comes with promotions of supervisors which is handled exclusively and totally by the Post Office Department.

Mr. MACY. That is their internal operation.

Mr. BOLAND. Off the record.

(Discussion held off the record.)

Mr. IRONS. We have followed very carefully the operation of the post office boards as they apply to the entrance of citizens in the clerk and carrier positions. I can say we have been extremely pleased with the operation of the post office in this area. They have followed our instructions precisely.

Mr. BOLAND. It is well that the Civil Service Commission does supervise these examinations. I think it makes for a better overall system.

Mr. EVINS. Uniformity of standards, lack of duplication.

Mr. BOLAND. That is right.

Mr. MACY. By the same token, in the naval shipyards, in an ordnance activity, the boards there are concerned with the examinations that lead to the appointment of individuals for the special work which has to be performed in that installation.

The Civil Service Commission's examinations for the departments and agencies across the board are for certain common types of occupations. We conduct the Federal service entrance examination, the primary entry route for college graduates. All agencies are using that source for manning their career jobs at the college graduate level.

Career Development and Training

Mr. Evins. That ties into the next title, "Career development and training."

Place in the record pages 82, 83, 84, 85, 86, and 87.

(The pages follow:)

PERSONNEL REQUIREMENTS

The average number of positions and salary costs for this activity are shown in the following table.

Function	1963 actual		1964 authorized		1965 estimate	
	Average positions	Cost	Average positions	Cost	Average positions	Cost
Administering the career development and training program:						
Central office	22	{ $213,608 (231,300) }	22	{ $225,200 (231,700) }	22	$231,700
Regional offices	11	{ 124,765 (132,300) }	11	{ 129,600 (132,300) }	11	132,300
Total, activity 7	33	{ 338,373 (363,600) }	33	{ 354,800 (364,000) }	33	364,000

Note.—Figures in parentheses are adjusted to reflect 1965 pay rates for comparability.

GENERAL STATEMENT

The activity of "Career development and training" is budgeted separately for the first time for fiscal year 1965. It was previously carried in the Commission's budget estimates as an item under activity 3, "Inspections." The emergence of this separate activity reflects the growing importance and specialized attention to the functions of career development, training, and incentive awards over the last several years. While expenses for these functions have not significantly increased during this period, they have been concentrated in activities managed by the Office of Career Development, which was established in 1960. Also under jurisdiction of this Office, since January 1962, are the employee development officers, one in each region, to whom are assigned full time the training and career development activities of the regions, such activities having been performed in the past by various personnel usually budgeted in activity 3. In addition, budgetary and program management problems stemming from increased cost-shared training activities reimbursed by agencies under section 8 of the Government Employees Training Act are managed more efficiently through the Office of Career Development.

Scope of activities

This activity includes (1) a program to improve agency and departmental training programs by analysis of agency training activities, with improvement obtained through consultation and technical guidance; (2) the coordination of training programs between and among agencies to achieve full utilization and to avoid duplication; (3) the determination of interagency training needs which can best be met through cost-shared training under section 8 of the Government Employees Training Act; (4) the training of agency personnel in personnel programs related to laws or regulations for which the Commission has enforcement responsibility; (5) the promotion and improvement of the incentive awards program authorized by Public Law 83-763; and (6) the management of a roster of career executives to facilitate interagency placement and utilization.

The enactment in 1958 of the Government Employees Training Act, Public Law 85–507, equipped with the Federal Government with policy, authority, and guidelines to meet the needs for improved performance through training of its career employees in a rapidly changing work environment. Training in new management skills, such as automatic data processing, for new duties caused by automation, and for new tasks created by rapidly changing technology has been encouraged and is increasing. The Commission has attempted to keep pace by developing a special competence in its staff, both at headquarters and in the regions, to be able to serve effectively as a clearinghouse for practices and methods.

In addition, the opportunities for the intermeshing of training needs and programs created by the act have been recognized. Collaborating closely with agencies in the development of their training plans and programs, the Commission has been successful in encouraging agencies to make their training available to other agencies, when it would not be feasible for such other agencies to establish specific programs, either because of lack of expert knowledge or because their needs could best be met by pooling of resources. A concrete manifestation of this effort is the publication of interagency training bulletins at the Commission's central office and in each region.

In direct consultation with agencies, training needs are identified which cannot be suitably handled by a single agency, but which can be met through a joint effort. The Commission staff in these circumstances develops a program directed to the joint purposes and conducts it on a cost-shared basis for the participating agencies.

The Commission continues actively to encourage the effective and discriminating application of the authority of the Government Employees Incentive Awards Act to the improvement of performance through motivation by honorary and cash awards. A staff of five is assigned to this function in fiscal year 1964, about half of that originally assigned to it in 1956, immediately after the law was enacted. In addition, staff in this functional area now has the responsibility to advise agencies on effective operating relationships between the incentive awards program and the step increases for superior performance authorized in recent pay legislation.

Budgetary requirements

Funds requested for fiscal year 1965 are at the same level as experienced for fiscal year 1963 and as authorized for 1964, adjusted to reflect the effect of the second phase of Public Law 87–793 on a full-year basis.

Cost-shared training

The following is a report of the Commission's activities in the area of reimbursable training. Under the authority of section 8 of the Government Employees Training Act, the Commission has increased significantly the training it conducts on a reimbursable basis. Through consultation with agencies, needs are determined and plans made for the conduct of programs which can be conducted on an interagency basis. Scarce talents are thus used more effectively, full utilization of training programs is accomplished, and governmental training resources are used to the maximum, as required by the act.

During fiscal year 1963, a total of 182 training sessions, involving 90 separate courses, were conducted by the Commission on a cost-shared basis. A total of over 9,700 employees, from 58 different Government agencies, participated in these programs. Training conducted by the Commission during 1963 in the Washington metropolitan area had a total cost of approximately $229,000, including salaries, services, publications, and other expenses. In the regions the cost was $184,000 for the same period. During fiscal year 1964, it is estimated that the comparable figures will be, respectively, $300,000 and $288,000.

In addition to the above training, during fiscal year 1964 an executive seminar center will be operated at the Merchant Marine Academy at Kings Point, N.Y., at a total cost of $205,000, including in this instance the cost of board and room furnished at the site. At the center there will be 15 training sessions of 2 weeks each. At each session there will be 37 participants, for a total of 555 trainees during the year. All of the major departments and agencies are participating in this program.

Since cost-shared programs are developed in response to needs of agencies with their collaboration, specific needs have not yet been determined for fiscal year 1965. It is assumed, however, depending on the continued utility of existing programs, that minimally the same level of activity will continue. Estimates for fiscal year 1965, therefore, are projected at the same level as for fiscal year 1964

(adjusted to reflect effect of increased pay rates). No funds are being requested for this phase of the activity, since the training is on a cost-shared basis and financed through reimbursements from the participating agencies.

Mr. EVINS. Average positions were 33 for 1963–64 and the same for 1965, and the funding is the same, $364,000. There is some change in procedure. You state the activity of career development is budgeted separately for the first time in fiscal year 1965. It was previously carried in the Commission's budget under inspections.

The emergence of this separate activity reflects the growing importance and specialized attention to functions of career development.

Mr. MACY. That is right, Mr. Evins. It is important that we point out this is the first year we have had this as a separate activity. We felt it would be helpful to you as well as to us to identify this as an activity.

It has come into its own, particularly since the passage of the Government Employees Training Act in 1958. We are proud of this as a Commission contribution to the training and advancement of people within the career service.

Mr. THOMAS. You might give us more specific detail. You have a nice two or three page description.

Mr. EVINS. You say (reading):

This activity includes a program to improve agency and departmental training programs; (2) coordinate training programs between and among the agencies to achieve full utilization and avoid duplication; (3) determination of interagency training needs which can best be met through cost-shared training.

I wanted to ask you about this.

Then there is (4) (reading):

(4) The training of agency personnel in personnel programs related to laws or regulations for which the Commission has enforcement responsibility; (5) the promotion and improvement of incentive awards.

How do the agencies share in this cost?

Mr. MACY. The process on that is this: The Commission, working with the agencies, identifies a particular area needing training, such as training in automatic data processing.

Then the Commission, with the advice of the agencies, will set up a training program, usually one of limited duration, and the program will be partially funded by tuition payments made by the departments and agencies using this program.

TRAINING COURSES

Mr. THOMAS. Let us start at the beginning. You have 33 employees in this activity—11 in the field and 22 in the District of Columbia assigned to the Commission's office.

You have about 10,000 students or something less. How are these courses organized? Where are they held? When are they held? What courses of instructions do you have? Who does the instruction? Where do the instructors come from and who pays for it? Let us get that in the record.

Mr. MACY. All right, we will submit a statement for the record.

(The material supplied follows:)

The Civil Service Commission has a personnel management curriculum with course offerings in: General personnel management, classification, staffing and placement, career development, employee relations, processing personnel actions,

and Government retirement and insurance programs. In fiscal year 1963, the Commission conducted a total of 206 training sessions in personnel management; 25 of these sessions being conducted in Washington by the central office and 181 conducted in the field by the 10 regional offices. These courses were attended by 8,770 employees; 1,200 in Washington and 7,570 in the field.

In addition to the Commission's curriculum in personnel management, it also offers a number of courses to meet Government-wide training needs which are not being met fully or satisfactorily through other sources. For example, considerable training has been needed to provide managers with an understanding of automatic data processing and how it can be used most efficiently. In fiscal year 1963, 1,459 agency personnel attended 26 Commission conducted training sessions on automatic data processing alone, and 593 attended 10 course sessions in other areas of the management sciences such as operations research. Other courses conducted by the Commission may be classified broadly as falling into three categories: Management intern and entry level training, middle management training and executive training. A total of 171 course sessions were conducted in non-personnel-management courses during fiscal year 1963; 88 in Washington and 83 in the field. These courses were attended by 8,746 employees; 4,208 in Washington and 4,538 in the field. Commission courses are spread quite evenly over the period September–June.

Of 377 training sessions conducted by the Commission during 1963, 195 sessions were financed by funds appropriated to the Commission, and 182 sessions were financed through agency reimbursements of costs to the Commission. The total cost of reimbursable training for 9,736 agency participants was $413,555. This amounted to an average course cost of $42.40 per participant, or 94 cents per course-hour per participant. This represents a 22-percent decrease in cost from the $1.20 per course-hour per participant in fiscal year 1962.

Faculties for Commission courses are drawn from Government, universities, and private industry. Government lecturers, normally experts on the topics they present, are glad to contribute to broadening the understanding of their subject matter fields. They are loaned to the Commission for this purpose, and they receive no additional compensation. Although subject matter experts from universities and private industry occasionally donate their services, they normally are paid an honorarium by the Commission. The total cost to the Commission for each cost-shared course is prorated among agencies in accordance with the number of participants from each agency. For courses designed to clarify personnel legislation or regulations or to orient agency personnel staffs in new personnel programs or policies, the Commission absorbs the cost.

NATURE OF TRAINING COURSES

Mr. THOMAS. You have four or five pages in the justification but you get around the specific question. Get down to specifics. What time do these schools meet?

Off the record.

(Discussion held off the record.)

Mr. THOMAS. You have a sizable cost in this program. You charge yourself with about $365,000. Where does the rest come from?

Mr. MACY. The 22 people here in Washington proposed to be funded at a level of $231,000 are engaged in all of the functions. With respect to the training programs conducted by the Commission, they are programs of an interagency nature. The Commission organizes the program, selects instructors from around the Government or from the academic fields, and brings them in for lectures. Most of these programs are of a week or less in duration.

Mr. THOMAS. Do they meet at night, daytime, when and where?

Mr. MACY. They meet for the most part during the day. This is training that the Government considers to be necessary. Therefore, it is given on company time. They are conducted in the Commission's fine new building or they are conducted in conference rooms or auditoriums, in other Government buildings.

Mr. THOMAS. Give us some details. How long are the classes? You said there are 8 or 10 lectures?

Mr. MACY. Most of them are for 3 or 4 or 5 consecutive days.

Mr. THOMAS. All day?

Mr. MACY. All day long. They are in a variety of subjects. I mentioned automatic data processing. They are concerned with financial management, budget administration, science administration, various areas of administrative activities, and so forth, that cut across agency lines.

Mr. THOMAS. Do you give them an examination, grade them, find out who absorbed it and how much?

Mr. MACY. No. They take the course. Upon completion, they return to their jobs within their agency.

Mr. EVINS. And the agency says, "We need certain type qualified personnel." You say, "We will take it from there," and give them training. You announce a schedule of classes and invite participants.

Mr. MACY. That is right. We send announcements about each course.

Mr. EVINS. You have 10 who will respond. You have a special class for these 10 in automatic data processing. After some period of time you say they are trained.

Mr. MACY. We evaluate the need for a course. We look at the demand.

Mr. EVINS. These are employees in the Government who are working in automatic data processing and you give them advanced training.

Mr. MACY. We give them such training as appears appropriate.

Mr. EVINS. They then go back to the job. Does this help them get a promotion immediately?

Mr. MACY. No. It has no necessary relationship to promotion or advancement. These are people that the agencies judge need this kind of training in order to do their job.

Mr. EVINS. These are people already in the Government. We are not bringing people from the outside and training them?

Mr. MACY. We are training people in the Government. These are people on the job. In order to do a better job, in order to perform more efficiently, more knowledgeably, the Commission has designed these particular programs.

ADP TRAINING

Mr. EVINS. How much does one of these automatic data processing schools cost? Who pays for it, you or the other agency?

Mr. MACY. The agency will pay for the attendance of its employees at an automatic data processing course. This represents a program put on by the Commission outside of its normal area of responsibility. Where the program is in the Commission's area of responsibility, it will be put on without sharing the cost with the agencies.

Here are some examples of the rates. One is an executive seminar in automatic data processing. It has been given at four different times in the past 2 years. The length of the course is 16 hours.

Mr. THOMAS. Who is giving that, GSA? They are in charge of that program.

Mr. MACY. The Civil Service Commission is doing this.

Mr. THOMAS. They are in charge of this program. You are not.

Mr. MACY. GSA and the Budget Bureau asked that we conduct programs of this kind.

Mr. THOMAS. They are the experts. Where do you folks get that expertise?

Mr. MACY. We are experts in training. They are experts in the equipment.

Mr. THOMAS. You have to operate the equipment before you become an expert in it.

Mr. MACY. We draw on people who are experts in the equipment.

Mr. THOMAS. Dr. Boutin over at GSA says they are experts in this field.

Mr. EVINS. The Commission coordinates furnishing the instructors and teachers.

Mr. MACY. As a matter of fact, there is need for skills of this kind in a large number of agencies because there are nearly a thousand ADP installations. We have one ourselves. We have $133,000 in our 1965 request for the purchase of such equipment.

TYPE OF TRAINING CONDUCTED BY CIVIL SERVICE COMMISSION

Mr. BOLAND. Do some of the agencies do the same thing you are doing here? Do they train their own personnel or are you handling all of the training of personnel within the agencies?

Mr. MACY. We are handling training that cuts across agency lines. If there is training in some area of agriculture, obviously this is Agriculture Department's responsibility. But if it is training in financial management, for example, every agency has a concern for financial management because they all must come before Appropriation Committees. They must go before the Budget Bureau. They need to manage the fiscal aspects of their responsibility.

Mr. SHIPLEY. Would the gentleman yield?

Mr. EVINS. Mr. Shipley.

Mr. SHIPLEY. How many people have you trained and how much has the program cost you so far?

Mr. MACY. During fiscal year 1963 the Commission's cost-share courses were attended by 9,736 agency participants, at a cost of $413,555. During this same period the Commission trained 7,780 employees in courses conducted on a nonreimbursable basis. Costs for the latter training were not identified separately.

Mr. EVINS. You say Civil Service conducted all of them or participated in them?

Mr. MACY. The Civil Service Commission publicized these courses and arranged for their conduct. The Commission did not provide all the instructors. The instructors were brought in from various places but the Commission organized, planned, and carried out each particular course.

Mr. SHIPLEY. Where do the teachers or instructors come from? When they come from Government service are they paid extra for this work?

Mr. MACY. Instructors from the Government rolls do this as part of their regular responsibility. If someone is brought in from outside, an honorarium is paid to him. Government people do this as an extension of their normal duties, in order to provide a better understanding in other agencies of their particular field of work.

COST OF TRAINING PERFORMED

Mr. SHIPLEY. Would it be possible to break this down, what the actual cost is for the people trained?

Mr. IRONS. Yes. The average cost is $42 per person trained. In the past fiscal year there were 9,736 participants in Commission-conducted cost-shared courses.

Mr. SHIPLEY. This does not take into consideration that this is on company time, so to speak?

Mr. IRONS. No; this is the out-of-pocket cost to the agency to reimburse us for providing the program. This does not cover his salary or, if any, per diem involved.

Mr. SHIPLEY. Are there any other costs considered in this total?

Mr. IRONS. There might be travel involved as far as the individual is concerned.

Mr. EVINS. Heretofore this was part of the inspection activity.

Mr. MACY. In the past this has been included in the activity entitled "Inspection." We felt that this was an inappropriate classification. We have broken it out so we could have this kind of discussion. We feel this is an important activity. The 11 positions in the field are positions that are set up in order to carry on work of this kind at the regional level.

Mr. EVINS. The committee is familiar with your incentive awards program. That applies across the board to all the agencies. This is set out by responsibility you have by statute.

ROSTER OF CAREER EXECUTIVES

Management of the roster: Tell the committee about that.

Mr. MACY. The roster is a listing of all of the individuals in grades 16, 17, and 18 in the Federal service. It contains information concerning their background and experience, which is made available to the heads of departments and agencies, in connection with the possible movement of these individuals from one program to another.

The agencies call upon us for information concerning qualified people elsewhere in the Government either to bring about a transfer or to compare the qualifications of their own people with others in the same field in other agencies.

Mr. EVINS. Are there further questions on activity 7?

EVALUATION OF TRAINING

Mr. THOMAS. How do you evaluate the training program, Mr. Chairman? You have in round numbers, about 10,000 of these young folks taking your courses. It lasts, how long did you say, 3 to 5 days to a week?

Mr. MACY. Yes.

Mr. THOMAS. They come from every nook and cranny in all of the various bureaus and departments. What part of that 10,000 or what percentage of that 10,000 change jobs during the preceding fiscal year by virtue of their training?

Mr. MACY. The following fiscal year?

Mr. THOMAS. During the fiscal year, after they are trained. What part of them change jobs?

Mr. MACY. I have no way of knowing.

Mr. THOMAS. That is the only way you will be able to evaluate the program; is it not?

Mr. MACY. You mean move on to higher responsibility?

Mr. THOMAS. Yes.

Mr. MACY. We would not have information on that.

Mr. THOMAS. What is the value of it, then? How can you have any accurate information without knowing?

Mr. MACY. We would not feel that a move to another job is necessarily an indication that the training has produced a higher degree of ability on the part of the individual. The intent of the agency in making the training available is so if the individual does a better job on the job he has——

Mr. THOMAS. Do you follow it up from the supervisors on the job from which X came from to see if you have any increase in efficiency? What followup do you have? What is your yardstick for measuring it?

Mr. MACY. It is very difficult to measure the value of training or education.

Mr. THOMAS. No; it is not.

Mr. MACY. Even a college education is difficult to evaluate. This is one thing that always puzzles the educators. Our appraisal is to go back to the agencies——

Mr. THOMAS. We are not advocating shutting it down. That school you were president of 2 or 3 years ago, you do not want to cut it down until you come to an answer to that, do you?

Mr. MACY. No. I do not want to shut this down because I have no answer as to their direct value.

Mr. THOMAS. Can you give me an approximate value? Going back to your college level, you have a better answer than that. Take the level of education and take the income from it. You have a very good yardstick. You know better than the answer you gave. You have a very fine, a very accurate yardstick. You apply that same yardstick to your classes here and see where you come out. Apply the same yardstick you do to the college graduate and to the noncollege graduate, or to the 2-year or 1-year college student.

Mr. MACY. The evaluation we get is from the agency that sends the individual and——

Mr. THOMAS. What is that evaluation?

Mr. MACY. The evaluation is very favorable. It is expressed in demand for more courses of the same kind in order to increase the capability of other people who have like jobs to perform.

Mr. THOMAS. I did not think you had that information. That is what we want. You get a lot of statements from the various bureaus and agency heads saying that it is productive, it is improving them.

Mr. MACY. Yes; there is continuing discussion with the agencies that send these students as to whether or not the course is contributing.

Mr. THOMAS. This program has been in operation since when?

Mr. MACY. It has been in operation since fiscal year 1961.

Mr. THOMAS. Mr. Shipley asked about this before. He asked you for a direct figure. You can give him that figure of costs and how many students you have had. You certainly can give him that.

Mr. MACY. We did. That is the 9,700 figure.

Mr. THOMAS. He asked you since it had been in operation.

Mr. MACY. We can go back.

Mr. THOMAS. The figure of almost 10,000 is there, as I read your justifications. What are you going to do this year? Is that a cumulative figure?

Mr. MACY. That was for last fiscal year.

Mr. THOMAS. I think this is your fourth fiscal year. He asked you how many students you had.

Mr. EVINS. You supplied it for 1 year. Supply for the record the totals for the 4-year period.

Mr. BOLAND. How many do you anticipate having in 1963?

Mr. MACY. Approximately the same level. That is why this is funded with the same figure and with approximately the same number of people. We feel this is an appropriate level.

(The information requested follows:)

Reimbursable training conducted by the U.S. Civil Service Commission since start of program (fiscal years 1961–63)

	Fiscal year 1961	Fiscal year 1962	Fiscal year 1963	Total
Total cost	$36,800	$187,000	$413,555	$637,355
Number of course sessions	13	68	182	263
Number of participants	1,553	4,761	9,736	16,050
Cost per course per participant	$23.80	$39.00	$42.00	
Cost per course per participant hour	$0.74	$1.20	$0.94	

SELECTION OF STUDENTS

Mr. JONAS. Is the school open to all employees or are they selected by management?

Mr. MACY. They are selected by management. This is a management-selected attendance in order to meet what management considers to be the need for higher level of ability and understanding to do the job.

TRANSPORTATION AND SUBSISTENCE COSTS

Mr. JONAS. The students are sent to the Marine School from the Midwest. Do you pay transportation and subsistence?

Mr. MACY. Those that are sent to King's Point, to the program there?

Mr. JONAS. Yes, or anywhere.

Mr. MACY. For any program that involves travel and living away from home there is payment of travel and subsistence by the agency for the period of time of the training. The salary is expense beyond the training expense that is incurred by the Commission.

Mr. OSTERTAG. Mr. Chairman.

Mr. EVINS. Mr. Ostertag.

SUPPLEMENT TO ON-THE-JOB TRAINING

Mr. OSTERTAG. I just wanted to get this clear in my own mind. I can see and understand where training has a purpose and is probably a laudable program. On the other hand, these people have all qualified through civil service by virtue of examination. In other words, they maintain a basic qualification.

Mr. MACY. Yes.

Mr. OSTERTAG. Now of course we all recognize, I am sure, that experience is a great teacher and they are on jobs. Where does experience on the job tie in with the need, or what is the relationship between the need for training and the actual experience that they have in their positions for which they qualified in the first place?

Mr. MACY. This is supplementary to the on-the-job training and experience.

Mr. OSTERTAG. I understand.

Mr. MACY. Certainly we would continue to say that on-the-job training is the best training that you can have. Our view, however, is that there is a need to supplement such training where there are new techniques, new equipments, or new programs that have come into being. This is taking the individual who qualified initially and augmenting his capabilities so that he can do the new job.

Another purpose is to provide an individual with a higher level capability, if he is going to move into a management job, or if he is going to take on some additional responsibilities for which he did not have direct education or training previously. This is a supplement to the training on the job and experience.

Mr. OSTERTAG. I thought you indicated that promotions were not involved in this program.

Mr. MACY. They are not directly related. In other words, the effort is to provide training as a means of increasing the individual's ability to do the job that he now has, to raise the level of performance in his present job.

It may very well be, as the Chairman has indicated, that the individual does move on to a higher level of responsibility. This is one of the reasons why the agency would invest in training. But it is not the only reason.

Mr. EVINS. The program supports the old theory that one never gets too old to learn.

Mr. MACY. Right. Education is a continuing process that has to go all the way through life, and because of the importance of training in doing the Government's job it has to be tied in with official work.

INTERAGENCY COOPERATION IN TRAINING

Mr. JONAS. I certainly agree with that, if you will yield, but you have not fully convinced me yet that the Civil Service Commission is better qualified to do that than the agency itself.

Mr. MACY. Again, we are not superseding the agency. The agency is training where it has its own capability. We conduct training programs of this kind only where there is a demand from a number of agencies. Rather than doing the same kind of training in several different agencies at the same time, it saves money and resources to conduct such training in one place. The Commission gets in the act only in response to particular needs of this kind.

Mr. BOLAND. That sounds good. I hope it is true. I would hope that agencies which have been conducting this type of training program in a specific category would combine with the Civil Service Commission and other agencies.

There is a real danger of overlapping here in that agencies will conduct their own seminars, conduct their own training schools in a particular subject that you are concerned with, with which you are training other agencies of Government. Is that true?

Mr. MACY. We are very conscious of this possibility and to use the GSA example we make very certain that the areas that they are covering are not areas that are available through our program, and if through their new institute they are taking on some training subjects where they have a greater capability, this is fine. This is something that they ought to be doing.

Mr. BOLAND. And if other agencies are in need of the same type of training and GSA can give it, do you get other agencies to come in and take it from GSA?

Mr. MACY. Yes. In fact, we put out a catalog each year of courses that are available for interagency use. Only a relatively small proportion of the courses in that catalog are conducted by the Commission. They are courses that are made available through GSA, or they may be conducted by the Department of Defense or the State Department, but open to other agencies. Here we feel that our function is to perform as a clearinghouse and a center of information with respect to interagency training.

Mr. BOLAND. I think this is good.

Mr. EVINS. Instead of having all training exclusively in one agency or one shop, you get a cross-section and the view that the knowledge may be disseminated and taken by each agency back to their own.

Mr. MACY. Yes. This document, "Interagency Training Programs," is what Mr. Irons calls "The Catalog of the College Without a Campus." This is the interagency training program for all agencies. In going through this you will see; that is, here is one on records disposition; a 2-day program conducted by the GSA. This is in their area. This is in connection with records and archives.

Mr. BOLAND. That sounds good.

CORRESPONDENCE COURSES

Mr. JONAS. One question right there. Have you considered whether you can do any of this by correspondence, or through correspondence schools?

Mr. MACY. I believe there are some correspondence courses, but these are all programs——

Mr. JONAS. Do you think demonstration and oral instruction is better than correspondence?

Mr. MACY. It is better for the type training involved here. Again, let me say that there are many Federal employees who on their own are taking what we call self-development courses at universities, through correspondence and by other means.

Mr. JONAS. I know there is a growing trend in the educational field to expand educational opportunities through correspondence, particularly in the adult group. Most of your trainees would fall in that group. If the universities can do a good job with it, I do not know why the Government cannot.

Mr. MACY. We are working very closely with the correspondence schools and the universities. In fact, many universities have established off-campus units at Federal establishments where they make training available. This is outside company time and at the individual employee's expense.

The role of the Government is only to encourage the employee to engage in this kind of self-improvement for his own good and indirectly for the good of the Government.

Mr. EVINS. This has been very helpful.

EXECUTIVE AND ADMINISTRATIVE SERVICES

We will move on into activity 8, "Executive and administrative services." I have looked this over, Mr. Chairman. You had a total of 289 employees for 1963, 281 for 1964, and you are asking for 281 for 1965. There is no change in numbers of personnel in 1965 compared to 1964. The funding is also the same, $2,145,000.

I do note over the 2-year period there has been an increase in only one activity and the Commission is to be commended. This is in the legal staff. I imagine with all the laws passed regarding Government employees you probably need another good lawyer down there?

Mr. MACY. That is correct.

Mr. EVINS. We will place in the record the general statement for executive management. We know what this is—overall management, approval of policies, recommendations to the President. Put in the record pages 88 and 89.

(The pages follow:)

Executive and administrative services

Functions	1963, actual		1964, authorized		1965, estimate	
	Average positions	Cost	Average positions	Cost	Average positions	Cost
Office of the commissioners	23	$204,287 (211,089)	22	$204,500 (207,100)	22	$207,100
Executive direction	17	186,086 (199,908)	17	196,200 (201,000)	17	201,000
Legal services	19	175,311 (187,316)	20	188,100 (192,200)	20	191,700
Director of management services	9	76,512 (79,773)	9	84,800 (85,700)	9	85,700
Budget and fiscal services	41	305,243 (324,507)	38	303,000 (308,000)	38	308,000
Management systems services	27	205,157 (215,320)	25	201,900 (206,000)	25	206,000
Offices services	116	650,885 (686,709)	114	655,700 (670,000)	114	670,000
Personnel services	24	184,208 (195,092)	23	183,700 (187,600)	23	187,600
Library services	13	82,732 (85,595)	13	86,600 (87,900)	13	87,900
Total, activity 8	289	2,070,511 (2,185,300)	281	2,104,500 (2,145,500)	281	2,145,000

NOTE.—Figures in parentheses above and in the following text are adjusted to reflect 1965 pay rates for comparability.

GENERAL STATEMENT

This activity consists of the executive and administrative functions of the Commission as performed in its central office and as listed in the table on the preceding page. Included are (1) the overall management and services required to facilitate the performance of the operating activities heretofore presented; (2) the approval of policy in the formulation of civil service rules and regulation; and (3) the recommendation of measures to the President to promote the more effectual accomplishment of the objectives of the civil service laws and rules.

The amount authorized for this activity for fiscal year 1964 represents a decrease of eight positions from the 1963 experience. Funds requested for fiscal year 1965 continue all functions of this activity at the 1964 authorized level. Detailed justifications are contained in the following pages.

Mr. EVINS. We think the Commission does a good job and now with their new building——

Mr. MACY. We are going to do an even better one.

Mr. EVINS. Any questions to the Commissioners themselves regarding their own management?

(No response.)

OTHER OBJECTS OF EXPENDITURE

Mr. EVINS. Other objects, in your budget, I notice show a substantial increase. Put page 98 in the record.

(The material referred to follows:)

Other objects of expenditure

Object classification	1963 actual	1964 authorized	1965 estimate
12 Personnel benefits	$1,307,822 (1,384,860)	$1,314,200 (1,339,800)	$1,321,000
21 Travel and transportation of persons	462,274	547,800	450,000
22 Transportation of things	132,026	135,300	135,300
23 Rent, communications, and utilities	957,308	1,056,500	1,123,500
24 Printing and reproduction	489,686	490,000	490,000
25 Other services	309,025	310,000	303,000
26 Supplies and materials	225,201	225,000	225,000
31 Equipment:			
Furniture and other equipment	466,720	71,200	71,200
Mechanized filing equipment	0	0	165,000
Computer	0	0	133,000
Total, other obligations	4,350,062 (4,427,100)	4,150,000 (4,175,600)	4,417,000

NOTE.—Figures in parentheses above and in the following text are adjusted to reflect 1965 pay rates for comparability.

Mr. EVINS. We mentioned earlier utilities, rents, communications. The President is trying to keep the light bill down. Do you follow that pattern?

Mr. MACY. Yes, sir, we do indeed. We turn out lights as soon and as early as we can. We are using solar power. On page 104 there is an explanation of that rent item that you were asking about. You will notice the increase is in the telecommunications service, which is a reimbursable item to GSA.

COMMUNICATIONS COSTS

Mr. EVINS. Payment to GSA, local calls, long distance toll calls, teletype and telegraph service, an increase of $67,000 is requested, brought about by Public Law 87-847. This establishes the communication fund, to be administered by GSA.

Mr. BOLAND. This is where GSA is saving $15 million; is it not, Mr. Chairman?

Mr. THOMAS. Look in the back and see if you can find the offset for the $67,000. I couldn't find it.

Mr. MACY. This is an added amount we had no control over.

Mr. THOMAS. You ought to show a reduction in your communications.

Mr. EVINS. It is going up every year.

Mr. BOLAND. You should be able to reduce your telephone bill considerably over the years as a result of the telecommunications setup.

Mr. UHLENHOP. Over the years, perhaps, this is nothing more than a shift in financing.

Mr. THOMAS. Why not the first year?

Mr. BOLAND. In long-distance calls you get a tremendous break. At least GSA tells us they have saved $15 million from all agencies.

Mr. THOMAS. That is, printed and spoken word.

Mr. MACY. Maybe this is like the Board of Examiners in reverse.

Mr. JONAS. Will you yield?

Mr. EVINS. Mr. Jonas.

INCREASE IN BILLINGS FROM GSA

Mr. JONAS. Laying jokes aside, I would like a little better explanation of why the telephone and telegraph service is going up to $67,000. It is an increase in the billings from GSA. How are they going to save any money on it if they go up on the billings?

Mr. WILLIAMS. The $67,000 which the Bureau of the Budget approved for inclusion in the budget represents certain costs plus an increase in teletype costs, which GSA has heretofore paid for out of direct appropriations. Because of the establishment of the Federal telecommunications fund, financed from a revolving fund type of operation, it is now proposed to make it completely self-supporting by charging to the agencies a prorated share of expenses which have always been present, but paid by GSA. It is not a new item.

Mr. THOMAS. Is it equipment? They are getting in business. That is your part of the equipment.

Mr. MACY. This started in February 1963.

Mr. THOMAS. You mean by that you will show the reduction next year?

Mr. WILLIAMS. I am not sure there will be a reduction next year.

Mr. THOMAS. Like Mr. Boland asked, How can it be justified?

Mr. WILLIAMS. We also got a notice that our teletype rates were to be increased. This is a direct out-of-pocket expense to us. At the mill price per word by GSA teletype service, costs will be increased by almost 100 percent.

Mr. MACY. 15 to 33 mills per word.

Mr. THOMAS. Where is the reduction?

Mr. WILLIAMS. Our point is, that is not a reduction to the Commission, it is an added expense.

Mr. THOMAS. How much more are you spending this year for the same services?

Mr. EVINS. $241,000 in fiscal year 1964 versus $308,000 in fiscal year 1965.

Mr. WILLIAMS. We expect our normal expenses for communications to be the same. Our only increase is the $67,000 which we must reimburse to GSA.

Mr. JONAS. I was just informed, Mr. Chairman, that the GSA budget shows a minus of about $5 million and apparently this $67,000 is the Civil Service part of that $5 million.

Mr. IRONS. That is the way I would interpret the letter from Mr. Boutin. He informed me he got $5 million from this committee. He is not asking for $5 million. Instead he is prorating to every agency. Now, we have to defend $67,000.

Mr. JONAS. Can you assure the committee that you are not planning to spend $67,000 more in communications next year than you have this year?

Mr. IRONS. All I know is we are being billed for $67,000 which we were never billed for before.

Mr. OSTERTAG. In other words, GSA is not actually reducing or saving it? They are just transferring it to other agencies?

Mr. MACY. That is for them to say. In accordance with GSA Circular No. 313, we have placed in our budget $67,000 which we did not have previously in order to cover this new telecommunications system and the increased costs in teletype service.

Mr. THOMAS. Gentlemen, let us refresh our memory now. They had to put in switchboards and other equipment. Assuming that that is correct, this is for initial equipment. What do you anticipate your actual communication bill—the written word and spoken word—will be this year as compared with last year?

Mr. WILLIAMS. About the same, sir.

Mr. THOMAS. No reduction?

Mr. WILLIAMS. No, sir.

Mr. MACY. No increase?

Mr. WILLIAMS. No increase.

Mr. THOMAS. We are looking for a sizable reduction.

Mr. WILLIAMS. If anything, I am afraid our charges are going up, because as I said, with regard to teletype messages sent through GSA, there is going to be more than a hundred percent increase.

Mr. THOMAS. What about your spoken word, your long lines, long-distance calls?

Mr. WILLIAMS. There is a theoretical reduction there, Mr. Chairman, to the extent we did not use it.

Mr. THOMAS. Added together, what is it?

Mr. WILLIAMS. We are assuming one is going to offset the other.

Mr. THOMAS. No reduction?

Mr. WILLIAMS. No.

Mr. THOMAS. In total, no reduction?

Mr. WILLIAMS. The increased cost of our teletype messages will probably offset any savings we get for long-distance calls.

Mr. THOMAS. Gentlemen, bear this in mind, that there is no reduction.

Mr. EVINS. We will bear this in mind when we have an examination of GSA.

OTHER EQUIPMENT

Other equipment costs are up also, Mr. Chairman. You are asking $165,000 for mechanized filing equipment, $133,000 for an electronic digital computer, and your total estimate for equipment is $369,200.

How much did this committee approve in appropriations for all new equipment and furnishings when you moved into the new building?

Mr. THOMAS. You broke the Treasury, Mr. Evins.

Mr. MACY. I think we got about 50 percent of what we asked for, wasn't that right?

Mr. WILLIAMS. In our regular budget we had $140,000 for the normal purchase and replacement of equipment. We were at the normal level of buying furniture and machines and things of this kind. We received through the Congress, in a supplemental appropriation, $248,000, which was exactly half what we had asked for in connection with the movement to the new building.

Mr. THOMAS. Isn't that a fair division, 50–50?

Mr. WILLIAMS. We were satisfied.

Mr. MACY. We are not making any complaints at all.

We are very pleased with what we have.

Mr. WILLIAMS. We spent $387,000 in 1963 in connection with the upgrading of furniture and equipment.

Mr. EVINS. In your 1965 request you are asking for locked files for security investigations, et cetera?

Mr. WILLIAMS. Yes, sir.

PURCHASE OF ELECTRONIC COMPUTER

Mr. EVINS. Do you have any electronic computing equipment at present?

Mr. MACY. Yes, sir. It is on lease at the present time. We have an IBM 1401, and using the Bureau of the Budget standards, it is our belief that it would be better economy to purchase this equipment in 1965 and thereby eliminate the rental charges. That is the reason for the $133,000 figure in there for the electronic computer.

Mr. THOMAS. Mr. Chairman, it is our opinion here that generally it is better to buy this equipment outright. Straighten out the record. You have two or three figures in there. What is the actual purchase price and how much rent have you paid, whether or not the rent goes against the purchase price, and exactly what are you doing with the equipment? Your justification is not clear on what you are doing with it.

Mr. EVINS. Spell that out for the record.

Mr. THOMAS. Some of the gentlemen are of the opinion that you are grading tests with it.

Mr. WILLIAMS. The sales price for the equipment bought outright is $341,000. We were a little uncertain whether we should buy outright, so in accordance with standards issued by the Bureau of the Budget we appraised the situation and decided for at least 2 years we should rent, and at that point make up our mind whether we should then buy. For that reason we rented with an option to buy. That option lasted for 2 years. The option expires this coming May 12. Part of our option agreement is that 65 percent of any rentals paid would be credited to the purchase price anytime within that 24-month period.

We got the computer in May of 1962—in effect the beginning of fiscal year 1963—so that in 1963 and 1964 we will have paid $175,000 in rental. We will get $114,919 of that credited to the purchase price. It costs us $3,411 to get this option to buy written into the contract. We get full credit for that $3,411 in the event that we buy.

Mr. EVINS. How much is the total cost?

Mr. WILLIAMS. $341,150.

Mr. EVINS. You need $133,000 more to complete the transaction with your credits.

Mr. WILLIAMS. We need $133,000 plus the $90,000 we have in other objects for a year's rental.

Mr. EVINS. Plus the credits you receive on the option.

Mr. WILLIAMS. Plus the credit. We will amortize the complete price by 1967. In 2 years we will have paid for it in terms of the rental we otherwise would have paid.

SERVICE CHARGE ON ADP EQUIPMENT

Mr. EVINS. What kind of provision do you have in the contract with respect to annual service charge payments to the company?

Mr. WILLIAMS. On a rental basis we pay no service charge. If we buy outright we can get a complete service contract for $10,500 a year. So in effect we are saving many thousands of dollars a year in rentals once we have amortized the cost of it in 1967.

Mr. THOMAS. That all boils down, gentlemen, that he is looking for about $225,000 in round figures, cash, to buy it this year.

Mr. WILLIAMS. Just about.

USES OF THE COMPUTER

Mr. THOMAS. Tell us exactly what you do with the machine. That is where the justification is thin. What do you do with it?

Mr. WILLIAMS. The machine is being used roughly one and two-tenths shifts a day. This means roughly about 10 hours a day we are effectively using the computer and the components of it. We have quite a number of programs already on it. We have got the complete annuity roll of something better than 600,000 payees on it. We have got the 10-percent sample of Federal employees, a program which has been discussed with this committee before.

Mr. THOMAS. Get back to your subject. In what regard do you use it on your annuitants?

Mr. WILLIAMS. We keep the payroll of the annuitants current, all name changes that occur, all removals because of deaths, all new cases coming in. This is almost a pure payroll operation between ourselves and Treasury.

Mr. THOMAS. You have a reduction in your limitation on the expense for the retired people.

Mr. WILLIAMS. I do not think we have got it to the point where we are going to get savings out of it.

Mr. THOMAS. What is the use having the machine? Why spend this $225,000?

Mr. WILLIAMS. I think we will get savings. It has only been programed within the past year.

Mr. THOMAS. You have had it 2 years now.

Mr. WILLIAMS. But work did not get on the machine as soon as we got delivery. It takes time, as you probably know, to gear necessary operations, to get the work on machines. A first-year cost sometimes, actually amounts to more than when you were doing it on some

other basis, but as time goes on, and you have your program written, and you get into operation, you do get savings in future years. But you do not, most times, get savings out of it as soon as you have put an operation on the computer.

Mr. THOMAS. Gentlemen, didn't we have the experience in one agency that after we bought the computers the salary costs went up?

Mr. EVINS. Yes. We have had that experience. We have had experience that they go up generally when we were told that they would be reduced.

Mr. THOMAS. The purpose of the machine was to reduce overall cost.

Mr. EVINS. The thing I do not like about the whole proposition is this annual $10,000 payment for service when many times you probably won't need service. You, in effect, are buying it and then putting the company on the payroll. This is the best business you can get into, gentlemen.

Mr. MACY. Our experience has been that the service is necessary, is it not?

Mr. WILLIAMS. It is quite essential.

Mr. THOMAS. In other words, you are working your machine overtime every day. Did you say that? It is about 10 hours a day.

Mr. WILLIAMS. About 10 hours a day.

Mr. THOMAS. It fits how many programs that you have in the agency?

Mr. WILLIAMS. At the present time we have many different programs on the machine.

(The information requested follows:)

USE OF ADP BY CIVIL SERVICE COMMISSION

The following are representative uses of automatic data processing equipment in Civil Service Commission systems:

Federal personnel sample program.—Maintenance of a 10-percent sample of Government personnel records for the preparation of statistics and management reports.

Maintenance of retirement actuarial file.—Maintained for the preparation of actuarial tables and statistics.

Preparation of employee health benefits data.—Processing for the purpose of determining payments to insurance carriers.

Processing claims for deposit and redeposit.—Computations of withdrawals and deposits to the retirement fund.

Computation of retired annuitant and survivor pay data.—Daily computation of annuities.

Automation of test scheduling.—Scheduling test applicants in accordance with examination point capacities; preparing examiner's instructions; preparing applicant admission letters.

Automation of test scoring.—Scoring tests, notifying applicants of results, and preparing statistical data.

SELECTION OF COMPUTERS

Mr. THOMAS. Who helped you select this particular machine?

Mr. WILLIAMS. We went out on competitive bids to all in the industry.

Mr. THOMAS. Did the Bureau of Standards or GSA have a hand in helping you make up your mind?

Mr. WILLIAMS. GSA did not. At that time, 2 years ago, they had no responsibility in the field.

Mr. THOMAS. What about the Bureau of Standards?

Mr. WILLIAMS. The Bureau of the Budget is primarily the agency which is setting standards with regard to acquisition of this type of equipment.

EQUIPMENT JUSTIFICATION

Mr. EVINS. I am through except for putting this material in the record, Mr. Reporter, pages 109 through 113.

(The justification pages follow:)

Equipment

Actual, 1963	$466,720
Authorized, 1964	71,200
Estimate, 1965	369,200

This object class provides for nonexpendable personal property which may be expected to have a period of service of 1 year or more after being put into use, without material impairment of its physical condition. It excludes commodities which are used to form a minor part of equipment or fixed property.

The following table shows total equipment requirements:

	1963 actual	1964 authorized	1965 estimate
Typewriters	$24,055	$24,000	$24,000
Office machines	35,353	35,400	35,400
Furniture and filing equipment	303,783	4,100	4,100
Miscellaneous nonexpendable property	103,529	7,700	7,700
Mechanized filing equipment	0	0	165,000
Electronic digital computer	0	0	133,000
Total	466,720	71,200	369,200

It will be noted from the above table that a substantial decrease occurred in fiscal year 1964 for furniture and filing equipment and miscellaneous nonexpendable property. Since a large part of the total funds available in fiscal year 1963 (including the supplemental appropriation) were used to replace furniture and miscellaneous items in the new building (FOB No. 9), only a token amount of funds are being requested for these categories for fiscal year 1965.

The items for which increases are requested in fiscal year 1965 follow:

Mechanized filing equipment

Within the Bureau of Personnel Investigations, the Commission maintains a large number of insulated, multirow, cross-drawer filing cabinets. This equipment provides for the security investigations index (SII) file and the security file (formerly "leads" file).

The operation of these files requires observance of extremely close production deadlines; the services of 53 searchers; nearly 5 million actions per year; approximately 10 million cards and guides; approximately 8,500 square feet of floor space; and the full-field clearance and training of 8 or 9 new searchers annually due to employee turnover. In addition, these files are currently expanding at a rate of 250 linear feet of filing compartment space per year, which is equivalent to approximately 80 to 100 square feet of floor and aisle space, and $2,000 in equipment costs.

Although active and continuing efforts have been made to reduce costs and turnover, and to increase productivity through various techniques in work measurement, audit, disposition, and personnel relations, the desired results have not materialized.

Due to rising costs for personnel and equipment, increasing volume of material and workload, and restrictions on available space, it was evident that consideration had to be given to additional devices or techniques to insure or improve operational effectiveness. Accordingly, attention was given to a special study on the merits of converting the investigative index files to a mechanized operation.

This study demonstrated that the use of mechanized (semiautomatic) filing equipment would provide the desired speed, accessibility, safety, compactness, and laborsaving features essential for this function. In addition, it would permit the most effective utilization of manpower, space, and equipment. For instance, it is estimated that 10 positions can be eliminated at a saving of $43,000 annually in personal services costs. (This saving is reflected in the summary and comparative summary statements under that portion pertaining to activity 2, "Investigations of character and fitness for employment"). Also,

approximately 3,000 square feet of floorspace would be available for other purposes, or future expansion.

Through the acquisition of 25 work units, with a capacity of 350,000 to 400,000 cards each, and 13 units of 150,000 cards capacity each, it would be possible to effect complete conversion of the present investigative index and security files. This would permit the release of 280 insulated cross files to the General Services Administration for redistribution to other Government agencies.

To provide for the mechanization of this function, an increase of $165,000 is requested for fiscal year 1965.

IBM model 1401 electronic digital computer

The Commission acquired this computer on a lease-with-option-to-purchase basis in the latter part of fiscal year 1962. The original selection of this equipment was based on the provisions of Bureau of the Budget Circular No. A–54 (which provides policies on selection and acquisition of automatic data processing equipment). Under the terms of this contract, the Commission was entitled to make a decision in favor of purchase at any time within 24 months after installation (specifically, before May 12, 1964). It further provided the opportunity to recapture approximately 65 percent of all rentals paid to date of purchase, as well as credit for the deposit made for this option.

According to the guidelines contained in Circular No. A–54, a recent evaluation of the relative merits of the various methods of acquisition (i.e., purchase, lease, or lease with option to purchase) indicated that it would be more advantageous to effect purchase of this equipment, in lieu of other methods. For example, the ability of the presently installed equipment to successfully and advantageously perform the Commission's work has been well demonstrated by actual experience. In addition, a comparative cost analysis revealed that a decisive financial advantage will exist through actual purchase. Assuming purchase in fiscal year 1965, rental costs would exceed purchase costs by $20,500 within 2 years after purchase. One year later, rental excess over purchase would amount to $102,700.

Based on predictable workloads, the study clearly showed that the capabilities of this equipment will be required for a long enough period to warrant its purchase.

Since careful consideration has been given to the merits of purchasing this equipment and in order for the Commission to exercise the option-to-purchase, a net amount of $133,000 is requested for fiscal year 1965. This amount, plus approximately $90,000 included under object classification 23 (rent, communications, and utilities) for normal rental, represents the difference between the actual purchase price less allowances for the option deposit and rental costs to purchase date.

Program by activities:			
Investigations (program costs, funded)	453	580	634
Change in selected resources [1]	28		
Total obligations	481	580	634
Financing: Unobligated balance lapsing	119	20	
New obligational authority (appropriation)	600	600	634

[1] Selected resources of June 30 are as follows: Unpaid, undelivered orders, 1962, $85,000 (1963 adjustments, −$3,000); 1963, $110,000; 1964, $110,000; 1965, $110,000.

Mr. EVINS. Investigation of U.S. citizens for employment in international organizations, explain that, Mr. Chairman.

Mr. MACY. The Commission accepts the estimate from the Department of State and based on previous experience develops the budget presentation. This request is $34,000 above the appropriations for 1964. A table on page 113 shows the number of cases that were estimated along with the unit cost, to determine the total request.

Mr. EVINS. There were 1,222 name checks in 1963. You will have name checks on 1,625 in 1965; full field investigations increased from 60 in 1963 to 80 for 1965.

Mr. MACY. Those are two items for which we reimburse the FBI. The rates and unit costs are the FBI's computation.

Mr. EVINS. You have some adjusted figures in brackets.

Mr. MACY. That is to adjust the 1963 and 1964 unit costs to the 1965 pay scales. That was done to give the committee a picture of what the unit cost would have been in 1963 and 1964 if the 1965 pay scales had been applicable at that time.

Mr. THOMAS. Mr. Evins, let me interrupt you a minute. Off the record.

(Discussion off the record.)

Mr. EVINS. Place in the record, Mr. Reporter, pages 112 through 116.

KANSAS STATE UNIVERSITY LIBRARY

NOTE.—Figures in parentheses are adjusted to 1965 pay scale for comparability.

GENERAL STATEMENT

Executive Order 10422, as amended, sets forth the procedures used for making available, to the Secretary General of the United Nations and the executive heads of other international organizations of which the U.S. Government is a member, certain information concerning U.S. citizens employed, or being considered for employment, by such organizations.

Under the Executive order, investigations are made by the Civil Service Commission and the Federal Bureau of Investigation. The Commission makes (1) background investigations in all cases involving U.S. citizens employed or being considered for employment for a period exceeding 90 days and (2) checks of specified records (national agency checks) for short-term (90 days or less)

appointees or potential appointees. The Federal Bureau of Investigation makes full field loyalty investigations whenever, during the course of investigations by the Civil Service Commission, derogatory information with respect to loyalty is revealed.

The reports of these investigations are forwarded to the International Organizations Employees Loyalty Board of the Civil Service Commission. The Board makes an advisory determination under the standard specified in the order. The standard is "* * * whether or not on all the evidence there is a reasonable doubt as to the loyalty of the person involved to the Government of the United States."

The Board sends its determinations, as advisory opinions, to the Secretary of State for transmission to the executive heads of the international organizations concerned for their use in exercising their responsibility with respect to the integrity of the personnel employed or to be employed by such organizations.

It is not the function of either the Civil Service Commission or the Federal Bureau of Investigation to make decisions as to whether the person investigated shall be retained or given further consideration for employment. That is a matter for the decision of the Secretary General of the United Nations or the executive heads of other international organizations.

Based on workload estimates received from the State Department, 1,325 investigations are expected in fiscal year 1964. The 1964 budget request was based on 1,335 background investigations at an average unit cost of $387. Improvements in the Commission's investigative procedures have reduced the cost of background investigations by $50 per case. Therefore, the 1964 authorized program is based on an average unit cost of $337 per case and contemplates an estimated unobligated balance of $20,000 on June 30, 1964, resulting from these savings.

The State Department indicated that some international organizations will continue to expand during 1964 and 1965 and estimated receipts of 1,400 investigations during fiscal year 1965. The Food and Agriculture Organization and the International Monetary Fund, for example, have budgeted for and expect to employ additional personnel. It is not unreasonale to assume that a good number of U.S. citizens will be placed in these positions. Also, a large number of vacancies due to turnover will be filled in all international organizations.

The 1965 budget request of $634,000 represents an increase of $54,000 from the authorized 1964 program ($34,000 from the 1964 appropriation level) as a result of (1) the increased number of investigations to be processed and (2) increases in unit costs due to second phase of Public Law 87–793.

Unit cost of investigations by the Federal Bureau of Investigation increased from $920 to $960 per investigation, and background investigations conducted by the Civil Service Commission increased from $325 to $350 per investigation due entirely to the increased pay rates.

Mr. OSTERTAG. Will the chairman yield?

Mr. EVINS. Yes.

INCREASES IN CASE COSTS

Mr. OSTERTAG. Mr. Chairman, in your justification statement, you refer to the increase as being brought about by the increased number of investigations to be processed and an increase in unit cost, due to the second phase of Public Law 87–793.

Mr. MACY. Yes.

Mr. OSTERTAG. What is that unit cost in the second phase of Public Law 87–793?

Mr. MACY. These are the rates that went into effect January 1, 1964, which would be applicable for the full period. You will see back on the table on 113 what this amounts to. On national agency checks by the Commission, the cost is $7.06 in 1964, with the new rates applicable, it becomes $7.10

Mr. OSTERTAG. Thank you.

Mr. THOMAS. It reflects the pay increase to some degree, does it not?

Mr. MACY. It reflects the increase as of January 1 of this year.

Annuities Under Special Acts

Program and financing

[In thousands of dollars]

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
1. To employees engaged in construction of the Panama Canal	1,498	1,399	1,297
2. To widows of former employees of the Lighthouse Service	387	401	403
Total program costs, funded—obligations (object class 13)	1,885	1,800	1,700
Financing: Unobligated balance lapsing	115		
New obligational authority (appropriation)	2,000	1,800	1,700

Mr. Evins. "Annuities under special acts." Mr. Reporter, place in the record pages 117 through 120.

(The pages follow:)

"Annuities Under Special Acts

"For payment of annuities authorized by the Act of May 29, 1944, as amended (48 U.S.C. 1373a), and the Act of August 19, 1950, as amended (33 U.S.C. 771–775), [$1,800,000] *$1,700,000, (Independent Offices Appropriation Act, 1964.)*"

No change in appropriation language is required for fiscal year 1965 other than to indicate the total amount of appropriation.

The estimated requirements for fiscal year 1965 for payments under the Panama Canal Construction Act, 48 U.S.C. 1373a, May 29, 1944, as amended, and to widows of former employees of the Lighthouse Service as provided in 33 U.S.C. 771–775, August 19, 1950, are as follows:

Appropriated, 1963	$2,000,000
Authorized, 1964	1,800,000
Requested, 1965	1,700,000
Decrease from 1964	100,000

Funds requested for fiscal year 1965 are for the continuation of annuities authorized. New claims under the Panama Canal Construction Act which was originally enacted in 1944, and under the Lighthouse Widows' Act of August 19, 1950, continue to be received each year, and are expected in 1965. Under the laws, such claims require retroactive payments to the beginning dates of the acts.

The budget request for fiscal year 1965 represents a decrease of $100,000 from the 1964 appropriation since it is expected that drops for death in fiscal years 1964 and 1965 will more than offset additions to the annuity rolls.

More detailed statements on the following pages indicate the basis of the estimated requirements for this appropriation.

Statement of funds required to finance payments to Panama Canal construction annuitants for the fiscal years 1964 and 1965

	Number	Annual rate	Funds required	
			Fiscal year 1964	Fiscal year 1965
Annuity roll as of June 30, 1963	1,645	[1] $853	$1,403,000	$1,403,000
Anticipated additions fiscal year 1964 retroactive to May 29, 1944 (3 additions times $853 average annuity times 20.08 years) [2]			+51,000	
Funds required to finance these 3 additions in fiscal year 1965	+3	853		+3,000
Subtotal	1,648		1,454,000	1,406,000
Less drops fiscal year 1964 for death [3]	−130	426	−55,000	
		853		−111,000
Funds required for fiscal year 1964	1,518		1,399,000	1,300,000
Anticipated additions fiscal year 1965 retroactive to May 29, 1944 (4 additions times $853 average annuity times 21.08 years) [2]	+4			+72,000
Subtotal	1,522			1,372,000
Less drops fiscal year 1965 for death	−175	426		−75,000
Funds required for fiscal year 1965	1,347			1,297,000

[1] The $853 average annuity is computed from the total annuity roll on June 30, 1963.
[2] The retroactive date refers to the effective date of the act providing such annuities and is the date from which retroactive benefits are computed. The third figure in the formula refers to the number of years' retroactive benefits to which new additions to the roll are entitled.
[3] Rate of $426 (annual rate of $853 for ½ year) used in computing amount of reduction in the roll for fiscal year 1964 and full rate of $853 used in reflecting this reduction in the roll for fiscal year 1965 requirements.

Statement of funds required to finance benefit payments to widows of former employees of the Lighthouse Servie for the fiscal years 1964 and 1965

	Number	Annual rate	Funds required	
			Fiscal year 1964	Fiscal year 1965
Annuity roll as of June 30, 1963	422	$900	$379,800	$379,800
Anticipated additions fiscal year 1964 retroactive to Sept. 1, 1950 [1] (2 additions times $600 annual rate times 7.583 years plus 2 additions times $900 annual rate times 6.25 years) [2]			+20,400	
Funds required to finance these additions in fiscal year 1965	+2	900		+1,800
Other (those not entitled to retroactive benefits) [3]	+30	450	+13,500	
		900		+27,000
Subtotal	454		413,700	408,600
Less drops fiscal year 1964 for death [3]	−29	450	−13,000	
		900		−26,100
Funds required for fiscal year 1964	425		400,700	382,500
Anticipated additions fiscal year 1965 retroactive to Sept. 1, 1950 [1] (2 additions times $600 annual rate times 7.583 years plus 2 additions times $900 annual rate times 7.25 years) [2]	+2			+22,100
Other (those not entitled to retroactive benefits) [3]	+26	450		+11,700
Subtotal	453			416,300
Less drops fiscal year 1965 for death	−30	450		−13,500
Funds required for fiscal year 1965	423			402,800

[1] The retroactive date refers to the effective date of the act providing such annuities and is the date from which retroactive benefits are computed. The third figure in the formula refers to the number of years retroactive benefits to which new additions to the roll are entitled.
[2] The annual rate of $600 was applied for the period Sept. 1, 1950, to Mar. 31, 1958, and the annual rate of $900 was applied for the period commencing Apr. 1, 1958, and subsequent thereto in accordance with Public Law 85-351, approved Mar. 28, 1958.
[3] Rate of $450 (annual rate of $900 for ½ year) used in computing amount of increase in roll for fiscal year 1964 and full rate of $900 used in reflecting this increase in roll for fiscal year 1965 requirements.

Mr. MACY. This is the program where with the passage of time the number of people covered is being reduced. We see on the Panama construction annuitants, on page 119, that the funds required for fiscal year 1965 cover 1,347 annuitants.

Mr. JONAS. Isn't increased longevity going to destroy your plan there? They live longer.

Mr. MACY. As people live longer the obligations continue longer; that is correct.

Mr. EVINS. We shall take up next the Government Payments to Annuitants and Employees Health Benefits Fund, and the statute as set forth on page 121.

We shall include the general statement, pages 122 through 125.

(The pages follow:)

GENERAL STATEMENT

The Federal Employees Health Benefits Act of 1959 (Public Law 86-382, 5 U.S.C. 3006) provides that there shall be created an employees health benefits fund to be administered by the Commission and to be available without fiscal year

limitation for all payments to approved health benefits plans. The act further provides that the sums authorized to be contributed by the Government toward the health benefits subscription charge of any annuitant as defined therein (including civil service annuitants and survivors of deceased employees and annuitants, those retired under other Federal civilian retirement systems, and individuals in receipt of compensation under the Federal Employees' Compensation Act) shall be paid from annual appropriations which the act authorizes to be made for such purposes. The act also provides that the health benefits fund will be available to pay for administrative expenses incurred by the Commission, within such limitations as may be specified annually by the Congress.

More than 1.9 million employees and approximately 116,300 annuitants are participating in this program. For fiscal year 1963, 237.9 million was withheld from enrolled employees and annuitants and $137.7 million was contributed by the Government as its share of the cost of health benefits. An estimated $292.3 million will be deposited into the fund for fiscal year 1965 from amounts withheld from employees and annuitants and $146.5 million will be contributed by the Government.

The Government contribution to any plan is at the minimum amounts authorized by law including an add-on for administrative expense and a contingency reserve. In no case does the Government contribution exceed 50 percent of the total charge for any plan. The Government's overall share of the program's cost is 36.7 percent, leaving 63.3 percent to be contributed by participants. For the 1963 fiscal year $360.8 million was paid from the fund to approved health benefits plans as the cost of providing the health benefits. Approximately $373.7 million will be paid out for fiscal year 1964 and $422.1 million in fiscal year 1965. An amount equal to 3 percent of the contribution toward each plan is set aside in the fund to provide a contingency reserve for that plan. The contingency reserve can only be used to defray future increased rates, or to reduce contributions, or to provide increased benefits. Effective with the contract period beginning November 1, 1963, an amendment to the regulations provides for additional payments to experience-rated carriers from the contingency reserve when the reserves held by the carrier are less than a stipulated amount and the plan's contingency reserve held by the fund exceeds 1 month's subscription charges. Community-rated carriers may also receive additional payments from their plan's contingency reserve held by the fund, when properly justified. For fiscal year 1964 approximately $770,000 will be paid from the contingency reserve to qualified carriers and an estimated $15.1 million will be paid in fiscal year 1965. In addition, an amount equal to 1 percent of all contributions is set aside for administrative expenses incurred by the Commission in the administration of the act.

All covered employees have a choice between two types of Government-wide plans: (1) A service-benefit type plan and (2) an indemnity-benefit type plan. Many employees may also choose from among (1) employee organization plans, (2) group-practice prepayment plans, or (3) individual-practice prepayment plans. Most plans offer a further choice between two options, thus offering two levels of benefits. Contributions by participants are based on the type of enrollment (self or family) plan, and option they select. New enrollments and changes in existing enrollments are permitted upon the happening of certain events; e.g., marriage. Additionally, employees are by regulation guaranteed an unrestricted opportunity (i.e., an open season) to enroll or change an existing enrollment at least once every 3 years. The first such open season was held in October 1961 and the second was held in October 1963.

The estimate of the administrative expenses required for fiscal year 1965 includes the cost of printing and distributing revised brochures and other issuances to reflect benefit and subscription rate changes expected to become effective for the ensuing contract year.

Appropriation request, fiscal year 1965, Government payment for annuitants, employees health benefits fund

	Appropriated, 1963	Authorized, 1964	Estimated, 1965	Changes, 1965 compared with 1964
Payment to employees health benefits fund on behalf of enrolled annuitants	[1] $6,789,000	$9,500,000	$10,664,000	+$1,164,000

[1] Includes $1,623,000 unobligated balance carried over from fiscal year 1962.

The funds to be appropriated for payment to the employees health benefits fund on behalf of enrolled annuitants depend on the number of enrolled annuitants, the type of enrollment (self only or family) and the amount of the Government's contribution to subscription charges. This contribution is fixed by the Commission at the minimum of the range authorized by law.

Of the 116,300 annuitants enrolled at June 30, 1963, 64.1 percent were enrolled for family and 35.9 percent were enrolled for self only. Using projected experience under the Civil Service Retirement Act and other retirement systems affected, it is estimated that there will be a net increase of 40,050 in fiscal year 1964 and a further net increase of 44,900 in fiscal year 1965 in the number of annuitants with health benefits coverage. These figures are the basis for estimating funds required to cover the Government's contribution to these annuitants for fiscal year 1965.

As shown in the statement on the following page, total funds required for fiscal year 1965 amount to $11,469,000, however it is estimated that there will be an unobligated balance of $805,000 available for expenditure in fiscal year 1965, resulting in a net appropriation request of $10,664,000. There will be a continuing need for this appropriation in increasing amounts each year. Available indicators forecast that the Government's share of contributions for annuitants will increase by almost $3 million a year because of the growing number of annuitants with health benefits coverage.

INCREASE IN 1965

Mr. EVINS. There is $1,164,000 increase, from $9.5 million to $10,664,000 for these health benefit payments. Is all this required by law or statute?

Mr. MACY. Yes. This is required by the Health Benefits Act of 1959 and is the Government's share of the contribution to support the program for those employees who have retired. We have on the rolls 116,300 annuitants who are covered by this program.

The increase is expected to carry it over 200,000 by 1965. The actual cost would be $11,469,000 but we have $805,000 in an unobligated balance in this account, which makes it possible for this figure to be reduced to $10,664,000.

Mr. EVINS. We spoke of an increase from $9.5 million to $10,664,000, an increase of $1,164,000 for next year, Mr. Chairman. We will ask you to justify that for the committee.

Mr. MACY. This is to take care of the increase in the number of retired employees who are covered under this program.

It is our estimate that in fiscal year 1965 there will be approximately 40,000 additional annuitants added to the rolls who will continue coverage under the health benefits program.

Mr. EVINS. How do these 40,000 new people added to the rolls compare with recent years?

Mr. MACY. About the same. It has been running around 40,000 for some time.

GAO REPORT ON HEALTH BENEFITS COVERAGE FOR EMPLOYEES IN NONPAY STATUS

Mr. OSTERTAG. Mr. Chairman, you are familiar with the GAO report on this subject, the matter of free coverage of persons no longer in Government service?

Then I think there is another item which they mention, that the regulations are not in compliance with the act which specifies that free extension may be granted to employees who are on leave without pay but does not refer to the broader category of nonpay status. Are you familiar with that?

Mr. MACY. I know of the report but I think Mr. Ruddock could give the committee a more responsive accounting on that.

Mr. RUDDOCK. The Health Benefits Act authorizes the Commission by regulation to permit continued health benefits coverage for an employee, and the law uses the term "in leave without pay status" for up to a year.

Leave without pay can be used as a technical term as follows: After a formal application, approved by his agency, employee is granted something which is called leave without pay.

Under the Commission's regulations, we have construed leave without pay in the generic sense of covering the somewhat broader category of people who are not in pay status.

We did this primarily so that we would not have to terminate the health benefits coverage of a substitute in the postal service when, for example, he is not called to duty for a pay period. He is technically not in leave without pay but he is certainly in a nonpay status.

It was the decision of the Commission after consultation with its General Counsel that these words could be construed to cover people in nonpay status in the broad sense, and that is the group covered by the Commission's regulations.

The General Accounting Office in its report takes exception to this decision by the Commission and they indicate that the regulation operates to give free health benefits coverage to people who have abandoned the Federal service.

Mr. OSTERTAG. That is right.

Mr. RUDDOCK. I think this is a bit of an exaggeration in this sense: If the agency recognizes that an individual has abandoned his position it takes an action of separating him from the Federal service.

Mr. MACY. And once separated he clearly would no longer be covered.

Mr. RUDDOCK. Health benefits coverage is terminated.

It is easy to say you should terminate health benefits coverage when a man abandons his position but you cannot take action on it until you make the decision that he has abandoned his position.

Once that has been done the agency takes an action separating him from their rolls and this terminates his health benefits enrollment.

Mr. OSTERTAG. It is a question of the difference between resigning or retiring from a job as against a leave of absence. Is that right?

Mr. MACY. That is right.

Mr. OSTERTAG. There is a 1-year limitation in your statute, is there not?

Mr. RUDDOCK. That is right.

Mr. OSTERTAG. Have you adhered to that 1-year limitation?

Mr. RUDDOCK. Yes, sir. If the individual is in a leave without pay status for 365 days consecutively this operates as a termination of his health benefits coverage even though the agency does not take an action of separating him.

As I am sure you recognize, most instances in which a Federal employee benefits by having this coverage while in a nonpay status are because he is ill. He has been sick. He has exhausted his sick leave, exhausted his annual leave. This is the time he needs the health benefits coverage most in our opinion.

Mr. OSTERTAG. I have a note which I believe summarizes their recommendations. That is that free extension of coverage be granted only to employees on leave without pay for reason which is of benefit to the Government or because of illness.

Mr. MACY. That is right.

Mr. OSTERTAG. Two, that the agency be provided guidelines with regard to reasons to be considered as being beneficial to the Government. You mentioned the reasons in your statement.

Mr. RUDDOCK. The Commission has provided guidelines to agencies for use in granting leave without pay, and has cited instances not only of the type which are to the advantage of the Government but also the type where out of humane consideration you do for the benefit of the individual.

The Commission did not prescribe these rules for the purposes of health benefits coverage. They did it for the granting of leave without pay generally.

General Accounting Office in its report is advocating that we come out with a separate set of instructions which would tell the agency: "You should grant leave without pay for the purpose of extending health benefits coverage only for certain reasons," and they would stick to reasons which are narrower than those now used by the agencies. I think there is an honest difference of opinion here between the General Accounting Office and the Civil Service Commission. It was our view this was beneficial legislation.

Mr. OSTERTAG. Then there was a further recommendation that enrollment of any other employee is a nonpay status be terminated as of the end of the last pay period during which such employee is in a pay status.

COMMISSION RESPONSE TO GAO REPORT

You have partially answered my question. The question was whether or not these recommendations of the GAO have been considered and have you taken any steps to implement them?

Mr. MACY. The response on that is that we have analyzed the report and have endeavored to respond to it. I would be pleased to volunter a copy of our response for the record if that would be helpful.

Mr. OSTERTAG. Rsponse to the GAO?

Mr. MACY. Response to the GAO report; yes.

Mr. OSTERTAG. I think we should have it.

Mr. THOMAS. Yes.

Mr. MACY. The committee will have our view with respect to each of the points that they have made there.

(The information referred to appears beginning on p. 150.)

Mr. EVINS. The Civil Service Commission is not the one who determines initially those who go on leave without pay.

Mr. MACY. The agency does.

Mr. OSTERTAG. They also bring out the issue of overinsurance and means to curtail certain free coverage under the health benefits provisions. Their review shows there is a need for additional measures to minimize detrimental effects.

Mr. RUDDOCK. This is also covered in our letter. The viewpoint of the General Accounting Office is that there should be restrictions

thrown into insurance so a man cannot profit from an illness; in other words, so if he has two policies, three policies, four policies, make it impossible for him to collect more in insurance than what his expenses were.

In theory they are absolutely right. As a practical matter this is one of the biggest problems of the health insurance industry. It is a problem which is not peculiar to the Commission's administration of the Health Benefits Act.

In most of the contracts between the Commission and carriers there is a provision which restricts to 100 percent of expenses the amount that can be collected for more than one policy where the other policy is also an employer-sponsored policy—in other words, there are payroll deductions or in some way it is sponsored through the employer.

By knowing where the man works, by knowing where his wife works, you can determine whether there are group policies and you can ascertain the coverage.

The industry has found this impossible to do on individual policies, where a man just goes to his insurance agent, obtains a health benefits policy, and makes his payments directly. He feels when an illness occurs that since he has bought this policy, since he has paid the premium, he should be entitled to whatever benefits are provided by that policy.

General Accounting Office advocates in connection with the Federal program that when an individual has any outside insurance, private policy or otherwise, that we should limit the payment made under the Federal employees health benefits program.

We have considered this seriously. We think it is not administratively workable. We think if this problem is to be solved it should be resolved by the insurance industry in the underwriting process at the time the policies are sold rather than by the Commission as a Federal agency trying to cure this industry problem.

Mr. OSTERTAG. I think there is another point. First of all, do health benefits costs increase? Do the general overall costs go higher by virtue of free coverage of a person no longer in Government service?

Mr. MACY. I don't believe so. The number would be so small it would not have an impact on the rates.

Mr. OSTERTAG. I think the GAO report makes an issue of that.

Mr. RUDDOCK. The insurance does not cover anyone who is no longer in service

INSURANCE COVERAGE IN NONPAY STATUS

Mr. OSTERTAG. It is a question of when he is no longer in service. Let us say he is no longer in pay status, then.

Mr. MACY. That would be more accurate. As long as he is on the rolls, even if in a nonpay status, he is technically an employee.

Mr. OSTERTAG. Do you have any guidelines, regulations, or measurement for determination?

For example, an employee who has been covered by this insurance takes leave. He subsequently enters into other employment. Is he on nonpay status with the Government and employed elsewhere?

Mr. MACY. You mean with a private employer at the same time?

Mr. OSTERTAG. Any employer; yes.

Mr. RUDDOCK. This is possible. Under these circumstances——

Mr. OSTERTAG. I am using that only to try to get to the point.

Off the record.

(Discussion held off the record.)

Mr. RUDDOCK. The man you speak of would normally be a man who has asked his agency for a period of absence without pay. He has asked for leave, but said, "I am sick." Or he has said, "I want to take this course at this college. I have a chance to take a trip to Europe which will be very educational." He has convinced the agency that there is a reason why he should be granted leave without pay. The agency expects him to return.

If he changes his mind, or if he goes off working for some other employer, I can see how this would happen. But if the agency learns of it, and this is the point where the agency would effect a separation for abandonment of position.

Mr. MACY. There would be limited instances of cases of this type. The agency would be maintaining communication with somebody on leave without pay and determining just what their intentions were.

Mr. OSTERTAG. Who determines a case of this kind, the agency or the Civil Service Commission?

Mr. MACY. The agency does.

Mr. OSTERTAG. But you are the regulator of the agencies.

Mr. MACY. We write the regulations and they apply them in individual cases such as this.

Mr. IRONS. Leave without pay is a very minor item. There are very few employees at any point in their lives ever on leave without pay. The regulations here are limited to a maximum of 1 year.

Furthermore, it should be borne in mind that whatever cost is attached to that, two-thirds of that cost is borne by the employees themselves and one-third by the Federal Government, whatever it might be.

Mr. OSTERTAG. I understand that.

Mr. JONAS. They do not pay while on leave.

Mr. IRONS. The total Federal population pays.

Mr. JONAS. If a man takes leave to go to Europe or to go to college he doesn't pay a premium.

Mr. IRONS. He doesn't but somebody else does. The same thing goes with any kind of insurance program. If you relate it directly to the individual who dies, he doesn't pay as much as the individual who lives and does not die for 10 or 15 years.

CONSIDERATION OF NONPAY STATUS

Mr. JONAS. You do not increase the charge against the people working to make up that loss which you do not get?

Mr. IRONS. The people who are working pay for a total set of benefits. They pay for two-thirds of the benefits. Part of the benefits is the privilege of having this health insurance provision extended for those employees, including themselves.

Mr. THOMAS. You didn't take that into account when you shaped that?

Mr. IRONS. Yes, we did.

Mr. THOMAS. How many man-days, months or weeks did you figure?

Mr. IRONS. I don't recall now, but we took that into consideration, the number of days on leave without pay. It was a major issue with the insurance industry.

Mr. THOMAS. I am sure it was.

Mr. RUDDOCK. When the carriers originally calculated their rates they did calculate an amount to cover this leave-without-pay situation and in every instance their calculation exceeded what it amounted to at any given time.

Mr. THOMAS. That means the rates are high, then.

Mr. RUDDOCK. Originally they were high by an overestimate of the amount of leave without pay.

STATUTE ON COVERAGE IN NONPAY STATUS

Mr. JONAS. The GAO criticism is that you have taken a much broader scope than contemplated by the statute because your regulations cover people in a nonpay status. They say that is much broader than leave without pay.

Mr. IRONS. That is what they say. We disagree.

Mr. JONAS. Where is the statute? How can there be disagreement from what the statute says?

They say the statute says on nonpay status. Does it not say that? You construed it leave without pay.

Mr. OSTERTAG. Let me read section 7(b) of the act. It states:

> An employee enrolled in a health benefit plan under this Act who is placed in a leave without pay status may have his coverage and the coverage of the members of his family continued under such plan for a period not to exceed 1 year in accordance with regulations prescribed by the Commission. Such regulations may provide for the waiving of contributions by the employee and the government.

Mr. IRONS. That is precisely what we do.

Mr. JONAS. Don't your regulations say nonpay status?

Mr. IRONS. They say nonpay status up to 1 year.

Mr. JONAS. Do you have the regulations here?

Mr. IRONS. No, sir.

Mr. JONAS. General Accounting Office states your regulations call for nonpay status and that is a broader term than leave without pay.

Mr. MACY. I am unable to see it.

Mr. JONAS. They cite the Federal Personnel Manual, definitions of the terms "leave without pay," "absence without leave," "nonpay status, including manuals of the larger agencies." They say it leaves no reasonable doubt as to the meaning of these terms; namely, that nonpay status is a broader category than leave without pay.

Mr. IRONS. That is their opinion. I cannot see it that way.

Mr. OSTERTAG. Can you bring it down to your opinion and what your interpretation of the statute means with regard to this nonpay status to which Mr. Jonas refers? A question arises as to whether or not you have taken into account this GAO report and have changed anything or considered changing your regulations or tightening down on the whole picture.

Mr. IRONS. We have considered it and decided as far as we are concerned we are right and they are wrong.

INCREASE IN COST DUE TO LEAVE-WITHOUT-PAY PROVISIONS

Mr. THOMAS. Gentlemen, regardless of the terminology, extended leave without pay, if you give to every person on the Federal payroll a right up to 1 year to enjoy this insurance without the employee receiving a nickel's compensation from the Government, and the converse of that is without his paying 5 cents into the fund, just how much does that increase the rate to the remainder of the employees?

Mr. OSTERTAG. I raised that question, Mr. Chairman, what effect it had on costs.

Mr. THOMAS. How much? It is bound to increase it.

Mr. IRONS. Precisely as you said it, it would give the right to the employee to leave a year without pay. It is not a right but a privilege granted by the agency.

Mr. THOMAS. You are getting technical now. We know the difference between rights and privileges, too. He doesn't make any contribution to that fund, though. How much more does it cost?

Mr. IRONS. Nothing to the Government.

Mr. THOMAS. Somebody is going to pay for it.

Mr. IRONS. There is no argument about that. It is a cost item borne by the total insured population of the Government.

Mr. THOMAS. That is all that is involved here.

Mr. IRONS. I don't recall the costs offhand.

Mr. THOMAS. How much is it?

Mr. JONAS. If there is a lot of that it will result in increasing the rates when the contracts are renewed.

Mr. IRONS. Sure. The percentage is very, very small. I don't recall it now.

Mr. JONAS. You said the rest of the working population paid it.

Mr. IRONS. That is right.

Mr. JONAS. They will pay it in increased premiums.

Mr. IRONS. That is right.

Mr. JONAS. When the contract is renewed?

Mr. IRONS. That is right.

Mr. JONAS. Because premiums are based on experience.

Mr. THOMAS. You said it was a matter of some controversy and everybody gave it consideration. How does your memory serve you? Was it 1 percent increase, 2 percent?

Mr. RUDDOCK. A fraction of 1 percent.

Mr. THOMAS. Can you insert in the record at this point the correct figure?

Mr. RUDDOCK. Yes, sir.

Mr. THOMAS. What is your horseback opinion now as to the rate of increase?

Mr. IRONS. About three-quarters of 1 percent is my recollection.

Mr. THOMAS. When you go back correct the record at this point.

(The information submitted follows:)

During the final pay period in June 1963, only fifty-five one-hundredths of 1 percent of enrolled employees were in a nonpay status.

Mr. OSTERTAG. The whole fine point of it is this, it seems: The law is intended to protect people who have been in service for 1 year after they leave the service if they are on leave, but it does not mean, and I do not believe it was intended to mean, to give them carte blanche protection for 1 year after they leave the Federal Government.

Mr. IRONS. And they do not get it.

COMMISSION RESPONSE TO GAO REPORT

Mr. OSTERTAG. Mr. Chairman, I believe we should have the Commission's response in the record to the GAO report.

Mr. MACY. It will be provided in full at this point.

Mr. OSTERTAG. Put it in at this point.

Mr. MACY. Yes, sir; for the record.

(The information follows:)

U.S. CIVIL SERVICE COMMISSION,
Washington, D.C., July 26, 1963.

HON. KERMIT GORDON,
Director, Bureau of the Budget,
Washington, D.C.

DEAR MR. GORDON: This refers to the May 1963 Comptroller General's report to the Congress, entitled "Need To Deter Overinsurance and To Curtail Certain Free Coverage," on the Federal employees health benefits program administered by the Civil Service Commission. I find it gratifying that in a new program of this size and complexity the General Accounting Office review disclosed no significant matters requiring the attention of the Commission, except the subject items.

As suggested by Bureau Circular No. A–50, I am enclosing a copy of Mr. Ruddock's letter dated December 27, 1962, commenting on the draft report. I believe these comments succinctly state our position on the two recommendations in the report but I would like to amplify.

With respect to deterring overinsurance, our two largest carriers, Blue Cross-Blue Shield and the Aetna, recommend strongly against extension of "double coverage" restrictions to individual policies because they have found them impracticable to administer. Perhaps the main problem in this regard stems from the fact that obtaining information concerning the existence and details of the individual policy depends entirely on the claimant's willingness to divulge it. Information concerning individual policies is withn the exclusve knowledge of the insured and cannot be checked without his cooperation. Thus the uncooperative claimant avoids the restriction and the cooperative one does not.

There are, of course, other problems not mentioned in the report. For example, the myriad types of individual policies sold and the large number of companies which sell them make effective verification of coverage and a determination of benefits payable in a particular case both difficult and costly; individual policies are often deliberately purchased to supplement group coverage and the purchaser strongly resents being penalized for his prudence; the interminable delays in claims settlements resulting from having to verify individual coverage with claimants and carriers would destroy the acceptance by purveyors of medical service of group insurance benefit assignments in lieu of cash.

It should be noted that the Comptroller General's report states that the extent of overinsurance under the Government program is unknown but assumes there must be some because of studies of overinsurance in other programs. In this connection, the following excerpt from a report to the National Association of Insurance Commissioners [1] is pertinent:

"The Michigan population study, which other studies support, indicates that although 12½ percent of the families have more than one contract, the actual overlap in coverage is about 4 percent; and even among this 4 percent, the overlapping insurance does not always or even usually result in payment to the individual of more than the total cost of illness, when all costs are considered."

[1] June 19, 1962, report entitled "Overinsurance," Artemas C. Lealie.

Of interest also is the position of the Department of Health, Education, and Welfare whose advice we sought at the time the Federal employees health benefits program was being implemented. In a January 27, 1960, letter to Roger Jones, then Chairman of the Commission, Arthur Flemming, then Secretary of the Department of Health, Education, and Welfare, said:

"I am of the opinion that the regulations you propose to promulgate should not deal with this subject. My reasons in essence are that a prohibition of duplicate coverage would be unworkable and could, in some instances, be inequitable.

"Furthermore, the potentially broad benefits possible under the [Federal employees health benefits] program will tend to reduce multiple policy holding by employees. Unnecessary expenditures from the insurance fund and instances of individuals profiting by being ill would be negligible."

Our 3 years of experience in administering the Federal employees health benefits program confirm the wisdom of the advice of Secretary Flemming and of our two largest carriers. Almost invariably, individual health insurance policies offer scant benefits at costly premiums: with the comprehensive benefits offered by plans under the Federal employees health benefits program we believe that purchase of expensive duplicate individual coverage is self-limiting; that overinsurance (and the ills it fosters) resulting from duplicate individual coverage is minimal; and that claim savings, if any, which could be realized by having restrictions against duplicate individual coverage would be exceeded by the administrative expense involved in their enforcement. We have not observed, nor has anyone presented evidence of any abuse under the Federal program which would merit consideration of adopting costly restrictions in this area.

With respect to the propriety of continuing health benefits coverage of employees in a nonpay status, we had the Comptroller General's comments, which were in the same vein as his report, in 1960 when we published our proposed regulations. It was the well-considered view of the Commission in 1960 as it is now that, although there is a close question of legal construction of the language in the health benefits law, the words "leave without pay" as used in section 7(b) are not used as a term of art but rather in the generic sense of "nonpay." We are certain that Congress intended the words not be strictly construed if for no other reason than that to do so would deny the benefit intended by this section of the law to 150,000 substitute postal employees who are almost never on "leave without pay" but who very often are in "nonpay" status subject to call.

The Comptroller General's report recommends that free coverage be granted only to employees on leave without pay for a reason which is of benefit to the Government and that we provide guidelines as to what is of benefit to the Government. This criterion, except in certain clear-cut cases, can obviously be a matter of opinion. For example, what benefit inures to the Government when leave without pay is granted for maternity? It could well be maintained that the Government derives a benefit from the return to duty of any experienced employee—including one who is absent without leave.

We feel strongly that in a beneficial program such as health benefits, benefit to the Government should not be the only criterion for granting free coverage; we believe that the needs (other than illness) of employees should also be considered. The granting of leave without pay is, of course, a matter of agency discretion. Nevertheless, we have published guidelines for the granting of leave without pay (Federal Personnel Manual, p. L–1–7) which most, if not all, agencies observe and which are based on both benefit to be derived by the Goverment and the serious and legitimate needs of employees. We believe these guidelines are equitable to the Government and employees and see no compelling reason for having a second, more restrictive set of guidelines for health benefits purposes.

By far the greatest amount of leave without pay is taken in periods of less than 31 days. Under the health benefits law an employee receives a free temporary extension of coverage (fixed by regulation at 31 days) when his enrollment terminates. As a practical matter, if we were to adopt the Comptroller General's recommendation, the expense involved in needlessly terminating and reregistering employees in short-term nonpay status would exceed the cost of providing free coverage for the relatively infrequent long-term nonpay absence.

We see considerable merit in the Comptroller General's point that free health benefits coverage should not be provided to employees who have abandoned their positions. But here again we see no practicable solution. The short-term

absentee-without-leave would be entitled to free coverage during the absence under the free 31-day temporary extension of coverage provision previously mentioned. For the long-term absentee-without-leave, a determination by the agency that he has abandoned his position should, under any reasonable personnel policy, result in an agency action of separation which effectively terminates health benefits enrollment.

Sincerely yours,

JOHN W. MACY, Jr., *Chairman.*

U.S. CIVIL SERVICE COMMISSION,
BUREAU OF RETIREMENT AND INSURANCE,
Washington, D.C., December 27, 1962.

Mr. LLOYD A. NELSON,
Associate Director, Civil Accounting and Auditing Division, U.S. General Accounting Office, Washington, D.C.

DEAR MR. NELSON: Thank you for the opportunity to comment on the draft report to the Congress on certain aspects of the Federal employees health benefits program. Thank you also for the opinion expressed on page 8 of the draft that the Commission has generally administered the program in compliance with the act and in the interests of the employees and the Government.

In reviewing the draft report we have found a few items which, strictly speaking, could be considered technical inaccuracies and have, without comment, indicated suggested corrections in the text of the report, copy enclosed.

On the second page of the draft letter to the President of the Senate and the Speaker of the House of Representatives, and on page 19 of the draft report, you refer to "persons who have left the Government service"; on page 20 a similar reference is to "persons in nonpay status who are no longer bona fide Government employees." I believe you mean to refer to persons who are absent without leave (AWOL), or perhaps more precisley, to such persons among AWOL's as the employing agency has decided have effectively abandoned their positions. I would comment that until they are separated by their agencies these persons are bona fide Government employees and have not left Government service.

On page 7 of the report there is this text:

"Following is a statement of the income and expenses of the fund for the year ending June 30, 1961, based on data published by the Commission without verification by us."

I know you customarily use the "without verification by us" to denote that your office has not audited the figures, and that among auditors, this is the only meaning attributed to the quoted phrase. However, to readers of your report who are not familiar with this usage of the phrase, it may be easily misunderstood to have a different connotation—i.e., it may seem to impeach the figures which follow or to imply criticism of the Commission for publishing data without your verification. Therefore, I would prefer that the quoted phrase be deleted and a less prejudicial one be substituted; or I suggest that you can rely on the "based on data published by the Commission" as disassociating your office from any responsibility for the accuracy of the published figures.

Although we share your desire to minimize abuses to whatever extent they are fostered by double coverage, your draft report does not touch upon the many difficulties involved in implementing the recommendations on deterring overinsurance. Our experience with existing restrictions demonstrates that they result in unconscionably long delays in setting claims because details of the overlapping coverage must be verified, and in indignation on the part of the insured when, despite explanations, he cannot understand why he does not get full benefits under both the policies for which full premiums are being paid. For these reasons alone, I believe that whatever is ultimately done to control double coverage arising from individual insurance may prove to be feasible and effective only if done by the industry at the time of underwriting rather than at the time of claims settlement. As your report recognizes, the industry is aware of the situation and is working on it.

We do not agree with the position in the draft report that the term "leave without pay" is used in the health benefits law with intent to extend coverage without current payment of premium only to employees who are on leave without pay in the strictest technical use of the term. The Commission's regulations

were approved on the basis of its interpretation that the term is used in the law in its generic sense and with an intent to embrace all types of nonpay status. The Commission will reappraise its exercise of the discretionary authority granted by the law in the light of such recommendation as you may include in your final report.

If you believe further discussion of the draft report will be useful to you or us, please call me.

Sincerely yours,

ANDREW E. RUDDOCK, *Director.*

Mr. EVINS. We will turn to the Government contributions, retired employees health benefit fund.

Insert pages 134 through 136 in the record.

(The pages follow:)

GENERAL STATEMENT

The Retired Federal Employees Health Benefits Act (Public Law 86-724, 5 U.S.C. 3053) provides that there shall be created a retired employees health benefits fund to be administered by the Commission, in which retired employee and Government contributions are to be deposited. This fund is available to finance (1) the payment of subscription charges to an approved carrier for those qualified employees and survivors who enroll in the Government-sponsored uniform health benefits plan; (2) the contribution to qualified employees and survivors who retain or purchase private health insurance; and (3) the payment of expenses incurred by the Civil Service Commission in administration of the act.

The act further provides that the amounts authorized to be contributed by the Government toward the health benefits subscription charge of any annuitant as defined therein (including civil service annuitants and survivors of deceased employees and annuitants, those retired under other Federal civilian retirement systems, and individuals in receipt of compensation under the Federal Employees Compensation Act) shall be paid from annual appropriations which the act authorizes to be made for such purpose.

This act provides a health benefits program for those qualified annuitants and survivors who are not eligible to enroll in the active employees program (under Public Law 86-382, 5 U.S.C. 3006) because of termination of the employee's service prior to the effective date of that act. All qualified retired employees and survivors may elect to enroll in the Government-sponsored uniform plan (for which the Commission has contracted with the Aetna Life Insurance Co.); to receive a Government contribution toward payment of other health insurance they may have; or not to enroll under the act. Enrollees in the Government-sponsored uniform plan initially had three choices: (1) "Basic" health coverage, providing first-dollar hospital and surgical benefits; (2) "major medical" health coverage, providing protection against castrophic medical expenses; and (3) both "basic" and "major medical" coverages. However, "major medical" coverage is not now available to those retirees and survivors who failed to elect it on initial enrollment. The amounts paid by annuitants enrolled in the uniform plan are withheld from their monthly annuity payments. Those who have private health insurance receive a Government contribution, which is added to their monthly annuity, equal in amount to the fixed for self only or family enrollment in the uniform plan.

The amount of Government contribution toward enrollments of annuitants (i.e., the rate of expenditure of the funds appropriated to the retired employees health benefits fund for such contributions) depends on the type of enrollment (self only or family) and the amount specified by the Commission, within a range authorized by law, as the Government's contribution toward their subscription charges.

Because of an increase in premium for the uniform plan and generally increasing premiums for private plans, the amount of the Government contribution was increased, effective July 1, 1963, from $3 to $3.50 a month for self only and from $6 to $7 a month for a family enrollment. As of June 30, 1963, there were 240,600 participants in this program, 52.4 percent of whom were enrolled for self only and 47.6 percent of whom were enrolled for family. Enrollees in the Government-sponsored uniform plan numbered 132,200, and in private plans the enrollment was 108,400. It is estimated that there will be approximately 231,600 participants in fiscal year 1965. The decrease is expected to occur primarily because of death of annuitants.

For fiscal year 1964 it is estimated that at least $21.8 million in premiums will be paid to the carrier of the uniform plan and $6.7 million will be paid to annuitants as the Government contribution toward the cost of their private health insurance plans. Approximately $21.4 million will be paid out for fiscal year 1965 in premiums to the carrier of the uniform plan and $6.5 million will be paid to those enrolled in private plans.

Appropriation request, fiscal year 1965, Government contribution, retired employees health benefits fund

	Appropriated, 1963	Authorized, 1964	Estimate, 1965	Changes 1965 compared with 1964
Payment to retired employees health benefits fund on behalf of enrolled retirees	[1] $13,200,000	$14,800,000	$14,840,000	+$40,000

[1] Includes reappropriation of $5,200,000 unexpended balance carried over from fiscal year 1962.

The Government contribution on behalf of those enrolled for fiscal year 1963 was $13,286,000, and for fiscal year 1964 an estimated $15,116,000 will be contributed by the Government, including $332,000 for administrative expenses of the Commission. Based on experience with those already enrolled and applying this to all retirement systems having annuitants in the program, it is estimated that the Government's contributions for fiscal year 1965 will amount to $14,853,000, including $348,000 for administrative expenses of the Commission. However, it is estimated that there will be an unobligated balance of $13,000 carried over from fiscal year 1964 which will be available for expenditure in fiscal year 1965, resulting in a net request for fiscal year 1965 of $14,840,000.

DIFFERENCE BETWEEN HEALTH PLANS

Mr. EVINS. Will you for the record summarize the difference between these two plans, the one we have been discussing and this one?

Mr. MACY. The one we have been discussing relates to the health benefits that are provided for employees who have retired since the act of 1959 went into effect. The retired employees health benefit fund, authorized by a new statute in 1960, is for those employees who retired prior to that.

Mr. THOMAS. Why can you not combine the two programs? The only difference is one is 3 to 5 years older than the other. Why can you not combine the two? What is the reason for having two programs?

Mr. IRONS. May I respond to that, Mr. Chairman?

Mr. MACY. Please.

Mr. IRONS. The first program applies to the employees. Their benefit structure and their premium rate continues precisely the same after they retire.

The second program which is applicable to those employees who were retired and on the annuity rolls before the active employees health benefit program was established, is a closed group, a group where——

Mr. THOMAS. Are the rates and benefits different?

Mr. IRONS. The rates and benefits are different.

Mr. THOMAS. Two separate and distinct items?

Mr. IRONS. Yes, sir.

Mr. THOMAS. Even though the two groups work for the same people, how much difference is there in the rates? It cannot be more than 3 to 5 years, the difference in the two age groups.

Mr. IRONS. Their benefits are totally different.

Mr. THOMAS. What is the difference in the benefits?

Mr. IRONS. The benefit structure of the retired program is not as liberal as the one for active employees.

Mr. THOMAS. That is understandable.

Mr. IRONS. It would be quite a job to illustrate the difference.

Mr. THOMAS. You could not combine them from an administrative point of view?

Mr. IRONS. They are combined from an administrative point of view. The same bureau administers both programs.

Mr. THOMAS. You have a different limitation on administrative expense.

Mr. MACY. There are two limitations. We would prefer to have a single limitation as they are both handled in one organization.

Mr. THOMAS. Where is the limitation under the present employees health insurance plan?

Mr. MACY. There is an expense limitation on the administration of each of the health benefits programs.

Mr. THOMAS. That is what I want. I do not want the annuitants included.

Mr. MACY. Less the annuitants under the employees program? What the breakout is?

Mr. THOMAS. Yes.

Mr. MACY. The chairman's question is, Can we separate the annuitant side of the employee fund from the active employees insofar as the administrative cost is concerned?

Mr. THOMAS. That is right.

Mr. MACY. I do not believe we have those figures.

Mr. IRONS. It would be better, if it could be done, to combine the administrative limitations of the retired health benefits program with the regular health benefits program.

Mr. THOMAS. What is a good reason for one limitation?

Mr. IRONS. Just because you have greater facility for utilization of people. You would not have to identify three-quarters of an employee's day on retired health benefits and one-quarter on regular health benefits.

Mr. THOMAS. Are the benefits the same?

Mr. IRONS. The benefits of the programs are totally different.

Mr. THOMAS. Different?

Mr. IRONS. Yes.

Mr. THOMAS. What he is paying for now is going to be exactly what he gets after he retires. It is the same, is it not? You are taking his money now.

Mr. IRONS. We are not on the same wavelength. I was talking about the retired health benefits program.

Mr. THOMAS. I am asking for a separate and distinct figure for the administrative expense of the present employees who are paying on their retirements.

Mr. IRONS. As contrasted from the annuitants under the employee program?

Mr. MACY. The same plan.

Mr. IRONS. I do not think it is possible to obtain.

Mr. RUDDOCK. Administrative cost figures have not been kept that way.

Mr. THOMAS. Why? There is bound to be a good reason. Why?

Mr. IRONS. They are not under the same act.

Mr. THOMAS. That is what I am trying to get you to say.

Mr. RUDDOCK. The Health Benefits Act of 1959 says there will be a limitation on the expenses of the Commission in administering that act, and of course the administration includes——

Mr. THOMAS. All you are doing now is collecting the money from him. He is not getting any annuity. You are collecting the money and after he becomes an annuitant you pay it out?

Mr. MACY. There are claims payments being made to active employees also.

Mr. THOMAS. Very little though. What percentage of claims payment is paid to your active employee?

Mr. MACY. Mr. Ruddock, can you give us a relative figure as to the volume of claims for active employees and annuitants under the regular program?

Mr. RUDDOCK. My recollection is that in the last year the benefits paid with respect to annuitants was about 8 percent of the total under the 1959 Employees Health Benefits Act. The number of annuitants under that act, of course, keeps growing.

Mr. MACY. We had 116,000.

Mr. THOMAS. You are right.

Mr. MACY. Whereas the active employees numbered 1.6 million, so that clearly the larger portion will be the active program.

Mr. THOMAS. Your annuitants program has not reached its height, yet, and it is growing a little faster right now; is it not. What is the appropriation?

Mr. EVINS. $14,840,000.

Mr. MACY. The annuitant portion of this program, we estimate, will grow at a rate of about $3 million a year, based upon projected retirements from the active force. The increase this year is actually estimated to be about $1 million in total funds.

Mr. THOMAS. Why can you not separate the health program of the employees who are paying now from those who are retired? We are not talking about retirement funds. We are talking about a health fund.

Mr. EVINS. Let me read this, Mr. Chairman. This is in the general statement. [Reading:]

The Retired Federal Employees Health Benefits Act (Public Law 86-742, 5 U.S.C. 5053) provides that there shall be created a retired employees health benefits fund to be administered by the Commission, in which retired employee and Government contributions are to be deposited. This fund is available to finance (1) the payment of subscription charges to an approved carrier—that is an insurance carrier, an approved carrier—for those qualified employees and survivors who enroll in the Government-sponsored uniform health benefits plan; (2) the contribution to qualified employees and survivors who retain or purchase private health insurance—by private health insurance, they also contribute to the fund—and (3) the payment of expenses incurred by the Civil Service Commission in administration of the Act.

Mr. THOMAS. Mr. Evins, you have an increase in your limitation. This year you go from $1,125,000 up to $1,151,000, in the employee program and in the other program you go from $392,000 to $348,000.

That is not a recurring item this year. You show a reduction of $44,000. The other one you show an increase of $26,000.

LIMITATIONS AND OBLIGATIONS

Did you have any carryover under either of your two limitations last year?

Mr. IRONS. No, sir.

Mr. THOMAS. Are you sure?

Mr. MACY. It is an annual limitation.

Mr. THOMAS. Did you use all your limitations?

Mr. WILLIAMS. I think we——

Mr. THOMAS. You used all of it?

Mr. WILLIAMS. I'm not sure.

Mr. THOMAS. Do you have your records here?

Mr. WILLIAMS. The statement we have shows only the balances in the appropriated funds.

Mr. THOMAS. Did you have any unused part of your limitations?

Mr. WILLIAMS. It works this way, Mr. Chairman: The limitation is simply the maximum amount we can use. We use only as much of it as is required.

Mr. THOMAS. That is what I am asking you, did you use all of it or did you have any of it you did not use?

Mr. WILLIAMS. We do not have that information with us.

Mr. THOMAS. You do not have your records here?

Mr. WILLIAMS. No, sir. We can supply it. It is available.

Mr. THOMAS. Insert it at this point in the record.

Mr. EVINS. Give us for the record the status of the limitation for the first employee's health benefit fund and the status of the limitation for the retired employees health benefit fund.

Will you place that in the record, please?

Mr. IRONS. Yes, sir.

Mr. EVINS. That will be for fiscal year 1963.

(The information supplied follows:)

Employees health benefit fund, fiscal year 1963

Limitation	$1,099,365
Obligations	932,884

Retired employees health benefit fund, fiscal year 1963

Limitation	$388,490
Obligations	226,227

INCREASES IN CONTRIBUTION FOR RETIRED EMPLOYEES HEALTH FUND

Mr. EVINS. I notice, Mr. Chairman, in 1963 the Congress appropriated $13.2 million for this second employee's health benefit fund, $14.8 million in 1964, and you are requesting $14,840,000 for 1965, an increase of $40,000.

Tell us why the $40,000 is needed and necessary and desirable and why it is going up each year?

Mr. MACY. The increase in this particular fund is almost entirely attributable to an increase in premium rates. The number covered in this program, the number of individuals, actually falls off each year, because of the death of those that are covered. You will see in the table on page 137 of the justifications that we started out the fiscal

year with an enrollment of 240,000 and we are estimating that funds will be required in 1965 for an average enrollment of 231,600. That is a reduction in the number covered.

The increase required here is due to a necessary increase in the premium rate.

Mr. EVINS. Do you have any type of control over the carriers in protecting the Government employees with respect to the rates? After you get them all on the rolls, do you let them hike the rates up again?

Mr. MACY. There is a contract period with the carriers and for each contract period a review is made of experience in an effort to keep the rates as low as possible. This is expensive coverage. These are older people. The average age in the group is going up because there are no younger individuals being added to the group.

Mr. EVINS. Did you ever know of an insurance company that ever voluntarily reduced its rates?

Mr. MACY. No.

Mr. EVINS. I never heard of any, either.

Mr. SHIPLEY. How many carriers do you have?

Mr. RUDDOCK. There is only one carrier. There is a contract with the Aetna Life Insurance Co. and with other insurance companies acting as reinsurers.

Mr. EVINS. When was the act passed originally?

Mr. RUDDOCK. In 1960.

Mr. EVINS. You haven't had much experience. How many rate increases have you had?

Mr. RUDDOCK. There has been one increase under the uniform plan. Under this program, the retired employee, one who retired before July 1, 1960, may take his health insurance coverage in a private plan, for example his local Blue Cross-Blue Shield, or some insurance company, or an employee organization. When he does that he gets the same Government contribution that is paid with respect to a person enrolled in the uniform plan. We merely add it to his annuity check. If he is enrolled in a private plan for self only, we add $3.50 to his monthly annuity check. If he is enrolled for self and family we add $7.

Mr. EVINS. They do not have to go out and solicit business. They do not have to advertise. They do not have to employ salesmen. It is automatic. You only have to sign a form. They do not have very much expense. I think you ought to insist upon holding the rates down from the time it was initially entered into and, if possible, look toward a reduction because of the volume of business which the Grovernment provides.

Mr. OSTERTAG. Is this a matter of negotiation?

Mr. MACY. As far as the private plans are concerned the Government has no part in determining the rates. It is in the uniform plan, where there is a contract negotiated between the Government and the carrier.

Mr. JONAS. Apropos of the comment of my friend from Tennessee, actually the rate is pretty low, is it not, as insurance rates go?

Mr. RUDDOCK. Yes, sir; for insurance of this type, in my opinion it is.

Mr. JONAS. I know I had some insurance for my son when he became 21. He had to come off my policy. I pay a whole lot more for his insurance than I do the family plan.

Mr. MACY. Yes. This is expensive insurance. These are older people.

INCREASE IN RATES

Mr. THOMAS. On the point Mr. Evins raised, why should the premium go up? Is it purely because of the risk, age involved, or the groups?

Mr MACY. The age and the increased cost involved because of the advancing age and the increased costs of medical care generally.

Mr. THOMAS. What does your price look like today on our health policy as compared to the original contracts you made with the carriers?

Mr. RUDDOCK. With respect to the program for active employees there has been no rate increase in the Government-wide service benefit plan—Blue Cross-Blue Shield. That plan covers about 55 percent of all employees. There has been no increase in the rate since the program began in July of 1960.

The second largest plan is the indemnity plan, the insurance industry plan. In that there has been a rate increase of 70 cents biweekly in high option family coverage. That increase, effective November 1, 1963, was made for the express purpose of providing a more generous maternity benefit.

Mr. THOMAS. I think it has been remarkable the rates have been held down in the health. Mr. Evins was looking at the life of some of the older groups, the first retired group. You may have a point there. Certainly you have done a magnificent job holding that rate down.

Mr. OSTERTAG. That is right.

NEGOTIATION AND RENEWAL OF CONTRACTS

How often are the contracts negotiated and do they have to be renewed?

Mr. IRONS. They are on an annual basis.

Mr. BOLAND. You just did that a couple of months ago; did you not?

Mr. MACY. Yes; November 1.

Mr. OSTERTAG. What is your experience? Do they go up each time?

Mr. MACY. No. As Mr. Ruddock indicated the Blue Cross-Blue Shield plan, with 55 percent of the coverage, remains the same. The next largest has gone up 70 cents biweekly in order to provide more liberal benefits on the high option family plan. I think we can generalize by saying that on the active employee program, over a period of 4 years, or 3 years, the rates have remained rather stable.

Mr. OSTERTAG. Because there is an option as to plan, is it possible that some day they would be out of balance sufficiently that you would have to abandon one or the other?

Mr. MACY. No.

OPPORTUNITY TO CHANGE HEALTH PLANS

You see, we have an open season every 2 years, which makes it possible for the individual to change if he wishes. There tends to be a degree of competition that forces the plans to be somewhat in line with each other.

Mr. OSTERTAG. I see. That is good.

Mr. MACY. We found that there were several thousand employees who made some changes during the open season that we had last October.

RECENT RATE INCREASE IN INDEMNITY PLAN

Mr. THOMAS. What percentage was that increase?

Mr. RUDDOCK. About 10 percent, but that was 10 percent only for the high option for the man with a family.

Mr. THOMAS. What part of that is your total insurance? Fifty-five percent of the Blue Cross-Blue Shield did not go up at all. What percent is the option, 25 percent, or what?

Mr. RUDDOCK. Eighty-six percent of all employees are in a high option.

Mr. THOMAS. That is a pretty steep jump; is it not?

Mr. MACY. No.

Mr. IRONS. The chairman is asking about the high option of the indemnity plan.

Mr. RUDDOCK. That is right.

Mr. IRONS. And this percentage increase of 10 percent just applies to the high option indemnity plan. What is the total high option indemnity plan of the total package?

DISTRIBUTION OF PARTICIPANTS

Mr. RUDDOCK. Twenty-five percent of all Federal employees are in the indemnity plan. About 75 percent of them are in family, and of those who are in family—86 percent or more are in high option.

NEGOTIATION OF INSURANCE CONTRACTS

Mr. EVINS. This is insurance by wholesale methods and the insurance companies do not have to have any expense. They get the business. Do you shop around with them every year at the end of the time as to whether or not you are going to convert to another insurance company?

Mr. MACY. It might be helpful to have Mr. Ruddock describe the negotiation process on the contract.

Mr. RUDDOCK. Actually, each contract is automatically renewable unless the carrier or the Commission gives advance notice of an intention to drop the contract. Along in the spring we ask each contractor whether they have any changes they want to make in their policy, and we suggest some changes from time to time where it appears that some need of Federal employees is not being met. We do not shop around for other carriers. Actually, that is pretty well fixed. All of these contracts are experience rated. This means that the premium is going to directly reflect the cost of the benefits, plus the cost of administration (which is kept at around 3½ percent by both Blue Cross-Blue Shield and by the insurance industry).

Mr. EVINS. What do you mean by "experience rated"? Do you mean fixed prices?

Mr. RUDDOCK. The premium is a product of the experience of the group that is in that particular plan. We do limit the risk charge,

which is the only potential profit item. In the service benefit plan which is Blue Cross-Blue Shield, the risk charge has been 1½ percent of premium. That is now reduced on a sliding scale. It would come out to about 1.2 or 1.3 from this point forward. With respect to the Aetna contract, for the first contract period the charge was 1$^{3}/_{10}$ percent of premium. In 1961, we reduced that to 1 percent of premium, so that 1 percent of premium, the risk charge, is divided between Aetna and over 200 insurance companies that are participating as reinsurers.

There is a very definite limit on the profit that is being taken out of it.

Mr. EVINS. They are very competitive as far as commercial insurance is concerned, advertising all these group health plans. They are advertising extensively trying to get the business. I thought there might be a little competition.

Mr. IRONS. There is.

Mr. EVINS. I wanted on the record to admonish our friends of the Civil Service Commission in dealing with the insurance companies to always sharpen their pencils.

Mr. THOMAS. That is good advice.

Mr. MACY. We will do that.

PAYMENT TO THE CIVIL SERVICE RETIREMENT AND DISABILITY FUND

Program and financing

[In thousands of dollars]

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
1. Annuities	1,067,652	1,226,000	1,381,000

Mr. EVINS. We will now take up the retirement fund. We appropriated in 1963, $30 million, in 1964 we appropriated $62 million, and for the next year the Commission has requested an appropriation of $65 million, or an increase of $3 million.

This committee is familiar with this fund. We will just let you spell out the status of it for the record.

CONDITION OF FUND AND PROPOSAL FOR LONG-TERM FINANCING

Mr. MACY. I believe first a comment should be made with respect to the figures that you have just read. Those figures reflect the estimate necessary to maintain part 3 of Public Law 793, which increased the annuitant rates during the past year.

In 1963, the $30 million was to cover 6 months of the new rates; the 1964 figure was for a full year and the $65 million in 1965 is necessary to cover that rate for the full 1965 fiscal year. However, we may not need this appropriation in future years because there is pending a proposal for an improvement in the financing of the entire fund.

The proposal has been introduced in the House as H.R. 6366 and H.R. 6412. This is the administration's plan to increase over the next period of years the Government's contribution in order to reduce, or to improve the status of the fund and to avoid a situation where the fund would become virtually exhausted at an early date in the future.

That proposed legislation has been heard in the Senate and a report is about to be released by the subcommittee that heard the plan.

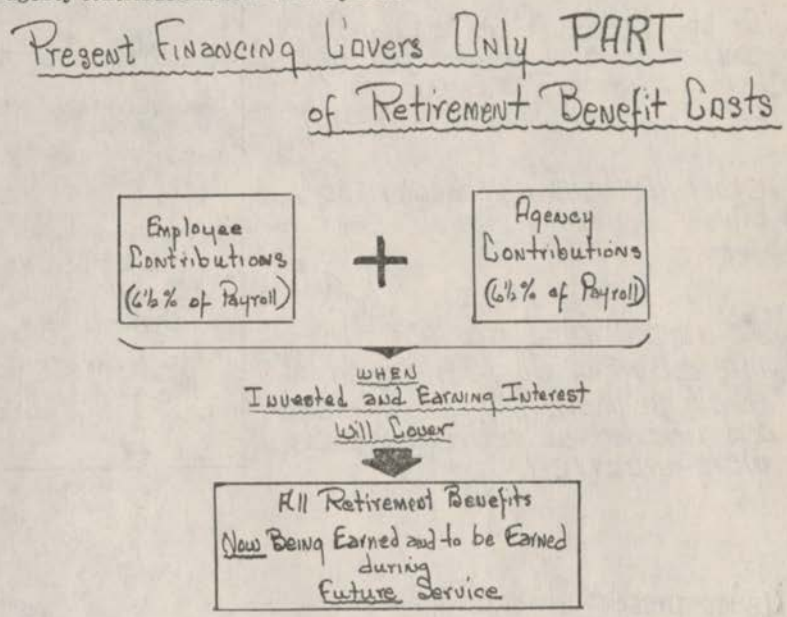
I would like to suggest, Mr. Evins, that perhaps it would be helpful to the committee if I submitted for the record a graphic presentation covering the condition of the fund and this proposal for the long-term financing.

Mr. EVINS. It may be included. I think it would be helpful, Mr. Chairman.

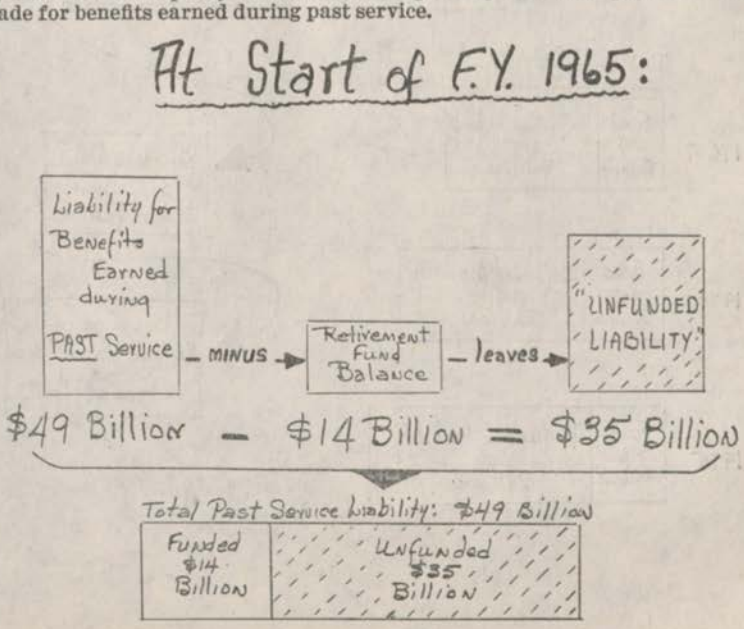
(The documents referred to follow:)

A PROPOSAL TO IMPROVE FINANCING OF THE CIVIL SERVICE RETIREMENT SYSTEM

The proposal: Permanent financing of retirement costs via a gradual increase in agency contributions scheduled by law.



Past financing—While producing income exceeding benefit payments made to date, has not built up any invested fund big enough to cover payments still to be made for benefits earned during past service.



WHY is there an Unfunded Past-Service Liability?

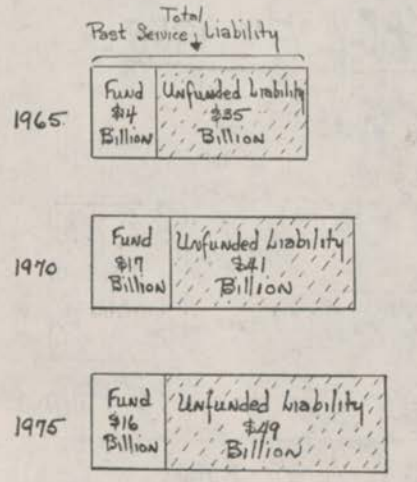
- In some years, Government did not pay its share of the cost of benefits earned in those years (though employees always paid their share)
- Liberalizations have been made without payment to cover past-service liability
- Retirement fund has lost the interest it would have earned if all payments had been made and invested as retirement costs were incurred

Such as—

- annuity increases
- pay increases
- liberalized benefit structure
- credit given to new groups for past service

Under present financing—

the UNFUNDED LIABILITY GROWS

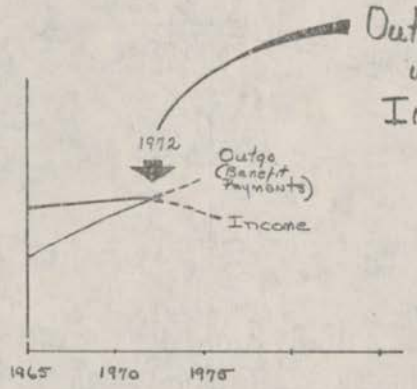


by more than $1 Billion each year

because of failure to replace the interest lost

What happens if present financing continues unchanged?

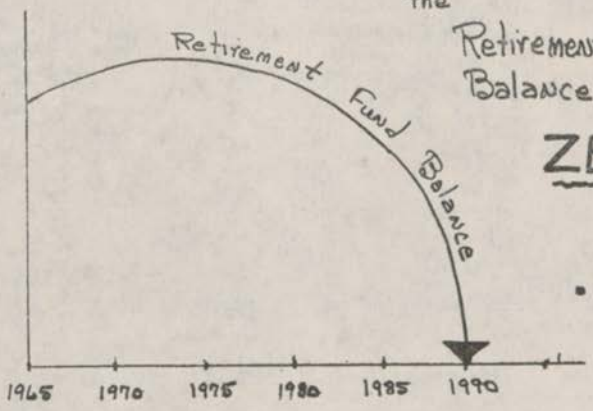
In 7 Years...



Outgo will exceed Income...

...and Start Eating Into Fund Balance

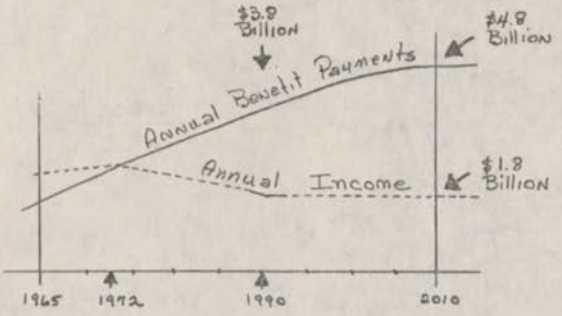
In 25 Years...



the Retirement Fund Balance will be ZERO

...but →

Benefit Payments will be HIGH,

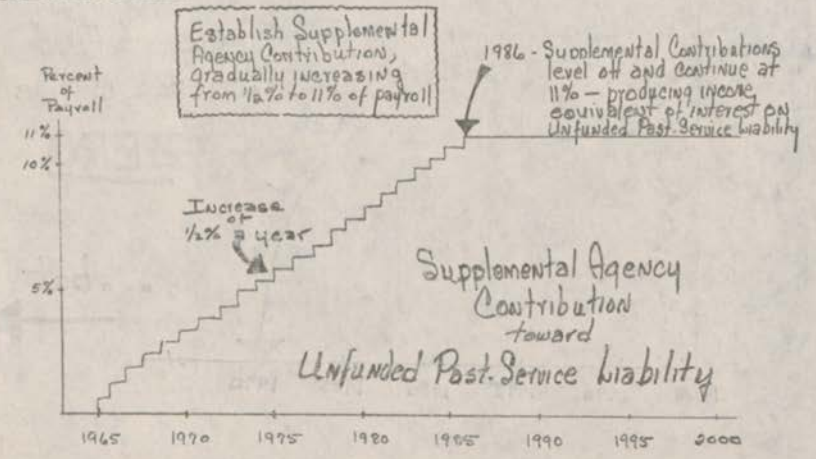


...and Will Exceed Income by $2 to $3 Billion each year

Problem: How to produce the additional income required to meet benefit payments?

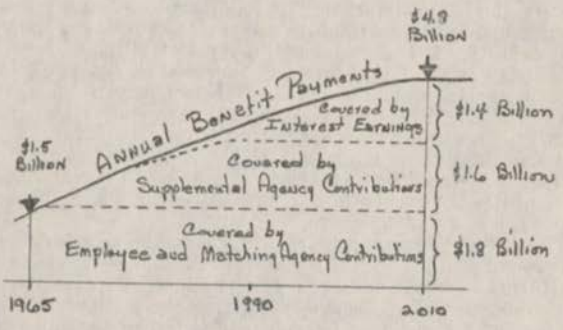
Appropriate $35 billion to fund now and wipe out the unfunded liability	No
Appropriate $2 to $3 billion more to fund each year after 1990?	No
Jump immediately to level annual appropriation of $1.1 billion (equivalent of lost interest) to fund?	No
Increase employee contributions?	No
Establish a gradually increasing supplemental agency contribution, growing from one-half of 1 perecnt of payroll in 1965 to 11 percent by 1986?	Yes

Here's How:



Result:

Benefit Payments Fully Covered



This proposal will—

Make operative the normal-cost-plus-interest financing principle OK'd by Congress in 1956.

Slow, then stop, growth of unfunded liability.

Keep retirement fund solvent.

Achieve goal without sharp increase in appropriations, either now or later.

Assure availability of sufficient funds to pay benefits promised to and earned by employees.

For technical details, see—

Letters of transmittal to the Speaker of the House and the President of the Senate (May 1963).

Draft bill to improve the financing of the civil service retirement system.

Table 1: Civil service retirement system—Estimated progress of the fund, assuming agency contributions matching employee deductions at 6½ percent, plus direct appropriations when needed to meet benefit payments.

Table 2: Civil service retirement system—Estimated progress of the fund, assuming agency contributions increasing by ½ of 1 percent each year from 1965 through 1986 and remaining level at 17½ percent thereafter, which then equals Government's normal cost plus interest on deficiency.

"Normal cost" means—

That level percentage of salaries which, if paid into an invested fund each year employees are in service, will, together with interest earnings, cover fully all retirement benefits due them and all their survivors.

"Plus interest" means—

Interest on the unfunded liability, needed as annual income to the fund to replace interest lost because growth of the fund has not kept pace with accumulating obligations.

U.S. CIVIL SERVICE COMMISSION,
Washington, D.C., May 9, 1963.

Hon. JOHN W. MCCORMACK,
Speaker of the House of Representatives.

DEAR MR. SPEAKER: I submit for consideration of the Congress a proposal for improving the financing of the civil service retirement system, and strongly recommend its adoption. As a result of failure to contribute adequate sums in the past, the unfunded liability of the system has grown to an estimated $34 billion as of June 30, 1963. Unless steps are taken to increase the present level of contributions, the unfunded liability will continue to grow and as benefit disbursements increase the civil service retirement and disability fund will vanish by the year 1990.

This unsound financial condition arises because contributions to the system have not been adequate in past years and no significant provision is now being made to overcome these past deficits. At the present time employees contribute 6½ percent of their basic pay and the employing agencies are required to match these contributions from their appropriations. But the combined contributions cover only a little more than the currently accruing or normal cost of benefits under the system. They are not sufficient to make any significant contribution even toward the interest accruing on the unfunded liability, with the consequence that the accrued unfunded liability accrued with respect to past service continues to mount rapidly. It is now increasing at $1.1 billion a year and under present financing this rate will progressively increase in future years.

The Civil Service Commision therefore urgently recommends action to place the finances of the civil service retirement system on a sound long-range basis. In brief, the plan contains three elements:

1. The present contributions of 6½ percent of pay by employees and the matching contributions by the agencies would be continued. These regular contributions together approximately cover currently accruing or normal cost of the system.

2. Each agency would be required to make supplemental contributions to help arrest the growth of the unfunded past service liability of the system and to preserve the integrity of the fund. To ease the budgetary impact, this would be accomplished by starting these supplemental contributions at one-half of 1 percent of payroll in fiscal year 1965 and increasing them by one-half of 1 percent annually for 21 years so that by fiscal year 1986 they would reach 11 percent of payroll and remain at that level thereafter. Based on our present estimates, this supplementary contribution schedule, together with the regular matching contributions, would stabilize the growth of the unfunded liability in 1986 and thereafter permanently finance the system on a normal cost-plus-interest basis.

3. Any new or increased benefits resulting from future changes in the Civil Service Retirement Act would not become effective and no benefits would accrue until the full estimated increase in unfunded liability for past service which would otherwise result from such change in the act had been appropriated to the fund. This would avoid the escalation of unfunded liabilities because of benefit or coverage liberalizations.

The enclosed draft bill would modify the Civil Service Retirement Act to implement these changes. The following paragraphs outline the basis for our recommendations in greater detail.

The normal contriubution rate is the estimated level percentage of the salaries of new employees that is required to be paid into the fund each year they will be in the service to pay fully for all benefits to them and to their survivors. The "interest" part of the "normal-cost-plus-interest basis" means interest on the unfunded liability, or deficiency, which represents the excess of benefit liabilities over the present fund and future contributions at the normal rate. If the deficiency is not being amortized, payment of interest is necessary to prevent its increase.

The normal cost-plus interest basis is the actuarially accepted method of estimating retirement costs as a level percentage of payroll. It thus reveals long-term cost implications, as contrasted to projections over the immediate future, which ordinarily give little clue to total costs. A normal cost concept has been used consistently since the Retirement Act became effective in 1920, to appraise the costs of the system and the actuarial condition of the fund. It has also been generally used to estimate the effect of proposed amendments to the Retirement Act, as being the most meaningful measure of their impact.

The Board of Actuaries of the civil service retirement system has long recommended the normal-cost-plus-interest basis as an appropriate method of financing. The Committee on Retirement Policy for Federal Personnel, created by Congress in 1952 to study all Federal retirement systems, made a similar recommendation, tempered by the recognition that the fiscal situation of the Government might make necessary a gradual rather than immediate approach to this goal. The Comptroller General in his report of October 27, 1959, to the Senate Appropriations Committee also endorsed the normal-cost-plus-interest approach.

However, as will be shown later in this letter, there has been no consistent observance of the normal-cost-plus-interest method of financing. The Commission has now concluded that attainment of this objective requires a schedule of

Government contributions fixed by law. An immediate shift would require additional Government payments of about $1.1 billion annually. Because of the sharp budgetary and fiscal impact of such a sudden increase, we recommend a gradual approach, with a schedule of increased agency conributions which is regular and definite and which is calculated to attain the goal of normal cost plus interest within a period of 22 years.

The Commission considers that one of its gravest responsibilities is the administration of the civil service retirement system. It is a powerful tool in our personnel program, serving to attract and retain employees of the caliber required to conduct the complex business of government. It contributes toward financial security for millions of past, present, and future Government employees and their dependents. There should never exist the slightest doubt of the system's ability to meet these promises. That doubt now exists.

The Government's financial obligation is clear. Legislative enactments have established a program of benefits, liberalized many times since the system was initiated in 1920. Employees have contributed at the rates required by law, ranging from an initial rate of 2½ percent of salary to the present rate of 6½ percent. The balance of the cost of the program must be borne by the Government.

A brief review of past policies on financing may be helpful in appraising this problem. Employees have contributed to the system since it started operation in 1920. During this period of over 40 years a number of methods for determining appropriations to meet the Government's share of costs have been used and the attitude of the Congress and its committees toward these approaches has changed from time to time. In the first 8 years of the system's existence no appropriations were recommended by the President, and none were enacted by the Congress. From 1929 to the World War II period, appropriations were generally recommended by the President on a basis to cover normal cost and to amortize the unfunded liability by the end of this century. From 1929 through 1949, the appropriations enacted by the Congress were those recommended by the President.

In the 8-year period 1950–57, appropriations based on several different methods were recommended by the President. The Congress enacted lower appropriations on five occasions, higher amounts twice, and on one occasion approved the amount proposed. The budget recommendation for the fiscal year 1953 was based on normal cost plus amortization over a 30-year period and was reduced somewhat by the Congress. Recommendations for appropriations to cover normal cost plus interest for each of the years 1950, 1951, 1952, and 1954 were reduced by the Congress. A recommendation for 1955 to cover only the additional cost of annuities increased by a then-recent enactment was approved by the Congress. On the other hand, requested appropriations for 1956 and 1957, computed on the basis of the Government's share of costs for current disbursements less the interest on its equity in the fund, were increased.

The present method of financing was recommended by the Commission and enacted by the Congress in the Civil Service Retirement Act Amendments of 1956 (Public Law 84–854), effective with the beginning of fiscal year 1958. Under it, each employing agency contributes to the fund, from its appropriations for payment of salaries, amounts equal to deductions from the salaries of its covered employees at the rate of 6½ percent, or 7½ percent for Members of Congress. Adoption of the agency contribution provision achieved the desirable objective of assuring annual income approximating normal cost.

However, agency matching contributions are not sufficient to meet fully the Government portion of retirement cost, because no significant provision is now being made toward the unfunded liability or even toward the interest on it. In recognition of this fact, Congress provided in section 17(e) of the 1956 amendments that "The Commission shall submit estimates of the appropriations necessary to finance the fund on a normal-cost-plus-interest basis and to continue this act in full force and effect." With respect to this provision, the act, however, does not require automatic appropriation of amounts so estimated, just as the similar provision in force before the 1956 amendments did not so require. Instead it leaves final determination of amounts to be recommended for this purpose to the discretion of the President. Accordingly, the Commission's estimates have been forwarded to the Bureau of the Budget for consideration as part of the normal process of formulating the executive budget. The President's final determination has been made only after consideration of the financial status of the system, including its unfunded liability, in the light

of the general fiscal situation of the Government. This procedure is in keeping with the tradition of executive development of the budget.

The President did not request an appropriation to the retirement fund in his budget for the fiscal years 1959 or 1960 beyond the amounts to be appropriated to the various agencies. For fiscal year 1959, Congress included in H.R. 11574 an appropriation to the fund of $589 million more than the agencies' contributions included in the President's budget. This amount plus employee and agency contributions equaled full normal cost plus interest. The President vetoed this bill, and Congress accepted his view by enacting H.R. 13856, which omitted an additional appropriation for the fiscal year 1959.

In fiscal years 1961 and 1962, appropriations were made to the fund for the specific purpose of continuing in effect certain benefits provided by Public Law 85–465. Otherwise, no Government payments in addition to agency contributions have been made.

The effect of a continuation of current policy is shown in table I attached. If present assumptions do not change, we estimate that the fund, now in excess of $12 billion, would continue to increase until early in the next decade, but thereafter decline at an accelerated rate as benefit payments maintain their inevitable climb. The fund would be exhausted by 1990, and continuation of payment of benefits at promised levels would require direct appropriations exceeding $2.5 billion annually by the end of the century, and ultimately approximately $3 billion. The deductions of then-active employees, which the system promises to return as a minimum under all circumstances and thus are in effect a deposit liability of the fund, would amount to nearly $13 billion. However, these deductions would have been expended in benefits to retired employees, leaving nothing in the fund to assure their later repayment.

The Commission urgently recommends that such a situation not be allowed to develop. We propose in the attached draft bill that a supplemental agency contribution be established starting in fiscal year 1965 at the rate of one-half of 1 percent of basic salary and with the rate increased by one-half of 1 percent each fiscal year from 1966 through 1986, reaching 11 percent in that year and continuing at that level thereafter. Based on our present estimates, this schedule of contributions would permanently finance the system under accepted actuarial principles on the normal cost-plus-interest basis, a standard already approved by the Congress in section 17(e) of the Retirement Act. Table II attached shows the estimated effect of this proposal.

Section 2 of the draft bill would make the proposed agency contribution rates applicable to certain Government corporations, whose organic acts now provide a different basis for determining the amounts of employer contributions to the fund. Section 3(a) would repeal the provision contained in the Independent Offices Appropriation Act of 1959 which places certain restrictions on the use of the fund toward the payment of authorized benefits. Section 3(b) would repeal the requirement that there be submitted annually to the Congress estimates of the appropriations necessary to reimburse the fund for the cost of benefits provided by Public Law 85–465. Public Law 87–114 removed the requirement that appropriations be made to continue these benefits in effect, and the financing proposed in the draft bill would cover the estimated cost of Public Law 85–465 benefits together with all others now provided under the retirement system.

Section 4 of the draft bill would prevent an increase in the deficiency because of any future liberalization of the Retirement Act. Before any new or increased benefits hereafter enacted could become effective, an appropriation to the fund would be required in an amount equal to the excess of the total present value of such benefits over the present value of their normal cost. In nontechnical terms, section 4 would permit liberalized benefits to become effective only after funds have been appropriated in an amount equal to the estimated increase in past service liability accruing because of the new legislation.

The question may well be asked why the Commission recommends improved financing of the system solely through an increase in agency contributions. The fund has three sources of income: employee deductions, Government contributions, and interest earnings. Since the fund was established in 1920, its investments have been limited by law to obligations issued or guaranteed by the United States. We believe this policy is sound and should not be changed. The present formula for determining the interest rate on special issues to the fund was established in 1961 by Public Law 87–350, providing an equitable basis geared to the average market yield on Treasury securities. We believe this to be a proper approach and suggest no change.

Neither do we recommend an increase in the present deduction rates of 6½ percent for employees and 7½ percent for Members. Under the assumption of a long-term interest rate of 3½ percent used in our estimates, the normal cost of the benefits provided by the system is 12½ percent. This measures the average value of benefits to a new employee who contributes throughout his entire service. At the 6½ percent rate, he is paying 52 percent of the total cost of his benefits. Few retirement systems require as much; many are noncontributory. Moreover, the past history of the system shows that every increase in the employee deduction rate has been accompanied by benefit liberalizations costing more than the increased income so provided. The net result has been increased, rather than decreased Government cost.

We thus have no desirable alternative to an increase in Government contributions if the financing of the system is to be improved. This is as it should be. The Government has established a retirement plan for its empolyees under which they must contribute at specified rates; the Government as the employer is responsible for the balance of the cost, which exceeds the portion assessed to employees. But since the system began, employee payments have exceeded Government payments by more than $2 billion. This policy of deferment can have only one result—increased future requirements. Unless provision is made toward improving funding, the combined employee-Government contribution required will total about 34 percent of payroll after the turn of the century.

There then remains the question of whether increased Government payments should be made as agency contributions or as direct appropriations. In either case, the general fund of the Treasury—and ultimately, the American taxpayer—bears the cost. We favor the agency contribution approach because it provides an explicit schedule of definite contributions clearly designed to fully meet estimated benefit expenditures. The need for increased Government payments is due to the present deficiency, and about 85 percent of this deficiency is with respect to future benefits which will be payable to presently active employees.

In summary, the Commission is deeply concerned by the present lack of adequate and permanent provisions for financing the civil service retirement system. This concern is shared by Members of Congress and by employees, both active and retired. We believe that corrective action should be taken now, and recommend to the Congress the proposal set forth in this letter.

The Bureau of the Budget advises that there would be no objection to the presentation of this draft bill from the standpoint of the administration's program.

By direction of the Commission:

Sincerely yours,

JOHN W. MACY, Jr., *Chairman.*

A BILL To improve the financing of the Civil Service Retirement System

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 4(a) of the Civil Service Retirement Act, as amended, is amended by inserting after the second sentence the following:

"A supplemental payment toward past service liability shall also be contributed from such appropriation or fund, in an amount equal to one-half of 1 per centum of the basic salary of each employee or Member from and after the first day of the first pay period which begins after June 30, 1964, with the rate of supplemental contribution increased by one-half of 1 per centum of basic salary on the first day of the first pay period which begins after June 30 of each succeeding year until the continuing supplemental contribution rate is equal to 11 per centum of the basic salary of each employee or Member."

SEC. 2. Section 4(a) of the Civil Service Retirement Act, as amended by section 1 of this Act, supersedes any provision of law inconsistent therewith for purposes of determining the amounts of employer contributions to the civil service retirement and disability fund.

SEC. 3. (a) The provisions of section 101, title I of the Act of August 28, 1958 (Public Law 85–844; 72 Stat. 1064), restricting the use of the civil service retirement and disability fund toward the payment of annuity benefits under the Civil Service Retirement Act and amendments thereto are hereby repealed.

(b) The proviso under the heading "Payment to Civil Service Retirement and Disability Fund" in section 101, title I of the Act of August 17, 1961 (Public Law 87–141; 75 Stat. 345; 5 U.S.C. 2259, Note), is hereby repealed.

SEC. 4. Section 17 of the Civil Service Retirement Act, as amended, is amended by adding at the end thereof the following new subsection:

"(f) Any new benefits or any increase in benefits resulting from a change in the eligibility requirements, the method of computation of benefits, or the crediting of service not previously creditable, authorized by amendment to this Act after June 30, 1963, or by any other enactment after such date which authorizes such new or increased benefits, shall become effective only after an appropriation has been made to the fund in an amount, as estimated by the Commission, equal to the excess of the total present value of such benefits over the present value of their normal cost. No benefits shall accrue and no payment shall be made with respect to such new or increased benefits for any period prior to the date of enactment of the required appropriation."

CIVIL SERVICE RETIREMENT SYSTEM

TABLE I.—*Estimated progress of the fund, assuming agency contributions matching employee deductions at 6½ percent, plus direct appropriations when needed to meet benefit payments*

Mr. OSTERTAG. Will the chairman yield?

Mr. EVINS. Yes.

Mr. OSTERTAG. Am I correct when I say that your estimated budget appropriation of $65 million for fiscal year 1965 is the estimated amount that you will require as your obligation during that year? In other words, there is nothing more into the fund. It is just going to meet your retirement pay?

Mr. MACY. No. It is just to cover the increase in annuities authorized in Public Law 793 in 1962. This is a funding of that particular increase. This will not change the status of the fund.

DEFICIENCY IN RETIREMENT FUND

The status of the fund is described in the table on page 152. You will see there that the deficiency in the fund is computed to be roughly $32,600 million as of June 30, 1963.

Mr. OSTERTAG. What will it be at June 30, 1964?

Mr. MACY. You will see down in the lower right-hand corner of the table on page 152 that the deficiency will increase by $1,141 million during that fiscal year. This is due to the various conditions that are described in the left-hand column. You will see that the normal cost to the Government, in order to finance the retirement system, is 5.78 percent. That covers the Government's share up to normal costs. The employee's contribution is 6½ percent of payroll, so you see that there is some excess over the Government's share.

Mr. JONAS. Will you permit me to interrupt? I thought you told me this morning it would go up to $37 billion if this legislation is not enacted.

Mr. MACY. The figure here shows $32.6 billion plus $1.1 billion.

The figure at the bottom of the page here is the level of the unfunded deficiency as of the end of 1964, so that would be $32.6 billion plus $1.1 or $33.7 billion. There would be approximately the same increase in the deficiency, assuming no liberalization, no pay increase during that year, of roughly another $1.1 billion, so the figure I gave earlier was in excess. It is more nearly $34.5 billion.

Mr. THOMAS. Gentlemen, for the record, Mr. Chairman, is this $34 billion considered a part of the national debt?

Mr. EVINS. Do you want this off the record?

Mr. THOMAS. No. Leave this on the record. Is it part of the national debt?

Mr. MACY. No.

Mr. THOMAS. It has been swept under the rug. It is not part of the national debt even though it is part of the national debt just as much as that which is added up and computed.

Mr. MACY. It is an obligation against the Federal Government.

Mr. OSTERTAG. It is an obligation. An obligation is a debt but it is outside of the purview of the regular national debt limitation; is that right?

Mr. MACY. That is right. This is an acturial computation that is arrived at by assuming that everybody covered by the system at this particular point in time were to take all of their——

Mr. THOMAS. We understand that. What is the cash value of the fund as of, say, December 31?

STATUS OF THE RETIREMENT FUND

Mr. MACY. The balance in the fund at the close of fiscal year 1964 is estimated to be $14 billion.

Mr. THOMAS. No.

Mr. OSTERTAG. You mean on hand?

Mr. THOMAS. What was the last year? It was only $10 or $10½ billion; was it not?

Mr. MACY. No; it was 13.

Mr. THOMAS. Where do you get that figure? That cannot be right. Last year at this time it was either 10 or 10½; was it not?

Mr. MACY. It was 13 as of 1963, and about 14 as of 1964.

Mr. THOMAS. I hope I am wrong.

Mr. MACY. That was the figure I was using.

Mr. THOMAS. What is it now? Repeat that again, $13,500 million?

Mr. MACY. $13,300 million.

Mr. THOMAS. When did we use that figure, 10 or 10½?

Mr. MACY. That was a couple of years ago.

Mr. IRONS. 1960.

Mr. THOMAS. About how much higher will the fund rise before it starts going down again and when will it deplete itself? What makes the fund go up now?

Mr. MACY. The income to the fund from Government payments and employee payments is still in excess of the benefit payments. It will continue to rise until about 1973.

Mr. THOMAS. The answer is for the last 3 or 4 years you have been paying in the Government's 6½ percent on time and for years and years behind that we would pay up 1 year and the next year we would pay nothing. Another thing, you have your increase in interest rates.

Mr. MACY. That is right. The interest rate has gone from less than 3 percent to three and a half.

Mr. THOMAS. Over the next 5 or 10 years how high do you think the fund will rise?

Mr. MACY. To about $16.6 billion by 1973.

Mr. THOMAS. $16.6 billion by 1973. What will happen after 1973?

Mr. MACY. Fall to nothing by 1989.

Mr. OSTERTAG. It is difficult to project this in view of salary changes, inflation, and everything else.

Mr. MACY. Indeed it is.

CONTRIBUTION TO THE RETIREMENT FUND BY THE GOVERNMENT

Mr. OSTERTAG. I want to get back to the $65 million we are appropriating. Do I understand that this is the Government's share on the salaries paid this year in retirement?

Mr. MACY. No. The $65 million listed here is just an estimate——

Mr. OSTERTAG. I understand.

Mr. MACY. This is exclusively for the purpose of financing the annuity increase, an incremental amount which was authorized by statute in 1962. The money that the Government contributes to the fund is 6½ percent of payroll in every appropriation.

As the chairman said we have had regular contributions now since 1956. Prior to that, some years there were contributions and other years not. Since 1956 there has been 6½ percent of total payroll paid to the fund by the agencies. That, along with the employee contribution, meets the current level of payments.

Mr. OSTERTAG. Or exceeds it.

Mr. MACY. It actually exceeds it. We are building up the fund.

Mr. OSTERTAG. In other words, the practice today is to put the Government's share in each year in addition to the funds that are paid in by the employee?

Mr. MACY. That is right.

Mr. OSTERTAG. And during the current period that exceeds the retirement cost? I am putting it simply.

Mr. MACY. Correct.

Mr. OSTERTAG. There have been times in the past where we appropriated or provided only what was necessary to meet the obligation during that year. Is that correct?

Mr. MACY. Yes. We have built up this unfunded liability largely because we failed to cover past service. On a current basis we are doing all right, but on past service, which has accumulated because of annuity increases and liberalizations and failures to appropriate, we are losing the interest which would come from a higher level in the fund. This increases the unfunded liability.

Mr. OSTERTAG. If every nickel was in the till that belongs there from the standpoint of contributions by employees, contributions by the Government, we would have in the neighborhood of $32 to $34 billion. Is that correct?

Mr. MACY. If we had done that from the very beginning in 1920, we would have that much more.

Mr. OSTERTAG. It is an obligation on the part of the Government because the money is not there. It has been expended by the National Government.

Mr. MACY. The $32 billion is a liability carried on the books. It has never been appropriated, but it constitutes a potential obligation.

Mr. OSTERTAG. Does the Government pay interest on that?

Mr. MACY. On the unfunded liability?

Mr. OSTERTAG. Yes.

Mr. MACY. No. The fund is getting interest on the balance in the fund. That is the source of interest income. It is invested in Treasury securities.

Mr. OSTERTAG. But the money that the Federal Government has borrowed from the fund is not subject to an interest payment to the fund?

Mr. IRONS. The unfunded liability is strictly an actuarial figure. There are no funds there at all.

Mr. OSTERTAG. I understand that.

Mr. MACY. You are talking about the money in the fund at the present time?

Mr. OSTERTAG. No. I refer to the money not there.

Mr. IRONS. That never was there, nor taken out of the fund. It just never was paid in.

Mr. JONAS. One reason the alleged deficit is going up is because it is not bearing interest. Is that right?

Mr. IRONS. Yes.

Mr. MACY. That produces part of the $1.1 billion increase each year. I have a diagram in this paper which I think explains what is involved. Here is the outgo line in benefits which is rising. We have a rapidly rising rate of retirement.

Here is the income line which is relatively flat. They cross at approximately 1972, and from then on there will be less income than

there will be outgo until by roughly 1990 there will be no balance in the fund at all. Our refinancing proposal is one which would avoid this by keeping the annual benefit payments offset by an increase in the income.

ANNUAL APPROPRIATION AFTER FUND IS EXHAUSTED

Mr. JONAS. By 1990 when those lines cross and you have no more money and it will go on an annual appropriation basis, what is your best estimate on the annual appropriation?

Mr. MACY. When the fund is exhausted, if there were no change, it would require an annual appropriation, starting in 1990, of approximately $1.1 billion a year. This would go up to $2 billion by 1992 to $2½ billion by the year 2000 as annual appropriations in order to meet the obligation.

Mr. JONAS. There have been people who have argued that would be a better way to do it than this.

Mr. MACY. There are those who say wait and meet it out of current appropriations when the time comes. Our view is that this is a mistake, that we ought to be building up.

Mr. EVINS. This committee for several years has been providing appropriations to put the fund in better condition. This committee has kept a bad situation from getting worse. You need to address your remarks to the legislative committee, Mr. Chairman.

Mr. MACY. This committee has been largely instrumental in reminding us of our obligation to see to it that this fund is placed in a better condition.

JUSTIFICATION OF THE ESTIMATE

Mr. EVINS. We shall place in the record the chart on page 152 which gives the full picture on the deficiency, plus 153 regarding the interest situation which we just discussed, and the language. Put pages 145 through 153 in the record.

(The pages follow:)

Payment to civil service retirement and disability fund

	Appropriated, 1963	Authorized, 1964	Estimate, 1965	Changes, 1965 compared with 1964
Payment to civil service retirement and disability fund	$30,000,000	$62,000,000	$65 000,000	+$3,000,000

GENERAL STATEMENT

The civil service retirement and disability fund was established in 1920 to furnish retirement benefits to officers and employees of the U.S. Government who become superannuated in governmental service, or incapacitated before attaining old age. The Civil Service Retirement Act directs that the Commission shall be the administering agency and that "Except as otherwise specifically provided herein, the Commission is hereby authorized and directed to perform, or cause to be performed, any and all acts and to make such rules and regulations as may be necessary and proper for the purpose of carrying the provisions of this act into full force and effect."

Since passage of the Retirement Act, a number of amendments have served to revise benefits and financing procedures. The more recent amendments are discussed in this submission. During the 88th Congress, 1st session, legislation was proposed which would provide for permanent financing of the retirement system.

The amount requested for fiscal year 1965 is needed to pay for increased benefits provided in part III of Public Law 87–793, approved October 11, 1962, as explained below.

Effect of Public Law 85–465

Public Law 85–465, effective August 1, 1958, increased annuities of retired employees and survivors whose benefits were based on service terminated before October 1, 1956; and provided annuities to certain widows and widowers whose spouses had died, either in service or after retirement, prior to February 29, 1948. This act originally required the termination of annuities and increases in annuities provided therein for each fiscal year beginning on or after July 1, 1960, for which an appropriation shall not have been made to cover the cost of such benefits in that fiscal year. Such appropriations were made for fiscal years 1961 and 1962.

Public Law 87–114, approved July 31, 1961, amended Public Law 85–465 by removing this appropriation requirement. However, the Independent Offices Appropriation Act for 1962 provided $44,637,000 for Public Law 85–465 benefits in that year, and also states that "the Civil Service Commission shall include annually, in its estimates to the Bureau of the Budget, estimates of the appropriations necessary to reimburse the civil service retirement and disability fund for the amounts paid out of the fund by reason of the enactment of Public Law 85–465 and the Bureau of the Budget shall submit such estimates annually to the Congress."

In accordance with the directive in the 1962 appropriation act, the Commission estimates that the cost of benefits provided by Public Law 85–465, to be paid out of the fund in fiscal year 1965, will be $38 million. However, in view of Public Law 87–114, an appropriation of this amount is not being requested.

Effect of Public Law 87–793

Public Law 87–793, approved October 11, 1962, has significant effect on retirement costs. The higher salaries provided in part II, effective in October 1962 and January 1964, will increase prospective retirement benefits based in part on prior service, and hence the deficiency increases as explained later in this submission.

Part III of Public Law 87–793 provides for adjustment of annuities, including those already in payment as well as the majority to be awarded in the future. An appropriation of $30 million was made to cover these increased benefit payments in fiscal year 1963. The 1964 appropriation of $62 million is for the same purpose. The amount of $65 million included in this request is the estimated amount of such payments in fiscal year 1965. On the assumption that payment in subsequent years of benefits provided by part III of Public Law 87–793 will be contingent on annual appropriations, no increase in the normal cost and deficiency is reflected in the following estimates because of these benefit liberalizations.

Section 1102 of Public Law 87–793 provides a cost-of-living adjustment in retirement annuities, when the change in the price index shall have equaled a rise of 3 percent from 1962 or the year preceding the most recent cost-of-living adjustment. The law requires the Commission to make a determination as of January 1 of each year beginning in 1964, with increases in annuities when applicable, to be effective April 1 of the same year. There are no funds included in this appropriation request or in the salaries and expenses appropriation to cover requirements for a cost-of-living adjustment.

Estimates on a normal cost-plus-interest basis

Section 17(e) of Public Law 84–854, approved July 31, 1956, directs that "The Commission shall submit estimates of the appropriations necessary to finance the fund on a normal cost-plus-interest basis and to continue this Act in full force and effect." Employing agencies contribute, from their appropriations, amounts equal to the sums withheld from the salaries of their employees at the deducton rate of 6½ percent of basic salary. These agency contributions are less than the Government's total retirement cost on a normal cost-plus-interest basis. The difference is developed in this submission; however, an appropriation request for this purpose is not being made.

Periodic actuarial valuations are necessary for the determination of the normal cost and the unfunded liability, or deficiency. On June 15, 1959, the board of actuaries of the civil service retirement system submitted a special report summarizing the results of a valuation as of June 30, 1958. Copies of

this report were furnished the interested congressional committees and the Bureau of the Budget. The new valuation produced a minor increase in the estimated normal cost, and a significant increase in the estimated deficiency.

Public Law 87–350 (75 Stat. 770) approved on October 4, 1961, amends section 17(d) of the Civil Service Retirement Act with respect to interest earnings on special Treasury issues held by the fund. The Board's 1958 valuation was based on an interest rate of 3 percent. The effect of Public Law 87–350 will be an improvement of interest earnings estimated equivalent to a revision of the base upward to 3½ percent. Accordingly, the analysis herein reflects for the first time the revision of normal cost and deficiency estimates on the basis of 3½-percent interest earnings. Deviations in actual interest earnings from the 3½-percent rate are treated as adjustments of the deficiency.

Further possible revisions in the normal cost and deficiency estimates may be expected as a result of a new actuarial valuation of the system, currently in process. The valuation will be as of June 30, 1963, but results are not expected to be available until about the middle of calendar year 1964. This valuation also will be based on the assumption of 3½ percent interest earnings; other actuarial factors and rates will be revised to reflect more recent experience under the system.

Computation of normal cost

The Commission estimates that, on the basis of a 3½-percent valuation rate of interest, the normal cost of the benefit provisions as amended by Public Law 84–854 is 12.28 percent of the total salaries of employees covered by the Retirement Act. With employees paying 6½ percent, this leaves a Government normal cost of 5.78 percent. As previously explained, the normal cost does not reflect an increase because of the enactment of part III, Public Law 87–793.

It is estimated that the annual payroll of covered employees will total $14,734,100,000 after the second phase of salary increases provided by Public Law 87–793, effective January 1, 1964. Covered payroll in fiscal year 1965 is thus estimated at this amount.

The Government's normal cost in fiscal year 1965 is estimated as follows:

(1) Estimated total salaries of covered employees	$14,734,100,000
(2) Government normal cost percentage	5.78
(3) Government normal cost, fiscal year 1965: (1) × (2)	$851,631,000

Computation of interest on the deficiency

The Board of Actuaries estimates that the deficiency amounted to $27,451 million as of June 30, 1958. The Commission's budget estimates for fiscal years 1961 and 1962 show how this increased to the estimated amount of $31,142,649,000 at June 30, 1960, primarily because (1) no direct appropriations to the fund were made in fiscal years 1959 and 1960; and (2) Public Law 86–568 increased salaries (and hence prospective retirement benefits based in part on prior service), and also brought under the Retirement Act about 15,000 employees of agricultural stabilization and conservation county committees.

The Commission's budget submission for fiscal year 1963 shows a further increase in the deficiency to an estimated amount of $32,546,939,000 at June 30, 1961. No direct appropriations to the fund were made in fiscal years 1961 and 1962 to cover interest on the deficiency and the excess of the Government's normal cost over contributions by agencies. A further increase in the deficiency resulted from enactment of Public Law 87–114, making Public Law 85–465 benefits payable from the fund without reimbursement through annual appropriations. After allowing for the Public Law 85–465 appropriation in fiscal year 1962, the Commission estimated an increase of $330,363,000 in the deficiency because of this legislation. The Commission's budget submission for fiscal year 1964 shows an estimated deficiency of $33,660,020,000 at June 30, 1962.

Revision of the interest base to 3½ percent, as previously discussed, results in a revision of the estimated deficiency at June 30, 1962. The revised amount of $29,727,900,000 at June 30, 1962, has been used herein, together with normal cost computations and assumed interest earnings based on 3½ percent, from that point onward.

During fiscal year 1963, the deficiency increased by an estimated $2,926,091,000, to $32,653,991,000 at June 30, 1963. A considerable part of this increase ($1,871 million plus assumed interest thereon) was due to the higher salaries provided by part II of Public Law 87–793. As previously stated, no increase in the de-

ficiency is assumed because of the costs of benefits provided by part III of the same act, under the assumption of annual appropriations to cover such costs.

A second part ($72,017,000) of the increase for 1963 was due to lack of full interest earnings at 3½ percent. As previously stated, the estimates of the normal cost and the deficiency are predicated on the assumption that the fund will earn 3½ percent over the long-term future. Even though Public Law 87–350 changes to basis for future investment of the retirement fund, its effect during fiscal year 1963 resulted in average earnings of less than 3½ percent of the total fund. This is so because the bulk of the existing investments are still earning less than 3 percent. This deviation from the assumed rate of 3½ percent is treated as an increase in deficiency. As more of present investments are redeemed and reinvested, along with current receipts, any earnings in excess of an average of 3½ percent of the total fund would be treated as a decrease in the deficiency.

For fiscal year 1963, the only direct appropriation to the fund was $30 million to cover costs of benefits provided by part III of Public Law 87–793, an appropriation which has no effect on the deficiency computed without reference to such costs. Since there were no other direct appropriations, the deficiency increased during 1963 by interest at 3½ percent on the balance at the beginning of the year ($29,727,900,000), offset only to the extent ($102,002,000 plus assumed interest earnings thereon) by which agency contributions exceeded the Government's normal cost as computed on the new 3½-percent base. This third and last part of the deficiency increase for 1963, due to interest on the starting balance, offset as described, was $936,689,000.

During fiscal year 1964, the deficiency will again increase due to lack of full interest earnings at 3½ percent and because of interest on the starting balance, offset to the extent that agency contributions exceed the Government's normal cost.

The following table shows the factors used in estimating interest on the deficiency for fiscal years 1963 and 1964.

	Fiscal year 1963	Fiscal year 1964
1. Deficiency at—		
June 30, 1962	[1] $29, 727, 900, 000	
June 30, 1963		$32, 653, 991, 000
2. Government's normal cost, 5.78 percent of estimated annual payroll of—		
$14,166,970,000 in 1963	818, 851, 000	
$14,544,500,000 in 1964		840, 672, 000
3. Agency contributions, 6½ percent of estimated annual payroll of—		
$14,166,970,000 in 1963	920, 853, 000	
$14,544,500,000 in 1964		945, 392, 000
4. Excess of item 3 over item 2	102, 002, 000	104, 720, 000
5. Amount by which interest income falls short of income at assumed rate of 3½ percent (see detail on following page)	72, 017, 000	54, 532, 000
6. Increase in deficiency due to salary increases provided by Public Law 87–793	1, 871, 000, 000	
7. Deficiency at June 30, excluding interest items (1−4+5+6)	31, 568, 915, 000	32, 603, 803, 000
8. Interest at 3½ percent on deficiency (3½ percent of item 1)	1, 040, 476, 000	1, 142, 890, 000
9. Interest at 3½ percent (for ½ year) on excess of agency contributions over Government normal cost (1¾ percent of item 4)	1, 785, 000	1, 833, 000
10. Interest at 3½ percent (for 8½ months) on item 6	46, 385, 000	
11. Total interest (items 8−9+10)	1, 085, 076, 000	1, 141, 057, 000
12. Total deficiency at June 30, 1963 (items 7+11)	32, 653, 991, 000	

[1] The June 30, 1962, deficiency was given as $33,660,020,000 in the 1964 budget submission, computed under the assumption of 3 percent interest earnings. The figure of $29,727,900,000 reflects the revision to a 3½ percent valuation rate.

Summary of computation on a normal cost-plus-interest basis, fiscal year 1965

1. Government normal cost	$851,631,000
2. Interest on deficiency for 1964	1,141,057,000
3. Total required on normal cost-plus-interest basis (items 1 + 2)	1,992,688,000
4. Less contributions by agencies	957,716,000
5. Amount on normal cost-plus-interest basis not met by agency contributions (items 3 — 4)	1,034,972,000

Detail of item 5

	Fiscal year 1963 actual	Fiscal year 1964 estimate
1. Investments in fund at beginning of year	$12,070,638,000	$13,144,672,000
2. Direct appropriation to fund:		
Public Law 87-793 benefits in 1962	30,000,000	
Public Law 87-793 benefits in 1964		62,000,000
3. Receipts from employee deductions, voluntary contributions, service credit payments, and agency contributions	1,854,796,000	1,903,000,000
4. Benefit disbursements	1,188,500,000	1,351,000,000
5. Excess of item 3 over item 4	666,296,000	552,000,000
6. Computation of 3½-percent interest:		
(a) Item 1 for 12 months	422,472,000	460,064,000
(b) Item 2 for 2 months in 1963	175,000	
For 10 months in 1964		1,808,000
(c) Item 5 for 6 months	11,660,000	9,660,000
(d) Total interest at 3½ percent	434,307,000	471,532,000
7. Interest income	362,290,000	417,000,000
8. Excess of 3½ percent over interest income (item 6d-7)	72,017,000	54,532,000

Mr. EVINS. Any further questions on the retirement fund?
(No response.)

Mr. EVINS. We will move on to the status of the employees' life insurance fund.

Mr. THOMAS. There should be a big fat profit there.

Mr. MACY. All that is involved here is a limitation on administrative expenditures out of the fund. We are proposing a limitation of $277,000.

STATUS OF THE LIFE INSURANCE FUND

Mr. THOMAS. Give us a little rundown on the fund. Two or three years ago everybody thought you would have a little extra money and the insurance would be increased 15 to 25 percent. What happened to that would-be profit?

Mr. RUDDOCK. There is no surplus in the life insurance fund. There is a provision in the Life Insurance Act that when an employee retires on immediate annuity, either for disability or after as much as 12 years service he continues his life insurance and continues to carry it after retirement.

It stays at the full amount until he is 65 and retired. Then it begins to decline until it goes down to 25 percent of the face value.

Because this insurance does carry into retirement we are going to need all of the money that has been coming into this program in premium to meet the obligations as they will arise in the future.

We have already reached a point where the number of people who die in a retired status under this act, exceeds the number of active employees who die, and this continues to grow a little each year. I think it is obvious we will need more money in the future. We are in the process of making a valuation of the condition of this life insurance fund; that is a valuation as of June 1963.

(Discussion held off the record.)

Mr. MACY. Table 159 shows the justification for that amount referred to, Mr. Ostertag.

Mr. OSTERTAG. We shall insert page 155 through page 161 in the record at this point.

(The pages follow:)

EMPLOYEES' LIFE INSURANCE FUND

GENERAL STATEMENT

The Federal Employees' Group Life Insurance Act, 5 U.S.C. 2091–2103, August 17, 1954, as amended, provides that the employees' life insurance fund is available for any expenses incurred by the Civil Service Commission in the administration of the act.

Regular program

There are approximately 2¼ million employee participants in this country and overseas. This is approximately 95 percent of the employees who are eligible. In addition, about 275,000 retired employees are insured. Estimated life insurance coverage for both groups is $16.6 billion.

From the start of the program through June 30, 1963, $700.3 million was withheld from the salaries of covered employees and $350.2 million was contributed by the Government. It is estimated that in fiscal year 1965, $102 million will be paid into the fund by employees, and $51 million by the Government. Employees in this group contribute 25 cents per $1,000 of insurance each biweekly pay period, and the Government contributes one-half that amount.

The amount of life insurance benefits paid under the policy to survivors of insured members and in dismemberment benefits to insured members since the start of the program was $666 million through June 30, 1963. It is estimated that about $135 million in life insurance and dismemberment benefits will be paid out in fiscal year 1965.

Most of the difference between receipts and benefit payments under the policy is placed in reserve for charges under the policy. On June 30, 1963, the end of the last completed policy year, there were total reserves of $399.8 million of

which $100 million was held as a contingency reserve by the insurer at interest, and $299.8 million was held by the fund with the Treasury of the United States. The contingency reserve held by the insurer is limited to a level of $100 million, and all amounts above this figure periodically are returned and deposited in the Treasury of the United States to be invested.

Beneficial association agreements

Through June 30, 1963, individuals whose beneficial life insurance agreements have been assumed by the fund paid $20 million into the fund. It is estimated that in fiscal year 1965 about $2.8 million will be paid into the fund by this group. Former members of beneficial associations continue to pay premiums according to the rate schedules in effect at the time their life insurance agreements were assumed by the fund, but the Government makes no current contributions to the fund for these individuals as it does for employees covered under the regular program.

A contingency reserve has been established and is held by the insurer at interest under the policy covering members of beneficial associations. This reserve, which was estimated to be $3.2 million on June 30, 1963, will accumulate interest consistent with that provided under the regular program. If the Commission determines that the contingency reserve under the beneficial association program has reached a level sufficient to meet adverse fluctuation in future charges, any amounts above this level will be returned to the fund.

Commission responsibilities

A number of functions are required by law to be carried out by the Commission in administering the Federal Employees' Group Life Insurance Act. Among the more important ones are—

1. The purchase of a group policy from a private insurance company to provide the benefits authorized, and the negotiation for amendments to the policy.
2. Determining or redetermining that the insurers and reinsurers meet the eligibility conditions and comply with contract provisions for carrying the policy under which Federal employees are insured.
3. Collecting premiums from members of beneficial associations whose life insurance agreements have been assumed.
4. Determining eligibility of employees retiring under the civil service retirement system and other Federal civilian retirement systems for continuance of their life insurance after retirement without cost to them.
5. Arranging for insured individuals to receive appropriate certificates, notices, and information concerning their rights, privileges, and benefits.
6. Auditing the mortality and other claim charges, and expenses incurred in the administration of the program by the insurance companies.
7. Prescribing the operating regulations, rules, procedures, and forms for the Commission, employing agencies, and individuals.
8. Developing and maintaining financial and statistical data for management use, and for annual reporting to the Congress.
9. Receiving and accounting for employee withholdings and agency contributions to the fund, and maintaining necessary control accounts and records.
10. Answering inquiries from individuals and agencies on insurance matters.

Under the program, all insurance payments to claimants are settled by an administrative office of each insurer upon receipt of certification of the insurance status of the person on whose account the claim is being made. In the case of an active employee, the certification is made by the last employing office, and it is unnecessary for the Commission to be involved in any recordkeeping for such individuals. For retired employees, and those individuals insured because of the assumption of life insurance agreements of beneficial associations, the Commission acts as the central agency for certification of insurance status when the insured person dies. Therefore, the Commission already has all necessary records, obtained from employing agencies at retirement, or at time of taking over the beneficial associations' life insurance agreements, and there is some individual recordkeeping in these cases.

Limitation on administrative expenses

Estimates for fiscal years 1964 and 1965 provide for increased costs in maintaining the regular insurance program because the number of insured annuitants is increasing, thereby increasing the number of eligibility determinations at retire-

ment, and certifications to be made at the time of death of these annuitants, and because of increased pay costs. The cost of servicing beneficial association members is expected to decrease in fiscal year 1965, except for the pay raise increment, because the number of members to be serviced is expected to decrease from 115,846 in 1964 to approximately 114,300 members in 1965. The declining membership is due to deaths and lapses.

The distribution of administrative expenses between the regular program and beneficial association work is shown below:

	1963 actual		1964 authorized		1965 estimate	
	Average positions	Cost	Average positions	Cost	Average positions	Cost
Regular program	15	$116,247 (121,000)	15	$128,000 (129,700)	17	$140,300
Beneficial association work	18	140,371 (146,100)	18	142,000 (143,800)	17	136,700
Total	33	255,618 (267,100)	33	270,000 (273,500)	34	277,000

The following table shows the distribution of average positions and costs by function for fiscal years 1963, 1964, and 1965.

	1963 actual		1964 authorized		1965 estimate	
	Average positions	Cost	Average positions	Cost	Average positions	Cost
Collecting, accounting and auditing	18	$109,786 (115,200)	17	$111,300 (113,200)	17	110,700
Determining and certifying insurance status	9	55,454 (58,100)	10	64,400 (65,400)	12	74,000
Answering insurance inquiries	6	33,097 (34,700)	6	33,400 (33,900)	5	32,900
Subtotal, personnel compensation	33	198,337 (208,000)	33	209,100 (212,500)	34	217,600
Other objects of expense	----------	58,281 (59,100)	----------	60,900 (61,000)	----------	59,400
Total program	33	256,618 (267,100)	33	270,000 (273,500)	34	277,000

NOTE.—Figures in parentheses above and in the following text are adjusted to reflect 1965 pay rates for comparability.

Collecting, accounting, and auditing

	1963	1964	1965
Average positions	18	17	17
Cost	($115,200)	($113,200)	$110,700

This is the entire accounting and fund control function. It includes (1) operating complete control accounts for the entire program; (2) receiving and depositing employee withholdings and agency contributions; (3) receiving, depositing, and accounting for individual premium payments on beneficial association agreements; (4) computing amounts of premiums due and authorizing payments to insurance carriers; (5) managing assets of beneficial associations; (6) preparing summary financial statements; (7) reviewing the effectiveness of the Government-wide accounting system for the program; (8) auditing individual claims and insurance companies' records to determine propriety of

claims and compliance with insurance contracts or agreements; (9) developing, compiling, and analyzing statistical data pertaining to the insurance program; and (10) analyzing and preparing reports on insurance legislation and policy proposals. The cost of administering this function is expected to be less in 1965 because the beneficial association membership will be smaller due to deaths and lapses.

Determining and certifying insurance status

	1963	1964	1965
Average positions	9	10	12
Cost	($58,100)	($65,400)	$74,000

This function consists of determining whether employees retiring under the several Federal civilian retirement systems are eligible for continuing coverage under the act. It includes: (1) Technical and clerical work involved in obtaining necessary data from agencies in retirement cases; (2) determining whether or not employees meet the requirement of the law for continuance of life insurance during retirement without cost to them, and notifying them of the determinations; and (3) certifying insurance status to the insurer at time of death of retired employees. The cost of this function is expected to be slightly higher in fiscal year 1965 because the number of insured annuitants in the regular program is increasing, thereby increasing the number of eligibility determinations at retirement, and certifications to be made at the time of death of these annuitants, and because of added pay costs.

Answering insurance inquiries

	1963	1964	1965
Average positions	6	6	5
Cost	($34,700)	($33,900)	$32,900

This function covers the work of replying to telephone, written and personal inquiries; designing necessary forms; and preparing and issuing external instructions and informational releases. The estimated cost for 1965 is below 1964 because of the declining beneficial association membership.

Other objects of expense

	1963	1964	1965
Cost	($59,100)	($61,000)	$59,400

This item provides for all expenses other than personnel compensation. Requirements for fiscal year 1965 are slightly less than in fiscal year 1964.

Mr. OSTERTAG. Any further questions on this?

(No response.)

Mr. OSTERTAG. The revolving fund is next. Mr. Chairman?

Mr. MACY. The revolving fund is the means whereby the Commission finances the service that it renders to other departments and agencies in the conduct of full field security investigations. The Commission performs this as a service and it bills the agencies on a per case basis.

You will note there in the table on page 162 that we are estimating the average cost per case for 1965 at $335. This is in contrast to an average cost per case in 1963 of $350.

Using 1965 pay scales it is a cost of $368. This means there actually has been a reduction of $33 per case. This is possible by improving our administration of this program, changing slightly the coverage of the investigations, and utilizing GSA automobiles for our investigators rather than permitting them to use their own automobiles.

You will note that on page 163 we have indicated that the savings that have been made in this program will save not the Commission but the agencies that use this service about $2 million a year.

Mr. THOMAS. This is not under salaries and expenses. You have about 1,500 employees there.

Mr. MACY. That is correct, approximately 1,500.

Mr. THOMAS. If we added that it would be——

Mr. MACY. This number of employees is included within the ceiling that the President has given to the Civil Service Commission. That is how we arrive at the overall ceiling of 4,079.

Mr. OSTERTAG. I think we should insert pages 162 and 163 in the record.

(The pages follow:)

REIMBURSABLE SECURITY INVESTIGATIONS PROGRAM

Pursuant to title 22 U.S.C. 1661, other laws, and Executive orders, the Civil Service Commission conducts full field security investigations for various agencies of the Government on a reimbursable basis.

Agency estimates of investigations to be requested in fiscal year 1964 and 1965 as compared to fiscal year 1963 experience are presented below. In addition, the table relates estimated workload receipts to estimates of production, manpower, and unit cost.

Caseload, average positions, and unit cost

	1963 actual	1964 authorized	1965 estimate
On hand beginning of year	15,303	10,483	8,483
Received	40,937	42,000	42,000
Total workload	56,240	52,483	50,483
Processed	45,757	44,000	44,000
On hand end of year	10,483	8,483	6,483
Average positions	1,329	1,395	1,395
Average cost per case	$350	$329	
	[1] ($368)	[1] ($335)	$335

[1] Adjusted to 1965 pay scale for comparability.

The procedures developed in executing the program appear to be effective and reports are generally furnished to the agencies within the time limits prescribed. The quality of the reports meets the standards and requirements of the agencies served.

The accomplishments in this program represent an outstanding response by the Commission to the President's desire for increased productivity, economy, and efficiency.

When Public Law 87–793 was approved, the agencies for which this service is performed were told that costs would approximate $375 per case after December 1962 and $400 per case after February 1964.

It was not necessary, however, to increase the billing rate in December 1962. Furthermore, it has been possible during fiscal year 1964 to reduce the billing rate to $325 through January 1964, with an expected increase to only $350 after that date. At the volume estimated for 1965, this represents a saving to the Federal Government of about $2 million per year.

This record has been made possible by management measures that improved overall efficiency. Following are several examples:

(*a*) Changed the coverage of investigations to place greater emphasis on more recent experience.

(*b*) Secured agreements with other agencies for making greater use of previous investigations.

(*c*) Established area centers for transcribing reports of investigation at 4 central locations rather than processing them at 11 different geographic locations. The change resulted in fewer supervisory positions, as well as savings in other overhead costs.

(*d*) Arranged for use of GSA automobiles at more economical rates than those for personally owned cars.
(*e*) Increased the emphasis on quality of training and supervision.

CHARITABLE FUND RAISING IN THE FEDERAL SERVICE

Mr. OSTERTAG. I would like to raise a question, Mr. Chairman, about your policy regarding deductions authorized from payrolls for charitable purposes. As I understand it, the plan has not yet been adopted?

Mr. MACY. I would be happy to explain it. In fact, I have a letter from Mr. Jonas on this very point. President Kennedy assigned to the Chairman of the Commission in Executive Order 10927 in March 1961 the responsibility for establishing policy with respect to charitable fundraising within the Federal service. It applies to both civilian and military personnel. This was a replacement for a committee operation which had existed previously.

Since that time we have endeavored to work with the charitable organizations, with the managers within the Federal service, and with employee groups to work out a charitable giving program that would produce funds for worthwhile causes that meet the criteria for solicitation on the job within the Federal Government.

We have been concerned about the amount of time that is consumed in these charitable drives. Under our standards there are up to three annual drives permitted—one, a fall drive——

Mr. THOMAS. Off the record.

(Discussion held off the record.)

Mr. MACY. This is voluntarily given to the United Fund, Community Chest, International Agencies, Red Cross when it is separate from the United Fund.

Mr. THOMAS. The social service groups have a little fight among themselves.

Mr. MACY. That is right.

Mr. JONAS. What they are complaining about is that they like the payroll deduction for community services——

Mr. MACY. But not the health agencies. My judgment is that the Federal Government cannot permit payroll deductions for one authorized charitable group without authorizing it for others as well. We cannot discriminate in favor of one particular group.

Mr. OSTERTAG. If I may I will inject a point which has come to my attention with regard to the local level, where you have your community chests and programs of that nature. They call attention to the fact that these drives on a national level with professional solicitation, and so on, that the cost almost absorbs the contribution made. If your plan lends itself only to a broad national program, funds going to the national organization and divorces itself from the local picture, then we are in trouble, and that is one of the——

Mr. MACY. It would not do that at all.

Mr. OSTERTAG. Do you get the point?

Mr. MACY. If this were the case this would clearly be objectionable. What we are proposing is to try in eight different cities an experiment to see if we can have in the Federal Government on-the-job solicitation at one time during the year with all of the authorized organizations soliciting concurrently in that drive. The objectives would be

first to respond to an almost universal request from our own employees, from our managers, and from the servicemen to do it that way; secondly, to see if we can reduce the cost to the Federal Government, the taxpayer, of the time that is involved in conducting two or three separate drives.

Mr. OSTERTAG. Loss of service.

COST OF CHARITY DRIVES TO THE GOVERNMENT

Mr. MACY. Loss of service. It is our estimate that at the present time it is costing the Government about $5 million a year to conduct these drives. If we could consolidate the drives into a single combined drive that could be cut at least in half.

PAYROLL DEDUCTION FOR CHARITY

Thirdly, it is our objective to make it possible for the Federal employee to contribute a fair share to these various charitable organizations. Experience in industry, and now increasingly in State government, has been that there is a larger contribution if it can be made through payroll deductions.

We do not feel payroll deductions are possible in the Federal Government if we have several different campaigns with several different systems.

Mr. THOMAS. Why should the Government make a payroll deduction for this? If an employee wants to give why should he not have the privilege to give? If he wants them to jump in the lake why can't he tell them to do that?

Mr. MACY. This is voluntary giving and he would elect to have it deducted, and if he elected——

Mr. THOMAS. How do you arrive at a figure of $5 million?

Mr. MACY. The beneficiary organization would pay for the payroll cost of making that deduction. The $5 million figure as to the cost of administering the fundraising programs at the present time is based——

INDUSTRY CHARITY PRACTICES

Mr. THOMAS. What is industry doing? Are they doing the same thing?

Mr. MACY. Industry very widely is providing payroll deductions at no cost to the beneficiary. We feel the taxpayer shouldn't have to pay this. There are many companies where there is a good deal of management persuasion.

Mr. THOMAS. Off the record.

(Discussion held off the record.)

PLAN FOR FEDERAL PAYROLL DEDUCTIONS

Mr. OSTERTAG. What are you going to charge for costs?

Mr. MACY. Probably come out around $1 a year for the actual handling of the payroll deduction.

Mr. OSTERTAG. Per person?

Mr. MACY. Yes. One of the reasons for the experiments is to determine the costs.

Mr. OSTERTAG. You spoke about a plan. Is the plan now adopted and in force as a pilot operation, or is the pilot operation going to be made and then planned?

Mr. MACY. We have a draft plan which we have just completed in the last few days, which we now propose to send out to the local authorities in the eight centers which would be used as experiments next fall. In the next few weeks it would be a matter of the community representatives reviewing this plan to see how feasible it will be in the cities that have been tentatively selected.

It would then be conducted in those cities next fall, and after that we would evaluate the results and decide whether this was sound, made sense, if the objectives I cited had been met or not, and then we would determine whether it should be extended on an across-the-board basis or not.

Mr. OSTERTAG. On the basis of this $1 assessment?

Mr. MACY. That is a very rough estimate at the moment.

Mr. OSTERTAG. Where would that assessment go?

Mr. MACY. At the point where the money was withheld. This would be money paid by the United Fund to the payroll office of the Air Force, for example, at the Rome Air Materiel Center.

Mr. OSTERTAG. Then what would they do with it?

Mr. MACY. This then would become a Federal receipt and it would be in effect a cost standoff for the money expended in providing the deduction.

Mr. OSTERTAG. Revert back to the Treasury of the United States?

Mr. MACY. Yes.

Mr. OSTERTAG. That is all I have.

Mr. MACY. I would be happy to include in the record if you wish a rather lengthy memorandum I have explaining this which I have been sending out in response to congressional inquiries on this program.

Mr. OSTERTAG. It might be well to insert it in the record at this point.

(The memorandum follows:)

U.S. CIVIL SERVICE COMMISSION,
Washington, D.C., January 7, 1964.

Mr. JOHN S. HAYES,
President, United Community Funds and Councils of America, Inc., Broadcast House, Washington, D.C.

DEAR MR. HAYES: Since our meeting of December 19 I have received, as you predicted, a volume of communications from local united funds protesting the proposed experiments with a single Federal service campaign for voluntary health and welfare agencies. Most protests reflect serious misunderstanding of the experiments. In view of my care in advising you at all times and in soliciting your participation at each planning stage, I cannot understand the action of your board in precipitating this widespread opposition based upon inadequate representations of the situation.

I am answering these communications by setting forth the information which your local funds and chests should have been furnished initially in order to judge the usefulness of the experiments. I would greatly appreciate your conveying this same information, as presented below, to all local funds which received earlier communications on this subject from your national office.

To begin with, they should know about the interests of the contributors, which have not been previously explained to them. The contributors are the Federal employees and members of the Armed Forces who currently give more than $20 million a year to help support voluntary health and welfare services, and the Federal Government and the taxpayers who expend some $5 million a year of official time in organizing and conducting the on-the-job solicitations which make these contributions possible.

Employees and servicemen have asked that the two or three separate drives now held each year be combined into one drive. Requests and suggestions to this effect have come from all over the country. Last year, a joint committee representing all major departments and agencies and the presidents of the principal employee organizations examined these proposals and recommended unanimously that a single campaign be tried out.

To the Government and the taxpayers, a single drive would be expected to cause less disruption of the work and to reduce by half the use of Government manpower for this function—a savings on the order of two and a half million dollars a year, by conservative estimate. This potential for cost reduction in Government operations would warrant the experiments even if it were the only consideration.

Secondly, they should know about the interests of communities which may be involved in the experiments.

Your organization and others have sought for several years to have a payroll deduction plan for charitable contributions by Federal personnel—a facility which would make possible larger contributions by spreading them out over the year. Even though payroll payment would be entirely optional with the contributors, it is probable that contributions would at least double if this facility were available. Your own organization, I believe, has estimated an increase from $20 to $50 million. In the past, these proposals have been turned down because the administrative complications in a program of the magnitude and diversity of the Government's make it economically impractical. It would cost too much in proportion to the benefits. But if solicitations are consolidated into a single drive it may be practical, and a payroll payment plan is one of the features of the proposed experiments.

The only economic effect to be expected, then, by the seven or eight communities which may be asked to participate in the experiments is a major increase in the level of Federal support for their voluntary health and welfare services. From this standpoint, a community has nothing to lose and a great deal to gain. If the experiments are successful the cooperation of these communities will not only have shown their interest in meeting the wishes of Federal contributors and the need for economy in Government but will have led the way to increased funds for health and welfare in the thousands of other communities where Federal personnel contribute.

With benefits which seem so apparent, many citizens have asked why the Government does not move ahead directly with a single Federal service campaign.

Experiments are necessary in order to work out a suitable arrangement for the several categories of voluntary agencies in the Federal program. The interest of Federal military and civilian personnel in voluntary health and welfare services has always been broader than the community where they live. Like millions of other Americans, in addition to the services financed by local united funds they have for some 20 years supported national voluntary programs for health research and education, like those of the American Cancer Society and American Heart Association, international people-to-people programs like CARE and Radio Free Europe, and the worldwide welfare, emergency relief and special services to the Armed Forces provided by the American Red Cross. While the national health services and the Red Cross are financed in some communities through united funds, if mutually satisfactory arrangements are available, they also raise funds through independent public campaigns on a national scale. And the international people-to-people programs are not accepted in local funds.

To bring the separate solicitations for these agencies together with the local united fund in a single Federal campaign involves technical difficulties which need to be worked out in order to be fair to all concerned. The presidents of the American Red Cross and the 15 other national voluntary agencies recognized in the Federal fund-raising program have agreed to cooperate in the experiments—not because their organizations want the single campaign, but in deference to the wishes of the contributors and the needs of the Government. Their representatives have been engaged in joint meetings with Federal officials and union leaders for the past several months to develop an experimental plan that will meet the special conditions of the Federal program.

As you are well aware, since a member of your staff has been participating in the joint work group, the experimental plan is not yet completed, and when finished at the national level it still is to be discussed and developed in detail at each test location with the local fund or chest and local chapter representatives of the national agencies. It has been changed since the first draft which was the basis for the critical report to your members. It undoubtedly will

undergo further changes, so it would be pointless for me to comment on specific provisions at this time. It is clear in any event that your board's objection is to the general principle involved in the experiments so my comments will be limited to this area.

Your principal objection is to the idea of combining in one drive the health and welfare agencies which are federated in local united campaigns with the other recognized agencies which conduct independent campaigns on a national scale. The alternative which you propose is for the Government to allow solicitation on the job only for your local united funds and chests. I have previously explained that this is contrary to public policy and to the wishes of our contributors. They currently give $6 million a year to the national health and international service agencies and several million more to the Red Cross. There are many private companies and public jurisdictions which successfully combine independent and federated agencies into a single campaign—the District of Columbia government is good local example. Since each group responds to legitimate needs of the Nation, the particular method of fund raising employed in any community should not be the determinant in providing opportunity for on-the-job contributions.

The viewpoint expressed by your board that it is unfair to your member agencies to associate them in a single drive with national agencies which run independent campaigns seems also to be unrealistic. The experimental plan does not propose to interfere in any way in the internal affairs of a local fund and its members. Their budgetary arrangements, methods of representing members in campaign literature, allocation of receipts and agreements regarding separate campaigns remain untouched. Since 1956, the agencies which are recognized for independent campaigns in the Federal program have accepted similar disciplines to the extent required: an annual appraisal of their programs, administrative operations and financial affairs by our National Eligibility Board and coordination of their solicitations in the Federal service into group campaigns at locations where they are not members of the united fund. The fact that this is done nationally rather than at the local level is in keeping with the nature of their programs and was agreed to at the Government's request, so as to avoid the expensive duplication of effort which would be involved if the heads of Federal field installations had to make these arrangements separately at all locations. The experimental plan does not propose to add or subtract any national agencies from the Federal fund-raising program, simply to combine the local joint campaigns in Federal agencies which they have conducted for the past 8 years with the united campaign of the local fund or chest into a single solicitation. And the on-the-job solicitation is to be organized and manned by Federal personnel using campaign materials and supplies provided by the voluntary agencies as in the separate campaigns in the past.

The purpose of the experiments is to determine whether the present federated and independent campaigns can be combined under the special conditions of the Federal program in a fair and practical arrangement that will be to the mutual benefit of all concerned. If they show that a single drive meets the wishes of our Federal employees and servicemen, makes a significant reduction in administrative expenses for the benefit of the Government and the taxpayer, and increases the level of support for the beneficiary agencies they will be considered successful and the single drive will be extended. If they are not successful the single drive proposal will be discarded.

In view of the purposes and potential benefits to be realized by all concerned, I cannot believe that local united funds and chests will arbitrarily refuse to consider the Government's request for their cooperation.

Sincerely yours,

JOHN W. MACY, Jr., *Chairman.*

Mr. OSTERTAG. There is a great deal of interest and perhaps considerable misunderstanding in connection with this.

Mr. MACY. There is, indeed. In fact the 2,000 letters received have been generated by the national organization representing the United Funds, really based on very incomplete and premature information.

Mr. THOMAS. There is a lot of competition among these various national organizations whose chief business is to raise funds and disburse them. They do a great job—the Red Cross, the March of Dimes,

the Heart Fund, the Community Chest—but they are all in competition for the same charity dollar.

Mr. MACY. Yes, but under the Federal program, and my predecessor was wrestling with this, they were put into three categories—the United Fund and/or the Red Cross; the national health agencies which includes heart, cancer, arthritis, muscular dystrophy, and perhaps the National Foundation; and then a third group of international agencies, Radio Free Europe, American-Korean Relief, Project Hope, and CARE. They are brought together so instead of campaigning as individual organizations they campaign as groups.

Mr. OSTERTAG. Was not the whole theory of these United Fund drives based on the desire to eliminate a constant and repeated solicitation among the people of the community?

Mr. MACY. Indeed.

Mr. OSTERTAG. And put it under one package and allocate it by virtue of whatever agreements and understandings were arrived at?

Mr. MACY. Yes; but the health agencies have not been included in many of the United Fund organizations.

Mr. SHIPLEY. They didn't want to be included at the time.

Mr. MACY. Either that or they tend to be national research organizations rather than locally applied, so they have a somewhat different focus.

Then the international agencies are for money spent overseas.

CONSOLIDATION AND CONDUCT OF CHARITY DRIVES

Mr. JONAS. You have a limitation of one drive or three drives a year?

Mr. MACY. I am trying to bring the three drives together at one time.

Mr. JONAS. One of the persons complaining to me was comparing the community services drive incorporating 43 agencies. How would it be determined whether that group would be the one to make the solicitation as opposed to another single-issue drive?

Mr. MACY. The way drives are conducted within the Federal Government is through the organization of keymen and solicitors within the Government, and each of the organizations which were proposing the single drive would provide their own material to the solicitors within the Federal Government. It would not change the character or integrity of the United Fund but it would be soliciting concurrently with the national health agencies and the international agencies.

Mr. JONAS. All included in the one drive?

Mr. MACY. Yes; but with their own separate information so they would not lose their identity.

Mr. JONAS. There would be no choice as to which group would be permitted to make the drive?

Mr. MACY. All would make the drive and the donor would be permitted to designate the organization to which he wished to make his contribution. Here in Washington we have had a request from the United Givers Fund to include Washington in the experiment.

Mr. EVINS. You will have these in the branch offices?

Mr. MACY. It will be handled by a committee of Federal officials in the eight communities selected. In some cases it will be the officer in charge of a procurement district or the postmaster.

Mr. THOMAS. What are the eight communities?

Mr. MACY. Dover, N.J., built largely around the Picatinny Arsenal; Philadelphia; Macon, Ga., where Warner-Robins Air Force Base is; San Antonio, very heavy Federal population there; Fort Worth, Tex.; Bremerton, Wash., the shipyard; Washington, D.C.; and the Twin Cities.

Mr. OSTERTAG. Would this plan apply to military personnel?

Mr. MACY. Yes. This program I am talking about includes servicemen as well as civilian personnel. This means about 5 million people. This is a very large fundraising target. They contribute about $20 million to charitable organizations every year.

Mr. OSTERTAG. The Civil Service Commission is adopting this plan and putting this into effect, but it seems to me that the military has a certain jurisdiction. Is this a joint operation?

Mr. MACY. It is a joint operation. Let me explain. I am performing this as Chairman on delegation from the President. It does not involve the Commission as an institution. So all the darts should get on this target, not everybody else here.

Mr. THOMAS. Any further questions, gentlemen?

PROGRAM FOR SUMMER EMPLOYMENT

Mr. JONAS. One question. I notice in the paper you have just promulgated an antinepotism plan for summer employment. What is the reason for that?

Mr. MACY. The reason for that, Mr. Jonas, is that in our review of the summer employment practice, we have found that in some instances there have been selections made of youngsters who are the sons and daughters of individuals working in the same agency. We feel this is undesirable, in view of the limited number of summer opportunities that there are.

Mr. THOMAS. I want to commend them for it. Heretofore the only charge of nepotism that we ever heard of in this country was against the legislative branch. There is 10 times more of it in the executive branch. I want to commend you for your stand.

Mr. MACY. That is the explanation.

Mr. JONAS. I wanted to see how far it goes. Would it apply to, say, an individual agency within a department or would it apply departmentwide?

Mr. MACY. Departmentwide. In other words, if there is a supervisor in the Pentagon in the Department of the Army, it would mean a son or daughter could not be employed anywhere in the Department of the Army, and not just in Washington but throughout the United States.

Mr. OSTERTAG. Nepotism is not where, say, a man and his wife are both employed by the Government?

Mr. MACY. What we are saying is that a son or daughter may not be selected for summer employment in the same department where the head of the family is working.

Mr. THOMAS. Why limit it to the same department? They all live in the same house. It ought to be throughout the Government.

Mr. MACY. Mr. Chairman, here in Washington, where really it is a one-industry town—if we were to make this Government-wide, it

would really preclude youngsters, that do need to earn some money during the summer, from any opportunity to do so.

Mr. THOMAS. Does it apply only to youngsters?

Mr. MACY. These youngsters will have to meet competitive standards in order to get employment anyway. What we are doing is adding a further limitation.

Mr. OSTERTAG. It is only summer employment, is it not?

Mr. MACY. Just summer employment.

Mr. OSTERTAG. Temporary in nature?

Mr. MACY. The employment does not exceed 90 days.

Mr. SHIPLEY. What is to prevent someone from the Labor Department hiring somebody's son whose father works for the Post Office Department?

Mr. MACY. I would say with President Johnson's economy drive there are not going to be very many summer jobs.

Mr. SHIPLEY. I am for that.

Mr. THOMAS. Gentlemen, we thank you all very much. Bring your staff back every year. We want all of you to come. Thank you very much.

MONDAY, FEBRUARY 10, 1964.

VETERANS ADMINISTRATION

WITNESSES

J. S. GLEASON, JR., ADMINISTRATOR
W. J. DRIVER, DEPUTY ADMINISTRATOR
A. H. MONK, ASSOCIATE DEPUTY ADMINISTRATOR
A. T. McANSH, ASSISTANT DEPUTY ADMINISTRATOR

J. G. MILLER, DIRECTOR, CONTACT AND ADMINISTRATIVE SERVICE
W. A. POISSANT, CHIEF ACTUARY

Mr. THOMAS. Gentlemen, will the committee please come to order?

We have with us this morning the Veterans' Administration and we are always delighted and honored to have the distinguished Administrator.

PURCHASE OF X-RAY FILM DEVELOPMENT EQUIPMENT

Dr. Drinkard, you did not buy those sorry machines over in the medical department, did you? I mean those X-ray machines worth about $800,000?

Mr. DRINKARD. No, sir.

Mr. THOMAS. Were those procured out of Somerville or Hines?

Dr. McNINCH. Somerville.

Mr. COOK. We purchased them in Somerville.

Mr. THOMAS. Did you buy them?

Mr. COOK. I did not personally buy them; no, sir.

Mr. THOMAS. Your crowd did?

Mr. COOK. Yes, sir.

Mr. THOMAS. You had better be thinking of a good excuse.

Mr. JONAS. He means he did not personally pay for them.

Mr. THOMAS. What kind of a machine was it?

Mr. COOK. X-ray film developing machine.

Mr. THOMAS. Did private hospitals throughout the country buy these machines?

Mr. COOK. There were some private hospitals that bought them, too.

Mr. THOMAS. Do you have any recourse?

Mr. COOK. That is still under consideration of our legal people, I think, Mr. Chairman.

Mr. THOMAS. They have already gotten the money and you have the machines?

Mr. COOK. Yes, sir.

Mr. THOMAS. Are they still in business?

Mr. COOK. No, sir.

Mr. THOMAS. You did not need your lawyers to tell you where you were sitting, did you?

Then we have Dr. McNinch, Chief Medical Director.

Doctor, we confirmed you the other day by unanimous consent and great pleasure.

Dr. MCNINCH. Thank you, sir.

Mr. THOMAS. It is a good thing you were not here when we bought those machines.

I see we have one of our oldtimers here, Dr. Zink and Dr. Engle is another one of our favorites.

Then I see we have Mr. Wise, Acting Controller, Department of Medicine and Surgery.

Doctor, you sure do spend a lot of money. You go up every year and you had better get ready to straighten out your figures. The very idea of showing a 10,000-patient-treated increase at a cost of $24 million.

Figure out what it costs you to treat your 720,000 patients.

Mr. WISE. Thank the pay raise. It is mostly that.

Mr. THOMAS. That is $11 million and you are a long way off from your $24 million.

Everybody else got paid and you are just charging this pay act increase to that 10,000 extra patients?

Mr. WISE. There are quite a few others, Mr. Chairman.

Mr. THOMAS. Get your pencil ready, Doctor. We are going to do business with you soon.

Mr. Administrator, you have a most able and distinguished group and we welcome all of you and we like to meet with you.

We were looking over your grade 17's and 18's and although you have many, perhaps not enough by and large, we think you are all doing a tremendous job, Mr. Administrator.

On this excess of $5 billion, we have a few little petty squawks and squabbles but we have no scandal and I think it is a tribute to the Administration.

Mr. Administrator, if you or any of your associates have a statement for us, we will be delighted to listen to you.

General Statement

Mr. Gleason. Mr. Chairman and gentleman of the committee, I am honored to appear before you today with my staff to discuss our 1965 appropriation requirements. The interest and deep insight of this committee in the programs and operations of the Veterans' Administration always makes this a valuable and welcome experience.

Our budget estimates for fiscal year 1965 total $5,442,971,000. This represents an increase of $41,108,000 over the amounts appropriated for fiscal year 1964, including pending and proposed supplementals. Before discussing the major elements of our budget requests, I would like to mention briefly some of the specific actions we have taken during the past year to improve service and reduce costs in the Veterans' Administration. We have—

(1) Closed regional offices at Dallas and Philadelphia, transferring these operations to Waco and the VA Insurance Center, Philadelphia, respectively.

(2) Completed conversion of national service life insurance and U.S. Government life insurance operations to automatic data processing. We are now maintaining almost 6 million insurance accounts by electronic computer systems.

(3) Consolidated insurance operations of our Denver and St. Paul offices at St. Paul; and, in central office, merged the former Department of Insurance with the Department of Veterans' Benefits.

(4) Consolidated vocational rehabilitation and education activities at selected field locations.

(5) Established a Department of Data Management to bring under a centralized organization all data processing activities of the agency—an action which will produce significant future savings; and

(6) Reduced employment in nonmedical programs from a 1963 average of 19,388 to 18,394 in 1964—a reduction of almost 1,000.

I am proud of these accomplishments. But, we do not intend to stop here. Our 1965 budget request now before you contemplates further economies and improvements in operations:

It anticipates increased employee productivity through improved work methods and operating procedures;

It provides for extending the application of automatic data processing methods to additional VA programs and activities;

It contemplates continued study of the feasibility of consolidating activities and closing field offices wherever possible without impairment of service to veterans;

It provides for continued improvement in the quality of medical care;

It anticipates further reductions in employment in administrative programs; and

In line with recommendations of this committee, it reflects reductions in employee travel and printing, below our 1964 budget estimates.

Turning now to our budget estimates, by appropriation item—a comparative summary of these estimates is provided in the accompanying table. First:

GENERAL OPERATING EXPENSES

As you know, this appropriation supports our staff services, the Department of Veterans' Benefits, and the Department of Data Managment. Our estimate of $156,524,000 is a reduction of $3,226,000 from the appropriation for the current year. Actually, the effective reduction is over $6 million, since our 1965 estimate includes additional statutory salary rate increases and data processing functions previously financed under other appropriations.

STAFF SERVICES

The 1965 estimate for staff services contemplates a reduction of 77 in average employment below our estimate for 1964. Most of this reduction will be accomplished in the Board of Veterans Appeals and in administrative services. Public Law 87–666, which modifies appellate procedures by requiring that field offices furnish each appellant with a "statement in the case," has resulted in reduced workloads in the Board of Veterans Appeals, and we are projecting a decrease of 43 in average employment for the Board. In administrative services, a decrease of 29 in average employment is anticipated through improved procedures and realinement of functions to further increase productivity of personnel.

DEPARTMENT OF DATA MANAGEMENT

As I stated earlier, this Department was established to bring together in one organization all data management activities of the agency. It was implemented in 1963 with average employment of 818. These 818 employees were merely transferred from other organizational elements into the new Department. Employment in the current year will average 872, and we are projecting an increase to 920 in 1965.

Mr. THOMAS. It is still located out at Hines?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. Can you account for this 900 on offsets in your other divisions to make up for that 900 or 920 in other departments?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. Go ahead.

Mr. GLEASON. You understand, Mr. Chairman, this also includes our Philadelphia Computer Center as far as data processing is concerned.

Mr. THOMAS. All?

Mr. GLEASON. Yes, sir.

We consider this prudent in terms of the potentials for significant cost reductions throughout the agency from further installation of automatic data processing systems. The additional manpower planned for 1965 will allow us to accelerate the development of new ADP applications and to continue to refine and update existing systems. At this point, I would like to again reiterate my firm belief in automation as the way of the future. We must have insight enough to continue to experiment and explore the vast potentials that are now present for automatic processing in the Federal service. This increase in employment of 48 in 1965 over 1964 is more than offset by gains in practically every operating element of the Veterans' Ad-

ministration. These gains are only the beginning, gentlemen, if we have foresight enough to research all possible avenues now available to us. I know, as evidenced by your past action, that I have your full support in this endeavor. We will be happy to discuss the specific projects we have underway, or planned, during the course of these hearings, if you desire.

DEPARTMENT OF VETERANS BENEFITS

Requirements for this Department in 1965 are estimated at $132,437,000 which is a reduction of $5 million below requirements for the current year. This reduction is planned, notwithstanding salary increases authorized by Public Law 87–793 which will approximate $2.2 million more in 1965 than in 1964.

Our estimate contemplates a reduction in average employment of 589, attributable to reduced workloads, further increases in employee productivity, and expanded use of ADP.

We are making significant strides in reducing employment in the guardianship program through streamlining our operations. We expect to be able to decrease average employment in this program from 1,450 this year to 1,390 in 1965. This will be accomplished with no decrease in essential service to the veteran or his dependents or beneficiaries.

It will be necessary to increase employment slightly in the compensation and pension program in 1965 to keep abreast of increasing workloads in dependency and income claims, and new death and burial claims. However, increased productivity projected for this function will limit the increase to only 10 man-years.

The vocational rehabilitation and education program will decline sharply, as the Korean conflict readjustment training program terminates on January 31, 1965. War orphan trainees will remain fairly constant through 1965. There will be a slight increase in the number of disabled peacetime veterans in training, due to Public Law 87–815, approved October 15, 1962, which extended vocational rehabilitation benefits to peacetime veterans. In aggregate, we estimate that the total trainee load will decline from 46,500 in 1964 to 29,300 in 1965. To cope effectively with this declining workload, we consolidated the activities of the vocational rehabilitation and education program with the compensation and pension program, effective February 1, 1964. Commensurate with the declining workload, our 1965 average employment estimate for vocational rehabilitation and education of 470 is approximately 20 percent below the estimated level for the current year.

Merging the Insurance Department with the Department of Veterans Benefits, consolidation of offices, and extension of automatic data processing has made it possible for us to achieve significant savings in the insurance program. Average employment for field activities of 1,852 in 1963 is reduced to 1,390 in 1964, and we anticipate a further reduction to 1,259 in 1965.

Consistent with reduced employment in substantive program areas, we are also projecting less employment in office services, which provide administrative support for these programs. Our estimate for 1965 reflects a reduction in average employment of 175 below the current year.

Mr. EVINS. Mr. Chairman, will you permit an interruption at this point?

Mr. THOMAS. Surely.

REDUCTIONS IN PERSONNEL AND COSTS

Mr. EVINS. I think you are to be commended, Mr. Administrator, for a reduction in personnel and consolidations of various activities, but on first impression it is difficult to see how you could reduce veterans' benefits by $5 million and also absorb $2.5 million pay raise costs without reducing benefits to veterans.

Mr. GLEASON. Sir, this is strictly in employment we are able to do this.

Mr. EVINS. All this savings?

Mr. GLEASON. Yes, sir.

VOCATIONAL REHABILITATION AND TRAINING

Mr. EVINS. One further observation. We are extending vocational rehabilitation and training in many fields and establishing trade schools and skill schools throughout the Labor Department as well as other Departments at this time.

Is your veterans training program declining? It seems to be and this would tie in with other programs for civilians?

Mr. GLEASON. Yes, sir. As we pointed out in the testimony, Mr. Evins, the Korean GI program ceases on January 31, 1965.

Mr. EVINS. You have no further training for veterans in various skills?

Mr. GLEASON. That is right for nonservice connected. The service disabled and war orphan training, of course, will continue.

Mr. THOMAS. Go ahead.

MEDICAL ADMINISTRATION AND MISCELLANEOUS OPERATING EXPENSES

Mr. GLEASON. We are requesting $14,915,000 under this heading for 1965, an increase of $115,000 over the appropriation for the current year. This increase is required to meet the full year cost of the second step of the pay raise under Public Law 87-793. The amount for 1965 continues, generally, the current year employment level and provides for completion of the Special Nursing Home Study authorized by the Congress in the 1964 appropriation.

MEDICAL AND PROSTHETIC RESEARCH

For medical research, our 1965 request of $35,712,000 represents an increase of $3,140,000 over the amount appropriated in 1964. The increase will continue the orderly growth pattern that has prevailed during the past few years and is in accord with our long-range plan for this program.

For prosthetic research, $1,275,000 is requested, a modest increase of $105,000 over 1964. This amount will permit us to continue our position of leadership in this field which is so important to the health and self-sufficiency of disabled veterans.

MEDICAL CARE

We are requesting $1,115,935,000 for medical care in 1965, an increase of $24,170,000, or about 2 percent over 1964.

Over half of this increase, $13 million, is attributable to increased salary costs; approximately $6 million is required to more adequately maintain aging facilities; $3 million is to meet additional workload requirements related to new or expanded facilities; and approximately $3 million is to provide for improvement in professional staffing and to cover increases in cost of drugs, medicines, prostheses, and utilities.

Within our request, we plan to activate approximately 2,000 nursing care beds. This will require some alteration of existing facilities and additional equipment. A supplemental appropriation under the "Construction" appropriation is proposed in 1964 for this program. It will be submitted as soon as alteration and equipment requirements are developed. At that time, we will also be in a position to advise you of our schedule for activating these beds.

In 1965, we plan to operate 120,249 hospital beds and 16,679 domiciliary beds, with an average daily hospital patient load of 110,318 and an average daily domiciliary load of 15,448. Including contract hospitals and State homes, a total daily average beneficiary load of 137,222 is planned. While the average daily patient load is continued at the 1964 level, the total number of inpatient beneficiaries treated will increase from 720,000 to 730,000 by increasing patient turnover rates.

Our request contemplates an average employment of 120,201 in our hospitals and domiciliaries in 1965, an increase of 933 over planned levels for 1964. This will permit improvement in staffing ratio of 7 per 1,000 daily patient load. Of the 933 increase in average employment, 358 is related to new facilities and medical services and 575 to other improvement in patient care and maintenance of facilities.

Major items provided for in the increase requested for 1965 include—

1. Activation of a new and larger hospital in Washington, D.C.; and a new restoration center at East Orange, N.J.;
2. Establishing or strengthening medical and surgical bed sections at nine neuropsychiatric hospitals;
3. Provision for improved care for the medically infirm psychiatric patients in our older and larger NP hospitals;
4. Establishing treatment centers at nine general hospitals for dialysis of patients suffering from chronic and severe renal failure;
5. Provision for improved maintenance and repair of our aging medical facilities;
6. Activation and staffing of five new psychiatric day care centers; and
7. Provision for increased usage and cost of drugs, medicines, medical supplies, utilities, and prostheses.

Advances in medical science continue to increase the ability of the medical profession to conserve and extend human life. But, each step forward involves additional costs for new treatment modalities and procedures. We cannot maintain our relative position of leadership in the field of medicine without application of additional resources.

We have given serious consideration to this problem as it relates to our budget request for 1965, and feel that the amount requested is the bare minimum required to continue the level and quality of medical care we desire to furnish the veterans of our Nation.

CONSTRUCTION

Our 1965 construction appropriation request of $102 million represents the fifth increment under our long-range hospital modernization and replacement program. Major items included are:

1. Construction funds for a replacement 1,200-bed hospital building at Hines, Ill.
2. Construction funds for a new 1,040-bed hospital at Los Angeles, Calif.
3. Construction funds for a replacement 720-bed hospital at San Juan, P.R.
4. Design and site funds for a new 760-bed general hospital at Chicago, Ill.
5. Funds to continue modernization and improvement of our pre-World War II hospitals.

Gentlemen, I think we have made tremendous strides in this program in the past several years. I promised you last year that we would reduce our annual unobligated balance to a lower figure. I can state now that we expect our unobligated balance at the end of 1964 to be less than $20 million, which represents the minimum balance needed for completion of projects under construction. We are proud of this accomplishment.

We share the concern expressed by this committee last year regarding the cost of hospital construction and are continuing to explore all possible means to insure that they are held to a minimum. During the past year, we have:

1. Continued an aggressive program of developing and maintaining minimum space criteria for medical facilities;
2. Kept abreast of new developments in construction, materials, and techniques;
3. Developed plans for a psychiatric bed building to be constructed of prefabricated components to test possible economy; and
4. Established a construction advisory council composed of outstanding hospital planners, architects, and engineers outside Government to advise us in all aspects of our construction program.

In the face of rising construction costs, advances in medicine that require additional space and technical equipment, increasing requirements for mechanical systems for air conditioning, communications, and supplies, we believe our unit costs are prudent and compare favorably with other public and private hospital construction costs.

COMPENSATION AND PENSION

We are requesting $3,963 million under this title for 1965, an increase of $33,400,000 over costs for the current year. These funds are to finance an average caseload for compensation and pensions of 4,460,460, which is an increase of 70,550 over the current year level.

Pension payments are estimated at $1,778,160,000 for 1965, an increase of $35,525,000 over 1964. Our pension rolls are expected to continue to increase, due to the advancing age of the veteran population. Budget requirements are predicated on an estimate of 2,106,275 cases on the rolls in 1965, an increase of 77,615 cases over the current fiscal year.

Estimated compensation payments for 1965 of $2,121,488,000 represent a decrease from 1964 of $4,500,000. The decrease continues our past experience and is due primarily to deaths of veterans now on the rolls.

Our estimate includes $771,000 under this title for burial flags and tort claim settlements which were previously funded by the "General operating expenses" appropriation.

READJUSTMENT BENEFITS

Costs for 1965 are estimated at $43,570,000, compared with $64,704,000 for the current year, a reduction of over $21 million. Estimated unobligated balances to be carried forward from this year will further reduce 1965 appropriation requirements to less than $40 million.

Our estimate for "Education and training" of $33,130,000 represents a decrease of $21,857,000 from 1964. This large decrease reflects the termination of the readjustment training program for Korean conflict veterans on January 31, 1965.

We estimate a training load of 15,000 under the war orphans' program in 1965, compared with 15,500 for the current year. The 1965 estimate of $24,500,000 for this purpose is a decrease from 1964 of $920,000.

Our 1965 requirements for "Special assistance to disabled veterans" is estimated at $10,440,000, an increase over 1964 of $723,000. This increase results from the effects of Public Law 87–815, approved October 15, 1962, which extended vocational rehabilitation benefits to peacetime veterans.

GRANTS TO THE REPUBLIC OF THE PHILIPPINES

We are requesting $310,000 for "Grants to the Republic of the Philippines" in 1965, the same as was provided in 1964. These grants are in the nature of reimbursements at agreed-upon per diem rates for medical care and treatment of Philippine Commonwealth Army veterans.

VETERANS INSURANCE AND INDEMNITIES

We are requesting $13,700,000 in the veterans insurance and indemnities appropriation for 1965. This account provides direct appropriations for insurance and servicemen's indemnities programs. The amount requested is $16,500,000 less than the 1964 appropriation. The decrease results principally from completion of installment payments on indemnities to beneficiaries of Korean conflict veterans.

LOAN GUARANTEE AND DIRECT LOAN REVOLVING FUNDS

Our budget for 1965 contemplates that receipts from loan repayments and sales of loans and properties will be sufficient to finance operations in the loan guarantee and direct loan revolving funds without additional appropriations. However, I wish to apprise you of the status of these programs because of problems involved in their management and, also, to request certain changes in appropriation language.

LOAN GUARANTEE REVOLVING FUND

The high cost of claims, property acquisitions, and other loan guarantee program operations presents a continuing problem. Although our estimates for 1964 and 1965 contemplate decreases from the 1963 level, our experience to date in 1964 indicates that our estimated cost of $290 million may be too low. The principal source of revenue to meet these costs will continue to be provided by the sale of vendee loans. Our budget estimates proceeds from this source of $224 million in 1964 and $265 million in 1965. These estimates assume a favorable market for these loans. If such a market is not available, or, if expenditures substantially exceed our estimates, it may be necessary for us to request supplemental appropriation relief. In any event, due to the uncontrollable nature of the expenditures involved in our loan guarantee operations, we are again requesting that the limitations on these expenditures be removed in 1965.

DIRECT LOANS

It is estimated that accumulation of unused borrowing authority from past years, receipts from loan repayments, and proceeds from sale of loans will be sufficient to meet direct loan expenditure requirements in 1965. Legislative action to rescind the $150 million authorized to be advanced to the fund in 1965 is, therefore, being proposed.

PROPOSED SUPPLEMENTAL APPROPRIATIONS FOR 1964

Three supplemental appropriations are proposed for 1964. This committee has already held hearings on the one to provide for wage rate increases under the medical care appropriation. Hearings are pending on another to provide for construction of the Corregidor-Bataan Memorial, which I understand is under the jurisdiction of another committee. A third supplemental to cover alterations and equipment necessary to activate 2,000 nursing home beds will be transmitted to the Congress as soon as requirements for this purpose are fully developed.

This concludes my opening statement. I, and members of my staff, will be pleased to supply any further information you may desire.

COMPARISON OF 1964 AND 1965 BUDGETS

If I may I would like to insert this table summarizing the budget estimates.

(The table follows:)

Appropriation	Appropriated, fiscal year 1964 [1]	Estimate, fiscal year 1965	Decrease (−) or increase (+)
General operating expenses	$159,750,000	$156,524,000	−$3,226,000
Medical administration and miscellaneous operation expenses	14,800,000	14,915,000	+115,000
Medical and prosthetic research	33,742,000	36,987,000	+3,245,000
Medical care	1,091,765,000	1,115,935,000	+24,170,000
Construction of H. & D.F.	81,796,000	102,000,000	+20,204,000
Compensation and pensions	3,921,000,000	3,963,000,000	+42,000,000
Readjustment benefits	67,000,000	39,600,000	−27,400,000
Veterans insurance and indemnities	30,200,000	13,700,000	−16,500,000
Grants to Republic of the Philippines	310,000	310,000	
Construction, Corregidor-Bataan Memorial	1,500,000		−1,500,000
Total	[2] 5,401,863,000	[3] 5,442,971,000	+41,108,000

[1] Includes the following pending and proposed 1964 supplemental requests:

Medical care	$10,579,000
Construction of hospital and domiciliary facilities	5,000,000
Construction, Corregidor-Bataan Memorial	1,500,000
Total	17,079,000

[2] Excludes direct loans of $150 million and permanent indefinite of $800,000 in V.I. & I.
[3] Excludes permanent indefinite in V.I. & I. of $800,000.

Mr. THOMAS. Mr. Administrator, a nice compact, terse statement.

TOTAL PAY ACT COSTS

What is the cost of the pay act for the entire Agency? That is the first thing we want to know.

Mr. MONK. $75 million; that includes the first and second stage.

Mr. THOMAS. I am talking about it for this fiscal year.

You have already been appropriated for the first half but what is involved in this budget?

Mr. SHYTLE. 1964?

Mr. GLEASON. No; 1965.

Mr. SHYTLE. Step 1 is $45 million for 1965 and step 2 is $30 million.

Mr. THOMAS. What is involved?

Mr. GLEASON. $75 million.

Mr. SHYTLE. For 1965; yes, sir.

Mr. THOMAS. The whole $75 million?

Mr. SHYTLE. Yes, sir.

Mr. OSTERTAG. What do you mean by step 2?

Mr. THOMAS. That is involved now but your entire pay act cost you $75 million?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. 2.5 percent of your budget, or $30 million?

Mr. SHYTLE. $30 million for step 2 that became effective January 4.

Mr. OSTERTAG. The fiscal year does not begin until July so it could not be both steps.

Mr. SHYTLE. In 1964, step 2 cost $15 million; step 1 cost $45 million. This year we are spending for pay raises, the year we are in now,

$60 million. The 1965 projection has built in the $75 million for a total annualized amount effective for both steps.

Mr. OSTERTAG. As far as fiscal year 1965, it is just one figure?

Mr. GLEASON. That is right.

Mr. OSTERTAG. That is $75 million?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. What is involved in this budget we are considering now, the amount you just gave?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. What did it cost you last year?

Mr. SHYTLE. Last year it cost $33 million. Last year's pay raise went into effect on October 14 so we had a part of the year and it ran a little over $30 million for 1963.

Mr. THOMAS. What is the total pay raise, 7.5 percent in two steps?

Mr. SHYTLE. It has been more than that—about 10 percent.

Mr. MONK. It varied with the grade.

Mr. THOMAS. Was it 10 or 11 percent overall in the two steps?

Mr. SHYTLE. Something like that.

Mr. THOMAS. This is the last step?

Mr. SHYTLE. That is right, built into 1965.

Mr. THOMAS. The last step and the first step are both built into this budget at $75 million?

Mr. SHYTLE. $75 million.

Mr. THOMAS. For 1965?

Mr. SHYTLE. Yes, sir.

Mr. THOMAS. Were you able to absorb any of this?

Mr. SHYTLE. We absorbed a great deal of it last year.

Mr. THOMAS. You know you do not get any credit in here for past favors. What did you do this year?

Mr. SHYTLE. We absorbed last year——

Mr. THOMAS. Forget last year. We are talking about 1965.

Mr. SHYTLE. When we absorbed last year, we changed our base.

Mr. THOMAS. We are working on this budget and the answer is "None"? I fear that is what it is.

Mr. SHYTLE. Specifically, as such, we did not absorb anything this year but we built from a base that was changed because we absorbed last year in some of our programs.

Mr. EVINS. The two pay raises, $75 million?

UNOBLIGATED BALANCES

Mr. THOMAS. Are you going to have any unobligated amounts in any of your accounts?

Mr. GLEASON. Not for 1965; no, sir.

Mr. SHYTLE. We are not estimating any for 1965 at all.

Mr. THOMAS. None of your accounts?

Mr. SHYTLE. No, sir.

Mr. THOMAS. Benefits or medical administration?

Mr. SHYTLE. No, sir; we have a chart on that.

Mr. THOMAS. Hospitalization, none of it? Compensation and pensions?

Mr. GLEASON. We may have to be back in 1964 on compensation and pensions.

On page 3–2 we have a rundown of the unobligated balance and at the end of this year, 1964, we will have $1,217,000 in general operating expenses.

Mr. Chairman, the middle four columns in fiscal year 1964 estimated shows an unobligated balance of $30,386,000.

Mr. THOMAS. What about this figure of $30,386,000?

Mr. GLEASON. $17.4 million of that is in construction of H. & D.F.; $7.5 million of that is in veterans' indemnities and——

Mr. THOMAS. Your figure for the whole operation is $30,386,000?

Mr. GLEASON. You will notice in 1965, Mr. Chairman, the unobligated balance is all in construction and veterans' insurance and indemnities and only $343,000——

Mr. THOMAS. I do not know what the figure on your unobligated balance is for 1965. You have not gone into that and you do not have your funds?

Mr. SHYTLE. We would hate to come up here and ask you for money now for an estimate that would be unobligated at the end of 1965. We are not doing that.

Mr. THOMAS. We did not ask you that.

How much did you have unobligated for the present fiscal year? The answer is $30,386,000?

Mr. GLEASON. Yes, sir.

Mr. Ostertag, you will note that on June 30, 1963, construction unobligated was $72.5 million and we will be down to under $20 million on June 30, 1964.

Mr. EVINS. Mr. Chairman, I have just one or two questions. Mr. Administrator, I concur with Chairman Thomas in commending you on your great work.

NUMBER OF HOSPITAL BEDS

However, regarding the number of hospital beds, I am interested in the figures shown on page 7. You state that you plan to operate 120,249 hospital beds and 16,679 domiciliary beds. Your average daily patient load for hospital beds is 110,318 and it is 15,448 for domiciliary beds. Then when you add contract hospitals and State homes, that makes a total average bedload of 137,222 according to your statement.

What is the statutory limit on hospital beds for the Veterans Administration?

Mr. GLEASON. There is no statutory limit, Mr. Evins. There is an Executive order which limits us to 125,000.

Mr. EVINS. This is a limitation?

Mr. GLEASON. Yes, sir.

Mr. EVINS. This is by Executive order but how many times has that limitation been revised upward?

Mr. GLEASON. To my knowledge, it has never been revised upward.

Mr. EVINS. I had the impression that it was about 115,000.

Mr. GLEASON. No; in that connection, Mr. Evins, we are talking of the average daily patient load.

Mr. EVINS. We understand 110,000 is the average daily patient load, but the Executive order——

Mr. GLEASON. We are planning 110,318 average daily patient load which is about the maximum that we can provide within the beds we

operate. That makes 91 or 92 percent occupancy for 120,249 operating beds in our own hospitals.

Mr. EVINS. This 110,000 average daily patient load does not include your domiciliary patients?

Mr. GLEASON. No, sir. This is just hospital beds.

Mr. EVINS. If you increase your domiciliary beds, and as you plan to build up your nursing home situation, then what happens?

Mr. GLEASON. We do not plan to build up the domiciliary beds.

Mr. EVINS. The domiciliary bed number decreases?

Mr. GLEASON. It well may in the years ahead; yes, sir.

NURSING HOME BEDS

Mr. EVINS. How many nursing home beds do you plan if the supplemental appropriation is approved? How many will that increase the average daily patientload? I am trying to get an overall, encompassing and round figure of the veteran population in hospital beds, nursing homes, domiciliaries, and contract hospitals. I think when we consider the average daily patientload of hospital beds, it does not look so large in consideration of what we have thought of over the years. However, when you add these auxiliaries and extras, the total number is mounting each year; is it not?

Mr. GLEASON. No, sir.

Mr. EVINS. It will increase with your nursing home beds?

Mr. GLEASON. No, sir; because we plan to be able to take care of the nursing home patients through an increase in patient turnover rate.

Mr. EVINS. Your contract hospitals and State homes are not included in your average daily patientload?

Mr. GLEASON. Yes, sir. They are in the overall load of 137,222, but not within the 125,000 limitation.

Mr. OSTERTAG. That is the 137,222?

Mr. GLEASON. That is right; yes, sir.

Mr. EVINS. These are not included in your limitation and this is the point. I am not trying to suggest any deviation, but I am trying to suggest that there are ways and means of having more veterans in hospital beds than your Executive order would limit.

Mr. GLEASON. No, sir; contract hospitals are very limited. We do have a great number of contract beds in Puerto Rico right now, and that is why we are building a veterans' hospital there so the veterans will not be in contract hospitals. The only other ones that are permitted to be in private hospitals under contract with the Government are service-connected cases that cannot possibly be brought to a veterans' hospital or women veterans who, for one reason or another, cannot be cared for in a VA facility. We just do not have the resources to take care of them in our own hospitals.

Mr. EVINS. The new hospital construction program you have planned in your 1965 budget will envision the transferring of patients from contract hospitals into Veterans Administration hospitals?

Mr. GLEASON. Yes, just as soon as we can get the hospital constructed in Puerto Rico this will happen. This will not completely eliminate contract hospitalization, you understand, but it will certainly reduce it a great deal.

NUMBER OF HOSPITAL BEDS

Mr. OSTERTAG. Your authority, Mr. Administrator, deals with 125,000 hospital beds?

Mr. GLEASON. It deals with a total of 125,000 authorized hospital beds.

Mr. OSTERTAG. Those are veterans' hospital beds?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. Nothing more, nothing less?

Mr. GLEASON. Veterans Administration hospital beds; yes, sir.

Mr. OSTERTAG. It does not deal with average patient load?

Mr. GLEASON. No, sir.

Mr. OSTERTAG. You must operate within the framework of that particular number of beds?

Mr. GLEASON. That is correct.

Mr. EVINS. That is as far as hospital beds are concerned.

Mr. OSTERTAG. That is what I am trying to clear up. In that connection, as Mr. Evins pointed out, you supplement other facilities such as contract hospitals, State homes, and the like, all of which——

Mr. GLEASON. State homes would not be included as a hospital bed.

Mr. OSTERTAG. I understand; this does not include domiciliary beds?

Mr. GLEASON. No, sir.

Mr. OSTERTAG. The limitation and restriction which you are under by Executive order is 125,000 hospital beds in veterans' hospitals, and you anticipate an average daily load of 110,000?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. Thank you.

Mr. GLEASON. That is operating at 91 to 92 percent occupany. The normal private hospital operates at 75 to 80 percent of capacity. If they could operate at 90 percent they would be receiving congratulations from everybody in the United States. We do a superb job on that.

EFFECTS OF NURSING HOME PROGRAM

Mr. OSTERTAG. As your nursing home program comes into being, what relationship will that have to your hospital bed picture?

Mr. GLEASON. This is going to free hospital beds because for each hospital bed that we have, because of the nature of the illness, et cetera, we can generally turn that bed over six or seven times a year.

A nursing home patient is going to be frozen in a bed until the day he dies, in all probability. This is why I wanted to make clear this question with the chairman earlier.

Mr. EVINS. Is it planned to convert some of your present veterans' hospitals into nursing homes, say in remote sections, or do you contemplate building new facilities?

Mr. GLEASON. The directive from the President says that we will utilize present buildings. We always want to have the nursing home group located close to one of our own hospitals.

Mrs. EVINS. You are going to operate hospitals and nursing homes jointly together?

Mr. GLEASON. Yes, sir; it will be much like our domiciliary program right now, where we have the domiciliary located adjacent to the hospital.

Mr. OSTERTAG. I want to supplement Mr. Evins' question. He confined his question to conversion from hospital facilities to nursing home facilities, but I would like to ask this as a supplement. I would like to know whether or not the domiciliary facilities will be converted.

Mr. GLEASON. Some may be. We are in the midst of a study right now. When we come up with the supplemental, we will have all the answers for you on this, exactly where and how.

Mr. EVINS. There would be many of your nursing home facilities that will, of necessity, have to be new, it would seem to me, under many State laws.

Mr. GLEASON. No, sir. May I interrupt a moment? State laws are not applicable to us.

Mr. EVINS. The State laws that say nursing homes cannot be on second and third floors for older people on account of fire hazards, that they must be on the ground floor only—are you going to have them in the loft or on the third floor?

Mr. GLEASON. Not if we can avoid it, but State laws are not applicable to us.

Mr. EVINS. I understand, but you generally try to follow the pattern of those State laws for safety, do you not?

Mr. GLEASON. We try to follow a pattern and a standard that we decide ourselves. I am sure the Department of Medicine and Surgery will use all due caution.

Mr. EVINS. I am a great champion of the veterans' hospital program as against State-operated facilities, but it would seem to me that since your hospitals are several stories in some situations, if you are going to convert to nursing homes, and it is the general pattern all over to have nursing homes on ground level, this would involve substantial construction changes.

Mr. GLEASON. We recognize that, which is why our appropriation supplemental will probably be in the nature of $5 to $6 million.

Mr. OSTERTAG. If I may, I would like to associate this discussion that you have just had with a point that I wanted to make in order to keep it together.

That is in regard to the nursing home study and your program. Without a question or doubt, it should have a measurable bearing on your overall problem of hospitalization and the care of veterans. If I am any judge, I believe it is something that is sorely needed and something that should have been instituted long before now. I think the general attitude and feeling in the Congress of the United States is very much in favor of it. I believe you are aware of that.

Mr. GLEASON. Yes, sir.

STATUS OF NURSING HOME PROGRAM

Mr. OSTERTAG. In that connection, you indicate that a supplemental request will be made for fiscal year 1964 to activate some 2,000 nursing home beds. I take it if that is your plan, you are ready to go.

Mr. GLEASON. Almost ready, Mr. Ostertag. As I mentioned to you, sir, we will have the supplemental available in about 3 to 4 weeks, at which time we will be back and we will have the full plan for you.

Mr. OSTERTAG. The point I am getting at is this. What is the need for including funds in the fiscal 1964 budget and appropriations rather than in the 1965 budget if you are not ready to go and use this money immediately?

Mr. GLEASON. We will have to make physical changes in the hospitals that we have now—the buildings. This is going to take time. You just do not go out and build a house or go out and tear down rooms and put them back together in a week or two. From the time we present the supplemental to you gentlemen and receive the authorization from the Congress, it is going to take us a few months to get these changes into effect, the construction and material changes.

Mr. MONK. We are only talking of a supplemental for 1964 for construction to renovate and equip the existing space to make it satisfactory for the nursing homes.

Mr. OSTERTAG. Does that not indicate you are ready to go?

Mr. GLEASON. We will be ready to go.

Mr. MONK. As soon as we get the space fixed.

Mr. OSTERTAG. If you had the money today——

Mr. GLEASON. If we had the money today, it would be about 3 months before this renovation work could be completed and we would be ready to go.

Mr. OSTERTAG. If you were required to await appropriation of funds for fiscal 1965, it would delay your program by 6 months or more?

Mr. GLEASON. As long as it takes the Congress to appropriate the moneys for us for 1965, this is true.

Mr. OSTERTAG. What I am trying to get at is this. What is the basic reason for including it in a supplemental for 1964 rather than in the regular budget for 1965?

Mr. GLEASON. Just so we can get the money now and get this renovation work completed in order to get it started just as fast as we can.

Mr. EVINS. When you get the funds and the nursing home program is underway and the room is available and the beds available, then you will move some veterans from the rolls under your average daily patient load over into nursing homes, and they will not be included within your limitation of veterans in the hospital program?

Mr. GLEASON. They will be a part of the total veteran load.

Mr. EVINS. They will still be included?

Mr. GLEASON. Yes, sir; in the overall load.

EFFECTS OF NURSING HOME PROGRAM

Mr. OSTERTAG. Will that have any effect on your average patient load in 1965? I am talking about the nursing home program.

Mr. GLEASON. It all depends on how soon the program gets into operation.

Mr. THOMAS. A half-bed reduction or 50-percent increase, figure it either way, a half-bed reduced under your limitation or 50-percent increase in the occupancy of that bed. It will not miss it far.

Mr. GLEASON. Not 50-percent occupancy.

Mr. OSTERTAG. The patients or the veterans who are placed in these nursing homes will primarily be transferred from your regular hospitals rather than domiciliary care?

Mr. GLEASON. They may well be transferred from domiciliary. It could happen that a domiciliary member might well have a stroke and not be ambulatory, cannot care for himself. Of course, he would come through the hospital into the nursing home. But it could well be that he would start out as a domiciliary member.

Mr. THOMAS. May I interrupt? The people you are going to put in your nursing homes are your more or less bedridden patients.

Mr. GLEASON. That is right.

Mr. THOMAS. How long has he been in that bed before you move him out?

Mr. GLEASON. He might have been there for years.

Mr. THOMAS. If he has been in there 6 months, do you not think you could put six patients in where you had one patient? One patient every 30 days?

Mr. GLEASON. This could be true.

Mr. OSTERTAG. Does this mean a further phaseout of domiciliary facilities?

Mr. GLEASON. No, sir.

Mr. EVINS. Is that 125,000 limitation done by statute?

Mr. GLEASON. No; there is no statute.

Mr. EVINS. We passed the nursing home bill.

Mr. DRIVER. That is not involved here.

Mr. GLEASON. That has not become law yet.

Mr. EVINS. I am sorry, I had the impression it had become law, but I do recognize there is another body to be considered.

Mr. OSTERTAG. Have all your plans been crystallized?

Mr. GLEASON. It is planned and crystallized sufficiently so that in 3 or 4 weeks we should be able to answer your questions.

EFFECT OF NURSING HOMES ON PATIENT LOAD

Mr. OSTERTAG. In further reference to this nursing home study and the plan and program, is it fair to say that once it moves into high gear, that is, becomes operative, that it will substantially relieve your hospital bed load?

Mr. GLEASON. Instead of relieving it, I think it will increase it.

Mr. OSTERTAG. It will what?

Mr. GLEASON. Increase it.

Mr. OSTERTAG. Increase the requirements for hospital beds?

Mr. GLEASON. The availability of beds.

Mr. OSTERTAG. In what way? How would it?

Mr. GLEASON. We already know, as I mentioned to you, that we get a turnover of six or seven patients per bed per year. If 2,000 of these are frozen, that means we do not have that same turnover.

Mr. OSTERTAG. There is no question but what the nursing home facilities will relieve your hospital bed facilities.

Mr. GLEASON. In this regard, yes. We do not need as many nurses and doctors to take care of the nursing home patients as we do those who are under acute care. The staffing ratio will not be as great.

Mr. OSTERTAG. I understand that. I am talking about loads and the average number of veterans to be cared for in hospitals. You point out in your statement that there will be an increase of from 720,000 to

730,000 in the total number of veterans that will be cared for in hospitals during this next year.

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. That is only an increase of 10,000.

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. The point remains, that by virtue of nursing home care, a number of veterans who are long-term patients will be removed from these hospitals and, therefore, making more beds available. Despite the fact that you will have an increase in your average total number of patients throughout the year, the relief that will be afforded by virtue of the nursing home care ought to substantially improve the picture.

Mr. GLEASON. This is true, Mr. Ostertag. We project an increase in fiscal year 1965, for example, from 720,000 to 730,000, an increase of 10,000. We can do better than that with additional moneys.

AMOUNTS FOR COMPENSATION AND PENSIONS

Mr. EVINS. Referring to compensation and pensions, we note you are requesting nearly $4 billion, an increase of $33 million. At the same time you are asking for $2,121 million in compensation payments, which is a decrease of $4.5 million. We are to gather from this that as veterans grow older and there are more applications for pensions, your boards are determining they are eligible under law to be added to the rolls and that those veterans with disability compensation payments are decreasing in number and certainly not a substantial number are being added to the compensation rolls?

Mr. GLEASON. This is substantially right.

Mr. EVINS. This is the explanation?

Mr. GLEASON. The compensation is paid only to service-connected disabled. Without any new wars, this will continue to decline as deaths occur.

VETERANS BENEFITS PROGRAMS

Mr. EVINS. It is an interesting observation. Reverting again to the benefits program, to which I referred earlier, I think it is on page 5, we note that the veterans' benefits are down by more than $5 million.

Mr. GLEASON. That is the operating expense.

Mr. EVINS. You are to be commended for reductions and consolidations in operating expenses. I had the figures earlier——

Mr. MONK. Down $21 million, benefits, page 11.

Mr. EVINS. I think the earlier figure was down——

Mr. GLEASON. Five million dollars.

Mr. EVINS. A substantial amount. Five million dollars is the total reduction in veterans' benefits program?

Mr. GLEASON. General operating expense.

Mr. EVINS. What other reductions and amounts?

Mr. GLEASON. Readjustment benefits. That is page 11. That is down about $27 million.

Mr. EVINS. I just wanted the total amount of veterans' benefits reductions planned for next year. Can you give us that?

Mr. BRICKFIELD. Page 7 to 3 in the budget book.

Mr. EVINS. We have another table at 3.1. How about that one?

Mr. THOMAS. It is a good one. They are all good.

Mr. EVINS. We will get to these tables and the overall amount. I want to refer specifically to the rehabilitation or education and training program. I think in your earlier statements you indicated this law was expiring.

Mr. GLEASON. Readjustment benefits will be down $27,400,000 total.

Mr. EVINS. That is the figure I wanted. That is down.

Mr. GLEASON. Yes, sir; our veterans' insurance and indemnities is down $16,500,000.

VOCATIONAL REHABILITATION PROGRAM

Mr. EVINS. Which part of your rehabilitation program is expiring by law?

Mr. GLEASON. The readjustment benefits.

Mr. EVINS. These are the men being readjusted just after return from service?

Mr. GLEASON. Korean veterans.

Mr. EVINS. Does this exhaust all your training program or substantially all for the Korean veterans?

Mr. GLEASON. Yes, sir; with the exception of those who are disabled.

Mr. EVINS. You refer to Public Law 87–815, approved October 1962 which extended vocational and rehabilitation benefits to peacetime veterans.

Mr. GLEASON. Yes, sir; these are people, for example, over in Vietnam that might be injured. They get the full wartime rates.

Mr. EVINS. The program is expiring and Congress enacts a law for rehabilitation of peacetime veterans.

Mr. GLEASON. Of course, the nonservice have had 10 years since the Korean war to do this, Mr. Evins. Those that are in Vietnam and other hotspots throughout the world have not had this opportunity.

Mr. EVINS. They certainly are worthy and deserving, but overall is the rehabilitation and training program for all groups of veterans declining?

Mr. GLEASON. Yes, sir.

Mr. EVINS. It is declining even with this new law?

Mr. GLEASON. Yes, sir.

Mr. EVINS. I alluded earlier to the fact that we have passed special laws for skills and grade schools and various types of training because of unemployment and lack of job opportunities. Does this mean that our veterans will be eligible for these other programs?

Mr. GLEASON. Yes, sir; they would be eligible for it but under other acts of Congress.

Mr. EVINS. Mr. Shipley?

Mr. SHIPLEY. I have no general questions, but we will have a chance to go into this nursing home under the supplemental?

Mr. EVINS. Yes, sir.

Mr. THOMAS. Mr. Ostertag.

Mr. OSTERTAG. First of all, Mr. Administrator, I want to commend you and the Veterans' Administration on the excellent job you are doing in the administration of veterans' affairs and also commend you, on the fine presentation to the committee today.

I realize, as we all must, that in dealing with this complex problem of administering veterans' affairs we both are confronted with changing conditions, changing times, and changing circumstances. It is evident that the Veterans Administration has been realistic to these changes and has moved with them in proper perspective, all of which is to the good.

It might be well if we had a little clearer picture of what is bringing about these changes. For example, you have indicated the need of a program for automation, which is part and parcel of an efficient and economic management.

There have been changes in the total number of veterans over the years and what it might look like in the future with regard to hospital care, what it looks like with regard to the total number of veterans in America who are going to receive benefits, assuming there is no major change in laws and requirements.

When you get into the insurance program, I assume that remains pretty much stationary, but take your loan guarantee fund and your direct loans. We have problems and this is a serious situation. Where is it going?

I would like to ask, first of all, this general question. Recognizing, as you indicated in your statement, that veterans are growing older each day and veterans of certain wars are expiring, but, on the other hand, there are more coming into the picture requiring medical care or other benefits. What is the general picture as you see it?

Mr. GLEASON. As you know, because of deaths the veteran population can only go down unless we have another war. There are no new veterans being added to the rolls since Korea except those service connected in some of these hotspots throughout the world and those who have remained in service since World War II and Korea and are now retiring from the service.

When it comes to hospital care and the pension rolls, this I can only see as going up, because as the American veteran becomes older, he is going to become ill more often and more seriously and is going to require medical attention more than he has to date. Likewise, pension rolls will continue to go up. Compensation rolls will be going down because of the deaths of the service connected.

Mr. OSTERTAG. In other words, the trend is, there will be an increase in pensions but a decrease in compensation?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. Unless unforeseen situations develop.

Mr. GLEASON. Which we all hope will never occur.

Mr. OSTERTAG. In this overall picture of Federal Government responsibility, for some years past your annual expenditures have hovered in the neighborhood of $5 to $6 billion. Would it be your judgment that that is a pretty stable figure over a period of years to come?

Mr. GLEASON. I think this will be true, Mr. Ostertag, that for the next few years it will hover within the same $5 to $6 billion. As certain of our programs phase out, others—for example, medical care

and pensions—will increase. So that I think temporarily they will sort of counterbalance one another and that the figures will remain in this general area.

Mr. JONAS. Would the gentleman yield before leaving that point?

Mr. OSTERTAG. Surely.

VETERAN POPULATION TRENDS

Mr. JONAS. I do not quite understand the table on page 4 in this red book showing trends. In the last column to the right, after listing number of veterans in World War II, Korean conflict, World War I, you have a column saying "Other." I assume that means Spanish-American War veterans and Indian War veterans and Civil War veterans.

Mr. GLEASON. And peacetime veterans.

Mr. JONAS. Instead of going down, the trend is back up since 1959.

Mr. GLEASON. This is the peacetime veteran that is going up.

Mr. JONAS. It started out with 200,000 back in 1946——

Mr. GLEASON. That is right.

Mr. JONAS (continuing). And came gradually down to 1957 to 129,000. Now it starts back up and is up to 156,000.

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. Is that peacetime veterans?

Mr. DRIVER. Yes; and Korean. It came down to 1951.

Mr. JONAS. You have Koreans in another column.

Mr. DRIVER. I was looking at the total.

Mr. JONAS. I am looking at the other.

Mr. DRIVER. Mostly peacetime veterans.

Mr. GLEASON. These are peacetime veterans that have a service-connected disability.

Mr. JONAS. That is number of veterans in civil life.

Mr. DRIVER. These are men drafted after 1955 and have come out of service with a service-connected disability.

Mr. JONAS. We have been drafting since 1946. Why would the number go down gradually to 1957 and then start back up?

Mr. DRIVER. More men coming out with peacetime service.

Mr. JONAS. Why more coming out in 1961, 1962, 1963 than in 1950? We were drafting in the fifties probably more than we are now.

Mr. GLEASON. You were drafting for the Korean war.

Mr. DRIVER. They are listed under Korean.

Mr. JONAS. Korean war ended in 1953.

Mr. DRIVER. 1955.

Mr. JONAS. 1955; you kept on going down; 135,000 in 1955. Only 129,000 in 1956 and 1957. Then you jump up to 132,000 in 1958 and go on up to 156,000.

Mr. DRIVER. The men that are listed in 1956 and 1957 did not go in in that year; they went in in previous years, started to come out then. The increase shown in those years would be shown under the Korean column.

If you look at the total line, you can see it followed the war. It went down until 1951, when the Korean war came along, then it starts back up again. It stays that way until 1959 and then starts down a little.

Mr. JONAS. Your first column, "All veterans," has a different trend.

Mr. DRIVER. Yes, sir.

Mr. JONAS. It keeps coming down, but this column starts back up.

Mr. DRIVER. That is the big influence of the World War II column and World War I column coming down and offsetting the other two, dying off.

Mr. JONAS. It is very unclear to me.

PEACETIME VETERANS' BENEFITS

Mr. OSTERTAG. Perhaps it might be well if we had a clearer picture of our responsibilities by way of care and benefits and other services rendered by the Veterans Administration and our Government to a peacetime veteran.

Mr. GLEASON. We have no obligation to a non-service-connected peacetime veteran at all. We only take care of war veterans, except a person who received a service-incurred disability during peacetime.

Mr. OSTERTAG. That is a responsibility?

Mr. GLEASON. A service-connected peacetime veteran becomes a charge of the Veterans Administration. Otherwise peacetime veterans are not handled by us at all. The only thing he will get from the Veterans Administration at any time is a flag when he dies.

Mr. EVINS. What about training?

Mr. GLEASON. No, sir.

Mr. OSTERTAG. If a serviceman serving today is released from the service but he incurred a disability during the time he served, he would be eligible for compensation if it is established as service connected?

Mr. GLEASON. That is correct.

Mr. OSTERTAG. When it comes to a pension, when it comes to hospitalization——

Mr. GLEASON. No, sir.

Mr. OSTERTAG. In other words, if he is released without a disability, would he then subsequently be eligible for veterans' hospital care?

Mr. GLEASON. No, sir.

Mr. OSTERTAG. I think we ought to make that clear, that he is only eligible for compensation and hospital care if he has incurred a service-connected disability.

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. If he came out of the service without a service-connected disability, he would not be entitled to any of these benefits?

Mr. GLEASON. No, sir. The only thing he would be entitled to is a flag when he dies.

Mr. JONAS. Under existing law.

Mr. GLEASON. Yes.

Mr. OSTERTAG. That is a good point.

LOAN PROGRAM SITUATION

Where are we going in this whole question of loans? What is the picture today?

Mr. GLEASON. We think we are going in the right direction. We have certainly sold more properties than we have taken in during the

last 8 to 9 months. We can see where we are going to eventually get out all right. This may take us 6 or 7 years at the present rate.

OVERALL EMPLOYMENT LEVEL

Mr. OSTERTAG. Mr. Administrator, you referred to certain programs with regard to automatic data processing and other activities of that kind, all of which is desirable and necessary in view of your tremendous load. What relationship has all this had to your total employment level? Is your personnel leveling off, or going up? I am talking about across the board.

Mr. GLEASON. It is going down everywhere except in medical care, where we want to increase it for a better staffing ratio. I think we are asking for some 47 or 48 more in data processing.

Other than that, as you will recall, in the Department of Veterans' Benefits it is a 589 decrease. I think our administrative overhead is certainly decreasing, Mr. Ostertag.

Mr. OSTERTAG. Your general operating expenses are decreasing.

Mr. GLEASON. This is due to decreased employment.

Mr. OSTERTAG. The medical administration has increased primarily due to the pay increase?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. Your medical and research area has increased. Your medical care has increased in cost. Compensation and pensions have increased. Readjustment benefits is down.

In connection with this whole picture of personnel, is attrition applicable?

In other words, are these people either transferred or are they automatically out or do you just wait until they leave the service and not fill the vacancy?

Mr. GLEASON. We are trying to absorb them by attrition.

Mr. OSTERTAG. That is the policy?

Mr. GLEASON. Yes, sir. I do not like to give RIF notices if it is humanly possible to avoid them. I think we can absorb these people and put them into other assignments in the Veterans' Administration as vacancies occur. The overall reduction will be there. Unemployment is high enough without our adding to it.

Mr. OSTERTAG. I assume as we go into your justifications we will have the opportunity of discussing the fine points of many of these programs and services. But again I want to repeat that you have presented us with a very clear and a very fine and comprehensive statement.

Mr. GLEASON. Thank you, sir.

Mr. THOMAS. Mr. Jonas.

AUTOMATION SAVINGS

Mr. JONAS. I do not find any information under the data management tab to point up where these savings in personnel have occurred. You spent $10 million on this system already and you are planning to spent $11 million in 1964, $10.7 million in 1965, which will be about a $30 million deal over a 3-year period. Will you have somebody prepared when we get to that subject to pinpoint where savings have occurred?

Mr. GLEASON. Yes, sir; we will.

Mr. JONAS. For example, Mr. Gorman told us last year there were 172 people handling these index cards out at the Munitions Building. How many have you still got out there doing that?

Mr. GORMAN. A total of 174 in the Index Section handling index cards. You are talking about automating our index?

Mr. JONAS. My recollection is you had around 185 out there last year handling the locater and index cards.

Mr. GORMAN. Yes; as well as correspondence——

Mr. JONAS. How many do you have still doing that?

Mr. GORMAN. About the same. In the identification section alone we have 67, approximately the same.

Mr. JONAS. You have not made any savings by use of your data processing?

Mr. GORMAN. No, sir.

Mr. GLEASON. This is one of the things we propose to do. We will be happy to go into that when we come to that section.

Mr. JONAS. I thought you had everything automated.

Mr. GLEASON. This will take years to automate.

Mr. JONAS. What are you doing with your machines at Hines?

Mr. GLEASON. Right now we are handling compensation and pension payments. This is the primary thing.

Mr. JONAS. Would that not have eliminated those 29 million cards?

Mr. GLEASON. No, sir; it has nothing to do with it.

Mr. JONAS. What are those index cards for?

Mr. GLEASON. These are for the 22.5 million veterans that we are responsible for.

Mr. DRIVER. They tell where all his records are located. They have nothing to do with paying him, sir.

Mr. JONAS You use the automated equipment only for pay?

Mr. DRIVER. Yes, sir; compensation and pension. Also all premium billings and insurance dividends.

Mr. GLEASON. One thing we are going into now is putting our entire payroll for 178,000 people on automatic data processing equipment.

Mr. JONAS. What are you going to do with all those cards?

Mr. GLEASON. We are going to keep them until we get around to putting them on ADP.

Mr. JONAS. Are we not getting ready to tear down the building in connection with your move?

Mr. GLEASON. We will move that activity probably into the Silver Spring section.

Mr. JONAS. I would like to have something in the record when we get to that section that will show in black and white and figures what money has been saved.

SAVINGS IN PREPAYMENT OF INSURANCE DIVIDEND

Mr. GLEASON. I will get to it, I have it here. The quickest one I can think of was on the prepayment of our insurance dividend this year. Three years ago, when we paid this, it cost us about $1,460,000. This year——

Mr. JONAS. Wait a minute. It cost you how much?

Mr. GLEASON. It cost us $1,460,000 administratively to pay the dividend.

Mr. JONAS. What were the costs?

Mr. GLEASON. You have to have people.

Mr. JONAS. You already had them on the rolls. You did not hire anybody else.

Mr. GLEASON. Like everything else, we have to cost account that all the way through.

Mr. JONAS. It did not actually cost that. If they had not been doing this, they would have been doing something else.

Mr. GLEASON. We would not have had so many people. You can look at the Insurance Department. Here we dropped about 600 people out of this department in the last 3 years. We have been able to eliminate how many altogether, would you say?

Mr. BUDD. About 1,200.

Mr. GLEASON. About 1,200 people we have been able to eliminate in the last 5 years, which is a tremendous savings, I would say. You cannot say if they were not doing that, they would be doing something else. We do not work it that way.

Mr. JONAS. You may not work it that way, but I do. I do not see how you can honestly claim you saved a million dollars.

Mr. GLEASON. Would you say honestly that we saved the salaries of these 1,200 people that we eliminated?

Mr. JONAS. You did not eliminate them to pay that dividend. You said it cost you a million dollars.

Mr. GLEASON. This is out of the Department of Insurance. There is a certain percentage of these people that were doing the dividend work. They did it all the year long.

Mr. DRIVER. It was not necessarily speeded up.

Mr. THOMAS. Is this an extra activity that, without this ADP equipment, you would have had to hire more people in order to get the job done?

Mr. GLEASON. Yes, sir; we would have had to hire more and we would not have been able to eliminate so many.

Mr. JONAS. Where is the savings?

Mr. GLEASON. Do you not think 1,200 people is a savings?

Mr. JONAS. You did not discharge 1,200 people as a result of that operation.

Mr. GLEASON. Not that one, but this is a part of the whole.

Mr. DRIVER. As a result of automating the insurance accounts—which includes paying dividends—we eliminated these people.

Mr. JONAS. You did that over 3 years, not at one time.

Mr. DRIVER. We do not say we did.

Mr. GLEASON. I would not hope that we could. This would be almost impossible to do all at once.

Mr. JONAS. I am not recommending that you do it all at once. I am asking you to tell me how you justify saying you saved over a million dollars on that one dividend check.

Mr. GLEASON. As a matter of fact, we saved almost a million and a half.

Mr. JONAS. I am not convinced that you saved that much money.

Mr. GLEASON. If we were not automated this last year in January, it would have cost us about $1,460,000. As it was, because we were automated, it cost us only $26,000.

INSURANCE PROGRAM EMPLOYMENT

Mr. THOMAS. At this point in the record insert your personnel load for the last 5 years in insurance. I think over a period of 5 years your problem becomes much more clear. You have reduced your employees and all the time your workload perhaps has increased a little bit because you have had changes in some of your laws, and a change is as much work as putting a new law on the books, or more. You have to figure all your records. Do you have those figures?

Mr. MONK. We have those employment figures up to the time we combined Insurance with DVB in 1963. The table on pages 2–4 gives the total trend in personnel.

Mr. THOMAS. Let us look at that. That is the long one?

Mr. MONK. Yes, sir.

Mr. THOMAS. I think you set it out under "Insurance."

Mr. BRICKFIELD. The second line shows the Department of Insurance, fiscal years 1953 to 1962.

Mr. THOMAS. Department of Insurance.

Mr. GLEASON. It went from 11,103 in 1953 to about 3,400 in 1962. It is down to about 1,259 now.

(The employment figures supplied follow:)

Department of Insurance personnel

1959	4,301
1960	4,122
1961	3,814
1962	3,439
1963	[1] 3,001

[1] Department of Insurance consolidated with DVB in 1963. Employees transferred to:

DVB, insurance service (as shown in fiscal year 1965 budget)	1,852
DVB, central office	165
DVB, office services	637
DDM, central office	100
DDM, field	247

GAO REPORT ON PROPERTY MANAGEMENT ACTIVITIES

Mr. JONAS. The GAO has been very critical of what they charge are excessive costs in your broker management field.

Mr. GLEASON. Yes, sir.

Mr. JONAS. Have you had access to their report?

Mr. GLEASON. Yes, sir. As a matter of fact, Mr. Jonas, I might say that before they even released it, all the necessary corrections were made.

Mr. JONAS. What do you mean by necessary corrections?

Mr. GLEASON. The corrections that were necessary. They found certain things wrong. GAO has about 30 men assigned to our office full time, day in and day out. We also have our own investigating staff, and when we feel the need of an investigation, we go out and make it. I can assure you that before this was ever put to print, all of the necessary corrections that were indicated were made.

Mr. JONAS. Why were they not made beforehand?

Mr. GLEASON. Because we did not know about it.

Mr. JONAS. You mean you did not know that in the State of Michigan, for example, the statutes provide for a 12-month redemption period and your brokers could not even enter the houses, yet you paid them $120,000?

Mr. GLEASON. Not until we were advised.

Mr. JONAS. What is the matter with your loan guarantee officer?

Mr. BRICKFIELD. We knew this and, as the Administrator points out, we corrected it before the report was made. If you look in the report, you will find out it has been corrected.

Mr. JONAS. After you paid $120,000 in 1 year in brokers' fees in Michigan that they did not earn.

Mr. BRICKFIELD. They did earn them. It is true Michigan has a 12-month redemption law. Some houses we cannot get into for 12 months, but other houses are vacated in the meantime, so that we do get them before the 12 months elapses, and it is in these houses where we have management brokers managing the properties and we pay them these fees.

Mr. JONAS. You say this report, then, is based on your own investigation?

Mr. GLEASON. They are consistent; yes, sir.

Mr. JONAS. You spent $800,000 that could have been saved if you had made your inspection earlier?

Mr. GLEASON. This is probably true.

Mr. JONAS. Is not that sort of careless management on the part of somebody?

Mr. BRICKFIELD. Mr. Jonas, we had a tremendous increase in the number of foreclosed properties from 1960 to 1962. Our emphasis then was on selling houses. If we could sell a house as soon as we got it, we saved money. We saved property management expenses and other expenses.

Our emphasis at that time was in selling, rather than in property management. As I say, we had a tremendous increase, and there was a lag until we caught up.

Mr. JONAS. All that increase did not justify having some of your brokers mow the lawns on these houses three or four times a month when it was not necessary, did it?

Mr. BRICKFIELD. I do not think there was ever a charge that any broker mowed the lawn three or four times more than was necessary.

Mr. JONAS. There is in this report, and the Administrator says it is based on your own investigation. I would assume it is correct.

Mr. BRICKFIELD. No, sir; not three or four times more than necessary.

Mr. JONAS. You described everything here, saying it came out of your own office. Do you want me to read what they say about mowing the lawn? [Reading:]

Our inspection of properties held by the Detroit regional office showed that although the lawns were generally in only poor to fair condition, they were being mowed with unnecessary frequency. Three of the management brokers whose activities we reviewed were handling the lawns of 490 properties, mowed an average of three times a month, at a cost of $5 a mowing.

Is that right?

Mr. BRICKFIELD. That is right, sir.

Mr. JONAS. Who is responsible for that?

Mr. BRICKFIELD. This results or reduces itself to a question of opinion. How often does the lawn need to be mowed? That is, in Michigan. Once a week or once every 2 weeks?

Mr. JONAS. The Administrator says this is correct. It is based on his own figures.

Mr. BRICKFIELD. No, I think what the GAO was saying was: We were cutting the grass too often and were not sending people out to the properties to see if the lawns were in fact mowed.

Mr. JONAS. [Reading:]

> We brought this to the attention of VA officials at both field and central office. As a result, the Detroit regional manager has subsequently reported that controls have been established under which lawn mowing is limited to not more than once every 3 weeks.

My question is: Why did you not discover that earlier? What is the matter with the people in the Detroit office that they could not have discovered that without GAO investigating?

Mr. BRICKFIELD. As the Administrator pointed out, we did get on to the situation before the GAO got into it, Mr. Jonas. As you also know, in Detroit we had a tremendous increase in number of properties. I think it went from something like 1,000 to 5,000 in a matter of months. In that short time we made contracts with property management brokers, and they agreed to mow the lawns for a certain fee per month. This fee included, I think, mowing at the rate of three or four times a month.

As we got further along into the program, experience indicated to us that they did not need to be mowed three or four times a month. Simultaneously with our own investigation, the GAO investigation disclosed we could get by with having it done only once every 3 weeks.

Mr. JONAS. Regardless of who discovered it, I am glad that it was discovered.

Mr. THOMAS. What is the loss per unit on those properties in Detroit and how long does it take them?

Mr. JONAS. That is not reflected in this.

Mr. THOMAS. Maybe he will give it to you.

ACQUIRED PROPERTIES IN MICHIGAN

Mr. JONAS. How many properties do you have in Detroit?

Mr. BRICKFIELD. We have somewhere in the neighborhood of 5,200 properties in the State of Michigan.

Mr. JONAS. In Detroit?

Mr. BRICKFIELD. All of Michigan.

Mr. JONAS. How long have they been held?

Mr. BRICKFIELD. I do not have it broken down for the vicinity of Detroit, but I have properties on hand as of December 31 in Michigan, where our regional office is located. In Detroit, 5,263. On hand less than 6 months, 973; between 6 months and a year on hand, 720; over a year, 644; over 18 months, 619; over 24 months, 727.

Mr. JONAS. How many have you disposed of during the last 18 months?

Mr. BRICKFIELD. We have a good record in Michigan.

Mr. JONAS. We will judge whether it is good. You tell us how many.

Mr. BRICKFIELD. We sold more than we have acquired. I will have it for you in a moment.

Mr. THOMAS. A 24-month record of 725 is not too good.

Mr. BRICKFIELD. Even there, Mr. Thomas, where we cannot sell, we rent. So that we recapture at least part of the cost.

Mr. THOMAS. Do these figures mean these are all rented?

Mr. BRICKFIELD. No, sir.

Mr. DERVAN. In December we acquired a total of 129 properties and sold 206. I do not have the cumulative total but I do know that they have regularly been disposing of more properties than we have acquired.

Mr. JONAS. What was the sales price the 206 brought?

Mr. DERVAN. I would have to break that down according to regional offices.

NATIONAL PICTURE ON PROPERTY ACQUISITIONS AND SALES

I can tell you this: Our experience nationally during fiscal year 1963 has been that we have sustained an average loss per property sold of about $1,326. That is the national figure, sir. Actually, the sales prices of our properties exceed the book value of the properties sold.

The expenses which we incur for the payment of real estate taxes, for repairs of the property, for maintenance and for the sales brokers' commissions exceeded the gross profit on the sales, so that in the net we sustained a loss of about $1,326 per property in 1963.

Mr. JONAS. That is the average, but what is the top figure of losses and the low figure?

Mr. DERVAN. I could not indicate that, sir, except that is the average.

Mr. JONAS. Can you pinpoint where most of your losses occur? Are they in metropolitan areas or rural communities?

Mr. DERVAN. I can indicate this: About 84 percent of the properties which we now have on hand are concentrated in 12 States throughout the United States. These are: Michigan, No. 1; Texas, Illinois, Florida, Kansas, California, Ohio, Pennsylvania, Louisiana, Alabama, Washington, and New Jersey.

Mr. OSTERTAG. Mr. Jonas has raised a point which I think might be interesting comparing the urban and rural areas.

Mr. DERVAN. I think it is quite true, sir, that the concentration of properties is in the metropolitan centers. For example, Wichita, Kans., is due to a change in the airplane employment situation there; Detroit, that is due largely to the automation of the automobile industry, notwithstanding, for example, that the total cars produced in the last 2 years have been records.

The total number of employees involved in the production is less than it was a number of years ago.

We also have problems that arise incident to the closing of military bases.

FORECLOSURE RATES—DIRECT LOANS AND LOAN GUARANTEE

Mr. THOMAS. Did you give Mr. Jonas an answer to his question? What is the rate of foreclosure in urban areas as compared to the country?

Mr. DERVAN. The answer to that would be by comparing the foreclosures on the guaranteed loan program as against the direct loan program.

On the guaranteed loan program, it is about 2.1 percent of the total number of loans made since the beginning of the program.

In the direct loan program, it is about 1.6 percent.

Mr. THOMAS. More than 50 percent.

Mr. EVINS. This is a little unfair comparison because your direct loan program came into the picture later. The number is less than the overall number in the guaranteed loan program in the cities?

Mr. GLEASON. We make a profit on the direct loan programs.

Mr. JONAS. Can you give those figures in units instead of percentages?

Mr. DERVAN. Yes, sir.

Mr. JONAS. What is your inventory of houses now in the guaranteed loan program?

Mr. DERVAN. We had 21,973 properties on hand in the guaranteed loan program on December 31, 1963.

Since the beginning of the guaranteed loan program, home loans guaranteed by the Veterans' Administration, this has been about $6.1 million. The total number of claims paid which resulted from foreclosures, about 126,000.

Mr. THOMAS. Gentlemen, may I interrupt at this point?

Let us get a little something to eat and get back at 1 o'clock.

AFTERNOON SESSION

Mr. THOMAS. Gentlemen, will the committee please come to order?

Mr. Jonas, you had two or three other questions?

Mr. JONAS. Did we get the information about the foreclosure rate straightened out?

ACQUISITION AND SALES

Mr. JONAS. Why do you not put a table in the record that will show the rate in units acquired in the last few years, by year, for 5 years?

Mr. DERVAN. First of all, sir, I would have to go back to the beginning of the program. I would have to supply it year by year for the record. I can tell you what the total is and what it has been for the last few years.

Mr. JONAS. That would be all right.

(The information supplied follows:)

Property acquisitions, sales, and on hand

Fiscal year	Acquisitions	Sales	On hand
1955	3,091	2,351	2,475
1956	4,207	3,558	3,047
1957	5,615	4,738	3,859
1958	7,708	6,491	4,606
1959	10,812	9,608	5,749
1960	10,965	10,229	6,397
1961	14,601	9,962	10,967
1962	21,165	13,974	18,045
1963	25,243	19,387	23,783
1964 (1st half)	13,536	14,532	22,733
Cumulative through Dec. 31, 1963	129,516	105,844	

Mr. JONAS. You said the situation is improving now with more sales exceeding new acquisitions?

Mr. DERVAN. Yes, sir. With respect to the past 6 months, sir, we have acquired approximately 13,500 properties from July 1 through December 31. In the same time we have sold about 14,500, which would be about 107 percent of our acquisitions. Comparatively speaking, as of the end of December 1963, we had roughly 22,750 properties on hand compared to June 30 of last year when we had 23,780 properties on hand.

Mr. JONAS. When you sell a foreclosed house, do you sell it financed? Is any purchaser, regardless of whether he is a veteran or not, permitted to continue to carry the installments?

Mr. DERVAN. Any qualified purchaser may apply for the purchase of one of the houses which we offer for sale through local sales brokers, sir. We take back from the purchaser a note for the difference between the sales price and his downpayment.

Mr. JONAS. I know; but what about the rate of payment of the note?

Mr. DERVAN. These are amortized mortgages monthly, generally at 5.5 percent interest.

Mr. JONAS. In other words, if a nonveteran buys one of your houses, he can carry it under the original terms?

Mr. DERVAN. No, sir; the original GI mortgage is extinguished in connection with the foreclosure of that mortgage. The holder of the foreclosed mortgage acquires title to the property by bidding on it at the foreclosure sale. Thereafter, he conveys title to the property to the Administrator of Veterans' Affairs. We then list the property for sale with local real estate brokers. When a qualified purchaser is found we take a new mortgage which, in effect, is a conventional mortgage for the difference between the sales price and the downpayment.

Mr. JONAS. I understand that, but what about the terms?

Mr. DERVAN. The terms will vary. The terms may be all the way up to 30 years at 5.5 percent interest, generally speaking.

Mr. JONAS. What do you require in the way of a downpayment?

Mr. DERVAN. We will sell for no downpayment and most of our sales today are on a no downpayment basis.

Mr. JONAS. That probably explains why your rate of sales is so high. It is not hard to sell a house with no downpayment, is it?

Mr. DERVAN. The average downpayment being received is about 3 percent of the sales price. One of the important things to bear in mind in this connection is that the sale of the property being taken over by a private purchaser immediately saves the Government the cost of real estate taxes and expenses such as repairs, maintenance, and so forth. It actually costs about $80 a month to retain one of these properties on our books.

Mr. JONAS. It is better to sell it without a downpayment than to continue to hold it, of course, unless you sell it to a person who is not responsible and he begins to default right off. Then you have trustee fees to foreclose, advertising, and all of the expenses of foreclosure to go through.

Mr. DERVAN. We do have the foreclosure expenses, sir, but our foreclosure experience on these properties that we take back and sell is, roughly, 8 percent for foreclosure.

FORECLOSURE COSTS

Mr. JONAS. What does it cost you to foreclose a $20,000 mortgage?

Mr. DERVAN. It depends on the State. Where we have foreclosure laws which are difficult, time consuming, and expensive, we will sell the property on an installment sale contract rather than on a deed and mortgage basis. In the event of a default on the part of the purchaser, it is relatively simple on an installment sale contract basis to terminate.

Mr. JONAS. Who is the trustee in the deed of trust?

Mr. DERVAN. Generally it would be the loan guarantee officer.

Mr. JONAS. In the State?

Mr. DERVAN. Yes, sir.

Mr. JONAS. For example, North Carolina?

Mr. DERVAN. It would probably be the loan guarantee officer.

Mr. JONAS. You would not pay him a commission?

Mr. DERVAN. No, sir.

Mr. JONAS. The only expense then would be the advertising?

Mr. DERVAN. That is right.

Mr. JONAS. Probably you would have a legal fee involved?

Mr. DERVAN. We hire local attorneys to foreclose for us. There is a foreclosure fee involved in it.

PROPERTY MANAGEMENT ACTIVITIES IN MICHIGAN

Mr. JONAS. Getting back to that Detroit business, and I am not picking on Detroit except just by accident, because I see this Detroit case cited. One of the points made by the GAO report was variance in charges for winterizing houses. As an example, they cited 5 different brokers handling 1,745 properties and their fees ranged from $10 up to $17.50 for winterizing. They ranged from $5 a house up to $15 for dewinterizing.

They say this was corrected and you fixed on a standard fee of $15.

It looks to me like, instead of trying to hit a medium or average, you settled on the top figure.

You are increasing your fee for two brokers? In addition you are reducing on only one?

Mr. BRICKFIELD. We did this, Mr. Jonas, with the concurrence of the General Accounting Office. They agreed with this uniform fee. But it must be remembered that almost overnight we had this tremendous increase of houses on hand, from approximately 1,000 to 5,000. It is true that in the hectic months that followed we entered into various arrangements with different property management brokers but as we got more experience in this, of course, we changed the prices so that we could in time come out with a uniform fee.

Mr. JONAS. It costs you more after you standardized in that instance than what it cost you when you were unstandardized? You went up on the price you were paying for 600 units?

Mr. BRICKFIELD. No; the higher fee consolidates two fees. There were cases where in the beginning we were being inequitable in not paying some property managers a realistic fee. Here, again, we come to the question of judgment of what fee is the proper fee to pay.

Should the grass be cut three times a month, which means every 10 days, or cut every 21 days?

I think it is wise to have the property look sharp at all times. If we are going to make an error in judgment, I would rather make it in a direction where it would sell the property rather than cutting the grass, for example, once every 3 weeks.

Mr. JONAS. What does all that have to do with the question I asked?

Mr. BRICKFIELD. The main point is that it comes down to a question of judgment. When we entered into these arrangements with some brokers, along at the beginning of this expanded program, we were probably getting a better price than what we really should have been paying. In other instances we paid too much. As we went along, we made new arrangements with new brokers and we paid them different prices. After about a year's time things began to settle and jell and then we arrived upon a uniform and proper price.

Mr. JONAS. I have no further questions.

HOME LOANS

Mr. OSTERTAG. On the question of home loans, there were more than 189,000, is that correct?

Mr. BRICKFIELD. Yes, sir.

Mr. OSTERTAG. For homes, farms, and business loans which amounted to $2,730 million guaranteed or insured?

Mr. BRICKFIELD. Yes, sir.

Mr. OSTERTAG. This was an increase over the number guaranteed in fiscal 1962, is that correct?

Mr. BRICKFIELD. Yes, sir.

FORECLOSURE RATE

Mr. OSTERTAG. On the other hand, while your foreclosures have increased by 3,780, or somewhere in the neighborhood of 4,000, nevertheless, you have an increase of some 5,000 over the previous record of sold properties? In other words, your percentage of rate of sales has been higher than in previous years?

Mr. BRICKFIELD. That is right, sir.

Mr. GLEASON. This only started last July, Mr. Ostertag. This trend reversed itself only beginning last July so that the rate of sales are now higher.

Mr. OSTERTAG. If this trend of foreclosures had continued to go up and you ran into a stone wall on your sales, you would really be in trouble?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. Are you worried about that?

Mr. BRICKFIELD. No, sir.

Mr. GLEASON. We are not worried but we are concerned.

Mr. BRICKFIELD. We hope that we are over the peak, Mr. Ostertag. Last year our sales jumped about 35 percent and the year before they jumped around 40 percent. This year while there will be a further increase, percentagewise it will be small. We have emphasized an advertising campaign and we have adopted many procedures to help us sell these properties. In the long run, we will save more money if we can sell properties more quickly.

Mr. THOMAS. Any further questions, gentlemen?

If not, let us turn to the budget estimates and go through the budget.

If anybody has any questions at any time, we will yield.

Mr. GLEASON. Yes, sir.

TOTAL VA PERSONNEL COMPENSATION AND BENEFITS

Mr. THOMAS. Gentlemen, this budget has a lot of good information in it and let us put the table on pages 2–1, 2–2, and 2–3 in the record at this point.

(The pages follow:)

SALARY AND OTHER PERSONNEL COSTS, 1958–62

Mr. THOMAS. These tables cover personnel compensation and employees' benefits paid from appropriated funds for fiscal years 1963, 1964, and 1965. I think it would be well if we could have an overall table at this point in the record immediately following the tables just inserted showing the salary amount and the number of employees for each of the 5 years, say beginning with 1958. You have also had a couple of pay increases and you might have a table showing that.

(The table follows:)

	Average employment [1]	Personal services costs	Pay raise costs [2]
Fiscal year:			
1958	156,158	$742,596,487	$28,500,000
1959	153,570	779,761,300	
1960	153,289	852,293,009	
1961	153,361	921,064,685	50,530,000
1962	155,009	941,534,553	

[1] Includes consultants; excludes canteen and supply funds.
[2] Estimated costs of statutory pay increases in year of enactment (cumulative costs in each year not provided by accounting and fiscal records).

SUMMARY OF BUDGETS, 1963–65

Mr. THOMAS. Page 3–1 shows a summary of all VA appropriations, 1963, 1964, and 1965. We will insert this page in the record.

(The page follows:)

Comparative summary of appropriations and appropriation estimates

Appropriation title	Fiscal year 1963 appropriations	Fiscal year 1964			Fiscal year 1965 appropriation estimate	Increase (+) or decrease (−) 1965 over 1964
		Appropriated	Supplementals	Total		
General operating expenses	$161,279,950	$159,750,000		$159,750,000	$156,524,000	−$3,226,000
Medical administration and miscellaneous operating expenses	13,981,950	14,800,000		14,800,000	14,915,000	+115,000

Total selected resources	263	−15	2,159	569	569

APPROPRIATION LANGUAGE

Mr. THOMAS. Let us turn to the appropriation language shown on page 406 of the committee print.

There is nothing in this language that is giving anybody any trouble. This covers the necessary operating expenses of the Veterans Administration and I do not see anything new in here. I do notice a reimbursement to the Department of the Army for the services of officers assigned to the Veterans Administration. That has been the law for 10 or 15 years?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. Last year the bill was $159,750,000 and this year it shows a reduction to $156,524,000.

Are these two proviso limitations at the bottom of the page on public relations people in payment of school fees rigidly respected and lived up to, Mr. Administrator?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. Mr. Reporter, insert page 4–1 of the justifications.

(The page follows:)

GENERAL OPERATING EXPENSES, $156,524,000

The general operating expenses appropriation supports the following three major segments of the agency: general administration; the Department of Veterans' Benefits; and the Department of Data Management. General administration includes the Office of the Administrator and all supporting staff offices with the exception of the Office of the Assistant Administrator for Construction, which is financed by the medical administration and miscellaneous operating expenses appropriation.

HIGHLIGHTS

During the latter half of fiscal year 1963 the following organizational changes were put into effect:

1. The merger of the former Department of Insurance with the Department of Veterans' Benefits.
2. The establishment of a new Department of Data Management.
3. The realinement of staff office functions, eliminating the offices of the Assistant Administrator for Management Services and establishing an Office of the Assistant Administrator for Management and Evaluation.

The past, current, and budget year requirements show the actual and estimated costs adjusted to reflect the above organizational changes. Functions previously financed under other appropriations are shown by "comparative transfers."

A net decrease of $3.2 million in appropriation requirements is forecast for fiscal year 1965. This reduction has been achieved in spite of salary rate increases authorized by recent legislation and a shift of data processing functions previously financed under other appropriations. Excluding these items, a decrease of $7 million would have been projected resulting from (1) increased productivity; (2) declining workloads; and (3) transfer of costs of payment of compromise settlements resulting from tort claims (38 U.S.C. 351) and burial flags to the compensation and pension appropriation.

ORGANIZATIONAL CHANGES

Mr. THOMAS. This has good narrative material.

During the latter half of 1963, the following organizational changes were put into effect (reading):

1. The merger of the former Department of Insurance with the Department of Veterans' Benefits.
2. The establishment of a new Department of Data Management.
3. The realinement of staff office functions, eliminating the offices of the Assistant Administrator for Management Services and establishing an office of the Assistant Administrator for Management and Evaluation.

That is a play on words.

AVERAGE EMPLOYMENT AND PERSONNEL COMPENSATION

Let us put page 4–2 in the record.
(The page follows:)

GENERAL OPERATING EXPENSES, $156,524,000

The following tables present average employment and actual costs and appropriation amounts for the past, present, and budget years by departments and selected classes of expenditures:

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate	Increase (+) or decrease (−), 1965 over 1964
General administration:				
Average employment	1,330	1,297	1,220	−77
Personnel compensation	$10,502,857	$10,951,868	$10,858,263	−$93,605
All other	2,858,881	2,711,132	2,469,737	−241,395
Total costs	13,361,738	13,663,000	13,328,000	−335,000
Department of Veterans' Benefits:				
Average employment	17,240	16,225	15,636	−589
Personnel compensation	$112,207,227	$112,415,000	$111,157,500	−$1,257,500
All other	22,770,878	25,023,000	21,279,500	−3,743,500
Total costs	134,978,105	137,438,000	132,437,000	−5,001,000
Department of Data Management:				
Average employment	818	872	920	+48
Personnel compensation	$5,220,505	$6,369,000	$7,042,000	+$673,000
All other	6,608,706	3,931,000	3,717,000	−214,000
Total costs	11,829,211	10,300,000	10,759,000	+459,000
Grand total:				
Average employment	19,388	18,394	17,776	−618
Personnel compensation	$127,930,589	$129,735,868	$129,057,763	−$678,105
All other	32,238,465	31,665,132	27,466,237	−4,198,895
Total, general operating expenses	160,169,054	162,401,000	156,524,000	−4,877,000
Change in selected resources	+1,911,397	−1,590,000	----------	+1,590,000
Total obligations	162,080,451	159,811,000	156,524,000	−3,287,000
Unobligated balance lapsing	+753,705	+1,217,000	----------	−1,217,000
Transfers: comparative transfers from other accounts (net)	−1,589,563	−1,318,000	----------	+1,318,000
To "General Services Administration"	+35,357	+40,000	----------	−40,000
Total appropriation or estimate	161,279,950	159,750,000	156,524,000	−3,226,000

Mr. OSTERTAG. May I ask a question at this point, Mr. Chairman?
Mr. THOMAS. Sure.

MERGER OF DEPARTMENT OF VETERANS' BENEFITS AND DEPARTMENT OF INSURANCE

Mr. OSTERTAG. I am sure that there is a good answer, but does this merger between the Department of Insurance and the Department of Veterans' Benefits lend itself to economy?
Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. The cost of operations?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. How does it work in practice? How do you separate insurance from veterans' benefits? Is there a dual operation or is it separated within a new Department?

Mr. GLEASON. No, sir; it would be just one section of the Department itself.

Mr. OSTERTAG. The people who are dealing with one would deal with the other?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. The overall personnel necessary for the two would be reduced considerably?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. Thank you.

Mr. THOMAS. Gentlemen turn to the chart on page 4–3. Are the jobs shown here man-years or what?

Mr. MONK. Average man-years.

Mr. THOMAS. Why do you not also put jobs in there and then we would know what we are doing. Is this figure for 1963 overall?

Under Department of Data Management you show so many but it was not in operation at that time and you have 840 people shown there. I thought you only put it in operation in the last 6 months.

Mr. MONK. This is constructed on a comparative basis.

Mr. THOMAS. Next, Department of Veterans' Benefits, 17,808?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. You have common service adjustment shown here. What is that?

Mr. SHYTLE. That is the employment we sell from one appropriation to another.

Mr. THOMAS. What else?

Mr. SHYTLE. Personnel.

Mr. THOMAS. The total is 19,388?

Mr. SHYTLE. That is right.

Mr. THOMAS. Then it goes down to 18,394 in 1964 and for 1965 you are down to 17,776.

That is a reduction of what?

Mr. SHYTLE. 618.

GENERAL ADMINISTRATION

Mr. THOMAS. Mr. Reporter, insert pages 5–1 and 5–2.

(The pages follow:)

GENERAL OPERATING EXPENSES

GENERAL ADMINISTRATION, $13,663,000

General statement

In the administration of the Veterans' Administration, the Administrator requires appropriate supporting staff services to keep him informed and advised of the development of agencywide policies and objectives, and to also keep him apprised of the effectiveness and economy of agency operations.

With the exception of the Office of the Assistant Administrator for Construction which is shown under the heading of the Department of Medicine and

Surgery, these supporting staff services are grouped under the title "General Administration," and include the following offices:

Information Service.
General Counsel.
Board of Veterans' Appeals.
Assistant Administrator for Personnel.
Assistant Administrator for Management and Evaluation.
Administrative Services.
Controller.

During fiscal year 1963, the Offices of the Assistant Administrator for Appraisal and the Assistant Administrator for Management Services were merged into a new Office of the Assistant Administrator for Management and Evaluation. All the functions and responsibilities of the two Offices were assumed by the new Office except for certain functions which were transferred to the Department of Medicine and Surgery and the Department of Data Management. In addition certain functions of the Manager, Administrative Services were transferred to the Department of Data Management. The functions transferred are listed as follows:

1. *To the Department of Medicine and Surgery.—*

(*a*) Civil defense and disaster relief functions involving assistance to and participation with the Department of Health, Education, and Welfare in the fulfillment of that Department's responsibility for the development of plans and guidance to utilize to the maximum extent the existing health resources of the VA.

(*b*) Supply management functions in the specific areas of (1) advice and assistance to the departments and staff offices on contractural and supply operations, (2) conducting a continuing program of appraisal and evaluation in accordance with established policies, (3) conducting research in the field of purchasing, storage, distribution, control, and conservation of supplies and equipment as practiced in the VA and in other organizations both public and private, and the development and recommendation of improved practices for the VA, (4) analyzation of markets and the preparation of market forecasts, (5) development of market sources and the maintenance of favorable relations with vendors, (6) VA supply fund management involving among other things, the determination and necessity for subordinate fund operations.

(*c*) The mechanical aids function of selection, testing, and installation of pneumatic tubes and conveyor systems in VA hospitals.

2. To the Department of Data Management—

(*a*) Telecommunications.

(*b*) Automatic data processing services.

The past, current, and budget years show the actual and estimated costs adjusted to reflect the above organizational changes.

Employment and cost data for staff offices is individually set forth in the following presentation.

Mr. THOMAS. What is the function of these 1,300 people? Where is this broken down under General Administration?

You have the Office of the Administrator, the Information Service, General Counsel, Board of Veterans' Appeals, Assistant Administrator for Personnel, Assistant Administrator for Management and Evaluation, Manager for the Administrative Service, and then the Comptroller's Office.

For this year that makes 1,220?

Let us take a quick look at each one of these. I assume you have a breakdown for each of these for the last 3 years?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. Where is the breakdown for the last 3 or 5 years for each one of these?

Mr. MONK. There is an overall summary table shown on page 5–3.

Mr. THOMAS. It will take a magnifying glass to find it.

Office of the Administrator

Let us put pages 5–4, 5–6, and 5–7 in the record. This is the Office of the Administrator under "General operating expenses."

(The pages follow:)

Office of the Administrator, $803,000

Summary of requirements

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate	Increase (+) or decrease (−), 1965 over 1964
Average employment	55	56	56

Transportation of things		1,000	1,000	
Other services	17,509	38,500	36,300	−2,200
Supplies and materials	11,673	8,900	8,800	−100
Equipment	4,824	7,300	7,500	+200
Total cost	700,845	784,000	803,000	+19,000

Distribution of average employment

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate
Administrator, Deputy Administrator, Associate Deputy Administrator, and staffs	33	33	33
Assistant Deputy Administrator and staff	4	2	2
Administrator's Advisory Council	12	15	15
Contract Appeals Board	6	6	6
Total	55	56	56

The Administrator is responsible to the President for the administration of veterans' affairs and the laws which govern them.

The Deputy Administrator is the principal assistant to the Administrator in the administration of the VA.

The Associate Deputy Administrator assists the Administrator and the Deputy Administrator in the administration of the VA. He takes independent action for the Administrator on all problems affecting the VA in the areas of office methods and administration, supply management, budget, construction, fiscal, personnel, management audits, and investigation and security, which do not require the personal attention of the Administrator or the Deputy Administrator. He acts for the Deputy Administrator in the latter's absence and for the Administrator in the absence of both the Administrator and the Deputy Administrator. The Assistant Administrator for Management and Evaluation, Construction, Personnel, the VA Controller, and the Manager, Administrative Services, report to the Administrator and the Deputy Administrator through the Associate Deputy Administrator.

The Assistant Deputy Administrator, as full assistant to the Administrator and the Deputy Administrator, participates in high-level policy discussions and contributes recommendations regarding solutions of problems and decisions to be made on all programs administered by VA. As directed, he represents the Administrator with the Congress, other Federal agencies, and the Bureau of the Budget. He also acts for the Associate Deputy Administrator in the latter's absence and for the Deputy Administrator in the absence of both the Deputy Administrator and the Associate Deputy Administrator.

The Assistant Deputy Administrator makes independent recommendations to the Administrator as to areas which should receive priority in substantive research, and recommends approval, disapproval, or revision of plans submitted by department heads and staff offices. He is the Administrator's top planning officer and director of substantive research.

The Executive Assistant directs the central coordinating staff for the Office of the Administrator. He presents to the Administrator those matters requiring his personal attention. His staff monitors special projects and assignments and insures that required action is controlled and coordinated; does for the Administrator and his deputies what they would do for themselves in their official capacity if they had the time; acts as point of contact for operating matters coming to the Office of the Administrator and is responsible for the last line of review before an action is taken or a decision is made in the operations of the agency; and discharges for the Administrator all matters of administrative nature within the Administrator's office.

The Contract Appeals Board is an integral part of the Office of the Administrator. Under the Chairman, this Board, by delegation of authority from the Administrator, acts as his authorized representative to ascertain the facts and circumstances attending appeals by contractors from decisions of VA contracting officers under construction, architect-engineer and supply contracts; and to render final decisions on such appeals in accordance with contract provisions.

The Administrator's Advisory Council, under a Chairman, advises the Administrator on policies, plans, research programs, organization, and whether established programs are meeting their objectives. The Chairman of the Administrator's Advisory Council is assisted by a deputy chairman who is a member of the council and also director of planning. The Council is concerned with such matters as how veterans compare with nonveterans, what are the handicaps and needs of veterans in various categories, what new programs are needed, what changes to established programs should be made, and the long-range impact of both existing and proposed programs upon sociological and economic welfare of the veteran population as a whole.

Mr. THOMAS. The increase in the Office of the Administrator this year is $19,000. It goes up from $784,000 to $803,000. The big item in here is compensation and personal benefits are around 48. That is statutory and you cannot do anything about it.

Are we to assume you pay your part of the $75 million total pay increase in the Veterans' Administration?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. What about your travel account of $31,700?

Mr. GLEASON. We all travel, Mr. Chairman.

Mr. THOMAS. Did we not cut the Administrator 15 percent on his travel allowance last year? Now he comes right back with the same amount. He did not respect that cut; did he?

Mr. GLEASON. As a matter of fact, sir, I would like to be able to do more traveling than I do.

Mr. THOMAS. That means you can cut this $31,700 down to $18,250; is that about it?

Mr. GLEASON. No, sir.

INFORMATION SERVICE

Mr. THOMAS. Let us look at the Information Service.

Let us put pages 5–10 and 5–12 in the record.

(The pages follow:)

INFORMATION SERVICE, $550,000

Summary of requirements

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate	Increase (+) or decrease (−), 1965 over 1964
Average employment	43	43	43	
Personnel compensation	$386,844	$418,444	$434,799	+$16,355
Personnel benefits	29,037	30,956	32,101	+1,145
Subtotal	415,881	449,400	466,900	+17,500
Travel and transportation of persons	20,413	21,300	21,300	
Transportation of things		1,500	1,500	
Other services	40,034	55,000	53,000	−2,000
Supplies and materials	4,339	3,800	4,300	+500
Equipment	954	1,000	3,000	+2,000
Total cost	481,621	532,000	550,000	+18,000

MISSION

The threefold mission of Information Service is (a) to keep veterans and their dependents informed of their rights and benefits as provided by law, and the proper procedures to be followed in applying for such benefits; (b) to keep the general public informed in regard to VA operations, activities, and policy determinations through the release of general information to a wide variety of media, and by answering thousands of inquiries received from newspaper and magazine representatives, Members of Congress, veterans' organizations, and other individuals and organizations; and (c) counseling and advising the Administrator, his principal assistants, and field station managers concerning public interest and reactions as they concern the determination of VA policies.

In providing accurate and timely information through Information Service, VA not only fulfills an obligation to veterans and their dependents, but also eliminates countless inquiries which would otherwise impose an added administrative burden, and thus retard service. To the extent that beneficiaries are apprised concerning eligibility requirements and correct procedures to follow in dealing with VA, the costs of operating programs are reduced.

WORKLOAD

The number of veterans and dependents who must be kept informed of benefits, laws, regulations, and policies will continue at about the present level. No lessening is anticipated in the needs of operating officials for the promulgation of advisory information to beneficiaries and others regarding proper procedures, policy and administrative changes, etc., and the heavy volume of press and other inquiries in regard to general programs and special happenings is expected to continue apace. Legislative changes and refinements enacted in each session of Congress require special informational effort.

In addition to its regular functions, Information Service again will be expected to spearhead ever-growing general Government programs, such as the President's Committee for Employing the Handicapped, and Veterans' Day, and assist with other broad programs such as United Nations Day, National Hospital Week, National Mental Health Week, etc.

FIELD AND CENTRAL OFFICE BREAKDOWN

Mr. THOMAS. Do you still have 43 people here? Where is our information officer?

Mr. HOOD. We still have 43, sir.

Mr. THOMAS. What do you need with all of those people? Where are they located?

Mr. HOOD. Twenty-three are located in the field and twenty in the central office. We have 11 field offices with 1 man and a secretary there.

Mr. THOMAS. Do you mean you have 32 here?

Mr. HOOD. No; we have 20 in Washington and 23 in the field.

Mr. THOMAS. Whereabouts in the field?

Mr. HOOD. The field stations are located in Seattle, Los Angeles, Denver, St. Paul, Chicago, Kansas City, Dallas, Boston, New York, Washington, D.C., and Atlanta.

Mr. THOMAS. What installations are they attached to in these cities?

Mr. HOOD. The regional office in every case.

FIELD INSTALLATIONS

Mr. THOMAS. How many regional offices are there now?

Mr. HOOD. Sixty-seven.

Mr. GLEASON. Sixty-six with Dallas-Waco consolidation. We had 67.

Mr. THOMAS. Is every city where you have a hospital a region now?

Mr. MONK. No, sir.

Mr. THOMAS. What activities are in your region now?

Mr. MONK. All of the activities other than medical.

Mr. THOMAS. You transferred Insurance out of them?

Mr. MONK. No; we just merged Insurance with the Department of Veterans' Benefits, which governs the operation of these regional offices.

Mr. THOMAS. That is where the claims are paid?

Mr. MONK. Regional offices.

Mr. THOMAS. All of the forms are made out in the regional offices?

Mr. MONK. Yes, sir.

Mr. THOMAS. What became of your Minneapolis office and the big office in Philadelphia and the one in Atlanta? What became of those?

Mr. GLEASON. Philadelphia is still there.

Mr. THOMAS. What is their function as compared to your regional offices?

Mr. GLEASON. The same thing, except that Philadelphia and St. Paul have additional responsibility for insurance activities.

Mr. BRICKFIELD. In two locations, Mr. Thomas, we have insurance centers. Philadelphia, in addition to the regional office activities has insurance activities. The regional office takes care of compensation and pension, loan guarantee, vocational rehabilitation, and things of that nature.

In 64 offices we have the usual functions of a regional office, and in two more; that is, in St. Paul and Philadelphia we also have insurance activities.

Mr. THOMAS. You closed up Denver?

Mr. BRICKFIELD. That is right.

Mr. THOMAS. You have not yet told me what the regional office does.

Mr. GLEASON. The regional office is in——

Mr. DRIVER. They consolidated the regional and insurance office.

Mr. THOMAS. For all practical purposes, your regional offices do not do any insurance?

Mr. DRIVER. They handle the claims.

Mr. THOMAS. That is what I asked you a while ago.

Mr. GLEASON. In the chart shown on pages 8–15 it gives you a pretty idea of the organization of a regional office.

Mr. EVINS. Would the Chairman yield?

Mr. THOMAS. Yes.

AREA MEDICAL OFFICES

Mr. EVINS. Do your regional offices also include administration and clearance for all hospital management requests?

Mr. GLEASON. No, sir.

Mr. DRIVER. They only render legal service for the hospitals.

Mr. EVINS. Hospital management is directed to the central office through the area offices?

Mr. GLEASON. We have the area medical offices.

Mr. EVINS. Spell those out and tell us where they are located.

Mr. GLEASON. Dr. McNinch, will you give them the exact locations?

Mr. EVINS. I thought we abolished the area office management of hospitals.

Mr. GLEASON. No, sir.

Mr. EVINS. So that the hospital manager could deal directly with the chief medical officer.

Mr. GLEASON. We consolidated a little bit and brought the area medical direrors to Washington a year ago.

Dr. McNinch is the new Chief Medical Director. He has only been here now about 6 months and he would like to have an opportunity to make a study of the area medical offices situation.

Mr. EVINS. We are talking about the services of the regional offices. It was our impression that you have had a lot of duplication and overlapping in your regional offices, particularly in the hospital administration and medical field. You brought those gentlemen into Washington and I was just asking you if the medical administration was still continued in your regional offices?

Mr. GLEASON. No, sir. The regional offices are different from area medical offices.

Mr. EVINS. Tell us about the medical offices, or should we wait until we get to that?

Mr. GLEASON. I would prefer we wait until we get to that.

Mr. OSTERTAG. Mr. Chairman, may I just ask this question?

Mr. THOMAS. Sure.

MERGER OF DEPARTMENT OF VETERANS' BENEFITS AND DEPARTMENT OF INSURANCE

Mr. OSTERTAG. You referred to the merger of your insurance and your veterans' benefits sections some time ago. How does it work? Is that a merger from the central office down through every area and

is supervision provided by one director over both benefits and insurance?

Mr. GLEASON. Yes, sir.

Mr. DRIVER. He is the Chief of the benefits section.

Mr. GLEASON. The Chief of Benefits is responsible.

Mr. OSTERTAG. Wherever insurance is administered?

Mr. GLEASON. It would be under the Chief of Benefits.

Mr. OSTERTAG. Under the benefits division?

Mr. GLEASON. That is correct.

Mr. OSTERTAG. It is a consolidation from the top right down to the local level?

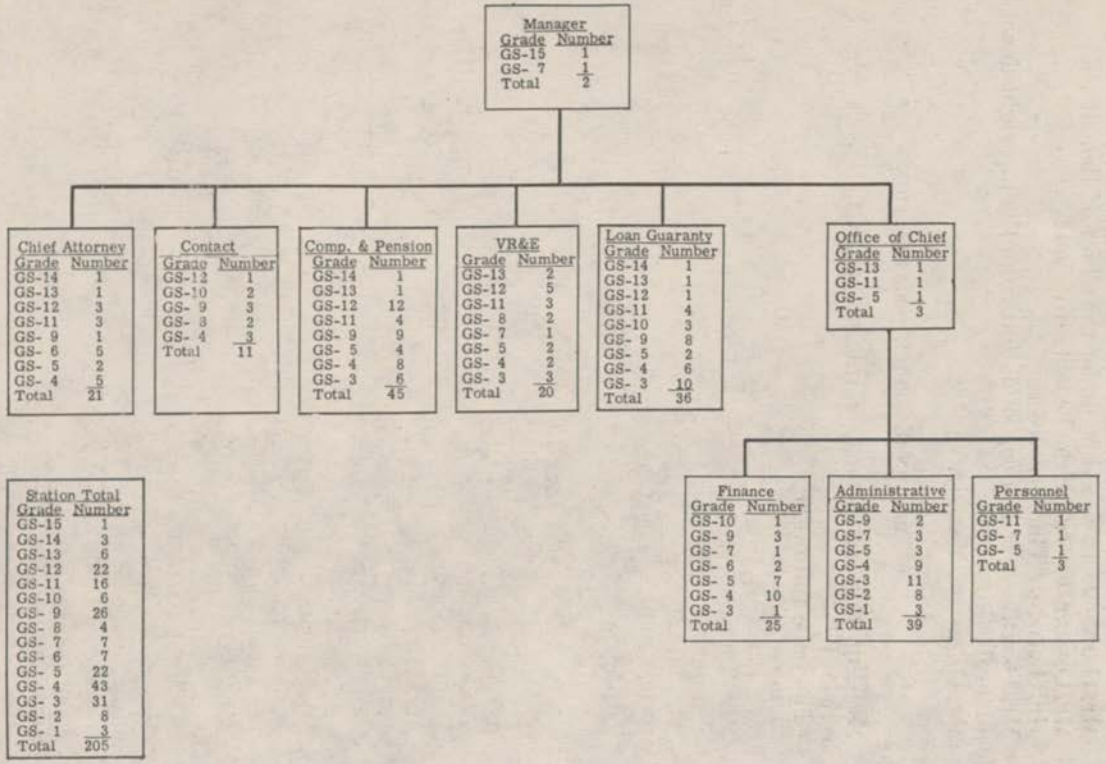
Mr. GLEASON. Yes, sir.

REGIONAL OFFICE ORGANIZATION

Mr. THOMAS. Gentlemen, at this point, let us insert page 8–15 in the record.

(The page follows:)

DEPARTMENT OF VETERANS BENEFITS
ORGANIZATION OF A REGIONAL OFFICE



Mr. THOMAS. This shows the organization of the regional office and it is not a chart which shows one iota of change since they sent out the insurance divisions to these three separate insurance offices. Here you have the chief attorney and then the contact division, and then compensation and pension and next is the V.R. & E., the loan guarantee, and that is it?

Mr. GLEASON. Mr. Chairman, I mentioned V.R. & E. in my statement. They were consolidated on February 1 and this will save us about 15 persons, or a saving in the first year of about $128,000.

Mr. THOMAS. You combined compensation and benefits, V.R. & E., but they still remain in the regional offices?

Mr. GLEASON. Right.

INFORMATION SERVICE

Mr. THOMAS. Let us get back to the Information Service. We have already put the justification in the record. We were talking with Brother Hood a while ago.

You say you have 20 employees in Washington and 23 in the field?

Mr. HOOD. Right.

Mr. THOMAS. Did you just pick your geographical location or your big population centers? How did you figure your 23?

Mr. HOOD. Basically, geographic location in 11 offices. They serve an average of about five States apiece. They also serve an average, I would say, of about 19 or 20 hospitals.

FIELD JURISDICTION—INFORMATION SERVICE

Mr. THOMAS. What is your jurisdiction and authority for your people in the field? Do you furnish a copy from here and only have releases made from here? If that be true, why do you need that many in the field?

Mr. HOOD. As to the operation of the Veterans' Administration in the field, we do not hospitalize any veterans in Washington or pay claims, so they are out there where the operation is and that is why we have a shade more than half of our strength there.

Mr. THOMAS. You have contact and information people out there. It is a Contact Division?

Mr. HOOD. No; I am talking about Information, sir.

Mr. EVINS. The chairman asked about the Dallas Information Office.

Mr. THOMAS. You do not send that to them?

Mr. HOOD. I can assure you of this: They like the Federal information better from Dallas than getting it wholesale from Washington. First of all, I would say they, at least, quadruple the coverage of information we get out in the way of news releases and radio and television material.

Mr. THOMAS. How much authority do you give your information specialists in the field? Does copy come from here? Does every man operate footlose and fancy free and make all the releases he has time to make, or does he rely on his own good judgment? What is the rule and regulation?

Mr. HOOD. We give him pretty much carte blanche but we also provide guidelines from here. They are receiving the releases we get out of about 500 a year from the central office. They then localize those in Tennessee or Texas because this is much more meaningful to the newspapers down there.

Mr. THOMAS. What are the grades of your field officers?

Mr. HOOD. They are 13's. They have secretaries who are grade 6.

Mr. EVINS. A lot of Congressmen localize these things if you will give them the information.

Mr. HOOD. You are asking about what they do and perhaps it would help you to have some specifics. Remember, we were talking about a lot of loan guarantee, foreclosures and the need for VA selling homes.

Just last December our man in New York City wrote a story and had walked it down to the New York Times, and also got it in other area papers. The result of this one story was that the regional office in New York City had 4,650 inquiries in regard to homes. That is, written inquiries, when we told them we had homes for sale and that nonveterans could buy them as well as veterans. They had 844 phone calls. That will lead inevitably to many sales. How many, I do not know.

Our man in Boston, a month earlier, placed another story in the Boston papers just on this one subject and the result of that was 793 telephone calls inquiring about houses for sale.

Mr. EVINS. We are all for information, but we thought you could run your Information Office from Washington.

Mr. HOOD. You really cannot do that. We get about $30 million worth of radio and television time donated as a public service to us. This is a tremendous thing and it is a great thing on the part of the industry, that they are willing to do this. Our fieldmen and our field installations have to distribute all of that material. You simply cannot mail it out of Washington. If you did, about 90 percent of it would go into file 13.

Mr. THOMAS. May I interrupt you right there? If it goes into file 13 over the years, does it make much difference?

Mr. HOOD. I think it makes a great deal of difference; yes.

Mr. THOMAS. I find that in my own shop the only difference it makes for my own propaganda is that it goes into file 13 and does not clutter up the files.

PRINTING

We are now getting into your "Printing and binding" item and as we often say here, we think that for printing and binding, all of our agencies spend anywhere from 25 or 30 percent too much. Everybody is deluged with mail and releases. I bet there is not 1 in 10 or 15 releases by all Government agencies that ever has any attention paid to it by anybody.

Mr. HOOD. I like to think about 80 percent of our stuff gets used. Maybe that is flattery.

Mr. THOMAS. I do not blame you for hoping, but let us be practical about it.

Mr. HOOD. We have a pretty good assessment on the thing.

Mr. THOMAS. How did you get an assessment on it?

Mr. HOOD. Largely through newspaper subscriptions. In other words, you put a release out and see if it ever sees the light of print. I think our stuff on spot checks shows we have pretty close to 80 percent usage. What I try to do——

Mr. THOMAS. It is more or less a patriotic thing on the part of the papers to print some of that information.

Mr. HOOD. We are grateful to them. It is a great help to us and the operating officials——

Mr. EVINS. If you ran an ad and said, "Contact your local VA office," they could pass the information on?

Mr. HOOD. Put an ad in the paper?

Mr. EVINS. Give out any information, perhaps on a sheet from Washington saying, "Make inquiry of your local VA office."

Mr. SHIPLEY. Mr. Chairman, may I ask one question?

Mr. THOMAS. Sure.

NEWSPAPERS AND PERIODICALS

Mr. SHIPLEY. Is that what the $3,700 is used for, newspapers and periodicals? How does that tie into the information program? That is a lot of newspapers and periodicals.

Mr. HOOD. Mr. Shipley, we have $3,700 for subscriptions to 143 newspapers.

Mr. SHIPLEY. Where do they go, here in Washington?

Mr. HOOD. A handful comes here to Washington. The New York Times, for instance, and the Wall Street Journal. The preponderance of the papers go to our men in the field.

Mr. SHIPLEY. What does he use them for?

Mr. HOOD. He uses them primarily for two things: One, a use yardstick as to just what we are talking about, and he puts out a release and unless he gets on the wire or gets into the newspapers, they are not really doing any good. This is a measurement of value.

Then it also gives us an indication of the reaction to the Veterans' Administration policy and activities and principles.

Mr. SHIPLEY. Can this not be done through your local VA offices?

Mr. HOOD. We do that, too, but it simply will not come in as fast as when you subscribe to the newspapers. Otherwise, they get wasted. If you count on the papers that are taken at home, part of them wind up in the garbage can and that sort of thing. This is a more expeditious method.

Mr. SHIPLEY. That is all I have, Mr. Chairman.

OFFICE OF THE GENERAL COUNSEL

Mr. THOMAS. Gentlemen, let us turn to the General Counsel and put pages 5–15 in the record.

(The page follows:)

GENERAL COUNSEL, $1,267,000

Summary of requirements

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate	Increase (+) or decrease (−), 1965 over 1964
Average employment	103	104	104	
Personnel compensation	$993,743	$1,071,904	$1,107,558	+$35,654
Personnel benefits	73,212	79,046	83,280	+4,234
Subtotal	1,066,955	1,150,950	1,190,838	+39,888
Travel and transportation of persons	9,835	9,350	9,350	
Transportation of things	1,246			
Other services	457	700	500	−200
Supplies and materials	12,680	11,000	10,500	−500
Equipment	8,398	10,000	5,312	−4,688
Insurance claims and indemnities	397,997	190,000	50,500	−139,500
Total cost	1,497,568	1,372,000	1,267,000	−105,000

Mr. THOMAS. This shows $1,267,000 for 1965 for the General Counsel's Office. I remember several years ago the functions and the duties of the General Counsel were split up, and in fact at one time he had a tremendous staff of 1,000 or so people and the majority of his staff were sent to the regional offices. That is where they are now.

This is not covered in General Administration but is in the other part of it, charged variously throughout the budget.

They come under the jurisdiction not of the General Counsel, but under the local regional director; correct?

Mr. SHYTLE. Yes, sir.

Mr. THOMAS. You show minus $105,000 as against last year's figure of $1,372,000 compared to $1,267,000 for 1965. The biggest plus item here this year is for personnel compensation of 104 last year and this year but a total increase of $35,654.

Does that include within-grade promotions and all pay act costs?

Mr. GLEASON. Both.

Mr. THOMAS. Break it down.

Mr. GLEASON. We could supply it for you, Mr. Chairman.

Mr. EVINS. The dollar value in the General Counsel's Office compared with others is not very large but from the point of view——

Mr. GLEASON. This is shown on page 5–18. The only thing we can say about that is that the 1964 increase over 1963 is primarily attributable to increased rates provided by Public Law 87–793.

Mr. THOMAS. Your breakdown here does not indicate that.

Mr. GLEASON. We did not break it down.

Mr. THOMAS. Your other items do not indicate any appreciable change.

GENERAL COUNSEL WORKLOADS

Under "General Counsel opinions," this is the workload chart. We might put page 5–17 in the record.

(The page follows:)

The General Counsel is the chief officer of the Veterans' Administration in all matters of law and legislation.

The primary responsibilities of the Office of the General Counsel are: (1) Rendering advice and opinions directly and through chief attorneys; (2) reviewing for legal correctness all regulations and directives; (3) collaborating with the Department of Justice on litigation; (4) supervising and coordinating matters pertaining to proposed legislation, Executive orders and proclamations; and (5) maintaining liaison with both Houses of Congress. To carry out these responsibilities, in addition to the General Counsels' immediate staff, the office is organized into five professional staff groups, four with responsibility for the full range of legal and legislative activities, and the fifth, handling a smaller volume of legal and legislative matters, provides administrative, liaison, and management services.

Summary of major workloads

	Fiscal year 1963, actual	Fiscal year 1964, estimated	Fiscal year 1965, estimated
General Counsel opinions requested	1,584	1,600	1,600
Litigation briefs	1,595	1,600	1,600
Legislative history files maintained	1,962	950	[1] 1,900
Legislative reports prepared	388	390	395
Studies conducted and résumés prepared	303	300	300

[1] The number of bills introduced concerning veterans serves as the base upon which the number of legislative history files maintained is determined. Experience has shown the first session of a Congress to be more active in the introduction of bills than the second session.

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate	Increase (+) or decrease (−), 1965 over 1964
10 Personal services and benefits				
11 Personnel compensation	$993,743	$1,071,904	$1,107,558	+$35,654
12 Personnel benefits	73,212	79,046	83,280	+4,234
Total	1,066,955	1,150,950	1,190,838	+39,888

Mr. THOMAS. Under "General Counsel opinions requested," you show 1,600 estimated and then under "Litigation briefs," 1,600. We do not like these round figures.

Under "Legislative history files maintained," you have 950 as against 1,900 and then you have an asterisk. What does that mean?

Mr. GLEASON. There is a footnote to explain the increase.

DUTIES OF THE GENERAL COUNSEL

Mr. THOMAS. What are the duties of the General Counsel's Office? This is domiciled in the District of Columbia. Is the Chief Counsel here?

Mr. GLEASON. Right behind me, Mr. Chairman. He is the chief officer on all matters of law and legislation.

Mr. THOMAS. Tell us what you are doing.

Mr. FABLE. Mr. Chairman, before I take up my duties, an honest confession, I might say, is good for the soul.

Mr. THOMAS. Do not tell too many family secrets.

Mr. FABLE. You are going to come to this sooner or later, so we might as well get to it now.

On page 5–15, it shows a decrease in insurance claims of $139,500. That is not because there is an actual decrease but it is because, under the proposed structure of the appropriation, there is going to be $156,000 requested added in the compensation and pension appropriation to take care of malpractice cases.

Mr. OSTERTAG. Formerly that was under this Office of the General Counsel?

Mr. FABLE. Yes, sir; the net increase in that particular item amounts to $16,500.

Having gotten that off my conscience, I would like to tell you about my duties.

Mr. THOMAS. Go ahead.

Mr. FABLE. The primary one is to give advice and legal opinions to the Administrator and his staff here in Washington, and then to give assistance to chief attorneys in the field when they have legal questions they are not in a position to answer. They put out about 10,000 opinions a year which never come near us but there are about 500 opinions roughly that will come into us for review, before release. They come to us for one of two reasons: either because there is involved a matter of VA law for which there is no precedent, or a matter of State law in a State in which they do not have jurisdiction. In addition we have the responsibility for the matter of going over all proposed regulations and directives to see that they are legally accurate. We coordinate matters pertaining to proposed legislation, Executive orders, and proclamations. Then we have the Congressional Liaison Service here at the Capitol which provides service to individual Members of Congress with respect to individual cases.

CONGRESSIONAL LIAISON SERVICE

Mr. EVINS. Is the Liaison Service under the General Counsel's Office or under administration?

Mr. FABLE. No, sir; under the General Counsel's Office or its predecessors, and it has been since 1945.

Mr. EVINS. This is for giving reports on bills?

Mr. FABLE. No; Congressional Liaison deals with individual cases. We take care of the reports on bills in our immediate office.

Mr. EVINS. The Liaison Service comes under the General Counsel's Office?

Mr. FABLE. Yes, sir.

Mr. OSTERTAG. In other words, Congressional Liaison is under your office and is limited strictly to casework or individual cases?

Mr. FABLE. That is correct.

Mr. OSTERTAG. Which might channel through a Congressman's office?

Mr. FABLE. That is correct. There were personal and telephone contacts which totaled over 80,000 in the course of a year. They put

out over 12,000 letters and memorandums and reviewed in the neighborhood of 600 C files at the request of individual Members of Congress. There are 10 individuals in that service, Mr. Congressman.

Mr. SHIPLEY. Why is it that there is so much activity in the Congressional Liaison Office? Is it lack of information to veterans? Why do we have so many calls, letters? What generates this?

Mr. FABLE. I think it is all a part and parcel of the point Mr. Hood was making. There is a wide interest on the part of the veteran population, their wives and children, in knowing what benefits are available. In many instances, they come to Members of Congress and Members of Congress then either go to the regional office or to the Congressional Liaison Service, as they see fit.

Mr. SHIPLEY. I realize what this has done, but I am trying to find out the reason for it. Why should they come to the Congressmen in the first place? The Veterans Administration should do this. Why is it? Do you know?

Mr. FABLE. I think it just shows they have a great deal of confidence in the Members of Congress.

Mr. SHIPLEY. Thank you, but that does not answer my question.

It is a problem and I think it should be solved somewhere but I do not know how. It is not right that a veteran should have to sit down and write his Congressman or Senator to get information that satisfies him.

Mr. GLEASON. Mr. Shipley, I think it is a point that they have more confidence in the Congressman, seeing they get a fair shake of the dice. They do not understand the Veterans Administration, actually how it works, and they do feel confident their Congressman will help them get a fair deal. I think this is one of the motivating factors.

Mr. SHIPLEY. Is this because you use too many form letters in answering veterans?

Mr. GLEASON. I do not think so. I think it is the way of the American citizen. He likes to go to the top and when he goes to the top and gets some action, right or wrong, favorable or unfavorable, he does feel satisfied then.

Mr. SHIPLEY. Maybe the Information Service can correct this. I hope so.

Mr. HOOD. Yes, sir; right away.

TRANSFER OF TORT CLAIMS

Mr. THOMAS. Judge Fable, if you are going to transfer $136,000——

Mr. GLEASON. Mr. Chairman, $156,000.

Mr. THOMAS (continuing). Under "Compensation and pensions," what amount are you transferring out?

Mr. FABLE. It is down $139,500. Actually, what we are planning on is $156,000.

Mr. THOMAS. Instead of minus $105,000, it would be what?

Mr. FABLE. $51,000. It would have been an increase of $51,000.

Mr. THOMAS. This is a minus figure of about $50,000?

Mr. FABLE. If we had done this year the same as in prior years, we would show a plus of $16,500 for this particular item.

Mr. THOMAS. This is to take care of tort claims where you settle out of court? Do you give the regional offices authority to settle tort claims under $2,500 on their own?

Mr. FABLE. Yes, sir.

Mr. THOMAS. Above $2,500 you keep strings on them?

Mr. FABLE. Over $2,500, the only settlement that could take place would be by the Department of Justice or where it gets the approval of the court. Agency awards stop at $2,500 under the Tort Claims Act.

Mr. THOMAS. According to the law, the Veterans' Administration has authority to settle those without consulting anybody?

Mr. FABLE. That is correct.

Mr. THOMAS. You let the regional offices do that?

Mr. FABLE. We do. We delegated that out to them within the past 12 or 14 months. However, Mr. Chairman, none of the matters being transferred to compensation and pension appropriation would fall under that category. Furthermore, I cannot conceive of any chief attorney making a compromise where the claims involve circumstances that fall into matters we have here, the section 351 cases.

Mr. THOMAS. I wondered what authority compensation and pensions have to pay a tort claim.

Mr. FABLE. May I go into that?

Mr. THOMAS. Look at the appropriating language. Turn to the committee print on page 423. Is that the first time you have used that language?

Mr. FABLE. Yes, sir.

Mr. THOMAS. Does it make sense to put it there rather than bring it back here where you can consult the Department of Justice locally?

Mr. FABLE. May I explain it to you, Mr. Chairman?

Mr. THOMAS. Yes.

Mr. FABLE. This is all going to be done in the future as it has in the past by the Department of Justice, with the approval of the courts. The only money that is going to be paid out of the compensation and pension appropriation is money which is the result of a compromise court-approved settlement. We have thought that this transfer to the compensation and pension appropriation was not only good commonsense but good accounting because Congress enacted Public Law 87–825 which provides for the offset.

Mr. THOMAS. To pay for pensions and compensation but not to pay anybody for negligence, being run over with an automobile or something of that nature.

MALPRACTICE TORT CLAIM PAYMENTS

Mr. FABLE. If the money which is paid in the compromise of a tort claim is potentially subject to the offset provision of section 351 of title 38, you will not pay him any compensation until the amount of compromise or settlement has been offset. That means where you have a malpractice case and where there is a court-approved compromise——

Mr. THOMAS. What do you mean by malpractice?

Mr. MONK. Something happens in the hospital that should not have.

Mr. THOMAS. This covers everything from soup to nuts, any tort case.

Mr. MONK. No; the other tort cases would still be paid out of this appropriation. The only ones we are talking about transferring are the so-called malpractice cases.

Mr. THOMAS. That is the only type of case transferred?

Mr. FABLE. Only those payable under section 351, title 38.

Mr. THOMAS (reading):

As amended, and for payment of amount of compromises or settlements under 28 U.S.C. 2677 of tort claims potentially subject to the offset provisions of 38 U.S.C. 351.

Does 38 U.S.C. 351 apply only to malpractice cases?

Mr. FABLE. No, sir; but section 351 benefits are only payable where it is shown—may I read from regulations covering it?

Mr. THOMAS. Let us see what the laws says. Subchapter VI, General Compensation Provisions; 351, benefits for persons disabled by treatment. By treatment? Or vocational rehabilitation. By treatment. I presume that is your malpractice. [Reading:]

Where any veteran shall have suffered an injury or aggravation of an injury as a result of hospitalization, medical or surgical treatment, or the pursuit of a course of vocational rehabilitation under chapter 31 of this title.

Ordinary tort claims are not covered. This is only medicine and education?

Mr. MONK. That is right, sir.

Mr. THOMAS. What about the offset provision?

Mr. FABLE. That results from Public Law 87–825. The offset provision says that if the money is paid as a result of the compromise, you will not pay compensation or pension until the compromise is offset. It is our feeling that the money which is going to be given to the veteran who brought the suit and who got the compromise is in lieu of compensation and therefore it should come out of the compensation and pension appropriation.

Mr. THOMAS. Since you assume he is already on the roll, drawing either compensation or pension——

Mr. DRIVER. Or would be put on.

Mr. THOMAS. Could be put on how?

Mr. DRIVER. As a result of the negligence.

Mr. FABLE. Under 351.

Mr. OSTERTAG. Would that be the result of the compromise?

Mr. FABLE. May I go back in history?

Mr. THOMAS. That goes back to service connected.

Mr. FABLE. Yes, sir. In 1924, under the World War Veterans Act, there was authority given to the Administrator of Veterans' Affairs, or rather to his predecessor, to put on the compensation rolls, as the language was just read, individuals whose disability is the proximate result of carelessness, accident, negligence, lack of proper judgment, or similar fault of the VA.

Mr. THOMAS. How would he get a pension? We will say X is not drawing a pension. He signs the form. He did not get within a thousand miles of a gunshot. You mean to say he can get——

Mr. DRIVER. Service connected.

Mr. THOMAS. You get service connected here?

Mr. DRIVER. Yes, sir.

Mr. OSTERTAG. He gets service connected because of the negligence?

Mr. GLEASON. Negligence of a surgeon.

Mr. OSTERTAG. Not in the service.

Mr. DRIVER. This is by law.

Mr. THOMAS. Let me read the law. I think the Legislative Committee spelled this out. [Reads:]

Administered by the Veterans' Administration or as a result of having submitted to an examination under any such law—

at his request—

and not the result of his own willful misconduct and such injury or aggravation results in additional disability * * *.

Suppose he did not have any?

Mr. GLEASON. That is additional.

Mr. THOMAS (reading):

* * * or the death of such veteran, disability or death compensation under this chapter and the dependency and indemnity compensation under chapter 13 of this title shall be awarded in the same manner as if such disability, aggravation, or death were service connected.

Mr. OSTERTAG. In other words, this is establishing service connection subsequent to service.

Mr. GLEASON. Yes, sir.

Mr. DRIVER. Just like a gunshot wound.

Mr. GLEASON. If a man was in for an operation and the surgeon let the knife slip and he was disabled for the rest of his life because of it, he becomes service connected.

Mr. OSTERTAG. That is what this does?

Mr. GLEASON. Yes, sir.

This transfers the funds to pay these costs from the General Counsel's Office to compensation and pensions.

Mr. EVINS. Mr. Shipley wants to know how many have been added to the rolls as a result of this act.

Mr. FARMER. Relatively few. I cannot give the exact number.

Mr. GLEASON. Could you give a horseback opinion?

Mr. FARMER. I can give you a horseback opinion. Less than a hundred a year. In the neighborhood of 50 to 60.

Mr. THOMAS. This was passed in 1962. Give it a little time.

Mr. FARMER. They are unusual.

Mr. DRIVER. Many added are death cases. You are adding the dependent.

Mr. OSTERTAG. Do you mean to say that is already a part of the law?

Mr. GLEASON. Since 1924.

Mr. OSTERTAG. A man is compensated for a disability subsequent to service if he has a disability which is the result of some negligence?

Mr. GLEASON. Ever since 1924, the same as if you went to a private hospital and it happened, you would sue the hospital.

Mr. OSTERTAG. You would sue the hospital?

Mr. GLEASON. And get compensated.

Mr. OSTERTAG. There is a difference between a suit and a settlement and payment and establishing service connection for compensation and payments indefinitely.

Mr. DRIVER. Until a year or two ago the man could go to court and collect under the Tort Claims Act, and on top of that draw compensation. This change provides if he gets a lump-sum award as a result of court action, he does not draw compensation until the amount of compensation he would get would equal the amount of the lump sum.

NUMBER OF MALPRACTICE CLAIMS

Mr. THOMAS. How many malpractice cases have you had throughout the system in the last 5 years?

Mr. FABLE. I have some figures.

Mr. THOMAS. Dr. Wise, do you have the figures?

Mr. WISE. No, sir.

Mr. DRIVER. The General Counsel has them.

Mr. FABLE. Mr. Chairman, if I may, could I just augment the answer a little bit? In 1958 there were 71 of those cases which were against the Federal Government. In 1959 there were 94. In 1960 there were 104. In 1961 there were 111. In 1962 there were 141. In 1963 there were 147.

Mr. EVINS. Does not speak well for your medical service.

Mr. FABLE. I have not completed my answer yet. As of January 31, 1964, there was a figure of 157. This was not the number of malpractice cases against the Veterans Administration but the total malpractice cases against the Federal Government. Now here are the figures against the VA.

Mr. EVINS. This is for malpractice?

Mr. FABLE. Yes, sir.

Mr. EVINS. I still say it does not speak well for the medical service.

Mr. FABLE. These are Government-wide, overall figures from the Department of Justice.

Mr. THOMAS. That is general throughout the Government?

Mr. FABLE. Yes. That is Air Force, Department of Health, Education, and Welfare, Army, Navy. At a time when there were 111 throughout the United States, against the United States, there were 49 cases against the Veterans Administration.

Mr. THOMAS. It's a little too high percentage, is it not?

Mr. FABLE. At a time when there were 157 against the United States, there were 64 against the Veterans Administration, which shows we are constantly getting less and less on a percentage basis and we probably also have a fewer number based on patient-days.

Mr. THOMAS. What do you mean, less and less? Your percentage goes up each year.

Mr. GLEASON. The percentage is going down.

Mr. EVINS. The number of overall cases is up but the number for the VA is down.

Mr. THOMAS. The actual number of cases for the VA is going up.

Mr. GLEASON. We are treating more cases.

Mr. DRIVER. The exposure is higher because of more patients treated.

Mr. FABLE. Two years ago, it was 49 out of 111, which is about 45 percent and today 64 out of 157 which is only 40 percent.

Mr. JONAS. The total number is going up but the percentage is going down?

COST OF MALPRACTICE CLAIMS

Mr. THOMAS. What is the average cost in one of those cases?

Mr. FABLE. An article, in the May issue of the Reader's Digest, says that malpractice litigation has become at least a $50 million annual business. A single California attorney boasts of having separated doctors or their insurers from over $8 million.

Mr. THOMAS. How much did he say he got?

Mr. FABLE. It did not say how much he got, but there was $8 million overall. Since 1950, jury awards in such cases have trebled. Now as far as the VA is concerned, we have been consistently, within the past 2 or 3 years, running in figures of around 62 to 68 suits pending at a time. During the past 3 years we settled several suits—when I say "we," I mean the Department of Justice. In 1961 they compromised nine. In 1962 they compromised seven. In 1963 they compromised 17.

Mr. THOMAS. What did they cost?

Mr. FABLE. The seven in 1962 cost $37,000. The 17 in 1963 cost $358,500.

Mr. THOMAS. The price is going up.

Mr. FABLE. We had one settlement of $150,000.

Dr. DRIVER. It depends on what happened.

Mr. OSTERTAG. Who does the work, the Justice Department or the Veterans Administration?

Mr. THOMAS. These are settlement cases by mutual consent. Do you have figures of what the jury has been awarding?

Mr. FABLE. Only two judgments for the plaintiff in 1961 and 1962. I think I have the figures in my hip pocket some place.

Mr. THOMAS. I will bet a horse he has.

Mr. FABLE. I believe one was $7,500. The other was $2,000. Of course the judge is the jury in these cases.

Mr. THOMAS. We had better go to the jury all the time, then.

Mr. FABLE. As a good defense attorney, you know you only go to a jury when——

Mr. THOMAS. What was the nature of the case where you settled for $150,000?

Mr. FABLE. That was one where a man's spinal cord was severed. There was a judgment against the United States for $200,000. The case was appealed.

Mr. THOMAS. That was not a Veterans' case, was it?

Mr. FABLE. Yes, sir.

Mr. THOMAS. That was under the old statute where they sued the Government?

Mr. FABLE. They can still do it today, sir. Plaintiff sued for $500,000, alleging paralysis followed a cervical laminectomy operation. The evidence and testimony at trial was conflicting and injurious to defense of the suit. The cumulative picture developed during the trial indicated that a leakage——

Mr. THOMAS. Where is that hospital located where the operation was performed?

Mr. FABLE. Hines, Ill. The cumulative picture developed during trial indicated that leakage and accumulation of blood at the operative site gradually produced a paralysis first detected in early morning, with relief measures in midafternoon, but not before irreversible paralysis ensued. Judgment was entered for $200,000. The Government took an appeal which was subsequently compromised at $150,000.

Mr. THOMAS. Judge Fable, you have been very helpful. We give you A plus.

Mr. FABLE. Thank you.

BOARD OF VETERANS' APPEALS

Mr. THOMAS. We will put page 5–20 in the record.

(The page follows:)

BOARD OF VETERANS' APPEALS, $2,837,000

Summary of requirements

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate	Increase (+) or decrease (−), 1965 over 1964
Average employment	333	305	262	−43
Personnel compensation	$2,853,904	$2,838,400	$2,574,900	−$263,500
Personnel benefits	210,461	209,000	189,000	−20,000
Subtotal	3,064,365	3,047,400	2,763,900	−283,500
Travel and transportation of persons	11,350	13,300	17,700	−4,400
Transportation of things	3,608	2,000	2,000	
Other services	8,614	13,400	14,400	+1,000
Supplies & materials	4,393	6,700	6,000	−700
Equipment	6,104	8,200	33,000	+24,800
Total cost	3,098,434	3,091,000	2,837,000	−254,000

Mr. THOMAS. You have 262 people, a reduction of 43 against 305 last year. This is average employment again. You show a reduction overall of $254,000 this year against last year.

Mr. EVINS. Equipment and travel are up.

Mr. THOMAS. You have two little pluses, one on "Other services," $1,000, and "Travel" you go from $13,300 up to $17,700. What did the pay act cost you, Judge?

Mr. STANCIL. The average salary increased about $500 per employee. Most of it is pay act.

Mr. THOMAS. You have a minus $263,500 in your personnel compensation.

Mr. STANCIL. A reduction in personnel compensation.

Mr. THOMAS. What did the pay act cost you? You are keeping 262 people. What is your pay act cost for those?

Mr. STANCIL. The average base salary, sir, is $9,649.

Mr. THOMAS. About 2 percent of your payroll?

Mr. STANCIL. It is closer to 5 percent, sir.

APPEALS CASELOAD

Mr. EVINS. I made a little observation here. Under "Mission," you estimate for fiscal 1965 a 22,000 caseload, which is considerably

below the trend in recent years. That is on page 5–22. On the next page, 5–23, you show an increase.

Mr. STANCIL. Yes, sir.

Mr. EVINS. From 18,000 to 22,000, a 4,000 increase, which is a little inconsistent.

Mr. STANCIL. Not when it is explained this way. Public Law 87–666, which the Administrator referred to in his opening statement, became effective January 1, 1963, in the middle of fiscal year 1963. Before fiscal 1963 the caseload had been running from 36,000 to 39,000 cases per year. In fiscal year 1963, when this new law came into being, most of that 24,000 you see there were received in the first half of the fiscal year. Only a minor portion represents appeals filed after January 1, 1963.

Mr. EVINS. You do not have as many appeals since you give them the statement of the case?

Mr. GLEASON. That is right.

Mr. EVINS. You say 1965 is up 4,000 over 1964.

Mr. STANCIL. That is right. The statement of the case gives the veteran a great deal more notice of what has been done, what the facts are; what the law is; and what the reasoning is for the action in the regional office. A certain number of them accept that and drop out. An additional number are paid in the field office without coming to the board. The sum total of the two add up to the reduction in our caseload.

Mr. EVINS. Did you not testify on the bill that it would require more work on the part of the VA if the bill was enacted into law because of having to write a separate opinion on every case for everybody?

Mr. STANCIL. Only those who initiate an appeal get a statement of the case. Preparing the statements is more workload on the field office.

Mr. EVINS. More work in the field and more cases, but your statement says the trend is down.

Mr. GLEASON. It is down for the Board.

Mr. STANCIL. It is easy to explain this 18,000 being lower than the 22,000.

Mr. THOMAS. Put pages 22, 23, and 24 in the record.

(The pages follow:)

MISSION

The Board of Veterans' Appeals is a statutory Board created in 1933. Its authority is now defined in title 38, U.S.C., chapter 71. The major objective is to equitably decide appeals under all laws administered by the VA, with sympathetic understanding and as expeditiously as possible consistent with quality, in order to grant all benefits to which veterans and their dependents are entitled. The decisions of the Board are final except as to cases involving insurance contracts (1 percent of the cases decided) where suit may be brought into Federal courts. We estimate our workload for fiscal year 1965 at 22,000 cases, which is considerably below the trend for receipts in recent years. This decline in appealed cases is expected because of the liberalizing effects of laws governing entitlement to benefits for aging veterans and to Public Law 87–666, Statement of Case, which was enacted for the purpose of improving due process of law in the adjudication and appellate process. Many of the decisions entered in these cases involve multiple issues and include contesting claims by two or more claimants.

Distribution of average employment

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate	Increase (+) or decrease (−), 1965 over 1964
Office of Chairman	9	8	8	
Appellate Service I	87	84	74	−10
Appellate Service II	85	76	65	−11
Administrative Service	152	137	115	−22
Total	333	305	262	−43

STAFFING

Average employment level of 262 is required for 1965, and will enable the Board to render appellate decisions of high quality in a timely manner in volume approximating the anticipated workload. Personnel requirements for accomplishing the Board's mission are determined by use of work measurement techniques and principles. Estimates for measured activities are developed by applying work performance standards to anticipated workloads. Staffing requirements for planning, program direction, and supervision, as well as overall personnel in the limited nonmeasurable areas, are dictated by experience.

The steadily decreasing employment of 333, 305, and 262 for 1963, 1964, and 1965, respectively, is attributable to: increased proficiency in the conduct of the Board's mission; downward trend in appellate workload, primarily due to Public Law 87–666.

The staffing is calculated to be the minimum for the proper disposition of projected workloads.

Summary of workload

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate
Total, case receipts	24,435	18,000	22,000
Disability benefits	20,889	15,334	18,700
Death benefits	2,304	1,866	2,290
Insurance	305	200	230
Waivers and forfeitures	937	600	780

The workload is estimated to be 18,000 and 22,000 cases for 1964 and 1965, respectively, and has been determined by experience and judgment factors. While a decrease in number of cases is indicated, our studies show that this will be partially offset by an increase in the complexity and volume of records to be reviewed in the individual case, including the added duty of determining whether "statement of case" procedures accomplished the "due process" objective of Public Law 87–666.

This law, effective January 1, 1963, modifies appellate procedures at the original jurisdictional level by requiring that field offices furnish each appellant with a "statement of case" and allow a period up to 60 days for appellants to answer. This lengthening of processing time and resulting backlog in field offices created a one-time lag in appeals received in Washington, thus reducing receipts for fiscal year 1963. However, decisions were promulgated in 31,370 cases during fiscal year 1963 with a consequent reduction in the Board's docket, which was excessive.

The estimated workload for 1964 is also reduced because the lag in field office processing of appealed cases continued into fiscal year 1964, and because of the impact to date of Public Law 87–666, particularly as to appealed cases closed by field offices for the appellant's failure to respond to the statement of the case. During this interim period in which the Board's workload is slowly building to its new normal level, some of the Board's professional and administrative personnel have been detailed to assist in working off the increased field office workload and thus bring about a normal appellate program at an earlier date.

The estimated workload for 1965 assumes that field offices will have achieved currency in their operations by the beginning of 1965, thus permitting a more nearly stable and normal workload to flow to the Board in Washington.

Mr. THOMAS. Let us see if this helps the discussion. [Reading]:

This law, effective January 1, 1963, modifies appellate procedures at the original jurisdictional level by requiring that field offices furnish each appellant with a "statement of case" and allow a period up to 60 days for appellants to answer. This lengthening of processing time and resulting backlog in field offices created a one-time lag in appeals received in Washington, thus reducing receipts for fiscal year 1963. However, decisions were promulgated in 31,370 cases during fiscal year 1963 with a consequent reduction in the Board's docket, which was excessive.

Mr. Evins points out to you that your workload which you set out in page 5–23 is estimated to increase from 18,000 in 1964 to 22,000 in 1965. Maybe this sentence that I just read explains that reduction. Is this the purpose of the sentence?

Mr. STANCIL. Yes, sir; to explain the reduction in fiscal 1963, and that lag continued into the first half of fiscal 1964.

Mr. EVINS. No further questions.

Mr. THOMAS. Does that explain it?

APPEALS BOARD TRAVEL COSTS

Mr. EVINS. On page 5–25 you state:

The increased cost for fiscal year 1965 over 1964 is attributable to increased fares for traveling sections of Board due to more miles traveled and for additional visits by a field appeals representative to field stations.

Do you send your men out in the field to write the statement of the case?

Mr. STANCIL. No, sir. We maintain a schedule of sending a section of the Board to each field office to conduct hearings approximately once each 2 years. It so happens that in fiscal year 1965 the schedule calls for the more distant offices, which will mean a little more travel. Also, while we are as far away as Texas or California, it makes sense to cover as many offices as you can while you are there, leaving them out a few days longer, rather than having the added expense of sending them out, again.

STATEMENT OF THE CASE

Mr. THOMAS. Let us go to the statement of the case. What do you mean by that terminology?

Mr. BRICKFIELD. Mr. Chairman, before you ever get to the appellate stage, you have the statement of the case. The statement of the case——

Mr. THOMAS. In other words, that is prepared by the local regional office?

Mr. BRICKFIELD. That is right.

Mr. THOMAS. We find you are not entitled to this or that and give the opinion. What is the statement of the case?

Mr. STANCIL. I would like to clarify one point. The case is in the appellate stage but not in the Board of Veterans' Appeals. The appellate process is initiated by the claimant expressing disagreement with the adjudication action.

Mr. THOMAS. Who files the statement of the case?

Mr. BRICKFIELD. If a veteran makes a claim for pension or compensation and the regional office denies it, he then has a year to submit a notice of disagreement to us. The minute he gives us this notice of disagreement, we prepare a statement of the case.

Mr. THOMAS. Is that in the field?

Mr. BRICKFIELD. This is in the field office.

Mr. THOMAS. What does that statement of the case contain?

Mr. BRICKFIELD. The statement of the case contains a chronology of the pertinent facts—everything that happened to the veteran. It sets out all the facts. Then it follows with a statement of the law. Then follows our decision. Then follows the reasons underlying our decision. This is sent to the claimant.

Mr. THOMAS. What is sent to the claimant when his claim is disallowed?

Mr. EVINS. A letter.

Mr. BRICKFIELD. Just a letter.

Mr. THOMAS. Saying the case is disallowed. This sets out the reasons?

Mr. BRICKFIELD. Yes, sir.

Mr. THOMAS. Plus your decision?

Mr. BRICKFIELD. That is right.

EFFECTS OF STATEMENT OF CASE REQUIREMENTS

Mr. THOMAS. It makes sense. You think it has cut down these cases from 31,000 in 1963 to about 22,000 in 1965 by following that procedure?

Mr. BRICKFIELD. We believe so because we give the veteran the full explanation for our action.

Mr. THOMAS. Do you show any increase in your administrative cost either in the field or in the Board?

Mr. BRICKFIELD. Yes, there has been a shift of some of the workload from the Board of Veterans Appeals to our field offices.

Mr. THOMAS. Where is that set out?

Mr. BRICKFIELD. This would be in "Compensation and pensions," and it would be set out on page 8–39.

Mr. THOMAS. General operating expense?

Mr. BRICKFIELD. Yes, sir. You will see the summary of major workload. The last item says "Notices of Disagreement." This is the statement of the case. We estimate 36,000 statements, which we will prepare during fiscal year 1965.

Mr. THOMAS. This is reflected in your $839,000 increase in compensation?

Mr. BRICKFIELD. Yes, sir.

Mr. THOMAS. You only have 10 new jobs.

Mr. BRICKFIELD. That is right.

Mr. THOMAS. What part of that $839,000 is for "Pay Act" and "Other objects," and what part of it is for the 10 new jobs? What are these people, 12's, 13's, or what?

Mr. BRICKFIELD. They are 11 and 12, Mr. Thomas. We have a total of 121 people who work on these statements of the case.

Mr. THOMAS. About an average of two in each of your regional offices average?

Mr. BRICKFIELD. That is about right although we do not allocate it that way. You see the 36,000 cases. I think there will be about 60 percent of that 36,000 that will go up on appeal.

Mr. EVINS. As a result of this new law and shifting of the workload from the Board of Appeals to your regional offices, how many Boards of Appeal have you received? How many personnel in the central office field section have you been able to reduce?

Mr. STANCIL. The reduction in the Board of Appeals in numbers of people is 43, as set out in the average employment. Number of sections, we did have 14, we now have 12.

Speaking of shifting the work to the field, I think that this may be a little oversimplification. Additional work is created in the field in handling these cases and a smaller volume reaches the Board of Veterans Appeals. In that sense only, work has been shifted.

Mr. THOMAS. You show an increase in "Compensation and pensions." It has gone up about $400,000.

Mr. OSTERTAG. What this does is it reduced your number of appeals.

Mr. STANCIL. The number that reach the board; yes, sir. We had not quite finished the appellate process. Once the statement of the case is released, the veteran has the opportunity to answer it. If he fails to respond within a specified number of days, the appeal is dropped by the wayside with no further action.

Mr. OSTERTAG. Mr. Chairman.

Mr. THOMAS. Mr. Ostertag.

APPEAL PROCEDURE

Mr. OSTERTAG. It might be well if we had a clearer understanding as to this 60-day limitation in which a veteran has a right to appeal. Is it to appeal or to get a review of his case?

Mr. DRIVER. He has a year, basically.

Mr. BRICKFIELD. The law contains two limitations. One is he has a 60-day notice to answer the statement of the case. Yet at the same time he can initiate appeal any time within 1 year from the——

Mr. OSTERTAG. Is that not rather confusing? You say he has a 60-day limitation in which to appeal and yet under the law he has 1 year in which to actually appeal.

Mr. STANCIL. May I clarify that?

Mr. OSTERTAG. I think it should be clarified.

Mr. STANCIL. Under the law, prior to this new law, a man was allowed 1 year within which to appeal. He still has the 1 year within which to initiate an appeal. An appeal has become a two-stage process. He initiates his appeal by filing a notice of disagreement. He still has the 1 year he has always had to do that. Then he is furnished his statement of the case, and he has a 60-day period within which to answer the statement of the case.

Mr. OSTERTAG. Is the 60-day limitation based on——

Mr. STANCIL. To answer the statement of the case. It can be over and above the 1 year.

Mr. OSTERTAG. His right to enter a disagreement?

Mr. STANCIL. No, sir; the 60-day provision in the law relates only to answering the statement of the case.

Mr. DRIVER. He has already filed his appeal at this point, you see.

Mr. OSTERTAG. Is the veteran advised of not only his rights but the existence of this limitation?

Mr. STANCIL. In the initial letter of adjudication that goes to him, he is notified that if he is not satisfied, he has 1 year within which to initiate an appeal, and he is advised if he wishes to initiate an appeal, to let the field office know. When he sends that in, he is sent a statement of the case, and he is given additional instruction to answer within 60 days or his case will be closed for failure to respond.

I think this is where a little confusion comes in—for instance, take a man who initiates his appeal early in the year and gets his statement of the case promptly. Then he is given 60 days to answer. He still has not used up his original 1 year period. In reality, he has the 60 days or the balance of the original 1 year period, whichever is longer, to answer the statement of the case.

Mr. JONAS. Mr. Chairman.

Mr. THOMAS. Mr. Jonas.

APPEALS ABANDONED AFTER STATEMENT OF THE CASE

Mr. JONAS. Do you have any statistics that will show how many of these appeals are abandoned after receipt of the statement of the case.

Mr. STANCIL. Yes, sir; we have experience thus far this calendar year. It was not until toward the end of calendar 1963 that things began to stabilize. Thus far the experience is that 34 percent in calendar year 1963 have failed to respond to the statement of the case and thus had their cases closed.

The biggest part of those, however, are subject to reactivation if they come back in within their original year, and that 1-year period is still running in a large number.

Mr. JONAS. Even if they let that expire, they can reopen the case on new evidence and file another claim and start it all over again?

Mr. STANCIL. Yes, sir.

Mr. JONAS. You really do not know whether it has actually been abandoned.

Mr. STANCIL. Our budget is predicated here on the estimate that of the notices of disagreement initiated, approximately 55 percent of them will wind up with the Board of Veterans' Appeals. The rest will be either allowed locally at the field office level, thus withdrawing the appeal, or will be closed for failure to respond.

Mr. EVINS. Mr. Stancil, Mr. Jonas asked how many had been abandoned or rejected. I would like to ask the question: Percentagewise. how many are approved? What do your statistics show of cases filed on appeal?

Mr. STANCIL. At the field office level?

Mr. EVINS. Both levels.

Mr. STANCIL. It is ranging around 15.6 percent, at the field office level, withdrawn for allowance of benefits sought on appeal. Then for the Board of Veterans' Appeals, the figure is 16.69 percent for the last quarter. 17 percent for the quarter before that.

Mr. JONAS. Reversed?

Mr. STANCIL. Yes, the ones that reached the Board of Veterans' Appeals.

Mr. THOMAS. About 16 or 17 percent in the Board. That means about 30 or 31 percent of the total number of cases received some——

Mr. STANCIL. Not exactly, these percentages relate to different totals. My percentage of 16 to 17 percent relates to the number that reach the Board of Veterans' Appeals.

EFFECTS OF STATEMENT OF THE CASE

Mr. THOMAS. How has the statement of the case affected your decisions?

Mr. STANCIL. How has the statement of the case affected the Board?

Mr. THOMAS. Yes, applying to the Board.

Mr. STANCIL. Overall, it is a great improvement in the adjudication process.

Mr. THOMAS. What about the Board?

Mr. STANCIL. In the Board of Veterans' Appeals it complicates our work but has resulted in better decisions. The veterans who are before us, instead of merely asking for a review of the action taken, are in a position to argue facts or law. They know what transpired and what is in their file. The issues are sharpened and evidence is better developed.

Mr. THOMAS. Before the law, you knew about how many cases were filed with you. Now you set out those figures here. It was 31,000 or 32,000 and now it is 22,000. Is that the best information you can get as to the effectiveness of it? If it is, it is pretty good in itself. Is there any other information that you can put your finger on that shows it has slowed down appeals or satisfied them, or what do you have other than this broad general picture?

Mr. STANCIL. The statistical picture is the best. We have the subjective comments of service organizations throughout the country, the reactions of Members of Congress and the reactions of veterans in general, but the statistical picture, I think, tells the story.

Mr. THOMAS. It is bound to.

Mr. STANCIL. Yes, sir.

Mr. THOMAS. Heretofore you have been receiving 33,000 appeals a year and now it is cut to 22,000. That is bound to be it.

Mr. OSTERTAG. Has the reaction been favorable?

Mr. STANCIL. Yes, sir.

Mr. OSTERTAG. I would think it would be.

Mr. STANCIL. There is occasional concern expressed about the cases closed for failure to respond. Some of the service organizations are wondering if this number is a little large and whether there are good cases in the group.

Mr. THOMAS. Certainly this new statement of the case figures out as cost to you for fiscal year 1965 about $400,000 more than it has been costing you heretofore.

Mr. STANCIL. It will cost me a quarter million dollars less.

Mr. THOMAS. I am talking about the taxpayer. It cost the Compensation and Pension Section $650,000 after deduction of the increase in pay. That makes it come out about $400,000 or $450,000.

Mr. STANCIL. The law requires and results in better service to veterans. There is additional work to be done.

Mr. THOMAS. Of course, you cannot do the work for nothing, but it seems to me it saves everybody time and saves the taxpayers money, too.

Mr. JONAS. Mr. Chairman.

Mr. THOMAS. Mr. Jonas.

Mr. JONAS. You heard the story of the justice of the peace who for 20 years never lost a case on appeal. Some smart lawyer talked him into writing opinions, and he was reversed in every one thereafter. You do not think you are having that same experience?

Mr. STANCIL. No, sir.

Mr. THOMAS. That old justice of the peace never lost a case because he never gave reasons.

Mr. JONAS. After he started giving reasons, he was never sustained.

Mr. OSTERTAG. I wanted to comment on this whole process of appeals and the general system. On the face of it, it seems to me, whether it is a saving of money or not, it is a means toward giving the veteran a better break or better opportunity to present his case. I think that is important. I think it is essential.

There may be this time factor which may work to his disadvantage. But, nevertheless, I have experienced myself in certain of these cases where the whole case is documented, we know what we are up against when we go before the Appeals Board. That is important.

Mr. THOMAS. We are all agreed it is worth the money.

Mr. STANCIL. Even from the point of view of money, you will find, on a cost-per-case basis, the Board of Veterans' Appeals operates more economically than any quasi-judicial body in this city.

Mr. THOMAS. You and your associates do a magnificent job. We are proud of you.

OFFICE OF PERSONNEL

Gentlemen, let us look at the Office of Personnel Administration. Insert pages 5–27 and 5–29.

The Assistant Administrator for Personnel advises and assists the Administrator in all personnel policy matters. Develops agencywide personnel objectives and policies which will enable VA to obtain, develop, and retain the best qualified personnel. Furnishes advice and technical guidance to key agency and department officials on the application of VA policies and of Civil Service Commission regulations.

Average employment is being held to one less than the fiscal year 1964 level although increased workload is anticipated during the period of initial application of automatic data processing to personnel activities. An increase in manpower required to handle employee-management relationships, particularly in the areas of contract negotiation, grievances, and appeals, is also expected. Increased emphasis on the development of employees' skills and talents to meet changing requirements and more intensive and coordinated recruitment of technical and professional personnel will also require greater productivity from the staff.

Distribution of average employment

	1963 actual	1964 estimated	1965 estimated
Office of the Assistant Administrator for Personnel	6	5	5
Career Development Service	17	17	16
Classification and Pay Administration Service	9	9	9
Evaluation and Reporting Service	12	13	13
Staffing and Relations Service	18	18	18
Central Office Personnel Service	40	40	40
Total	102	102	101

Mr. THOMAS. You are asking for $1,141,200 this year and you have 101 jobs against 102 last year, a decrease of 1. Personnel compensation goes up $41,954. Is that all pay act?

Mr. MONK. Basically.

Mr. THOMAS. What about your "Other services"? You show a little increase of $3,249. "Other services" are where?

Mr. MONK. Page 5–33.

Mr. THOMAS. "Transportation of things" is up $2,000, is it?

Mr. GLEASON. No, sir, it is the same.

MAINTENANCE OF OFFICE EQUIPMENT

Mr. THOMAS. What about our maintenance shops? We have three now, one on the Pacific coast, one at Hines, and where is the other?

Mr. COOK. These are for office machines.

Mr. THOMAS. Hines can fix almost anything. They can fix a dentist's drilling machine. They can do anything. You have a shop that does a little furniture repair; is that right?

Mr. COOK. Yes, sir.

Mr. THOMAS. Where is that?

Mr. COOK. Hines also. These are essentially office machines and typewriters.

Mr. THOMAS. You do this by contract. Why did this item jump this year? What are you going to do this year that you did not do last year with them? There is cost of recruiting, more travel. That is it, is it not?

Mr. GLEASON. Employee travel is only up $400.

Mr. THOMAS. I know, but the cost of the seminars comes pretty high. A seminar is an advanced study group, is it not?

Mr. UNDERWOOD. Yes. We have our regular National Management Institute, which is the capstone of our total management development program. We wish to put in an additional one in the field for this next year.

Mr. THOMAS. Who are you going to send from your shop? You are supposed to be taking care of personnel records. What management people are you going to send out of your shop?

Mr. UNDERWOOD. The people that we have who are at the head of the management development program. Dr. Manes Specter is one, magna cum laude from Harvard.

Mr. THOMAS. What are you doing with him over there? These doctors and lawyers will be getting all over you with a cum laude Ph. D.

Mr. UNDERWOOD. That is the kind of people we like to have heading up that kind of program.

Mr. THOMAS. It is hard to get them. What seminars is he going to? He is already educated. Why reeducate him?

Mr. UNDERWOOD. It is a rather continuous process. We hold some here in Washington. We have the 16th one starting this morning for managers, assistant managers, and chief of staff. We had hoped to do a little bit more at the division and service level.

MANAGEMENT AND EVALUATION

Mr. THOMAS. Let us look at "Management and Evaluation." We will put pages 35 and 36 in the record.

(The pages follow:)

ASSISTANT ADMINISTRATOR FOR MANAGEMENT AND EVALUATION, $2,112,500

Summary of requirements

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate	Increase (+) or decrease (−), 1965 over 1964
Average employment	161	163	160	−3
Personnel compensation	$1,573,560	$1,688,025	$1,777,935	+$89,910

Mr. THOMAS. Who has this?

Mr. MONK. Mr. Turner.

Mr. THOMAS. What about your police force? You have one 17, one 16, ten 15's, the Director of Services at 15, a staff assistant at 15, emergency planning officer at 15, administrative officer at 15, supervisory security officer at 14, special investigator at 14. What is the main duty of these 164 people you have here?

Mr. TURNER. To put it as short as possible, sir, it is our job to keep the Administrator advised of how good a job the agency is doing through such programs as of investigation and internal audit.

Mr. THOMAS. This is the eyes and the ears of the Administrator. What are some of the shortcomings, if any, you have discovered this year? What are some of your main complaints that you have to look into? Is it mostly complaints arising from your hospitals?

Mr. TURNER. We have a lot in the hospital program, but we have some administrative problems, too. The Rapidex item is one of them.

INVESTIGATION OF X-RAY EQUIPMENT PURCHASES

Mr. THOMAS. How did the Rapidex thing turn out?

Mr. TURNER. We are still investigating this, sir.

Mr. THOMAS. How long have you been investigating that?

Mr. TURNER. Since late last year.

Mr. THOMAS. Late last year. How many months would you call that?

Mr. TURNER. Three or four.

Mr. THOMAS. Three or four months. With 164 people, you should wrap that up in 2 or 3 weeks. Why so long? What does it look like so far?

Mr. TURNER. We still have not finished, sir, but the original supplier is out of business.

Mr. THOMAS. We are out the money and you have not finished. It looks to me as though you were finished before you got started.

Mr. TURNER. There is still some question of that. We are now in the process of trying to find out what went wrong internally.

Mr. THOMAS. We have been bragging on you, but we are going to have to withdraw that bragging if you are still investigating and the company has gone defunct. What else is there? Do you think some moral turpitude was involved?

Mr. TURNER. I think the company was defunct before we ever started.

Mr. THOMAS. Who else bought these machines besides the Veterans Administration?

Mr. TURNER. Other Government agencies.

Mr. GLEASON. A number of private hospitals, one in Washington was Georgetown University Hospital. They had one.

Mr. THOMAS. You should have that information if he has been devoting 3 months to it. Who else bought them? How many did they sell? How long has the company been in operation?

Mr. TURNER. The company went into operation about the same time that they began to build and sell this equipment. I have forgotten the exact year.

Mr. THOMAS. Is this the same crowd that brought pills out to Hines one week and the next week they went from $100 down to $5. It had about a 95-percent drop in price. Is this the same group again? This was not Hines but at Somerville.

Mr. GLEASON. This is supply.

Mr. THOMAS. How do we get hooked on this? Why do we have to break our necks to be the first to buy some untested medicine? Is it because Uncle Sam has the money and a slick salesman comes by and we purchase the item?

Mr. TURNER. The doctors could answer better, but in this case it looks like we were searching for a quick way to develop these X-ray films. Up to the time Rapidex came on the scene, this had been a manual process, sometimes quite long.

Mr. THOMAS. We are all familiar with that. We know it is not your baby. Tell us about it, Doctor. Why do we have to be the first ones to get hung? Is there not some way of taking these pills on trial or buying some of this equipment on trial? You ought not to be the biggest suckers in all the world every year. Any time anybody gets hung in the VA, it goes back to the Medical Department. You are the first ones to buy a worthless pill. Now you are the first ones to get hung on some piece of equipment. Is there not some way you can protect yourselves, the Administration, and the taxpayers?

Dr. MCNINCH. I do not know the answer on this particular item of equipment. I know the developments in the medical field are coming so fast, and equipment becoming obsolescent, that someone who is faced with a problem requiring new equipment is apt to——

Mr. THOMAS. Is there not such a thing as sending out a piece of equipment or a new patented medicine to, say, let us try it out for 30 days? We used to do that kind of bargaining.

Dr. MCNINCH. The trial of medical drugs is a separate subject, there are many controls today. I cannot answer as to why this particular purchase was made.

Mr. THOMAS. What does the Office of the Administrator do in these things? What about you, Mr. Gleason and Brother Monk and Brother Driver? Do you look over these things when a department puts it up to you? Do you pay it any attention?

Mr. GLEASON. I would like to ask Dr. Zink if he would explain this Rapidex purchase insofar as he knows.

Mr. JONAS. We have never found anybody yet who admits he is responsible for this purchase. I want to hear from him.

Dr. ZINK. Our people a number of years ago scoured the market for someone to build a smaller piece of equipment that would process these films. Those that were on the market at that time ran from $24,000 to $30,000. Many of our small hospitals could not afford this type of equipment because of the workload.

At about this time the Rapidex came on the market with this item that cost about $12,000. This is what we were looking for. We did look at it carefully. We went around and talked to people who had been using it, including the Georgetown Hospital. They were very laudatory about the performance of the machine.

This is reasonable when you consider the fact that these machines did very well for 6 to 8 months before they broke down. Again comes

the point: How long do you wait if you have an item here that is an economy? If you wait for the newest model all the time, you go without the equipment, or else it is obsolete when you get it. We thought we had given this a reasonable look.

Mr. JONAS. Did you have any of them on trial at any of our 175 installations?

Dr. ZINK. Did we put any out on trial?

Mr. JONAS. Yes; did the company put any of them out on trial to the Veterans Administration to let them test it?

Dr. ZINK. They did not in this instance, but again normally a trial would run for anywhere from 45 to 60 days. If we had these machines, they would have performed very nicely even up to 6 or 8 months.

Mr. JONAS. If they were that good, what went wrong all of a sudden?

Dr. ZINK. We were hopeful that is all it would take, but as time went on it was not the case. The machines would not hold up. In answer to the other question, we frequently——

Mr. JONAS. What became of the company?

Mr. MONK. Out of existence.

Mr. JONAS. Did you put up any research and development money in addition to this purchase price?

Mr. MONK. No.

Mr. JONAS. How much money was involved?

Mr. GLEASON. $580,000, I believe.

Mr. JONAS. How many did that represent?

Mr. MONK. 52.

Mr. JONAS. Would it not have been smart to have bought one and tried it out a year?

Mr. MONK. In retrospect, yes, sir.

Mr. THOMAS. Hindsight is always better than foresight.

Dr. ZINK. We bought a small number and put them out. They worked well and we bought more.

Mr. THOMAS. How many did you buy the first time?

Dr. ZINK. Twenty.

Mr. THOMAS. How much did each cost?

Dr. ZINK. $11,500, each.

Mr. THOMAS. How long did you keep them before you bought any?

Dr. ZINK. A period of 4 or 5 months before the second buy.

Mr. THOMAS. All of a sudden—how many did you buy, all together?

Dr. ZINK. Fifty-two.

Mr. THOMAS. Is there any information in this budget on this?

Mr. MONK. No, sir.

Mr. THOMAS. Why was it not under hospitalization expense here? How long has it been since they folded up on you?

Mr. COOK. About a year.

Mr. THOMAS. How much longer do you need?

Mr. JONAS. The company had a patent on this machine?

Mr. COOK. Yes.

Mr. JONAS. Was this the only company in the field making machines of this nature?

Mr. COOK. The only one at this price.

Dr. ZINK. I think one more comment would be in order.

Mr. JONAS. I believe your trouble was you took the low bid but you did not take the low responsible bid. Was the company brand new?

Mr. MONK. The company was brand new.

Mr. JONAS. Just in the field?

Mr. MONK. Yes, sir.

Mr. THOMAS. Did somebody else make the same kind of machine?

Dr. ZINK. Yes, sir. But the other cost $30,000 compared to $12,000. Pickers X-Ray was tied in, a responsible firm. They had a service contract with them. Looking back, of course, it was a fiasco, but at the time it looked very reasonable.

Mr. SHIPLEY. How many machines did this company manufacture and sell?

Mr. COOK. The Air Force got one of them.

Mr. GLEASON. All services took some.

Mr. SHIPLEY. Do you know how many the Government got stuck with?

Mr. TURNER. No; we only know how many we bought.

Mr. SHIPLEY. How long was the company in operation?

Mr. TURNER. A little over 2 years.

Mr. THOMAS. You have an item in here—we will get into it in detail after a while—about $844,000 on equipment for medical expense. Is it part of that $8.5 million in here for these new machines?

Mr. MONK. No, sir.

Mr. THOMAS. They tell me, if I am correctly advised, that this machine in 30 or 40 seconds would develop this X-ray, go through all the chemical process, heating, drying, everything, against what was it, 10 minutes for the old method? Is that about right, Dr. Zink? What was it supposed to do that was so good?

Dr. ZINK. This automatically developed and processed into the finished dried product the film that otherwise you have to do manually.

Mr. THOMAS. How long did it take to do it? You fed it into this machine and it came out the finished product?

Dr. ZINK. About a 2-minute cycle in the machine.

Mr. THOMAS. Was it that long?

Dr. ZINK. Yes.

Mr. THOMAS. What was the old manual way of doing it? How long did it take?

Dr. ZINK. I do not know if I have the figure. It took quite a bit longer. If you had a dryer, the time was not too great. The thing it did was save the man's time.

Mr. THOMAS. It was a big time element because I heard people speak about it. It either cut down the time element to 1 or 2 minutes from 8 or 10 or 12 minutes.

Dr. ZINK. Probably 15 to 20 minutes.

Mr. THOMAS. After you manually dipped it into the chemical process, you had to let it dry 3 or 4 minutes.

Dr. ZINK. If you let it dry that way, it takes hours, but in a dryer it takes a few minutes.

Mr. THOMAS. That is a separate piece of equipment.

Dr. ZINK. Yes.

Mr. DRIVER. It looked like a wonder worker.

Mr. OSTERTAG. Is not the whole issue involved here one of accepting deliveries of units after you had discovered the deficiency of these

units and the malfunctioning of them. The GAO indicates that the waste of Government funds and adverse effects on patient care which resulted from the procurement of the unsatisfactory processes clearly demonstrated a need to strengthen the VA's procurement and contract administration policies and procedures. That, to my mind, is the nub of the whole issue.

Mr. THOMAS. What does he mean by procedures? It looks to me that the Medical Department ought to be able to say to these pharmaceutical houses or equipment houses, if you have something good, we are good customers for your product, let us use it 30 or 60 or 90 days and see how good it is. Is that not still done?

Mr. GLEASON. As Dr. Zink mentioned, if you had done this, even if you had had it for 4 or 5 months on a trial basis, it still would have proven itself in that period of time.

Mr. THOMAS. That is hard to buy. It is hard to believe the thing is going to fall to pieces overnight.

Mr. EVINS. Did the VA discover this or was it the GAO?

Mr. GLEASON. GAO discovered it.

Mr. DRIVER. The users knew but the Administrator did not know.

Mr. JONAS. I would think the fact that you could buy this machine, an brandnew one, put out by a brandnew company, at $12,000 when the nearest product competitive to it was $30,000 would have been a red flag.

Mr. GLEASON. Mr. Jonas, I might mention, sir, as I recall, once this happened and this company put the machine out for $11,500, the other companies in related industry put out a like machine for approximately the same price now. In other words, we might have lost some money directly by purchasing these, but now we have a new price base. It has brought it down. If this company had not put it out at that price, they never would have brought it down.

Mr. OSTERTAG. The report shows that VA records indicated that at the Somerville Depot they had already received complaints from 25 of the 28 field stations at which processors had been installed. Nevertheless, the VA accepted subsequent deliveries of and paid $98,890 for the remaining nine units. That is my point.

Mr. GLEASON. It is well taken.

Mr. THOMAS. They were on notice.

Mr. OSTERTAG. You said GAO discovered this. You discovered it yourself, according to this report.

Mr. GLEASON. This is true. In the field we had our complaints, and so on.

PROCUREMENT POLICIES AND PROCEDURES

Mr. DRIVER. This is something we are now looking at to see what has to be changed so that cannot happen.

Mr. OSTERTAG. What about this recommendation of the GAO of the need to strengthen your procurement and contract administration policies and procedures?

Mr. GLEASON. That is what Mr. Driver just meant by that.

Mr. DRIVER. That is what Mr. Turner is continuing to document, to make certain we plug up whatever loopholes there are.

Mr. GLEASON. This may take him another 2½ months to complete.

Mr. OSTERTAG. We are bound to make mistakes as long as we are human, but when we make mistakes and do nothing to correct them, there is no excuse. One of the outstanding or glaring charges here against the Veterans' Administration is that after you discovered these inequities or inefficiencies, you did not move to correct them yourselves.

Mr. DRIVER. We are doing this now. It is too late for that.

Mr. THOMAS. In the Office of the Administrator, you have how many people?

Mr. MONK. Fifty-six people.

Mr. THOMAS. Out of that crowd, somebody ought to stop it. Somebody in the Office of the Administrator should do that.

Who in the Administrator's Office looks over the Medical Department?

Mr. DRIVER. I do, sir. Under certain procedures that are in effect, Mr. Chairman, this would never come to the Office of the Administrator for approval. We would not get involved in it normally until something like this has occurred. The practice within the Administration is to make sure this does not happen and to guard against it from the standpoint of the Administrator's office and, as you know, the Office of Internal Audit makes periodic spot checks of VA operations.

Mr. THOMAS. You mean the Office of the Administrator does not keep any check at all on the various bureaus as to what they do with their money?

Mr. DRIVER. Yes; it does. We get regular reports from them.

Mr. THOMAS. That is contradictory. You said you did not know anything about it until you get the next external audit.

Mr. DRIVER. When I said something goes wrong——

Mr. THOMAS. We are asking you if, with 56 people in the Office of the Administrator, why you did not catch it.

Mr. DRIVER. Because under normal procedures, the catching of it would occur within the department, and unless the department had a report, the second something went wrong it would be most unusual anyone in the Administrator's office would find it routinely. It just would not happen.

Mr. THOMAS. Are you not on speaking terms with the various departments?

Mr. DRIVER. Yes, sir.

Mr. OSTERTAG. Would they report their mistakes?

Mr. MONK. They should.

Mr. DRIVER. I would expect they would.

Mr. MONK. Ordinarily the Administrator would have been alerted to a problem of this magnitude but in this case he was not.

Mr. DRIVER. Someone from his office would not normally find it as a result of this own activities.

Mr. THOMAS. How did you get onto this item?

Mr. TURNER. The GAO came to us. We heard about it.

Mr. THOMAS. With 56 people, you did not turn it up?

Mr. UNDERWOOD. I was at the other end of this in the field station at Pittsburgh and that was one of the first ones. It was not clear at the time. We got one at a time as our patient load was increasing.

Mr. THOMAS. We are talking about when you got those 12 or 15 machines. You were at that end, too?

Mr. UNDERWOOD. No, sir. I wanted to show how this became apparent at this station only after a period of time.

Mr. OSTERTAG. Are we to understand that if it had not been for the GAO, this situation would have gone on indefinitely?

Mr. GLEASON. Not indefinitely.

Mr. DRIVER. It had been suspended at that time.

Mr. THOMAS. Gentlemen, let us come back tomorrow morning at 10 o'clock.

We should finish the title of "General Administration" tomorrow in about an hour or an hour and a half and then we will go on to the other bureaus.

Thank you, gentlemen.

TUESDAY, FEBRUARY 11, 1964.

Mr. THOMAS. Gentlemen, will the committee please come to order?

It is nice to see you all healthy and hale this morning. When we adjourned yesterday before this mammoth snow—and we ought to have it for the record. We all got here on time. The snow is 7 inches, or 6, Mr. Evins?

Mr. EVINS. Eleven.

Mr. THOMAS. We were discussing a matter with brother Turner, were we not? Brother Turner, you have a lot of jobs here. Let's refer to page 5–37. (Reading:)

> The Assistant Administrator for Management and Evaluation formulates and recommends to the Administrator general policies and plans of agencywide application.

That is the only thing you have in common. From there we branch out [continuing reading]:

> in matters relating to internal audit, investigation, emergency planning and security, employment policy, manpower utilization, management analysis, and supply management.

You run the whole field, do you not? That is the first police chief I have ever seen with so much jurisdiction.

WORKLOADS—MANAGEMENT AND EVALUATION

Preliminary inquiries, 64, 75, 75, stations visited—we are referring to the years 1963, 1964, and 1965: 303, 270, and 270. That is installations, I guess.

Employment policy group, cases closed, 122, 130, and 130. What does all this mean? You say full investigation, 56, 80, 85. What is a full investigation? Here is a preliminary investigation. You have 73, 85, 85. Audits authorized and anticipated, field station audits, 8, 10, 10; State soldiers homes audits, 0, 1, and 3. Is that under your jurisdiction?

Mr. TURNER. Yes, sir.

Mr. THOMAS. Who has this home out here? General Hazelit is the head of it. That comes under the Army, doesn't it?

Mr. GLEASON. Yes, sir. That is not a State home.

Mr. THOMAS. You are auditing the accounts of your people who are in the State homes?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. Central office audits, 0, 1, and 1. Special studies, 8, 5, and 5. This is hodgepodge jurisdiction. I do not know what the Administrator has in mind when he lumps all these divergent and sometimes overlapping items all under one jurisdiction.

Gentlemen, we will put 5–37 and 5–37a in the record.

(The pages follow:)

Summary of major workloads—management and evaluation

FIELD REPRESENTATIVES

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate
Preliminary inquiries	64	75	75
Station visits	303	270	270

Projects and special assignments	41	31	35

EMPLOYMENT—MANAGEMENT AND EVALUATION

Mr. THOMAS. This is more workload. Look at jurisdiction over on 5-38. Here is your personnel. You list activities. Then you correlate personnel with the activities. This is the meat in the coconut. Field representatives are listed. What do you mean? You have 66 regional offices. You have 10 here. Where are these located in the field?

Mr. TURNER. These are in Atlanta, Boston, Chicago, Dallas, and San Francisco, Mr. Thomas.

Mr. THOMAS. Why do you pick those out from any other office?

Mr. TURNER. We spotted these people out primarily as eyes and ears, extensions of what we are trying to do in here and they travel to assigned territories through field stations and keep us advised of trouble spots.

Mr. THOMAS. You do not keep one up in New Jersey to test those pills up there, do you?

Mr. TURNER. We have one in Boston, sir.

Mr. THOMAS. That is not a procurement office in Boston.

In the Employment Policy Section you have four for each year. Really, you have got two big sections here. One is what we call investigative. Then you have your brain trusting section. That is split up into four or five sections.

Here is the Employment Policy Section. I don't know where that goes. Here is your investigative service. That is your big one. That is coupled with your internal audit. There are about 70 people out of your 160.

EMERGENCY PLANNING AND SECURITY SERVICE

Here is Emergency Planning and Security Service, six, seven, and seven. What do they do?

Mr. TURNER. Sir, they adjudicate cases under Executive Order 10450.

Mr. THOMAS. Emergency Planning and Security Service coordinates the policies, plans, and programs covering VA's assigned emergency preparedness functions, and administers VA's document and personnel security programs. You are getting into fallout shelters here, planning for the future bombing and all of that. What do those seven people do over there?

Mr. TURNER. No. 1, sir, they coordinate VA emergency planning.

Mr. THOMAS. What is that? What is there this year that you did not coordinate last year?

Mr. TURNER. For example, an Executive order was issued since last year which assigns the specific emergency planning functions to agencies.

Mr. THOMAS. Let's see that Executive order. That must be a very interesting document. Let's see what the duties are. Do you have a copy of that?

Mr. TURNER. I don't have one with me. We can get it, sir.

Mr. THOMAS. What do the seven people do this year that you couldn't have wound up last year and what did they do last year? You have had that for about 6 or 7 years. What do they do?

Mr. TURNER. Besides the emergency planning activity they also review cases involving employees who are hired and cleared by investigation; everybody who comes on the rolls is investigated by a requirement of an Executive order for clearance, for Government employment and if some derogatory information is discovered——

Mr. THOMAS. Why should you be doing this to your workload when the Civil Service Commission has 1,500 investigators doing routine investigations? You stumble into something that looks bad and ugly. Then you have the FBI; they charge you around $1,000 to $2,000 per copy of the investigation.

Mr. TURNER. Someone has to review the case, the information that is developed in these investigations, and determine whether or not a person should have access to classified data and be in a sensitive position.

Mr. THOMAS. You mean you review the routine work of the Civil Service Commission and the detailed study of the FBI?

Mr. TURNER. Right; this is one of the jobs we do in this section.

Mr. THOMAS. Let's eliminate you. How many people do you have doing that? I don't think you are any better qualified than the Civil Service Commission or the FBI, either. I doubt if you are as well qualified.

Mr. TURNER. All they do is investigate and then they give the results to the agency. The agency must screen the information and decide what to do with it. Between the FBI and the Civil Service Commission, they will not recommend whether you clear or do not clear.

Mr. THOMAS. They are investigators. They give you the facts.

Mr. TURNER. Right.

Mr. THOMAS. Why shouldn't the Personnel Department do that? Why should you be doing it?

Mr. TURNER. The Commission from long past furnishes this service for agencies which cannot do it themselves. This involves strictly a personnel investigation and it involves a lot of people.

Mr. THOMAS. Are you working for some other agencies?

Mr. TURNER. No; we are not working for another agency but we pay the Civil Service Commission for a full field investigation where we need it and all employees get what we call a national agency check. This is a routine check, which the Commission furnishes without charge. If any of these cases involve subversive backgrounds, then the Commission calls in the FBI.

Mr. THOMAS. The Civil Service Commission furnishes that without charge? Look up your records.

Mr. MONK. On a full scale we pay $350.

Mr. TURNER. Right.

Mr. MONK. We have a limited number of those.

Mr. TURNER. If an employee is appointed he automatically is subjected to a national——

Mr. THOMAS. We know that as well as you do.

Mr. TURNER. If this is clear, nothing happens. If it is derogatory——

Mr. THOMAS. Why doesn't the Personnel Department handle that? How many people do you have in the Personnel Department? Every man who is employed in this Government goes through that routine

check. Why should you have a special organization set up to do this when it belongs in the regular personnel work?

The bigs things we overlook, with the little things we chase the rabbits all over the lot.

ALLOCATIONS FOR EMERGENCY PLANNING AND SECURITY

Mr. THOMAS. How much have you allocated for emergency planning and security outside of your own budget?

Mr. MONK. We do not get anything.

Mr. THOMAS. Not one penny?

Mr. MONK. No, sir.

Mr. THOMAS. How come? Didn't we appropriate about $4 million for about 12 agencies last year for this purpose?

Mr. MONK. But we have not been of the agencies to participate in this.

Mr. THOMAS. You do not enjoy that?

Mr. MONK. No, sir.

Mr. THOMAS. I do not know why that is.

SUPPLY MANAGEMENT SERVICE

Mr. THOMAS. Supply Management Service, 21, 22, 22. (Reading:)

Supply Management Service formulates and recommends general plans and policies of VA-wide application for contract administration, procurement, storage, distribution, supply management and overall management of the supply fund; evaluates effectiveness and economy of these operations.

Who has supply management this year? Where is Mr. Cook?

Mr. COOK. Right here, sir. This is my office.

Mr. THOMAS. Your office?

Mr. COOK. Yes, sir.

Mr. THOMAS. Who has the entire supply fund now, the procurement for all the installations and the warehouses?

Mr. COOK. The actual procurement and warehousing, sir, is in the Department of Medicine and Surgery.

Mr. THOMAS. Who has that, though?

Mr. THOMAS. Mr. Parmelee is the Director. He is in the next room.

Mr. THOMAS. What became of the Merchant Prince?

Mr. WISE. He died.

Mr. GLEASON. Mr. Cook took his place, Mr. Chairman.

Mr. THOMAS. You are split up all over the lot again. Your warehouses, supplies and everything are in another place and you are over here with the police force now. You are in about four different appropriations.

Mr. TURNER. This is a staff element, sir, that has always existed. It did exist before. Last March we merged two former staff officers into one, but Mr. Cook was still a staff officer as was Mr. O'Neil before him last year and several years before that.

Mr. THOMAS. We will have to go through your budget and transfer this over there when you get into other operation. What do you do in here you don't do in your regular warehouse operation? Is this where you do your purchasing?

Mr. TURNER. No, sir.

Mr. THOMAS. What do these words mean, then? (Reading:)

Supply Management Services formulates and recommends general plans and policies for VA-wide application for contract administration, procurement, storage—

This is just the brain truster crowd. How many people do you have over there doing the actual procurement in your warehouses?

Mr. COOK. In the warehouses themselves, sir?

Mr. THOMAS. In supply you have 3,745 in 1965 against 3,740 last year and 3,712 in 1963. "Management and evaluation" staff—is this your 22 that you are carrying on your chart?

Mr. COOK. Sir?

Mr. THOMAS. Your management and evaluation staff of 22 is the same 22 you had back under "Management and evaluation"?

Mr. MONK. This is the same. This has always been this way, Mr. Chairman. We have had a small staff group separate and apart from the operating group. Previously we had a separate assistant administrator for management services. Last year we combined this organizational element with Mr. Turner's appraisal element, so we eliminated one overhead staff job.

Mr. THOMAS. Where is the purchasing unit you used to have?

Mr. MONK. The purchasing unit is in the supply service at 112 people, 123 for 1965, plus the depots.

Mr. THOMAS. You mean you have your supply fund operation. Then you have your supply depots. Now, you have activities included and funded under medical care appropriation. What do you mean by "activities"? That is the big one.

Mr. MONK. That is field station supply operation. That is the supply officer in the field station at the hospital and his staff.

Mr. THOMAS. Most of your purchasing is done right in your 175 or 180 local stations as far as food is concerned—fresh fruit, milk, butter?

Mr. MONK. That is right.

Mr. THOMAS. How many people do you have buying in your local institutions if you have 22 here in headquarters?

Mr. MONK. The 22 in the headquarters do not do any buying.

Mr. THOMAS. What do they do?

Mr. MONK. They write the policies, oversee the general total supply program as a staff arm of the Administrator, but they are not directly in the line of operation of the supply program. This is done through the Department of Medicine and Surgery and the field station supply operations, the hospitals.

Mr. THOMAS. You do not mean to say you have one group that is laying down standards and forms and has nothing to do with the execution of the policy?

Mr. MONK. Yes, sir.

Mr. THOMAS. What do they do? Here is one crowd up here that you say lays down the standards and tells Medicine what to do and Medicine does the doing?

Mr. MONK. That is right.

Mr. THOMAS. Who should have caught this little error with your X-ray machines? That is what I am getting at. You have 22 people here laying down your standards and yet you turn it over now to Medicine. What liaison, what coordination, what rapport do you

have? I have the idea you do not know each other after you lay down the standards. What rapport exists between these 22 under Mr. Turner, or the Merchant Prince, and those in the Department of Medicine and Surgery?

Mr. MONK. There is a constant liaison. They are very close.

Mr. THOMAS. They sure were not very close. They weren't on speaking terms in the X-ray machine proposition.

Mr. GLEASON. This is true in this instance. There is nothing we can say other than that it won't occur again.

Mr. THOMAS. We do not want to run any salt in any wound. That is water over the dam. The taxpayers lost money. What can be done to prevent its happening again? There is something loose here, something disjointed, disconnected. You have the people, but the people don't function together properly.

Mr. GLEASON. Mr. Chairman, I feel confident that Dr. McNinch, who is our new Chief Medical Director, will make sure that there is closer liaison with his Department and the Office of the Administrator and these situations will not occur in the future, I can assure you.

Mr. THOMAS. It looks like to me that there are 22 braintrusters doing the purchasing. They ought to be over in Medicine where 75 or 80 percent at least of your total volume of your purchasing and supplies serve your medical installations. Why shouldn't they be in one package where they can see what is going on? Put your brain trusters over here in the police department.

Mr. MONK. The Administrator needs a staff to watch the total supply program and lay down broad——

Mr. THOMAS. Isn't that your job? You can supply that, can't you?

Mr. MONK. I need some help to do that.

Mr. THOMAS. How many people do you have in your office, Professor?

Mr. MONK. I have a secretary.

Mr. THOMAS. Only one?

Mr. MONK. Yes, sir.

Mr. THOMAS. Get yourself another secretary to do this.

We don't want to put salt in wounds, but it looks like this needs tightening up badly. A good way to tighten it up, instead of having 160 people, is to cut it down to about a hundred and see what happens.

OTHER OPERATING COSTS—MANAGEMENT AND EVALUATION

What about your other objects? Your personnel compensation is shown here. Is there anything unusual about this in other objects? Do you see anything?

Employee travel is a pretty high figure of $166,565.

Mr. MONK. That is high because these investigators and auditors are on the road most of the time.

Mr. THOMAS (reading):

> To replace equipment that cannot be economically repaired and which meets or exceeds the standards for replacement.

There is nothing out of the ordinary in this, is there?

Does anybody see anything?

Mr. MONK. This is typewriters.

OFFICE OF THE MANAGER, ADMINISTRATIVE SERVICES

Mr. THOMAS. Let's look at the office of the Manager, Administrative Services; housekeeping, $3,557,000.

Let's put page 5–42 in the record.

(The page follows:)

OFFICE OF THE MANAGER, ADMINISTRATIVE SERVICES, $3,557,000

Summary of requirements

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate	Increase (+) or decrease (−), 1965 over 1964
Average employment	460	449	420	−29
Costs:				
Personnel compensation	$2,492,013	$2,522,000	$2,467,500	−$54,500
Personnel benefits	188,799	195,000	187,000	−8,000
Total, personal services and benefits	2,680,812	2,717,000	2,654,500	−62,500
Travel	6,242	9,900	9,000	−900
Transportation of things	39,940	48,500	50,100	+1,600
Rents, communications, and utilities	180,667	228,000	206,000	−22,000
Printing and reproduction	406,460	386,000	370,000	−16,000
Other services	222,502	116,300	106,000	−10,300
Supplies and materials	151,564	146,300	142,100	−4,200
Equipment	73,007	48,000	19,300	−28,700
Total costs	3,761,194	3,700,000	3,557,000	−143,000

Mr. THOMAS. Who has this?

Mr. MONK. Mr. Gorman.

Mr. THOMAS. Where is Brother Gorman?

Mr. GORMAN. Right here, sir.

Mr. THOMAS. You know, you ought to be around in front; we have been looking for you.

Where are you from, Mr. Gorman?

Mr. GORMAN. Brockton, Mass., sir.

Mr. THOMAS. This weather makes you feel at home, does it not?

Mr. GORMAN. It sure does.

OPERATING COSTS—ADMINISTRATIVE SERVICES

Mr. THOMAS. Discuss this with us, Mr. Gorman.

You have personnel compensation and this shows a decrease of $54,500, but you still have a bill of $2,467,500. Other objects run about $900,000, which according to my books is about 33⅓ percent of your salary costs. That is considerably high, is it not? Let's see why it is high. He has travel, $9,000, minus $900; transportation of things, $50,100, an increase of $1,600; rents, communications, and utilities, $206,000, minus $22,000; printing and reproduction $37,000, minus $16,000; other services, $106,000, minus $10,000.

Mr. EVINS. Mr. Chairman, I would give him a good mark. They are almost all minus.

Mr. THOMAS. The whole program is down $143,000. You are right.

Mr. MONK. I would like to point out that Mr. Gorman is the housekeeper for the central office elements. These other objects not only are for his office, but for all the other staff offices.

Mr. THOMAS. Dr. Monk, you are always eminently correct.
Let's put page 5–44 in the record.
(The page follows:)

OFFICE OF THE MANAGER, ADMINISTRATIVE SERVICES

Mission

The Manager, Administrative Services, is responsible for the provision of general administrative services. Primary functions include providing basic office service support in central office and certain specialized operating services on a VA-wide basis.

Office Services Division provides, on a VA-wide service basis, claimant identification and folder location, language translation, records development, and processing notices of death. Mail and messenger, files maintenance, telecommunications, and remote transcription services are furnished for all of central office.

Central Office Finance Division is responsible for all fiscal services for central office.

Building and Supply Division provides supply, building management, equipment maintenance, and repair service for all central office.

Visual Aids Division produces and distributes visual media including exhibits and film production on a nationwide basis.

Distribution of average employment

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate	Increase (+) or decrease (−), 1965 over 1964
Office of the Manager	11	13	11	−2
Office Services Division	328	314	287	−27
CO Finance Division	47	48	48	----------
Building and Supply Division	54	54	54	----------
Visual Aids Division	20	20	20	----------
Total	460	449	420	−29

In addition to the above four Divisions, the Manager, Administrative Services, has jurisdiction over the Publications Division and Creative Arts Section. These elements are funded under the supply fund. Accordingly, their details and justification are included under the consolidated supply activities.

FUNCTIONS OF ADMINISTRATIVE SERVICES

Mr. THOMAS. This sort of gives you a good bird's eye view of his 420 people. [Reading:]

The Manager, Administrative Services, is responsible for the provision of general administrative services. Primary functions include providing basic office service support in central office and certain specialized operating services on a VA-wide basis.

These services are on a VA-wide basis. You have "claimant identification and folder location, language translation"—that must be a heavy duty—"records development, processing notices of death." Mailing, files, one of your big ones, telecommunications and remote transcription services are furnished to the central office.

Your Central Office Finance Division is responsible for all fiscal services for central office. "Building and Supply Division provides supply, building management, equipment maintenance and repair service for all central office." You have 54 people in this Division. That is the plumber, electrician, typewriter repairman.

Mr. MONK. The labor crew to move furniture.

Mr. THOMAS. Office Services Division is a big one. You have 287 for 1965. That is minus 27 from 1964. That is on an agencywide basis. You have Folder Division, Language Translation. How many do you have there?

Mr. MONK. We have eliminated that.

Mr. THOMAS. Record Division and processing notices of death. What do you mean? You have mail and messenger, file maintenance. Let's see your breakdown on your big activity. You reduced about 27 in the Office Services Division. You have visual aids, here, 20, Building and Supply Division, 54. What does this Building and Supply Division do? You provide supply, building management, equipment maintenance, repair service for all central office.

What are you going to repair, adding machines, bookkeeping machines?

Mr. GORMAN. We have a machine repair unit repairing our calculators and typewriters.

Mr. THOMAS. Doesn't Building Management Service over in GSA have somebody to take care of your lights and your plumbing and items of that nature? You do not do that, do you?

Mr. GORMAN. No, sir. We are the liaison with GSA on all building maintenance and tenant's alterations.

Mr. EVINS. Your number of employees are down 29 for next year over the past year, is that correct?

Mr. GORMAN. Yes, sir.

OTHER OBJECT COSTS—ADMINISTRATIVE SERVICES

Mr. EVINS. What things are you going to be transporting? You have a slight increase for this item as shown on page 5–46.

Mr. GORMAN. Principally in line with our exhibits, sir, our visual aids.

Mr. EVINS. Rents, communications, and utilities are decreasing.

Mr. GORMAN. Yes, sir.

Mr. EVINS. This item goes up in a number of agencies. You are in line with President Johnson's policy of keeping the lights turned off, I guess.

Mr. GORMAN. Yes, sir. We have a memorandum out to all concerned people to turn out the lights when they go home at night.

Mr. EVINS. That is fine.

CONTROLLER

Mr. THOMAS. We will turn to the Controller. For 1963–65 you had an average employment of 73, 75, 74. You are down one, for a total of $810,075 for personnel compensation in fiscal year 1965 as against $790,053 in fiscal year 1964. You are down $3,700 overall but personnel compensation is up about $20,000. Why this increase?

Mr. SHYTLE. All of that is attributable to the step-2 increase. This is the net effect of most of that, sir.

Mr. EVINS. Controller's Office renders an important service. Mr. Reporter, place in the record pages 5–49 through 5–54.

(The pages follow:)

Controller, $1,060,300

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate	Increase (+) or decrease (−), 1965 over 1964
Average employment	73	75	74	−1
Personnel compensation	$711,006	$790,053	$810,075	+$20,022
Personnel benefits	53,055	60,747	62,073	+1,326
Subtotal	764,061	850,800	872,148	+21,348
Travel and transportation of persons	8,337	16,400	16,400	
Transportation of things		1,600	1,600	
Other services	128,801	189,400	165,552	−23,848
Supplies and materials	1,406	1,800	1,800	
Equipment	4,164	4,000	2,800	−1,200
Total cost	906,769	1,064,000	1,060,300	−3,700

The VA Controller is the top financial management officer of the agency. He is responsible to the Administrator for the economical and efficient use of all funds available to the agency and for the control, direction, and administration of all financial operations. He is responsible for reports management and the basic reports structure of the agency, and in research statistics he provides staff support and publications on the veteran population, its characteristics, composition, and participation in Veterans' Administration programs. In addition, he is the principal representative of the Veterans' Administration on budget, appropriations, accounting, and other fiscal matters with the Bureau of the Budget, the Congress, the Treasury Department, the General Accounting Office, and other Government agencies.

The VA Controller's office includes a budget service, financial management service, reports management service, and research statistics service, in addition to his immediate office. These services operate in their functional areas VA-wide to assist the Controller in discharging his responsibilities.

Distribution of average employment

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate
Controller's immediate office	3	4	3
Budget service	27	27	27
Financial management service	23	24	24
Reports management service	12	12	12
Research statistics service	8	8	8
Total	73	75	74

The functions of these services have been emphasized and realined during the past year to meet increasing controllership demands.

In the budget service the fiscal year 1963 average employment level of 27 is projected for fiscal year 1964 and fiscal year 1965. Increased employee effectiveness and productivity in the current and budget years will make additional man-hours available for expanded efforts to (1) more closely relate agency planning and budget functions and objectives, (2) develop better techniques and methods for relating workloads to manpower requirements in determining and justifying agency fund requirements, and (3) generally improving the content and quality of future agency budget submissions.

Financial management service requirements are increasing due to the impact of automatic data processing techniques on accounting, fiscal administration, audit programs, and costing applications; and the continuing emphasis on improving financial management to achieve maximum economy and efficiency throughout the agency.

Reports management is continuing its emphasis on agencywide reports control, reporting needs, and improvements in presentations to the Administrator and top staff officials on program status, progress, and problems.

Research statistics is developing long needed data on veteran population and characteristics from tabulations by the Census Bureau and the Department of Health, Education, and Welfare.

10. Personal services and benefits

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate	Increase (+) or decrease (−), 1965 over 1964
11 Personnel compensation	$711,006	$790,053	$810,075	+$20,022
12 Personnel benefits	53,055	60,747	62,073	+1,326
Total	764,061	850,800	872,148	+21,348

The increase in cost is attributable to the pay increase as authorized by Public Law 87–793.

21. Travel and transportation of persons

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate	Increase (+) or decrease (−), 1965 over 1964
Employee travel	$8,218	$16,300	$16,300	----------
Local travel	119	100	100	----------
Total	8,337	16,400	16,400	----------

Funds are required for field travel to evaluate budget processes, accounting systems and procedures, reports management, statistical applications, inauguration of a financial audit program, and to obtain an overall evaluation of the Controller's activities.

These funds will also enable our staff personnel to participate in budget conferences, attend financial management, statistical research, seminars, and training courses to include the development and application of automatic data processing functions as pertains to the Office of the Controller.

22. Transportation of things

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate	Increase (+) or decrease (−) 1965 over 1964
Shipment of household goods	----------	$1,600	$1,600	----------

To cover shipment of household goods and personal effects for transfer of field personnel as replacements caused by employee turnover.

25. Other services

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate	Increase (+) or decrease (−), 1965 over 1964
Contracts with the Bureau of the Census and Social Security Administration	$127,200	$180,000	$163,000	−$17,000
Miscellaneous contractual services	1,601	9,400	2,552	−6,848
Total	128,801	189,400	165,552	−23,848

For tabulations on male veterans, female veterans, and widows and orphans of veterans from surveys conducted by the Bureau of the Census.

The first tabulation provides for the continuing enumeration of war and peacetime veterans in the Census Bureau's current population survey and the flow of current information on the male veteran population.

The second tabulation will gather data on widows and orphans of deceased veterans in a special national sample survey conducted by the Bureau of the Census.

The third special tabulation will summarize information from an enumeration of female war and peacetime veterans in special Census Bureau survey.

These tabulations will provide information which has heretofore been unavailable, such as current information on veterans income, source of income, and interstate migration. Data made available through these tabulations will greatly increase the effectiveness of long-range planning. Some examples of the uses of these data follow:

To determine nature and extent of the veterans population interstate migration and to project them into the future for planning purposes in the hospital construction and replacement program.

To compare the income of widows of veterans in the compensation and pension program with like widows outside the program in order to evaluate the level of income provided by the compensation and pension benefits.

To ascertain for the first time the extent to which female veterans have participated in the veteran programs, how the veteran programs have met their needs and to determine their family, employment, income and socioeconomic status.

26 Supplies and materials

Office supplies and materials: fiscal year 1963 actual, $1,406; fiscal year 1964 estimate, $1,800; fiscal year 1965 estimate, $1,800.

To provide for the cost of nonroutine expendable office supplies including those to maintain the agency chart room and those used in VuGraph presentations.

31 Equipment

Furniture, furnishings and fixtures: fiscal year 1963 actual, $4,164; fiscal year 1964 estimate, $4,000; fiscal year 1965 estimate, $2,800; increase (+) or Decrease (−) 1965 over 1964, −$1,200.

Estimated requirements for replacing furniture and equipment that is uneconomical to repair and continue in use.

DEPARTMENT OF DATA MANAGEMENT

Mr. EVINS. Department of Data Management; who is the chief of this division?

Mr. BUDD. I am, sir.

Mr. EVINS. You are requesting $10,759,000 for this under "General operating expenses." (Reading:)

The Department of Data Management is responsible for managing, coordinating and planning all ADP operations for the Veterans' Administration. The basic functions are as follows:

1. Directing all VA data processing centers and providing ADP service to VA departments, field stations and staff offices.

2. Identifying areas of potential ADP applications within the VA, conducting preliminary system studies and establishing priorities for feasibility studies. Develop and install new systems and programs.

3. Conducting a continuing review of the Veterans' Administration's ADP resources and their relationship to existing and planned systems. This includes the responsibility for selection of equipment for use in performing the ADP functions of the agency.

4. Furnishing technical staff advice and assistance on ADP and communications to the Administrator, department heads, staff offices and field offices.

What kind of technical advice is that?

Mr. BUDD. Anything that has to do with the ADP service.

Mr. EVINS (continuing reading:)

The planned goal of the Department consists of three major areas in which automatic data processing will be able to improve the future operations of the Veterans Administration. These areas are:

(*a*) Improved quality of service to veterans.
(*b*) Better and more timely information for management and research.
(*c*) Reduction of operating costs.

Tell us about these planning goals.

Mr. BUDD. We are trying to take full advantage of the data processing equipment in any activity that the Veterans Administration has. We are studying every facet of the Veterans Administration and endeavoring to develop a data processing system which will allow us to improve the service we are rendering, to do it at minimal cost.

ESTABLISHMENT OF THE DEPARTMENT OF DATA MANAGEMENT

Mr. EVINS. This division was established in February of 1963?

Mr. BUDD. Yes, sir.

Mr. EVINS. Was it transferred from another department?

Mr. BUDD. Yes, sir. The data processing activities within the agency were all assembled under one department on that date.

Mr. GLEASON. They were consolidated, Mr. Chairman, from the other departments into one department. Previously they had been disseminated through the Department of Veterans' Benefits and Medicine.

Mr. EVINS. This Department advises the Administrator on all data that is processed through all your electronic equipment?

Mr. GLEASON. Yes, sir.

Mr. EVINS. He gives you a report on anything you want?

Mr. GLEASON. Yes, sir.

Mr. EVINS. It is consolidated into one operation and includes medicine?

Mr. GLEASON. Yes, sir.

EMPLOYMENT AND COST—DATA MANAGEMENT

Mr. EVINS. The Department's costs for 1964 and 1965 are $10.3 million and $10,759,000. Manpower requirements have been projected on the basis of estimated needs.

Additional man-year requirements developed: My question is, With the installation of the data processing equipment, why should employment be increasing? This is always the projection, that when you install this equipment the numbers of employees will go down but your projections are increasing.

Mr. BUDD. No, sir. This is the group that makes the studies and does the installation and then operates the system. There are significant decreases within the agency.

Mr. EVINS. There are also significant increases. Look on page 6–4. Most of them are increases, in every department.

INCREASE FOR LOAN GUARANTY AUTOMATION

Mr. GLEASON. Mr. Chairman, the reason why we would like to have this increase of 48 is for research and development of new areas, con-

version and maintenance of newly completed studies and personnel accounting data pay system and also for our loan guaranty automation.

Mr. EVINS. Mr. Administrator, would it be possible to transfer 48 from some other division, as the chairman has suggested?

Mr. GLEASON. No, sir. As you will recall from my statement yesterday, for example, in the Department of Veterans' Benefits we have already decreased that by over 500 employees. Looking at this from an agencywide basis, we think this is exceptionally good.

Mr. EVINS. The Department of Data Management is a very important function and service and I can see that if it were coordinated it would be very valuable because you do compile a tremendous amount of statistics and information through your wide operations. It is very necessary.

We shall place in the record, Mr. Reporter, pages 6–4 and 6–5.

Common services adjustments	−209,393	−201,799	−206,460	−4,661
Total net cost	11,829,211	10,300,000	10,759,000	+459,000

PERSONNEL COSTS—DATA MANAGEMENT

Mr. EVINS. Personnel services are up from $6.4 million in 1964 to $7,143,000 in 1965. Is this partly attributable to the pay raise, Mr. Monk?

Mr. MONK. Partly, but partly because of the increase of the 48 personnel. This department, the employment here, Mr. Evins, will have to go up as we convert more and more activities into computers, electronic methods, because when we do this it takes people to operate the machines and to program and to actually provide the service which this department does. At the same time, there will be corresponding decreases elsewhere.

Mr. GLEASON. In other departments.

Mr. MONK. Maybe 10-to-1 decreases in other departments as we add into this department.

AUTOMATION OF PAYROLL SYSTEM

Mr. EVINS. You had a data processing in the Department of Medicine and also a processing section in your administrative function?

Mr. MONK. That is right.

Mr. EVINS. You consolidated them.

Mr. MONK. That is right.

When we put our payroll on computers, which we are going to do later this year, they will have to have more people here to operate the payroll system out of the Department of Data Management, but we will reduce employment in Medical, Department of Veterans Benefits and the Staff Offices because we will need less people to do the payroll job in those offices, but we will need some increase in this department to perform that work in this department.

Mr. EVINS. This division will do all your payroll and check disbursing?

Mr. MONK. They will.

Mr. GLEASON. They will by the end of the year, Mr. Chairman.

Mr. EVINS. They are just getting organized.

Mr. MONK. They operate the computer at Hines. Mr. Budd is responsible for that operation. He has the operation at Philadelphia.

Mr. EVINS. I notice an increased equipment cost. You are adding more equipment to this division.

Mr. BUDD. Yes, sir. As we put more applications on, additional equipment allows us to get more utilization out of the computers we have.

EMPLOYMENT—DATA MANAGEMENT

Mr. EVINS. The chart on page 6–7 shows that with all this new equipment you still propose to add 48 additional personnel.

We will place 6–6 and 6–7 in the record.

Total, central office and field	840	892	940	+48
Common services adjustment	−22	−20	−20	
Net average employment	818	872	920	+48

Mr. EVINS. The Operations Division is shown on page 6–14. Your equipment goes up $291,000, the total net cost, after some common services deductions. What does that represent, Mr. Budd?

Mr. BUDD. The common service adjustment, sir?

Mr. EVINS. Yes.

Mr. BUDD. Our data processing centers are located where other VA stations are located; and rather than setting up separate personnel, separate supply and engineering divisions, we get support from other VA activities on that site.

DATA PROCESSING CENTERS

Mr. THOMAS. Let's locate the five centers you have. Locate them for Mr. Evins.

Mr. BUDD. Philadelphia, Pa., Hines, Ill., St. Paul, Minn., Los Angeles, Calif., and Washington, D.C.

Mr. THOMAS. Three of those have been in existence heretofore. How long have the other two been in existence?

Mr. BUDD. July 1 of 1963, sir.

Mr. MONK. They have been in existence for a long time. The Los Angeles one has only been in existence for 3 or 4 years, but the one here in Washington we have had for a long, long time.

Mr. BUDD. Under a different caption.

Mr. EVINS. Each of your several divisions send in information and it is all coordinated here?

Mr. BUDD. Yes, sir.

Mr. THOMAS. You did not set up one here in Washington, did you?

Mr. BUDD. Yes, sir; we have a data processing center here.

Mr. MONK. The Washington one has existed for a long time. This is the element where we consolidate all of the agencywide reports.

OPERATIONS DIVISION—DATA MANAGEMENT

Mr. EVINS. Mr. Reporter, put pages 6–14 and 6–15 in the record. This tells what the Operations Division does.

(The pages follow:)

OPERATIONS DIVISION, $3,608,000

Summary of requirements

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate	Increase (+) or decrease (−), 1965 over 1964
Average employment	431	401	398	−3
Common services adjustment	−28	−26	−26	
Net average employment	403	375	372	−3
Personnel compensation	$2,151,456	$2,181,153	$2,234,329	+$53,176
Personnel benefits	167,780	160,939	166,024	+5,085
Total personal services and benefits	2,319,236	2,342,092	2,400,353	+58,261
Employee travel	10,130	8,000	8,000	
Transportation of things	2,993	10,000	10,000	
Rental and utilities services	1,150,172	847,604	753,604	−94,000
Communications	52,120	33,000	25,000	−8,000
Printing and reproduction	77,475	144,000	140,000	−4,000
Other services	138,454	212,000	219,000	+7,000
Acquisition of capital assets: Equipment	3,021,514	7,000	298,000	+291,000
Total cost, DDM jurisdiction	6,772,094	3,603,696	3,853,957	+250,261
Common services adjustment	−244,404	−240,696	−245,957	−5,261
Net costs, total	6,527,690	3,363,000	3,608,000	+245,000

OPERATIONS DIVISION

Operates the data processing system, including computers, peripheral, data transmission, and EAM equipment and insures that attained results are within the prescribed system control. Some of the major functions are:

1. Schedules the machine processing to meet output commitments for production or test runs and insures effective machine and staff utilization.
2. Maintains logs of machine utilization to determine actual cost of machine time and to provide managerial control.
3. Schedules and controls all machine input and controls proper distribution of output.
4. Controls magnetic tape inventory and library and is responsible for security of program tapes and data files.
5. Maintains liaison with manufacturer's customer engineers to insure proper level of equipment maintenance.

The decrease of employment in 1964 and 1965 is due primarily to the conversion of punchcard systems to an ADP system, notwithstanding the need for extra-shift personnel to accommodate existing and new ADP operations and effect better utilization of computers. Significant areas involved are conversion of USGLI accounts, actuarial operations, and the conversion of other EAM activities to ADP.

Objects other than personal services and benefits are justified for the Department in total on pages 6–18 through 6–23.

Mr. EVINS. The logs are maintained, as well as the schedules.

The research and development in the Department of Data Management is shown on page 6–18. Salaries and benefits are up $54,000. There are some slight deductions, making the total increase $52,000. Is this pay act?

Mr. BUDD. Yes, sir. This is essentially the pay increase.

TRAVEL-DATA MANAGEMENT

Mr. EVINS. Your travel out of central office is up by about $50,000.

Mr. BUDD. Yes, sir.

Mr. EVINS. I thought they were sending all the information in to you.

Mr. BUDD. Sir, $44,000 is the total figure we have on travel increase. Sir, that comes about because we have several major installations to put in, ADP installations, this coming year, the pay personnel system and the first phase of our loan guarantee system. This requires central office personnel to be on site to assist in the training and conversion, which is one of the most critical aspects.

Mr. EVINS. You will bring those men in from Philadelphia and Hines to train the people here?

Mr. BUDD. No, sir. We have to write procedures, we have to train the field people who have to prepare the information that goes through the computers.

Mr. EVINS. I thought you said they were operating for some time.

Mr. BUDD. Yes, sir, but each application requires specific training because it is a new system. It is not general training for automatic data processing. It is taking the actual application and installing it.

Mr. EVINS. Mr. Budd, are your reports piecemeal or are they consolidated into one overall report that probably gives you the full picture?

Mr. BUDD. I do not know how to answer that question, sir. I am not sure I understand it.

Mr. EVINS. I know VA makes an annual report which gives you everything. Does your data processing report to the Administrator give him everything?

Mr. BUDD. This is our objective, sir. One of the main projects we have is to develop a management information system which will give him his total information from the computers automatically.

Mr. EVINS. Any further questions on data management?

If not, we will turn to the Department of Veterans' Benefits.

DATA PROCESSING EQUIPMENT

Mr. THOMAS. Before you leave that, let us go into some detail on other objects here, particularly rental and communications.

What about purchase of equipment? How much are you spending for it this year?

Mr. BUDD. This year we have about $360,000, sir.

Mr. THOMAS. What is your inventory on machines now? You have EAM equipment, about $645,000, a reduction. What is that EAM equipment?

Mr. BUDD. Electric accounting machines.

Mr. THOMAS. That has nothing to do with your automatic data processing equipment. They are two separate and distinct items. How much are you spending in this budget for rent on automatic data processing equipment and how much are you spending for the purchase of new equipment and what is your inventory on your automatic data processing equipment?

NUMBER OF COMPUTERS IN VA

Mr. BUDD. We have 14 computers in the Veterans' Administration, sir. Eleven have been purchased previously.

Mr. THOMAS. Where are they located?

Mr. BUDD. The 14?

Mr. THOMAS. Yes.

Mr. BUDD. We have two pieces in Washington, D.C., we have three pieces in Philadelphia, we have four pieces in Hines, we have two pieces in St. Paul, one piece in Los Angeles, one at Little Rock, and one at Omaha.

CENTRAL OFFICE SERVICING OF COMPENSATION AND PENSIONS

Mr. THOMAS. What is the jurisdiction of the central office in Washington as far as compensation and pensions?

Mr. BUDD. What is the jurisdiction?

Mr. THOMAS. Yes.

Mr. BUDD. I am not sure I understand the question.

Mr. THOMAS. What is the jurisdiction of the Washington office in compensation and pension?

What cases do you take care of? I thought they were all in your regional offices.

Mr. BUDD. No, sir. The compensation and pension all are paid out of the Hines Data Processing Center. They are centralized. All payments are handled in Hines. The Washington Data Processing Center primarily handles the consolidation of reports and performs services for all the staff offices and departments in Washington, D.C.

Mr. THOMAS. What are those services? Do you take care of Reserve officer death compensation here?

Mr. BUDD. Yes, sir.

LOCATION OF EMPLOYEES AND WORKLOAD

Mr. THOMAS. Why didn't you tell us that? You knew what I was asking for. How many employees do you have here in the District of Columbia doing this work?

Mr. BUDD. 130, sir.

Mr. THOMAS. How many do you have in St. Paul?

Mr. BUDD. Eight-five.

Mr. THOMAS. And the remainder of the three, how many?

Mr. BUDD. 190 in Philadelphia, 175 in Hines, Ill., and 67 in Los Angeles.

Mr. THOMAS. You mean you have more employees here in the District of Columbia than you have in those four other regional offices?

Mr. BUDD. No, sir. We have more in——

Mr. THOMAS. How do you account for your topheavy employment here against the other agencies?

Mr. BUDD. It is the work assigned to the particular data processing center.

Mr. THOMAS. Name it.

Mr. BUDD. The work we have in Washington is basically preparing reports.

Mr. THOMAS. Name some of the reports.

Mr. BUDD. Consolidation of personnel statistics, consolidation of budget data, preparation of payroll for all employees in central offices.

Mr. THOMAS. That is the Controller's Office; is it not? What does he do? There is the financial man. He is not only the financial man, but he is the statistical man. What is he doing with it?

Mr. BUDD. The paperwork part of it is what the data processing center does. When it gets ready for pay——

Mr. THOMAS. Is that charged to you or Dr. Shytle?

Mr. BUDD. Paperwork is charged to me, sir. We use punchcards and mechanical equipment to do as much of the work as possible. This is the system that we are going to convert to a tape system, to a large computer, which will be done in Hines later this year, sir.

Mr. THOMAS. We thought Judge Shytle was the financial genius. We thought you were doing all the work. Come to find out, you turned it over to our distinguished friend, here.

Mr. SHYTLE. He is not doing it all, sir. He is handed raw data and brings it in, so we can use and bring it together, and make you a budget.

Mr. THOMAS. Excuse me, Mr. Evins.

Mr. EVINS. It does appear in some regions you have data management; you have your administrative functions, and you have your Controller. Possibly there could be some more coordination. There may be some overlapping and duplication.

Mr. GLEASON. There isn't, Mr. Evins; I can assure you of that.

Mr. EVINS. If you say that, Mr. Administrator, I will take your word for it.

Mr. GLEASON. Thank you, sir.

DEPARTMENT OF VETERANS BENFITS

Mr. EVINS. We will turn next to the Department of Veterans Benefits. We discussed this at quite some length on yesterday. This is the division that requires the biggest appropriation. This is under Mr. Brickfield?

Mr. GLEASON. Yes, sir.

Mr. EVINS. Mr. Reporter, we shall place in the record pages 7–2 and 7–3.

(The pages follow:)

DEPARTMENT OF VETERANS BENEFITS

ALL APPROPRIATIONS, $4,149,047,000

Summary

The Department of Veterans Benefits has jurisdiction over, directs, and is responsible to the Administrator for, a program of veterans benefits consisting of compensation and pension, insurance, vocational rehabilitation and education, loan guarantee, guardianship, and contact activities.

The Department's requirements for fiscal year 1965 are budgeted under the following appropriations:

1. *General operating expenses.*—Funds under this appropriation provide for necessary operating expenses of the Department, such as salaries, supplies, services, and travel.

2. *Compenation and pension.*—Funds provided under this appropriation are used to pay compensation to veterans and their dependents for disabilities or death which are service connected. These funds are also used to pay pensions to veterans and their dependents for disabilities or deaths that are not of a service-connected origin, whenever there is a demonstration of need within the

criteria established by the Congress. Amounts are also paid out of this appropriation for burial awards, burial flags, subsistence to seriously disabled veteran receiving vocational rehabilitation and other allowances, awards and gratuities related to the veteran's service.

3. *Readjustment benefits.*—Funds provided under this appropriation are used to pay for the vocational rehabilitation of seriously disabled veterans, and to otherwise assist in the education and training of veterans of wartime service, as well as certain qualified children of these veterans. These funds are spent for tuition, necessary equipment, and supplies as authorized by law. Money from this appropriation is also used to provide specially equipped automobiles to the more seriously disabled veterans and specially adapted houses to certain very seriously disabled veterans. Whenever it becomes necessary to augment the funds available to the loan guarantee revolving fund, for payment of claims and other costs incident to guaranteed and insured housing loans to veterans, such funds are obtained under this appropriation for transfer to that revolving fund.

4. *Veterans insurance and indemnities.*—Funds under this appropriation are avialable for term and automatic military and naval insurance payments; for the payment of benefits and for transfer to the National Service Life Insurance Fund; and for automatic indemnity coverage benefit payments in accordance with the Servicemen's Indemnity Act of 1951.

5. *Grants to the Republic of the Philippines.*—Funds under this appropriation are used to pay the Republic of the Philippines for the medical care and treatment of veterans of the Philippine Commonwealth Army.

The following table summarizes in millions of dollars the actual costs for fiscal year 1963, the appropriations for fiscal year 1964, and the fiscal year 1965 requirements:

Summary of requirements

[In millions of dollars]

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate	Increase (+) or decrease (−), 1965 over 1964
General operating expenses	$135.0	$137.4	$132.4	−$5.0
Compensation and pensions	3,874.0	3,921.0	3,963.0	+42.0
Readjustment benefits	95.8	67.0	39.6	−27.4
Grants to the Republic of the Philippines	.5	.3	.3	
Veterans insurance and indemnities	32.7	31.0	13.7	−17.3
Total appropriation estimates	4,138.0	4,156.7	4,149.0	−7.7

Mr. EVINS. The Department of Veterans Benefits has jurisdiction over and direct responsibility for programs of veterans benefits consisting of compensation, pension, insurance, vocational rehabilitation, education, loan guarantee, guardianship, and contact service.

That is being reduced substantially.

Off the record.

(Discussion off the record.)

Mr. EVINS. Compensation and pensions for fiscal year 1963 it was $3,874 million for 1964, $3,921 million and for 1965, estimated $3,963 million or an increase of $42 million. This is by statute. How many supplementals did you have to submit to get it adjusted to the right level last year just for compensation and pensions?

Mr. GLEASON. We did not have any.

Mr. EVINS. You didn't have a supplemental last year?

Mr. GLEASON. No.

Mr. THOMAS. I thought you did.

Mr. BRICKFIELD. We had one last year, one supplemental.

Mr. GLEASON. That was last year. I am talking about 1964.

Mr. EVINS. How much was the last supplemental you submitted?

Mr. BRICKFIELD. Last year we had a supplemental, Mr. Evins, and we asked for I think $42 million. We spend about $11 million a day in this appropriation, so it is kind of hard when you come down to the end of the year to hit it right on the head.

Mr. EVINS. You testified yesterday that the pension rolls are increasing annually.

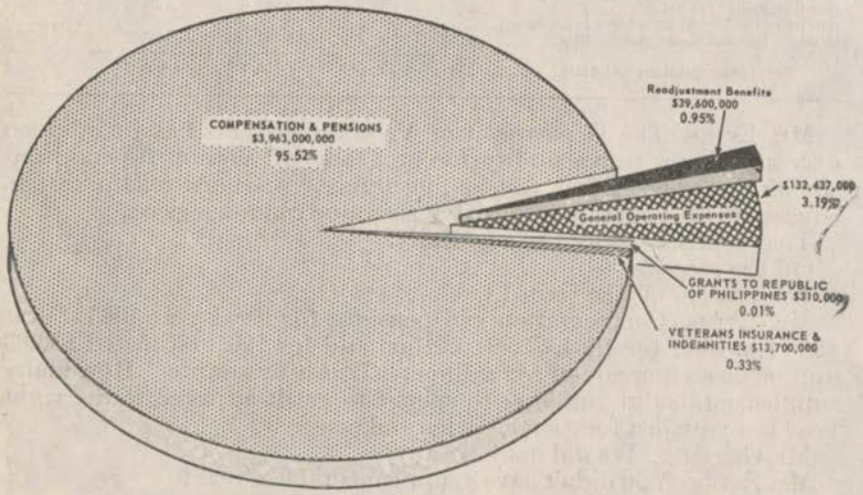
Mr. BRICKFIELD. Yes. The increase there is principally the increase in the pension rolls, $35.5 million.

Mr. EVINS. Can this chart on page 7–4 be printed in the record? If so, let's have the chart on page 7–4 included. It shows you the entire amount; 95.52 percent of this payment is payment to veterans in compensation and pensions.

(The chart follows:)

DEPARTMENT OF VETERANS BENEFITS

TOTAL APPROPRIATIONS - $4,149,047,000



Mr. EVINS. General operating expenses declined and Veterans Insurance and Indemnities——

Mr. GLEASON. They decreased $5 million, I might point out.

Mr. EVINS. This is the lesser number of veterans with insurance in force. Is this the reason for this?

Mr. GLEASON. No, sir. I meant the general operating expense of the Department of Veterans Benefits.

Mr. BRICKFIELD. This $17 million, Mr. Evins, this is an insurance benefit. Between 1951 and 1956 there was the so-called free insurance and if the veteran was killed in the service at that time, we gave $10,000 of insurance at some $92 a month. Ten years from 1956—the end is in 1966 and it is now beginning to phase out and decline. That is why we have this reduction of $17 million.

Mr. THOMAS. Mr. Evins, may I interrupt a moment?

Mr. EVINS. Certainly.

FUTURE ADP APPLICATIONS

Mr. THOMAS. Mr. Brickfield has a very heavy responsibility here. It goes back to our friend, Mr. Budd, and his new Department. These two certainly go hand in hand. If there is any justification for Mr. Budd's future continuance it will have to depend on the feedback from Mr. Brickfield here. As of today there is not sufficient offsetting reduction in personnel to justify Mr. Budd's tremendous budget for this year.

Mr. GLEASON. Yes, sir.

Mr. THOMAS. Well, wait a minute. Go back to your insurance. Of course, that is included in here. You are riding on what you have done on insurance but that insurance cannot carry every other activity on its back. That is what it is doing now. It is going to be up to Mr. Brickfield's group to help Mr. Budd make this thing work. There is no reason in the world why it should not work. If we give you enough time and you have enough patience it is bound to work.

Mr. MONK. There will also be a large load for Mr. Budd from the Medical Department as time goes on.

TRANSFER OF FUNCTIONS

Mr. THOMAS. What was this $132,437,000 item last year, the general operating expense for the Department of Veterans' Benefits?

Mr. BRICKFIELD. It is on 8–2, Mr. Chairman.

Mr. THOMAS. What is it, please?

Mr. BRICKFIELD. $137,438,000.

Mr. THOMAS. $137.4 million?

Mr. BRICKFIELD. That is right.

Mr. MONK. But we must remember here, we have made a comparative transfer here. When we pulled Mr. Budd's department out we also pulled out of the Department of Veterans Benefits the people that were previously charged to the Department so that you would have to build this up to show the comparative transfers. Remember we told you that 820 of Mr. Budd's people came out of other organizations.

Mr. THOMAS. I think your table on 8–11 and 8–12 does it in tabular form for the years 1963, 1964, and 1965, but you do not show by narrative the transfers in and out.

Mr. GLEASON. I thought we did that last year.

Mr. BUDD. We did.

Mr. SHYTLE. We had instructions on that last year. This year what we did was retroactively adjust back the same employees so that you have comparison.

Mr. THOMAS. Judge, we are not talking about last year. We are talking about what is in here now. Go ahead. That is all right.

Mr. GLEASON. Those figures are built in here.

Mr. EVINS. This chart on 8–7 shows it. This is the summary of requirements by major categories.

Mr. SHYTLE. That is a good chart. That is a good place to compare your reductions in 1965. You will notice the reduction in insurance is not carrying the increase to the data management to that extent, Mr. Chairman.

Down at the bottom of that page, summary of requirements activity, you will notice that $575,000 reduction is in the insurance operation. He is pulling down his cost $4,970,000, with the service adjustment of $5,001,000 and only $575,000 of that is in insurance. He is pulling down his straight DVB operations from 1964 to 1965 considerably more than Mr. Budd is going up in data management, which is only 48 people.

Mr. BRICKFIELD. Mr. Thomas, I think you can get a clear picture of this on page 4–3.

Mr. THOMAS. These tables tell the story. I just pointed out it was not in narrative form. I think you can depend that we on both sides of the table know what these figures mean, but what about the people who read the record?

Mr. GLEASON. On the top of the page, Mr. Chairman, I would like to point out there is a reduction of 589 people in the Department of Veterans Benefits whereas Mr. Budd increased 48 people.

Mr. EVINS. Where do they go?

Mr. GLEASON. They will be absorbed through attrition.

Mr. EVINS. They will be off the rolls?

Mr. GLEASON. Yes, sir.

EMPLOYEE TURNOVER

Mr. THOMAS. What is your turnover this year for all causes—deaths, resignations, and so on?

Mr. MONK. 1½ percent per month, about 18 percent per year.

Mr. THOMAS. Was it about that same level last year?

Mr. MONK. Yes, sir.

Mr. THOMAS. Throughout the Government turnover heretofore has been 16 percent but the Civil Service people reduced it to 14 percent this year. But your figure of turnover for all causes is 18 percent?

Mr. MONK. Yes, sir. It is a little high for us because of the dietetic workers, housekeeping workers, and so forth.

Mr. UNDERWOOD. The figure for 1963 for full time only is 16.8 percent. And for 1962 it was 17.8 percent. It is higher when you include both full-time and part-time employees because most of our turnover is with the part-time group. So we have a slightly lower turnover rate in 1963 than we had in 1962.

Mr. EVINS. You have more and more veterans on the pension roll and more and more being admitted to the hospitals and Congress passes pay increases for the employees, yet the number of employees is down which would appear to be a pretty good picture of management providing more service with the same personnel.

Mr. GLEASON. Thank you, Mr. Evins.

Mr. EVINS. But we are never satisfied, Mr. Gleason.

Mr. GLEASON. Yes, sir. I appreciate that.

GENERAL OPERATING EXPENSES—VETERANS' BENEFITS

Mr. EVINS. Miss Reporter, put pages 8–1 through 8–8 in the record. (The pages follow:)

DEPARTMENT OF VETERANS' BENEFITS

GENERAL OPERATING EXPENSES, $132,437,000

General statement

The Department of Veterans' Benefits is responsible for providing all of the direct benefits, except medical, to eligible veterans and their dependents as authorized by law.

The basic functions of the responsibilty are as follows:

Adjudicate the claims of veterans and their dependents for compensation and pension benefits.

Adjudicate associated claims for such benefits as insurance awards, burial allowances and other miscellaneous allowances or awards.

Provide guarianship and fiduciary service to helpless or incompetent veterans and minor dependents.

Counsel and supervise the vocational rehabilitation of disabled veterans, including the more seriously disabled peacetime veterans.

Guide and supervise the education and training to which Korean veterans are entitled.

Counsel and supervise the education of war orphans.

Issue certificates of loan guaranty or insurance for veterans' home and business loans.

Service veterans' loans reported to be in default.

Settle claims by lenders on defaulted guaranteed or insured loans.

Acquire, manage, and dispose of properties on which veterans have defaulted and lenders' claims have been paid.

Make direct loans to veterans where private financing is not available.

Assist qualified paraplegic veterans to acquire housing specially adapted to their disabilities.

Disseminate information to veterans and their dependents regarding their entitlement to assistance and benefits.

Provide service and administer benefits to policyholders and their beneficiaries under existing insurance programs.

Support the above functions with efficient and economical finance, administrative, and personnel services.

In some instances these support services are provided to other VA departments, or received from other departments. The cost effect of such "common services" is shown as "common service adjustments."

Summary analysis of change

Fiscal year 1964 estimate	$137,438,000
Less:	
One less workday	440,000
Reduction in workloads	4,298,500
Reduction in employee travel	37,000
Reduction in printing and reproduction	30,000
Reduction in equipment	1,660,000
Reduction in V.R. & E. "Other objects"	1,300,000
Reduction in other costs	624,500
Total reductions	8,390,000
Plus:	
Within grade periodic salary increases	1,177,000
Public Law 87-793—salary rate increase	2,212,000
Total increases	3,389,000
Net reduction	5,001,000
Fiscal year 1965 estimate	132,437,000

Department objective

We have earlier stated the requirements and responsibilities of the Department of Veterans' Benefits. It is our aim to discharge these responsibilities with the greatest possible speed, effectiveness and economy without stinting in the service provided the disabled or needy veteran and his dependents.

Improvements and economies

In keeping with this objective, it is our endeavor constantly to strive for improvements and economies in our operations. Typical of accomplishments in this direction over the past years are:

Consolidation of insurance activities.—Formerly, all insurance activities were under the jurisdiction of a separate department. During fiscal year 1963 they were consolidated with the Department of Veterans' Benefits, thereby, combining the responsibility for all nonmedical benefits to eligible veterans and their dependents in one department. This combination permits greater flexibility and economy in the guidance and administration of these benefits. At the same time, the number of field stations handling insurance activities was reduced from three to two.

Consolidation of vocational rehabilitation and education actiivties.—In fiscal year 1959 we administered the V.R. & E. program through 67 regional offices. Since then the staffing requirements in relation to the number and type of veterans being serviced have regularly and systematically been evaluated in terms of the number and location of the V.R. & E. offices required. As a result, the number of these offices has progressively been reduced to 27 as of June 30, 1963. These reductions were accomplished by means of consolidating workloads and staffs among offices in geographic proximity to each other. This has resulted in the retention of a single office of an effective and economical size in lieu of two or more which would have been uneconomical and of limited effectiveness. Not only has this permitted the continuation of maximum service to the decreasing number of veterans in training, but it has done so at considerable savings.

Contact office closings.—In fulfilling its obligation to provide maximum information, aid and assistance to veterans and their dependents seeking benefits to which they are entitled, this Department in 1956 maintained 309 contact offices which were located separate and apart from our regional offices in strategic population areas throughout the States. Again, the need for these offices was regularly and systematically evaluated in terms of the traffic each received. When it was determined that a permanently staffed office was no longer war-

ranted by the number of beneficiaries utilizing it, the office was closed. In lieu of a permanently staffed office, the affected area would initially be serviced by itinerant contact personnel visiting the location on specified days. Eventually, such itinerant service was also curtailed as appropriate. By this careful and selective method the number of full-time contact offices has been reduced to 10.

Automatic data processing.—Alert to modern advances in accounting and data processing by electronics, this Department began very early to apply these techniques to the payment and procesing of its millions of compensation and pension and insurance accounts. Currently, all compensation and pension accounts (except for Manila, P.I.) are now maintained and paid by an automatic data processing system as are all National Service Life Insurance accounts. Conversion to automatic data processing will be completed in fiscal year 1964 of U.S. Government Life Insurance (World War I insurance) and insurance actuarial operations.

Improvements in manpower utilization and control.—Within the Department of Veterans Benefits, manpower control systems are observed through a variety of management practices and processes.

The Department has been long engaged in the continued maintenance of an effective, efficient, and strong management improvement program and manpower control system. One of the most significant steps taken by the Department has been the increased emphasis on the application of work measurement standards in the budgetary process. Our work measurement system has been designed to serve the following managerial functions: (1) Manpower and staffing requirements, (2) program management and evaluation, (3) long-range planning, (4) performance evaluation, and (5) production control.

Much emphasis, through Bureau of Budget Circular A–44, revised, and VA communication releases, has been placed on a strongly directed budget review process in order to exert continuing pressure for increased efficiency through a program of improving manpower controls and utilization with the budget process. A particularly good example of the Department's search for ways of improving and increasing manpower utilization occurred in fiscal year 1963 when it was determined to go beyond central office and systematically survey our field stations for improvement ideas. Accordingly, field stations were requested to submit all ideas, innovations, and suggestions they had for improving manpower utilization. These proposals covered a wide range of activities which would be classified under the following subjects: (1) organizational improvement, (2) improved work flow, (3) simpler procedures, (4) improved forms control and design, (5) elimination of report preparations through mechanical means, and (6) elimination of nonessential activities. The proposals approved resulted in a change in policy or procedure which was not previously planned. Many of the proposals were counted as disapproved due to the fact that the procedure or policy involved was in effect or in process of being placed in effect at the time the recommendation was received. In general, the recommendations represent constructive thinking and an earnest desire on the part of regional offices to improve procedures with the resultant effect in better manpower utilization.

Incentive awards.—We have had consistently good participation in this vital program for encouraging and recognizing superior performance and the creation of better methods for improving and economizing on our operations. The following summarizes the program activity in 1963:

	Fiscal year 1963
Total suggestions submitted	3,674
Total suggestions approved	1,773
Tangible savings	$356,216
Number of performance awards	1,295

The tangible savings represented above are annual savings during the first year of operation under the adopted suggestions and are applied toward the total cost of operating the station. While intangible savings may not generate funds that can be applied to operations, they do result in improved working conditions, greater safety, etc.

Future plans

With the history of improvements and economies that have been accomplished, the Department plans no lessening of its efforts in this direction. Rather, its previous efforts will be augmented by the experience gained and the sources of such managerial gains that have been demonstrated.

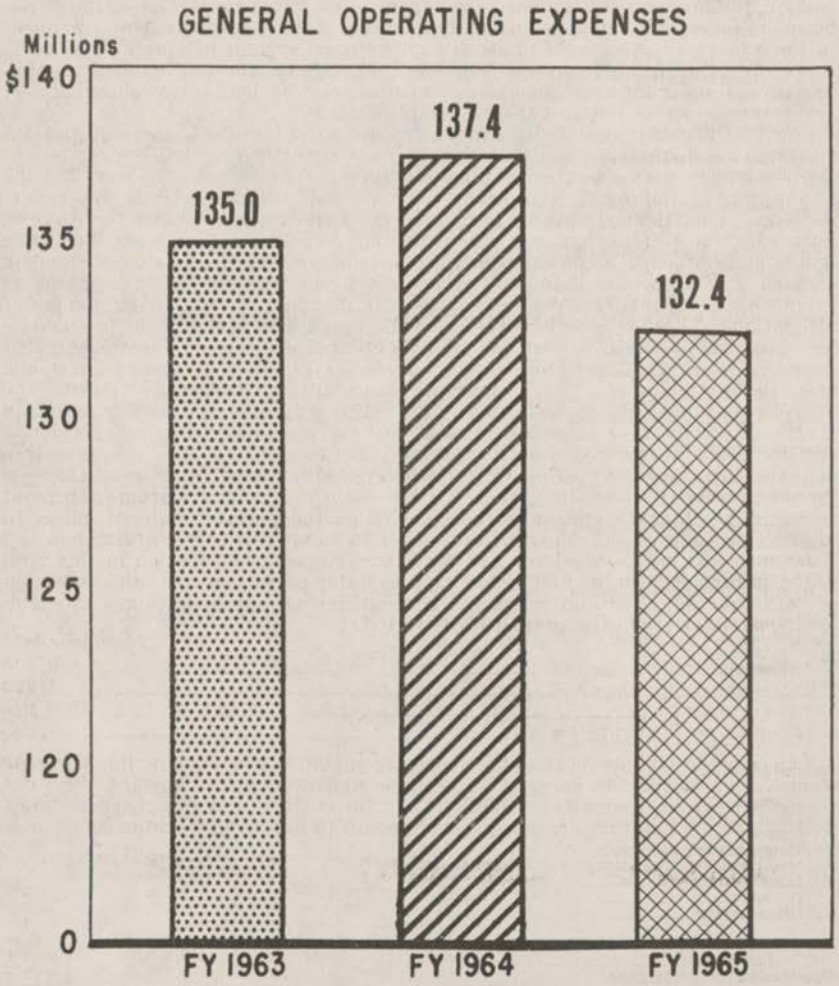
Workload consolidations will continue to be systematically evaluated.

Organizational realinements will be assessed to uncover better ways to accomplish and control our objectives in keeping with current and changing requirements.

Automatic data processing will be fully exploited to determine additional benefits and savings that can be accomplished within present programs and to uncover new programs and activities that can be adapted to automation.

Manpower utilization controls and improvement techniques will be explored in even greater degree. New methods and sources will be reviewed and utilized where applicable. Application of automation to this vital and important management responsibility will be assessed.

Actual and estimated costs for fiscal years 1963 through 1965 are indicated below.



Comparative summary of requirements—Detailed object and subobject of expenditures

SUMMARY OF EMPLOYMENT REQUIREMENTS BY ACTIVITY

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate	Increase (+) or decrease (−), 1965 over 1964
Average employment:				
Central office	678	673	638	−35
Manager	319	319	318	−1
Chief attorney	1,552	1,450	1,390	−60
Contact	1,003	905	850	−55
Compensation and pension	3,645	3,330	3,340	+10

Net cost	134,978,105	137,438,000	132,437,000	−5,001,000

SUMMARY OF MAJOR WORKLOADS

Mr. EVINS. We will turn to the "Summary of major workloads." These are cases, are they not, Mr. Administrator?

Mr. GLEASON. What page?

Mr. EVINS. Pages 8–11 and 8–12.

Mr. GLEASON. Yes. Would you like to know the total of new claims, approximately?

Mr. EVINS. Tell us the total number of contacts you made.

Mr. GLEASON. Personal interviews in the far column we estimate at 2,546,000.

Mr. EVINS. These are not totaled. They are just totaled for each one?

Mr. GLEASON. Yes.

Mr. EVINS. What about compensation and pension?

Mr. GLEASON. The same thing, sir. Out of compensation and pension there are certain figures which are shown separately. I would like to call particular attention to initial disability claims, 156,000; new death claims, 145,000; new insurance claims, 29,000; burial and accrued reimbursement claims, 246,000; for a total of 576,000 new claims.

Mr. EVINS. Well, you have a tremendous amount of work.

We will place pages 8–11 and 8–12 in the record.

(The pages follow:)

Summary of major workloads

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate
1. Chief attorney:			
Total wards (end of year)	530,121	548,000	556,000
Accounts audited	400,775	269,000	169,200
Field examinations completed	157,358	193,410	195,350
2. Contact:			
Personal interviews	2,793,430	2,598,000	2,546,000
Telephone interviews	2,720,036	2,411,000	2,311,000
Applications and forms	1,693,407	1,546,600	1,505,000
Correspondence prepared	756,761	689,500	665,500
Counter interviews	296,591	263,000	247,000
3. Compensation and pension:			
Initial disability claims	178,854	172,000	156,000
Nonoriginal claims	318,197	288,000	280,000
Dependency and income claims	612,034	711,000	775,000
New death claims	132,147	140,000	145,000
Insurance claims	40,036	42,000	44,000
Burial and accrued reimbursement claims	222,940	238,000	246,000
Notices of disagreement	6,346	35,000	36,000
4. Vocational rehabilitation and education:			
Average number of trainees:			
Vocational rehabilitation	4,290	6,000	7,000
Readjustment training	50,020	25,000	7,300
War orphans	15,573	15,500	15,000
Cases of counseling:			
VA	24,117	15,000	15,000
Fee basis	12,782	32,000	18,000
5. Loan guarantee:

Compensation and Pension Field

Mr. Evins. "Compensation and pension field"; we discussed this to some extent. Mr. Reporter, insert page 8–38.

(The page follows:)

General Operating Expenses

COMPENSATION AND PENSION FIELD, $29,675,000

Mission

The mission of the compensation and pension program is to administer equitably and uniformly all laws relating to the payment of compensation, pension, and related benefits to veterans and their dependents.

Highlights

During fiscal year 1963, more than $3.8 billion in benefits were paid to veterans and their dependents. These payments involved compensation and pension allowances to an average of over 4.8 million beneficiaries, of which 2 million were veterans receiving compensation, 1.2 million were veterans receiving disability pension, and 1.6 million were dependents of deceased veterans receiving either compensation or pension. Workloads incident to these payments are reflected in the workload table on pages 8–39.

A realinement of activities was affected during fiscal year 1963. The clerical functions incident to Flexowriter input processing, award notice letter typing, and coding of certain items on basic automatic data-processing input forms heretofore performed by adjudication divisions were transferred to the finance divisions. This grouped all ADP activities in our regional offices into one organizational element.

During fiscal year 1963 field stations submitted many recommendations on improving manpower utilization in the compensation and pension service. The recommendations covered a wide range of compensation and pension activities; such as, ratings (general), income questionnaire procedures, apportioned awards, ADP procedures, etc. Some require legislative changes, some require changes to VA regulations and procedures, and others are now receiving study by central office. In general, the recommendations represent constructive thinking and an earnest desire to improve methods and procedures with the resultant effect in better manpower utilization.

Summary of requirements

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate	Increase (+) or decrease (−), 1965 over 1964
Average employment	3,645	3,330	3,340	+10
Personnel compensation	$26,860,161	$26,679,000	$27,518,000	+$839,000
Personnel benefits	2,029,237	2,056,000	2,122,000	+66,000
Total personal services and benefits	28,889,398	28,735,000	29,640,000	+905,000
Travel and transportation of persons	42,452	35,000	35,000	
Total cost	28,931,850	28,770,000	29,675,000	+905,000

Mr. EVINS. You state that the increase of 10 man-years in average employment in fiscal year 1965 is due to an increase in the aggregate workload in such work areas as dependency and income claims, new death claims, and burial and accrued reimbursement claims.

Mr. GLEASON. And insurance claims. We also need between 118 and 121 people for a statement of the case which we went into yesterday.

Mr. EVINS. How do you identify nonoriginal claims?

Mr. BRICKFIELD. That is a claim that is reopened either for an increase in benefits or something of that nature.

Mr. EVINS. Does the Veterans Administration do this on its own initiative or after some veteran or officer requests it?

Mr. FARMER. Both of them come from the veteran or his representative.

Mr. EVINS. In other words, you do not originate any of these claims on your own?

Mr. FARMER. No, sir.

Mr. EVINS. You will not initiate anything to see that a veteran is getting his rights under the law?

Mr. FARMER. Not in this category.

Mr. EVINS. Off the record.

(Discussion off the record.)

Mr. BRICKFIELD. When a veteran dies, we get in touch with the widow and tell her what the possible claims could be, either for compensation or pension or insurance, etc.

Mr. EVINS. That is a real service.

Mr. BRICKFIELD. Yes, sir.

VOCATIONAL REHABILITATION AND EDUCATION—FIELD

Mr. EVINS. "Vocational rehabilitation and education." Insert pages 8–43, 8–44, and 8–45.

(The pages follow:)

VOCATIONAL REHABILITATION AND EDUCATION, FIELD, $6,633,000

Mission

The objective of the vocational rehabilitation and education program is threefold: (1) To provide vocational rehabilitation needed by Korean conflict, World War II, and peacetime (Public Law 87–815) veterans with service-connected

disabilities; (2) to provide readjustment education and training to veterans of the Korean conflict or World War II; and (3) to provide vocational and educational assistance to children of veterans who died as a result of service in the Armed Forces.

Highlights

During fiscal year 1963 a most significant happening affecting the vocational rehabilitation and education program was the enactment of Public Law 87–815. This law affords vocational rehabilitation to veterans (peacetime) with disabilities incurred between World War II and the Korean conflict or after the Korean conflict. The law also removes the final termination date for vocational rehabilitation for those veterans disabled during the Korean conflict.

To cope with the counseling workload generated by the new law and the increase in war orphans trainees, a shifting to fee-basis counseling was adopted. Use of guidance center facilities as a resource to supplement VA staffing was also instituted. As of July 1, 1963, contractual arrangements with 98 guidance centers were in effect.

Progress continues in the consolidation of vocational rehabilitation and education locations. Seven consolidations were accomplished during 1963, bringing the number of consolidations completed to 40. This leaves 27 offices with vocational rehabilitation and education responsibilities.

Reajustment training and education.—During fiscal year 1963, 8,000 Korean conflict veterans started readjustment training—this brought the total to 2,381,000 Korean conflict veterans who have trained under this program. The monthly average of Korean conflict veterans in training during fiscal year 1963 was 50,000, with the peak enrollment being about 76,000 in November 1962. Korean conflict veterans were paid education and training allowance of about $63 million during fiscal year 1963. This was a decrease of 48 percent from the $121 million paid during fiscal year 1962. During the past fiscal year $0.7 million was paid to educational institutions for preparing and submitting required certifications on veterans attending the institutions.

Educational assistance for orphans.—During fiscal year 1963, 13,000 orphans entered training. The total orphans entered training thus far is 56,200. The monthly average number of orphans in training in fiscal year 1963 was 15,600, with a peak training load of 24,500 orphans in training during December 1962. Payments of educational assistance amounted to $25.7 million during fiscal year 1963, or an increase of 20.3 percent over fiscal year 1962.

Vocational rehabilitation.—During fiscal year 1963, 1,800 disabled Korean conflict veterans and 900 World War II veterans entered vocational rehabilitation training for the first time. Also, 1,400 peacetime veterans (Public Law 87–815) whose disabilities were incurred during the period between World War II and the Korean conflict or since January 31, 1955, enrolled for vocational rehabilitation training. The monthly average number of disabled veterans in training was 4,300, with a peak training load of 4,500 veterans in November 1962.

Summary of requirements

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate	Increase (+) or decrease (−), 1965 over 1964
Average employment	649	580	470	−110
Personnel compensation	$5,151,646	$4,966,000	$4,140,000	−$826,000
Personnel benefits	380,990	375,000	313,000	−62,000
Total personal services and benefits	5,532,636	5,341,000	4,453,000	−888,000
Travel and transportation of persons	476,765	515,000	398,000	−117,000
Other services	1,594,679	2,282,000	1,307,000	−975,000
Grants to States	859,665	800,000	475,000	−325,000
Total cost	8,463,745	8,938,000	6,633,000	−2,305,000

Average employment

Estimated workload for fiscal year 1965 will require an average employment level of 470. This is a decrease of 110 man-years from the estimate for 1964 and 179 man-years from 1963. Personnel requirements are developed on the basis of measurable workload. There is not a constant relationship between the aggregate number of trainees of all types and man-years requirements. During fiscal year 1963, the volume of trainees under readjustment training dominated the trend of the combined training load but required fewer man-years per trainee. Vocational rehabilitation and war orphans training load, which is more complex, require more man-years per trainee. This is due to the counseling workload which is required under these two programs. By fiscal year 1965, the training load under vocational rehabilitation and war orphans will dominate the trend of the combined training load. This reversal in the composition of the training load is due to the decline of Korean conflict and World War II veterans eligible to initiate readjustment training and an increase in vocational rehabilitation training for disabled peacetime veterans resulting from enactment of Public Law 87–815 coupled with the continuation of war orphan trainees at about the fiscal year 1964 level.

Workloads supporting the above employment requirements are as follows:

Workloads	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
A. Monthly average in readjustment training, ch. 33: Korean conflict:			
Higher learning	32,476	16,640	4,890
Below college	12,203	5,550	1,710
Correspondence	4,333	2,460	620
On farm	520	130	30
Job training	480	220	50
Total	50,012	25,000	7,300
World War II	8		
Total readjustment training	50,020	25,000	7,300
Vocational rehabilitation, ch. 31:			
Higher learning	1,070	1,870	2,260
Below college	2,466	3,560	4,100
On farm	188	160	190
Job taining	566	410	450
Total vocational rehabilitation	4,290	6,000	7,000
War orphans, ch. 35:			
Higher learning	12,831	13,100	12,900
Below college	2,742	2,400	2,100
Total war orphans	15,573	15,500	15,000
Total all trainees	69,883	46,500	29,300
B Counseling cases disposed of:			
Veterans' Administration	24,117	15,000	15,000
Contract (fee basis)	12,782	32,000	18,000
Total	36,899	47,000	33,000

Mr. EVINS. Do you want to explain the chart on page 8–45 for the record, the workload in respect to different categories of veterans? This is in your training program.

Mr. BRICKFIELD. Yes, this is in our vocational rehabilitation and education program.

The first workload, "A readjustment training," is for the Korean veterans. This program ends on January 31, 1965, and, as you can see, it goes down from 25,000 in 1964 to 7,300 in 1965. So this is a phasing-out program.

In vocational rehabilitation we have an increase of 1,000. This is due principally to the recent law which granted vocational rehabilitation to peacetime veterans.

The war orphans is dropping from 15,500 to 15,000.

The total reduction for all trainees is from 46,500 to 29,300.

In addition to that, we counsel our veterans, particularly the people who are in need of vocational rehabilitation training. Here you can see that the counseling workload will be drastically reduced from 47,000 to 33,000.

Mr. EVINS. Tell us what level of education this training is. Is it higher level, intermediate, or what?

Mr. BRICKFIELD. I would say it is principally in the higher level. Ninety percent of the war orphan training is at the higher level. Out of the 15,000 shown on page 8–45, 12,900 are in college and only 2,100 are below the college level.

In vocational rehabilitation, however, where we give them on-the-job training and the like, out of 7,000, 4,100 are below college level and 2,260 in college.

Mr. EVINS. This table shows the programs are being reduced. Is there a corresponding reduction in employees?

Mr. BRICKFIELD. Yes; we are coming down 110 in average employment in the program in fiscal 1965.

LOAN GUARANTEE PROGRAM

Mr. EVINS. We will turn to the loan guarantee program.

Place in the record page 8–52.

(The page follows:)

GENERAL OPERATING EXPENSES

LOAN GUARANTEE, FIELD, $21,946,000

Mission

Through the loan guarantee program, the Government guarantees or insures loans made by private lending institutions to veterans for homes, farms, and businesses; makes direct loans to veterans for homes in areas where private housing credit is short; and makes grants to paraplegic veterans for specially adapted housing. The program also services, liquidates, sells, and otherwise disposes of properties and loans owned as a consequence of underwriting and making loans.

Highlights

During fiscal year 1963, GI loan activity continued to trend upward. Nearly 206,000 home, farm, and business loans, amounting to $2.9 billion, were guaranteed or insured. Loan applications received during fiscal year 1963 increased about 10 percent over fiscal year 1962.

The VA, during fiscal year 1963, acquired 25,243 properties. This was an increase of 4,078 acquisitions over fiscal year 1962. However, sales of acquired

properties increased during the year by 5,413, to 19,387, leaving 23,783 properties on hand at the end of the year.

During fiscal year 1963, 18,488 direct loans were made, bringing the cumulative total to 227,069. Loans as of June 30, 1963, amounted to nearly $2 billion.

During fiscal year 1963, $181.2 million in direct loans and $279.3 million in vendee accounts were sold to private investors.

Summary of requirements

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate	Increase (+) or decrease (−), 1965 over 1964
Average employment	2,705	2,772	2,740	−32
Personnel compensation	$17,351,751	$18,928,000	$19,122,000	+$194,000
Personnel benefits	1,307,833	1,458,000	1,474,000	+16,000
Total personal services and benefits	18,659,584	20,386,000	20,596,000	+210,000
Travel and transportation of persons	499,939	500,000	500,000	
Other services	872,884	900,000	850,000	−50,000
Total cost	20,032,407	21,786,000	21,946,000	+160,000

Mr. Evins. Give us a brief summary of the operating expenses for the loan guarantee program. You are requesting $21,946,000 which is an increase of $160,000. Most of this is taken up in personal service and benefits.

Mr. Brickfield. We have an overall decrease of $210,000 in this program between 1964 and 1965, but we plan on losing 32 people.

Mr. Ostertag. Did you say an increase or decrease?

Mr. Brickfield. This is an increase of $210,000 and this is attributable, Mr. Ostertag, to the pay increases.

Mr. Ostertag. I thought you said decrease.

Mr. Brickfield. I did. I meant a decrease in personnel.

Mr. Evins. Page 8–52 shows the average employment is down 32; personnel compensation is up from $18,928,000 to $19,122,000, an increase of $194,000; and personnel benefits are up from $1,458,000 to $1,474,000 or $16,000, making a total increase of $210,000 in that category.

Mr. Gleason. This is attributable to the pay raise and the within-grade promotions.

WORKLOADS—LOAN GUARANTEE

Mr. Evins. We will put the workload table on page 8–53 in the record.

(The table follows:)

Workloads

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate
Appraisal requests received (units)	350,639	344,600	329,500
GI loan applications	215,184	208,000	195,000
GI loans closed	203,065	190,000	175,000
Direct loan applications received	32,798	24,000	22,400
Direct loans closed and disbursed	18,488	15,000	10,000
Average number of loans owned	226,809	216,800	224,200
Paraplegic grants	350	400	400
Defaults reported	107,945	106,400	104,700
Claims processed	22,940	20,600	16,000
Property acquisitions	25,243	25,400	21,500

Mr. EVINS. What is the workload situation?

Mr. BRICKFIELD. Generally, Mr. Evins, there is a decrease. For example, in appraisal requests received we go from 344,600 to 329,500. In GI loan applications there is a drop from 208,000 to 195,000. In GI loans actually closed there is a drop from 190,000 to 175,000. In our direct loan applications received there is a drop from 24,000 to 22,400. In direct loans closed and disbursed there is a drop from 15,000 to 10,000.

Mr. EVINS. These figures are significant. They indicate you closed or disbursed or approved less than 50 percent of the applications received. Is that about the right figure?

Mr. GLEASON. That is about right.

Mr. DERVAN. We have an attrition in those received due to the fact the property is not appraised at a value equal to the sale price or the applicants do not qualify from a credit standpoint.

RURAL AND URBAN LOANS

Mr. EVINS. What is the percentage of guaranteed loans for people in the city in comparison to the number received and approved? Then what is the rural situation?

Mr. DERVAN. Roughly, you can get a good idea from these figures; 208,000 applications——

Mr. EVINS. That includes all types; does it not?

Mr. DERVAN. Yes; home, farm, and business.

Mr. EVINS. I want to compare the rural against the city.

Mr. DERVAN. I would say in respect to direct loans, or rural loans, there is a very considerable attrition. It is presently running 40 percent of the applications that are received.

Mr. EVINS. What percentage of applications for veterans in the cities are disapproved?

Mr. DERVAN. I would say not more than 10 percent.

Mr. EVINS. What is the reason for that?

Mr. DERVAN. With respect to the GI home loans the veteran makes an application to the lender and the lender submits the loan to us for prior approval. If the lender is not satisfied that the loan will be approved by the VA, he will reject it in the first instance and it does not come in to the VA; whereas in the direct loan field the veteran makes the application direct to the VA office.

Mr. EVINS. Is there anything the Veterans Administration can do to improve that situation as to the rural applicants?

Mr. BRICKFIELD. We have no waiting list, Mr. Evins. We have very little downpayment and long terms and the only thing that would prevent an applicant from getting the loan is that his credit is not sufficient.

Mr. EVINS. The man's credit in the city is better than the credit of the man in the country, is it?

Mr. DERVAN. No. There are more of them.

Mr. EVINS. I do not think the man in the city is any more honorable than the man in the country.

Mr. DRIVER. I think Mr. Dervan indicated the banks are washing out the applications in the city.

Mr. GLEASON. We have no way of knowing how many the banks have turned down as poor credit risks.

Mr. OSTERTAG. You mean before they get to you?

Mr. DRIVER. Yes.

Mr. OSTERTAG. Before they come to your attention the banks have turned them down?

Mr. GLEASON. Probably 90 percent of all washouts would have already been turned down.

Mr. DRIVER. As you know, Mr. Evins, the economic stability of the rural area shows up more favorably than that in the city.

INCREASE IN LOAN AMOUNTS

Mr. OSTERTAG. What about property values? Is that shifting to any great degree?

Mr. DERVAN. I think what is most indicative of that is the average loan. It has crept up substantially since 1950. As I recall back in 1950 the average loan was about $6,000 in the GI loan program. By 1955 it had crept to $10,700, and by 1963 to more than $14,000, and today it is close to $15,000.

Mr. OSTERTAG. Are you speaking of new homes?

Mr. DERVAN. I am talking about average.

LOANS FOR NEW HOMES AND EXISTING PROPERTIES

Mr. OSTERTAG. On these GI loans, are they associated primarily with new homes or resales?

Mr. DERVAN. It is rather interesting to note that in the last 2 years, since 1961, there has been almost a complete reversal. For example, in 1961, about 70 percent of the GI loans made were made to finance the purchase of new homes and about 30 percent were made to finance the purchase of existing previously occupied homes.

Due to the fact that there has been an adequate supply of financing generally in the past 2 years, in 1963 the situation had reversed so that in 1963 about 60 percent of the loans made under the GI program were made to purchase existing previously occupied homes and only 40 percent to purchase newly constructed homes.

Mr. OSTERTAG. What is the real cause of that shift?

Mr. DERVAN. I think it is primarily due to two things, sir. Prior to the last couple years, and especially prior to 1961, money was quite tight. Our interest rate is at the statutory maximum of 5¼ percent. Therefore, rather substantial discounts prior to 1961 were involved in the making of a GI loan by a lender. As the money market loosened and financing became rather abundant generally, the discount lessened and today the discount is such that people owning previously occupied property are willing to absorb that discount, and this accounts to a large extent for the shift from the newly constructed housing being predominant to previously occupied housing, which is now predominant.

Mr. EVINS. These veterans are only entitled to one guaranteed loan. Would you say the entitlements are being used up?

Mr. DERVAN. I think the significant factor is that today about 70 percent of the GI loans are being obtained by Korean veterans and only 30 percent by World War II veterans.

Mr. GLEASON. I think we should point out that it is possible for a GI to get more than one GI home loan. If he is relocated and the first one is paid off he can apply for another one.

LOAN GUARANTEE EMPLOYMENT

Mr. THOMAS. I cannot find where you set up the location of your personnel in your loan guarantee program.

Mr. MONK. They are located in the 54 regional offices.

Mr. THOMAS. How many are in the District of Columbia?

Mr. DERVAN. We do not have a list office by office.

Mr. BRICKFIELD. The field strength is listed on page 8–54.

Mr. DRIVER. Those are all in the regional offices.

Mr. THOMAS. You set it out by activity but where are they located?

Mr. DRIVER. In 54 of the 66 regional offices.

Mr. THOMAS. How many are there in the District of Columbia?

Mr. MONK. 74.

Mr. THOMAS. Where is that set out?

Mr. MONK. On page 8–20, down at the bottom.

Mr. OSTERTAG. That is a complete breakdown of the whole office?

Mr. MONK. Yes; of the Department of Veterans Benefits.

Mr. THOMAS. Where is the figure for the loan guarantee program?

Mr. MONK. 74.

Mr. THOMAS. Why not insert in the record at this point the location of your people: 74 in the District of Columbia and the other people in the field.

What are the duties of the people here in the District of Columbia in this regard? Do you make any loans here in headquarters?

Mr. BRICKFIELD. Mr. Chairman, the people in the District of Columbia have overall responsibility for the policies which set up the guidelines for our loan guarantee program.

Mr. OSTERTAG. Does it take 74 people to do that?

Mr. BRICKFIELD. Yes, it does, Mr. Ostertag. If I may direct your attention to page 8–52, our mission is set out there.

Mr. THOMAS. We have already read that, and it is in the record.

Mr. OSTERTAG. That is the loan guarantee program generally.

Mr. THOMAS. You are asking for 2,740, a reduction of 32; and you have 74 in the District of Columbia.

Mr. MONK. The 74 are in addition to the 2,740.

Mr. THOMAS. Why do you not put them in there?

Mr. GLEASON. This is just the field personnel, on this page 8–52.

Mr. THOMAS. At page 8–52 you say (reading):

The VA, during fiscal year 1963, acquired 25,243 properties. This was an increase of 4,078 acquisitions over fiscal year 1962. However, sales of acquired properties increased during the year by 5,413, to 19,387, leaving 23,783 properties on hand at the end of the year.

You say these 2,740 people are in the 66 offices?

Mr. GLEASON. Yes.

Mr. THOMAS. Why do you not insert a table showing the number for the last 5 years for each one, and the number in the District of Columbia?

Mr. GLEASON. All right, Mr. Chairman, we will do that.

(The information supplied follows:)

FORECLOSURE LOCATIONS

Mr. THOMAS. Mr. Brickfield, I think you said your foreclosures were mostly in five States?

Mr. BRICKFIELD. Eighty-five percent of the foreclosures are in 12 locations.

Mr. THOMAS. Where are they?

Mr. BRICKFIELD. Texas, Michigan, Kansas, Illinois, Florida, California——

Mr. DERVAN. Ohio, Pennsylvania, Louisiana, Alabama, Washington, and New Jersey.

Mr. THOMAS. The State of Washington?

Mr. DERVAN. Yes.

Mr. THOMAS. How many States is that?

Mr. DERVAN. Eighty-four percent in 12 States.

CENTRAL OFFICE LOAN SUPERVISION

Mr. THOMAS. What is your employment picture? If 84 percent of your total employment is in those 12 States, there ought to be a reduction in this.

Mr. GLEASON. We will furnish those figures, Mr. Chairman.

Mr. THOMAS. Can you give us a bird's-eye view?

Mr. BRICKFIELD. In addition to handling the acquired properties which we try to sell, the people in our regional offices also handle the day-to-day work of receiving direct loan applications and the usual work of the office. These properties——

Mr. THOMAS. The work is all done in the field so why do you need 74 people in the District of Columbia?

Mr. BRICKFIELD. Primarily to supervise this work.

Mr. THOMAS. If you would put them in the field it might help a little.

Mr. BRICKFIELD. Every day we get literally a dozen problem cases that come into the central office.

Mr. THOMAS. You think you are better able to handle them here than in the field? In dealing with a foreclosure, you might have sickness in the family or other circumstances. These hardship cases come up a hundred times a year, do they not?

Mr. BRICKFIELD. Yes, but we keep a close look at finances. If a loan guaranty officer in Philadelphia receives an offer on a bulk package of 10 homes, we require it to come in to the central office to see if the price is right. We compare what is done in Philadephia with what is done in Chicago and Los Angeles to have uniform rules.

Mr. THOMAS. I understand the situation in Los Angeles is different from in Chicago and the real estate values are different.

Mr. BRICKFIELD. That is true.

Mr. THOMAS. Why could you not send that to the field office? They made the loan, did they not?

Mr. BRICKFIELD. The banks, for the most part, make the loans, then we guarantee them.

Mr. THOMAS. We use that as an interchangeable term.

Mr. BRICKFIELD. No, sir. Banks are supervise lenders. They make the loans automatically and then we guarantee them.

Mr. THOMAS. Except that you do make the direct loans.

Mr. BRICKFIELD. Yes, when the property is located in the rural area.

Mr. DERVAN. Only certain types of lenders make the loans automatically. Most of them are submitted to the VA for prior approval.

Mr. THOMAS. All the activity is in the field. The loans are made there and the foreclosing is done there. What is so important in your functions here? If you are taking the responsibility of overseeing all of this, do you take the responsibility for the 25,000 foreclosures too? You cannot take credit for the sunshine unless you take credit for the rain. You take credit for overseeing all of it. Do you take credit for the 25,000 foreclosures too?

Mr. BRICKFIELD. We take the responsibility, yes, sir.

Mr. THOMAS. You are a brave man.

Mr. BRICKFIELD. Mr. Thomas, you do not just sell 25,000 houses by wishful thinking.

Mr. THOMAS. You do not just foreclose on 25,000 houses, either. Maybe somebody exercised poor judgment down the line.

Mr. GLEASON. Not necessarily.

Mr. THOMAS. What do you call it?

Mr. GLEASON. Economic factors come to bear on these situations.

Mr. BRICKFIELD. How did the VA make a poor judgment in Wichita, Kans., when Boeing Aircraft pulled out?

Mr. THOMAS. Did Boeing guarantee to have a plant in Wichita for 25 years, the length of your mortgage?

Mr. BRICKFIELD. No, sir.

Mr. THOMAS. Go ahead.

Mr. BRICKFIELD. Mr. Chairman, when the loan application was made in Wichita, say 5 or 6 years ago, the bank looked at the veteran's credit and at that time it looked good and for the foreseeable future

it was indicated he would have a steady job, and on that basis the loan was made. Suddenly the situation changed. This veteran then, was not a bad credit risk at the beginning. This was one that developed. I think that is a good example. And there are other examples in Detroit where automation came into play.

Mr. THOMAS. Off the record.

(Discussion off the record.)

Mr. THOMAS. Go ahead, Mr. Evins.

Mr. EVINS. I was preparing to turn to the insurance picture, Mr. Chairman.

Mr. GLEASON. Would you like a functional breakdown of our 74 personnel in the Washington office?

Mr. THOMAS. Yes. Mr. Brickfield said the managerial group lays down the guidelines and takes responsibility, and I guess they have to take the responsibility for the foreclosures. So let us get rid of the 74 people in Washington and the assumption is we will not have as large a foreclosure list.

Mr. GLEASON. We will supply you with that list.

(The information supplied follows:)

Number of employees on duty, Jan. 31, 1964

Function:	
Office of Director	4
Construction and valuation	13
Loan policy and management	26
Property management	10
Administration	21
Total	74

Mr. BRICKFIELD. I have just been handed the breakdown of the number of people in our loan guaranty division in each of our regional offices.

Mr. THOMAS. We will insert it in the record.

INSURANCE

Mr. EVINS. Place in the record pages 8–58 and 8–59 and 8–60. (The pages follow:)

GENERAL OPERATING EXPENSES

INSURANCE, FIELD, $8,342,000

Mission

The Insurance Service directs the operations of four insurance activities, authorized by statutes, for the benefit of veterans and servicemen policyholders and their beneficiaries. These are: U.S. Government life insurance that originated in World War I (USGLI), national service life insurance authorized in World War II (NSLI) and the two programs, veterans special life insurance (VSLI) and service-disabled veterans insurance (S–DVI), that were created during the Korean conflict by amendments to the basic National Service Life Insurance Act of 1940. The following summary gives the number of policies, and the total assets of the four insurance funds as of June 30, 1963:

Program	Policies in force (thousands)	Face value (millions)	Fund assets (millions)
U.S. Government life insurance	277	$1,220	$1,105
National service life insurance	4,961	32,275	6,197
Veterans special life insurance	645	5,700	110
Service-disabled veterans insurance	53	460	3
Total	5,936	$39,655	$7,415

Highlights

The operations in connection with the maintenance of insurance records are now concentrated in two VA centers located at Philadelphia, Pa., and St. Paul, Minn. During fiscal year 1963, maintenance of these records included the processing of 22,554,000 remittances, 168,000 reinstatements, adjudication of 22,000 disability claims, granting of 112,000 loans and 75,000 refunds. Approximately 2 million National Service Life Insurance records were converted to magnetic tape in our western offices. This brings the total number of converted records to 5.7 million since September 1959.

The insurance activity at Denver, Colo., was transferred to, and merged with, the insurance activity at St. Paul, Minn., effective June 3, 1963, with a resultant savings in fiscal year 1964 of 90 positions.

In fiscal year 1964, records for World War I insurance (USGLI) will be converted to ADP. Conversion costs will be recovered in less than 2 years, after which annual savings of about 20 man-years should be realized.

Summary of requirements

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate	Increase (+) or decrease (−), 1965 over 1964
Average employment:				
Assistant manager for insurance	67	51	30	−21
Insurance accounts	1,532	1,110	1,019	−91
Underwriting and claims	253	229	210	−19
Total	1,852	1,390	1,259	−131
Personnel compensation	$10,402,264	$8,270,000	$7,731,000	−$539,000
Personnel benefits	791,123	637,000	601,000	−36,000
Total personal services and benefits	11,193,387	8,907,000	8,332,000	−575,000
Travel and transportation of persons	56 311	10,000	10,000	
Total cost	11,249,698	8,917,000	8,342,000	−575,000

Employment requirements for all measurable activities are determined by applying work performance standards to anticipated workloads. The standards have been validated to insure consistency with required quality as well as effective production. Operations are retested and new standards developed throughout each year to keep them in line with improvements from procedural and computer programing changes and increased employee effectiveness. Other work measurement techniques are used for developing staff consistent with overall requirements in nonmeasurable areas.

Reduction in employment from fiscal year 1963 to fiscal year 1964 was due to consolidation of the Denver and St. Paul offices at St. Paul, automatic data processing, increased efficiency and revised procedures.

Workloads supporting the above requirements are as follows:

	Fiscal year 1963	Fiscal year 1964	Fiscal year 1965
Policies in force	5,967,000	5,887,000	5,806,000
Remittances	22,554,456	22,180,000	21,815,000
Loans and surrenders	128,390	134,000	139,000
Adjustments	894,500	1,022,000	1,017,000
Underwriting actions	530,631	497,000	485,000
Correspondence	1,270,234	1,248,000	1,126,000
Disability claims	21,958	20,000	19,000
Termination cases audited	78,796	79,000	79,000

TOTAL POLICIES IN FORCE

Mr. EVINS. Tell us about the number of policies in force and by classes and a general discussion of the insurance situation.

Mr. BRICKFIELD. On page 8–58 you can see the total number of policies in force are 5,936,000. The face value is $39,655 million, and the assets in the fund are $7,415 million.

These policies are broken down as follows: USGLI, World War I policies, 277,000; NSLI, which is generally World War II, 4,961,000; VSLI, which is a nonparticipating insurance issued to Korean veterans, 645,000; and S–DVI, which is issued to the service disabled, 53,000.

Mr. OSTERTAG. Will the Chairman yield?

Mr. EVINS. Yes.

REDUCTIONS DUE TO AUTOMATIC DATA PROCESSING

Mr. OSTERTAG. I have one general question with regard to the insurance program. I recall our discussions earlier about the consolidation of the Department of Insurance with the Department of Veterans' Benefits and that it is a dual or a joint operation.

Secondly, we have discussed and we have heard a great deal about the data processing program and its relationship to the insurance field. Yet there does not seem to be any substantial reduction in overhead in this field as compared to what it seems it should be due to the data processing and the consolidation of services and so on.

I am raising this question because maybe the future will unfold more of the point I am raising.

Mr. GLEASON. You will recall we asked for 48 personnel for Mr. Budd. At the top of page 8–59 you will note there is a reduction of 131 personnel.

Mr. OSTERTAG. I see that.

Mr. GLEASON. We just this past year completed the automation of our insurance accounts. This has brought about this decrease of 131 in the Department of Insurance. At the same time it has increased somewhat in the Department of Data Management, but the overall improvement is remarkable.

Mr. THOMAS. But it goes back to one thing, as far as automatic processing is concerned insurance is carrying Mr. Budd's operation?

Mr. GLEASON. No, sir. In compensation and pension——

Mr. THOMAS. He shows a reduction of 131 in insurance.

Mr. DRIVER. There is a 500 reduction in the other area.

Mr. THOMAS. Insurance is not as big as compensation and pension by any means and you know it.

Mr. DRIVER. No, sir. There should be very little reduction because all the accounts have been converted, but there will continue to be other reductions in programs.

Mr. THOMAS. This division is carrying the load in the consolidation.

Mr. DRIVER. That reduction has been made in the past.

Mr. GLEASON. When we automated compensation and pension payments, Mr. Chairman.

Mr. THOMAS. You did not have much reduction last year in compensation and pension.

Mr. GLEASON. It was made the year before.

Mr. THOMAS. What reduction do you have this year in compensation and pension that can be attributed to automation?

Mr. DRIVER. Not any because that was 2 years ago.

Mr. EVINS. Can you provide a table to show the reductions made in insurance, in compensation, and pension, and so forth?

Mr. GLEASON. Yes, sir.

Mr. BRICKFIELD. That is on page 2–4, Mr. Evins.

Mr. MONK. In 1960 we had 22,795 average employment in general operating expenses and we have 17,776 projected for 1965.

Mr. EVINS. I will have to have a little explanation of this one.

Mr. GLEASON. It does not give the breakdown.

Mr. EVINS. Give us one table showing the reductions by the various major divisions.

Mr. GLEASON. Yes, sir.

(The information supplied follows:)

Comparison of average employment from 1960 through 1965

Program	1960	1961	1962	1963 [1]	1964 [1]	1965 [1]
Staff offices	1,470	1,459	1,453	1,330	1,297	1,220
Chief attorney	1,518	1,550	1,555	1,552	1,450	1,390
Compensation and pension	3,785	3,950	3,926	3,645	3,330	3,340
Vocational rehabilitation and education	1,652	1,100	802	649	580	470
Loan guarantee	2,468	2,269	2,559	2,705	2,772	2,740
Office services	5,836	5,329	4,992	5,405	5,354	5,179
Insurance	4,122	3,814	3,439	1,852	1,390	1,259
Data management				818	872	920
All other	1,944	1,876	1,794	1,432	1,349	1,258
Total general operating expenses	22,795	21,347	20,520	19,388	18,394	17,776

[1] Fiscal years 1963, 1964, and 1965 reflect the following organizational changes: 1. Merger of Insurance with the Department of Veterans Benefits. 2. The establishment of the Department of Data Management. 3. Realinement of staff office functions. 4. Realinement of activities in compensation and pension and office services.

Mr. OSTERTAG. The fact remains you have instituted a system of automatic data processing which you claim has brought about efficiency, and I agree it has, but it is not reflected entirely in the overall cost of the operation of your insurance department.

Mr. DRIVER. Look at the top of page 8–59, Mr. Ostertag.

Mr. GLEASON. With a drop of 131 in personnel, what else can we do? We went from $10.4 million in personnel compensation in 1963 to $7.7 million for fiscal year 1965. That is almost $3 million.

Mr. OSTERTAG. In your budget for 1965 under this heading you are asking for $8,332,000, which is a reduction of $575,000.

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. Which is not a substantial amount.

Mr. DRIVER. That includes the pay raise.

Mr. GLEASON. Gee, Mr. Ostertag, how much can we absorb? If you will look at the top of page 8–59 you will see that from 1963 we are down $3 million from just 2 years ago including the pay raise, and when you include the pay raise for 1,300 people, this is a tremendous amount that we have absorbed.

Mr. OSTERTAG. The consolidation was recently put into effect?

Mr. GLEASON. Yes, sir; this past year.

FUTURE REDUCTIONS DUE TO ADP

Mr. OSTERTAG. I opened the door for you to say that this is going to lend itself to further reductions.

Mr. GLEASON. I do not think you will get further reductions because we have already been automated now and any further reductions would be minimal.

Mr. OSTERTAG. I applaud what you are doing but I thought it would have a larger effect than what seems to be reflected here.

Mr. GLEASON. I would like to refer you back to the chart on page 2–4 just for insurance purposes. The Department of Insurance overall in 1953 had 11,000 personnel. For next year we are asking for 1,259 for the field operation. I think over this period of time this is a tremendous breakthrough. I do not know how much further you can ask us to go. We have gone from 11,000 to 1,259 in about 10 years. I think that is a tremendous amount.

Mr. DRIVER. In 1953 it was about 8,000 for the field operations.

Mr. THOMAS. That is remarkable.

Mr. DRIVER. I would think the saving in the future as a result of automatic data processing and so on will come in areas such as loan guarantees, supply management, and so on. The ones that have been fully automated such as insurance have already been reduced.

Mr. THOMAS. What about compensation and pension?

Mr. DRIVER. That has been completed. The table we will give you for the record will show these reductions.

Mr. OSTERTAG. I would like to have, if you are in a position to advance an estimate, what your projected savings will be in the subsequent years of 1966, 1967, and 1968 by virtue of the automatic data processing.

Mr. DRIVER. You mean new savings and not continuations?

Mr. OSTERTAG. I expect you to continue the savings, but will you have additional savings?

Mr. DRIVER. When you get down to the point we have got it and distribute it in about 75 locations, you have reached the point where it will be very difficult to make very large personnel savings. In the medical area there might be considerable savings but it will require a great deal of programing before we can make a firm estimate.

Mr. GLEASON. And it will take years.

Mr. OSTERTAG. Have you any projected estimates as to subsequent changes that will develop as a result of your program primarily due to the automatic data processing and your consolidations as well?

Mr. GLEASON. We have changes that we think we would like to follow but whether we will be able to accept them, I do not know. Mr. Budd will have to see if it is feasible. If so, only then can we try to go into it.

Mr. EVINS. Whereas you had six insurance offices you now have two and the personnel is considerably reduced. You say (reading):

The operations in connection with the maintenance of insurance records are now concentrated in two VA Centers located in Philadelphia, Pennsylvania and St. Paul, Minnesota. During fiscal year 1963, maintenance of these records included the processing of 22,554,000 remittances, 168,000 reinstatements, adjudication of 22,000 disability claims, granting of 112,000 loans and 75,000 refunds. Approximately 2,000,000 National Service Life Insurance records were converted to magnetic tape in our western offices. This brings the total number of converted records to 5.7 million since September 1959.

SAVINGS FROM AUTOMATIC DATA PROCESSING

Mr. GLEASON. Mr. Ostertag, we do have annual savings that have occurred through automatic data processing as of the end of fiscal 1964 from the conversion of compensation and pension accounts to ADP.

Mr. OSTERTAG. Could we put the paper you have just handed me in the record?

Mr. EVINS. Without objection, it will be placed in the record at this point.

(The paper referred to follows:)

Annual savings through automatic data processing as of end of fiscal year 1964

Conversion of compensation and pension accounts to ADP	$1,500,000
Processing of TWX hold checks, suspend-stop pay notices	12,000
Input and control revision (C. & P.)	32,000
Processing notices of death on the computers	43,000
Automatic reinstatement of policies	128,000
Insurance underwriting changes	30,000
Cash surrender of insurance and policies	34,000
Conversion of NSLI accounts	3,000,000
Computer sort and reconciliation of insurance collections	69,000

ADDITIONAL ESTIMATED SAVINGS 1965 OR AFTER

Conversion of USGLI accounts	137,000
Storage and retrieval of dividend information	55,000
Personnel and accounting integrated data pay system	1,770,000
Loan guarantee automation	1,294,000
Payment of insurance awards	110,000
Insurance actuarial operations	160,000
Preparation of premium, loan interest, and lien interest notices	55,000
Computer sort of miscellaneous insurance transactions	26,000

Automatic data processing—Accomplishments and plans

ACCOMPLISHMENTS

Description of project	Estimated annual savings to VA	Completion or target date
1. Conversion of compensation and pension accounts to automatic data processing. This project placed the maintenance of 4.5 million compensation and pension-benefit payment accounts on a centralized electronic data processing system. This system integrates the entire information-handling process from the rating decision at the VA regional office through the issuance of the benefit check by the Treasury Department. In addition to VA's savings, the Treasury and Post Office Departments save $500,000 a year.	$1,500,000	August 1962.
2. Processing of TWX hold checks, suspend-stop pay notices [1] This project provides a system of automatically processing hold-check requests and eliminates 3,500 teletype messages per month.	12,000	June 1963.
3. Automatic increase of compensation payments [1] Public Laws 88-21, 88-132, and 88-134 authorized increases of dependency and disability indemnity compensation payments to children, parents, and widows. Computer programs were developed to automatically increase these payments on the computer, providing 1-time savings of about $99,000 over the manual system. In addition, these programs are now available and need only to be modified to accomplish similar operations in the future.	[2]	October 1963.
4. Input and control revision (compensation and pensions) This modification of the compensation and pension ADP application provides for direct paper tape to magnetic tape conversion and improves our control procedures. It also eliminated the use of punched cards.	32,000	November 1963.
5. Processing notices of death on the computer An automatic procedure which calculates the amount of insurance payable, generates the account status for adjudication of the claim, and removes the record from the active file.	43,000	April 1962.
6. Automatic reinstatement of policy A program which automatically reinstates lapsed insurance policies when all conditions are met by the policyholder.	128,000	June 1962.
7. Insurance underwriting changes A program which automatically processes changes affecting underwriting aspects of the insurance contract.	30,000	June 1962.
8. Cash surrender of insurance policies An automatic process to accomplish an insurance policyholder's request to surrender his policy for cash.	34,000	November 1962.
9. Conversion of national service life insurance accounts [1] The conversion of nearly 2,000,000 of these accounts which were maintained at the St. Paul and Denver VA center was completed. (The Denver office was consolidated with St. Paul on June 2, 1963.) This converted all national service life insurance accounts, totaling about 5,700,000, to a data processing system of maintenance. In addition to savings in cost, we have gained greater accuracy, better accountability, and faster processing.	3,000,000	April 1963.
10. Computer sort and reconciliation of insurance collections [1] Completion of this project provides a system of placing payments of insurance premiums and loans almost directly on tape. This eliminated 10 electric accounting machine operations and records payments 1 day earlier.	69,000	April 1963.
11. Automatic deduction of insurance premiums from benefit payments.[1] Completion of this project provides a tape-to-tape operation between Chicago and Philadelphia for automatically processing insurance premium payments being made through deductions from benefit payments. This new system eliminated the use of punched cards and provides greater accuracy.	[2]	July 1963.
12. Conversion of U.S. Government life insurance accounts [1] The conversion of about 270,000 U.S. Government life insurance accounts was completed. In addition to savings in cost, this new system of maintenance provides faster and more accurate service to policyholders.	137,000	December 1963.
13. Storage and retrieval of dividend information [1] Completion of this project revised the insurance ADP system to provide for storing paid dividend information in the master record and retrieving this information when needed. This system also eliminated a supplemental punched card file.	35,000	Do.

See footnotes at end of table.

Automatic data processing—Accomplishments and plans—Continued

PROJECTS UNDER STUDY, DEVELOPMENT OR INSTALLATION

Description of project	Estimated annual savings to VA	Completion or target date
1. Personnel and accounting integrated data pay system. This project will provide a centralized, integrated ADP system for the pay and personnel administration operations of the Veterans' Administration including the associated fiscal system. Within the VA, this system provides for one-time capture of data for all purposes, the minimum of coding and punching at field stations, and keeping the complexities of the system within the computer, thus simplifying field stations tasks. It will also allow us to furnish tax information to the Internal Revenue Service, a record of personnel actions to the Civil Service Commission, and information to the Treasury Department RDO from which to prepare checks and bonds all on a magnetic tape to magnetic tape basis which eliminates paperwork in each agency.	[4] $1,770,000 [5] 542,000	June 1965.
2. VA total information processing system for 1975. This project is tied in with a study "Projection of the VA for 1975" being conducted by the Administrator's Advisory Council. It provides for developing the concepts and plan for a total information processing system to most effectively meet the conditions and needs anticipated for the VA in 1975.	[3]	May 1964. (Complete development of plans.)
3. VA automated management information system. This major study will determine how automatic data processing can be used to improve the VA management information system. This includes assisting planning and policy determinations by the use of the management sciences.	[3]	August 1968. (Complete research and analysis.)
4. Data processing branches. Through this study it is planned that criteria will be established for the assumption of management control and operation of data processing branches by the Department of Data Management and the proper organizational relationship of the branches will be explored. This study has potential for substantial savings through better utilization of EAM equipment and personnel.	[3]	February 1964. (Complete feasibility study.)
5. Procurement, storage and distribution of supplies. The VA spends about $225,000,000 annually to buy supplies and equipment. It owns $250,000,000 worth of equipment in use and another $35,000,000 in inventory. This program represents an area of potentially large savings through the use of automatic data processing. The current study will determine the feasibility of improving the management of the VA supply program through the application of advanced data processing techniques and developing a total integrated system which will meet both operation and management requirements. The design of an integrated system including supply functions of storage and distribution, inventory control, supply management, and purchase and contracting with the related fiscal and statistical activities will follow.	[3]	October 1964. (Complete feasibility study.)
6. Pension benefits projections (year 2000). This project provides for the development of a computer system to replace the present manual calculation of projections of the cost of veterans' benefits. This would allow the use of more sophisticated forecasting techniques and provide greater accuracy.	[3]	March 1964. (Complete development of an experimental computer program.)
7. Annual income questionnaire study [1]. This project will attempt to improve the process of preparing and evaluating over 2,000,000 annual income questionnaires by the use of ADP to reduce costs and improve service.	[3]	(Feasibility study in process.)
8. Automation of C. & P. accounting system [1]. This project provides for developing a completely computer-oriented accounting system which will produce final accounting reports and fiscal management information for the compensation and pension program as direct computer outputs. This system will eliminate a considerable amount of EAM processing and field station report preparation.	[3]	January 1965.
9. Forecasting by simulation. This project will attempt to expand the number of variables that will be taken into account in forecasting future costs and workloads in the veterans' benefits programs by the use of computer simulation techniques. It will allow us to forecast under several different contingencies with a minimum of additional cost and effort.	[3]	Open.

See footnotes at end of table.

Automatic data processing—Accomplishments and plans—Continued

PROJECTS UNDER STUDY, DEVELOPMENT OR INSTALLATION—Continued

Description of project	Estimated annual savings to VA	Completion or target date
10. Loan guarantee automation. It has been determined that the application of automatic data processing techniques to segments of the VA loan guarantee program is feasible and desirable at this time. Development of the ADP system for maintaining portfolio loans is underway and development of an ADP system for property management is currently planned.	[4] 1,294,000 [5] 450,000	September 1966.
11. Payment of insurance awards. This project will integrate the payment of about 527,500 insurance death awards a month into the insurance ADP system. It will eliminate the current manual-mechanical system and make the authorized payments automatically, providing the required reports as by products.	110,000	April 1964.
12. Insurance actuarial operations. The conversion of insurance actuarial operations from a punched card system to computer maintenance and integration with the insurance ADP system will be accomplished by this project. The national service life insurance portion has been completed. A total of about 12,000,000 punched cards used under the present actuarial system will be obviated as well as the EAM equipment needed to process them. Actuarial records will be generated by the computer system as a byproduct of normal processing.	160,000	June 1964.
13. Preparation of premium, loan interest, and lien interest notices [1]. This project will improve the efficiency of the insurance billing operation by further automation of the process.	55,500	Do.
14. Computer sort of miscellaneous insurance transactions. This project provides for developing a system for using the computer to sort miscellaneous insurance transactions to reduce costs and processing time. It will eliminate current EAM processing operations.	26,000	June 1965.
15. Placing insurance allotments on ADP [1]. If successful, this project will allow us to establish a system of computer tape-to-tape processing of insurance payments being made from the military service payrolls. The Coast Guard is cooperating in a test to develop the procedures for this application.	[3]	Open.
16. Architectural design criteria. This project will explore the feasibility of generating architectural design criteria for the construction of VA hospitals on the computer from existing medical requirements and data. It is anticipated that this project will reduce the time required from the time a new hospital is approved to the time it is given to the architectural engineer from the current 18 months to 7½ months.	[3]	During fiscal year 1965.
17. Estimation of construction costs. This project will develop computer procedures to provide rapid and detailed preproject estimates of hospital construction costs. It is anticipated that this project will provide further reductions in hospital construction leadtime and reduce costs.	[3]	March 1964. (Complete development on an experimental computer program.)
18. Automated hospital information system. This major study will determine the technical and economic feasibility of providing a minimal cost, real time automatic data processing system for VA hospitals. If feasible, this system will harbinger a new era of patient care in which the computer will become a primary tool of the doctor and hospital staff in providing better care to the hospital patient. Parts of this project are being conducted on a contract basis by the System Development Corporation.	[3]	June 1965. (Complete feasibility study.)
19. Analysis of nutritive content of menus by computers [1]. This system uses a nutritive value catalog of food items served in the VA hospitals to provide nutritional analysis of menus as a service to them. It will save station dietitians time and provide a more accurate analysis to assure proper patient nutrition.	[3]	February 1964.
20. Use of linear programing for food procurement. The objective of this project is the development of a system for utilizing linear programing, a mathematical optimizing technique, and the capacity of a large-scale computer in the selection of nutritionally adequate, patient acceptable and minimum cost diets for VA hospitals. The application of this procedure should produce the best combinations of types and quantities of food, the sources of supply, and a schedule for ordering and using food over a period of time.	[3]	July 1964. (Complete feasibility study.)

See footnotes at end of table.

Automatic data processing—Accomplishments and plans—Continued

PROJECTS UNDER STUDY, DEVELOPMENT OR INSTALLATION—Continued

Description of project	Estimated annual savings to VA	Completion or target date
21. Patient discharge statistical reports. This project under development will provide the Department of Medicine and Surgery with the statistical data they require for management from the master records of discharged patients, maintained on magnetic tape.	[3]	March 1964. (Complete developmental work.)
22. Use of ADP for the annual patient census [1] This project will provide for capturing and computer processing of data on all patients who are in VA hospitals on a specific date each year to provide statistical tables necessary for projecting patient loads and budget requirements.	[3]	April 1964. (Complete developmental work.)
23. Patient data system (EDP) [1] Completion of this project provides a centralized patient data system of processing a variety of Department of Medicine and Surgery and agencywide medical administrative operating requirements and relieves field stations of the day-to-day accumulation and tabulation of the data manually.	[3]	January 1964.

[1] Projects were started before the establishment of the Department of Data Management (Feb. 1, 1963) but have been continued or completed under DDM.
[2] See writeup.
[3] Projects are (1) at a stage of development such that it is not possible to estimate any potential savings or (2) it is not anticipated that they will generate any direct dollar savings.
[4] Net impact savings.
[5] Net whole-unit savings.

USE OF ADP IN COMPENSATION AND PENSIONS

Mr. THOMAS. How many employees did you have?

Mr. GLEASON. I do not have that.

Mr. THOMAS. Ten or twelve years ago we were constantly being asked to go in the field of automation. And you have only saved about $1 million?

Mr. GLEASON. That is 1 year.

Mr. THOMAS. If you have cut down your employment from 11,000 to 1,300 in insurance, that is about a 90-percent decrease. Compensation and pension is many times larger than insurance, so your field is fertile.

Mr. DRIVER. We have already converted the pension and compensation program.

Mr. THOMAS. You keep harping back to "We have done all we can do."

Mr. DRIVER. I do not mean to say that but in the claims program you were talking about something far different from the insurance program.

Mr. THOMAS. We understand it is far different. But if you cannot do it let us get someone who can. You have said a dozen times it cannot be done. We think it can.

Mr. DRIVER. What I was saying was we had already converted the compensation and pension program to the computer in the same sense we have converted the insurance to the computer.

Mr. THOMAS. Mr. Ford built the Model T Ford in 1905 and has been improving on it ever since and I think you can.

Mr. GLEASON. We can always try.

Mr. THOMAS. If you listen to Mr. Driver he has come up with a saving of $1 million and he says that is all he can do.

Mr. DRIVER. I am hesitant to say we can make further reductions in these areas that have already been converted.

Mr. EVINS. We appreciate all small favors and hope for more.

OFFICE SERVICES, FIELD

The next item is "Office services" in the field.

Place in the record pages 8–62 and 8–63.

(The pages follow:)

GENERAL OPERATING EXPENSES

OFFICE SERVICES, FIELD, $33,124,400

Mission

Office services provides the finance, administrative, and personnel services for the Department of Veterans Benefits, and at some stations for the Department of Medicine and Surgery on a reimbursable basis.

Highlights

At our larger offices, these services are provided by separate divisions with separate chiefs responsible directly to the Manager. At the smaller stations, the activities are combined into one division with a chief who is responsible to the Manager for all of the activities. During 1963 an "in put" section was established in finance in order to consolidate the functions applicable to data processing in one division. In addition to providing for more effective supervision, this change will make for more effective utilization of existing personnel. Personnel were transferred from compensation and pension, contact and administrative programs with no increase to total station employment.

The consolidation of the Department of Insurance with the Department of Veterans Benefits during 1963 combined those office services functions formerly performed independently in the separate departments. For purposes of comparison with the current and budget years, actuals for 1963 have been prorated to reflect the costs of this activity.

The following reflects estimated requirements for these functions and includes not only the personnel to provide above services, but the major portion of all other administrative costs of the regional offices plus employee travel for all transoceanic travel.

Summary of requirements

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate	Increase (+) or decrease (−), 1965 over 1964
Average employment	5,405	5,354	5,179	−175
Personnel compensation	$28,290,254	$29,069,000	$28,656,000	−$413,000
Personnel benefits	2,196,121	2,246,000	2,214,000	−32,000
Total personal services and benefits	30,486,375	31,315,000	30,870,000	−445,000
Travel and transportation of persons	601,929	610,000	623,000	+13,000
Transportation of things	231,055	163,000	178,000	+15,000
Rents, commissions, and utilities	1,920,751	1,955,000	2,134,000	+179,000
Printing and reproduction	745,532	630,000	610,000	−20,000
Other services	615,100	615,000	389,000	−26,000
Supplies and materials	1,629,812	1,640,000	1,002,400	−637,600
Equipment	757,348	1,324,400	546,000	−778,400
Total cost	36,987,902	38,252,400	36,552,400	−1,700,000
Common service adjustment	3,475,924	3,417,000	3,428,000	−11,000
Net cost	33,511,978	34,835,400	33,124,400	−1,711,000
Average employment:				
Office of Chief	112	108	105	−3
Finance	1,837	1,975	1,872	−103
Administrative	3,253	3,076	3,012	−64
Personnel	203	195	190	−5
Total	5,405	5,354	5,179	−175

The effects of several reorganizations, mergers, and consolidations are reflected in this section. Among other things, it includes the establishment of finance and data processing activities at regional offices and the merger of Department of Insurance with the Department of Veterans' Benefits. Improved procedures resulting from these changes, as well as increased productivity, account for the principal difference in personnel strength between fiscal year 1965 and fiscal year 1964.

Mr. EVINS (reading):

Office Services provides the finance, administrative, and personnel services for the Department of Veterans' Benefits, and at some stations for the Department of Medicine and Surgery on a reimbursable basis.

There is a decline here of 175 in average employment, 1965 over 1964, and there are other reductions.

"Travel and transporation of persons" is up $13,000. "Transportation of things" is up $15,000. "Rents, communications, and utilities" is up $179,000. What caused them to go up in some areas and decrease in others?

INCREASED COST FOR COMMUNICATIONS

Mr. GLEASON. The rents, communications and utilities—is that the one about GSA?

Mr. BRICKFIELD. Yes.

Mr. GLEASON. They have a new telecommunication system that has been put in and all the departments of Government originally were to go into this and then some have pulled out and our communications bill has gone up on a comparative basis. This is not because we are using the telecommunications more than previously but our share has proportionately increased because of others pulling out. We are giving consideration to pulling out ourselves if the charges continue to go up.

Mr. EVINS. Is it working out as planned?

Mr. BRICKFIELD. It is working well but it is costing a great deal more.

Mr. THOMAS. Why should it cost more? What is the increase over last year?

Mr. BRICKFIELD. You mean in telephone services?

Mr. THOMAS. Yes.

Mr. MONK. $179,000.

Mr. THOMAS. Why should that be? The total bill is around $1 million?

Mr. MONK. $1.3 million.

Mr. THOMAS. Why should it be up? You are not buying equipment, are you?

Mr. BRICKFIELD. No, sir. GSA (1) increased the rate, and (2) it was the initial cost of converting to this new system, the Centrex system, and they charged us for this cost of converting and we pay not only for the rates but for the cost of converting. This was an addition of $179,000.

Mr. THOMAS. What was the conversion fee?

Mr. BRICKFIELD. In the offices converted to date, the cost has ranged from $1,000 to over $10,000.

Mr. THOMAS. Per office?

Mr. BRICKFIELD. Yes, an estimated average of $5,000 per office.

Mr. THOMAS. You said the rates were up. How much did the rates go up?

Mr. BRICKFIELD. I will have to supply that.

Mr. EVINS. You say (reading:)

Effective July 1, 1964, rates for communication services received from GSA were increased to all agencies and our estimate reflects this increase.

We will have to talk to GSA about this. There must be more here than meets the eye. This committee supported them in this with the understanding it would provide better service at reduced costs.

Mr. BUDD. Some of this cost comes from a circular to absorb GSA overhead costs. Starting in fiscal year 1965 it is required that each agency takes a certain cost heretofore budgeted by GSA. Starting with 1965 each agency has to take its share of that cost and put it in its own budget.

Mr. THOMAS. That is not a recurring cost, is it?

Mr. BUDD. Yes, sir.

Mr. THOMAS. What will it be next year?

Mr. GLEASON. It will be up.

Mr. THOMAS (reading):

Centrex is a name given to a centralized telephone system in which a common switchboard and switching equipment serves one or more agencies. One of the main distinguishing features is direct in-dialing. In addition, effective July 1, 1964, rates for communication services received from GSA were increased to all agencies and our estimate reflects this increase.

How much were they increased?

Mr. GLEASON. We will supply that for the record.

Mr. THOMAS. Do you have a horseback opinion?

Mr. SHYTLE. I would say around 5 percent, sir.

Mr. THOMAS. What justification did they give you for that increase?

Mr. BUDD. Estimated costs. I think there is litigation pending. GSA went on a new system. The telephone company allowed them to buy their lines in bulk and lease to the agencies. I believe some of the competitors of the telephone company, A.T. & T., are contending that the cost is below their cost and they are doing it as a means of getting business and they are challenging the TELPAK system. They are saying A.T. & T. is charging less than it properly should. This is pending litigation at the present time.

Mr. THOMAS. What justification does GSA offer to the agencies for this increased cost?

Mr. BUDD. They had a directive to install a Government-wide system, and distribute costs.

Mr. THOMAS. We understand that. We helped them put it in effect. What does it add up to?

Mr. BUDD. They are installing new equipment. Centrex system is an automatic dialing system.

Mr. THOMAS. That is right. I asked if that would be a recurring cost.

Mr. BUDD. Yes, sir; it will because the equipment is rented and more expensive. The other factor you have is that some of the agencies, upon their failure to participate in this particular local operation, raised the unit cost of those who do participate. In the locations where we cooperate, in line with the administration program, we——

Mr. THOMAS. Is it mandatory that all agencies participate?

Mr. BUDD. The Bureau of the Budget directive implied mandatory cooperation. We have been cooperating. Unfortunately, some of the other agencies, did not cooperate and this had the effect of raising our cost. We have brought this to the attention of GSA and they are trying to rectify the situation.

Mr. THOMAS. I thought it covered everybody except the military and a movement was on foot to include the military in the continental United States. Is that correct?

Mr. OSTERTAG. I think that is correct.

Mr. BUDD. Out of our first 17 installations, 14 came up with increased cost compared to our prior cost.

Mr. EVINS. You were forced, in effect, to cooperate by a directive from the Budget Bureau?

Mr. BUDD. That is right.

Mr. MONK. This may be a cost distribution problem that affects us more than a total overall increase in Government cost.

Mr. THOMAS. Why should it cost you more than anybody else?

Mr. OSTERTAG. The chairman raised the question whether this was a recurring expense and you said yes, but the question comes to my mind, once you have completed this installation and whatever goes with it, why would it be a recurring expense?

Mr. BUDD. Because the rates go up for the users.

Mr. OSTERTAG. You mean from the standpoint of use?

Mr. BUDD. Just rental of a telephone with the new system requires modern equipment, therefore you are paying more per instrument than before, so each month your rental is higher. Then there are the other factors of cost redistribution. Maybe some of the other agencies are saving money. We are not.

Mr. MONK. Maybe GSA has been coming to you heretofore and maybe now it is going to the agencies.

Mr. OSTERTAG. This would only apply when you are doing business with other agencies, would it not?

Mr. MONK. In a pool.

Mr. BUDD. In many cities there are 40 to 50 different offices and GSA is trying to set up a central switchboard.

Mr. THOMAS. That is the purpose right there. You put your finger on it. Theoretically it ought to save money but on the surface it does not seem to.

Mr. SHYTLE. It has not to us.

Mr. OSTERTAG. Why are these other agencies resisting this program? Is it from the financial outlook, the original outlay in cost or is it because they want to remain sort of independent?

Mr. BUDD. I would not want to speak for the other agencies. If I may say informally my guess is the cost is the thing that probably makes them back off. Our people who have attended local area meetings, meetings called by GSA, I am merely basing my comments on the feedback from our people and the reported reaction of the other agencies, I would not want to say that is their reason.

Mr. SHYTLE. It is probably that one-time cost the chairman was talking about a while ago, too.

Mr. THOMAS. I do not think we have the right answer. We will take this up with GSA. Those people do not make that kind of mistake.

Mr. EVINS. Mr. Chairman, I have been impressed with the detail in these budgets; how much information they give us. They tell us how many people travel, home leave, rotation, et cetera. They come from Honolulu, Manila, San Juan. They have certainly done a good job in trying to give us all the information that the committee wants.

I do not have any further questions, unless we are going to turn to the next one.

BURIAL FLAGS

Mr. THOMAS. What about this $600,000 transfer item on page 8–68? This is for burial flags.

Mr. GLEASON. We covered this yesterday. This is transfer from "General operating expense."

Mr. THOMAS. Does it show a reduction in benefits?

Mr. MONK. It shows an increase in benefits.

Mr. THOMAS. I mean it shows an increase in benefits and reduction here.

As a matter of fact, your reduction is not $637,600. It is about $37,000.

Mr. MONK. That is right.

Mr. THOMAS. That is made up of miscellaneous, repair to furniture?

Mr. MONK. It is made up of supplies.

Mr. THOMAS. It is made up of operating and maintenance supplies and office supplies.

Mr. GLEASON. Yes, sir.

EMPLOYMENT IN CONTROLLER-TYPE FUNCTIONS

Mr. THOMAS. It is remarkable the amount of information that your controller digs up. How many people do you have working on the budget in all aspects of it.

Mr. SILBERMAN. I have 28 in Washington, D.C.

Mr. SHYTLE. The whole agency, Mr. Chairman? That is what you want?

Mr. THOMAS. Yes. Each department has its own budget staff.

Mr. SHYTLE. In controller-type functions throughout the entire agency and the field we have 3,883 and in budget functions we have 96. There are 27 of those in my office. There are 29 in DVB and 32 in the Department and Medicine and Surgery.

Mr. THOMAS. What is the total now?

Mr. SHYTLE. Total controller-type functions, I am throwing statistical, financial, and budget all together, there are 3,883.

Mr. THOMAS. You prepare your statistical information for your releases and the budget. What else do you do?

Mr. SHYTLE. We have our financial management operations. We have our fiscal audit work that is in this.

Mr. THOMAS. Can you bring it right down to the budget here? How many people do you have?

Mr. MONK. 74 for budget.

Mr. THOMAS. You have more than 74.

Mr. SHYTLE. 96 total.

Mr. MONK. If you counted everybody that was involved in the budget, you would have a considerable count.

Mr. THOMAS. Half of this budget goes back to his statistical staff.

Mr. SHYTLE. It is a continual flow of data.

We pull the cream out of it and try to put it in here. It is a standard reporting system that we try to adhere to.

As Mr. Monk points out, the cost of budget, it seems to me, is getting heavier all the time. It is in the Budget Bureau.

COMPENSATION AND PENSIONS

Program and financing

[In thousands of dollars]

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
1. Compensation:			
(a) Living veterans:			
Spanish-American War	363	293	254
World War I	184,263	173,572	163,680

[1] Selected resources as of June 30 are as follows: Accounts receivable (benefit overpayments collectible from beneficiaries) 1962, $14,251,000 (1963 adjustments, −$5,000); 1963, $13,852,000; 1964, $13,852,000; 1965, $13,852,000.

Mr. THOMAS. "Compensation and pensions." Put pages 9–1 and 9–2 in the record.

(The justification pages follow:)

COMPENSATION AND PENSIONS APPROPRIATION, $3,963,000,000

The total requirements for the past, current, and budget years are summarized by major category as follows:

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Appropriation	$3,874,000,000	$3,921,000,000	$3,963,000,000
Unobligated balance brought forward	3,075,894	8,610,173	
Unobligated balance carried forward	−8,610,173		
Total obligations	3,868,465,721	3,929,610,173	3,963,000,000
Adjustment of obligation to cost (net)	[1] 394,273		
Total costs	3,868,859,994	3,929,610,173	3,963,000,000
Compensation	2,114,178,689	2,125,991,000	2,121,488,000
Pensions	1,697,812,484	1,742,585,000	1,778,160,000
Other	56,868,821	61,034,173	63,352,000

[1] Change in selected resources.

The funds requested under this title are to cover the payments of all compensation, pensions, and certain allowances authorized by the Congress, including emergency officers' retirement pay and annuities, as well as the payment for subsistence allowance to veterans receiving vocational rehabilitation under title 38, United States Code, chapter 31, initial burial allowances, payments due under World War I Adjusted Compensation Act in cases where benefits are not covered by the issuance of adjusted service certificates, special allowances (38 U.S.C. 412), burial flags and tort claim settlements (38 U.S.C. 901 and 351, respectively).

The caseloads and average payments used in preparation of these estimates are based on the experience obtained in fiscal year 1963, and prior years, with consideration given to various conditions which will affect the number of cases or amounts of payments to the separate classes of beneficiaries during 1964 and 1965.

The increased cost in the total appropriation is attributable primarily to the continuing accretions to the rolls in certain pension categories caused by the advancing age of veterans and the continuing effects of the equalization features of the Veterans' Pension Act of 1959, particularly in the case of beneficiaries of deceased veterans of World War II.

Consideration has been given to the cost effects of new legislation enacted in the 1st session of the 88th Congress, which has been estimated at a cost of approximately $18.7 million in 1964 and $22.9 million in 1965. Those with a major cost impact are explained in the following narrative.

The total appropriation requested amounts to $3,963 million which represents an increase of $33,389,827 over the estimated cost for the current fiscal year and an increase of $94,140,006 compared with the past fiscal year. Actual and estimated costs and average caseloads are summarized respectively for each major entitlement category in the following two tables:

Mr. THOMAS. The total requirement for the past, current, and budget years are summarized by major categories as follows: In 1963, you had $3,874 million. That runs into money, does it not? You had $3,921 million in 1964; in 1965 you want $3,963 million. Why the increase in 1964 over 1963 and 1965 over 1964? You show an unobligated balance of $8,610,000 carried forward into this year in compensations? Is this approximately correct?

Mr. MONK. That is right. Basically the increase is due to the pensions going up, more people coming on the rolls.

Compensation is down slightly.

Mr. GLEASON. It is down about 1 percent.

RECENT COMPENSATION LEGISLATION

Mr. THOMAS. Did you have any legislation last year that affected compensation and pensions?

Mr. GLEASON. Not pension; a rate increase in compensation in the death cases.

Mr. THOMAS. Was it in pensions or compensation?

Mr. GLEASON. Compensation.

Mr. THOMAS. You had a rate increase in compensation the year before last, did you not, a small one?

Mr. MONK. That is right.

Mr. BRICKFIELD. About $98 million.

Mr. THOMAS. At this point in the record give us a little information as to whether we have had rate increases in compensation or pensions in the last 5 years, and in the same table set out the amount of the increase itself.

Mr. GLEASON. All right.

(The information supplied follows:)

Legislation enacted affecting rates, fiscal years 1960–64 compensation and pensions

1960: No legislation enacted with significant cost effect.
1961:
Compensation: Public Law 86–663, effective September 1, 1960, $5 million (added House-bound rate).
Pension: Public Law 86–211, effective July 1, 1960, $82.5 million (new pension law).
1962: No legislation enacted with significant cost effect.
1963:
Compensation: Public Law 87–645, effective October 1, 1962, $98 million in fiscal year 1963 (increased most disability compensation rates).
Pension: None, with significant cost effect.
1964:
Compensation:
Public Law 88–21, effective July 1, 1963, $5 million (increased DIC parent and children rates).
Public Law 88–132 and Public Law 88–134, both effective October 1, 1963, $13 million in fiscal year 1964:
$4.2 million Public Law 88–132 (military pay bill effect on DIC widows).
$8.8 million Public Law 88–134 (increased DIC widows from $112 to $120 a month).
Pension: None, with significant cost effect.

ANALYSIS OF COSTS

Mr. THOMAS. The $3,963 million requested for 1965 is broken down between compensation and pensions. For 1965, pensions are $2,121,-

488,000 against $2,125,991,000 last year, and for pensions you have $1,778,160,000 for 1965 against $1,742,585,000 for fiscal year 1964. You have "Other" here. What is covered by "Other"? It shows an increase in excess of $2 million.

Mr. BRICKFIELD. On page 9–3, Mr. Thomas, the very last part of the page——

Mr. THOMAS. It includes retired officers?

Mr. BRICKFIELD. That is right.

Mr. THOMAS. Dependents pay, subsistence allowance, burial allowance—was there an increase in the burial allowance this year?

Mr. MONK. No, sir; more burials.

Mr. THOMAS. Special allowance for dependents, invalid lifts, burial flags——

Mr. GLEASON. That was transferred from general operating and the tort claim settlement, also.

Mr. THOMAS. This was added from "General administration"?

Mr. GLEASON. Transferred over.

Mr. THOMAS. It showed a decrease on the "Other" and "General administration for compensation."

Mr. GLEASON. Yes.

Mr. THOMAS. It is added here.

Mr. GLEASON. Yes, sir.

Mr. THOMAS. So this accounts for at least $600,000 of the increase, does it not?

Mr. MONK. Yes, sir.

APPROPRIATION STRUCTURE

Mr. THOMAS. Did it serve any useful purpose to commingle these two tremendous sums? Do you mean they were so large nobody could understand either one of them so we just lumped them both together? Did it serve any useful purpose?

Mr. MONK. Administratively it serves some purpose in that there is an interchangeability here of funds by legislative authority, 5 percent from the giving and 10 percent to the receiving. This used to be more important to us when the readjustment benefits was a larger item.

Mr. THOMAS (reading):

Funds requested under this title are to cover the payment of all compensation pension, and certain allowances allowed by the Congress.

Certain allowances authorized by the Congress are about eight and are included in the table as "Other."

Mr. BRICKFIELD. That is right, sir.

COMPENSATION AND PENSION REQUIREMENTS

Mr. THOMAS. Let's insert the table on page 9–3 at this point in the record. The bottom half covers other benefits other than compensation and pensions.

That runs up into the total of how much in dollars and cents?

Mr. GLEASON. $63,352,000.

(The page follows:)

The actual and estimated costs are listed below in detail by activities for each of the major categories:

	1963 actual	1964 estimate	1965 estimate
Total costs	$3,868,859,904	$3,929,610,173	$3,963,000,000
Compensation (total)	2,114,178,689	2,125,991,000	2,121,488,000

World War II	176,853,082	199,673,000	217,989,000
Korean conflict	14,818,558	18,375,000	21,675,000
Peacetime service	7,776	6,000	5,000
Other (total)	56,868,821	61,034,173	63,352,000
Retired officers	2,757,914	2,718,000	2,600,000
Adjusted service and dependents pay	2,041	2,000	1,000
Subsistence allowance	5,904,839	8,220,000	9,590,000
Burial allowance	48,072,011	49,954,173	50,235,000
Special allowance, dependents (38 U.S.C. 412)	112,269	120,000	130,000
Invalid lifts (38 U.S.C. 617)	19,747	20,000	25,000
Burial flags (38 U.S.C. 901)			[2] 615,000
Tort claim settlements (38 U.S.C. 351)			[2] 156,000

[1] Last participant died Aug. 22, 1962.
[2] Funding requirements transferred effective 1965.

Mr. THOMAS. Mr. Ostertag?
Mr. OSTERTAG. Off the record.
(Discussion off the record.)

BURIAL ALLOWANCE

Mr. THOMAS. The burial allowance is going up every year. It is $50,235,000 this year against $49,954,000. Why is this?
Mr. MONK. Number of deaths are increasing.
Mr. THOMAS. And the dollar amount per funeral is what?
Mr. GLEASON. $250.
Mr. THOMAS. Isn't there a little transportation?
Mr. BRICKFIELD. Yes. If a man dies in a VA hospital, there is entitlement for transportation to the cemetery.
Mr. THOMAS. The death must occur in the hospital?
Mr. BRICKFIELD. That is right.

Mr. THOMAS. Do you have any backfires of any kind under the funerals? I understand in most regional offices, particularly where you have a hospital, contracts will be let for burials.

Mr. GLEASON. We do not have any more contracts, Mr. Chairman.

Mr. THOMAS. When was that done away with?

Mr. GLEASON. Last July 1.

Mr. THOMAS. How is the matter handled now?

Mr. GLEASON. Now we have a list of morticians in the area that, after a complete inspection by our people, we believe them to be satisfactory and leave it up to the family to make the choice.

Mr. THOMAS. You said morticians.

Mr. GLEASON. Yes, sir; undertakers.

COMPENSATION AND PENSION CASELOAD

Mr. THOMAS. Let's look at the compensation table on page 9–4. It gives the living veterans, the total, and breaks them down between the Spanish-American War veterans, World Wars I and II, Korean conflict, and peacetime. Insert page 9–4 in the record.

(The page follows:)

The actual and estimated average caseloads are listed below in detail by activities for each of the major categories:

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Compensation (total)	$2,361,596	$2,361,250	$2,354,185
Living veterans (total)	1,986,837	1,991,410	1,987,795
Spanish-American War	134	110	95
World War I	141,804	132,700	124,000
World War II	1,503,156	1,501,300	1,491,500
Korean conflict	214,031	218,000	221,000
Peacetime service	127,712	139,300	151,200
Deceased veterans (total)	374,759	369,840	366,390
Spanish-American War	790	740	690
World War I	42,568	41,600	40,800
World War II	252,927	245,000	238,000
Korean conflict	39,309	40,000	40,700
Peacetime service	39,165	42,500	46,200
Pensions (total)	1,961,703	2,028,660	2,106,275
Living veterans (total)	1,181,960	1,199,995	1,223,575
Indian wars	27	20	15
Spanish-American War	22,356	18,600	15,500
World War I	1,016,003	1,013,000	1,010,000
World War II	133,650	157,000	185,000
Korean conflict	9,735	11,200	12,900
Peacetime service	189	175	160
Deceased veterans (total)	779,743	828,665	882,700
Mexican War	2		
Indian wars	486	430	370
Civil War	2,687	2,300	2,100

World War I	475,730	493,000	514,300
World War II	214,190	244,200	274,200
Korean conflict	16,601	21,000	25,500
Peacetime service	42	35	30
Other:			
Retired officers	1,173	1,100	1,040
Adjusted service and dependent pay	[1]	[1]	[1]
Subsistence allowance	4,290	6,000	7,000
Burial allowance [2]	190,762	198,600	210,300
Special allowance, dependents (38 U.S.C., 412)	192	220	265
Invalid lifts (38 U.S.C., 617)	120	120	150
Burial flags (38 U.S.C., 901) [2]			[3] 123,000
Tort claims settlements (38 U.S.C., 351)			[4]

[1] Less than $50.
[2] Figures shown represent estimated fiscal year totals, not averages.
[3] Less than $50. Funding requirements transferred effective 1965.

Mr. THOMAS. When was peace declared in the Spanish-American War?

Mr. BRICKFIELD. 1898. The Spanish-American War?

Mr. THOMAS. Yes.

Mr. GLEASON. That is when it was declared.

Mr. BRICKFIELD. Peace was declared, yes, sir, around 1902. War against Cuba was in 1898.

Mr. GLEASON. But then we had the troops in Cuba.

Mr. THOMAS. When were the troops there?

Mr. FABLE. The term "Spanish-American War" means the period beginning on April 21, 1898, and ending on July 4, 1902, includes the Philippines Insurrection and the Boxer Rebellion and in the case of a veteran who served with the U.S. Military Forces engaged in hostilities in the Moro Province means the period beginning on April 21, 1898, and ending on July 15, 1903.

Mr. THOMAS. How many troops did we have at the time?

Mr. HOOD. Total participants were 392,000.

Mr. THOMAS. And there are how many living now?

Mr. GLEASON. There are about 15,000 still alive.

Mr. THOMAS. There are how many living?

Mr. DRIVER. There are approximately 18,000 Spanish War veterans living today.

Mr. GLEASON. What page is that on?

Mr. DRIVER. It is in the other book, page 3.

Mr. THOMAS. How many widows?

Mr. DRIVER. The widows are under the deceased total.

Mr. THOMAS. Somebody said there were only 18,000.

Mr. GLEASON. That is the veterans that are receiving the pension.

Mr. DRIVER. 15,500 veterans receiving pension. There are 690 dependent cases receiving death compensation.

Mr. OSTERTAG. Mr. Chairman, according to this table there are 15,500 Spanish-American War veterans living.

Mr. DRIVER. Receiving pensions, sir. Then there are 95 receiving compensation up above.

Mr. GLEASON. Some may not be on the pension rolls at all.

Mr. OSTERTAG. That is what I am saying. Under the various tables you have, living veterans, total compensation——

Mr. GLEASON. That is living veterans total that are on the pension roll.

Mr. THOMAS. You have to combine the two figures now.

Mr. DRIVER. Yes, sir.

Mr. THOMAS. Here are 15,000 getting pensions and how many getting compensation?

Mr. DRIVER. Just 95.

Mr. GLEASON. Just 95 veterans of the Spanish-American War receive compensation?

Mr. THOMAS. And how many pensions?

Mr. GLEASON. 15,500.

Mr. OSTERTAG. Isn't there a special law on the Spanish-American War veterans, a special benefit?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. Which is different than that of other veterans?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. 15,500 are getting pensions.

Mr. MONK. Practically every Spanish-American War veteran is on the rolls.

Mr. BRICKFIELD. It is called a service pension.

Mr. THOMAS. I knew a half dozen or a dozen in my town that were not getting any compensation or pension. They wouldn't take it. They had to apply for it and they wouldn't apply for it.

Mr. GLEASON. I did not think you had to apply.

Mr. MONK. You had to apply.

Mr. THOMAS. They said they didn't need it. If they ever needed it, they would. They just didn't apply.

Mr. MONK. But, at the end of June 1963, there were estimated to be 22,000 living Spanish-American War veterans.

Mr. THOMAS. All together?

Mr. MONK. All together.

Mr. THOMAS. And you have 15,500 of them drawing some type of compensation or pension.

Mr. MONK. During fiscal year 1963 we had 22,356 on the rolls.

Mr. DRIVER. We had 4,000 deaths during that year.

Mr. MONK. In large percentage they are on the rolls.

Mr. OSTERTAG. It is difficult to conceive there are that many living Spanish-American War veterans or even dependents because taking the average age, which let us assume it is 18 years at the time of the Spanish American War, here we are in the year of 1964 and they must be at least on an average of about 80 years of age.

Mr. DRIVER. That is right.

Mr. GLEASON. We still have "Civil War," if you will notice. Down below "Deceased veterans," these would be widows, or unmarried children, there are 66,200 that are on the pension rolls for Spanish-American War. We even have 2,100 Civil War dependent pensioners still on the rolls.

Mr. THOMAS. He is talking about the actual participants.

Mr. MONK. The average age of Spanish-American War veterans is 86.2 years.

WORLD WAR I VETERANS

Mr. THOMAS. Look at the "World War I" now for compensation. For this year you have got 124,000 and for pensions, World War I——

Mr. GLEASON. You have 1,010,000.

Mr. THOMAS. How many were involved, how many did service all together in World War I?

Mr. GLEASON. Do you have that?

Mr. HOOD. Total participants in World War I were 4,744,000.

Mr. THOMAS. And now 1,134,000 are receiving compensations and pensions and 90 percent of it is pensions; is it not?

Mr. OSTERTAG. Mr. Chairman, will you yield?

Mr. THOMAS. Surely.

Mr. OSTERTAG. I am trying to put the mathematics together as to how you arrive at your estimates for the number of World

War I veterans who will receive compensation during fiscal year 1965. You show 124,000 as against 132,700 in fiscal year 1964. That is a shrinkage of 8,700; is that correct?

Mr. GLEASON. Yes.

Mr. OSTERTAG. The difference between fiscal year 1963 and 1964 was 9,100. You estimate less going off the rolls or off the compensation benefits for this next year than you did the year previous. Yet they are older, time is going on; wouldn't the rate of World War I veterans receiving compensation pass on at a higher rate this next year than they did the year previous and previous years to that?

Mr. GLEASON. Not necessarily.

Mr. OSTERTAG. Not necessarily, but how do you arrive at a figure?

Mr. GLEASON. I am sure Mr. Stratton could tell you.

Mr. STRATTON. I think primarily, Mr. Ostertag, that is because the reduction in the rolls is not altogether due to the deaths of the World War I veterans. It is also due to the fact that some of them give back their compensation; in other words, they waive their compensation to receive pensions. We expect there are less in 1965 that would do this than we had in the prior years. It is not just deaths. If a veteran is receiving $20, he will waive it.

Mr. OSTERTAG. That is a point you would not ordinarily think of. I was trying to arrive at numbers here and how you arrived at the lesser shrinkage this next year than the year previous, but you account for that as I understand it, by virtue of the transfer or the election of benefits under pension rather than compensation.

Mr. GLEASON. That is right.

Mr. OSTERTAG. Which should, of course, increase the number on pensions, shouldn't it?

Mr. STRATTON. Yes, sir.

Mr. THOMAS. Another interesting sidelight to the picture is you have 1,134,000 receiving compensation and pension and it is the ratio of 10 to 1 that are receiving pensions.

In other words, it is actual injury received in service against the frailties that happen to all of us.

How many do you figure who performed service did not receive any compensation or any pension, who were not on the rolls for either compensation or pension?

Mr. DRIVER. 50 percent are on the rolls now.

Mr. THOMAS. No more than 50 percent?

Mr. DRIVER. There are about two and a quarter million living.

Mr. THOMAS. How do you account for that?

Mr. DRIVER. They cannot meet the pension criteria for some reason or other, income or lack of disability.

Mr. THOMAS. No, sir; anybody can reach the criteria for pension when you become 65.

Mr. OSTERTAG. Isn't age a criterion?

Mr. GLEASON. Not all can meet the income criteria.

Mr. THOMAS. I did not say anything about income. When he reaches the age of 65, if he wants to make a case, he can do it.

Mr. GLEASON. He can get 10 percent disability, sure, at least.

Mr. THOMAS. But to complete the picture, these 2 million who are eligible from the point of view of age have not attempted to bring themselves under the terms of the pension law.

Mr. DRIVER. One million, sir. There are 2 million living and 1 million is on the rolls.

Mr. THOMAS. 50 percent of the living have not attempted to bring themselves under the pension laws or compensation laws, either.

Mr. DRIVER. They have not succeeded if they have tried.

Mr. THOMAS. Have they tried?

Mr. DRIVER. Many of them have tried, sir; and many of them have been on the rolls in the past and gone off because their incomes have gone too high.

Mr. THOMAS. Do you have any information on the number of living World War I veterans who have never tried to secure compensation or pension?

Mr. DRIVER. I do not think so, sir.

PENSION REQUIREMENTS AND BENEFITS

Mr. FARMER. Of those we disallow, we know we disallow about 34 percent because of excess income.

Mr. THOMAS. You are talking about compensation or pension?

Mr. GLEASON. Pension only.

Mr. THOMAS. Thirty-four percent on account of excess income?

Mr. FARMER. That is right.

Mr. THOMAS. What is the income on the pension?

Mr. FARMER. It varies depending on whether he has a dependent or not.

Mr. THOMAS. A single veteran.

Mr. FARMER. A single veteran can have no more outside income than $1,800 per year. If he has greater than that, he is barred by reason of——

Mr. THOMAS. If he has an income of $1,800 a year, how much can he draw from the Veterans Administration if he is 65 years of age?

Mr. BRICKFIELD. $40 per month.

Mr. THOMAS. Does that depend upon any degree of disability?

Mr. GLEASON. Ten percent.

Mr. BRICKFIELD. He has to be unemployable because of his disability.

Mr. THOMAS. And that is 10 percent?

Mr. BRICKFIELD. Yes, sir.

Mr. THOMAS. It is $40 a month.

Mr. BRICKFIELD. That is right.

Mr. THOMAS. Suppose he is married and has a wife, who is a dependent. What can he draw then?

Mr. BRICKFIELD. He can have an income up to $3,000 and if it is less than $3,000 he can draw $45 per month.

Mr. THOMAS. What is the amount that he can receive now where he has a wife and—the maximum outside income is $3,000, isn't it?

Mr. BRICKFIELD. Yes.

Mr. THOMAS. What is the maximum he can draw in the VA pension program?

Mr. BRICKFIELD. If his income is under $1,000 it is $90 a month; if it is under $2,000 it is $75 a month and if it is under $3,000 it is $45 a month. That is a veteran with a wife, which is one dependent.

Mr. THOMAS. What degree of disability must he have?

Mr. BRICKFIELD. He, again, must be unemployable because of his disability, and 10 percent is sufficient for us to make a finding.

Mr. THOMAS. What does that 65 years count, 9 percent?

Mr. OSTERTAG. That is a good question, the question of the relationship of age to his capability or employability.

Mr. THOMAS. How do you arrive at that?

Mr. OSTERTAG. What is the relationship?

Mr. STRATTON. Mr. Ostertag, if he is 65 he only needs 10 percent disability for us to grant it at the local level, in the field station.

Mr. THOMAS. What is the 10 percent made up of? The question asked is 65 years, 9 percent of the 10 percent?

Mr. STRATTON. Sixty-five years is 10 percent because we are paying for the disability.

Mr. THOMAS. It is the mere fact he has reached 65 years of age.

Mr. GLEASON. Not quite. If he is 65 and is unemployable, he generally has at least 10 percent disability somehow, with arthritis or something wrong with him.

Mr. DRIVER. There have been many recommendations to eliminate the disability requirement at 65 to 70.

Mr. THOMAS. For all practical purposes he is eliminated now, is he not?

Mr. DRIVER. Yes, sir.

Mr. THOMAS. In a good many States the man is almost automatically taken off the company payroll at 65, is he not?

Mr. GLEASON. Yes.

Mr. OSTERTAG. Let me put the question another way, Mr. Chairman. Have you any figures or facts as to how many World War I veterans or veterans 65 years of age or over who have applied for pensions that have been denied such pensions by virtue of the fact that they have no disability?

Mr. STRATTON. Very few, Mr. Ostertag.

Mr. GLEASON. It is almost unheard of, Mr. Ostertag.

Mr. OSTERTAG. Then the chairman's point is well taken in that this 10 percent at 65 does not mean a great deal.

Mr. GLEASON. Well, except as Mr. Stratton said, 90 percent of this is the fact that you are 65 years of age. The other 10 percent is the fact that you are disabled.

WORLD WAR I CASELOAD

Mr. OSTERTAG (presiding). One more question on this World War I veteran picture: According to the tables on page 9–4 there will be approximately 1,134,000 World War I veterans either receiving pensions or compensation. What is the total World War I veteran population?

Mr. GLEASON. About 2.1 million.

Mr. OSTERTAG. So approximately one-half of the total of World War I veterans are now, or will be receiving during this next year benefits of one kind or another?

Mr. GLEASON. Either pension or compensation; yes, sir.

Mr. OSTERTAG. In that connection, on the dollar side of the picture, you are estimating compensation for World War I veterans at a figure of $163,680,000 for 1965, as against $173,572,000 for 1964. That is a

decrease of $10 million. That is, of course, compensation alone, and I think while we are on the subject, I might say that there is likewise a decrease from $960,417,000 for fiscal year 1964 for World War I under the pensions, as against $936,560,000 estimated for fiscal year 1965. That is a decrease of approximately $24 million. There is about $34 million decrease in the total requirements for World War I veterans during this next year.

Now, that is based on a decline in the World War I veteran population. Isn't that true?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. What do you estimate that to be?

Mr. STRATTON. On the rolls, Mr. Ostertag, there is a reduction on average payees in that area in pension of 3,000 in 1965 against 1964; that is shown on page 9–4. But that 3,000 does not account entirely for the loss or reduction of money because also in that reduction of money is a reduced average payment that is reflected generally on page 9–7, a drop from an average of 968 a year to 952 a year.

ESTIMATES FOR COMPENSATION AND PENSIONS

Mr. OSTERTAG. In this whole picture of compensation and benefits and pensions, how firm are your estimates?

Mr. MONK. Very good.

Mr. SHYTLE. It is amazing. It has been that way over the years. It has been very close.

Mr. OSTERTAG. Of course. You, by virtue of the nature of this program, must estimate what your requirements are going to be and I assume that your estimates are based on experience and lifespan and other factors that would tend to increase or decrease your obligations.

Mr. MONK. That is right.

Mr. OSTERTAG. How do you figure that there will be a decrease in the pension picture of World War I veterans? Isn't there apt to be an increase in demand, in view of the fact that while a large percentage of the World War I veterans are passing on, circumstances are going to bring more of them into the fold of pension requirements?

Mr. DRIVER. Mr. Ostertag, you will recall under the law prior to 1960, when a man came on the pension rolls at 65 or better, which is the World War I man's age now, he drew $78.75 as long as he met the income limits. Now when he comes on the rolls we look at this income and he falls into three categories. He may come on at $40, he may come on at $70, or he may come on at $85.

As Mr. Stratton indicated, the average cost per case per year has gone down.

More than as you indicate come on the rolls, but they come on at intermediate rate instead of the top rate.

Mr. MONK. Actually, the number of deaths will more than offset the number of those coming on the rolls, according to the figures.

JUSTIFICATION MATERIAL

Mr. OSTERTAG. I think we might include 9–5 through 9–10, because the tables and general information here tie together in one picture.

(The pages follow:)

Compensation and Pensions

COMPENSATION

Compensation is payable to a veteran because of a disability connected with military service, or to a widow, child, or parent of a veteran, because of the service-connected death of the veteran occurring before January 1, 1957. Dependency and indemnity compensation is payable to a widow, child, or parent (*a*) because of a service-connected death occurring after December 31, 1956, or (*b*) pursuant to the election of a widow, child, or parent, in the case of such a death occurring before January 1, 1957.

Living veterans.—The basic rates of disability compensation provided in wartime cases range from $20 for 10 percent disability to $250 per month for total disability. Certain cases are compensated for specific disabilities as prescribed by law, to a maximum of $725 a month per case. Veterans rated 50 percent or more disabled, with dependents, receive an additional allowance up to a maximum of $100 a month per case, plus $12 monthly for each child in excess of three. Generally, all rates of peacetime disability compensation are 80 percent of wartime rates.

Living veterans—Service connected

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Total costs	$1,665,897,548	$1,665,076,000	$1,658,142,000
Average payment per case per year	$838.47	$836.13	$834.16
AVERAGE NUMBER OF VETERANS			
Total	1,986,837	1,991,410	1,987,795
Wars:			
Spanish-American War	134	110	95
World War I	141,804	132,700	124,000
World War II	1,503,156	1,501,300	1,491,500
Korean conflict	214,031	218,000	221,000
Peacetime service	127,712	139,300	151,200

The moderate increase in average living veterans caseload in fiscal year 1964 reflects a lesser decrease in World War II during fiscal year 1963 and early fiscal year 1964 than had previously been experienced. This is expected to be a temporary trend and is so projected in fiscal year 1965.

The average payment in 1963 reflects the increased rates provided under Public Law 87–645, but a return to a normal decreasing trend is projected for 1964 and 1965.

Deceased veterans.—Death compensation or dependency and indemnity compensation, as previously stated, is paid to widows, children, and dependent parents of veterans who died in service or as a result of service-connected disease or injury.

Deceased veterans—Service-connected

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Total costs	$448,281,141	$460,915,000	$463,346,000
Average payment per case per year	$1,196.19	$1,246.26	$1,264.63
AVERAGE NUMBER OF CASES			
Total	374,759	369,840	366,390
Wars:			
Spanish-American War	790	740	690
World War I	42,568	41,600	40,800
World War II	252,927	245,000	238,000
Korean conflict	39,309	40,000	40,700
Peacetime service	39,165	42,500	46,200

The average caseload has decreased in 1963 and a similar decrease is projected through the budget year. The World War II caseload controls the overall decrease in this category. A steady increase in the peacetime roll continues but not in sufficient numbers to offset the losses in the World War I and World War II categories.

The increase in the average annual payment in 1964 and 1965 is attributable to the higher dependency and indemnity compensation rates provided for parents and children (Public Law 88–21, effective July 1, 1963) and to widows (Public Laws 88–132 and 88–134, both effective October 1, 1963.

PENSIONS

Pension is payable to a wartime veteran because of service, age, or non-service-connected disability and need, or to a widow or child of a wartime veteran because of non-service-connected death of the veteran.

Living veterans.—The rates and conditions of entitlement of World War I and subsequent periods of service are payable to wartime veterans who are unable to secure substantially gainful employment as a result of permanent and totally disabling non-service-connected disability. Effective July 1, 1960, a sliding scale of pensions was placed in effect, based on income limitation and family status, payable in amounts ranging from a minimum of $40 monthly to a single veteran with $1,200–$1,800 annual income, to a maximum of $100 monthly to a veteran with three or more dependents whose income is $1,000 or less annually. These, and intermediate rates, are increased by $70 monthly when the veteran needs regular aid and attendance. Rates and conditions of entitlement applicable to prior periods vary somewhat and are on a more liberal basis.

Living veterans—Nonservice connected

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Total costs	$1,151,122,816	$1,162,112,000	$1,165,742,000
Average payment per case per year	$973.91	$968.43	$952.73
AVERAGE NUMBER OF VETERANS			
Total	1,181,960	1,199,995	1,223,575
Wars:			
Indian wars	27	20	15
Spanish-American War	22,356	18,600	15,500
World War I	1,016,003	1,013,000	1,010,000
World War II	133,650	157,000	185,000
Korean conflict	9,735	11,200	12,900
Peacetime service	189	175	160

The caseload continues to increase steadily with the major gain projected in the World War II category through 1965. The World War I caseload appears to have reached a peak and is projected accordingly. Average payments in this category have steadily decreased. Much of this is attributable to lesser retroactive payments. Similar experience is expected to continue and average payments are projected to decline accordingly in 1964 and 1965.

Deceased veterans.—Pensions are now payable to widows and children of World War II and Korean conflict veterans on the same basis as applicable to widows and children of World War I veterans. A sliding scale of pensions based on income limitation and family status is payable in amounts ranging from $25 monthly to a widow alone with $1,200–$1,800 annual income to maximum of $105 to a widow with three children (plus $15 for each additional child) whose income is $1,000 or less.

Deceased veterans—Nonservice connected

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Total costs	$546,689,668	$580,473,000	$612,418,000
Average payment per case per year	$701.12	$700.49	$693.80
AVERAGE NUMBER OF CASES			
Total	779,743	828,665	882,700
Wars:			
Mexican War	[1] 2		
Indian wars	486	430	370
Civil War	2,687	2,300	2,100
Spanish-American War	70,005	67,700	66,200
World War I	475,730	493,000	514,300
World War II	214,190	244,200	274,200
Korean conflict	16,601	21,000	25,500
Peacetime service	42	35	30

[1] Last deceased veteran survivor on VA rolls died June 20, 1963.

The estimated caseload in 1964 reflects a normal increase in trend which is continued through 1965, as World War II and Korean conflict widows and children maintain their gains under the equalization features of the Veterans Pension Act of 1959.

The annual average payment decreased in 1963 and 1964. It is believed that a larger number of children will be discontinued from the World War II rolls in 1965, upon attaining age 18, resulting in a larger decrease in average payment.

OTHER

Average number of cases

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Total costs	$56,868,821	$61,034,173	$63,352,000
Retired officers	1,173	1,100	1,040
Adjusted service and dependents pay	[1]	[1]	[1]
Subsistence allowance	4,290	6,000	7,000
Burial allowance [2]	190,762	198,600	211,100
Special allowance, dependents (38 U.S.C., 412)	192	220	265
Invalid lifts (38 U.S.C., 617) [2]	120	120	150
Burial flags (38 U.S.C., 901) [2]			[3] 123,000
Tort claim settlements (38 U.S.C., 351) [2]			[3]

[1] Less than 50.
[2] Figures shown represent estimated fiscal year totals and not averages.
[3] Less than 50. Funding requirements transferred effective 1965.

Retired officers.—Emergency officers (World War I) and certain officers (Regular Establishment) retired for service-connected disability are entitled to special retirement benefits at rates substantially higher than the normal compensation payments.

Adjusted service and dependents pay.—Adjusted service credits earned by veterans of World War I are payable from this appropriation. Veterans' claims of $50 or less and dependents' claims of less than $50 are paid in cash. Dependents' claims of $50 or more are paid in 10 equal quarterly instalments. A bonus payment of $60 is paid to the dependents of a World War I veteran who died while in service and before July 1, 1919, if an adjusted service credit is certified to the Administrator.

Subsistence allowance.—Subsistence allowance payments to disabled veterans enrolled in vocational rehabilitation and education programs are made from this appropriation. Increases in 1964 over 1963 are continued in fiscal year 1965, attributable to delayed initial effects of Public Law 87-815, approved October 15, 1962.

Burial allowance.—Under present statutes the Administrator is authorized to provide an allowance of $250 (plus transportation charges where death occurs

under VA care) for the funeral expenses of a deceased veteran. The estimated increases in obligations are directly related to the estimated increase in number of deaths of veterans in civil life.

Special allowance—Dependents.—Under certain conditions a special allowance is payable to certain dependents of a veteran who dies after December 31, 1956, but who was not a fully and currently insured individual under the Social Security Act. The award is based upon a certification to VA by the Social Security Administration.

Invalid lifts.—The Administrator may furnish an invalid lift, if medically indicated, to any veteran in receipt of pension under Chapter 15 of title 38, United States Code, based on the need of regular aid and attendance.

Burial flags.—Under section 901, title 38, United States Code, the Administrator is authorized to furnish a flag to drape the casket of each deceased veteran entitled thereunder.

Tort claim settlements.—To provide for payment of compromise settlements resulting from tort claims where the claim is eligible for payment under 38 United States Code, section 351. This type of compromise settlement is in most claims in excess of $2,500 and is pursuant to the provisions of the Federal Tort Claims Act.

RETIRED OFFICERS

Mr. OSTERTAG. Under "Other benefits, retired officers"; who constitutes a retired officer under the terms of your program here?

Mr. BRICKFIELD. On page 9–9.

Mr. GLEASON. It says (reading):

Emergency officers, World War I, and certain officers of the regular establishment retired for service-connected disability are entitled to special retirement benefits at rates substantially higher than the normal compensation payments.

READJUSTMENT BENEFITS

Program and financing

[In thousands of dollars]

Total selected resources	1,335	1,085	1,085	1,085

Mr. OSTERTAG. We will now turn to readjustment benefits. The total budget request is $39,600,000.

We shall insert justification sheet 10–1 in the record at this point.

(The page follows:)

READJUSTMENT BENEFITS, $39,600,000

The funds requested under this appropriation are to cover the cost of education and training, and special assistance benefits to disabled veterans, as authorized by chapters 21, 31, 33, 35, 37 and 39 of title 38, United States Code, as amended.

Summary of requirements

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate	Increase (+) or decrease (−), 1965 over 1964
Education and training	$88,164,763	$54,987,009	$33,130,000	−$21,857,009
Loan guarantee	360			
Special assistance to disabled veterans	7,814,952	9,717,000	10,440,000	+723,000
Total cost	95,980,075	64,704,009	43,570,000	−21,134,009
Costs financed from obligations of other years, net (−)	−249,760			
Total obligations	95,730,315	64,704,009	43,570,000	−21,134,009
Unobligated balance brought forward	−1,604,324	−1,674,009	−3,970,000	−2,295,991
Unobligated balance carried forward	1,674,009	3,970,000		−3,970,000
Appropriation	95,800,000	67,000,000	39,600,000	−27,400,000

Mr. OSTERTAG. The funds requested under this appropriation are to cover the cost of education and training and special assistance benefits to disabled veterans, as authorized by chapters 21, 31, 33, 35, 37, 39, of title 38, United States Code, as amended.

Under "Education and training, World War II, Korean conflict"——

Mr. GLEASON. This is the program that ends on January 31, 1965, Mr. Ostertag. That is why there is this decrease of almost $22 million for the next fiscal year.

Mr. OSTERTAG. Under "Education and training" you have a budget request of $33,130,000 as against $54,987,000 for fiscal year 1964, a decrease of $21 million.

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. Likewise, under the "Special assistance to disabled veterans," there is an increase of $723,000. That is $10,440,000 as against $9,717,000 for fiscal year 1964.

I think we might insert in the record pages 10–2, 10–3, and 10–4.

(The pages follow:)

EDUCATION AND TRAINING

WORLD WAR II

Expenditures for subsistence allowance, tuition, supplies, equipment, settlement of old claims and miscellaneous adjustments amounted to $42,169 in fiscal year 1963. The average number of trainees was eight in fiscal year 1963. Activity in fiscal years 1964 and 1965 will be negligible.

KOREAN CONFLICT

The estimated requirements for Korean conflict trainees as authorized in title 38, United States Code, chapter 33 are based on the latest analyses and pro-

jections of the number of veterans who will be in training during fiscal years 1964 and 1965. Although the training program terminates January 31, 1965, the average number of trainees shown for 1965 represents trainee years. Funds required for education and training benefit payments and unit cost per trainee are shown below:

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate
Average number trainees:			
Higher learning	32,476	16,640	4,890
Below college	12,203	5,550	1,710
Correspondence	4,333	2,460	620
Institutional-on-farm	520	130	30
Job training	480	220	50
Total	50,012	25,000	7,300
Average cost per trainee	$1,248.07	$1,182.68	$1,182.19
Total cost (Korean conflict)	$62,418,384	$29,567,009	$8,630,000

ORPHANS

An educational assistance allowance is provided for orphans in title 38, United States Code, chapter 35, as amended (74 Stat. 1023). Estimated requirements for this allowance in fiscal years 1964 and 1965 follow:

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Average number of trainees	15,573	15,500	15,000
Average cost per trainee	$1,650.56	$1,640.00	$1,633.33
Total cost (orphans)	$25,704,210	$25,420,000	$24,500,000
Total education and training	$88,164,763	$54,987,009	$33,130,000

LOAN GUARANTEE

In fiscal year 1963, $360 was paid from this appropriation representing 4-percent interest gratuity payments.

SPECIAL ASSISTANCE TO DISABLED VETERANS

Vocational rehabilitation

The estimated requirements for tuition, books, supplies, and equipment for vocational rehabilitation training, title 38, United States Code, chaper 31, as amended (74 Stat. 820), are shown as follows:

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Average number trainees:			
Higher learning	1,070	1,870	2,260
Below college	2,466	3,560	4,100
Institutional on farm	188	160	190
Job training	566	410	450
Total	4,290	6,000	7,000
Tuition:			
Average number payments (excluding job training)	3,720	5,590	6,550
Average cost per trainee	$771.60	$773.70	$774.81
Total cost	$2,870,354	$4,325,000	$5,075,000
Supplies and equipment:			
Average number trainees	4,290	6,000	7,000
Average cost per trainee	$109.05	$112.00	$115.00
Total cost	$467,815	$672,000	$805,000
Total cost (vocational rehabilitation)	$3,338,169	$4,997,000	$5,880,000

Housing grants

Title 38, United States Code, chapter 21, authorizes the Administrator to approve grants up to $10,000 each, for specially adapted housing, to veterans having suffered the loss of, or loss of use of, both feet, and to paraplegic veterans. As disabled veterans grow older and their disability worsens, a new group become eligible each year. Estimates for fiscal years 1964 and 1965 follow:

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Number	354	400	400
Average cost	$9,771.07	$9,800.00	$9,800.00
Total cost	3,458,960.00	3,920,000.00	3,920,000.00

Automobiles or other conveyances for disabled veterans

Requirements for automobiles or other conveyances for disabled veterans as authorized in title 38, United States Code, chapter 39, are shown below:

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Number	637	500	400
Average cost	$1,597.84	$1,600.00	$1,600.00
Total cost	1,017,823	$800,000	$640,000
Total special assistance to disabled veterans	$7,814,952	$9,717,000	$10,440,000

AVERAGE NUMBER OF TRAINEES

Mr. OSTERTAG. Under this program of readjustment benefits you have certain items such as "Education and training," "Loan guarantee," and, of course, the question of "Trainees." I note that the average number of trainees is substantially reduced for this next year. The average cost remains the same, $1,182 per trainee. Does that mean that this is phasing out completely?

Mr. GLEASON. This is the one that ends next January, Mr. Ostertag, the Korean education training program.

Mr. OSTERTAG. There are 7,000 that you are programing for fiscal year 1965, 7,300.

Mr. GLEASON. That is an average.

Mr. BRICKFIELD. That takes us from July 1 through January 31.

Mr. OSTERTAG. So at the end of this calendar year——

Mr. GLEASON. Well, a year from now this will no longer be in effect because it goes through until January 31, 1965.

Mr. THOMAS. January 31, 1965?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. And orphans come under this program as well?

Mr. GLEASON. Yes, sir. That will continue, as you know.

Mr. OSTERTAG. Although there is a decrease in our total cost?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. How do you account for that? The average number of trainees remains—no, that is a reduction of 500.

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. And vocational rehabilitation, average number of trainees, tuition, housing grants appear on page 10–4. The total number of housing grants remains the same and your cost remains the same, at $3.920 million?

Mr. GLEASON. Yes, sir.

AUTOMOBILES FOR DISABLED VETERANS

Mr. OSTERTAG. Automobiles or other conveyances for disabled veterans comes under the title 38 of the United States Code, chapter 39. You have a reduction there, I note, of about 100 disabled veterans. Your average cost remains the same. The total cost has been reduced from $800,000 to $640,000?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. This is a special assistance program.

What does it cover, just the automobile or conveyance aspect?

Mr. BRICKFIELD. We contribute not to exceed $1,600 for an automobile.

Mr. OSTERTAG. That is what the law is?

Mr. BRICKFIELD. That is what the law provides. That is why you see that $1,600 figure there. It cannot go beyond that on average cost.

Mr. OSTERTAG. Was the law changed from 1963 to 1964? I note that the average cost was $1,597.

Mr. BRICKFIELD. No; 1963 is actual, and of course 1964 and 1965 are an estimate. There is less than a $3 difference.

Mr. OSTERTAG. How can it be when the law provides it must be $1,600——

Mr. BRICKFIELD. Not to exceed $1,600 per automobile.

Mr. OSTERTAG. I see. That is the limitation.

Mr. GLEASON. The maximum.

AVERAGE ANNUAL TRAINING AND ORPHAN PAYMENT

Mr. THOMAS. Mr. Ostertag, the thing that always baffled me here is that you give your Korean war veterans $1,100 or $1,200, certainly no more than $1,250 a year. Then the orphans get $1,650. Why is this?

Mr. MONK. The explanation of that is that in the Korean war there are some in on-job training, some in correspondence training, training that does not get full-time tuition. In the orphans program you only have full-time training so that you are applying here the full-time cost including tuition, books, supplies, and an educational allowance.

Mr. THOMAS. That is the maximum set by statute?

Mr. MONK. Yes, sir.

Mr. OSTERTAG. They are both training or education programs.

Mr. MONK. In rehabilitation training we pay the tuition that the school charges wherever the veteran goes to school so the tuition varies. There is no actual dollar maximum as to the per-trainee cost. There is a dollar maximum to the educational allowance that would be paid.

Mr. THOMAS. Still there is a spread of $450.

Mr. MONK. The difference in the war orphan cost is full-time versus part-time, to oversimplify it.

Mr. STRATTON. There is another thing there, Mr. Chairman. The war orphan generally goes to the institution and that is the thing that pays the highest rate, whereas the other group that you are comparing with it does not only include college, which is the higher rate, but also correspondence, institutional, on-the-job training.

Mr. THOMAS. That is the average?

Mr. STRATTON. The average per veteran trainee in 1963 was $1,248 and for orphans was $1,650.

Mr. OSTERTAG. The Korean veteran or trainee is involved either in higher learning or below college, correspondence, institutional, farm, or on-the-job training. What does the orphan's training or education entail?

Mr. GLEASON. Mostly college.

Mr. BRICKFIELD. 90 percent are in college, about 10 percent are in other schools.

Mr. OSTERTAG. And you say that that benefit goes direct to the institution rather than to the orphan?

Mr. GLEASON. No.

Mr. OSTERTAG. I misunderstood you then.

Mr. GLEASON. In the rehabilitation program we pay direct to the college institution for the tuition.

Mr. OSTERTAG. In other words, that is correct. Yes, you pay it to the institution for the tuition.

Mr. GLEASON. Yes, sir; for vocational rehabilitation: under the education and training program, tuition allowances are paid to the veteran or orphan.

Mr. OSTERTAG. But does it entail anything besides tuition?

Mr. MONK. Books and living allowance; total.

Mr. OSTERTAG. That is what I was getting at. What does the orphan's benefit entail?

Mr. BRICKFIELD. Usually it is tuition and supplies and a living allowance.

Mr. GLEASON. And a subsistence allowance.

Mr. OSTERTAG. That is part of the item, is it not?

Mr. THOMAS. Yes.

Mr. OSTERTAG. Are there any other questions on this?

VETERANS' INSURANCE AND INDEMNITIES

Program and financing

[In thousands of dollars]

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
Operating costs, funded:			
1. Military and naval insurance:

Permanent indefinite	682	800	800
Appropriation	32,682	31,000	14,500

Mr. OSTERTAG. We will now turn to "Veterans insurance and indemnities," $13.7 million.

The "Veterans insurance and indemnity" appropriation provides funds for military and naval insurance, national service life insurance, Service Indemnity Act of 1951, and service disabled veterans insurance fund.

We shall put in pages 11–1, 11–2, and 11–3, comparison of the programs.

(The justification pages follow:)

VETERANS INSURANCE AND INDEMNITIES, $13,700,000

The "Veterans insurance and indemnities" appropriation provides funds for:

Military and naval insurance;

National service life insurance;

Servicemen's Indemnity Act of 1951; and

Service-disabled veterans insurance fund.

A comparison of actual and estimated requirements for each of the program activities for fiscal years 1963, 1964, and 1965 is shown in the following tabular statement:

Comparison of program costs

	1963 actual	1964 estimate	1965 estimate
1. Military and naval insurance:			
(a) Payment to USGLI fund	−$240,088	$125,000	$125,000
(b) Direct payments to policyholders and beneficiaries	2,667,303	2,570,000	2,460,000
2. National service life insurance:			
(a) Payments to NSLI fund	5,993,246	6,953,000	5,713,000
(b) Direct payments to insured and beneficiaries	875,523	876,000	876,000
3. Service-disabled veterans insurance: Payment to S-DVI fund	2,300,000	2,700,000	3,200,000
4. Servicemen's indemnities: Payments to beneficiaries	22,033,920	15,316,000	9,261,000
5. Other expense	7,159		
6. Acquisition of loans and liens, net	14,821	60,000	65,000
7. Less payments effected by income offset	−11,417

Unobligated balance brought forward	−6,102,034	−5,143,848	−7,543,848
Change in unappropriated receipts	−242		
Unobligated balance carried forward	5,143,848	7,543,848	343,848
Required new obligational authority	32,682,039	31,000,000	14,500,000
Appropriations:			
Annual definite: Veterans insurance and indemnities	32,000,000	30,200,000	13,700,000
Permanent indefinite: Veterans insurance and indemnities	682,039	800,000	800,000
Total appropriation	32,682,039	31,000,000	14,500,000

As the number of claimants under the military and naval insurance program continue to decline, expenditures are expected to decrease in excess of $100,000 from fiscal years 1964 to 1965.

Requirements for national service life insurance are expected to decrease by $1.2 million from fiscal years 1964 to 1965; $0.5 million is attributable to the decline in payments for gratuitous insurance to otherwise qualified illegitimate children. A reduced number of claims for extra hazard deaths and claims for death while under waiver of premiums account for the remaining $0.7 million decrease.

At present, the service-disabled veterans insurance program is the only insurance open to new applicants. This insurance is available to veterans separated from service after April 1951 who are suffering from a service-connected disability, but who are otherwise insurable. The number of claims will rise as the program increases in age and size. Since the insureds are medically substandard risks, death claims and refunds will exceed premium payments each year. The need will continue, therefore, for appropriated funds to supplement premium income. The estimate for this purpose in fiscal year 1965 is $3.2 million.

The servicemen's indemnities running award cases averaged 21,984 for fiscal 1963. The number of award cases are decreasing annually as installment payments are completed. The fiscal year 1964 expenditures are expected to be $15.3 million. The estimated requirements for fiscal year 1965 are $9.3.

MILITARY AND NAVAL INSURANCE

Mr. OSTERTAG. Under the military and naval insurance, your requirements remain the same as in fiscal year 1964. The direct payments to policyholders and beneficiaries is a slight decrease of $110,000.

What brings that about?

Mr. BRICKFIELD. This is the phasing out of this program. This fund goes back, Mr. Ostertag, to World War I war risk insurance at the very beginning of the program.

PAYMENTS TO SERVICE DISABLED FUND

Mr. OSTERTAG. And the national service life insurance has a decrease; service to disabled veterans insurance, payment to "SDV–1 Fund". What is that fund?

Mr. BRICKFIELD. It is the fourth item that you read at the beginning, service-disabled veterans insurance fund. These are veterans who are disabled, but who are otherwise insurable but for the disability. We charge a rate or a premium that is not sufficient to meet the obligations of the fund and so each year there is an appropriation from the Congress to supplement the fund to meet expenses. This is the appropriation of $3.2 million that we are asking for in 1965.

SERVICEMEN'S INDEMNITIES PROGRAM

Mr. OSTERTAG. Under the servicemen's indemnities, payments to beneficiaries, I notice you have a substantial decrease. How do you account for that?

Mr. BRICKFIELD. Yes, sir. When they closed off NSLI insurance in 1951, the Congress substituted the servicemen's indemnity payments. This was free insurance. It cost the serviceman nothing. Each year Congress appropriates the money. It is a 10-year program and will be completely terminated in 1966. We are getting toward the end of that program.

Mr. OSTERTAG. Are there any questions?

Mr. THOMAS. Thank you, I have no questions.

GRANTS TO THE REPUBLIC OF THE PHILIPPINES

Program and financing

[In thousands of dollars]

	1963 actual	1964 estimate	1965 estimate
Program by activities: Medical care and treatment of veterans (costs—obligations) (object class 41)	307	310	310
Financing: Unobligated balance lapsing	43		
New obligational authority	350	310	310
New obligational authority:			
Appropriation	500	310	310
Transferred to "General operating expenses," Veterans' Administration (77 Stat. 39)	−150		
Appropriation (adjusted)	350	310	310

Mr. OSTERTAG. Grants to the Republic of the Philippines, $310,000. (Reading:)

Grants-in-aid are made to the Republic of the Philippines for the medical care and treatment of eligible Philippine Commonwealth Army Veterans.

The total budget request is $310,000. There seems to be no substantial change here.

Mr. GLEASON. No, sir. The third paragraph from the bottom, Mr. Ostertag, on page 12–1, gives the explicit reason in that it provides for reimbursement at agreed-upon patient per diem rates for veterans of the Philippine Scouts.

Mr. BRICKFIELD. Commonwealth army veterans; yes, sir.

Mr. OSTERTAG. We shall insert page 12–1.

(The page follows:)

GRANTS TO THE REPUBLIC OF THE PHILIPPINES, $310,000

Grants-in-aid are made to the Republic of the Philippines for the medical care and treatment of eligible Philippine Commonwealth Army veterans.

Summary of requirements

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate	Increase (+) or decrease (−), 1965 over 1964
Medical care and treatment of veterans:				
Average daily patient load	179	180	180	----------
Patient-days of care (cumulative)	65,437	65,880	65,700	−180
Cost per patient-day	$4.64	$4.65	$4.67	+$0.02
Summary by type cost:				
Hospital care	$303,704	$306,500	$306,500	----------
Authorized travel	3,650	3,500	3,500	----------
Total	307,354	310,000	310,000	----------
Unobligated balance lapsing	42,646	----------	----------	----------
Transferred to "General operating expenses"	150,000	----------	----------	----------
Appropriation	500,000	310,000	310,000	----------

Section 632 of title 38, United States Code, as amended by Public Law 88–40, approved June 13, 1963, provides for reimbursement at agreed upon patient per diem rates, up to a maximum annual cost of $500,000.

Funds provided this appropriation for fiscal year 1963 were based upon an estimated per diem cost of $7.30 per patient day. However, it was actually negotiated at $4.96 with resultant savings of more than $190,000 from originally estimated requirements. Legislation providing necessary addditional funds to cover the fiscal year 1963 cost of the recently enacted pay raise (Public Law 88–25, approved May 17, 1963) directed that $150,000 of the unused portion of this appropriation be transferred to the appropriation general operating expenses, VA, for this purpose.

Medical care and treatment is provided by the Philippine Veterans Memorial Hospital in Manila, which was constructed from U.S. grants-in-aid totaling approximately $9,400,000.

PATIENT LOAD AND UNIT COST

Mr. THOMAS. Look at that per diem cost at $7.30. How many beds are there in that hospital?

Mr. SHYTLE. 722.

Mr. THOMAS. You do not have a patient load of over 200; do you?

Mr. BRICKFIELD. 180.

Mr. SHYTLE. Commonwealth army veterans are 180 and in addition to that, we have over 200 contract beds for the Philippine Army.

Mr. WISE. 230, which we pay for under $24,000.

Mr. THOMAS. What do you mean, American citizens?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. Are they living in the Philippines?
Mr. GLEASON. Or Filipinos who became American citizens.
Mr. THOMAS. And went back to the Philippines?
Mr. GLEASON. Yes, sir.
Mr. THOMAS. Do they have dual citizenship now?
Mr. GLEASON. No, sir.
Mr. THOMAS. Are they living in the Philippines?
Mr. GLEASON. Yes, sir.
Mr. THOMAS. Are they all Filipinos?
Mr. GLEASON. Not necessarily; no.
Mr. THOMAS. Off the record.
(Off the record.)

DIRECT LOANS TO VETERANS AND RESERVE REVOLVING FUND

Mr. THOMAS. We now turn to Direct Loans to Veterans and Reserve Revolving Fund. Put 13–1 and 2 in the record.
(The pages follow:)

DIRECT LOANS TO VETERANS AND RESERVES REVOLVING FUND

This fund permits the Veterans' Administration to make direct loans to eligible veterans in areas designated by VA where guaranteed loans are not generally available from private lending sources. Direct loans may be made to purchase, construct, or improve a home; to purchase a farm on which there is a farm residence to be occupied by the veteran as his home; or to construct, alter, repair, or improve a farm dwelling to be occupied by the veteran as his home.

The direct loan program was initiated under provisions of Public Law 475, 81st Congress, approved April 20, 1950, to run through June 30, 1951. Subsequent amending legislation has extended the program to July 25, 1967, for World War II veterans and to January 31, 1975, for Korean conflict veterans.

Funds available for making direct loans consist of periodic U.S. Treasury advances, the proceeds of principal repayments on loans made, and the proceeds from the sale of direct loans to private investors. From the beginning of the direct loan program in 1950 through June 30, 1963, a total of about $2.4 billion had become available for making direct loans from the following sources:

U.S. Treasury advances	$1,730,077,996
Principal repayments	441,313,904
Proceeds of sales to private investors	265,279,189
Total	2,436,671,089

Of the total availability as of June 30, 1963, almost $2 billion had been used to make direct loans; an additional $109.4 million was reserved for loans in process; an amount of $869,000 was outstanding in fund reservation commitments to builders or sponsors for direct loans on new houses they propose to construct for veteran purchasers; and funds amounting to $105.7 million had been transferred to the Loan Guaranty Revolving Fund. This left a balance of $230.8 million in unreserved funds available for processing loan applications from veterans.

Expenses involving loan closings are paid by the veteran; foreclosure expenses, property management and sales expenses, and interest on borrowings from the Treasury are met from interest income. Administrative expenses are borne by the appropriation for general operating expenses, Veterans' Administration.

APPROPRIATION LANGUAGE

Mr. THOMAS. Gentlemen, let's turn to page 454 of the committee print [reading]:

The amount authorized by section 23(a), title 3, United States Code, to be advanced after June 30, 1964, by the Secretary of the Treasury to the Administrator of the Veterans' Affairs for the purpose of direct loan revolving fund is hereby reduced by the amount of $150 million.

When we see that word "reduction" we do not usually look any further, do we?

This permits the Director of the VA to make direct loans to eligible veterans in areas designated by the VA where guaranteed loans are not generally available from private lending sources.

BORROWING AUTHORITY

What is the rate of interest? This is back door all the way. When was your last authority to go to the back door of the Treasury and how much were you to get?

Was it $2 billion?

We will read next to the last paragraph.

Mr. GLEASON. $1.2 billion, sir.

Mr. THOMAS. [Reading:]

Of total available as of June 30, 1963, almost $2 billion have been used to make direct loans.

Where is that paragraph showing how much the authorization was? Here it is. [Continuing reading:]

The direct loan program was initiated under the provisions of Public Law 475, 81st Congress, approved April 20, 1950, to run through June 30, 1951.

When was the last one? It reads:

From the beginning of the direct loan program in 1950 through June 30, 1963, a total of $2.4 billion became available for making direct loans * * *

Almost $2 billion has been used. When was the last authorization?

Mr. GLEASON. In the 87th Congress in July 1961, sir, when we were authorized $1.2 billion. That was to run to January 31, 1975, for Korean veterans and to July 25, 1967, for World War II veterans.

Mr. THOMAS. Foreclosure, sales expenses, and interest on borrowing from the Treasury are met from interest income. You really get into some complicated bookkeeping here.

Administrative expenses are borne by the appropriation for general operating expenses. You have to tie in general operating expense with this other revolving fund. You have three elements, expenses involving loan closings paid by the veterans themselves. How much is that?

Mr. DERVAN. Averages about $300 on a $15,000 direct loan.

MORTGAGE LOAN AMOUNTS

Mr. THOMAS. What is the greatest amount of the loan?

Mr. DERVAN. $15,000. Originally it was $10,000, and then $13,500 and now $15,000.

Mr. THOMAS. You get a good house for $15,000?

Mr. DERVAN. In the areas in which these loans are being made.

Mr. THOMAS. What is the ceiling on the insured loans rather than the direct loans?

Mr. DERVAN. There is no limit on the guaranteed or insured loans, sir. It may be for 100 percent of the purchase price provided the purchase price or the cost is not in excess of the appraised value as determined by the Administrator.

AMOUNT OF GUARANTEE

Mr. THOMAS. What is the limitation above which you do not go?

Mr. BRICKFIELD. If you are talking about guaranteed loans it is $7,500, but not to exceed 60 percent of the value of the property.

Mr. DERVAN. This is the amount of the guarantee, sir.
Mr. BRICKFIELD. Guarantee loan.
Mr. THOMAS. You usually do not go above $20,000.
Mr. DERVAN. It is very infrequent. The average property is considerably less than that.

REDUCTION OF BORROWING AUTHORITY

Mr. THOMAS. Why do you want to reduce it by $150 million?
Mr. GLEASON. We just do not think we will need it.
Mr. THOMAS. What was the schedule of contemplated withdrawals on that last $1.2 billion?
Mr. GLEASON. We had $150 million for this year and next, and $100 million in each of the remaining 2 years.
Mr. THOMAS. What year was that, 1961?
Mr. GLEASON. Fiscal year 1962.
Mr. BRICKFIELD. Borrowings to date, $200 million in 1962; $200 million in 1963.
Mr. THOMAS. Why this reduction? This does not apply to any particular year but it is the overall amount; is it not?
Mr. GLEASON. That is right.
Mr. THOMAS. Off the record.
(Discussion held off the record.)
Mr. THOMAS. Let us look at some of the figures involved here now. We shall insert pages 13–3 and 13–4 in the record.
(The pages follow:)

DIRECT LOANS TO VETERANS AND RESERVES REVOLVING FUND

DIRECT LOANS TO VETERANS

Under existing legislation, the Veterans' Administration may make or enter into a commitment to make loans through July 25, 1967, for World War II veterans and through January 31, 1975, for Korean conflict veterans. The amount of loans outstanding will be reduced to about $1 billion in 1965. A summary of loan activities follows:

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Number of loan commitments	20,101	14,933	9,770
Amount of loan commitments	$213,238,714	$161,278,000	$107,475,000
Number of loan disbursements and in process	18,488	15,000	10,000
Average cost per loan closed and in process	$10,605	$10,800	$11,000
Total disbursements on loans closed and in process	$196,061,181	$162,000,000	$110,000,000
Repayment of loans	$87,317,203	$77,560,000	$74,473,000
Sales of loans	$181,140,465	$150,000,000	$200,000,000
Losses on loans	$174,052	$165,000	$160,000
Net loan disbursements	−$72,570,539	−$65,725,000	−$164,633,000
Loans outstanding, end of year:			
Number	172,099	166,004	156,879
Amount	$1,261,014,255	$1,195,316,000	$1,030,683,000

VENDEE LOANS MADE

These loans are the result of resales of real property acquired through foreclosure or voluntary conveyances, and normally involve a cash down payment by the purchaser and the creation of a new mortgage loan to be held by the Veterans' Administration. The increase of vendee accounts indicated for both

fiscal years 1964 and 1965 are anticipated by reason of the increase in property sales.

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Amount of properties sold	$6,380,640	$7,405,000	$7,749,000
Amount of vendee loans acquired	5,658,909	6,675,000	6,849,000
Amount of vendee loans repaid	815,198	847,000	965,000

REAL PROPERTY ACQUIRED

Properties are acquired through foreclosures and voluntary conveyance in defaulted loans. The expected decreases in property acquisitions reflect fewer defaults occasioned by the decreasing portfolio of loans outstanding.

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Amount of properties acquired	$7,547,109	$7,062,000	$6,865,000

FINANCING

Prior to June 30, 1963, loans were made primarily with funds borrowed from the Treasury. Present plans are that the program will generate most of the funds needed for operations from loan repayments and the proceeds of loan sales, thereby reducing the dependence on Treasury borrowings. Borrowing authority in the amount of $2,033 million was authorized through June 30, 1963. New authorization of $150 million in 1965 is to be deferred as unnecessary to the program. These authorizations will be reduced by the proceeds of loan sales in the preceding fiscal year. Of the total funds to be made available from program operations, it is expected that $162 million will be disbursed in the current year and $110 million in 1965.

OPERATING RESULTS AND FINANCIAL CONDITION

To date, interest and other earnings from the direct loan program have been sufficient to pay all interest due the U.S. Treasury on advances, to cover all expenses which have been incurred, and to provide $101 million for transfer to the loan guarantee revolving fund. In addition, there will be a reserve of about $40 million, against future losses on the $1 billion in loans outstanding.

OPERATING EXPENSES—LOAN PROGRAMS

Mr. THOMAS. Re-insert the pages on administrative expenses at this point.

(The pages referred to follow:)

GENERAL OPERATING EXPENSES

LOAN GUARANTEE, FIELD, $21,946,000

Mission

Through the loan guarantee program, the Government guarantees or insures loans made by private lending institutions to veterans for homes, farms, and businesses; makes direct loans to veterans for homes in areas where private housing credit is short; and makes grants to paraplegic veterans for specially adapted housing. The program also services, liquidates, sells, and otherwise disposes of properties and loans owned as a consequence of underwriting and making loans.

Highlights

During fiscal year 1963, GI loan activity continued to trend upward. Nearly 206,000 home, farm, and business loans, amounting to $2.9 billion, were guaranteed or insured. Loan applications received during fiscal year 1963 increased about 10 percent over fiscal year 1962.

The VA, during fiscal year 1963, acquired 25,243 properties. This was an increase of 4,078 acquisitions over fiscal year 1962. However, sales of acquired properties increased during the year by 5,413, to 19,387, leaving 23,783 properties on hand at the end of the year.

During fiscal year 1963, 18,488 direct loans were made, bringing the cumulative total to 227,069. Loans as of June 30, 1963 amounted to nearly $2 billion.

During fiscal year 1963, $181.2 million in direct loans and $279.3 million in vendee accounts were sold to private investors.

Summary of requirements

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate	Increase (+) decrease (−), 1965 over 1964
Average employment	2,705	2,772	2,740	−32
Personnel compensation	$17,351,751	$18,928,000	$19,122,000	+$194,000
Personnel benefits	1,307,833	1,458,000	1,474,000	+16,000
Total personal services and benefits	18,659,584	20,386,000	20,596,000	+210,000
Travel and transportation of persons	499,939	500,000	500,000	
Other services	872,884	900,000	850,000	−50,000
Total cost	20,032,407	21,786,000	21,946,000	+160,000

Average employment

An increase of 67 man-years and 35 man-years is projected for fiscal years 1964 and 1965 respectively, over the employment level for fiscal year 1963. While a decline in several of the projected workloads is estimated for these years, there will be a corresponding increase in several key time consuming activities, such as loan servicing, and property management.

The Department has established goals which will enable it to curtail the number of properties to be acquired while at the same time dispose of a larger number of acquired properties than ever before. Involved in this accomplishment will be an increasing stress on servicing defaulted loans, coupled with an equally growing emphasis on the vendee sale program. Both of these will place a considerably increased burden on our field personnel.

Workloads supporting the above employment requirements are as follows:

Workloads

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Appraisal requests received (units)	350,639	344,600	329,500
GI loan applications	215,184	203,000	195,000
GI loans closed	203,065	190,000	175,000
Direct loan applications received	32,798	24,000	22,400
Direct loans closed and disbursed	18,488	15,000	10,000
Average number of loans owned	226,809	216,800	224,200
Paraplegic grants	350	400	400
Defaults reported	107,945	105,400	104,700
Claims processed	22,940	20,600	16,000
Property acquisitions	25,243	25,400	21,500

Distribution of employment by function

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Office of loan guarantee officer	214	214	214
Appraisal	581	565	530
Loan processing	557	545	470
Loan service and claims	856	883	936
Property management	497	565	590
Total	2,705	2,772	2,740

Construction and valuation

Overall workload will be enlarged in this activity during fiscal years 1964 and 1965, as a result of (a) implementing Executive Orders Nos. 11063 and 11114, which pertain to nondiscrimination in federally assisted housing and housing construction contracts, and (b) the adoption of a sale pricing technique through on site inspection of acquired properties. However, notwithstanding the enlarged workload in this area and the fact that backlogs developed in the appraisal activity during fiscal year 1963, workloads for fiscal years 1964 and 1965 will be processed at the same high level of productivity as performed during fiscal year 1963.

Loan processing

Because of the marked increase in claims under the guarantee and the frequency of marginal risks being submitted for VA approval, it has been necessary to extend underwriting techniques to encompass a sample review of loans made by private lenders under the automatic procedure. The purpose of this review is to evaluate the adequacy of credit reports submitted by credit reporting agencies and take corrective action as necessary. While this expanded activity increases the amount of work in loan processing, it does not reflect as an increase in reported direct labor workloads. Therefore, the inclusion of this additional work does not permit an increase in the overall productivity for loan processing in fiscal years 1964 and 1965. However, because of the importance of credit underwriting, particularly in respect to its effect on subsequent claims activity, the total workload will be accomplished with no lessening in productivity of the direct labor workloads.

Loan service and claims

The number of claims under the guarantee has continued to increase, contrary to improved economic conditions and a leveling-off trend of new defaults reported. In fiscal year 1962, claims were filed in 19 percent of defaults processed and, in fiscal year 1963, the ratio increased to 21 percent. The highest rates of claims and foreclosures processed occurred at those stations where supplemental servicing had to be curtailed. This attributed to the increased productivity in loan service and claims activity and occurred at the time when greater efforts were needed to forestall payment of claims and subsequent acquisition of properties.

The increased employment shown in fiscal years 1964 and 1965 should result in a reduction in the number of new claims and a commensurate reduction in the number of properties acquired. It is estimated that a saving of $11.5 million in capital outlay, and another $2.5 million in property and sales expenses, can reasonably be expected as a result of increased emphasis on supplemental servicing.

Property management

The volume of new property acquisitions in fiscal year 1962 and fiscal year 1963 raised workloads more rapidly than employment adjustments could be made to meet program needs.

In spite of a 39 percent increase in property sales in fiscal year 1963 over fiscal year 1962, efforts to reduce the inventory of acquired property fell far short of this objective. At the end of fiscal year 1963, there were 5,738 more properties in the inventory than at the end of fiscal year 1962. In fiscal year 1964, and fiscal year 1965, 25,000 property sales are planned for each year.

This is 5,613 more than were sold in fiscal year 1963. The additional volume of sales will require a greater effort per sale than was expended in fiscal year 1963. This is because the inventory contains both properties that are easy to sell and properties that are difficult to sell. As the volume of sales increases, a greater proportion of hard-to-sell properties must be disposed of. There were 11,231 properties owned more than 6 months in the inventory as of June 30, 1963, compared to 7,148 such properties in the inventory as of June 30, 1962.

Prudent management of the inventory requires that constant vigilance be exercised to assure that Veterans' Administration receives full value for services billed by management brokers, contractors, and others. Effective control requires that staff reviews be conducted to a greater extent than was possible with available manpower resources in fiscal year 1963. Therefore, to achieve this better control and a reduction in inventory, additional employment is required for fiscal years 1964 and 1965. The cost of the additional employment will be more than offset by the savings in property expenses which are estimated at $3 million per year.

Personal services and benefits

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate	Increase (+) decrease (−), 1965 over 1964
Personnel compensation	$17,351,751	$18,928,000	$19,122,000	+$194,000
Personnel benefits	1,307,833	1,458,000	1,474,000	+16,000
Total	18,659,584	20,386,000	20,596,000	+210,000

Fiscal year 1964 requirements are based on average salaries currently in effect, plus a nominal increase to cover periodic within-grade salary advances. Also included is $352,000 to cover the second phase of Public Law 87–793, and $143,000 for 2 additional paid workdays. Fiscal year 1965 requirements include a nominal increase to cover within-grade salary advances, $721,000 to cover a full year of Public Law 87–793, and $72,000 for 1 additional paid workday, which is offset by a decrease of 32 in average employment.

Travel and transportation of persons

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate	Increase (+) decrease (−), 1965 over 1964
Employee travel	$499,939	$500,000	$500,000	----------

It is expected that this administrative expense, resulting from the performance of travel necessary to meet program objectives with respect to the sale of acquired properties and the supplemental servicing of defaulted guaranteed or insured loans, will be no greater than the cost during fiscal year 1963.

Other services

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate	Increase (+) decrease (−), 1965 over 1964
Miscellaneous contractual services	$872,884	$900,000	$850,000	−$50,000

Fee appraisals, property inspections, special land planning, sanitation and drainage surveys, and credit reports, all of which are performed by non-VA personnel are necessary to fulfill the objectives of the GI loan program and the direct loan program. The level of these costs for fiscal year 1964 are estimated to be approximately $28,000 higher than fiscal year 1963. It is anticipated that the cost of credit reports will increase due to the rise in the number of prospec-

tive purchasers of VA acquired property and the necessity of adjusting the credit data reported by lending institutions. Fiscal year 1965 requirements are estimated to be $50,000 less than fiscal year 1964 due to diminishing workloads and greater utilization of salaried VA personnel.

LOAN COMMITMENTS

Mr. THOMAS. Under existing legislation, the Veterans' Administration may make or enter into a commitment to make loans through July 25, 1967 for World War II veterans and through January 31, 1975, for Korean conflict veterans.

It doesn't break it out in amounts?

Mr. GLEASON. No, sir.

Mr. THOMAS. The amount of loans outstanding will be reduced to about $1 billion in 1965.

The loan commitments in 1965 drop down, from $15,000 in 1964 and from $20,000 in 1963.

The amounts of commitments, $213 million in 1963, drop down to $107 million.

You are about caught up?

Mr. GLEASON. This is the way we view it as of now.

NUMBER OF REMAINING ELIGIBLE VETERANS

Mr. THOMAS. How many eligibles for home loans are there who have not used the entitlement?

Mr. GLEASON. About 6 million who have used it.

What were there in World War II?

Mr. BRICKFIELD. There are about 4 million who still have eligibility from the Korean war, and about 5 million from World War II.

Mr. THOMAS. Five million?

Mr. BRICKFIELD. That is right.

Mr. THOMAS. How many have used it since the Korean war?

Mr. DERVAN. About 20 percent of the Korean eligibles have used their entitlements, sir, and about 38 percent of the World War II veterans have used their entitlements.

Mr. THOMAS. You still have a lot of business ahead of you, then.

Mr. DERVAN. Considerable potential, but they are phasing out every day for World War II veterans.

Mr. THOMAS. Number of loan disbursements and in process goes down from 15,000 to 10,000.

Average cost per loan closed and in process has gone up very slightly.

Repayment of loans is $87.3 million in 1963; $77.5 million in 1964; and in 1965 it is $74,473,000. It seems the number should be going up.

SALES OF DIRECT LOANS

Mr. DERVAN. Sales of direct loans have been increasing, $181 million in sales last year, and we are predicting $150 million in sales this year and $200 million in sales next year depending upon the type of legislation enacted.

Mr. THOMAS. You mean payments are bound to be made or else there is a foreclosure.

Why are you selling the loans?

Mr. DERVAN. The governing law, sir, specifically prescribes that the Administrator shall offer for sale and shall sell loans to private investors presently at not less than par.

There is an amendment to the law which has been introduced which would authorize us to sell for reasonable prices as determined by the Administrator. This is presently before the——

Mr. THOMAS. You have seen the time when sales were few because there was no markets?

Mr. DERVAN. That is right.

Mr. THOMAS. Now the market is good and there is a lot of mortgage money.

Mr. BRICKFIELD. That is right, sir.

Mr. GLEASON. It is much better than it was.

Mr. THOMAS. We understand it is generally excellent, is it not? There is a lot of house money floating around?

Mr. GLEASON. Generally, yes.

SALES BELOW PAR

Mr. THOMAS. You cannot discount them. What is the statutory rate of interest?

Mr. DERVAN. Five and a quarter percent, sir.

Mr. THOMAS. And you cannot discount them?

Mr. GLEASON. No, sir. If we discounted them we would be able to sell——

Mr. THOMAS. This should be a good sale. What does VA draw now, five and a half?

Mr. GLEASON. This is an overall Government problem. With FNMA and ourselves it is a problem. If we break the rate it will break the rate for them.

Mr. THOMAS. You are not authorized to break the rate, though, are you?

Mr. GLEASON. That is right.

Mr. THOMAS. Even at that you are cheaper than the FHA, are you not?

Mr. GLEASON. FNMA and VA the same prices for the sale of loans. The interest rate now for FHA loans is also 5¼ percent, but FHA has a one-half-percent mortgage insurance premium.

Mr. OSTERTAG. That average cost per loan closed and in process, then, means what the average loan amounts to, $11,000?

Mr. DERVAN. That is right.

Mr. GLEASON. This is the direct loan program.

Mr. OSTERTAG. You say average cost. It is not actually a cost, is it?

Mr. DERVAN. It would be more descriptive to say "average loan amount," sir.

Mr. GLEASON. Exactly.

LOSSES ON DIRECT LOANS

Mr. THOMAS. You see this "Losses on loans, $174,000"? How many foreclosures does that represent?

Mr. DERVAN. Last year we had 941 foreclosures.

Mr. THOMAS. And you took a loss of $174,000 on it?
Mr. DERVAN. Yes, sir, the particular item is for losses on loans.
Mr. THOMAS. How much is that for each one?
Mr. GLEASON. Almost $160.
Mr. DERVAN. This item principally covers certain writeoffs, so it is not quite accurate——
Mr. THOMAS. What is this loss element made up of? That is what I am getting at. You have two revolving funds. You borrow from one and pay to the other. What element of loss is this made up of? It is about $175 a house, something less than 1,000 houses. You have $175,000 involved approximately, so it is around $175 a house.
What elements make up that loss?
Mr. DERVAN. I could not break it down as to the various elements at the moment, Mr. Chairman. I do know that this account includes writeoffs were, for example, a loan has been set up on the books at a certain amount and then it has been determined that there has been an error made in this respect and you have to write this down and it is written off on this basis, but I could not be precisely accurate——
Mr. THOMAS. Do you charge administrative expense in the loss in the direct revolving fund?
Mr. DERVAN. Administrative expenses are paid from appropriated funds.
Mr. THOMAS. I know where they are paid from. How do you figure out your loss now on your direct loans?
Mr. DERVAN. The loss is charged against the interest income together with all the other expenses such as foreclosure fees, appraisal costs, advertising costs in connection with foreclosures.
What we do is to take the interest income of loans, charge off against them the interest we have to pay to the Treasury, and then all the other operating expenses of the fund except salaries and administrative expenses.
Mr. THOMAS. On these loans it seems you pay less than a year's interest to the Treasury. What is the average amount of loan?
Mr. DERVAN. About 10.8, sir.
Mr. THOMAS. At 10 and a half percent, that is about what?
Mr. DERVAN. Five and a quarter.
Mr. THOMAS. $525.
Mr. DERVAN. The interest rate is 5¼ percent.

OTHER DIRECT LOAN COSTS

Mr. THOMAS. What are the other elements of cost?
Mr. DERVAN. The cost of the loan closer who closes the loan; the fee appraisal——
Mr. THOMAS. Is he a private individual?
Mr. DERVAN. Yes, sir.
Mr. THOMAS. What does that cost you?
Mr. DERVAN. This will vary, sir, approximately around $35 to $45 a loan for closing a loan.
Mr. THOMAS. Go ahead.
Mr. DERVAN. Credit report, anywhere from $3 to $5.

Mr. THOMAS. You have some court costs to pay in here, have you not?

Mr. DERVAN. Yes, sir.

Mr. THOMAS. How much is that?

Mr. DERVAN. This will depend upon the jurisdiction. Where we have judicial foreclosure it can be quite expensive.

Mr. THOMAS. What do you mean by that?

Mr. DERVAN. In certain States throughout the country, sir, foreclosure is by judicial action rather than by foreclosing under a power of sale.

Mr. THOMAS. You have to go to the courthouse to get a court order directly from the sheriff to sell the property. Otherwise you sell it under trustee sale?

Mr. DERVAN. That is right.

Mr. THOMAS. What are the elements to make up that $175? You are already way past that figure.

Mr. DERVAN. Other costs which we bear out of interest income to the fund—cost of compliance inspector.

Mr. THOMAS. What does he make, $20 to $25?

Mr. DERVAN. About $5 per person.

Mr. THOMAS. How do you arrive at this figure of $174,052?

Mr. DERVAN. We, sir, also have one other factor. We appraise the property prior to the foreclosure. If there is any reduction in the reasonable value of the property since the loan was made, so that the loan balance is in excess of the current——

Mr. THOMAS. There must be a charge to the fund for the amount of delinquency. You don't let them go over 60 to 90 days before you foreclose, do you? What is the usual period before you foreclose?

Mr. DERVAN. Where we have a borrower who has tried to make his payments, and he appears to be in temporary difficulty, we will work with him just as long as possible rather than foreclose, and we would certainly work with a deserving borrower at least 6 months before we foreclose.

Mr. THOMAS. When he is delinquent 6 months?

Mr. DERVAN. Yes, sir.

Mr. THOMAS. Then when you take over the property do you still charge interest or do you start taking it out of the fund, the revolving fund, do you waive the interest so far as bookkeeping is concerned?

Mr. DERVAN. First of all, we are still liable on the advance to the Treasury. We still owe the Treasury interest. We no longer have interest coming in from this individual.

Mr. THOMAS. So you pay it to the Treasury out of the revolving fund?

Mr. DERVAN. That is right, sir.

Mr. THOMAS. So your interest charge runs whether you have title or whether the veteran has title?

Mr. DERVAN. That is right.

Mr. THOMAS. This is not clear about the $175,000. You have accounted for about $600 per house.

Mr. DERVAN. The difference, Mr. Chairman, I think, is this: The property at the time of foreclosure is worth less, or has a reasonable value less, than the accumulated loan balance owing at the time of foreclosure, so we have taken a loss in acquiring that property to the

extent of the difference between the loan balance at that time and the reasonable value of the property when we take it in.

Mr. THOMAS. This item, then, does not cover your expenses in acquiring it. Whereabouts is that set up? In other words, you have that much depreciation in your original nest egg in your capital.

Mr. DERVAN. Yes, sir.

The other expenses which would be involved here would be foreclosure expenses and advertising.

Mr. THOMAS. Where are they set out?

Mr. DERVAN. On the prior page, 13–2. You will see real property acquired.

Mr. THOMAS. Under program by activities?

Mr. DERVAN. Yes.

Mr. THOMAS. The fourth line, yes.

Mr. DERVAN. This includes foreclosure costs, advertising, all the other incidental expenses incident to foreclosure and in advertising and acquiring that property.

Mr. THOMAS. $114,733.

Mr. DERVAN. This item is not limited solely to direct loans. It applies, also, to those mortgages which we acquired when we sold a direct loan property which had been foreclosed.

Mr. THOMAS. Judge, this makes the figure even further out of line. This is $114,000 and the other was $176,000. We had an excess of $500 on an annual basis for interest alone.

Mr. DERVAN. But this is limited to foreclosure costs, sir, and incidental advertising in connection with the foreclosure of the property.

Mr. THOMAS. Obviously one of the biggest items is the interest. You do not show any ad valorem taxes to be paid. Where is the item of interest charged?

Mr. DERVAN. With respect to real estate taxes, sir, with respect to those properties still under ownership of the veteran, the veteran pays the real estate taxes by paying us a monthly T and I account and we pay the taxes when due.

With respect to properties we acquire as a result of foreclosure, and while they are in the hands of the VA, we pay the taxes. That is shown under property management and selling expenses.

Mr. THOMAS. What are the operating expenses, General?

Mr. BRICKFIELD. Fee appraisers and other operating costs which we should properly absorb.

Mr. THOMAS. You have interest on borrowings, $49 million. You have operating expenses, general, $398,000. That does not come from the revolving fund; does it?

You have property management and selling expenses. This must be the overall figure for 1963.

FORECLOSURES AND PROPERTIES ON HAND

How many foreclosures did you have in 1963? How many properties did you have on hand for 1963, including the foreclosures?

Mr. DERVAN. First of all, foreclosures were 941, sir, during 1963.

Mr. THOMAS. All the foreclosures that year, 941?

Mr. DERVAN. Yes, sir; in the direct loans program.

Mr. THOMAS. How many properties did you have on hand?

Mr. DERVAN. We had roughly about 700 properties.

Mr. BRICKFIELD. 760.

Mr. THOMAS. I don't see how you got all these big figures, then, if the most you have is 1,700 to 1,800 houses in the revolving fund. I don't see how you get these big figures from that.

DIRECT LOAN FUND—FINANCIAL CONDITION

Let us look at the other funds. Maybe somebody will straighten it out tomorrow.

Insert the table on 13–5.

(The table follows:)

DIRECT LOANS TO VETERANS AND RESERVES REVOLVING FUND

Statement of financial condition

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate

LOAN GUARANTEE REVOLVING FUND

Mr. THOMAS. Now we shall proceed to the loan guarantee revolving fund.

Insert page 14–1 in the record.

(The page follows:)

LOAN GUARANTEE REVOLVING FUND

The loan guarantee revolving fund was established at the beginning of fiscal year 1962 by Public Law 86–665, 74 Stat. 533. This law provides that the revenues obtained from principal payments and proceeds of sales of vendee accounts, principal payments on acquired loans, income from interest payments on such assets, and miscellaneous income, such as, from rental of properties, could be used to defray part of the expenses of paying claims, acquiring, managing, and selling properties.

Statement of program and financing

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Program by activities:			
Capital outlay:			
Real property acquired	$248,853,155	$225,500,000	$195,300,000
Claims paid	22,561,588	19,000,000	15,000,000
Loans acquired	1,242,426	1,000,000	1,000,000
Repurchase of loans sold	3,063,076	5,000,000	5,000,000
Capital improvements to acquired properties	4,169,802	4,500,000	4,700,000
Total capital outlay	279,890,047	255,000,000	221,000,000
Operating costs, funded:			
Property management expense	19,763,881	24,000,000	23,000,000
Sales expense	9,865,931	13,000,000	13,000,000
Total operating cost, funded	29,629,812	37,000,000	36,000,000
Total program (cost and obligations)	309,519,859	292,000,000	257,000,000
Financing:			
Revenue and other receipts:			
Loan and other repayments	13,755,883	15,000,000	18,000,000
Sale of loans with recourse	281,310,689	223,614,000	264,532,000
Sale of properties	9,535,668	12,000,000	12,000,000
Collection of claims receivable (veterans' indebtedness)	2,653,353	3,500,000	4,500,000
Interest, rental and other revenue	27,881,800	26,400,000	20,600,000
Total revenue and other receipts	335,137,393	280,514,000	319,632,000
Unobligated balance brought forward	55,333,167	80,950,701	69,464,701
Unobligated balance carried forward	−80,950,701	−69,464,701	−132,096,701
Financing applied to program	309,519,859	292,000,000	257,000,000

REAL PROPERTY ACQUIRED

Private lenders who have acquired properties through foreclosure proceedings on defaulted guaranteed or insured loans may, under terms specified by VA, elect to convey the properties to the Veterans' Administration. Fewer property acquisitions are in prospect for fiscal year 1964 and fiscal year 1965 because of the reduced number and further aging of outstanding loans.

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Properties acquired:			
Number of properties acquired	22,894	20,535	17,860
Average cost per acquisition	$11,052	$11,200	$11,200
Total cost	$253,022,957	$230,000,000	$200,000,000

CLAIMS PAID

When veteran borrowers or their transferees fail to meet their obligations under the terms of loans guaranteed or insured by the Veterans' Administration, the holders of such obligations submit claims pursuant to contracts of guaranty or insurance. Fewer claim payments are projected for fiscal years 1964 and 1965 consistent with the lesser acquisitions discussed above.

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Claims paid:			
Number of claims paid	23,375	19,000	15,000
Average cost per payment	$965	$1,000	$1,000
Total cost	22,561,588	19,000,000	15,000,000

Mr. THOMAS (reading):

The loan guarantee revolving fund was established at the beginning of fiscal year 1962 by Public Law 86-665, 74 Stat. 533. This law provides that the revenues obtained from principal payments and proceeds of sales of vendee accounts, principal payments on acquired loans, income from interest payments on such assets, and miscellaneous income, such as from rental of properties, could be used to defray part of the expenses for paying claims, acquiring, managing, and selling properties.

This is different from the direct loan. This is the big one, in other words.

PROPERTY ACQUISITIONS

Let's look at property acquisitions (reading):

Private lenders who have acquired properties through foreclosure proceedings on defaulted guaranteed or insured loans may, under terms specified by Veterans' Administration, elect to convey the properties to the Veterans' Administration. Fewer property acquisitions are in prospect for fiscal year 1964 and fiscal year 1965 because of the reduced number and further aging of outstanding loans.

This was printed last August. How true is that statement today?

Mr. DERVAN. Total number of loans is declining year by year, because payouts are exceeding new originations.

Mr. THOMAS. We are not talking about loans but fewer property acquisitions being in prospect.

Mr. DERVAN. As fewer loans develop, sir, there is less of an exposure to foreclosures, and, as a consequence——

Mr. THOMAS. The longer the loan goes the better it gets.

Mr. DERVAN. That is right.

Mr. THOMAS. Number of properties acquired in 1963 shows 22,894; in 1964, you had 20,535; for 1965, you have an estimate of 17,860. How true is your figure for 1964; 20,535?

Mr. DERVAN. Total altogether, sir, is about 13,500 this first half year, of which about 500 are direct-loan properties. I would say it is about 13,000.

PROPERTIES ON HAND

Mr. THOMAS. How many do you have on hand as of January 1, or some recent date?

Mr. DERVAN. 22,700, roughly, sir.

That is as of December 31. This includes direct-loan properties, also. Those were properties acquired as a consequence of direct-loan foreclosures.

Mr. GLEASON. And we are selling more than we are acquiring now, Mr. Chairman.

Mr. DERVAN. The distinction being we pay from the loan guarantee revolving fund——

Mr. THOMAS. The testimony of a while ago shows you had about 1700 direct-loan properties; so, 1,700 of these 22,700 are direct loans.

Mr. DERVAN. 760.

Mr. BRICKFIELD. We have 21,973 loan guarantee, 760 direct loans; a total of 22,733 total.

Mr. THOMAS. On hand as of——

Mr. BRICKFIELD. December 31, 1963.

Mr. THOMAS. The figure of 1,300 is the number acquired?

Mr. BRICKFIELD. I think it was 700, Mr. Chairman.

Mr. THOMAS. You had 700 on hand and acquired 942 during the year. That makes about 1,700.

Mr. DERVAN. That is right.

Mr. THOMAS. How many do you have now?

Mr. DERVAN. About 700, sir.

LOSS ON PROPERTIES

Mr. THOMAS. That is getting rid of them pretty well. What loss do you take on those?

Mr. DERVAN. On direct loans, sir, in fiscal 1963 it was $1,145 per property sold. Cumulatively, it is $931 since the beginning of the program in 1950.

Mr. THOMAS. You have had pay raises, increases in taxes, increase in everything. As of today, it is about $1,100 a house direct loans?

Mr. DERVAN. Yes, sir.

Mr. THOMAS. I notice here you have a figure, for average cost of acquisition: $11,052, $11,200, $11,200. What do you mean by that "average cost per acquisition"?

Mr. DERVAN. The average amount we pay to the holder of a foreclosed loan when we accept the property from him, after he elects to convey it to us.

Mr. THOMAS. You have listed here as average cost per payment, under "Claim paid," $1,000. Is that the loss?

Mr. DERVAN. Yes, sir; that is the net amount we pay to the holder over and above the cost of acquisition, sir.

Mr. THOMAS. So your loss is less under your loan guaranty program than under the direct loans?

Mr. DERVAN. No, sir.

Mr. THOMAS. That is what you said.

Mr. DERVAN. Then I am sorry; I will straighten it out.

I understood you asked what our loss was on a direct loan. It is $1,145 per property sold in 1963.

Mr. THOMAS. That is what we understood you to say.

Mr. DERVAN. Guarantee loans, $1,326.

Mr. THOMAS. You have average cost per payment. I asked if that was the loss and you said yes, $1,000.

Where is the $1,300 figure? You have $1,000 shown here.

Mr. DERVAN. Average cost per payment is the net claim above the cost of acquisition.

Mr. THOMAS. So that figure of $1,000 should be $1,300; is that correct?

Mr. DERVAN. No, sir. When you asked the average loss, this is the loss we sustained after a property is acquired by the Veterans' Administration, repaired, placed in shape, and offered for sale and sold.

Mr. THOMAS. It is part of the loss, and the other part adds up to $300, making $1,300. Is that correct?

All right, Judge. I think it makes sense.

Turn to page 14–2 and we shall insert it in the record.

(The page follows:)

Loan Guarantee Revolving Fund

LOANS ACQUIRED

Guaranteed or insured loans in a default status may be purchased by the Administrator to avoid foreclosure when it is felt that temporary forebearance will allow the veteran borrower to cure the default.

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Loans acquired:			
Number of loans acquired	99	77	77
Average cost per acquisition	$12,545	$13,000	$13,000
Total cost	$1,242,426	$1,000,000	$1,000,000

REPURCHASE OF LOANS SOLD

Pursuant to VA Regulation 4600, dated March 22, 1962, the Administrator may sell mortgage loans, which have been created incident to the sale of VA acquired properties, with full recourse. Allowances are made for the possible repurchase of loans sold as indicated below:

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Repurchase of loans sold:			
Number of loans repurchased	303	495	495
Average cost per repurchase	$10,108	$10,100	$10,100
Total cost	$3,063,076	$5,000,000	$5,000,000

PROPERTY MANAGEMENT EXPENSE

The cost of ownership of the acquired properties is financed from this fund. These costs include local real estate taxes, services performed by management brokers, and the general maintenance required to keep the property in a salable condition.

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Property management expense:			
Average number of properties	20,364	22,900	21,900
Average cost per property	$971	$1,050	$1,050
Total cost	$19,763,881	$24,000,000	$23,000,000

SALES EXPENSE

This item consists principally of brokers' fees and advertising costs incident to the sale of acquired properties. A comparative statement of sales volume and related expenses follows:

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Sales expense:			
Number of sales	18,605	24,150	23,750
Average cost per sale	$530	$540	$550
Total cost	$9,865,931	$13,000,000	$13,000,000

FINANCING

Revenue and receipts consist principally of interest income and repayments on mortgage loans made incident to the sale of real property acquired as a result of foreclosure on guaranteed loans. It is also estimated that $222 million and $263 million in vendee loans will be sold to private investors during fiscal year 1964 and fiscal year 1965 respectively.

PROPERTY MANAGEMENT EXPENSE

Mr. THOMAS. Look in the middle of the page "Property management expense." (Reading:)

The cost of ownership of the acquired properties is financed from this fund. These costs include local real estate taxes, services performed by management brokers, and the general maintenance required to keep the property in a salable condition.

When you add these costs, plus that administrative cost back under general administrative expense, that is where you get the other $300, judge, and it all makes up the amount. Are you sure it is $1,300?

Mr. DERVAN. 1,326 actual in fiscal 1963, sir.

Mr. THOMAS. All right.

You have average number of properties here.

FINANCIAL CONDITION—LOAN GUARANTEE FUND

Now let us insert page 14–3 in the record.

(The page follows:)

Statement of financial condition

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Assets:			
Treasury balance	$86,271,243	$76,272,000	$139,272,000
Accounts receivable	3,270,646	2,000,000	2,300,000
Advances for bidding at public sales	40,566	42,000	45,000

End of year	728,205,710	728,206,000	728,206,000
Deficit (−), end of year	−13,292,841	−31,048,000	−53,663,000
Total, Government equity	714,912,869	697,158,000	674,543,000

Mr. THOMAS. Somebody explain this financial sheet, please.

Off the record.

(Discussion held off the record.)

APPROPRIATION LANGUAGE

Mr. THOMAS. Gentlemen, turn to page 460 of the committee print and follow this language.

(The language follows:)

LOAN GUARANTY REVOLVING FUND

[During the current fiscal year, the] *The* Loan guaranty revolving fund shall be available for *payment of expenses*[, but not to exceed $300,000,000,] for property acquisitions and other loan guaranty and insurance operations under Chapter 37, title 38, United States Code, except administrative expenses, as authorized by section 1824 of such title: *Provided*, That the retained earnings of the Direct loans to veterans and reserves revolving fund shall be available[, during the current fiscal year,] for transfer to said Loan guaranty revolving fund in such amounts as may be necessary to provide for the foregoing expenses.

REVISION IN LIMITATIONS

Mr. THOMAS. "During the current fiscal year the loan guarantee revolving fund shall be available for payment of expenses not to exceed $300 million." We had that in last year.

You delete the limitation for property acquisitions, and so forth—provided the retained earnings shall be available.

Why do you take out the limitation? You take out two limitations, the dollar amount and the current fiscal year.

Mr. GLEASON. We need it in the current year. Right now we are positive we will need it by the 1st of May.

Mr. THOMAS. How much will you need? What should that figure be?

Mr. GLEASON. Because of this limitation, Mr. Chairman, we probably will have to cut off payment of claims on the 1st of May and we will not be paying for 2 months.

LEVEL OF EXPENDITURES IN 1964

Mr. THOMAS. How much more do you need in addition to that $300 million?

Mr. GLEASON. About $60 million, sir.

Mr. THOMAS. What should the figure be, $360 million?

Mr. GLEASON. Yes, sir, $360 million would be fine.

Mr. OSTERTAG. The 1st of May of this year?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. This limitation applies——

Mr. GLEASON. That is why we are asking for it in the current year, also, the current year being 1964.

Mr. OSTERTAG. But this proposed change would be for the next year.

Mr. GLEASON. We would take the limitation out completely for next year.

Mr. OSTERTAG. That doesn't change the situation you are in in the current year.

Mr. GLEASON. If you pass this in time, by the 1st of May, the current year will give us——

Mr. OSTERTAG. Off the record.

(Discussion held off the record.)

VOCATIONAL REHABILITATION REVOLVING FUND

Mr. OSTERTAG. The Vocational Rehabilitaiton Revolving Fund follows, shown on page 15–1. This fund is used to make loans up to $100 to disabled veterans eligible for vocational rehabilitation who are without sufficient funds to meet their expenses. Repayments are used to make new loans.

The number of loans you anticipate will be somewhat less than last year. The average of the loan will be the same.

Number of loans outstanding remains the same, and this amounts to $210,000.

We shall insert pages 15–1 and 15–2 in the record.

(The pages follow:)

VOCATIONAL REHABILITATION REVOLVING FUND

This fund is used to make loans up to $100 to disabled veterans eligible for vocational rehabilitation who are without sufficient funds to meet their expenses (sec. 1507, title 38, United States Code). Repayments are used to make new loans.

Administrative expenses are borne by the appropriation "General operating expenses."

Workload—Amounts loaned and repaid

Mr. MONK. This is a small revolving fund where they advance money to people in training, at no interest.

ADJUSTED SERVICE CERTIFICATE FUND

Mr. OSTERTAG. We now turn to page 16–1, the Adjusted Service Certificate Fund.

The World War Adjusted Compensation Act of 1924 created this fund to receive appropriations for ultimate payment of the face value of adjusted service certificates issued to qualified World War I veterans pursuant to this act.

Mr. GLEASON. That is the old World War I bonus.

Mr. OSTERTAG. That is right. Your estimated requirements are $60,000. This is on the decline. Is this because there are still certificates remaining unpaid?

Mr. BRICKFIELD. That is right, sir.

Mr. GLEASON. Some people just won't turn them in. As the chairman mentioned about the Spanish-American War veterans, some just won't apply for it. Some World War I people won't, either.

Mr. OSTERTAG. Under the financing, unobligated balance brought forward, cash, you show $2,734,000. Is that right?

Mr. GLEASON. Yes.

Mr. OSTERTAG. Is that the balance in the fund?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. Then what do you need the $60,000 for?

Mr. MONK. We don't. This is an expenditure out of the fund to reduce the unobligated balance.

Mr. OSTERTAG. This is what you anticipate using in fiscal year 1965 from the fund?

Mr. GLEASON. That is right. We are not asking for any of this money.

Mr. OSTERTAG. Insert page 16–1.

(The page follows:)

ADJUSTED SERVICE CERTIFICATE FUND

The World War Adjusted Compensation Act of 1924 (43 Stat. 121, 128) created this trust fund to receive appropriations for ultimate payment of the face value of adjusted service certificates issued to qualified World War I veterans pursuant to this act. Only a small portion of the certificates issued remain unpaid. Administrative expenses are charged to the appropriation "General operating expenses, Veterans' Administration."

The principal of the fund, except for a small cash balance, was invested in U.S. securities, and interest income therefrom was also available to pay matured certificates. As of December 31, 1956, all U.S. securities held in the fund were paid off in full along with accrued interest. None of the fund will be reinvested and all payments will henceforth be made from the cash principal.

Payments of certificates amounted to $66,685 during fiscal year 1963. It is 1965. The expenditures and balances of the fund for the past, current, and budget years are reflected in the following schedule:

Program and financing

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Program by activities:			
Operating costs:			
Adjusted service payment program:			
Payment of World War I adjusted service certificates (total obligations)	$66,685	$65,000	$60,000
Financing:			
Unobligated balance brought forward:			
Cash	2,866,649	2,799,964	2,734,964
Unobligated balance carried forward:			
Cash	−2,799,964	−2,734,964	−2,674,964
Total financing	66,685	65,000	60,000

SERVICE-DISABLED VETERANS' INSURANCE FUND

Mr. OSTERTAG. Next is "Service-disabled veterans' insurance fund." This is another revolving fund established to record financial data pertaining to nonparticipating insurance issued under section 620 of the National Service Life Insurance Act of 1940, as amended.

You have a statement of the revenue, expense, and retained earnings. The revenue in 1965 is estimated at $6,818,000.

Expense is $9,301,000. The net loss is shown.

Mr. BRICKFIELD. This is disability insurance where we do not charge sufficient premiums so that the premiums can meet the obligations of the fund. It runs at a deficit each year as you can see from these figures, and we show the amounts we need.

Mr. GLEASON. This is the only insurance still open, too.

NEED FOR APPROPRIATED FUNDS

Mr. OSTERTAG. What do you have to offset the liabilities other than the assets?

Mr. BRICKFIELD. That is it.

Mr. GLEASON. That is where you come in.

Mr. BRICKFIELD. That is why we come to Congress.

Mr. OSTERTAG. What are you asking for here?

Mr. BRICKFIELD. We have this fund called V.I. & I. The amount we are asking for is part of this $13 million.

If you turn to page 11–1, sir, and if you turn to item No. 3, that is the same fund and that is the appropriation.

Mr. OSTERTAG. In other words, the appropriation is not associated with this fund at this point?

Mr. BRICKFIELD. That is right.

Mr. OSTERTAG. It is included under veterans' insurance and indemnity of the total appropriation of $13,700,000, of which $3,200,000 is part?

Mr. BRICKFIELD. That is right, and it is on page 17–1. Look at the next to the last line, $3,200,000. Do you see it, sir?

Mr. OSTERTAG. Yes.

We shall insert 17–1 and 17–2 in the record at this point.

(The pages follow:)

SERVICE-DISABLED VETERANS' INSURANCE FUND

This revolving fund was established to record financial data pertaining to nonparticipating insurance issued under section 620 of the National Service Life Insurance Act of 1940, as amended (38 U.S.C. 722). This insurance is available to veterans with a service-connected disability which makes them ineligible for commercial insurance. It is estimated that the number of policies in force will increase from 52,790 at June 30, 1963, to 58,600 at June 30, 1965.

Fund requirements are completely uncontrollable administratively due to the medically substandard lives insured. Fund payments have exceeded the income resulting in capital impairment. Restoration of capital is made by payments from "Veterans insurance and indemnities" appropriation.

Administrative expenses are paid from the "General operating expenses" appropriation.

Statements of income and expense and of financial condition for past, current, and budget year follow:

Revenue, expense, and retained earnings

	1963 actual	1964 estimate	1965 estimate
Insurance program:			
Revenue	$5,927,966	$6,408,000	$6,818,000

Soldiers' and Sailors' Civil Relief Fund

Mr. Ostertag. The next item is the "Soldiers' and sailors' civil relief fund." This is another revolving fund established to record financial data pertaining to Government guarantees to commercial life insurance companies under article IV of the Soldiers' and Sailors' Civil Relief Act of 1940.

The status of this fund is what? This is down to where repayments are estimated at $1,000 and expenses at $17,000, net loss of $16,000 during this next year. Is that right?

Mr. Brickfield. That is right.

SOURCE OF FUNDS

Mr. Ostertag. Does this money show up in the other tables? Where is the appropriation for this?

Mr. Gleason. There is no appropriation for this. No money has been required for this for several years.

Mr. OSTERTAG. You have a deficit of $1,944,000 at the end of the year.

Mr. MONK. But we had $2,300,000 to start out with in that fund and we spent $1,944,718, so we still have some money left.

Mr. GLEASON. We still have $58,000.

Mr. OSTERTAG. Let us insert pages 17–3 and 17–4.

(The pages follow:)

SOLDIERS' AND SAILORS' CIVIL RELIEF FUND

This revolving fund was established to record financial data pertaining to Government guarantees to commercial life insurance companies under article IV of the Soldiers' and Sailors' Civil Relief Act of 1940, as amended. Servicemen may defer payment of premiums while they are in service and for 2 years after discharge. The Government guarantees the payment thereof to the commercial insurance companies if the serviceman defaults.

Any payment by the Government on cases approved subsequent to the October 6, 1942, amendment of the act, becomes a debt owed to the Government by the insured.

In fiscal year 1963, 39 settlements (payments to commercial insurance companies under guaranteed policies) were made in the total amount of $27,690; 40 settlements totaling $39,000 are estimated for fiscal year 1964; and 35 settlements totaling $22,050 are estimated for 1965. Repayments are estimated at $5,000 for 1964 and for 1965.

Statements of income and expense and of financial condition for the past, current, and budget years follow.

Statement of income and expense

	1963 actual	1964 estimate	1965 estimate
Income: Repayments of claims, receivable written off	$1,515	$1,000	$1,000

VETERANS' SPECIAL TERM INSURANCE FUND

Mr. OSTERTAG. We have the "Veterans' special term insurance fund." This is another revolving fund established to record financial data pertaining to nonparticipating term insurance issued under section 621 of the National Service Life Insurance Act of 1940.

Let us insert pages 17–5, 17–6, 17–7, and 17–8.

(The pages follow:)

VETERANS' SPECIAL TERM INSURANCE FUND

This revolving fund was established to record financial data pertaining to the nonparticipating term insurance issued under section 621 of the National Service Life Insurance Act of 1940, as amended (38 U.S.C. 723). This insurance was available to veterans who served in the Armed Forces subsequent to April 1951 and who applied for coverage within 120 days after separation from service.

Under Public Law 85–896 (72 Stat. 1716), two additional basic plans were authorized: (*a*) Permanent plan insurance; (*b*) term insurance unrenewable beyond age 50. Policyholders were given the right to convert their original term insurance to a permanent plan or to exchange for the few form of term insurance. Those who converted to a permanent plan also acquired the right to purchase total disability income coverage of $10 per month per $1,000 of insurance (38 U.S.C., sec. 715). The premium rates under the new form of term insurance were less than for the unlimited term insurance.

The fund has an accumulated surplus in excess of its anticipated liabilities. Provision was made (75 Stat. 495) for a one-time distribution of this surplus by payment of a special dividend to policyholders whose insurance was in force during November or December 1960 to January 1961 if they have a permanent or limited-term plan, or convert from unlimited term to permanent or limited term before September 14, 1963. The dividend will be paid also on unlimited-term policies which mature by death on or after the November 1960 premium due date and before September 1963.

Administrative expenses of the program are charged to the general operating expenses appropriation, Veterans' Administration.

Statements of income and expense, and financial condition for the past, current, and budget years are included below.

Revenue, expense, and retained earnings

	1963 actual	1964 estimate	1965 estimate
INSURANCE PROGRAM

National Service Life Insurance Fund

Mr. Ostertag. The last item is the national service life insurance fund. Insert page 17–8 in the record.

(The page follows:)

National Service Life Insurance Fund

This trust fund was established in 1940 as the financing mechanism for the World War II servicemen's and veterans' insurance program authorized by the National Service Life Insurance Act of 1940. Over 22 million policies have been issued under this program. Five million policies with a total face value of $32 billion remain in force. In 1951 the fund was closed to new issues.

Fund assets total $6,196 million as of June 30, 1963. These consist almost entirely of interest-bearing U.S. securities and policy loans. Policy obligations of $5,805 million and current liabilities of $341 million, total $6,146 million in liabilities. Earnings of $50 million are retained as a reserve for contingencies. An estimated income excess over payments will increase the fund's assets to $6,619 million as of June 30, 1965.

Income of the fund is derived from premium receipts, interest on investments, amounts left under optional income settlements, and transfers from the veterans insurance and indemnities appropriation.

The fund is operated on a commercial basis to the greatest extent possible consistent with law. Administrative expenses are charged to the general operating expenses appropriation.

Statements of financial condition for the past, current, and budget years are included below. Fund operating reserves are presented as liabilities on the statements.

Mr. OSTERTAG. Questions on that, Mr. Chairman?

Mr. THOMAS. I have no questions.

Mr. OSTERTAG. That finishes this book.

Mr. THOMAS. We will resume tomorrow at 10 o'clock.

WEDNESDAY, FEBRUARY 12, 1964.

LOAN PROGRAMS

Mr. THOMAS. Gentlemen, will the committee please come to order?

We had just about finished volume I yesterday when we adjourned, but after consultation with members of the committee, we feel it may be better to go back and strengthen our record a little bit under the loan guarantee program.

We felt we ought to get some more details in the record concerning that program, particularly in the field of housing.

This is becoming quite important.

Mr. Miller, how long have you been with the organization?

Mr. MILLER. Since last October, sir.

Mr. THOMAS. Where did you come from?

Mr. MILLER. I have been in the Veterans' Administration——

Mr. THOMAS. You are not plowing in virgin soil then. Anyway, we are delighted to have you, and we look forward to working with you.

Mr. MILLER. Thank you, sir.

Mr. THOMAS. We have been bragging on you folks and you are good, but you have come up with, perhaps, the most disjointed, unconnected, and unrelated budget on housing that I have ever seen. You have enough information in here. You have more information than is contained in a Sears & Roebuck catalog, but it is unconnected, disjointed, and when you get through working your fingernails over it you still do not know what it is all about.

Next year, combine this. You have two revolving funds. Put them in side by side with a narrative. You have fine tables in here but our friend, Mr. Dervan, did not clearly explain them yesterday. I hope we do better today.

Next year give us a narrative on each of your big revolving funds. Show us the loan guarantee fund and a narrative as to what it contains and a narrative on what your direct revolving fund contains, as well as a narrative on your expenses for these programs.

You have the information in here now but you cannot find it yourself. You have to look about five places in the book. You cannot follow it.

Mr. SHYTLE. We put a lot of time on that, Mr. Chairman.

Mr. THOMAS. Put less time on it and more facts in there where we can understand it and where you can understand it.

There is no place I can find what I want in here, and we have worked at it pretty hard. I am sure it is in here if you get a magnifying glass

out, or if 10 of you get together you can find it. How many fee appraisers do you have? What do you pay them and where are they located? What is charged against each one of your funds?

You do not have it in any central place in here, what your overall housing program costs you. What is the cost for your two revolving funds? What are your administrative costs? You have it scattered all over the lot.

Is that clear to you?

Mr. SHYTLE. Yes, sir.

Mr. THOMAS. Let us get started then. Let us take a quick review.

Mr. Dervan, you are a gentleman and a scholar and have been very cooperative and we are not trying to embarrass you a bit, so take your time. You know your subject and the information is there, so take your time and get it for us.

However, it is not in any one place that we can find it.

LOCATION OF LOAN GUARANTEE EMPLOYEES

For your employment, you have 2,740 people you are requesting for 1965 and you have 2,772. That is supposed to be a minus 32. However, your minus figure is way out here and you show 74 in the District; is that correct?

Mr. DERVAN. That is correct, sir.

Mr. THOMAS. Which gives you a total of 2,814 in all for 1965?

Mr. DERVAN. Correct.

Mr. THOMAS. Where are these 2,740 people located?

Mr. DERVAN. They are located in 54 loan guarantee divisions throughout the United States. Those 54 offices and the number in each office were included in the chart which was supplied for the record yesterday.

Mr. THOMAS. Can you read that for the record now, the employment in half a dozen or a dozen of these offices?

Mr. DERVAN. Yes, sir.

Mr. THOMAS. Give us the location and the numbers.

Mr. DERVAN. Yes, sir, I have the December 31 on-duty figures.

Montgomery, Ala., 61; Phoenix, Ariz., 38; Little Rock, Ark., 24; Los Angeles, Calif., 193; San Francisco, 110; Denver, Colo., 64; Hartford, Conn., 17; and in our Florida office, 138——

Mr. THOMAS. Does the Florida office cover the entire State of Florida?

Mr. DERVAN. Yes, sir; it does.

Mr. THOMAS. Where is it located in Florida?

Mr. DERVAN. The Loan Guarantee Division itself is in Jacksonville, Fla.

Atlanta, Ga., 73; Boise, Idaho, 20; Chicago, Ill.—Mr. Chairman, I will take up the larger offices—Detroit, Mich., 178——

Mr. THOMAS. What are the duties and the functions of these people in the field?

Mr. DERVAN. I think that I can point that out best by taking——

Mr. THOMAS. It comes to a total cost for fiscal year 1963 for those people in the field of $19,122,000 which is an increase of $194,000 over last year.

This does not include your 74 people for the headquarters in the District of Columbia, is that correct?

Mr. DERVAN. That is correct.

Mr. THOMAS. Where is their compensation set out?

Mr. BRICKFIELD. In the central office shown on page 8-20.

Mr. THOMAS. Why do you leave this off of this table where you are discussing loan guarantees? Advise me, Mr. Shytle.

Mr. SHYTLE. Mr. Chairman, routinely for the Department of Veterans' Benefits we have shown central office activities separate from the field activities. We have broken the budget down in that manner. This has been historically the case.

Mr. THOMAS. Do you mind breaking history and making it understandable and putting the proper items in their proper places? If you are considering loan guarantee, why not put the costs involved in loan guarantee under "Loan guarantee" where we can see it? This does not give us a complete picture.

Mr. SHYTLE. We could do what you are suggesting, sir.

Mr. THOMAS. It is fundamental. Go ahead.

What is the cost of these 74 people? Where do you find that? What excuse is there for having us chase all over the lot for that item and then still not be able to come up with the total cost.

Mr. DERVAN. Sir, it is not broken out in the table here.

Mr. THOMAS. Mr. Miller, I hope you can improve this budget next year.

Can anybody tell us what the cost is? We are trying to figure out the cost of your whole operation and we have chased all over the lot and we have not found it yet.

Mr. OSTERTAG. In other words, you have loan guarantee personnel of 74 in the central office that are not combined with the field figures; is that right?

Mr. GLEASON. Yes, sir; they are included in the central office totals.

Mr. OSTERTAG. It is not broken down separately.

Mr. GLEASON. They are included as part of central office in the general operating expense of the Department of Veterans Benefits. I think it is my fault, Mr. Ostertag, that they are not combined with the field figures.

Mr. THOMAS. Can anybody come up with a horseback opinion?

Mr. MONK. The salary cost is about $500,000 for those 74 people.

Mr. THOMAS. In round figures, your budget on personnel costs is how much?

Mr. MONK. $21 million with fringe benefits.

Mr. THOMAS. Personnel costs are $21 million and then under "Other objects" which comes in here, making it perhaps—what, $22,250,000?

Mr. MONK. That is right, sir.

Mr. GLEASON. Mr. Chairman, for next year would it be permissible to include it as we have, the entire central office general operating expense and then break it down by divisions?

Mr. THOMAS. There is no objection to that, but set it out so that when we go to that subject matter it will be there in detail. There

is no objection to putting in your central office as a part of that but do not let that suffice because that does not give us any information when we get over here, as far as the total is concerned.

We have to chase back all over a thousand pages here to try to find it.

What are the items or the expenses you charged against this $21 million? Is this nothing but personnel costs, travel, benefits, and so forth?

Mr. SHYTLE. That is right.

LOAN GUARANTEE COSTS OTHER THAN PERSONAL SERVICES

Mr. THOMAS. Do you have any appraiser fees charged against this?

Mr. MONK. Some.

Mr. THOMAS. Which one of the revolving funds is that charged against?

Mr. DERVAN. Speaking with respect to page 8–56, "Loan guarantee"——

Mr. THOMAS. I am not concerned about what you have on the page; I am talking about substance now.

Mr. DERVAN. $21,946,000 includes "Other services" or "Miscellaneous contractual expenses" of $900,000 for fiscal year 1964, and $850,000 for fiscal year 1965.

"Miscellaneous contractual services" include such items as fee appraisals, property inspections, and special land planning surveys.

Mr. THOMAS. Credit reports?

Mr. DERVAN. Yes, sir; sanitation and drainage surveys and credit reports.

NUMBER OF FEE APPRAISERS AND COSTS

Mr. THOMAS (reading:)

The level of these costs for 1964 is estimated to be approximately $28,000 higher than fiscal year 1963. It is anticipated that the cost of credit reports will increase.

For fiscal year 1965, the requirements are estimated to be $50,000 less than 1964 due to diminishing workloads.

You still do not tell us very much. How many fee appraisers do you have and what do you pay them per appraisal, and so forth? They just work the way the language indicates, on a fee?

Mr. DERVAN. That is right. The total number of fee appraisers, sir, as of November 30, was 9,400. There were 4,762 real estate fee appraisers and 4,883 non-real estate appraisers. Some of the 9,400 are qualified as both real estate and non-real estate appraisers. We had 2,201 who were compliance inspectors rather than fee appraisers.

Mr. THOMAS. What part of your appraisal work is done by outsiders and what part is done by your regularly paid staff?

Mr. DERVAN. The great bulk is done by the fee appraisers. They make the original appraisal report to the Veterans' Administration. The report is then reviewed by our staff appraisers in each of the local offices and, based on the appraisal report and the local office review, a certificate of reasonable value is issued.

Mr. THOMAS. You set out here your workload, but you have not told us how many fee appraisers you have and what is the per copy cost. The estimate made yesterday was $15 or $20, but we want it accurate today.

Mr. DERVAN. I could not be precisely accurate today except that I can say with considerable assurance that the average charge for a fee appraisal throughout the United States is probably $25.

Mr. THOMAS. Who pays the cost?

Mr. DERVAN. In respect to appraisals made in connection with veterans seeking GI loans, the charges are paid by the veteran himself. It is also included in the charge which an applicant for a direct loan pays. When we have these appraisals made for our own purposes, for example in connection with appraisals of properties prior to foreclosure, these fees are paid by the Veterans' Administration.

Mr. THOMAS. What is that last statement?

Mr. DERVAN. Immediately prior to the foreclosure of any GI mortgage loan, or a direct loan, Mr. Chairman, an appraisal of the property is made for the purpose of determining its reasonable value. In that instance, the fee is paid by the Veterans' Administration.

Mr. OSTERTAG. That is the only case where the Veterans' Administration pays the fee?

Mr. DERVAN. That is the most common case, sir. There may be others. For example, in special situations in which there are disputes as to the reasonable value, we may bring an independent appraiser in that case to get an independent opinion.

Mr. OSTERTAG. Would the chairman yield further?

Mr. THOMAS. Yes.

Mr. OSTERTAG. I might cite that that is where the GAO report indicates that $520,000 could be saved annually by eliminating the duplicate appraisal functions. You are familiar with their report?

Mr. DERVAN. This has reference to the proposal made by the GAO, sir, that the Federal Housing Administration might make the appraisals for the Veterans' Administration purposes, and thereby avoid so-called duplication.

LOAN GUARANTEE WORKLOADS

Mr. THOMAS. Let us look at this workload.

Let us reinsert the table on page 8–53 in the record.

(The table follows:)

Workloads

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate
Appraisal requests received (units)	350,639	344,600	329,500
GI loan applications	215,184	208,000	195,000
GI loans closed	203,065	190,000	175,000
Direct loan applications received	32,798	24,000	22,400
Direct loans closed and disbursed	18,488	15,000	10,000
Average number of loans owned	226,809	216,800	224,200
Paraplegic grants	350	400	400
Defaults reported	107,945	106,400	104,700
Claims processed	22,940	20,600	16,000
Property acquisitions	25,243	25,400	21,500

Mr. THOMAS. You had a request for 1963 of $350,639. You made estimates on 344,600 and you have reduced that estimate to 329,500. Let us now get down to the actual number of loans closed. Out of loans requested, 350,000, you closed 203,000 in 1963; is that correct?

Mr. DERVAN. In 1963 we closed 203,000 loans; yes, sir.

Mr. THOMAS. That is the final figure.

It is 190,000 in 1964, and the estimated figure is 175,000?

Mr. DERVAN. That is correct.

COMPARISON OF LOAN GUARANTEE AND DIRECT LOAN WORKLOADS

Mr. THOMAS. Let us break this down as between direct loans and loan guarantees. Under "Direct loan applications," is that a separate figure of 32,780, or is that a part of the other?

Mr. DERVAN. It is a separate figure.

Mr. THOMAS. This is in addition?

Mr. DERVAN. Yes, sir; these are direct loan applications as distinguished from guarantee loans.

Mr. THOMAS. In 1964, you estimate 24,000 and how firm is this figure?

Mr. DERVAN. More accurately, sir, I think the more pertinent factor is mentioned in the next line down, "Direct loans closed and disbursed." It shows 15,000 for fiscal year 1964 and through the first half of this fiscal year, we have closed about 10,500.

Mr. THOMAS. What line are you reading from?

Mr. DERVAN. Just below "Direct loan applications received."

Mr. THOMAS. The average number of loans?

Mr. DERVAN. "Direct loans closed and disbursed."

Mr. THOMAS. What does that mean?

Mr. DERVAN. This means the actual number of loans to be closed in fiscal year 1964.

Mr. THOMAS. If you are going to do something, why in the world can you not do it right? Why do you not break it down as between direct loans and guarantee loans, where it can be understood? Set them out separately.

How many direct loans did you close that year? Can you tell from this table?

Mr. DERVAN. Yes, sir; direct loans closed, 1963, 18,488.

Mr. THOMAS. Direct loans closed and disbursed, 18,488?

Mr. DERVAN. Right.

Mr. THOMAS. How firm is this figure of 15,000 for 1964?

Mr. DERVAN. This figure looks low, sir. The first half of the year the total number closed was 10,494.

Mr. THOMAS. You have defaults reported and the figure is 107,000 in round figures for 1963. In 1964, you have claims processed, but what do you mean by that?

Mr. DERVAN. These are the claims received from holders of GI loans which have been processed to the point of having been checked over completely and vouchered for payment.

Mr. THOMAS. That is almost your final step in acquisition?

Mr. DERVAN. Yes, sir.

Mr. THOMAS. Your final step is the property acquisition and you acquired 25,243 in 1963?

Mr. DERVAN. Yes, sir.

Mr. THOMAS. You show acquisition of 25,400 for 1964. How firm is that figure?

Mr. DERVAN. Our estimate is pretty firm. In the first half of this year we acquired about 13,500 and it looks as if we could go as high as 26,500.

Mr. THOMAS. Let us carry that one step further. As betwen direct and loan guarantee, you are 25,400——

Mr. DERVAN. Of this, we would say direct loans would probably be about 2,500.

Mr. THOMAS. Let us put it in some perspective now. The percentage of direct loans closed to loan guarantees is in the neighborhood of about 10½ or 11 to 1.

Mr. DERVAN. That is right; yes, sir, on that basis. However, I see the exact figure as 1,300.

COMPARISON OF LOAN GUARANTEE AND DIRECT LOAN FORECLOSURES

Mr. THOMAS. What about the percentage in foreclosures, direct to loan guarantee? Is it the same proportion?

Mr. DERVAN. The proportion would be about this: Last year we had, roughly, about 22,500 property acquisitions which, in effect, are foreclosures resulting from GI loans.

Mr. THOMAS. You are talking about fiscal 1963?

Mr. DERVAN. Yes, sir.

Mr. THOMAS. You set it out here as 25,300, but what part of that is direct loans?

Mr. DERVAN. Our actual direct loan foreclosure figure for the same year, sir, was 941, to be exact.

Mr. THOMAS. What part of that total would that be?

Mr. DERVAN. About 25 or 26 to 1, sir.

Mr. GLEASON. 3.7 percent.

Mr. THOMAS. The record ought to clearly state loans closed, 203,000 in 1963 in loan guarantees and 18,500 under direct loans, which makes a total of what, in round figures?

Mr. DERVAN. 221,000.

TYPES OF DWELLING UNITS

Mr. THOMAS. These are all what we call single-family units?

Mr. DERVAN. Yes, sir.

Mr. THOMAS. They are all brandnew starts?

Mr. DERVAN. No.

Mr. THOMAS. Part of them?

Mr. DERVAN. Roughly, about 60 percent last year were existing, previously occupied properties; 40 percent of the loans were to purchase newly constructed properties.

Mr. THOMAS. Heretofore constructed and heretofore occupied houses, but were they all houses that the Veterans' Administration had a mortgage on?

Mr. DERVAN. No, sir.

Mr. THOMAS. Do you let the veterans go out and choose any house they want, a secondhand house, so to speak, an occupied house?

Mr. DERVAN. Yes, sir.

Mr. THOMAS. Your program in that regard is the same as the FHA?

Mr. DERVAN. Yes, sir.

Mr. THOMAS. What part of your workload of 221,000 houses last year were new starts and what part were old houses you were purchasing?

Mr. DERVAN. I could give that to you.

Mr. THOMAS. You used a proportion of 60–40. I did not understand which was the 60 and which was the 40.

Mr. DERVAN. The old was, roughly, 60 percent.

Mr. THOMAS. You mean 60 percent of your purchases were for heretofore occupied houses?

Mr. DERVAN. Yes, sir.

Mr. THOMAS. Your new starts were 40 percent?

Mr. DERVAN. Yes, sir.

Mr. THOMAS. Do you have a modernization program after you buy the house?

Mr. DERVAN. The governing law does allow GI and direct——

Mr. THOMAS. It is all single-family units?

Mr. DERVAN. Yes, sir.

Mr. THOMAS. No multifamily or anything else?

Mr. DERVAN. It is one to four family, but for all practical purposes, our business is single family.

Mr. THOMAS. Do you have one to four family units, co-ops, or what?

Mr. DERVAN. No; an individual, and let us take Boston for example, Mr. Chairman, where there are a number of older type properties built in the last 1800's, three- story; a veteran there could buy one of these properties with a GI loan.

Mr. OSTERTAG. Rent the rest?

Mr. DERVAN. Rent the rest.

COMPARISON OF VA VERSUS FHA WORKLOADS

Mr. THOMAS. How does that number of 221,000 stack up with FHA new starts?

Mr. DERVAN. Moving from loans to starts, I have the precise figures here.

In calendar year 1963, there were 70,968 new properties started under the Veterans' Administration inspection procedure. This was 4.5 percent of the total census of nonfarm private starts in 1963. Although I do not have the comparable number of FHA starts——

Mr. THOMAS. What is a houseback opinion?

Mr. DERVAN. That percentage was 10.6.

Mr. THOMAS. Yours was what?

Mr. DERVAN. 4.5.

LOAN GUARANTEES FOR REPAIRS AND MODERNIZATION

Mr. THOMAS. Just what authority do your field offices have under loan guarantee in reference to new starts, direct loans, insurance on

KANSAS STATE LIBRARY
MAY 26 196
MANHATTAN, KANSAS

purchases, on heretofore occupied houses, and so forth? You do not have any major alteration or repair program?

Mr. DERVAN. No, sir. There is very little or virtually none in our program.

M. THOMAS. Have you given any consideration to starting one?

Mr. DERVAN. It is authorized under the governing law. The governing law specifically provides that a GI loan or direct loan may be made for repair, alteration, or improvements to a property already owned by the veteran.

Mr. THOMAS. What is the authorization. How long is the insurance for?

Mr. DERVAN. It can be made on the same terms, Mr. Chairman, as the loan to purchase a house; namely, up to 30 years.

Mr. THOMAS. Is there any dollar limitation on it?

Mr. DERVAN. No, sir; the guarantee is the same as in the purchase loan, up to 60 percent of the loan or $7,500, whichever is less.

Mr. THOMAS. I am surprised you do not do any business.

Mr. DERVAN. The reason for this is that most of the loans are small loans to begin with. The interest rate is 5¼ percent.

The modernization program under the FHA is the title I program which involves a discount rate which is the equivalent of about 9 percent.

Mr. THOMAS. FHA has a 20-year program up to $10,000?

Mr. DERVAN. That is a separate program; yes, sir.

Mr. THOMAS. That is the big one?

Mr. DERVAN. On minor repairs, sir, up to $2,500. The lender will go FHA rather than——

Mr. THOMAS. They can go directly to the bank and get that?

Mr. DERVAN. Yes, sir.

AUTHORITY OF FIELD OFFICES IN LOAN GUARANTEE PROGRAM

Mr. THOMAS. You are in the business of issuing insurance for either single-family new starts or single-family houses heretofore occupied. What authority do your local offices have?

Mr. DERVAN. Basically, it resolves itself into three functions: First of all, is the appraisal of proposed construction, houses to be constructed under this program, the appraisal and valuation of existing, previously occupied properties, which individuals desire to buy with GI financing or with direct loan financing.

Second, our offices are concerned in the broad major field of servicing defaulted GI and direct loans.

Mr. THOMAS. That has become a major activity with you now?

Mr. DERVAN. Very much.

Mr. THOMAS. That ought to be a minor activity but that is one of your biggest activities?

Mr. DERVAN. It is very important.

Mr. THOMAS. What authority does your regional office have in the field? That is what I am getting at. Do you have a divided authority with the regional office manager, and does he have direct authority over this, or do you have a separate man in the loan guarantee section who is in charge?

Mr. DERVAN. The manager, sir, has prime responsibility for the overall operation of the loan guarantee activity. The technical direction of that program is in the hands of the loan guarantee officer. He makes all of the technical decisions and any broad policy decisions which would come up in this connection would be taken up with the manager and would probably be submitted to the central office for consideration and decision.

GRADES OF LOAN GUARANTEE OFFICERS AND EMPLOYEES

Mr. THOMAS. What is the usual civil service classification of your loan guarantee manager?

Mr. DERVAN. That is shown in a chart on page 8–15.

Mr. THOMAS. Is this the average office?

Mr. DERVAN. This is a typical office; yes, sir.

The loan guarantee officer would be a GS–14 as shown on this chart; a section chief functioning as assistant loan guarantee officer would be a GS–13.

Another section chief, probably the chief appraiser, would be GS–12. The four GS–11's would be two section chiefs; one a head of the property management operation and the other the head of the loan servicing.

The other two would be a construction analyst and a senior appraiser.

The three GS–10's, one probably would be a direct loan agent and the other would be a senior loan examiner. The other would be a senior loan service representative.

The GS–9's would be journeymen loan examiners, appraisers, and loan service representatives. The rest primarily, clerical.

Mr. THOMAS. Thank you very much. We are going to give you an A this morning.

Mr. DERVAN. I can use it, sir.

DIRECT LOAN REVOLVING FUND

Mr. THOMAS. Let us see if we can correlate this now with your disrect loan program.

Let us turn to page 13–1 and reinsert this page in the record.

(The page follows:)

DIRECT LOANS TO VETERANS AND RESERVES REVOLVING FUND

This fund permits the Veterans' Administration to make direct loans to eligible veterans in areas designated by VA where guaranteed loans are not generally available from private lending sources. Direct loans may be made to purchase, construct, or improve a home; to purchase a farm on which there is a farm residence to be occupied by the veteran as his home; or to construct, alter, repair, or improve a farm dwelling to be occupied by the veteran as his home.

The direct loan program was initiated under provisions of Public Law 475, 81st Congress, approved April 20, 1950, to run through June 30, 1951. Subsequent amending legislation has extended the program to July 25, 1967, for World War II veterans and to January 31, 1975, for Korean conflict veterans.

Funds available for making direct loans consist of periodic U.S. Treasury advances, the proceeds of principal repayments on loans made, and the proceeds from the sale of direct loans to private investors. From the beginning of the

direct loan program in 1950 through June 30, 1963, a total of about $2.4 billion had become available for making direct loans from the following sources:

U.S. Treasury advances	$1,730,077,996
Principal repayments	441,313,904
Proceeds of sales to private investors	265,279,189
Total	2,436,671,089

Of the total availability as of June 30, 1963, almost $2 billion had been used to make direct loans; an additional $109.4 million was reserved for loans in process; an amount of $869,000 was outstanding in fund reservation commitments to builders or sponsors for direct loans on new houses they propose to construct for veteran purchasers; and funds amounting to $105.7 million had been tranferred to the loan guarantee revolving fund. This left a balance of $230.8 million in unreserved funds available for processing loan applications from veterans.

Expenses involving loan closings are paid by the veteran; foreclosure expenses, property management and sales expenses, and interest on borrowings from the Treasury are met from interest income. Administrative expenses are borne by the appropriation for "General operating expenses, Veterans' Administration."

AMOUNT OF TREASURY ADVANCES AND BALANCES

Mr. THOMAS. What is your authorization and unexpended balance as of some recent date?

Mr. DERVAN. I can supply that or explain it this way: We came into fiscal year 1964 with $280 million unused from fiscal year 1963. The authorization for fiscal year 1964 is $150 million, thereby making a total of $430 million in gross. This gross has to be reduced by the amount of direct loans sold last year; namely, 1963, in the amount of $180 million. Consequently, as of now, sir, our unused authorization is $250 million.

Mr. THOMAS. What was the total availability as of June 1963? What were you authorized to go to the Treasury and get as of that date? Do you have that figure?

You say that almost $2 billion had been used to make direct loans?

Mr. DERVAN. Yes, sir.

Mr. THOMAS (reading):

An additional $109.4 million was reserved for loans and processes; an amount of $869,000 was outstanding in the fund reservation commitments to builders or sponsors for direct loans on new houses they proposed to construct. This left a balance of $230.8 million in "Unreserved funds" available for processing loan applications for veterans.

AUTHORIZED CHARGES TO DIRECT LOAN REVOLVING FUND

What are the expenses involved in this district loan account? This is the revolving fund, but what do you charge to this?

Mr. DERVAN. We charge the foreclosure expenses which are incurred.

Mr. THOMAS. Only in direct loans?

Mr. DERVAN. Yes, sir.

Mr. THOMAS. Are there any administrative expenses charged whatsoever against this?

Mr. DERVAN. No, sir; salary and administrative expenses are borne by——

Mr. THOMAS. Expenses involved in loan closing, foreclosure expenses, property management, and sales expenses?

Mr. DERVAN. And interest.

DIRECT LOAN FORECLOSURES

Mr. THOMAS. The next table here we tried to go into yesterday but it is disjointed and disconnected.

Where do you have a table on the direct loans foreclosed? What is that number?

Mr. DERVAN. The number of foreclosures I supplied was 941 in fiscal 1963. Commulatively, through December 31, 1963, there have been 3,733 foreclosures.

Mr. THOMAS. It is not on page 8–53?

Mr. DERVAN. No, sir; it is not.

Mr. THOMAS. How many?

Mr. DERVAN. 3,733.

Mr. THOMAS. What does that 3,733 cost from this fund?

Mr. DERVAN. This is on page 13–3.

Mr. THOMAS. Is that the overall cost?

Mr. DERVAN. On the real property acquired, sir, this is shown on page 13–3 and is the last one on the bottom of the page.

Mr. THOMAS. You have there the number of loans, the loans outstanding, and the real property acquired. Is this last paragraph what you are talking about?

Mr. DERVAN. Yes, sir.

Mr. THOMAS. You say properties are acquired through foreclosure and voluntary conveyance of defaulted loans?

Mr. OSTERTAG. Is that dollars?

Mr. DERVAN. Yes, sir.

Mr. THOMAS. Break it down. What did you spend it for? I do not find it here on page 13–2 either.

Mr. DERVAN. For all of the costs incident to the acquisition of the 3,733 properties. This would be attorneys' fees, advertising, court costs, et cetera.

LOSSES PER DIRECT LOAN FORECLOSED

Mr. THOMAS. How much is that per house?

Mr. DERVAN. I am not that quick with arithmetic.

Mr. THOMAS. This is just getting it back, but you have not shown us yet, and I do not find here how much you lost on each house. That is just getting it back. You have not put it in shape and paid the expense for doing a little touching up, a little painting, modernization, sales, and everything else?

Mr. DERVAN. The amount of loss is not shown here. However, I can state that based on fiscal year 1963 experience on direct loan cases, speaking only in respect to properties sold in fiscal year 1963——

Mr. OSTERTAG. I might say in response to the Chairman's question, that if I figured this correctly it is about $2,000 a property.

Mr. DERVAN. I was going to say that after taking into account all expenses incurred by the Veterans' Administration after acquisition of the property, such as fixing the property up with repairs, maintenance—and this involves lawn mowing, et cetera, and the payment of fees to the property management broker and ultimately the payment of sales brokers' commission when the property is sold—the average loss per direct loan property sold in fiscal 1963 was $1,145.

Mr. THOMAS. I thought we used a figure of $1,300 yesterday.

Mr. DERVAN. That, sir, was in respect to the properties which were acquired in the guaranteed or insured loan program.

Mr. THOMAS. You are confining that $1,100 per house to the direct loan?

Mr. DERVAN. Yes, sir.

Mr. THOMAS. Can you break down the $7,547,000 figures for 1963? This is getting the property back?

Mr. DERVAN. Yes, sir; this is just getting the property back on our books.

Mr. THOMAS. On the 3,733 units? Is that the cost you gave us per house in getting it back?

Mr. DERVAN. About $2,000.

Mr. THOMAS. No. Can that be?

Mr. OSTERTAG. Certainly.

Mr. THOMAS. About $2,000?

Mr. DERVAN. Yes, sir.

Mr. THOMAS. Where is your $1,100 then? Where is your cost on doing a little painting, restoring it to order, and paying somebody to sell it for you as well as somebody to maintain it before you sell it?

Mr. DERVAN. Sir, I think I can explain that.

Mr. THOMAS. Your $1,100 has already evaporated and you have $2,000 here.

Mr. DERVAN. Sir, when the property is acquired, we put it on our books as involving a cost of acquisition which is equal to the amount of the unpaid balance of the direct loan indebtedness when it was foreclosed. To that we add all payments of real estate taxes; we add all maintenance charges, such as lawn mowing, shoveling snow if it is in an area——

Mr. THOMAS. We understand all those things, but get down to the meat in the coconut.

Mr. DERVAN. Then we sell the property and we take the net amount realized and subtract it from the total cost. When this is done for each property and all of this averaged up for all properties sold——

Mr. THOMAS. You had better get your bookkeeping in shape so anybody can understand it. The way it is now, it is not realistic. Are you saying this is a case where you have a veteran in the house for 2 years and he has built up a little equity in the house, but when you foreclose he loses his equity?

Mr. DERVAN. Yes, sir; he loses it.

Mr. THOMAS. You are bound to do some fancy bookkeeping there, because if it shows here as a loss of $2,000 in acquisition, you cannot absorb that loss and spend another $500 or $600 to get it down to $1,100. Where is your fancy bookkeeping here? Do you take advantage of his equity or what do you do?

Mr. DERVAN. This is reduced by any rentals that are obtained——

ACQUIRED PROPERTIES RENTED PRIOR TO SALE

Mr. THOMAS. You know there is no such thing, as a practical matter, of any rentals while you are trying to sell a property. You do not do much renting. You are not in the business of renting houses, but in the business of selling them.

Mr. DERVAN. We have about 4,300 properties rented in the United States today.

Mr. THOMAS. You have around 25,000. They are producing some income.

Mr. DERVAN. 22,200.

Mr. THOMAS. Do you have a contract of sale along with the rent?

Mr. DERVAN. The tenant is moved from the property, and the property is sold to the purchaser.

Mr. THOMAS. Explain how you reduce the loss. If it cost you $2,000 to get hold of a property, get title back in your hands, then you have to keep it 3 or 4 or 5 or 6 months, doing painting, paying somebody to sell it, paying interest and incurring other expenses all during that time. How is it, with those items of expense, you can reduce your loss from $2,000 down to $1,100? That is a Houdini.

Mr. DERVAN. The only answer is the offset from rental.

Mr. THOMAS. Mr. Shytle, can you explain that? There is fancy bookkeeping here or else your figures are wrong.

Mr. SHYTLE. To understand these funds, you have to sleep with these things day and night.

Mr. THOMAS. If you just write it out in narartive form, we will understand it or run you crazy.

Mr. SHYTLE. We are going to do our best to do what you suggested, next year.

Mr. THOMAS. Does anybody understand it now? Off the record.

(Discussion off the record.)

ACQUIRED PROPERTIES ON HAND

Mr. THOMAS. How many properties did you carry over into 1963?

Mr. DERVAN. We carried over from June 30, 1963, a total of 23,783 properties.

Mr. THOMAS. I am talking about direct loans.

Mr. OSTERTAG. That is total properties.

Mr. DERVAN. Both GI and direct.

Mr. OSTERTAG. Of which how many are direct?

Mr. THOMAS. How many directs did you carry over into 1963. In 1963 you acquired 37,033 more. In other words, how many did you have at the end of 1963.

Mr. DERVAN. I would say about 800.

ACQUIRED PROPERTY COSTS

Mr. THOMAS. You sold that many? How much did you acquire from rents alone in 1963? Then I am going to ask you how much interest you paid. You can get them both right together. My guess your interest far exceeded your rental income.

Mr. MONK. I think part of the trouble is the $2,000. I do not think the $2,000 figure is right.

Mr. THOMAS. It cannot be right.

Mr. OSTERTAG. Not the way it balances out.

Mr. THOMAS. The figure is bound to be too high.

Mr. OSTERTAG. I know it.

Mr. MONK. How did we derive the $2,000?

Mr. DRIVER. It was derived by dividing 3,733 into the $7.5 million.

Mr. OSTERTAG. You have your 3,700 properties, and the amount is $7,554,000.

Mr. MONK. This is wrong.

Mr. THOMAS. The purpose of this examination is to show the weakneses in your bookkeeping system and your budget presentation. I hope we have accomplished that purpose.

Mr. MONK. You certainly have.

Mr. THOMAS. Mr. Ostertag.

Mr. OSTERTAG. On this loan guarantee revolving fund, page 14–1, we discussed this briefly yesterday. You might give us a better picture of the whole setup here.

The program of activity, of course, includes real properties acquired. I note that there is a reduction there of about $30 million. Is that about what it will figure this next year?

Mr. DERVAN. Yes, sir. We are predicting a lesser number of properties to be acquired than in fiscal 1963, sir.

Mr. OSTERTAG. The claims paid will be substantially less and loans acquired will be about the same. Repurchase of loans sold will remain about the same as the last fiscal year. Capital improvements to acquired properties is increased $200,000. We have discussed your operating costs to some extent.

If I understand your situation, you desire to remove the limitation applicable to the next fiscal year.

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. Off the record.

(Discussion off the record.)

SALE OF VENDEE LOANS

Mr. OSTERTAG. In your statement, Mr. Administrator, you indicate, and I quote:

> Experience to date in 1964 indicates that our estimated cost of $290 million may be too low.

Is that right?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. Going on, continuing to quote:

> The principal source of revenue to meet these costs continues to be provided by the sale of vendee loans. Our budget estimate proceeds from this source of $224 million in 1964 and $265 million in 1965. These estimates assume a favorable market for these loans. If such a market is not available or if expenditures substantially exceed our estimates, it may be necessary for us to request supplemental appropriation relief.

What I am trying to get at is this. You say your estimates assume a favorable market.

Mr. GLEASON. In the sale of our vendee accounts.

Mr. OSTERTAG. But this is all associated with your revolving fund?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. Your proceeds will be higher this next year than this year?

LOAN GUARANTEE FUND LIMITATION

Mr. GLEASON. We hope that the proceeds of our sales will reach $265 million in 1965. If we reach that, we will have sufficient moneys

to pay the claims. But we will be limited in the amount of money that we can pay out by this limitation that we have asked relief on.

Mr. OSTERTAG. Your limitation is $300 million?

Mr. GLEASON. Yes, sir, for fiscal year 1964.

Mr. OSTERTAG. You feel that you will be hitting the ceiling?

Mr. GLEASON. Yes, sir. We feel we will be hitting the ceiling before the end of fiscal year 1964. That is why we are requesting relief from the limitation of $300 million.

Mr. THOMAS. Mr. Ostertag, will you yield briefly for one point there?

Mr. OSTERTAG. Yes, Mr. Chairman.

SOURCE OF DIRECT LOAN FUND PROFIT

Mr. THOMAS. Can we tie in now the loss, if any, between your two revolving funds? Heretofore your direct loan revolving fund showed a profit; is that right?

Mr. GLEASON. Yes, sir, and still does.

Mr. THOMAS. How does that profit originate? Where is your breakage and what is your breakage?

Mr. GLEASON. We get the advantage there from the amount of money we have to pay in interest to the Treasury and what we get from the GI.

Mr. THOMAS. Call that breakage. What is the breakage involved?

Mr. DERVAN. It is about 1.3 percent.

Mr. THOMAS. You ought to make plenty of money on that.

Mr. GLEASON. We are making money on it.

Mr. THOMAS. What is the status of the fund as of January 1 this year? You have a breakage in there. You go to the Treasury and borrow money at 4 percent. You charge the veteran what?

Mr. GLEASON. 5¼ percent.

Mr. THOMAS. You have breakage of about 1¼ percent. The overall program, you have made money and you borrowed money from the Treasury and put it into the revolving fund. What is the status of your direct loan fund as of January 1 or some recent date?

Mr. DERVAN. As of January 1, the retained earnings remaining in the fund after transfers to the loan guarantee revolving fund——

Mr. THOMAS. That is a borrow. Let it stand on its own feet.

Mr. DERVAN. It is about $124 million.

Mr. THOMAS. After paying what expenses?

EXPENSES OF DIRECT LOAN REVOLVING FUND

What are your expenses? Repeat them. All the costs involved in direct loans and getting the property back in your hands. Does it stop there?

Mr. DERVAN. And in disposing of the property.

Mr. GLEASON. Losses occurred in disposing of it.

Mr. THOMAS. All your losses in acquiring and selling. It still shows a profit?

Mr. DERVAN. Yes, sir.

Mr. THOMAS. As far as the fiscal 1963 is concerned, what does it show on that one year? You lost.

Mr. DERVAN. No, sir.

Mr. MONK. For the 6 months July 1 through December 1963, we showed a net profit of almost $7 million.

Mr. GLEASON. $6,786,000.

Mr. THOMAS. Even with the 3,733 acquired properties at a loss of——

Mr. GLEASON. $1,100.

Mr. THOMAS. $2,000. You still need $7.5 million? They will get you for usury.

What is the FHA breakage? Is it one-fourth of 1 percent?

Mr. MONK. One-half of 1 percent.

Mr. THOMAS. A half or a quarter?

Mr. DERVAN. The FHA——

Mr. THOMAS. We are asking you a simple question. You know what it is. It is a quarter of 1 percent or a half of 1 percent.

Mr. DERVAN. It is a half percent.

LOSSES IN LOAN GUARANTEE REVOLVING FUND

Mr. THOMAS. You folks get 1¼. You get three-fourths of 1 percent more than they do. With that three-fourths of 1 percent more, you did not show a loss in this account. What loss do you show in the loan guarantee?

Mr. DERVAN. $27 million, sir.

Mr. THOMAS. Is that one for 1 year or is that an accumulated figure?

Mr. DERVAN. This is an accumulated figure.

Mr. THOMAS. Up to when?

Mr. DERVAN. December 31, 1963.

Mr. THOMAS. What period of time does it cover?

Mr. DERVAN. Since the inception of the program in 1944.

Mr. THOMAS. 1944. That figure of $27 million looks heavy. What was the loss for 1963?

Mr. DERVAN. About $13 million, cumulatively, as of June 30, 1963.

Mr. THOMAS. Let us keep it at $13 million. If we go any further, we are liable to increase it. What was the cost to the Veterans' Administration for the loan guarantee section in 1963?

Mr. DERVAN. On this basis, sir, the loan guarantee operation, I would say was roughly about $13 million, approximately $8 million having been added in fiscal year 1963.

Mr. THOMAS. What was the total to the taxpayers?

Mr. MONK. You cannot determine that yet because we have taken in properties that still are carried on our books as an asset. Until these properties are disposed of, you cannot determine finally and definitely——

Mr. THOMAS. You are building a good case for increasing the $13 million. We are trying to hold it at $13 million because the longer you hold them, the chances are the more you lose. Let us leave it at $13 million. That is big enough. You are going to have to add your $13 million to your general administrative expense. How much was that?

Mr. SHYTLE. $20 million.

Mr. THOMAS. Around $22.5 million, adding the 74 people in Central Office. Your $22.5 million plus $13 million is approximately $35.5

million cost. That is a pretty accurate figure, is it not? There is a whole lot of difference between that and $21.9 million you have set out here.

Next year pull it all together and give us a narrative. Your tables are fine, but who understands your tables without a narrative? Not even your experts understand them. Mr. Ostertag.

LOAN GUARANTEE REVOLVING FUND LIMITATION

Mr. OSTERTAG. I have one general observation. That has to do with the complicated and confused picture we were confronted with here on this whole problem of the loan guarantee and direct loans, including that of the revolving funds. I think everyone understands the basic arrangement under which a revolving fund operates and what its purposes constitute. But this $300 million limitation that is part and parcel of the law today is associated with payments for expenses. Is that not correct?

Mr. GLEASON. Claims; yes, sir.

Mr. OSTERTAG. Payment of expenses, property acquisitions, other loan guarantee operations under the law. Of course, it further provides that the retained earnings of the direct loans to veterans and reserved revolving fund shall be available for transfer to said loan guarantee revolving fund in such amount as may be necessary to provide for the foregoing expenses.

In your budget, on the program of activities, if I read your estimate right, it amounts to $257 million for fiscal 1965. Is that correct?

Mr. BRICKFIELD. That is right.

Mr. OSTERTAG. $257 million is considerably less than the $300 million limitation.

ESTIMATE OF EXPENSES VERSUS LOAN GUARANTEE LIMITATION

Mr. GLEASON. I have to point out to you that this is sticking to the Fanny Mae price right now of par. We cannot sell below Fanny Mae. If we could sell at 101 or less right now, we could sell maybe $350 million or $400 million of these vendee accounts. As it is, we think that, as we mention out here, we can sell $265 million in 1965.

That, together with what we already have in the revolving fund, we can pay the claims that will be presented to us in fiscal year 1965. We will be able to pay them. But we have a limitation of $300 million. Our estimates are that this will be more than $300 million, so that by law when we get to $300 million, we cannot pay out any more even though we have the money.

Mr. MONK. Mr. Ostertag, to go back to the figures you are referring to in the budget, you will notice in 1964 we estimate $292 million, 1965 is $257 million. This is expense.

The $292 million today we are saying looks to us like this is going to be closer to $360 million for 1964. We have a limitation by law that we can only spend $300 million. So that unless we get a limitation increase, we will not be able to pay our claims.

For 1965, although the budget shows $257 million, if the trend continues, then our expense for 1965 will far exceed the $257 million. So that we will need certainly more than $257 million in limitation.

If you were to write into our law for 1965 a limitation of $257 million, you would meet what the budget says, but we are saying today that it looks like we will far exceed the $257 million.

Mr. OSTERTAG. Is that associated with the market or the number of foreclosures?

Mr. MONK. It is associated directly with the number of foreclosures and number of claims paid because that is by far the largest amount of our expenses.

Mr. OSTERTAG. But the market is associated with the foreclosures; is it not?

Mr. GLEASON. No, sir; this is on sale of vendee accounts.

Mr. OSTERTAG. I am talking about disposal of the properties you acquire by foreclosure.

Mr. MONK. That is associated with the market. That is where we get the money to pay our bills.

Mr. OSTERTAG. The picture is favorable; is it not?

Mr. DRIVER. Yes, sir; but when we sell a house, we take back the mortgage. We only get a portion of the money at that point to pay claims with.

Mr. THOMAS. Gentlemen, this all adds up to one big glaring fact, which is that we had better avoid so many foreclosures.

The record shows that World War II GI's—how many of them have exhausted their GI loans? About 40 percent of them only have exhausted their GI loans. What is the percentage of the Korean veterans?

Mr. DERVAN. 20 percent.

Mr. THOMAS. Only 20 percent. Let us not let the program get sour now by taking on too many bad risks. We have to be more careful. You have 74 people here in the District of Columbia, but actually your work is done in the field. I do not know what your 74 people are doing here. But the time to act is before we get into trouble and not after we get into trouble. You have these unfortunate economic conditions in about 12 States. Nobody can be certain about economic conditions. You have to use some better judgement, to say the least, than you have been using in the past.

DEPARTMENT OF MEDICINE AND SURGERY

Gentlemen, let us go to volume No. 2 and take up medicine. This is the first time we have had the privilege and pleasure of having Dr. McNinch here, the Chief Medical Director, to talk to us. Do you have a general statement, Doctor?

GENERAL STATEMENT

Dr. MCNINCH. Mr. Chairman and gentlemen, thank you for the opportunity to discuss the major changes in Veterans' Administration medical programs contemplated by the 1965 fiscal year budget estimate you now are considering. I shall confine my remarks to items which I believe will be of special interest to this committee, since the Administrator already has summarized the needs for increased medical program appropriations.

QUALITY OF VA MEDICAL CARE

In accepting my present position I have also accepted the program objective which is contained in the Veterans' Administration congressional submission on page 18–3 and which has been included in previous submissions; namely, "The quality of medical care provided by the Veterans' Administration shall be maintained at a level comparable with the best civilian institutions treating similar types of illnesses." Since I have been with the Veterans' Administration I have received a number of letters from and become aware of a number of statements by deans of medical schools affiliated with the Veterans' Administration medical program and members of their faculties, indicating that in their opinion the quality of Veterans' Administration medical care program in recent years has not kept pace with the quality of care provided by the best civilian institutions.

Mr. THOMAS. That is a rather disturbing statement. You have had eminent predecessors. The last was a dean of one of the fine medical colleges in the United States. We were led to believe that perhaps no better medicine than that of the VA was to be had in any hospital. It was good for the simple reason that the vast majority of your big new hospitals are adjacent to these medical colleges and research institutions, that perhaps the brains in those VA hospitals were furnished not by VA but by the colleges and universities themselves.

When did we get this very adverse report?

Dr. MCNINCH. I can only repeat that since I have been with the Veterans' Administration I have received a number of letters and have heard a number of statements.

Mr. THOMAS. Do you have one you could read in the record—a typical one? Did your predecessor take his files? We would like to see some of the letters from those same colleges. I note you go up in your budget estimate this year for medical care about $24,170,000 and in the last 5 years for inpatient care you have gone up about 40 percent. In all that time you have been tied down to a limitation of 125,000 beds.

On top of that, you have come here for an increase of $24,170,000. You explain that.

Dr. MCNINCH. Mr. Chairman, if I may go on, I think what I have to say has some bearing on what I have just said.

Mr. THOMAS. I beg your pardon for interrupting. We are just pointing out what your problem is.

Dr. MCNINCH. At the present time I do not know whether these allegations are indeed true, and I accept the 1965 budget request prepared by my predecessor and submitted by the President to be conservative but adequate and believe that this budget, as submitted, should make possible some progress in improving the quality of the medical program. However, although I do not know at this time whether these allegations are true or not, I believe that I have a deep obligation to satisfy myself on this point during the coming months.

I am very much aware that the cost of medical care throughout the Nation has risen steadily since 1946 and all evidence points to a continuation of this rise. Major factors in the increasing costs are

the increased pay of medical service personnel, the increased number of such personnel necessary to provide essential services to patients in accordance with modern medical concepts, increased costs of supplies and materials, and increased complexity of diagnostic and therapeutic services and equipment. There is no reason to believe that Federal medical care programs are exempt from these influences.

TOTAL MEDICAL BUDGET

The President has requested an appropriation of $1,167,837,000 in the 1965 fiscal year for financing all activities of the Department of Medicine and Surgery, and certain administrative expenses of the Office of the Assistant Administrator for Construction. This sum is the aggregate amount requested under three separate appropriations, all directly related to medical treatment and care of America's veterans.

Of the total, 95.6 percent or $1,115,935,000 is requested under the "Medical care" appropriation head for maintenance and operation of Veterans' Administration hospitals, domiciliaries, and outpatient clinics; care of eligible beneficiaries in contract hospital facilities; and aid to State or territorial homes for support of veterans eligible for care by the Veterans' Administration. About 3.1 percent of the total, or $36,987,000, is requested for programs of medical research and prosthetic testing and development. For these activities, the appropriation again is requested under the no year funding arrangement. In addition, the construction of hospital and domiciliary facilities appropriation estimate for fiscal year 1965 includes $6,414,000 for construction of research facilities, not otherwise provided in complete hospital replacement or modernization projects.

Less than 1.3 percent of the total, or $14,915,000 is requested under the "Medical administration and miscellaneous operating expenses" appropriation for the administration by central office and area medical offices of all medical programs of the Veterans' Administration; a program of education and training to support the medical care programs; and technical staff and services required for the agency's construction program.

For all medical programs, this budget estimate reflects an increase of $27,530,000 over the anticipated availability for the current year. Of the $27,530,000 increase, $17,992,000 or about 65 percent, will be required for continuance of operations at fiscal year 1964 levels—that is, to pay the higher salary rates resulting from Public Law 87–793 and within-grade salary step increases. The 35 percent remainder, or $9,538,000 of the increase, relates to planned workload and program changes including activation of newly constructed medical facilities.

The average daily beneficiary load to be furnished care and treatment on an inpatient basis in fiscal year 1965 is estimated at 137,622, comprised of 110,318 in Veterans' Administration hospitals, 15,448 in Veterans' Administration domiciliaries, 2,756 in contract hospitals, and 9,100 in State soldiers' homes.

The trend of improved patient turnover continues. Increased numbers of patients are being treated in our hospitals each year, despite the continued growth in numbers of aging veterans who require treatment for long-term illnesses and disabilities.

QUALITY OF MEDICAL CARE

Mr. THOMAS. Did any of these university professors criticize the Veterans' Administration for running patients out of the hospital too soon or not letting them stay there long enough?

Dr. MCNINCH. I do not recall that, sir.

Mr. THOMAS. They said they were just getting second quality medicine?

Dr. MCNINCH. They did not say that, either. They said care in Veterans' Administration had not kept pace with that provided in the best of the institutions.

Mr. THOMAS. What does that mean; second quality, or third quality, or what? If it has not kept pace with the best, where does that put it, second best or third best?

Dr. MCNINCH. I do not think that the quality of medical care can be answered in a simple statement.

Mr. THOMAS. You made one. I do not know why you cannot answer it the same way. You said it was criticized, that it had not kept pace with the best. If it is not the best, then it is second best.

Dr. MCNINCH. The Federal budget is $97 billion. That is a simple statement, but a discussion of it takes much longer.

Mr. THOMAS. Are you an expert on that, too?

Dr. MCNINCH. No, sir.

Mr. THOMAS. Excuse me. Go ahead.

Dr. MCNINCH. Do you wish me to read the rest of my statement, sir, or discuss the quality of medical care?

Mr. THOMAS. Go ahead, Doctor. It is your pleasure.

WORKLOAD

Dr. MCNINCH. We expect to treat about 730,000 patients in Veterans' Administration hospitals in fiscal year 1965 which is an increase of 10,000 more patients than we expect to treat in fiscal year 1964.

Outpatient workloads planned for fiscal year 1965 consist of about 6,012,000 patient visits for medical purposes, 41,000 denal examinations, and 50,000 dental treatment cases. Five additional psychiatric day-care centers are scheduled for activation in the fiscal year 1965. These facilities will be located at Cleveland, Ohio; Dearborn, Mich.; Little Rock, Ark.; Houston, Tex.; and Albuquerque, N. Mex.

Upon completion of construction at the Wood, Wis., San Francisco, Calif, and Washington, D.C., hospitals in fiscal year 1965, the outpatient clinics in those cities will be consolidated at the hospitals. This will afford veterans in those localities with the broader range of medical services found in a hospital setting.

RESEARCH

Modest growth will be possible in fiscal year 1965 to our programs of medical and prosthetic research and to the education and training opportunities offered Veterans' Administration treatment staff. These activities are inextricably linked to our efforts to recruit and retain the type of physicians and other health service personnel that will

assure our patients receive the best possible care and treatment. Without opportunity for continued education and research activity, these personnel will not stay with Veterans' Administration. The results of their research work are invaluable to the treatment of veterans and are shared throughout the medical world in order that all sick and disabled may benefit.

EMPLOYMENT

More than 154,000 full-time or part-time employees will be engaged in the conduct of agency medical programs at over 200 field installations in the 1965 fiscal year. The combined administrative staff that will be on duty in the central office and area medical offices will average 882 employees.

It must be my objective to provide resources necessary for the best possible quality of care to the American veteran. You can also be assured that I intend to carefully analyze the administration of our large and complex program in an effort to achieve optimum efficiency and economy.

I appreciate this opportunity of appearing before you and I, together with my staff, will endeavor to answer any questions which you may have.

Thank you.

If I may return one moment to the question of the quality of medical care, I refer back to the statement that I think I have a deep obligation to satisfy this myself on that point.

Mr. THOMAS. How long have you been on board, Doctor?

Dr. MCNINCH. About 8 months, sir.

Mr. THOMAS. How long will it take you to make up your mind wether you are running a first-rate hospital or not?

Dr. MCNINCH. Perhaps 8 or 9 months more.

INCREASED COSTS OF MEDICAL CARE IN 1965

Mr. THOMAS. Well, you have one question here that sort of puzzles me. You have an increase for inpatient care of about $24 million, in round figures, and you will take 10,000 more patients. Of course, that is an estimate, but assuming it is true, what part of your increase is due to salary increases?

Mr. GLEASON. $13 million.

Mr. THOMAS. What is the figure for inpatient care?

Mr. GLEASON. $13 million is attributable to the increased salary cost; $6 million is attributable to adequately maintaining existing facilities; $3 million for additional workload requirements——

Mr. THOMAS. I am talking about inpatient care. Is $13 million your salary cost?

Mr. GLEASON. Yes, about $13 million for salary increases.

Mr. THOMAS. That is about one-half of your $24 million-plus. How much does it cost per patient per year? You said you will take in 10,000 more patients at an increase of $24-million-plus. One-half of the $24 million is pay increase. What does it cost you outside of that?

Dr. MCNINCH. It will cost more to treat the patients we will treat at the present level as well as the 10,000 additional patients.

Mr. THOMAS. Why?

Dr. McNinch. The cost of medical care is rising, as I have pointed out, due to increased pay and the increased number of personnel to provide essential services to patients.

Mr. Thomas. You have an increased personnel cost here of about $12 million in inpatient care. Does that take care of all your wage board employees too?

Mr. Gleason. No, sir.

Mr. Thomas. That is in addition?

Mr. Gleason. Yes, sir.

Mr. Thomas. What is this $12 million for inpatient care for then? That is increase in pay. Who gets that?

Mr. Monk. Doctors, nurses, dentists.

SALARY COSTS OF WAGE BOARD EMPLOYEES

Mr. Thomas. What was the increase for the wage board employees last year?

Mr. Monk. $11 million in the supplemental.

Mr. Gleason. $10,500,000.

Mr. Thomas. Your whole $24 million, practically, is for wage increases?

Mr. Monk. The $11 million was a supplemental.

Mr. Thomas. This $24 million does not include the wage board employees?

Mr. Gleason. That is correct.

Mr. Thomas. There are no wage board employees in here?

Mr. Gleason. No.

Mr. Thomas. Your wage board costs how much more?

Mr. Monk. $11 million more in 1964.

Mr. Ostertag. Why is not the wage board increase included?

Mr. Gleason. Because under the law we are not permitted to do that until next year.

Mr. Ostertag. The wage board rates are in now?

Mr. Gleason. Yes. That is why we are in for the supplemental.

Mr. Ostertag. That is to cover 1964?

Mr. Boland. They do not know what the wage board cost will be for 1965.

Mr. Gleason. No, because the surveys will be going on now and begin in fiscal year 1965.

Mr. Wise. Mr. Chairman, before the 1965 fiscal year is out we will have to request a supplemental appropriation for all wage board increases between last June and a year from next July, a 2-year period. That will probably run $10 million additional.

Mr. Ostertag. Have there been wage board adjustments since last year that are not included in this budget?

Mr. Wise. Only since last July 1.

Mr. Ostertag. Whatever the wage is today that which is real and applicable is included in here?

Mr. Wise. Yes; up to last June 30.

Mr. Ostertag. So you mean any subsequent wage board increases have not been provided for because you do not know what they will be?

Mr. Wise. That is right, and we have some 18 months to go before we know that.

Mr. THOMAS. And you are sure the first 6 months of 1965 were not included in that supplemental?

Mr. MONK. Positive.

Mr. THOMAS. Does this $24 million, then, contemplate any funds for wage board employees as far as inpatient care in concerned?

Mr. GLEASON. No, sir.

Mr. THOMAS. This item of $24 million, then, does not reflect the true inpatient care figure for 1965, does it? It is short from $8 million to $10 million on pay?

Mr. WISE. That is right.

Mr. THOMAS. So your increase for 1965 so far as inpatient care is concerned is purely salaries?

Mr. MONK. No, sir.

REASONS FOR INCREASES IN MEDICAL CARE COSTS

Dr. ENGLE. The chart on page 21–4 gives the increases in the medical care appropriations and it breaks out the increase related to salary increases.

Mr. THOMAS. Turn to page 21–4, gentlemen. This is a graphic chart showing the increases. Go ahead.

Dr. ENGLE. This is for the total medical care appropriation, Mr. Chairman, and it shows there will be an increase of $17,105,000 for salary increases.

Mr. THOMAS. And for changes in number and composition of beneficiary load, $2,895,000. What do you mean by that?

Mr. WISE. That includes requirements for the Washington, D.C., general medical replacement hospital, the restoration center at East Orange, N.J., and some increase in the Cleveland, Ohio, hospital.

NUMBER OF VA HOSPITAL BEDS

Mr. THOMAS. You still have a limitation of 125,000 beds. If you bring in operation 1,500 or 2,000 new beds, what becomes of the old beds?

Mr. WISE. There are less than 122,000 of these beds in existence today. About 3,000 of the 125,000 capacity are as yet unconstructed.

Mr. THOMAS. Do you mean by that you will add 1,500 or 2,000 beds in 1965 that you did not have in 1964?

Mr. WISE. Not in 1965, sir.

Mr. THOMAS. You are talking about the two hospitals you will activate?

Mr. WISE. We will add roughly 400 beds at the Washington, D.C., replacement hospital and about 40 more beds at Cleveland plus this 200-bed installation at the East Orange Restoration Center.

Mr. THOMAS. How many additional beds will that give you; 1965 against 1964?

Mr. WISE. That will give us a net G.M. & S. increase of——

Mr. THOMAS. You have already told us the net increase. We want to know haw many beds.

Mr. WISE. We will have a total of 120,249 beds in 1965 in all hospitals.

Mr. THOMAS. And in 1964?

Mr. WISE. 120,371. That is a decrease of 122, mainly because of construction at N.P. hospitals. At the same time we have these G.M. & S. beds coming in.

Mr. THOMAS. You have me in a whirl. First you had more and now you have 122 less. Make up your mind.

REQUEST FOR LETTERS ON QUALITY OF MEDICAL CARE

Doctor, after lunch will you be good enough to bring to the committee some of those letters from the medical colleges about the second-rate medicine that you have been dispensing for several years, and in addition to those letters you bring from the colleges, bring the amount of money they are getting in terms of research contracts and the amount of money they requested.

There are three things we want: The letters, and then we want the amount of money they were actually given, if any, for research contracts, and the amount of money they requested for research contracts.

Dr. MCNINCH. We do not give any research contracts to medical schools, sir.

Mr. OSTERTAG. They are affiliated with you just the same.

Mr. THOMAS. They get the money in the long run.

Mr. OSTERTAG. That is what the chairman wants; the affiliation.

Mr. MONK. We can give the amount the staff asked where they were affiliated for research and how much they got.

Mr. THOMAS. They have the professors conducting the research. You are right technically, Doctor.

Mr. OSTERTAG. Mr. Chairman, if I may ask along the line of the question you raised about the total number of beds, if I understand correctly, you will have 120,371 beds in veterans' hospitals?

Mr. WISE. Yes, sir.

Mr. OSTERTAG. This is, of course, aside from domiciliary and all other phases?

Mr. GLEASON. Yes, sir.

AVERAGE DAILY PATIENT LOAD

Mr. OSTERTAG. And your average patient load daily will be 110,318, so there will be a difference between your total bed capacity and your daily load of about 10,000?

Mr. WISE. Yes, sir. Our general medical hospitals will run about 91 percent occupancy, which is high. In psychiatric hospitals it is 95 to 96 percent occupancy.

Mr. OSTERTAG. That is your anticipated load?

Mr. WISE. Yes. Of course this is very seasonal. For example, while the annual average is 110,318, in the month of January we were up to 112,000.

NUMBER OF PATIENTS TREATED

Mr. OSTERTAG. And in connection with that, you anticipate treating or caring for 730,000 patients, which is an increase of 10,000 over the previous year?

Mr. WISE. Yes, sir.

Mr. OSTERTAG. On what basis do you arrive at your anticipated number of veterans that will require care? On what basis do you arrive at the increase of 10,000 you anticipate?

Dr. ENGLE. This is on the basis of our experience in recent years. I think we can start out by saying there has been a very steady increase in the number of veterans applying for hospitalization. There were 962,000 in 1963. In 1964, on the basis of our experience last year, it is expected to be 980,000. And next year we anticipate 1 million veterans will be applying for hospitalization. Despite the fact our patient load has remained relatively stable, we have been able to treat and admit more. In 1963 we admitted 22,000 more than the previous year and this year we expect to admit 10,000 more, and we think this trend will continue.

APPLICATIONS FOR HOSPITALIZATION

Mr. OSTERTAG. How many applied for hospitalization?

Dr. ENGLE. We expect 980,000 veterans to apply for hospitalization.

Mr. OSTERTAG. Of which you will care for 730,000?

Dr. ENGLE. We will admit 66 percent of them and end up treating 720,000.

Mr. OSTERTAG. In other words, there will be about 250,000 veterans that will apply for hospitalization that will not receive it?

Dr. ENGLE. That will not be considered medically in need.

Mr. OSTERTAG. Is that 250,000 figure made up of veterans who do not qualify for this care?

Dr. ENGLE. Do not qualify medically. In an analogous situation, if you go to a private physician for treatment he may not think hospitalization is necessary. These are veterans that have some complaint but are not ill enough to require hospital attention.

VETERAN'S ABILITY TO PAY FOR HOSPITALIZATION

Mr. GLEASON. Or cannot meet the financial test.

Mr. OSTERTAG. The means test?

Mr. GLEASON. Yes.

Mr. JONAS. Do you have any figures of the percentage of those that cannot qualify because of the financial test?

Mr. GLEASON. Yes, I think Mr. Rosen has that.

Mr. ROSEN. 6.7 percent during the first year of the program.

Mr. JONAS. Who were disqualified by reason of not signing the affidavit?

Mr. ROSEN. 6.7 percent or about 14,000 persons were found to have an ability to pay for hospital care in excess of the estimated cost. The organic law still says if they affirm their inability to pay we must admit them, but these men were counseled and 20 percent withdrew.

Dr. ENGLE. I have the figure on those who were counseled and withdrew and there were 3,000 during the first year.

Mr. BOLAND. You do not go beyond their statement?

Mr. GLEASON. Yes, we do.

Mr. MONK. Most of those not admitted were declared to be not medically in need.

Mr. THOMAS. The law says you cannot go behind their statements.

Mr. GLEASON. We have to admit them, but I still go behind it. If a man makes a financial statement——

Mr. THOMAS. He is not required to give a financial statement?

Mr. GLEASON. Yes; we require it.

Mr. THOMAS. You do not have that authority.

Mr. GLEASON. I still think the law gives the Administrator that authority.

Mr. THOMAS. The law is clear if he signs that statement you cannot go behind it and that is the end of it, period. It was put in for that purpose. We wanted to give them all free medicine if they asked for it.

Mr. GLEASON. We cannot keep them from receiving medical care but we do go behind it and we do recover from those who make a false affidavit.

Mr. FABLE. Mr. Chairman, there are circuit courts of appeal that are in agreement with you and circuit courts of appeal that are in agreement with the Administrator. The chairman will recall——

Mr. THOMAS. I remember you had some decisions on it and you had one favorable decision.

Mr. FABLE. It went both ways. You will recall you asked about one case, the *Borth* case, where we lost in the 10th circuit. After that we had another case, the *Alperstein* case, where we won in the fifth circuit. Since then we lost one in a district court in the seventh circuit.

There have been few cases where the facts were shocking. To illustrate that there are about 3,729 cases which were reviewed by the General Counsel under the program. Of those we referred 211 to the Department of Justice. Four of those were litigated and 68 were settled or compromised.

Mr. THOMAS. You mean for expenses?

Mr. FABLE. Yes, sir; usually with no penalty but frequently settlement for more than what the per diem would be.

Mr. THOMAS. Did any go to the jury or did you have any contested cases?

Mr. FABLE. Four were litigated and in one of these, which happened to be in a district court in the seventh circuit, we got an adverse decision.

Mr. THOMAS. By the jury or the court?

Mr. FABLE. By the court as a matter of law.

Mr. THOMAS. Did it go to the jury?

Mr. FABLE. I think it was decided as a matter of law without going to the jury.

Mr. THOMAS. What was the outcome of the others?

Mr. FABLE. I do not have the figures on those three.

Mr. THOMAS. I think the intent of Congress was clear. First it was decided to put a limitation on it and they came back with an amendment and it was clearly understood what it was. The intent was to give all these veterans free medical care. The veterans' organizations operate on that theory and I thought it was pretty clear. Eighty or eighty-five percent of your patients are not service-connected.

Mr. GLEASON. We believe in giving medical care to those that are in need, not to those that can pay for it.

Mr. THOMAS. I think you are right about that. I agree with that point of view, but I am talking about the status of the law.

RECOVERIES FOR COST OF HOSPITALIZATION

Mr. FABLE. In Arizona there was a case where a judgment was rendered for the Government in the amount of $22,208; and in Oregon a judgment was rendered for the Government in the amount of $12,710, in the *Mayberry* case. Both cases involved individuals who were in VA hospitals, and who made a statement of inability to pay, and under the law we had to accept them. They stayed in the hospital and died, and at the time they died it was apparent their estates were so great that by no stretch of the imagination could they have met the test of inability to pay. In one case the man left an estate worth nearly half a million dollars because of increase in land value.

Mr. THOMAS. Was the judgment ever satisfied?

Mr. FABLE. Yes. At least one has already been paid in cash.

RECOVERIES—TYPES OF CASES

Mr. OSTERTAG. It would be interesting to learn how many veterans receive hospitalization, and recoveries are made from those veterans; that is, the number of veterans from whom recoveries are made and the total amount annually.

Mr. FABLE. I can give you figures on that. We have recoveries in many different kinds of cases. We will have veterans taken to hospitals who have been injured in the course of their employment. They come under the workmen's compensation law, and there is a responsibility upon the employer or his insurer to pay us.

Another instance is: A veteran will be injured in an automobile accident, and he will have a cause of action against the person driving the car responsible for the accident; third-party cases. In cases like that, during fiscal year 1962 there were recoveries in the amount of $747,000.

Mr. THOMAS. Against the third party?

Mr. FABLE. Third-party and workmen's compensation cases.

Mr. OSTERTAG. Does that include recoveries against the veterans?

Mr. FABLE. No. Actions against veterans are extremely unusual situations, handled by the Department of Justice, because this is the type of case where the circuit courts of appeal are in complete disagreement.

Mr. JONAS. How do you collect in third-party cases?

Mr. FABLE. Congress passed a law, Public Law 87-693, which formalized the proceeding. We can take an assignment, and sue on that basis. For the first half of fiscal year 1964, the total of all recoveries has been $437,729.

Mr. OSTERTAG. Then it is not clear as to how many veterans you have brought an action against, and how much you have recovered. I am talking about the veteran individually.

Mr. FABLE. I have the figures for the number of cases, but not the dollar figure. Since the program commenced, 68 cases were settled or compromised; 4 were litigated; and 53 cases are still in the Department of Justice. They have returned, without action, 86 cases.

Mr. OSTERTAG. All these funds that result from recoveries revert to the Treasury?

Mr. FABLE. There are some cases where I believe recoveries would go into this appropriation—the in-patient care appropriation—but I am not in a position to give the split. Do you know, Mr. Monk?

Mr. MONK. In the supplemental, we said we got an additional $521,000 in reimbursements, and part of this would be in the reimbursement figure. But, where there was a judgment, we did not get that money.

Mr. THOMAS. If it is a voluntary settlement you get it?

Mr. MONK. Yes.

Mr. THOMAS. But not where it is a judgment?

Mr. MONK. That is right.

Mr. OSTERTAG. You collect from veterans who are willing to pay, do you not?

Mr. GLEASON. No. They should go to a private hospital.

Mr. OSTERTAG. In case of emergency?

Mr. GLEASON. If it is an automobile accident, we take care of them right away, veteran or nonveteran, it makes no difference. But the medical care we give them, either Blue Cross or Blue Shield, or a private insurance company that carries their hospitalization, pay us direct for the medical care we have given them. This is part of the recovery we make.

Mr. THOMAS. Gentleman, let us get lunch and come back at quarter to 1.

AFTERNOON SESSION

Mr. THOMAS. Gentlemen, will the committee please come to order.

LETTERS ON QUALITY OF MEDICAL CARE

Doctor, were you able to have sent over to you some of those letters during the luncheon hour? Did we give you enough time?

Dr. MCNINCH. May I talk off the record about the letters?

Mr. THOMAS. On or off, whatever way you like.

Dr. MCNINCH. Off the record.

(Discussion off the record.)

Mr. THOMAS. On the record.

That ought to be on the record.

Dr. MCNINCH. Personal letters expressing personal opinions. I do not feel they should be made a matter of public record.

Mr. THOMAS. They were written before you were Chief Medical Officer or after?

Dr. MCNINCH. They are not even addressed to me.

Mr. OSTERTAG. How could they be personal?

Dr. MCNINCH. Personal to someone else in the office. May I go off the record?

(Discussion off the record.)

Dr. MCNINCH. May I go on?

Mr. THOMAS. Sure.

Dr. MCNINCH. My second reason is that it seems to me unfair to introduce into the record opinions that are critical of the Veterans' Administration and the Budget——

Mr. THOMAS. You are the one who introduced them. We did not introduce them for you. You did it voluntarily.

Dr. MCNINCH. Without a search for other opinions which might be contrary. I felt I received this type of information and I felt it was

my duty, sir, to report this to the Administrator and to this committee and to point out I neither accepted this as being true or not true. I did feel that in view of these statements, I had an obligation to determine whether or not——

Mr. THOMAS. This is a very unsatisfactory way to handle it, Doctor. You raised it on your own free will. We did not raise it. You raised the question and we asked you to bring the letters where we could share the reading with you and let us come to our own conclusions as to the merits of the letters. If you do not want to, that is all right.

Mr. OSTERTAG. May I add, Mr. Chairman, something along the thought you have expressed.

Doctor, you have placed great emphasis and weight on this. As a matter of fact, you have seen fit to include it in your first and leading statement with regard to your responsibilities and the picture that you find. It would appear you share some of this concern by virtue of these communications you have received, and yet it is very unclear as to how much weight you have given to this.

Secondly, how authentic are they and what is the real basis for this?

Dr. MCNINCH. Mr. Ostertag, the quality of medical care, I think, obviously is a matter of opinion for experts in this field. It is an area in which opinions may differ. I am concerned when anyone criticizes the Medical Service of the Veterans' Administration since, obviously, I am responsible for it.

Mr. THOMAS. Anything further?

Mr. JONAS. No questions.

SUMMARY OF MEDICAL PROGRAMS

Mr. THOMAS. Gentlemen, let us take a look now at the front sheet here in volume II for the Medical Department.

Let us put pages 18–1, 18–2, 18–3, 18–4, and 18–5 in the record.

(The pages follow:)

DEPARTMENT OF MEDICINE AND SURGERY

Summary of appropriations

Appropriation title	Fiscal year 1963, actual	Fiscal year 1964, estimated	Fiscal year 1965, estimated	Increase (+) or decrease (−) 1965 over 1964
Medical administration and miscellaneous operating expenses appropriation or estimate	$13,981,950	$14,800,000	$14,915,000	+$115,000
Medical and prosthetic research appropriation or estimate	30,500,000	33,742,000	36,987,000	+3,245,000
(Medical research)	(29,500,000)	(32,572,000)	(35,712,000)	(+3,140,000)
(Prosthetic research)	(1,000,000)	(1,170,000)	(1,275,000)	(+105,000)
Medical care appropriation or estimate	1,048,172,300	1,091,765,000	1,115,935,000	+24,170,000
Department of Medicine and Surgery appropriations or estimates	1,092,654,250	1,140,307,000	1,167,837,000	+27,530,000

NOTE.—The above table reflects comparative year appropriation amounts for Veterans' Administration medical programs. Effective with the fiscal year 1963, financing for "Agency medical and prosthetic research activities" was consolidated under a "no year" appropriation head titled "Medical and Prosthetic Research." Appropriations titled "Medical Administration and Miscellaneous Operating Expenses" and "Medical Care" are annual (1 year) appropriations. This estimate contemplates no change in the fiscal year 1963 medical program appropriation structure for either of the fiscal years 1964 or 1965.

The fiscal year 1964 amount of $1,091,765,000 for the "Medical care" appropriation shown on the preceding page includes $10,579,000 estimated supplemental appropriation requirement to pay current year costs of presently unfunded Public Law 83–763 wage board increases approved during the period July 1, 1962 through June 30, 1964. Consistent with Bureau of the Budget policy, no amount is included in the fiscal year 1965 "Medical care" appropriation sum of $1,115,935,000 for the costs of wage rate increases that will accrue between July 1, 1963 and June 30, 1965. Supplemental appropriation requirements therefor will be transmitted separately later in the 1965 fiscal year.

Of the $27,530,000 increase requested for agency medical programs in fiscal year 1965, $17,992,000 or 65.4 percent will be required for continuance of operations at fiscal year 1964 level. The $17,992,000 will be required to pay the higher salary rates resulting from Public Law 87–793 and within-grade step increases. After considering the effect of the $4,084,000 decrease for the 1 less workday and calendar day occurring in fiscal year 1965, $9,538,000 or only 34.6 percent of the total increase relates to workload or other program changes including the planned activiation of new medical facilities. An analysis of the monetary changes required for fiscal year 1965 appears in the following table:

	Medical, administration, and miscellaneous operating expenses	Medical and prosthetic research	Medical care	Total
1 less workday and calendar day	−$43,000	−$105,000	−$3,936,000	−$4,084,000
Within-grade step increases	+42,000	+122,000	+5,344,000	+5,508,000
Public Law 87–793 salary rate increases	+296,000	+427,000	+11,761,000	+12,484,000
Workload and other program changes	−180,000	+2,801,000	+11,001,000	+13,622,000
Total	+115,000	+3,245,000	+24,170,000	+27,530,000

APPROPRIATION ESTIMATE, FISCAL YEAR 1965

The Veterans' Admiinstration is responsible for providing medical care and treatment to eligible veterans as authorized by law (title 38, United States Code). Medical program financial requirements for fiscal year 1965 are budgeted under three operating appropriations as follows:

1. "Medical administration and miscellaneous operating expenses" provides for the administration by central office and area medical offices of all medical programs of the Veterans' Administration; a program of education and training to support the medical care programs; and technical staff and services required for the agency construction program.

2. "Medical and prosthetic research" provides for a program of medical research and a program of prosthetic testing and development.

3. "Medical care" provides for maintenance and operation of Veterans' Administration hospitals, domiciliaries, restoration centers, and outpatient clinics; care of beneficiaries in contract hospital facilities not under jurisdiction of the Veterans' Administration; and aid to State or territorial homes for support of veterans eligible for care by the Veterans' Administration.

Program objectives

In accordance with the intent of the Congress as expressed by the enactment of medical benefit legislation for veterans, the following are the operating objectives upon which this budget is predicated:

1. Medical care shall be rendered to all eligible veterans who request and require such care, either in Veterans' Administration facilities or by contractual arrangements, when necessary.

2. The quality of medical care provided by the Veterans' Administration shall be maintained at a level comparable with the best civilian institutions treating similar types of illnesses.

3. Current and proposed operating standards shall be studied and reduction made of the unit cost of medical care wherever possible by amending or eliminating standards and practices in keeping with sound management principles.

Program problems

The rising costs of medical care, due primarily to advances in knowledge and improved and more complex treatment procedures, pose many serious problems.

Achievement of the objectives previously stated is made possible largely through the close relationship maintained with the medical schools with which many of our hospitals are affiliated, together with the active programs of research and education conducted by the agency. This combination has produced an atmosphere which, to be sustained demands that we keep abreast of the progress being made in the vast and complex field of medical care.

Failure to keep pace will jeopardize both the valuable affiliation ties with the medical schools, who are the forefront of the advance, and our ability to recruit and retain the necessary caliber of physician that will assure our patients receive the best possible care and treatment.

The amounts requested for our medical programs in fiscal year 1965 represent minimal levels needed to continue our relative position in the field of medical care. Within these amounts, we will continue to improve and expand the care provided our psychiatric patients, make modest progress in expanding such new treatment procedures as open-heart surgery and renal dialysis facilities in general hospitals and improve the maintenance and upkeep of all medical facilities.

These needs are developed in detail in the ensuing pages.

Program highlights

(*a*) *Patients admitted, treated, and discharged.*—During fiscal year 1963, there were 585,297 admissions and 586,452 discharges of patients in VA hospitals with a total of 712,937 patients treated during this period.

The number of patients treated was increased by 24,430 over the prior year by expanding the prebed care program (PBC) and the "completion of bed occupancy care" program (CBOC). These programs make beds available for more intensive treatment of hospital patients. The PBC program permits the patient who requires surgical or medical treatment of a nonemergent condition to go home after undergoing preadmission workup (blood tests, urine tests, X-rays, etc.), to wait there until the appropriate surgical or medical treatment can be determined from analysis of the PBC tests, and to return to the hospital on a scheduled date (within 14 days of the initial visit) for treatment of his condition. The CBOC program results in earlier release of the patient by providing necessary followup care on an outpatient basis.

More than twice as many patients were admitted through the PBC program during fiscal year 1963 (22,755) than in the previous year. The PBC program accounted for 3.9 percent of all VA hospital admissions, and surgical cases accounted for two out of three of the PBC admissions.

The CBOC program speeded the release of 225,459 patients, enabling them to return to their homes at an earlier date. While the exact number of bed days made available by this program for admission of other patients cannot be determined, even 1 or 2 days of hospitalization saved per patient has profound effect on the agency's bed availability.

An increase in patients discharged with a resultant improvement in turnover rate was realized despite the continued rise in the proportion of VA patients requiring treatment of long-term disabilities and illnesses associated with an aging veteran population. The average monthly turnover rate (percentage of ADPL discharged) for all types of patients in VA hospitals was 44.5 percent in fiscal year 1963 compared to 42.3 percent in fiscal year 1962, thus continuing the upward trend experienced in recent years.

The increase in turnover resulted in part from the PBC and CBOC programs, but improved staffing and the changing diagnostic composition of the patient load also contributed to this end. A decrease in the number of tuberculous patients in VA hospitals allowed the VA hospital system to accommodate more medical, surgical, and neurological patients in fiscal year 1963. The latter types of patients have relatively shorter lengths of stay than tuberculous patients.

The following table reflects the trends of increased service resulting from all these factors.

	Fiscal year 1961	Fiscal year 1962	Fiscal year 1963	Change, fiscal years 1963-1962	Change, fiscal years 1963-1962
					Percent
Patients admitted to VA hospitals	537,022	561,808	585,297	+23,489	+4.2
Patients treated in VA hospitals	664,400	688,507	712,937	+24,430	+3.5
Patients discharged from VA hospitals	540,068	563,417	586,452	+23,035	+4.1

(*b*) *Administrative research and development program.*—The mission of this program is to promote better patient care through a continuous program of administrative research necessary for sustained effective operation of hospitals, domiciliaries, and clinics.

Mr. THOMAS. These are the summary sheets and the first one shows "Medical administration and miscellaneous operating expenses," $13,981,050 in 1963 and then it goes up to $14.8 million for 1964; now it goes up $115,000 to $14,915,000 in 1965. Then we have "Medical and prosthetic research," which is combined apparently. This goes up $3,245,000 over last year. Last year it was a little better than $3 million over the preceding year.

"Medical research" is up exactly $3,140,000.

INCREASE IN MEDICAL CARE

Your big item here is "Medical care." We figured out that in the last 5 years it has gone up about 40 percent.

With a limitation of 125,000 beds in 5 years it has gone up 30 percent and every year, with the same number of beds.

For fiscal year 1963 it was $1,048,172,300 and then it jumped about another $50 million to $1,091,765,000 in 1964. This year it goes up $24,170,000, according to the $1,115,935,000 figure. The justification for that is that you are going to treat 10,000 more patients.

NUMBER OF PATIENTS TREATED

I believe your table under "Medical care" shows 10,000 more patients treated. The patients treated in Veterans' Administration hospitals goes up here as shown on page 18–5, 24,400. In the table under "Medical care," it shows 24,000 but you use the figure of 10,000.

Mr. MONK. Mr. Chairman, in the table on page 18–5, that change is for 1962 to 1963. We are talking about 10,000 from 1964 to 1965.

Mr. THOMAS. That is what I am talking about, as shown on page 18–3 and 18–5.

Mr. GLEASON. The change is 1963 over 1962.

Mr. THOMAS. The patients treated in hospitals, yes. That is not alone for that one fiscal year 1965?

Mr. GLEASON. We did not have 1964 and 1965 listed here.

Mr. THOMAS. From 1962 to 1963? The correct figure is 10,800 more patients?

Mr. GLEASON. Yes, sir.

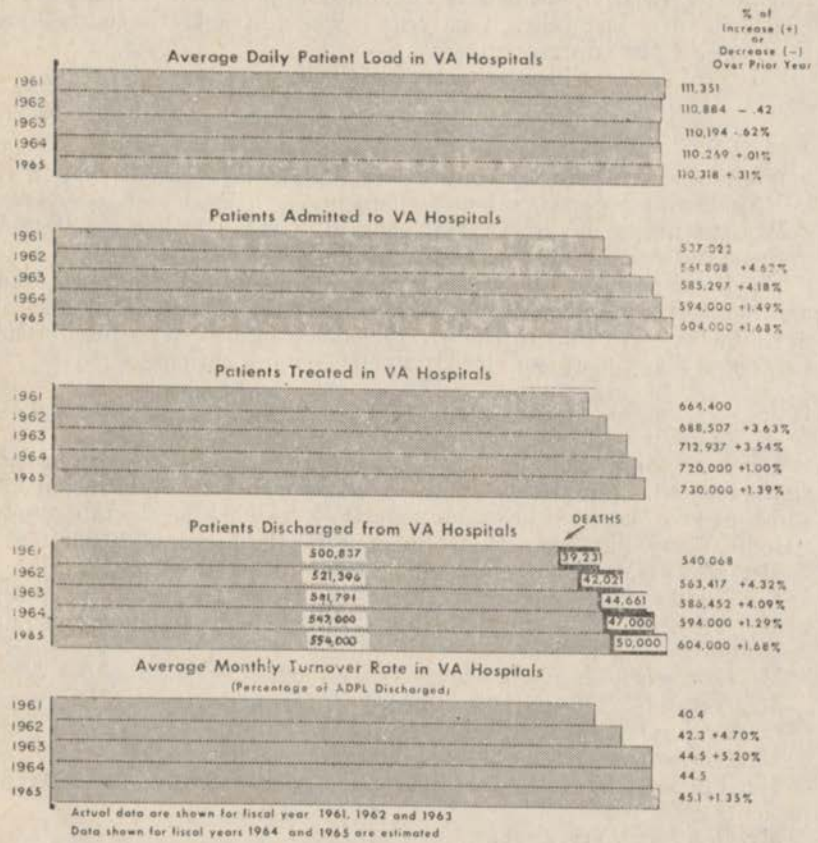
Mr. MONK. If you will go to page 21–26, Mr. Chairman, there is a good chart on that page showing patients treated. It is under the tab "Patient care," and if you will look at the third bar down, the middle group of bars there, you will see that.

Mr. THOMAS. Let us put that table in the record.

(The page follows:)

MEDICAL CARE

INCREASED NUMBERS OF VETERANS ADMITTED, TREATED, AND DISCHARGED MORE THAN COMPENSATE FOR DECREASED ADPL IN VA HOSPITALS



Mr. THOMAS. This can be printed but I do want to ad lib an important part of it.

You show from 1961 to 1964 patients treated in VA hospitals go from 664,400 to 730,000.

When did you put your new plant into effect?

Dr. ENGLE. Public Law 86–339; that was put into effect in 1960.

Mr. THOMAS. What is that public law?

Dr. ENGLE. This public law provides for pre- and post-hospital care for nonservice connected veterans.

Mr. THOMAS. Is that the basis for your increase in bed occupancy, your advance work done in clinics and so forth, looking toward admissions, preadmission work, as we call it? What do you call it?

Dr. ENGLE. It is called preadmission work and therapy to follow up after the hospitalization. We think it accounts in important measure for the increases in the number of patients treated.

Mr. THOMAS. In 1962, this jumped from the previous total of 664,400 to 688,507 and that is 3.63-percent increase.

In 1963 it goes from 712,937, which is a 3.54-percent increase to 720,000 in 1964, and that is a 1-percent increase.

In 1965 it goes to 730,000 and that is a 1.39-percent increase.

In actual numbers, the 10,000 is a guess, is it?

Mr. MONK. Yes, sir.

INCREASE IN PATIENTS TREATED IN 1954

Mr. THOMAS. What does the picture for the first 6 months of fiscal year 1964 look like?

Mr. MONK. We are up about 8,000 in the first 6 months of 1964.

Mr. THOMAS. Eight thousand?

Mr. MONK. Yes, sir; in the first 6 months of 1964. We are not in 1965 yet.

Mr. THOMAS. You are only supposed to go to 7,000 in 12 months. Are you exceeding your guess?

Mr. MONK. We will exceed the guess.

Mr. THOMAS. By what?

Mr. WISE. Probably 12,000 a year.

Mr. THOMAS. At the end of the year, it will be 12,000 rather than 7,000?

Mr. WISE. Yes, sir.

Mr. THOMAS. That is good, is it?

Mr. OSTERTAG. Will the chairman yield there?

Mr. THOMAS. Yes.

RELATION OF PATIENTS TREATED TO ADMISSIONS

Mr. OSTERTAG. I notice you have two charts, one dealing with patients admitted and one with patients treated. There is an average of about 10,000 patients admitted, not treated, and what is the answer to that?

Mr. MONK. You have patients in the hospital that are carried over, that are not in the admission figures. Your patients treated should exceed the patients admitted and they do because you have patients

who remain in the hospital from one year to the next. They are not counted as admissions but they are counted as treated.

Mr. OSTERTAG. So the overall picture is about 10,000 carried over?

Dr. MCNINCH. It would be about 110,000 carried over. The number in the hospitals at the beginning day of the year.

Mr. OSTERTAG. I did not mean carried over as of the beginning of the year, but I mean more or less permanently carried as patients?

Dr. MCNINCH. Something less than 10,000, perhaps 8,000.

INCREASED COSTS OF MEDICAL CARE

Mr. THOMAS. What was the increase of your 1964 appropriation over 1963? Can you give it to us on the basis of more patients treated? You used the figure of 10,000 but now you estimate 8,000. What was the increase in dollars in the appropriation of 1964 over 1963?

Mr. GLEASON. $43 million.

Mr. THOMAS. Did you have a supplemental?

Mr. SHYTLE. Yes, sir.

Mr. THOMAS. You had a supplemental?

Mr. WISE. That would include the $10.4 million.

Mr. THOMAS. $43 million, including the supplemental. Did you have any pay act in 1964?

Mr. WISE. Yes, sir.

Mr. THOMAS. What part of the $43 million was pay act?

Mr. WISE. $22 million.

Mr. THOMAS. You are going to increase again this year the number of patients treated by 10,000. How much increase are you seeking for that?

Mr. WISE. For all purposes, $24,170,000.

Mr. THOMAS. Is that the total increase?

Mr. WISE. Yes, it is $2,895,000 which relates to these workload changes.

There are many items in there. For example, the activation of these new facilities including the expense of initial equipment; things of that nature. It is quite hard to put a price tag on individual patients treated. Such costs are within that portion of the overall increase.

As the doctor mentioned this morning, only 65 percent of the total increase applies to the pay raise or within-grade Ramspeck promotions which I am unable, in my own mind, to relate to patients treated. It sure costs, however.

Mr. THOMAS. That is a good honest statement.

PAY ACT COSTS

At least 50 percent of your increase for this year is pay act costs and I think it is a fair statement to say that in 1964, it will be 50 percent of that. Your increase in pay for 1964 was what, 5 percent?

Mr. WISE. About 5.9 percent.

Mr. THOMAS. Percentagewise of your payroll?

Mr. WISE. Nine percent.

Mr. THOMAS. What is it this year?

Mr. WISE. About 2.9 percent.

Mr. THOMAS. So, you had a greater increase percentagewise in pay for 1964 than in 1965?

Mr. WISE. Yes, sir.

Mr. THOMAS. Your other expenses are going up a little bit higher.

Mr. WISE. We could not do much for our doctors' pay on the second phase.

Mr. THOMAS. Let us look a little bit more into the item here and then we will have questions.

MEDICAL ADMINISTRATION AND MISCELLANEOUS OPERATING EXPENSES

Object classification

[In thousands of dollars]

		1963 actual	1964 estimate	1965 estimate
11	Personnel compensation:			
	Permanent positions	9,633	10,523	10,854
	Positions other than permanent	185	242	242

Total appropriation or estimate	13,981,950	14,800,000	−43,000	+338,000	−180,000	14,915,000	+115,000

Mr. THOMAS. This table has the cost by activity and payroll costs as well as everything else. It shows you had 855 employees in 1963, 882 in 1964, and it remains the same for 1965. Then you have a plus two out here and I do not know how you get it.

Mr. GLEASON. That is for construction, sir.

Mr. THOMAS. Under "Medical administration, construction," you have 162 for 1963 and 165 for fiscal year 1964.

What is "Education and training"?

Mr. WISE. There is no employment in that program and the increase is $40,000 for 1965.

USE OF MEDICAL CONSULTANTS

Mr. THOMAS. Where do all of these consultants come from?

Mr. WISE. They are paid under the "Medical care" appropriation and by the hospitals that use them.

Mr. THOMAS. Where do they come from? Are these the gentlemen who are criticizing the Veterans' Administration medicine? Do you have that many of these professors? Is that where they come from?

Dr. MCNINCH. These consultants are members of the Special Medical Advisory Group.

Mr. THOMAS. Where do you get them? That is the question.

Dr. MCNINCH. I would have to get for the record what particular universities they were from.

Mr. THOMAS. Doctor, where are the consultants from? Where do you draw them from?

Mr. WISE. We utilize consultants in all operations, and the ones in this particular program are members of the special medical advisory group who advise the Administrator and the Chief Medical Director of the Veterans' Administration.

The predominant numbers are consultants to the area medical offices.

Mr. THOMAS. If you have 1,049 here I am afraid to look at the number when you get to patient care. Where do they come from?

Mr. WISE. There are only eight consultants here.

Mr. THOMAS. I am sorry. What about your consultants in inpatient care?

Mr. WISE. 1,097 consultants for this year. That is shown on page 21-22, the first line.

Mr. THOMAS. At as cost of what? Where do you draw these gentlemen from?

Mr. WISE. By and large, these are the consultant staffs from the medical schools, or from the community at locations where we are not affiliated with the medical schools.

Mr. THOMAS. What number are from medical schools where your hospitals are more or less adjacent to the medical school or college?

HOSPITALS AFFILIATED WITH MEDICAL SCHOOLS

Dr. ENGLE. About one-half of the hospitals, or 86, are affiliated with medical schools. Most of them are close to Veterans' Administration hospitals and some of them some miles away.

NUMBER OF INDIVIDUAL CONSULTANTS

Mr. THOMAS. Would it be safe to assume that 80 or 85 percent of your consultants are on the teaching staff of a medical college?

Dr. ENGLE. Certainly a high percentage—maybe 75 percent would be closer to it. This total of 1,000 is on full-time equivalent but, actually, about 10,000 different individuals are involved. There are about 6,000 consultants, with 4,000 participating in the program on an attending basis.

This would be in the neighborhood of 10,000 different physicians who participate in the program.

Mr. THOMAS. What is this figure of 1,000?

Dr. ENGLE. This is full-time equivalent, sir.

Mr. THOMAS. Full time?

Dr. ENGLE. Equivalent.

Mr. THOMAS. What is the accurate figure on your consultants, even if they are not full time?

Dr. ENGLE. Ten thousand different individuals; yes, sir.

COST OF MEDICAL CONSULTANTS

Mr. THOMAS. What is the fee of your consultants?

Dr. ENGLE. The fees are $50 for consultants and $25 for attendings. This has been exactly the same since 1946.

Mr. THOMAS. You have 10,000 individuals?

Dr. ENGLE. Yes, sir.

Mr. THOMAS. Of course, you do not know how many visits during the year each one of the 10,000 may make?

Dr. ENGLE. No, sir.

Mr. WISE. It will vary.

Mr. THOMAS. What is your total outlay for consultants?

Mr. GLEASON. $10,692,000.

Mr. THOMAS. Is that based upon 1,000 consultants?

Mr. WISE. This would be about 240,000 visits; roughly, about a quarter of a million visits each year.

Mr. THOMAS. Your $10,692,000 is for your consultants, as shown on this page, but you say you have more than shown on page 21–11?

Mr. MONK. This is full-time equivalent. If a man works 1 day, that is counted as one-fifth of a week's work, or $\frac{1}{220}$ of a year.

You add up all of the visits, and convert them to what would be full-time equivalent.

Mr. OSTERTAG. In other words, your 10,000 amounts to 1,100 full time?

Mr. GLEASON. That is about right.

Mr. MONK. To put it another way, on an average they work about $\frac{1}{10}$ time for us.

Mr. THOMAS. That is a lot of consultants, and I think it is well to have them, since, for one thing, they bring in new ideas. If you have that many consultants, you ought not to have too bad medicine in the Veterans' Administration. You have a lot of new ideas, and fresh blood from every section of the country. I do not guess a man being a consultant prevents him from criticizing, does it?

Dr. McNinch. I would not think so, if he felt the criticism was justified.

Mr. Jonas. May I ask a question there?

Mr. Thomas. Sure.

REASONS FOR USING CONSULTANTS

Mr. Jonas. What is the usual reason for bringing in a consultant—to get a second opinion, or an outside opinion? Does a doctor in X hospital examine a patient with a serious disorder, and feel the need of a second outside opinion, beyond the capacity of the staff? What is the usual reason for this?

Dr. McNinch. Our hospitals are manned by residents who are young doctors in training, and members of the full-time staff. Consultants' participation involves this program of training, and in the treatment of patients.

The activities of the different consultants vary a great deal. Some consultants actually performed surgery when they are in a specialty which is not present in our hospital. The patient may need a neurosurgeon at the hospital and, if it has no neurosurgeon, in this case the consultant does the surgical operation.

Mr. Jonas. You will not pay him the $50?

Dr. McNinch. We would pay him the $50 a day and he might see that patient five, six, or seven times. Usually he will see him along with other patients, but in this particular type of situation with the consultant we certainly are not paying him the fee for a competent neurosurgeon would be on a fee basis——

Mr. Thomas. Mr. Evins, did you have some questions?

LEVEL OF MEDICAL RESEARCH

Mr. Evins. I have one general question.

What has been the highest level of expenditure in the Veterans' Administration annually on research?

Mr. Gleason. This last year, Mr. Evins——

Mr. Evins. How much have you expended last year and was that the highest level?

Mr. Gleason. That was in the present fiscal year, 1964, and it is $33,742,000.

Mr. Evins. That has always been a question of some controversy in your budget and we never seem to get the right level. Some say you should have more and more research and others say you should not. Others say you have been researching for years. We want you to have what is required, but $30 million would be about the level of research the Veterans' Administration should possibly carry on?

Mr. Gleason. No, sir.

Mr. Evins. Are we going to continue to climb?

Mr. Gleason. I believe it is our program to get up to around $46 to $47 million before we reach a plateau, Mr. Evins, and this is in step progressions. If there are $45 million in research, we could not use it right now because the doctors tell us there is a staffing problem. It would be a problem to get the right people in the right field of

research we are interested in and this would be most difficult. It takes a lot of planning.

Mr. EVINS. Congress has been concerned about research costs mounting in all areas and has for several years been concerned about this and has set up a select committee to study research costs in all Federal activities. They want to have some idea about what is the right level for the Veterans' Administration. For several years, you have asked for more money for research. You think you want to reach a level of about $45 million?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. Mr. Jonas?

RESEARCH VERSUS PRACTICE BY PHYSICIANS

Mr. JONAS. Thank you, Mr. Chairman.

I want to ask the Chief Medical Director one question.

Would you comment on the criticism or the comment heard occasionally that too many of our medical doctors want to engage in research and this contributes to the shortage of people who want to practice medicine? Is there any truth in that?

Dr. MCNINCH. Certainly there are varying opinions on this subject. I do not believe this is true in the Veterans' Administration by any means. Our research budget is something less than 4 percent of our medical care budget. In many organizations it is as high as 10 percent and the percent of the budget that goes into the research represents some indication of the percent of personal effort of the people involved.

Mr. JONAS. Are there any statistics available which you could put in the record on the percentage of medical doctors prepared to practice medicine who have given up the practice and are exclusively engaged in research in relationship to the total number?

Dr. MCNINCH. Within the Veterans' Administration?

Mr. JONAS. The total.

Dr. MCNINCH. I certainly can try. I am not sure that that information is available. What one sees more frequently than not is an individual participating in three things; that is, he is taking care of patients, he is engaing in some way or another, either individually or with a team, in a research project, and he is also teaching younger doctors.

This is the environment one finds in the medical schools. I think this is the reason why the highest level of medical practice is in university hospitals.

Mr. JONAS. That is all.

LEVEL OF MEDICAL RESEARCH IN VA

Mr. OSTERTAG. May I make this statement: While I am sure we are all in complete accord with the objective and the purpose and the need for medical research in the Veterans' Administration, it is a very desirable and very important program, but the program is not only essential to the health and welfare of the veteran but people as a whole. As I recall, when this program came into being one of the basic reasons

for the increases in the budget each year was the one-shot cost of equipment, laboratories, and things of that kind.

It was said that it would level off substantially once the program was substantially established.

However, the picture continues to be one of increasing costs, expansion, and the Administrator now tells us we will not reach the peak for several years when we reach the $45 or $50 million figure.

I just offer that as an observation. I am not quarreling about the need, the purposes, and desirability of the medical research program.

Mr. GLEASON. I understand, sir, that if you recall 3 years ago, Dr. Middleton went into this at quite some length and pointed out to you gentlemen how this would be in step increases until we reached a plateau of around $45 million to $46 million.

Mr. OSTERTAG. My point, Mr. Administrator, is that in the initial development of the program it was recognized there were certain basic costs that were essential but would not be required each and every year to follow. I referred to the laboratories, the equipment, and all of that.

Mr. GLEASON. Once this plateau is reached, this is a correct statement, Mr. Ostertag.

Dr. MCNINCH. Mr. Ostertag, I think in most agencies in and out of government, a rule of thumb is that personal salaries normally cost about 65 percent of the research program.

Supplies, equipment, and instrumentation which go on because new instruments are developed these days and are very expensive instruments, would be about 35 percent of the program.

I am not sure we are really so far from this, although it is still a growing program and things such as construction certainly are one-time costs. We have not completed this program.

Mr. OSTERTAG. I repeat that I, for one, and I am sure the Congress and the people as a whole applaud this program, believe it is vital and essential and very productive. However, we are talking in terms of levels and we are also talking in terms of the original picture and what it seems to be today.

Mr. GLEASON. For example, Mr. Ostertag, research has done such a great deal for us. I think it has saved us so much money in the Veterans' Administration. Just in one particular field, that has been impressed on me. That is in chemotherapy where we developed this for tuberculosis. Because of this one thing alone we have saved more money than all the money we have spent in research to date. In 14 of our tuberculosis hospitals, we have been able to convert them to general medical use rather than building 14 new ones.

Mr. OSTERTAG. Was that entirely developed by virtue of the Veterans' Administration?

Mr. GLEASON. By the Veterans' Administration; yes, sir. It has additional benefits which you mentioned just a little while ago that, not just the veterans gaining from this but the entire population of the United States gaining from this.

Mr. THOMAS. What is the exact meaning of the term chemotherapy?

Mr. GLEASON. I will have to ask one of the physicians here to explain that.

Dr. McNinch. Chemotherapy is a term developed about 1939 when the sulfa drugs were first introduced. I am not sure that we should have waited until that length of time for them to be introduced because obviously quinine is chemotherapy, and epsom salts are a form of chemotherapy.

This is a therapy with chemical agents as opposed to biological agents, such as antitoxin, and some of the other biological products.

MEDICAL RESEARCH GRANTS

Mr. Jonas. When you gave that figure $46 to $47 million as the top level in answer to a question by Mr. Evins, this did not include grants you received and administered in addition to appropriated funds, did it?

Mr. Gleason. No, sir.

Mr. Ostertag. Actually, the total would be some $5 to $10 million more than that, would it not?

Mr. Gleason. About $7 million, offhand.

Mr. Ostertag. Your program of research is costing, instead of $35 million is now $42 million.

Mr. Thomas. It has already reached the ceiling.

Mr. Gleason. No; we are talking about a ceiling in the Veterans' Administration itself in this program, Mr. Chairman.

Mr. Thomas. I believe that logically follows. We have always questioned here why the other agencies should hand you funds for research when you have your own budget estimate on research.

We put a limitation on the National Science Foundation.

You do not get very much of your funds from them, but the Public Health Service. They are prevented from doing just exactly that.

Any further general questions, gentlemen, before we go to another subject?

DISTRIBUTION OF FREE CIGARETTES

Mr. Ostertag. While we are on this general research subject, Mr. Chairman, I have one question.

I note you have now instituted a policy of no cigarettes for your patients; is that correct?

Mr. Gleason. No free cigarettes; that is correct.

Mr. Thomas. Free cigarettes.

Mr. Ostertag. Free cigarettes.

Mr. Gleason. Yes, sir.

Mr. Ostertag. You have dispensed with that policy or practice of giving free cigarettes; is that correct?

Mr. Gleason. Yes, sir.

Mr. Ostertag. What brought that about, the general finding that cigarettes are unhealthy? I think there has been considerable publicity about this lately, and I think it might be well to have a little reaction on the record to this.

Dr. McNinch. Mr. Ostertag, I think the final action which we have just taken to prohibit the acceptance and distribution of free cigarettes in the veterans medical facilities was the immediate result of the report

of the Committee to the Surgeon General of the Public Health Service. Actually, in looking back, our Providence, R.I., hospital stopped the distribution of free cigarettes in 1957. I suppose they did this in the belief of the medical staff there that this was contra-indicated, not healthful, because a lot of physicians have felt for many years that cigarettes and smoking were harmful. I do not think it surprised very many physicians when the Surgeon General's report came out the way it did. Most of us knew what it was going to say because the evidence has been accumulating a long time. Actually, a number of our hospitals at various times since 1942 have stopped the distribution of free cigarettes. This was of some interest to us because we were interested in the reaction of the patients to this. We were interested in the reaction of the voluntary service organizations to this because this is one of the devices whereby they give to patients anything the patients want. Actually, the experience we have had indicated there was very little reaction in the past to this.

Of course, patients can still buy cigarettes. It is possible for voluntary organizations, if the patient really needs or wants to smoke, and has no source of free cigarettes available, to give him canteen coupon books or money in order that he can buy cigarettes.

Mr. OSTERTAG. If I follow you correctly, there is no prohibition on patients smoking? They are free to smoke their own cigarettes or any other donated cigarettes but you just draw the line on the issuance of cigarettes as an item in the hospitals; is that correct?

Dr. MCNINCH. Either by the hospital or by voluntary agencies. That is, no one can any longer go through a ward with a cart or a tray of cigarettes and ask who wants a cigarette.

Mr. OSTERTAG. This is prohibited as to voluntary contribution.

Dr. MCNINCH. Prohibited. There is a prohibition on free distribution.

Mr. OSTERTAG. That was not clear to me and I was not sure that if a veterans' organization servicing a hospital wanted to pass out candy or cigarettes, whether cigarettes are prohibited. I thought it was strictly a Veterans' Administration matter.

Dr. MCNINCH. We have conferred with national representatives for this past week, both the service and nonservice organizations, and explained our order and our position and the reasons therefor.

We got very fine acceptance. Of course, I think the issuance of the Surgeon General's report made a lot of difference. Actually, going out in the field we found one or two voluntary service committees had, on their own, stopped the free distribution of cigarettes after having heard about the Surgeon General's report.

Mr. JONAS. That brings up a question I suppose you have not had enough experience on to determine, whether this has reduced the use of cigarettes in your hospitals or not?

Dr. MCNINCH. We do not know what will be our experience or what will be the national experience.

Mr. JONAS. A person who is addicted to cigarettes will buy cigarettes if he has a little money—and they all have a little money. I do not see what you are accomplishing by forbidding the free distribution of cigarettes if you still permit the purchase of them.

Dr. McNinch. This becomes a matter of degree, of course, and control. To us, distribution of free cigarettes is an encouragement to the individual to smoke cigarettes.

Mr. Ostertag. Is it not in a sense putting more of a burden on the patient himself rather than any one other thing?

Dr. McNinch. That is right. Our action is, of course, consistent with that taken by the Public Health Service in their hospitals and by all Department of Defense hospitals.

Mr. Thomas. Gentlemen, let us get back to the budget and take a look at "Medical administration, miscellaneous operating expenses." What is covered in medical administration? Research?

Dr. McNinch. No, sir.

Mr. Thomas. That is a separate appropriation. What all is covered by medical administration? It has nothing to do with general operating expense. It does not cover inpatient care. What is covered in medical administration?

Mr. Monk. Basically, it is Dr. McNinch's staff here in Washington, the area medical offices, and the Assistant Administrator for construction staff here in Washington.

Medical Administration

Mr. Thomas. We will put pages 19–7 through 19–12 in the record. (The pages follow:)

MEDICAL ADMINISTRATION

Program notes

This program includes those central office services responsible for the development of objectives and the administration of policies and plans to insure complete medical, dental, and hospital services for the care and treatment of veterans as prescribed by the Administrator pursuant to statutory authority and regulations. Also included under this heading are the seven area medical offices, each having an assigned geographic area and concerned with day-to-day supervision and operation of the medical program as carried out by the hospitals, domiciliaries, and clinics.

In addition to providing for needed administrative staff, this estimate includes consultants to the Administrator and the Chief Medical Director as well as the Special Medical Advisory Group. The members of this Special Medical Advisory Group meet four times a year with the Department of Medicine and Surgery to advise on medical and policy matters. They serve as liaison between the Veterans' Administration and major segments of American medicine, such as the medical schools and the various professional associations of medical specialists. Central office use of consultants is in connection with neuropsychiatry, social service, tuberculosis, and dentistry to advise and assist on policies and procedures. Consultants and attendings in area medical offices are also utilized to supplement the professional staff in those offices. They supervise specialty activities and submit reports on each hospital appraising the capabilities of the head of the particular specialty, the physical layout, the type of service being rendered, as well as criticisms and recommendations.

The mission of the agency's medical program is to provide hospital, outpatient, and domiciliary care to eligible veterans; a research program to improve methods of diagnosis and treatment; and an education and training program to improve the professional competence of its staff.

The medical care and treatment programs were conducted during fiscal year 1963 in 169 Veterans' Administration hospitals and in 19 Veterans' Administration domiciliaries, with average operating beds of 120,304 and 16,770, and average daily patient or member loads of 110,194 and 15,690, respectively. Outpatient medical and dental services for veterans were provided by all hospitals

and 33 clinics and 16 subclinics not located in a hospital setting during fiscal year 1963 and by physicians and dentists participating in the hometown-care plan. Outpatient services for fiscal year 1963 consisted of more than 5,900,000 medical visits, 40,000 dental examinations, and 48,000 dental treatments.

More than 154,000 full-time or part-time employees will be engaged in the conduct of agency medical programs in the current 1964 fiscal year. The combined administrative staff of the Department of Medicine and Surgery that will be on duty in the central office and area medical offices averages 882 employees, or less than three-fifths of 1 percent of the total employment in medical programs. This represents one of the lowest ratios of administrative employment to total program employment found in the Federal Government.

An important development during the 1963 fiscal year was the reorganization of the central office component of the Department of Medicine and Surgery.

1. The Office of the Assistant Chief Medical Director for Operations was abolished, and a direct line of authority established between the Area Medical Directors and the Office of the Chief Medical Director.

2. Two new offices were established, headed by an Assistant Chief Medical Director for Plans and Coordination and a Director for Administrative Services. The former was made responsible for the development and recommendation of policies, long-range plans, medical facilities requirements, systems and standards, and coordination of the vast departmental program. The latter was made responsible for the engineering, registrar, personnel, housekeeping, supply, and canteen services.

3. The Field Fiscal Service was placed under the Department of Medicine and Surgery Controller.

4. Slight changes were effected in the Office of the Assistant Chief Medical Directors for Professional Services and for Evaluation.

5. The functions of the Assistant Chief Medical Director for Dentistry and the Assistant Chief Medical Director for Research and Education remain unchanged.

Improved departmental staff performance under the new organizational alinement already is apparent. As a result of these changes, it will be possible to undertake additional workloads and expand present efforts in many important fields in fiscal year 1965 without requesting additional personnel for the central or area medical offices. Among the major staff actions planned are:

1. Continuance of the study of potentials for outplacement of increased numbers of eligible veterans in nursing homes.

2. Formulation of improved systems for determining physical plant maintenance and repair requirements.

3. Development of systemwide work measurement criteria to give greater effect to the President's program for improved manpower utilization.

4. Improvement of transitional procedures for incorporating medical research advances into care and treatment programs.

Cost changes

The $89,530 net increase requested in fiscal year 1965 for medical administration covers additional requirements for Public Law 87–793 salary rate and within-grade average salary increases, partially offset by savings for the one less workday occurring in fiscal year 1965. Of this total net increase, $54,530 applies to central office, and $35,000 to the area medical offices.

1. *Explanation of the $37,470 decrease for the one less workday.*—The $37,470 decrease includes the lesser requirements for object classes 11 and 12, personnel compensation and benefits payments which will be saved because of the one less paid workday in fiscal year 1965. There are only 261 paid workdays in fiscal year 1965, compared to 262 paid workdays in fiscal year 1964. Of the $37,470 total decrease, $25,470 applies to central office, and $12,000 to the area medical offices.

2. *Explanation of the $257,000 request for Public Law 87–793 and average salary increases.*—Of the $257,000 requested, $35,000 will provide an increment averaging $40 per employee toward the cost of average annual salary increases resulting from within-grade salary advances. Payment of these costs are estimated at $25,000 for the central office, and $10,000 for the area medical offices. The $222,000 remainder of the increase is required to pay the higher Public Law 86–793 salary rates effective January 5, 1964 for the full 1965 fiscal year, and is distributed $156,000 for the central office, and $66,000 for the area medical offices.

3. *Explanation of the $130,000 decrease for central office and area medical office program changes.*—Aggregate net decreases in nonpersonal services objects of expenditure amounting to $130,000 are planned in fiscal year 1965. Purchases of office equipment and initial supply stocks for new employees in fiscal year 1964 need not be duplicated in fiscal year 1965, thereby resulting in these decreases. Within the overall adjustment for nonpersonal services objects, a minor increase of $8,000 in employee travel limitation is required in connection with implementing the special study related to outplacement of patients in nursing homes.

Comparison of costs by activity

Activity	Fiscal year 1963 actual	Fiscal year 1964 estimated	Fiscal year 1965 estimated	Increase(+)or decrease (−) 1965 over 1964
Chief Medical Director	$464,588	$481,000	$508,000	+$27,000
Assistant Chief Medical Director, Professional Services	1,643,118	1,779,000	1,806,000	+27,000
Assistant Chief Medical Director, Dentistry	170,984	188,000	192,000	+4,000
Assistant Chief Medical Director, Research and Education in Medicine	118,989	127,000	128,000	+1,000
Assistant Chief Medical Director, Plans and Coordination	955,210	1,051,470	987,000	−64,470
Assistant Chief Medical Director, Evaluation	259,950	296,000	300,000	+4,000
Controller	1,090,884	1,174,000	1,194,000	+20,000
Director, Administrative Services	2,126,564	2,433,000	2,469,000	+36,000
Central office, total	6,830,287	7,529,470	7,584,000	+54,530
Area medical offices	3,431,656	3,763,000	3,798,000	+35,000
Total costs, Medical Administration	10,261,943	11,292,470	11,382,000	+89,530

Mr. THOMAS. Let me read the first paragraph on page 19–7. It is very well expressed:

This program includes those central office services responsible for the development of objectives and the administration of policies and plans to insure complete medical, dental, and hospital services for the care and treatment of veterans as prescribed by the Administrator pursuant to statutory authority and regulations.

It has nothing to do with actual treatment, handling of patients, in your 180 hospitals, does it?

Mr. MONK. 168.

Mr. THOMAS. Plus 17 doms. [Continuing reading:]

Also included under this heading are the seven area medical offices, each having an assigned geographic area and concerned with day-to-day supervision and operation of the medical program as carried out by the hospitals, domiciliaries, and clinics.

In addition to providing for needed administrative staff, this estimate includes consultants to the Administrator—

That is 7 rather than 1,019; is that correct?

Mr. MONK. Full time.

Mr. THOMAS (reading:)

The members of this special medical advisory group meet four times a year with the Department of Medicine and Surgery to advise on medical and policy matters.

Let us get down to construction. Where is that?

CONSTRUCTION PROGRAM

Mr. MONK. We have put the construction part of this appropriation back with the construction program, Mr. Chairman.

Mr. THOMAS. You did not bring it up here this year? Is any administrative expense chargeable to medical administration on the construction program?

Mr. MONK. We put that part of it back with the construction program.

Mr. THOMAS. What part of it is charged to medical administration? Is any part of it so charged?

Mr. MONK. Yes, sir.

Mr. THOMAS. Why do you not put it here where we can see it? We have to chase back here.

Mr. MONK. We tried to do what you wanted us to do in here. We tried to put this back so we could have it all together.

Mr. THOMAS. Assistant administrator for construction. You set out your costs here by activities, medical administration and education and training. Here is the assistant administrator for construction. In 1963 there were 162 jobs. Now it is 167 jobs for 1965 and an increased cost of $52,718. You have two pay increases which average what together, about 10 or 10½ percent?

Mr. WISE. Yes.

Mr. THOMAS. 7½ percent and maybe 8 in 1964 and you have 2½ percent coming up this year but that is on a half-year basis so maybe it is more than 10 percent. What is the remainder of that $52,000 increase for with only two jobs, pay act?

Mr. MONK. Two additional employees, sir. The rest is pay increase.

Mr. THOMAS. I guess that makes it, the two additional employees.

MEDICAL ADMINISTRATION—EMPLOYMENT AND COSTS

Medical administration has 882 employees this year? I thought we were cutting medical administration down. What do 882 people in the District of Columbia do? Why do you not put them in the hospitals where they belong? We will put 19–5 in the record.

(The page follows:)

Employment and object summary

	Fiscal year 1963 actual	Fiscal year 1964 estimated	1 less workday and calendar day	Public Law 87-793 and within grade increases	Program changes		Fiscal year 1965 estimated	Increase (+) or decrease (−), 1965 over 1964

Mr. THOMAS. What do these 882 people do? You have here in the central office employment the medical director, 623 people? What do you do with 623 people? You have ACMD, professional services, 47. What is that? Who is the distinguished gentleman?

Dr. MCNINCH. Dr. Timm.

Mr. THOMAS. What are you doing with 44 people, Doctor?

Mr. SHYTLE. He has 126.

Dr. TIMM. In the professional services we have all of the different medical specialties represented to provide the leadership program development. We review the programs.

Mr. THOMAS. Would you not do well to put about a hundred of those back in these hospitals all over the country where they can practice that expert knowledge they have?

Dr. TIMM. We feel that we have to have program unity in order to insure that veterans are receiving the same quality of care throughout the country to the best of our ability. We have to coordinate the training efforts for these professional people in the field.

Mr. THOMAS. How long have you been with the VA Medical Department?

Dr. TIMM. Twenty-five years, except for my period of military service.

Mr. THOMAS. Where did you take your training?

Dr. TIMM. Washington University, St. Louis, and St. Louis County Hospital.

Mr. THOMAS. Was Mike Bromberg there when you were there?

Dr. TIMM. Yes, sir.

Mr. THOMAS. Where is he now?

Dr. TIMM. I do not know.

Mr. THOMAS. He was professor of surgery?

Dr. TIMM. He was in surgery.

Mr. THOMAS. He was quite talented, was he not?

Dr. TIMM. He had a particular interest in those days in the early development of physical medicine, as I recall.

Mr. THOMAS. A very brilliant mind. We went to school together 4 years. He is a very splendid individual, a hard worker, made a great doctor, I understand, a great teacher, a great professor. I think he retired a couple of years ago.

Dr. TIMM. I have not heard.

Mr. THOMAS. He moved back to Galveston, Tex. He was a great citizen. Thank you, Dr. Timm. You have been very helpful. We appreciate it.

OFFICE OF CHIEF MEDICAL DIRECTOR

How many employees does the Chief Medical Director have; 47?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. You have 11 in dentistry. That is an increase of one. Dr. McNinch has an increase of three. Why do you need an increase of three in your immediate office?

Dr. MCNINCH. This is a reshuffle in the offices, a moderate change.

Mr. THOMAS. You have not been there long enough to tell whether these letters you have been getting are true or not, so how do you know you need the three people?

Dr. McNinch. These are the changes my predecessor made.

Mr. Thomas. You did not make this budget?

Dr. McNinch. No, sir.

Mr. Thomas. When was this budget made? Last September; is that right?

Mr. Shytle. The preliminary figures came out last May. We started working with the Bureau.

Mr. Thomas. You did not defend it before the Bureau of the Budget until last September.

Mr. Shytle. That is right.

Mr. Thomas. Who defended it then?

Dr. McNinch. I defended my staff, yes.

Mr. Thomas. This is your budget, then.

Dr. McNinch. It was pretty well jelled before I arrived, sir.

Mr. Wise. There was no increase in numbers of people in 1965 for this program. Actually, seven jobs changed internally. A number of them were clerk-typist jobs that we redistributed in accordance with the workload.

Mr. Thomas. The more we talk about putting these people back in the field where they can practice medicine, the more you increase. There is a little conflict. There is only one thing to do, which is stop talking and use the pencil. That is what we will do this year.

OFFICE OF RESEARCH AND EDUCATION IN MEDICINE

You have residency and education in medicine, nine in that staff. How many did you have last year?

Mr. Monk. Nine. That is research and education.

Mr. Thomas. You mean this is your coordination of research?

Mr. Monk. Yes.

Mr. Jonas. I thought the professional services covered that.

Dr. McNinch. This is on education. It is the education, and not research, program. Personnel are paid for out of research funds. Education personnel are paid for out of this.

Mr. Thomas. Where is your narrative on that? It ought to be about 19–9 and 19–10. Where is your narrative where you explain it?

Mr. Wise. There is no narrative on this.

Mr. Thomas. Why is there not a narrative? Would you touch it on "Medical education and training" any place?

Mr. Wise. No, sir; these nine persons are charged to administration, both medical research and the education and training programs.

Mr. Thomas. We understand that. Where is the narrative in the justification to explain it?

Mr. Wise. There is nothing in the narrative, sir.

Mr. Thomas. Maybe we should take this out of the budget if you do not think enough of it to explain it. It is not very important anyway, is it?

Mr. Wise. Yes, it is, sir.

Dr. McNinch. Page 19–8 describes changes made in the organization this past year.

CENTRAL OFFICE EMPLOYMENT

Mr. THOMAS. You have medical administration program notes. An important development during the fiscal year 1963 was reorganization of the central office component of the Department of Medicine and Surgery. You state there that field fiscal service was placed under the Department of Medicine and Surgery Comptroller. With this tremendous number of people here in the District of Columbia, I do not know, but it looks to me like you are topheavy on medical administration, trying to run 170 hospitals over the phone. It certainly would cut down your long-distance bill and it looks to me as though it would afford better medicine to send out once or twice a year some guidelines to your hospital managers and your doctors.

After all, you are going to have to trust them about 20 hours a day anyway. You cannot supervise them 24 hours a day. Their judgment is going to prevail in treatment of the case. That is the primary thing they are supposed to do. I do not know what you need with this tremendous organization here. You are building it up every year, a few more people, layer on layer.

Mr. EVINS. Would you yield, Mr. Chairman?

Mr. THOMAS. Yes.

AREA MEDICAL OFFICES

Mr. EVINS. I believe it was last year that you had a reorganization in which the area officers from Philadelphia, St. Louis, Atlanta, and so on, were brought into Washington. We were deluged with telegrams saying they should be here. I supported you at that time. It was called to our attention that the hospital managers themselves had to go through another channel to reach Washington if they had something they wanted, they could not reach Washington, they had to go through the area.

Is this the result of the reorganization, just for clarification and for our own information? Is this reorganization plan being in effect? Has it resulted in a larger staff in Washington and has it resulted also in a more direct chain of command from headquarters to the hospital itself?

Mr. GLEASON. This itself has not resulted in a larger increase in Washington in the office of the Chief Medical Director in the central office.

Later on you will note down further on the page the area medical officers do come in there. This has an overall effect of increasing the number of people in Washington, Mr. Evins.

Mr. EVINS. Are the area medical officers assigned here now at this time?

Mr. GLEASON. The area medical officer is assigned here. He has certain personnel with him. The great preponderance of the officers still remain out in the seven locations.

Mr. EVINS. Does the hospital manager have to clear through the seven locations before he can reach Washington on any request?

Mr. GLEASON. Either there or directly to the area medical officer here in Washington.

Mr. EVINS. He has access to either avenue?

Mr. GLEASON. If it is necessary to go to the area medical officer, then he will come direct to Washington to him, through the area medical office to the Chief Medical Director.

Mr. EVINS. Let us say he needs some supplies. Does he come to Washington to get the supplies?

Mr. GLEASON. No, sir.

Mr. EVINS. He goes through the area medical man in the field?

Mr. GLEASON. It is not even necessary for him to do that.

Mr. EVINS. Say he needs new medicines. How does he go about procuring them?

Mr. GLEASON. Through the medical supply.

Mr. EVINS. If he has a policy matter, does he come to Washington or does he go through the area medical officer?

Mr. GLEASON. It should go through the area medical officer.

Mr. EVINS. What does the area medical man who was brought here do?

Mr. GLEASON. He is in charge of a given geographic area.

Mr. EVINS. Sort of a supervisory position?

Mr. GLEASON. That is right. He may have anywhere from 20 to 25 hospitals in his jurisdiction. He, in turn, runs those under the direction of the Chief Medical Director and his deputy for that given area.

Mr. EVINS. You really did not eliminate the level of area medical officer?

Mr. GLEASON. I do not think this is a fair thing to do right at the moment, Mr. Evins, because Dr. McNinch has just come into the Veterans' Administration, and I think it only fair that he be given an opportunity to have 6 or 7 months more to make an evaluation as to where these offices should be located or whether they should be eliminated or increased, whatever in his judgment it might be. He will make recommendations to me as Administrator at that time.

Mr. EVINS. I supported the Administrator in bringing these men in here, but if they are in here in surplus supply and the chairman feels they can be more useful in the hospitals in the field, it might be better to do that.

Mr. GLEASON. These particular people were not in the hospitals. You must remember, sir, that this is a tremendous administrative problem, running so many hospitals, running around 135 to 140,000 personnel. You just cannot do this with a handful of people. Here with Dr. Timm in charge of professional services, he has 127 people. This is less than one person for each hospital that he has the responsibility for.

MEDICAL PROGRAM ADMINISTRATION

Mr. THOMAS. Why does he need so many people? I cannot buy that. Is he running the hospital or is the man on the ground running the hospital?

Mr. GLEASON. The man on the ground is running it.

Mr. THOMAS. Dr. McNinch, if he has had the hospital experience you say he has—I know he has—he knows better than anybody that you cannot run the hospital from a thousand miles away. The man on the ground has the day-to-day and the hour-to-hour responsibility.

Dr. MCNINCH. I know if I am to be responsible for the medical service in the Veterans' Administration, I need a certain administra-

tive staff to see that the right policies are established, that the policies are carried out, that good management is effected. I perhaps am not as interested in some details of management as some other people in Government are, but this is an important element. I could not defend job by job the 619 people in my office.

SURVEY OF MEDICAL ADMINISTRATION

I have directed as of January 23 that a manpower survey be made to not only determine whether or not the number of individuals present are necessary but what perhaps is more important, are all the functions that they are carrying out essential?

Mr. JONAS. Who is going to do that survey?

Dr. MCNINCH. It will be done by some of my own personnel, supervised by me.

LAYERS OF SUPERVISION

Mr. JONAS. I follow you that you need some supervision, but you have too many layers of it, I am afraid. You have a layer in the hospital, you have a man in charge. If he is not a good man, you will get rid of him. Then you have your area people. Then you have 28 evaluation people and 88 making plans and doing coordinating work, and 123 professional services. You do not tell us why you need all those layers.

Dr. MCNINCH. After 7 months, I cannot tell you why I need them.

Mr. JONAS. You have some people who have been in the Department 25 years.

Dr. MCNINCH. They apparently feel I do need them, and they so advise me.

Mr. JONAS. Maybe they can tell us.

Dr. MCNINCH. I have had experience in managing pretty large medical services. I know there are many complaints generated about medical services. I know that those complaints come to my office. They do not go to the hospital director, nor can he satisfy them.

Mr. JONAS. Who do you turn those over to; your evaluator?

Mr. MCNINCH. Yes, sir.

Mr. JONAS. Is that what they do, the 28 engaged in evaluation?

Dr. MCNINCH. That is one of his functions, sir.

Mr. JONAS. Why do you not turn it over to your area man?

Dr. MCNINCH. I think that they do go to the area eventually.

Mr. JONAS. They go to your evaluation section, then to the area?

Dr. MCNINCH. Right, sir.

Mr. JONAS. Then to the local hospital?

Dr. MCNINCH. Yes, sir.

PLANS AND COORDINATION

Mr. THOMAS. Look at your "Plans and coordination," up 88.

Mr. JONAS. Eighty-eight people, "Plans and coordination." What is the difference between your duties and your professional services people? I thought the professional services people made the plans and coordinated the program.

Dr. McNinch. May Dr. Zink, Chief of that Service, answer that question?

Mr. Thomas. Surely.

Dr. Zink. The Office of Plans and Coordination was set up as a staff function of the Office of the Chief Medical Director. We are responsible for a substantive program, long-range planning, hospital requirements section, reporting to the statistical service and standards service, which also has an administrative research element in it. In addition, we have overall coordinating function of various activities of the Department.

Mr. Thomas. Doctor, you have used a lot of big words. What do you do? Coordinating—we have been coordinating for 25 years. We do not known what we mean by it yet. Just what do you do? You hear these hospital managers talk, and they say you give them a rough time. They try to reciprocate. You tell them how to run their hospital over long distance. They say they know more about it than you do. They want to put a wing on a hospital and you tell them where to drive the nails, do you not, you and the construction people?

Dr. Zink. We help them develop plans.

PLANNING OF MEDICAL FACILITIES

Mr. Thomas. Some of the worst mistakes I have ever seen were made in connection with some of these hospitals. Were you the one who was responsible for all these fine NP hospitals that covered about 99 acres where they have to get on bicycles to ride from one end to the other? Now they change the plan and make them all high-rise structures. Who made that mistake? Were you over there then?

Dr. Zink. No, sir.

Mr. Thomas. What distinguished gentleman did that?

Dr. Zink. Those are generally attributed to Dr. Hahn.

Mr. Thomas. We ought to give him a medal.

Dr. Zink. He left the agency back in 1953.

Mr. Thomas. He was under Dr. Magnuson?

Dr. Zink. Yes, sir. There are very few matters that come up in the Department that affect only one element. They generally ramify throughout the various parts. To coordinate with each group, to make sure that the total package, when it gets up to Dr. McNinch, has been thoroughly developed by all parts of the office, this is one of our functions, coordinating the functions.

Mr. Thomas. Make it difficult for everybody down below. That is all it adds up to. If a man is going to be responsible for the hospital and run it, he has to be there.

MANAGEMENT LEVELS

Mr. Evins. The managers of these hospitals are all excellent men who know their business and do a good job, but they cannot reach Washington on any matter. They have to go through other levels with no direct access to headquarters.

Mr. Gleason. If I might say, this is somewhat analogous to all of us who have had service in one of the branches of the armed services.

Taking the Army, with which I am more familiar, a company-sized unit has a company staff, whether it is noncommissioned or commissioned staff. From there, to run that company effectively they have to have a certain staff. Then you go up to a battalion size. Once again you have to have a larger staff because you have anywhere from 5 to 10 companies under you. From there you go up to a division staff. This is somewhat the same position that we find ourselves in in trying to run a large organization.

Mr. JONAS. You do not mean you are going to try to model the VA after the Army or the military services in the use of personnel, do you?

Mr. GLEASON. No, sir.

Mr. THOMAS. That is just what he got through saying, copying it exactly.

Mr. GLEASON. Mr. Chairman, don't put words in my mouth.

Mr. THOMAS. It was your example, not ours.

Mr. GLEASON. That is right.

Mr. OSTERTAG. Let me put the question another way. Suppose this was a private enterprise and you were the president or chairman of the board of this corporation. Do you think that in order to have it operate efficiently and properly and well and productively you would need all these lawyers, and the magnitude of operation that you have in being today?

Mr. GLEASON. This is a difficult thing to say at the moment because, as Dr. McNinch has mentioned, he is having an evaluation study made as to whether he actually does need this. I think every now and then in an organization our size——

Mr. THOMAS. He has been there 8 months and he will say yes. If he cannot make up his mind in 8 months, he cannot do it in 10 years.

Mr. GLEASON. That is not quite fair.

Mr. THOMAS. We are not all children and neither is the doctor. How much time does he need?

Mr. GLEASON. I think he needs another 6 to 8 months.

Mr. THOMAS. He is familiar with hospitalization, he is a doctor, he has been engaged in hospital practice for years and years. You say 8 months is not enough.

Dr. MCNINCH. If you ask me as of today to make a judgment, I would say yes, I need the area medical officers.

Mr THOMAS. We knew that was the answer, we anticipated that.

Dr. MCNINCH. I would further ask how many people at the table have ever managed a medical service.

Mr. THOMAS. I doubt if there is any. We could not do any worse than some of you folks have done. Certainly, spending a million dollars over there for equipment is a pretty good example. Nobody knows what is going on. You have 700 people here in your big office and could not even catch that.

Are there any further questions? If not, gentlemen, we will stand adjourned until tomorrow morning.

THURSDAY, FEBRUARY 13, 1964.

Mr. THOMAS. The committee will please come to order.

Dr. MCNINCH. Mr. Chairman, with your permission, I would like to apologize to you and to the members of the committee.

Mr. THOMAS. For what, Doctor?

Dr. MCNINCH. For losing my temper yesterday and making remarks not appropriate to the occasion.

Mr. THOMAS. That is all right. We let anybody say anything he is big enough to get by with. You are nice to say that. Thank you very much.

We are taking a look at Medical administration. This Program 1700 is included in this language, is it not? The Program 9000 is under construction; so you have two programs.

Mr. MONK. That is right.

Mr. THOMAS. After fishing around this morning, I discovered it is all wrapped up in 9000 rather than 1700; is that correct?

Mr. MONK. That is correct, sir.

AREA MEDICAL OFFICES

Mr. THOMAS. You have a separate item set out on page 9–5 for area medical offices, an increase of $35,000, bringing it to $3,798,000 as against $3,763,000. We have already put this justification material in the record.

Of your 882 employees, how many are charged against the area medical offices?

Dr. MCNINCH. 259.

OTHER OBJECTS—MEDICAL ADMINISTRATION

Mr. THOMAS. Let us look at your travel and other objects. Travel goes up $8,000 to $600,000 as against $592,000 last year and $567,000 in fiscal 1963.

Transportation of things shows a decrease of $24,000.

Rent, communications, and utilities, $185,000, down $10,000.

Heretofore you testified in one of the subheads that your communications bill, particularly the spoken word and the printed word, had gone up by virtue of certain activities of the General Services Administration. No increase is reflected here, is there?

Mr. WISE. Those charges will be paid under the "General operating expenses" appropriation, Mr. Chairman, by arrangement with GSA.

Mr. THOMAS. In other words, you get a free ride here.

Mr. WISE. For that service; yes, sir.

PRINTING AND REPRODUCTION

Mr. THOMAS. Printing and reproduction is $190,000. What do you print for $190,000? That is a lot of money for printing. How many publications do you have?

Office supplies, a reduction of $5,000. Books and periodicals, $16,000, $16,000 last year.

What about your printing? Where is that set out?

Mr. SHYTLE. We could supply the complete detail on this printing for the record. We have subsidiary information on printing for the

agency, broken by appropriation, and have a detailed description of our printing.

Mr. THOMAS. Where is all that valuable information, Judge?

Mr. SHYTLE. It is in another place.

Mr. THOMAS. It is not in our book. Is it secret?

Mr. SHYTLE. No, sir.

Mr. THOMAS. It is in your book but not in our book?

Mr. SHYTLE. We will give it to you if you like.

Mr. THOMAS. Is it secret, gentlemen? How many different pamphlets are you printing? Are you the printer?

Mr. SHYTLE. No, sir; I am the Controller. The printer was here for 2 days. He is on standby. He can come back with several boxes of printed materials of all types we print in VA. We could have him here within a few minutes.

Mr. THOMAS. Did we reduce this last year? In 1964 what did you have?

Mr. GLEASON. Doctor, is there not somebody here who can tell the chairman what you print for $190,000?

Mr. WISE. The $190,000 covers mainly forms and form letters which are initiated by the central office in prescribing reporting procedures for the system. The initial stocks at the time a new form is introduced are paid for under "Medical administration" and distributed in the initial quantity at no cost to the field stations; but if replenishment of the stocks is required, the field stations from that point on buy through the supply fund. The printing and reproduction activities are under that.

Mr. THOMAS. What was your budget estimate for 1964?

Mr. MONK. $196,000. The one we had last year was $196,000.

Mr. THOMAS. What limitation was put on it?

Mr. WISE. There was no limitation originally imposed. We did volunteer the $6,000.

Mr. THOMAS. There was a reduction of 15 percent.

Mr. MONK. In your report you asked that printing be reduced 15 percent.

Mr. THOMAS. It was not done in this instance.

Mr. MONK. The Senate report asked that it be reduced 7½ percent. Overall, we have reduced about 10 percent in this budget.

Mr. THOMAS. Your table does not reflect it.

Mr. MONK. No, sir; because we have revised the middle column here, as we always do.

Mr. THOMAS. What was your budget estimate for 1964?

Mr. MONK. $196,000.

Mr. THOMAS. You reduced it to $190,000?

Mr. MONK. In this document; yes, sir.

Mr. GLEASON. In this particular phase, Mr. Chairman. Throughout the entire agency we have reduced it more than 10 percent.

Mr. THOMAS. What did the conference report state?

Mr. MONK. If I may, I will read it to you, sir:

Amount recommended for travel and printing by the House of Representatives Committee on Appropriations has been generally reduced 15 percent below the budget estimates. The committee also recommends that each agency review carefully its spending for such purposes in order that it may make further reductions.

Mr. THOMAS. You are reading from the House report.

Mr. GLEASON. He is coming to the Senate.

Mr. THOMAS. I am asking about the conference report. Was there anything in the conference report about this?

Mr. GLEASON. Not that I am aware of, sir.

Mr. THOMAS. We did not put anything on printing in the conference report.

Mr. JONAS. May I ask a question?

Mr. THOMAS. Yes; go ahead.

Mr. JONAS. What is the difference in item 24 on page 19–12 and your summary on 19–1? That shows printing and reproduction cost last year as $210,000.

Mr. WISE. The table on 19–1 is the summary for the appropriation, which includes the requirements for the Assistant Administrator for Construction. The table on 19–12 relates only to the medical administrative programs, that is the pure operation of the Medical Department central and area offices.

Mr. JONAS. The $20,000 increase on 19–1 is for construction?

Mr. WISE. It covers requirements of construction and any printing requirements of the education and training program which is also funded under this appropriation.

OTHER OBJECTS, MEDICAL ADMINISTRATION

Mr. THOMAS. What is the cost of your "Other objects?" I do not see the total. Excluding personnel costs and personnel benefits such as insurance, and so forth. What is the cost of your "Other objects?"

Mr. MONK. $1,132,000 in this Medical Administration.

Mr. OSTERTAG. Where is that shown?

Mr. MONK. It is the difference between $11,382,000 and $10,250,000 for personnel services.

Mr. THOMAS. You have $600,000 for travel and transportation of persons; $56,000 for transportation of things; $185,000 for rents, communications, and utilities; printing and reproduction, $190,000. You mean it all adds up to what?

Mr. MONK. $1,132,000.

Mr. THOMAS. Did you add that or estimate it?

Mr. MONK. I deducted it. I took the total personnel cost from the total cost.

Mr. THOMAS. Your personnel cost is what?

Mr. MONK. $10,250,000.

Mr. GLEASON. That is on 19–12, third column.

Mr. THOMAS. I have $11,382,000 here for total cost of Medical Administration.

Mr. GLEASON. Yes, sir; take $10,250,000 from the $11,382,000. This will give you your cost.

Mr. THOMAS. Where is the remainder of the $14,950,000?

Mr. WISE. Education and training program and Office of the Assistant Administrator for Construction.

Mr. THOMAS. Three items make it up?

Mr. WISE. Yes, sir.

Mr. THOMAS. We will go into that. The appropriating language covers really three items—construction, program 1700; medical administration, and employee education and training; correct?

Mr. GLEASON. Yes, sir.

ASSISTANT ADMINISTRATOR FOR CONSTRUCTION

Mr. THOMAS. Let us take the next, "Assistant Administrator for Construction," 19–13. This is program 1700. It is the smallest of the three. When we get over on construction, which is the last tab in the book, we will go into this program.

MEDICAL EDUCATION AND TRAINING

Let us take "Medical Education and Training." Put 19–14 in the record.

(The page follows:)

MEDICAL ADMINISTRATION AND MISCELLANEOUS OPERATING EXPENSES

Education and training activity and object summary

	Fiscal year 1963 actual	Fiscal year 1964 estimated	Program changes, postgraduate and inservice training	Fiscal year 1965 estimated	Increase (+) or decrease (−), 1965 over 1964
Costs by activity:					
Residency training	$120,558	$130,000		$130,000	
Postgraduate and inservice training	1,270,307	1,455,000	+$40,000	1,495,000	+$40,000
Medical illustration [1]	308,185				
Total	1,699,050	1,585,000	+40,000	1,625,000	+40,000
Costs by object:					
21 Travel and transportation of persons	875,906	979,000	+40,000	1,019,000	+40,000
22 Transportation of things	13,472				
23 Rent, communications, and utilities	5,379				
24 Printing and reproduction	25				
25 Other services	564,508	546,000		546,000	
26 Supplies and materials	218,673	60,000		60,000	
31 Equipment	21,087				
Total gross costs	1,699,050	1,585,000	+40,000	1,625,000	+40,000

[1] Effective with the fiscal year 1964, financing for medical illustration activities was consolidated under the "Medical care" appropriation.

Mr. THOMAS. This is by activity and objects. Effective with fiscal year 1964, financing for medical illustration activities was consolidated under the medical care program. What is that? Is that your films, et cetera?

Mr. MONK. Pictures.

Mr. THOMAS. Put pages 19–15 and 19–16 in the record.

(The pages follow:)

EDUCATION AND TRAINING

Program notes

The Veterans' Administration, for reasons of sustaining the quality of its program of medical care, is affiliated with the Nation's medical schools. In fiscal year 1963, 89 VA hospitals were affiliated through deans' committees with 78 medical schools. By virtue of these arrangements, the Veterans' Administration is inextricably linked to the advancing edge of medical progress.

This is a great boon to the veteran patient whose treatment thereby is supervised by a physician who insists on knowing and doing the best. The academically oriented physician values his continuing professional development highly and knows that in addition to his responsibilities for patient care, he must invest time and effort in his own education as well as in research and teaching. Having been attracted to the Veterans' Administration because of affiliation with

the medical school, such a physician must find the right climate for increasing his skills and knowledge or he will not stay.

Thus, it is of utmost importance to the maintenance of a staff of high quality that opportunities in research and education be afforded by the Veterans' Administration. This is accomplished by participation of Veterans' Administration staff members in the teaching of medical and dental students and residents and physicians and dentists taking postgraduate courses. The Veterans' Administration also maintains a research program of major proportion. Various programs of education in fields allied to medicine are also conducted in Veterans' Administration hospitals in conjunction with institutions of higher learning. The Veterans' Administration is faced with a demand which can be met only partially to provide advanced education to members of its staff. Some indication of the scope of the present education and training programs in the Department of Medicine and Surgery is given in the following paragraphs.

Veterans' Administration employees participated in 649 individual medical residency programs offering training in 21 medical specialties. The 3,001 VA medical residents on duty December 31, 1962, represented about 10 percent of the Nation's medical residents. More than 300 of the medical residents then on duty were "career" appointments in fields where significant medical staff shortages existed. These appointees receive regular staff compensation and are obligated to serve the Veterans' Administration full time for a specified period upon completion of residency training.

An increasing number of undergraduate medical students receive training each year in VA hospitals and clinics. VA clinical clerkships are provided in the last 2 years of medical school. Physical diagnosis and other basic subjects are covered in the first 2 years. During the 1963 fiscal year there were about 8,500 medical school assignments consisting of approximately 6,900 clinical clerks and 1,600 first- and second-year students.

Twenty-nine dental residency programs and 40 dental internship programs were offered at 40 VA hospitals in affiliation with 35 dental and 4 medical schools. Veterans' Administration dental residency and internship programs constituted 21 percent of all dental residency programs and 19 percent of all dental internship programs in the United States.

The Veterans' Administration continues to make a major contribution to the Nation's needs in nursing education. Slightly more than one-tenth of the students graduating from schools of nursing each year are provided with student experience in VA hospitals. The number of VA hospitals participating in basic professional education for nurses increased from 49 in 1962 to 58 in 1963. More than 3,400 students from approximately 10 percent of the Nation's schools of nursing were provided clinical practice in these hospitals. There also were 284 non-VA registered nurses in advanced programs at 22 different colleges and universities who had VA clinical practice.

Training conducted in a variety of other disciplines under the supervision of academically oriented VA staff and university and college personnel provides valuable service to patients and aids dramatically in the recruitment of highly qualified full-time VA staff. During their period of training, most of the trainees are accorded the status of part-time employees with opportunity to obtain full-time employment at advanced salaries upon successful completion of training.

Funds requested for the education and training program are used solely to pay expenses incidental to education and training of employees that are journalized and paid under other medical appropriations or programs of the agency. These expenses include costs of tuition, travel, lecturers' fees, services, and materials required for the conduct of training activities.

Veterans' Administration personnel of all specialties and disciplines participate in intra and extra VA educational assignments including courses, institutes, seminars, or meetings offered by universities, medical schools, and professional organizations. A number of the VA meetings are conducted annually and are of such educational merit as to attract considerable attendance by staff of other Federal agencies and representatives of health agencies and medical colleges of the United States, Canada, and oversea countries.

Mr. THOMAS. Let us look at the narrative (reading):

The Veterans' Administration, for reasons of sustaining the quality of its program of medical care, is affiliated with the Nation's medical schools. In fiscal year 1963, 89 VA hospitals were affiliated through deans' committees with 78 medical schools. By virtue of these arrangements, the Veterans' Administration is inextricably linked to the advancing edge of medical progress.

That statement is inconsistent with that of Dr. McNinch yesterday that the medical colleges say you are doing a second-rate job.

This is a great boon to the veteran patient, whose treatment thereby is supervised by a physician who insists on knowing and doing the best. The academically oriented physician values his continuing professional development highly and knows that in addition to his responsibilities for patient care, he must invest itme and effort in his own education as well as in research and teaching.

I am trying to find personnel costs.

Mr. MONK. There are no personnel attached to this particular part of the program. We do pay lecturers.

Mr. THOMAS. It is paid not from "Medical administration" but from "Inpatient care."

NUMBER RECEIVING TRAINING

How many people are involved in the program?

Mr. MONK. On page 19–18 there is a breakdown of the total number of people involved.

Mr. THOMAS. Lectures for full-time staff. Is this figure of 2,800 supposed to be it, or 2,050 for 1963, 2,800 for 1964?

Mr. MONK. That is the number of lectures.

Mr. THOMAS. I am trying to find out how many people——

Mr. MONK. Down below, tuition and registration for full-time staff. Here we pay tuition and registration fees for a total of 2,726 people under this appropriation.

Mr. THOMAS. Tuition and registration for full-time staff. Number of staff, 2,721, 2,726. Are these all doctors?

Mr. MONK. It is broken down there, physicians, dentists, and nurses, 1,002. Therapists, technicians, et cetera, 1,006. Medical administrative employees, 718. This is where we pay tuition and registration fees to a college or university. Down below we send people to other stations.

Mr. THOMAS. Professor, may I interrupt you? Have you ever seen anything more disjointed and disconnected? Would it not be a whole lot simpler to spend 2 or 3 minutes with a little narrative and follow it up with this table so we can understand what you are talking about?

Mr. MONK. We have some narrative.

Mr. THOMAS. Where is it?

Mr. MONK. On page 19–16 and 19–17.

Mr. THOMAS. Where does it set out number of people enjoying this training in the narrative? That is what we are trying to find (reading):

More than 3,400 students from approximately 10 percent of the Nation's schools of nursing were provided clinical practice in these hospitals.

"Twenty-nine dental residency"—you are talking about dental students here. I am sure it is here, but you have to get a search warrant to find it. Do you have that search warrant in your pocket, so you can put your hand on it right quick?

Number of staff, total, does that mean total number of doctors and nurses and dentists and specialists you have or what does the word "total" mean?

Mr. MONK. It means numbers of staff, total number of staff that are traveling and being paid from this appropriation in connection with education and training activities.

Mr. THOMAS. You mean they have to travel before you pay the tuition; is that right?

Mr. MONK. That is right. They also go to professional meetings. They go to other stations.

Mr. THOMAS. Your next one down here, you come up with this requiring travel. Number of staff, total, you have an increase of 314 up to 8,023 requiring travel. Above there you got tuition for registration. You said something about travel up there and here is travel down here.

Mr. JONAS. This is a new system. I always was taught that you put the total at the bottom so you can add up the figures and put the total, but here you have to add up.

Mr. THOMAS. How many doctors do you have taking this program? How many nurses? I presume you break your doctors down between M.D.'s and dentists. How many technicians? Put it where we can understand it. What is your average cost of travel? How far do they travel? How often do they travel?

Mr. MONK. $127 is average.

Mr. THOMAS. You spend a lot of money for travel. Where do they go and how long do they stay when they get there?

Mr. WISE. These are usually short courses of 1 or 2 weeks' duration, refresher courses, professional meetings.

TYPES OF EDUCATIONAL TRAVEL ASSIGNMENTS

Mr. THOMAS. Most of your travel is right across the street to your medical school, is it not?

Mr. WISE. No, sir.

Dr. MUSSER. There are two types of travel. There is travel to courses where tuition and registration is necessary sometimes running a week or 2 weeks in duration. Also there is travel to medical and scientific meetings usually of 3 or 4 days' duration. They are located in various parts of the country. Thus the distances depend upon the location of the meetings.

Mr. THOMAS. How many of your doctors attended those seminars and what did it cost?

Dr. MUSSER. As indicated on the chart, the average cost of transportation——

Mr. THOMAS. I am talking about where doctors go to seminars, dental and medical societies, and they meet for 2 or 3 days.

Dr. MUSSER. A typical example would be the Society for Clinical Investigation in Atlantic City. It is a meeting that takes place each May. I would imagine that approximately 200 attend that meeting. We would probably pay the expenses of 100 of them and the rest go there on their own.

Mr. THOMAS. How do you draw the line as to whether they travel at Government expense?

Dr. MUSSER. If they are invited to present a paper at this meeting which is of scientific significance and it is a report of work they have

done in the Veterans' Administration, we will then pay their transportation. If they go simply to attend the meeting——

Mr. THOMAS. That is quite an honor. I notice in the justification, your research program, you come up with a figure which I have forgotten, the number of papers that were read at various medical societies. What was that figure?

Dr. MUSSER. Something over 2,000 during this fiscal year.

Mr. THOMAS. Everybody must have had a paper.

Dr. MUSSER. There are a lot of medical meetings.

Mr. THOMAS. You weaken your case considerably by that large number of 2,000 and then by your further statement of a lot of medical meetings. Are they remarks or really studies? Do you have eminent people in the field lecturing?

Dr. MUSSER. I think we have eminent people in the field. In our research program we have slightly under 7,000 projects, and these 2,000 reports each year represent reports of the research which has been accomplished during the course of that year.

Mr. THOMAS. We are going into your research program in a minute. This is education. They have to be educated before they do that research and become prominent; is that right?

Dr. MUSSER. That is our effort.

Mr. THOMAS. When you get them well educated, they pull out. How long do they stay with you?

Dr. MUSSER. This varies. We have physicians who have been with us for 25 years. We have a large number of physicians who joined the Veterans' Administration immediately after school.

NUMBER OF PHYSICIAN EMPLOYEES AND TURNOVER

Mr. THOMAS. I understand some of your oldtimers are very dedicated. What is the turnover among your M.D.'s throughout the Administration? How many M.D.'s did you have aboard say January 1 in all your 170 hospitals and your 18 doms? Do you recall the number?

Dr. MUSSER. I think we have that figure.

Mr. WISE. 4,730 full-time physicians, approximately 11,000 part time, which would fall under the categories of residents, interns, consultants or attendings. Dentists, 688 full time, approximately 700 part time.

Mr. THOMAS. Stay with your doctors now, the M.D.'s. How many of those do you have full time?

Mr. WISE. 4,700.

Mr. THOMAS. What is the turnover annually?

Dr. ENGLE. 12.1 percent for the last fiscal year.

Mr. THOMAS. For your larger number, what was the other number?

Mr. MONK. About 18 percent for the total.

Mr. THOMAS. Of your residents, what number is that?

Mr. WISE. We have five categories, regular, part time, community physician coming in so many hours a week, 892. Medical residents, 2,638. Medical interns, 168. Consultants, 6,020.

MEDICAL CONSULTANTS

Mr. THOMAS. When you get over to your research program, we cannot find that figure of 6,000 consultants.

Mr. WISE. 6,020.

Mr. THOMAS. That is the number of consultants you have in your research program?

Mr. WISE. No, sir; 95 of this number are in the research program.

Mr. THOMAS. I am talking about your consultants.

Mr. WISE. Within the agency there are 6,020 medical consultants, 95 of that number are working in the research program.

Mr. THOMAS. What do your consultants do? Most of them are engaged in your research program, are they not?

Mr. WISE. No.

Mr. THOMAS. I notice you set out the figure of 95, but I could not think that is correct. You have more than 95 people by 10 or 15 times that number coming in once or twice a week or two or three times a week or sometimes every day in your various hospitals from your medical schools in a consulting basis.

Mr. WISE. They are coming to treat patients, not to engage in the technical work of a research program.

Mr. THOMAS. You had better look at your records again. It is more than 95. It cannot be that low.

Mr. WISE. There are 6,020 coming into the hospitals. Of that number 95 are specifically working in research activities.

Mr. THOMAS. Only 95?

Mr. WISE. Yes, sir; the vast majority work in the patient-care areas.

Dr. MCNINCH. Mr. Chairman, I think I pointed out yesterday many of the physicians—very fine ones—become involved in teaching, patient care, and in research. I am sure that many of the consultants from the medical schools are involved in both teaching, patient care, and research in the hospital; but under our budgeting system they have to be charged to one program or another.

Mr. THOMAS. That figure of 95 is not within four city blocks of being accurate.

Mr. WISE. I think this may clarify the issue. Of the 6,020 consultants in the agency, these are individuals, 49 worked in the central office, 321 helped the area medical offices, 95 worked in research, 946 worked in neuropsychiatric hospitals, 4,203 in the general hospital, 21 in the domiciliaries, 385 in the outpatient clinics, a total of 6,020.

Mr. OSTERTAG. These are all part-time consultants?

Mr. WISE. That is correct, sir.

CONSULTANTS PARTICIPATING IN RESEARCH

Mr. OSTERTAG. In what way is a consultant directly associated with the research? You say he is not in the technical end of it in the laboratory but only in the patient end; is that correct?

Dr. MUSSER. Sir, I would like to answer that question. We have long had a policy that no medical school faculty member would be paid for actively participating in any type of research project.

Mr. THOMAS. Why? What is the sense of that?

Dr. MUSSER. We consider that the opportunity to do research is a privilege and we should not pay medical school people for having that privilege.

Mr. THOMAS. You are looking for brains.

Dr. MUSSER. We get the brains because they will collaborate with us, and it is not necessary for us to pay them. Under certain circumstances, where we need expert consultation——

Mr. THOMAS. You mean you put up your staff against the staff of these medical colleges that do the training of your staff? Why do you have them over there if they are not better than your people? Let us save this fee of 6,000 consultants that you are paying out every year. Let us save that. You have 6,020. Why?

Dr. MUSSER. Because they contribute materially to the standard of care.

Mr. THOMAS. These top brains in the medical profession are not in the Veterans' Administration; they are in the medical colleges and research institutions. Everybody knows that. You mean you have a rule you do not let them come over and take part in your program? Why do you build your hospitals adjacent to them?

Mr. MONK. I think what Dr. Musser said was that we have many doctors affiliated with medical schools—on the faculties of medical schools—that come into our facilities to do research, but we do not pay them a consultant's fee.

Mr. THOMAS. He said only 95 a while ago. Certainly 95 is not many in 170 hospitals.

Mr. MONK. Only 95 are getting compensation as a consultant for participation.

Dr. MUSSER. The only circumstance that would cause us to pay a consultant in research is when he provides us with expert opinion which we need in the conduct of the research, but when he is not a participant in the research project per se.

RESEARCH FUNDS FROM GRANTS

Mr. THOMAS. What is your connection with HEW? Do you get any funds out of HEW for research? Do you get any funds out of the National Science Foundation for research?

Dr. MUSSER. We get grants, our people get grants from the National Institutes of Health. We do not get money from the National Science Foundation.

Mr. THOMAS. The NSF is mainly engaged in the physical sciences, not in the biological and medical sciences, although they do have a small biology program. Why do you accept money from HEW?

Dr. MUSSER. Because our investigators apply for grants, their work is considered good enough to qualify for grants; therefore, they get the grant.

Mr. THOMAS. We had a prohibition in the Independent Offices Appropriation Act last year against one agency contributing to another. What became of that? Did it apply only to the National Science Foundation?

Mr. OSTERTAG. Yes.

Mr. THOMAS. The reverse will have to be adopted. That is the agencies being prevented from receiving it.

Dr. McNinch. These grants from NIH are not made directly to the Veterans' Administration but are made to the medical school and worked frequently as a joint effort on the part of both the medical school and the VA.

Mr. Thomas. Your table shows they were made directly to the VA.

Mr. Ostertag. Is this actually a transfer of funds from HEW to the Veterans' Administration?

Dr. McNinch. No, sir. If you look on page 20–19, the $4,448,000 in NIH is under a column headed "Administered by an academic institution."

Dr. Musser. Sir, the only instance where a transfer of funds——

Mr. Thomas. What is the tie-in? There is bound to be a tie-in some place. If you do not get funds, do you claim you do not get any funds from NIH?

Dr. Musser. No, sir.

Dr. McNinch. One exception, the contract for cooperative cancer chemotherapy study, very special, a national cooperative study.

Mr. Thomas. What do you get for that?

Mr. Gleason. $1,189,000.

USE OF NIH RESEARCH GRANTS IN VA HOSPITALS

Mr. Thomas. These universities and colleges adjacent to your hospitals gets funds from NIH. Do you have some working arrangement that if they will take their funds or their brains and come to your facility, that you will furnish free rent and maybe some equipment with your own funds and they will conduct their research in the VA installation?

Dr. Musser. No, sir.

Mr. Thomas. There is no tie-in with them whatsoever?

Dr. Musser. We have circumstances where we encourage the collaboration of medical school faculty with our own physicians in the pursuit of research objectives important to VA medicine.

Mr. Thomas. Off the record.

(Discussion off the record.)

Dr. Musser. Approximately 2,000 of our physicians have faculty appointments in medical schools. For this they receive no pay but they are identified as members of the faculty. Being members of the faculty they are eligible to apply, through the university, to NIH for grants. If they are fortunate enough to get the grants they may do their work in our hospitals and in some cases they may collaborate with university facility members.

Mr. Ostertag. In other words, the VA facilities or hospitals are used or employed in connection with these research grants that are going to educational institutions?

Dr. Musser. Only if the recipient of the grant happens to be a VA physician. In other words, a faculty member of a medical school who receives a NIH grant would not work in a VA hospital unless collaborating with a VA physician.

I can tell you of circumstances where, in the beginning of certain medical schools like UCLA in Los Angeles, they had no physical plant for a short time and some of their scientists did work in our hospitals. However, as soon as their physical facilities were established that was terminated.

Mr. THOMAS. You people have not been in the research business more than 10 years or so. It was started right here in this room. In your basic act, if you get a magnifying glass, you would find the word "research" maybe once or twice in a left-handed way. You remember that, do you not?

Dr. MUSSER. I remember reading it; yes, sir.

USE OF MEDICAL CONSULTANTS

Mr. BOLAND. You say of 6,020 consultants you have 95 in research and 4,200 in your general hospitals and 946 in the NP's, and so forth. What is the difference in the work they do? You say outside the 95 these people actually treat patients. This is the difference, treating patients, and doing work on medical research. You have 4,200 coming into your general hospitals. What do these consultants do?

Dr. MUSSER. They make rounds and——

Mr. GLEASON. What do you mean by "making rounds"?

Dr. MUSSER. They will join with the staff and visit patients.

Mr. BOLAND. And treat patients?

Dr. MUSSER. And treat patients. They will also conduct lectures.

Mr. BOLAND. The 95 in medical research do not do this at all?

Dr. MUSSER. No, sir. These are highly skilled technical advisers. Whenever we need expert advice and do not have it available in the Veterans' Administration we may pay a consultant for services he can render.

MEDICAL AND PROSTHETIC RESEARCH

Object classification

[In thousands of dollars]

		1963 actual	1964 estimate	1965 estimate
11	Personnel compensation:			
	Permanent positions	17,227	19,615	20,779
	Positions other than permanent	1,006	1,036	1,097

Financing:			
Comparative transfers to or from other accounts	16	34	
Unobligated balance brought forward		−648	−105
Unobligated balance carried forward	648	105	
New obligational authority (appropriation)	30,500	33,742	36,987

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $780,000 (1963 adjustments, −$27,000); 1963, $1,286,000; 1964, $1,286,000; 1965, $1,286,000.

Mr. THOMAS. Let us look at "Medical and prosthetic research." This is broken down on page 20–1. You show $35,817,000 for medical research and $1,275,000 for prosthetic research. The total of these two items is $37,092,000 but you will finance $105,000 of that from unobligated balance brought forward so you actually are requesting $36,987,000 for 1965. We will insert the table on page 20–1 in the record.

[1] Includes $632,658 actual fiscal year 1963 unobligated balance planned for expenditure in fiscal year 1964.

[2] Includes $105,000 estimated fiscal year 1964 unobligated balance planned for expenditure in fiscal year 1965.

BEGINNING OF VA RESEARCH

Mr. THOMAS. When did you get started in your research, 10 or 11 years ago?

Dr. MUSSER. It started in 1946.

Mr. THOMAS. Was it that long ago? I thought it was 1953 or so. We had Professor Farber and four or five more distinguished professors in here and they really put it over. Later I will read from that hearing to refresh your memory.

RESEARCH EMPLOYMENT

Let us put this in the record: Your average employment was 2,800 in 1963, 3,013 in 1964, and you want to increase it by 138 to 3,151 in 1965.

You break it down by activities but I cannot follow it. In 1963 you had 903 in medicine and that goes up to 988 in 1965; in surgery you had 400 in 1963 and that goes up to 459; in psychiatry you had 328 in 1963, it jumps to 356 in 1964 and 15 more to 371 in 1965; in neurology you had 98 in 1963 and that goes up to 113, and so forth, aging, pulmonary, radioisotope, preclinical, and dental. The total in 1963 was 2,800 and it goes up to 3,151 in 1965.

RESEARCH COSTS BY OBJECT

In your costs by object, your personnel compensation in 1963 was $18,051,384 and it jumps to $21,721,000. The increase over 1964 is $1,135,000. Are you under the pay act or do you have a special law taking care of your doctors and dentists?

Mr. MONK. We have a special law.

Mr. THOMAS. How much was the increase?

Mr. MONK. The increase parallels the classified increase.

Mr. THOMAS. The same?

Mr. MONK. Yes, sir.

Mr. THOMAS. Plus, you have how many more employees than 1964?

Mr. MONK. 138.

Mr. THOMAS. Your travel and transportation of persons goes up to $308,000. Why are these researchers traveling so much? You had over $1 million travel going to school. Why are the researchers spending $308,000 for travel?

Then you have rent, communications, and utilities. That was $160,000 in 1963, and it jumps up to $172,000 in 1965.

Other services was $1.4 million in 1963. That goes up how much?

Mr. WISE. It drops $58,000.

Mr. THOMAS. Where is it in your justifications? Where is your table and narrative?

Mr. WISE. Page 20–18.

Mr. THOMAS. On page 20–17 is where I found a figure of $767,000 for additional personnel. You say:

> A net increase of $1,225,000 is required, comprised of increase of $540,000 for Public Law 87–793 and within-grade increases for existing staff; a decrease of $82,000 for the one less workday occurring in fiscal year 1965; an increase of $767,000 for the employment of 138 additional research personnel to augment research projects underway and undertake new studies. The increase of $1,225,000 includes $1,135,000 for personnel compensation and $90,000 for personnel benefits, respectively.

Where are your consultants?

Mr. WISE. Within this total there are three additional consultants.

Mr. THOMAS. Giving you a total of how many?

Mr. WISE. The description of the positions is on page 20–22.

Mr. THOMAS. Explain the increase for other objects. In object class 21 you have an increase of $18,000 to pay the travel expenses of employees recruited in scarce categories to their first duty station and travel expenses required in connection with new research studies to be undertaken.

In object classes 22, 23, 24, and 25, you have an aggregate net increase of $20,000 to provide for additional transportation, rental, communications, utilities, printing, and reproduction expenses related directly to the additional research studies to be undertaken.

In object class 26 you say [reading]:

An increase of $752,399 is required for the procurement of supplies and materials for new research studies; expansion of animal laboratory activities; and initial stocking of new research space made available by construction.

What are they? How many animal hospitals are you building? This is pretty unsatisfactory. What are the essential equipment items?

Well, if you are not interested why should we be interested? Maybe we should eliminate it all.

Mr. WISE. This page 20–22 gives a breakdown.

Mr. THOMAS. You have your consultants here of 33 and awhile ago you said you had 95.

Mr. WISE. Ninety-five referred to the number of actual individuals.

Mr. THOMAS. You have 33 here.

Mr. WISE. That is full time equivalent, that is measuring how often these 95 are used.

Mr. THOMAS. Where is your 95 figure set out?

Mr. WISE. Our estimate is for both body count and full time equivalent. It would be a great thing for Government if we could settle on full time equivalent.

Mr. THOMAS. Is it 95 or 33?

Mr. WISE. Ninety-five individuals.

Mr. THOMAS. Why do you not show the 95? Why do you have this 33? You show an increase of 3 for a total of 38.

Mr. WISE. These 95 individuals do not work every day.

Mr. THOMAS. Let us take this table at page 20–22; printing and reproduction, $76,000.

Under other services you have repairs to furniture and equipment, $250,000; maintenance and repair services, $116,000; other contractual services, $1,226,000.

Under supplies and materials you have office supplies, $125,000; drugs, medicines, and chemicals, $691,000. That goes up $122,000. For other medical and dental supplies, $1,974,000. That goes up $380,399. Operating supplies and materials, $1,002,000. That is up $202,000. Maintenance supplies and materials, $118,000. That is up $23,000. Your total suplies and materials is up $752,399.

Well, you still have not told us anything.

Mr. WISE. Mr. Chairman, there is $6,614,000 in the construction budget for new facilities. These are the operating moneys required to put these facilities to use.

Mr. THOMAS. You do not charge that under construction, fully equipping new buildings?

Mr. WISE. No, sir; that is in this appropriation.

Mr. THOMAS. Where is this procured?

Mr. WISE. Geographically, depending on the area where the new facility is constructed.

Mr. THOMAS. You do not have but two procurement stations, one in New Jersey and one in Hines. You closed the one in Los Angeles?

Mr. WISE. No, sir.

Mr. THOMAS. It is still there? The one in Los Angeles buys the equipment and the one in Hines buys food and the one in New Jersey, what do they buy?

Mr. WISE. There are some key items in each but many will stock other items to cut transportation costs.

RESEARCH IN AGING

Mr. BOLAND. On page 20–20 you have comparative extra—VA research costs. You have an increase of $61,500 for Brandeis University. What would this increase be attributable to?

Dr. MUSSER. Sir, that is a study of the remaining Spanish-American War veterans being conducted jointly by the Veterans' Administration, the University of Chicago, and Brandeis University. It is a research-in-aging project.

Mr. BOLAND. You have nothing for the University of Chicago this year?

Dr. MUSSER. I think the University of Chicago was in 1963.

Mr. BOLAND. How long has that particular program been running?

Dr. MUSSER. There was a preliminary study of the Spanish-American War veterans done 3 years ago at Boston. This created sufficient interest so this larger project was instituted. This new project is less than a year old.

Mr. BOLAND. How long will it run?

Dr. MUSSER. It will run for slightly less than 3 years.

Mr. BOLAND. What will be the total amount of money expended?

Dr. MUSSER. The total amount of money that will be expended will be $175,000.

Mr. BOLAND. Any questions on this?

SCIENCE INFORMATION EXCHANGE

Mr. OSTERTAG. I note in the table on page 20–20 that you estimated $65,000 for the National Science Foundation in 1964 but you do not anticipate any funds in 1965. What was this for?

Dr. MUSSER. You may recall the Sciences Information Exchange is more or less a clearinghouse of research information. As of last year the funds of that foundation were transferred to the National Science Foundation, and we had to pay our $65,000 as our contribution

to the support of the SIE. However, beginning in 1965, SIE will have its own budget and we will no longer be required to contribute to its support.

INCREASES IN RESEARCH COSTS

Mr. BOLAND. On page 20–16 you say [reading]:

The estimate of $35,817,000 for fiscal year 1965 expenditures contemplates an increase of $2,751,342 over the $33,065,658 amount planned for expenditure in fiscal year 1964. Total expenditures planned for fiscal year 1965 are comprised of $34,317,000 for operational research and $1,500,000 to provide object class 31 equipment for newly constructed research facilities. The latter item formerly (until fiscal year 1963) was financed from amounts appropriated under the "Construction of Hospital and Domiciliary Facilities" appropriation.

Put in all of page 20–16 and the table on page 20–17 indicating the hospitals in which this equipment will be installed.

(The pages follow:)

COST CHANGES—MEDICAL RESEARCH

The estimate of $35,817,000 for fiscal year 1965 expenditures contemplates an increase of $2,751,342 over the $33,065,658 amount planned for expenditure in fiscal year 1964. Total expenditures planned for fiscal year 1965 are comprised of $34,317,000 for operational research and $1,500,000 to provide object class 31 equipment for newly constructed research facilities. The latter item formerly (until fiscal year 1963) was financed from amounts appropriated under the "Construction of hospital and domiciliary facilities" appropriation.

In addition to amounts provided for the medical research program by direct appropriation, an amount of $7,971,000 was available in fiscal year 1963 in grants from the National Institutes of Health and from other organizations sponsoring research. It is anticipated that the same level of funding from these outside sources will be available in fiscal years 1964 and 1965. An indeterminate amount of support to the research program also is furnished from funds budgeted for hospital operations for such services as housekeeping, personnel, fiscal, and engineering at the hospital level. This estimate does not include funding of major research construction projects which are provided under the "Construction of hospitals and domiciliary facilities" appropriation.

Fiscal year 1965 operational research expenditures of $34,317,000 will provide moderate increases over fiscal year 1964 expenditures to permit addition of 138 new research employees. The increase also will cover Public Law 87–793 and within grade salary increases for existing staff and provide additional supplies, equipment, and other services to augment existing research studies and implement new studies. Efforts will be directed toward consolidating the gains of previous years and assuring that proper balance and normal growth continue in the program.

Beginning in the 1963 fiscal year, the medical and prosthetic research appropriation assumed payment for object class 31 equipment required in connection with all research space construction projects programmed in the fiscal year 1963 and subsequent year budget submissions. These include projects where research space is to be provided as part of major construction and alterations, hospital modernization and replacement, and additional hospitals. Subject to the availability of total fiscal years 1964 and 1965 medical research amounts reflected in this estimate, the Agency proposes to earmark funds sufficient to result in applied costs of $1,828,057 in fiscal year 1964 and $1,500,000 in fiscal year 1965 specifically for object class 31 equipment required for new research space provided under the construction program. If construction delays, changes in scope, or substitution of research projects occur, the earmarked operating appropriation "no year" funds will be retained exclusively for the above stated purpose with any savings applied to equipment requirements of future projects.

The fiscal year 1965 request of $1,500,000 for equipping newly constructed research facilities is comprised of the following:

Station	Construction of hospital and domiciliary facilities appropriation project No.	Estimate of initial object class 31 equipment cost
Albuquerque, N.M.	5112	$40,000
Ann Arbor, Mich.	5183-5189	40,000
Boston, Mass.	5251	300,000
Brooklyn, N.Y.	5640	20,000
Buffalo, N.Y.	5633	20,000
Kerrville, Tex.	5362	5,000
Lake City, Fla.	5238	30,000
Los Angeles, Calif.	5520	15,000
Louisville, Ky.	5178	20,000
Madison, Wis.	5209	60,000
Martinsburg, W. Va.	5136	15,000
Oklahoma City, Okla.	5126	200,000
Palo Alto, Calif.	5542	20,000
Pittsburgh, Pa.	5396	100,000
St. Louis, Mo.	5188	5,000
Seattle, Wash.	5182	325,000
San Francisco, Calif.	5507	250,000
Sepulveda, Calif.	5530	35,000

PROCUREMENT OF RESEARCH EQUIPMENT

Mr. THOMAS. How is that equipment procured? Is it procured by open competitive bid or negotiated bid?

Mr. MONK. It is either off the GSA schedule or on open competitive bid.

Mr. THOMAS. GSA will not stock most of this. It is scientific equipment.

Mr. MONK. Most of it we would buy by competitive bidding.

Mr. THOMAS. Does your own merchant prince buy it or how do you buy it? Common items like beds you buy yourself.

EXAMPLES OF VA RESEARCH PROJECTS

Mr. OSTERTAG. Mr. Chairman, may I say that I think it might be helpful to have for the record a brief summary of some of the achievements in the field of research, particularly in recent days. We have had this information in the past and I thing it might be well to have some indication on the record.

Mr. THOMAS. He sets out 25 or 30 paragraphs begining on page 20-6.

Mr. BOLAND. Put in the record pages 20-6 through 20-11.

(The pages follow:)

MEDICAL RESEARCH

The functions of the Veterans' Administration, Department of Medicine and Surgery include medical research as an integral part of the complete medical and hospital service provided for the care and treatment of veterans. Patient care, medical research, and education necessarily are interrelated and constitute the principal means of providing eligible veterans with high-quality medical care.

As presently consituted the Veterans' Administration system of hospitals and clinics makes available a unique and unparalleled resource for the advancement of medical science. Veterans' Adminisration staff recognize the obligation to use this source to its full capacity for better care of patients presently and in the future. By providing the opportunity to engage in research, the Veterans' Administration is enabled to attract and retain thoroughly competent physicians and

scientists; to provide an intellectual climate stimulating to all VA medical employees; to contribute to the development of new diagnostic and treatment procedures, and to remain in the forefront of developments in the field of medicine.

The following information about VA's medical research program will present an idea of the scope of activities in fiscal year 1963:

1. VA installations with research programs numbered 163 which included 148 hospitals either with or without outpatient clinics and 15 outpatient clinics not located in a hospital setting.

2. A total of 5,500 research investigators conducted 6,599 separate research projects.

3. These investigators had 2,490 articles published in professional and scientific journals, and of this number, 2,034 appeared in national publications.

4. Totals of 3.717 professional papers, 186 exhibits, and 135 motion pictures were presented by investigators before professional and scientific audiences.

Some examples of current VA medical research investigations which attest to the high caliber of the program are as follows:

1. Because the blood-forming tissues of the body are especially vulnerable to damage from exposure to nuclear fallout, measures for prevention and repair of damage to the tissues have become of great importance. Besides investigation of substances capable of stimulating production of new cells, much remains to be learned about the tissues themselves before such measures can be applied successfully. VA investigators are studying means for repacements of damaged cells, effects of storage in cell banks, characteristics of the cells on tissue culture, and mechanisms utilized in the transportation of nutritional elements, to name only a few of the tissue studies now in progress.

2. Kidneys, livers, and other organs can be transplanted from one person to another only when all components of the transplanted tissue are accepted by the recipient. Unless complete assimilation is possible, the unacceptable constituent may produce such undesirable responses as those induced by pollen in a hay fever sufferer up to the severe reactions of anaphylactic shock. These may be induced by any part of the organ itself or by the blood it contains. Human hemoglobin has many components, each with different immunologic characteristics. These must be separated and identified so that immunity can be established to any substance which proves offending as an important step toward the successful transplantation of organs. Investigation is proceeding along these lines in a number of research laboratories in VA hospitals.

3. A nuclear reactor in a VA installation has enabled investigators to analyze the elements in serum and other biologic fluids with a degree of accuracy unthinkable by other methods. Through neutron-activation analysis, exact amounts of trace elements in the circulation can be determined and followed in any change throughout the course of a disease. This makes possible identification of toxic substances on the one hand and of therapeutic approaches on the other to a variety of pathologic conditions.

4. Certain radioactive substances have been observed to concentrate in tumors of the intestinal tract and others to have an avidity for tumors by injection into the bloodstream. The latter substances are capable of emitting radiation, thus focusing their effect on the malignancy and sparing the normal body. Of equal importance, this makes possible the identification of malignant growth, offers a means of ready identification of cancerous areas, demonstrates their spread, and indicates to the surgeon the health or malignant involvement of questionable parts.

5. As growth and behavioral characteristics of cancer cells are learned, early detection becomes possible. Diagnosis during inception of cancer appears a logical probability and wholly new avenues to treatment are opened. A few examples of such characteristics follow:

(*a*) Metabolic substances labeled with radioisotopes are absorbed by the red blood cells of persons with certain types of cancers much more readily than the cells of normal people.

(*b*) One form of cancer causes gamma globulin to disappear. This renders the patients susceptible to infections which would be harmless in the presence of normal gamma globulin.

(*c*) Circulating hormones are greatly altered in amount in the presence of certain cancers.

(*d*) The many enzymes in the blood or tissues are altered by cancers of the lung in patterns so specific that the identification of types which are

otherwise indistinguishable becomes possible. Such precision may become of extreme importance as specific chemotherapies become available.

6. A VA investigator has perfected the technique of assay of insulin antagonist glucagon. This project is now being extended as a large-scale study of the genetic factors that predispose to diabetes in the Dallas, Tev., general population in cooperation with the Dalles Diabetes Association. As a result of the project, a much more accurate definition of persons who can be expected to develop diabetes during their lifetime becomes possible than afforded by any techniques hitherto available.

7. The cooperative study of antihypertensive agents has reached conclusive results in the simplest and most effective medication combination for reducing blood pressure in mild and moderate hypertensives. A new cooperative study has been designed to apply this therapy to large numbers of patients in an effort to answer the pressing question of whether blood pressure reduction in these hypertensives delays vascular aging and prolongs life.

8. The definite reversal of atherosclerosis through modification of the blood fat content in a colony of rabbits has been demonstrated.

9. A technique has been designed for objectively evaluating the efficacy of drugs used for angina pectoris. The first observation, completely unexpected, was that nitroglycerin which is traditionally the therapy for this disorder is of no greater benefit than placebo tablets.

10. Recognizing the importance of research on hormones, a pituitary bank was established by the Director of the Research Service to enable VA investigators to have an adequate supply of these critical substances. Seven thousand glands have been contributed by 57 hospitals to date. New methods of extraction have been devised which already have increased greatly the yield of several important hormones which will be used, among other purposes, in the correction of hormone balances altered from normal by cancer and other pathologic conditions.

11. The action of hormones is short lived. To obtain a prolonged effect, it previously was necessary to administer the substance repeatedly or to implant it in a pellet for a slow absorption. Attachment of a chemical radical to a hormone used in the treatment of prostatic malignancy, however, has made it possible through a single dose administered to young rats to induce high blood level of the hormone and maintain that level throughout their entire lives. The duration of the effect in persons has been found to vary with dosage and to be closely controllable for periods ranging from 3 to 6 months.

12. Assays of other hormones present in exceedingly small amounts in human serum have been made possible by newly devised techniques. Three new adrenal hormones from the adrenal gland have been identified through a new technique for separating them which was developed by a VA investigator.

13. Estrogen determinations have required such large amounts of blood that they have been nearly impossible to make during physiologic states which are not accompanied by unusually high levels. With a sensitive method recently developed, estrogen can be determined in men or even in women during menstruation when the level is at its ebb. The technique is expected to permit accurate following of estrogen levels in a wide variety of clinical disorders. Similarly the hormones in plasma can be identified by a method which is making it possible to observe such slight changes in their levels that they can be followed during the course of an acute disease. Such minute observation permits precise knowledge of the degree and area of disruption of these circulating substances and points the direction to be taken for reestablishment of the normal balance. For example, there is a progressive decrease in the utilization of one adrenal hormone as aging takes place which indicates that benefit can be expected by replacing the loss of this regulator of body function.

14. Thyroid preparations, effective in a number of clinical disorders, can now be assayed by a new chemical method which permits closer quality control of the product.

15. Patients with both pulmonary emphysema and peptic ulcer have been found to have abnormally great excretion of hormones from the cortex of the adrenal gland. A cause and effect relationship is suggested which may lead to therapy for these widely prevalent conditions.

16. Vaccines against staphylococcal infection are being improved through discovery of potent activity of the surface of staphylococcal cells. These vaccines are being used in previously intractable cases of osteomyelitis, a chronic infection of bones now increasingly resistant to antibiotics.

17. An injection of toxoid 19 years after the initial series has been shown to restore the earlier level of resistance to tetanus.

18. A tropical disease caused by a minute worm is believed to be afflicting 30 million people in the world, and 15 percent of the Puerto Ricans in New York, Philadelphia, and Chicago. Diagnosis has required a time-consuming study of the eggs of the parasite in either the stool or biopsied rectal tissue, but this technique is now being replaced by a highly reliable blood test developed by a VA physician.

19. Fertilizer composed of starling guano has been studied as a cause of histoplasmosis, a lung disease resembling tuberculosis. This provides one of the first clues to the heretofore unknown means of dissemination of this widespread disease. Blood tests for this disease have been markedly improved both in sensitivity and in specificity increasing the accuracy of screening measures and diagnostic techniques.

20. A chemical, well known as being capable of inducing hallucinations, has been discovered to be regularly present in the circulating blood of patients with certain types of malignancies.

21. There appears to be a difference in response to stain between the white blood cell lymphocytes in blood from schizophrenics and those from normal persons. This suggests the pathologic condition has accompanying body changes which may render it diagnosable by physical means and offers another approach to early diagnosis and assaying effects of treatment.

22. It is possible to obtain distinctive magnetic patterns for a number of the tranquilizing drugs recovered from the urine of the patients under treatment. Through improvements in precision of analytic techniques, the specific drug can be identified and the amount ingested determined.

23. Ingestion of alcohol has been shown to cause an excretion of magnesium in the urine. This suggests a pharmacologic approach to alcoholism through replacement therapy of this calming element.

24. An instrument has been developed for locating the conduction system in the heart. It is being used in most surgical centers where open heart surgery is performed, preventing inadvertent surgical damage to unseen nerves because of any inability to identify their presence.

25. A method of rapidly measuring the amounts of oxygen, anesthetic gases, nitrogen and carbon dioxide in the blood and fluids has been developed making it possible to follow changes in these gases during diagnostic and therapeutic procedures, and guard against dangerous levels.

26. A number of granulated, dried tissues are being used successfully as protheses for the repair of eardrums.

27. During studies on effects of magnetic fields on growth, it was observed that direction of flow of the brain's electrical current was reversed during anesthesia. Applying these observations, it has been made possible to increase or diminish the functional level of brain activity at will by altering intensity of an externally generated magnetic field.

28. The virus-causing measles in man and the one causing distemper in dogs have been shown to be related, and possibly to be a single virus capable of inducing either disease depending upon the species of its host.

Mr. BOLAND. What is the total amount we have spent since VA has been in medical research? It started with about $10 million. You must have spent around $175 million in medical research. We would like to have some specific or particular accomplishments you can point to with pride. And $175 million is a lot of money. Since 1955, since I have been sitting here, I think it is in that neighborhood.

Mr. WISE. In the TB hospitals we saved over $100 million in new hospitals in that area alone.

Mr. THOMAS. How can you take credit for that?

Mr. BOLAND. How did you do it?

MENTAL RESEARCH

Mr. THOMAS. When you got in the research business, you brought in here some of the great professors from the best medical colleges. I remember Professor Farber of the Harvard Medical College. And you had a Dr. Kline from New York, a very distinguished gentleman. And who was that distinguished gentleman from Duke Medical Col-

lege in North Carolina, Dr. Sanger, probably one of the leaders in biology, was it not? And we have done less than anybody, I presume, in mental research, accomplished less, to say the least, and one of the key selling points in getting in the research business was that you had the patients and you had the records and you were going to do wonders. That was reiterated and reiterated and reiterated and I find from your own research program that is already in the record you have perhaps in the biggest field the smallest number of doctors working on it. In medicine you have 903; in surgery you have 400; in neurology, 328.

Dr. Kline was selling the program. He was a great advocate. This is in the hearings of calendar year 1959 [reading]:

Dr. KLINE. The only way we are going to reduce the economic burden of caring for the veterans—

he was talking about neurology—

and this constitutes 50 percent of your cases, is through research. There is no industry in the country that could keep alive with less than 5 percent of their budget going for research.

Well, I imagine a whole lot of industries in this country have less than that in their budget for research. [Continuing reading:]

We are not utilizing the potentialities that we have. The Veterans' Administration has done a good job but a very limited one to date.

That is still true. [Continuing reading:]

They have attracted a few good men and have done a few very promising studies. The possibility of cutting back at this point is disastrous. The morale which has been built up would be completely destroyed by a reduction in the research budget.

What was the figure that was being proposed for that year? As I recall, it was $15 million. Now listen to this:

We (meaning VA) have the patients that no one else has, and we have problems that no one else has in terms of how much it costs. It is my desire as well as yours to go into this project and I do not think we would need to spend the tremendous amount we spend for hospital and neuropsychiatric patients if research were furthered. I would like to run a race with my friend, Dr. Farber here.

That is the eminent and great Dr. Farber who perhaps is the leading world researcher in cancer. [Continuing reading:]

I think the breakthroughs in the area of mental diseases are as close or closer than they are in the field of malignancy.

I doubt many people will agree with him there. Then I say—

Stop right there. You can't beat what you have already said.

That is just a sample of it. We could go back years prior to that. What became of all that effort you were going to make in your psychiatric research? You went in the research business largely through that door and you have done less in that field than perhaps any other.

CANCER RESEARCH

You set out your accomplishments. You are even going in competition with Dr. Farber. On page 20–7 you set out under your paragraph 5 [reading:]

As growth and behavioral characteristics of cancer cells are learned, early detection becomes possible.

That is pretty broad and loose. You are not taking credit for detecting them are you?

Dr. McNinch. I do not think anybody could take complete credit for anything.

Mr. Thomas (reading):

Diagnosis during inception of cancer appears a logical probability and wholly new avenues to treatment are opened.

Have we discovered anything along that line? Professor Farber says we have 20,000 pieces of basic research and he is positive that the answer to the whole malignancy problem is in the work that has already been done and all you have to do is find it, and he thinks it could come tonight or tomorrow night or Saturday night, but he is very positive you have the answer in the work that has already been done. Off the record.

(Discussion off the record.)

Mr. Ostertag. We have placed pages 20–6 to 20–11 in the record. I think these pages of the justification fairly clearly answer the question I raised as to what you have done in this field or what you have accomplished. Is that correct?

Dr. McNinch. I would like to make this comment: Rarely in medical research do you have a dramatic achievement such as the discovery of insulin or the discovery of cortisone. Most medical research develops little bits that eventually get together and have meaning.

RESEARCH ADVISORY COMMITTEE

Mr. Boland. Who helps you set up your research programs? Do you consult with Dr. Farber and other individuals and institutions?

Dr. Musser. Yes. We have a formal advisory committee and I think we enjoy fine relationship with the outstanding scientists of the country, of which Dr. Farber is one. We can turn to them at any time.

COORDINATION OF RESEARCH EFFORT

Mr. Ostertag. In view of the fact the Veterans' Administration has one of the largest medical organizations in the world, it lends itself to an up-and-coming medical research program. I do not believe anyone quarrels with the need or the desirability of the program. But we must bear in mind that the Government of the United States is spending many millions of dollars in medical research each year, and that public and private funds are also going into this vast area of research. I am just wondering to what extent your activities are coordinated with those of other institutions and agencies. In other words, are we duplicating? Are we all trying to find the same answer to the same thing?

Dr. Musser. I do not believe so. I would like to tell you how we operate in terms of coordination. There is a VA member on every NIH study section and council. In this way we hear what is going on in NIH. We then have a basis for comparison of our own activities with theirs.

Furthermore, we have a continuing file of our own research activities and they are reviewed so that where there is duplication we can get our people to coordinate their activities rather than duplicate them, and in the last several years we have made a great effort to

accomplish these things. I think more can be done along that line. But one thing we have learned is that while two doctors may be working in research in one field, each is working on a somewhat different question and the results of the several projects may make a greater contribution to one disease than a single project.

RESEARCH IN PSYCHIATRY

If I may, I would like to give some figures I have in regard to the psychiatric accomplishments. I think this is an interesting segment. Much has been made of the accomplishments in the field of TB, and I think it has been a salutary accomplishment. On the other hand, we have done a major amount of work on the effectiveness of various tranquilizing drugs in psychiatric disorder.

In 1954, before these drugs became popular, we had 50,128 psychiatric beds in the Veterans' Administration and we admitted 29,190 patients and discharged 21,120.

In 1963, after we had learned how these drugs worked and understood the patients for which they were best suited, we found there were 59,021 beds in VA hospitals for psychiatric patients. We were able to admit 51,304 patients and discharged 53,435 patients, which is almost twice the number of admissions and discharges in 1954.

I have not tried to place a dollar value on this but in terms of taking care of more patients and more rapidly discharging patients so they could live active lives in their communities, this alone has been a major achievement.

Mr. OSTERTAG. You attribute that mostly to drugs?

Dr. MUSSER. Drugs and other care. There are other things besides drugs that help restore them.

Mr. BOLAND. How many of the 53,435 that were discharged were readmitted?

Dr. MUSSER. That I cannot tell you.

Mr. BOLAND. Is that not a pretty good figure to have? You say there were 53,435 in 1955 released and returned to society. How many of the 53,435 came back in the next 5 years or so?

Dr. MUSSER. I would assume a fair number.

Mr. BOLAND. Maybe 50,000?

Dr. MUSSER. I could get that figure. The important thing is they were able to be back in civilian life.

Mr. THOMAS. Is it not generally understood the medical profession does not know any more today than it did 150 years ago as to the why and wherefore and the cause of mental disturbances? Where is the basic research being done along that line, going to the root of the whys and wherefores? The medical profession does not know any more now than it did 150 years ago in this field. I think that is an accepted fact.

Dr. MCNINCH. If this is true, I think it is an indication there are many problems in medicine that are extremely difficult to determine.

Mr. THOMAS. That is right; but what has the medical profession done about the basic causes?

Mr. OSTERTAG. May I just add to what the chairman has said, is it not basic and fundamental in matters of research that you must find the cause in order to achieve a cure?

Dr. McNinch. Yes; I think that is true, but it does not make it easier to find the cause. And mental diseases is not the only area where it is difficult to find the cause. Infectious hepatitis has for years been an area where research has been going on to find the cause.

Mr. Thomas. The NIH has a tremendous section doing purely basic research in the field of mental activities. What is the generally accepted result of their activities in basic research—not treatment—in the field of mental disturbances?

Dr. Musser. I think we are making a great deal of progress. We are learning much about the fundamental mechanism of nutrition of the brain and the chemical reactions in the brain. You have heard of drugs that cause hallucinations. I might point out some other areas where we have work going on. You are aware of the fact that a fair number of psychiatric disturbances we treat are in the elderly individuals where there is considerable hardening of arteries. We have research going in hardening of the arteries now, how it can be prevented, and what the factors are that cause it to be so much more prominent in one person than in another. We have found—and this is of considerable importance—that in the blood of some people there are substances that, when injected in animals or other individuals, cause them to have certain types of mental changes.

Mr. Thomas. Is it not an accepted fact among the brain people that certain types of insanity are inheritable?

Dr. Musser. No, sir. What is acquired and what is inherited is a question.

Mr. Thomas. It is not an accepted fact?

Dr. Musser. No. There are two schools of thought. We have a young woman scientist who has found changes in the capillaries of the nail beds of certain schizophrenic patients, and from this one might assume a genetic influence in some types of schizophrenia.

Mr. Thomas. You are going back to inheritance, are you not?

Dr. Musser. Yes. But we have a scientist on the west coast who received a national award because of a new concept in schizophrenia that would indicate it is an acquired disease. There are two schools of thought, and someday this might level off and it might well be instead of schizophrenia being one disease, it will turn out to be a group of diseases. But we are getting closer to the answer.

Mr. Boland. Any more questions on this section?

Prosthetic Research

Page 20–23, prosthetic research. You had $1,185,641 in 1964, and you are asking for $1,275,000 for 1965, an increase of $89,359.

You have an increase of $48,000 in intra-VA research and an increase of $41,359 in contract research.

This is a program with which we are pretty familiar and on which we compliment the Veterans' Administration. I think they have done perhaps the most outstanding job of any research in this field in the United States.

We will put page 20–23 in the record.

(The page follows:)

Prosthetic Research

Employment and object summary

	Fiscal year 1963 actual	Fiscal year 1964 estimated	1 less workday and calendar day	Public Law 87-793 and within-grade increases	Program changes			Fiscal year 1965 estimated	Increase (+) or decrease (−) 1965 over 1964

25 Other services	715,361	792,641			+27,000	+10,359	+4,000	834,000	+41,359
26 Supplies and materials	23,151	40,000			+5,000	+1,000		46,000	+6,000
31 Equipment	19,556	25,000			+9,000	+1,000	+1,000	36,000	+11,000
Total gross costs	1,048,597	[1] 1,185,641	−1,000	+9,000	+64,000	+12,359	+5,000	1,275,000	+89,359

[1] Includes $15,641 in fiscal year 1963 unobligated balance planned for expenditure in fiscal year 1964.

Mr. BOLAND. What is the increase of $48,000 in intra-VA research for? Where does that go?

Dr. TIMM. That is one consultant and one additional employee in the research center in New York.

Mr. BOLAND. How many employees do you have in the research center in New York?

Dr. TIMM. I do not have the exact figure.

Mr. BOLAND. Are you looking at the figure of 32 on page 20–22? Are these consultants or are they people that run the facility in New York? How many people are actually working in the New York facility?

Dr. TIMM. Thirty-two.

Mr. BOLAND. Do you call them consultants?

Dr. TIMM. No, sir.

Mr. WISE. The consultant position over here shows there is one consultant.

Mr. BOLAND. That is right. These tables are hard to follow.

CONTRACTUAL PROSTHETIC RESEARCH

How about the additional $49,000 for contract research? Where does it go?

Mr. WISE. There is a list starting on page 20–29 and goes on for a number of pages over to 20–36, which sets out each contract for the years 1964 and 1965.

Mr. BOLAND. There is some interesting narrative material on these proposed contractors and present contractors in this area.

It is a long list but it is interesting. What do you think, Mr. Ostertag, should this be in the record?

Mr. OSTERTAG. All right.

(The material referred to follows:)

PROSTHETIC RESEARCH

Extra-VA prosthetics research and development contractual research

Category	Proposed contractor	Estimated, fiscal year—	
		1964	1965
ARTIFICIAL LIMBS			
Fundamental research on locomotion; design and developmental research; energy expenditures by geriatric amputees.	University of California (Berkeley and San Francisco Biomechanics Laboratory).	$70,000	$70,000
Investigation of control of artificial limbs, including auxiliary power and substitution for senses of touch and position.	University of California (Los Angeles Bio-Technology Laboratory).	30,000	50,000
Refinements of hydraulic knees and maintenance of test models; exploration of simple hydraulic knee for control by very short below-knee stump or by cineplasty tunnel or muscle bulge; increased attention to development of hydraulic ankle; hydrogen peroxide system for auxiliary power for limbs, braces, or wheelchairs.	Mauch Laboratories, Inc....	70,000	70,000
Correlation of nationwide cooperative program of research and of dissemination of results; publications; conferences; advisory services; clinical feedback of results on devices emerging from the research program.	National Academy of Sciences.	80,000	85,000
Evaluation of prosthetic devices, components, and techniques, emphasizing bioengineering with prosthetics support.	New York University.....	63,641	63,641

PROSTHETIC RESEARCH—Continued

Extra-VA prosthetics research and development contractual research—Continued

Category	Proposed contractor	Estimated, fiscal year—	
		1964	1965
ARTIFICAL LIMBS—Continued			
Clinical studies of problem cases, especially geriatrics: stump definition including recording of stump changes; development of techniques or prototype devices for problem cases.	Northwestern University	$85,000	$87,000
Fundamental studies toward skeletal attachment of prosthesis.	John O. Esslinger, M.D.	10,000	10,000
Development of improved items for the upper-extremity armamentarium, particularly elbow locks.	Gilmatic, Inc.	50,000	50,000
Physiological studies to improve neurophysiological control of prosthesis, underlying improved methods of training.	To be selected	12,000	----------
Total, artificial limbs		470,641	485,641
BRACES			
Evaluation of orthopedic devices newly developed or used in existing practice, especially lower extremity devices for hemiplegia or other conditions involving spasticity.	Baylor University and Texas Rehabilitation Institute.	10,000	10,000
Fundamental studies of knee and hip; development of orthotic devices; investigation of prescription principles for lower extremity orthotic devices, with special attention to knee joints.	University of California (San Francisco Biomechanics Laboratory).	50,000	50,000
Development and evaluation of brace or orthopedic shoe for shortening of 1 leg compared to the other embodying SACH foot principles.	To be selected	1,000	1,000
Control of auxiliary power for bracing	UCLA in cooperation with Rancho Los Amigos.	2,000	2,000
Correlation of nationwide cooperative program of research and dissemination of results; publications; advice and services.	National Academy of Sciences.	5,000	17,000
Total, braces		68,000	80,000
AIDS FOR THE BLINDED			
GUIDANCE DEVICES			
Completion of independent evaluation of Haverford-Bionic Instruments obstacle detector; refinement of training methods; recommendations for further improvements.	Tracor, Inc.	6,000	----------
Development of ultraminiatruized obstacle detector suitable for mounting on a long cane to detect obstacles above the cane handle likely to strike a blind person between the waist and top of head.	Airborne Instruments, Inc.	10,000	15,000
Fundamental studies of obstacle detection based on sonic principles, ultimately for mounting on cane, particularly for warning of objects further than 1 cane length away and for detection of obstacles above the waist.	Lockheed-California Co.	10,000	10,000
Improvement of up-curb and down-curb detector; miniaturization; integration with obstacle detector; bench tests of curb detector.	Bionic Instruments, Inc.	11,000	12,000
Practical trials of pattern detectors using ambient light, for detecting edges and especially curbs based on stereoscopic principle.	BioDynamics, Inc.	4,000	----------
Coursekeeper or device to enable a blind person to follow a straight path; evaluation of portable radio receiver working at null position for this purpose.	Pennsylvania Association for the Blind.	2,000	3,000
Optical triangulation detector, functioning somewhat like a cane but with a beam of light; careful fundamental studies and user evaluation of existing device.	Opti-Guide, Inc.	----------	2,000
Improvements in method for teaching cues available to a blind person for navigation through relatively unfamiliar environment, including development of improved tactile maps.	Catholic Guild for the Blind.	10,000	10,000
Subtotal, guidance devices		53,000	52,000

PROSTHETIC RESEARCH—Continued

Extra-V A prosthetics research and development contractual research—Continued

Category	Proposed contractor	Estimated, fiscal year— 1964	1965
READING MACHINES AND OPTICAL AIDS			
Assistance to other organizations conducting clinical application studies; maintaining devices in clinical application studies.	Battelle Memorial Institute	$5,000	----------
Partial support of clinical application studies on Battelle aural reading device.	To be selected from agencies having qualified instructors.	10,000	----------
Transducers for tactile outputs for optophonetype reading device or Visotactor.	Stanford Research Institute	5,000	----------
Evaluation of tactile output for direct-translating device.	New York Medical College	----------	$3,000
Intermediate personal-type reading machine with spelled-speech output; improved output device; improved mechanical tracking; refinement of methods permitting recognition of a wide variety of type fonts.	Mauch Laboratories, Inc.	70,000	71,000
Construction of improved Mauch synthesizers to produce Metfessel "spelled speech" from Teletypesetter tape or directly from recognition teaching machines.	do	----------	5,000
Alternative design of synthesizer based on magnetic typewriter principle.	Metfessel Laboratories, Inc.	6,000	12,000
Evaluation of user acceptance of Metfessel "spelled speech" produced from TTS tapes.	Cleveland Society for the Blind.	----------	3,000
Extension and refinement of "spelled speech," teaching machine and programs for teaching blind subjects.	Metfessel Laboratories, Inc.	10,000	----------
Studies of linguistic problems of Haskins word dictionary, involving evaluation of output of present machine with 7,000 word dictionary and simulation of output from equivalent machines of larger or smaller dictionary capacities; investigation of "fluid" section of dictionary for specialized vocabulary.	Haskins Laboratories, Inc., with agency for the blind, such as Brooklyn Industrial Home for the Blind.	5,000	----------
Fundamental studies of rules for synthesizing speech; continued use of small computer to follow rules; fundamental information for other contractors; initiating of translation of letters (graphenes) to phonemes; exploration of hybrid systems combining dictionary and synthesizer; continued thought on possibility of reading devices with "speech like" output from certain characteristics of letter shape.	Haskins Laboratories, Inc.	25,000	36,359
Evalution of Visagraph for producing tactile outputs corresponding to graphs, wiring diagrams, maps, and similar nonverbal information.	Manhattan College	2,000	----------
Exploration of Scherertz plan for transmitting facsimile over telephone to sighted operator.	Telephone Pioneers and Bell Laboratories.	----------	3,000
Pocket notetaking device for blind	Stanford Research Institute	----------	5,000
Converter of teletypesetter tape to grade I braille	Systematics, Inc	----------	6,000
Magnifiers and high-powered spectacles for partially sighted individuals, with particular attention to problems of geriatric amputees with visual defects, including loss of accommodation.	Miami University, Ohio State University, or Indiana University.	----------	5,000
Subtotal, reading machines and optical aids		138,000	149,359
Total, aids for the blinded		191,000	201,359
AIDS FOR THE HARD OF HEARING			
Interaction of hearing aids (binural or monaural) with various types of hearing loss, with special reference to nerve loss.	Northwestern University	35,000	35,000
Relationships of physical properties of hearing aids and their changes during use, particularly transient response, to acceptance of aid and to user preference for aids.	Houston Speech and Hearing Center.	12,000	13,000
Investigation of possibility of high frequency aids for blind individuals presently unable to detect obstacles by echo location; development of special aids.	Knowles Electronics Laboratories with Northwestern University.	14,000	17,000
Total, aids for the hard of hearing		61,000	65,000
Total contractual research		790,641	832,000

MEDICAL CARE

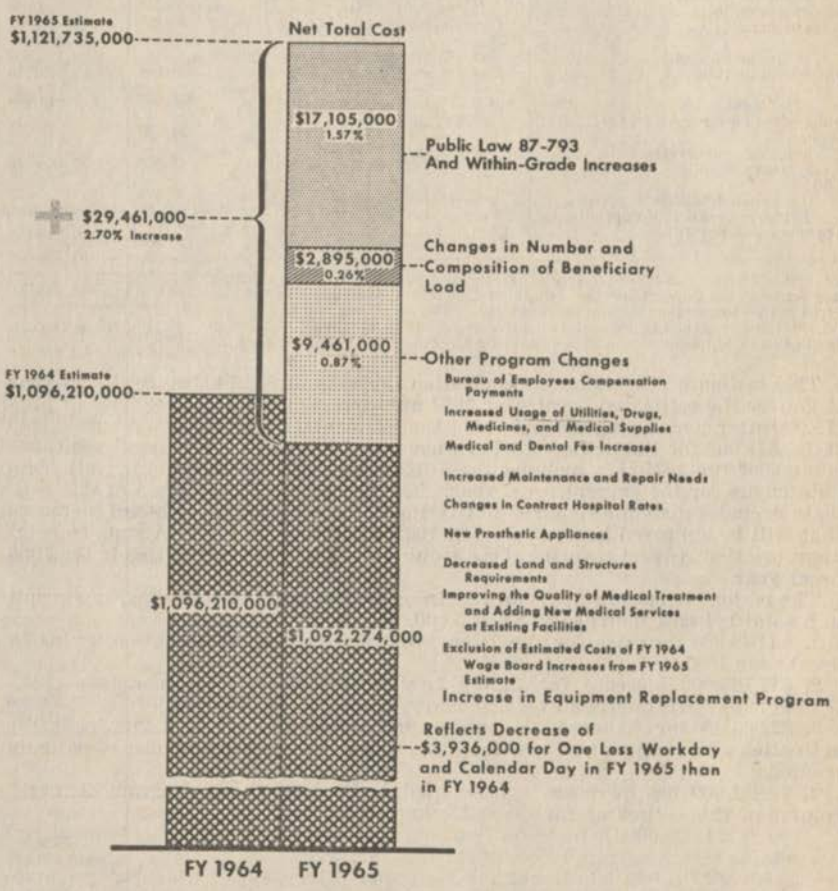
INCREASE IN COST - FY 1965 OVER FY 1964



MEDICAL CARE

This appropriation provides for expenses necessary for maintenance and operation of VA hospitals, domiciliaries and clinics, and care and treatment of eligible beneficiaries in contract hospitals and State homes.

Comparative fiscal year monetary distributions for the medical care appropriation are as follows:

Net costs by major program	Fiscal year 1963, actual	Fiscal year 1964, estimated	Fiscal year 1965, estimated	Increase (+) or decrease (−), 1965 over 1964
VA hospitals	$865,097,803	$909,440,000	$933,034,000	+$23,594,000
VA domiciliaries	30,475,011	32,102,000	32,742,000	+640,000
Contract hospital	16,084,442	16,761,000	16,679,000	−82,000
State homes	7,378,261	7,481,000	7,461,000	−20,000
Inpatient activity	919,035,517	965,784,000	989,916,000	+24,132,000
Outpatient activity	124,641,968	130,426,000	131,819,000	+1,393,000
Net total costs	1,043,677,485	1,096,210,000	1,121,735,000	+25,525,000
Obligations for other years, net	+7,230,413			
Less:				
Reimbursements received	−5,133,596	−5,621,000	−5,800,000	−179,000
Property supplies		−10,579,000		+10,579,000

Unobligated balance or savings	+941,499			
Transfers to other appropriations	+1,456,499	+1,176,000		−1,176,000
Appropriation or estimate	1,048,172,300	1,081,186,000	1,115,935,000	+34,749,000

NOTE.—Transfers to other appropriations in fiscal year 1963 totaling $1,456,499 are comprised of $30,499 transferred to the General Services Administration for rental of outpatient clinic space and $1,426,000 transferred to the Department of Data Management. The fiscal year 1964 transfer amount of $1,176,000 includes $16,000 transferred to GAS for rental of outpatient clinic space and $1,160,000 made available to the Department of Data Management for data processing functions transferred to that jurisdiction.

This estimate reflects an appropriation increase of $34,749,000 for fiscal year 1965 over the estimated fiscal year 1964 appropriation, or a net increase of $24,170,000 after considering fiscal year 1964 supplemental appropriation requirements of $10,579,000 for Public Law 83–763 wage board increases. The fiscal year 1964 column of this estimate includes the $10,579,000 supplemental appropriation requirements for the current fiscal year. The fiscal year 1965 column of this estimate excludes amounts required to pay Public Law 83–763 wage board increases that will be approved between July 1, 1963, and June 30, 1965. A supplemental appropriation request covering these requirements will be transmitted in the 1965 fiscal year.

The major changes in financial requirements for medical care programs result in a total net cost increase of $25,525,000.

1. $3,936,000 decrease for the 1 less workday and calendar day occurring in fiscal year 1965.

2. $17,105,000 increase for Public Law 87–793 salary rate increases ($11,761,000) and within-grade average salary increases ($5,344,000).

3. $2,895,000 for changes in the number and composition of beneficiary loads, the activation and equipping of new facilities, and increasing the number of patients treated.

4. $9,461,000 net increase (consolidated under the "Other program changes" column of this estimate) for the following needs:

(*a*) $4,098,000 increase for improving the quality of medical treatment and adding new medical services at existing facilities.

(*b*) $2,791,000 additional for increased utilization of utilities, communications, drugs, linens and medical supplies, and expense of operating central air-conditioning systems being installed at 19 hospitals.

(*c*) $250,000 additional for general rate increases approximating 3 percent in medical fees ($237,000) and 1 percent in dental fees ($13,000).

(*d*) $637,000 for increase in reimbursement to the Bureau of Employees Compensation, Department of Labor, for payment of benefits from the employees compensation fund, pursuant to Public Law 86–767.

(*e*) $6 million increase to meet maintenance and repair needs at aging medical facilities.

(*f*) $200,000 increase for prosthetic repairs and purchase of new prosthetic appliances becoming available as a result of research endeavors.

(*g*) Increase of $366,000 for the higher per diem rate increases for VA beneficiaries hospitalized in other Federal hospitals.

(*h*) Decrease of $3,480,000 to exclude the anticipated fiscal year 1964 cost of wage board increases approved between July 1, 1963, and June 30, 1964, from the fiscal year 1965 column of this estimate.

(*i*) Increase of $321,000 for the object class 31 equipment replacement program.

(*j*) Decrease of $21,000 in object class 32, "Land and structure," requirements, based on review of stations' engineering plans.

(*k*) Decrease of $441,000 in appropriation requirements due to the anticipated increase in Q.S. & L. salary deductions for new employees and adjustment of rental rates.

(*l*) Decrease of $1,260,000 for planned savings that will be realized in fiscal year 1965 due to conversion of elevators to automatic controls; improved prosthetic distribution procedures; increased productivity in VA pharmacies; and deferred purchases of new equipment for existing facilities.

Statements appearing in the immediately following paragraphs generally explain the necessity for special consideration for these items. More detailed explanations of the changes in number and composition of beneficiary loads affecting individual programs appear in the appropriate subsections of this estimate. The impact of each major change is spelled out separately on object of expenditure, employment, and functional activity cost charts for all programs and summaries to afford a clear picture of the transition in planned operating levels between fiscal years 1964 and 1965.

Inpatient Activities

Mr. Boland. Let us put in the record this summary on inpatient activities, page 21–23.

(The page follows:)

Inpatient Activities

Employment, workload, and object summary

	Fiscal year 1963 actual	Fiscal year 1964 estimated	Fiscal year 1965 estimated	Increase (+) or decrease (−), 1965 over 1964
Average employment	119,499	119,268	120,201	+933
Average payroll cost	$6,157	$6,512	$6,593	+$81
Operating beds:				
VA hospitals	120,304	120,371	120,249	−122
VA domiciliaries	16,770	16,669	16,679	+10
Average daily beneficiary load	137,867	137,664	137,622	−42
VA hospitals	110,194	110,269	110,318	+49
VA domiciliaries	15,690	15,451	15,448	−3
Contract hospitals	2,822	2,844	2,756	−88
State homes	9,161	9,100	9,100	
Patients treated	712,937	720,000	730,000	+10,000
Costs by object:				
11 Personnel compensation	$684,317,250	$722,360,000	$736,489,000	+$14,129,000
12 Personnel benefits	51,495,813	54,362,000	56,005,000	+1,643,000
21 Travel and transportation of persons:				
Employee	492,454	462,000	462,000	
All other	554,525	550,000	559,000	+9,000
22 Transportation of things	1,400,228	1,409,000	1,416,000	+7,000
23 Rent, Communications, and utilities	17,577,099	18,529,000	19,547,000	+1,018,000
24 Printing and reproduction	907,469	861,000	858,000	−3,000
25 Other services	28,477,935	30,224,000	36,064,000	+5,840,000
(Contract hospitals)	(16,084,442)	(16,761,000)	(16,679,000)	−(82,000)
(Medical and dental fees)	(1,069,837)	(1,080,000)	(1,077,000)	−(3,000)
26 Supplies and materials	114,527,209	115,796,000	117,205,000	+1,409,000
31 Equipment	17,189,841	19,819,000	20,381,000	+562,000
Replacement equipment	(13,781,979)	(16,657,000)	(17,533,000)	+(876,000)
Initial equipment for new facilities	(203,227)	(1,292,000)	(1,500,000)	+(208,000)
Initial equipment for existing facilities	(3,204,635)	(1,870,000)	(1,348,000)	−(522,000)
32 Lands and structures	3,194,396	2,493,000	2,472,000	−21,000
41 Grants, subsidies, and contributions (State homes)	7,378,261	7,481,000	7,461,000	−20,000
Total gross costs	927,512,480	974,346,000	998,919,000	+24,573,000
Less: Q.S. & L.	8,476,963	8,562,000	9,003,000	−441,000
Net total costs	919,035,517	965,784,000	989,916,000	+24,132,000

Mr. BOLAND. This table shows that in 1964 you spent $965,784,000 and you are asking for $989,916,000, an increase of $24,132,000.

You show the average employment as 119,268 in 1964 and 120,201 in 1965, an increase of 933.

Where does the big increase come here, in personnel costs?

Mr. MONK. $14,129,000 is the personnel cost increase.

Mr. BOLAND. That accounts for the great part of the $24 million increase?

Mr. MONK. Yes, sir.

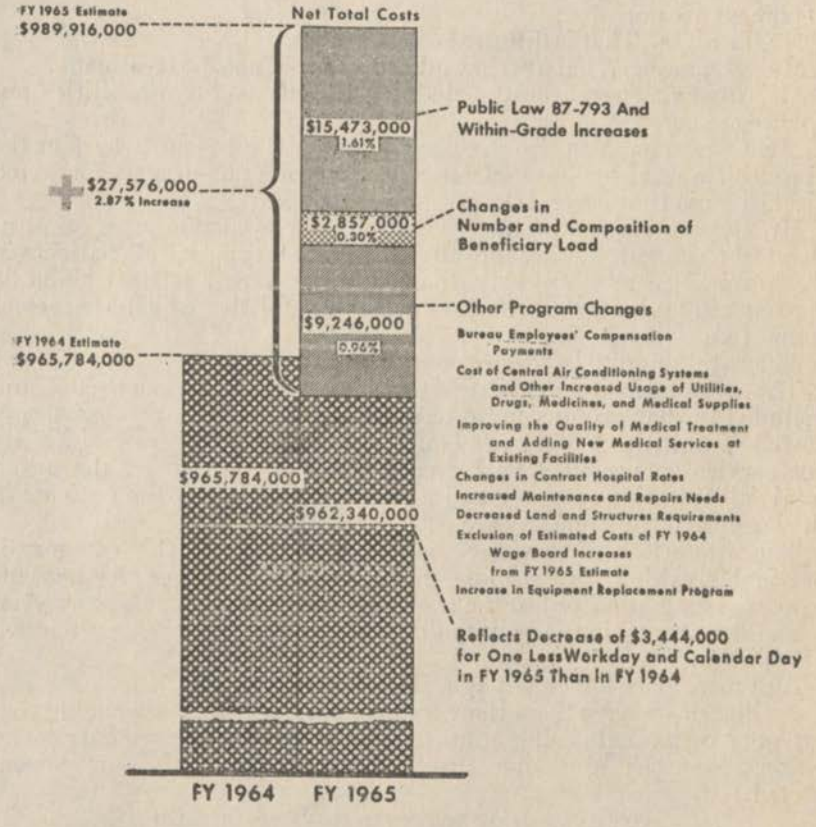
Mr. BOLAND. Put in page 21–24.

(The page follows:)

MEDICAL CARE

INCREASE IN COST - FY 1965 OVER FY 1964

Inpatient Care Activities



SERVICE-CONNECTED AND NON-SERVICE-CONNECTED PATIENTS

Mr. OSTERTAG. At this point, what is the relationship between non-service-connected and service-connected patients? What is the ratio?

Mr. WISE. Approximately one-third service connected.

Mr. ROSEN. There are 110,000 patients in the hospital and one-third of them are in because of service-connected disabilities.

Mr. THOMAS. What is that?

Mr. ROSEN. One-third of the patients in the hospital at any one time are in the category of service-connected disabilities.

Mr. THOMAS. You are talking about your outpatient clinics?

Mr. ROSEN. The question was "in the hospital."

Mr. THOMAS. It is not that high. You never have used a figure any higher than 80–20?

Mr. ROSEN. Among patients admitted to the hospital, 20 percent of them are admitted for treatment of service-connected disabilities and 80 percent are not.

Mr. THOMAS. That is different.

Mr. OSTERTAG. What are they admitted for if not for treatment?

Mr. ROSEN. They are admitted for treatment for disabilities not service connected.

Mr. OSTERTAG. You are dividing them on the basis of the fact the disability is service connected, but admitted for a non-service-connected disability; is that correct?

Mr. ROSEN. We can go into these things in two different ways. Instead of a patient moving into the hospital, all types of all patients in the hospital on most any day, the round number of 100,000, about 33 percent are under treatment for care of disabilities which are service connected.

They are found to be service connected.

The remainder are disabilities which are not service connected, and included in that group you do have some folks who have service-connected disabilities. They are being treated for conditions which are not service connected. As I recall, about 10 percent of the grand total fall into this category and a large proportion of the patients in the hospital on any one day are psychiatrically ill.

The proportion of service-connected disabilities in this category is particularly high. It is close to 50 percent. Among the patients who are being admitted to the hospital during the course of any year, a smaller proportion is being admitted for care of service-connected disabilities.

As I mentioned a moment ago, about 20 percent.

Although we have them there and even though they are among that category of patients being admitted for treatment of psychiatric conditions, even the admissions are running higher on the service connected.

COMPARISON OF PATIENTS IN VA HOSPITALS

Mr. GLEASON. Mr. Ostertag, in my annual report to the Members of Congress and to the President for 1963, on page 24 there is a chart and a summary. On a given day, for the census of the Veterans' Administration, there were 112,500 patients of which 525 were non-veterans, who were in there on a reimbursable basis. Of the remain-

der, there were three classifications of which 30.8 percent were veterans receiving care for their service-connected disabilities. There were 9.4 percent of veterans who had service-connected compensable disabilities, who were receiving medical care for non-service-connected disabilities.

Then there was 59.4 percent of veterans receiving care for non-service-connected disabilities. These veterans are eligible for VA care if a bed is available and they sign an affidavit certifying their inability to defray the cost of hospitalization.

LENGTH OF STAY OF PATIENTS IN VA HOSPITALS

Mr. OSTERTAG. In that connection the average stay or the average requirement of each patient is what? What I am getting at is that you have 110,000 beds and what I am talking about are those in veterans hosiptals; is that right, 110,000?

You are budgeting for 110,000 average daily patient load?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. I believe you are anticipating 730,000 patients during the course of this next year; am I correct?

Mr. WISE. Correct.

Mr. OSTERTAG. The question is, What is the average patient stay?

Mr. ROSEN. The average patient is staying about 60 days.

Mr. WISE. In that total, about half of the patients are psychiatric patients. Mr. Ostertag, the psychiatric patients, about 18 percent of those, have been with us 20 years or longer. That does rather distort the average length of stay of 60 days. In the case of your short-term medical surgery——

Mr. BOLAND. What is the total number?

Dr. ENGLE. 10,000.

Mr. BOLAND. Twenty years or longer?

Mr. GLEASON. Mr. Ostertag, once again I would like to refer to my report on page 28. This covers the length of stay in the hospitals. The length of stay can best be evaluated by an analysis of the duration of hospitalization of patients admitted during a given period. The median length of stay of a group of admissions provides an index of the hospital-stay experience of all admissions. One-half of the patients admitted require shorter periods of hospitalization than the median stay and the other half require longer periods of care. The estimated median length of stay of patients admitted to VA hospitals during calendar year 1962 was 21 days.

This figure was obtained from a 20 percent systematic random sample of VA admissions during the first 4 months of the year 1962.

The chart enclosed here presents data on the hospital stay experience of such patients admitted for treatment. About 80 percent of the patients admitted to VA hospitals during the year 1962 were treated for medical and surgical conditions. Their median stay was 18.8 days. Patients admitted for psychiatric conditions, other than psychosis, had a median stay of 27.4 days while those with neurological conditions required 28.8 days of care. In contrast, the median stay of patients admitted for all forms of tuberculosis and those treated for psychosis was 63.9 and 76.1 days respectively.

Mr. THOMAS. Let us take those three categories and give us the stay for each; NP, TB and G.M. & S. You said 18 days on the G.M. & S.?

Mr. GLEASON. I have that for you right here.

Mr. THOMAS. You did not give it to us for the TB? What is that?

Mr. OSTERTAG. How does that jell with the average 60-day figure?

Mr. GLEASON. On TB it is 62 days, sir.

Dr. MCNINCH. This is what the long-term psychiatric case does to the average, Mr. Ostertag.

Mr. OSTERTAG. The Administrator read those into the record but what was the average on the psychotic?

Mr. GLEASON. On the psychotic, about 78 days; 76.1.

On TB it is 63.9.

Mr. THOMAS. And then on G.M. & S., 18?

Dr. MCNINCH. Yes, sir.

Mr. OSTERTAG. I was given a figure of 60 days for the average of all, across the board; is that right?

Mr. ROSEN. That is right. The problem arises this way: You have in the hospitals, generally speaking, two kinds of patients. There is a group principally in the medical and surgical group expected to stay in the hospital a relatively short time. As these patients are admitted, most of them leave the hospital within several months. Half of them leave in about 20 days.

On the other hand, there is a group of very long-term patients, psychiatrically ill. Many of these patients after they are admitted to the hospital may stay in for 10, 15, and 20 years. If we compute the average length of stay, it is a number which is particularly affected by the length of stay of a small number of patients who stay a very long time.

CLASSIFICATION OF PATIENTS ADMITTED TO VA HOSPITALS

Mr. THOMAS. Doctor, this is very confusing to the public. Which category comes in for the largest number, NP, TB, or G.M. & S.?

Dr. MCNINCH. In terms of admissions to the hospital?

Mr. THOMAS. Yes.

Dr. MCNINCH. G.M. & S.

Mr. THOMAS. What part of your total bedload goes into G.M. & S.—40 percent?

Mr. ROSEN. About 40 to 50 percent.

Mr. THOMAS. What is the figure for NP?

Mr. ROSEN. About 50 percent of the bedload.

Mr. THOMAS. The NP is your biggest bedload?

Mr. ROSEN. In terms of admissions.

Mr. THOMAS. We are talking about bedload. You are operating on the basis of 110,000 beds in this chart; are you not?

Mr. ROSEN. Yes, sir.

Mr. THOMAS. Your biggest patient bedload is NP, about 50 percent, and the G.M. & S. is 40 percent, and the TB is going down and down? What is it?

Mr. ROSEN. 78 percent now.

Mr. THOMAS. People do not understand. They do not expect a TB patient to come out in 24 hours or 48 hours. They do not expect an NP patient to come out in that time, but I think where most of your misunderstanding comes from is your G.M. & S. cases where they stay in 18 days. Is that not considerably longer than a private hospital permits them to stay?

Mr. ROSEN. I do not think——

Mr. GLEASON. That would affect the average, Mr. Chairman. You must remember in our hospitals we do not have pediatrics or gynecology. We do not have obstetrics. These are all averaged out in the length of stay for private hospitals. Our patients are all aging patients.

Mr. THOMAS. Put your best foot forward and explain it. You have a pretty favorable record on G.M. & S. In the first place, your patients are usually older than you find in private hospitals. You do not have child delivery cases which usually take 7 or 8 days at the longest, do you?

Mr. GLEASON. Much lower than that, now, sir.

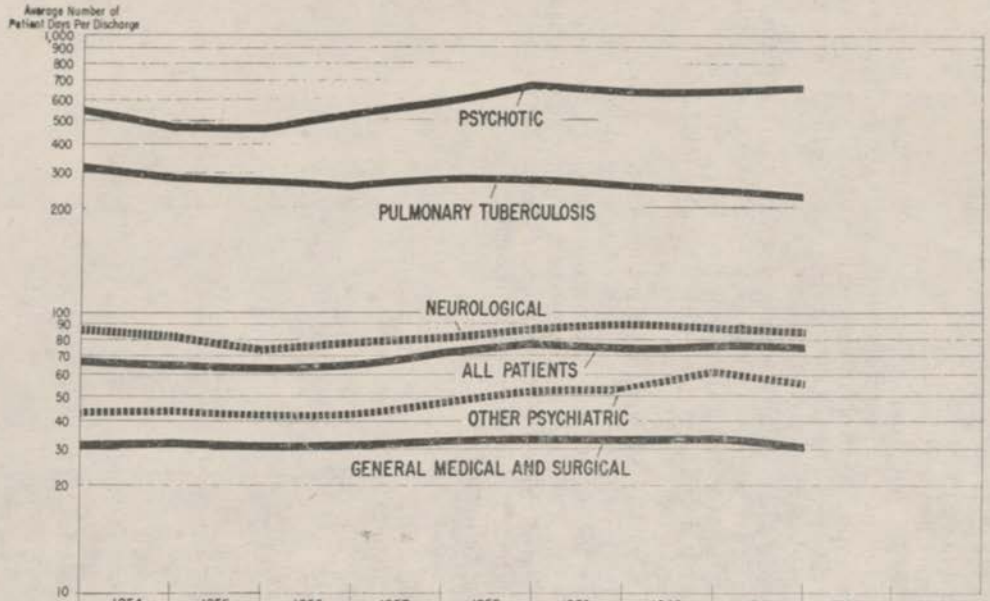
May I offer for the record a chart on the trend and length of stay in VA hospitals? It is a very interesting chart, Mr. Boland.

As you can see, the psychotic cases at the top average about 670 days, over the period of the last 10 years shown there.

Mr. BOLAND. Put that chart in the record.

(The chart follows:)

TREND IN LENGTH OF STAY IN VA HOSPITALS



TYPE OF PATIENT	CALENDAR YEAR								
	1954	1955	1956	1957	1958	1959	1960	1961	1962
ALL PATIENTS	64.8	63.0	64.9	70.2	76.8	73.1	76.0	74.8	
PULMONARY TUBERCULOSIS	286.3	275.4	258.0	278.1	281.7	263.6	250.9	235.5	
PSYCHOTIC	471.3	471.0	526.0	583.8	671.9	643.5	647.3	662.8	
OTHER PSYCHIATRIC	43.3	42.0	42.8	46.4	51.9	52.1	60.6	55.7	
NEUROLOGICAL	81.8	74.3	78.3	80.8	86.4	90.0	87.9	84.5	
GENERAL MEDICAL & SURGICAL	31.9	31.0	31.4	33.0	33.2	33.1	35.3	30.8	

1962 data are expected to be available in Sept 1963

305

Dr. ENGLE. We would also like to mention there has been a significant improvement in shorter lengths of stay for every age group between 1960 and 1963. The average length of stay has gone down for each age group. For example, under the heading of "Under 35 Age Group," in 1963, the average length of stay was 20.7 days for G.M. & S. patients. We attribute this primarily to the cooperation and understanding of this committee in giving us additional employees in the hospital system alone, where we have 4,000 more employees now than we had in 1959.

Mr. OSTERTAG. Mr. Chairman, what I was trying to get at when I raised the question about the total patient load was the average stay as related to this whole picture of inpatient care and I think the Administrator, has, to some extent, answered it with this table covering trends.

NUMBER OF PATIENTS TREATED

However, how does your anticipated load, not beds, but your anticipated load apply to this 700,000 patients expected next year? How does that compare with previous years?

Mr. GLEASON. 10,000 more than——

Mr. OSTERTAG. Than last year?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. How about the year before that?

Mr. GLEASON. It was about 20-some-thousand.

Mr. OSTERTAG. You have had a rapid, or substantial, increase in the total number of patients and veterans you care for each year, so you have reached a high total of 730,000-odd? This is with 110,000 beds, without maintaining the existing level of capacity and you are gradually working toward a higher and higher figure in the total number of patients that will be cared for in what we call inpatient care in veterans' hospitals?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. That is basically caused by virtue of the average stay; is it not?

Mr. GLEASON. Being reduced.

Mr. OSTERTAG. Being reduced, but do you look for a continuation of that trend?

Mr. GLEASON. Yes, sir; we do.

Mr. OSTERTAG. The need or demand for care of patients will remain as high or higher?

Mr. GLEASON. It will be going up.

Mr. OSTERTAG. Am I right?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. That is what I am trying to get at.

SUMMARY DATA ON INPATIENT ACTIVITIES

Mr. BOLAND. Let us put pages 21–27 and 21–28 in the record.

(The pages follow:)

INPATIENT ACTIVITIES

Program notes

During fiscal year 1963, the Veterans' Administration operated 169 hospitals (counting separate divisions of consolidated hospitals) and 18 domiciliaries. A 120-bed restoration center at Hines, Ill., also was operated which is reported statistically and financially as part of the domiciliary program. Operating bed averages of 120,304 in hospitals and 16,770 in domiciliaries were maintained, in which care and treatment were provided to average daily beneficiary loads of 110,194 patients and 15,690 members. In addition, care and treatment were provided to average daily beneficiary loads of 2,822 patients in civil, State and

other Federal hospitals, and 9,161 members in State homes on a contract reimbursable basis. The total average daily beneficiary load receiving care and treatment under the inpatient care program in fiscal year 1962 was 137,867.

The total average daily beneficiary load receiving care and treatment on an inpatient basis is expected to decrease slightly in the fiscal years 1964 and 1965 due to the lesser demand for domiciliary beds in certain localities. However, the average daily patient load in VA hospitals will rise in fiscal year 1964 with completion of the activation of the new Brecksville, Ohio, 1000-bed NP hospital. A further increase in VA hospital workloads will occur in fiscal year 1965 with activation of the new general hospitals in Washington, D.C., and Cleveland, Ohio. Comparative average daily beneficiary loads are as follows:

	Fiscal year 1963	Fiscal year 1964	Fiscal year 1965	Increase (+) or decrease (−), 1965 over 1964
VA hospitals	110,194	110,269	110,318	+49
VA domiciliaries	15,690	15,451	15,448	−3
Contract hospitals	2,822	2,844	2,756	−88
State homes	9,161	9,100	9,100	
Total	137,867	137,664	137,622	−42

With enactment of Public Law 86–639, approved July 12, 1960, the average daily beneficiary load has assumed a lesser role in measuring the effectiveness of the agency's medical system. This legislation authorized the Administrator of Veterans' Affairs to furnish medical services for non-service-connected disability in preparation for admission of a veteran who has been determined to need hospital care and who has been scheduled for admission, as well as posthospital medical services where it is found necessary to complete hospital care. Profound impact is being demonstrated in the VA hospital system, resulting in improved patient turnover despite the increase in chronic infirmity, among the aging veteran population.

In a hospital system as vast as that operated by the VA, it is inevitable that many of the hospitals will experience a decrease in the average daily patient loads as patient turnover rates increase. It is the policy of the VA, however, that decreases in average patient loads at any hospital will be compensated by demonstrated increases in patient turnover.

The VA is presently operating under an overall hospital bed ceiling of 125,000 established by the President of the United States on February 26, 1959. Within this policy, the VA has the authority to change the designation of hospitals and to relocate beds on the basis of geographic demand. The flexibility thus granted enables the agency to meet changes in hospitalization demand more quickly.

Changes in operating bed levels at VA facilities for the comparative fiscal years are shown below. The changes in hospital beds planned for fiscal year 1965 result principally from modernization work at the Bedford, Mass., and Perry Point, Md., hospitals, and the new construction at Washington, D.C. Domiciliary bed levels will remain relatively stable with beds closed in areas of reduced demand more than offset by beds becoming available at the new East Orange, N.J., Restoration Center.

Operating bed changes

	Fiscal year 1963	Fiscal year 1964	Fiscal year 1965	Increase (+) or decrease (−), 1965 over 1964
Neuropsychiatric hospitals	57,601	57,590	57,445	−145
General hospitals	62,703	62,781	62,804	+23
Subtotal, hospitals	120,304	120,371	120,249	−122
Domiciliaries	16,770	16,669	16,679	+10
Total, VA facilities	137,074	137,040	136,928	−112

The total VA hospital bed authorization is based on the present structural capacity of each of the hospitals with adjustments for approved future hospital replacement and modernization projects. As of June 3, 1963, the total bed capacity of the VA hospitals was 122,205, of which 2,065 beds were unavailable on that date for the following reasons:

In process of activation	182
Type of bed not required, no patient demand	672
Space for beds undergoing construction or maintenance activity	688
Other reasons, due to hospital replacement, overcrowded conditions, etc.	523
Total	2,065

A substantial number of the beds reported on June 30, 1963, as unavailable will be placed in operation during the current fiscal year. December 31, 1963, data on the number of beds in operation and beds unavailable for patient use will be provided in complete detail at hearings on the agency's fiscal year 1965 appropriation request.

Mr. BOLAND. This indicates you are operating 169 hospitals and 18 domiciliaries.

Mr. GLEASON. Eighteen domiciliaries plus the two restoration centers.

Mr. BOLAND. You have a comparative average daily beneficiary load shown in the middle of that page.

WAITING LIST

Let us put page 21–29 in the record indicating the waiting list.
(The page follows:)

WAITING LIST

Comparative fiscal years 1962 and 1963 month-end waiting list numbers of beneficiaries eligible, but not then scheduled for hospital admission are shown in the following table:

At end of month	Psychiatric patients		Medical, surgical, and tuberculosis patients		Total		Increase (+) or decrease (−), 1963 over 1962
	Fiscal year 1962	Fiscal year 1963	Fiscal year 1962	Fiscal year 1963	Fiscal year 1962	Fiscal year 1963	
July	11,930	11,904	4,896	5,801	16,826	17,705	+879
August	11,837	11,866	4,417	5,625	16,254	17,491	+1,237

Monthly average	12,070	12,163	5,451	7,412	17,521	19,575	+2,054

Mr. BOLAND. This indicates the number of people waiting to get into your institutions, and this increased as between 1962 and 1963.

Mr. WISE. Mr. Boland, we would like to insert in the record an additional table which will bring this up to date since last June through December. There has been a reversal of this trend where we have today approximately 1,900 less veterans on the waiting list than a year ago at this time.

(The table referred to follows:)

Monthly waiting list

At end of the month	Psychiatric patients		Medical, surgical, and neurological patients		Total patients		Increase (+) or decrease (−) 1964 over 1963
	Fiscal year 1963	Fiscal year 1964	Fiscal year 1963	Fiscal year 1964	Fiscal year 1963	Fiscal year 1964	
July	11,904	11,144	5,801	6,959	17,705	18,103	+398
August	11,866	10,745	5,625	6,100	17,491	16,845	−646
September	11,762	10,873	6,033	5,840	17,795	16,713	−1,082
October	12,031	10,778	5,770	5,514	17,801	16,292	−1,509
November	12,009	10,998	5,527	5,022	17,536	16,020	−1,516
December	12,103	10,971	5,330	4,483	17,433	15,454	−1,979

Mr. OSTERTAG. What has brought that about?

Mr. WISE. I think the continued efforts to improve patient turnover.

Mr. THOMAS. What is the classification of the waiting list as between service connected and nonservice connected and the three categories, general medical and surgical, tuberculosis, and neuropsychiatric?

Mr. GLEASON. No waiting list for service connected.

Mr. THOMAS. Where is your big waiting list then, nonservice?

Mr. GLEASON. Yes, sir.

Mr. WISE. The waiting list is 100 percent nonservice connected.

Mr. THOMAS. Which part of the three categories?

Mr. GLEASON. Probably two-thirds in the neuropsychiatric, I would say; is that about right?

Mr. WISE. Yes.

Dr. ENGLE. Of the 19,575 on the waiting list shown on page 21–29, 12,163 were psychiatric patients.

Mr. GLEASON. I would like to mention that out of that 12,000 that the doctor has mentioned, about 6,905 of those on the waiting list were in non-VA hospitals; that is, State, Municipal, or county, principally for psychiatric assistance.

CONVERSION OF TUBERCULOSIS BEDS

Mr. THOMAS. How many beds are you converting now from tuberculosis to neuropsychiatric and how many new beds do you have coming into operation within this fiscal year for neuropsychiatric cases?

Dr. ENGLE. We are converting 600 beds from neuropsychiatric and tuberculosis to medical and surgical.

Mr. WISE. None to neuropsychiatric. The neuropsychiatric program, because of construction——

Mr. THOMAS. None are being converted from tuberculosis to neuropsychiatric? I thought this was where conversion was, rather than general medical and surgical?

Mr. WISE. No, sir; every tuberculosis bed converted today is for treatment of medical and surgical conditions.

Mr. THOMAS. How many new neuropsychiatric beds do you have coming into operation? That is where your waiting list is, two-thirds of the waiting list in neuropsychiatric?

Mr. WISE. In 1965, construction will provide no new beds. Actually, because of construction, we will have to take 145 present beds out of operation and that will be at three locations; Bedford, Mass., Northport, N.Y., and Perry Point, Md. I believe it is 145 beds.

DEMAND FOR PSYCHIATRIC CARE

Mr. THOMAS. How many beds do you have set aside for neuropsychiatric now? Give us the number set aside for general medical and surgical. That is where your backlog is, in your neuropsychiatric?

Mr. GLEASON. Yes, sir, Mr. Chairman.

Mr. Chairman, could I insert in the record another chart which is a waiting list of psychiatric patients. This shows only a third of those on the waiting list are not now receiving psychiatric care in other hospitals, either Federal or State or local.

Mr. THOMAS. Yes.

Mr. GLEASON. It shows very graphically the situation for the last 3 fiscal years.

(The chart referred to follows:)

FY 1963

1/ Preliminary

Mr. THOMAS. Most of the people are in State institutions and their families are clamoring in trying to get them here?

Mr. GLEASON. In our hospitals; that is correct.

Mr. THOMAS. That is where your shortage is, but what is the answer to it; more beds?

Mr. DRIVER. Research.

Mr. THOMAS. More beds or more conversions?

Do you have any more TB beds that you can convert?

Dr. ENGLE. I think the answer, Mr. Chairman, is basically we cannot get the professional staff to operate more than this total of psychiatric beds. I think you and the other members of the committee are aware of the fact that there is a nationwide shortage of psychiatrists and we share in this shortage. We share in the problem of recruiting these scarce-category personnel. I think we acknowledge without any debate our primary responsibility and our primary challenge is in this area of psychiatry and we are endeavoring to do all that we can in this connection.

Mr. OSTERTAG. Will the chairman yield there?

Mr. BOLAND. Yes.

CHANGES IN OPERATING BEDS AND PATIENT LOAD

Mr. OSTERTAG. In connection with this overall picture of hospital beds and inpatient care, you plan to operate 120,000 beds this next year with an average daily load of 110,318. What change has taken place or will take place as between the various types of care as it relates to your overall bed capacity or bed-patient load? I am talking about NP, TB and G.M. & S. and so on. Can you give us a breakdown of that? How does it compare with the previous year?

Mr. BOLAND. Mr. Ostertag, that is on page 21–34.

Mr. GLEASON. That is right; I think that will answer it, Mr. Ostertag.

Mr. BOLAND. Let us put the narrative shown on pages 21–30, 21–31, 21–32, and 21–33 in the record.

(The pages follow:)

CHANGES IN IN-PATIENT MEDICAL PROGRAMS

Highlights of planned changes in the scope of individual inpatient medical programs contemplated in this estimate for fiscal year 1965 are as follows:

Neuropsychiatric hospitals

The programs will be accelerated for establishing medical and surgical bed sections for psychiatric patients requiring treatment for medical, surgical, and neurological conditions, and for providing increased nursing and related staffing for psychiatric-medically infirm patients. Consistent with the objective of increasing the turnover rate at all neuropsychiatric hospitals, greater emphasis will be placed on trial visit, foster home, halfway house, and similar programs designed to return the patient to his home community. Decreases of 145 operating beds and 101 average patient load will be required because of construction work scheduled in the 1965 fiscal year.

General hospitals

Except for the increase of 150 patient load resulting from activation of the new general hospitals in Cleveland, Ohio, and Washington, D.C., only minor changes in operating bed and patient load levels are planned at general hospitals

in fiscal year 1965. These changes primarily are occasioned by major modernization work scheduled for that fiscal year, but include limited shifts in patient load and bed activation to alleviate overcrowding and/or meet changing patient demands in specific geographic areas.

Contract hospitals

A decrease of 88 average daily patient load (minus 89 in Federal and plus 1 in non-Federal hospitals) is planned for the contract hospitalization program in fiscal year 1965. Demands for Federal beds are expected to increase at the U.S. Navy hospitals in Jacksonville, Fla.; Philadelphia, Pa.; and San Diego, Calif. An overall decrease in Federal contract bed utilization, however, will result in the Washington, D.C., area where new VA beds will adequately meet demands.

VA domiciliaries

A new 200-bed Restoration Center will be activated at East Orange, N.J., midway in fiscal year 1964. Under the Restoration Center program, special restoration training will be afforded former hospital patients and domiciliary members that have received maximum benefits in order to fit them for purposeful and independent living. This program emphasizes restoration and outplacement of disabled veterans, and serves to increase the utilization of beds in VA facilities for those in need of medical treatment and care. The domiciliary program operating bed and beneficiary load levels will remain relatively stable in fiscal year 1965 with the full-year operation of the new East Orange facility compensating for the lesser demand for domicilary beds in other localities.

State homes

The estimate for fiscal year 1965 provides continuance of the fiscal year 1964 level of 9,100 average daily member load in State homes.

DETAIL OF CHANGES IN NUMBER AND COMPOSITION OF BENEFICIARY LOADS

Net increases in average employment of 358 and funds in amount of $2,857,000 are required for inpatient activities in fiscal year 1963 in order to provide for changes in the number and composition of average beneficiary loads, staffing of newly activated hospitals and a restoration center, and increase of 10,000 patients treated in VA hospitals over the number anticipated in fiscal year 1964, explained as follows:

Neuropsychiatric hospitals

Net increases of 160 employees and $1,375,000 comprised of the following:

1. Increases of 186 average employment and $1,250,000 for establishing or strengthening medical and surgical bed sections in NP hospitals. The Agency plans movement of all its hospitals toward the general hospital concept, recognizing that institutions staffed and equipped to represent all the medical specialties can render better patient care. This program contemplates establishment of a limited number of general medical and surgical beds in psychiatric hospitals. These beds will serve both immediate community needs as well as the needs of the psychiatric patients already hospitalized for whom medical and surgical care is primary. The initial phase of this program contemplates that within the next 3 or 4 years approximately 8 percent of the beds in psychiatric hospitals will be redesignated as medical and surgical beds. Present staffing ratios in the older NP hospitals now provide about 36 to 40 treatment staff per 100 patients, compared with averages of 90 treatment staff per 100 patients required for medical and surgical bed sections. The increased staffing and funds requested for fiscal year 1965 will permit bringing the staffing ratios for medical and surgical bed sections to acceptable levels at eight NP hospitals where these bed sections already are established, and establishing bed sections of 40 medical beds and 30 surgical beds at one NP hospital not now having such bed sections. In addition to adequately providing for establishment of the new bed sections, the increment in staffing will afford an increase of 1,700 more patients treated in NP hospitals in fiscal year 1965 over the number treated in fiscal year 1964.

2. Decreases of 26 average employment and $171,000 for a decrease of 101 average patient load at NP hospitals where construction changes will result in reduced bed capacities, or where it is necessary to ease overcrowded conditions.

3. Increase of $296,000 for procurement of initial equipment for newly constructed or modernized facilities.

General hospitals

Increases of 180 employees and $1,961,000 for the following:

1. One hundred and eighty employees and $1,809,000 additional for increase of 110 average patient load at the new Washington, D.C., 710-bed general hospital; 40 average patient load at the new Cleveland, Ohio, 804-bed general hospital; change of approximately 450 TB patients to other medical and surgical categories in other general hospitals; and increasing the number of patients treated in all general hospitals by 8,300.

2. Increase of $152,000 for procurement of initial equipment for newly constructed or modernized facilities.

Domiciliaries and restoration centers

A net increase of 18 employees and a net decrease of $77,000 for the following:

1. Increases of 45 employees and $370,000 for 126 additional average restoree load at the new restoration center located at East Orange, N.J. These increases are required to annualize the full activation level expected to be attained at the close of the 1964 fiscal year.

2. Decreases of 27 employees and $207,000 for the 129 lesser average member load planned in domiciliaries where demands are declining.

3. Decrease of $240,000 in the procurement of initial equipment since no new domiciliary facilities are planned in fiscal year 1965.

Contract hospitals

Decrease of $402,000 for reduction of 88 average daily patient load in contract hospitals in fiscal year 1965. The decrease in contract hospital load is at locations where new VA hospital beds will meet demands adequately.

State homes

This estimate contemplates no change in the average daily member load level of 9,100 in State homes for the fiscal years 1964 and 1965.

AVERAGE DAILY PATIENT LOAD

Mr. BOLAND. Perhaps it would be well to add page 21–34 giving the average daily patient load in VA hospitals.

(Page 21–34 follows:)

Average daily patient load in VA hospitals

	Fiscal year 1963, actual	Fiscal year 1964, estimated	Fiscal year 1965, estimated	Increase (+) or decrease (−), fiscal year 1965 over 1964
Neuropsychiatric hospitals:				
Psychiatric patients	50,202	50,030	49,749	−281
Medical patients [1] [2]	3,275	3,340	3,460	+120
Surgical patients [1]	909	927	987	+60
Total, patients	54,386	54,297	54,196	−101
General hospitals:				
Psychiatric patients	5,353	5,487	5,637	+150
Medical patients [1] [2]	34,114	34,003	33,907	−96
Surgical patients [1]	16,341	16,482	16,578	+96
Total, patients	55,808	55,972	56,122	+150
All hospitals:				
Psychiatric patients	55,555	55,517	55,386	−131
Medical patients [1] [2]	37,389	37,343	37,367	+24
Surgical patients [1]	17,250	17,409	17,565	+156
Total, patients	110,194	110,269	110,318	+49

[1] Patients with psychiatric-TB and neurologic conditions receiving treatment in medical and surgical wards are included in the respective counts for medical or surgical patients.

[2] The count for fiscal year 1963 includes 423 patients who were classified as member employees prior to enactment of PL 87-574.

PSYCHIATRIC PATIENT LOAD

Mr. BOLAND. This indicates the average daily patient load in VA hospitals in NP in 1965 was 49,749 as compared with 50,030 in 1964. We actually have a decrease of 281 psychiatric patients. Is this occasioned by construction?

Mr. WISE. Yes, sir.

Mr. BOLAND. This is temporary?

Dr. ENGLE. There is one other aspect we might mention at this time. In terms of responsibilities we have in our psychiatric hospitals, of the 50,000 or so patients about 15 percent of them have significant medical and surgical ailments. We have just recently come to appreciate the fact that there are so many patients in our hospitals who have been there for many, many years. They are aging and incurring the same medical and surgical ailments that nonpsychiatric patients have. About 15 percent or 7,500 patients in our psychiatric hospitals have serious medical and surgical ailments. About half of this total, 3,000 or 4,000, we are going to try and put internists and surgeons on, medical and surgical staff, to give them more adequate care. Some of these beds will be changed from the category of psychiatric beds to medical beds. They will be psychiatric patients who will be needing, primarily, medical and surgical care. This is going to change the statistics over a period of the foreseeable future wherein it will seem at first glance we are cutting down on the number of psychiatric beds, but more correctly, we are just changing the categorization of those beds. We are calling them medical because the primary need is for medical attention for this type of patient.

Mr. BOLAND. Doctor, what you are saying is probably, without a doubt, correct, but does not fall into place in my thinking with regard to your chart on page 21–34 where you anticipate an estimated load of 49,749 in NP hospitals which is a reduction of 281. In general medical and surgical hospitals, you will have 5,637 psychiatric patients, which is an increase of 150 over previous years.

Dr. ENGLE. Yes, sir.

Mr. BOLAND. In other words, it looks like there will be more NP or psychiatric patients in general hospitals and less in NP hospitals?

Dr. MCNINCH. The balance is shown at the bottom under the listing of "All hospitals." There is really very little change. That is shown at the bottom of the page.

Under "Beds for psychiatric, medical patients, and surgical patients," that is shown there.

Mr. WISE. Mr. Ostertag, I think, directly to your question, in general hospitals with the activation of this new Washington, D.C., replacement hospital, that is going to replace the Mount Alto Hospital which is on Wisconsin Avenue, we are picking up 400 additional beds in that facility. A large block of these are psychiatric beds. We will have an increase of 150 psychiatric beds all at this new hospital when it opens in 1965.

NURSING BED CARE PROGRAM

Mr. OSTERTAG. Mr. Chairman, this might be a good place to raise a question with regard to the relationship of the nursing home study

program to this program, or this in-patient care aspect, or the medicar care aspect of the Veterans Administration.

Will there be any relationship between them during this next year?

Mr. GLEASON. Not that we can see, Mr. Ostertag.

Mr. OSTERTAG. In other words, the program will not be in effect?

Mr. GLEASON. Which program?

Mr. OSTERTAG. The nursing home program.

Mr. GLEASON. Yes; we will certainly get this underway.

Mr. OSTERTAG. Why will it not have a relationship to your average stay and a few other aspects of your requirements in in-patient care? Will not these patients, or these veterans, in nursing homes, to a certain extent be the result of nursing care from hospitals?

Mr. GLEASON. Yes, sir; I do not believe they will be considered in this chart shown on page 21–34 any more than our domiciliary members are.

Mr. THOMAS. He is raising the general question and now is a good place to discuss that on your rest homes. He is asking you, fundamentally, for every rest home bed, how many beds are you going to take out of your actual hospitals?

Mr. GLEASON. One for one, since nursing bed patients will be admitted from our hospitals.

Mr. OSTERTAG. Why will it not have an effect on your capacity or your stay in these hospitals?

Mr. GLEASON. In that regard, it will.

Mr. OSTERTAG. Then your increase in the total number of patients you anticipate during this next year is predicated to some extent on certain of these patients being moved into nursing homes?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. That is what I wanted to know.

COST CHANGES IN IN-PATIENT ACTIVITIES

Mr. BOLAND. Let us put page 21–36 in the record.

(The page referred to follows:)

Detail of cost changes

Items	Neuro-psychiatric hospitals	General hospitals	All hospitals	Domiciliaries	Contract hospitals	State homes	Total
Public Law 87-793 and within grade increases	+$5,174,000	+$9,878,000	+$15,052,000	+$421,000			+$15,473,000
One less workday and calendar day	−1,101,000	−2,169,000	−3,270,000	−108,000	−$46,000	−$20,000	−3,444,000
Changes in number and composition of beneficiary load	+1,375,000	+1,961,000	+3,336,000	−77,000	−402,000		+2,857,000
Improving the quality of medical treatment and adding new medical services at existing facilities	+2,135,000	+1,478,000	+3,613,000	+202,000			+3,815,000
Exclusion of fiscal year 1964 wage board increased costs from fiscal year 1965 column of this estimate	−1,118,000	−2,205,000	−3,323,000	−147,000			−3,470,000
Increased utilization of utilities, communications, drugs, medicines, linens, medical supplies, and expense of operating central air conditioning system	+478,000	+1,967,000	+2,445,000	+68,000			+2,513,000
Increased prosthetic repairs and purchase of new prosthetic appliances	+4,000	+28,000	+32,000	+2,000			+34,000
Increase in reimbursement of Department of Labor for payment of benefits from employees compensation fund	+209,000	+352,000	+561,000	+17,000			+578,000
Change in contract hospitalization rates					+366,000		+366,000
Maintenance and repair needs at aging medical facilities	+2,004,000	+3,534,000	+5,538,000	+402,000			+5,940,000
Change in object 32 land and structure requirements	−5,000	−11,000	−16,000	−5,000			−21,000
Increase for object 31 replacement equipment	+162,000	+792,000	+954,000	−78,000			+876,000
Decrease for estimated increase in Q.S. & L. salary deductions	−145,000	−285,000	−430,000	−11,000			−441,000
Decrease for management improvement actions	−196,000	−702,000	−898,000	−46,000			−944,000
Total	+8,976,000	+14,618,000	+23,594,000	+640,000	−82,000	−20,000	+24,132,000

Mr. BOLAND. This shows a detail of cost changes. This table reflects the increase you are asking for, $24,132,000 for fiscal 1965.

Page 21–37 gives the comparative full-time equivalent employment summary by activity and I see you are looking for 933 additional employees for a total of 120,201 in 1965 as compared to 119,268 in 1964.

The greatest number here is in the nursing services; this is a big increase.

Mr. THOMAS. Mr. Boland, would you let me interrupt you a minute?

Gentlemen, let us recess now and come back at a quarter to 1.

AFTERNOON SESSION

COMPARISON OF IMPATIENT COSTS BY ACTIVITY

Mr. BOLAND. The committee will please come to order. We will put page 21–38 in the record.

(The page follows:)

Comparison of costs by activity

Activity	Fiscal year 1963 actual	Fiscal year 1964 estimated	1 less workday and calendar day	Public Law 87-793 within-grade increases	Changes in number and composition of beneficiary load	Other program changes	Fiscal year 1965 estimated	Increase (+) or decrease (−) 1964 over 1964
Care of patients:								
Professional medical services	$105,201,213	$115,707,000	−$426,000	+$1,867,000	+$404,000	+$210,000	$117,762,000	+$2,055,000
Ancillary medical services	73,801,998	77,418,000	−228,000	+1,007,000	+398,000	+1,937,000	80,532,000	+3,114,000
Nursing services	255,933,302	267,255,000	−1,097,000	+6,982,000	+1,710,000	+1,914,000	276,854,000	+9,599,000
Physical medical and rehabilitation service	35,417,614	37,527,000	−158,000	+695,000	+65,000	+65,000	38,195,000	+668,000
Dietetic service	127,928,485	133,577,000	−501,000	+879,000	+204,000	−1,317,000	132,842,000	−735,000
Chaplains	4,243,161	4,410,000	−15,000	+69,000			4,464,000	+54,000

MAINTENANCE AND REPAIR

Mr. BOLAND. There is a large increase here of $5,944,000. What is that, maintenance and repair?

Mr. MONK. That is right, maintenance and repair by contractual service.

Mr. BOLAND. Does this go to all of your hospitals?

Mr. MONK. Yes, sir; this increase is an acceleration of the maintenance and repair program to the tune of about $6 million this year.

Mr. BOLAND. What will it be next year, do you think?

Mr. MONK. We would expect it to be about the same.

Mr. BOLAND. You mean around $11 million?

Mr. MONK. Yes, sir.

Mr. THOMAS. Is any part of this charged against the construction budget?

Mr. MONK. No, sir.

Mr. THOMAS. Where is your line of demarcation? You used to have two programs, over and under a certain dollar amount. Now you combine them. What does this cover?

Mr. MONK. This covers recurring repair and maintenance, not capital improvement.

Mr. THOMAS. What is your dollar limitation?

Mr. SCHWEICKART. $5,000.

Mr. THOMAS. Anything above $5,000 goes under your construction contract?

Mr. SCHWEICKART. Yes, sir.

Mr. THOMAS. Go ahead.

OTHER INPATIENT COST CHANGES

Mr. BOLAND. Page 21–43 gives the breakdown of employment, workload, objects. Rent, communications, and utilities goes up $991,000, 1965 over 1964.

Mr. WISE. Central air-conditioning systems in 19 hospitals plus the fact that the utility rates have increased about 6 percent a year average over the last 7- or 8-year period.

Mr. BOLAND. Do you have a narrative on that somewhere?

Mr. WISE. Yes, sir; page 21–13 and also 21–14.

Mr. BOLAND. We shall put into the record at this point pages 21–13 and 21–14.

(The pages follow:)

INCREASED USAGE OF UTILITIES, DRUGS, MEDICINES, AND MEDICAL SUPPLIES AND EXPENSE OF OPERATING CENTRAL AIR-CONDITIONING SYSTEMS, $2,791,000

The $2,791,000 request is comprised of (1) $941,000 additional operating expense for newly installed air-conditioning systems; (2) $441,000 additional expense under Object Class 23 for increased utilization of utilities and related items, exclusive of the increased utility utilization associated with the new central air-conditioning systems; and (3) $1,409,000 additional expense under Object Class 26 for increased utilization of drugs, blood, blood products, medicines, and medical supplies.

Newly installed central air-conditioning systems will be in operation at 19 or more hospitals prior to the close of fiscal year 1965. Average annual expenditure increases of nearly $50,000 per hospital will be required to provide operating personnel, mechanics, maintenance supplies, steam, and electricity for operation

of these systems. The $941,000 increased operating cost includes $407,000 for salaries of 61 additional operating personnel and mechanics, $64,000 for maintenance supplies and materials, and $470,000 for steam and electricity costs.

Increased utilization of utilities and related Object Class 23 items, other than as associated with the new central air-conditioning systems, results from technological advances in the development and utilization of new electromedical equipment and the increasing number of veterans receiving medical care and treatment, for whom greater outlays for communications and equipment rental expenses are required.

Usage of drugs, blood, blood products, medicines, and medical supplies increases sharply each year. This increased utilization stems jointly from (1) the increased numbers of patients treated in VA hospitals as a result of enactment of Public Law 86-639 (authorizing prebed and postbed occupancy treatment); (2) a greater percentage of the patient population in VA hospitals receiving acute intensive treatment during their period of hospitalization; and (3) the increasing numbers of patients developing multiple chronic medical infirmities as the veteran population ages. As a result, additional outlays are necessary for these Object Class 26 items.

These trends have become increasingly apparent during each of the past several years, and are substantiated by the steady rise in expenditures reported under the Object 23 and 26 classifications. Hospital, domiciliary, and clinic directors have had no option in meeting these rising costs other than to reduce the number of treatment staff available to provide care and treatment to patients and members. The increment requested to meet these rising expenses is necessary for the agency to maintain an adequate treatment staff and continue providing quality medical service to eligible beneficiaries.

Mr. BOLAND. On "Supplies and materials" you are looking for $109,783,000 in 1965 compared to $108,423,000 in 1964. This represents an increase of $1,360,000. Where is your narrative on that? Is that on page 21-13?

Mr. WISE. Yes, sir. The preponderant part of that increase is in this increase on 21-13 for utilities, drugs, medicines, medical supplies.

Mr. THOMAS. The closest proximation he has to justification is 21-48. You might turn to that. It looks pretty indefinite. It ought to be strengthened considerably.

COST OF DRUGS, MEDICINE, AND MEDICAL SUPPLIES

Mr. BOLAND. Drugs and medicines go up by $736,000 in this item. What causes this increase?

Mr. WISE. There is the increase in patients treated. There is an increase in utilization of drugs as new chemotherapies are developed.

Mr. BOLAND. Is there also an increase in cost of drugs?

Mr. WISE. In some instances; yes.

Mr. BOLAND. Medical and dental supplies go up by $357,000. Is this attributable to increased cost of supplies?

Mr. WISE. Many of the medical and dental supplies, drugs, medical supplies, surgical instruments, small expendable items, all in these categories, they are principally these items that are used in the direct treatment of patients.

Mr. THOMAS. It covers other medical supplies to the tune of $117 million.

Mr. GLEASON. That is the whole total.

Mr. MONK. $953,000.

Mr. THOMAS. What do you mean by other medical supplies?

Mr. WISE. It is all others not classified here. It could be issues to indigent patients, personal comfort items, medical supplies other than drugs or medicines.

Mr. THOMAS. What do you mean by personal comfort items? There is no such thing as comfort items in a hospital?

Mr. WISE. To indigent patients there are some, no longer tobacco.

Mr. BOLAND. Utility services go up by $938,000. What is this increase due to?

Mr. WISE. Principally the central air conditioning in the new installations, along with the price increases that I have told you about.

Mr. BOLAND. Communications increase $71,000. What is this attributed to?

Mr. WISE. In part to the new hospitals, larger hospitals, coming in, and rate increases.

GSA TELECOMMUNICATIONS SYSTEM

Mr. BOLAND. You are now part of GSA telecommunications setup?

Mr. WISE. Yes, sir.

Mr. BOLAND. How much do you have in here for that particular program? Do they ask you to put an item in your budget for this program for the telecommunications setup?

Mr. GLEASON. Yes, sir.

Mr. BUDD. On the hospital side there is very little at this point because VA hospitals have their own switchboards. Only a few locations are our hospitals associated with GSA centrex system.

Mr. BOLAND. You will be associated?

Mr. BUDD. Yes, sir; this is the next phase planned. We have only gone to the first phase, one-seventh of the total plan.

Dr. ENGLE. Less than 17 installations now.

HOSPITAL UNIT COSTS

Mr. BOLAND. We shall put the table on page 21–48 in the record, and also 21–44.

(The pages follow:)

All Hospitals

Comparative analysis of unit and total costs

NOTE.—Consultant employment computed at rate of each visit being 1/20 of a man-month or 240 visiting days per man-year.

HOSPITAL PER DIEM COSTS

Mr. BOLAND. This shows total cost and the cost per day by type of hospital. We have a breakdown here of the NP hospitals. In 1963 the cost was $14.611, an increase to $15.898 in 1965. For G.M. & S. it is $28.330 in 1963 and increases to $30.310 in 1965. How do your rates compare with private hospitals per day? This is something we get into every year.

Dr. MCNINCH. The rate for the private hospitals, the nearest comparable to our general hospitals is the non-Federal general short-term hospital, which is around $36 a day. I have here a chart showing increase in per diem which the chairman may be interested in, a comparison between non-Federal hospitals and Veteran hospitals in G.M. & S. hospitals.

Mr. OSTERTAG. Did you give us a comparative figure?

Dr. MCNINCH. $36.

Mr. OSTERTAG. For general medical.

Dr. MCNINCH. It is very difficult to make these comparisons. It does not include physician fees. Each year more nurses are combined. However, they take depreciation on their capital investment which we do not. So I have not made a comparison in these charts of the cost, per se, increase in per diem costs only.

Mr. BOLAND. I think we can put those charts in the record.

(The charts follow:)

INCREASES IN HOSPITAL PER DIEM COSTS

Mr. BOLAND. To what do you attribute the increase in both NP and general hospitals in these tables?

Dr. MCNINCH. Predominantly the pay raise.

Mr. WISE. Out of the $24 million increase, $17 million of it is cost of the pay raise and within-grade raises. That all reflects in the per diem rate, and that would be the predominant reason for the increase in the per diem rate.

It is predominantly the staffing requirements. For example, we have about 75 employees per hundred patients for the pyschiatric hospitals, but we have about 134 per hundred for the treatment of medical or surgical categories. That in itself reflects the broad difference in per diem rates.

Mr. BOLAND. How about the type of employee for both institutions? Are they similar, the people doing the same type of work? They would be paid the same anyway. You do not require any greater knowledge on the part of somebody working in G.M. & S. than the NP hospital?

Mr. WISE. There may be more in the laboratory. We have to cover a broader range of services in G.M. & S. hospitals. You will find a much heavier incidence of aids or nursing-type personnel in NP hospitals.

Mr. BOLAND. You have more attendants in NP hospitals than in G.M. & S.?

Mr. WISE. Yes, sir.

Mr. BOLAND. We note on page 21–44 that there are almost twice as many employees in the G.M. & S. as in the NP's. Mr. Ostertag, do you have any questions on this section?

STAFF TO PATIENT RATIOS

Mr. OSTERTAG. What is the ratio in the G.M. & S. hospitals of employees to that of patients?

Mr. WISE. The ratio is 1,344 employees per thousand patients in the general medical.

Mr. OSTERTAG. What is this table on 21–46?

Mr. MONK. That is a composite, all hospitals.

Mr. OSTERTAG. All hospitals within the VA operation.

Mr. WISE. A combination of both, sir.

Mr. OSTERTAG. In 1962 the projection appears to be 1,070 employees to 1,072 patients; is that right?

Mr. WISE. That is the ratio under the reporting practices at that time. There is a footnote on the page that explains that in 1963 there was a redefinition of the outpatient and inpatient medical services. Up through 1962 the type of work, prebed care or postbed care, was reported under the inpatient category, although it was essentially by nature outpatient work. We have brought this into line with common reporting practices, along with the rest of the medical industry.

Neuropsychiatric Hospitals

Mr. Ostertag. We will turn to NP hospitals under inpatient care. On page 21–50 it points out that the estimate provides an average of 57,445 operating beds and 54,196 patient load in neuropsychiatric hospitals in fiscal 1965 or a decrease of 145 operating beds and a decrease of 101 patient load averages from levels anticipated in 1964. These decreases are necessitated by construction work that will be in progress in 1965.

Is that in line with what you have previously told us?

Mr. Wise. Those are what Mr. Boland asked about this morning—Bedford, Mass.; North Point, N.Y.; Perry Point, Md.

Mr. Ostertag. The estimate contemplates 494 additional treatment staff or establishment of medical and surgical bed sections at certain hospitals and provides for more adequate care and treatment of psychiatric medically infirm patients and increasing the number of patients treated. I think the summary on 21–51 and the table on 21–54 should be inserted in the record and also 21–56.

Mr. OSTERTAG. Page 21–53 shows comparison of total costs and unit costs by activities.

Mr. THOMAS. Here is a good table on page 56, location and staffing and operating beds. I would look at page 54.

COSTS OF NP HOSPITALS

Mr. OSTERTAG. Let us look at the comparative analysis of units and total costs under personal services and benefits. There is an increase of $6,484,000. Under travel, no change; transportation of things, a decrease of $1,000; rent, communications, and utilities, an increase of $135,000; as compared with fiscal 1964.

Printing and reproduction, a $1,000 decrease. Supplies and materials increase of $233,000, to $38,407,000.

Mr. WISE. You will notice the big item is $2 million for maintenance and repair in NP hospitals, part of the overall $6 million increase.

Mr. OSTERTAG. Under other contractual services you have laundry and medical, nursing, dental fees, compensated therapy, and reproduction of furniture and equipment and other medical services. There is an increase of nearly $2 million in this general item.

Your $2 million increase, the substantial increase is maintenance and repair.

Mr. WISE. This is of the physical plant.

Mr. MONK. That is the piece of the $6 million we were talking about a little while ago that applies to the psychiatric hospitals.

Mr. OSTERTAG. That accounts for the substantial part of the general increase here. Are there any questions on that item?

PROCUREMENT FOR HOSPITALS

Mr. THOMAS. May I ask this: When you get into the question of medical supplies and provisions, fuels, even some of your operating supplies, office supplies, other medical supplies, even in the question of fuel for automobiles, what does it look like throughout the inpatient care and your clinics, too? I do not guess you break them down as to that.

In your procurement service, you might give us a little rundown on your procurement service. Is there any diminution in your own procurement service with reference to letting the GSA do some of your procurement? Do you still handle it all? Is it all done by competitive bid? We understand from each of your installations, as far as fresh milk, fresh vegetables, meats, all that is bought locally. This is where your big money is. How do you procure your staples and your office supplies and automobiles, fuel, and so forth? Give us a little rundown on that.

Mr. COOK. Perishable foods are procured almost exclusively by the individual hospitals themselves, by supply people at those hospitals.

Mr. THOMAS. How do they procure it; on the open market?

Mr. COOK. By competitive bidding, sir.

Mr. THOMAS. Say X hospital wants 100 gallons of fresh milk a day. Do they go out and contract for that with competitive bids?

Mr. COOK. Yes, sir; they usually make a contract for a period of 3 months for milk.

Mr. THOMAS. On competitive bids?

Mr. COOK. Yes, sir.

Mr. THOMAS. What do you pay for a gallon of milk? Is there any general price?

Mr. COOK. No, sir.

Mr. THOMAS. Does it vary from community to community?

Mr. COOK. Yes, sir; many States fix the price of milk. It varies from community to community. It also varies whether we are in an area where there is price support for milk or not.

FOOD COSTS

Mr. THOMAS. What is your ration cost today?

Mr. WISE. Raw food is about 97 cents, but the prepared ration, cost of preparation and all, makes it about $2.90 on the table.

Mr. THOMAS. That is pretty high eating.

Mr. WISE. Three meals a day. That is a bargain.

Mr. THOMAS. That is per person. No family spends that.

Mr. WISE. I try to discourage my wife from counting in the labor cost, but it still runs close to $2.90 a day per person in our family.

Mr. THOMAS. I hope you do not have five children.

Mr. WISE. Just two, sir.

Mr. GLEASON. Page 21–41 gives you that information, sir.

GSA PROCUREMENT FOR VA

Mr. THOMAS. What does GSA procure for you?

Mr. COOK. GSA procures almost all of our administrative supplies, sir, office supplies, equipment, fuel, both coal and oil we use for heating, and gasoline used for vehicular fuel. They procure the vehicles you mentioned earlier.

Mr. THOMAS. Your procurement setup is just the same this year as it was 5 or 6 or 10 years ago?

Mr. COOK. Essentially; yes, sir.

Mr. THOMAS. Has there been any change in it?

Mr. COOK. No, sir.

WAREHOUSES

Mr. THOMAS. How many warehouses do you have?

Mr. COOK. Three.

Mr. THOMAS. Where are they?

Mr. COOK. Wilmington, Calif., outside of Los Angeles; Hines, Ill., and Somerville, N.J.

STABILITY OF FOOD COSTS

Mr. THOMAS. What did you say the food cost was, $2.98 or $2.90?

Mr. WISE. $2.90.

Mr. THOMAS. What is the general outlook? What was it 3 or 4 or 5 years ago? Has there been an appreciable increase in the last 5 years?

Dr. MCNINCH. $2.78 in 1963.

Mr. GLEASON. $2.89 now.

Mr. WISE. Raw food cost has held quite stable, has varied over the last 10 years from 91 cents per ration up to about 97 cents now. The main increase in the past 10 years has been the labor cost since the dietetic work force, by and large, are under this wage board program.

DIETETIC PERSONNEL GRADE CHANGES

Mr. THOMAS. What was the result of your changes of those dietetic workers? You changed them under civil service rating all over the country. Did you reduce the compensation?

Mr. MONK. We did not reduce their pay; no, sir.

Mr. THOMAS. Everybody is satisfied now?

Mr. MONK. No, sir.

Mr. THOMAS. What is wrong, then?

Mr. MONK. They were reduced in grade, certain of them were reduced in grade; they held their pay.

Mr. THOMAS. All of them held their pay?

Mr. MONK. All of them held their pay; yes, sir. Nobody lost any pay as a result of the change.

Mr. THOMAS. Thank you.

General Hospitals

Mr. Boland. We shall go to general hospitals, page 21–57. This is a further breakdown of what we were talking about a moment ago with respect to inpatient care. We shall put in the record pages 21–57 and 21–58.

(The pages follow:)

GENERAL HOSPITALS

The estimate provides averages of 62,804 operating beds and 56,122 patient load in general hospitals in fiscal year 1965, or an increase of 23 operating beds and an increase of 150 patient load averages over the levels anticipated for fiscal year 1964. These increases relate mainly to the activation of the new general hospitals in Washington, D.C., and in Cleveland, Ohio, but also provide limited shifts in patient loads to alleviate overcrowding and/or meet changing patient demands in specific geographic areas.

The estimate contemplates 383 additional treatment staff in the general hospitals to (1) increase turnover rates, (2) convert TB beds at certain hospitals for treatment of 450 additional patients with medical and surgical conditions, (3) improve the quality of medical treatment and add new medical services at existing facilities, and (4) activate the new hospital facilities at Cleveland, Ohio, and Washington, D.C.

Inpatient Activities General Hospitals

Employment, workload, and object summary

	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate	Increase (+) or decrease (−), 1965 over 1964

24 Printing and reproduction	661,912	626,000	624,000	−2,000
25 Other services	8,110,315	8,241,000	11,758,000	+3,517,000
(Medical and dental fees)	(741,163)	(745,000)	(743,000)	(−2,000)
26 Supplies and materials	69,544,965	70,249,000	71,376,000	+1,127,000
31 Equipment:	11,676,792	14,341,000	14,987,000	+646,000
Replacement equipment	(9,434,884)	(12,018,000)	(12,810,000)	(+792,000)
Initial equipment for new facilities	(148,656)	(1,048,000)	(1,200,000)	(+152,000)
Initial equipment for existing facilities	(2,093,252)	(1,275,000)	(977,000)	(−298,000)
32 Lands and structures	2,272,936	1,597,000	1,586,000	−11,000
Total gross costs	581,541,937	610,580,000	625,483,000	+14,903,000
Less quarters, subsistence, and laundry	5,470,071	5,488,000	5,773,000	−285,000
Net total costs	576,071,866	605,092,000	619,710,000	+14,618,000

Mr. BOLAND. The table on 21–61 indicates that part of the inpatient budget is attributable to general hospitals, and the big increases here, as they were in the neuropsychiatric hospitals, are in drugs and medicines, and drugs and dental supplies.

How many more patients do you have in the neuropsychiatric hospitals than in the general medical and surgical hospitals?

Mr. WISE. You mean in numbers?

Mr. BOLAND. In numbers.

Mr. WISE. We have about 54,000 patients in psychiatric and about——

Mr. GLEASON. 53,000.

Mr. THOMAS. 3,000 or 4,000 difference.

Mr. BOLAND. There is an indication that in general hospitals the cost of supplies runs more although you have less. Are there any questions on this? We have been over this.

BEDS AND PATIENT LOAD BY HOSPITAL

We shall put in page 21–63, which is a table indicating the locations of all general hospitals.

(The page follows:)

Distribution of patient load and beds by hospital

Mr. BOLAND. What is the total, 127?

Dr. MCNINCH. 127.

Mr. BOLAND. It was 128 in 1963 but Oakland was dropped out; is that right?

Mr. WISE. Excelsior Springs.

Mr. GLEASON. We closed Excelsior Springs completely.

CONTRACT HOSPITALIZATION

Mr. OSTERTAG. We will take up "Contract hospitalization." For fiscal 1965 you estimate $16,679,000, a decrease of $82,000. The average daily patient load decreased by 89. I think we might place in the record pages 21–65 through 21–68.

(The pages follow:)

CONTRACT HOSPITALIZATION

Cost summary by object

PROGRAM NOTES

Hospitalization of VA beneficiaries in other Federal hospitals is provided for either service-connected or non-service-connected conditions to insure coverage in areas where there is a critical shortage of VA facilities.

Hospitalization of VA beneficiaries in non-Federal hospitals in the United States (including Alaska and Hawaii) is restricted to male veterans requiring hospitalization for service-connected conditions, female veterans in need of hospitalization for treatment of either service-connected or non-service-connected conditions, and those veterans requiring hospitalization to prevent interruption of training authorized under provisions of 38 U.S.C. 1506. Non-Federal hospitals may be utilized for the care and treatment of the aforementioned persons when suitable facilities are not feasibly available in VA hospitals, e.g.:

(*a*) When beds in VA hospitals are insufficient to meet the demand for hospitalization of certain types of patients—i.e., primarily those suffering from mental disorders—or where Federal hospital facilities are extremely limited or nonexistent.

(*b*) To provide hospitalization in medically emergent cases when immediate transfer to a VA hospital would be hazardous.

(*c*) To provide hosiptalization for female beneficiaries for whom appropriate facilities are not available in Federal hospitals.

Per diem reimbursement rates for care rendered by other Federal hospitals are established and/or approved annually by the Bureau of the Budget. The cost of hospitalization in non-Federal hospitals is based generally on per diem rates established under contracts between the VA and the various hospitals concerned plus charges for additional services such as special duty nursing care, surgical fees, consultants, special medical services, etc. This latter arrangement is exemplified by the $65 per diem rate for the 14 medical and surgical average patient load in municipal and State hospitals where the higher cost is incurred for special medical services which cannot be provided by VA hospitals in the immediate area.

The agency's objective over the years has been to reduce the contract hospitalization bed utilization to the extent practical. The Federal contract hospital patient load will decline in fiscal year 1965, in view of additional VA beds becoming available as a result of the VA hospital replacement and modernization program.

Patient load and cost estimates for Federal hospitals are based on actual utilization rather than bed allocation agreements with the agencies concerned. The VA, however, will provide reimbursable support for patient loads up to the full number of beds allocated, where demand exists.

Of the total contract hospitalization load of 2,844 and 2,756 estimated for fiscal years 1964 and 1965, respectively, it is estimated that approximately 63 percent will be hospitalized in the 50 States and 37 percent in Manila and Puerto Rico.

The Veterans Memorial Hospital at Manila has a planned ADPL and per diem cost of 230 and $5.05, respectively, for both fiscal years 1964 and 1965. The San Juan hospital has a planned ADPL of 810 for fiscal year 1964 and 800 for fiscal year 1965. The planned per diem cost is $13.42 for each fiscal year.

Cost changes

The net decrease of $82,000 for fiscal year 1965 is composed of (1) a decrease of $402,000 for the reduction of 88 average daily patient load; (2) a decrease of $46,000 for costs related to the 1 less calendar day; (3) an increase of $106,000 for increase in per diem rates at the U.S. Department of Health, Education, and Welfare St. Elizabeths Hospital (from $11.44 to $11.97) and the U.S. Public Health Service hospital at Fort Worth (from $14.25 to $15) and (4) an increase of $260,000 in per diem reciprocal rate (from $25 to $26) for VA beneficiaries hospitalized in other Federal general and tuberculosis hospitals.

Mr. OSTERTAG. The program notes indicate that hospitalization of VA beneficiaries in other Federal hospitals is provided for either service-connected or non-service-connected conditions to insure coverage in areas where there is a critical shortage of VA facilities.

There is a decrease, of course, in your overall estimate of this service. The decrease is $402,000 for the reduction of 88 average daily patient load and a decrease of $46,000 for costs related to one less calendar day and an increase of $106,000 for increase in per diem rates to the Department of Health, Education, and Welfare, St. Elizabeths Hospital, U.S. Public Health Service Hospital at Fort Worth, and an increase of $260,000 in the per diem reciprocal rate for VA beneficiaries hospitalized in other Federal hospitals.

What is the general nature of this program? This has to do with your contracts for outside hospitalization; does it not?

Mr. WISE. Yes, sir, it does.

LOCATION OF CONTRACT HOSPITAL PATIENTS

I think that the most significant thing about this program is the number of beneficiaries hospitalized outside of the United States. Of the total, 2,756 planned for next year, 800 of those are in San Juan, P.R. You know, we also have a 200-bed hospital there at the moment, but there are 800 additional veterans hospitalized in contract hospitals.

Then, as we discussed the other day, there are 230 patients in the Veterans' Memorial Hospital at Manila that are hospitalized under this program. That accounts for over a thousand of this total, Mr. Ostertag, who are located in either Puerto Rico or the Philippine Islands.

Mr. OSTERTAG. Your estimated program shows a decrease of 88 from last year.

Mr. WISE. Yes, sir. Those are principally in the continental United States in areas where VA beds are becoming available. The best example of that is the Washington, D.C., replacement hospital where, when that is opened, a number of patients will be transferred from St. Elizabeths into the VA hospital.

PER DIEM COSTS FOR CONTRACT HOSPITALIZATION

Mr. OSTERTAG. These contracts, are they for a definite period of time in which the rate is established?

Mr. WISE. The rate is for 1 year. We find that in practically all levels, whether Federal Government, civil, State, municipal, that the rates do change slightly from year to year. The table on page 21–68 shows the per diem rates in effect by category of patient and type of hospital.

Mr. OSTERTAG. Are these rates firm for fiscal 1965 sufficiently to the degree that this figure can be relied upon?

Mr. WISE. Yes, sir; they are agreed-on contract rates. In the case of Federal hospitals, these rates are prescribed by the Bureau of the Budget.

TYPE OF PATIENT IN CONTRACT HOSPITAL

Mr. THOMAS. What is the nature of the illness being treated in these hospitals? Are these G.M. & S. or NP or what?

Mr. OSTEGTAG. Could be anything.

Mr. THOMAS. What are the majority?

Mr. WISE. It is shown on this table on 21–68. For example, in the civil hospitals in the current year we expect to maintain an average of 488 neuropsychiatric patients, 459 general. In the municipal or State hospitals, 371 psychiatric and 14 in general hospitals.

In the other Federal hospitals, these are essentially all general medical patients with the exception of those at St. Elizabeths Hospital which number 350.

Mr. THOMAS. What about at Manila and the other one where you are building the hospital?

Mr. WISE. San Juan. Those are predominantly medical and surgical.

Mr. THOMAS. Not mental?

Mr. WISE. Not San Juan.

Mr. THOMAS. 1,200 patients, total, are mental, are they not?

Mr. WISE. Yes, sir.

PER DIEM RATES

Mr. OSTERTAG. Under "Cost change" there is quite a variation in the rates. What is the nature of this per diem reciprocal rate provision which is increased from $25 to $26 for VA beneficiaries hospitalized in other than Federal and general and tuberculosis hospitals?

Mr. WISE. Those are other Federal hospitals. This is the rate the Bureau of the Budget establishes where any agency that hospitalizes a medical or surgical patient pays the other agency $26 a day. In the case of the psychiatric patients, where the per diem is usually lower; for example, at St. Elizabeths the Bureau of the Budget also prescribes that rate, which is $11.97.

Mr. OSTERTAG. In other words, this is a reciprocal arrangement within the Federal Government?

Mr. WISE. Yes, sir.

Mr. OSTERTAG. That indicates that you are hospitalizing certain of their patients, does it not?

Mr. WISE. Yes, sir.

Mr. GLEASON. It might happen.

Mr. OSTERTAG. Your rate must be comparable to theirs in this instance despite what your costs might be.

Mr. WISE. That is correct. This does simplify bookkeeping on exchanges within the Government.

Mr. THOMAS. How does your rate compare for NP cases compared with St. Elizabeths?

Mr. WISE. Our rate runs about $14.

Mr. THOMAS. Against $11?

Mr. WISE. Yes, sir.

Mr. THOMAS. How does your rate compare with the States that you pay?

Mr. WISE. The average State hospital runs about $9. I would also like to cite, sir, the difference in turnover rate. In the Veterans' Administration neuropsychiatric hospitals the turnover rate is 8.1 percent. In the other Federal it is 5.8 percent, and in the State and local government hospitals it is 4.3 percent. We are doing practically 2 to 1 in the area of treatment and discharge.

Mr. THOMAS. As Mr. Boland brought out, they come back to you after 60 or 90 days.

Mr. GLEASON. They do not all come back.

Mr. THOMAS. I did not say they all came back, but you get a majority of them.

Mr. GLEASON. I do not think so.

Mr. THOMAS. That is no fault of yours. We went into that in some degree this morning on your basic research.

Dr. MCNINCH. It is difficult to get useful statistics on the final result of neuropsychiatric hospitalization. One has to wait for 5 years. You are estimating what your success was 5 years ago.

Mr. THOMAS. We realize that.

DOMICILIARY CARE

Mr. OSTERTAG. We will take up domiciliary care. Here is an indication that the estimate provides for an average of 16,679 operating beds and 15,448 member load in VA domiciliaries during fiscal year 1965, which results in an increase of 10 operating beds and a decrease of 3 member load.

What do you mean by three member load?

Mr. GLEASON. Instead of calling them patients, we call them members.

Mr. OSTERTAG. Your monthly average is 393 as compared with 398.

Mr. GLEASON. That is the waiting list.

Mr. OSTERTAG. Where is the comparative table of your operating beds and member loads?

Dr. MCNINCH. At 21–70.

Mr. OSTERTAG. It is not broken down by institutions.

Mr. WISE. 21–75 shows the distribution by individual stations.

Mr. OSTERTAG. You are maintaining the same average approximately in 1965 that you maintained in 1964. We shall insert 21–69, 21–70, and 21–75 in the record.

(The pages follow:)

DOMICILIARY CARE

The estimate provides for averages of 16,679 operating beds and 15,448 member load in VA domiciliaries during fiscal year 1965, which results in an increase of 10 operating beds and a decrease of 3 member load. These adjustments are due to the establishment of the 200-bed restoration center at East Orange, N.J., shifts of member load to alleviate overcrowding in other VA domiciliaries, and decreased demand in certain localities.

Pilot projects are in process to study the operation of restoration centers as part of the VA domiciliary program. Special restorative training will be afforded certain former hospital patients that have received maximum hospitalization benefits to fit them for more purposeful and independent living. The restoration center program will emphasize restoration and outplacement of disabled veterans, and serve to make more hospital beds available for those in need of hospitalization.

WAITING LIST

A slight decrease in domiciliary waiting lists was experienced in fiscal year 1963. The number of eligible applicants not scheduled for admission at the end of each month for both the 1962 and 1963 fiscal years is shown below:

Month	Fiscal year 1962	Fiscal year 1963	Month	Fiscal year 1963	Fiscal year 1963

RESTORATION CENTER PROGRAM

Mr. OSTERTAG. In connection with the domiciliary care, we have the restoration center program. Is that provided for in this particular part of your budget?

Mr. WISE. Yes, sir. The highlight for fiscal year 1965 would be the activation of the 200-bed restoration center at East Orange, N.J. At this facility we expect to maintain an average member load of 126 in 1965.

In other geographical areas there are small changes in demand, slightly downward, where we would expect 129 lesser member load than in the present year but, as is indicated, the program remains practically level.

Mr. THOMAS. What is the difference between a domiciliary facility and a restoration center?

Dr. ENGLE. The restoration center program was started about a year and a half ago. The objective is to inject something dynamic in the domiciliary program. We have been operating a pilot installation at Hines, Ill. There are 120 beds at that installation.

Mr. THOMAS. I remember when you set it up. But 90 percent of your people in there are over 60 years of age. What do you intend to restore?

Dr. ENGLE. The emphasis in the past has been on domiciliation care, food, and lodging and a sheltered environment, and it is our belief that a large number of domiciliary members can be motivated to return to society.

Mr. THOMAS. What have you accomplished in the last 2 years?

Dr. MCNINCH. At Chicago about 23 percent of those admitted have been placed in occupations.

Mr. THOMAS. What are the age groups?

Dr. MCNINCH. The average age group in Chicago has been 45.

Mr. OSTERTAG. What is your load there?

Mr. MCNINCH. 110, something like that. It has been a pilot project.

Mr. THOMAS. How many will there be?

Mr. WISE. There will be two with East Orange.

Mr. OSTERTAG. East Orange is not operating as yet?

Mr. GLEASON. Not yet.

Mr. THOMAS. Has the program proved successful?

Mr. GLEASON. We think a 23-percent return to community life is a pretty good percentage. If we could do that well with our domiciliary members there could well be a great saving.

Mr. THOMAS. We have been to a good many of the domiciliary facilities and I do not recall seeing anyone as young as 40 or 45.

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. It would be interesting to learn where these veterans who are placed in the restoration centers are channeled from. Are they channeled to the restoration centers from hospitals or from domiciliary facilities?

Dr. ENGLE. It could be from both. In the pilot study it has been mainly from the hospital at Hines. But there will be a potential from both the hospitals and domiciliary facilities. This would be another means of freeing hospital beds.

Mr. OSTERTAG. In what way are you trying to restore these veterans, physically, mentally, or occupationally?

Dr. MCNINCH. Both, but it is primarily a mental and social problem. At Hines I think 43 percent are alcoholics.

Mr. THOMAS. They are out of your mental institutions, are they not? You do not have any out of your domiciliary facilities, do you?

Dr. MCNINCH. We have a rehabilitation program at Los Angeles that is not called a restoration center but it is a similar type program and we have had about the same amount of success under a very energetic director.

Mr. OSTERTAG. But you started out, as I recall—and I recall that we discussed this matter a year ago—to substitute or take from your domiciliary capacity for what was being established as restoration capacity. Am I right in that, Mr. Administrator?

Mr. GLEASON. We are taking the beds from domiciliary and, as you can see from the bottom of page 21–75, the beds are still all included in the overall total but we are using domiciliary beds for the restoration program, that is correct.

Mr. OSTERTAG. When I spoke of capacity I meant beds or members.

Mr. GLEASON. So many of these people in the domiciliary program have lost all desire to live in the community. This is more a place for them to go and wait until they die. That is why we are trying to initiate a program to have them return to the community and obtain jobs and work and live among their fellow men in a more normal life.

Mr. BOLAND. That sounds good but once they get in these places they like to stay, and there is a reason for it. There is no other place for them to go.

Mr. GLEASON. If we could do as well in the coming year with a 23-percent return to community life, this will be quite successful because this, in turn, will free hospital beds for us to take care of additional patients.

Mr. OSTERTAG. The whole question arose as to whether or not you were doing this at the expense of the domiciliary capacity or capability or beds and whether or not, despite the fact you call it a pilot operation, it was your plan to eventually resort all veterans with the idea of abolishing domiciliary care.

Mr. GLEASON. No, sir. I do not think we will ever be able to abolish domiciliary facilities in total, and we do not even know we can abolish them 23 percent.

DOMICILIARY WAITING LIST

Mr. OSTERTAG. What is the waiting list for domiciliary care today?

Mr. GLEASON. About 393.

Mr. OSTERTAG. That is the overall waiting list for the country?

Mr. GLEASON. That is the monthly average.

Mr. OSTERTAG. The monthly average?

Mr. GLEASON. Yes.

Mr. BOLAND. Does that mean 393 people have made applications for domiciliary care who have not been satisfied?

Mr. GLEASON. That is correct.

Mr. BOLAND. That is surprisingly low when you stop to think of the numbers involved.

Mr. GLEASON. There are some places where they make applications, such as in Florida in the winter months, and there might not be vacancies, but you could go to the New England States and get in tomorrow. And in the summertime you could walk into Florida pretty nearly any day.

Mr. WISE. It is very seasonal.

Mr. BOLAND. That is understandable. These people are human beings. They like vacations.

Mr. GLEASON. We have three domiciliaries in which there is no waiting list whatsoever.

STATUS OF FACILITIES FOR RESTORATION PROGRAM

Mr. OSTERTAG. I would like to raise one more question about this restoration program. Hines is in operation?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. And East Orange, N.J., is partially in operation?

Mr. GLEASON. We hope that will be in operation by the end of this fiscal year, in another 3 to 4 months.

Mr. OSTERTAG. I notice on the table of distribution of member loads and beds by domiciliary that East Orange had in 1964, 75 operating beds, and in 1965 you anticipate 200 operating beds?

Mr. GLEASON. That is an annual average, Mr. Ostertag. We had anticipated that East Orange would be completed about 3 months ago in the construction but because of labor disputes and so on it has been delayed.

Mr. THOMAS. What construction are you doing at Hines and East Orange?

Mr. GLEASON. At Hines we did not have to do any. The buildings were there.

Mr. THOMAS. You had buildings at East Orange?

Mr. GLEASON. No, sir. This is prefabricated construction.

Mr. THOMAS. Did you not have domiciliaries at East Orange?

Mr. GLEASON. No, sir.

Mr. THOMAS. How many do you have now?

Mr. GLEASON. Twenty if you count Hines and East Orange.

Mr. THOMAS. What are the facilities you do not have in regular domiciliaries that you have in restoration centers? You want more psychiatrists and more trained personnel and that is about all there is to it, is it not?

Mr. GLEASON. Dr. Engle might be able to enlarge on this.

Dr. ENGLE. The essential problem is staffing with social workers, occupational therapists, psychologists, and so forth.

TREATMENT FOR ALCOHOLISM

Mr. THOMAS. Mr. Boland, will you go into the question of alcoholism. I am getting a lot of questions about it. Most of these cases are nonservice connected. They want to get into hospitals, they are sick, and their families are calling. Most of them are not service connected but 60 percent of the patients in your hospitals are not service connected. What is the policy? What can you do about it? Is not alcoholism a disease just like some of the other diseases we are having? Let us go into it in some detail. Is this the only place that the veteran can go for alcoholism? Does he have to go to a private hospital? Certainly the hospitals at Fort Worth and at Lexington, Ky., do not deal in alcoholism, do they? They deal in other kinds of addiction.

Mr. GLEASON. Narcotics.

Mr. THOMAS. What is the policy? Personally I know it is a disease in my own mind. Sometimes I am a little impatient, and I guess the average doctor is, and I guess the position is by virtue of the fact they say, "You brought it on yourself." That is true to some extent but does not the medical world recognize it as a disease? What is being done? Are you doing any research in your hospitals? Give us a 5- or 10-minute discussion of it.

Dr. TIMM. Of course alcoholism is a disease. In many instances it is symptomatic of another underlying disease, particularly in the psychiatric area. We do admit these for treatment when they are considered to be treatable cases.

Mr. THOMAS. What is the yardstick? What is the scientific yardstick of whether it is a treatable case? A drunk is a drunk, is he not?

Dr. TIMM. I suppose you could say a drunk is a drunk; yes, sir, but there are various degrees.

Mr. THOMAS. I have heard of some good people—and I say they are good people when they are sober—who say, "Help get me out of this mess. I want to take the cure and I want to get in the hospital. They won't take me in." They have enough sense that they know they are in trouble. That person could be restored. What are we doing about it?

Dr. TIMM. I think in these cases, we get them in hospitals where alcoholism is the primary trouble as long as they will cooperate.

VA POLICY ON TREATMENT FOR ALCOHOLISM

Mr. THOMAS. The hospital manager will say, "I saw you 2 weeks ago and now you are back again." The hospital manager is put out with him, but the man is still sick. What can be done about the problem and what is the answer to it? Is there any general policy? The hospital manager will say, "I told you the last time you were here I was not going to take you back. You are back again." Do you have any general policy on this type situation?

Dr. TIMM. Our general policy on this is to treat the veteran as long as he will accept the treatment and cooperate.

Mr. THOMAS. I do not know what you mean by that. I have had them call me and want me to help them get in the hospital and the hospital manager will say, "He was in here last week and I told him not to come back."

Dr. TIMM. This is the kind of problem that we are trying to find an answer for. We do not have a good answer to it.

RESEARCH ON ALCOHOLISM

Mr. THOMAS. What research has been done on alcoholism? It seems to me this is a necessary area for research. Is it a combination of neuroses? Is it a biological defect? Is it a molecular defect? What research have you done?

Dr. MUSSER. We have conducted research on alcoholism. We are associated with the Menninger Clinic at Topeka, Kans., and we are working with them in the operation of a research ward for alcoholism.

Mr. THOMAS. What about a hospital where you have 1,000 beds? You do not have to send him out of town, do you?

Dr. MUSSER. The chief factor in the treatment of alcoholism is the motivation of the individual, whether he wants to get well.

Mr. THOMAS. Are any biological defects involved?

Dr. MUSSER. There is some difference of opinion. By and large most doctors and psychiatrists feel that fundamentally these are psychoneurotic people. Recently there has been some indication that after a certain time metabolic changes appear in the central nervous system of alcoholics which have some of the features of a deficiency disease, and some of the most encouraging research is along this line.

Mr. THOMAS. You mean it starts as a mental deficiency and ends as a physical deficiency?

Dr. MUSSER. Yes, in a sense. This is a clue we have never had before and I think it needs more research and study. For the first time in history of the Veterans' Administration we have a very active program of research on alcoholism.

POLICY ON ADMITTANCE OF ALCOHOLICS

Mr. THOMAS. Do you have general rules about taking a non-service-connected alcoholic in your hospitals?

Dr. ENGLE. Yes, sir; we have a general rule that says in effect that unless this man has a background disease that is definitely treatable like a psychosis he should not be admitted unless he had delirium tremens or was a medical emergency.

We are not saying this is the best policy but it is the present policy. Many alcoholics are turned down.

Mr. THOMAS. Can you do them any good? Are you not making a mistake?

Dr. MCNINCH. They are competing with other patients.

Mr. OSTERTAG. Is there any research along this line associated with your restoration center?

Dr. ENGLE. Yes, sir; 45 percent of the members admitted to the restoration center are alcoholics. In addition there is a project at Los Angeles for the restoration of alcoholics. It is called PAR—program for alcoholic rehabilitation.

Mr. THOMAS. Suppose he is competing with another veteran for a bed and they are both nonservice connected. If alcholism is a disease, you are giving his second choice, are you not? Did he bring it on himself? I guess he did in one sense of the word because nobody held him by the ear and made him drink, but if it is a disease, maybe he did not want it. Maybe he was helpless in combating it, just like a person cannot combat appendicities. Are you going to deny him hospitalization on the basis he is an alcoholic?

Dr. ENGLE. We are not sure it is right, Mr. Thomas. I think in many of these cases hospitalization not only does not do any good but it may be harmful.

Mr. THOMAS. What do you mean, it may be harmful?

Dr. ENGLE. In providing a sheltered environment or a haven, a place to go after you go on an alcoholic bout.

Mr. THOMAS. Are you saying he has to get right down on the ground and stay there for awhile and from that position he has to pull himself up and nobody can pull him up except himself? Is that what you are saying?

Dr. ENGLE. No, sir.

Mr. THOMAS. If that is right, medical science is not doing anything for him.

Dr. ENGLE. We are talking about hospital treatment. Of course outpatient treatment can often be helpful and Alcoholics Anonymous is helpful to a large number of these individuals.

Mr. THOMAS. I think Alcoholics Anonymous are about the only people who have done an outstanding job.

Well, it is a problem and I was hoping you were doing some research on it.

Mr. BOLAND. I think it would be a good field for you to go into because so many who come to VA institutions are alcoholics. Of course alcoholism should not be the only problem when they are admitted, there must be some psychosis.

FUTURE PLANS FOR RESTORATION CENTERS

Mr. OSTERTAG. You have no definite goals as to the total program on restoration as yet?

Mr. GLEASON. We are only going as far as East Orange and we will use it, along with Hines, Ill., to see if we should go further with this program.

Mr. OSTERTAG. What has been your experience thus far?

Mr. GLEASON. Has been very good.

Mr. OSTERTAG. It has been good but it has not revealed what your ultimate program or goal should be?

Mr. GLEASON. It has revealed a very fine goal but whether we can reach this goal in the eastern part of the United States, we do not know. If we do, we probably will put one out on the west coast.

UNIT COSTS—DOMICILIARIES

Mr. OSTERTAG. This table on page 21–72 should be put in the record at this time.

(The table follows:)

Comparison of total costs and unit cost by activity

	Fiscal year 1963, actual		Fiscal year 1964, estimated		Fiscal year 1965, estimated		Increase (+) or decrease (−), 1965 over 1964	
	Cost	Cost per member-day	Cost	Cost per member-day	Cost	Cost per member-day	Cost	Cost per member-day
Care of members:

COST PER PATIENT-DAY FOR INPATIENT CARE

Mr. OSTERTAG. May I make this observation, that the cost per member-day for inpatient care is estimated at $5.77 for fiscal year 1965 as compared with $5.64 for 1964 and $5.285 for 1963.

We shall put in the record pages 21–73 and 21–74.

(The pages follow:)

Comparative analysis of unit and total costs, by object

Costs by object	Base factor	Fiscal year 1963 actual		Fiscal year 1964 estimated		Fiscal year 1965 estimated		Increase (+) or decrease (−), 1965 over 1964	
		FTE employees	Total cost	FTE employees	Total cost	FTE employees	Total cost	FTE employees	Total cost
10 Personal services and benefits:									
Consultants and attendings		9	$91,334	11	$116,000	11	$117,000		+$1,000
Nurses		79	643,672	81	719,000	85	789,000	+4	+70,000

Mr. OSTERTAG. Any further questions on this?

(No response.)

STATE HOMES

Mr. BOLAND. On page 21–76 it is indicated there is a decrease of $20,000 requested in 1965 from 1964 for medical care in State homes. You had $7,481,000 in 1964 and you are requesting $7,461,000 for 1965. The average daily member load was 9,100 in 1964 and is expected to be the same in 1965.

Put in the record page 21–76 and the table on page 21–77 that shows the distribution of the average daily member load by State home.

(The pages follow:)

Cost summary by object

	Fiscal year 1963 actual	Fiscal year 1964 estimated	Fiscal year 1965 estimated	Increase (+) or decrease (−), 1965 over 1964
41 Grants, subsidies, and contributions	$7,378,261	$7,481,000	$7,461,000	−$20,000
Average daily member load	9,161	9,100	9,100	

Program notes

In accordance with 38 U.S.C. 610, domiliciary and hospitalization care are furnished to eligible beneficiaries in State soldier's homes under this legislation, the Federal Government reimburses States or territories for domiciliary or hospitalization care furnished members meeting the same criteria for admission as those required by the Veterans' Administration. Payment is effected at a rate not to exceed $2.50 per diem for each veteran, or one-half the cost of maintenance, whichever is less.

The average daily member load of 9,100 projected for fiscal years 1964 and 1965 reasonably approximates fiscal year 1963 experience. The downward trend of demand in this program during the past few years has been reversed in fiscal year 1963, and is expected to remain relatively stable for the next several years.

Comparative average daily member loads since fiscal year 1948 are as follows:

Actual average daily member load

Fiscal year:	
1948	6,150
1949	6,712
1950	7,437
1951	7,774
1952	7,900
1953	8,088
1954	8,346
1955	8,802
1956	8,739
Fiscal year—Continued	
1957	8,938
1958	9,318
1959	9,678
1960	9,418
1961	9,385
1962	9,062
1963	9,161
1964 (estimated)	9,100
1965 (estimated)	9,100

Member loads actually experienced in fiscal year 1963 are indicated in the table shown below:

Distribution of fiscal year 1963 average daily member load by State home

Total	9,161

Cost changes

Fiscal year 1965 costs reflect no change in the fiscal year 1964 unit cost level with the exception of the expense for 1 less calendar day in fiscal year 1965, which amounts to $20,000. Both the fiscal year 1964 and fiscal year 1965 dollar estimates have been adjusted to reflect authorized increases in the annual per capita costs. Advance notice that such increases in billings will occur has already been received from several States. Costs per member day are $2.21 for fiscal year 1963 and $2.25 for the fiscal years 1964 and 1965.

Mr. BOLAND. How many State homes are there?

Dr. MCNINCH. Thirty-three in twenty-eight States.

Mr. BOLAND. Incidentally, you give pretty good treatment in these State homes. I am familiar with the one in Chelsea and the one in Holyoke, Mass., and they are both fine homes.

OUTPATIENT ACTIVITIES

The chart on page 21–78 indicates an increase of $1,393,000, 1965 over 1964, for outpatient activities, for a total of $131,819,000 compared to $130,426,000 in 1964. The average employment indicates an increase of 65, 1965 over 1964, from 11,067 in 1964 to 11,132 in 1965. Put in the record the charts on pages 21–78 and 21–79.

(The charts referred to follow:)

Employment, workload, and object summary

	Fiscal year 1963 actual	Fiscal year 1964 estimated	Fiscal year 1965 estimated	Increase (+) or decrease (−), 1965 over 1964

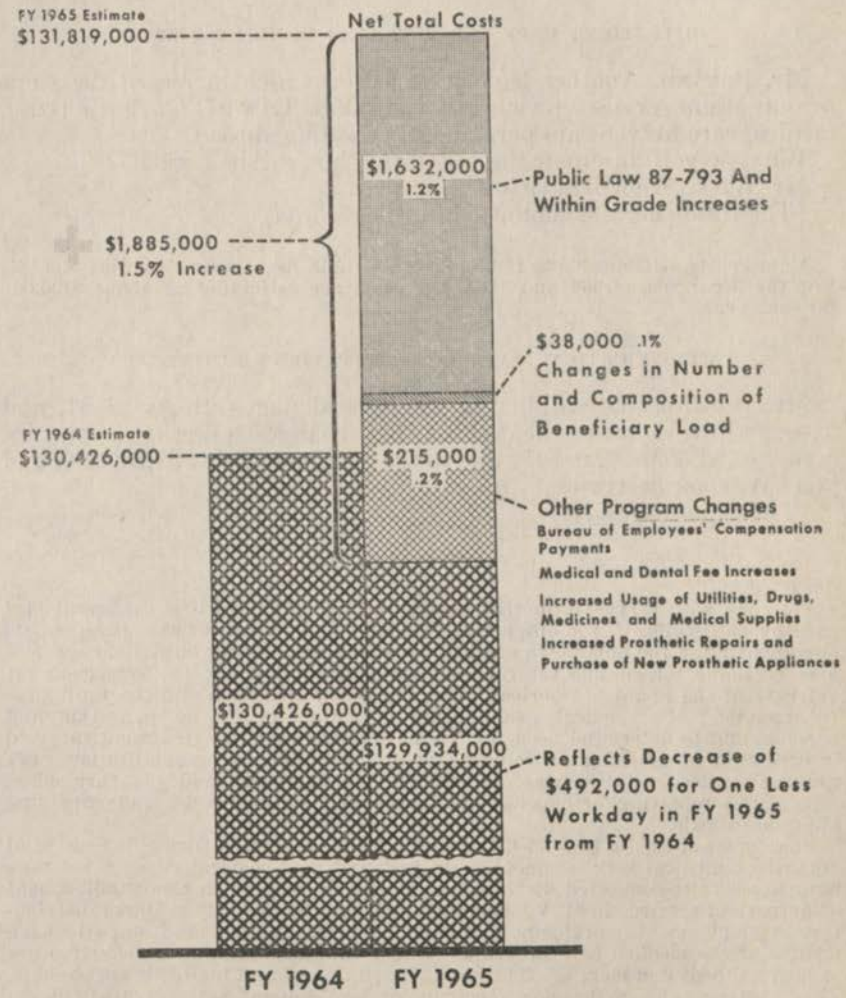
MEDICAL CARE

INCREASE IN COST-FY 1965 OVER FY 1964

Outpatient Care Activities



OUTPATIENT CARE FOR CERTAIN PEACETIME VETERANS

Mr. BOLAND. You state that legislation actions which have increased the scope of outpatient services to veterans include Public Law 87–583, authorizing medical care to peacetime veterans suffering from noncompensable service-connected disabilities.

What do you anticipate the increased cost of this is for 1965?

If you do not have it, supply it for the record.

(The following was submitted for the record:)

With the enactment of Public Law 87–583 on August 14, 1962, the number of peacetime veterans receiving outpatient treatment from VA totaled 27,590 during fiscal year 1963, and is expected to increase to about 35,000 by fiscal year 1965. Treatment costs in the 1965 fiscal year are estimated at about $280,000 for these veterans, based on an average cost of $8 per visit.

OUTPATIENT CARE FOR VETERANS RESIDING ABROAD

Mr. BOLAND. Another legislative action which increased the scope of outpatient services to veterans was Public Law 87–815, authorizing medical care for veterans permanently residing abroad.

What do you anticipate the cost of that law will be for 1965?

Mr. WISE. We will have to supply that.

(The following was submitted for the record:)

Actual costs attributable to Public Law 87–815 in fiscal year 1963 were $84,165. For the fiscal years 1964 and 1965, the costs are estimated at about $135,000 for each year.

JUSTIFICATION MATERIAL—OUTPATIENT ACTIVITIES

Mr. BOLAND. We will put in the record pages 21–80, 21–81, and 21–82, which indicates the detail of cost changes reflecting a total increase of $1,393,000, mostly due to the pay increase of $1,632,000, and you have some decreases.

(The pages follow:)

OUTPATIENT ACTIVITIES

Program notes

Veterans with service-connected disabilities are provided medical and dental care by the staffs of VA outpatient facilities and by physicians and dentists participating in the hometown medical care program. Other outpatient services also available for eligible veterans consist of the following: (1) treatment for veterans of the Spanish-American War, the Boxer Rebellion and the Philippine Insurrection; (2) medical examination of claimants for compensation and pension, and to determine need for VA hospitalization; (3) treatment to avoid interruption of training to veterans receiving vocational rehabilitation; (4) nursing service, social service and guidance in nutrition; and (5) furnishing, fitting and repairing orthopedic appliances and sensory aids, and supplying pharmaceuticals.

Enactment of Public Law 86–639, July 12, 1960, authorized furnishing essential outpatient medical services incident to pre- and post-hospital care of veterans with non-service-connected disabilities. This has resulted in the establishment of outpatient services in all VA hospitals and has significantly realined distribution of employment, workloads, and costs between inpatient and outpatient activities of the medical care program. Under this legislation more effective use of hospital beds and more efficient use of hospital staff and facilities are possible. This also provides a broader spectrum of professional services available to veterans.

Other legislative actions which more recently have increased the scope of outpatient services to veterans include:

1. Public Law 87–583 approved August 14, 1962, authorizing medical care to peacetime veterans suffering from noncompensable service connected disabilities.

2. Public Law 87–815 approved October 10, 1962, authorizing medical care for veterans permanently residing abroad.

Medical care provided through the outpatient program supplants or reduces extended periods of costly hospitalization. In fiscal year 1963 outpatient services were provided by all VA hospitals and 33 outpatient clinics and 16 subclinics not located in a hospital setting. During fiscal year 1964 the outpatient clinic located at VA regional office, Cleveland, Ohio, will be consolidated with the VA hospital, Cleveland, Ohio. Three additional clinic consolidations are planned for fiscal year 1965 at VA hospitals, Wood, Wis.; San Francisco, Calif.; and Washington, D.C.

For fiscal year 1965, outpatient medical workloads are expected to increase due to activation of five additional day-care centers, increased compensation, and pension examination referrals, the new legislative entitlements previously mentioned, increased activity in the prebed care, completion of bed occupancy, and trial visit programs, and the general demand for services occasioned by an aging veteran population.

The five additional psychiatric day-care centers planned for activation in fiscal year 1965 will be located at Cleveland, Ohio; Dearborn, Mich.; Little Rock, Ark.; Houston, Tex.; and Albuquerque, N. Mex. These activations will increase the total number of day-care centers in operation to 29.

The estimate for fiscal year 1965 contemplates 65 additional personnel for the increased beneficiary loads including activation of the five new day-care centers and adding new medical services at existing facilities. In addition to salary funds for the new personnel, monetary increments are requested for payment of Public Law 87–793 salary rate and within-grade increases to existing employees, general rate increases in medical and dental fees, and increased utilization of drugs, medicines, prosthetic appliances, and related medical supplies.

Detail of changes in the number and composition of beneficiary loads

Increases of 25 employees and $38,000 are reflected under the "Change in Number and Composition of Beneficiary Load" column of the estimate, comprised of the following:

(*a*) Increases of 25 employees and $246,000 for activation of the 5 day-care centers. Workload increases of 25,000 medical visits are anticipated for these facilities in their initial year of operation; however, it is expected that the workload count will rise to about 37,000 in the second year without further staffing increases.

(*b*) Increase of 12,500 medical visits realized from increased productivity of day-care centers activated in fiscal year 1964 for which no additional funds are required.

(*c*) Decrease of $208,000 in requirements for initial equipment in newly constructed facilities.

Detail of cost changes

Public Law 87–793 and within-grade increases	+$1,632,000
One less workday and calendar day	−492,000
Change in number and composition of beneficiary load	+38,000
Improving the quality of medical treatment and adding new medical services at existing facilities	+283,000
Exclusion of fiscal year 1964 wage board increased costs from fiscal year 1965 column of this estimate	−10,000
Increased medical and dental fee rates	+250,000
Increased usage of utilities, drugs, medicines, medical supplies, and expense of operating central air-conditioning systems	+278,000
Increased prosthetic repairs and purchase of new prosthetic appliances	+166,000
Increase in reimbursements to Department of Labor for payments of benefits from employees compensation fund	+59,000
Maintenance and repair needs at aging medical facilities	+60,000
Decrease for object 31 replacement equipment program	−555,000
Decrease for management improvement actions	−316,000
Total increase	+1,393,000

Mr. BOLAND. How did you effect the decrease in management improvement actions?

Mr. WISE. By increasing the utilization of VA pharmacies.

Mr. BOLAND. Put in the tables on pages 21–84 and 21–85. Page 21–85 breaks down the outpatient activities.

(The pages follow:)

Comparison of cost by activity

OUTPATIENT MEDICAL WORKLOADS

Mr. OSTERTAG. How do you arrive at an estimate of the total number of visits by veterans for outpatient care?

Mr. BOLAND. That table, incidentally, is on page 21–87. I see where you anticipate 6,011,800 total visits for outpatient treatments.

Mr. OSTERTAG. That is a slight increase over the last 2 years but there must be some basis for your estimating that number of visits.

Mr. WISE. With the five psychiatric day centers that will be activated, we would expect 5,000 workload count at each the first year. This would account for about 25,000 of the increase in load.

Mr. THOMAS. The test is how many patients you have?

Mr. WISE. Mr. Rosen, what do we have on individuals?

Mr. ROSEN. During the last fiscal year in our clinics we see 1.8 million patients, some 3 times a year.

As far as the method of estimating, a record is kept each time a patient visits the clinic.

Mr. BOLAND. This figure of 6,011,800 reflects the number of visits made by veterans to your outpatient clinics?

Mr. WISE. Yes.

Mr. OSTERTAG. On that basis there would be slightly over three visits on an average per patient.

Mr. WISE. On page 21–87 you will notice 3.9 million of this total are veterans we can generally expect repeat visits from. Those are visits for outpatient treatment. But in the other categories, such as insurance examinations or examinations for need of hospital or domiciliary care, these are more apt to be one-time examinations to determine the disposition that should be made of those cases.

Mr. THOMAS. These people do your preinduction work for your hospitals, too, do they not? How is it working out? How much time it is saving you?

Mr. WISE. There were about 22,000 examinations made in this particular category.

NUMBER OF CLINICS

Mr. THOMAS. Is there a clinic for every hospital?

Mr. WISE. Yes, sir.

Mr. THOMAS. How many hospitals do you have?

Mr. WISE. 169.

Mr. THOMAS. So you have 169 clinics?

Mr. WISE. Plus 33 more located in regional offices and in addition 16 subclinics, very small facilities.

Mr. THOMAS. What do they give you altogether?

Mr. BOLAND. 218.

CONSOLIDATION OF CLINICS WITH HOSPITALS

Mr. THOMAS. How many clinics have you moved to your hospitals?

Mr. WISE. About 35 or 36 have been consolidated in hospitals. We still have 33 in the regional offices, many of those being in the metropolitan areas such as New York City.

Mr. THOMAS. What has been the result where you have consolidated them?

Mr. WISE. We found two things. Generally there is a cash saving of around $50,000 made through consolidation. We have three consolidations planned in 1965. We also find greater medical benefits because of the broader range of services.

Mr. THOMAS. Why are you so slow in consolidating?

Mr. WISE. It is dependent on construction, space.

Mr. THOMAS. Space?

Mr. WISE. Yes. We will have three more consolidations in 1965.

Mr. THOMAS. What percentage are in hospital space and what percentage in rented space?

Mr. WISE. They are practically all in Government-owned buildings. Sometimes we activate new facilities in rented space. One of the psychiatric day-care centers for next year, in Cleveland, would be in rented space. I would say a good 95 percent are in Government-owned facilities.

Mr. BOLAND. I note that the ratio of staff visits at the outpatient clinics to fee physician visits is about 3 to 1, is it not?

Mr. WISE. Yes.

Mr. BOLAND. What is the total amount of money you expend for fee physicians under this program?

Mr. WISE. $9,429,000.

Mr. BOLAND. This is a combined total for medical, nurses and dentists?

Mr. WISE. Yes.

OUTPATIENT DENTAL WORKLOADS

Mr. BOLAND. Page 21–89 deals with outpatient dental workloads. [Reading:]

Staff workloads projected for fiscal years 1964 and 1965 were based on an increase in performance ratio of dentists to cases completed during fiscal year 1963. Fee costs for fiscal year 1965 are based on limited rate increases over fiscal year 1964 in the cost per case, based on new contracts now being negotiated in fee schedule for dental examinations and treatments.

Put in the record the table on page 21–90.
(The page follows:)

Outpatient dental estimate

	Fiscal year 1963, actual	Fiscal year 1964, estimated	Fiscal year 1965, estimated
Applications:			
Pending start of fiscal year	7,207	8,837	10,900
Received during fiscal year	106,550	108,700	109,100
Total workload	113,757	117,537	120,000
Disposed of during fiscal year	104,920	106,637	107,900
Pending, end of fiscal year	8,837	10,900	12,100
Examination cases completed	40,729	41,000	40,985
Staff	36,790	37,000	37,000
Fee	$3,949	$4,000	$3,985
Treatment cases completed	48,903	49,600	49,572
Staff	41,858	42,500	42,500
Fee	$7,045	$7,100	$7,072
Fee cost per case:			
Examination	$18.32	$18.50	$18.82
Treatment	147.06	150.00	151.73
Total fee cost	1,108,305	1,139,000	1,148,000
Examination	72,295	74,000	75,000
Treatment	1,036,010	1,065,000	1,073,000

Replacement of Motor Vehicles

Mr. Boland. Let us turn to "Replacement of motor vehicles on page 21–92 (reading):

The estimate provides $806,000 for replacement in fiscal year 1965 of 84 passenger-carrying vehicles and 172 non-passenger-carrying vehicles, listed on the following pages. Replacement of agency vehicles is based on General Services Administration standards of 6 years or 60,000 miles, whichever is first attained, and/or no longer are economically repairable.

I do not think we need a list of all these cars and where they are located.

Mr. Ostertag. What are the criteria on the replacements?

Mr. Gleason. That is stated on page 21–92, Mr. Ostertag. They must be 6 years or 60,000 miles, whichever occurs first.

If you will recall, sir, this sheet was made up June 30, 1963, so we have to estimate what it will be a good 12 to 18 months later. We figure all these vehicles listed here will have reached either the 6 years or the 60,000 miles.

Mr. Boland. Or complete dilapidation as at Perry Point, Md., where you have a 1962 Plymouth sedan with 32,500 miles.

Mr. Gleason. That is probably a vehicle going between Perry Point and Washington on daily trips to the hospital with patients that might be admitted.

Mr. Ostertag. Here is a station wagon at Mountain Home, Tenn., a 1962 Plymouth, with 24,824 miles.

Mr. WISE. These are reviewed very carefully and where we find the cost of repairing would greatly exceed the cost of replacement, it is only sensible to buy a new car.

Mr. GLEASON. I want to point out. You mentioned 1962. This is as of 1963 and I cannot tell you right now but this station wagon might be only 8 months old and if it had 24,000 miles on it when this table was made up, by the time we get our money in 1965 it will have 60,000 miles on it.

Mr. BOLAND. If any of these that meet the test are in good shape, do you keep them even if they have gone 60,000 miles?

Mr. GLEASON. We eventually turn them back to GSA.

Mr. BOLAND. Do you always make replacements?

Mr. GLEASON. No, sir.

Mr. BOLAND. Off the record.

(Discussion off the record.)

NURSING CARE PROGRAM

Mr. BOLAND. Before we leave medical items I think we ought to ask the Administrator about the nursing home problem. What do you plan to do here and how much money did you ask the Bureau of the Budget for and have they supplied you with that?

Mr. GLEASON. We believe there are sufficient funds in this budget we have requested to operate the nursing homes.

Mr. BOLAND. Give us a rundown on where you are operating them.

Mr. GLEASON. We are not operating them right now. We will have to come before this committee in another 2 or 3 weeks for a supplemental of $5 million or $6 million for renovating money to set up this program, at which time we will have the locations and plans. We do not have them now. If you will be good enough to bear with us until we come before you.

CANTEEN SERVICE REVOLVING FUND

Mr. BOLAND. Turning to the canteen service revolving fund, put in the record pages 22–1, through 22–5, and the table on financial condition on page 22–6.

(The pages follow:)

CANTEEN SERVICE REVOLVING FUND

No appropriation by the Congress will be required for the operation of the Veterans Canteen Service during fiscal year 1965. The Veterans Canteen Service was established by Congress in 1946 to furnish at reasonable prices merchandise and services necessary to the comfort and well-being of veterans in hospitals and dimiciliaries operated by the Veterans' Administration (38 U.S.C. 4201–4208). The budget estimate in the amount of $11,708,000 for the Veterans Canteen Service, fiscal year ending June 30, 1965, is submitted for the purpose of providing for its maintenance and operation.

The Congress originally appropriated a total of $4,965,000 for the operation of the Veterans Canteen Service and no additional appropriations have been required. Funds in excess of the needs of the Service totaling $8,400,000 have been paid to the Treasury. Funds in the amount of $311,000 will be paid to the Treasury during fiscal year 1964. Contingent upon the operating results for fiscal year 1964, and the capital requirements for fiscal year 1965, the 1965 estimate anticipates a further payment to the Treasury of $25,000.

Capital requirements

At the end of fiscal year 1963, there were canteens in operation at all VA hospitals and domiciliaries. Capital requirements for operation of the Veterans Canteen Service for fiscal year 1965 are as follows:

1. *Cash.*—(*a*) Petty cash and change funds: The average sum of $852 per canteen is considered necessary for the purpose of making limited local purchases, paying incidental operating and housekeeping expenses, and providing adequate change requirements. Such funds are established in amounts commensurate with the size and requirements of each individual canteen. Total requirements, $144,000.

(*b*) At the field station depositories: It is estimated that the average sum of $9,361 per canteen is necessary for the maintenance of field station depository accounts. Total requirements, $1,582,000.

(*c*) At the field offices and central office: It is estimated that the capital requirements for five field offices and central office will amount to $1,845,000. This total will provide a portion of the cash for payment of outstanding accounts payable, accrued payroll, withholding taxes, retirement, etc.

(*d*) Cash reserve in special deposit account: It is estimated that a $300,000 cash reserve in the special deposit account with the Treasury Department is required to provide a source for emergency cash requirements.

(*e*) Cash reserve for contingencies: It is estimated that a minimum cash reserve of $200,000 in the special deposit account with the Treasury Department is required to provide sufficient cash on hand for the following contingencies:

(1) To provide a reserve for losses that may materialize due to cost-price depreciation of merchandise inventory and decreased sales volume.

(2) To provide adequate protection for possible losses resulting from fire, robberies, or other casualties.

2. *Accounts receivable, prepaid expenses and other assets.*—It is estimated that accounts receivable, prepaid expenses, and other assets will be $534,000.

3. *Inventories—Commodies for sale.*—(*a*) Retail departments: It is estimated that a retail inventory of $5,042,000 is required.

(*b*) Food departments: It is estimated that a food department inventory of $286,000 is required.

(*c*) Service departments: Service department inventories consist primarily of vending machine stocks. It is estimated that an inventory of $18,000 is required.

4. *Equipment.*—Capital requirements for replacement of wornout equipment and remodelings during fiscal year 1965 are estimated to be $842,000.

Operating results

It is expected that sales will amount to $48,888,000 in fiscal year 1965, and that a net profit of $306,000 will be realized.

Personnel requirements

In the area of manpower control and utilization, the Veterans Canteen Service uses many of the techniques that are generally applied in commercial retail chainstore operations. Major consideration is given to salary expense in relation to sales. Salary expense data is provided to management personnel periodically for each department in each canteen, as well as consolidated data for each field office and the total Veterans Canteen Service. This data is compared to the corresponding period for the previous year and to the budget. This has been and will continue to be an effective control.

Although the major control is salary expense in relation to sales, other means, such as sales productivity figures per employee have been developed for the retail and food departments to determine trends. Studies will be continued and productivity data refined during fiscal years 1964 and 1965. It is expected that sales and services to be provided in fiscal years 1964 and 1965 will be increased without a commensurate increase in personnel.

It is estimated that a total of 2,576 permanent positions and 237 full-time equivalent of all other positions will be required in fiscal year 1965, as indicated in the following tabulation.

	Actual, 1963	Increase (+) or decrease (−) 1964 over 1963	Estimate, 1964	Increase (+) or decrease (−) 1965 over 1964	Estimate, 1965

Total full-time equivalent of all other positions	237		237		237
Total positions	2,814	(1)	2,813		2,813

Financial condition

The current assets of the Veterans Canteen Service consist of cash, accounts receivable, merchandise inventories, prepaid expenses, and other assets. At the close of fiscal year 1965, it is expected that cash on hand and on deposit will be $4,609,000. It is estimated that accounts receivable, consisting mainly of amounts due from personal funds of incompetent patients will be $518,000. It is believed a capital investment in inventory of $5,346,000 will be required. Prepaid expenses and other assets should amount to $16,000. Current assets are estimated to total $10,489,000. Current liabilities are estimated to be $3,197,000; this amount will be made up of trade accounts payable, accrued payrolls, accrued leave, unredeemed coupons, withholding taxes, retirement, and other current liabilities. The total working capital (current assets less current liabilities) as detailed above will amount to $7,292,000.

The total budget estimate for the Veterans Canteen Service for fiscal year 1965 is made up as follows:

Total working capital	$7,292,000
Investment in equipment, net	4,416,000
Total investment of U.S. Government	11,708,000

Revenue, expense, and retained earnings

Mr. BOLAND. Any questions on that?
(No response.)

RENTAL, MAINTENANCE, AND REPAIR OF QUARTERS

The next tab is rental, maintenance, and repair of quarters, page 23–1. [Reading:]

There are available for leasing to Federal employees 128 housekeeping units under this fund located at Perry Point, Md. These units, which were transferred to the Veterans' Administration in 1925, were constructed prior to World War I and consequently are in need of considerable modernization, maintenance, and repair.

Put in the record pages 23–1 and 23–2.
(The pages follow:)

RENTAL, MAINTENANCE, AND REPAIR OF QUARTERS

There are available for leasing to Federal employees 128 housekeeping units under this fund located at Perry Point, Md. These units, which were transferred to the Veterans' Administration in 1925, were constructed prior to World War I and consequently are in need of considerable modernization, maintenance, and repair.

Due to the need for providing living quarters as an incentive to recruit and retain the services of key employees, a long-term program is maintained to defray from rental income all operating, maintenance, repairs and, as possible, modernization expenses incidental thereto (38 U.S.C. 5012(a)). Rental charges are determined in accordance with instructions contained in Bureau of the Budget Circular A–45, which require that charges be set at comparable community rates, based on fair appraisals.

Because of the extensive backlog of maintenance and repair work, virtually all income must be applied to the upkeep of the quarters to assure even minimal living standards. The age and type of construction of the units will require continuing maintenance in future years.

Statement of income and expense

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Income: Rentals received	$88,105	$92,000	$92,000

Expense:			
Maintenance and repair	54,521	54,000	55,000
Fuel, utilities, and services	36,462	38,000	37,000
Total expense	90,983	92,000	92,000
Net operating income or loss (−)	−2,878		

Statement of financial condition

	Fiscal year 1963 actual	Fiscal year 1964 estimate	Fiscal year 1965 estimate
Assets:			
Cash with Treasury	$1,836	$1,234	$1,234
Accounts receivable	1,721	2,000	2,000
Total assets	3,557	3,234	3,234
Liabilities: Current	938	1,000	1,000
Government equity: Retained earnings	2,619	2,234	2,234
Total Government equity	2,619	2,234	2,234

Mr. BOLAND. What are these quarters for? Just for employees?

Mr. GLEASON. Yes, sir.

Mr. BOLAND. This is an area where it is difficult to get housing, or what is the situation?

Mr. MONK. It is difficult to get housing and we spend the rental income to maintain the property.

Supply Program

Mr. Ostertag. Page 24–1 is the supply program. [Reading:]

The supply program is responsible for providing supply services to all organizations in the Veterans' Administration, and for the procurement and distribution of drugs, biologicals, official reagents, and nonperishable subsistence for all civilian agencies.

Mr. Ostertag. I think we might insert the narrative on pages 24–1, 24–2, and 24–3.

(The pages follow:)

SUPPLY PROGRAM

General statement

The supply program is responsible for providing supply services to all organizations in the Veterans' Administration, and for the procurement and distribution of drugs, bilogicals, official reagents, and nonperishable subsistence for all civilian agencies. The program provides a source of supply through VA supply depots and national VA contracts to hospitals of the Department of Health, Education, and Welfare, and provides medical supplies and equipment to the government of American Samoa. It provides for the stockpiling and distribution of civil defense material for DOD and HEW and for fire protection and guard services for GSA stockpiles located at Somerville Depot. Three supply depots, a publication depot, and 170 field supply activities provide purchasing and warehousing facilities.

Program notes

The objective of the supply program is to provide quality support for all programs in the VA and to assure for the agency the greatest return for every dollar spent for the acquisition, maintenance, and utilization of supplies, equipment, and services.

The program provides—

1. A staff office for promoting more effective and economical operations, developing plans, policies, standards, cost controls, methods, overall management of the supply fund, and for the appraisal and evaluation of the supply program for the Administrator through the Assistant Administrator for Management and Evaluation.
2. An operations office which provides centralized direction of the supply activities.
3. A system for agency supply standardization and cataloging, personal property management, property utilization and disposal, and for financing and management of inventories.
4. Centralized direction of field supply operations.
5. A national buying system for the procurement of supplies, equipment, and services. National buying is designed to consolidate requirements and purchases of all items for which there is a price advantage in volume buying.
6. The management and operations of three VA supply depots for economical storage and distribution.
7. A service and reclamation program for the repair and reclamation of supplies and equipment nationwide, and for providing laboratory inspection and testing services for technical instruments, equipment, and supplies.
8. A national buying system for the procurement, printing, and distribution of forms, form letters, publications (manuals, circulars, etc.), and other printed material as authorized by the Joint Committee on Printing.
9. Field station supply activities for the local purchase of all items for which there is no price advantage in volume buying and for the purchase of goods and services which are not made available from GSA or other mandatory sources. These activities also provide for storage and issue of supplies and equipment to field station users. They perform functions

of supply accounting, utilization, and disposal of property, equipment maintenance, and supply fund administration. They furnish hospitals, outpatient clinics, regional offices, insurance centers, etc. with drugs, medical supplies, and equipment; orthopedic appliances; engineering supplies and equipment; etc.; also contractual services such as equipment rental, maintenance and repair of office machines, laundry services, etc.

Supply fund financing

The supply fund finances, on a reimbursable basis, the procurement of supplies and equipment consumed throughout the VA; the operating expenses of the three VA supply depots, including acquisition, cost, and depreciation of operating equipment; the cost of the service and reclamation program; and the cost of production, procurement, and distribution of printed matter for the VA. Appropriations reimburse the fund for the cost of supplies and equipment provided and services rendered by the above specified activities, including related expense such as transportation, inspection, and testing. The fund is expected to break even in fiscal year 1965.

Appropriations financing

The following costs are direct charges to appropriations and are not financed by the supply fund:

1. Personal services of the supply program in central office and field stations.
2. Nonpersonal services such as contracts for laundry service, office machine repairs, research (medical and prosthetic), etc.

Workload

The total dollar volume produced in the supply program amounted to $216,874,366 actual, fiscal year 1963; $226,579,238 estimated, fiscal year 1964; and $231,395,220 estimated, fiscal year 1965.

Cost trends

Manpower and cost controls are used to insure operational effectiveness of the supply program. The following cost trends express the ratio of supply salary costs to each $100 of total workload produced for VA and other Government activities.

Fiscal year 1963, actual	$10.01
Fiscal year 1964, estimate	10.21
Fiscal year 1965, estimate	10.20

Explanation of increases

Increase of two average employment financed by the supply fund at supply depots for increased service required in the personal property maintenance program.

Increase of 3 average employment at field supply activities is required for advanced staffing of the new VA hospital, Washington, D.C.

Mr. OSTERTAG (reading):

The total dollar volume produced in the supply program amounted to $216,874,366 actual, fiscal year 1963; $226,579,238 estimated, fiscal year 1964; and $231,395,220 estimated, fiscal year 1965.

We have a good table here on page 24–4, as well as page 24–5. Then we have the "Program by activities" on page 24–6.

(The pages follow:)

Unobligated balance carried forward (negative)	15,107,309	12,667,987	12,668,347
Financing applied to program	179,307,278	180,442,317	183,724,154

Mr. OSTERTAG. The total financing applied to the program is estimated at $183,724,154 as compared to $180,442,317.

Under "Operating costs funded": Procurement, distribution and services program, costs of goods sold, you estimate at $174 million which is a slight increase over fiscal year 1964.

Under "Publications and reproduction program," there is a slight increase over last year.

Under "Capital outlay" this also calls for an increase of about $3.5 million.

Mr. THOMAS. There are 3 supply depots and 170 field stations. Let us look at the big table there and see if we want to put that in the record.

Mr. OSTERTAG. We already have that in the record, page 24–4.

Mr. THOMAS. You have 170 supply stations and 3 depots.

What is the amount of your revolving fund now? How much inventory do you have?

Mr. COOK. The inventory at the end of fiscal 1963 is $34,134,994.

Mr. THOMAS. How much cash do you have?

Mr. COOK. At the same time we had $13,389,000.

Mr. THOMAS. How much cash was originally put into the fund?

Mr. COOK. Nothing, sir. You permitted us to capitalize the value of the goods already purchased.

Mr. OSTERTAG. That is all set out on page 24–8.

Mr. THOMAS. How much was the original capitalization?

Mr. COOK. The original capitalization was about $51 million.

Mr. THOMAS. Then you have 24 plus 13, but what became of your other assets?

Mr. COOK. We gave $15 million to the Treasury.

Mr. THOMAS. When?

Mr. COOK. I do not recall the exact date but I think it was 1955 or 1956.

ECONOMIES RESULTING FROM SUPPLY FUND OPERATIONS

Mr. THOMAS. What do you figure you are saving the taxpayers and the Veterans Administration if it costs $10.20 per hundred of business? What do you figure you save, if anything?

Mr. COOK. It would vary according to the kind of commodity we are talking about. We figure on foodstuffs the savings would be somewhere in the neighborhood of 15 percent.

Mr. THOMAS. Chainstores do not take that much gross profit. It is much less than that. What is their markup?

Mr. COOK. Sir, the difference is not only in the chainstore markup but the wholesale distributors' markup.

Mr. THOMAS. The vast majority of your purchases are from chainstores, are they not?

Mr. COOK. No, sir.

Mr. THOMAS. When you go into your big city hospitals, do they buy locally? How do they buy, from the chainstores?

Mr. COOK. No, sir; the biggest item would be meat and we go directly to the packer.

Mr. THOMAS. What about fresh turnip greens, oranges, and black-eyed peas?

Mr. COOK. We go to the wholesale market, not retail.

Mr. THOMAS. What do you figure you save on fresh vegetables?

Mr. COOK. This would be a guess but I would say 10 percent.

Mr. THOMAS. You are bound to save some money though, are you not? The markup is pretty low on food, generally, is it not?

Mr. COOK. Yes, sir.

Mr. BOLAND. What is the markup in Safeway or Giant? Usually about 3 or 4 percent?

Mr. COOK. Yes, sir; for supermarkets of this type. In this total it might average that but it goes all the way from 1 percent on bread to 30 percent on something like coffee.

BAKERIES AT VA INSTALLATIONS

Mr. OSTERTAG. You do not buy bread on the open market, do you?

Mr. COOK. No, sir.

He asked about the markup in the retail stores.

Mr. BOLAND. Do you do your own baking?

Mr. GLEASON. In some places.

Mr. THOMAS. At all of your sizable institutions, you have your own bakeshops, do you not?

Mr. GLEASON. Yes, sir.

Mr. BOLAND. Is it more expensive to do it this way than buy it outside?

Mr. COOK. Sir, there were some studies made several years ago and at those hospitals where it was found to be cheaper to buy commercially we closed our own bakeries.

Mr. GLEASON. A lot of places, you just cannot buy it.

FINANCIAL CONDITION—SUPPLY FUND

Mr. OSTERTAG. Let us put page 24–8 in the record.

(The page follows:)

SUPPLY FUND

GOVERNMENT EQUITY IN SUPPLY FUND

Mr. OSTERTAG. At the start of the year, you have equity of $40 million in the capital fund. It is a non-interest-bearing capital fund but what is the nature of that capital?

Mr. THOMAS. Merchandise.
Mr. OSTERTAG. I want to find out.
Mr. COOK. It is mostly inventory, sir.
Mr. OSTERTAG. Inventory of stocks?
Mr. COOK. Yes, sir; and cash in excess of our outstanding bills.
Mr. OSTERTAG. The cash is $4 million and the balance would be stocks, is that correct?
Mr. COOK. Yes, sir.

GENERAL POST FUND, NATIONAL HOMES

Mr. BOLAND. Let us take up "General Post Fund, National Homes." This is a fund which is generated by gifts from property left in the care of the facilities by former beneficiaries or the general public at large. This is something with which we are familiar. It is interesting people would actually leave funds to these institutions because they are grateful for the care that has been given to them or their families or their friends.

I do not have any questions.

Let us insert in the record pages 25–1, 25–2, and 25–3.

(The pages follow:)

GENERAL POST FUND, NATIONAL HOMES

This fund consists of gifts, bequests, and proceeds of property left in the care of the facilities by former beneficiaries or the general public; unpaid pension money standing to the credit of beneficiaries who die without pensionable heirs; and proceeds from effects of such beneficiaries who die leaving no heirs or without having otherwise disposed of their estates. Such funds are available to promote the comfort and welfare of the veterans at the various hospitals and homes, and are used for purposes for which appropriated funds normally are not available, or where the items desired are sufficiently low on the priority list as would preclude their being provided from appropriated funds on a timely basis. (38 U.S.C. 83 and 85.)

During fiscal year 1964, it is estimated that cash expenditures from the fund will approximate $1,638,000, comprised of $1,263,000 for supplies and services, $20,000 for settlement of estates and claims, and $355,000 for recreational and religious facilities and equipment. The expenditures are in accord with purposes for which the fund legally may be expended (Controller General's Decision B–125715, Nov. 10, 1955), and the intent of the donors. Donors usually specify that their donations be used for designated recreational or religious projects or equipment purchases.

In fiscal year 1965, expenditures for supplies and services are estimated at $1,280,000 in keeping with small but steady increases being experienced each year. Estimated expenditures for the settlement of estates and claims are projected on the actual cost for fiscal year 1963. Approximately $355,000 will be expended for recreational and religious equipment and facilities projects required for the patients and members. An invested reserve of approximately $2,400,000 will be maintained to meet claims for estate settlements which must be held in trust for a legal period of 5 years after the demise of intestate veteran beneficiaries.

Cash receipts from donations and estates for each of the fiscal years 1964 and 1965 is estimated at $1,830,000.

Statement of income and expense

	Fiscal year 1963 actual	Fiscal year 1964 estimated	Fiscal year 1956 estimated

Mr. BOLAND. Is all of this money used for the general welfare of the patient where you are going to buy games or something to make their lives a little bit easier?

Mr. GLEASON. Yes, sir.

Mr. BOLAND. That is all.

Mr. THOMAS. Let us take a look at construction, gentlemen. You have two programs here, 1700 and 9000.

Let us put the tables on page 26–2 in the record. Also insert page 26–3.

(The pages follow:)

ASSISTANT ADMINISTRATOR FOR CONSTRUCTION

CONSTRUCTION OF HOSPITAL AND DOMICILIARY FACILITIES, $102,000,000

A construction program of $102,010,000 is recommended for 1965 to be financed with new obligational authority of $102,000,00 and savings of $10,000 from a completed project at McKinney, Tex. The appropriation limitation cited in Public Law 623, 84th Congress, 2d session, must be changed before the McKinney savings can be used. The appropriation requested is the fifth increment toward financing the 15-year program for replacement and modernization of our existing hospital facilities.

The substantial increase for 1965 over the $75 to $77 million funding level for 1961–64 is requested to advance the schedule for constructing a 720-bed replacement hospital at San Juan, P.R. When San Juan is completed, the VA can reduce a large number of contract beds and furnish 40 beds to meet the needs of the Department of the Army. As planned, VA is to provide bed requirements for the Department of the Army in lieu of constructing a separate hospital for the Army.

This request also includes $630,000 for fallout shelter facilities in replacement hospitals as follows: for construction only, $200,000 each for Hines, Ill., phase I, Los Angeles, Calif., and San Juan, P.R.; and for planning only, $20,000 for Chicago (S.S.), Ill., and $10,000 for Northport, N.Y.

The financial summary shown below includes only the following: (1) 55 new projects for which initial funds are requested in 1965; and (2) 328 projects in process which include only those projects having unobligated balances of 1964 or previous year appropriations on hand.

Summary for new projects and projects in process

[Thousands of dollars]

Program	Total estimated cost	Appropriation available through 1964	Appropriation request for 1965			Appropriation required after 1965 [1]
			New projects	Projects in process	Total for 1965	
(1)	(2)	(3)	(4)	(5)	(6)	(7)
Replace hospitals	438,265	297,255	1,800	68,154	69,954	71,056
Modernization	168,282	101,341	7,298	11,003	18,301	48,640
Other improvements	91,350	61,590	4,485	2,356	6,841	22,919
Domiciliaries	7,300	1,800	500		500	5,000

Savings—McKinney, Tex., lim				−10	−10	
Net appropriation request, 1965			15,499	86,501	102,000	

[1] Covers balance of technical services and construction funds for projects on which only partial funding has been requested through 1965.

Replacement hospitals.—The $69,954,000 requested for this activity provides $1,800,000 for acquisition of building site and initial planning funds for a "new project"; and $68,154,000 to complete the financing of eight "projects in process."

Modernization.—The $18,301,000 requested under this activity includes $7,298,000 for seven "new projects" and $11,003,000 to complete the financing of seven "projects in process."

Other improvements.—The $6,841,000 requested for this activity includes $4,485,000 for 41 "new projects" and $2,356,000 to complete the financing of two "projects on process."

Domiciliaries.—The $500,000 requested for this activity is to start one "new project."

Research facilities.—The $6,414,000 requested for this activity includes $1,416,000 for five "new projects" and $4,998,000 to complete the financing of five "projects in process."

Description of new projects.—Detailed descriptions of new projects included in this request are shown on pages 26–10 through 26–14.

Mr. THOMAS. You have 328 projects now in progress and in the construction program this year you are looking for $102 million at which $86,501,000 is for projects in process. What was it in 1964?

Mr. SCHWEICKART. $77 million.

Mr. THOMAS. Let us look at page 26–4 for a complete breakdown. You want $102 million and the appropriation requested, you say, is a fifth increment toward financing a 15-year program for replacement and modernization.

The substantial increase for 1965 is about $25 million, is it?

Mr. GLEASON. Yes, sir.

NEW VA HOSPITAL, SAN JUAN, P.R.

Mr. THOMAS. Is it requested to advance the schedule for construction of 720 bed-replacement hospitals in San Juan? San Juan is completed, but you say the Veterans Administration can reduce a large number of contract bids. You are going to do business with the Army? What are they going to bring you in this? Are they going to bring you out whole?

Mr. GLEASON. $26 a day as of right now.

Mr. THOMAS. They will bring you out whole, whatever it is?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. Is this going to be NP, TB, and G.M. & S.?

Mr. THOMAS. Is this going to be NP, TB, and G.M. & S.? No NP cases?

Mr. GLEASON. We do have some NP beds.

Mr. THOMAS. Your biggest patient load is in NP now?

Dr. MCNINCH. NP and G.M. & S.; both.

Mr. THOMAS. How are the beds broken down?

Mr. MONK. 240 NP beds, 400 medical and surgical beds, 40 TB beds, and 40 beds to meet the requirements of the Department of the Army.

Mr. THOMAS. Let us take a look at this request which includes $630,000 for fallout shelters in replacement hospitals as follows: for construction only, $200,000 each for Hines, Ill.—phase 1, Los Angeles, Calif., San Juan, P.R.; and for planning only $20,000 for Chicago, Ill., and $10,000 for North Port, N.Y. Planning only?

Mr. GLEASON. We have not even started phase 1 at Chicago.

Mr. THOMAS. At Hines?

Mr. GLEASON. No, sir.

Mr. THOMAS. You have completed phase 1 this year there?

Mr. GLEASON. Not at Hines.

Mr. THOMAS. You are going to start on phase 1 in Hines when, next year?

Mr. GLEASON. Yes, sir; 1965.

Mr. THOMAS. You say $20,000 for Chicago?

Mr. GLEASON. The new South Side Hospital.

FALLOUT SHELTERS

Mr. THOMAS. You show $630,000 for fallout shelter facilities.

Mr. MONK. Yes, sir.

Mr. THOMAS. The Congress has killed fallout four times. How many times do you have to kill it until it becomes dead?

Mr. MONK. We have to put it in here.

Mr. THOMAS. Why?

Mr. MONK. We are required to.

Mr. GLEASON. We are going to keep trying, Mr. Chairman.

Mr. THOMAS. I ask again, it is never dead, is that it?

Mr. GLEASON. We never give up, Mr. Chairman.

APPROPRIATION REQUEST AND FUTURE REQUIREMENTS

Mr. THOMAS. The financial summary includes the following: 55 new projects for which initial funds are requested in 1965, and 328 projects in process, which include only those projects having unobligated balances of 1964 or previous year appropriations on hand.

That is what the $102 million calls for this year, to carry it forward beyond 1965 and then it will be $149,537,000; is that correct?

Mr. GLEASON. Yes, sir.

(NOTE.—The following was subsequently supplied for the record:)

The following additional information regarding the unobligated balances and the funding of projects is supplied for the record:

The construction of hospital and domiciliary facilities appropriation request for fiscal year 1965 is $102 million. This will be added to the estimated unobligated balance of $17.4 million expected to be carried over from fiscal year 1964. The unobligated balance at the end of fiscal year 1965 is anticipated to be approximately $20.1 milion. The effect of the unobligated balances is shown in the following table. The unobligated balances by individual projects carried over from fiscal years 1964 and 1965 are shown in columns 7 and 10, respectively, on pages 26–4 through 26–9.

[In millions]

Item	Fiscal year 1963, actual	Fiscal year 1964, estimate	Fiscal year 1965, estimate
New appropriations	$77.0	$76.8	$102.0
Unobligated balance carried over	67.3	72.6	17.4
Total available for obligation	144.3	149.4	119.4
Less obligations	71.7	132.0	99.3
Unobligated balance	72.6	17.4	20.1

The $102 million requested for fiscal year 1965 will be applied to the 383 projects listed on pages 26–4 through 26–9 as follows:

For 55 new projects listed on page 26–4, $15.5 million is needed to initiate plans and construction. This amount will cover the entire cost of 42 projects at $11,100,000. It will also provide $4.4 million to partly finance the other 13 projects, the total estimated cost of which is $63.9 million; $59.5 million of the $63.9 million will be requested after 1965.

Of the 328 projects in some stage of design or construction shown on pages 26–5 through 26–9, funds are requested in fiscal year 1965 for only 22; $85.9 million of the $86.5 million requested will complete the financing of 21 of the 22 projects for which funds are required during fiscal year 1965. This will bring the total number of inprocess projects completely financed to 312. Of the remaining 16, funds in the amount of $600,000 are requested in this fiscal year and $90.1 million will be required in future appropriations. From a table which

follows, you will recognize that of the 383 projects, only 29 will require funds in future years in the amount of $149.6 million.

Summary of effect of 1965 appropriation

[Costs shown in millions of dollars]

	Number	Total estimated cost	Prior funds	Appropriated, 1965	Future requirement
New projects completely financed	42	11.1	0	11.1	0
New projects requiring funds after 1965	13	63.9	0	4.4	59.5
Subtotal for new projects	55	75.0	0	15.5	59.5
In-process projects completely financed	312	554.6	463.7	85.9	0
In-process projects requiring funds after 1965	16	95.4	4.7	.6	90.1
Subtotal for in-process projects	328	650.0	473.4	86.5	90.1
Total for program	383	725.0	473.4	102.0	149.6

Mr. THOMAS. Before we go to the details and look at your program, let us check this item.

Replacement hospitals, the total estimate is $438,265,000 and the appropriation available through 1964 is $297,255,000. Under new projects you have $1.8 million; projects in process, $68,154,000 and the total is $69,954,000.

Then under modernization, you have $18,301,000 total.

Under other improvements, you have $6,841,000.

Next, we have RO and supply depots, and that is $500,000.

Next, research facilities, $6,414,000.

Let us turn now to new projects.

The estimated cost for replacement hospitals is $22,093,000.

Mr. SHIPLEY. That is for Chicago.

Mr. THOMAS. That is only one. Which one is this?

Mr. GLEASON. This is the South Side Hospital across from the University of Chicago.

Mr. THOMAS. That is the brandnew one you contemplate?

Mr. GLEASON. Yes, sir.

MODERNIZATION—VA HOSPITAL, BATTLE CREEK, MICH.

Mr. THOMAS. The modernization at Battle Creek will be $2 million. You have $153,000 set up for 1965; describe this.

Mr. GLEASON. Lowell, can you?

Mr. SCHWEICKART. That involves the modernization of existing buildings.

Mr. THOMAS. Modernization of building 13 for what, utilities? For $2 million?

Mr. SCHWEICKART. No, sir; modernization of building 13 and utilities in addition to the modernization

MODERNIZATION—VA HOSPITAL, DANVILLE, ILL.

Mr. THOMAS. What is this $5.4 million for Danville, Ill.?

Mr. SCHWEICKART. This is a similar project at Danville which involves construction of a building for physical medicine and rehabilitation and construction of a 240-bed NP building.

Mr. THOMAS. At a cost of $5 million?

Mr. SCHWEICKART. Yes, sir.

Mr. THOMAS. Are these new beds?

Mr. SCHWEICKART. Those are replacement beds, replacing existing buildings.

Mr. THOMAS. Brand new?

Mr. SCHWEICKART. Yes, sir.

Mr. THOMAS. How many square feet in the building? What do you figure this is per bed?

Mr. SCHWEICKART. It runs around $10,000.

Mr. THOMAS. For an NP building?

Mr. SCHWEICKART. Yes, sir.

Mr. THOMAS. You have been using only $20,000 for G. M. & S.?

Mr. GLEASON. No; $25,000 for G. M. & S.

Mr. THOMAS. Are these contractor estimates or in-house?

Mr. MONK. In-house, so far.

Mr. THOMAS. What do you mean by "so far"?

Mr. MONK. We did not have a contract bid on it.

Mr. GLEASON. We cannot put them up for bid until we get approval.

Mr. THOMAS. I understand, but these estimates look a little high, gentlemen.

MODERNIZATION—VA HOSPITAL, MARION, ILL.

For Marion, Ill., modernization, phase one, $3 million total estimated cost. What is the history on this? Modernization of what and how many?

Mr. GLEASON. It is about a 170-bed hospital and we wanted to modernize it, bring it up to about a 200-bed hospital.

Mr. MONK. Mr. Thomas, we have given you a brochure on each one of these projects.

Mr. THOMAS. What we want you to do is to take this table and spell it out.

CONVERSION TO AUTOMATIC ELEVATOR CONTROLS

How many automatic elevator controls do you have? Is this a part of the 328 projects?

Mr. MONK. This is approximately 50 elevators. The 10 projects for automatic elevator controls are listed on page 26–13.

Mr. THOMAS. That is on page 26–4?

Mr. MONK. Approximately 50.

Mr. THOMAS. How many new projects on this page? You break it down into 55 new projects and 328 non——

Mr. MONK. There are 55 on this page. These are the new projects shown on page 26–4.

Mr. THOMAS. These are all new?

Mr. MONK. All brand new; yes, sir.

Mr. THOMAS. Let us take a look at your research facilities; Birmingham, Chicago, Madison, and St. Louis.

RESEARCH ADDITION—VA HOSPITAL, BIRMINGHAM, ALA.

The research facility in Alabama is $1.1 million. What are you getting for your money there?

Mr. MONK. A new research building addition.

Mr. THOMAS. How big is it?

Mr. GLEASON. 31,600 square feet of which 20,000 square feet will be in new construction.

Mr. THOMAS. $1.1 million, but how much is that a square foot?

Mr. GLUCKMAN. That project is phased out at 20,000 square feet in new construction. We were told that this was one where the contractor indicated that would be the price.

Mr. THOMAS. You set out in your prospectus as $31.74 and there is no contractor bid on this either.

Mr. MONK. No, sir.

Mr. THOMAS. Is this going to be one where you will come back under the other appropriation?

Mr. GLEASON. This is just the construction.

Mr. THOMAS. No equipment? There is no equipment in any of these projects?

Mr. MONK. Not portable; no, sir.

Mr. THOMAS. You mean the elevators in here, and so forth?

Mr. MONK. That is right.

Mr. THOMAS. When it comes to portable equipment, none of it is in here?

Mr. MONK. That is back in the research appropriation.

PLANNING AND SITE FUNDS—NEW PROJECTS

Mr. THOMAS. This is just pure construction and the money heretofore appropriated for your plans, specifications, and land covers that.

Mr. GLEASON. That is all out of here.

Mr. THOMAS. No; you have had it heretofore in most of these.

Mr. MONK. No, not in these new projects.

Mr. GLEASON. There is not a thing on this page at all, Mr. Chairman, and you will note on the next page——

Mr. THOMAS. You have sites and planning money on most of these?

Mr. MONK. Not on this page; these are brandnew projects. You asked us last year to split this and give you the brandnew ones.

Mr. THOMAS. No site and planning money?

Mr. GLEASON. No, sir. We have not had a penny on any of these.

Mr. MONK. Some of this is planning money.

Mr. GLEASON. We are going to use this in 1965 but we have not received a penny of it yet.

Mr. THOMAS. On the 55 you have not received a penny?

Mr. GLEASON. That is right.

LAND ACQUISITION FOR CHICAGO HOSPITAL

Mr. THOMAS. What are your sites and planning costs and your real estate costs on the South Side, Chicago, hospital for 860 beds?

Mr. GLEASON. We plan about $3 million.

Mr. THOMAS. For what?

Mr. GLEASON. The acquisition of the property and the plans.

Mr. THOMAS. Acquisition of the land? How much land is involved?

Mr. GLEASON. If we get the land we hope to get, it will be approximately 18 acres.

Mr. THOMAS. $3 million?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. How much is that an acre?

Mr. GLEASON. All of that, of course, would not be for the land because it would have your plans in there. I imagine it would run pretty high; about $200,000 an acre.

Mr. THOMAS. Expensive land; is it not? Where in Chicago is it going to be located?

Mr. GLEASON. We hope right across the street from the University of Chicago Medical School.

Mr. BOLAND. Who owns the land?

Mr. GLEASON. The Chicago Park District.

Mr. THOMAS. Not the university?

Mr. BOLAND. Why do they not give it to you?

Mr. GLEASON. They will not.

Mr. BOLAND. They ought to give it to you for less than that cost. You are putting in a tremendous facility that will benefit the people of Chicago.

Mr. GLEASON. The reason they won't, Mr. Boland, is that we are taking parkland away from the people of Chicago and there is no other land around there for them to replace it with.

Mr. BOLAND. Yes, but we have another program in Housing and Home Finance Administration that creates open parkland and then they will come in here for money under that program, and we will give them money to establish open land in Chicago.

Mr. GLEASON. Not in this particular location, Mr. Boland.

Mr. BOLAND. I know; but in some location they will get it. I think they would be able to negotiate.

Mr. GLEASON. If you are acquainted with the South Side of Chicago, it is a very difficult area to negotiate.

Mr. THOMAS. How many floors will this new hospital at South Side, Illinois, have?

Mr. GLEASON. We do not have any idea yet, Mr. Chairman.

Do you have any preliminary plans?

Mr. SCHWEICKART. We do not have any preliminary plans yet; no, sir.

STANDARDIZED PLANS

Mr. THOMAS. Do you not have some standardized plans on your hospital? You are not going to go out and cover 5 or 6 acres with one building, are you? Do you not have plans like these high-rise buildings where you have most of the facility under one roof? Do you have any standardized plans?

Mr. GLEASON. I do not have any.

Mr. SCHWEICKART. We do not have a standardized plan as such.

Mr. THOMAS. Why?

Mr. SCHWEICKART. We attempt to standardize nursing units to the extent local conditions permit. We repeat such arrangements as we develop new hospitals, but we attempt to improve on them to the extent we can without making radical departures from the established patterns for providing good nursing service. We standardize as is practical but we also try to make improvements as we progress with the program.

LOCATION OF NURSING STATIONS

Mr. THOMAS. I notice in some of the modern private hospitals being constructed the nurses' office is right in the middle of the hall and every room on that floor looks right into that office. That nurse can sit there and see every patient by moving in a circle within a radius of 25 or 30 feet.

Mr. SCHWEICKART. Mr. Thomas, the plans for Jackson, Nashville, Martinez, Cleveland, and Washington hospitals are similar. With respect to the point you are making, the arrangement of the nursing units and the location of the nursing station in relation to the beds, they are similar. In later developments, we are working with an improved nursing unit and in the Temple, Memphis, Long Beach, San Juan, and Hines hospitals, we are using a different plan.

Mr. THOMAS. In talking about G.M. & S. hospitals, I guess the plans for NP might be a little different?

Mr. SCHWEICKART. Yes, sir.

Mr. THOMAS. When you are talking about Temple and other places, you are talking about a different plan and you are referring to an NP hospital?

Mr. SCHWEICKART. No, sir, general medical. I was referring to the general medical portion of Temple as it compares with the general medical hospitals at Memphis, Hines, and the others.

Mr. THOMAS. What is the difference in the plan?

Mr. SCHWEICKART. We have gone from what we formerly had, a double corridor plan with two or three pairs of nursing units on a floor, to a square plan with two nursing units on a floor. The purpose is to shorten the distance of travel for the nurses and others serving the patients in the wards and in the bedrooms.

Mr. THOMAS. That is where the nurse is, out in the circle in the middle of the building and she is able to look into every door?

Mr. MONK. We have in the Memphis hospital planned one intensive care unit in the circle. We had not yet built any of those circular hospitals.

Mr. SCHWEICKART. The square is the closest approach used by the VA in general medical nursing units to this circular plan you have reference to. We are approaching that with the square plan.

CONSTRUCTION COSTS—CHICAGO

Mr. THOMAS. You have here an overall cost of $22 million for this new 760-bed hospital in Chicago. How much did you say it is per bed?

Mr. SCHWEICKART. That would run close to $29,000.

Mr. THOMAS. Per bed?

Mr. SCHWEIKART. Yes, sir.

Mr. THOMAS. You do not have any contractor estimates on that, do you?

Mr. SCHWEICKART. No, sir. May I explain that?

The timing was scheduled for the development of the construction budget and it is such that the budget submissions come ahead of the development of preliminary plans. The estimates are based on the requirements developed by the Department of Medicine and Surgery which provide the gross area to be included in the building. The cost estimates are obtained by multiplying the gross area by the average cost per square foot of new construction accomplished by the Veterans' Administration throughout the country adjusted to the cost in each locality.

Mr. THOMAS. You estimate your cost as $27.55 a square foot and that includes no equipment? By the time you get through equipping your hospitals, what will it cost you per bed?

Mr. SCHWEICKART. The initial portable equipment, I presume you are talking about, adds about $3,600 a bed.

Mr. WISE. About $3,600.

Mr. THOMAS. That makes it a round $33,000 a bed?

Mr. MONK. That is about right for that hospital.

Mr. THOMAS. Pretty high, gentlemen.

Let us look at this facility at Chillicothe, Ohio, medical and surgical and NP hospital.

Let us turn to the justifications right quick on this item.

Mr. GLEASON. That is $100,000.

Mr. MONK. That is to add a medical and surgical service in the NP hospital there at a total cost of $100,000.

MODERNIZATION—VA HOSPITAL, PERRY POINT, MD.

Mr. THOMAS. Let us look at this facility at Perry Point, Md., modernization program, phase 4; what is this?

Mr. SCHWEICKART. This is for the modernization of administration and for foster home building 9–H and 80 and for some air conditioning. This is the fourth phase of a program for modernizing the whole hospital.

Mr. THOMAS. How many beds do you have at Perry Point now?

Mr. MONK. 1,500.

Mr. THOMAS. That is one of your big ones?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. Let us take a look at page 26–5. This is still new units and replacements?

Mr. MONK. Yes, sir.

Mr. THOMAS. You have had money on Atlanta?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. What about Charleston?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. Brecksville?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. What about Cleveland?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. I notice you are renting outclinic space in Cleveland. You have two brandnew hospitals. How do you account for that?

Mr. SCHWEICKART. The hospital is not yet finished in Cleveland but it will be finished sometime next month.

Mr. BOLAND. Are you going to buy them?

Mr. GLEASON. Yes, sir.

Mr. WISE. The day care will be separate unless it is picked up in the future construction. We had the director in last week and the only option is to knock 40 beds out of service. It is also 29 miles to the supply house.

Mr. THOMAS. Did you plan it that way? You did not intend to combine them?

Mr. WISE. The day care center was not planned until after the hospital was about half through.

Mr. THOMAS. Do you plan to move it out there?

Mr. WISE. Not at this time.

CLEVELAND HOSPITAL

Mr. THOMAS. You have two new ones in Cleveland. What about the one completed? Do you have an outpatient clinic? Where is it with reference to the one completed?

Mr. WISE. The clinic itself, we moved into the new hospital which is being completed this April. The day care center was an afterthought.

Mr. DRIVER. I think the chairman is referring to the Brecksville Hospital already completed.

Mr. WISE. No; we are speaking of the new Cleveland hospital.

Mr. DRIVER. You are going to move that when it is completed. The one completed a few years ago at Brecksville is too far away.

Mr. THOMAS. Not feasible to combine your outpatient clinic and the hospital?

Mr. DRIVER. No, sir; but it will be with the new one.

Mr. THOMAS. Where is the new one located, Brecksville?

Mr. DRIVER. The new one is in downtown Cleveland, across from the medical school.

Mr. GLEASON. Right across the street from the Western Reserve. They have Case Polytechnic School there. It is right across from Western Reserve.

Mr. THOMAS. Where is the new one located?

Mr. GLEASON. This is where the new one is located.

Mr. THOMAS. Where is the old one?

Mr. DRIVER. It is out near the Brecksville Hospital, the Crile location.

Mr. SCHWEICKART. It is south of the city about 15 miles in Parma Heights.

Mr. THOMAS. What is it close to?

Mr. SCHWEICKART. Parma Heights.

The old Crile Hospital is near the airport and that is perhaps what you are thinking of, the wind tunnel and research center.

Mr. THOMAS. Is there not an FAA facility nearby?

Mr. GLEASON. I think you are right, Mr. Chairman. There is an FAA building or space building right near Case.

Mr. THOMAS. I think it is brand new.
Mr. GLEASON. There is a center there.
Mr. THOMAS. That center covers three or four States for the FAA.
Mr. GLEASON. There is a Space Agency building near Case.
Mr. THOMAS. You have "Downey, Ill., NP, phase I," $22,530,000.
Mr. MONK. Plan I is completed. We are asking for $500,000 for phase II for Downey this year.
Mr. THOMAS. Downey is finished?
Mr. MONK. Practically finished.
Mr. GLEASON. Yes, sir; practically speaking.

NEW AND REPLACEMENT HOSPITALS IN PROCESS

Mr. THOMAS. How many of these new and replacement hospitals are you asking money for?
Mr. MONK. Eight.
Mr. THOMAS. What are they?
Mr. SCHWEICKART. Charleston——
Mr. GLEASON. Charleston, Hines, Los Angeles, Memphis, Miami, Oteen, San Juan, and Temple.
Mr. THOMAS. Wait a minute. Let me get column 8 here.
Mr. GLEASON. That is right.
Mr. THOMAS. That is for this year, Charleston?
Mr. GLEASON. Hines and Los Angeles.
Mr. THOMAS. $20 million.
There is a new hospital in Los Angeles for $22.6 million. Are these contractor bids?
Mr. MONK. No, sir.
Mr. GLEASON. Memphis, Tenn.; Miami, Fla.

HINES, ILL., HOSPITAL

Mr. THOMAS. How many bids are you going to have at Hines?
Mr. GLEASON. 1,220 in phase I.
Mr. THOMAS. What is that per bed? Is this the final cost?
Mr. GLEASON. No, sir; this is the first phase of Hines. There will be 1,220 general medical and neurological and later 480 neuropsychiatric.
Mr. THOMAS. How much money?
Mr. MONK. For Hines?
Mr. THOMAS. Yes.
Mr. MONK. $20,310,000.
Mr. THOMAS. The unobligated appropriation is $1.5 million?
Mr. GLEASON. That is right.
Mr. THOMAS. Is this going to be the total cost?
Mr. MONK. $21,310,000 is going to be the total cost of this first phase.
Mr. GLEASON. For 1,200 beds.
Mr. THOMAS. How much a bed?
Mr. SCHWEICKART. $17,000-plus.
Mr. THOMAS. Is this NP?
Mr. GLEASON. General medical.
Mr. MONK. The next phase will be.
Mr. GLEASON. Phase 2 will be NP, 500 beds.

Mr. MONK. Mr. Chairman, we have some facilities we will use at Hines.

Mr. THOMAS. How can you reduce this cost to $17,000 a bed and other costs that come to around $33,000?

Mr. MONK. Mr. Chairman, we had some facilities at Hines that we would use. We have a building that we are going to use for an administration building. The building that we are going to use for recreation will help and we have a building we are going to use for a canteen.

Mr. GLEASON. We have the chapel and we have other facilities.

Mr. SCHWEICKART. Mr. Thomas, I believe there is a mistake in the $33,000. We started with $29,000 and added the cost of the equipment which was said to be $3,500.

Mr. THOMAS. Where is the mistake then, please?

Mr. OSTERTAG. Mr. Chairman, before you leave that?

Mr. THOMAS. Surely.

VA HOSPITAL, BAY PINES, FLA.

Mr. OSTERTAG. I realize this is what you call the fifth increment of your 15-year plan for general modernization under the new and replacement hospital program but you are asking for $68,154,000 for fiscal 1965 and you expect to obligate $61 million; you will have an unobligated balance of $13,175,000 and I cannot help but mention the fact that $1,722,000 is for Bay Pines and that fund remains idle.

Mr. GLEASON. I think it will remain idle, Mr. Ostertag. I think if you will note in the location in column 1, you will see although the Tampa Bay Pines, Fla., area shows an unobligated balance, there may well be a statement in the very near future that will take care of this matter.

Mr. OSTERTAG. I am not going to belabor the point because we have discussed this project on previous hearings and if something develops that clears this unsatisfactory situation, I shall be very happy.

Mr. GLEASON. No one would be happier than myself, Mr. Ostertag.

Mr. THOMAS. What is this table that begins on page 26–10?

This gives the project location and description.

Mr. MONK. This is just a narrative that gives a little more than what is on the table, Mr. Thomas.

ASSISTANT ADMINISTRATOR FOR CONSTRUCTION—PROGRAM 1700

Mr. THOMAS. Gentlemen, let us look at your Program 1700.

We are getting into the administrative costs of the program as well as the medical administration and miscellaneous operating expenses.

How many jobs do we have here? You show 175 for 1963 and 177 for 1964 and 1965.

Are all of these engineers and construction people?

Mr. MONK. Engineers, architects; yes, sir.

Mr. THOMAS. For a total cost of $1,607,000 in 1964?

Mr. MONK. Yes, sir.

Mr. THOMAS. Where is this charged?
Mr. GLEASON. Medical administration.

CONSTRUCTION OF HOSPITAL AND DOMICILIARY FACILITIES APPROPRIATION
PROGRAM 9000

Mr. THOMAS. Your Program 9000 is charged to this account, is it?
Mr. MONK. Yes, sir.
Mr. THOMAS. You have 344 people in 1963, 363 in 1964, and you want to increase it by 6 to take care of the work on the 328 projects?
Mr. MONK. Yes, sir.
Mr. THOMAS. And the progress of the 55 new ones; is that it?
Mr. MONK. Yes, sir.
Mr. THOMAS. For a total cost of $3,843,975.
What is the total cost here for your construction program, $3.8 million for Program 9000 and $1.7 million for Program 1700?
Mr. GLEASON. $5 million.
Mr. THOMAS. Any other costs?
Mr. MONK. We have "Other objects" costs.
Mr. THOMAS. This is nothing but salaries. Any other salary costs?
Mr. MONK. No, sir.

CONSTRUCTION PERSONNEL

Mr. THOMAS. What is the difference in your personnel? Under Program 9000 you have three 15's, a dozen 14's, and so on. What is the difference in personnel?
Mr. SCHWEICKART. There is no difference. The negatives on 26–16 are the pluses on the other sheets, the 9000 appropriation, the following sheet.
Mr. THOMAS. You have three 15's for this year; is that right?
Mr. SCHWEICKART. There are all people who are presently on the payroll.
Mr. THOMAS. You do not have any 16's and 17's, but you did in the 1700 program.
Mr. MONK. Two 16's and one 17.
Mr. THOMAS. Why the difference?
Mr. MONK. On the 1700 program the 17 is the assistant for construction and one of the 16's is Mr. Schweickart, the other is Mr. Hagner. These are all administrative people paid out of this appropriation.
Mr. THOMAS. Is there any reason why you charge both of your top people to 1700 rather than 9000?
Mr. MONK. They could logically be either way.

PROGRAM 9000—OTHER OBJECT COSTS

Mr. THOMAS. You have personnel costs of $3.8 million and $1.7 million, for a total of $5.5 million. Where are your "Other objects"?
Mr. SCHWEICKART. 26–18.
Mr. THOMAS. We will put that in the record.

(Page 26–18 follows:)

CONSTRUCTION OF HOSPITAL AND DOMICILIARY FACILITIES APPROPRIATION—PROGRAM 9000

Comparative summary of requirements by object

	Fiscal year, 1963 actual	Fiscal year, 1964 estimated	Fiscal year, 1965 estimated	Increase (+) or decrease (−), 1965 over 1964
Average employment	374	398	407	+9
VA employees	299	323	332	+9
Hired labor	75	75	75	
11 Personnel compensation	$3,132,501	$3,463,850	$3,605,340	$+141,490
Permanent positions	(2,481,187)	(2,808,850)	(2,952,840)	(+143,990)
Positions other than permanent	(651,314)	(655,000)	(652,500)	(−2,500)
12 Personnel benefits	197,184	228,385	238,635	+10,250
Total, personnel compensation and benefits	3,329,685	3,692,235	3,843,975	+151,740
21 Travel and transportation of persons	109,610	120,000	120,000	
22 Transportation of things	1,926	2,000	2,000	
23 Rent, communication, and utilities	18,734	19,000	19,000	
24 Printing and reproduction	6,734	7,000	7,000	
25 Other services	5,057,496	5,000,000	5,000,000	
26 Supplies and materials	324,410	500,000	500,000	
31 Equipment	2,916,582	6,300,000	3,550,000	−2,750,000
32 Land and structures	56,592,840	63,144,465	75,569,425	+12,424,960
Total Veterans' Administration	68,358,017	78,784,700	88,611,400	+9,826,700
Allocation to OCE	136,372	2,361,300	2,309,600	−51,70
Program costs	68,494,389	81,146,000	90,921,000	+9,775,000
Change in selected resources	+3,187,891	+50,812,178	+8,377,000	−42,435,178
Total obligations	71,682,280	131,958,178	99,298,000	−32,660,178
Unobligated balance brought forward	−67,271,458	−72,589,178	−17,427,000	+55,162,178
Unobligated balance carried forward	72,589,178	17,427,000	20,129,000	+2,702,000
Appropriation	77,000,000	76,796,000	102,000,000	+25,204,000

Mr. SCHWEICKART. That is 9,000 and 1,700 is on 19.

Mr. GLEASON. Which is first?

Mr. SCHWEICKART. 9,000 is first.

Mr. THOMAS. "Travel and transportation of persons," $120,000 last year and this year. What is this $109,600 for transportation of persons in 1963?

Mr. MONK. The $109,600 for 1963 was the total expense for travel. This is primarily for resident engineers to move back and forth to jobs.

Mr. THOMAS. How many automobiles are assigned to this group?

Mr. MONK. They do not have any.

Mr. THOMAS. Where do they travel to and from?

Mr. MONK. Wherever the jobs are.

Mr. THOMAS. From Washington?

Mr. MONK. Most of them we move from one job to another. As they complete one job, we move them over to some other job. Very little out of Washington.

Mr. THOMAS. Very little. "Rent, communications, and utilities," what does this $19,000 cover?

Mr. SCHWEICKART. These are costs of the operation of the offices on the projects, resident engineer's office, telephone, electricity.

Mr. THOMAS. What is the type of office on the project, like you see on wheels at construction sites all over the country?

Mr. MONK. Just a construction shack.

Mr. THOMAS. Not on wheels?

Mr. MONK. No, sir. If we condemn property, sometimes there is a house or building on the property that we can use.

ARCHITECTURAL AND ENGINEERING FUNDS

Mr. THOMAS. What is this $5 million for other services?

Mr. SCHWEICKART. Those are the fees for the architects and engineers for the plans and specifications and working drawings.

Mr. THOMAS. What is your fee?

Mr. SCHWEICKART. On an average, it has run 4.45 percent over a 10-year period for contracts for $375 million worth of construction contracts.

Mr. THOMAS. What is your statutory limitation?

Mr. SCHWEICKART. We have none.

Mr. THOMAS. You have none?

Mr. SCHWEICKART. No, sir.

Mr. THOMAS. You have authority to pay anything you want to?

Mr. SCHWEICKART. Yes, sir.

Mr. THOMAS. Did you not pay some at 6, 6½, and 7 percent?

Mr. SCHWEICKART. There are projects that require that, depending on the types, but the large ones run less, some 3 and a fraction percent.

Mr. THOMAS. It looks like the larger the project the smaller the fee. Why reverse it?

Mr. GLEASON. A smaller percentage.

Mr. THOMAS. Did someone say 7 percent on your large projects? Did I misunderstand?

Mr. SCHWEICKART. I am afraid so, sir. For the large projects and as new hospitals, the percentage will be under 4 percent. It will be 3 and a fraction percent in most cases.

Mr. THOMAS. I thought someone said on the large projects it would be 6 and 7 percent. What is it in the smaller projects?

Mr. SCHWEICKART. It may run as high as 6 percent. In some cases it may run larger than that where you have a complicated mechanical and electrical installation.

Mr. THOMAS. What is your rule and regulation about these outside architects? Do you go to the local area?

Mr. SCHWEICKART. Yes, these are generally architects from the localities. First consideration is given to architects in the immediate vicinity of the project.

EQUIPMENT

Mr. THOMAS. What is this equipment, $3.5 million in 1965 against $6.3 million last year, a reduction?

Mr. SCHWEICKART. This would be equipment for the construction projects.

Mr. MONK. The $3,350,000.

Mr. SCHWEICKART. That would be the initial portable equipment.

Mr. THOMAS. For what?

Mr. SCHWEICKART. For the new projects.

Mr. THOMAS. I thought we charged that under——

Mr. MONK. We are in the process of switching it over.

Mr. THOMAS. Which way are you switching it?

Mr. SCHWEICKART. We are not asking for money in this appropriation for any initial portable equipment under this object.

Mr. THOMAS. What is it doing here?

Mr. SCHWEICKART. This is money we already have from previous appropriations for that purpose.

Mr. SHYTLE. We are in the process of shifting over this initial equipment.

Mr. THOMAS. Are you getting double money?

Mr. SHYTLE. No, we have not had double money.

Mr. THOMAS. You have been getting money for these many years.

Mr. GLEASON. No, sir.

Mr. SHYTLE. We had an accounting problem and to keep it straight now we work with the Bureau of the Budget in making a clean separation on initial portable equipment that we can handle. We will have a set procedure.

Mr. THOMAS. You either do not need this money or else you do not need that one over there under "Inpatient care."

Mr. SHYTLE. We need both.

Mr. MONK. I can clear it up.

Mr. THOMAS. They are both for the same proposition.

Mr. MONK. This money here is for fixed equipment in the hospitals. The initial portable equipment we now pay out of the "Medical care" appropriation.

Mr. THOMAS. This is for your elevators?

Mr. MONK. Elevators——

Mr. WISE. Fixtures.

Mr. BOLAND. What do you mean by initial portable equipment?

Mr. MONK. Anything that can be picked up and moved around, desks, beds——

Mr. WISE. Typewriters.

Mr. BOLAND. This is new equipment for a building that is new?

Mr. GLEASON. A new hospital.

Mr. WISE. This is mainly installed equipment like laundry equipment, built-in dietetic equipment, walk-in refrigerator, an integral part of the building.

Mr. BOLAND. That about wraps it up.

Mr. THOMAS. Mr. Boland, did our distinguished friend include the cost of these beds and everything in that square footage cost?

Mr. BOLAND. He did when he got up to $33,000 a bed.

Mr. THOMAS. That is just portable equipment. Here is another few million dollars for stationary equipment.

Mr. MONK. That was included in the total.

Mr. GLEASON. I do not think the $33,000.

Mr. THOMAS. I will not take time to cross-examine you because you may have to add another thousand dollars per bed.

On "Other services,'" what did we say that was?

Mr. GLEASON. Architects and engineers.

Mr. THOMAS. That equipment is stationary equipment?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. What is "Land and structures"?

Mr. GLEASON. Building and site.

Mr. THOMAS. That is the main thing?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. This is your wrap-up cost. Put page 26–19 in the record.

(The page follows:)

MEDICAL ADMINISTRATION AND MISCELLANEOUS OPERATING EXPENSES APPROPRIATION

Comparative summary of requirements by object

		Fiscal year 1963 actual	Fiscal year 1964 estimated	Fiscal year 1965 estimated	Increase (+) or decrease (−), 1965 over 1964
Average employment		162	165	167	+2
11	Personnel compensation	$1,401,848	$1,497,000	$1,584,100	+$87,100
12	Personnel benefits	105,796	110,000	117,900	+7,900
	Total personnel compensation and benefits	1,507,644	1,607,000	1,702,000	+95,000
21	Travel and transportation of persons	33,243	35,000	35,000	
22	Transportation of things	4,581	3,000	3,000	
23	Rent, communications, and utilities	15,363	15,000	15,000	
24	Printing and reproduction	19,293	20,000	20,000	
25	Other services	65,581	[1] 150,282	108,000	−42,282
26	Supplies and materials	16,469	20,000	20,000	
31	Equipment	23,899	5,000	5,000	
	Total cost	1,686,073	1,855,282	1,908,000	+52,718
	Change in selected resources	15,644	−55,282		+55,282
	Total obligations	1,701,717	1,800,000	1,908,000	+108,000

[1] Includes $55,282 for obligations incurred in fiscal year 1963.

Mr. THOMAS. This is the 1700 program. We have already gone over this in some detail. Look at personnel. Off the record.

(Discussion held off the record.)

JUSTIFICATION MATERIAL

Mr. THOMAS. We shall put pages 26–22 and 26–23 in the record.

(The pages follow:)

ASSISTANT ADMINISTRATOR FOR CONSTRUCTION

GENERAL INFORMATION

Mission

The Assistant Administrator for Construction directs the Veterans' Administration construction program which is based on requirements determined by the operating departments. He has three major areas of responsibility: (1) Design and construction of Veterans' Administration hospitals, domiciliaries and other facilities, including modernization and improvement of existing plant; (2) acquisition, utilization, and disposition of VA real property; and (3) safety of VA patients, the public, and VA employees; and protection of VA property from fire.

Highlights

The 1965 request of $102 million for the "Construction of hospital and domiciliary facilities" appropriation represents the fifth annual increment of a 15-year program of modernization and replacement of VA hospital and domiciliary facilities. This request is a substantial increase over the $75 to $77 million funding level for 1961–64.

By June 30, 1964, the unobligated balance of the "Construction of hospital and domiciliary facilities" appropriation is expected to drop below $18 million. This will be the lowest balance to be carried over since 1945.

The dollar value of "design completed" and "construction put-in-place" in 1963 is the highest of any year during the 10-year period 1954–1963.

Construction completed—Replacement and new hospitals

1963 actual		1964 schedule		1965 schedule	
Location	Beds	Location	Beds	Location	Beds
Martinez, Calif.	500	Cleveland, Ohio	800	Washington, D.C.	7
Nashville, Tenn.	500			Wood, Wis.	1,2
Total beds	1,000		800		1,974

Designed completed and construction awarded—Replacement hospitals

1963 actual		1964 schedule		1965 schedule	
Location	Beds	Location	Beds	Location	Beds
Atlanta, Ga.	587	Gainesville, Fla.	480	Hines, Ill.	1,220
Charleston, S.C.	500	Long Beach, Calif.	1,160	Los Angeles, Calif.	1,040
East Orange, N.J.[1]	200	Memphis, Tenn.	1,000	San Juan, P.R.	720
		Miami, Fla.	1,068		
		Oteen, N.C.	500		
		Temple, Tex.	480		
Total beds	1,287		4,688		2,980

[1] All facilities above are general hospitals, except East Orange which is a restoration center.

OPERATIONS AND FINANCING

The mission of the construction program is accomplished by VA architects and engineers who (1) develop preliminary drawings, technical data, and cost estimates for budget submissions; (2) award and administer contracts with, and review work of, architect-engineer firms which are employed to prepare working drawings and specifications for about 85 percent of the program; (3) prepare working drawings and specifications for about 15 percent of the program; (4) supervise construction at the jobsite with technical assistance provided by the architect-engineers as required.

The costs of the Office of Assistant Administrator for Construction are paid from two appropriations: Medical administration and miscellaneous operating expenses (Program 1700); and construction of hospital and domiciliary facilities (Program 9000).

The medical administration and miscellaneous operating expenses appropriation provides for the salaries of architects, engineers and others who are engaged in preliminary development of projects and programs to be included in requests for appropriation of funds and other budgetary actions, and for those persons who perform real estate, safety and fire protection, and other organizationwide or staff activities. The medical administration and miscellaneous operating expenses appropriation request for 1965, shown in section 19, includes $1,908,000 for these activities. Summary of requirements and other details are included herein to facilitate review and evaluation.

The construction of hospital and domiciliary facilities appropriation, which becomes available for use after Presidential approval, provides for planning, building sites, working drawings, construction, and personnel services applicable to approved projects.

Mr. THOMAS. We thank you gentlemen very much. We enjoy working with you. Come back and see us.

MONDAY, FEBRUARY 17, 1964.

SECURITIES AND EXCHANGE COMMISSION

WITNESSES

WILLIAM L. CARY, CHAIRMAN
BYRON D. WOODSIDE, COMMISSIONER
MANUEL F. COHEN, COMMISSIONER
PHILIP A. LOOMIS, JR., GENERAL COUNSEL
WALTER WERNER, DIRECTOR, OFFICE OF PROGRAM PLANNING
ALLAN F. CONWILL, DIRECTOR, DIVISION OF CORPORATE REGULATION
GORDON D. HENDERSON, ASSOCIATE DIRECTOR, DIVISION OF CORPORATE REGULATION
RALPH S. SAUL, DIRECTOR, DIVISION OF TRADING AND MARKETS
EDMUND H. WORTHY, DIRECTOR, DIVISION OF CORPORATION FINANCE
ARTHUR FLEISCHER, JR., EXECUTIVE ASSISTANT TO THE CHAIRMAN
LLEWELLYN P. YOUNG, REGIONAL ADMINISTRATOR, NEW YORK OFFICE
O. H. ALLRED, REGIONAL ADMINISTRATOR, FORT WORTH OFFICE
ALEXANDER J. BROWN, JR., REGIONAL ADMINISTRATOR, WASHINGTON, D.C., OFFICE
WILLIAM E. BECKER, MANAGEMENT ANALYST
FRANK J. DONATY, COMPTROLLER

Mr. THOMAS. Gentlemen, we have with us this morning many of our distinguished friends from the Securities and Exchange Commission.

It is good to have Mr. William L. Cary, the Chairman of the Commission, Commissioner Woodside, and Commissioner Cohen.

Are we absent one Commissioner?

Mr. CARY. Yes, sir. Mr. Whitney is not here, sir.

(Discussion held off the record.)

Mr. THOMAS. How long has he been on the Commission?

Mr. CARY. He has been working very hard, sir. He has been with the Commission slightly over 2 years.

Mr. THOMAS. We have your General Counsel, Judge Loomis; Mr. Werner, Director, Office of Program Planning; Mr. Conwill, Director, Division of Corporation Regulation; Mr. Henderson, Associate Director, Division of Corporation Regulation; Mr. Saul, Director, Division of Trading and Markets; Mr. Worthy, Director, Division of Corporation Finance; Mr. Fleischer, executive assistant to the Chairman; Mr. Young, regional administrator in the New York office.

You are always busy there and you have a great office.

We have Judge Allred from Fort Worth. We have Mr. Brown, regional administrator, Washington, D.C. It is good to have you with us, Mr. Brown. We have Mr. Becker, management analyst; and we have Mr. Donaty, the comptroller, well and favorably known.

Do you have a statement for us, Mr. Chairman? If you do, we are delighted and honored to have all of you. We always look forward to working with this distinguished group. I think you all do a fine and capable job. I am delighted to see you bring in some of your distinguished managers from your regional office. We hope you keep up the practice.

Mr. CARY. Well, sir, we try to bring in a certain number each year. I think Judge Allred had not been here for a few years. Mr. Young, the head of the New York regional office, has never been before you at a hearing.

Mr. THOMAS. I think I have been to his office, though.

Mr. CARY. I think you have, sir.

Mr. Brown has recently been made head of the Washington regional office after a long career in the Government.

GENERAL STATEMENT

As you have indicated, sir, the total amount of our request for next year is $15,225,000——

Mr. THOMAS. I didn't indicate it. I was afraid to mention that big figure.

Mr. CARY. You did it in the number of positions—an increase of $1,287,500 over our appropriation of $13,937,500 for this fiscal year. This increase of $1,287,500 represents $385,000 for those 60 additional positions; $290,000 for the pay increases; $262,500 for within-grade increases; and $350,000 for other expenses, which includes the cost of additional space we need plus the first step in the renting of a computer.

Of those 60 positions you mentioned, 47 will be——

Mr. THOMAS. You say $290,000 is for the 2½ percent pay increase and $262,500 for within-grades?

As I said, of those 60 positions, 47 will be assigned to our regional offices. I will cover in addition, as my statement indicates, the registration statement activity and where we are in that process, our space deficiency, and so on.

Mr. THOMAS. All of your tables are in the justifications. The summary does it in six or seven pages and tells the tale. If your statement is any better we will put them both in the record.

INVESTMENT COMPANIES

Mr. CARY. Turning to the 21 persons for which we are asking in the field for the inspection of investment companies, we need these positions to achieve a 2-year inspection cycle of investment companies which would involve the inspection of about 325 companies in 1965.

Mr. THOMAS. What is the definition of an investment company? How is it organized? How does it get its funds? What does it do with them?

Mr. CARY. Investment companies, sir——

Mr. THOMAS. First the definition from the act. Is this the act of 1934 or 1940?

Mr. CARY. This is the act of 1940, sir.

Mr. THOMAS. Let us read into the record what the act states and then you may explain it.

Mr. CARY (reading):

> Investment company means any issuer which: (1) is or holds itself out as being engaged primarily, or proposes to engage primarily, in the business of investing, reinvesting, or trading in securities; (2) is engaged or proposes to engage in the business of issuing face-amount certificates of the installment type, or has been engaged in such business and has any such certificate outstanding; or (3) is engaged or proposes to engage in the business of investing, reinvesting, owning, holding, or trading in securities, and owns or proposes to acquire investment securities having a value exceeding 40 percent of the value of such issuers' total assets (exclusive of Government securities and cash items) on an unconsolidated basis.

Mr. THOMAS. What does that limitation amount to?

Mr. CARY. Is this the last limitation to which you refer, sir?

Mr. THOMAS. 40 percent.

Mr. CARY. This would be a case in which a company is engaged in an actual industrial pursuit of one type or another. It is an industrial company and holds, also, investment securities. It is this percentage limitation which makes it tip the scale into being an investment company as well as an industrial concern.

Mr. THOMAS. Something like Du Pont. They own x thousands of shares of General Motors. Its main business is in the chemical business but they have $1 billion worth of General Motors stock.

Mr. CARY. That is correct, sir. Perhaps even a better example is the M. A. Hanna Co. which for years controlled and operated many industrial enterprises. When they ceased participating in the operations and assumed an investment posture they became a registered investment company.

Mr. THOMAS. They are in Cleveland?

Mr. CARY. Yes.

Mr. THOMAS. We have heard about it. The former Secretary of the Treasury who has done a lot of business with the Federal Government.

Mr. CARY. It has been somewhat in the public eye in the last few years.

Mr. THOMAS. And in this committee about 8 or 9 years.

Mr. CARY. That is correct, sir.

Mr. THOMAS. Go ahead.

Mr. CARY. I don't know whether you want me to elaborate from that, Mr. Chairman.

Mr. THOMAS. Just what is an investment company? Are all these people who have seats on the New York Stock Exchange and the other exchanges investment companies?

Mr. CARY. No, sir. By and large investment companies are persons, companies, or trusts which hold——

Mr. THOMAS. The definition seems to put them right in the middle of it, a man who deals in stocks.

Mr. CARY. It holds itself out as being engaged primarily in the business of investing. You are asking me why a broker is not an investment company. The reason why, for example, a broker-dealer is not an investment company is because there is a specific exemption under section 3(c)2. Is that correct, Mr. Conwill?

Mr. CONWILL. That is right.

Mr. CARY. We are primarily speaking about a so-called mutual fund which is an open-end investment company issuing shares and receiving money which it in turn invests in securities. That is primarily the role and the function to which we are addressing ourselves.

EXEMPTION OF BROKERAGE-DEALERS FROM INVESTMENT COMPANY ACT

Mr. EVINS. The statute specifically exempts broker-dealers?
Mr. CARY. That is correct.
Mr. THOMAS. Read that section of the act which exempts them.
Mr. CARY. Section 3(c) states:

Notwithstanding subsections (a) and (b) none of the following persons is an investment company within the meaning of this title—

and then I go down to subsection 2:

Any person primarily engaged in the business of underwriting and distributing securities issued by other persons, selling securities to customers, and acting as broker—

Mr. THOMAS. Is that part of the original act of 1940 or an amendment to it?
Mr. CARY. It is part of the original act, sir.
Mr. THOMAS. Go ahead. That is clear enough.
Mr. CARY (continuing):

Selling securities to customers and acting as broker—

and so on.

FUNCTIONS OF AN INVESTMENT COMPANY

Mr. THOMAS. Explain the function of an investment company. Where do they get the funds and what do they do with them?
Mr. CARY. The principal investment companies with which we are dealing are open-end investment companies, so-called mutual funds. They are continuously issuing shares, obtaining funds, and in turn investing those in securities of other companies. That is really the type of company represented here.

CAPITAL REQUIREMENT OF INVESTMENT COMPANIES

Mr. THOMAS. Where do they get the original nest egg with which to buy shares against which they issue stocks? Do they issue stocks and then buy the shares? How do they get into business, in other words?
Mr. CARY. I will ask Mr. Conwill to speak to this generally. I will start off by saying that, as I recall, the statute requires a minimum capital on their part of roughly $100,000.
Mr. CONWILL. Yes, sir.
Mr. CARY. After the promoter, the persons sponsoring it, put that in, then from then on——
Mr. THOMAS. The only requirement of the law is that he have $100,000. How much can he buy against that? How much can he sell against it?
Mr. CAREY. Unlimited amounts because of the fact that, as the amount of funds taken in increases, these additional funds are invested in securities.
Mr. THOMAS. Where does the Securities and Exchange Commission come into play?

REASONS FOR INVESTMENT COMPANY ACT OF 1940

Mr. CARY. The Securities and Exchange Commission comes in because historically the mutual funds and the investment companies generally represented a major area in which there were abuses.

Mr. THOMAS. Don't you have a better answer than that? If the law requires they have only $100,000 and they can issue stock to an unlimited amount against that $100,000, and therefore somebody had better take a look into it. Is that correct?

Mr. CARY. That is correct, sir.

Mr. THOMAS. Is that really the basis of your jurisdiction and need?

Mr. CARY. The reason why the Investment Company Act of 1940 was enacted was because there were so many abuses in terms of the types of investments that were made that they began to have heavy capitalization of debt, and so forth, so these represented thin equities. And regulatory protection was needed for investors to protect them against the temptation which might occur in managers of highly liquid pools of other people's money.

Mr. THOMAS. At the time that act was passed the number and the dollar value of their assets was quite small?

Mr. CARY. Infinitely so. As I recall it is was somewhere in the neighborhood of $3 billion.

Mr. CONWILL. Less than that. The open-end companies had total assets at that time of $475 million. They are now well over $25 billion. If you consider open-end companies and closed-end companies they would amount to approximately $35 billion with roughly 6 million shareholder accounts.

Mr. THOMAS. Did most of them start issuing stock right off the bat, selling stock against small capitalization?

Mr. CARY. They have. That is the way they started.

Mr. THOMAS. What is the history of them? How many of them issued stock in the same amount or approximately the same amount as the original capitalization?

The studies show all this. You have all this information. Your study of a year or a year and a half ago showed all that.

Mr. CARY. That is right. We are continuing that.

Mr. Conwill and Mr. Henderson are engaged in this entire study. The reason the investment companies have grown is that the public has been anxious to buy these shares representing other companies, and as values have risen it has made it more attractive for people to buy. The shares are also aggressively sold. The records of the investment companies have not been generally favorable during the period of rising markets, and as a consequence it has been a major medium of investment.

OUTLOOK FOR INVESTMENT COMPANIES

Mr. THOMAS. You have two are three good points there. Inflation certainly is at a standstill. What is the history of the investment company as of today? What is their outlook as of today?

Mr. CARY. I don't know about that. The rate of increase certainly has dropped in the past year or so but I would say the amount of sales substantially exceeds redemptions still.

Mr. CONWILL. By over $1 billion last year.

Mr. THOMAS. What dividends are they paying?

Mr. CONWILL. You will find the more conservative mutual funds are called balanced funds. Their dividends run approximately 3 percent, I would say, on an income basis, and they also distribute capital gains which oftentimes will run another 3 percent. There are approximately 6 percent in distributions, although only half of that is attributable to income.

Mr. THOMAS. What is the value of the other part, the 50 percent paper stock, and what is the value of it actually? If not based on income what value does it have?

Mr. CONWILL. Valuation is made on a market basis, Mr. Chairman.

Mr. CARY. Underlying securities are valued every day.

Mr. CONWILL. Twice a day oftentimes.

Mr. THOMAS. You have an incline in the market, then, which looks good. When the bottom falls out temporarily and the Dow-Jones average drops off considerably, then where does the owner of the stock set?

Mr. CONWILL. You will find if the Dow-Jones takes a rapid descent most of the mutual funds values also will take a rapid descent.

If I may add one thing on the $100,000 minimum capital requirement just as a matter of interest, there was considerable congressional objection to that $100,000 limitation. There were Congressmen who thought it should be considerably less, particularly the Congressman from Oklahoma who urged that the limit be $10,000.

Mr. THOMAS. What is the attractive part of it? What makes it so attractive?

Mr. CONWILL. It is an opportunity to participate in the market on a diversified basis and it appeals to individuals who do not have a lot of money to invest so that they can take, say, $5,000 and buy mutual fund shares which may give them an interest in 100 different securities.

Mr. THOMAS. What is the difference from going into a stock broker and saying "I have $5,000. I will buy 10 shares of 10 different companies." You can do that. You pay a slight premium, 5 percent more.

Mr. CARY. Most people would not buy in that small a lot across the board in that way.

Mr. THOMAS. It is perfectly possible, though, is it not?

Mr. CARY. That is correct.

Mr. THOMAS. And you stand a better chance of making more money than in the open-end fund account.

Mr. CARY. Depending on the securities you buy in your own diversification program.

Mr. THOMAS. That applies to the fund, too, does it not?

Mr. CARY. That is right. We are trying to convey if we can the reason why they are sold or how they are sold, why the public likes to buy them.

Mr. THOMAS. That is all we are doing. We are trying to find out the advantages and disadvantages from a group of experts.

Mr. CARY. We also might indicate why they are sold so vigorously and why they are bought. That is another factor in the picture. Of course, the sponsor is very frequently tied in with the investment adviser who is an outside person whose income depends on the amount

of the total fund. Generally up to this time, although there have been changes recently, the investment advisers, the persons who decide what the portfolio of the investment company shall be, receive a fee, which is usually one-half of 1 percent.

Mr. THOMAS. Pretty good fee; is it not?

Mr. CARY. It does amount to a very substantial amount, particularly when you get into the major investment companies.

Mr. THOMAS. They are persons close to the organization who organize the fund.

Mr. CARY. Mr. Chairman, in most cases that is the case.

Mr. THOMAS. You call that a sort of brother-in-law deal?

Mr. CARY. It all depends on the type of in-law. I think the relationship is definitely there.

Mr. THOMAS. Go ahead.

INVESTMENT COMPANY INSPECTIONS

Mr. CARY. Going on, sir, I was going to point out that really we had had a very limited number of inspections of these companies until the last 3 years.

Mr. THOMAS. How many people do you have working on them now?

Mr. CARY. At the moment, we have 17 in the field and 8 in Washington who are inspectors. That is 25 in all.

Mr. THOMAS. What do those in Washington do?

Mr. CARY. There is the important role of supervision of the people in the field.

Mr. THOMAS. It doesn't take 8 to supervise 17. You have 8 chiefs and 17 Indians.

Mr. CONWILL. In the first place, in Washington we schedule them, plan the program, and since the idea originated here we have been responsible for the training. In this past year, we have conducted training sessions in four different regional offices.

Mr. THOMAS. What difference does it make where the idea originated? The idea originated in Congress before any of you were here. You are fencing a little there, Judge.

Mr. CONWILL. It was developed here, and the people who to date are the most experienced inspectors are here in Washington, and they go out and assist the regional offices with the inspection program.

Mr. THOMAS. I wonder if the distinguished people who run the field offices would agree with that.

Mr. CARY. I was in Atlanta a year ago when we were starting our investment company inspection program down there, and I remember distinctly having one of the men come from Washington. They really had never done that kind of inspection work before. He was able to participate in the training of a person in the Atlanta regional office to do that very job.

Mr. THOMAS. I imagine that is true. You have been inspecting them now 3 years and everybody knows what it is all about. You had better put about five of these eight in the field, though; had you not? That would give you 22 Indians and 3 chiefs.

Mr. CARY. In the first place, all the investment companies have never been inspected. In other words, we have never gotten over a full cycle.

NUMBER OF INVESTMENT COMPANY INSPECTIONS

Mr. EVINS. How many have never been inspected?

Mr. CONWILL. Approximately 400 have not been inspected. We have 721——

Mr. EVINS. How many have been inspected in the last 3 years?

Mr. CONWILL. As of today it would run about 190.

Mr. CARY. We are beginning to step up this program. We think it is one of the most important programs we have accelerated in the last last 3 years.

VIOLATIONS UNCOVERED THROUGH INSPECTIONS OF INVESTMENT COMPANIES

Mr. EVINS. Have you any results you can show us? Spell out the accomplishments.

Mr. CARY. For the 18-month period ending last December 31, we have had 132 inspections for which 50 investigations relating to serious violations were instituted. During this same period, there was restitution of over $800,000 which was returned to either the investment company, resulting in a greater equity for the shareholders, or directly returned to individuals through mandatory rescission of their stock purchases.

Furthermore, to give you some examples of the kinds of irregularities involved, there was a negligent performance by a fund custodian, also, improper certification by an independent accountant of a fund, directors being indifferent to their fiduciary responsibilities, and unlawful transactions between a fund and its affiliates.

Because of the close relationships and contractual arrangements between the fund and other persons, negligent and fraudulent activities can result. Their operation must be carefully supervised and effective regulatory oversight can be done well only through a continuous inspection program.

I think this has yielded very favorable results and I would emphasize it as our first priority.

Mr. WYMAN. $800,000 of restitutions in terms of the hundreds of millions that you regulate is not very much money; is it?

Mr. CARY. Not in dollar terms. It has an important element of principle about it. When it gets around that we are beginning to look over the shoulders of these investment companies, and are carefully examining them, you would be surprised how the procedures and how the practices move up, too.

Some of them were relatively small investment companies which were just getting going. Happily we nipped the problem in the bud.

Mr. Conwill, for example, can give you one recent example, perhaps the most horrible one, which I think we have made a substantial contribution on by preventing more shareholders from actually being taken advantage of and losing all their funds.

Mr. WYMAN. I didn't want to interrupt your response to Mr. Evins. I will cover that later.

Mr. EVINS. You say that the funds are returned to the investment companies because of some improper or illegal act by some employee. Is that correct?

Mr. CARY. Frequently an employee, or actually it may be the person with whom they have a contract.

Mr. EVINS. Do you follow up to see whether the company has taken action with respect to the employee?

Mr. CARY. Yes, sir. Mr. Conwill can give you some chapter and verse examples of this.

Mr. EVINS. Is the employee retained or promoted?

Mr. CONWILL. In two instances, sir, actually three instances, we have caused the removal of the entire boards of directors of the funds involved and have obtained their undertaking to stay out of the investment company business for at least 5 years so that we have reconstituted the entire fund and caused an entirely new slate of directors and personnel to go in and attempt to revitalize the operation and correct it.

DELAY OF ACTION WITH RESPECT TO INVESTMENT COMPANIES

Mr. THOMAS. You are being criticized to some extent now by certain quarters. Whether or not it is justified I do not know. Certainly as a result of your studies the report you issued 6 to 8 months ago was well treated. It did not create any panics nor any sizable repercussions. Good judgment was used.

Are you planning some new regulations on these investment funds? If so, what has been the reason for the delay in not coming forward with them? The financial community is getting a little worried about it, wants to know what is happening. Will you address yourself to that a moment?

Mr. CARY. Yes, sir. I can understand they would like us to come forward with any recommendations which we are proposing to make. This area, by the way, poses some very complicated legal and financial problems on which any answer is difficult to reach. As a consequence, I am sure the financial community would rather have us approach this matter in a very practical and in a very conservative way rather than coming out with a conclusion of which we are not convinced.

There are areas on which we have focused. For instance, there is a special study focused on the so-called contractual plan way of selling securities.

Mr. THOMAS. What do you mean by that?

Mr. CARY. That is a way pursuant to which a sale is made of a plan to buy, let us say, a block of stock of an investment company over a period of time with the first payment going in large part; that is, 50 percent of it in many cases, going to pay the salesman who made the sale.

For example, if that contractual plan was not carried out, a person at the end of the first year who had thought he might have invested in investment company shares will find that 50 percent of the funds he put in were in terms of a commission and he gets only 50 percent of his money back. That poses a problem.

The sale of contractual plans and the so-called front-end load with that 50-percent commission is one of the things which the special study reflected upon.

As to whether changes should be made in it, we are at the present time giving great consideration. We have not arrived at any final conclusion on that point. The question comes up whether or not, for example, if we were to reach a conclusion that this area should

be improved, must we have legislation or is there power in the act?

Mr. THOMAS. Is it installment selling and buying?

Mr. CARY. Yes.

COMMISSION ON SALES—INVESTMENT COMPANIES

Mr. THOMAS. What part of the whole package purchase price is included in that first installment amount where the salesman gets 50 percent?

Mr. CONWILL. The Investment Company Act provides that the sales load for the entire term of the contract—say it is a 10-year contract—cannot amount to more than 9 percent of the payments. However, the act also permits 50 percent of the first-year payments to go to the sales load.

Mr. THOMAS. Overall that is 18 percent, then, is it?

Mr. CONWILL. It averages out to 9 percent.

Mr. THOMAS. Less than that. If the statute limits the overall package sales commission to 9 percent and the salesman gets 50 percent of that in the first year——

Mr. CARY. Fifty percent of the whole amount.

Mr. CONWILL. He gets 50 percent of the first year's payment, and thereafter——

Mr. THOMAS. It amounts to par value?

Mr. CONWILL. Fifty percent the first year, and then in the 2d through the 10th year the sales load amounts to about three and a half percent so the overall average works out to 9.

SALES COMMISSION ON INSURANCE POLICIES

Mr. THOMAS. An insurance company who sells a life insurance policy, 20-year, what do they pay the salesman?

Mr. CONWILL. They will vary all the way, I suppose, from 50 percent to in some cases, I am told, for sales commissions and administrative charges it may be 125 percent of the first year's premium.

Mr. THOMAS. What does it average out? Does it average out more than the commissions under the act?

Mr. CONWILL. Yes, it does average out to more.

Mr. THOMAS. For the insurance company?

Mr. CONWILL. For the insurance company.

Mr. THOMAS. It has worked well for the insurance company and John Public, too.

INSURANCE POLICIES AND MUTUAL STOCKS

Mr. CONWILL. There is a slight difference. It you buy mutual fund shares you are investing. When you buy an insurance policy you are certainly in part buying protection which you get immediately when you make your premium payment in the full amount regardless of how much goes to the salesman for a commission.

If you take out a $10,000 ordinary life policy, the instant you make your payment you are protected for $10,000 regardless of what the insurance company may pay the salesman.

Mr. THOMAS. So what? Who pays it in the final analysis anyway?

Mr. CONWILL. You pay it, but there is a difference between buying insurance——

Mr. THOMAS. Is it an insurance policy you are buying or a stock company policy?

If it is mutual shares policy, look at that for a moment and see what it amounts to. If it is an insurance policy it is based on broad general coverage where John Public picks up the bill.

Mr. CONWILL. That is right.

Mr. THOMAS. What is the difference between that and the mutual stock company?

Mr. CONWILL. The difference between that and a mutual fund we are talking about?

Mr. THOMAS. Yes.

Mr. CONWILL. I would say the difference is that in a mutual fund you are investing in securities. For example, if you went to a bank, put your money in a savings account, you would be a little surprised if you found out that 50 percent of what you put in the bank as an investment went to pay a salesman.

Mr. THOMAS. Off the record.

(Discussion held off the record.)

Mr. THOMAS. In the bank example you gave, if a depositor put in money with the idea it would remain there and draw interest, and he doesn't realize that when he deposits the bank has authority to go out and invest that money as it sees fit, that is something else. That is where you come in in regulating securities and exchanges. That is the basis of your disagreement with the Comptroller of the Currency.

COMMON TRUST FUNDS

Mr. CARY. We say in our problem, vis-a-vis the Comptroller, we are taking the position there, sir, that a bank is acting like any other sponsor of a mutual fund, and if it decides to set up a fund out of which its clients will have a proportionate interest, they won't have any claim against the bank as such and it is not the liability of the bank. The clients will just have the right to a proportionate interest in that fund of securities which the bank, as investment adviser, selects. Then we say they are in exactly the same kind of business as a mutual fund.

With that in mind we say there should be a uniform——

Mr. THOMAS. He still has an action and that is for the particular security the fund buys.

Mr. CARY. The depositor has a claim against the bank as depositor. There is a second role, as buyer of a mutual fund of which the bank is sponsor. I assume it will be just like a mutual fund. He would have a right to have his interest redeemed.

Mr. THOMAS. Off the record.

(Discussion held off the record.)

Mr. CARY. I was pointing out what the claim of a person who would be an investor in one of these funds organized by a bank would be. I would assume his claim would be like that of a shareholder in a mutual fund, simply that at any date he might have the right to redeem his prorated interest in that fund and get a cash equivalent to the market value of the shares then held by that fund.

Mr. THOMAS. As of that date?

Mr. CARY. As of that date; that is correct.

Mr. EVINS. It is a separate arrangement or agreement with the bank.

Mr. CARY. It would have to be a separate agreement. It might not take the form of a share but the fact of the matter is that it is exactly like a share because it is the same kind of right as you would have with a share in a mutual fund.

Do you want to add to that, Mr. Conwill?

Mr. CONWILL. I don't think so.

Mr. EVINS. You don't get into the banking business in this law, do you?

Mr. CARY. No, and we have no desire to. We have taken the same position as to the variable annuity and insurance companies. All we are saying is that when an insurance company gets into the mutual fund business, or a bank gets into that business, or a mutual fund gets into that business, they should be subject to the same kind of law.

Mr. THOMAS. Whether it is a bank or an insurance company, that is why they are interested in your coming out with recommendations.

Mr. CARY. That may be the reason. I would say that these problems are sufficiently complicated, from just the questions you have asked——

Mr. THOMAS. Is Sears, Roebuck interested in this, too?

Mr. CARY. They are now applying and may ultimately organize a mutual fund.

MUTUAL FUNDS OF INSURANCE COMPANIES

Mr. EVINS. To what extent have you looked into the mutual funds of insurance companies as against just organized investment companies?

Mr. CARY. Mr. Evins, we certainly would not attempt to get into the regulation of insurance companies as such. We would focus only on the fund that is really a separate fund.

Mr. EVINS. To what extent have you focused on that? What have you done?

Mr. CARY. There are relatively few of them now. There is the Variable Annuity Life Insurance Co. of the District of Columbia and one other. Those are subject to our jurisdiction.

At the present time, we are at the stage of negotiation with the Prudential Life. We won a case in the Third Circuit Court of Appeals which upheld our jurisdiction over that fund of an insurance company which represents a variable annuity interest. We are trying to establish the principle that we have the same uniform jurisdiction over banks and insurance companies.

FEES OF THE COMMISSION

Mr. THOMAS. We want you to tell us about the $3 million in fees collected and the total cost of running the commission of about $15 million. Why can't you get on a self-sustaining basis? You have had the authority since 1952. Why should not these people who make tremendously large sums every year. It makes no difference whether the investor loses or gains, the other side of the table always makes money. Why should these people who make tremendously large sums every year not be on a break-even basis? You collected $3 million.

You have an expense of $15 million. Why can't you even that up? You have the authority now. You have had it for over 10 years.

Mr. CARY. Sir, I don't know that I will answer your question satisfactorily. May I say first that the cost involved in this Division of Corporate Regulation has up to this time been relatively small.

Mr. THOMAS. I anticipated that answer. Two or three divisions pay for themselves but we are looking for the balance.

Mr. CARY. We have moved ahead in this Division in the last 3 years because we think this is of great importance. We have moved toward increasing the number of people and therefore the cost. There is no doubt of it.

Why we should not attempt to raise fees in that area—put it this way—why we have not done it, perhaps we may be derelict, but I think if you would encourage us to do so and, indeed, think——

Mr. THOMAS. Put it on a percentage basis. Your overhead bill is about $15 million. Here you have $35 billion, $60 billion, no telling how much—what do you think is the fair amount charged in the way of fees each year for the professionals who are in the business, whether they are advisers, brokers, stock companies, or whatnot?

Mr. CARY. It might be better approached as a charge—I don't know whether it would be the investment adviser or the fund itself. I suppose it would be on the basis of the cost to the Division of Corporate Regulation which is the one responsible for it. That would be the approach we could take.

I confess we have not taken any position in that area up to this time.

Mr. DONATY. I believe in the 86th and 87th Congresses, bills were introduced into the Congress. I believe the Senate passed it and the House did not.

Mr. THOMAS. You already had the authority. Why didn't you use it? You didn't need any more authority.

Mr. DONATY. I believe you are referring to title 4 or 5 of the Appropriations Act of 1952.

Mr. THOMAS. Title 5, 1952. You are right.

Mr. DONATY. If I can recall my history on the SEC, I was not here at that time——

Mr. COHEN. I can speak to it, Frank. I was here.

May I, Mr. Chairman?

Mr. THOMAS. Go ahead, Mr. Commissioner.

Mr. COHEN. At that time, after the legislation (title V) became law, we were encouraged—the SEC was encouraged—to take steps. The SEC was in fact the first agency to initiate steps in this direction. We did put out various proposals for various additional fees of one kind or another.

We were then met with all kinds of opposition.

Mr. THOMAS. First, Mr. Commissioner, which of the many operators under the various acts you operate under are not self-sufficient and pay their own costs? I remember there was a storm of protest from the stock exchanges and the brokers. There were hundreds of letters poor-mouthing, it was terrible, you would ruin the business. You never heard so many poor-mouthed pleas. Was that the basis of it?

Mr. COHEN. This was in part one of the difficulties the Commission ran into.

Mr. THOMAS. What does it cost the taxpayer a year in regulation?

Mr. COHEN. I haven't the exact figure. This is the broker-dealer program. Frank, would you have the figure?

Mr. DONATY. Registration of investment advisers and broker-dealers approximately $150,000 to $175,000 a year.

Mr. THOMAS. That is a small part. What about the exchanges? That is where most of the complaint came from.

Mr. COHEN. I think a substantial number of the complaints came from broker-dealers as well as from certain small issuers who felt it would be unwise and unfair to impose on them what they considered to be a proper governmental cost. They viewed it as an additional tax.

Mr. THOMAS. My memory seems to be that the mail came from the brokers on the big exchanges in every community where they had offices.

Mr. COHEN. That is true. I didn't mean to suggest otherwise. The bulk of the mail and the bulk of the complaint came from the broker-dealers. There is no question about that.

One of the arguments they put forward was that under the 1934 act there already is provision for some revenue that comes to the Commission, or I should say to the Government. This is a fee in essence.

COST OF AND FEES FROM REGULATION

Mr. THOMAS. What part of your overhead expense goes toward the regulation of the broker-dealers of the $15 million? Can you put a percentage on it?

Mr. DONATY. Top-of-the-head estimate for regulation of broker-dealers is approximately 10 percent, sir, and 40 percent to cover the cost of all investigations and enforcement actions.

Mr. THOMAS. What part of the $3 million comes from them? You have a charge against them of half of your total cost, seven and a half million dollars, what do you get from them in the way of fees?

Mr. DONATY. From the exchanges, about $1.3 million. For registration statements, about another $1.5 or 0.6 million.

Mr. THOMAS. What is the total amount, about $3 million?

Mr. DONATY. About $3 million, yes, sir.

Mr. THOMAS. Then they are short about four and a half million dollars. They lack that much of paying their way. Is that right?

Mr. DONATY. That is right.

Mr. THOMAS. With the amount of money they handle and the amount of fees they collect—what is the amount of fees they collect? Have you a horseback opinion on that? Certainly four and a half million dollars would be very small in the way of a charge. It would be a negligible charge. What is your answer to that?

Mr. CARY. Mr. Chairman, I don't have a total answer to that. I will say this, however: In our substantive legislation area, we are going before Mr. Harris tomorrow to discuss a proposed bill and other matters. We are pushing in the direction of placing greater additional responsibility on both the exchanges and particularly the NASD which is a quasi-regulatory agency.

Mr. THOMAS. National Association of Securities Dealers?

Mr. CARY. Yes, sir. They have increased their budget very substantially and we are expecting them to lift it perhaps double in the near future.

As a consequence, I must confess to you that we have not been as anxious to push the raising of fees affecting them because we know they will get hit in another direction through self-regulation which they will have to increase in large measure.

The point I make, however, does not apply to investment companies, I confess to you. We might try to push toward greater self-regulation in the investment company field but it is not happening to the same extent and, as a consequence, I think your point is well taken that perhaps the financial burden is not being equitably shared by investment companies with respect to the costs of their regulation.

Is that correct, Mr. Conwill?

Mr. CONWILL. Yes, sir.

Mr. THOMAS. That is very interesting.

Mr. EVINS. You have the statutory authority. In view of the recent report on unregulated flow of money in the market, the tremendous growth of these investment companies, why would not all of this be a predicate for you now to set up a schedule of increased fees?

Mr. CARY. I think we should consider it. Particularly relating to this group it is true we are not proposing to burden them with large self-regulatory responsibilities which in turn would increase their costs.

INVESTMENT ADVISERS

Mr. THOMAS. What about the investment advisers? Give us a bird's-eye view of them. How many do you have now? You want eight more employees for this?

Mr. CARY. Yes, sir.

Mr. THOMAS. Where will they be located?

Mr. CARY. All in the field, Mr. Chairman.

Mr. THOMAS. How many do you have now?

Mr. CARY. At the present time we have——

Mr. DONATY. Seven people out in the field.

Mr. THOMAS. What is an investment adviser? We spoke of him a while ago.

Mr. CARY. An investment adviser is a person licensed to give advice on the investment of securities to individuals.

Mr. THOMAS. Does the statute make it mandatory that he must be licensed before he engages in interstate commerce?

Mr. CARY. He must register with us.

I might ask Mr. Saul to speak to this because he knows the subject best. In general they are required to register with us and are subject to certain requirements under our act.

Mr. THOMAS. Do you have any leeway in issuing and withholding licenses?

Mr. CARY. Very limited.

Mr. SAUL. I will give it in short form. I think anyone who under the statute engages in the business of giving investment advice for a fee must register with us as an investment adviser.

There are, however, certain exceptions from that registration requirement. For example, investment advisers who have investment companies exclusively as their clients need not register with us.

Newspapers, general publications, public or general publications need not register with us.

In general, anyone engaging in the business of giving investment advice.

(Off the record.)

Mr. EVINS. Mr. Chairman, please proceed, and continue with your statement.

INVESTMENT ADVISERS INSPECTION PROGRAM

Mr. CARY. As you recall, we were just approaching the second phase of our request, having completed our discussion of the investment company inspections. We are addressing ourselves to the investment advisers. We are requesting eight positions for our regional offices, in other words, for the field, so as to achieve a 4-year inspection cycle, which involves the inspection of 440 investment advisers as compared with 235 and a 7-year cycle for this year.

Mr. EVINS. If I may interrupt, you have 440 investment advisers registered with the SEC?

Mr. SAUL. No, sir. As of the end of January we had 1,605 registered with us.

Mr. CARY. In other words, this will get us around to inspecting each of them roughly once every 4 years if we obtain this additional manpower.

Up to this time it has been only once every 7 years.

Mr. EVINS. What has been the result of your inspection of the investment advisers, let us say in the last 3 years?

Mr. CARY. In the first place, may I say I had something to do personally with trying to push this ahead because when we stepped up our inspection of investment companies, we found we located a number of problems that had been hidden under the water, so to speak, and as a consequence, we decided by the same principle we ought to look into investment advisers.

I would say we have found some violations of a serious nature, but it is our belief that we can find a very substantially larger number if we begin to step up our inspection in this area. We just won a case in the Supreme Court, *SEC* v. *Capital Gains Research Bureau*, in which we took action against an investment adviser who would buy a security and then send out a brochure recommending it to the public, and then as it went up in price he would sell out. That is a practice known as scalping. The case broadly interpreted the antifraud provisions of the Investment Advisers Act, and with that kind of precedent before us, it is obvious that we have a basis for going after investment advisers for wrongdoing which we did not have before. It is our opinion that we can in this area very substantially improve the situation.

Mr. EVINS. This type of inspection is long overdue. You have had this authority all the time, but it has been supplemented through court decision only recently.

Mr. CARY. We had the authority all along. We obtained additional authority in recent years because there was an amendment to the act in 1960. So, really our powers have increased very substantially, and they will, as a practical matter, be increased by virtue of this decision of the Supreme Court.

TYPES OF INVESTMENT ADVISERS

Mr. JONAS. You see the ads of the investment advisers in the papers all the time. "Send us a dollar and we will put you on a mailing list for a month—we will send you a list of 28 companies which are scheduled for stock splits," and that sort of thing. How many of them are operating?

Mr. CARY. A total of 1,600 at the present time, sir.

Mr. JONAS. Do you make any effort to determine if all of them are trustworthy?

Mr. CARY. Sir, I think I will ask Mr. Saul to elaborate, but may I say generally we have only a fairly limited number of standards under the act by which we can in effect classify somebody. As a consequence, we can speak only to those that have violated the acts under which they have registered. I think Mr. Saul could speak to the general situation in connection with those 1,600.

Mr. SAUL. Yes, sir.

I would say, adding to what the chairman said, that most of our 1,600 registered investment advisers are of the kind that you spoke about, namely, what we call publishers. In other words, all they do is publish on a periodic basis some kind of publication giving investment advice.

Also, in the 1,600 registered investment advisers, there are what we call investment counsel. Investment counsel are people who have generally a rather restricted group of clients to whom they give individual advice.

I would say, sir, one of our principal controls over publishers, in addition to the inspection program which the chairman has outlined, is our controls over advertising. We have developed rules recently under the legislation that Congress gave us in 1960 in which we set forth standards as to investment adviser advertising. We have proceeded against a number of investment advisers during recent years on the ground that their advertising was false and misleading. That has been one of our principal controls in addition to the inspection program which the chairman has outlined.

ADVERTISING BY INVESTMENT ADVISERS

Mr. JONAS. I notice one magazine has about four people writing columns, all of whom give investment advice. "I like 'X' stock" or "I recommend that you take a look at 'Y' stock." Do you look at this sort of thing?

Mr. CARY. We are not in a position to examine, say, the quality of their investment advice unless it be fraudulent, of course, but we are in a position to examine to see whether or not their advertising is overlurid. For instance, they may publish that fact that last year we recommended General Gadgets and it went up 500 percent, but they may not point out that they recommended 15 other stocks, all of which went down. We have certain limits on their mode of advertising, advertising which is impermissible under present law.

Mr. JONAS. You are policing all of those?

Mr. CARY. That is correct.

Mr. JONAS. You take a careful look at all of this advertising?

Mr. CARY. That is correct.

Mr. COHEN. I think I should add in the case you mentioned, as in the case of certain other publications of general circulation, those are specifically exempt from the statute by provisions of the statute.

Mr. JONAS. I thought that was true, because they work for a publication as editors and columnists, and the people who read their advice are the subscribers to the publication.

Mr. COHEN. Exactly.

Mr. JONAS. That is a little different than putting an ad in the Wall Street Journal, the Charlotte Observer or the Washington Post that "10 stocks are scheduled to split in the next 6 months. Why don't you get the list? Send in a dollar."

Mr. WYMAN. Who in the SEC has a close eye all the time on the investment advisers, for example? Is there some one person?

Mr. CARY. This is the Division of Trading and Markets under the general supervision of Mr. Saul.

Mr. WYMAN. If there was a rascal in the field or a series of them, you would be the person, probably, more than anyone else, whether or not you had the power under existing law to regulate them effectively, who would know who was pitching the curve balls and who was not, is that right?

Mr. SAUL. Yes, sir, together with people in my Division and the people in the field who, of course, are very important. They are down at the ground level on this and are actually inspecting investment advisers. Ultimately, the case comes up through my division and we make recommendations to the Commission, if enforcement action is required.

ACTION ON INVESTMENT ADVERTISING

Mr. WYMAN. I notice in your justifications on several occasions you refer to the quality of being able in the sense of an ounce of prevention is worth a pound of cure, to nip situations in the bud. Did you ever call some of these boys in and say, "Look, cut this out?"

Mr. SAUL. Yes, frequently. For instance, if we noticed the advertising was false, misleading or unusually flamboyant, we would not institute a suspension proceeding against them, but call them in and talk it over with them and tell them what remedies we think should be pursued in cleaning up their advertising, and give them a reasonable opportunity to make remedies.

Mr. CARY. Perhaps, also, Mr. Young, the head of our New York regional office, and Judge Allred, the head of our Fort Worth office, could add to that if you would like to hear from them. They can give you the regional approach to the problem.

Mr. WYMAN. Yes. In that light, what is the attitude of the investment advisers and investment counsel toward the SEC generally. Do they resent this policing, or how do they feel about this?

Mr. EVINS. Mr. Young, will you fill us in on your New York work and experiences?

Mr. YOUNG. It has been our experience that the responsible investment advisers, as responsible brokers, are only too anxious to coperate with us 150 percent. Once in a while we do run into a fellow that I would describe as irresponsible, to say the least, who runs away instead of coming in and working it out. By and large, the industry has been very anxious to cooperate and frequently when we

see a problem developing throughout an industry, we will call in some of the leaders in the investment advisers' group and talk it over with them. The word goes throughout the industry without our taking any legal action or formal action of any kind.

Mr. WYMAN. The legal action that you might take would be in the form of an injunction to stop them?

Mr. YOUNG. Yes, sir.

Mr. WYMAN. Is it within the investment advisers' group itself a stigma to have been the recipient of injunctive process by the SEC?

Mr. YOUNG. Very much so. We also have administrative remedies. We have one interesting case which is currently the subject of an administrative proceeding in which it is alleged that an investment adviser got out two issues of one of these sheets recommending that you buy a particular stock and extolling the virtues of the management. We happened to know something about the management and we called in the investment adviser and pointed out that the president of this company whose securities he was recommending was just about ready to start a 5-year jail term for mail fraud. At that time we started a proceeding against him for not looking sufficiently into the company at the time he made the recommendation.

AUTHORITY UNDER THE INVESTMENT ADVISERS ACT

Mr. WYMAN. When you talk to these people at the informal stage you do not, of course, issue any subpoenas at that time, but suppose you said, "I would like to see your records on the XYZ company"? Do they produce the records on the XYZ company, or do they have to have a subpoena served on them?

Mr. YOUNG. We are empowered by statute to see the records which they are required to keep by statute. That would include the type of records they keep on recommendations they make to their customers. In making our inspections, we frequently make a spot check of two or three of the recommendations and ask them to show us an example of the homework they did in making those recommendations. We do not agree or disagree with the recommendations. We just want to know what they did before they made the recommendation.

Mr. WYMAN. What do you do with the fellows that you know are taking advantage of the general public and yet who are clever enough to make sure they are not actually breaking the law, the fellows who offer and recommend investments that have just enough equity in them and just enough of a speculation to meet the requirements, and then go sour, but not fraudulently so, for internal management reasons, and so forth; and this happens several times? Can you in the regional office say that John Smith has really pulled about the fourth fast one in a row here, yet we cannot quite get to him? Is there any way you can protect the public in that situation?

Mr. YOUNG. You are quite correct in your observation that there is a gray area in which you and I might know that this man is really not giving out sound advice, but it is not really fraudulent. We do not have enough of a case actually to go to court on it. We watch him very closely. We bring him in and urge upon him to be a little more careful in his recommendations. Until he actually makes some overt

and concrete step which comes within our statute, our hands are tied and all we can do is watch him carefully.

Mr. WYMAN. While this may not be exactly the committee for this question, do you think you have enough legislative authority at the present time, or do you need more to deal with this kind of situation?

Mr. YOUNG. I would rather yield to the chairman on that.

Mr. CARY. I suppose our authority in the field of investment advisers is relatively limited. We were pleased to have that increase in power or, shall we say, increase in standards enacted by the amendment of 1960. I do not regard our power in the field of investment advisers as very broad. Perhaps it is really not broad enough.

What would you say, Mr. Saul?

Mr. SAUL. It may not be, Mr. Chairman, although I think up to this point, with the expansion in 1960, it appears so far to have been adequate.

Mr. CARY. We are really just getting underway in this area in some ways. As you have noticed, we have been able to inspect the investment advisers only once every 7 years. There are certain areas that I think some of us have felt very strongly had not adequately been touched.

One of them, besides the investment company area, was this investment adviser field.

Mr. EVINS. We have Mr. Allred here with us. He comes all the way from Texas. I wonder if he would give us the benefit of his wisdom, judgment, and experience.

Have you a list of "wheeler dealers" out there in your jurisdiction in Texas?

Mr. ALLRED. There are a number of investment advisers out there. They are generally high-class people. We have not had the problem that they have in New York or perhaps in Chicago.

Mr. EVINS. You do not need any additional personnel out in your regional office, then?

Mr. ALLRED. We are asking for two additional people for the investment company inspections.

Mr. EVINS. For inspection and investigations work, but not investment advisers? You do not need any additional personnel for investment adviser investigation?

Mr. ALLRED. We are using our broker-dealer inspectors. They are presently doing that work. We are working in some of our investment advisers with our present staff.

Mr. EVINS. Can you absorb all the additional work in your branch, in your field office, with the present staff you have available? Can you handle all the work that the chairman and the Commission are assigning to you with your present staff out there?

Mr. ALLRED. No, sir. I have asked for four additional people.

Mr. COHEN. May I add a word to supplement the answer to the question put here. I did not want to leave a picture of complete frustration in the situation that you have mentioned. This situation does arise. When our people feel that a person has been acting up enough times and is close to the line, then a formal and intensive investigation is initiated. This is part of the reason that we want additional people in investigations and enforcement, to supplement the inspectors and to make a thoroughgoing investigation of the affairs of a person of this kind.

Mr. WYMAN. Mr. Cohen, when there is a cycle of once every 7 years for an investment adviser to be the recipient of an investigation, and you hit him this particular time, does this cost him any money? Does it slow him down in his operations? Are there agents of the SEC running through his place and hauling out his files?

Mr. COHEN. There are people who come to visit him, but they do not really interfere with his business.

Mr. WYMAN. It does not cost him anything, then?

Mr. COHEN. No; it does not, as distinguished, for example, from a bank examiner going into a bank and the bank paying for it. Our law does not provide for it.

RECOVERABLE COSTS FOR INSPECTIONS OF INVESTMENT ADVISERS

Mr. WYMAN. Is there any recommendation for the regulated financial community here, within proper limits, making some contribution and paying for the SEC examination?

Mr. COHEN. Some consideration has been given to this. As I started to say before, by virtue of title V, some thought was given to this some years ago, but there was considerable criticism at that time, not only from people regulated, but there were many people in the Congress who felt this was perhaps something that the Congress itself should deal with specifically rather than leaving it to rule-making.

Mr. JONAS. They are paying about 20 percent of it now; are they not?

Mr. COHEN. These particular people I do not think make any contribution.

Mr. JONAS. I mean the investment community.

Mr. COHEN. The community.

Mr. CARY. About $3 million, Mr. Jonas, out of the $15 million that we are asking for.

Mr. JONAS. They do not collect the total cost of the police force in traffic fines.

Mr. COHEN. Points of the kind Mr. Jonas is making now, I think led to the abandonment of this program some years ago.

Mr. EVINS. You might look at the very excellent Federal Deposit Insurance Corporation Building around 17th and the Avenue, which was built without appropriated funds. The banks of the Nation all contributed to that building. The Securities and Exchange Commission is a very important Commission and has a responsible function. You have already delineated earlier its tremendous growth in various areas. The chairman has suggested, and I am supporting the chairman in the suggestion, that the Commission may well look to revising its schedule of fees. Maybe some of these funds could be provided for an adequate building for the SEC. I understand you are in need of quarters.

Mr. COHEN. Amen.

Mr. CARY. We are in third-class quarters, the only one of any regulatory agency in the Government.

(Off the record.)

Mr. EVINS. Will you proceed, Mr. Chairman?

Mr. CARY. I would like now to address myself to the third segment, in which we are asking for a total of 20 people. That is the area of investigations and enforcements.

We have been trying to place the enforcement responsibility on a sounder foundation and propose to intensify our efforts in this area. Of the 20 positions we are requesting, we are asking for 18 for the field and 2 clerical positions for the Division of Trading and Markets.

Judge Allred, for example, said he was asking for 2 more people in the field of investigations and enforcement out of those 18.

The additional positions are necessary in order to accelerate the disposition of investigations as well as administrative, civil, and criminal proceedings pending before the Commission and courts. Our backlog of investigations has reached an unrealistic figure of 1,095 on last December 31 and must be reduced.

For the 6 months ending last December, 87 administrative proceedings were instituted as compared with 77 for the entire fiscal year 1961. In this same area, the number of defendants in these proceedings has more than doubled in the past 5 years.

During the past 4 fiscal years, that is, 1960 to 1963, 208 cases were referred to the Department of Justice as compared with the same number for the previous 10 years—that is, 1950–59.

Mr. EVINS. Do you mean, Mr. Chairman, you referred more cases in 3 years than you had previously in 10 years?

Mr. CARY. That is correct, yes. We have been exceedingly active in this field in recent years.

It is estimated that 55 criminal reference reports will be referred to the Department of Justice in both 1964 and 1965. Moreover, the number of charges and of defendants and coconspirators in the past years has increased significantly.

Emphasis on developing criminal cases has broad implications in utilizing our personnel. First of all, our job is to obtain the evidence in these criminal cases and, second, additional manpower is needed to assist U.S. attorneys in the grand jury phase of the case and its prosecution. The number of employees engaged in assisting U.S. attorneys has increased by 50 percent in the past 2 years.

I might say, to supplement my statement, we had several people spend at least a full year in New York City on one case alone, which of course lasted actually a year in the courts.

Mr. DONATY. Thirteen months.

Mr. CARY. Thirteen months in the southern district of New York.

That completes our request for 20 additional positions with respect to investigations and enforcement.

Mr. EVINS. How many people do you have in this Division of Investigations and Enforcement at the present time?

Mr. CARY. The Division of Trading and Markets has to be examined together with the regional offices in order really to arrive at the total figure. I think Mr. Donaty may be able to give us the total figure of people doing exclusively that kind of work.

Mr. DONATY. Out in the field, primarily for this program, there are approximately 350 people, that is, on this program of investigations and enforcement actions.

Mr. CARY. Over half of our field personnel.

Mr. EVINS. How many did the committee approve last year for this particular work?

Mr. DONATY. There was no increase at all for any work this year over last year.

Mr. CARY. We asked for some, Mr. Chairman, but we did not get any. Because we feel the need of it and because our investigations and enforcement work has increased, we are asking for additional people.

Mr. EVINS. Thank you, Mr. Chairman.

Proceed, if you will, please.

REGULATION OF EXCHANGES AND OVER-THE-COUNTER MARKETS

Mr. CARY. Our next priority is the regulation of exchanges and the over-the-counter market and economic and statistical research.

For 1965, seven additional positions are requested for this program, distributed as follows: Five for the Division of Trading and Markets, and two for the Office of Program Planning.

The Division of Trading and Markets must be strengthened so as to assume further responsibility for more effective supervision over self-regulatory organizations in order to carry out recommendations contained in the report of the special study of securities markets. I might say, as you well know, this study has produced a large number of recommendations, a total of 175, and one of the areas which it emphasized most was our further jurisdiction and supervision over these self-regulatory institutions, whether they be the exchanges or the NASD. In other words, we leave a great deal of responsibility down in those institutions, but also there ought to be some oversight over them.

Mr. EVINS. At this point, Mr. Chairman, your report has been completed, and it received widespread attention. You make a number of recommendations. Is the Commission now attempting to implement those recommendations insofar as you have authority and means to do so?

Mr. CARY. We are, sir. We are constantly working with the exchanges and the NASD, and substantial steps have been taken. I would say relatively few new rules have been published, I think two thus far, and many are in the mill right now in order to carry out the recommendations of the special study.

Mr. EVINS. Much of the burden of this report is in the nature of shifting the responsibility on these self-regulating agencies?

Mr. CARY. I would say a very substantial number of the recommendations have to go directly to the self-regulatory institutions to be carried out, but it is our job to try to urge them in every way possible, and sometimes even by rule, to have them carry those functions out to completion.

REGULATION OF FUNDS OF FOUNDATIONS

Mr. EVINS. In this connection, Mr. Chairman, we have a subcommittee of the Committee on Small Business, the Subcommittee on Foundations, of which the gentleman from Texas, Mr. Patman, is chairman, and he has made some extensive investigations and preliminary reports, as your Commission is aware.

One of the things Congressman Patman points out on your investigation is that one of the possible reasons for the recent wide drop in the stock market was "unregulated capital" which is flowing from unregulated foundations. Has the Commission any jurisdiction in the field of the regulation of the funds of foundations? Are you exercising the authority? Do you propose to do anything in this field?

Mr. WOODSIDE. Mr. Chairman, the only impingement of our statutes upon the activities of charitable foundations occurs when occasionally one of them wishes to sell securities to the public where a control question is involved and registration under the Securities Act of 1933 is necessary, or where perhaps some company or controlling person of a company wishes to give securities to a foundation for some particular purpose, and again registration of the securities under the 1933 act becomes necessary. Except for that, I do not believe we are concerned.

Mr. COHEN. I might add, Mr. Evins, that some of the information in Mr. Patman's report actually came from information on file with the Commission. I would only supplement what Mr. Woodside said to indicate that on occasion, foundations have been used by individuals to carry out various purposes, such as proxy fights and things of that sort. In that area, our job has been limited to eliciting the relevant facts and getting them out in the public prints. This is what we have done.

As I say, Mr. Patman got a great deal of his information from our files.

Mr. SAUL. I might say insofar as the Patman report involved registered broker-dealers, we have that problem under our jurisdiction.

Mr. CARY. I would like to ask Mr. Loomis, our General Counsel, to speak, also.

Mr. LOOMIS. I would like to say, in addition to our furnishing information to the Patman committee, they have furnished a good deal of information to us in terms of material that they found and their report. We are looking into that for the purpose of determining whether there is anything that does fall within our jurisdiction there.

As Commissioner Woodside points out, we do not have any jurisdiction over foundations as such.

Mr. EVINS. The Internal Revenue Service has been derelict in its inspections of foundations and their operations, and, as I understand it, one of the conclusions in your special report following your investigation was that one of the possible reasons for the tremendous drop in the stock market was the use of unregulated flow of capital by numerous so-called charitable foundations.

Mr. CARY. Moneylenders generally, I think.

Mr. EVINS. The foundations comprise such a large body and control such a large volume of funds in this area, over which the SEC has no apparent effective jurisdiction and the Internal Revenue Service is not making concerted effort at regulation or inspection, this might be one reason for the stock market break.

Mr. JONAS. Which break is that?

Mr. CARY. May 28, 1962.

Mr. EVINS. The condition which brought about the special investigation. Following the big break, the Commission asked this committee for additional funds for a special study.

Mr. CARY. Mr. Chairman, I do not think we can speak to the quantitative effect of moneys from foundations. I just do not think we have

enough information at this moment. The unregulated credit which did exist at the time was substantial, although I think its effect was indeed more qualitative than it was quantitative. That is, in certain securities it did have an effect, undoubtedly, in driving their prices up. Whether or not the contribution made by foundations was substantial, I do not think we really have at the moment information.

Mr. EVINS. I believe the Commission should have authority to determine the numbers of shares of stocks purchased and sold from foundation funds. There is an indication in this report that there is a tremendous amount of trading in the open market with foundation funds.

Mr. COHEN. I think that is right, Mr. Evins. There were suggestions of this kind. There were also suggestions that perhaps some of these foundations were acting almost in the nature of brokers or dealers in securities.

These are the areas in which Mr. Saul and Mr. Loomis indicated studies are under way at the Commission.

Mr. EVINS. Thank you, Mr. Chairman. Proceed, please.

OVERSIGHT OF SELF-REGULATORY INSTITUTIONS

Mr. CARY. I was just going to go on with respect to the role our regulation has over the exchanges and self-regulatory agencies, to point out the Special Study of Securities Markets reported that the Commission had not established an effective, that is, an adequate, system of surveillance of the exchanges' enforcement and disciplinary activities and in general had equipped itself, in personnel and procedures, only for the most passive role of surveying whatever is brought to its attention.

So, in the past year we have strengthened the Division's Office of Regulation and have accelerated our oversight of the self-regulatory institutions.

The study also recommended that the Commission be more adequately staffed to enable it to give greater emphasis to the compilation, analysis, and publication of data concerning the trading market. The complement of the Office of Program Planning, which has been organized during the past year, and the Office of Statistical Studies of the Division, must be supplemented so as to carry out this vital mission.

I might say we have been fortunate to have Mr. Werner with us the last year and a half. He is the Director of the Office of Program Planning. He came from business, and has joined the Government for the first time. The role of that Office which has been formed is really to have a small group who would see that the recommendations of the special study are being carried out and to see what further steps the Commission ought to be taking in the light of changes in the industry as a whole.

Mr. EVINS. Do you mean, Mr. Chairman, as a result of this very important and extensive study, you have recommended the establishment of another Commission within the Commission?

Mr. CARY. No, sir. The real work is being done by the divisions, that is, Mr. Saul as head of Trading and Markets, Mr. Conwill as head of the Division of Corporate Regulation, Mr. Worthy, Director of the Division of Corporation Finance. When you are involved with

175 recommendations covering a wide gamut of fields, you need a small group to sort of keep on top of them all; in other words, to see what is happening in each in order that we may know what is developing with respect to carrying out each of those recommendations. It is really a sort of coordinating and centralizing Office of Program Planning, and it is not a large number of people.

BIOGRAPHY OF MR. WALTER WERNER

Mr. EVINS. Mr. Werner, tell us a little about your background and what you propose to do in new programs and studies in the Commission. It is good to have a new, fresh face brought in with this Commission.

Mr. WERNER. My background is probably diversified for the work I am doing, but I think it blends with it very well.

I am a lawyer by training. In law school I specialized in securities and, as a matter of fact, did my major job in the law school in the field of securities regulation. That was at a time when the SEC was a lot younger than it is now.

Mr. CARY. May I say he was chairman of the Yale Law Journal, which meant he was top man in his class at Yale Law School in that year.

Mr. WERNER. Later I went into the practice, of law, first in Connecticut and then in Pittsburgh, corporate practice in Pittsburgh. Subsequently, I went into my own business back in Danbury, Conn., where I was a fuel merchant, oil burners, gasoline, and was involved in real estate. At that time, I was interested in the securities market. In fact, I was interested in it throughout, but more in the role of an investor than in any other capacity.

I sold my business early in 1961 and became a consultant to an international oil company which purchased it, and found that was not a very fruitful kind of work, and when several opportunities presented themselves to come into Government service, this was the one which impressed me as being the field in which I could make the maximum contribution. So, I have been with the Commission for the last year and a half, first as Associate Director of the Division of Corporation Finance and since last July as the Director of the Office of Program Planning.

FUNCTIONS OF THE OFFICE OF PROGRAM PLANNING

As I visualize my present job or my present capacity, it is really threefold. The first portion of it, the part we are engaged in right now, is to implement the recommendations of the special study. This is a very difficult and very complicated job, because it is more than just implementation alone; it is more than taking the recommendations of the study and putting them off to one side as a special area for development and work. Rather, it is a matter of doing the work of implementation at the same time that the Commission itself and its staff are doing their day-to-day job. In other words, it is very hard to say where implementation begins and where the routine administration begins.

We are working very close together with each of the operating divisions. In effect, although I am Director of this Office which has

primary responsibility, we have an ad hoc committee within the Commission of which I am a member and as well as the directors of the operating divisions, the General Counsel and Chief Accountant.

We are taking the primary responsibility for integrating and planning and coordinating the work.

My own staff is very small. We have a small number of lawyers. We have a smaller number of economists. We are looking for more. We need them.

At the moment, we are emphasizing almost exclusively the implementation of the study.

Our thought and our hope are and our objective must be that the implementation work will gradually fade off and that the permanent work of this Office will not be implementation of the special study but, rather, to see that in the future it is not necessary to do on a one-time crash basis what the special study did but, rather, that this Office of Program Planning will be doing that kind of analysis and research and recommending to the Commission so it is done on a continuing basis.

Mr. EVINS. Mr. Chairman, this is Mr. Werner, a new man who has been brought into the Commission to implement the special study. He has been telling us what they plan to do with respect to their

Mr. THOMAS. Have we confirmed him yet? We usually confirm all these distinguished gentlemen. You do not mean to say we have a new one that has not been confirmed?

Mr. CARY. He has been with us 18 months.

Mr. THOMAS. You mean the statute of limitations has expired?

Mr. WERNER. I feel like an oldtimer now.

Mr. THOMAS. We are delighted to have you. You were here last year?

Mr. CARY. I do not think he came to the hearing before you, Mr. Chairman, but he was in the Commission at that time.

Mr. Werner was just telling us, Mr. Chairman, of the role of the Office of Program Planning, the small group dealing with the implementation of the special study and coordinating the activities of the Commission in this area. That was the discussion we just finished.

Mr. THOMAS. Off the record.

(Discussion off the record.)

PERSONNEL FOR PROGRAM PLANNING

Mr. EVINS. How many people do you plan to have for this special division?

Mr. CARY. The Office of Program Planning, sir, has 19 now, and the total will be 21. This would include lawyers and economists, and so forth, persons who have to keep up with what the market situation is in the light of the materials developed by the special study.

Mr. EVINS. Can you not transfer some of your present staff to this work, Mr. Chairman?

Mr. CARY. Mr. Evins, as you well know, this was a very elaborate study that was made, coming up with 175 recommendations.

Mr. EVINS. Did not this committee authorize additional funds which provided additional personnel for this particular study?

Mr. CARY. Yes, sir.

Mr. EVINS. You were given additional personnel at the time.

Mr. CARY. Then a substantial number of them left the Commission at the end of that time.

Mr. THOMAS. How many did you keep? Thirty or thirty-five?

Mr. DONATY. We kept about 30 or 35 people out of the 65, including stenographic.

Mr. THOMAS. How permanent will this group be? This is the old carryover.

Mr. EVINS. It will be a permanent division.

Mr. CARY. This Office of Program Planning for the present time will certainly be heavily involved in the work of implementing for this year, and I would say the next year. After that time, whether or not it would stay at that size is really a question. It will all depend on whether or not there are new things happening in the industry that need study.

As Mr. Werner was saying, Mr. Chairman, in your absence, one of the objectives of this organization, once the implementation phase is overcome, is that we will not have to have another crash program or study of the securities market of the magnitude we had 2 years ago.

Mr. THOMAS. It was not upsetting. It was not a crash program.

Mr. CARY. It was a crash program around our organization. They were working night and day.

Mr. THOMAS. It was studied 20 months and did not upset any apple-carts. It was smoothly handled. We understand a crash program to be far different from what you have done here.

Mr. CARY. All I meant is that everybody was working late every day, and if you had seen the activities in the building you would have thought it was crash from our standpoint. That is all I meant.

Mr. THOMAS. I think you have done a magnificent job. I did not intend to detract from that.

Mr. EVINS. Would not those people who were assigned to the special study be those who were most knowledgeable in the field? Of course, all the people down there are knowledgeable and have great skills and abilities, but these people have made the special study and worked with it and lived with it, and it would seem to me if you have 45 you would have enough to continue your effort to implement it with your new chief of the Division.

Mr. WERNER. In fact, most of the people who are actually engaged in the program of implementation are people who were with the special study. There are very few new faces.

Mr. CARY. These are not a wholly new group, Mr. Evins. It just so happens they have been given a new label or new designation for purposes of coordinating the activities.

(Off the record.)

Mr. CARY. I am at the middle of page 6 of the statement, Mr. Chairman, where I indicate in summary that seven positions are requested to provide more adequate supervision over self-regulatory agencies and analyze economic and statistical data about the securities market.

Just to repeat a point that I had made, the special study emphasized that although more responsibility is being vested in these self-regulatory institutions, exchanges and NASD, at the same time more oversight on our part, of those institutions, is needed; and that is really the role they are to perform.

Sir, I have indicated generally the programs for which we are requesting 47 additional positions in 1965 for the regional offices, seven for the Division of Trading and Markets, and two for the Office of Program Planning. That makes a total of 56. The remaining four are one for an additional hearing examiner and three positions for administrative services resulting from our larger inspection and enforcement program.

WORKLOAD—HEARING EXAMINERS

Mr. THOMAS. How many cases did your hearing examiners handle all during the fiscal year 1963, and what is your timelag from the time when a complaint is filed and it goes to the hearing examiner until the time the Commission gets around to its actual disposition of the case?

Mr. DONATY. In 1963, the Commission authorized 165 administrative proceedings. The Office of Hearing Examiners disposed of 172.

Mr. THOMAS. How many hearing examiners did you have in 1963?

Mr. CARY. Twelve.

Mr. DONATY. Hearing examiners, eight.

Mr. THOMAS. Located in the field or in the District?

Mr. DONATY. Located in the District, in the Office of Hearing Examiners.

Mr. THOMAS. None of the hearings are in the field? They are all in the District of Columbia?

Mr. DONATY. No, sir; some of the hearings are out in the field. In fact, most of them are in the field.

Mr. CARY. Their main office is here, but they go out.

Mr. THOMAS. What is the nature of the cases? The preponderating majority of the cases come under what sections of the act?

Mr. DONATY. Primarily, I would say they are the broker-dealer and investment adviser.

Mr. THOMAS. Suspension of license; or what?

Mr. DONATY. Revocation of broker-dealer registration.

Mr. THOMAS. What was the total number of cases handled by your 12 hearing examiners——

Mr. CARY. I made a mistake when I said 12. It is eight, plus four stenographers.

Mr. THOMAS. How many cases did they handle?

Mr. DONATY. 172 in fiscal 1963.

Mr. THOMAS. That is 22 per hearing examiner per year; is that it?

Mr. CARY. Yes.

Mr. THOMAS. How much time is required for each one of cases? The cases are rather short in duration; are they not? You do not have any long-winded one that will go for 10 days or 2 or 3 weeks; do you?

Mr. COHEN. Yes.

Mr. CARY. Very much longer than that, as a matter of fact.

Mr. DONATY. I think Mr. Brown can address himself to this from his regional area—a case in Pittsburgh. An administrative proceeding started up there and they were up there three 3 weeks. Subsequently, the hearing was transferred to Washington, D.C., for a number of reasons.

Mr. THOMAS. What was the nature of the case, Mr. Brown?

Mr. BROWN. It was a fraud case against a broker-dealer for selling securities by means of fraudulent representations.

Mr. THOMAS. Was there a criminal action pending simultaneously with your hearing?

Mr. BROWN. No, sir. The criminal action is under consideration.

Mr. THOMAS. No indictment has been returned?

Mr. BROWN. Not as yet. The criminal reference report is in the process of being prepared.

CRIMINAL PROCEEDINGS

Mr. THOMAS. What is the usual practice of the Commission with reference to proceedings with the U.S. attorney when you have obvious cases or cases that you think are obvious, on suspension or revocation? Which precedes? Do you go to the criminal side of the docket first in the U.S. district court before you remove, or do you remove and then go to the criminal docket?

Mr. CARY. I will ask Mr. Loomis to speak to that.

Mr. LOOMIS. It is more usual that we have the administrative proceeding first and the criminal case second. If we have completed a criminal case, the person is apt to be out of the securities business anyhow and, hopefully, in jail. We start the administrative pro- and then get the wheel turning for criminal prosecution. That is the usual course.

Mr. WYMAN. Do you not run into a lot of fifth amendment in your administrative proceedings when a criminal proceeding is pending?

Mr. LOOMIS. Usually the criminal proceeding is not pending in the sense that an indictment has been returned at the time when the administrative proceeding goes on. We do, however, I think, have an increasing tendency for people to take the fifth amendment in our proceedings.

Mr. COHEN. This is almost inevitable.

Mr. THOMAS. Gentlemen, let us get some lunch and will you come back at 1:30?

AFTERNOON SESSION

Mr. EVINS. The committee will come to order. Would you please present the balance of your statement, Mr. Chairman?

Mr. CARY. All right, sir.

I think I have completed the presentation of the reasons for and the need behind the 60 positions for which we are asking.

STATUS OF REGISTRATION STATEMENTS

The next item is largely informational, but since it is the largest division in our organization, the Corporation Finance Division, with Mr. Worthy, the Director, I thought I would report on the status of that.

We are not asking for any additional positions in this area. In the current year the Division of Corporation Finance has been allocated 287 positions as compared with 320 allocated in 1963.

The reduction of 33 positions reflects primarily a downward adjustment in the number of registration statements previously estimated to be filed, thus less filings to be examined than originally anticipated.

Of the 33 positions, 20 were reallocated to the regional offices for the investment company inspection program. That constitutes the primary group from which we derived the strength to do the investigations we have had, and 13 positions were abolished.

This reallocation is, of course, a calculated risk because the Commission may be confronted with a sudden increase in filings as we experienced in 1961–62.

Mr. THOMAS. Off the record.

(Discussion held off the record.)

Mr. CARY. 287 positions will be required to reduce further the time in processing registration statements. We are now down to 21 days from a period of 57 days a couple years ago. These positions are needed, also, to reduce our existing backlog of annual and periodic reports.

FUTURE REDUCTION IN PERSONNEL

Mr. THOMAS. We think you are doing a fine job. You have to have some additional personnel to do this exploratory work which you are going to undertake. However, after you get the pattern laid would it not be possible for you to go back and reduce the number of personnel by 100 to 150 or perhaps 200 people? That is what you have gained in the last 3 or 4 years, in the little over 3 years you have been Chairman.

Mr. CARY. I hope we shall. I do believe, for example, in the field of Corporation Finance, which I have just been addressing myself to, you will notice we cut back 33 positions in that area in the last year.

I do think we need 287 for this forthcoming year, but if the registration statements do not increase in number I would assume we could cut back further.

In the investment company field we will get stabilized. After all, once you get down to every 2 years, something like that, you have reached a point which I would regard as practicable. At this stage we would hope to, and that is as far as I can go in making any assurances.

Mr. EVINS. Mr. Chairman, do you want to place the balance of your statement in the record and highlight it?

Mr. CARY. I would appreciate it.

(The material referred to follows:)

RENTAL OF A COMPUTER

Another item I wish to discuss is the additional amount of $53,000 for rental of a computer to be installed in January 1965. On an annual basis, the equipment will cost approximately $142,000 and will be rented on a lease-purchase agreement with option to purchase within 2 years from date of installation. The annual cost of this equipment would be offset by an annual savings of like amount in personal services pertaining to 25 to 30 positions. The use of a computer will eliminate duplication of data, reduce timelags in name searching and will provide a cross indexing to show associations and relationships of persons, firms, files, and actions.

For the past year, representatives of the National Archives and Records Service of the GSA have conducted a survey of data retrieval needs of the Commission. The survey team has recommended the installation of a computer and supporting equipment for the prime purpose of providing more detailed data pertaining to names of individuals and corporations on an expedited basis. Thus, such data would be centralized in lieu of the existing manual maintenance of about 20 separate indexes, which are finding aids and reference media to the Commission's files. The report of the survey team states also that the growth

rate in filings and changes in Commission rules and legislation will increase the cost of the existing manual data retrieval system by $94,000 in fiscal 1970.

In addition to the GSA survey, the report of the special study of securities markets recommended in particular that the Commission place greater emphasis on the compilation, analyses, and publication of data pertaining to the trading markets. Toward this end, essential economic, statistical, and market analyses could be performed on the computer. Furthermore, the computer would be utilized for personnel management, payroll and leave operations, and other program and administrative areas.

REPORT OF THE SPECIAL STUDY OF SECURITIES MARKETS

The final item I wish to mention is the report of the special study of securities markets. The report was submitted to the Congress last year and is a major contribution to the understanding of the operations and problems of the securities markets. Following 18 months of exhaustive collection and analyses of data, which culminated in approximately 175 recommendations, the report provides a thorough and responsible foundation for action. Furthermore, the very existence of a special study assisted in the creation of a more salutary environment and has resulted in numerous important developments.

The American Stock Exchange has undergone an intensive reorganization. The New York Stock Exchange has commenced a program for improved controls over selling practices and initiated new qualification standards. The National Association of Securities Dealers (NASD) has undertaken a comprehensive revision of its bylaws and rules of fair practice. Broker-dealers have reviewed and altered their systems of supervision. It would go too far to assert that all of these, and other numerous changes, are the direct products of the special study and of the initiating legislation. Yet it would be difficult to deny that their existence has at least produced a reevaluation of existing practices and procedures by the industry, as well as the Commission, which can only be beneficial. In other words, the financial community has taken the opportunity to make its own special study, with valuable consequences.

The report is only a prelude; it discloses many problems whose resolution will require the efforts of the Commission, the exchanges, the NASD and the industry itself.

At the present time, the Commission's efforts are heavily committed to our legislative program (H.R. 6789 and S. 1642), which is under consideration by the Congress. S. 1642 has passed the Senate and hearings are continuing before a subcommittee of the House Committee on Interstate and Foreign Commerce. In the meantime, the staff of the Commission is preparing rulemaking proposals for presentation to the Commission and to the industry.

Gentlemen, this concludes my statement, and with the assistance of my fellow Commissioners and our staff members, we will answer any questions you may have.

Mr. CARY. The next item I will just highlight as you suggested. I would like to mention that what we have in mind is to ask for $95,500 for rental of office space: $31,000 of it will go to take care of the 60 additional positions and the balance is to take care of an existing space deficiency in Washington, D.C.

As I mentioned earlier in this hearing, we are in third-class condition space so far as the GSA is concerned, but at the same time while having these low class accommodations we also have very limited space available, and we do not have enough space to meet our requirements of 171,300 square feet.

Mr. EVINS. Could you supply the rental costs of the SEC over the past 5 years for the record?

Mr. CARY. Yes, sir. We shall supply that for the record.

Mr. EVINS. You might also include a breakdown by offices if you have it.

(The information supplied follows:)

Summary of estimated costs of general purpose commercial space rental paid by GSA

	1960	1961	1962	1963	1964
Outside Washington, D.C.	$263,351	$278,464	$341,007	$372,288	$376,141
Inside Washington, D.C.	20,956	20,956	39,456	44,999	51,000
Total	284,307	299,420	[1] 380,463	[1] 417,287	[1] 427,141

[1] Includes funds transferred to GSA for fiscal years 1962 to 1964. (See exhibit B.)

Estimated cost of general purpose commercial space inside Washington, D.C.—Rental cost paid by GSA

	1960	1961	1962	1963	1064
425 2d St. (main building)	(1)	(1)	(1)	(1)	(1)

St. Paul	(1)	(1)	(1)	(1)	(1)
Total	263,351	278,464	[4] 341,007	[4] 372,288	[4] 376,141

[1] Located in a Federal office building.
[2] Miami branch office moved into Federal office building, Feb. 1, 1964.
[3] San Francisco regional office will move into Federal office building on or about May 1, 1964.
[4] Includes $19,532; $21,625; and $3,465 transferred to GSA by the Commission for fiscal years 1962, 1963, and 1964, respectively.

STATEMENT OF REIMBURSABLE COSTS TO GSA FOR ADDITIONAL OFFICE SPACE

Effective with fiscal year 1962, agencies are required to budget initially (first year) for estimated rental cost of all additional space necessitated by new or expanded activities. When the space has been secured and the cost thereof is known, an appropriation transfer is made from the agency appropriation to an appropriation of the general Services Administration (GSA). This existing procedure applies to the Securities and Exchange Commission. Thereafter, the GSA is responsible for obtaining funds for such additional space.

Prior to fiscal 1962, additional space was provided by GSA without cost to the Commission. There follows a tabulation of funds transferred to GSA by the Commission for fiscal years 1962 to 1964, inclusive, pertaining to the cost of additional space for the first year or part thereof.

	Reimbursable costs to GSA		
	Inside Washington, D.C.	Outside Washington, D.C.	Total
Fiscal year:			
1960			
1961			
1962	$18,500	$19,532	$38,032
1963	21,374	21,625	42,999
1964		3,465	3,465
Total	39,874	44,622	84,496

Mr. DONATY. Our rental costs are reimbursable to GSA, who in turn pays the lessor.

Mr. THOMAS. Not all of them. You are not a Government corporation, are you?

Mr. DONATY. No, sir. GSA obtains the commercial space for us. We pay GSA. GSA, in turn, pays the owner.

Mr. THOMAS. You do not pay GSA all your rental bill every year?

Mr. DONATY. No, sir, we do not.

Mr. THOMAS. All right.

RENTAL OF COMPUTER

Mr. CARY. The next point I would discuss, and I will discuss it briefly, and we have Mr. Donaty and Mr. Becker here if you wish to discuss it in detail, is $53,000 for rental of a computer. I believe you referred to this in the hearings last year, Mr. Chairman.

On an annual basis the equipment will cost $142,000 and will be rented on a lease-purchase agreement with an option to purchase 2 years after date of installation.

We believe there will be an annual saving of like amount in personal services pertaining to 25 to 30 positions.

The use of the computer will eliminate duplications of data, reduce the time lags in name searching, provide a cross indexing to show associations and relationships of persons, firms, and files. It will serve a variety of other purposes, including statistical and analytical work for us, and it will also handle personnel management, payroll, and leave operations. We look forward to it. If it is propertly programed, and we are training people at the moment, we look for it to be fully utilized and of great value to the SEC.

I might say the industry, with which we are dealing, is getting so heavily automated that I think some automatic equipment is needed for us in order to keep in step with the kind of work they are doing.

Finally we have——

Mr. THOMAS. Twenty-five employees?

Mr. CARY. That was the estimate Mr. Donaty made.

Mr. THOMAS. Using round figures how much is that a year?

Dr. DONATY. About $200,000.

Mr. THOMAS. It is more than that—it is about $220,000. What is the total cost of the machine?

Mr. DONATY. Total cost for the machine is approximately $500,000. I might point out at this time we are presently establishing the necessary procedures——

Mr. THOMAS. What does it cost you to maintain a year?

Mr. DONATY. Around $7,000 a year.

Mr. THOMAS. It pays for itself in about two and a half years, does it not?

Mr. JONAS. It has not always turned out that we have had these manpower savings when these computers are bought. We are watching this with keen interest to see whether you knock off 25 to 30 people next year.

Mr. THOMAS. What is the general pattern—adding five?

Mr. JONAS. That is right.

Mr. THOMAS. Go ahead, Mr. Evins.

Mr. EVINS. Proceed, Mr. Chairman.

AFTERMATH OF THE SPECIAL STUDY

Mr. CARY. The final item I wish to mention is the Report of the Special Study of the Securities Markets that I referred to earlier. This report was submitted to the Congress last year and is a major contribution to the understanding of the operations and problems of the securities markets.

Following 18 months of collection of this data which culminated in 175 recommendations, the report provides a thorough and responsible foundation for action.

Furthermore, the very existence of a special study assisted in the creation of a more salutary environment and has resulted in numerous important developments.

The American Stock Exchange has undergone an intensive reorganization. The New York Stock Exchange has commenced a program for improved controls over sellings practices and initiated new qualification standards.

The National Association of Securities Dealers has undertaken comprehensive revision of its bylaws and rules of fair practice. Broker-dealers have reviewed and altered their systems of supervision.

Not all of these are direct products of our special study and the initiating legislation, but I like to think they contributed substantially to it.

In other words, as we see it, the financial community has taken the opportunity to make its own special study with valuable consequences.

The report is only a prelude. It discloses many problems. The resolution will require the efforts of the Commission, the exchanges and the NASD itself.

At the present time the Commission's efforts are heavily committed to the legislative program (H.R. 6789 and S. 1642) which is under consideration by the Congress.

S. 1642 has passed the Senate and hearings are continuing before a subcommittee of the House Committee on Interstate and Foreign Commerce. In the meantime we are preparaing rulemaking proposals.

I might say in closing that tomorrow I will be in front of Mr. Harris' committee on the last phase of this bill which passed the Senate and which is now before the House, and I hope it will be before the full House before the next 4 months are over, before the summer comes.

Mr. EVINS. Thank you, Mr. Chairman, for a very fine statement. It is very concise and very much to the point.

COMMISSION STAFF GROWTH

I like to make this little observation. Echoing what the chairman said, we think you do a tremendous job. It always seems to resolve around coming back for more appropriations and more legislation.

My thought is that the Congress has armed you with this duty and responsibility and we want to give you funds to do the job. I hope you will continue vigorously the authority which you already have.

Mr. CARY. We are trying to exercise existing authority. This legislation we are asking for is, as I say, primarily increasing self-regulation.

Mr. JONAS. I agree with the chairman and Mr. Evins. I think the Commission is serving a very useful purpose. It has to be properly financed to do the job.

However, I do not know of any agency of the Government growing any faster than yours in the last 10 or 15 years. You have grown from 1,000 employees 5 years ago to 1,528. That is quite a heavy increase. You have gone up from $7 million 5 years ago to $15 million.

While the country is growing and the activitites in the securities market are increasing, I don't know whether they are increasing that fast.

We are concerned about that. We had assumed that you would come in here asking for a little less money than you did last year. With all this talk about economy it does not seem to be catching on. I am really disappointed that you have asked for 60 additional employees. I thought we would cut off about 60.

Mr. CARY. I don't know f I can fully answer your point, Mr. Jonas. If I may speak as somebody who has been in this field from another side before I came here, it has been often believed and said that the regulatory agencies have been really understaffed to perform the big jobs they have been given. I would think that we during this period have had an opportunity to reexamine what our job is. We had it through this special study. I think it demonstrated the need in the field of trading and markets for further activity.

I do feel that the investment company field to which I referred earlier has really never been explored adequately and never been inspected. That is really the point. As a consequence I do feel now that with this amount we are asking we can responsibly do the several jobs we have.

It may be we are not totally efficient and you are absolutely right, sir, that we have increased substantially since 1960 which was the year in which we had 1,000 employees, as you mentioned, but I do feel we have done a more extensive and intensive job in administration along a variety of fronts. That is the only justification I can give for the expenditure.

Mr. JONAS. We have been concerned over protecting the general public against sharpies. In view of the experience on the commodity exchange in New York, you should think about protecting some of the banks.

Mr. CARY. I am afraid the Comptroller of the Currency might have another fight with me.

Mr. JONAS. Does he say you are not concerned with that?

Mr. CARY. As the chairman indicated this morning, he already has said we are trying to get our foot in the door through the regulation of the so-called managing agency accounts that the banks are considering going into at the present time.

We simply have no jurisdiction over the banks.

Mr. JONAS. Do you have jurisdiction over the commodity exchanges?

Mr. CARY. No, sir; but we have this jurisdiction, and this is something we have to face. We will be before Mr. Harris tomorrow on this and I am sure this question will come up. We shall have to face the fact that even though we have no jurisdiction over the commodities market as such, we should establish higher requirements, let us say margin requirements and the like, with respect to brokers who are doing a commodities business as well as a securities business. That is the weakness perhaps, at least one of the weaknesses, which was developed in the case.

Mr. THOMAS. Who does have regulation over the commodities market?

Mr. CARY. Department of Agriculture. We do not have authority over it.

Mr. JONAS. I suppose there is not as much activity in the cotton exchange as there was 15, 20, and 25 years ago when everybody in the textile busines had to sell or buy cotton on the exchange.

Mr. CARY. I think that is right.

Mr. JONAS. But the other exchanges are quite active.

Mr. CARY. The New York Produce Exchange and the Chicago Board of Trade are both very active, indeed.

Mr. JONAS. Why were those things not included in your act? Do you know?

Mr. CARY. I assume ours was exclusively focused upon securities and that is the basic reason, although you are quite right that broker-dealers handle both.

Mr. EVINS. You have spelled out to this committee quite an extensive legislative recommendation for broadening your authority. Is this bill specific or comprehensive?

Mr. CARY. No great authority, just two points. Greater controls over qualifications of the persons entering the business, and secondly we are asking for disclosure of information to the public, along the lines now applicable to listed securities, for securities of companies in which there is a large public interest, where there are more than 750 shareholders and assets of $1 million or more.

STATUTORY AUTHORITY

Mr. EVINS. Pages 1, 2, and 3 include the statutory authority of the Commission. It might be well to include those pages in the record.

(The pages follow:)

STATUTORY AUTHORITY

The Securities and Exchange Commission is an independent, quasi-judicial agency. It administers: (1) Securities Act of 1933; (2) Securities Exchange Act of 1934; (3) Public Utility Holding Company Act of 1935; (4) Trust Indenture Act of 1939; (5) Investment Company Act of 1940; and (6) the Investment Advisers Act of 1940. By terms of chapter X of the National Bankruptcy Act, as amended, the Commission also serves as adviser to Federal courts in corporate reorganization proceedings.

PURPOSE

The general objective of the statutes administered by the Commission is to protect the interests of the public and investors by preventing fraud, deceit, and manipulation in the sale and trading of securities, by enforcing statutes requiring high standards of conduct in financial reporting and other activities of issuers of securities and brokers and dealers, by regulating public utility holding company systems and investment companies, and by rendering assistance to courts in corporate reorganizations.

DUTIES

The primary duties of the Commission under the above statutes are:

1. *Securities Act of 1933.*—Administration of the law which, with respect to securities sold in interstate commerce or by use of the mails, has two basic objectives: (*a*) To provide investors with financial and other information concerning new issues of securities or outstanding issues owned by controlling persons offered for public sale; and (*b*) to prohibit misrepresentation, deceit, and other fraudulent acts and practices in the sale of securities generally.

2. *Securities Exchange Act of 1934.*—This act requires the filing of registration applications and annual and other reports with national securities exchanges and the Commission by companies whose securities are listed on the exchanges. These filings must contain financial and other data prescribed by the Commission for the information of the investing public.

The act also requires registration with the Commission of national securities exchanges, brokers, and dealers engaged in an over-the-counter securities business, and national association of such dealers. Their activities and practices are subject to regulation and disciplinary action by the Commission to prevent fraud in the purchase or sale of securities, to prevent manipulative practices in the over-the-counter and exchange markets, and to insure maintenance of just and equitable principles of trade for the protection of investors and the public.

The act also subjects to Commission regulation short sales, stabilizing, floor trading, the activities of specialists and odd-lot dealers, and such matters as excessive trading by exchange members. It further provides for control of the use of credit to finance the purchase of securities listed and registered on exchanges through establishment of minimum margin requirements by the Board of Governors of the Federal Reserve System.

3. *Public Utility Holding Company Act of 1935.*—This act provides three areas for regulation of holding companies controlling electric and gas utilities: (1) Physical integration of public utility and related properties of holding company systems, and simplification of financial and corporate structures of those systems; (2) regulation of financing operations, acquisitions and dispositions of securities and properties, accounting practices, and servicing arrangements of holding company systems; and (3) exemptions of certain companies from provisions of the act and regulation of the rights of persons affiliated with a public utility to acquire securities of other public utilities.

4. *Trust Indenture Act of 1939.*—The rights and interest of purchasers of debt securities issued under mortgage indentures and sold publicly are safeguarded through provisions of this act requiring elimination of exculpatory clauses from and inclusion of protective provisions in indentures. The act also requires that the indenture trustee, who, as a representative of the debt holders, has the duty to see that the covenants in the indenture are adhered to, shall be independent and free of any interests which might conflict with the proper exercise of his duties.

5. *Investment Company Act of 1940.*—This act provides for the registration with the Commission of investment companies, and subjects their activities to regulation in accordance with prescribed standards in the interest of protecting investors.

6. *Investment Advisers Act of 1940.*—Persons who, for compensation, engage in the business of advising others with respect to their security transactions must register with the Commission.

In addition to other provisions, amendments to this act by the 86th Congress expand the authority of the Commission as follows: (1) Empowers the Commission to require investment advisers to keep books and records in accordance with rules to be prescribed by the Commission; (2) provides for regular and periodic inspections of registered investment advisers; (3) expands the power for denial or revocation of registration of investment advisers; and (4) empowers the Commission to issue rules and regulations, which would prohibit fraudulent, deceptive and manipulative practices by investment advisers.

7. *National Bankruptcy Act—chapter X.*—To aid the Federal courts in the administration of the affairs of debtor corporations being reorganized under chapter X, the Commission participates actively as a party to the proceedings in those cases in which a substantial public investor interest is involved, and files advisory reports on reorganization plans in appropriate cases. The Commission also may appear in chapter XI cases to challenge whether the relief sought may properly be granted under the provisions of that chapter.

The Commission is assisted by a staff of professional employees, including lawyers, accountants, engineers, security analysts, and examiners; and by administrative and clerical employees. The staff is organized into separate divisions and offices, including 9 regional offices, each under the charge of a division director or office head, and each of which is responsible for the performance of certain functions in the administration of the laws assigned to the Commission.

The table on page 4 shows the additional funds and positions requested for fiscal year 1965 over 1964. The table on page 5 shows, by divisions and offices the actual obligations and positions for 1963, estimated obligations and positions for 1964 and 1965, and changes proposed in 1965. Similar data are furnished for all other items of "Other expenses."

ADDITIONAL FUNDS REQUESTED IN 1965

Mr. EVINS. We shall insert page 4, appropriation for 1964, the number of positions, and the total request for 1965.

(The page follows:)

Summary of additional funds requested for fiscal year 1965

Fiscal year 1964	Positions	Funds
Appropriation for fiscal year 1964	1,468	$13,937,500
Increases, fiscal year 1965:		
A. Personal services:		
Additional positions	[1] 60	385,000
Salary step increases		262,500
Cost of pay increases in 1965 over 1964		290,000
Subtotal, personal services		937,500
B. Other expenses:		
Personnel benefits		72,000
Travel		48,000
Other costs		230,000
Subtotal, other expenses		350,000
Total requested appropriation for fiscal year 1965	1,528	15,225,000

[1] Includes 47 positions for the regional offices.

Mr. EVINS. This is quite an extensive chart on page 5, but too much detail and we shall not insert it.

OFFICE OF PROGRAM PLANNING

We shall turn to the Office of Program Planning. Insert in the record pages 8 and 9.

(The pages follow:)

OFFICE OF PROGRAM PLANNING

FUNCTIONAL STATEMENT

The principal function of this Office is to assist the Commission in establishing policy by analyzing legal, economic, and industrial developments affecting the regulation of the securities markets. This Office recommends to the Commission the institution or modification of programs commensurate with the needs and trends of the securities markets.

During fiscal years 1964 and 1965, the Office will assist and advise the Commission in the implementation of the recommendations of the special study of securities markets. This work involves, in coordination with other Commission offices and divisions, changes in the rules, regulations, and policies of the Commssion and self-regulatory agencies; recommendations for legislation; proposals for modifications of industry practices; and procedures for gathering and analyzing economic data about the securities markets.

It is anticipated that, as the recommendations of the special study are implemented, the work of this Office will gradually shift in emphasis to the principal functions described above.

Justification

Fiscal year	Personal services	
	Cost	Positions
1964	$190,000	19
Increase	30,200	2
Total, 1965	220,200	21

The increase of $30,200 represents the cost ($20,200) of two additional positions (economists) and $10,000 for mandatory pay increases.

Personal services data sheet, Office of Program Planning

Title	Grade	Program, 1964		1965 increase	Estimate, 1965	
		Number	Annual salary		Number	Annual salary
Director	GS-17	1	$18,512		1	$19,011
Special counsel	GS-16	1	16,515		1	17,014
Economist	GS-15	1	15,683		1	16,182
Attorney	GS-15	3	47,548		3	49,066
Economist	GS-13	1	11,731	1	2	23,857
Attorney	GS-13	3	37,897		3	38,667
Economist	GS-11	1	8,424	1	2	17,118
Economist	GS-9	1	7,030		1	7,280
Attorney	GS-9	1	7,030		1	7,280
Various	GS-8 and under	6	33,653		6	34,007
Total permanent		19	204,023	2	21	229,482
Less lapse			14,023			9,282
Cost			190,000			220,200

Mr. EVINS. You have a total of 19 positions; you are asking for 2 more economists?

Mr. CARY. That is right.

Mr. EVINS. Do you really think you need an additional brain trust staff in addition to the Commission itself for your planning?

Mr. CARY. Yes, sir; this is the area carrying out that special study and it has to also analyze market conditions and situations carrying on from the information we had available through the study.

Office of Hearing Examiners

Mr. Evins. Turning to the Office of Hearing Examiners, pages 12 and 13 should be inserted, Mr. Reporter.

(The pages follow:)

Office of Hearing Examiners

FUNCTIONAL STATEMENT

The hearing examiners preside in a quasi-judicial capacity over public and private hearings ordered by the Commission under the various statutes it administers, which are held throughout the United States. In the conduct of such proceedings, they subpena witnesses; administer oaths; take testimony; rule on the admissibility of evidence, offers of proof and other disputed matters; rule upon motions and procedural requests; and take other and related actions incident to the proper development of the evidentiary record while protecting the rights of all parties to the action.

At the conclusion of the hearings, the hearing examiners prepare recommended decisions, as may be required, based upon the evidence in the record, the arguments and contentions made, and the application of law and regulations to the facts, in aid of the Commission's ultimate resolution of the factual and legal issues involved.

Justification

Fiscal year	Personal services	
	Cost	Positions
1964	$149,000	12
Increase	23,700	1
Total, 1965	172,700	13

One additional hearing examiner will be required in 1965 over 1964 to provide for the expeditious disposal of the increased number of administrative hearings resulting from the accelerated enforcement program of the Commission and to reduce the number of hearings pending at the close of fiscal 1964.

	Actual, 1963	Estimate, 1964	Estimate, 1965
Administrative proceedings:			
Pending, beginning of year	90	83	78
Authorized, during year	165	175	185
Subtotal	255	258	263
Disposed of by Office of Hearing Examiners	172	180	210
Pending, end of year	83	78	53

The increase of $23,700 in 1965 represents the cost ($15,700) of the additional hearing examiner and $8,000 for mandatory pay increases.

Mr. Evins. You said this morning you had eight. This looks like 13 positions. In 1965, it is increased to 13?

Mr. Donaty. We have eight hearing examiners in 1964 and four stenographic personnel. One additional hearing examiner is requested for 1965.

Mr. Evins. How about the backlog? You told us how many they are disposing of. How many cases are pending before the hearing examiners at the present time?

Mr. Donaty. As of December 31, we had 72 pending, sir.

Mr. EVINS. Most of your work is settled before it gets to the hearing examiner; I assume?

Mr. CARY. A great deal of our work is handled administratively. For instance, all the registration work is handled that way, except when we get into a stop order proceeding.

Mr. EVINS. Page 16 shows you have 15 personnel in "Opinion writing." The increase is because of the pay act?

Mr. CARY. Yes.

OFFICE OF THE GENERAL COUNSEL

Mr. EVINS. The Office of the General Counsel is next. Insert pages 17 through 20.

(The pages follow:)

OFFICE OF THE GENERAL COUNSEL

FUNCTIONAL STATEMENT

The General Counsel is the Commission's chief legal officer and counsel on overall legal policy, litigation, legislation, rulemaking, and in the interpretation of the several statutes administered by the Commission. In addition, the General Counsel exercises joint responsibility with the Director, Office of Opinion Writing, in dealing with general problems arising under the Administrative Procedure Act as well as the adoption or revision of the rules of practice.

Justification

Fiscal year	Personal services	
	Cost	Positions
1964	$277,000	32
Increase	12,400	
Total, 1965	289,400	32

For 1965, no additional positions are requested in 1965 over 1964. The increase of $12,400 represents the cost of mandatory pay increases.

Civil and appellate litigation

One of the most important phases of the work of the General Counsel's Office is the conduct of appellate litigation, which includes appeals from Commission decisions, appeals in injunction cases and appeals in chapter X proceedings. Assistance is rendered also to the Department of Justice in the preparation of appellate briefs in criminal cases arising from criminal references. The civil appellate proceedings are briefed and argued by the staff of this Office and usually involve complicated factual situations and difficult legal problems requiring the expenditure of very large amounts of time.

In addition to the preparation of briefs and the presentation of oral arguments in the Supreme Court and in the various U.S. courts of appeals, this Office prepares also briefs and occasionally participates in oral argument in private law suits as amicus curiae when the issues presented involve questions of such importance under the Federal securities statutes as to warrant participation by the Commission.

This Office is responsible for defending the Commission in actions instituted against it, including suits to enjoin Commission hearings, administrative proceedings, or investigations.

This Office also supervises all civil litigation in the U.S. district courts in the enforcement of the securities laws. As a general rule, trials at the U.S. district court level are conducted by attorneys in the Commission's regional offices working under the supervisory direction of the Office of the General Counsel. However, in important or novel cases, particularly in the proxy and investment company field, personnel of the Office of the General Counsel are assigned as trial

counsel in district court matters. The frequency of such direct involvement has been steadily increasing.

During fiscal 1963, the Commission filed 110 suits for injunctions in the U.S. district courts. In addition, there were pending 19 appeals involving petitions for review of Commission orders. There were also pending 14 amicus curiae proceedings in which the Commission participated, 14 appeals in reorganization matters, and 14 appeals in injunction cases.

Criminal reference reports

Although the function of reviewing and supervising criminal reference reports to the Department of Justice is a responsibility of the Division of Trading and Markets as part of its enforcement activities, the General Counsel still retains ultimate responsibility of all criminal matters referred to the Department of Justice.

During fiscal 1963, the General Counsel referred to the Department of Justice 49 criminal reference reports. The scope and complexity of these criminal matters is significantly increasing.

Legislative matters

The General Counsel is the Commission's primary legal consultant and counsel on legislation and is responsible for the preparation of material submitted by the Commission to the committees of the Congress, and advises and assists the Commission in its hearings and appearances before the Congress. During fiscal 1963, comments were requested by the congressional committees or were referred by the Bureau of the Budget on 50 legislative proposals. Legislative proposals resulting from "Report of the Special Study of Securities Markets" have caused a substantial increase in this activity, and it is anticipated that it will continue during fiscal 1965.

Other functions

The Office of the General Counsel is constantly required to render opinions, either written or oral depending upon the magnitude of the problem, in numerous legal matters that are presented by the operating divisions, by the regional offices, by the Commission itself and by attorneys and other members of the public. It is responsible also for the conduct of administrative proceedings relating to possible disqualification of attorneys, accountants and other professional persons from practice before the Commission. Such matters may involve extensive investigation and travel and result in vigorously contested proceedings. The Office will also be called upon to advise the Commission with respect to numerous rulemaking proposals and similar matters attributable to the "Report of the Special Study of Securities Markets."

Mr. EVINS. Where is your General Counsel?

Mr. CARY. Mr. Loomis.

Mr. EVINS. Mr. Loomis, besides the big investigation in New York what is your principal concern at the Commission at the present time?

Mr. LOOMIS. The Office of the General Counsel is particularly concerned with court cases, mostly appellate cases.

Mr. EVINS. How many have you in the courts at this time, speaking of SEC cases?

Mr. LOOMIS. I do not have total number of cases because many are handled in the regional office.

Mr. EVINS. The General Counsel should know how many cases he has in court. How many in round numbers?

Mr. DONATY. As of December 31, we had approximately 115 pending in civil action.

Mr. THOMAS. Filed; 110 suits for injunction in the U.S. district courts.

Mr. EVINS. Page 21 should be inserted concerning the personnel in the Office of the General Counsel.

(The page follows:)

Personal services data sheet, Office of General Counsel

Title	Grade	Program, 1964		1965 increase	Estimate, 1965	
		Number	Annual salary		Number	Annual salary
General Counsel	GS-18	1	$20,010		1	$20,010

Mr. EVINS. There are no position increases recommended.

OFFICE OF OPINION WRITING

Turn to the Office of Opinion Writing and insert pages 15 and 16 in the record.

(The pages follow:)

OFFICE OF OPINION WRITING

FUNCTIONAL STATEMENT

The principal function of this Office is to assist the Commission in the preparation of findings, opinions, and orders in cases, which come before the Commission for decision in the exercise of its quasi-judicial functions. Further, this Office is responsible for the preparation of the annual report of the Commission to the Congress, and exercises joint responsibility with the Office of General Counsel in dealing with general problems arising under the Administrative Procedure Act, including the adoption or revision of the rules of practice.

Justification

Fiscal year	Personal services	
	Cost	Positions
1964	$148,000	15
Increase	7,000	
1965	155,000	15

For fiscal 1965, no additional positions are requested for this Office. The increase of $7,000 in 1965 over 1964 represents the cost of mandatory pay increases.

During fiscal 1963, this Office prepared drafts for the Commission's use in disposing of 173 matters of an adjudicatory nature. It is expected that the Office will dispose of 180 matters in 1964 and approximately the same number in 1965.

Personal services data sheet, Office of Opinion Writing

Cost			148,000			155,000

Mr. JONAS. On page 16 I understand why you need five attorneys writing opinions, and a Director in charge of the Opinion Writing Section, but why do you need an Associate and Assistant Director? Couldn't you knock off two of those high-paying positions?

Mr. CARY. This is some of the most technical and highly qualified work in the Commission.

Mr. JONAS. I understand that. That is the opinion writing. I am referring to the direction. You have three directors directing five lawyers.

Mr. COHEN. They all write opinions, including the Director.

Mr. JONAS. We had some argument about that a few years ago.

Mr. COHEN. They are all working people.

Mr. CARY. They are not all managers.

Mr. JONAS. Not just supervisors?

Mr. COHEN. All opinion writers.

Mr. JONAS. You give them these extra titles to give them higher pay?

Mr. COHEN. They are a little more experienced, have been there longer, and have greater responsibility.

Mr. JONAS. They are doing work other than just assigning opinion writing?

Mr. COHEN. Yes; they are writing opinions.

They handle the most difficult ones.

Mr. CARY. There has been quite a turnover in this field and we are fortunate to have several who have stayed with us and given us some continuity.

Mr. JONAS. It looked like a lot of chiefs for five Indians.

Mr. CARY. These are men who have been with us in some cases 10 and 20 years.

DIVISION OF CORPORATION FINANCE

Mr. EVINS. Division of Corporation Finance, one of the big divisions of the Commission. This sets forth their responsibilities on pages 25 and 26. Insert these pages in the record.

(The pages follow:)

Division of Corporation Finance

FUNCTIONAL STATEMENT

The Division of Corporation Finance assists the Commission in the discharge of those responsibilities relating to the (1) prevention of fraud in the public offering of new securities; (2) establishing and requiring adherence to standards of adequacy and fairness in economic and financial reporting by companies, underwriters and others with respect to securities traded on national exchanges or offered for public sale; (3) establishing, in collaboration with the Office of the Chief Accountant and in cooperation with the accounting profession, sound standards of auditing and accounting procedures and practices; (4) establishing and requiring, with respect to securities traded on national securities exchanges and to certain other securities, adherence to standards of fair disclosure and fair dealing in the solicitation of proxies of security holders for the election of directors or the accomplishment of other corporate actions, such as mergers, consolidations, reorganizations, recapitalizations, acquisition or disposition of assets; and (5) the enforcement of statutory provisions requiring that indentures governing debt securities contain certain provisions for the protection of the public security holder, including high standards of conduct on the part of indenture trustees.

The Division also enforces the financial reporting, proxy solicitation and disclosure provisions applicable to the various types of investment companies subject to the Investment Company Act of 1940 and reviews sales practices in the public distribution of securities and sales literature used for that purpose. In addition, the Division has responsibility for rendering interpretations to issuers, underwriters and their representatives and to the public as to the meaning and application of the statutes it administers, and the rules and regulations thereunder.

Justification

	Personal services	
	Cost	Positions
Fiscal year:		
1964	$2,509,000	287
Increase	136,500	
Total 1965	2,645,500	287

Position increase by organization, 1965 over 1964

	1964	1965	Increase 1965 over 1964
Office of the Director	8	8	
Branches of Corporate Analysis and Examination	192	192	
Branch of Administrative Proceedings and Investigations	11	11	
Branch of Filings and Reports	30	30	
Office of Chief Accountant	9	9	
Office of Chief Counsel	14	14	
Branch of Small Issues	12	12	
Office of Engineering	11	11	
Total	287	287	

For 1965, no additional positions are requested for the various activities of the Division. The additional amount of $136,500 for 1965 represents the cost of mandatory pay increases.

For the current fiscal year (1964), the Division has been allocated 287 positions as compared with 320 allocated in 1963. The reduction of 33 positions in 1964 reflects primarily a downward adjustment in the number of registration statements previously estimated to be filed, thus less filings to be examined than originally anticipated. Of the 33 positions, 20 were reallocated to the regional

offices for the investment company inspection program, 13 positions were abolished.

FILINGS

Mr. EVINS. The proxy cases are set forth on the top of page 34. You indicate the workload has increased, Mr. Chairman?

Mr. CARY. That is right.

Mr. EVINS. Insert the table on page 31 in the record at this point, Mr. Reporter.

(The table follows:)

	Percent of filings	
	New filings	Repeat filings
Fiscal year:		
1963	31.0	69.0
1962	60.0	40.0
1961	52.4	47.6
1960	47.5	52.5
1959	39.0	61.0
1958	28.0	72.0

DIVISION OF TRADING AND MARKETS

Mr. EVINS. Next is Division of Trading and Markets, showing an increase of seven positions. In 1964 the funding was $1,435,000. In 1965 you ask for $1,541,900, and 198 positions.

You have two stenographic positions and five other positions, two financial analysts, one clerk, two additional statisticians, for a net increase of $106,900 including pay increases of $67,200.

Mr. Chairman, you discussed this quite at length this morning but we will ask you again—don't you have some staff you can transfer to substitute for some of these people?

Mr. CARY. Sir, this is all part of the work that is being done in the field of the special study. Even the statistical men being brought in for this purpose will give us information about the market and the activities of the exchanges. This is very necessary for carrying out the regulatory program we have and the oversight we have over those exchanges.

Mr. EVINS. How many statisticians do you have in the Commission?

Mr. DONATY. I would say a dozen.

Mr. EVINS. Twelve statisticians and a computer. Won't you be able to handle the statistical work with that?

Mr. CARY. We hope we will be able to; yes, sir.

Mr. EVINS. Place in the record pages 42 through 45.

(The pages follow:)

DIVISION OF TRADING AND MARKETS

FUNCTIONAL STATEMENT

The Division of Trading and Markets is responsible for: (1) Administering the provisions of the Securities Exchange Act of 1934 and the Investment Advisers Act of 1940 pertaining to the detection and prevention of illegal or fraudulent practices in the marketing and trading of securities both on the exchanges and in the over-the-counter markets; (2) the registration and regulation of

national securities exchanges, national securities associations of brokers and dealers, brokers and dealers, and investment advisers; (3) the compilation and analysis of financial and market statistics; (4) the coordination and supervision of the investigative and other enforcement activities of the regional offices; and (5) the investigation and trial of certain administrative, civil, and criminal cases.

Justification

Fiscal year	Personal services	
	Cost	Positions
1964	$1,435,000	191
Increase	106,900	7
1965	1,541,900	198

Position increase by organization, 1965 over 1964

	1964	1965	Increase, 1965 over 1964
Office of the Director	11	11	
Office of the Chief Counsel	8	8	
Offices of Enforcement, Criminal Reference and Special Proceedings	86	88	2
Branch of Broker-Dealer and Investment-Advisers Registration	20	20	
Office of Regulation	27	30	3
Office of Statistical Studies	39	41	2
Total	191	198	7

For 1965, seven additional positions are requested for the increased workload of the Division. The additional positions are distributed as follows:

(*a*) The addition of two stenographic positions are required so that adequate stenographic assistance is available to professional personnel in the areas of investigations and enforcement.

(*b*) The addition of three positions (two financial analysts and one clerk) in the Office of Regulation are required to meet the expanded responsibilities of supervision and regulation of exchanges and the over-the-counter market.

(*c*) Two additional statisticians are required in the Office of Statistical Studies to provide needed current statistical data relating to the exchanges and the over-the-counter market for the use of the Commission on a continuing basis.

The net increase of $106,900 represents the following items:

(*a*) The sum of $39,700 for the cost of seven additional positions in 1965 over 1964.

(*b*) The sum of $67,200 is required for mandatory pay increases.

1. Investigations and enforcement

(*d*) Criminal reference reports referred to the Department of Justice:			
Pending at beginning of year	130	140	145
Referred during the year	49	55	55
Subtotal	179	195	200
Disposed of during the year	39	50	65
Pending at end of year	140	145	135
2. Correspondence relating to complaints and investigations	6,504	7,000	7,600
3. Securities violations files:			
Communications received and disposed of	2,778	3,300	3,600
Additional items of information added to files	8,985	10,500	12,000
Number of persons for whom data is on file	78,216	80,000	83,000
Parole reports received	9	15	20
4. Review of broker-dealer inspection reports	1,534	500	500
5. Review of investment adviser inspection reports	219	100	200

For fiscal year 1965, two additional stenographic positions are required so that adequate stenographic assistance is available to professional personnel in the areas of investigations and enforcement.

The Offices of Enforcement, Criminal Reference, and Special Proceedings perform the following functions:

1. Supervise and coordinate the Commission's enforcement activities.

2. Review reports of investigation submitted by regional offices and make appropriate recommendations to the Commission.

3. Assist particular regional offices in the prompt development of cases of importance, especially where the regional office in question is overburdened as a result of temporary variations in its enforcement workload.

4. Provide assistance in the preparation and trial of significant civil and criminal cases and administrative proceedings.

5. Process complaints indicating possible violations of the statutes administered by the Commission.

6. Review pleadings and supporting evidence in actions instituted by the Commission to enjoin violations of the acts and regulations.

Mr. EVINS. Page 57 shows an interesting chart. You have 191 positions in 1964 and you want 198 positions in 1965, $1,541,900.

Questions, gentlemen?

Mr. THOMAS. Insert pages 55 and 56.

(The pages follow:)

Registration of broker-dealers and investment advisers

	Actual, 1963	Estimate, 1964	Estimate, 1965
1. Number of broker-dealers registered at end of year	5,482	5,500	5,700
2. Applications for broker-dealer registration:			
Pending at beginning of year	81	50	50
Filed during year	679	1,100	1,150
Subtotal	760	1,150	1,200
Processed during the year	710	1,100	1,150
Total pending at end of year	50	50	50
3. Terminations	1,067	725	740
4. Amendments to registration of broker-dealers:			
Pending at beginning of year	982	312	212
Filed during year	3,404	3,500	3,600
Subtotal	4,386	3,812	3,812
Processed during the year	4,074	3,600	3,600
Total pending end of year	312	212	212
5. Number of investment advisers registered	1,564	1,650	1,760
6. Applications for registration of investment advisers:			
Pending at beginning of year	16	26	21
Filed during year	285	325	330
Subtotal	301	351	351
Processed during the year	275	330	330
Total pending at end of year	26	21	21
7. Terminations	547	275	275
8. Amendments to registration of investment advisers:			
Pending at beginning of year	373	123	98
Filed during year	886	650	700
Subtotal	1,259	773	798
Processed during year	1,136	675	725
Total pending at end of year	123	98	73

For this activity, the Office of Enforcement requires no additional positions in 1965 over 1964.

Applications for registration as broker-dealers and investment advisers are required to be processed within time limits fixed by the acts. Furthermore, requests for acceleration of effectiveness, granted whenever possible upon request of an applicant, require prompt disposition of applications for registration, in order to permit applicants to open for business without undue delay and expense.

Notwithstanding the decrease in total registrations in 1963, the number of amendments being filed is increasing. Amendments, unless processed promptly, create a potentially dangerous enforcement situation, because persons who may be disqualified or subject to disqualification, would otherwise continue to engage in business as broker-dealers or investment advisers.

Division of Corporate Regulation

Mr. Evins. We will turn to the Division of Corporate Regulation if there are no questions. For this activity you say on page 61 [reading]:

The branches of Investment Company Inspections and Investigations requires no additional personnel in 1965, although 21 additional positions are requested for the field offices to achieve a 2-year inspection cycle in 1965. The 21 positions are justified under the regional offices section of this justification.

Mr. Reporter, insert pages 58 through 61.

(The pages follow:)

Division of Corporate Regulation

FUNCTIONAL STATEMENT

The Division of Corporate Regulation assists the Commission in administering the regulatory provisions of the Investment Company Act of 1940 and the Public Utility Holding Company Act of 1935. It also performs the Commission's functions as adviser to the courts under chapters X and XI of the National Bankruptcy Act.

The Division consists of the Office of the Director, the Office of Chief Counsel, three branches of Investment Company Regulation, one branch of Investment Company Inspections and Investigations, the Office of Research and Service Company Regulation, the Branch of Reorganization (chs. X and XI), and the Branch of Public Utility Regulation.

Justification

Fiscal year	Personal services	
	Cost	Positions
1964	$952,000	106
Increase	44,500	
1965	996,500	106

Position increase by organization, 1965 over 1964

	1964	1965	Increase 1965 over 1964
Office of the Director	11	11	
Branches of Investment Company Regulation (3) and Branch Inspection	60	60	
Branch of Public Utility regulation	13	13	
Office of Chief Counsel	17	17	
Office of Research and Service Company regulation	5	5	
Totals	106	106	

For fiscal 1965, no additional positions are requested for the Division. The increase of $44,500 represents the cost of mandatory pay increases.

1. Regulation of investment companies

Item	Actual 1963	Estimate 1964	Estimate 1965
A. Registration of new companies	48	50	50
B. Applications reviewed for exemption of transactions with affiliates, status matters and other proposals of investment companies:			
Pending at beginning of year	93	103	63
Filed during the year	142	160	160
Subtotal	235	263	223
Applications reviewed during the year	132	200	200
Pending at end of year	103	63	23
C. Review of filings for compliance with regulatory provisions of the act:			
Pending at beginning of year	51	47	47
Filed during the year	1,386	1,400	1,400
Subtotal	1,437	1,447	1,447

D. Review of annual compliance reports:			
Pending at beginning of year	----------	----------	177
Filed during the year	----------	677	717
Subtotal	----------	677	894
Reviewed during the year	----------	500	744
Pending at end of year	----------	177	150
E. Public and interpretive letters	1,606	1,700	1,800

For this activity, the branches of investment company regulation require no additional positions in 1965 over 1964. Personnel will be reviewing, for the first time, annual compliance reports in 1964.

The Commission has recently approved the need for an annual compliance report from each registered investment company for the purpose of supplementing the inspection program on the proposed 2-year cycle. The compliance reports will contain detailed information as to the registrants' methods of operation as well as representations as to compliance with various sections of the act. Thus, the Commission will be able to take remedial action on a more current basis, where necessary.

Initial registartion of an investment company requires a careful analysis of its financial position, a review of its corporate structure and of the literature by means of which it intends to sell its shares to the public. Once it has started in business, its activities must be closely supervised in order to make sure that they comply with the provisions of this intricate statute. On June 30, 1963, the aggregate value of assets managed by all registered investment companies was estimated to have reached over $35 billion.

The publication entitled "A Study of Mutual Funds" prepared by the Wharton School of Finance and Commerce, University of Pennsylvania, at the direction of the Commission and chapter XI of the Special Study of Securities Markets have uncovered a myriad of actual and potential problems in the area of mutual funds. Accordingly, data pertaining to mutual funds and other areas must be developed and analyzed in depth for the purpose of determining, formulating, and documenting legislative and rulemaking recommendations to the Commission, as may be deemed appropriate.

Examples of noncompliance with regulatory provisions of the Investment Company Act are as follows: (1) Improper composition of boards of directors because of the affiliation of directors; (2) unlawful joint transactions of a fund and its officers and directors; and (3) deviations from fundamental policy without approval of stockholders.

2. Investment company inspections and investigations

	Actual, 1963	Estimate, 1964	Estimate, 1965
A. Registered investment companies:			
Number at beginning of year	727	727	727
Number of registrations during year	48	50	50
Subtotal	775	777	777
Number of registrations terminated during year	48	50	30
Number of registrations end of year	727	727	747
Less inactive companies	72	50	30
Potential inspection workload	655	677	717
Investment company inspections	85	150	325
Approximate cycle of inspections, years	8	4½	2
B. Investigations relating to serious violations involving possible civil action:			
Pending at beginning of year	19	47	67
Opened during the year	39	40	60
Subtotal	58	87	127
Disposed of during the year	11	20	60
Pending at end of year	47	67	67

For this activity, the Branch of Investment Company Inspections and Investigations requires no additional personnel in 1965 although 21 additional positions (professional and clerical) are requested for the field offices to achieve a 2-year inspection cycle in 1965. The 21 positions are justified under the "regional offices" section of this justification.

The personnel of the Branch extensively assists the regional office personnel in inspection of investment companies since this program is in its formative stage. Eventually, it is anticipated that a greater share of the workload will be accomplished subsequent to fiscal 1964 by field personnel.

ADDITIONAL PERSONNEL REQUESTED

Mr. EVINS. Do you want to tell us why these additional personnel are needed, those mentioned on page 61?

Mr. CARY. Yes, sir. We need these because the investment company field has been untouched up to this time. We are trying to increase our inspection program so we can cover them on a basis of every 2 years rather than the present cycle which is roughly 4½ years. This means every 2 years we will be able to have inspected each one of these.

I think at least until we get that first set of inspections done we do not feel very comfortable.

Mr. EVINS. You want 13 new personnel in the New York office, three in Boston, two in Atlanta, seven in Chicago, four at Fort Worth, and so forth, for three programs in the field.

Mr. JONAS. Mr. Chairman, you were not here when Mr. Allred paid such a high compliment to your dealers in Texas. I thought he said he didn't need any more help there.

Mr. CARY. He said he needed no help in the field of investment advisers.

Mr. ALLRED. I referred to investment advisers. I do not need investment advisers but I need help in the investment company division.

Mr. JONAS. He said you had a high type of investment counselor operating in Texas and didn't have the same problem as in New York and Chicago.

Mr. THOMAS. Off the record.
(Discussion held off the record.)

REGIONAL OFFICES

Mr. EVINS. Let us turn to regional offices. We shall insert in the record pages 78, 79, and 91.
(The pages follow:)

REGIONAL OFFICES

FUNCTIONAL STATEMENT

The regional offices are the field representatives of the Commission in the administration and enforcement of the various acts.

The principal functions of the regional offices include the following: (1) examination of the books, records and practices of registered brokers and dealers and members of national securities exchanges, and the examination of their annual financial reports; (2) investigation of (*a*) transactions in securities on national securities exchanges in the over-the-counter market, and in distributions to the public, and (*b*) complaints from investors and others; (3) examination and processing of filings under regulation A; (4) recommendation of administrative civil or criminal sanctions where violations have been established; (5) prosecution of injunctive actions in U.S. district courts and administrative proceedings before hearing examiners; (6) rendering of assistance to U.S. attorneys in criminal cases; (7) participation in proceedings in U.S. district courts under chapters X and XI of the Bankruptcy Act; (8) examination of the accounts and records of registered investment companies; (9) rendering interpretative advice and assistance to registrants registered brokers and dealers, prospective registrants, the investing public and others as to the application and meaning of the various statutes and the Commission's rules regulations and forms; and (10) examination of the books, records, and practices of registered investment advisers.

Justification

Fiscal year	Personal services	
	Cost	Positions
1964	$4,610,000	609
Increase	542,238	47
1965 total	5,152,238	656

Position increase by regional office, 1965 over 1964

	1964	1965	Increase 1965 over 1964
New York	224	237	13
Boston	27	30	3
Atlanta	35	37	2
Chicago	95	102	7
Fort Worth	34	38	4
Denver	50	52	2
San Francisco	58	65	7
Seattle	39	41	2
Washington, D.C.	47	54	7
Total	609	656	47

The 47 additional positions requested for the regional offices in 1965 over 1964 are required for the following purposes:

1. Increase the number (175) of inspections of investment companies which will result in an overall 2-year cycle as compared with the 4½-year cycle estimated for 1964.

2. Increase the number (205) of inspections of investment advisers so as to achieve an overall 4-year cycle as compared with the 7-year cycle estimated for 1964.

3. Accelerate the conduct of investigations and enforcement actions including administrative, civil, and criminal proceedings.

Summary of additional positions requested for regional offices for fiscal 1965, by program

Region	Investment company inspections		Investment adviser inspections		Investigations and enforcement		Total	
	Number	Annual salary rate	Number	Annual salary rate	Number	Annual salary rate	Number	Annual salary rate

Office of Comptroller

Mr. Evins. We shall turn now to the Office of the Comptroller, page 71. Insert that in the record.

(The page follows:)

Office of the Comptroller

Functional statement

This Office performs all the Commission's financial management functions, including (1) formulation of budget estimates; (2) apportionment, allocations, and control of funds; (3) program planning; (4) payroll and audit operations; (5) billings and collections; (6) recording transactions to the general ledger accounts and subsidiary ledgers; (7) preparation of financial statements; (8) machine tabulation; and (9) compilation of required reports in accordance with current regulations.

Justification

	Personal services	
	Cost	Positions
Fiscal year:		
1964	$174,000	28
Increase	22,800	2
Total, 1965	196,800	30

The increase of $22,800 in 1965 over 1964 represents the cost ($16,800) of two additional positions (programers) and $6,000 for mandatory pay increases. The

additional positions are required for the operation of a computer to be installed in January 1965.

Function	Estimate 1964	Estimate 1965	Increase 1965 over 1964
Budget activities	5	5	
Payroll operations and maintenance of leave records	7	7	
Administrative auditing	4	4	
Administrative accounting, collection and disposition of fees and revenue	2	2	
Machine tabulation	10	12	2
Total	28	30	2

Mr. EVINS. You are asking for two additional positions in the Office of the Comptroller.

Mr. DONATY. That is right. These will be required in connection with the establishment of the computer section next year.

Mr. EVINS. Next is Office of Records and Management, where you need one additional personnel. I do not believe your computer is reducing the personnel requirements.

BROKER-DEALER INSPECTIONS

Turn to page 81, "Broker-dealer inspections." Would you give us a quick rundown of the situation in this Division, the workload, the number of applications pending, the number of referrals called to your attention, what you need to do, what you are accomplishing, and so on?

Mr. SAUL. One of the principal purposes of this inspection program is the one mentioned earlier, and that is nipping violations in the bud. I think this is perhaps the most important part of it.

When we go into making an inspection we do nip in many cases violations of the act. We find possible violations of the Commission's rules and regulations.

I would say the purpose of this program is primarily prophylactic. It has worked out very effectively. As we point out, we are now on a cycle of inspections every 3 years for every broker-dealer.

Mr. EVINS. In 1964, you had 5,500 registered broker-dealers.

Mr. SAUL. That is correct.

Mr. EVINS. You anticipate 5,700 next year.

Mr. SAUL. That is correct.

Mr. EVINS. Two hundred more are entering the field.

Mr. SAUL. Yes.

Mr. EVINS. Are these all over the country?

Mr. SAUL. These are generally all over. Most of our broker-dealer registrants are, of course, centered in the New York area.

Mr. EVINS. In 1963, you had 1,534 inspections; in 1964, you had 1,553; and you anticipate 1,600 in 1965. What do you do besides a pleasant social call when you go to see them?

Mr. SAUL. It is far more than a pleasant social call. If we find there is the possibility of violations or actual violations, we point it out to the broker-dealer and give him an opportunity to take corrective action. Of course, we recommend administrative proceedings to

the Commission, if that is indicated. The inspection program is the most important of our surveillance of broker-dealers.

(Off the record.)

OTHER EXPENSES

Mr. EVINS. Let us turn to "Other expenses." Insert page 94 in the record.

(The page follows:)

SUMMARY, OTHER EXPENSES

The sum of $2,525,000 is required in 1965 for costs other than salaries. These costs are itemized in the following tables:

Item of expense	1963 actual	1964 estimate	1965 estimate
Personnel benefits	$734,042	$800,000	$872,000
Travel and transportation of persons	493,467	570,000	618,000
Transportation of things	12,645	12,000	12,000
Communications and rental	403,719	390,000	575,000
Printing and reproduction	66,386	51,000	64,000
Other services	174,061	205,000	220,000
Supplies and materials	147,259	125,400	131,000
Equipment	71,924	21,600	33,000
Total	2,103,503	2,175,000	2,525,000

The overall increase of $350,000 for expenses other than personal services in 1965 represents the following items:

1. The sum of $232,500 for normal office expenses for the additional personnel requested necessary to accomplish the increased program workload of the Commission.
2. The amount of $64,500 is required to alleviate the existing space deficiency of 11,700 square feet in Washington, D.C.
3. The sum of $53,000 for rental of a medium size electronic computer.

Mr. EVINS. Summary of "Other expenses." Personal benefits are up. Travel and transportation have increased. Transportation of things is $12,000.

Mr. THOMAS. Why should it be that much? What is your turnover? Transportation of things is tied more or less to your turnover.

Mr. JONAS. Communications is up.

Mr. DONATY. It is the same in 1965 as in 1964 for the transportation of things. Communications and rental is up.

Mr. THOMAS. Yes. I beg your pardon.

Mr. JONAS. $600,000 for travel for one little agency is fantastic.

Mr. CARY. Of course, we are all over the country, sending people out for investigations and inspections. In enforcement work, even our Seattle regional office, for example, has to go as far as Alaska and Montana.

Mr. JONAS. What do you guess the travel bill of the agencies covered by our appropriation bill amounts to?

Mr. CARY. The total of all agencies?

Mr. JONAS. No, just the ones in our independent offices bill. $61 million.

Mr. COHEN. We are small peanuts.

Mr. JONAS. You have but 1,500 people traveling.

Mr. THOMAS. Look at your communications and rental. How much of that is for the computer?

Mr. DONATY. The increase is only $53,000. We will have the computer for only 6 months, from approximately next January or February until the following June.

One of the largest increments in communications and rental is the additional $95,500 for office space making a total of $100,500 in 1965. Of the $100,500, approximately $36,000 is for the additional 60 jobs. The balance of $64,500 is to alleviate a very bad situation in Washington, approximately 12,000 additional square feet is needed.

COMMUNICATIONS COSTS

Mr. JONAS. What is your communications bill, stated separately?

Mr. DONATY. The communications bill for this year is $132,600 for local telephone, and $115,800 for long distance, or a total of approximately $248,000.

Mr. JONAS. The rest is rental?

Mr. DONATY. Yes, sir.

Mr. THOMAS. What is your experience with General Services? Many people come in here and claim they are tying in under General Services and costs more than before the tie-in. What is your experience?

Mr. DONATY. We have found generally that when we use FTS, it is more economical.

Mr. EVINS. You are asking for an increase because of increased rates?

Mr. DONATY. This is not a facet of FTS. If my understanding is correct, some of the General Services' cost of FTS at the present time is being subsidized by certain GSA appropriations. To make the FTS network self-sufficient on a reimbursable basis from other agencies, they intend to have the agencies pay the additional cost. Thus, the Congress will not have to give GSA any direct appropriations for this network. This is something like your retirement fund.

Mr. EVINS. It is appropriated to the individual agencies like yourself, and you, in turn, reimburse GSA, but have you any information that GSA is going up on its rate to SEC?

Mr. DONATY. Not to SEC, but they have distributed a Government-wide statement, something to the effect that on local calls there probably will be an increase of about 45 percent. However, this increase should be offset by approximately a 25- or 30-percent savings in using the FTS long-distance network.

In our particular instance, the increased rates are approximately $13,000.

Mr. THOMAS. And your saving is how much?

Mr. DONATY. It is a 45-percent increase in local and about a 30-percent decrease in long distance. So, there is a net increase of about 15 percent, or about $13,000.

Mr. EVINS. Printing and reproduction costs are up by $13,000. You want to print judicial decisions. All other printing costs remain constant, except for this new item.

That appears on page 102.

Building alterations show an increase. Miscellaneous expenses are up. Contract stenographic reporting is up.

ADDITIONAL OFFICE SPACE

Mr. Chairman, what does the GSA say to you about the possibility of providing you with additional quarters? Where are you on their schedule of priorities?

Mr. CARY. We have been talking to them. I have talked to Mr. Boutin, and I thought I had him in tears. He nevertheless said that we probably could not get a building for 7 more years. He therefore said that the best thing for us to do was to try to see if sometime we could come to you and the Bureau of the Budget and see whether we can rent space in a better location, with the idea that he then would put us into something of a permanent nature.

(Off the record.)

SUPPLIES AND MATERIALS

Mr. THOMAS. Break down the item of supplies and materials. That is getting into money here. I assume your increase here is based upon additional employees, is it not?

Mr. DONATY. Yes.

Mr. THOMAS. Put page 104 in the record.

(The page follows:)

SUPPLIES AND MATERIALS

The amount of $131,000 is required in 1965 for the purchase of supplies and materials, subscriptions to financial services and other published materials, library additions, and the purchase of newspapers. The itemization of these costs is shown below:

Item	Actual, 1963	Estimate, 1964	Estimate, 1965
Office supplies	$109,422	$86,600	$89,000
Newspapers	1,738	1,800	2,000
Library material	36,099	37,000	40,000
Total	147,259	125,400	131,000

The increase of $5,600 in 1965 over 1964 represents increases in the following items:

1. An increase of $2,400 relates to the cost of office supplies for the requested increase in the personnel requirements for 1965.
2. An increase of $3,000 for providing financial periodicals, law books, and other reference material for the regional offices.
3. A nominal increase of $200 for the purchase of newspapers for the regional offices.

EQUIPMENT

Mr. THOMAS. Here is a breakdown of equipment. Insert pages 105 and 106.

(The pages follow:)

EQUIPMENT

The following table shows the amount required for the purchase of equipment in 1963, the estimate for 1964, and the 1965 estimated requirements.

Item	Actual, 1963	Estimate, 1964	Estimate, 1965
Equipment	$71,924	$21,600	$33,000

For 1965, the amount of $33,000 represents the cost of items summarized in two major groups, which are explained later in detail:

1. Purchase of equipment for additional positions requested in 1965	$19,000
2. Replacement of equipment	14,000
Total	33,000

PURCHASE OF EQUIPMENT FOR ADDITIONAL POSITIONS

The following tabulation lists the items of equipment, which are the minimum requirements for the additional personnel requested in 1964:

Description	Unit price	Number	Total cost
Clerical desks	$160	39	$6,240
Typist desks	160	21	3,360
Rotary chairs	40	39	1,560
Typist chairs	30	21	630
Typewriters	430	21	9,030
Subtotal			20,820
Less estimated cost of equipment to be obtained, as excess, from GSA			1,820
Total			19,000

REPLACEMENT OF EQUIPMENT

The following equipment is required as replacement for the Duplicating Section in view of the poor condition of existing machines:

Item	Quantity	Year of purchase	Cost
Model 1250 multilith	1	1957	$3,200
Envelope sealer	1	1937	3,500
Addressograph	1	1958	7,300
Total cost for duplicating equipment			14,000

FEES

Mr. THOMAS. Then there is a statement of fees.

Mr. EVINS. Insert page 107, Mr. Reporter.

(The page follows:)

STATEMENT OF ACTUAL 1963 FEES AND ESTIMATED FEES FOR 1964 AND 1965

The fees collected by the Commission in the fiscal year 1963 and the estimated fees for fiscal 1964 and 1965 are as follows:

Character of fees	Actual 1963	Estimate 1964	Estimate 1965
Registration of securities under the Securities Act of 1933	$1,400,615	$1,560,000	$1,750,000
From stock exchanges under sec. 31 of the Securities Exchange Act of 1934	1,131,280	1,300,000	1,300,000
Qualification of trust indentures	1,100	1,000	1,000
Other fees	991	1,000	1,000
Total fees collected	2,533,986	2,862,000	3,052,000

Mr. EVINS. Are there any further questions?

Mr. Chairman, this is always an interesting exercise, and we are always glad to have you here.

Mr. THOMAS. Before you close the hearing, Mr. Evins, may I make one other observation, please?

Let us turn over to page 4 or 5 of your justifications.

Mr. CARY. This long one, sir?

PAY INCREASES

Mr. THOMAS. Turn back to your original transmittal letter.

You are seeking 60 new jobs at a cost of $385,000. You are breaking down the increase of $1,287,500 over last year. Of that, $385,000 is for 60 jobs. That is just about one-fourth of it. The cost of pay increases, $290,00, is statutory. The salary step increases are $262,500.

I note that your average grade is 9.2, and your salary average is slightly under $9,000. How many supergrades do you have?

Mr. DONATY. We have 25 supergrades, sir.

Mr. THOMAS. How many 18's, 17's, 16's, 15's, and 14's? Read that into the record.

Mr. DONATY. Grade 18, we have 4; grade 17, we have 6; grade 16, we have 15; grade 15, we have 64; grade 14, we have 76; grade 13, 176.

Mr. THOMAS. You have taken good care of your people. We like to see that. You are an important agency. A good many of us here think the Government will have to pay some comparable salaries for its people. Particularly the salaries of Commissioners and top staff people, now around $17,000 or $18,000, we think will have to go up to perhaps $30,000.

But here you have $550,000, and about 40 percent of your increase is not for new jobs, but for within-grade promotions and pay act costs.

I think we ought to increase the pay schedule for the people who are carrying the responsibility and doing the work, but you have a number of within-grades here. How many people are you giving within-grade promotions?

Mr. DONATY. The law states, sir, that in steps 1, 2, and 3, an individual who has a satisfactory performance rating every year will get a within-grade promotion.

Mr. THOMAS. Of what?

Mr. DONATY. It varies with the grade the individual is in. For instance, if I am in the second step and go to the third step, my increase will be approximately $500 a year.

Mr. THOMAS. That is the new law passed last year. That is all right. We are in favor of that. That makes sense.

How many people did you promote a full grade throughout the agency? How many went from 12 to 13, for instance?

Mr. DONATY. We can take this for an example, Mr. Chairman. In 1963, in grade 13 level, we had 173 grade 13's. This year we estimate 176.

Mr. THOMAS. That is quite modest.

Mr. DONATY. What happens in these regular promotions is that generally, one of our individuals resigns or retires or passes away, and, of course, we have a ladder for promotions.

Mr. THOMAS. Your within-grade promotions arise by virtue of legislation.

Mr. DONATY. Yes.

Mr. EVINS. These figures for within-grade promotions do not include your 60 new personnel.

Mr. DONATY. No. That is right. Within-grades for the 60 jobs are not in this figure because they will not have served at least 1 year in fiscal year 1965.

Mr. EVINS. Are there any further questions.

Mr. JONAS. Do you have your people travel at the cheapest rate available.

Mr. DONATY. Yes, sir.

Mr. COHEN. Including the Commissioners.

Mr. THOMAS. Thank you, gentlemen. We always are delighted to have you over.

Mr. CARY. Thank you very much, Mr. Chairman.

TUESDAY, FEBRUARY 18, 1964.

CIVIL AERONAUTICS BOARD

WITNESSES

ALAN S. BOYD, CHAIRMAN
ROBERT T. MURPHY, VICE CHAIRMAN
CHAN GURNEY, MEMBER OF THE BOARD
G. JOSEPH MINETTI, MEMBER OF THE BOARD
WHITNEY GILLILLAND, MEMBER OF THE BOARD
EDWARD J. DRISCOLL, EXECUTIVE DIRECTOR
JOHN B. RUSSELL, CHIEF, OFFICE OF ADMINISTRATION
IRVING ROTH, DIRECTOR, BUREAU OF ECONOMIC REGULATION
JOHN H. WANNER, GENERAL COUNSEL
WARNER H. HORD, CHIEF, OFFICE OF CARRIER ACCOUNTS AND STATISTICS
FRANCIS W. BROWN, CHIEF HEARING EXAMINER
JOSEPH C. WATSON, DIRECTOR, BUREAU OF INTERNATIONAL AFFAIRS
LEON H. TANGUAY, DIRECTOR, BUREAU OF SAFETY
JOHN G. ADAMS, DIRECTOR, BUREAU OF ENFORCEMENT

Mr. THOMAS. Gentlemen, will the committee please come to order?

We have with us this morning the Civil Aeronautics Board. It certainly is nice to have this distinguished and patriotic group of high-grade technicians with us again. That is what they are. They have a very technical job. They certainly do it well. It is nice to have with us our very able and distinguished Chairman. I understand he is going to be with us a while longer. We are delighted to have you. Congratulations.

We have the Vice Chairman, Mr. Robert T. Murphy; our old and distinguished friend, Chan Gurney; and our partner from New York, Commissioner Minetti; and of course, we can't let this distinguished gentleman get away from us. He worked with us long and hard.

(Discussion off the record.)

Mr. THOMAS. For the record, we are delighted and honored to have with us again Judge Gillilland. You look like a million. We hope you always enjoy good health and good looks.

Mr. GILLILLAND. Thank you, Mr. Chairman.

Mr. THOMAS. We have the Executive Director, Mr. Driscoll.

Mr. BOYD. He is our new Executive Director, Mr. Chairman.

Mr. THOMAS. Did we confirm him gentlemen? We will have to go into these procedures later. We usually confirm all of these high-ranking officers.

Mr. BOYD. He is here, subject to your approval.

Mr. THOMAS. We are delighted to have you, Mr. Driscoll. We will confirm you after a while.

Where is brother Russell? You had better get around where we can see you. How are you doing?

Mr. RUSSELL. Fine.

Mr. THOMAS. Here is brother Roth. It is nice to have you with us. Mr. Roth is Director, Bureau of Economic Regulations.

Where is Mr. Wanner? Judge, how are you doing?

Mr. WANNER. Very fine.

Mr. THOMAS. Mr. Hord is with us, Chief, Office of Carrier Accounts and Statistics. Nice to see you, Judge Hord.

Where is Judge Brown, Chief Hearing Examiner? How are you doing?

Mr. BROWN. Just fine. Glad to be with you, sir.

Mr. THOMAS. What about that workload?

Mr. BROWN. Doing the best we can.

Mr. THOMAS. Getting pretty heavy, isn't it?

We have with us Mr. Joseph C. Watson, Director, Bureau of International Affairs. That is the job I want.

Mr. WATSON. Yes, sir.

Mr. THOMAS. Good to have you, Mr. Watson.

Here is Mr. Leon Tanguay, Director, Bureau of Safety. How are you feeling, sir?

Mr. TANGUAY. Fine, thank you.

Mr. THOMAS. Where is brother Adams, Director, Bureau of Enforcement? How are you, Judge?

Mr. ADAMS. Fine, sir.

Mr. THOMAS. It is nice to have all of you distinguished gentlemen with us.

Mr. Chairman, I hope you and your fellow Commissioners will talk to us and tell us what is going on, what are some of your headaches, how are you getting along with some of your big mergers.

What about your subsidiary bills? What about the improvement of your activities, looking toward improvement of service? We have a few general questions.

We are delighted to have all of you.

Mr. BOYD. Thank you, Mr. Chairman.

I would like to mention one thing in passing, before we get started on the essentials of the appropriation itself and that is, I say with a sense of some sadness that this is the last time this Board will be meeting before you as presently constituted because Senator Gurney has announced that he is retiring the end of this year.

Mr. THOMAS. We noticed that with much regret. Maybe he will change his mind.

Mr. BOYD. We figured by this time he might not be able to find his way out of Washington.

Mr. THOMAS. We are always delighted to have you. You certainly render an outstanding service to the taxpayers. The people are always indebted to you.

Mr. GURNEY. Once in a while I get one of them to agree with me.

Mr. THOMAS. You can't win them all; can you?

GENERAL STATEMENT

Mr. BOYD. Mr. Chairman and members of the committee, it is a pleasure for us to meet with you again to discuss the Civil Aeronautics Board's program goals and financial requirements. I believe that our budget justifications which you have, provide you with a detailed picture of our requirements. Therefore I will cover highlights of our accomplishment and future needs. First, I would like to bring you up to date on the status of the industry the Board is charged with regulating and promoting.

STATUS OF THE INDUSTRY

Six charts, attached to this statement as exhibit No. 1, show the tremendous growth of the air carrier industry for the period 1947 to 1963, and the comparative size and scope of today's air transport industry. The operating statistics for 1963 also represent a substantial growth over the preceding year.

For the year 1964 we are projecting an additional growth in revenue passenger miles from 48⅓ billion to a little over 52½ billion, which is nearly a 9-percent rate of growth for the scheduled carriers and for freight we are projecting a 14-percent growth, from 1,059 million ton-miles of freight and express to 1,207 million.

COST OF AIRFREIGHT

Mr. THOMAS. What about that airfreight? Can anybody afford to ship anything, unless it is diamonds?

Mr. BOYD. Yes, sir.

Mr. THOMAS. Can they ship anything but diamonds or uranium by airfreight?

Mr. BOYD. Yes, sir. The airfreight business is growing. There have been significant reductions in the aircargo tariffs in the past two and a half years, and I think——

Mr. THOMAS. They are so high now.

Mr. BOYD. They are high on a comparative basis, but you cannot just look at the dollars, Mr. Chairman. There are a lot of things involved that make airfreight more valuable to the shipper and the consignee. Insurance is cheaper, there is less pilferage, there is less breakage and there is less packaging cost.

Mr. THOMAS. Those are certainly big points in favor of it, but I do not think it is the fault of the carriers. It may be the state of the art. I do not know what it is. If you can ever get the tariff down to a reasonable figure, you will really have something. It eliminates those things you just mentioned, the breakage is less, and therefore the insurance ought to be less, and certainly it saves time, packing, crating and so forth.

Mr. BOYD. It helps to reduce inventories also for warehousing.

The high cost in the past has been that the carriers were trying to make something work that was not set up for the purpose. They took passenger planes and tried to convert them and they were able to move cargo but not able to move it efficiently. Now, for the first time the manufacturers are making airplanes which are specifically for cargo movement. This has brought the cost down very considerably. At the other end of the scale, one of the big costs in cargo was the ground handling charge which, until recently, was done almost altogether manually. Now the airfreight operators are going into automated terminals, which is cutting down the ground handling costs.

NUMBER OF AIRFREIGHT CARRIERS

Mr. THOMAS. How many freight operators do we have of sig[illegible] magnitude?

Mr. BOYD. There are about seven. There are three all-cargo carriers that handle nothing but cargo and four of the trunk carriers are

KANSAS STATE UNIVERSITY LIBRARY MAY 26 1964 MANHATTAN, KANSAS

major cargo operators. That is in the domestic field. In the international field we have four, Pan American, TWA, Northwest, and Seaboard, all of whom have very substantial cargo operations.

PASSENGER TRAFFIC INCREASES

For example, passenger traffic was 12 percent higher for the year ending September 1963 than for the same period the preceding year. Some 14 percent more seat-miles were offered last year than in the preceding year. It is interesting to note that the increased volume of operations was performed with a smaller total aircraft fleet—1,910 aircraft compared with 2,033 a year ago. However this fleet includes a greater number of the highly productive and larger capacity turbine-powered aircraft.

The industry had progressed substantially in its historical conversion from piston to turbine-powered aircraft by the end of 1963. The cumulative effect of the conversion, which started in late 1958, shows the certificated route industry with 683 turbine-powered aircraft, of which 415 are large turbojet and turbofans, in its total fleet of 1,910. Eighty-three percent of domestic and 94 percent of international mainline passengers now are being carried in turbine-powered aircraft.

Last year, and the year before, I reported to the committee that the industry profit picture was not impressive compared to the growth in traffic and capacity.

This year the financial picture of the carriers is pretty good. The domestic trunks had a net operating income of $75 million in 1962. That is the operating profit before interest, income taxes, and other "below the line" items. The net operating income was $140 million in 1963. The net income in 1962 was $8 million, and jumped to more than $45 million in 1963. We hope to see better figures for 1964. Industry-wide, the return on investment for 1958 was 5.5 percent. It then slumped. The industry earned only 3.2 percent in 1960 and 2.1 percent in 1961. The turning point came in 1962 when the industry realized a 5.7 percent return on investment. The recovery continued during 1963 with the result that the 12 months ended September 30, 1963, was 6.8 percent, significantly above the 1958 level of 5.5 percent which preceded the aircraft conversion period.

The international and territorial carriers, particularly, have shown a sharp improvement in return on investment. In 1958, it was 3.2 percent; last year it was 10.4 percent.

Prospects are bright for future profitability of the certificated industry as a whole. This is primarily due to the marked improvement in the economics of the turbine-powered aircraft over piston-powered aircraft.

At present fare and cost levels, the best break-even load factor attainable by a piston aircraft is approximately 50 percent whereas the turbofans now are approaching a 35-percent break-even load factor.

PROSPECT OF LOWER FARES

With a better adjustment between capacity and traffic to permit an improvement over present load factors there is every likelihood that the industry can look forward to continued improvement in profit-

ability while at the same time holding out the prospect of lower fares to the public.

Average domestic trunkline fares per mile, both first class and coach, turned downward last year for the first time since 1957. The lower fares are reflected in the various special fares and fare changes introduced by the carriers which I will discuss later.

Salaries and Expenses

Now let us turn to our appropriation request for "Salaries and expenses." We are requesting $10.8 million for 1965, an increase of $572,000 over the preceding year. This increase is a net figure consisting of several elements of increases and decreases.

With respect to increases, we are requesting:

1. $194,700 to cover the additional half year's cost of the second step of 1962 pay raise which was effective in January 1964;

2. $172,400 to cover the cost of mandatory within-grade salary increases which will be in effect for only part of 1964 and the additional ones becoming effective during 1965;

3. $185,500 to cover an increase of approximately 17 man-years of employment as a result of reduced lapses going with fuller utilization of positions and the various other cost adjustments detailed in the justifications; and——

Mr. Jonas. Would you yield?

Mr. Boyd. Yes, sir.

Mr. Jonas. Have you taken into consideration the fact that we have one less workday this year?

Mr. Boyd. Yes, sir.

Mr. Jonas. That is reflected in these figures?

Mr. Boyd. That is reflected. That is in this figure here of $185,000. That is a net figure.

4. $213,300 for increasing program activities and which except for an amount of $17,300 for increasing the memory capacity of our electronic computer, is for safety activities including 12 additional positions.

We are projecting decreases, totaling $193,900, resulting from our planned elimination of 26 positions throughout our various activities. The exception is in the Bureau of Safety.

Organizational Improvements

The reduction in positions and financial requirements will be possible, we believe, through improvements in organization and procedures, as well as continued improvement in the overall efficiency of the staff over and above that attained during the past 2 years and that originally planned for 1964.

We are in the midst of consolidating various supporting functions in the Office of the Secretary. This, we anticipate, will enable us to improve the performance of those functions. At the same time we will be able to eliminate four positions in 1965. Another example of consolidation is the establishment of a central file facility in the Office of Administration where Board files and related positions from

the several offices and bureaus have been transferred. Here again, we anticipate we will be able to eliminate three positions.

The Board is requesting an increase of 12 positions and $196,000 for the Bureau of Safety activity. We also are requesting $17,300 for an additional memory unit for the electronic computer as well as for increased utilization of the computer. Of the 12 positions for the Bureau of Safety, 7 are to permit needed training of safety technical personnel, 4 are for accident prevention and safety promotion work, and 1 is needed to handle the increase in workload and backlog in the "accident analysis and determination of probable cause" area.

ACCIDENT INVESTIGATION

In our safety activities the first priority is, of course, given to the primary function of aircraft accident investigation. For the first half of this fiscal year we initiated 524 investigations, of which 138 involved air carriers. The remaining 386 were in general aviation. For the comparable period in the preceding fiscal year, 482 investigations were initiated, 134 involving air carriers and 348 in general aviation.

We have no investigatory backlog and we have maintained a normal level of pending cases for the last 6 months. Thus, we are holding our own while experiencing about a 9-percent rise in investigatory workload.

I am happy to say, that unlike last year, we now are able to provide some sorely needed training for our safety personnel so they can maintain their proficiency in this rapidly changing technological field. Keeping technical personnel abreast with advances in the state of the art is one of our real critical problems. We aim to provide continuous refresher training to the staff through courses offered by manufacturers, educational institutions, or other Government agencies.

During the first half of this fiscal year, 32 people attended 17 different training courses. During the last half of this fiscal year we plan to send an equal number to other training courses.

CAB-FAA SCHOOL

Also available to us is the National Aircraft Accident Investigation School at Oklahoma City established jointly by the CAB and FAA with Government funds. This school is a job-oriented practical course in the latest techniques of aircraft accident investigation aimed at teaching our personnel, who have accident investigation duties, the latest techniques, procedures, and methods of conducting an investigation.

The school opened September 30, 1963, with a prototype class limited to 15 students selected from the CAB and FAA. Classes were completed in November 1963. We are now evaluating the results of this first course and are making changes in the material and course of study before the next class begins in early March. Seven CAB investigators were in the first class. We have scheduled 27 persons to complete the course at the school in fiscal 1964 and 49 in 1965.

There are many indications that this school is a worthwhile undertaking, and it will be one of the most valuable contributions in many

years to the improvement in aircraft accident investigation knowledge and skills.

If our investigating personnel are to live up to the worldwide reputation of experts that they have achieved, they must be schooled in the latest developments in the science and art of aviation and flying.

ACCIDENT PREVENTION

Although accident investigation is the most immediate of the Bureau's work priorities, its more rewarding and more enduring function is accident prevention. The lessons learned from accidents are put to use in preventing other accidents. We have made some strides in our accident prevention program. We must do more.

For the past 3 years the number of safety recommendations we forwarded to the FAA and other agencies has increased. In 1961 we forwarded 18, and 82 percent were accepted and adopted in the form of Federal air regulations, airworthiness directives, or other directive-type material. In 1962 we forwarded 65 recommendations and had 80 percent accepted; in 1963, 87 were forwarded and 83 percent were accepted. Since this January we have forwarded 23. I can't give you a percentage of acceptance for 1964 because many of the recommendations still are under study.

I cite these statistics only as one quantitative illustration of the accident prevention work we do. We are increasing the quantity and we believe maintaining the quality of our accident prevention work.

ACCIDENT RATES DROPPING

The accident rates in both general aviation and air carrier operations have been dropping slightly over the past 10 years—in general aviation, from 3 accidents per million miles flown in 1954 to 2.5 in 1963; in air carrier operations from 0.122 accidents per million miles flown in 1954 to 0.059 in 1963.

We must do all we can to increase the safety of flights. And today's prevention work is tomorrow's safe flight. Four of the twelve position increases we are requesting for this fiscal year will be utilized in accident prevention and safety promotion activities.

DETERMINING PROBABLE CAUSE

The accident analysis function for which the 12th position is being requested mainly involves general aviation. The most severe accicent problem is in general aviation. To illustrate, for the past 4 years there has been an annual average of 4,790 accidents of which 441 were fatal. On the average, 828 were killed in these accidents; 900 persons lost their lives in 477 fatal general aviation accidents in 1963.

It is the analysis function where the accident's probable cause is determined. It is from this work that accident statistics are derived, and it is on this work that much of our accident prevention program is based.

Since the inception of this function in 1959 and the implementation of the Federal Aviation Act, the backlog of general aviation accident cases has increased. One of our prime objectives in our program is to decrease this backlog.

PLAN TO INCREASE ADP CAPACITY

The Board has made substantial progress in mechanizing the statistical and analytical procedures involving the handling of voluminous factual data in the field of both economics and safety. These reports include all of the origin-destination passenger traffic statistics used extensively in route proceedings and bilateral negotiations, and the traffic and financial data widely used in all use-it-or-lose-it cases and many other regulatory proceedings.

At the present time the automatic data processing facility is being used on a two-shift basis with some requirement already for further overtime operation. In order to accommodate the extension of operations to numerous other areas within the Board which are adaptable to mechanized procedures, we plan to increase the capacity of the present facility by adding an additional memory unit.

IMPROVED EFFICIENCY

There are numerous examples that I could cite within our overall activities which would illustrate the improvements already made in our operations or planned for 1965 to improve our efficiency.

I would like to emphasize at this point that the improvements made and those anticipated, together with the resultant savings in dollars and positions reflected in the budget estimates before you, are the payoff, so to speak, of ideas, plans, and a lot of hard work.

In this connection you may recall, Mr. Chairman, that I said last year we would significantly improve our efficiency in 1963. I think we achieved that goal in 1963.

In the budget estimates submitted to you we predict continued improvement in productivity during 1964 and 1965 in most areas of our work. The best evidence that I can present to you of our increase in productivity, both accomplished and expected, is our budget justifications. They show that despite a continuing increase in our economic workload, we are going to eliminate 26 positions with a commensurate reduction in related costs. This will be achieved by improvements in management control, discovering adequate shortcuts and better and more efficient ways of doing our work, and by just plain harder work.

Last December I personally made a pledge to the President that we would do our utmost to make the Civil Aeronautics Board one of the leaders in the field of economy and efficiency in Government operations. The Board unanimously endorsed this program. I am prepared today to make that same pledge to this committee and the Congress. We shall relentlessly pursue this objective.

MAJOR ACCOMPLISHMENTS

I think we can look with pride on the major accomplishments we made during fiscal year 1963, particularly in the field of international rate policy and domestic fares.

The Board rejected a proposed increase in North Atlantic roundtrip fares and was influential in securing substantial reductions in new passenger fares to go into effect April 1, 1964.

In reversing the upward trend, the Board fulfilled one of this Government's announced objectives outlined by the President in his April 1963 statement on international air transport policy.

Tariffs now being filed with the Board reflect an overall reduction of approximately 12 percent on the world's most densely traveled routes over the North Atlantic. This will result in an estimated saving in excess of $50 million for U.S. travelers during the coming season. These fares also become effective in time for the opening of the New York World's Fair. Thus, this Government's efforts to encourage foreign travelers to visit the United States will be materially assisted with a resultant favorable effect on U.S. balance of payments. The world's fair will be brought closer to the doorstep of the European traveler.

LONG-DISTANCE RATES

Mr. THOMAS. Mr. Chairman, what about the Far East? You have talked about the North Atlantic. What about the Far East and Central and South America? Those are pretty long distances. What about those longer distances and the rates on those?

Mr. BOYD. In the Far East, Central and South America, Mr. Chairman, the rates have generally been lower than they have been on the Atlantic and the Pacific because of the type of competition. The operations also have been less profitable for the north-south carriers.

We are working on the Pacific area at the present time in this sense. We have informally advised the carriers, the U.S. carriers, that we are looking for some reductions in mail rates. We had a meeting with them yesterday and they are going to study the situation and come in in 30 days to make proposals to us on how they are going to reduce their mail rates.

Mr. THOMAS. But as of today there is no firm scheduled reduction either in mail rates or passenger rates?

Mr. BOYD. No, sir.

Mr. THOMAS. For east-west or north-south. The reductions are around—I believe you said 12 percent—which apply only to the North Atlantic.

Mr. BOYD. That is right.

Mr. THOMAS. That is where the main volume of travel is?

Mr. BOYD. That is correct.

Mr. THOMAS. That is where you encounter the stiffest opposition?

Mr. BOYD. Yes, sir.

Mr. THOMAS. Mainly because of what fact?

Mr. BOYD. In my judgment mainly because the European countries, the European governments, were not willing to follow the lead of the United States. As it turns out, they were quite willing to reduce rates on their own, but when we objected to an increase in fares, they said, "You cannot do this to us," and they showed us that we couldn't, but they won that round.

Mr. THOMAS. Why did they want to increase them? It is already as high as a cat's back.

OWNERSHIP OF FOREIGN AIR CARRIERS

Most of the lines are owned better than 50 percent by the governments involved, aren't they?

Mr. BOYD. Yes, sir.

Mr. THOMAS. BOAC is predominantly British Government owned. Lufthansa is predominantly German Government owned, is it not? Belgium the same way? Swiss Air the same thing?

Mr. BOYD. Swiss Air has a higher degree of private ownership than any of the others.

Mr. THOMAS. Air France is the same way?

Mr. BOYD. They are all primarily Government controlled with the exception of Swiss Air and a small percentage of Alitalia.

REDUCTION OF NORTH ATLANTIC FARES

Mr. THOMAS. I think our Board certainly deserves an outstanding A-double-plus mark, because on the face of it it was obvious that instead of reducing the fares, the North Atlantic lines were going to increase them.

Mr. BOYD. Yes, sir.

Mr. THOMAS. The final upshot was instead of holding down the present rates, much less an increase, you worked out a sizable decrease of 12 percent.

Mr. BOYD. That is an overall decrease. Some passengers will be able to get up to about a 38-percent decrease, but the average works out at 12 percent.

Mr. THOMAS. Does that apply to scheduled airlines?

Mr. BOYD. Yes, sir. This is only to scheduled air carriers.

Mr. THOMAS. What about the other side of the coin, the nonscheds?

Mr. BOYD. They do not sell on an individually ticketed basis, Mr. Chairman. They sell charters and the charters are much cheaper than the bulk of the scheduled individual ticketed traffic.

Mr. THOMAS. It is a matter of contract between the carrier and the nonscheduled carrier and his customer?

Mr. BOYD. Yes, sir.

AUDIT OF SUPPLEMENTAL CARRIERS

Mr. THOMAS. How much supervision is the Board and FAA paying this group both domestically and overseas?

Mr. BOYD. We are devoting a tremendous amount of time and effort, both of us, to the charter class of carriers, what we call the supplemental carriers. Up until 2 years ago we had not done much of anything in the way of auditing the carriers to keep track of their financial fitness, the supplemental carriers. As a result of the supplemental law, the law applying to supplemental carriers passed in the 87th Congress, we increased our activities by, I would say, well over a thousand percent and we have audited every one of them.

We are making special audits of them at the request of the FAA. We are working very closely with the FAA. We have a good liaison. One of the first things we did as a result of that law, Mr. Chairman, was to put 15 of those carriers out of business because they just were not up to snuff with the statutory standards. I might say——

DISTINCTION BETWEEN SUPPLEMENTAL AND NONSCHEDULED CARRIERS

Mr. THOMAS. When we refer to nonscheduled, you say that really the supplemental applies to all of the nonscheds; does it not? I want the terminology in the record.

Mr. BOYD. No, sir. It applies to the bulk of the nonscheduled carriers.

Mr. THOMAS. What is the difference between the nonscheds and the supplementals?

Mr. BOYD. There are other carriers that could come within the category of nonscheduled, which are what are called "Part 45 carriers," Mr. Chairman, and these are not under the jurisdiction of the CAB in any way, shape, or form. The part 45 carriers are private-contract carriers. They do not seek nor advertise nor hold themselves out for common carriage. They operate on single contracts. The best examples I could give you are——

Mr. THOMAS. They are the occasional operators?

Mr. BOYD. Well, not necessarily, Mr. Chairman. Part 45 carriers, for example, at this time of the year, will be involved in bringing tomatoes and cucumbers into the United States from the Bahamas and from Mexico. They bring shrimp up from Mexico.

Mr. THOMAS. What is the difference between that type carrier and the nonscheduled?

Mr. BOYD. The difference is only that the supplemental carriers, which are under the Board's jurisdiction, hold themselves out to the public to provide a charter service.

Mr. THOMAS. Without a regular schedule?

Mr. BOYD. Without a regular schedule.

Mr. THOMAS. You do not require it?

Mr. BOYD. That is right, sir.

CAB SUPERVISION OVER PART 45 CARRIERS

Mr. THOMAS. What is the difference in supervision given to the two by the Board?

Mr. BOYD. We have no supervision over the part 45 carriers. As long as they stay out of common carriage we have nothing to do with them.

We have at the present time a complaint which will be heard by the Board.

Mr. THOMAS. By common carriage you mean he will carry only a specific product?

Mr. BOYD. No; holding himself out to the public.

Mr. THOMAS. He can carry anything but it is a matter of private contract between himself and his customer?

Mr. BOYD. That is right, sir. We have a complaint before the Board now.

Mr. THOMAS. Supplementals have no regular schedule, but they are under the jurisdiction; they are certificated?

Mr. BOYD. Yes; that is right, sir.

Mr. THOMAS. How carefully do you observe them? Do you set the rates?

Mr. BOYD. The rates are all charter rates and they have to be filed with us, but as a practical matter, the level of the rates has been such that we have found no reason to.

Mr. THOMAS. What is the question involved in the economic study you are giving them?

Mr. BOYD. Whether they are——

Mr. THOMAS. Your economic study has one fundamental purpose, and that is rates, fares, and tariffs?

Mr. BOYD. Yes, sir; but our audit is where we exercise the bulk of our jurisdiction over the supplemental carrier, not the economic studies. Our audits go purely and simply to the question of financial fitness of the carrier.

In order to give you a complete picture, the supplemental carriers are qualified to do business with the Department of Defense and, in that area, we do specifically set the rates and we do it after a tremendous amount of study.

Mr. THOMAS. They do quite a bit of business with the Department of Defense?

Mr. BOYD. Yes, sir; running about 80 percent of their total.

FAA JURISDICTION OVER SUPPLEMENTAL CARRIERS

Mr. THOMAS. What jurisdiction does the FAA assume or what activity does it undertake in regard to the part 45 supplemental carriers?

Mr. BOYD. I am not sure of this, but I believe they exercise the same jurisdiction over both of them, which is total safety surveillance, which includes——

Mr. THOMAS. The same rules and regulations that apply to a regular scheduled airline applies to them?

Mr. BOYD. They have somewhat different rules but because of the nature of the operation——

Mr. THOMAS. I think the only difference in the rules is the question of inspection. They do not get around to them quite often enough. In the final analysis, that is about it, is it not; what is the difference, gentlemen?

Mr. BOYD. The safety standards are exactly the same, Mr. Chairman, and in the past couple of years the FAA has shifted some of its resources over into the supplemental area, more than it had in the past. The basic difference is that——

Mr. THOMAS. That comes about by inspection and testing; does it not?

Mr. BOYD. Yes, sir.

Mr. THOMAS. That is it.

Mr. BOYD. The basic difference is that under the Federal Aviation Agency requirements the scheduled carriers must have a dispatch service, which is licensed, or certificated, so to speak, by the FAA, but due to the nature of the supplementals' business of going from here to there today and somewhere else tomorrow, they are not required by the FAA regulations to maintain a dispatch service. That is the essential difference as I understand it.

Mr. THOMAS. I thought there was another difference. There was a question of inspection and testing. I thought that was really the meat in the coconut.

Mr. BOYD. No, sir, it is exactly the same.

Mr. THOMAS. The great deficiency, if there is any, and I think there is, is by virtue of the fact they do not have the requirements, which add up to as tight safety rules and regulations as the scheduled carriers have.

Mr. BOYD. They have tried in the past, because of the rather small operation of each one of these individual carriers, to have an inspector assigned to five or six or maybe seven carriers, when they were located at Miami, or Los Angeles, all on one base. What they have

done as I understand it in the last 2 years is try to get closer to assigning one or two inspectors to each carrier.

Mr. THOMAS. Is examination and licensing for the pilots and navigation the same?

Mr. BOYD. Exactly, not one bit of difference; also the maintenance standards, Mr. Chairman, the training requirements and recurrent training requirements for the crews. The supplementals tell us that the FAA has just been on their back day and night for the last 2 years, and in this connection I would like to point out that for the last 2 years the supplementals have had a perfect safety record, not one accident.

Mr. THOMAS. But you take some of the big accidents in Europe, over which we have no jurisdiction, and most of those accidents over there in the last 2 or 3 years have been what we call supplemental carriers, have they not? Take the last 2 or 3 years, if my memory serves me correctly.

Mr. BOYD. I would have to ask our safety people. I have a lot of accidents mixed up in my mind.

Mr. THOMAS. What was the big hockey team accident of 6 or 8 months ago?

Mr. GURNEY. The Olympic team?

Mr. THOMAS. Was that British, French, Norwegian or what?

Mr. BOYD. You are talking about a Norwegian accident. I was just trying to recall the accident. There was one.

Mr. THOMAS. Wasn't that what we would call a supplemental carrier?

Mr. BOYD. Yes, sir. The situation is a little different over there, Mr. Chairman, because the supplemental carriers in Europe by and large are affiliates of the scheduled carriers. They have subsidiary companies who do their charter work to a considerable extent.

Mr. THOMAS. I had the definite impression—I do not know how accurate it is—from newspaper accounts it is not under the Board or the FAA. Certainly it looks to me like their standard of testing and maintenance, I guess operation, is certainly beneath what is required in this country. Is that a fair statement?

Mr. BOYD. The standards vary. Generally, though, they are the same. They are essentially the same, at least in the Western European countries.

Mr. THOMAS. Are their schedule qualifications and standards?

Mr. BOYD. That is my understanding.

(Discussion off the record.)

Mr. BOYD. Of course, one of the things that happens is so often people make mistakes of judgment. This really does not have a great deal to do with training, Mr. Chairman.

Mr. THOMAS. You can go back to the operations of the pilot, navigator, the testing and training.

Mr. BOYD. They have more mountains to fly in Europe. They take better advantage of that opportunity than we do here.

Mr. THOMAS. Excuse me. Go ahead with your statement.

GROUP EXCURSION FARES

Mr. BOYD. We also approved group excursion fares for transatlantic travel providing for discounts of 38 percent below normal economy fares.

Out in the transpacific area, the Board forestalled an increase in fares by disapproving an IATA agreement.

Domestically, our achievements have been many. The Board approved reductions of up to 14 percent in first-class fares in numerous major markets, and new thrift fares in the Hawaii-west coast market that were 25 percent below lowest then available fares.

There have been a number of promotional fares approved since we last met with this committee.

FAMILY PLAN APPROVED

The Board approved application of family plan to coach, business, and one-class services for the first time at a 25-percent discount from regular fares; disapproved a series of uneconomic family plans that threatened to precipitate a nationwide rate war; approved numerous individul and group excursion fares; approved various local service carrier "Visit U.S.A." fares, and approved military furlough standby fares at a 50-percent discount from jet coach fares.

With reference to domestic and foreign military charter rates, the Board reduced minimum rates for MATS foreign and oversea charters (pt. 288) to take account of lower operating costs of new turbine-powered aircraft. The Board also initiated action to explore feasibility of stabilizing rates for Logair and Quicktrans domestic cargo services.

In the 2-year period prior to January 1963, the trunkline carriers were faced with a chain of circumstances which put a severe strain on their financial resources. The wide expansion of jet fleets created an immediate overcapacity in services. Traffic failed to maintain historic growth rates. Consequently, the industry as a whole, for the first time in recent years, sustained red-ink balances in their profit-and-loss statements.

STRENGTHENING ECONOMIC CLIMATE

While some of its programs were initiated prior to January 1, 1963, the Board has been engaged since then in efforts to strengthen the economic climate of the industry. To this extent it has:

(*a*) established and pursued the area airport program which seeks consolidation at a single airport of services offered at two or more adjacent airports, where such action will provide significant economies in carrier operations with minimum inconvenience to the traveling public;

(*b*) initiated a review of markets having multiple competition, where such competition might produce excess capacity and prevent reasonably profitable operations;

(*c*) reexamined, or is preparing to do so, the authorizations of U.S.-flag carriers in foreign and oversea transportation to measure the impact of foreign carrier competition and, in light of such competition, the necessity of traditional point-to-point competition among U.S.-flag carriers in these areas;

(*d*) given priority consideration to route transfers and other trunk route adjustments necessitated by the changing character of their fleets.

While the emphasis has been placed on improving the carriers, improvements in service have not been neglected. The Board has heard

proposals for additional service in several large markets where competitive service had been eliminated as the result of the United-Capital merger.

LOCAL SERVICE AREA

In the local service area, the Board continues to furnish all local service cities with tabulations of average daily passengers originated. The Board has continued to set down for decision the need for continuation of air service at points not meeting the "use-it-or-lose-it" traffic standards. There were 88 points not meeting the standard as of September 30, 1963, a decrease from a level of about 130 2 years ago. Many of these 88 points are at issue in pending cases.

USE IT OR LOSE IT

Mr. THOMAS. What did you do with those 88 points that did not come up to your requirements?

Mr. BOYD. The first thing we do is establish the trends, Mr. Chairman, and if the community did not meet the standards but by the time the matter gets to the Board has approached the standards and the trend is upward——

Mr. THOMAS. What I am getting at, how much time do you give the community?

Mr. BOYD. We give them a minimum of 18 months after the service has started.

Mr. THOMAS. And when you make your first check, if they are not coming up to the yardstick laid down under your rule of use it or lose it, you notify them and then how much time do you give them?

Mr. BOYD. We give them, from the time service begins, we give them a monthly report of the passengers they originated at that community. They have that report for 18 months, each month. At the end of 18 months we start a proceeding and, of course——

EMPLOYEES ENGAGED IN USE-IT-OR-LOSE-IT FUNCTION

Mr. THOMAS. That is quite an expensive operation. How many employees do you have doing that work? That comes under the Bureau of Rates and Fares?

Mr. BOYD. We have got two different operations there, Mr. Chairman.

Mr. THOMAS. Where is that located?

Mr. BOYD. The Bureau of Economic Regulations handles the matter, but under Operating Authorities and Practices, I believe.

Mr. THOMAS. It is not under Rates and Fares?

Mr. BOYD. No, sir. The Office of Carrier Accounts and Statistics does all of the statistical work of preparing the reports.

Mr. THOMAS. That is in two Bureaus, Operating Practices, and Economics?

Mr. BOYD. No, sir, Office of Carrier Accounts and Statistics, which is under——

Mr. THOMAS. That is a subdivision. Under which one of your big activities is it?

Mr. BOYD. It is the statistical and research section of the Office of Carrier Accounts and Statistics, which is, of course, a major service

organization for the other bureaus of the Board, and it does the statistical work. Mr. Roth, how many people do you have involved in the use-it-or-lose-it reporting program?

Mr. ROTH. I believe in recent months we have gotten down to just a token, because of the mechanical assistance we get from the Office of Carrier Accounts and Statistics.

Mr. THOMAS. What do you call token?

Mr. ROTH. I believe we do not have as much as one man-year, one person spending full time gathering figures.

Mr. THOMAS. That is under your Bureau?

Mr. ROTH. Yes, sir.

Mr. THOMAS. What is it?

Mr. ROTH. This is under the "Routes and agreements division," part of the operating authorities.

Mr. THOMAS. Where is the other division?

Mr. ROTH. The Office of Carrier Accounts and Statistics which has our ADP machines.

Mr. BOYD. The Office of Carrier Accounts and Statistics is the big division, Mr. Chairman.

Mr. THOMAS. You do not have but 46 jobs in it altogether. How many do you have? That is where your work is done.

Mr. EVINS. You had about 130 situations a few years ago in which there was a question as to whether or not they were meeting the formula. Now that has been reduced to 88?

Mr. BOYD. Yes, sir.

Mr. EVINS. As to the remaining number between 88 and 130, did they ultimately justify the service or how many did you set aside?

Mr. BOYD. Some justified the service and some we eliminated. I will have to provide you with that figure, Mr. Evins.

(The information supplied follows:)

Substandard "use it or lose it" points, 12 months ended Sept. 30, 1961, versus 12 months ended Sept. 30, 1963

Number of points originating less than 5 per day during 12 months ended Sept. 30, 1961	128
Service ceased; CAB deleted or denied renewal	−21
Points at which traffic had increased to 5 or more per day during 12 months ended Sept. 30, 1963	−25
Points for which service authority continued but through area airport	−5
Points where traffic decreased from 5 or more during 12 months ended Sept. 30, 1961, to less than 5 per day during 12 months ended Sept. 30, 1963	+9
Points having substandard traffic during 12 months ended Sept. 30, 1963, but had not been served during 12 months ended Sept. 30, 1963	+4
Number of points orginating less than 5 per day during 12 months ended Sept. 30, 1963	90
Points deleted by the Board since Sept. 30, 1963	11
Points considered and continued by the Board in decisions issued in 1963	11
Points under consideration in formal cases at Feb. 19, 1964	40
Number of points of the 90 not acted upon or under consideration by Feb. 19, 1964	28

Mr. EVINS. The one questionable item in your budget is the subsidy

to the carriers. It is an enormous amount. Certainly the Congress wants to promote aviation and aviation safety.

There are 88 stations now that are in question.

Mr. BOYD. Mr. Chairman, the Office of Carrier Accounts and Statistics handles this program, use it or lose it, utilizing the computer between 15 and 20 hours per month. It is completely automated.

Mr. THOMAS. This Bureau of Statistics and Research Activities is how old? How old is the Board?

Mr. BOYD. We are in our 26th year.

Mr. THOMAS. You changed the name. What did you call it?

Mr. BOYD. What did OCAS start out as?

Mr. HORD. It was a division in the Bureau of Economic Regulations. We used to do the rates and accounting years ago. Then we became the Office of Carrier Accounts and Statistics.

Mr. THOMAS. When did you change it?

Mr. HORD. About 1950.

Mr. THOMAS. Go ahead.

AIR TAXI PROMOTION

Mr. BOYD. We also have programs for the promotion of air taxi operations. An air taxi guide to fares and services was published in December 1963 as a part of the Official Airline Guide representing a major new marketing tool. This action represented the culmination of closely coordinated work by the National Air Taxi Conference, trade associations and Government agencies to develop a program to promote the services offered by the noncertificated air taxi operators.

The genesis of this idea came from the Board, Mr. Chairman, as one of our efforts to promote aviation. It is something that did not cost us any money.

CARRIER SERVICES

I would now like to discuss the carrier services area. Public Law 87–528 empowered the Board to issue permanent certificates of public convenience and necessity for supplemental air service. Pending completion of formal proceedings involving applications for permanent supplemental certificates, the Board was authorized to review on an expedited basis the qualifications of supplemental air carriers holding authority as of the date of enactment of Public Law 87–528, and to issue interim certificates to those found qualified.

Three of the carriers found unqualified requested expedited proceedings on their applications for permanent certificates. The Board proceeded to hold hearings on these applications. During 1963 decisions were issued in two of the three affirming the earlier findings that the carriers are unfit to hold certificates.

The Board also concluded a landmark case in which it authorized a foreign air carrier to engage only in charter services over a specified route between the United States and Great Britain. The Board also has been engaged in proceedings involving applications of several other foreign carriers for similar authority. It is drawing near to conclusion of a case in which a number of U.S. carriers seek permanent authority to engage in transatlantic passenger charter transportation.

MAJOR PROBLEMS FOR 1965

Now I would like to mention some of the major problems that will be before the Board in 1965.

1. The Board feels transpacific fares are higher than required to support profitable and efficient operations and will exert every effort to persuade the U.S. carriers to reduce them.

2. At the present time there is no binding IATA agreement in effect on fares to and from the United States. IATA will hold a conference in the fall of 1964 to review and/or negotiate fares applicable on a worldwide basis for a 2-year period beginning April 1, 1965. Cargo rates, applicable on a worldwide basis, will also be considered at this conference. The Board will encourage U.S. carriers to press for the lowest fares and rates consistent with reasonable carrier earnings under efficient and economical management.

3. The Board will inquire into the domestic fare structure situation with a view to establishing more definitive fare policies. The fare structure issues include the appropriate relationship of fares among various classes of services, the proper role of family fares, and updating the Board's domestic coach fare policy.

4. In view of the conversion from high-cost piston aircraft to low-cost turbine-powered aircraft the Board will reexamine current service airmail rates in transatlantic and transpacific operations to determine what revisions should be made.

5. Alterations in MATS domestic and foreign charter service requirements, as well as the new minimum rates set by the Board, will require Board implementation in fiscal year 1965.

6. Now that a healthy financial climate has been largely restored in the industry, the Board will face increasing demands for additional services. While most of the major markets in the country enjoy two-carrier or three-carrier competition, there are a few areas without a single carrier or competitive service. The jet age, of course, has necessitated a new look at the application of traditional standards for such services.

7. The statement of policy regarding international aviation, approved by the President on April 24, 1963, has created policy modifications and recommendations which will undoubtedly result in an increased workload.

PROGRAMS TO CONTINUE

Many programs previously initiated have not been completed and work will continue on such programs as:

(*a*) Reduction of multiple competition on domestic routes where such competition appears uneconomic.

(*b*) Review of the need for U.S.-flag point-to-point competition in the international area.

(*c*) Guidelines for determination of local service versus trunkline route authorizations.

(*d*) Advisability of direct competition between subsidized and nonsubsidized carriers in domestic and oversea markets.

7. The Board will consider major proposals which contemplate changes in the business relationships between ATA and/or IATA carriers, on the one hand, and their passenger sales agents, on the

other. These includes the ATA area settlement plan and the IATA bonding program.

8. In his transportation message of April 5, 1963, President Kennedy recommended that Congress "should declare as a matter of policy that through routes and joint rates should be vigorously encouraged, and authorize all transportation agencies to participate in joint boards." In this connection, the Board along with the Federal Maritime Commission and the Interstate Commerce Commission will examine closely the role of the Railway Express Agency in the through movement of property.

The Board itself will give consideration to certain existing agreements between REA and various airlines relating to the through movement of air-surface traffic.

9. Legislation has been enacted authorizing all cargo carriers to engage in passenger charter transportation and establishing the supplemental air transportation carriers as charter specialists. Coupled with this legislation, changes have taken place in the operations of the combination route carriers since regulations governing their charter operations were adopted. These factors prompted the Board to issue a proposed regulation which would, if adopted, substantially alter the charter authority of the several classes of air carriers.

JOINT BOARD—CAB, ICC, AND MARITIME COMMISSION

I would like to go back to this Joint Board business for a moment, Mr. Chairman, and sort of blow our horns a little bit. The Chairmen of the ICC, Federal Maritime Commission, and CAB have been workliaison committees among the staffs of our three agencies. We have tried to develop some common costing approaches, some common regulations on matters pertaining primarily to finance, and to eliminate duplication of audits where two of the agencies have jurisdiction over the same entity. This is particularly true in the area of airfreight forwarders. We think we have saved the businessmen a considerable amount of administrative burden by doing this.

Mr. THOMAS. Where does Commerce have any jurisdiction in airfreight forwarders? I notice there under your loans to your scheduled carriers, you state in the final analysis all you do is make recommendations and the ultimate authority is in the Secretary of Commerce.

Mr. BOYD. I misspoke myself because I was referring to the Interstate Commerce Commission. The Interstate Commerce Commission has jurisdiction over surface freight forwarders, whereas, we have jurisdiction over airfreight forwarders. In many cases they are one and the same people.

Mr. THOMAS. You divide the forwarder in two parts. You take part and the Interstate Commerce Commission takes the other part?

Mr. BOYD. That is what the law does. But we have decided if we audit a forwarder, we will send our audit to the ICC, and they will not fool with that forwarder for that period.

Mr. THOMAS. That makes sense. That is quite a feather in your cap. Commerce has nothing to do with it?

Mr. BOYD. No, sir.

Mr. THOMAS. Where does Commerce come in on the loan guarantee program? What does the law say?

Mr. BOYD. On the loan guarantee program the law says that Commerce shall either approve or disapprove loan guarantee applications based on its own studies and on advice from CAB.

Mr. THOMAS. You have 27 people engaged in that activity?

Mr. BOYD. No, sir.

Mr. THOMAS. How many?

Mr. BOYD. We have three people.

Mr. THOMAS. How does that operate now?

Mr. BOYD. The loan guarantee?

Mr. THOMAS. Yes. Does the act give it to anyone except the Secretary of Commerce? How much time does he put on it? How much of a staff does he have? How many loans are you making or is he making this year? Whose money is it?

Mr. BOYD. It is the Government's money, it is your money.

Mr. THOMAS. It is back-door Treasury financing. Who takes it out, the Board or the Secretary of Commerce?

Mr. BOYD. It is a guarantee.

Mr. THOMAS. I understand. Have you picked up some of the guarantees?

Mr. BOYD. No, sir; there has never been a default.

Mr. THOMAS. Not a one?

Mr. BOYD. Not a one.

Mr. THOMAS. I am thinking about the railroads. You are right.

Mr. BOYD. We have enough problems with the airlines. Don't give us the railroads.

Mr. THOMAS. When we get into your rates and fares, we are going into it in some detail. What was the thought in Congress putting that final word in Commerce when it is purely an air matter? What is the philosophy behind it?

Mr. BOYD. The philosophy, as I understand it, was this was not a regulatory matter and, therefore, it should not be in a regulatory agency.

Mr. THOMAS. Certainly, it is an integral part of your rate structure problem. Certainly, it is regulatory in that sense, it affects rates. It is your sole responsibility to fix rates.

Mr. BOYD. It affects subsidies more than it affects rates. We made the pitch as hard as we could, but we were not persuasive.

Mr. GURNEY. It is a guaranteed loan.

Mr. THOMAS. Is the philosophy that it is a loan, does not affect rates, does not affect subsidies, and is purely a guarantee?

Mr. BOYD. It is purely a guarantee, but I think the philosophy is purely and simply that the Board should be limited to regulatory matters in which it is supposed to have some expertise and the approval of a loan guarantee or disapproval of a loan guarantee is not a regulatory matter in the sense that routes, rates, and fares are.

Mr. THOMAS. It goes back to routes, rates, and fares.

Mr. JONAS. Will the chairman yield?

Mr. THOMAS. Yes, surely.

Mr. JONAS. It might possibly be that the committee was looking at the experience of the ICC with some of their rail guarantees and thought this should be at Cabinet level. Do you think that had anything to do with it?

Mr. BOYD. No, sir; we had administered that program for 5 or 6 years, since its inception. Nobody has ever defaulted under our operation.

OUTLINING CARRIER ROLES

In so doing this the Board would further delineate the roles of the combination carrier, the all-cargo carrier, and the supplemental carrier with respect to charter business and cargo "blocked space" arrangements. The major objective of the policy is to assist the all-cargo and supplemental air carriers in their respective roles as cargo and charter specialists.

10. There are pending a number of applications seeking permanent certificates of public convenience and necessity to perform supplemental air service. Major attention of the Board will be focused on processing these cases.

11. The Board also faces during the coming year a major policy decision concerning grant of air freight forwarder authority to long-haul surface carriers of household goods.

PAYMENTS TO AIR CARRIERS

Now with respect to our second appropriation, "Payments to Air Carriers," we estimate an appropriation of $82,824,000 for 1965. This appropriation is of the no-year liquidation of contract type and is, therefore, to provide the Board with the funds required to pay subsidy to the carriers as the subsidy becomes due.

Subsidy payments are estimated at $82.8 million in 1965, a reduction of $2.7 million compared with estimated payments of $85.5 million in 1964.

Consistent with the limitation in the subsidy appropriation language for fiscal 1964, subsidy for the three helicopter operators serving the Chicago, Los Angeles, and New York metropolitan areas is budgeted at $4,300,000 for 1964. A total of $3 million is requested for fiscal 1965.

HELICOPTER SUBSIDIES

The three helicopter operators have been operating under an open rate for the period starting July 1, 1963, and have received temporary subsidy. Last Friday, the Board issued a show-cause order which proposes final subsidy rates for these operators aggregating $4,300,000 a year, based on its determination of such rates in accordance with section 406 of the act and the limitations in the appropriation act for fiscal 1964.

In order for these three carriers to live within the $4.3 million rate which we have proposed for fiscal 1964, they must, in our view, contract their volume of service. On the basis of our present knowledge of the facts, we believe that any further significant contraction below

the levels of service to which they must reduce for the current fiscal year would render the helicopter experiment of little value.

The order which the Board issued on Friday would be made effective for an indefinite period. In other words, it would be effective for a period which will extend into fiscal 1965 and beyond. This is unless, as until, it is challenged by one or more of the carriers or reopened by the Board on its own initiative. We decided on this course of action because termination of the rates for the helicopter operators at the close of the fiscal year for which they were being established has tended to impair the stability of the carriers and their opportunity to plan ahead for the conduct of required services on a sound economic basis. Another factor, as explained earlier, is that $4.3 million subsidy per annum will in any event support a minimal level of operations. This will mean that an annual governmental obligation in the same amount will exist on a continuing basis by virtue of Friday's order unless reopened by the carriers or the Board.

BOARD COUNSEL OPINION

It has been the opinion of the Board's Counsel that the limitation on the helicopter subsidy appropriations by Congress in fiscal years 1962 through 1964 do not constitute an amendment or modification of the standards of section 406 of the Federal Aviation Act.

As a result, unless action is taken by Congress to amend the act, the Board must necessarily continue to be guided by such standards and principles in carrying out its duties and responsibilities. If the promulgation of subsidy orders—including last Friday's order—pursuant to section 406 results in subsidy claims by the helicopter operators in excess of the amounts appropriated by the Congress, we believe that the Board would be obliged to seek a supplemental appropriation, or alternatively, the operators would be entitled to pursue their remedy in the Court of Claims to recover the amounts of subsidy due them over and above the amounts appropriated to the Board.

I have gone into this in some detail, Mr. Chairman, so that you had the committee would have a clear understanding of where we think our duty lies in carrying out the intent of Congress as expressed in the Federal Aviation Act of 1958 and the appropriation acts.

Mr. THOMAS. That sounds to me like a hand engraved invitation to come in—hand engraved and personally delivered. Go ahead.

Mr. BOYD. The estimate of subsidy accruals, which are the amounts due the carriers under final subsidy rates and on which the payment estimates are based, shows a reduction of $1.8 million from $85 million in 1964 to $83.2 million in 1965.

DOMESTIC TRUNKLINE SUBSIDY

Subsidy accrual of $3.7 million is projected under the domestic trunkline category to sustain the New England services of Northeast Airlines, Inc. This represents the subsidy rate established by the Board for Northeast in October 1963 in conjunction with its decision not to renew the services of that carrier south of New York. The $3,700,000 is solely for the New England regional services. All other domestic trunklines are expected to continue to be subsidy free in 1965.

LOCAL SERVICE SUBSIDY

Subsidy accrual for the 13 local service carriers is estimated at $67 million in 1965, compared with $67.8 million in 1964, a reduction of $800,000. The 1965 estimate of $67 million includes a full year of operation of the new routes recently awarded to Trans-Texas. Excluding this factor, the 1965 estimate is some $1 million less than the estimate for 1964.

The 1965 estimate is tentative at this time as the Board and its staff are currently reappraising and reassessing the economic needs of the 13 local service carriers for the purpose of establishing a new class subsidy rate during 1964.

The level of subsidy estimated for all Alaskan services shows a favorable trend from the 1963 level of $9,467,000 to $9,225,000 estimated for 1964 and $8,614,000 for 1965. This decline is anticipated essentially as the result of the significant upward trend in mail volume, based on Post Office Department estimates.

Increased payments for mail services serve to reduce the carriers' subsidy need in substantially the same manner as any other source of commercial revenue. However, the actual subsidy for both 1964 and 1965 may prove to be significantly higher depending upon current and future developments in requirements of the two subsidized carriers providing service between the Pacific Northwest and the State of Alaska.

The two carriers serving the State of Hawaii are estimated to require the same amount of subsidy in fiscal 1965 as currently estimated for 1964—$886,000 each year. These estimates assume that third-carrier services, authorized by the State public utilities commission in 1963 but enjoined by the Federal District Court of Hawaii in mid-1963, will not be reinstituted, and that the carriers' use of four-engine equipment for expanded traffic needs will have a beneficial effect on their operating requirements.

That concludes my statement. I will attempt to answer any questions you may have.

Mr. THOMAS. That is an excellent statement. Do any of your brother Commissioners have any observations to make to us? We are certainly delighted to listen to all of you. This is very interesting and very helpful to the committee.

Mr. GURNEY. Mr. Chairman, the only thing I would say is that the Chairman has mentioned the fact that I intend to go back to South Dakota at the end of the year. This is my final chance to talk to your committee.

FINANCING THE SUPERSONIC TRANSPORT

I would say that with some more jet planes to be purchased by our air carriers—they do cost money, as we all know from the records of the last 5 years—in fact, there was much concern at the time the trunk carriers did purchase the jet planes, there was the thought that there was not enough traffic to pay for them. It took about 3 years before they developed enough traffic to get on a profitable basis. They are still purchasing these jetplanes. There are the new short-range planes in the domestic field, the big cargo planes for the certificated transcontinentals, and now we have the SST supersonic coming in, which is anticipated may cost as much as $30 million per copy.

There has been some discussion about how they are going to finance it. We do know that it is a pretty nice thing to have equity capital with the air carriers, possibly the increased prices of airline stocks on the New York Stock Exchange may attract some new equity capital. I do not know.

Nevertheless, anticipating the purchase of these planes, we may run up into——

Mr. THOMAS. Can they put up 25 percent like Mr. Halaby is trying to get them to do?

Mr. GURNEY. They possibly can.

Mr. THOMAS. Broken down between the airframe people and the engine people?

Mr. GURNEY. I do not know about that. I do not know whether you are alluding to whether or not the manufacturer of the plane is going to put up 20 percent. I am talking about the air carriers themselves who are going to use the plane.

Mr. THOMAS. Of course, I think the original plan was for the manufacturer to foot at least 25 percent of the research and development cost.

Mr. GURNEY. Twenty-five percent.

Mr. THOMAS. The original figure is around a billion dollars, but I understand it has been upped $200 or $300 million. The airframe manufacturer and the engine manufacturer demurred and said they cannot put up more than 10 or 12 percent. The other part of the financing would come out of the user, the certified carrier.

Mr. GURNEY. That is the one I am speaking about and am concerned about at the moment, the user of the airplane, when and if they come into being. Therefore, I have some hesitancy to endorse completely the statements made in the presentation by our chairman. Take the program for this coming fiscal year, to carefully look at rates with the intention that lower rates be charged people traveling on the airlines. I do not want these rates to be unreasonably high, but I do want the rates to stay high enough so that the carriers can not only take care of their present obligations, which are huge, but also keep themselves in a stable condition in order to build up a reserve so that they can purchase these new planes that I think are absolutely coming. They should be allowed to retain reserves in order to buy them without Government guarantees.

Mr. THOMAS. I think your concern for the carrier is certainly justified and makes good common business sense, but look at the other side of the coin. Did not most of them start out with a prayer and the certificate the Commission gave them, a little beat-up equipment, a nice financial statement which was about nine-tenths water and one-tenth cash. They all got rich. Look at Eastern.

Mr. GURNEY. What scares me is the prospect of the Government being compelled to guarantee the purchase of these huge airplanes for the trunklines that we now say are in fine financial condition. We must remember that Eddie Rickenbacker's airline presently does have a petition before our Board for subsidy. That case has not yet been handled by our Board. Also TWA for a number of years had some loss years and had an average return for 5 or 6 years of around 2 or 3 percent.

So my word of caution is that I would like to see the carriers kept in a healthy condition so that we would not be looking into the future for another huge Government guarantee on the supersonic plane.

Mr. THOMAS. You have not made but two loans, as I remember, to the big trunklines for equipment.

Mr. GURNEY. The Government has not made any loans to trunklines as far as I know, except Mackey, and we have guaranteed a loan to them.

Mr. THOMAS. I have in mind, I think, two which were none too large. Is that erroneous?

Mr. ROTH. You might be thinking of loans in the days of the Reconstruction Finance Corporation. There were a number of such loans such as Northwest Airlines. In the statute administered by the Board and now by the Secretary of Commerce, the domestic trunklines are not eligible for guaranteed loans.

Mr. GURNEY. The supersonic planes, if they could be financed the same as the present jetplanes have been, the banks could then with a proper financial statement from the trunklines, make a legitimate private enterprise loan.

Mr. THOMAS. I think everybody would join you in that hope. In the first place, is that 2,000-mile plane feasible?

Mr. GURNEY. That is not for me to decide, but I believe our technicians say it can do the job.

Mr. THOMAS. How about all the headaches that come with it? We have considered it in here several times. It looks to us as though it is inevitable and if we do not do it, the British and the French will.

Mr. MURPHY. I have nothing to add of any great substance. I think the essence of what Chan has to say is one that we would all agree with.

Mr. THOMAS. Fundamentally sound, yes.

Mr. MURPHY. Nevertheless, I believe we have to think of the public as well as the carriers.

Mr. THOMAS. The carriers have not done too bad.

That is very fine. We are delighted to have all our distinguished friends. We hate to see Commissioner Gurney leave us. He has been part of this committee for 15 or 20 years. I do not know how we will get along without him. We may move to South Dakota and room and board with him for a while.

I think the committee likes to discuss generally some of these problems of rates and fares, generally the problems involved. Mr. Evins, would you please begin?

Mr. EVINS. I was interested in the overall picture presented by the chairman, that the carriers are now in the black. They have been in the red for some time, but they are now in pretty healthy condition. Also that the Board has done an excellent job from the public traveling point of view persuading them to reduce rates. You have healthy carriers, you have reduced rates to the public. You have increased traffic and lowered the accident rate. This all looks very good, a very good report on the whole aviation industry.

LEVEL OF HELICOPTER SUBSIDY

The main concern on the budget before Congress is the subsidy we are having to pay to the carriers each year. This is continuing

Did we gain from your impression about the helicopter service that you were going to recommend a reduction in the helicopter subsidy?

Mr. BOYD. The purpose of elaboration on the helicopter subsidy was if the existing rate, which we have authorized, the rate of $4.3 million per year, continues through fiscal 1965 or into fiscal 1965, the $3 million appropriation for which we are asking is not going to be sufficient. I tried to make it clear that either the carriers or the Board can reopen that rate.

Mr. EVINS. You are trying to say that even though the Congress wrote a limitation on the amount, that they might file with the Board additional petitions for increased amounts and you would be compelled by another statute to pay it?

Mr. BOYD. That is about the size of it.

Mr. EVINS. In other words, the limitation is not effective?

Mr. BOYD. We are caught between two acts.

Mr. THOMAS. If you start this out as an experimental item, in your argument you meet yourself coming back from two directions. In the first place, how long does an experiment have to last? That is No. 1. No. 2, if it is an experiment, it is not permanent law. Certainly the limitation ought to govern what you can spend. If it is not permanent law by virtue of the fact that it is an experiment, how can you say it is binding upon you and that it is a debt against the taxpayer of the United States to the amount of money they expend?

That debt is the difference between the income and operating expense. Why should that be if it is an experiment? How long does an experiment have to last before ipso facto it becomes a matter of law? The Congress has not declared it a permanent policy, has it?

Mr. BOYD. No, sir, the Congress has not. I think under the circumstances, though, that as long as these carriers have a certificate it can be labeled experimental or whatever, but during the period of the certificate life they are entitled, as we read section 406 of the act, to their break-even need and to an element for taxes and profits. That has not been available for several years.

The question of when do you end an experiment is a very difficult one. Our judgment is that given a little flexibility or freedom, this experiment could be ended by 1966 or 1967.

Mr. THOMAS. I cannot imagine any more flexibility than they now enjoy.

MAIL CARRYING OPERATIONS OF HELICOPTERS

They started out as purely a mail-carrying operation, and they have just about forgotten about the mail-carrying operation now. It is a matter of ferrying passengers from one downtown airport to another. No one ever mentions mail, and that was the reason it was set up in the first place, to carry mail.

Mr. BOYD. I think they are carrying quite a bit of mail, Mr. Chairman.

Mr. THOMAS. You lose sight of that now. No one ever mentions that. Do they not still get a pretty good rate on the mail-carrying operation? In making the justification, nobody ever mentions mail any more, it is always passengers.

Mr. EVINS. Could you supply for the record the amount of the Post Office Department's payment for carrying the mail, and also include a column for the subsidy payments?

Mr. BOYD. For the helicopters?

Mr. EVINS. Yes.

Mr. BOYD. Yes, sir.

SERVICE MAIL AND SUBSIDY PAYMENTS

Mr. EVINS. I was interested in the statement that in the case of the Alaska carrier, because of the mail contract award, you would reduce the subsidy payments. I think you always must consider the payment for the mail-carrying contracts. I am sure you do that.

Mr. BOYD. Yes, indeed, we do. We will provide for the record the mail payments to the carriers and the total subsidy. How many years back would you like to go with that?

Mr. EVINS. I would say 10 years.

Mr. BOYD. All right. We take all revenues into consideration—passenger, mail, cargo, and express.

(The information supplied follows:)

Mr. JONAS. Would you yield right there?
Mr. EVINS. Mr. Jonas.

LOS ANGELES HELICOPTER OPERATION

Mr. JONAS. Why do you think they cannot make a profit in an operation like at Los Angeles, where they haul an enormous number of passengers? Is it too much overhead, too much cost of equipment, too much cost of operations? What is it, in your opinion?

Mr. BOYD. There are two big items as I see it. One is that they have too much overhead for a small operation. One of the things we have tried desperately to persuade the Congress and the Bureau of the Budget is that if they can have a chance to expand their operations, to limit their overhead on a unit basis, if they can have a chance to get the bugs out of this new equipment they have, at the same time doing what they are doing now or trying to do, get instrument flight qualification so they can improve the dependability of their service, we can come in to you and say, gentlemen, we think these fellows should be on their own. But as we keep contracting their service, we make it harder and harder.

Mr. JONAS. You could not expand that service in the Los Angeles area. They cover the whole southern part of California with that helicopter service, do they not?

Mr. BOYD. No, sir.

Mr. JONAS. A man had a map in here, and he had a very extensive operation.

Mr. THOMAS. He made 10 or 12 stops, did he not?

Mr. JONAS. He flew all the way from Los Angeles Airport up into the valley.

Mr. BOYD. Yes, sir.

Mr. JONAS. I forget the mileage, but it was a pretty substantial area he covered.

Mr. BOYD. He has the best route system and the lowest unit costs. Two of the problems Los Angeles Airways have are simply these. Due to the atmospheric conditions in Los Angeles, they get this smog early in the morning, and without instrument capability in their helicopter, even though they can see up to the sun, they cannot take their helicopters off the ground because FAA requires that where there is

cloud cover, they have to have instrument capability. This causes them to lose out now on some of the best time of day.

The second thing is that the machines they fly had trouble with the main gear. The manufacturer is committed to fixing the main gear, putting in a new gear, but it is a slow process to get the right kind of metal. I do not understand all this, but this is essentially the way the problem was expressed to me. They are having trouble getting the right kind of gear manufactured to give the equipment the type of reliability that it has to have and that the manufacturer warranted.

Mr. JONAS. Have you read our hearings when we had the helicopter operators in here and gave them a pretty thorough examination?

Mr. BOYD. Yes, sir.

Mr. JONAS. My recollection is they told us they needed another year of subsidy so they could buy new machines. I do not know how long they expect us to keep on.

Mr. BOYD. Mr. Jonas, let me say, if I may, I believe this. I do not think we feel at the Board any proprietary or paternal affection for these helicopter carriers.

Mr. JONAS. You have an act to abide by.

Mr. BOYD. Yes, sir. We are trying to be as completely objective as we possibly can. It is our view that if they are permitted to operate over a reasonable portion of their routes, they can spread their costs, they can develop their traffic, and they can go off subsidy. But if you keep contracting them, I say in all sincerity it is just throwing money away.

CONSOLIDATION OF TRUNK CARRIERS

Mr. EVINS. This leads to one further question I had regarding consolidations. With your consolidations of major lines, you indicated in your testimony that you were having applications for providing services to areas that had been eliminated by the consolidations. How extensive are these new applications and what do you propose to do about serving cities where service has been deleted by consolidations?

Mr. BOYD. We have a case. There is only one area involved. The only consolidation, Mr. Evins, that has affected trunk service was the merger of Capital into United. We have a case which is very close to conclusion on putting competitive service into points where the competitive service was eliminated by the merger. That case we started 18 months or 2 years ago.

Mr. EVINS. Is it a new carrier that has been created or an existing carrier that proposes to serve the area?

Mr. BOYD. There were about six or seven existing carriers who proposed to pick up the slack.

Mr. EVINS. I believe in some of these consolidations, they are proper and justified for efficiency and stability for making a sound carrier, having resources to operate, and so forth. There are many reasons, it seems to me, to be more feasible for consolidations of some air carriers than possibly in the case of the railroads.

SUBSIDY TO NORTHEAST AIRLINES

From observing from a distance your Northeast Airline case, it would seem to me the Board made the sound and proper decision be-

cause you testified here they have been in the red for a long time and now you have to subsidize them just to operate in the East. Is that the situation?

Mr. BOYD. Yes, sir.

Mr. MURPHY. We would have to subsidize a local service carrier to do the same job in New England anyway.

Mr. EVINS. If the Board finds in its judgment that a fine major trunkline carrier is not in good financial situation, say like Northeast, you can then provide it with subsidy to keep it alive and to keep it going? It was my understanding that you were not subsidizing the major trunklines.

Mr. BOYD. No, sir; we have not been. This raises a very interesting question, it seems to me. That is: Are we subsidizing the carrier or the communities that are being served?

Mr. GURNEY. May I interrupt, Mr. Chairman? Was not the subsidy voted, and our order says it shall be for the subsidizing of the local service in New England?

Mr. BOYD. That is right.

Mr. EVINS. Local service is Northeast, is it not?

Mr. BOYD. Yes, sir. We are subsidizing Northeast, and it is characterized as a trunk carrier. As I understand the law, there is nothing to inhibit a trunk carrier fom seeking subsidy.

M. EVINS. Is this the only trunk carrier that also has designation of a local carrier, a dual designation?

Mr. BOYD. Yes, sir.

POINTS SERVED BY NORTHEAST AIRLINES

Mr. THOMAS. How many communities does Northeast serve in New England?

Mr. BOYD. About 17 on a regular basis.

Mr. THOMAS. Can you name them?

Mr. EVINS. Boston, New York——

Mr. BOYD. Augusta, Bangor, Montpelier, Boston, Burlington, Hartford-Springfield, Hyannis, Lawrence, Lewiston, Martha's Vineyard, Nantucket, New Bedford, White River, Worcester, Manchester.

Mr. THOMAS. Some of those are 35 miles apart.

Mr. BOYD. Keene, N.H., Presque Isle, Maine.

Mr. THOMAS. That is local service because some of those points are not 35 miles apart.

Mr. BOYD. It is. One of the difficulties they have up there is that Vermont, New Hampshire, and Maine all have mountain chains generally running north and south. The service in some cases is only 35 miles apart, but they have bad roads and bad weather in the winter.

Mr. EVINS. This is an unusual carrier with an unusual situation in which you have a major trunkline carrier that is also certificated as a local service carrier.

Mr. BOYD. Yes, sir.

Mr. THOMAS. What type plane do they use on those short hops?

Mr. BOYD. They are using DC–3's.

Mr. THOMAS. That is the old workhorse.

Mr. BOYD. Yes, sir.

Mr. EVINS. No further questions.

Mr. THOMAS. Mr. Shipley, you are interested in aviation. Do you have any questions?

Mr. SHIPLEY. I have one question on the general statement. First I want to commend the chairman for a very impressive statement.

FAMILY PLANS

I am interested in page 11 of your statement. I would like to know what airline first initiated their application for the family plan and also on the straight one-class services, what airlines initiated this?

Mr. BOYD. United Airlines initiated one-class service. Today it is the only airline providing a single class service. My belief is that American initiated the family plan.

Mr. SHIPLEY. Would you tell me more about the family plans where you say it did threaten to precipitate a nationwide rate war? What airlines were involved?

Mr. BOYD. All major airlines.

Mr. SHIPLEY. Was Continental the leader in this?

Mr. BOYD. No; Continental was not the leader. It seems to me again American was the leader. Mr. Roth is the Director of our Bureau of Economic Regulation, and he has these matters at his fingertips more than I have.

Mr. SHIPLEY. You should be commended for this. I think this is very important to stimulating air travel. I know you must have had many problems to work out with these carriers to be able to do this. I was interested in what some of these problems were.

RECENT CHANGE IN FAMILY PLAN

Mr. ROTH. I think it is important to keep in mind that the family plan was radically changed in the middle of January. I think from the standpoint of the public and the industry alike in many respects the family plan today is a great improvement over what preceded it.

Specifically, since January 15 most of the trunklines now have a 25 percent family plan discount applicable to coach service as well as first class. That means that now husband and wife, traveling together on days in which the family plan tariff is available, have available a lower means of travel than heretofore.

On the other hand, before January you had a situation in which, with the husband and wife traveling and the family plan then confined to first-class service, 50 percent discount on first class, no discount on coach, husband and wife paid a cheaper rate if they traveled in the first class luxury section than in the coach section.

Mr. SHIPLEY. I realize this.

Mr. ROTH. This type situation was corrected in the more recent filings, and it seems to me the public now has a lower fare than heretofore because of the availability of the family plan tariff on coach and at the same time it is more economical from the standpoint of the carriers performing the service. I think in that sense the situation is radically improved compared to what it had been.

ONE-CLASS SERVICE

Mr. SHIPLEY. I think you should be complimented for working this out. Is there any indication that the other carriers may follow up on this one-class service? I think this is the only way to travel. It is very confusing to find out where you are going and how much.

Mr. BOYD. No, sir; we have seen no indication that the others are going into a single-class operation.

Mr. SHIPLEY. For the record, I have traveled this one-class service since it has been in effect. I think it is wonderful. I hope all the airlines will follow this procedure. It really simplifies going and getting a ticket and flying from here to Chicago or wherever you are going.

Mr. THOMAS. Is not that only a gimmick? Why should these rates be as high as they are? Let us go into the question of rates. If you come in with your family on Tuesday between the hours of 9 and 11—that is nothing but a gimmick. I cannot see that it is an overall bona fide offer to reduce rates.

The taxpayers put them in business and then subsidize them. The taxpayer nurtured them along, offered to guarantee the payments on the planes. The big operating cost is borne by the taxpayers. The taxpayers light the runway, put safety devices in, pay for the towers, pay for equipment. All they do is buy a little equipment and pay a few landing fees. It looks to me like the rates are all too high. Why can they not be reduced?

REDUCTION OF FIRST-CLASS FARES

Mr. GURNEY. I would like to have Mr. Roth tell about the reduction of first-class fares that went into effect.

Mr. THOMAS. You get in the back end of the plane, and it is 25 percent cheaper than the front. It is the same plane. If you fall, you all fall together. The meals are practically the same. They give you a little champagne up front. The only difference is when you get through. There is a difference in what? The champagne you get and a 25 percent increase in the price of the ticket. To go from here to Houston it cost me $110 one way, while getting in the back end it is $80.

Mr. BOYD. About 75 percent of first-class fare.

Mr. THOMAS. Why tolerate that? This is not Europe. We do not know anything about traveling first and second class. All this country ever has known is, you either ride in a pullman car on the railroad or you ride in the day coach. We do not know anything about that first and second class. Get on a steamship going from here to Europe, it is first and second class, but that is going to Europe.

Mr. BOYD. The situation has evolved from a purely first-class service with most of the trunk carriers being violently opposed to coach service. In 1953 about 20 percent of the available seats were coach. It was just coming in then. Today it is more nearly 85 percent. It would indicate that the public, given a choice, is much in favor of the coach.

Mr. THOMAS. They are seeking that lower rate. Call it whatever you want. That is what it is. They are trying to save a little money.

You put a little stigma on it, but they do not care about the stigma. They want the reduction. You go into the back end of the plane, second class, come out the front of the plane, first class, strutting. You are plus $30 for the same trip.

Mr. EVINS. Maybe the Board could infuse a little Henry Ford philosophy, mass production of the Ford, volume brings about a reduced rate.

Mr. BOYD. We try to do that day after day. We try to tell these people the way to maximize their profits is to increase their volume. It is not through boosting their fares. On the first-class travel, Mr. Shipley, there is both a congressional resolution and a Bureau of the Budget directive. The Bureau of the Budget directive requires that, except in certain limited instances, all travel be at less than first class.

Mr. SHIPLEY. I assume that must be when you call an airline and they say there is no more coach available and you have to go first class.

Mr. BOYD. Yes, sir.

Mr. SHIPLEY. I wonder how often this is true. I get caught in that situation quite often.

Mr. BOYD. It could be quite often going from Washington to Chicago because American has a very small coach section on its Electras.

Mr. SHIPLEY. Can you not do something about that?

Mr. BOYD. No, sir. The law does not permit us to.

Mr. SHIPLEY. It is rather a personal problem with me. When I go out, many times I have made reservations coach and end up getting there late and the coach is resold and I am sitting up first class for coach fare with no extra charge. I do not know whether it is legal.

Mr. BOYD. If there is an oversale, if it is the company's mistake, it is legal.

Mr. SHIPLEY. I am sure it would be. That is all the questions I have, Mr. Chairman.

Mr. THOMAS. Before we conclude our general session with these distinguished gentlemen, I hope Mr. Jonas and Mr. Shipley and Mr. Evins will go into the question of the general workload of the Board and see what their big route cases are. This has always been troublesome.

Some of these cases, through appeals, maybe through no fault of the Board, would last 2 and 3 and, some of them, 4 years. Let us go into some of these questions with the Board. Does anybody have any more questions?

Mr. JONAS. Mr. Chairman.

Mr. THOMAS. Mr. Jonas.

CAB AND FAA RESPONSIBILITIES FOR ACCIDENT INVESTIGATION

Mr. JONAS. I have just one. You may prefer to take it up when we get to Safety. I am familiar with the jurisdiction the Board has under this section of the act dealing with investigations. However, you have a divided responsibility, and the FAA investigates accidents in certain cases. Is that by order of the Board or assignment of that responsibility by the Board?

Mr. BOYD. Yes, sir; that is PN–13, which came about as a result of the Board's lack of personnel resources to do the work itself several years ago.

Mr. JONAS. You concluded that the FAA had unlimited resources, which is about a correct assumption I might add.

Mr. BOYD. They have more than ours. We have been trying to get our hook unhung ever since, without any success.

Mr. JONAS. There is bound to be some duplication of efforts, is there not, and lost motion? You have FAA charged with the responsibility of investigating accidents that do not result in fatalities and you have one other little difference there, a 12,000-pound limit.

Mr. BOYD. Yes, sir.

Mr. JONAS. Then the Board investigates all other accidents. You finally wind up with your investigators and FAA investigators at the same accident, do you not?

Mr. BOYD. Yes, sir; on major accidents. However, in those cases FAA works under our supervision.

Mr. THOMAS. Does not the act say that probable cause shall be established by the Board?

Mr. JONAS. That is right.

Mr. BOYD. Yes, sir.

Mr. JONAS. Even in the cases where the Board has transferred its authority to FAA, you still have to accept their findings of fact and make a determination of probable cause?

Mr. BOYD. Yes, sir.

Mr. JONAS. You say they do that under your supervision. They have their own supervisory force, too. It strikes me you have an extra layer of people involved.

Mr. BOYD. Of course, FAA response to this is that accident investigation of the light plane, nonfatal accidents is strictly an additional duty, that if this were all turned back to us, it would not save a man in the FAA because they are flight inspectors and things of that nature, and they just pull whoever happens to be closest apparently, and he goes out and fills out a form and asks questions, then sends the material in to the Board, and we take that material. If the information is complete, we make a finding; if it is not, we go back to the FAA and say, "How about finding out thus and so?" That is what happens on light plane accidents. Where there is a fatal accident, the Board is involved in every one of them.

On the major accidents, FAA comes in and participates on the Board's teams. There is no question in my mind about the legitimacy of what the FAA does in that case because they send specialists in on the big cases, by and large, to see if there is anything found on the site at the time which would lead them immediately to either ground some airplanes or take some action of that kind prior to the more methodical and thorough approach the Board takes in reaching the probable cause conclusion.

Mr. JONAS. Every investigation of an accident is bound to involve not only structural defects but operations and crew capability, and all those things; is that right?

Mr. BOYD. In the first instance, yes, sir.

Mr. JONAS. There is a direct responsibility of the FAA.

Mr. BOYD. Yes, sir.

Mr. JONAS. It strikes me that the act is inconsistent in the two sections. I do not know who ought to be doing it, but I cannot see much justification for both agencies being involved.

Mr. THOMAS. The operating people become judge and jury of their own activities. It does not ring a bell with me. Maybe the operating people, whose duty it is, ought to have this.

Mr. JONAS. Why do you bring FAA into big accidents that involve fatalities?

Mr. BOYD. I do not mean to be facetious, but we cannot keep them out. The law gives them the right to be in. I do not want to give the impression that we are not happy to have them. It is very helpful, for example, to have one of the FAA Boeing test pilots on an accident involving a Boeing aircraft, because he can give us a great deal of information that we would have to do some plugging around to find ourselves.

Mr. JONAS. I guess where you are considering a matter of safety, it is like a research program. You have 10 people researching 1 particular subject and 9 of them may fail. If one succeeds and it is important enough, I guess the whole cost is justified.

Last year Mr. Halaby told us, for example, that this Northwest airplane accident in Miami, the Board was there, FAA was there, Boeing was there, Northwest Airlines had their investigators. Were you not all falling over yourselves? How could all of you operate effectively?

Mr. BOYD. Absolutely not, Mr. Jonas. The others are there, but they are there to be of assistance. The Board has complete control of the accident investigation, and they cannot move a hand without the approval of our CAB investigator in charge.

Mr. JONAS. On the other hand, you cannot do anything about the ones where you find what is wrong. All you can do is recommend to the FAA.

Mr. BOYD. Yes, sir; that is right.

Mr. JONAS. It sounds like a loose kind of an operation.

Mr. BOYD. Before you came in, I was citing some statistics about the recommendations we have made, between 80 and 85 percent.

Mr. JONAS. You said about 85 percent of 18 of your recommendations were accepted. That is good reading. When you analyze that figure, it turns out they accepted 14 out of 18.

Mr. BOYD. That was for a very limited period. We are putting it on the basis of the annual.

Mr. JONAS. I understand.

Mr. THOMAS. Gentlemen, let us recess until 1 o'clock.

AFTERNOON SESSION

Mr. THOMAS. Gentlemen, will the committee please come to order?

BOARD MEETINGS

Let me ask you one or two general questions, if I may. Give us a quick rundown, Mr. Chairman, on the Board's activities. What are some of your main headings? How often does the Board meet? How far behind, if you are behind, are you, or do you consider yourself current with your workload? Tell us something about the activities of the Board. Do you have regular meeting days, regular submission days?

Mr. BOYD. We meet about three times a week on the average.

Mr. THOMAS. Do you have a regular schedule for meeting days or is that the call of the Chair?

Mr. BOYD. That is at the call of the Chair. We do it on the basis of calendared items, items calendared for Board discussion. A great deal of our work is done through notations and one or more members might want an item calendared rather than voting on it by notation, so as these build up we have calendar meetings of the Board and the calendar agenda is established through meetings of the members' assistants so that we do not get something on the calendar where a member is not prepared. Then, of course, we have meetings such as we had yesterday with the transpacific and transatlantic carriers, Post Office Department and Department of Defense, to discuss the procedures for attempting to reduce the mail rates. Then, occasionally we have emergency meetings which relate to somebody having to have something or thinking they do right away. Then we try to take care of that. But on the average we will have one meeting a week in executive session, where we try to reach decisions in cases that have been argued in the recent past. So we meet about three time a week on the average.

MAJOR ROUTE CASES

Mr. THOMAS. Do you have any big route cases pending?

Mr. BOYD. Yes, sir. We have got one—we have got two major cases.

Mr. THOMAS. I notice here under "Operating practices" on pages 24 and 26, you say:

> While there are a few areas in the United States without single-carrier or competitive service, the major markets in the country enjoy two-, three-, or four-carrier competition. As a consequence of the jet equipment program, which will be virtually completed with delivery of short-range jets in fiscal year 1965, the Board has had to modify the domestic trunkline route structure for all-jet operations. This endeavor has been given priority over new trunkline service proposals and is being implemented under several programs which will continue in fiscal year 1965, including regional airport cases; review of voluntary arrangements for transfer of smaller points and route segments from trunk to local service carriers; trunkline deletions; and review of markets or areas with multiple competition to determine if such competition is uneconomic. In addition, consideration will be given to the few areas where there may be a need for single-carrier service or first competitive service.

You list here foreign cases, international cases.

Mr. BOYD. The international case we mentioned.

Mr. THOMAS. What about your big domestic routes? What are they? You said you had two.

Mr. BOYD. I am sorry. I misspoke myself, Mr. Chairman. We do not have major domestic route cases today.

INTERNATIONAL ROUTE CASES

We have two major international route cases. The one we have listed here, the United States-Caribbean-South American investigation is nothing less than a mare's nest. We have got more complications in this case than you can imagine. We have got the Pan American Panagra antitrust complaint in the middle of that and the entire service to and from South America.

Mr. THOMAS. I do not understand why the Board gets involved in this so much. After all, whether a U.S. plane is permitted to fly over foreign soil depends not on action taken by the Board, but upon the foreign government and the other side of the coin is, of course, when the foreign government comes in here, the duties are reciprocal with that of the State Department. It is my understanding the State Department or rather the President of the United States enjoys the last say, but all the spadework and the hard work has to be done by the Board; is that about correct?

Mr. BOYD. Yes, sir.

CAB JURISDICTION OVER INTERNATIONAL ROUTES

Mr. THOMAS. How will these international cases bother you so much? You say on page 25 [reading]:

> Over the past several years, the Board has instituted investigations reviewing U.S.-flag services in every area of the globe. Major staff activity in all these cases will probably have been completed before fiscal year 1965 except in the Latin America area, where procedural action has been delayed pending expansion of the case to include Caribbean area applications and has been reconstituted as the United States-Caribbean-South American Investigation. In terms of number of issues and applications, it is the largest review of U.S.-flag international services in recent years. The proceeding should move to hearing in fiscal year 1964 and conclude in fiscal year 1965.

Why should that give you so much trouble? You do not tell them whether they can fly overseas. They have to get that authority from the foreign governments with which they deal.

Mr. BOYD. That is correct, but they also have to get authority from us. It does not make a hoot whether they get authority from Venezuela. They still cannot fly without authority from the CAB.

Mr. THOMAS. I understand you have to let them get out of the country.

Mr. BOYD. Yes, sir.

Mr. THOMAS. Why do you go at that so intently?

Mr. BOYD. There are two reasons, Mr. Chairman: One is, the Ashbacker theory, which makes it impossible for us to limit the case to the size case we could handle with our resources adequately and expeditiously; the other is that the Supreme Court of the United States said that the CAB has jurisdiction over the antitrust aspects of the complaints between Panagra, Pan American, and W. R. Grace & Co., which goes to the fitness of both Panagra and Pan American to hold certificates.

Mr. THOMAS. So it is a question of fitness and not operating at all, then, and where they operate.

Mr. BOYD. On the antitrust part.

SUMMARY OF BUDGET ESTIMATES

Mr. JONAS. Let us turn to the justification book. There is a very fine statement under the tab marked "Statement of Highlights Summary" which summarizes a good part of the opening statement of the chairman. Without objection, I think we ought to put this entire highlight statement in the record, because it sets out the high-

lights of the Board's activities and the justification. That will include pages 2 through 16.

(The pages follows:)

CIVIL AERONAUTICS BOARD—SUMMARY AND HIGHLIGHT STATEMENT, 1965 BUDGET ESTIMATES

The Civil Aeronautics Board is an independent regulatory commission, responsible for regulation of the economic aspects of U.S. air carrier operations, both domestic and international, and investigation and analysis of accidents involving civil aircraft.

The budget estimates of the Board for the fiscal year 1965 are summarized in the following table:

Appropriation	1964	1965	Difference, increase (+) or decrease (−)
Salaries and expenses (adjusted)	$10,228,000	$10,800,000	+$572,000
Payments to air carriers: (Liquidation of contract authorization), includes for 1964 a proposed supplemental appropriation in the amount of $5,000,000	84,000,000	82,824,000	−1,176,000
Total	94,228,000	93,624,000	−604,000

The Federal Aviation Act of 1958 states that the fundamental responsibility of the Board is to promote, encourage, and develop civil aviation and "an air transportation system properly adapted to the present and future needs of the foreign and domestic commerce of the United States, of the postal service, and of the national defense;" and in the exercise and performance of its powers and duties, shall consider as being in the public interest "regulation of air transportation in such manner as to recognize and preserve the inherent advantages of, assure the highest degree of safety in, and foster sound economic conditions in, such transportation, and to improve the relations between, and coordinate transportation by, air carriers; * * *"

SALARIES AND EXPENSES

As shown above, the Board is requesting an increase of $572,000 in its appropriation for salaries and expenses in 1965. This increase is to cover the addition of 12 positions for safety activities, increased costs to cover mandatory within-grade salary advancements and the additional one-half year's cost of pay increases, effective January 5, 1964, under Public Law 87–793, partially offset by the elimination of 26 positions in several areas of the Board's functions.

The justifications generally reflect needs related to an increased workload and, in most areas, increased productivity is indicated for both 1964 and 1965 over the experience of 1963. In this connection, the activity justifications include a new type of schedule showing the volume of workload receipts, workload completions, workload on hand at the end of the year and productivity ratios in terms of workload completions per technical position during each of the 3 fiscal years.

The workload of the Board reflects the continuing growth and changing characteristics of the air transportation industry and for the most part, is generated by developments in the industry and specific applications which are laid before the Board by industry sources.

The policies and projected program on which the budget estimates are based are set forth in the following paragraphs:

The award and control of operating authorities and practices

The major functions include (*a*) granting authorizations of various types to U.S. carriers to engage in interstate and foreign air transportation; (*b*) issuing permits to foreign air carriers authorizing them to engage in air transportation between the United States and foreign countries, and also authorizing the navigation of foreign civil aircraft in the United States for other purposes; and

(c) maintaining regulated competition by passing on mergers, acquisitions of control and interlocking relationships involving air carriers, and on contracts for cooperative working arrangements between air carriers. The Board also has jurisdiction over unfair competitive practices of air carriers and ticket agents selling air transportation.

In this area the projected program anticipates a continued high level output both of formal and informal proceedings but with a smaller staff. The projections therefore are based upon anticipated success in finding ways both to shorten or reduce the burden of proceedings as well as to provide additional areas of exemption from regulation where routine matters are involved.

The major program objectives and plans in this area are:

1. To continue the Board's program to modify the domestic trunkline route system to provide an optimum structure for all-jet operations;
2. Development of a program for processing the more significant route applications promptly;
3. To continue the program of formally examining regional airport possibilities;
4. To continue the use-it-or-lose-it program;
5. To continue the route realinement program for local service carriers;
6. To eliminate individual flight authorization procedure in most major areas;
7. To maintain a close surveillance over supplemental carriers;
8. To process promptly freight forwarder applications;
9. To undertake studies which will involve possible revision of Board policy with respect to entry into the freight forwarder field and with respect to forwarder financial responsibility.

Rates and fares

The major functions include (a) authorizing the payment of subsidy to certain air carriers where required for the development of an adequate air transportation system; (b) exercising jurisdiction over tariffs and the rates and fares charged the public for air transportation; and (c) establishing rates for the carriage of mail by air carriers.

The major program objectives in this area for 1965 include:

1. In the subsidy rate area:
   (a) Working toward a continuing reduction of the overall subsidy level in fiscal 1965, with additional substantial declines anticipated in 1966, 1967, and 1968.
   (b) Make further progress toward a current subsidy docket, which envisions that subsidy cases on hand by the end of fiscal 1965 will be about half the number on hand at the end of 1963.
2. In the commercial (passenger and property) rate area:
   (a) To keep current with the increasing flow of tariffs, complaints, agreements, exemptions, and petitions.
   (b) To reduce the backlog of pending rate and fare investigations.

International aviation agreements

The major functions include consulting with and assisting the Department of State in the negotiation, drafting, and interpretation of agreements with foreign government for the establishment, development, and maintenance of international air routes and services.

The President's April 1963 statement of policy regarding international aviation has created policy modifications and recommendations which will (1) result in an increased number of bilateral negotiations with foreign governments, (2) require an increase in scope of analytical preparation, (3) require analyses of origin and destination statistics exchange with foreign countries; and (4) require more detailed programing. This program also involves exploring the exchange of aviation benefits, other than route grants, or nonaviation benefits, whenever possible, for concessions of routes and air transport rights to the United States.

Economic enforcement

The work performed involves the handling of passenger and shipper complaints; the investigation of alleged or suspected violations; and the taking of enforcement action, formal administrative proceedings and prosecution in the enforcement action for the imposition of sanctions and achievement of compliance by informal courts.

Enforcement activity, in the past few years, has moved into new, complex, and diverse areas. This trend is expected to continue. In 1964 and 1965, it will be necessary to handle an increasing volume of work generated from outside sources; i.e., passenger and shipper complaints and complaints from competing carriers and other entities subject to Board jurisdiction. In addition, there are specific problems which will require extraordinary effort, including such cases as the *North Atlantic Rate-Cutting Investigation*, the complaint of *Hughes Tool Co.* v. *Metropolitan Life Insurance Co., et al.*, and the *Panagra-Pan American-Grace Investigation.*

Safety activities

The major functions include the investigation of accidents involving civil aircraft and reporting the facts, circumstances and probable cause thereof; ascertaining what will best tend to reduce or eliminate the possibility of or recurrence of accidents by conducting studies and investigations; and making recommendations to prevent accidents and promote safety in air navigation.

The Board's air safety program for 1965 is based on (1) continuation of efforts to improve the quality and efficiency of aircraft accident investigation, (2) continuation of accident prevention and safety promotion activities at approximately the 1964 level, (3) an increase in the number of public hearings in connection with accidents from six in 1964 to nine in 1965, and (4) training of the technical safety personnel to the extent this can be achieved in relation to the overall workload. It is planned that manpower equivalent to approximately 16.9 positions, an increase of about 7 positions over 1964, can be devoted to training during 1965. Keeping safety technical personnel abreast of the technological changes is one of the Board's most critical problems.

Other activities, essentially in support of the preceding substantive program areas:

The major functions include providing technical advice and assistance to the Board and staff in case proceedings; providing basic statistics; performing economic studies; preparing economic forecasts; making evaluations of air transport and other economic trends needed by the Board in planning and performing its regulatory and developmental functions; the design, prescription, and administration of uniform systems of accounts and reports; field audit of carrier accounts and records and desk audit of carrier reports; and the development and operation of a centralized automatic data processing system.

The major objectives for areas under this heading in 1965 are:

1. In the accounting regulations and audits area:

   (*a*) To liquidate the backlog of work in the electronic computer area which has accumulated during the 1963–64 conversion period. It is planned to program additional work areas on the computer during 1965.

   (*b*) The field audit program will be directed toward auditing all subsidized and nonsubsidized carriers on an annual basis, including the provision of information necessary for determining the financial fitness of the supplemental carriers, although some reduction in scope of audits may be necessary.

2. In the statistical and research area:

   (*a*) To fulfill essential requests of the Board and its staff for technical assistance in statistical and economic analyses required in formal proceedings, especially assistance in connection with hearing examiners' initial decisions and Board opinions, and in other Board programs;

   (*b*) To make wider and more effective use of electronic data processing to broaden the content and speed up availability of the basic statistics needed in the Board's work;

   (*c*) To convert the Board's three-passenger origin-destination surveys to an integrated program on a common basis and provide additional data needed by Board and industry users; and

   (*d*) To complete studies of air transport demand and long-range forecasts of passenger traffic and capacity, develop new series of seasonally adjusted traffic and capacity data, and undertake analyses of the potential impact of supersonic aircraft on airline profits and financial condition.

PAYMENTS TO AIR CARRIERS

Subsidy payments are estimated to total $85,478,000 during 1964 and $82,824,000 in 1965, a decrease of $2,654,000. However, the $85,478,000 for 1964 is $5 million more than the $79 million appropriated for 1964 after adjustment for the carryover from 1963 of an unexpended balance of $1,478,000. Therefore, a supplemental appropriation for 1964 is projected in these estimates in the amount of $5 million.

The decrease of $2.6 million in estimated subsidy payments during 1965, compared with 1964, represents a reduction of $900,000 for the nonrecurring costs of rates issued during 1964 that were applicable to past periods, a reduction of $1.3 million in subsidy requirement of the local service, helicopter, Alaskan and Hawaiian operations, an increase of $1.4 million to annualize the Northeast rate effective for only part of fiscal 1964, and an anticipated refund for past periods totaling $1.8 million.

The estimated subsidy accrual for 1965 of $83.2 million represents a decrease of $1.8 million compared with $85 million for 1964. The estimated subsidy accrual for local service carriers for 1965 of $67 million represents a reduction of $800,000, from the revised 1964 estimates. The estimate of $67 million for 1965 provides for a full year of operation of the routes newly awarded to Trans-Texas. Excluding this factor, the 1965 estimate is some $1 million less than the 1964 estimate.

The estimate for 1965 is tentative at this time in that: (1) it is based upon existing policies of the Board and does not reflect any increases or decreases that would stem from the implementation of the programs set forth in the Board's June 1963 report to the President, since the status of such programs has not been determined finally at this time; and (2) while the Board and its staff are currently reappraising and reassessing the economic needs of the 13 local-service carriers for the purpose of establishing a new final-class subsidy rate during 1964, the outcome of the subsidy proceedings in which the revised rate is to be established will not be known until a subsequent period of time. These two factors render the $67 million estimate a tentative one, subject to revision upward or downward to accord with further developments in these two areas.

Subsidy for the present three helicopter operations in 1965 is estimated at $3 million, or $1.3 million less than the amount appropriated for 1964. The three helicopter carriers have been operating under temporary rates since July 1, 1963. The Board's staff is currently exploring with the carriers, on an informal basis, the scope and character of operations which may be possible at a subsidy cost not in excess of $4,300,000 as specified in the 1964 appropriation act.

Mr. JONAS. Summarizing that so far as dollars are concerned, the record shows that for 1964, for salaries and expenses, you had $10,228,000. You are asking for $10,800,000 in 1965, or an increase of $572,000.

Those increases are itemized in the summary statement and show that in the main they involve additional half year's cost of salary increases voted last year; that amounts to $194,000; mandatory within-grade salary increases, amounting to $172,400; increase of approximately 17 man-years of employment as a result of reduced lapses, $185,500; and $213,000 is for increased program activities; is that correct?

Mr. BOYD. Yes, sir.

NET DECREASE IN EMPLOYMENT

Mr. JONAS. You have a net decrease of 14 in employment.

Mr. BOYD. That is right, sir.

Mr. OSTERTAG. Will the gentleman yield?

Mr. JONAS. Yes.

Mr. OSTERTAG. In other words, Mr. Chairman, on the point that Mr. Jonas just raised, the increase is in part due to the creation of 12 new positions in the safety field, but it is offset to a certain extent by the elimination of 26 positions?

Mr. BOYD. Yes, sir.

Mr. JONAS. Any questions on this summary?

USE OF NEW SAFETY POSITIONS

Mr. SHIPLEY. Mr. Chairman, one question on the 12 new positions. What will they contribute to your safety activities other than what you have been doing? Will they just be a buildup of your entire program or what?

Mr. BOYD. They will provide seven people, Mr. Shipley, seven bodies for training, which we do not now have, so we will have seven people available to put into training, not necessarily the seven we hired, but free seven people from jobs for training, four for accident prevention activities and one to try to cope with the backlog in our safety analysis activities, accident analysis activities.

Mr. SHIPLEY. This will be a training program so they can go to the schools you have?

Mr. BOYD. Yes, sir.

NATIONAL AIRCRAFT ACCIDENT INVESTIGATION SCHOOL

Mr. SHIPLEY. One other question on the school, if I may. Who takes advantage of this school?

Mr. BOYD. As I stated this morning, we ran one prototype class to see whether we had the right curriculum and it was being properly presented.

Mr. SHIPLEY. I know you said that. I meant besides FAA employees or CAB employees, whatever it may be. What other groups in the Government take advantage of this.

Mr. BOYD. We have only run the one class. What we propose is that in the future, as the thing gets rolling, which it will start to do in March, we will then offer to permit members of the Armed Forces and foreign nationals who are involved in accident investigation and other private U.S. individuals who are interested, for example, ALPA, the Airline Pilots Association has advised us that they would like to put people through that school.

Mr. SHIPLEY. But as of today they are not in it.

Mr. BOYD. No. We are just getting cranked up. We are particularly concerned about getting foreign nationals in because one of the great problems we have in accident investigation is that a U.S. manufactured aircraft, or a U.S. operated aircraft sometimes crashes in a foreign country and then we are in some cases unable to get the information about it to a considerable extent, we think, because the foreign nationals who have the responsibility for accident investigation do not have the competence to do the job and they are not willing to let us come in to see their inadequacies, so if we can get them trained

to a level of competency where they won't be ashamed to have us see how they operate, then we think we will open up new vistas of information.

Mr. SHIPLEY. How many hours is this present school and when was the last class you had?

Mr. BOYD. I think it was 8 weeks—6 weeks.

COST OF SCHOOL

Mr. SHIPLEY. Do you have a figure on the cost, or what it costs per student?

Mr. BOYD. Yes, sir. I think we do. Mr. Allen, who is the Deputy Director of our Bureau of Safety.

Mr. ALLEN. Sir, we do not have a breakdown per student right now. The only breakdown that I can give you at the present time is the overall nonsalary fund required, $16,000 from the Bureau of Safety. The Federal Aviation Agency matches a like sum. Right now it is very difficult to cost out because there are several nonrecurring costs involved—training aids, things of this nature, that we are procuring. We feel that after about the second year of operation, our $16,000 will be reduced by half or three-fourths.

Mr. SHIPLEY. Would you bring that to the committee next year if you can, if you have a further breakdown on it?

Mr. ALLEN. Yes, sir.

INCREASE IN AVERAGE EMPLOYMENT AND DECREASE IN POSITIONS

Mr. OSTERTAG. Mr. Chairman, going back to salaries and expenses, it shows an average employment of 848 for 1965 as against 847 for last year. That actually is an increase of one for average employment, despite the fact that you are eliminating 26 positions and creating 12.

Mr. BOYD. That is right, sir.

Mr. OSTERTAG. How do you account for that?

Mr. BOYD. Because we are reducing the number of appropriated positions.

One of the things that is involved here is that we had 886 authorized and 872 maximum of positions. That was the base we worked from, the 872. That is set forth on page 16.

Mr. OSTERTAG. That is th maximum of persons.

Mr. BOYD. I said positions.

Mr. OSTERTAG. But that is not average employment.

Mr. BOYD. No, that is right.

Mr. OSTERTAG. Your average employment has increased by one?

Mr. BOYD. That is right, sir.

SUMMARY BY OBJECT CLASS

Mr. JONAS. While we are on that subject, let's put this summary sheet on page 18 in the record.

(The page follows:)

CIVIL AERONAUTICS BOARD—SALARIES AND EXPENSES, BUDGET YEAR 1965

Summary of estimated obligations

	Actual, 1963			Estimate, 1964 (adjusted)			Estimate, 1965		
	Maximum number of positions	Average number of positions	Dollar cost	Maximum number of positions	Average number of positions	Dollar cost	Maximum number of positions	Average number of positions	Dollar cost
Personnel compensation and benefits:									
Personnel compensation:									
Permanent	884	836	$7,490,855	886	847	$8,207,200	872	848	$8,621,600
Other									
Total	884	836	7,490,855	886	847	8,207,200	872	848	8,621,600
Personnel benefits			547,527			596,500			626,000
Total			8,038,382			8,803,700			9,247,600
Other objects:									
Travel and transportation of persons			554,697			673,500			705,200
Transportation of things			12,752			20,900			22,200
Rents, communications, and utilities			271,296			289,900			318,100
Printing and reproduction			89,125			88,600			88,600
Other services			148,160			189,400			244,400
Supplies and materials			101,845			102,500			108,800
Equipment			49,426			58,000			63,600
Insurance claims and indemnities			1,315			1,500			1,500
Total			1,228,616			1,424,300			1,552,400
Total obligations			9,266,998			10,228,000			10,800,000

Mr. JONAS. That is a summary of obligations for salaries and expenses. It shows the breakdown there, as mentioned by Mr. Ostertag, average number of positions last year, 847, estimated average number this year, 848, which is an actual increase of 1 but when you consider it on the basis of appropriated positions, the figures are slightly different.

Mr. THOMAS. Gentlemen, off the record.

(Discussion off the record.)

INCREASED TRAVEL COST

Mr. JONAS. While we are looking at page 18, it is interesting to note that every other object goes up. You are doing a lot of traveling. This increases from $554,000 in 1963 to $673,000 in 1964 to $705,000 in 1965. Why do you continue to increase travel?

Mr. BOYD. Yes, sir. That is one of the things that is bound to come about. As the operation grows, this comes about. Let me give you one example, Mr. Jonas. We have estimated this morning that we have saved for the American traveler $50 million this year on international fares, across the North Atlantic. Part of what we did in that connection was to make two trips to Europe to talk to the European governments, in addition to which we had one or two observers at three IATA conferences, all of which were held outside the United States, so we did expend more money.

If you look at it on a return basis, I think the U.S. citizen got a pretty good return for that money. Also, a portion of this obviously goes to safety and we are as you can imagine vitally interested in what happens to American aircraft wherever there is an accident, so we are sending people out when there are accidents; also we have aircraft in operation in the United States that were manufactured abroad, and when something comes up we sometimes have to send some of our people to the manufacturing plant to set up tests and things of that nature.

INCREASED COST OF COMMUNICATIONS

Mr. JONAS. Your communications are up, too. What are you doing, telephoning more?

Mr. BOYD. That is primarily the GSA switchboard charge. The GSA charges have gone up. This is set forth in detail in each one of our subheadings.

Mr. JONAS. Is this increase attributable entirely to that? Do you have any increase in rents or utilities?

Mr. BOYD. There is a slight increase——

Mr. JONAS. In utilities?

Mr. BOYD. Yes, sir. I think that is primarily what it is, the GSA.

Mr. JONAS. You reimburse GSA. That is the GSA building, most of it?

Mr. BOYD. Yes, sir.

SUMMARY BY ACTIVITY

Mr. JONAS. Let us put page 19 in the record.
(The page follows:)

Analysis by activities

Budget activity	Actual, 1963	Appropriation, 1964 [1]	Additions	Total estimate, 1965
1. Economic regulation:				
(a) Operating authorities and practices	$908,325	$998,900	$27,300	$1,026,200
(b) Rates and fares	877,436	955,400	25,000	980,400
(c) International aviation agreements	247,062	265,900	5,100	271,000
(d) Economic enforcement	363,659	385,600	20,400	406,000
(e) Hearing activities	556,338	573,700	24,500	598,200
(f) Accounting regulations and audits	1,324,067	1,472,400	63,800	1,542,200
(g) Statistical and research	399,595	460,900	23,800	478,700
Total	4,676,482	5,112,800	189,900	5,302,700
2. Safety activities	2,318,698	2,670,300	362,600	3,032,900
3. Board adjudication, executive and legal staff activities:				
(a) Executive staff activities	864,152	906,000	2,300	908,300
(b) Legal staff activities	606,876	665,600	15,400	681,000
Total	1,471,028	1,571,600	17,700	1,589,300
4. Administrative services activities	800,790	873,300	1,800	875,100
Total, all acivities	9,266,998	10,228,000	572,000	10,800,000

[1] Adjusted to exclude transfer to "Operating expenses, Public Buildings Service, GSA," $12,000.

COST OF ECONOMIC REGULATION

Mr. JONAS. This contains an analysis by activities. It breaks down your salaries and expenses by activities. Economic regulation accounts for about half of your total budget; is that correct?

Mr. BOYD. Yes, sir.

Mr. JONAS. You have seven subheads under that, operating authorities and practices, rates and fares, international aviation agreements, economic enforcement, hearing activities, accounting regulations, and audits and statistical and research, a total of $5,302,700, up substantially over 1963 and up a couple of hundred thousand for 1964, an increase in each one of those activities, I believe.

Mr. BOYD. That is salaries, Mr. Jonas, yes, sir.

Mr. JONAS. I understand, most of which is pay increase and the in-grade promotions to which you have already alluded.

Mr. BOYD. Yes, sir.

Mr. JONAS. That is a good table. It contains an analysis of those things.

OPERATING AUTHORITY AND PRACTICES

Mr. JONAS. Let's look at "Operating authority and practices." That is your first big activity under economic regulation; is that correct?

The purpose and objectives of this activity are set forth there in the first paragraph. I think it would be well to include that page in the record.

(The page follows:)

OPERATING AUTHORITIES AND PRACTICES

The Bureau of Economic Regulation performs the functions of this activity.

I. Purpose and objectives

To recommend action with respect to the authorization of routes and other services required by the scheduled air carriers, and the authorization of supplemental, charter, and indirect air carrier services, and with respect to agreements between air carriers, thereby providing for air route and service patterns, both domestic and international, which will further the economic soundness of the air transport industry; to assure proper competitive relationships in the aviation industry; to maintain the quantity and quality of services required by the public, the postal service, commerce, and the national defense; to assist in the economic integration of new and improved equipment and the development of new types of traffic and services; and to assure sound and economic supplemental classes of air transportation services through the regulation of such carriers and activities as: supplemental air carriers, air taxi operators, transatlantic and other charter services, and noncommon carriage flights by foreign registered aircraft.

For the fiscal year 1965, the major program objectives of this activity are (1) to continue the Board's program to modify the domestic trunkline route system to provide an optimum structure for all-jet operations; (2) to develop a program for processing the more significant route applications promptly; (3) to expedite consideration of merger applications; (4) to continue the program of formally examining regional airport possibilities; (5) to continue the use-it-or-lose-it program; (6) to continue the route realinement program for local service carriers; (7) to eliminate individual flight authorization procedure in most major areas; (8) to maintain a close surveillance over supplemental carriers; (9) to process promptly freight forwarder applications; and (10) to undertake studies which will involve possible revision of Board policy with respect to entry into the freight forwarder field and forwarder financial responsibility, and (11) to continue emphasis on the emergency preparedness function.

Financial requirements

	Actual, 1963	Estimate, 1964	Estimate, 1965	Increase
Permanent positions	98	98	94	−4
Average number of all employees	91.8	93.5	91.7	−1.8
Obligations:				
Personnel compensation and benefits	$859,067	$941,700	$963,600	$21,900
Other objects	49,258	57,200	62,600	5,400
Total	908,325	908,900	1,026,200	27,300

Mr. JONAS. Financial requirements show you have 94 people engaged in that activity, "Operating authorities and practices."

Mr. BOYD. Yes, sir. That is down four from last year.

Mr. JONAS. That is one of the places you made a reduction.

Mr. THOMAS. This is his biggest bureau.

Mr. JONAS. That is the biggest bureau. It will cost $1,026,000 to operate, an increase of $27,300, despite the fact that you reduced permanent positions by four.

Inviting your attention to page 23, Mr. Chairman, what is that note down there under "Justification, staff requirements"? You say:

Of a total of five positions formerly reported in this activity, three positions are now included in the administrative services activities as a result of establish-

ment of a central file function in the Office of Administration and two positions are included in the "Executive staff" activity.

Mr. BOYD. Yes, sir.

Mr. JONAS. Does that have anything to do with your decrease of four permanent positions?

Mr. BOYD. No, sir. The whole purpose of this is to say we took these five people out for actual 1963 and estimate 1964. They would have shown 103 there instead of 98, but we transferred those by virtue of establishing a central file system and all this means is that we wanted to give you comparable statistics.

Mr. THOMAS. Mr. Jonas, he charged a lot of economic activities against this Bureau. It feeds the information into this Bureau.

COMPUTER STAFF

How many people do you have and are they working on a computer or do they work manually getting out the information and compiling the information on the number of passengers, either landing or taking off at these local stops.

Mr. BOYD. That is all on a computer, Mr. Chairman.

Mr. THOMAS. How many people work on it?

Mr. BOYD. How many people work on the computer?

Mr. THOMAS. I mean on this particular aspect of the computer.

Mr. BOYD. The same number of people who work on the other programs on the computer. How many do we have?

Mr. HORD. Eighteen on the entire computer staff.

Mr. THOMAS. What part of that 18 would you allocate to this job?

Mr. BOYD. Twenty man-hours a month. I am sorry, 20 computer hours a month.

Mr. THOMAS. How many people is that?

Is it half of your 20 jobs, a third, or a fourth of them?

Did you say 20 jobs or 18 people?

Mr. HORD. There are about 20.

Mr. THOMAS. How many people on the computers?

Mr. HORD. Eighteen on the entire staff.

Mr. THOMAS. Would a third or fourth of them be involved in compiling this information on the computer?

Mr. BOYD. I think it is very difficult to figure it that way, Mr. Chairman. Actually less than one-half person full time on this single job.

Mr. THOMAS. How long have you had the computer?

Mr. HORD. A year and a half.

Mr. THOMAS. How many people worked on this particular job before you got the computer working?

How many people got on and off your local service carriers at the various locations?

Mr. HORD. That could be better answered over in BER.

Mr. THOMAS. That is where your bureaus overlap into this operating bureau. Go ahead, Mr. Roth.

Mr. ROTH. I believe, sir, we had two clerical people who were more or less full time in accumulating statistics for the use-it-or-lose-it program.

Mr. THOMAS. How many stops did they have to compute, out of your total number of how many feeder lines do we have in the country?

Mr. ROTH. Thirteen local feeder airlines.

NUMBER OF LOCAL SERVICE STOPS

Mr. THOMAS. How many stops are there? That applies to Alaska, too, doesn't it?

Mr. ROTH. Use-it-or-lose-it policy is on the basis applicable to the 13 local service airlines.

Mr. THOMAS. Not to the Alaskan carriers?

Mr. ROTH. Not as such.

Mr. THOMAS. Or the other one——

Mr. ROTH. I think there are something like 500 local service stations.

Mr. THOMAS. You mean stations or stops, and 2 people take care of the 500, then?

Mr. ROTH. There were about two people, I believe, who were full-time clerks in compiling these quarterly statistics on the number of passengers aboard.

Mr. THOMAS. And then when the information comes in every week or 30 days, how many people are there in addition?

Mr. HORD. We get traffic every 30 days.

Mr. THOMAS. If you had two regular employees when you received your traffic data once every 30 days, how many additional, if any, did you put on besides the two regular?

Mr. ROTH. I think we had these two people working full-time and it took them—it was a slow process——

Mr. THOMAS. Excuse me, gentlemen. That is all I want to know.

Mr. JONAS. We can all agree that there is considerable overlapping.

Mr. BOYD. No, sir. No, sir; I would like to explain this, gentlemen, if I may.

Mr. THOMAS. You may do anything that you want to in here.

Mr. BOYD. It is only because I am sure you all want to know what the facts are.

FUNCTIONS OF THE OFFICE OF CARRIER ACCOUNTS AND STATISTICS

The Office of Carrier Accounts and Statistics is our service organization. If you want to call it overlap, there is overlap, but it is not duplication at all because the function of that office is to compile and provide the statistics that the other offices need for their substantive work. This is the purpose of that office. It also has another function, which is auditing of the carriers, but in the computer section it is purely and simply to run the studies and provide the information that the other bureaus need for their substantive activities, so Mr. Roth, when his trial attorneys in a route case want some information, they forward a request to Mr. Hord's office and say, "Will you prepare these statistics for us." Then Mr. Hord programs that on his computer. It comes out of the computer——

Mr. THOMAS. How long has Mr. Hord been heading this Bureau?
Mr. BOYD. Since about 1946, I believe.
Mr. HORD. 1944.
Mr. BOYD. 1944.
Mr. THOMAS. He is your top economist, too, is he not?
Mr. BOYD. I do not know. I would rather let him—he is a very valuable man but I do not know whether he qualifies as an economist in his own judgment.
Mr. THOMAS. He is an economist and accountant, too. He has been auditing all of these books. I think he has been looking at them a little more carefully for the last 3 or 4 years.
Excuse me, gentlemen. Proceed.

INTERCORPORATE AGREEMENTS

Mr. JONAS. You follow this preliminary statement with a breakdown of the operating offices and this activity. You set out on page 24 a table showing the number of work units and positions assigned to trunkline and international route matters, local service route matters, et cetera, showing the utilization of your 94 employees. What do you mean by number of work units, 3,057 work units under acquisition of control in intercorporate agreement activity?
Mr. BOYD. These are applications or agreements—applications for control or agreements between aviation interests, which are filed with the Board for review and approval. This is primarily a conflict of interest situation.
Mr. JONAS. The work units set out in this table describe the workload of those activities?
Mr. BOYD. Each one of those is a separate application or agreement and some of them are very minor and some are fairly major.
Mr. JONAS. He has language describing the work in each of those offices continuing on through page 30. I do not see any point in listing in the record all of those tables, Mr. Chairman.
Mr. THOMAS. You are right.
Mr. OSTERTAG. It is pretty good information, though.
Mr. JONAS. It sets out the work of the operating authorities and practices offices all right. It is divided into trunklines, international route matters, local service route matters, three or four subheads under that.
Mr. THOMAS. Those bar figures in themselves do not mean a thing unless you spend a lot of time explaining them in narrative.

SUPPLEMENTAL AND SPECIALIZED AIR CARRIER AUTHORIZATIONS

Mr. JONAS. Supplemental and specialized air carrier authorizations—I think we are all pretty familiar with trunkline and international route matters and local service route matters, but supplemental and specialized air carrier authorizations you have not said too much about.
Mr. BOYD. That comes about under the law 87–528, where we were required to issue interim authority.

Mr. JONAS. That is a late amendment, too, 1962.

Mr. BOYD. Yes, sir.

Mr. JONAS. This is a new activity in fact, is it not?

Mr. BOYD. Yes, sir.

Mr. JONAS. I think it might be well to put the paragraph labeled 3, on page 27, and paragraph 4, on page 28, and paragraph 5, on 29, in the record.

(The pages follow:)

3. Supplemental and specialized air carrier authorizations.—This function involves the processing of applications for new and expanded supplemental air carrier authority, freight forwarded authority, and exemption from specific requirements of regulation governing air taxi operations. The workload and staff requirements for this function follow:

Number of work units	Actual, 1963	Estimate, 1964	Estimate, 1965	Increase
Supplemental and other cases completed and in process (formal hearing)	8.0	8.0	7.0	−1.0
Forwarder, supplemental, and other carrier applications completed (without hearing)	91.0	64.0	64.0	.....
Position requirements:				
Hearing cases	3.7	5.3	5.3	.....
Informal applications	5.8	4.6	4.6	.....

Public Law 87-528, enacted by Congress in the summer of 1962, provides for permanent certification of supplemental air carriers. It is anticipated that major effort will be devoted to processing the certificate applications for supplemental air service. Initial steps have been taken to determine the most feasible procedure to follow in processing these applications; and the actual proceeding will begin late in fiscal 1964 and continue at least through 1965. Thus, the estimates for 1964 and 1965 include as four cases, very complex proceedings involving approximately 40 applicants seeking supplemental air carrier authority. These proceedings will require assignment of several attorneys and analysts. In addition to the expanded program for handling supplemental certificate applications, the Board is charged with a duty to maintain close surveillance over the supplemental carriers, including a continuing review of their financial fitness, insurance coverage, and ability to provide safe and adequate transportation services. The proper discharge of these responsibilities will require increased manpower to be assigned to this activity in fiscal 1964 and 1965. However, it is anticipated that this can be accomplished through reassignment of manpower now required to maintain the Board's program for issuance of individual flight authorizations.

Hearings in the *Air Freight Forwarder Authority* case, a case involving major policy decision with respect to entry of surface motor carriers into the airfreight forwarding field, were concluded in fiscal 1963, and Board decision thereon may be rendered around the beginning of fiscal year 1965. Decision in this case will bring to conclusion many applications that have been backlogged. In addition to processing formal and informal cases involving forwarder applications, it is planned to investigate possible revision of Board policy with respect to entry into the forwarder field and with respect to forwarder financial responsibility. These studies will be undertaken as soon as manpower is available and should be in progress no later than the close of fiscal 1964. This function is also participating in coordinated efforts, and will continue in 1964 and 1965, to identify and solve problems in aircargo development. Focus will be placed primarily on the role of airfreight forwarders, and other indirect carriers, especially REA, in the aircargo breakthrough. Problems of air-surface integration and direct surface carrier authorization for airfreight forwarding are now being explored to some extent in the *Terminal Area* case and the *Air Freight Forwarder Authority* case.

4. *Individual flight authorizations.*—This function involves the processing of applications for individual flight authorizations for applicants who hold no

authorization under sections 401 and 402 of the act. The workload and staff requirements for this function follow:

	Actual 1963	Estimate 1964	Estimate 1965	Increase
Number of applications completed without hearing:				
Foreign carrier 1108(b) permits	208	200	200	
Off-route charters by foreign air carriers	507	525	27	−498
Charter exemptions by certificated air carriers	9	8	8	
Exemptions by supplemental and certificated cargo carriers to conduct international passenger flights	58	56	56	
Total	782	789	291	−498
Position requirements	7.0	6.7	5.7	−1.0

With respect to individual flight authorizations, work is proceeding toward removing individual authorization procedure in most major areas. This has been temporarily achieved with respect to transatlantic passenger charters of cargo and supplemental carriers, and it is anticipated that the conclusion, by spring of 1964, of a formal proceeding (*Transatlantic Charter* case) may result in certificating some carriers and dropping others from this market. Following decision in the *Transatlantic Charter* case, action is planned to place off-route charters of foreign air carriers under a blanket system thereby removing this category from individual flight authorization. A reduction of one position is therefore projected for 1965.

It is also anticipated that additional applications for foreign air carrier permits authorizing charter service only will be processed, following the pattern established in 1963 by the Board's decision in granting such a permit to Caledonian Airways Ltd. Portions of part 207, pertaining to charter trips of U.S. certificated route carriers, are under review, particularly with regard to whether restrictions applicable to passenger-cargo and all-cargo route carriers should be modified in view of Public Law 87–528. A notice of proposed rulemaking should be issued in fiscal 1964, and work on this project is expected to continue in fiscal 1965.

5. *Acquisition of control and intercorporate agreement activities.*—This function involves reviewing and preparing recommendations on applications for approval of acquisitions of control, applications for approval of interlocking directorates, and agreements between an air carrier and any other common carrier affecting air transportation. The workload and staff requirements for this function follow:

Number of work units	Actual, 1963	Estimate, 1964	Estimate, 1965	Increase
Hearing cases completed and in process	3	4	4	
Nonhearing cases completed:				
Interlocking directorates and control cases	57	55	55	
Major agreements	279	244	246	2
Other agreements	918	893	876	−17
Blanket exemptions	79	73	76	3
Stockownership reports	1,783	1,800	1,800	
Total	3,116	3,065	3,053	−12
Position requirements:				
Hearing cases	1.2	0.9	0.9	
Informal matters	13.3	13.0	12.4	−0.6
Emergency preparedness function	1.0	1.0	1.5	+0.5

During the past fiscal year, further progress has been made in reducing the backlog of section 412 agreements to 358 at the close of 1963. Although statistically, the number of pending agreements is declining, considerable work remains to be done, particularly on individual industrywide arrangements stem-

ming from air carrier trade association actions. We propose to direct primary attention to such arrangements during fiscal years 1964 and 1965. Within the area of association matters, the airlines' programs affecting related industries, e.g., travel agents and forwarders, have required considerable effort in the past, and we expect that they will continue to do so principally because of the antitrust implications. Otherwise, emphasis will be placed on major traffic agreements, especially those which by their terms are made subject to prior Board approval. It is estimated that with the further reduction in backlog planned for 1964 the workload projected for 1965 can be handled with a staff of approximately 12.4 positions compared with 13 in 1964 and 13.3 in 1963.

Mr. JONAS. What did you start to say, Mr. Boyd? I interrupted you.

Mr. BOYD. This supplemental and specialized air carrier authorization has come about primarily as a result of Public Law 87–528 and involves all of the supplemental air carriers now in this country as well as some not operating, companies——

Mr. JONAS. The law requires you issue certificates to permit such operation?

Mr. BOYD. Yes, sir.

INDIVIDUAL FLIGHT AUTHORIZATIONS

Mr. JONAS. You also are authorized to grant certificates for individual flight authorizations; is that correct?

Mr. BOYD. Yes, sir.

Mr. JONAS. Is that a pretty sizable activity?

Mr. BOYD. We are cutting down on the people in it.

Mr. JONAS. One body?

Mr. BOYD. Yes, sir. We are cutting down 15 percent.

Mr. JONAS. You say:

With respect to individual flight authorizations, work is proceeding toward removing individual authorization procedure in those major areas.

Mr. BOYD. That is right, sir. We are hopeful that we can complete a case on transatlantic charter authority which will provide certificate authority to U.S.-flag operators so they won't need individual flight exemptions, such as they have operated on in the past, with the exception of some seasonal exceptions we gave for four or five of the carriers.

INTERCORPORATE AGREEMENTS

Mr. JONAS. How intensive is your investigation of interlocking directorates, agreements between air carriers and other carriers?

Mr. BOYD. Well, it is very intensive in the sense that all such intercorporate interlocks are required to be approved by the Board, or the Board can waive jurisdiction, and they all have to be filed, I believe under oath, setting forth what the relationships are.

Mr. JONAS. You examine the statements filed and then if your suspicion is aroused, or if investigation seems indicated, you set a case down for investigation?

Mr. BOYD. Yes, sir.

Mr. JONAS. You had four in 1964?

Mr. BOYD. Yes, sir.

Mr. JONAS. How can you estimate you will have four in 1965?
Mr. BOYD. We are just going on the basis of what we had last year.
Mr. JONAS. How many people do you have working in that activity?
Mr. BOYD. We haven't got a breakdown on that. It is not a very major operation, though, in terms of people.
Mr. JONAS. I know, but where are your people listed who do that work? Is that the 13.3, shown on page 24?
Mr. BOYD. On page 29 we have got one person listed, or nine-tenths of a person on hearing cases; that is, the ones that would become formal cases.
Mr. JONAS. On page 24 you show 13.3 people. Is that not correct?
Mr. BOYD. Yes, sir; but that is——
Mr. JONAS. That is the total in that activity.
Mr. BOYD. That is right, sir.
Mr. JONAS. Fewer people than that are engaged in actual hearings?
Mr. BOYD. That is right, about one.

EMERGENCY PREPAREDNESS

Mr. JONAS. I think this concluding paragraph on page 30 setting forth the emergency preparedness activity under Executive Order 11090 should be put in the record, for the information of those who read it.
(The page follows:)

EMERGENCY PREPAREDNESS

Under Executive Order 11090, the President delegated certain emergency preparedness functions to the Board. The major functions to be performed during fiscal year 1965 include planning for an emergency period in the following areas: distribution of aircraft, economic regulation of war air service pattern matters, establishment of air priorities system for the entire Nation, assisting in evaluating requests for aircraft and supporting equipment needed during emergency conditions, and establishment of an executive reservist program. This will require an increase in the effort devoted to this activity equivalent to approximately five-tenths of a position.

Mr. THOMAS. Mr. Jonas, does he absorb that five-tenths of one position or does he get a part of that out of emergency preparedness in OEP?
Mr. BOYD. Except for you gentlemen nobody has done anything for us, Mr. Chairman.
Mr. THOMAS. You mean you do not get in on that overall program over in the Office of Emergency Planning?
Mr. BOYD. We get some assignments but no people or money.
Mr. JONAS. What will you do with this half man you list down there? Where do you get him?
Mr. BOYD. He is the fellow with which we do our halfway jobs, Mr. Jonas.
Mr. THOMAS. At least they absorb him. That is more than 12 other agencies do not do.
Mr. JONAS. That is right.

RATES AND FARES

Mr. SHIPLEY. Let the record show page 32, which explains the purpose and objectives of rates and fares.

(The page follows:)

RATES AND FARES

The Bureau of Economic Regulation performs the functions of this activity.

I. Purpose and objectives

To recommend rates, rate structures, and related practices and services of air carriers, including determinations of subsidy and of rates for carrying U.S. airmail, and make recommendations to the Secretary of Commerce as to Government guarantees of loans to air carriers for purchase of modern aircraft. The basic objectives of these activities are to insure a financially sound commercial air network, for commerce and national interest purposes, through passenger and cargo rate reviews, proceedings, and investigations, and to insure that the public will continue to derive the maximum benefit for each subsidy dollar, with the ultimate goal of reduction of the overall subsidy level by making steady progress toward a current subsidy docket and by continuing review, revision, and reduction of outstanding subsidy rates.

For fiscal 1965, the major program objectives of this activity are a reduction of the overall subsidy level in fiscal 1965 with additional substantial declines anticipated in 1966, 1967, and 1968; further increased staff productivity with progress toward a current subsidy docket, which envisions that subsidy cases on hand by the end of fiscal 1965 will be 26 as compared with 50 on hand at the end of 1963; to keep current with the increasing flow of tariffs, complaints, agreements, exemptions, and petitions in the commercial rate area; to develop factfinding procedures in the cargo rate area, including informal means for presentation of shipper views, to be employed in considering whether to investigate or suspend aircargo tariffs; and to reduce the backlog of pending rate and fare investigations.

Financial requirements

	Actual, 1963	Estimate, 1964	Estimate, 1965	Increase
Permanent positions	87	87	84	−3
Average number of all employees	83.1	83.1	81.9	−1.2
Obligations:				
Personnel compensation and benefits	$844,304	$919,600	$941,200	$21,600
Other objects	33,132	35,800	39,200	3,400
Total	877,436	955,400	980,400	25,000

Mr. SHIPLEY. It covers rates and fares. If I may quote, it says:

To recommend rates, rate structures, and related practices and services of air carriers, including determinations of subsidy and of rates for carrying U.S. airmail, and make recommendations to the Secretary of Commerce as to the Government guarantees of loans to air carriers for purchase of modern aircraft. The basic objectives of these activities are to insure a financially sound commercial air network, for commerce and national interest purposes, through passenger and cargo rate reviews, proceedings, and investigations, and to insure that the public will continue to derive the maximum benefit for each subsidy dollar—

That is a very worthwhile program, I will tell you—

with the ultimate goal of reduction of the overall subsidy level by making steady progress toward a current subsidy docket and by continuing review, revision, and reduction of outstanding subsidy rights.

The financial requirements are $980,400 for 1965, compared to $955,400 for 1964, which is an increase of $25,000. The majority of this increase is $21,600, which is for personnel compensation and benefits, which has resulted by the elimination of three positions, to offset the

cost of within-grade salary advancements and increased pay costs, pursuant to 87–793.

The majority of what is left is about $3,400 and I understand this increase is for travel expenses. There is something else in there; isn't there?

Mr. Boyd. GSA telephone.

STAFF REQUIREMENTS

Mr. Shipley. Let's put in the record pages 33 and 34.

(The pages follow:)

Justification of staff requirements [1]

	1963		1964		1965		Position increase
	Number of work units	Positions	Number of work units	Positions	Number of work units	Positions	
Subsidy rates and guaranteed loans	73	33	106	33	108	31	−2
Commercial rates	50,674	50	50,646	50	53,746	49	−1
Overall rate program direction		4		4		4	
Total		87		87		84	−3

[1] Of a total of 6 positions formerly reported in this activiy, 4 positions are now included in the "Administrative services" activity as a result of establishment of a central file function in the Office of Administration and 2 positions are included in the "Executive staff" activity as a result of a consolidation of certain support functions in the Office of Secretary. The data for fiscal year 1963 has been adjusted to put it on a basis comparable with the data for 1964 and 1965.

The 1965 staff requirement for the rates and fares activity totals 84, which projects a reduction of 3 positions from the staff allocation in 1964.

1. *Subsidy rates and guaranteed loans.*—The basic objective in this area is the reduction of the overall subsidy level by review of outstanding subsidy rates for reopening, processing, and downward revision; and a concurrent, steady progress toward a current subsidy docket. Progress toward a current docket consists of an orderly programing of old past period cases, with the eventual goal of closing out such cases, and the processing and closing of newly reopened cases at reduced subsidy levels without the lapse of an extended period of time.

The Board's program calls for a continuing reduction of the overall subsidy level in fiscal 1965 as compared with 1964, following a decline in 1964 from 1963 (exclusive of the subsidy which was commenced for Northeast's New England services early in fiscal 1964), with additional substantial declines in 1966, 1967, and 1968. Achievement of the program makes it an absolute necessity that there be a frequent reopening on the Board's initiative, and prompt closing by the Board of existing final subsidy rates in fiscal 1964 and 1965 and succeeding years, as well as continued steady progress in closing out the older cases.

The workload and staff requirements for this function are summarized below:

	Actual, 1962	Actual, 1963	Estimate, 1964	Estimate, 1965
Number of work units:				
Final subsidy rates:				
Issued	28	40	68	65
On hand, end of year	24	50	35	26
Temporary subsidy rates:				
Issued	8	5	5	5
On hand, end of year	2	0	0	0
Guaranteed loan matters:				
Processed	27	20	25	30
On hand, end of year	2	2	2	2
Conference waivers granted		8	8	8
Position requirements	41	33	33	31

Final stubsidy rates are fixed for an indefinite period into the future and bear no termination date. Accordingly, as the Board implements the various programs to reduce subsidy (e.g., suspensions under the use-it-or-lose-it policy, the award of profitable routes, etc.), the outstanding final rates must be reopened, processed, and reduced by a final rate order if a reduction is to be achieved. Thus, the forecast workload and estimate of cases processed envisages that, in addition to cases reopened by a small number of carriers for an increase in subsidy, there will be a substantial number of cases initiated by the Board for the purpose of reduction, and that the level of output of final subsidy rates will be substantially increased in fiscal 1964 and 1965 over 1962 and 1963, as shown below:

Fiscal year:	*Final subsidy cases processed*
1962	28
1963	40
1964	68
1965	65

In the face of this increased workload and output requirement, the Board is requesting only 31 positions for 1965, a decrease of 10 positions—or 24 percent—from fiscal 1962.

The combination of the projected increased output and the reduced staff will require even further sharply increased productivity in 1964 and 1965 as compared with 1962, as demonstrated in the following table:

Fiscal year:	*Completions per technical position*
1962	1.9
1963	2.5
1964	3.6
1965	4.0

Mr. SHIPLEY. To go back to page 32, there is a reduction from 1964 from 87 positions—87 positions to 84, which is a reduction of 3.

Mr. BOYD. That is right, sir.

Mr. SHIPLEY. That is in positions.

Pages 33 and 34 cover the justification of the staff requirements. Mr. Chairman, would you go in detail just a moment on the work units listed on page 33 and explain to me what this is, subsidy rates, guarantee rates, and the overall rate program?

Mr. BOYD. The subsidy rates—the work units of subsidy rates or guarantee loans in the case of subsidy consist either of an application by a carrier or an activity by the Board of its own to effect an adjustment in the existing rate of a particular carrier on subsidy and the guaranteed loan is an application for a loan or for a waiver of a loan. We have been occupied and expect to be for the future, the immediate future, on a great many, what we call ad hoc adjustments of the subsidy rates as a result of route changes, where we delete a community, or where we add a segment under our class rate program. This has an immediate effect on the payments to be made to the carrier and without making ad hoc adjustments, in a number of cases the carrier would either get a benefit or a burden that was not intended by the class rate, because it is based essentially on an existing system, and as that system changes there have to be changes made in the subsidy.

Mr. OSTERTAG. Will the chairman yield?

Mr. SHIPLEY. Yes.

SUBSIDY RATES

Mr. OSTERTAG. Mr. Boyd, I am confused with regard to the reference to the rate as it relates to subsidies.

Mr. BOYD. Yes, sir.

Mr. OSTERTAG. Can you define or describe where the relationship is or where the difference lies?

Mr. BOYD. Well, subsidy rate is a method of paying the subsidy. Does that give you an answer?

Mr. OSTERTAG. The rate in which you are making subsidized payments?

Mr. BOYD. As it applies to a carrier and that carrier's system.

We may authorize $4 million to a carrier and that is paid on the basis of rates that are calculated on the type of equipment operated and the number of stations it serves and the number of seats.

Mr. OSTERTAG. What is a rate in a case of that kind? Is it a formula?

Mr. BOYD. Yes, sir. We have a formula under which the carriers are now operating and we are trying to change the formula.

The formula is based on the equipment, it is based on the load factor, and it is based on the number of departures and the number of stations, or the number of departures from the stations.

Mr. OSTERTAG. I realize we are going to get into this whole question of subsidies later in the justifications so I do not want to muddy the discussion with regard to subsidies. The subsidy rate aspect is here before us. I am trying to associate it with subsidies or disassociate it, whichever the case may be.

Mr. BOYD. Let's look at it this way: Maybe this will help clarify it some. Each year the Congress appropriates a total sum of money for subsidy. We have to have some method whereby that subsidy is paid to the carriers, so the method that we have evolved is a formula which applies uniformly to the 13 local service carriers and we pay x cents per available seat-mile flown based on this formula, to the carriers and that, in general, aggregates the total requirement of the carrier for the system it has been certificated to serve, and those, the cents per seat-mile we pay, are called subsidy rates.

Mr. OSTERTAG. In other words, subsidy is applied by mileage rather than any other form?

Mr. BOYD. We have got really a very complicated formula.

Mr. OSTERTAG. I don't want to labor the thing, but go ahead.

Mr. BOYD. The formula is one that provides a dual scale of subsidy rates, by DC–3 equipment on the one hand and other equipment on the other per available seat-mile, with the unit rate—that is, the rate per seat-mile—decreasing as the actual daily departures per station go up. In other words, with more departures your unit rate decreases up to eight departures, after which there is no subsidy paid. This requires, of course, a calculation of load factor which should be generated, and if the carriers do not obtain the load factor which we have in the formula then they are losing money as they increase their departures.

GUARANTEED LOANS

Mr. OSTERTAG. Take guaranteed loans. There is where we make loans and you guarantee them; is that right?

Mr. BOYD. Well, the Government does, we don't. This is done through the Department.

Mr. OSTERTAG. You are the Government in this instance?

Mr. BOYD. No, sir; not the Board.

Mr. OSTERTAG. Why is this in here?

Mr. THOMAS. They changed the law on us about 1½ or 2 years ago.

Mr. OSTERTAG. In other words, the Department of Commerce represents the Federal Government with regard to guaranteed loans.

Mr. THOMAS. These people now do all the work. They used to do all the work and be the guarantor, too, but the Department of Commerce is the guarantor now but the Board does all the work.

Mr. BOYD. We are required to advise the Department of Commerce.

Mr. OSTERTAG. Is there a fund that they use to make good these loans as they might default?

Mr. BOYD. No, sir. There is a provision in the statute that loans can be made to subsidized carriers of an amount up to I believe $10 million per carrier, but so far as I know, there is no money appropriated. There never was money appropriated to the Board.

Mr. OSTERTAG. Our committee chairman said you do all the work and they have the jurisdiction.

Mr. BOYD. Yes, sir.

Mr. OSTERTAG. Is that the sum and substance of it? What work do you do? Do they just take your say-so of what loans to make, or how does that work?

Mr. BOYD. In fact, no, they have not been taking our say-so, Mr. Ostertag, or our "say-no," I should say.

Mr. JONAS. At least you make the investigation and prepare a summary or analysis or a recommendation.

Mr. BOYD. We make a recommendation.

Mr. JONAS. Which the Secretary may reject or accept.

Mr. BOYD. That is right. We make a recommendation based on the study of the application and of the carriers' financial standing and a projection of the revenues the carrier will have so that we can say whether we think the carrier can pay off the loan.

Mr. OSTERTAG. Do they follow your recommendations or findings? You are policing this program, in other words, are you not?

Mr. BOYD. Sometimes they follow our recommendations and other times they don't.

The only requirement in the act is that they ask us for recommendations; not that they accede to our point of view.

Mr. OSTERTAG. I can only say, Mr. Chairman, to me it does not look like a good picture.

Mr. THOMAS. It sure doesn't. We talked about it this morning in your absence. We all agreed it did not look good. I hope the Legislative Committee will take a look at it and put it back the way it was.

Mr. THOMAS. You really haven't set up a separate bureau for rates. It is still rates and operating practices. It is still for all practical purposes under one Bureau under Mr. Roth, isn't it?

Mr. BOYD. Yes, sir. We haven't made any changes in organization since we were last here except to set up a central file section and a central docket section.

Mr. THOMAS. Go ahead, gentlemen.

COMMERCIAL RATES

Mr. SHIPLEY. Would you like to go ahead, Mr. Chairman, with regards to commercial rates and give us more information on why there is an increase in work units from 50,646 in 1964 to 53,746 in 1965, as you show on page 33.

Mr. BOYD. Yes, sir. These rates are the result of the constant shifting and changing on the part of the carriers to find rates and fares for either cargo, passenger, mail, or express, that will generate more traffic to them profitably. On page 39 there is a breakdown of the work units that is involved in this item of commercial rates.

Mr. JONAS. If you will permit me to interrupt, I saw that table and I was intrigued with it. The only thing you leave out there, you do not tell us how many of these rate increases you approve and how many you got down.

REDUCTION OF FARES

Mr. BOYD. I do not have that figure, but I can tell you that the vast majority of them have been on a downward trend.

Mr. JONAS. Is that true? I do not find that reflected in my airplane ticket purchases. Are rates going down?

Mr. BOYD. Yes, sir.

Mr. JONAS. All over the country?

Mr. BOYD. Yes, sir.

Mr. JONAS. I thought they were increasing.

Mr. BOYD. No, sir. The average yield to the carrier is down. Now the basic coach fare and the basic first-class fare in many sections of the country have remained the same, but these rates have gone down by virtue of new and different fares that are put in.

Mr. JONAS. Mr. Shipley, would you permit me to offer a suggestion and ask him to prepare a little table for the record showing some of the reduced fares that have gone into effect in the last 12 months?

Mr. SHIPLEY. Surely.

Mr. BOYD. Surely.

Mr. JONAS. Will you do that?

(The information supplied follows:)

Major fare reductions, 12 months ending Jan. 30, 1964

Effective date	Nature of reduction	Carriers	Markets	Reduced rates	Standard rate		Percent reduction	Comments
					1st class	Coach		
Mar. 1, 1963	Establish no-reservation fares on 1st class and coach service.	Eastern, Delta, and National.	Between Houston and New Orleans.	$19.05 day 16.19 night	$27.25 27.25	$20.80 20.80	8 to 30 2 to 41	
Mar. 10, 1963	Increased family plan discount from 33⅓ to 50 percent (1st class).	All trunks	Systemwide	Typical savings, dependents' fare:				The application of this discount was also extended from a 72-hour midweek period to all week except Sunday.

	Discount at—		Percent reduction
	33⅓ percent	50 percent	
New York to Los Angeles	$124.55	$93.45	25
New York to Chicago	36.50	27.38	25
New York to Dallas	70.70	53.03	25

Effective date	Nature of reduction	Carriers	Markets	Reduced rates				Comments
Mar. 17, 1963	Established standby fares for military personnel on leave at 50 percent of jet coach fares.	All trunks; certain local service.	do	Typical savings (round trip):				

	Jet coach	Standby military	Percent reduction
New York to Los Angeles	$290.20	$145.10	
New York to Washington	32.80	16.40	

May 18, 1963	Open-jaw group tour fares (10 or more passengers).	Delta	Between New York, Las Vegas, Los Angeles, San Francisco, and San Diego.	25 percent off standard coach fares.				This fare may only be used in connection with ground tour.
July 12, 1963	No-reservation fare extended to apply to 1st class jet service.	TWA	Between Philadelphia and Pittsburgh.	$15.24	$22.64	$19.50	22 and 33.	
Sept. 1, 1963	Established "Visit U.S.A." fares for Alaska in connection with current continental U.S. "Visit U.S.A." fares.	Alaska and all local service carriers except Trans-Texas.	Alaska and local service routes on continent.	$100 for 15 days; $200 for 45 days.				Restricted to foreign visitors and good for unlimited travel on the carrier's routes during 15- or 45-day time period.
Nov. 1, 1963	Established 3d class service.	Pan Am and United.	Between Los Angeles/San Francisco and Honolulu.	$100		133	25	
Dec. 1, 1963	Established no-reservation fare.	Western	Between Los Angeles and Las Vegas.	$11.43		18.25	37	
Jan. 15, 1964	Reduced 1st class jet and prop fares.	All trunks except Northeast.	Various points over 700 miles apart.	Typical savings (one-way):				
					Old	New	Percent reduction	
				New York to Los Angeles	$186.90	$160.90	14	
				New York to Chicago	54.75	52.30	5	
				Washington to Dallas	94.10	86.25	8	
Spring and summer 1963.	Excursion fares	National, Northeast, and Eastern.	Between Boston and New York and Florida points.	Various reduced excursion fares established by class of service with reductions from standard service of 13 to 22 percent.				

Mr. OSTERTAG. Are they by individual carriers or are they general rate reductions?

Mr. BOYD. The way that generally works, Mr. Ostertag, is that one carrier will file and then if there is any competitive impact, the carriers who are competitive will immediately come in and file the same, but there is always one carrier that is a leader.

Mr. OSTERTAG. Are you speaking primarily of trunkline carriers?

Mr. BOYD. Yes, sir. Of course, with the local service carriers, much of their operation is a monopoly operation, so there is no competitive effect in terms of competing airlines on their rate actions. They do, of course, have to be competitive with the trunkline carriers over the routes where their segments parallel.

RATES OF LOCAL SERVICE CARRIERS

Mr. JONAS. One other question on that point: Do you give any consideration or has the Board given any consideration to the rate schedule, the tariff used by feeder lines to determine whether in your opinion you would kill the goose that lays the golden egg by authorizing increased rates or getting those lines more self-sufficient? Does that enter into your consideration?

Mr. BOYD. Yes, sir. What we have tried to do with the subsidized carriers is to get them to raise their rates as high as we and they thought they could reasonably go without losing traffic and at the same time we have encouraged an excursion type of fare at a lower rate. If you live outside the United States today you can get the greatest bargain in the world by traveling on the local service carriers.

Mr. JONAS. That is right.

Mr. BOYD. I think 15 days for a hundred dollars, anywhere in the United States. This is good business for those carriers because their average load factors run less than 50 percent, so this is made money. Every time they are able to generate traffic that way it is made money.

Mr. JONAS. I do not see why generally the taxpayers ought to be taxed to provide undercost transportation for a limited number of people or a certain class of people in the United States. I can accept the principle to develop aviation from the beginning, but, as we were talking this morning, how long is an experiment going to last?

Mr. BOYD. Let me point this out to you, Mr. Jonas: With the local service carriers, they are charging full first-class fares for DC–3 operations, which is a pretty good chunk for a passenger to pay 7 or 8 cents a mile to ride in a DC–3 when, if he can get to a major airport, he can ride on a jet for less than that.

Mr. OSTERTAG. Have you had any experience in reduction in rates for local carriers? We were talking about reduction in rates a few moments ago. I asked if it would apply to trunklines and you said, "Yes."

Mr. BOYD. Yes, sir.

Mr. OSTERTAG. I am not sure whether it is clear whether local carriers have likewise reduced rates and have you been a party to that?

Mr. BOYD. Substantially, no. They have put in some special fares that I just mentioned, this "visit U.S.A. fare" for one.

Mr. OSTERTAG. That is something different.

Mr. BOYD. And a few fares like that.

REDUCTION OF STAFF—RATES AND FARES

Mr. THOMAS. Gentleman, may I interrupt just a moment? Somebody asked a while ago for a table showing the action of the Board in decreasing rates, one as to the subsidized carriers and the trunk carriers during the last 12-month period. This table on page 33 and 34 shows the workload and the positions for rates and fares. We have a total of 84 people this year against 87 last year. You have 31 for subsidy rates, and guaranteed loans. That is the local carriers. There are 49 for commercial rates. It appears to me that that employment figure ought to go down, Mr. Chairman. With all due respect to everybody, you set out a workload that may be meaningful, but I do not quite understand it. You show here that final subsidy cases processes—1962, 1963, 1964, 1965—range between 28, 40, 62, and 68. That does not mean much. What will have the meaning is that table? It should show what reductions have been made in the fiscal years 1963 and 1964 and what you contemplate in fiscal year 1965. Why can't this Bureau be reduced? It remains too constant. What occasions having 85 men rehash year in and year out a few little minor reductions, saying: "If you bring your wife and children and put them on my plane, from 9 to 4 on Wednesday of the week, you will get a 15-percent reduction." That is what it amounts to.

Mr. BOYD. It is not quite that.

Mr. THOMAS. You mean it is not quite that easy to get that reduction?

Mr. BOYD. No, sir. Let me point out to you now——

Mr. THOMAS. That, sir, is what is involved on this side of the table. You gentleman go on and straighten it out for the record.

DECREASE IN FIRST-CLASS FARES

Mr. BOYD. First-class fares have come down. This is average fare. In first class from the end of March 1961, it was 7.22 cents per passenger mile. It is down now to 6.73 cents. We are talking in terms of millions of passenger-miles, Mr. Chairman. This is not just a half a cent. It is a half a cent by several billions.

Mr. THOMAS. Let me interrupt you there. Every now and then I ride one of these local service carriers. I go from Chicago to the University of Iowa. I haven't found that fare going down any on that one plane that is as old as I am, and that makes it in excess of 14 years of age. I will bet it has been amortized at least three or four times.

Mr. BOYD. No, sir. That is because we are trying to keep the subsidy down as low as possible.

SUBSIDY STAFF

Mr. THOMAS. Why do you need that staff of 33 people figuring that out when you don't change it? If there is any change, it goes up slightly.

Mr. BOYD. On the subsidy rates, Mr. Chairman, this is trying to figure out the best way to pay the carriers. The subsidy rates are not the rates that the passenger pays. These 33 people or 31 people are involved in dealing with the carrier on the payment of subsidy to the carriers.

CARRIERS' AUTHORITY TO SET RATES

Mr. THOMAS. You give the carrier almost unlimited authority to set his own rates, or what he is going to charge the customer, don't you?

Mr. BOYD. The law does that, Mr. Chairman. We don't.

Mr. THOMAS. I mean, he has that authority?

Mr. BOYD. Yes, sir.

Mr. THOMAS. What you are dealing with here is what you are going to pay him?

Mr. BOYD. That is on the subsidy rates.

Mr. JONAS. You have quite a different problem on rates for subsidy carriers than the trunkline carriers that don't have the subsidy.

Mr. BOYD. That's right, sir.

Mr. JONAS. You are interested in getting rates down but you must consider trying to make these subsidized carriers self-sufficient, too, as soon as possible.

DISTINCTION BETWEEN REGULATION AND MANAGEMENT

Mr. BOYD. That's right, sir. Of course, we always run into this problem of where does regulation stop and where does management start. We have a lot of ideas about how they can run their airlines better than they are, and we tell them, but we can't put it into effect, and I would say that sometimes we are wrong in our judgments, but we give them all of the help and advice and suggestions we can.

In many areas where the local service carriers operate they are dealing with a captive market.

Mr. THOMAS. Doesn't the law give you any authority to tell that local service carrier what fare he can charge?

Mr. BOYD. The fare has got to be reasonable and reasonably related to the cost.

Mr. THOMAS. Who is the judge of "reasonable"? You have some authority here, because what he charges you ultimately is going to be reflected in what you have to pay him. You are bound to have some authority.

Mr. JONAS. Doesn't the authority come in because you set the rate of return he can earn?

Mr. BOYD. That is right, we do, but that is another thing altogether.

BASIS FOR SUBSIDY

Mr. JONAS. You base your subsidy. You say you will let these people earn 10 percent.

Mr. BOYD. Yes, sir.

Mr. JONAS. Your subsidy is based on whatever it takes from what their net operating income is to bring them up to 10 percent, you grant the subsidy. Isn't that the substance of it?

Mr. BOYD. That is right, as long as they operate in the manner which is prescribed. I am becoming a little confused because we have been pushing the local service carriers to keep their fares up, to cut the subsidy down, and what you gentlemen are telling me, I think, is that we ought to be urging them to get their fares down.

Mr. JONAS. I am not telling you that. I am not telling you to get them up. You had an example this morning in one section of the country where you said this local service carrier was the only means of transportation.

Mr. BOYD. Yes, sir.

Mr. JONAS. There comes a time when the rest of the country will probably get tired of subsidizing their transportation.

Mr. MURPHY. On a national scale there is a pretty good balance between or among all the sections of the country.

Mr. JONAS. That is true. A lot of people ride on airplanes but probably more people have never been in an airplane than have been in one, is that right?

Mr. MURPHY. That is true.

Mr. THOMAS. Yes, many more. I believe those are the statistics they publish.

INCREASE IN COMMERCIAL RATES WORKLOAD

Mr. SHIPLEY. Mr. Chairman, to go ahead with your commercial rates here, in 1963, you had 50,674.

In 1964 you had a small decrease. What is the reason for this projected, rather large, increase to 53,000, almost 54,000?

Mr. BOYD. We make projections based on trends, Mr. Shipley, and the trend has been up in the recent past.

Mr. SHIPLEY. You are going to go ahead and handle this projected increase with one less employee?

Mr. BOYD. Yes, sir.

SUBSIDY WORK UNITS

Mr. SHIPLEY. On page 34, Mr. Chairman, it gives us the number of "work units" and "position requirements," and also a listing of the final subsidy cases processed, and also the number of completions for technical positions required.

First let us take a look at the 1964 estimate of 68. It runs similar with that of 1965 under final subsidy rates issued, and on hand at the end of 1964 the cases were numbered 35, and you estimated in 1965 there will be 26 on hand; temporary subsidy rates issued are 5 in 1964 and 5 in 1965. You expect to not have any on hand at the end of the year. Guaranteed loan matters in 1964 were 25, and you had an increase of 5, making it 30 in 1965. You practically have none on hand. Conference waivers granted will be about the same in 1965 and in 1964. You will have a reduction of two positions.

Mr. BOYD. Yes, sir.

Mr. SHIPLEY. We were talking a while ago about the cases processed. Here on page 34 it shows the final subsidy cases processed. In 1964 it numbered 68. You expect this number to be 65 in 1965.

Mr. BOYD. Yes, sir.

Mr. SHIPLEY (reading):

The combination of the projected increased output and the reduced staff will require even further sharply increased productivity in 1964 and 1965, as compared with 1962, as demonstrated in the following table—

Would you go into this table just a moment, and the reason for the increase from 3.6 in 1964 to 4?

Mr. BOYD. We have just put more pressure on our people.

Mr. SHIPLEY. This is the economy drive?

Mr. BOYD. Yes, sir.

Mr. SHIPLEY. That is terrific.

Mr. BOYD. We are trying to find shortcuts, and hopefully our people are getting smarter as they get older.

Mr. SHIPLEY. We pretty well discussed commercial rates and guaranteed loans.

I think we will turn over to page 39.

RATES AND FARES WORKLOAD

Mr. Reporter, let the record show pages 39, 40, and 41.

(The pages follow:)

	Actual, 1963	Estimate, 1964	Estimate, 1965	Increase
Number of work units:				
Screening of tariff filings	43,947	45,000	47,500	2,500
Tariff rejections	802	900	925	25
Special tariff permission applications	1,696	1,80	2,000	200
Processing tariff referrals and complaints on the merits	913	1,10	1,300	200
Formal cargo and passenger rate proceedings	39	40	40	0
Free and reduced-rate temporary exemptions	180	190	200	10
Service mail rate proceedings	8	7	6	−1
Rate agreements	728	700	750	50
Exemption applications	79	75	85	10
Position requirements	50	50	49	−1

The volume of work in this field is essentially beyond the Board's control since it originates in large part by statutory filings by carriers or other members of the public. The amount of IATA work has increased sharply during fiscal 1963, and we expect an acceleration of this trend in fiscal 1964 and 1965. The increased capacity for passengers and cargo provided by the new, large jet aircraft has resulted in more numerous and controversial fare and rate agreements than hitherto. Consequently, the instances in which economic data are required to substantiate rate changes are growing. The controversial nature of the fare and rate changes engenders growing requirements for correspondence and communication with travelers and shippers to reconcile conflicting views. Moreover, the mushrooming of small national airlines has tended to magnify past problems. Different rate philosophies among carriers and their governments add to the problem and necessitate more frequent and closer communication with representatives of foreign governments and the State Department. MATS foreign and oversea contracts are in the third and final year under options to renew, which expire June 30, 1964. Consequently, it appears that a new pattern of contracts will evolve in fiscal year 1965 that will in all probability increase the workload, since new combinations of carriers are likely to be involved and an important overhaul of policy guidelines may be required.

The processing of tariff referrals and complaints entails the analysis of substantive tariff filings and related complaints, followed by the formulation of recommendations for Board action with respect to the institution of fare and rate investigations and the suspension of tariff proposals pending investigations. Since Board actions on suspension matters are at least as important as any other aspect of its functions in the area of rate regulation, the staff's analysis of the factual, policy, and legal considerations related to tariff proposals is of vital significance. The number of these matters handled in fiscal 1963, 913, represents an increase of more than 31 percent over the preceding year and necessitated the assignment of additional personnel to this activity. Further increases in this important workload category are expectd in the future in line with the upward trend of tariff filings. Moreover, in the summer of 1963, the

Board amended its economic regulations to require carriers to submit detailed economic data and other information in support of their tariff filings. This added documentation will require intensive analysis to provide the Board with a sound basis for deciding whether to permit a tariff to become effective or to suspend its effectiveness pending investigation. Timely and careful analysis of substantive tariff filings and related complaints is, of course, the cornerstone of effective regulation by the Board in this area. Since, in the absence of affirmative action by the Board, tariffs become effective on the date designated by the carrier, and the Board's power to suspend pending investigation lapses once a tariff has become effective, it is absolutely essential that each substantive tariff filing and complaint be carefully reviewed promptly after its filing. It is clear that a procedure that permits tariffs to become effective prior to their analysis would result in many rates and fares being established that would be inconsistent with the public interest. Similarly, this would seriously undermine the Board's ability to discharge its statutory responsibilities to maintain fair and reasonable fare and rate structures. To keep pace with the upward trend of tariff filings and complaints, new methods must be developed to process this work on a timely basis.

Passenger and property rate investigations and service mail rate proceedings represent a work area that includes processing, through the various formal steps, the investigation of passenger fares, cargo rates, and related matters, as well as service mail proceedings. Some of these procedings involve the suspension of a tariff and, as such, are accorded a high priority so as to complete the proceedings within the 6-month maximum suspension period. Although a substantial number of the older cases have now been disposed of, the total backlog remains large by virtue of the institution of new investigations in the last year. Obviously, prompt resolution of the matters requiring investigation is in the interest of the carriers, the public, and the Board. Since many such matters involve controversies between particular carriers, the failure to expeditiously process investigations may result in a serious injustice to one or more of the persons concerned. Full exploration of the use of informal conferences, shortened proceedings, and limited Bureau participation in proceedings will be utilized in order to prevent increases in the backlog.

Rates and fares activity

Description and fiscal year	Workload flow				Personnel			Average completions per technical position
	Receipts during year	Completions during year	Adjustments	On hand end of year	Technical	Clerical	Total	
1. Subsidy rates and guaranteed loans:								
1963 actual	97	73	.....	52	29	4	33	2.5
1964 fiscal plan	91	106	.....	37	29	4	33	3.6
1965 CAB budget	99	108	.....	28	27	4	31	4.0
2. Commercial rates:								
1963 actual	49,355	50,674	.....	1,118	38	12	50	1,333
1964 fiscal plan	50,145	50,646	.....	617	38	12	50	1,333
1965 CAB budget	53,745	53,746	.....	616	37	12	49	1,453
3. Overall program direction:								
1963 actual	.....	.....	.....	.....	1	3	4	.....
1964 fiscal plan	.....	.....	.....	.....	1	3	4	.....
1965 CAB budget	.....	.....	.....	.....	1	3	4	.....
4. Total, rates and fares activity:								
1963 actual	49,452	50,747	.....	1,170	68	19	87	746
1964 fiscal plan	50,236	50,752	.....	654	68	19	87	746
1965 CAB budget	53,844	53,854	.....	644	65	19	84	792

Mr. SHIPLEY. Here the number of work units have increased from 45,000 to 47,500, 1964–65, which makes an increase of 2,500, under the screening and tariff filings.

Tariff rejections shows that there were 900 in 1964 and it has increased 25 in 1965; special tariff permission applications have in-

creased; processing tariff referrals and complaints on the merits has increased; formal cargo and passenger rate proceedings is the same.

Mr. BOYD. Yes, sir.

Mr. SHIPLEY. You have increased in all of your workloads here.

Mr. BOYD. That is because, as I mentioned this morning, the total activities of the industry are increasing and it goes all the way through, not only in passenger miles but in tariff filings, too.

Mr. SHIPLEY. You have a reduction of one position from 1964 to 1965. Do you intend to squeeze this a little harder to get a little more work out of them?

Mr. BOYD. We are going to keep squeezing.

Mr. SHIPLEY. You should be commended for that.

Page 41 covers what we have discussed in the previous pages, guarantee rates, commercial loans, commercial rates, overall program direction, total rates and fares activity.

Are there any questions on this page?

SUBSIDY REDUCTION

Mr. THOMAS. I suggest we set out the two middle paragraphs on page 35 in the record. Let me read these two. This goes back to his workload and his positions of 31 for 1965 in local service. [Reading:]

Reopening of the current class rate for the 13 carriers is projected during fiscal year 1964 along with the finalization of a new class rate during the same fiscal year. This is critical to the goal of subsidy reduction for fiscal year 1965.

Of course, the only way you are going to reduce the subsidy is either for the fares to go up, the fares for which the local service carrier carries the customer, or for the volume to increase. This is the meat in the coconut. I wonder why the personnel in this bureau cannot be reduced. [Reading:]

The original and revised class subsidy rate contains provision for appropriate refund of subsidy by each of the 13 local carriers. Accordingly such determination must be made formally for each carrier for its calendar year during the effectiveness of the class subsidy rate. These cases, which are estimated to result on the average in overall subsidy refund from $500,000 to $1 million annually.

What are your results? What has the class rate done for you? [Reading:]

In addition to subsidy class rate cases, 20 ad hoc adjustment cases per year are projected for fiscal year 1964 and 1965.

What do you mean?

How does it work? Why do you have to have all of these people?

NUMBER OF SUBSIDIZED CARRIERS

Mr. BOYD. I had hoped that this explanation would provide you with an answer, Mr. Chairman. We have 13 carriers in this area. These are not the only subsidized carriers by any means, but these are the ones who account for the bulk of the subsidy.

Mr. THOMAS. What more do you have outside of——

Mr. BOYD. We have eight Alaskan carriers.

Mr. THOMAS. Outside of those in Alaska and Hawaii?

Mr. BOYD. That is all.

Mr. THOMAS. About 80 or 85 percent.

Mr. BOYD. The 13 local service carriers in the United States are just about half of the subsidized local service carriers.

THEORY OF CLASS RATE

Mr. THOMAS. How does your class rate affect it?

Mr. BOYD. The theory of the class rate was that it would provide a greater incentive to management to be efficient than had been the case where we are dealing with an individual company rate where the carrier's profit depended to a great extent on who could outargue who.

DISTINCTION BETWEEN BUREAU OF ECONOMIC REGULATION AND OFFICE OF CARRIER ACCOUNTS AND STATISTICS

Mr. THOMAS. Does not the Bureau of Statistics and Economics come in here as much as the Bureau of Rates?

Mr. BOYD. This is the Bureau of Economics. I am lost here.

Mr. THOMAS. You call it rates and fares, but it is statistics.

Mr. BOYD. The Bureau of Economic Regulation has the responsibility for routes, agreements, rates, and fares.

Mr. THOMAS. It services two or three subheads. We understand that.

Mr. BOYD. That is right. That is all in one bureau.

Mr. THOMAS. How is your class rate working out?

Mr. GURNEY. May I say something?

Mr. BOYD. Yes.

Mr. GURNEY. You will remember 3 or 4 or 5 or 10 years ago we did not know what the subsidy was; we did not know what the bill was in order to tell you how much we had to appropriate. We were always 3 or 4 years back.

Mr. THOMAS. At least 18 months.

Mr. GURNEY. More than that. I know cases of carriers where we went back 6 or 8 years to adjust their subsidy rates. The class rates allow us to give you current information, and we know what the bill is exactly.

FUNCTIONS OF SUBSIDY STAFF

Mr. THOMAS. How is it working out now related to your 31 people? That is where the people are involved. You do not have this to contend with so much. You have another group of 40 or 41 taking care of your trunklines. What are these people doing with reference to class rates?

Mr. BOYD. These people are working out the adjustments that have to be made. They are working on the refunds. They are working on developing a new formula.

We have had two formulas, neither of which was perfect. We have made a proposition to the industry on a third formula which has a different approach completely.

Mr. THOMAS. What are some of the details, first, of your class rates? You have certain types of equipment. We are going to allow you so much. You have so many seats. We are going to allow you so much. Is that what you call your class rates?

Mr. BOYD. Yes.

Mr. THOMAS. Where do your employees come in? That is, year in and year out. What is their day-to-day job?

Mr. BOYD. Their day-to-day job is working on such things as developing figures for calendar 1961. We have so far developed refunds of $571,882 on profit sharing. We have developed $300,000 for 1962 and have additional work to do which we think will bring it up to over——

Mr. THOMAS. You say profit sharing. You are taking so much of that out of the subsidy?

Mr. BOYD. That is right. They are working on such things as how much should be paid to a carrier which has received a new route award and where the new route award specifies three or four points and the carrier already has service going across through one or more of those points on another——

Mr. THOMAS. He tells you he is the operator and the statute gives him the authority to set the amount of fare he is going to charge his customer, and unless it is decidedly out of line, you are not going to overturn it. So why do you need this big staff?

Mr. BOYD. This staff has nothing whatsoever to do with fares. That is in the commercial rates staff, Mr. Chairman. The subsidy staff deals only with subsidy payments, subsidy adjustments between the Government and the carriers.

Mr. THOMAS. There is bound to be a connection with the subsidy you pay being dependent upon two things in the final analysis: what he charges his customers, and the numbers he has to charge. It is on that basis, plus a few interstices there, that you arrive at this subsidy.

Mr. BOYD. That is right, sir.

Mr. THOMAS. The big things in formulating his subsidy are what he takes in and what he pays out. Those are the two big things.

Mr. BOYD. Yes, sir.

Mr. THOMAS. What he takes in depends on the number of people he hauls and what he charges them.

Mr. BOYD. Yes, sir; but that is not the function of these people who work in the Subsidy Payments Division.

Mr. THOMAS. What do they do on a day-to-day basis?

Mr. BOYD. They pay out the subsidy you appropriate.

Mr. THOMAS. It ought not to take 31 of them to pay it out. Is that all they do?

Mr. BOYD. Yes, sir.

Mr. THOMAS. You ought to reduce that by two-thirds.

Mr. BOYD. We have reduced it, Mr. Chairman.

Mr. THOMAS. You are gradually reducing it, but I was wondering if you could not reduce it more.

EXTENSION OF ROUTES

Mr. JONAS. In granting an extension of a route to a subsidized carrier to permit it to serve a community 40 or 50 miles off of a so-called beaten path, do you ever restrict that certification and make it dependent on whether that leg, so to speak, can be economically feasible?

Mr. BOYD. I am not sure I know what your definition of "economically feasible" is. But certainly we take the cost into consideration, and if the cost seems to us to be exorbitant, we do not——

Mr. JONAS. You do not know until you have had some experience how much travel will be generated off of that extra part.

Mr. BOYD. No, sir; but we make a projection. Over the years generally it has proved to be pretty accurate. It is not always accurate, by any means.

Mr. THOMAS. You have a little statistical information on the number of people in the area.

Mr. BOYD. Community of interest is one of the big things.

Mr. JONAS. I know all these communities want airline service. I live in a little town. They want to build an airport now. They all want air service, but frequently they do not support the airline when it comes in.

There should be some well-developed promotional activity on the part of the agencies in the community to generate some business for it. Is any of that activity going on?

Mr. BOYD. Yes, sir. The communities getting air service, by and large, do a very good job of promoting the service once it comes in.

INTERNATIONAL AVIATION AGREEMENTS

Mr. JONAS. There is a very good statement on page 45 which justifies your activity in the international field. I would like to quote it at this point:

> U.S. carriers are serving more than 64 countries, 47 under bilateral agreements. They are also serving others, particularly the many newer nations, without agreement or on the basis of a reciprocal or unilateral arrangement. Czechoslovakia, with which the United States has a bilateral, is not presently served by a U.S. carrier, and U.S. carriers are not serving 19 other countries to which they are certificated to operate.

I think we should put in the record the statement on page 42 and down through the table on page 43, which will show the purposes and objectives of your activity in the international field.

(The pages follow:)

INTERNATIONAL AVIATION AGREEMENTS

The Bureau of International Affairs performs the functions of this activity.

I. PURPOSE AND OBJECTIVES

To obtain through international agreements or through other reciprocal or unilateral arrangements authority necessary for the operation of U.S. air carriers to and through foreign countries; to resolve problems arising out of international air operations of U.S. and foreign air carriers engaged in foreign air transportation, both under and outside of air transport agreements; to formulate technical and policy recommendations regarding the economic aspects of U.S. international air transport relations; and, to recommend U.S. positions for the implementation of the economic programs of the International Civil Aviation Organization (ICAO) and other international civil aviation entities.

To achieve these objectives, the Board consults with and advises the Department of State on international aviation matters; participates as a member of U.S. delegations in the negotiation of international air agreements and their amendment as well as in consultations for the interpretation of such agreements. The Board also initiates notes to foreign governments and instructions to Embassies for use of the Department of State in working out international aviation problems.

In supporting U.S. international air transport policy, the Board makes economic analyses and prepares economic data both in connection with the negotiation of agreements and consultations with other governments for the

interpretation of such agreements, and in the working out of day-to-day problems arising as a result of operations in foreign air transportation of U.S. carriers and foreign carriers authorized to operate to the United States.

For the purpose of determining the immediate and long-range international air-transport objectives of the United States, the Board prepares extensive overall aviation studies on a regional basis. These studies also serve as guidance in determining U.S. positions in specific negotiations.

The Board also participates in the activities of the Inter-Agency Group on International Aviation (IGIA), established pursuant to the President's memorandum of August 11, 1960. In this area the Board has primary resonsibility for the preparation of U.S. positions on economic matters involving the International Civil Aviation Organization (ICAO), North Atlantic Treaty Organization/Civil Aviation Planning Committee (NATO/CAPC), European Civil Aviation Conference (ECAC), Regional (Western Hemisphere) Conference on Civil Aviation (CRAC), and similar international aviation bodies.

During fiscal years 1964 and 1965, objectives in the international area will be (*a*) to consult with and advise the Department of State on matters of interpretation, and on operating problems arising in connection with existing agreements or other arrangements to the end that U.S.-flag carriers receive and maintain foreign operating rights which are economically sound and consistent with reciprocal rights requested by foreign countries; (*b*) to negotiate, as appropriate, bilateral agreements where none has heretofore existed; (*c*) to renegotiate agreements which have either been denounced, or have expired, or when an exchange of rights has not been fully consummated; (*d*) to continue efforts through international bodies to encourage the development of an adequate air transport system properly adapted to the present and future needs of the U.S. foreign commerce, the postal service and the national defense; and sound economic conditions therein; and (*e*) to continue to consult with the U.S. air transport industry in the coordination of such U.S. air transport policy matters. In addition to handling a progressively larger volume of negotiations, consultations, and other matters, the program for 1964 and 1965 provides for improving the Board's effectiveness through the increased use of economic data.

Financial requirements

	Actual, 1963	Estimate, 1964	Estimate, 1965	Increase
Permanent positions	21.0	21.0	20.0	−1.0
Average number of all employees	20.5	20.2	19.6	−.6
Obligations:				
Personnel compensation and benefits	$232,255	$246,800	$245,600	−$1,200
Other objects	14,807	19,100	25,400	6,300
Total	247,062	265,900	271,000	5,100

The decrease of $1,200 for personnel compensation and benefits is the net result of abolishing one position in 1965 and the cost of within-grade salary advancements and increased pay costs pursuant to Public Law 87–793.

Of the $6,300 increase for other objects, $6,000 is for travel expenses in connection with negotiations and consultations and the remainder is for the increase in GSA switchboard rates and postage.

WORKLOAD AND EMPLOYMENT

Mr. JONAS. The table on page 43 shows you have 20 people working in this activity, a reduction of 1 over last year. The activity costs $271,000, which is up $5,100 from last year.

There is a table showing justification of staff requirement on page 44 at the top of the page which lists the number of agreements that you participated in and the workload which I think would be interesting to have made a part of the record.

(The table referred to follows:)

	1963		1964		1965		Position increase
	Number of work units	Positions	Number of work units	Positions	Number of work units	Positions	
International air agreement consultations and negotiations	918	15	940	15.1	985	14.5	−0.6
International aviation policy review and development, advisory assistance and IGIA/ICAO and other civil aviation activity	552	6	561	5.9	583	5.5	−.4
Total	1,470	21	1,501	21.0	1,568	20.0	−1.0

INTERNATIONAL CONSULTATIONS AND NEGOTIATIONS

Mr. JONAS. The table on page 45 under "International air agreement consultations and negotiations" would be helpful to have in the record also.

(The table follows:)

INTERNATIONAL AIR AGREEMENT CONSULTATIONS AND NEGOTIATIONS

The workload and staff requirements for this function follow:

	1963		1964		1965		Position increase
	Number of work units	Positions	Number of work units	Positions	Number of work units	Positions	
Multilateral conferences	10	1.3	8	0.9	8	0.9	0
Bilateral agreement activities	684	11.7	703	12.6	736	12.0	−.6
Nonbilateral consultations and problems	224	2.0	229	1.6	241	1.6	0
Total	918	15.0	940	15.1	985	14.5	−.6

Mr. JONAS. I do not think we need any more on that subject.

ECONOMIC ENFORCEMENT

Mr. THOMAS. Let us look at Bureau of Enforcement. We shall put pages 49 and 50 in the record.

(The pages follow:)

ECONOMIC ENFORCEMENT

The Bureau of Enforcement performs the functions of this activity.

I. PURPOSE OF WORK

The main objectives of the Board's economic enforcement program are to obtain compliance with the economic provisions of the Federal Aviation Act and with all of the regulations, orders, certificates, permits, exemptions, and other requirements issued thereunder; preventing unfair, deceptive, and restrictive competition and practices; protecting the public from unjust discrimination and mistreatment by air carriers and their agents; and improving the quality and dependability of air transportation service, thereby promoting the sound growth and development of air transportation.

The work performed involves the handling of passenger and shipper complaints; the investigation of alleged or suspected violations; and the taking of enforcement action for the imposition of sanctions and achievement of compliance by informal enforcement action, formal administrative proceedings and prosecution in the courts.

In 1964 and 1965, it will be necessary to handle an increasing volume of work generated from outside sources and other entities subject to Board jurisdiction. In addition, there are specific problems which will require extraordinary effort, including such cases as the *North Atlantic Rate-Cutting Investigation*, the complaint of *Hughes Tool Co.* v. *Metropolitan Life Insurance Co., et al.*, and the *Panagra-Pan American-Grace Investigation.*

Financial requirements

	Actual, 1963	Estimate, 1964	Estimate, 1965	Increase
Permanent positions	34	34	34	
Average number of all employees	32.5	32.6	33.2	0.6
Obligations:				
Personnel compensation and benefits	$316,036	$340,300	$358,400	$18,100
Other objects	47,623	45,300	47,600	2,300
Total	363,659	385,600	406,000	20,400

The increase of $18,100 for personnel compensation and benefits is to cover the cost of within-grade salary advancements, a reduction in position turnover lapse, and increased pay costs pursuant to Public Law 87–793.

Of the increase of $2,300 for other objects, $2,000 is for travel expenses in connection with the increased investigation workload, and $300 is to cover small cost increases such as the increase in GSA telephone switchboard rates.

III. JUSTIFICATION OF STAFF REQUIREMENTS

Enforcement activity, in the past few years, has moved into new, complex, and diverse areas. In 1964 and 1965, this trend is expected to continue. It is difficult to establish a set enforcement program with any degree of precision, since the identity of the violators and the nature of the violations cannot specificaly be predicted and today's high priority item may be superseded by an unexpected emergency tomorrow. Nonetheless, there are certain predictable trends in the enforcement field, there are certain areas in which future problems can be pinponted, and there are certain specific cases which are either now pending or will definitely be filed. Staffing requirements are predicated on these trends, areas of predictable problems, and positive caseloads.

Mr. THOMAS. You have 34 jobs, the same as last year and the year before last. The Bureau costs about $406,000 this year against $385,600 last year, an increase of about $20,000 (reading):

The main objectives of the Board's economic enforcement programs are to obtain compliance with the economic provisions of the Federal Aviation Act and with all of the regulations, orders, certificates, permits, exemptions, and other requirements issued thereunder.

The work performed involves the handling of passenger and shipper complaints; the investigation of alleged or suspected violations; and the taking of enforcement action for the imposition of sanctions and achievement of compliance by informal enforcement action, formal administrative proceedings, and prosecution in the courts.

FUNCTION OF ECONOMIC ENFORCEMENT

What does this Division do outside of these high sounding words? What actually does it do?

Mr. BOYD. If you forgive me for mentioning it, Mr. Chairman, we go back to the Latin American case again. One of the major things the Bureau is involved in today is the antitrust investigation of Panagra, Pan American, and W. R. Grace & Co.

Mr. THOMAS. You have not had that case all the time and you have had 34 employees from time immemorial, going back far beyond 1963, 5 or 6 years beyond that. You have the North Atlantic rate-cutting investigation, complaints of *Hughes Tool Co.* v. *Metropolitan Life Insurance Co.*, and the Panagra-Pan American-Grace investigation. Those directors are going at it with hammer and tongs. Business is getting awfully good now with TWA, so that suit ought to be dropped right quick, should it not? When matters were a little tight about 18 months ago, the brothers were inclined to argue; but business is good, and the suit ought to evaporate pretty soon, should it not?

Mr. BOYD. I have no idea about that, Mr. Chairman.

Mr. THOMAS. Good business sort of removes most of these headaches, and they enjoy good business now. Are they not paying a big dividend now?

Mr. BOYD. No, sir.

Mr. THOMAS. Did we not see in the Wall Street Journal about 2 weeks ago that business is good?

Mr. BOYD. They made a lot of money this year.

I can give you six examples of what the Bureau of Enforcement did last year under the civil penalties program: $12,500 against Pakistan International Airways for unlawful rate cutting; $500 against the chairman of the board of North Central Airlines for engaging in prohibited stock purchases; $2,500 against South Pacific Airlines for engaging in unauthorized air transportation; $2,500 against Tolaxa, which is a Costa Rican airline, for violations of the law on cargo charter flights.

Mr. THOMAS. That is section what?

Mr. BOYD. 901(b).

Mr. THOMAS. You are bound to have plenty of activity under your nonscheds.

Mr. BOYD. That is right, sir. We are continually working on cease-and-desist orders for violations, not only with the nonscheds but with scheduled carriers.

Mr. THOMAS. Do these cases go before your hearing examiners?

Mr. BOYD. Those are compromise penalties, the ones I outlined to you. They have the right to go before an examiner.

Mr. THOMAS. How many of these activities go before an examiner and how many are handled administratively?

Mr. BOYD. Most of them are handled administratively.

Mr. THOMAS. Do these matters come to the attention of the Board or are they handled in the Bureau?

Mr. BOYD. On an informal basis the Bureau has been delegated the authority to resolve these cases. The Bureau has so far, as a matter of practice, brought them to the Board's attention.

ENFORCEMENT INVESTIGATIONS

Mr. THOMAS. The best idea we can get as far as something concrete is this table and narrative on page 54, which we will put into the record.

(The material referred to follows:)

INVESTIGATIONS

This function involves the conduct of investigations of alleged or suspected violations including operations without or in excess of authority, tariff violations, unlawful interlocking and control situations, failure to comply with accounting requirements, illegal or discriminatory treatment of passengers, unfair and deceptive practices and unfair methods of competition in all fields of the air transport industry, including cancellation of flights, overbooking and oversales, misrepresentation and misleading advertising and violations of charter regulations. The workload and staff requirements for this function are summarized below:

	Actual, 1963	Estimate, 1964	Estimate, 1965	Increase
Number of investigations:				
Received during the year	235	280	320	40
Completed during the year	227	280	320	40
On hand at end of year	68	68	68	
Position requirements	12.4	12.4	12 4	

Mr. THOMAS. Number of investigations were 280 in 1964 and 320 this year, an increase of 40. Completed during the year 280; 320 this year. What does that mean, cases? You say this function involves the conduct of investigations of alleged or suspected violations, including operations without or in excess of authority, tariff violations, unlawful interlocking and control situations, et cetera. These are all handled administratively?

Mr. BOYD. The bulk of them are handled administratively; yes, sir. The North Atlantic rate-cutting investigation is before an examiner. We have been having quite a time with that. We just got a man cited for contempt in the Federal court.

Mr. THOMAS. What is the nature of that case?

UNDER-THE-COUNTER TICKET DISSCOUNTS—FOREIGN CARRIERS

Mr. BOYD. There has been a lot of under-the-counter discounting of tickets on the North Atlantic which militates against the general public. We have been trying to bring——

Mr. THOMAS. You mean foreign carriers or our own?

Mr. BOYD. Foreign carriers. So far as we can find out, our own carriers are completely legal and legitimate.

Mr. THOMAS. You mean rebates of some type?

Mr. BOYD. Discounts primarily. Rebates are involved in some cases.

Mr. THOMAS. That means in fares or charges in the United States?

Mr. BOYD. To the passengers.

Mr. THOMAS. I mean passengers coming to the United States.

Mr. BOYD. No; it is going across from the United States to Europe. There are several ways, we understand, that this is done. One is that you just pay less for a ticket. Another is that you pay the full price for the ticket, then you arrive on the other side, and you are handed——

Mr. THOMAS. The way we get jurisdiction is they set down on our soil at some time?

Mr. BOYD. Yes, sir.

Mr. THOMAS. Is this Bureau here kept busy all the time?
Mr. BOYD. Yes, indeed, they are.
Mr. THOMAS. Go ahead, Mr. Jonas, with hearing activities.

HEARING EXAMINERS

Mr. JONAS. Let us look at hearing activities. The purposes of your hearing activities are set forth pretty well on page 57. We will put in the record that paragraph outlining the purpose and objectives and we will include the financial requirements tabie on that page.
(The page follows:)

HEARING EXAMINERS

The functions of this activity are performed by the Bureau of Hearing Examiners.

I. PURPOSE AND OBJECTIVES

To conduct formal proceedings pursuant to appropriate sections of the Federal Aviation Act of 1958, as amended, particularly sections 401, 402, 403, 404, 406, 408, 409, 412, and 1002, on economic regulatory matters instituted by applications, petitions, or Board investigations; to conduct formal proceedings pursuant to sections 602 and 609 of the act on appeals from action of the Administrator of the Federal Aviation Agency; and to prepare and issue the examiners' initial or recommended decisions thereon.

The work consists of processing (from prehearing conference through hearing and initial or recommended decision) applications, petitions, investigations, or appeals involving route licensing, foreign permits, commercal and mail rates, mergers, control, adequacy of service, and economic and safety enforcement. Since these cases constitute the basis for a major part of the Board's regulatory function, they are vital to its successful operation.

The work objective is to maintain on a current basis formal proceedings involving priority matters, such as route problems having a high precedence, commercial and mail rates, mergers, route transfers, foreign permits, and economic and safety enforcement cases.

Financial requirements

	Actual, 1963	Estimate, 1964	Estimate, 1965	Increase
Permanent positions	45.0	45.0	45.0	
Average number of all employees	45.3	43.3	43.9	0.6
Obligations:				
Personnel compensation and benefits	$516,727	$536,200	$558,200	$22,000
Other objects	39,611	37,500	40,000	2,500
Total	556,338	573,700	598,200	24,500

The increase of $22,000 for personnel compensation and benefits is to cover the cost of within-grade salary advancements, increased pay costs pursuant to Public Law 87-793, and a reduction in position turnover lapse to the extent of 0.6 man-years.

Of the increase for other objects, $2,000 is for travel expenses in connection with economic hearings, depositions, and safety enforcement cases held in the field, and the remainder is to cover small cost increases such as the increase in GSA telephone switchboard rates.

Mr. JONAS. You have 45 people permanently employed in this activity. Are they all hearing examiners?
Mr. BOYD. No, sir; 22 hearing examiners and 23 secretaries.
Mr. JONAS. That is the same number you have had all along?
Mr. BOYD. Yes, sir.

Mr. JONAS. There is a slight increase in cost, $573,000 to $598,200, an increase of $24,500; $22,000 of that is attributable to increased personnel compensation and $2,500 other objects.

This table on page 58 shows the number of hearings held during the year, number of dockets examined, examiners' decisions issued, safety enforcement proceedings, hearings held, number of examiner decisions issued, then the total, a total of 147 hearings last year and the examiners issued 147 decisions. The docket is current, I take it from this.

Mr. BOYD. In that sense, yes, sir.

Mr. JONAS. Twenty-two hearing examiners including 1 chief and 21 associates, and 23 clerical.

Your table on page 59 shows the type of proceedings heard by the examiners; is that correct?

Mr. BOYD. Yes, sir.

Mr. JONAS. The table I just referred to, the information in its is slightly contradictory to this, is it not?

Mr. BOYD. No, sir; this is taken as off a particular date to give you a comparison as of June 30, 1962, and as of June 30, 1963.

Mr. JONAS. Where are these hearings conducted?

Mr. BOYD. All over.

Mr. JONAS. In the field?

Mr. BOYD. Yes, sir.

Mr. JONAS. You send the examiners out for hearing instead of bringing the parties to Washington?

Mr. BOYD. Yes, sir.

Mr. JONAS. Are all the examiners stationed in Washington?

Mr. BOYD. Yes, sir.

Mr. JONAS. When a case is assigned to an examiner, he takes his clerical force with him and goes to the place of the hearing?

Mr. BOYD. No, sir, the examiner goes by himself. The Bureau of Economic Regulation or Bureau of Enforcement, depending on who is involved, will provide public counsel and witnesses from the Board's staff here in Washington. But the examiner goes by himself. He does all of his clerical work, so far as I know, here in Washington.

Mr. JONAS. After he returns?

Mr. BOYD. Yes, sir.

Mr. JONAS. How long do these hearings usually take?

Mr. BOYD. It is impossible to say. We can give you an average.

Mr. JONAS. It would not mean much.

Mr. BOYD. It would not be meaningful.

Mr. JONAS. They all involve a variety of factual situations and the importance of the case would determine the length of the hearing.

Mr. BOYD. That is right, sir.

Mr. JONAS. What do these hearings mostly involve, applications for extension?

Mr. BOYD. Mostly applications for route authority.

Mr. JONAS. No further questions on this.

ACCOUNTING REGULATIONS AND AUDITS

Mr. EVINS. The next subject is "Accounting regulations and audits." We shall place in the record pages 61 and 62.

(The pages follow:)

ACCOUNTING REGULATIONS AND AUDITS

The Office of Carrier Accounts and Statistics performs the functions of this activity.

I. PURPOSE AND OBJECTIVES

To provide, in accordance with section 407 of the Federal Aviation Act of 1958, a validated body of facts required in the regulatory processes of the Board through the design, prescription, and administration of uniform systems of accounts and reports; field audit of carrier accounts and records and office audit of carrier reports filed with the Board; and the operation of a centralized automatic data processing system to service the needs of the entire Board.

During 1965 there will be continued emphasis on increased efficiency and productivity with effort concentrated on keeping current in the most significant workload areas. Since no program expansion is planned and the development of an air cargo origin and destination traffic survey and the auditing of air freight forwarders will be deferred. Some additional workload will be inescapable particularly in view of the imminent studies and evaluations required in the development of a supersonic air transport. The carrier form 41 reports and uniform system of accounts will be revised in order to utilize the electronic data processing procedures to the fullest extent possible.

In order to achieve all possible economies, every effort will be made to extend automatic data processing procedures to suitable areas throughout the Board. The backlog of work resulting from conversion to electronic data processing procedures had been largely eliminated by midyear of fiscal 1964. Machine capacity will, therefore, be available for extension to other areas of work.

Extensive liaison programs with the Federal Maritime Commission, Interstate Commerce Commission, Federal Aviation Administration, and the Military Air Transport Service have been developed during the past year, and these programs will be continued with available staff. The liaison with FAA and MATS in regard to supplemental air carriers has been particularly useful but has also necessitated the expenditure of a substantial amount of staff effort.

Financial requirements

	Actual 1963	Estimate 1964	Estimate 1965	Increase
Permanent positions	117	117	113	−4
Average number of all employees	108.5	111.3	109.8	−1.5
Obligations:				
Personnel compensation and benefits	$1,011,642	$1,138,500	$1,187,200	$48,700
Other objects	312,425	333,900	355,000	21,100
Total	1,324,067	1,472,400	1,542,200	69,800

The increase of $48,700 for personnel compensation and benefits is the net result of eliminating four positions offset by the cost of within-grade salary advances and increased pay costs pursuant to Public Law 87–793.

Of the increase for other objects, $4,000 is for travel expenses in connection with the field audit of air carrier accounts and records, $13,000 is for rental of an additional 8K unit memory to increase the memory capacity of the present computer to 16K, and $4,300 is for electronic data processing supplies, especially magnetic tapes.

III. JUSTIFICATION OF STAFF REQUIREMENTS

A total of 117 positions was utilized during fiscal year 1963 to perform the various activities comprising the work of the "Accounting regulations and audits" activity and, although the volume of work is expected to increase during 1964 and 1965, 117 positions are planned for 1964 and 113, a reducting of 4, are projected for 1965. This decrease of four positions is reflected in the field audit activity. Only the most urgent and compelling programs are planned for 1965.

The level of work and distribution of staff (positions) are summarized by function in the following table and explained in subsequent paragraphs:

	Actual 1963		Estimate 1964		Estimate 1965		Position increase
	Number of work units	Positions	Number of work units	Positions	Number of work units	Positions	
Electronic data processing		20.0		20.0		20.0	
Processing and conformance of air carrier reports	1,151	11.2	1,377	11.2	1,841	11.2	
Financial analysis and cost finding	146	5.2	167	5.2	167	5.2	
Regulation of carrier accounting and reporting systems	894	9.6	911	9.6	920	9.6	
Field audit of air carriers	85	68.5	88	68.5	85	64.5	−4
Overall direction		2.5		2.5		2.5	
Total		117.0		117.0		113.0	−4

Mr. Evins. Mr. Chairman, I note that they had 117 employees in this division to be reduced to 113, a reduction of 4.

Mr. Boyd. Yes, sir.

Mr. Thomas. Who has this now?

Mr. Boyd. Mr. Hord.

ADDITIONAL COMPUTER MEMORY UNIT

Mr. Evins. "Other objects" are up by $21,000. You point out that $4,000 is for travel expenses in connection with appealed audits of air carrier accounts, and $13,000 is for rental of additional 8K unit memory.

Mr. Boyd. Yes, sir.

Mr. Evins. Tell me what a memory unit does, what this one does in relation to the other memory unit.

Mr. Boyd. It provides additional capacity.

Mr. Hord. It has what we call an 8K memory unit. We are adding another 8K unit, which will make 16K. That doubles the capacity of the memory unit.

Mr. Evins. I am always interested in technology. What exactly does it do?

Mr. Hord. One way to think of it is if you are adding up 40 columns of figures and you want to consolidate them in one answer. The memory unit would keep each answer in its mind until the last one was added and then it would put them all together in one figure. So the memory in the machine is almost exactly as it is in a person's mind.

Mr. Evins. You need another unit?

Mr. Hord. It increases the capacity and the speed.

ORGANIZATION OF THE OFFICE OF CARRIER ACCOUNTS AND STATISTICS

Mr. Thomas. How many units does the Board have? It has economics, statistics, enforcement. What do the three units add up to?

Mr. Boyd. No, sir. Mr. Adams has enforcement, Mr. Hord has statistics, and Mr. Roth has economics.

Mr. Thomas. What is the total under Mr. Hord?

Mr. Evins. 113.

Mr. THOMAS. There are two different divisions here. There are 113 in this one alone.

Mr. BOYD. I would urge that we look at page 20.

Mr. THOMAS. That is the big table.

Mr. BOYD. This gives a pretty good breakdown here.

Mr. THOMAS. It does not follow your narrative, that is the point. Go ahead.

Mr. BOYD. This shows that we have a total——

Mr. THOMAS. You call it Office of Carrier Accounts and Statistics.

Mr. BOYD. Yes, sir, that is what we have been calling it for about 12 years.

Mr. THOMAS. Your justification and narrative do not follow it, which is why I asked the question. What is the total employment in the Bureau?

Mr. BOYD. 113, plus 46, 159.

Mr. THOMAS. I guess Mr. Roth has him by the skin of his teeth. Go ahead. Excuse me.

Mr. EVINS. What are the other 46 employees doing?

Mr. BOYD. They are covered over in the other statistical and research activities, which is the next major heading, Mr. Evins.

Mr. EVINS. Can you not consolidate those into one bureau?

Mr. BOYD. They are.

Mr. THOMAS. These narratives do not follow the chart.

Mr. BOYD. I do not know why we have this breakdown.

Mr. THOMAS. We are not complaining.

Mr. EVINS. One tab shows accounting regulations and audits, and the other shows statistics and research.

Mr. BOYD. Yes, sir, that is exactly what we have on the chart on page 20.

Mr. EVINS. With that memory unit next year, perhaps you should consolidate them into one, Mr. Chairman.

Mr. BOYD. The reason we do this is we give a breakdown because we operate this way and because we thought you would like to know the way we operate. But we do not feel we have all the answers on organization.

STATISTICAL AND RESEARCH ACTIVITIES

Mr. EVINS. Next division is statistical and research activities. We shall place in the record pages 76 and 77.

(The pages follow:)

STATISTICAL AND RESEARCH ACTIVITIES

The Office of Carrier Accounts and Statistics performs the functions of this activity.

I. PURPOSE AND OBJECTIVES

To provide basic statistics, conduct statistical surveys, perform economic studies, prepare forecasts, and make evaluations of air transport and other economic trends needed by the Board in planning and performing its regulatory and developmental functions; to provide technical and analytical assistance to the Board and its staff in decisional phases of rate, route, merger, regional airport, and adequacy-of-service proceedings in which the Administrative Procedure Act prohibits assistance by parties to the proceedings; to provide expert

statistical and economic advice and assistance on complex regulatory problems; and to provide cartographic and drafting services.

General objectives for 1964 and 1965 are (1) to fulfill requests of the Board and its staff for assistance in statistical and economic analyses required in formal proceedings, especially assistance in connection with hearing examiners' initial decisions and Board opinions, and in other Board programs; (2) to make wider and more effective use of electronic data processing to broaden the content and speed up availability of the basic statistics needed in the Board's work; (3) to convert the Board's three passenger origin-destination surveys to an integrated program on a common basis and provide additional data needed by Board and industry users; and (4) to complete studies of air transport demand for long-range forecasts of passenger traffic, develop new series of seasonally adjusted traffic and capacity data, and undertake analyses of the potential impact of supersonic aircraft on airline profits and financial condition.

Financial requirements

	Actual, 1963	Estimate, 1964	Estimate, 1965	Increase
Permanent positions	47	47	46	−1
Average number of all employees	43.4	44.7	45.2	.5
Obligations:				
Personnel compensation and benefits	$378,566	$437,500	$454,400	$16,900
Other objects	21,029	23,400	24,300	900
Total	399,595	460,900	478,700	17,800

The increase of $16,900 for personnel compensation and benefits is the net result of eliminating one position in 1965, the cost of within-grade salary advancement, a reduction in position turnover lapse and increased pay costs pursuant to Public Law 87–793.

The increase of $900 for other objects is to cover small cost increases such as increased GSA telephone switchboard rates.

III. JUSTIFICATION OF STAFF REQUIREMENTS

A total of 47 positions were available during fiscal year 1963 to perform the work of the statistical and research activity; 47 positions are estimated for 1964 and 46 positions, a decrease of 1, are requested for the fiscal year 1965. The level of work and the distribution of staff (positions) are summarized by function in the following table and are explained in subsequent paragraphs covering each such function.

	1963		1964		1965	
	Number of work units	Positions	Number of work units	Positions	Number of work units	Positions
Analytical economic and statistical assistance	173	10.9	175	8.7	180	8.7
Economic studies and forecasting	40	9.8	34	9.8	45	9.8
Periodic and special-purpose statistical reports	97	14.1	133	14.1	105	13.1
Origin-destination surveys	11	5.7	21	7.9	23	7.9
Cartographic services	----------	5.0	----------	5.0	----------	5.0
Overall program direction	----------	1.5	----------	1.5	----------	1.5
Total	321	47.0	363	47.0	353	46.0

ECONOMIC FORECASTS

Mr. Evins. The purpose of this activity is to conduct statistical surveys and to perform economic studies, prepare forecasts, and make

evaluations of air transport and other economic trends. What kind of forecasts?

Mr. BOYD. They attempt to make economic forecasts based on the information which is made available through reports filed by the carriers with the Board. One of the things that was done recently was to prepare, for Messrs. Osborne and Black in connection with their supersonic study for the President, a calculation of the resources that would be available to the air carriers of the United States in the period 1968–71 to buy supersonic aircraft.

Mr. EVINS. In the other division you reduced your staff about 3, and in this one you propose to reduce from 47 to 46, a reduction of 1, but a $900 increase for "Other objects" to cover increased telephone and switchboard rates. Has GSA gone up on your rates to you?

Mr. BOYD. Yes, sir.

Mr. EVINS. They told us there were going to be savings by establishing this system.

Mr. THOMAS. We have heard this same thing from other agencies. You are not by yourself.

Mr. EVINS. Does this chart on page 77 cover the same employees as the chart on page 76?

Mr. BOYD. Yes, sir.

Mr. EVINS. It is another breakdown?

Mr. BOYD. Breakdown by function.

STATISTICAL AND RESEARCH FUNCTIONS

Mr. EVINS. Your statistics give assistance in formal cases, assistance to Board activities, assistance to industry, and assistance to the public and to the Government.

Mr. BOYD. Yes, sir. We have gotten together with FAA, for example, and put out the airport activities statistics of certificated route air carriers, which has saved money for the Government by eliminating what was essentially a duplication in the past. We provide assistance to the Securities Exchange Commission in analyzing filings made by air carriers before the SEC.

The major cases that come before us are getting more and more complicated and, as you will note from items 2, 4, and 5 at the bottom of page 78, we are calling on this group more and more to try to tell us what is going to happen, given one vote or another vote by the Board on a case.

Mr. THOMAS. The purpose and objective is to provide basic statistics and conduct statistical surveys. You have 46 people; this is a reduction of 1. Do you need all these people?

Mr. BOYD. Yes, sir.

OBJECTIVES FOR 1964 AND 1965

Mr. THOMAS. General objectives for 1964 and 1965 are (1) to fulfill requests of the Board and its staff for assistance in statistical and economic analyses required in formal proceedings, especially assistance in connection with hearing examiners' initial decisions and Board opinions, and in other Board programs.

Did you ever see a general who did not want more statistics and more material, just like a staff officer wanting more information?

Mr. BOYD. It puts quite a burden on the examiners to try to reach conclusions in major cases having to scratch it up on their own. The examiners are not qualified.

Mr. THOMAS. I disagree with you. We are not quarreling with our hearing examiners, but you say, "to fulfill requests of the Board and its staff for assistance." You mean the examiners require it. The witnesses are from your staff.

You say, "to make wider and more effective use of electronic data processing." We do not object to that. You say, "to convert the Board's three passenger origin-destination surveys to an integrated program on a common basis." We have heard of that time and time again. When are we going to get through with that?

Mr. BOYD. We will never get through with that.

Mr. THOMAS. You mean we have to do it every 2 weeks to see if they carried more passengers this week than last week?

Mr. BOYD. We try to put it on a continuous basis because this is the source of information from which most of our route activities come.

Mr. THOMAS. I thought you relied upon the local Chamber of Commerce. They supplied you most of that information; is that right?

Mr. BOYD. Yes, sir; it is just like getting legal advice. It is worth what you pay for it.

Mr. THOMAS (reading):

A total of 47 positions were available during fiscal year 1963 to perform the work of the statistical and research activity; 47 positions are estimated for 1964; and 46 positions, a decrease of 1, are requested for the fiscal year 1965.

When you talk about statistics, we have seen more than our share in here. You can prove anything on earth by them. Nobody ever got enough of them. Look at this table here in the middle of 77. Analytical, economic, and statistical assistance; economic studies and forecasting; periodical and special purpose statistical reports. You have work units and positions here. Origin-destination surveys. We will never get through with that; is that right?

Mr. BOYD. That is correct.

Mr. THOMAS. Cartographic services. What does that mean?

Mr. BOYD. That is mapmaking.

Mr. THOMAS. Overall program. The surface of the earth is not changing very often, towns are not changing. We ought to get through with this.

Mr. BOYD. This is the kind of thing we are talking about.

Mr. THOMAS. Overall program direction. You translate your facts and figures there?

Mr. BOYD. Yes, sir.

Mr. THOMAS. That is what we call a slight amount of featherbedding. If we did not have that first unit, we would not have this?

Mr. BOYD. No, sir. I have to disagree, Mr. Chairman. The trouble is that the Board members are just not smart enough to understand the figures, but when they put them in bar charts, sometimes we can understand what it is all about.

INCREASED STATISTICAL INFORMATION

Mr. THOMAS. I can understand that. I am just like you are.

Seriously, can we not finally get our desires for more statistical information satisfied?

Mr. BOYD. I do not think so.

Mr. THOMAS. Does the Department of Commerce have any of this information for you?

Mr. BOYD. No, sir; they get information from us.

SAFETY ACTIVITIES

Mr. THOMAS. Let us look at safety activities. Insert pages 88 and 89 in the record.

(The pages follow:)

SAFETY ACTIVITIES

The Bureau of Safety performs the functions of this acitvity.

I. PURPOSE AND OBJECTIVES

Title VII of the Federal Aviation Act of 1958 makes the Board responsible for investigating aircraft accidents and incidents involving civil aircraft of U.S. registry and accidents involving civil aircraft of foreign registry that occur in the United States or its possessions. It is the duty of the Board to (*a*) make rules and regulations governing notification and report of accidents involving civil aircraft; (*b*) investigate such accidents and report the facts, conditions, and circumstances relating to each accident and the probable cause thereof; (*c*) make such recommendations to the Administrator as, in its opinion, will tend to prevent similar accidents in the future; (*d*) make such reports public in such form and manner as may be deemed by it to be in the public interest; and (*e*) ascertain what will best tend to reduce or eliminate the possibility of or recurrence of accidents by conducting special studies and investigations on matters pertaining to safety in air navigation and the prevention of accidents.

The Board's air safety program for 1965 is based on a continuation of effort to achieve the goals etsablished for 1964 with respect to improved coverage, quality and efficiency in the conduct of aircraft accident/incident investigations, and improvements in managerial and administrative procedures.

For fiscal year 1965 approximately 8.4 percent of the Bureau's manpower resources will be scheduled for training; this is the equivalent of 16.9 positions and represents a slight increase over 1964 of 3.2 percent of total manpower or the equivalent of 7 positions. Keeping technical personnel abreast of technological changes is one of the most critical problems of the Bureau. In past years an insufficient amount of training was accomplished due to the amount and pressure of more immediate work.

Public Notice 13, effective January 1, 1959, issued by the Board requesting the Federal Aviation Agency to investigate nonfatal general aviation accidents involving fixed-wing aircraft of 12,500 pounds or less gross weight, will be continued in effect during 1965.

The resources planned for fiscal year 1965 will enable the Board to achieve the goal of improved coverage in the primary function of accident investigation. The accident prevention and safety promotion program in 1965 will be continued at approximately the same level as 1964.

Financial requirements

	Actual, 1963	Estimate, 1964	Estimate, 1965	Increase
Permanent positions	186	189	201	12
Average number of all employees	177.5	180.8	193.4	12.6
Obligations:				
Personnel compensation and benefits	$1,801,630	$2,017,000	$2,296,200	$279,200
Other objects	517,068	653,300	736,700	83,400
Total	2,318,698	2,670,300	3,032,900	362,600

The increase of $279,200 for personnel compensation and benefits is to cover the cost of 12 new positions, within-grade salary advancements, the difference between the first year's cost of new positions in 1964 and the full year's cost in

1965, increased pay costs pursuant to Public Law 87–793, and $10,000 for hire of guards, witnesses, and for the performance of autopsies in connection with aircraft accidents.

The increase for other objects of $83,400 breaks down as follows: $11,000 for travel expenses, $30,000 for accident investigation expenses, $10,000 for rental of warehouse space and hearing rooms, $25,000 for training; and the remainder is to provide equipment for safety investigators.

Mr. THOMAS. We had a very nice discussion on that this morning. One of the lawyers was making a finding of probable cause and here comes the agency along and says, yes, after all, we are the ones who are going to have to prevent this from happening again, regardless of who finds the probable cause. We have to look at it, too. Any way you look at it, it is a duplication, but the amount of accurate and detailed work done is simply astounding. How a group of men can go out there amid all the grief and sorrow and carnage and wreckage and look around and come up within a week or 10 days or 2 weeks and say—I imagine with 90 to 95 percent accuracy—what caused it, it almost taxes one's credulity.

Mr. BOYD. We are really proud of these people.

Mr. THOMAS. Whatever it costs, it is worth the money.

Did I talk too soon? You have 195 people here. Is this man-years or jobs?

Mr. BOYD. We have 189.

Mr. THOMAS. You have an increase of 12 at a cost of $3,032,900, which is a $362,000 increase over last year. As shown on the above table, a total of 186 positions were utilized in 1963 to carry out safety activities. In 1964 a total of 189 positions is planned and 201 are requested for fiscal year 1965.

Mr. BOYD. Yes, sir.

SAFETY WORKLOAD AND EMPLOYMENT

Mr. THOMAS. You show a very nice breakdown on page 90, which we will put in the record.

(The page follows:)

	1963		1964		1965		Position increase
	Number of work units	Positions	Number of work units	Positions	Number of work units	Positions	
Accident investigation	960	86.3	1,013	89.3	1,050	89.3	0
Analytical accident research	341	9.9	473	9.9	520	9.9	0
Accident prevention, safety promotion	992	13.5	1,000	13.5	1,400	17.5	4
Public hearings, depositions, and formal board reports	32	19.4	40	19.4	40	19.4	0
Accident analysis, machine processing of reports—statistical reports, etc	12,725	15.5	13,000	15.5	13,250	16.5	1
Ancillary duties, training program direction	----	41.4	----	41.4	----	48.4	7
Total	----	186.0	----	189.0	----	201.0	12

FAA STAFF ENGAGED IN ACCIDENT INVESTIGATION

Mr. THOMAS. You are investigating accidents and you have to have some hearings, and so forth. How many people does the Federal Aviation Agency have doing the same or similar work?

Mr. BOYD. We will try to get that figure and provide it to you.

Mr. THOMAS. Give us the approximate figure for the record at this point.

(The information supplied follows:)

	1961	1962	1963
Number of general aviation accidents	4,839	5,052	5,050
Man-hours expended	49,084	52,329	52,268
Man-years expended	27.3	29.1	29.0
Personnel available for participation	440	455	459

Source: Federal Aviation Agency.

POSITIONS AND FUNCTIONS

Mr. THOMAS. These people are called out at all hours of the night. They may not work for 3 or 4 days, but then they may go on the job for 8 or 10 days. I think they do a tremendous job.
